As Mr. Stickney admits that there are tens of thousands in Maine who think that horse trotting is proper and desirable at fairs, his protest is a good deal on the order of a dog barking at the moon. Should the bark go on forever the moon would not come down. The fast trotter commands a stiff price in the open market, and so it is idle talk about nobody wanting him. That which sells readily is always wanted. What other test can we take as a guide? The well-bred and well-trained horse has keen relish for his work. It is a pleasure for him to show his power. Of course his breath comes short and thick when we take the last inch out of him, but he quickly recovers and is ready and willing to try again. We have seen at the Maine fairs a yoke of steers strain every muscle in the effort to move a stone boat. The eyes looked as if they would burst from their sockets, and when the test was over the animals stood with lolling tongues and panting sides. There is no more cruelty in requiring a horse to put his greatest effort into speed than in asking a steer to put his greatest effort against the neck yoke. We cannot have excellence, superiority, without calling forth that extreme exertion which some tender heart is certain to class as cruel.

A publication in the West which voices the sentiments of intelligent farmers, the National Live Stock Journal, talks in a different strain. It calls attention to the fact that the horse element is monopolizing the greatest interest at fairs, and remarks:

"In all departments of the horse display actual tests are not only practical, but they would be intensely interesting to the spectators. Not only should trotting horses compete with each other in the speed rings, but light harness horses should vie with each other, single and in pairs, in light harness, and coach horses in carriages, while draft horses should be pitted against each other in overcoming draft hurdles before the assembled spectators. Such a spectacle would draw a thousand people intensely interested, where ten now attend the fairs, and that, too, with languid interest. But in all the horse departments the trotting horse carries off the largest premiums because he is the greatest favorite of the people. Notwithstanding his production in increased proportions every year, he still commands a larger price every succeeding season, till it has come to pass, even in these times of unusual depression of commercial interests, that the highest price ever paid for a trotting horse Mr. Robert Bonner has just given for the queen of trotters—the peerless Maud S."

These are sound views. The Journal argues that the tracks on fair grounds should be made better, and that pains should be taken to exclude old "ringers" from the competing lists.

"Our fair management, as constituted at present, is powerless to reform these and many other abuses. Their only remedy is to join the National Trotting Association, which would not only lift them into national importance, but clothe them with authority to adequately punish all fraudulent entries, and conduct the races upon authoritative and systematic regulations. The time is not far distant when the country and State fairs will be the leading places of competition in trotting contests. These fairs seem to be the compromise grounds upon which all classes of people, the church communicant as well as the citizen of the world, can meet together to enjoy the one supreme national amusement of America, that of fairly contested trotting races. It therefore becomes the managers of our county fairs not only to become an integral portion of the national trotting congress, but to throw around this exhilarating pastime all the guards of honesty and respectability that the moral sense of the body politic tacitly demand. When these precautions are enforced, our county fairs will become more popular than has ever been the case in their history heretofore."

Years ago, when nearly every agricultural journal in the land was fighting the Turf, Field and Farm on this fair-speed ring question, we contended that it would be better to do away with the agricultural "horse-trot" than to keep it going under the loose and happy-go-lucky system then in favor. Ringers were allowed to sweep the board and weak-kneed judges, ignorant of all rules, occupied the judges' stand and permitted things to go on which rendered the so-called tests but little better than a mockery upon justice. We referred the managers of fairs anxious to get out of the wilderness to the National Trotting Association, with its admirable code, its powerful machinery and far-reaching penalties; and some of them, we are glad to state, profited by our advice. The Live Stock Journal does well in stepping upon our platform. Discipline will make the speed-ring a safer test and render it far more attractive to all who visit the grounds of the agricultural fair on which no form of gambling is tolerated.—Turf, Field and Farm.

Local Fairs as Educators.

Farmers have not as cordially devoted themselves to the success of annual fairs as their importance demands. The local annual fair is the farmer's home school, and should teach a valuable, practical lesson. The fair should be expected to bring together the best evidence of the advancement of agriculture in its district. If the farmers in the district, representing by the annual fair, entered into it as a matter of personal interest, competing whenever an opportunity offered, offering prizes in all those departments most requiring improvement, stimulating a lively rivalry, such enthusiasm would produce most unexpected progress, and soon give the fair a wide reputation.

The fair is capable of being organized into a most instructive school in any or all departments of agriculture. Let us suppose that cattle feeding for beef is an important industry in the district. Now this business, by some, is supposed to be well understood by farmers, and they are hardly aware that anything remains to be learned about it; but when you meet one who holds that opinion, just ask him what it costs, accurately, to raise a thrifty steer the first twelve months. He can do nothing more than give a guess at it. As he does not know the cost of the steer, he does not know whether it is kept at a profit or a loss; this is the precise state of agricultural knowledge upon this matter. But a proper management of the fair will soon produce accurate knowledge on this question. Let \$40 be offered for the best two-year-old, and \$20 for the best yearling, and half the amount to the second best, with a full account of all the food given in separate periods of six months, making it easy to determine the real cost of the animal; this will not only render it easy to figure the cost of the animal at one and two years old, but it will show another important fact, the cost of keeping at different ages. This point would be of the greatest consequence to the old-fashioned farmers, who have been wont to consider beef under three to four years old as of very inferior value, and

who have never discovered that their steers do not pay their keeping in gain after they are two years old. This test in actual feeding will show them that the younger the animal the less it costs to put on a hundred pounds live weight—that it takes less food the first six months than the second less the second than the third, and less the third than the fourth six months, and so on; and when this law is thoroughly understood, the beef-producer will govern himself accordingly.

The fair is the practical school to teach each principle. Every prize offered should be for the illustration of some important point in agricultural practice; and as the feeding of live stock absorbs more of the capital and time of the farmer than any other specialty, so it should occupy a very prominent position at all our local fairs, and the prizes should be given to illustrate in a practical way all the live-stock specialties. All breeds of cattle should be encouraged alike, for each breed has special qualifications adapting it to certain localities. All matters in farm practice should be illustrated at our fairs, and every farmer should regard it as his duty to assist in building up these local fairs.—Live Stock Journal.

SHEEP.

What Shall Sheep Breeders Do?

We are told that "in a multitude of counsellors there is safety." This may be true in a general sense or perhaps in some particular cases, but as applied to the conditions and circumstances of the flock-masters of the country, it seems rather difficult of belief and application. It is one of the easiest things in the world to give advice. It is not always so easy to follow it. It can not be disguised that sheep husbandry all over our land is to-day at or below zero. The breeding season is at hand, and every breeder is called upon to decide for himself what course is wisest to pursue. Shall he sell? Where is the purchaser? Shall he increase his flock, which is already kept at a loss? Shall he keep the ram away from his ewes and feed them for the butcher? Shall he purchase a larger ram than he has formerly used, and attempt by crossing to secure a larger carcass, without regard to fleece, or, rather, with the certainty of sacrificing the fleece while enlarging the meat supply? Can he hope to establish a new breed by judicious crossing, when hundreds have most ignominiously failed? Is there any way under heaven whereby his flock can be saved and he made once more to yield him a satisfactory return for care and labor and expense? These are not idle questions, prompted by any temporary causes of discouragement, they are asked by numbers of anxious inquirers every day in the week, and the responses are more numerous than satisfactory. The truth is, that with the low prices consequent upon the tariff reduction of 1883, there arose a feeling of despondency among the wool growers of the country very general, quite natural and easily accounted for. Many were inclined to give up and abandon the business at once, but they were told that the fall in prices was only temporary, caused largely by the efforts of speculators, not justified by the action of Congress; that a reaction must take place, and by the time the clip of 1884 was ready for market, prices would find their level, and all would be well again.

The clip of 1884 has been mostly thrown upon the market at prices as much below those of 1883 as those of 1883 were below those of 1882. It reminds one of the traveler who inquired of a man, when about to cross a slough, if it had a hard bottom, and was told it had; and when his horse sank below the saddle skirts, he asked his informant for an explanation, and was told that the bottom was hard enough, but he was not half way to it. The American people are not accustomed to sticking to a non-paying business for any great length of time after its non-paying qualities are fully developed, and consequently the number of sheep and flock-masters has largely decreased within the last eighteen months. Sheep that in the Spring of 1883 could have been sold, and were sold at from \$3.50 to \$7.50, can now be bought at from \$1 to \$2.50, and scarcely any demand at those figures. Men who have been in the habit of selling each year, until 1883, from 50 to 100 stock rams, at fair prices, have now on hand the increase of two or three years unsold and uncalled for, and every man who knows anything of the business will understand that this means a halt until something occurs to restore confidence. The wool interest in this country, while it embraces over a million of flock-masters, is mainly indebted for the influence it has exercised to a much smaller number of careful, intelligent, painstaking breeders of fine-wool sheep. This class of men have really furnished to the great mass of wool growers their stock sheep, until the character of the great body of the sheep of the United States has been fixed by the Merino sheep breeders. It is clearly demonstrated that no other sheep can compete successfully with the Merino in large bodies, and the Merino is therefore, par excellence, the ranch sheep. It is about as well ascertained that the conditions of ranch sheep husbandry forbid their raising their own stock rams, at least for many years, if not for all time. They can better afford to pay for the improved blood of the thoroughbred ram than to attempt to raise him. As things now are, the Eastern breeder can not afford to sell at prices that the Western or Southwestern ranchman can afford to pay. What will be the consequence? It seems as if the quality of the ranch sheep must deteriorate, or at least improvement will cease, and thus widespread disaster and loss result to the wool growers generally in our Government.

The production of clothing wool will inevitably be greatly lessened, the small woolen factories be crippled, if not disabled, and the parties to be principally the gainers will be the foreign wool growers, who can, by virtue of their climate, grow cheaper wool than we can, and, by virtue of our tariff reduction, can bring it into our ports and drive our wool growers and our sheep out of the business. We are not monopolists; we are no more selfish or exacting than the sugar, iron, woolen manufacturing, and various other interests are who are clamoring for protection. It is to be hoped that we may get a fraction of what we are entitled to, even from the American Congress. If that august body of the wisdom of the nation will deign to give the interest of the wool growers a moiety of the consideration they give to the nominating conventions which place them in the line of promotion, they will be able to do the country some service, and "they will know it." By restoring the tariff on wool and wooleens, as it was fixed in 1867, they will enable each wool grower to answer the questions mentioned in this article for himself, and to shape his action accordingly. I should be glad to answer them myself, but hesitate, because of the uncertainty of any future legislation on the subject, and do not assume a fore-knowledge greater than human.—A Breeder in Live Stock Journal.

ADVERTISING RATES.

Displayed, \$1 50 per inch each insertion or pro rata for less space. Reading Notices set in brier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent will be allowed on 3 months, 20 per cent on 6 months and 30 per cent on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 60 cents each insertion.

San Francisco, - Saturday, October 25, 1884.

"Doping" Horses.

There appears to be again a necessity for such punishment as was awarded at Newmarket, England, in the early part of the present century, when a culprit was hanged to death for poisoning the water troughs from which the horses drank. There is little question of horses being dosed during the circuit, and though absolute proof may be lacking the only hypothesis on which several defeats can be logically based is that the animals were poisoned. There were two cases so palpably the result of practices of the kind that no other explanation can be given consistent with the previous history of the beaten horses. One of these we saw, viz., the race when Prince of Norfolk was beaten by Philip S. At no time during the run of one and a half miles did Princes show any capacity, for though the two ran locked for half a mile the time was slow, 52½ seconds, and before another furlong was compassed he could scarcely gallop as fast as a saddle pony. It is true that the hetting—usually a good guide—did not show that it was a preconcerted plan, as the Princes was the favorite at long odds up to the time of starting, though that may have come from a lack of certainty in the potion being administered on the part of those who laid the scheme, or a lack of funds to carry out the plot. Again it may have resulted from accident in place of design, and the cause of his poor display ascribable to inadvertency in adjusting the throatlash. In this connection a short history of a case may be of service in coming to a conclusion. In 1869 we had a mare, Columbia, engaged in a "3 in 5" race at Chicago. There was a large field of starters, among them, Gilroy, the sire of Grinstead, and Boh Lee. Coyle had been training her, but had to leave on account of ill health, and his place was filled by a man who assisted him. The course was very deep, the inside track at Dexter Park, and following the advice of the trainer she was "laid up" for two heats. He urged the same tactics for a third heat, but becoming suspicious of his intentions the rider was instructed to win it if he could and make running from the start. The heat was won so easily that she became the favorite in the betting, and we solicited William Jennings to look after her between the heats. He had been hacking her and stood to win quite a sum if she proved victorious. He reported that she had "cooled out" admirably and he had every confidence in her ability to win. In order to run the mile the track had to be "lapped" about one hundred and fifty yards. The same instructions were given the jockey to run for the heat unless he got a very bad start, and to let the mare stride along from the dropping of the flag. When the riders were mounted the trainer took her by the bridle and led her to the starting point. She got a good start and passed the stand a length in the lead. Before reaching the quarter pole she almost came to a stop and could scarcely gallop thereafter, being a long way outside of the distance. Having the management of the track we could not go to the stable until the racing was finished, and then found the trainer missing, and the jockey informed us that when he removed the bridle he found the throatlash so tightly drawn that he could scarcely unbuckle it, and that just before the mare stopped he had "taken a pull" and felt sure of winning. The pull had increased the pressure on the windpipe and the mare was virtually choked. The trainer ran away, as he well

knew that job was too apparent to conceal his part, and he had succeeded in drawing up the throatlash in walking from the judge's stand to the starting point. Carelessness might accomplish the same object as design, and from the way the Prince ran it may have been that his breathing was restricted in a like manner. According to the statement of those who watched the pacing race in San Jose closely there is not a doubt that Maud B. had been fixed for the occasion.

After being "warmed up" she could not score with anything like her usual speed. She was more than unsteady, appeared to be in a daze, and when recovered from a break wobbled about with a lack of energy very different from her usual movements. There was another strong point to sustain the charge, and if true conclusive evidence that her condition was known to a few of the bettors. The hetting can usually be depended upon to give a clew to nefarious practices. And when the purpose is to have a horse beaten by the rascality of rider or driver the rates will show the intention. When the poisoner accomplishes his object it may not be so clearly shown. He is afraid to make known his nefarious job to many confederates, and the lack of money to consummate his plans does not produce the usual revulsion in the odds. Effectual measures were taken at Sacramento to discover what was likely to be the course of those who were suspected, and in all probability detection would have followed an attempt to carry out their schemes. We do not know what the punishment is, under the present code, for the offense, but if not severe enough to lock up the perpetrator for years in the penitentiary, measures should be taken to provide for a law that will at the next meeting of the legislature.

Winter Training of Racehorses.

That the climate of California gives the best opportunity for the continuous training of racehorses, during the whole of the year, of any other section of this continent is generally acknowledged. There are places, when such unusual rains come, as was the case the latter part of the early Spring of this season, that the work may be interfered with, though the infrequency of such an occurrence does not materially affect the situation. Thus at Santa Anita last Spring there were weeks when the horses could not be got out of the stables; but that was the first instance in many years and may not happen again for a long time. But there are many places in California where the heaviest rains are only a temporary interference, and within a few hours after the actual downpouring exercise can be given. Santa Cruz is one of them, as the course there is made on ground through which the water readily penetrates, and is at such an elevation above the hay as to afford the surplus fluid a speedy exit. The plateau on which the course is built is nearly level, and the soil is a sandy loam, with enough of the latter to present a firm surface which sheds the water freely when there is more than a gentle shower. The hay is within a furlong of the track and at the highest tides the hanks rise several feet above the water mark. This gives both surface and sub-drainage, and though there is no trouble at present a very little expense would perfect the drainage so that a deluge would be inoperative for harm. We understand that the course at Pleasanton has like advantages and that during the heaviest rains of last Winter there was no hindrance to the exercising soon after the water ceased falling.

We have heard that one of our prominent stables was to be transferred to Mobile after the close of the Blood-Horse Meeting, and though our informant stated that he had learned that such was the intention from good authority it is likely to prove one of those idle rumors which has little foundation. There is no question that Mobile presents advantages over any other portion of the East or South for the Winter training of horses. Those who have tried the experiment have been pleased with the result, and, doubtless, there will be a large number of horses kept there when the advantages are better known. As headquarters for those who intend to take part in the Winter campaign it can also claim superiority over any other locality from contiguity to points at which the Winter racing will come off. But we do not think that it would be sound policy for the owners of California horses to engage in a Winter campaign, as by doing so they would lessen their chances of success in the later meetings when there is so much more money to run for. It is evident that the Santa Anita forces began too early, and though the dohrt was at Covington, May 31st, before the season came to an end the brilliant promise of the first gave way to a succession of defeats. This may be partly ascribed to the break in training occasioned by untoward weather before leaving home, though if the racing calendar he consulted it will be evident that the horses which ran frequently at the Winter meetings failed to sustain their reputations during the Summer and Fall.

The Coming Race Meeting.

It was a wise course changing the time of the Fall Meeting, Pacific Coast Blood Horse Association, so as to secure a longer interval between election day and the opening of the meeting. The turmoil and anxiety will be abated by the 15th, as with the ten days which intervene to bring the intelligence there will be time enough for an absolute knowledge of how the great race has terminated. It is beyond ordinary probability that the contest will prove so close as to require the official count to decide the victory, as even remote sections are so nearly within the range of telegraphy that a few days after the ballots are cast will be all sufficient to aggregate the votes. Whichever way it goes the finish will relieve the long tension due to prolonged excitement, and in this happy country those who have been bitterly antagonistic in their political views will heartily greet each other at the races with the best of feeling.

Then, too, the racing is nearly certain to be so spirited as to drive away all the gloomy recollections incidental to defeat, while those who have "plunged" on the winning side could not be kept away with a six-inch cable. That the racing will be more than ordinarily good is as nearly assured as future turf events can be foretold. The horses in training at Sacramento, and which have not run since the State Fair, are reported to be doing exceedingly well; there are like reports from Rancho del Paso, and those which have made the southern tour have returned in good shape, and will only require a short rest to put them in prime condition. It must be borne in mind that the nominations and entries close on the 1st of November, a week from to-day. The only exceptions are the fixed events which have already closed, and the purses left open until the horses arrive in order to arrange them more satisfactory than if fixed now.

What Is It?

There is a general impression among those who have the charge of horses, that a drug can be administered which will remain comparatively inert until the animal is "warmed up," when the evil influences become apparent. In our limited experience we are not aware of any drug that will remain latent in the sense that is claimed, although effects of medicines can be hastened by exercise. According to those who think their horses have been poisoned there are differences. In one case the animal become sluggish, an apparent lack of nerve force, while in others there is a tendency to wildness. The trotter or pacer becomes unsteady, the racehorse rushes off uncontrollable to die away to nothing after the crazy effort. Should any of our readers who are learned in the effects of poisons, elucidate this question we will be much obliged for contributions on the subject. A knowledge of what is used will aid in guarding against it, and an antidote be of great service. The general purpose is to incapacitate without direct effects, so that the failure to perform may not be evident until the race has progressed far enough to ensure against the scheme being rendered abortive. To win wagers is the governing cause, and in a large majority of cases the only end sought. If merely to gratify malice the potion would be sufficient to cause death, or severe sickness, and there are hundreds of drugs which will carry out such intentions. But when the design is to prostrate after a certain interval, or under conditions which always are found prior to a race, there must be a skilful concoction of agents to carry out the scheme.

The Trotting Meeting.—Bay District Course.

Next Thursday, 30th inst., the entries to purses offered by Bay District Association will close. The prospects for a continuation of the present fine weather could hardly be better, and in that case we anticipate some very good sport in the trotting line. There are plenty of horses still in training to fill the purses liberally. And now that the best of the various classes have lowered their records there is a chance for those which were overmatched through the circuit. With good weather the track will be in the best possible condition, and as November is one of the pleasantest months of the San Francisco season, there should be a "good time."

F. W. Dunn.

It will be learned with general regret that Mr. F. W. Dunn, known through his letters to this paper and others, and his excellent judging at last year's Pacific Coast Field Trials, is seriously ill. He has been complaining of nervous exhaustion and started East two weeks since to recuperate, but had to be removed from the trains at Evanston, Wyoming Territory, being unable to proceed safely. His physicians hold out but little hope of his recovery.

Bonner and Bergh.

The following characteristic letter from Robert Bonner to Henry Bergh is a comprehensive reply to the strictures of the crotchety president of the society to prevent cruelty to animals. It is to be sincerely regretted that the good work accomplished by Mr. Bergh should be so sadly marred by his crazy freaks, but even these can be condoned when his whole services are taken into consideration. In regard to the severe punishment of race-horses, Mr. Bergh is undoubtedly correct, and there is not one owner in a hundred who does not thank him for his efforts to put a stop to the unmerciful flagellations at times administered. For this the public is more to blame than the jockeys, and unless a horse is whipped and spurred to the extent of the power of the rider, spectators are prone to say that there was no intention to win. The small bettors are usually the ones to make the unfounded charge, and with a probability of suspension or expulsion before him the jockey does all in his power to escape the indictment. Many races have been lost by severe castigation, and we doubt if one victory has been secured through the savage use of whip and spurs that could not have been won by more merciful treatment. In nearly every case a proper husbanding of the powers until the proper moment arrives, and then encouragement in place of abuse; at the most a light prick of the spur or a sharp reminder in the shape of a light touch of the lash, and above all the "magnetism" which imbues the animal with the spirit of the rider are more to be depended upon than brutal harshness. The letter also shows that Mr. Bonner has determined to send Maud S. to Kentucky, and if this wise movement was further supplemented by sending the reining Empress to California for a Winter's sojourn, there is little doubt that there would be still greater benefits. Without the opportunity to supple her joints, give tone to her tendons and increase her nerve force in our "glorious climate" her younger rival may regain the sceptre, provided always that he is granted a chance to inhale the life-giving breezes of the Pacific.

OFFICE OF THE LEDGER,  
New York, Oct. 16th, 1884.

DEAR SIR: I thank you for calling my attention to the newspaper clipping which states that it is cruel to give a horse repeated trials in an endeavor to heat 2:10. Let me answer by stating the facts. Maud S. as you know, is the only horse that has beaten 2:10. Her record, as nearly every one knows, is 2:09 3/4. Mr. Vanderbilt believes, her trainer believes and I believe that she is capable of beating this time. In fact every horseman, so far as I can learn, who saw her trot in 2:12 1/2 in a gale of wind on Tuesday last, believes it, and I have concluded, at her trainer's earnest solicitation, to let him take her to Kentucky, her native State, where she can have an opportunity in a warmer climate to show what she can do. Even if she should not best her own time this Fall she can be kept in training longer there and in that way be prepared earlier for a performance next year.

But in the newspaper paragraph which you inclose, it is stated that it is cruel to give her these repeated trials "under whip and spur" to heat her own unparalleled record. It is a very easy matter to reply to that statement. She has never made but one attempt to heat her record, and that was when she trotted her wonderful mile on Tuesday last, and on that occasion she was not touched with a whip even once, for her driver did not carry a whip with him, and as for "spurs," every one knows that in driving a horse to any kind of vehicle it is impossible to use a spur. It is as easy and natural for Maud S. to trot fast as it is for an ordinary horse to move at a brisk pace in the family carriage.

Both her trainer and her groom have a positive affection for the mare, and would not for a moment think of treating her cruelly. Let me give you an instance of her groom's affection for her. He sleeps on a cot in her stall, and one night recently when the weather was warm but threatened to turn cold, he purposely went to bed with very little clothing on himself, knowing that if it turned cold during the night, he would feel it and would wake up, when he could put additional clothing on the mare. If the men who figure in divorce suits would treat their wives half as kindly as this, our courts would not have so much to do. Yours truly,  
ROBERT BONNER.

A Merited Recompense.

We are much gratified to learn that our old friend "Joe Elliott," of the New York Herald, has been presented by the proprietor of that paper with a retiring salary of \$5,000 a year during life. Mr. Elliott has been connected with the Herald for nearly the whole of his life, entering the service of the founder when a young man, and now he is something over the "three score and ten," which is considered a proper time for active work to cease, but as he is reported to be as " hale and hearty " as when we last saw him, twelve years ago, there is likely to be many years for him to enjoy before his race comes to an end. We merely reiterate the universal desire of those who have known him, that there may be very, very many happy years in store for him. Mr. Elliott is the oldest "turf reporter" in the United States, and his reportorial work in this line, has been a "labor of love." Acting under his advice the Herald was the first of the great dailies to give full space to the sports of the turf, and it is beyond question that the course was wise from a financial standpoint. It largely increased the circulation and advertising patronage, and from a few horse and turf advertisements columns have been required

to present them. We were somewhat startled at Fleetwood Park, thirteen years ago, by Mr. Elliott brusquely informing us that he was "turned out." Taking it literally we proffered sympathy when he replied that condolence was uncalled for, as Mr. Bennett had placed him at the head of the turf and horse bureau, with power to employ assistance, had increased his salary \$1,000 a year, and granted him permission to travel where and when he liked, all of his expenses to be paid by the Herald. The last clause was what he meant by being turned out, a relief from the constant labor of so many years, with a chance to select the pastures which were the most enticing, and which would extract all the possible benefit from the "let up." As he has visited all portions of the United States East of the Mississippi, and made a trip to the other side of the Atlantic, we hope he will employ a part of his leisure time in a journey and long stay on the Pacific Coast. We can assure him a hearty welcome, as in addition to the many who will be proud to greet the veteran turf-writer, there are quite a number of the oldtime New Yorkers, who have never forgotten the faithful and public chronicler of events, and cherish the remembrances of Auld Laug Syn.

Arno Farm, at Arno Station, Sacramento county, is offered for lease for a term of years. The place is extensive, with grain and pasture lands, family residence, barns, stables, blacksmith shop, trainer's cottage, house for laborers, corrals, paddocks, training track, windmills, engine, tanks, and all the appurtenances of a stock and grain ranch. Possession will be given immediately. Application may be made to Beatty & Denson, attorneys, Sacramento, or to Mrs. Alice M. Valensin on the premises.

The auction sale of horses belonging to the estate of the late Charles McLaughlin will be held at the ranch, near Bantas, next week, commencing Wednesday the 29th, and continuing for three days. Particulars regarding the terms of sale, running of trains, etc., will be found in the advertisement.

The Kentucky Live Stock Record says: "We do not believe any club should give five-furlong races for all ages. Racing is given and conducted for the improvement of the horses of the country, but we can see no benefit to arise from thousand-yard racing for all ages. It is well enough to run these short courses with two-year-olds, but three-year-olds and upwards who cannot run a long distance in the fall should be sent to some other service. Such races are an invitation to train and run a lot of half-bred speedy quarter horses, some of whom have little or no pedigree, and a few took part in these races and were backed to win." This is just what we have been arguing for two years past.

We have received the premium list and speed programme of the first annual fair of the Arizona Industrial Exposition, to be held at Phoenix, November 10th to 15th, inclusive. The premiums for live stock are in cash, medals and diplomas, and the classification seems to be comprehensive. In the speed ring purses are offered for running, trotting, pacing, road teams, cow-ponies, mules, hurros, etc., with foot races, and the usual border variety.

John A. McKerron, of this city, donated a fine driving whip to the Sonoma County Agricultural Park Association, to be held at Phoenix, November 10th to 15th, inclusive. The premiums for live stock are in cash, medals and diplomas, and the classification seems to be comprehensive. In the speed ring purses are offered for running, trotting, pacing, road teams, cow-ponies, mules, hurros, etc., with foot races, and the usual border variety.

W. H. McCarthy has recently purchased of B. B. Kenney, of Lexington, Ky., the brown pacing gelding Buldozer, 2:21. He is six years old, by Standard Bearer (by Voln-ter), dam Puss, by Kinney's Eclipse. His first and only race last year was at Paris, Ky., when he made a record of 2:30 3/4, which he reduced this year to 2:21 1/2 at Chicago. McCarthy says, "look out for another Brown Jug."

The greatness of Gny Wilkes increases as it travels. The New York Sportsman makes him out a four-year-old, and credits him with beating Jay-Eye-See's time, almost reaching the top record. Unfortunately for the new records Wilkes is six years old, but there is no reasonable doubt but that he could have performed as well in his four-year-old form had he been trained and tried.

At a meeting of the Kentucky Trotting Horse Breeders' Association, held at Lexington on the 16th, the following officers were chosen for 1885—President, Major P. P. Johnson; First Vice-President, Col. R. West; Second Vice-President, Major H. C. McDowell. Directors—Isaac Smith, Crit Davis, W. H. Wilson, R. P. Todhunter, and T. Anglin.

James McLaughlin, identified for several years with all of the great successes of the Brooklyn stable of Messrs. Dwyer Bros., closes his engagement with them the present year and done the cherry and black of the Ranocas Stable; at least that is the current rumor at Jerome Park. His salary will be the largest ever paid in America to a jockey.

Mr. P. Lorillard, Jr., has diehanded his racing stable, or what was left of it. Nimrod has been sold, and Petition and Neutizen will be sent into the stud to be bred to Siddartha. Mr. Lorillard has not given up racing, but will probably start out afresh in the Spring with a new lot.

The well-known horse, Lloyd Daly, 3 years, by Kyrle Daly—Levette, fell in a race at Toronto, last week, breaking his fore leg, and necessitating his being destroyed. He was the best racehorse in Canada, and performed splendidly at the Chicago meeting.

Winnemucca, Nev., will have a three day's race meeting next week, commencing Wednesday.

Maud S. is domiciled at Lexington and doing nicely.

Racing at Lakeport.

Twelfth District Fair, Lakeport, Sept. 23d—Running; Purse, \$100; three quarters of a mile.	
F. F. Hawley's Ironwood, by Ironclad.....	1
L. Rainey's Billy Johnson, by Glenelg.....	2
Time, 1:37.	
Same Day—Running; purse, \$100; half a mile.	
L. Rainey's Del Paso, by Shannon.....	1
John Poe's Estelle Clark, by Ironclad.....	2
H. Helman's Don Pedro, by Lilburn.....	3
Time, 3:51.	
Same Day—Trotting; purse, \$50.	
Floyd, by Milton Medium—J. D. Adams.....	1 1 1
Maud Medium, by Milton Medium—H. H. & W. C. Helman.....	2 2 2
Time, 2:59 1/2, 2:56 1/2, 2:56 1/2.	
Sept. 24th—Trotting; purse, \$100; three minute class; mile heats.	
Mamie Kobl, by Kentucky Hunter—John Spaulding.....	2 1 1
Iraqua Maid, by Ethan Allen—H. T. Hatch.....	1 2 dr
Secretary, by Gen. McClellan—L. H. Boggs.....	dis
Time, 2:46 1/2, 2:43 1/2, 2:53 1/2.	
Same Day—Trotting; purse, \$100; district three year olds; mile heats.	
Allene, by Son of Ethos—J. M. Hanson.....	2 1 1
Munie, by Milton Medium—L. H. Rainey.....	1 2 3
Frank, by Overland—H. T. Hatch.....	3 3 2
Bessie E., by Milton Medium—J. W. Boggs.....	4 dis
Time, 3:38, 3:35 1/2, 3:29 1/2.	
Sept. 25th—Running; purse, \$200; dash of a quarter of a mile.	
W. L. Rainey's Morning Star, by Brick.....	1
Geo. Hammack's Nettie Moore, by Stonewall.....	2
Geo. McCullough's Johnny Moore, by Johnny Moore.....	3
* Bolted.	
No time.	
Same Day—Trotting; purse, \$90.	
Secretary, by Gen. McClellan—L. H. Boggs.....	1 2 2 2 1 1
Brown Neil, by Taylor—J. D. Curtis.....	3 3 1 1 3 2
Maud Medium, by Milton Medium—H. H. Helman.....	2 1 3 3 2 3
* Fifth and sixth heats trotted Sept. 26th.	
Time, 3:00 1/2, 3:06 1/2, 3:00 1/2, 3:02 1/2, 2:55 1/2, 2:57 1/2.	

Quarter Stretch Points.

The sports who frequent race tracks are always ready to "make a killing," and in truth are not at all saintly or particular as to methods. These speculators are ever on the watch for points and sometimes get them. The black mare Minnie Monlon expelled at Cleveland two weeks ago, for ringing under the name of Bahy Mine, is a smooth going black mare, a good actor, but has a habit of switching her tail which is sometimes confined with an iron crupper. The sports used to judge of the driver's intentions by the crupper—if she wore it she was going to be driven to win, if not, they laid their money against her. A famous runner that has been in the front rank in California and the East for the past two years, used to be managed so that the smart ones did not need to be told what the programme was. He was next to invincible at his distance, and when a competent jockey was put up the sports knew that the horse would land the race if he could, and he generally could if he tried. If, however, a boy from the stable was mounted, they knew that the horse would finish in the ruck. But this sure thing game was eventually spoiled, and the over anxious sports themselves killed the goose that laid the golden eggs. In one race, after the stable boy had weighed on, a few greedy ones piled in their money on the horse at good odds, and then made such representations to the judges at the last moment, as resulted in the horse being put in charge of an officer of the association, and a reliable and skillful jockey mounted in place of the boy. The race and money was won handily, but this interference of the judges threw such an uncertainty around the business, that the manager of the stable never tried the game again.

Sir John Willoughby will, it is rumored, shortly submit his stud of racehorses for sale by public auction. Should he do so it will be curious to note the difference between buying and selling rates. Sir John is a bold gambler, who gambles rather than bets, as betting, a calculating science, is understood, and failing big runs of luck, has very little chance of earning a balance in his account by the end of a year. He has been under the guidance of the accomplished diplomatist, Captain Machell, for a season or two, but nothing can save a gambler at heart who does his own betting. I do not say that Sir John has lost money, but the announcement or rumor that he will sell off looks like that being the fact, and should it prove to be true, none will be surprised. Harvester was, after all, not cheap taken, though he looked so a month after the hammer fell at Lord Falmouth's sale; and Queen Adelaide, while promising her best, has always turned out a fraud. Set Queen Adelaide in almost any company, and a judge would pick her as a real good one. She is not half so good as she looks though, and decidedly soft.—Sportsman.

Jim Renwick is reported to be going all right again and will probably be a dangerous horse at Baltimore and Washington next week. He is still Mr. Levi Knott's property, that gentleman having refused \$5,000 for him at New York, in which I think he committed a grave error. He only gave \$800 for him in the first place, and the horse has won nearly seven times that amount since he was taken East. Renwick was lame in one of his ankles about six weeks ago, and should he break down, he could not be sold for half what Mr. Knott gave for him. He is a good horse up to a mile, but not quite yet a world-beater. Buchanan still continues in charge of the horse and will probably winter him at some place in Virginia or South Carolina. Having been brought up on oat hay in California, the big horse does not relish the hay of the Eastern States, and has eaten rather gingerly all through the season.—Oregonian.

At the Kentucky Trotting Horse Breeders' meeting at Lexington, on the 13th, the eastern two-year-old record was slightly reduced, the winner of the stake doing the first heat in 2:30. The best previous record was that of So So, 2:31. Wildflowers, 2:21, still leaves a large gap to be closed. The youngster that made the new mark was L. E. Simmon's roan colt, Eagle Bird, by Jay Bird, dam by Geo. Wilkes. He is an inbred Wilkes, his sire, Jay Bird, being by Geo. Wilkes, dam by Mambrino Star, son of Mambrino Chief.

The breeders of trotting horses in Illinois met at the Sherman House, Chicago, Oct. 8th, and completed their organization. The officers elected for the ensuing year are: A. G. Danforth, of Washington, president; C. B. Allaire, of Peoria, secretary and treasurer. The yearlings in that State have a trotting record of one-half mile in 1:33, two-year-olds a mile in 2:40, four-year-olds in 2:23.

Another lot of fine horses were shipped to Japan by the steamer of last Saturday. Among them is the brown stallion, Mambrino Belmont, by Carr's Mambrino, bred by W. O. Hatch, of San Jose. This colt is a beauty, of fine size and substance, and took the blue ribbon as a two-year-old at the State of last year.

## STABLE AND PADDOCK.

## Whoh!

[Col. M. C. Weld, in Philadelphia Press.]

A simple word—a verb in the imperative mood, but the most important word in the equine lexicon. It is really a matter of vital moment, often of life or death, that a horse be well taught not only the meaning of whoh! but obedience to the command—unflinching, prompt, instant and hearty obedience. He should throw his whole being into the effort to stop.

The preeminent Whoh! should bring any horse to a dead standstill anywhere, at any time, and by whomsoever spoken to him.

It is a little annoying sometimes to have a horse stop when the driver of an adjacent vehicle says whoh! to his horse, but it is a fault easily forgiven and the horse is not to be dealt with harshly which stops thus by mistake. It is infinitely worse not to have him stop at the word when spoken by his own driver. In my experiences many otherwise well-broken horses will only slow up and gradually stop at the word. This is all wrong and often dangerous. The reason for stopping is frequently seen only at the last moment of safety. If it requires both rein and word, and a violent tug or jerk at the rein, and a loud shouting of the word at that, the moment will be passed—the child will be run over—the collision with another vehicle will have occurred, and the damage done. Beside, one is often not so situated as to be quick with the rein—for instance: One stops upon the road to take up a neighbor who is walking home from the village. The driver takes the basket, and, before the person can get into the wagon, the horse starts. In this case the voice only can control the animal. I know a very expert driver, who controls his horses largely by the voice. He uses the word "aye," repeated twice when he wishes his horses to slow up. Thus he brings the team to a deliberate stop with "Aye-aye! Whoh!" Or he checks their speed without their stopping with "Aye-aye—Aye-aye."

In New England a common, and to me a very disagreeable, sound accompanying whoh is the prolonged sound of sh. It is used by some as a slowing up order, by others in place of whoh, while whoh is used for slowing, thus: "S—h—Whoh!" or "Whoh—sh!" No doubt in other parts of the country other terms and sounds are employed. That there should be uniformity admits of no question and certainly Whoh! should always mean stop short.

A team that minds the word well when going ahead sometimes does not recognize it when hacking, and thus, in spite of the shouting of the driver, unless he is very quick with his whip, will send a carriage back into the ditch, or against a curbstone, or otherwise endanger it. A horse should therefore be taught that Whoh! means stop, whether he is hacking or going ahead. Whoh! in backing must be obeyed entirely without any auxiliary pull upon the rein, which would only tend to increase the difficulty. Some drivers use the word whoh! to indicate slowing up, the whoh-hack for stop short. This is wrong—for there should be no confusion or association of ideas between the words. True a horse that is going ahead cannot back without stopping; but, if whoh-hack! means to stop, what does whoh! alone when a horse is backing? It leads eventually to confusion in the horse's mind.

In breaking a colt or any young horse to mind the word whoh! promptly, it is best to attach a safety rein to the bridle or headstall. One may be easily applied in this manner: Take a strong, flexible five-eighths or three-quarters of an inch strap having a buckle in one end. Then, with the strap laid over the colt's neck, pass each end through the rings in the bit from the under side, and buckle them together upon the top of the head. A strap with two buckles may be used, passed through the bit-rings in the same way and fastened to the ends of the head-piece below the buckles of the check pieces. An ordinary single rein is to be buckled to the middle of the right of this gag-strap, and goes back to the driver. The effect of drawing upon this rein is to put a severe strain upon the angles of the mouth, and to draw the head in towards the breast. A jerk is especially painful. At the word whoh! a short, quick pull on the safety rein forces the animal to stop instantly, and by a hard pull he may be thrown upon his hanches. After a few hints of this kind the horse will be well trained in this respect, and at the word whoh! promptly spoken, will sometimes stop so suddenly that persons in the carriages will be thrown forward very uncomfortably. Still, this is an excellent fault, and really is only a lesson to the driver not to say whoh! when he does not mean it. In using the safety-rein and gag-strap it should never, never, no never, be employed without the word, and not even then if obedience is prompt and positive. Its use is exactly the reverse of the whip, and as we don't use the whip when a horse is doing his best, neither should we apply the gag when a horse is doing his best to stop.

## Oriental Notions of Color.

The Arabs at Sahara are very particular as to the color of their horses. White is the color for Princess, but does not stand heat. The black bring good fortune, but fears rocky ground. The chestnut is the most active. If one tells you that he has seen a horse fly in the air, ask of what color it was; if he replies "chestnut" believe him. In a combat against chestnut you must have a chestnut. The bay is the hardest and most sober. If one tells you a horse has leaped to the bottom of a precipice without hurting himself, ask of what color he was, and if he replies "Bay," believe him. Ben Dyab, a renowned chief of the desert, happening one day to be pursued by Saad-el-Zenaty, turned to his son and asked, "What horses are in front of the enemy?" "White horses," replied the son. "It is well; let us make for the sunny side, and they will melt away like butter." Some time afterward Ben Dyab again turned to his son and said, "What horses are in front of the enemy?" "Black horses," cried his son. "It is well; let us make for stony ground, and we shall have nothing to fear; they are the negroes of the Soudan, who cannot walk with bare feet upon the flints." He changed his course, and the black horses were speedily distanced. A third time Ben Dyab asked, "And now what horses are in front of the enemy?" "Dark chestnuts and dark bay." "In that case," said Ben Dyab, "strike out, my children, strike out, and give your horses the heel, for these might perchance overtake us had we not given harley to ours all the Summer through."

With rains come mud, and extra precaution should be used to keep the horses' feet in a healthy condition. Wash the fetlocks frequently and with warm castile soap-suds if there is any irritation of the skin; then, after wiping dry, apply a little lard or sweet oil. Grease heel, or scratches, in cold weather is much more frequent and much more severe than in warm weather. A horse that is well cared for will never suffer from either, as the disorders are generally results of neglect.

## The Driving Horse

No youth should be permitted to have, own, or drive a good horse for pleasure, until he understands how to care for it properly, and does so. The only way to keep a good horse so, is by care. If you do not have to do the work yourself, it is necessary to know how, so you can intelligently direct the labors of others. Before starting for a long drive, do not, as some foolishly do, give your horse an extra heavy feed; but give him only his regular feed, and leave the extra for him when he comes back. Drive moderately for the first few miles, until your horse gets settled, then you can go faster without injury. Many a fine horse has been spoiled by feeding heavily, harnessing at once, and then putting him down to his speed from the start. When returning slow up and walk your horse, or only jog him, a mile or so from home, if you have had a long or a spirited drive, so as to cool him off. It does not hurt a horse to water him while en route, even if he is warm, unless he is much over-heated, if you do not give him too much, and do not stop longer than to have him watered. The perspiring workers in the harvest field drink liberally of water and keep on with their work without injury. It is only the extremes that work injury to man and beast. If the horse is warm when brought in, sponge out his mouth with cool water, and rub him down briskly with wisps of straw until he is dry, and walk him around if he is very warm, to cool off gradually. If the weather is hot, put him in the stable, let him remain unblanketed, (unless he has been clipped), and out of a draught. If the weather is cold put on a light cover until he cools off and dries, and afterwards blanket or not as has been the custom. Have the shoes reset once a month.

For a puller or lugger use a large leather or rubber-covered bit, not a twisted or curb bit. We crined one of the worse luggers we ever owned by adopting just such a bit. The former is humane and effective, while the latter is cruel in the extreme and makes the horse much more desperate and dangerous.

A little linseed meal, given occasionally, will help to keep the coat bright and glossy. If the horse has been out to grass and "slobbers" badly, just before you are ready to start give him a head of cabbage—one which is not hard enough for use or sale will do—and it will remedy the unpleasant habit. In grain, oats—good, bright and clean—should be the principal food, with an occasional mess of cut feed, roots, etc., to break up the monotony. Bright, sweet hay should be the only hay given. Clover is not fit for a driving horse, though it may do for work horses.—Country Home.

## A Leaf From Turner's Book.

As I sat in the grand stand watching the trotters receiving their work, John Turner called my attention to a horse who was acting unsteady and stale, although a few weeks ago he could be scarcely whipped off his feet.

"Now you see," said he, "the effects of training a cold-blooded horse too fine. There is a horse of a great deal of speed, but he does not like to be strung out mile after mile. These faint-hearted fellows must be kept feeling well to give a good account of themselves."

"How do you handle them?"

"Well, I feel my way slow, and if they show any signs of losing their speed, and with it their courage, I let them alone for a while. A good plan with a soft horse is to work him pretty strong—say one and a quarter heats at two-thirds speed—and then let up on him a week or two before a race. He will then feel well, and the staying up work will not have had time to lose its good effects."

He next broke out with the following remark: "A game horse requires longer and finer feeding. You have seen me drive one in 2:14 that will not trot in 2:40 for some trainers. This is not because I am a better reinsman, but I have studied and understand her. I never ask for a good race until she is ready, and when she tells me she is I have put my money on her and she has never deceived me."

"You refer to Trinket," I remarked, "but she is not on the turf now."

"She will be next season, as we thought the season's rest would do her good."—Spirit.

Is your stable light and cheerful, or dark and dismal? "It is pleasant to behold the sun." There is no crueler punishment than to be immured in a dark dungeon. This should be thought of when arranging stables and pens for farm animals, but it appears to be too often lost sight of, and stables for both horses and cattle are too dark for the well-being of the animals. The eyes of horses are not infrequently injured by being kept in dark stables. Our houses as a rule are much better lighted than our stables, yet we all know how uncomfortable it is to go out of a well lighted house into the glare of sunlight. The effect is even worse on our horses and cows which are generally kept in much darker places than we are ourselves. Aside from any special effect on the eyes, light and sunshine in stables are of vast importance to the general health and thrift of farm stock, and they should always be constructed with a view to admitting as much as possible of both. In old barns and stables where the stock quarters are dark (and where they are dark they are usually damp) it will be a good idea to put in some new windows to admit light and sunshine into them. The present is a good time to attend to this, and the considerate person will see to it.

The best horse doctor is a sensible horse. Give him liberty and he will take care of himself. Who ever saw a horse running wild that was troubled with "heaves"? A nibble of the popple pole, or a bite of "rosin weed" and a full supply of grass is all he wants to put himself in a sleek, plump, happy condition; but if kept up and fed dusty hay and made subject to the natural demands of a thoughtless owner, it is no wonder he suffers. Father Clarkson says "rosin weed" is a sovereign cure for heaves, or a prevention, and any one who has seen the intelligent horse stretch his nose away over to browse it in the uncut grass when hitched to the mower has evidence in support. A good horse is his own doctor if you give him a chance.—Ex.

To a hard-working horse, repose is almost as much a necessity as good food; but tired though he may be, he is often very shy to lie down, even when a clean bed has been provided for him. Unless a horse lies down regularly, his rest is never complete, and his joints and sinews stiffen; and while it is true that some horses that sleep in a standing position continue to work for many years, it is equally true that they would wear much longer, and perform their work much better, if they rested naturally. Young, nervous horses not infrequently refuse to lie down when first made to occupy a stall, and, when introduced into a town stable, the habit may become confirmed, unless inducements are offered to overcome the disinclination.—Reynolds on Draught Horses.

## Bruises and Corns.

Bruises of the foot from stones, or gravel impacted between the shoe and foot, are by no means uncommon, particularly in horses with thin, flat soles. Horses also with good feet are occasionally lame from this cause, or from the feet having been pared too closely, so that there is not horn enough left to defend the sensitive parts from the blows and pressure to which they are necessarily exposed, and even if the shoe does not press on this thin part, any vacancy that is left may soon be filled by earth or gravel in traveling, and the same effect is produced as if the shoe were in contact with it. The manner of detecting this kind of lameness is similar to that before described, namely, tapping the foot with a hammer or lightly pinching with the pincers; and the treatment also the same, care being taken to give free exit to any matter that may be formed. A horse is sometimes observed to be tender from this cause immediately after shoeing, particularly in the fore feet and it will often be found that this arises from the toe having been pared too much. If the shoe does not press on the thin part, give a few days' rest, and the horn will quickly be reproduced and increased in thickness, but should the shoe bear on it, it must, of course, be taken off and re-adjusted.

Corns is another and very common disease of the forefoot occasioning lameness. They almost invariably occur on the inside heel, and are the result of a bruise, or rather of a succession of bruises of the sensitive sole in the angle of the heel. Except in name, they have no similarity to the corn on the foot of a man. The sensitive sole is bruised at the part, some of the small blood vessels ruptured, and the blood penetrates into the pores of the horn, causing the red appearance observable on the removal of the shoes; sometimes from continued pressure or bruising, or the severity of the injury, suppuration may take place, and matter form, as in other bruises or injuries of the sole. This must, of course, be given free exit. In other cases, a horny tumor is formed, or the injury may be even deeper seated, and, from continued repetition of the original cause, excrescence or "spicillae" of bone may be formed on the ground surface of the coffin bone. Corns may usually be thoroughly eradicated by careful shoeing and taking the pressure off the part, if taken early; but if bony excrescences have formed on the coffin bone, the part will always remain in a tender state and require care.—Live Stock Journal.

The Dublin Farmer's Gazette gives the following rules for breeding light horses: 1. Determine exactly what it is you really require to produce, and having done so never lose sight of it. 2. Procure a young mother that has arrived at maturity and is healthy, roomy, well-shaped, round, large-sized, with good temper and good action, and remember the better bred the mare is that possesses those qualities the more valuable she will be. 3. The dam, as a general rule, has more direct influence on her offspring as regards health and size than the sire has. 4. The offspring bred from greatly dissimilar parents in either size or character should never be used for breeding purposes; their offspring will certainly prove to be mongrels of nondescript character. That the parents should be as similar as possible is a rule the neglect of which has led to more disappointment than almost any other rule I know of. 5. A pure thoroughbred sire that has got good ones should be selected, and I do not believe a really good weight-carrying hunter will ever be bred from anything but a thoroughbred horse. 6. The sire has more direct influence on the bones, heart, tendons and nerves of the foal than the mare, consequently nothing but blood horses will produce stout and fast hunters. Breeding too early is quite incompatible with hardness of constitution and lasting qualities. Hence I believe the mare should be at least four years old before she is put to the horse.

Horses should be carefully shielded from the cold, unpleasant rains that are likely to occur at this time of the year. They should have access to the barn, or sheds should be erected in the pasture field where they can find shelter. If it is necessary to work horses in the rain, waterproof covers should be provided, and not only provided but used every time it is necessary to use them.

## POULTRY.

## The Broom in the Poultry House.

It is a disagreeable task at all times to clean out the poultry houses and coops, but, like every other undertaking, much depends upon the systematic manner in which the work is performed. We have seen persons labor hard all day, in the midst of filth, with shovel and hoe, cleaning the poultry house, and when the job was finished but little appearance of cleanliness was added to it. There is an easy, neat and effectual way of cleaning the poultry house, which, if adopted removes the dread and disgust of the work, and makes it a pleasure instead of an annoyance. The first consideration is the construction of the floors. Dry dirt will not answer, for the reason that it absorbs the impurities, and the filth can only be removed with the dirt, thus entailing the necessity of changing the entire floor and substituting fresh material. We have found the use of the broom to be the cleanest, easiest, and best method of removing the droppings, but in order to do so the floor must be hard. Wood is the best material, but a wooden floor is liable to become a barboring place for rats, unless it is well closed underneath, or raised sufficiently to allow of a cat or ferrier to run in and out under it. When this is done the cold air comes up into the poultry house in winter, and makes the wooden floors objectionable. Cement is better, for it not only prevents vermin from entering, but also the drafts. The cheapest way to make such a floor is to take one barrel of lime, two of sand, one of fine gravel, one bushel of cement, and two gallons liquid coal tar. Mix the ingredients dry, then add water, and spread evenly on a hard surface which has been graveled. The coal tar may be brought to a proper consistency with coal oil. It keeps away lice and colors the cement. Let the floor remain undisturbed for twenty-four hours, and add another coating in order to stop the cracks.

To clean such a floor first dust it well with dry earth, plaster or sand. A mixture of road dirt and plaster, equal parts, is best. Dust it over every portion of the floor, and dust it over the walls and in the nests. Three times a week take a broom and sweep the floor, and dust it again after sweeping, and it will be surprising to notice how nicely and easily a poultry house may be cleaned out in a few minutes. Another advantage is also secured, which is, the droppings will need no preparation for preservation, as it will only be necessary to put them in an old flour barrel and keep the barrel under cover. Such a method gives the lice but little chance for securing possession, and no disagreeable odor is at any time manifested, while the work can be done much better than with the shovel, spade or hoe.—Farm and Garden.

HERD AND SWINE.

Scale of Points in Swine.

Division of points and a numerical scale as adopted by the National Convention of Swine Breeders, 1872.

Table with 2 columns: Part and Points. Includes items like Back, Long Ribs, Short Ribs, Shoulder, Ham, Length of Body, Flank, Twist, Snout, Jawl, and Total.

Berkshires adopted at National Swine Breeders' Convention in 1872.

Color, black, with white on feet, face, tip of tail and occasional splash of white on the arm. While a small spot of white on some other part of the body does not argue an impurity of the blood, yet it is to be discouraged...

Standard of excellence of Berkshire Swine, adopted by the American Berkshire Association.

Color—Black, with white on feet, face, tip of tail and an occasional splash on arm.

Face and Snout—Short, the former fine and well dished, and broad between the eyes.

Eye—Very clear, rather large, dark hazel, or gray.

Ear—Generally almost erect, but sometimes inclined forward with advancing age, medium size, thin and soft.

Jowl—Full and heavy, running well back on neck.

Neck—Short and broad on top.

Hair—Fine and soft, medium thickness.

Skin—Smooth and pliable.

Shoulder—Thick and even, broad on top, and deep through chest.

Back—Broad, short and straight, ribs well sprung, coupling close to hips.

Side—Deep and well let down, straight on bottom line.

Flank—Well back and low down on leg, making nearly a straight line with lower part of side.

Loin—Full and wide.

Ham—Deep and thick, extending well upon back, and holding thickness well down to hock.

Tail—Well set up on back, tapering and not coarse.

Legs—Short, straight and strong, set wide apart, with hoofs erect, and capable of holding good weight.

Symmetry—Well proportioned throughout depending largely on condition.

Condition—In good healthy growing state, not over-fed.

Style—Attractive, spirited, indicative of thorough breeding and constitutional vigor.—Swine Breeders' Journal

Milk Setting.

A writer in The Tribune has been experimenting with cream, and has come to the conclusion, which seems quite reasonable, that the ripening of cream does not consist in, or necessarily include, souring.

"When I set a sample of milk for forty eight hours at sixty-three degrees in an atmosphere of pure oxygen, and another equal sample from the same mess of milk for the same time and at the same temperature, in an atmosphere containing no oxygen, both soured exactly alike and both samples produced exactly the same quantity of butter. If the ripening of cream and development of butter-flavor depends on souring alone, these two samples of butter should have been alike, since the milk and cream were sour alike in both samples; but they were not alike. They were very different, and the churning was different. The cream from the milk set in oxygen gas churned in two-thirds of the time required for churning the cream of the milk from which oxygen was excluded by enveloping it in carbonic acid gas. The butter from the former was very highly flavored and delicious, and remarkable for its long keeping. The butter from the latter was less flavored and equally remarkable for being short-lived. The milk-fats in the latter case appeared to have acquired no new flavor from the act of souring, but to have retained unchanged the new-milk flavor they had when the milk was first set. This experiment, repeated till the results were demonstrated to be uniform, is interesting as showing the fallacy of the current opinion that souring is the potent agency in ripening cream, either for the purpose of heightening the flavor of butter or to give it long keeping, or to make churning easy, for it proves positively that something else than souring is necessary to these ends, and that that something is free oxygen. Airing, not souring, is the efficient agent for effecting these purposes, but even if well aired the effect will be but feeble if the temperature is kept too low."

Early Maturity.

What age is best for heef? The increase in our exports of live cattle during the last few years has called the attention of the American farmer to the profitable age for beef. It is evident that the greater value we can concentrate into a larger animal within a given time the greater will be our profit. The United States far exceeds Great Britain and Europe in the amount of meat consumed per capita, and an increase of sales can be reasonably expected when the best quality is offered them. The English farmers understand that their home production of meat is not sufficient to supply the demand. There is room for their own and all we can send. It has been claimed that early maturity offers the only safe system of profitable beef production. In those countries where the first study is to furnish food for the greatest number of animals little matters will be studied that entirely

escape the attention of feeders in our country, where there is such an abundance of space and food. But the generous production of a new soil cannot always last unless the soil is compensated for the crops taken from it. The British feeders have for years favored the early maturity of cattle for market, and are fast exploding the old idea that four year old beef is necessarily superior to that from a younger animal. The first compromise in England was on three year old beef, it being feared at the time, however, that cutting off one year would reduce the quality; but, on the contrary, it proved entirely satisfactory to both butchers and consumers, and it was at length discovered that thirty months were sufficient to produce excellent quality, with but very little falling off in weight. By thus shortening the market age it was found that a large percentage was added to the profit, and the best feeders finally succeed in maturing the steers in 24 months, realizing about the same prices they had obtained in the 36-months beef. But we shall have still more wonderful statements in regard to "calvy meat," which is procured from steers and heifers at from 11 to 20 months old. Mr. E. W. Stewart, in his work on "Feeding Animals," tells us of an animal killed by Mr. Peget, of England, which was only 100 weeks old, dressed 132 stone, which would be equivalent to 1,760 pounds live weight. Some 16-months steers dressed, in the quarters, 600 pounds, and possessed 120 pounds of rough fat.—Farmers' Review.

Potent Sires.

The Jersey Bulletin, in answer to an inquiry for information as to "some simple rule that novices can understand that will make the mistakes in selecting inferior bulls less frequent," replies as follows:

Inquiries as to the best rule for selecting a suitable bull to place at the head of a choice herd of Jersey cows reach this office frequently. The briefest answer that can be given to these and similar questions that relate to the science of breeding is the old axiom that "like begets like, or the likeness of some ancestor."

The discussions and views of breeders as to the best methods for determining the quality of a Jersey hull prior to the test of his daughters have been quite animated, diversified, and confusing to the inexperienced.

Breeders who are using bulls with fashionable pedigrees, not backed up by hutter tests, ridicule a standard based upon actual performance of the dams; while fortunate breeders who are using bulls backed up with pedigree and performance, insist that both are essential.

The popular prejudice against any fixed rule for determining the quality of a sire will continue until the majority of the breeders obtain bulls having the prescribed qualifications.

Some of the most extensively advertised hulls are likely, under any rules that may be adopted, to be excluded from the roll of merit, and our correspondent can see the storm that is likely to accompany the discussion of this question.

It is generally conceded that the mission of the Jersey cow is to produce butter, and the cow that produces the largest quantity of gilt-edge butter in a given time, at the least cost per pound, represents the strain of blood that the intelligent and practical breeder will select to perpetuate and improve these qualities.

The most potent Jersey bull, is likely to have a sire and dam with near ancestors on both sides having good butter records.

A farmer giving his views on the management of cows, where but few are kept for butter making, so that the greatest yield from them may come at such a time as the business is the most profitable and the most readily performed, thinks that the cows should come in early in the Fall instead of early Spring, thereby avoiding the labor and vexation of trying to manufacture and sell hutter in the heated season of the year, when it is so very difficult to produce a good article, or to keep it any length of time sweet, or sell it at any price. The other parts of the year, he says, good butter can be made, and will readily sell at a good price as fast as it can be produced and put upon the market. He argues that cows which go dry a few weeks in hot weather while the pastures are flush with feed, will recuperate and gain new strength very fast at that time, and young cows and heifers will develop their hags and give more milk and be more profitable during the year than to drop their calves earlier in the season.

PACIFIC COAST BLOOD HORSE ASSOCIATION.

Fall Meeting, 1884.

BAY DISTRICT COURSE.

PROGRAMME

First Day. Saturday, Nov. 15th.

- No. 1. LADIES' STAKE—For two-year-old fillies; \$50 entrance; \$25 forfeit; \$20 added; three-quarters of a mile; second to save entrance. Nominations for 1884: 1. Theo. Winters' ch f, by Hooker—Puss. 2. Theo. Winters' b f, by Hooker—Abby W. 3. Theo. Winters' b f, by Hooker—Countess Zelka. 4. Theo. Winters' b f, by Hooker—Illusion. 5. Theo. Winters' b f, by Hooker—Kitten. 6. G. Pacheco's ch f, by Wheatley—by Lodi. 7. James Mee's ch f Mischief, by Thad Stevens—Katie Pease. 8. James Mee's ch f Mistletoe, by Thad Stevens—Mistake. 9. E. J. Baldwin's br f, by Grinstead—Blossom. 10. E. J. Baldwin's b f, by Rutherford—Glenita. 11. Palo Alto's h f, by Shannon—Lizzie Whips. 12. Palo Alto's b f, by Monday—Plaything. 13. Palo Alto's b f, by Shannon—Katharon.

- No. 2. Sweepstakes of \$50 each; \$25 forfeit; \$250 added; for two-year-olds; three-quarters of a mile; Alta and Estill to carry rule weights; one hundred pounds on all others, with three pounds allowance to fillies and geldings. Second to save stake. No. 3. SAME DAY—THE VESTAL STAKE; for three-year-old fillies; one and a quarter miles; \$25 p p; \$300 added; second to receive \$100; third to save stake. Closed with the following nominations for 1884.

- 1. J. K. Gries' b f Nettie Hill, by Joe Daniels, dam Mary Wade. 2. E. J. Baldwin's b f, by Rutherford, dam Glenita. 3. E. J. Baldwin's ch f, by Grinstead, dam sister to Clara D.

- 4. E. J. Baldwin's ch f, by Grinstead, dam Josie C. 5. E. J. Baldwin's br f, by Grinstead, dam Mollie McCarthy. 6. Theo. Winters' ch f Callie Smart, by Norfolk, dam Mattie A. 7. W. L. Pritchard's b f Bonita, by Leinster, dam Napa Queen. 8. Palo Alto's b f, by Monday, dam Riglin. 9. Palo Alto's s f, by Norfolk, dam Glendew. 10. Palo Alto's blk f, by Willdide, dam Frolic. 11. Palo Alto's br f, by Norfolk, dam Lizzie Whips. 12. Palo Alto's s f, by Norfolk, dam Fron Fron. 13. W. L. Pritchard's ch f, by Bazaar, dam Tibbie Dunbar. 14. W. L. Pritchard's ch f, by Leinster, or Bazaar, dam Minerva. 15. W. L. Pritchard's ch f, by Leinster, dam Flush.

No. 4. Sweepstakes of \$50 each; \$25 forfeit; \$250 added; one and one-eighth miles; for three-year-olds; second to save stake.

No. 5. Purse, —; amount and distance to be announced Thursday, Nov. 15th; and entries made at Secretary's office at or before 4 P. M. Friday.

Second Day, Tuesday, Nov. 18th.

No. 6. Purse, \$300; \$75 to second; heats of three-quarters of a mile; for all ages.

No. 7. Selling race; one and one-eighth miles; purse, \$250; free entrance; second to receive \$75; horses entered to be sold for \$1,000 to carry regular weight, with two pounds deducted for each \$100 below \$1,000, and three pounds added for each \$100 above.

No. 8. Sweepstakes for two-year-olds of \$50 each; \$25 forfeit; \$250 added; one mile; same conditions as to weights as No. 2; winner of No. 2 to carry seven pounds extra and second four pounds extra.

No. 9. Purse, —; amount and distance to be announced on opening day; entries to close at Secretary's office, Monday, Nov. 17th, at 4 P. M.

No. 10. Purse, —; same as No. 9.

Extra Day, Thursday, Nov. 20th.

No. 11. Sweepstakes; for three-year-olds; \$50 each; \$25 forfeit; \$250 added; one and one-half miles; second to save stake; winner of No. 4 to carry five pounds extra.

No. 12. Purse, \$400; heats of a mile; for all ages; second to receive \$100; ten pounds deducted from regular weights.

No. 13. Purse, —; amount and distance to be announced on second day of meeting; entries to close at Secretary's office, Wednesday, Nov. 19th, at 4 P. M.

No. 14. Purse, —; same as No. 13.

Third Day, Saturday, Nov. 22d.

No. 15. THE FINING STAKE; for two-year-olds; dash of a mile; \$50 each; \$25 forfeit; \$250 added; second to save stake. Nominations for 1884:

- 1. Theo. Winters' ch c, by Norfolk—Lady Jane. 2. Theo. Winters' b c, by Norfolk—Ballinette. 3. Theo. Winters' ch f, by Hooker—Puss. 4. Theo. Winters' b f, by Hooker—Abby W. 5. Theo. Winters' b f, by Hooker—Countess Zelka. 6. Theo. Winters' b f, by Hooker—Illusion. 7. Theo. Winters' b f, by Hooker—Kitten. 8. J. B. Chase's blk c Hidalgo, by Joe Daniels—Electra. 9. G. Pacheco's c f, by Wheatley—by Lodi. 10. J. W. Adams' br c Cannon Sense, by Hardwood—Consin Peggy. 11. James Mee's ch f Mischief, by Thad Stevens—Katie Pease. 12. James Mee's ch f Mistletoe, by Thad Stevens—Mistake. 13. E. J. Baldwin's ch g, by Grinstead—Jennie. 14. E. J. Baldwin's br c, by Shannon—Kolin Girl. 15. E. J. Baldwin's b f, by Rutherford—Glenita. 16. E. J. Baldwin's br f, by Grinstead—Blossom. 17. Palo Alto's b c, by Shannon—Kolin Girl. 18. Palo Alto's b c, by Shannon—Sallie Gardner. 19. Palo Alto's b c, by Shannon—Miss Peyton. 20. Palo Alto's s c, by Flood—Planeta. 21. Palo Alto's s c, by Shannon—Betie Bishop. 22. Palo Alto's br c, by Shannon—Riglin. 23. Palo Alto's b f, by Monday—Plaything. 24. Hill & Gries' b c Arthur H., by Hockshocking—Maid of the Mist.

No. 16. SAME DAY—FAME STAKE.—For three-year-olds; dash of two miles; \$100 each, \$25 forfeit, \$300 added; second to have \$150, third to save stake. Closed with the following nominations for 1884:

- 1. J. K. Gries' br f Nettie Hill, by Joe Daniels, dam Mary Wade. 2. E. J. Baldwin's b c, by Rutherford, dam Maggie Emerson. 3. E. J. Baldwin's b f, by Rutherford, dam Glenita. 4. E. J. Baldwin's ch f, by Grinstead, dam sister to Clara D. 5. E. J. Baldwin's ch f, by Grinstead, dam Josie C. 6. E. J. Baldwin's br f, by Grinstead, dam Mollie McCarthy. 7. Theo. Winters' ch Prince of Norfolk, by Norfolk, dam Marion. 8. Theo. Winters' ch f Callie Smart, by Norfolk, dam Mattie A. 9. Jos. Cairn Simpson's b c Sir Thad, by Norfolk or Thad Stevens, dam Lady Amanda. 10. P. J. Shafer's b f Bonita, by Shannon, dam Napa Queen. 11. Palo Alto's b c, by Norfolk, dam Boydana. 12. Palo Alto's b c, by Norfolk, dam Nova Zembla. 13. Palo Alto's b c, by Shannon, dam Demip. 14. Palo Alto's b f, by Monday, dam Riglin. 15. Palo Alto's s f, by Norfolk, dam Glendew. 16. Palo Alto's blk f, by Wild Idle, dam Frolic. 17. Palo Alto's br f, by Norfolk, dam Lizzie Whips. 18. Palo Alto's s f, by Norfolk, dam Fron Fron. 19. George Harrison, Sacramento, br f, Augusta E., by Monday, dam by Norfolk. 20. W. L. Pritchard's ch c, by Bazaar, dam Avel. 21. W. L. Pritchard's ch c, by Bazaar, dam Minerva. 22. W. L. Pritchard's ch c, by Leinster, dam Lottie Lee. 23. W. L. Pritchard's ch c Ed Smith, by Leinster, dam Tibbie Dunbar. 24. John A. Cardine's bl c John A., by Monday, dam Lady Clare.

No. 17. BALDWIN STAKE; a poststake for all ages; \$250 each, p. p., \$1,000 added; second to receive \$400, third to save stake; dash of four miles. Subscribers: J. D. Christie, St. Louis, Mo. M. W. Allen, Sacramento, Cal. A. J. Stemler, Sacramento, Cal. Jas. Mee, San Francisco.

No. 18. HANDICAP; 1 1/2 miles; stake \$50 each; \$25 forfeit; \$10 declaration. \$300 added. Weights announced second day of meeting at 1 P. M. from judges stand. Declaration following day at secretary's office at 1 P. M. Second \$75, third to save stake.

No. 19. CONSOLATION PURSE; \$200; \$50 to second; one mile, for non-winners at this meeting. Horses beaten once allowed 5 lbs., twice, 10 lbs., three times, 20 lbs.; entries to close five minutes after the finish of last race.

CONDITIONS.

Entries to stakes and purses not marked closed, except Nos. 5, 9, 10, 13, and 14, will close November 1st, 1884.

Races to close will be run under weights adopted at the annual meeting of 1881.

Starters in all races must be named at 6 P. M., the day preceding the race.

Entrance free for starters in purses. Non-starters can declare out at 6 P. M. the day preceding the race, by paying five per cent. After that time they can only be excused by the presiding judge, and in such case ten per cent. on the amount of purse must be paid.

Non-members will be placed on the same footing as members of the Association, in regard to the payment of purses and stakes advertised; and should there be a deficiency, the winners will receive a pro rata division.

Parties making nominations will be required to record colors at time of making entries, and after record will not be allowed to ride in other colors. This rule will be strictly enforced.

All nominations in stakes and entries in purses (except Nos. 5, 9, 10, 13 and 14) must be made before the first day of November next, 1884, directed to Jos. Cairn Simpson, Secretary, 708 Montgomery St., San Francisco. To be valid, they must be delivered to the Secretary personally or plainly postmarked, on or before that day—November 1st.

The Association reserves the right to postpone races on account of unfavorable weather or other sufficient cause.

JAS. V. COLEMAN, President.

JOS. CAIRN SIMPSON, Secretary.

Embryo Stakes.

The Embryo Stakes for Foals of 1881 and 1882 will be trotted on the Oakland Trotting Park SATURDAY, November 1st, 1884. Races to commence at 1 P. M.

JOE CAIRN SIMPSON, Chairman. N. T. SMITH, Treasurer. BEN E. HARRIS, Secretary.

## NEW YORK LETTER.

## The Close at Jerome Park—Baldwin's Stable off for Home—Renwick's Retirement—Accidents at Fordham—Notes from Latonia and other points West and East and Abroad.

To-day the American Jockey Club brought their fall meeting at Fordham to a close with probably the most sensational day's racing ever seen there, for out of eight horses in the third race colliding in the fatal turn by the bluff and falling in a heap, one horse, Economy, and one jockey, Farley, being fatally injured. Lucky B. was one of the *unlucky* ones, as the son of Rutherford was a close third, and just making his run for the front when the accident occurred, it was hard lines for Mr. Baldwin, especially after Shenandoah's saddle girth shifting had lost that colt all chance in the first race of the day.

The Baldwin stable leave Jerome for their home in California next Tuesday without going to Baltimore and Washington, as at first intended. The bad luck of this stable since they left Saratoga in August has been enough to discourage their enterprising owner. Not a race did they secure either at Sheephead Bay or Jerome Park, and Freda's illness with Mission Belle's lameness, united to the accidents to Shenandoah and Lucky B., on Saturday, have capped the climax of their misfortunes. Fallen Leaf, Mission Belle, Verano, Freda, Volante, Rapido, Shenandoah, Gano, and Lucky B., have all, however, secured a good share of winning honors at Covington, Chicago, and Saratoga, and their Eastern campaign must be considered a success, in spite of the rebuffs of the fickle goddess during the last two months. Mr. Baldwin had not secured an additional trainer and jockey at last accounts, as most of the men are averse to going so far from home. By next season we hope to see the "black with red maltesecross" again on Eastern tracks, for their advent always stimulates the sport in no slight degree.

Lewy Gerry's and "Bill" Daly's wordy set-to in the Yorkville Police Court, resulted, greatly to the surprise of those who have witnessed the former's usual method of cross-examining witnesses, in this discomfiture of the lawyer. Daly's cool persistence in direct opposition to the lawyer's attempted dictation, fairly staggered the legal luminary, and the beach-comber remained master of the situation, to the evident delight of most of the audience assembled in Judge Murray's courtroom. The weight of evidence in the Evans' assault case appeared to establish the fact that no assault had been committed by the defendants. Certainly, if Officer Evans was ill-treated he should have redress, if his assailant or assailants can be located. Fair play should be awarded any such official in the pursuance of his duty, and we believe that the occurrence would not have taken place had the examination taken place earlier in the day, when the turbulent spirits in the crowd could have given no trouble.

Aristides, the former great racehorse, and now promising young sire, has been purchased by Mr. J. Lucas Turner, of Missouri, from Al Hankins, of Chicago, and will hereafter hold court at that gentleman's breeding-farm near St. Louis. The performances of Blast has doubtless brought about this transfer, and with a proper chance at the stud Aristides is likely to follow the rest of Leamington's sons in siring racehorses. He has had few good mares as yet, but at his present home Mr. Lucas's constantly growing collection of stud matrons will afford him material to show whether "like can beget like." Aristides in 1876 was one of the best racehorses in America, and few who witnessed the race will ever forget his howling over Ten Broeck at Lexington when he ran the two miles and a furlong in 3:45, the second best race at the distance on record.

Jim Renwick, after winning a dash of six furlongs from a fast field on Saturday week, has been retired for the season, and Buchanan will winter him at Jerome Park. Lew Martin has got out of the law's clutches at last, and was at Brighton Beach race course one day this week. He has lost the sight of one eye completely, and the other is so nearly gone, that the worst is to be feared. His misfortunes excite much sympathy among turf men, for Martin is a genial, whole-souled man, popular in many circles of life.

"Is an old saying among racing men that this or that horse 'won't lose unless they fall down,' but few persons ever expect that the exception will come to pass, as seldom comparatively do accidents of this kind occur in a flat race. Probably over half of the backers of Topsy had made that same remark or felt equally confident on Saturday last at Jerome Park, only to be filled with consternation at the literal fulfillment of their condition, as their favorite with three others went head over heels at the now fatal turn south of the clubhouse. The sad accident that resulted fatally to the jockey Farley and the filly Economy was brought about from the unforeseen holting of Richard L., but whether it was preventable or not, the club will now recognize the necessity of hastening their projected remodeling of this dangerously-shaped course, and until this is done post a patrol there to report such jockeys as ride recklessly, for the spot being out of sight of the stand is notoriously selected for this kind of work.

Erdenheim's standard bearer, Pardee and Ratsplan, created a genuine sensation at Jerome on Thursday by their successive wins from strong fields. The youngster had, it is true, nothing to brag of as regards the character of his victory, for Eachus, who was conceding him 20 lbs., ran him close, but Pardee had become to be regarded by the general public as such an unlucky colt, something like Gen. Monroe used to be—fated always to just fall short of winning—that racegoers in general were pleased to see him bracketed at last. Now that the ice is broken Pardee may be looked to run up to his best form of the year, which, looking at some of his performances, is nearly, if not quite, first-class. Ratsplan was hardly looked for to win at such a comparatively short distance as the race of Thursday, in which he beat Tornado, Royal Arch, Louisette, and others. The colt's evident forte seems to be a distance, and staying qualities, not speed, are to be looked for from Ratsplan, as shown from his defeat by the fast lot of handicap horses he met on Saturday. Still on that occasion he ran nothing like as good a colt as he was on Thursday.

Brookdale again had its day on Saturday, after a long series of defeats since its victories at Monmouth Park. Mr. Withers' all black colts are among the most popular on the American turf, and when Pampero spread-eagled his field in such hollow style, and the Julietta colt followed suit by a clever victory from his fellow youngsters, the public were jubilant. The great army of small backers follow the Withers' colors persistently, knowing that they always get a run for their money, and many remembered that it was on this course last year where Pampero as the Cyclone colt ran two good races over the T. Y. C. The year has, however, been hardly as successful for the stable as usual, at least in that

quarter where it is generally the strongest, in home-bred two-year-olds. The Cadence colt and the Julietta colt, each with a single purse race, are all the Brookdale youngsters have won during 1884, not one of the numerous stakes for their age having fallen to their share. Next year, however, we trust to see the Brookdale youngsters oftener in front in this style of yore.

Old Warfield, resurrected by John Hanigan, to whom the Dwyers gave him last year, actually won a race at Latonia last week. True, he did not beat much, but when one considers the amount of campaigning and racing this old gelding has undergone since the Dwyers bought him years ago, they must naturally credit him with possessing a frame of iron to come out again and win. Such horses as he, old Parole, Monitor, and others that might be named are, however, few and far between.

English exchanges effectively establish Eole's eyrie in England as at Stockbridge, as previously intimated in these columns. Training reports of the 29th ult. represent him as taking steady mile and a half gallops with the rest of Tom Cannon's string, but later dates say that he was in physic on the first of this month. As Mr. Gebhard has entered Eole in the Liverpool Cup, one mile and a half, and in the Shrewsbury Cup, two miles, both to be run next month, it looks as if he intended beginning the English invasion where Messrs. Lorillard and Keene have left off. The American contingent in England is now in a very small minority, with Blue Grass under continued suspicion, American Girl thrown out of training and sent to the stud, and but a few of the others able to earn their keep, and if Eole, under the circumstances, should succeed in sustaining our waning prestige abroad, great credit will be due to the famous son of the Eolus and his enterprising young owner. Certainly he could not well be in better hands.

Mr. McGeorge's recent *faux pas* at Nottingham shows that even the English starter is sometimes found fault with, as all who hold the flag are prone to realize, try as conscientiously and honestly as they may. In the Welbeck Abbey Plate, six furlongs, on Oct. 1st, Mr. McGeorge had nine starters to get away, ridden by Archer, Wood, and other well-known jockeys, and the advance flag going down, seven of them went off, and ran the race out, Archer's horse winning after a close race. But Mr. McGeorge at once sent word to the stewards that though the advance flag had fallen there had not been a start, and the horses were called back, Sir John Astley going down to the post. The race was finally run, the winner in the false start being last in. Much fault was found with Mr. McGeorge for not displaying his flag more prominently, and there was no little dissatisfaction at the affair.

The excitement was kept up in the next race, which resulted in a "double dead heat," the owners finally agreeing to divide after their horses had finished head and head in the run off, after the first dead heat. Archer rode one, and G. Barrett the other, but all their skill in the saddle availed not to alter the result.

Mr. John Hammond, owner of St. Gatien, the winner of the Cesarewitch, is said to have won this year with the colt and the four-year-old mare Florence, nearly if not quite three-quarters of a million of dollars on the Manchester Cup, the Derby, the Ascot Vase, and the above-mentioned grand feat of last week. This for an ex-bootcleaner at an Epsom hotel, ex-stableboy, ex-jockey, and ex-tout, in all of which graduations to fortune Mr. Hammond's career was very slow until this last few years' meteoric rise, attest the possibilities of the turf, where phenomenal luck, like in this instance, means speedy fortune to an unlimited extent. Mr. Hammond only gave about £4,000 (\$20,000) for the two animals that have helped to make him what he is, and it is safe to say that they will be well cared for during the rest of their equine lives. Both, however, especially the colt, are of the wear and tear sort, and will doubtless win more races yet for their owner before retiring to the calmer labors of the paddock.

## YACHTING.

## The Closing Exercises of S. F. Y. C.

The wind last Saturday when this event was started was not up to a yachtman's ideas of quantity. The yachts remained anchored off the club wharf during the early portion of the afternoon, but there was very little in progress in the Club House. The gun was fired at the appointed time—which action has always been a feature of the S. F. Y. C. cruise when Commodore Harrison has had charge of the fleet—and the following vessels got under way: schooners Chispa, Whitewing and Ramble, and yawls Frolic and Emerald; not a particularly good showing for a final cruise of the senior club. The wind was light from the westward, and the tide had about one hour's mors ebb to run. The vessels stayed bunched until Raccoon Straits were reached, when Rambler hauled the wind and went back to Saucelito to get the wherewithal to supply the inward man as their provisions did not go over on the noon hoat.

Chispa, Whitewing and Emerald managed to hold the wind through the straits, while the flagship ran into a calm, and the ebb tide took her back to the windward of Angel Island. The breeze was light from Myford Point to Red Rock, when a moderate breeze sprang out of the northwest which took the yachts as far as the Brothers. Here the wind again failed them, but as the flood tide had now commenced to run they all drifted up for about a mile when the breeze again came to their relief and from there held steadily up to Vallejo. The yachts reached their destination as follows: Chispa first, followed by Emerald and Whitewing together; then Rambler and last of all Frolic.

At noon the next day, when the preparatory gun was fired, there was scarcely sufficient wind for the vessels to beat the tide, which was then near the last of the flood.

As the vessels got moving through the water, Fleur de Lis came up Vallejo Straits and came about astern of the fleet which was then following astern of the Commodore. The flagship was flying a signal which interpreted meant, "keep within hailing distance." This was done by the larger schooners slacking off their fore sheets, and the yachts went down in a heap as far as the magazine wharf where the signal was hoisted to. "Form line abreast to starboard of Commodore," this manoeuvre giving him the most leeward position. This evolution, owing to the inability of the smaller craft to get into position before the Frolic reached the Contra Costa shore, was not particularly well executed. The signal was then changed to read, "Come about in order, behind leading yacht." This was a success, barring the action of the Emerald which went in staya too soon, in order seemingly to take instantaneous photographs.

The next order was, "Form into single line and keep as close as possible." This was splendidly executed; the yachts taking positions in the following order: Frolic, Chispa, Whitewing, Fleur de Lis, Rambler, Emerald and Thetis, the latter having started with the fleet from Vallejo. After

keeping in these positions for about ten minutes the order was hoisted "Proceed without delay;" and all the larger vessels immediately sheeted home. Fleur de Lis, Emerald and Whitewing went about and stood shoreward on the starboard tack, evidently with the idea of keeping out of the tide and getting that "slant of wind off the Contra Costa shore."

The result however, proved their calculation wrong as the wind close to shore fell very light barely giving the yachts steerage way, and when they reached the channel again all had fallen astern of Rambler, which was close astern of Frolic, while Chispa which was still on the port tack had a long lead over the whole fleet. The wind remained light but steady during the whole homeward passage and nothing of any event occurring, the principal interest centring in the struggle between Rambler and Frolic, the position of these two changing frequently, the schooner finally reaching her anchorage first by about one minute; the Chispa and Fleur being a long way ahead of these two.

The Whitewing was very foul and stayed with the tail end of the fleet, and proceeded direct to Oakland and was followed in this respect by Emerald. Everything passed off satisfactorily and barring the small number of yachts participating the cruise was a complete success.

The Lurline and Halcyon started out last Saturday afternoon for the Farralones, on a fishing excursion. The fishing grounds were resched about eight o'clock P. M., and the yachts lay off and on until daybreak, when the lines were thrown overboard and good sport enjoyed. The yachts returned to Saucelito on Sunday afternoon, the Lurline towing in behind the tug Alert.

By advices from the East under date of Oct. 16th, we learn that the Carmelita has been planked up and that she has deck, hatch, coamings, and rail in place. Preparations were being made to cast her lead keel, and the interior was going to be finished shortly.

A week from to-day the Pacific Club will celebrate the closing of the season at their Club House. The course of action is not yet definitely settled on, but we hope to publish the orders in our next issue.

## BICYCLING.

H. J. Cortis, the ex-champion amateur bicycle rider, is dead; at least so it is reported. In his day Cortis, who was an Australian by birth, was perhaps the best man, either professional or amateur, we had. His daring was wonderful and he was quite the Archer of the cycling path. Not only in whelming but at any other game, and no one could ever make out how he accomplished his great feats, for he took hardly any care of himself.—*London Correspondence in N. Y. Sportsman.*

We think the correspondent of the *Sportsman* must be mistaken, as we can find no mention of the fact in our late Australian exchanges.

A good cement for mending cuts in rubber tyres is made as follows: Procure a small bottle with a wide mouth and ground glass stopper. Into this put some pure bottle rubber, cut up in fine shreds, until it is one-third full, then fill it up with mineral naphtha. In a few days the naphtha will have dissolved the rubber, then add as much naphtha as will make it liquid enough to be easily applied. It must be carefully kept air-tight, or the naphtha will evaporate and the cement will become thick.

The San Francisco correspondent of the *Springfield Wheelman's Gazette* writes in a late issue that H. C. Finkler rode from San Jose to the top of Mt. Hamilton in one hour and a half. For the benefit of those who are unacquainted with the journey we would state that the distance is about 26 miles, and the last three miles at an elevation of 3,000 feet. There is not a rider in America who can accomplish the journey in one hour and a half.

"Are you hurt?" shrieked a dozen picnicking females as the young man was tossed over a neighboring fence by an angry bull and landed on his head in the middle of the road. "Hurt?" he answered. "Why, of course not; I am used to coming down that way." "Used to it?" exclaimed the fair chorus. "Why, how can that be?" "I own a bicycle," was the reassuring reply.

The sporting editor of the *Call* has just found out that the records at Spriggfield were made on Rudge machines. We would also state for the purpose of enlightening our friend on the *Call*, that Finkler rides a Rudge, and that 2:39 has never been beaten.

The Omaha Bicycle Club held their first annual tournament on Oct. 11th. The five mile race proved to be the most interesting contest of the day, and was secured by Nicholson after a desperate struggle with Hitchcock, in 17 m. 5½ s.

John Keen has been trying Pengelly's new water velocipede, and putting in some remarkable time for a mile on Hendon Lake. The machine seems likely to create a sensation, as it can be made to go along at a fair rate of speed.

The tandem tricycle record was lowered during the recent Kangaroo bicycle race in England by Messrs. Gossett and Bird, who covered 100 miles in 8 hours 11 minutes and 45 seconds.

Next week's BREEDER AND SPORTSMAN will contain the rules for the government of race meetings, as prepared by the racing board of the League of American Wheelmen, on August 1st, 1884.

Woodside challenges Armaido to ride for the long distance championship of America, for from \$200 to a \$1,000 a side.

Among the possibilities of the near future is a run to San Jose, under the auspices of the Oakland Bicycle Club.

The Bay City Wheelmen visit Haywards to-morrow. The club has now a membership of thirty.

A party of riders visited Haywards last Sunday. They report the roads in good condition.

Rideout promises to develop in a fancy and trick rider of more than ordinary ability.

The drill corps of the Bay City Wheelmen have of late been doing excellent work.

Sellers rides a fifty-seven inch and Howell a fifty-eight inch Rudge Racer.

S. C. Bowley, Fiddes & Co.

GREAT SALE OF

Thoroughbred Registered

All of the above to be mile heats, 3 in 5, in harness National Rules to govern. Entrance 10 per cent. of purse. Every race five or more must enter, and three or more horses start. The Association reserves the right to hold a less number than five to fill, by withholding a proportionate amount of the purse. Entries close with the Secretary.

THURSDAY, Oct. 30th, 1884. T. W. HINCHMAN, Secretary. 1435 California Street.

Stick-Fast Toe-Weight.

This Toe-Weight, wherever introduced, has effectively supplanted every other kind. All prominent saddlers and horse-men in the U. S. recommend them in preference to any other. Sizes 2 to 12 oz. Ask your dealer or send to MILES & ANDREWS, Fentonville, Mich. SOLE MANUFACTURERS.

THE publishers of OCEAN to OCEAN desire to secure the names of one million subscribers. With that number to go before advertisers, who are willing to pay one cent per line per thousand of circulation, or \$10 a line for a million, the profits of the paper will approximate as follows:—RECEIPTS: 1,000,000 subscribers, at \$2, \$2,000,000; 500 inches advertising space, at \$10 a line or \$140 an inch, \$7,000,000—total, \$9,000,000. EXPENSES: For paper and press work, 1,000,000 copies, 52 issues, \$600,000; editorial work, office, repairs, etc., \$80,000; premium engravings, \$1,000,000; incidentals, commissions, etc., \$100,000—total \$1,780,000; leaving a net profit of \$7,220,000. This enormous profit from sale of advertising space, Ocean to Ocean will owe directly to its subscribers, for advertisers will pay \$10 a line simply because the paper will have 1,000,000 circulation. In order to secure such a circulation and such profits, the publishers will loan back to subscribers in \$100 to \$500 amounts, the profits thus secured, and also furnish the most attractive and valuable Premium ever offered.

The GRANDEST PREMIUM and a Long Loan at 4 per cent

"Waiting for the Verdict."—This grand engraving was never sold for less than \$12 retail for a less amount. Our order is for 1,000,000 copies, we paying cost of American plate. Every future subscriber to Ocean to Ocean can secure a copy of this, the most valuable work of art ever issued in the form of an engraving, by sending 42c. in addition to the subscription price, to prepay cost, express and properly packing, or postage, if sent by mail. Also, any subscriber who desires to borrow from \$100 to \$500 at 4 per cent., the principal to stand if desired as long as borrower remains a subscriber, should state when he orders the premium. In such case—

The Subscription Price, \$2.00, need not be sent, as it can be deducted when Loan is made

And subscription begins. Your individual note is all the security asked: provided you will send the names of several of your neighbors to whom we can refer, not as to the amount of property you are worth, but as to good character. First year's interest at 4 per cent., and subscription price will be deducted from amount borrowed.

CONDITIONS. Loans made pro rata; not less than \$100 nor more than \$500. First year's interest at 4 per cent., and the subscription price to be deducted from amount loaned. If the subscriber does not apply for a loan, the subscription price must be sent in advance. If a loan is desired, no money need be sent for subscription, the charges for the Premium, 42c., only being required, as the subscription and first year's interest can be deducted from the loan. Every subscriber must accept as a condition of receiving the Premium, that he will display it in a conspicuous place in his house or office, and inform those who call how and where he secured it. Positively this must be done. Every Premium sent out secures additional subscribers, and no application will be entered unless the charges on the Premium are sent. These charges, 42c., have nothing to do with the subscription price, and largely cover cost, delivery and properly packing so large an engraving, and the delivery charges must be prepaid. The subscription price, \$2 (which represents a profit and not a direct expense) can remain unpaid until loan is made and subscription begins. Postage stamps will not be received for Premium charges except from places where a postal note can not be obtained. When a loan is made the additional form must be sent, with the money, to the subscriber's nearest bank or express office, and no note need be signed until the money is paid over. Send the names of several references, and immediate inquiry will be made. If no loan is desired, no references need be sent. The Premium will be sent at once. Address: Ocean to Ocean, 16 Bradford Block, CINCINNATI, O.

KILLIP & CO., LIVE STOCK AND GENERAL AUCTIONEERS,

### Electioneer Filly AT AUCTION.

**THE BROWN FILLY REGINA,**  
Four years old, by Electioneer, dam Accident, by Elmo, will be offered at Auction, without reserve, at the  
Bay District Track,  
—ON—  
Wednesday, Nov. 5th, 1884.  
She will be entered in the \$1,000 purse for named horses, and sold with that engagement.  
**JAMES GARLAND.**

**KILLIP & CO.,**  
Live Stock Auctioneers,  
116 Montgomery St., S. F.

**THE FAMOUS GALVANIC BELT**  
The most wonderful Curative Agent in the world.  
Full Power Belt, for Lady or Gentleman, price \$10.  
Cures without the aid of Medicine  
General Debility, Nervous Prostration, Rheumatism, Neuralgia, Disease of the Liver, Sciatica, Paralysis, Kidney or Bladder, Constipation, Seminal Weakness, Dyspepsia, Female Weakness, Sick Headache, Insipid Catarrh, Insipid Consumption, Lame Back, and many other diseases.  
For particulars and Circulars address  
**PACIFIC ELECTRIC CO.**  
SOLE PROPRIETORS,  
330 Sutter St., San Francisco.

### Montana Horse Ranch FOR SALE.

CONSISTING OF ABOUT 2,000 GELDINGS, Mares and Colts, 500 acres patented land controlling the water supply for many thousand acres of pasturage, several thousand acres fenced and fencing material on the ground for some 15 miles more, good barns, corrals and comfortable house, Hay, Grain and supplies for one year; Farming utensils, Wagons, Harness, a few cows and everything necessary or required to carry on the business of horse or cattle raising on a large scale.  
Will give time on part of the purchase money if desired. Apply to or address  
M. SALISBURY, 329 Sansome street, San Francisco, Cal.

### OPIUM.

**DRUNKENNESS!**  
THE OPIUM AND MORPHINE HABIT AND drunkenness cured. The habit and necessity wholly removed and health improved by DR. L. E. KEELLY'S Chloride of Gold Remedies. Send for references and pamphlets, mailed free. Opium smoking cured in two weeks when under my special care.  
Dr. C. O. STRONG, Sole Agent for the Pacific Coast. Office, 21 Third street, San Francisco, Cal.

### JERSEYS and GUERNSEYS,

Registered in the A. J. C. C. and A. G. C. O., of New York, the only standard register.

Jersey Belle of Scituate that made 25 lbs 4 1-2 ozs. of butter in one week.

A grandson of above cow is now in use in the Yerba Buena. This herd won all the herd prizes for 1882. Since then have been added young animals from Mr. Pierce's valuable herds East. He now has Jersey Belle of Scituate, Coomassie, Mary Ann of St. Lambert, Silver Cloud and Eurotas strains; also large selections from the Islands, without regard to cost.

He has interest in Eastern herds of 200, at the head of which stand only living son of Jersey Belle, Romeo de Bonar, (87 1/2 per cent. Mary Ann's blood), and Pier-sou, the best show bull in America. These bulls are valued at \$10,000 each.

HENRY PIERCE, San Francisco.

### IMPROVED HORSE CLOTHING.

Secured by Letters Patent ISSUED MAY 27, 1879. REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap G, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B to fit the fore and hind legs of the animal, front fastenings FG, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings FG, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J in combination with the elastic connecting-strip I, substantially as described and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose singurings is avoided, substantially as herein described.

Manufactured and for sale by  
**L. D. STONE & CO.,**  
422 and 424 Battery St., SAN FRANCISCO, CAL.

### VULCANIZED FIBRE AXLE WASHERS.

Far Superior to Leather. Warranted Not Affected by Oil or Grease

One Set Will Outwear Three or Four Sets of the Best Pressed Leather Washers. Ask Dealers for the "Vulcanized Fibre Washers."

**GREATLY REDUCED PRICE LIST,**

Which is far below any Leather Washer List.

**DIEFFENBACHER & WIHL,**

GENERAL AGENTS, 318 Front Street, San Francisco, Cal.

### HARNES AND SADDLERY.

Linen Sheets and Hoods, SWEAT AND COOLING BLANKETS.

THE LARGEST STOCK, FINEST Goods, and Lowest Prices. WHOLESALE & RETAIL.

**J. O'KANE, 767 Market street.**

—Just received, a large stock of—  
**ENGLISH JOCKEY GOODS,**  
AGENTS FOR  
**STICK-FAST TOE WEIGHTS.**

**John A. McKerron,**

MANUFACTURER OF

### FINE HARNES

AGENT FOR  
**Famous Whitman Saddle and Halter Bridle,**

AND CELEBRATED  
**Stick Fast Toe Weights. HORSE BOOTS AND TRACK WORK**  
A Specialty.

232 Ellis St., opp. Fashion Stable, San Francisco.

### DIETZ'S PATENT

**CHECK HOOK.**  
Simple in its Structure and Practical in its Use.

The horse never loosens the check-rein when this Check Hook is used.  
Horsemen can appreciate the value of a Check-Hook of this kind.  
There being no springs or hinges to break connected with it, makes it serviceable and easily appended, as the check-rein passes through a solid ring attached to the front of the hook.

Orders sent to  
**A. C. DIETZ,**  
No. 9 Front St., San Francisco, Cal.

Will receive prompt attention.  
When ordering state whether gold or silver plate required.

### W. H. Woodruff,

VETERINARY DENTIST.

Office at Fashion Stable, 221 Ellis street.

FOR SALE.

### Thoroughbreds OF ALL AGES.

ENQUIRE OF  
**HENRY WALSH,**  
Sup't Training Horse  
Palo Alto Stock

RAWSON'S U. S. ARMY

Suspensory Bandages. A perfect fit guaranteed. Support, Relief, Comfort. Automatically Adjustable.

DISPLACEMENT IMPOSSIBLE. Treatise on Nervous Tension and Circular mailed free. Sold by Druggists. S. E. G. RAWSON. Sent by mail safely. Patentes, Saratoga Springs, N. Y.

IMPROVED Blind Bridle & Winkers FOR RACE HORSES.

Secured by Letters Patent, July 25, 1882.

Having thus described my invention, what I claim as new, and desire to secure by letters patent, is: 1. The part D supported by the side straps of the bridle, extending back as shown, the front having an opening into which the blind is fitted, substantially as herein described. 2. In a bridle, in combination with the extensions D, the curved blinds F, secured to such extensions, and as shaped, to give full freedom and ventilation to the eye while circumscribing the vision, substantially as herein described. 3. In a bridle, and in combination with the extensions D, blinds F, and side straps A, the screw, nut and washer E, to secure the blind and allow it to be set, substantially as herein described. 4. In a bridle, and in combination with the check-pieces D and blinds F, as shown, the straps or bands G and H, connecting the branches or extensions above and below the eyes, and having the adjusting slides or buckles, substantially as and for the purpose herein described. 5. In a bridle, and in combination with the blinds F, supported and pivoted to the bridle so as to be movable about the point of support, the adjustable front straps or bands G and H, and the rear band I and the front-latch or lash connected with the blinds, and adjustable, substantially as herein described.

The above are the claims allowed by the patent office, and though the corresponding letters do not appear on the cut, the general principle will be understood.

It meets with universal approbation, doing away with all the objections urged against blinds, and at the same time giving complete control of the line of vision. By throwing the lower portion of the blind up something of the same effect on the action follows as is induced by toe-weights. This is especially the case when young colts are the pupils, teaching them to bend the knee without the strain of weights on the feet.

For bridle of all descriptions apply to JOHN A. MCKERRON, No. 230 and 232 Ellis St., San Francisco.

Thoroughbred SETTER PUPPIES.

ENGLISH SETTERS. FIN est breed imported. Irish Setters, from Champion stock imported by R. W. Hill of Oregon. Pedigrees guaranteed. \$25.00 each at six weeks old. Apply to E. LEAVESLEY, Gilroy.

Sportsmen & Pleasure-Seekers.

SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE SUPERIOR FACILITIES AFFORDED BY ITS LINE FOR REACHING

with speed and comfort the best places in the State for Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTEREY.

THE MOST CHARMING Summer and Winter Resort of the Pacific Coast.

with its beautiful Groves and delightful Drives. Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best of shooting may be had in season.

THE BAY OF MONTEREY

is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Baracuda, Pompano, Spanish Mackerel, and Flounder.

The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING FACILITIES

AT THE "HOTEL DEL MONTE," ARE UNSURPASSED,

having a MAGNIFICENT BEACH of pure white sand for surf bathing. The BATH-HOUSE contains

SPACIOUS SWIMMING TANKS (150x50 feet) for warm salt water plunge and swimming baths, with ELEGANT ROOMS connecting for individual baths, with douche and shower facilities.

THE FAVORITE ROUTE to those well-known Watering Places, APTOS, SOQUEL AND SANTA CRUZ.

IS VIA THE Southern Pacific Railroad, (Broad Gauge).

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known Resorts, PURISIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets will be entitled to FREE TRANSPORTATION OF THEIR DOGS when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

\*In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle will be carried free of charge. Gunstaken apart and securely packed in wood or leather cases may be taken to Passenger Cars. TICKET OFFICES. - Passenger Depot, Townsend street, Valencia Station, and No. 613 Market St., Grand Hotel. A. C. BASSETT, Superintendent. H. R. JUDAH, Pass. and Tkt. Agt.

FIVE DOLLARS A YEAR.

## Reminiscences of the Betting Ring.

When the history of betting comes to be written by some competent hand, it will appear that, from the very earliest times, nearly all the prominent members of the ring—that variegated region—have sprung from very humble origin and started with very little capital. As nearly all those who may, in a comparative sense, be termed the saving members of the fraternity die wealthy, and as the rest live in what they consider to be a luxurious fashion, it will also appear that bookmaking is a lucrative calling, and backing the reverse. The modern betting man is chiefly remarkable for lung power, and imperviousness to atmospheric influences that would simply make the fortune of an operative tenor; a love for strong language and diamonds. In these respects the old school of bookmakers appear to have set an example to their descendants, for, if history is to be credited, they were a remarkably quiet, easy-going, respectable set of men. Take old Michael Brunton, a true Yorkshireman, for instance, born in 1755, and who, we are told, lived respected by all, and died rich at the age of ninety, after having attended Doncaster races for sixty-one years without intermission, and having carried on his trade till within three years of his death. In the matter of bookmaking aspiring to municipal honors history repeats itself, for Michael was more than once Mayor of Richmond, where he lived all his life. The interpretation of acts of Parliament is said to have been the only thing that caned him any uneasiness, though in that difficulty his self-reliance never deserted him, and when his brother magistrates disagreed with his reading—and they appear to have done so pretty often—it was his habit to produce a handful of coins, and offer to lay the hench 6 to 4 all round that he was right. Quite as great a character was old William Richards, the Leicester stocking seller, who, like Brunton, invariably dressed in a blue coat with brass buttons, drab breeches, and gaiters. Richards used to hawk stocking, in early life, and while on his rounds won some money at cards. A local race meeting gave him the chance of hacking a successful outsider with his winnings, and from this small beginning he became the proprietor of Ragdale Hall. Whenever he went to a race meeting he used to take a supply of stockings with him to sell to the people of the inns at which he stopped, and whenever he won over a meeting he always brought back brown Windsor soap and ribbons for his servants. As an example of his careful mode of living, it is said that he always refused to keep a servant until he was worth £500 a year. He always read the Bible for an hour on Sunday, being as methodical in his studies as old William Scott—no relation to the racing family—who made it a practice to read "Bailey's Dictionary" and the prayer book twice every year.

Betting on horse racing is no doubt as old as horse racing itself. At any rate, in the time of Charles II. racing seems to have so far grown from a pleasure to a business as to call for legislative interference. In those days, however, it must have been well-nigh impossible to have obtained a correct return of the betting, as each bookmaker was a law unto himself. A certain Mr. Ogden, who had the reputation of having such a marvelous head for figures as to enable him to amass a fortune of £100,000, was one of the first to see the weak points in the old style, and to reduce bookmaking to a science. This was about 1780, or perhaps a little earlier. Ogden was another example of a bookmaker rising from nothing, for in the *Morning Post* of the 5th of July, 1797, the following question, subsequently answered in the affirmative, appeared: "Is Mr. Ogden (now called the Newmarket Oracle) the same person who, twenty-five years ago, was an annual pedestrian to Ascot, covered with dust, amusing himself with pricking in the belt, hustling in the hat, &c., amongst the lowest class of rustics at the inferior booths of the fair?" The first yearling book ever known is said to have been made by Henry Stebbing, brother to the trainer, and who, besides being a large bookmaker, was at the head of the B. Green confederacy, composed of himself, B. Green and "Jelly" Morris. In Flatcatcher's year they were very fortunate, all their horses being backed by the public for the Derby, but they were all scratched in favor of Shylock, whom they bought of Lord Caledon, but who could only get third to Surplice and Springy Jack. In Voltigeur's year Stebbing took liberties with Lord Zetland's horse, and this ruined him. Sixty years ago the unpleasant results of becoming a defaulter were not so great as at the present time, for when, in 1821, Frank Richardson allowed his fancy to outrun his discretion, and plunged heavily on Fortuna for the Leger of that year, when she ran second, he was unable to meet his engagements. To his credit, however, be it recorded, that, instead of joining the army of welters, he adopted the business-like course of asking for time, and issuing promissory notes to his creditors. These forbearing creatures must have jumped for joy on hearing

that Richardson had, at the succeeding Newmarket meeting, been lucky enough to back Michaelmas at the remunerative price of 20 to 1 for the Grand Duke Michael Stakes. It is not stated in what proportion his own uprightness and the pressure of his friends contributed to the result; but the fact remains that the first use he made of his winnings was to redeem his paper. In 1824 Richardson had a great turn of luck by hacking Jerry for the Leger of that year, and refusing to lay against him. With the fortune—of which the money so won was the foundation—he bought land, and built a great house near York, called by the owner St. Nicholas' Place, but dnbbed by the neighbors Jerry Hall. Before many years had passed he was again in difficulties, and died in 1833, at the Golden Lion, Newmarket, in straitened circumstances. Newmarket Heath has ever been a favorite resort with Cambridge undergraduates of the period, and in Boh Munton's day they trusted him with all their business, and this juvenile connection gained for him the soubriquet of "The Baby Jumper." Bob, they say, had a hack, appropriately enough a son of Flatcatcher, who knew a hacker as well as his master, and would stop dead when one approached. Just when Munton was at the height of his success he, unlike the jockey in the story, "hedged," and, giving up the trade of bookmaking, became a dissenting minister. This by no means exhausts the list of men who have in some way or other been remarkable, and who owed their success to bookmaking. There was John Gully, for instance, who was in turn butcher's boy, prizefighter, public-house landlord, outside betting man, member of Tattersalls, and M. P. for Pontefract. He was taken out of prison (where he was confined for debt), by Col. Mellish, to fight Pearce, "the Game Chicken." He was beaten, fought Gregson twice, and then retired from the prize ring to settle at Newmarket, where he used to keep a "hell," and where, it is said, he began a system of corruption that "placed the secrets of all Newmarket at his disposal," a statement that may be a little wide of the mark, though trainers were not then the men they now are.

Gully's son-in-law, Pedley, was also a bookmaker, and owned racehorses in confederation with his father-in-law. He carried off the Derby with Cossack in 1847, and there his luck stopped, as he never won a race afterward, though his horse was beaten a head only for the Goodwood Cup and Brighton Stakes by Malton and Lord George, respectively. As a breeder Pedley will be best remembered as having reared Christmas Carol, who ran second to Gladiateur for the Derby. Then there are John Jackson, of Fairfield, whose first sporting venture was a half-crown hook on a local cricket match; Harry Hill, Lord George Bentick's factotum, who in early life spent his last three half-pence in the purchase of a small loaf and a glass of treacle beer, and died possessed of Ackworth Park; Simon Nicholson and others. There have doubtless been several Davises in the ring, but the only two whose lives have been recorded were very different men. Davis, the ex-tailor, began by attending a gaming-house in Pickering Place, after which he took one of his own in St. James street, and finally became a prominent bookmaker. He it was who called out at the Newmarket Subscription Rooms, "Here, Bentick, I'll accommodate you," a piece of impertinence for which he was well snubbed; while on another occasion he anticipated the man who, on hooking a small bet to the Marquis of Hastings, when his plunging days were over, emphasized the entry with the remark, "Mind, I expect this to be paid," by saying to a backer, "I wonder if I shall ever see your money if you lose." He was a very good illustration of a certain uncharitable saying about bookmakers in general, for, after having won and received a larger sum over the Leger in 1830, he repudiated a lost bet of £300. The backer, however, was able to produce evidence of the making of the bet, which was paid after gentle pressure had been brought to bear by Lord Kelburne, afterward Lord Glasgow, one of the stewards. In Coronation's year he and his confederates laid heavily against the horse, pocketed their winnings and refused to pay the backers of Coronation. The other Davis was the well-known "Leviathan," who first had his attention called to the profits of bookmaking while employed as a journeyman carpenter at the Newmarket Subscription Rooms. On his return to town he acted as bookmaker to his fellow-workman at Cuhitt's, and then, after betting in the streets, became a member of Tattersalls, and the proprietor of lists innumerable that were looked after by clerks in various public-houses. He did not come into prominence till 1848, when he laid Lord Strafford—to whom the commission to back The Cur for the Cesarewitch had been intrusted—£12,000 to £1,000 in a single bet. If Davis was one of the best men to win from, he was one of the worst to lose to, as he would never bet again with any one who had to "ask for time." Besides the loss of £12,000 over The Cur, Hetspur's not winning the Derby is said to have

made a difference to him of about £50,000, and Barbarian's failure of nearly twice that sum. Voltigeur's Derby is reported to have cost him £40,000, while in Teddington's year he paid Mr. Greville £15,000 in one check; but, in spite of losses, his winnings are supposed to have been large enough to have allowed him to begin the season of 1852 with £130,000 to his credit at the London and Westminster Bank. It will be remembered that Davis left his money to the Mayor and Corporation of Brighton. They, after coming to terms with the relations, who disputed the will, lately expended a large sum of what "the Leviathan" left in the laying out of Preston Park.—*London Field*.

## Tips for the 2,000 Guineas.

LONDON, Oct. 22.—The race for the Dewhurst Plate to-day, at Newmarket, was won by the Duke of Westminster's Sterling-Casistry colt, with Mr. Manley's Cora second and M. Lupin's French-bred colt Xaintrailles third. There were ten starters. The betting closed with odds at 5 to 4 against the Frenchman, 2 to 1 against the Casistry colt and 7 to 1 against Cora. The following are the conditions of the race:

The tenth Dewhurst Plate, of £300 in specie, added to a sweepstakes of £25 each, £15 forfeit, for two-year-olds, the owner of the second to receive £200 and of the third £100 out of the stakes; entrance, £3 each; colts to carry 121 lbs.; fillies, 118 lbs.; the winner of the Middle Park Plate to carry 10 lbs.; of a stake of the value of £1,000, 7 lbs.; of one of the value of £500, 4 lbs. extra; closed with 99 subscribers; last seven furlongs of the Rowley mile.  
Duke of Westminster's bay colt —, by Sterling, dam Casistry, 121 lbs. .... 1  
Mr. Manley's b f Cora, by Uncas, dam Gratinska, 125 lbs. .... 2  
M. Lupin's ch c Xaintrailles, by Flageolet, dam Delaine, 125 lbs. .... 3  
Seven others ran.

Followers of English racing in this country will no doubt become quite familiar with the names of the three horses placed for the Dewhurst Plate as above before the middle of next June. The winner made his debut for the Middle Park Plate, for which he divided third-place honors with Royal Hampton. He was bred at Yardley, and was sold a yearling to Capt. Bowling for 700 guineas, and who in turn sold him to the Duke of Westminster "for a large sum and contingencies." His exhibition in the race for the Middle Park Plate was that of a green colt, literally knocked out of all form by fright, and it was not until the last 200 yards that he began to run, and then he made up such a lot of ground that many of the English writers gave it as their opinion that when he ran for the Dewhurst Plate that he would show in much better form, which he has amply confirmed, for in the same race the French colt, Xaintrailles was second, half a length behind Melton, which was good enough for him, two days after to be made the favorite for the Prendergast Stakes, which he won by four lengths. As to their next year's engagements, both the Casistry colt Xaintrailles are in the 2,000 Guineas, and Cora in the 1,000 Guineas, both of which are run over the full mile course, of which the Dewhurst is the last seven furlongs. They are also in the Derby, Oaks, and other important three-year-old fixtures.

American followers of racing will also have a chance of seeing a youngster by Sterling next year. He is a bay colt out of Sea Mark, by Adventurer, and was bought at the Yardley sale last Summer for Mr. Withers, and who thinks he will prove a fairly good two-year-old.

## Sales at Belmont Park, Montana.

Mr. W. H. Raymond, of Belmont Park, Puller's Springs, Montana, reports the following recent sales from his breeding establishment: To Misner Bros., Portland, Or.—Fowler, bay colt, 2 years, by Commodore Belmont, first dam Gracie, by Fancy Goldust; second dam by Excelsior Morgan; third dam the dam of Old Goldust, by Zilcaedi; fourth dam by Barefoot. Price \$1,000. Fowler won the three-year-old stakes at the Territorial fair, in 2:59, but could trot a good track in 2:45.

To Samuel Wade, of Montana, Falcon, black colt, 2 years, by Commodore Belmont, dam Emma Cloud, by Ward's Flying Cloud. Price \$500.

To Curry & Shafer, Montana, Gilt Edge, chestnut colt, yearling, by Commodore Belmont; first dam Lilac, by Tomabawk; second dam Bayflower, by Alexander's Abdallah; third dam by Sir Wallace; fourth dam by Hunt's Commodore; fifth dam a Canadian mare. Price \$400.

It is a singular thing that while the Middle Park Plate is thought to be a sort of trial for the next year's Derby, not one winner of the Plate has won the great three-year-old race, only two have captured the St. Leger, namely, Pero in 1869, and Petrarch in 1876.

## TURF AND TRACK.

## The Early Career of Deck Wright.

"Speaking of money horses," said Galvin, in New York *Sportsman*, "I do not know of one in the country that pays a better percentage on what he is worth than old Deck Wright. When he starts over a half-mile track he has a big mortgage on the money hung up, no matter who starts against him, and even over the mile track at Homewood I timed him separately the first heat better than his record, and he never lifted his nose.

"I shall never forget my first experience with the old horse when you talk about had actors, and never saw him six or eight years ago, you have no idea about it. I was sitting on the club house steps at the track in Meadville, Pa., one morning very early, away back, I think, in 1877. An old man approached me and asked if I was acquainted in the place, if there were any horsemen about, and if I knew any of them. I replied in the affirmative, adding that I was somewhat in that line myself. Then the old man told me his story. He had started out a short time before with a horse and \$600 to do up the slow classes through Michigan. As a result he had gone broke and now had the horse down at the railroad station, with a bill of \$75 against him for transportation, and no way to release him, so as to start in our races, for which he was entered, unless he could interest some one in his behalf. The long and short of the story was he agreed to turn the horse over to me to keep as security and manage until I was reimbursed, and I put up the amount. The horse was Deck Wright. When it came to the first race of our meeting, in which he was entered, I asked his owner in regard to a driver, and we finally put up a man behind him that lived in the same vicinity as the owner, and had some horses entered in other classes. They got the word, and before they got to the quarter pole Deck was a distance out, and I guess the man never took the trouble to go under the wire. I took him to the stable, had him well rubbed out and done up, and the next morning very early, before a soul was stirring, I took him out and gave him a jog, and then sent him a mile without his offering to make a mistake, better than :30, and it was the first time I had ever pulled a rein over him. I said nothing, but had him cooled out and put away. He was entered in the :34 class, and when they began selling pools on the race I thought him, and bought him for almost nothing. I got up behind him, and got the word well up and level, and he never lifted his nose, and I never looked back until I was under the wire, and I had shut out every other horse in the race, and Deck had a record of :34. From there I entered him all through the oil country, and I never lost a race with him; consequently his owner soon had plenty of money, and again took control of him. When he began to want me to pull a race, because there was more money on the short end, I turned over the horse and let him put some one else behind him, for I won't do that for any man living, but I did send a man to buy the horse, first, last and all the time, when we could, and got good betting from his party, who had a sure thing, for they were going to throw the race. The judges got on to the racket and took the horse and put me up. This was what I had been laying for and you can bet I won it."

## Mr. Bergh at Jerome Park.

One day last week at Jerome Park, one of Mr. Bergh's officers undertook to prevent the steeplechaser, Jim McGowan, (formerly Voltaire), from starting in a race on the ground that he was suffering from a sore back. Messrs. Withers and Monson resented the intrusion of the man without either a warrant or permission and ordered his arrest by the regular police. Mr. Bergh in turn had warrants served for violence on both Judge Monson and Mr. Withers. The former gentleman being interviewed on the matter said: "The Society for the Prevention of Cruelty to Animals is a good one, but the President of the Society too often talks and acts more like an insane than a sane man. Mr. Bergh addressed a communication to the American Jockey Club, asking, as near as I can remember, permission to come on our race-track with his official wagon and his officers in official dress. While the club had no objection to one or two of his officers coming quietly on the track, they thought that the manner in which Mr. Bergh's society wished to appear was objectionable.

"The race grounds of the American Jockey Club are private property, and neither Mr. Bergh nor his agents have a right to come upon those grounds without a warrant, unless with the consent of the officers of the club. That consent can be obtained by the purchase of a badge or ticket, or by the invitation of the officers of the club. If the ticket purchased only gives admission to the field, no officer of Mr. Bergh's society has a legal right to jump over fences or pass through our grand stand or quarterstretch gates upon the mere supposition that an offence is about to be committed. Whether, having only purchased a field ticket, and he could see that an act of cruelty on the racetrack was actually committed, his officers would have the legal right to force an entrance through our gates, is a question which it is now unnecessary to discuss. The club, under such circumstances, if requested, would undoubtedly pass the officer through and afford him every opportunity to make an arrest.

"The other day I was sitting in the judges' stand when I was told that one of Mr. Bergh's officers was over at the starting point for the steeplechase. Mr. Withers and myself went over. A man stepped out and said he was the officer. Mr. Withers asked him to show his badge of admission. He showed a silver or metal badge. I told him that was not sufficient. He then said he paid to come in, to which I replied, "If you paid to come in here, you must have a badge." He said he had no badge. I told him he must leave. As he did not move I put my hand on his arm and told him he must go, and to my recollection that was the only way in which I touched him. At any time during the day Mr. Bergh's officer, on requesting permission of an executive officer of the club, would have been allowed to have gone to the stable and examined the horse. But instead of that he waited until the rider had been weighed, the horse's number shown as a starter, the horse saddled and at the starting-post, ready and prepared for the race, which was an unreasonable time and place for the officer to pursue his inquiry. It looked too much as though he wanted to collect a crowd and to attract public attention."

Robert Bonner has a three-year-old brother to Majolica, 2:17, by Startle, dam Jessie Kirk, that showed a quarter in Murphy's hands at the Tarrytown track last week in 34 seconds, a 2:16 gait.

It is said that next season Pierre Lorillard will race no horses but homo bred.

## Some Exceptions from Los Angeles.

Considering the rapid growth and improvement of Los Angeles city and county of late years the annual races and fair of 1884 are more than usually important, and suggest much to the stranger worthy of comment. I intend to give the BREEDER AND SPORTSMAN a full summary of each, claiming the right, though in a perfectly kindly spirit, of commenting on such things as come under my observation, which necessarily tend to lessen the interest and success of both, if not remedied in future. It will suit my purpose best if I give the races first. It cannot be denied there was much in the management which needs hasty correction, and this is principally owing, I understand, to the fact that among the Directors there is only one man who knows anything about horses, or takes any interest in racing, and that the track is in litigation, which prevents harmony among the Directors. But, however much people may be inclined to deal leniently with the management on these accounts, it cannot be denied, at the same time, they were sadly remiss in many things on which the pleasure of the visitor and the success of the race mainly depend. The first and principal thing that struck me was the absence of properly printed cards, giving the names and colors, so that people not familiar with the horses personally might know one from the other. It is true programmes were delivered in a little six by eight paper, sometimes long after the races had commenced, but these gave no information, except that such and such horses had entered for the different stakes, and were practically useless to strangers, and to most of the local residents. This annoyance should be certainly removed. Next the Directors should have better arrangements for such special occasions, with the street cars for the conveyance of the public to and from the track. Every evening, if I did not leave before the races were over, by useless and senseless waiting at the track, I and hundreds of others could not cover the four miles to the city under one hour and a half, and it was often from that cause half-past seven before we reached town. The complaints on this account were very severe by the public. A few more cars to convey the crowds of passengers on each, and greater punctuality in starting, would obviate all this annoying delay, but here, it seems, as in San Francisco, the general American citizens have no rights to assert, no comforts to study, although it is from the liberality of such citizens such corporations exist and get rich. The next thing that should be attended to is the view from the grand stand, to which twenty-five cents extra is charged. Between this stand and the Club House balcony are a lot of large pepper trees, which totally obscure the view of the horses as they round into the homestretch to all on the stand except those immediately in the front. Now as the horses round into the homestretch is generally the best and most interesting part of a race, those trees should be trimmed, or if needed cut down, so that all people may have the benefit of what they pay *extra for*. I believe in the rights of all people to have in full what they pay for, and so I call the attention of the Directors to these things. There are things sometimes in public amusements, besides making every dollar that can be made out of them, that pay very well, and justice to all is one of them. In this strain I shall only refer to one thing more—the track. As it stands, it may be called good, but a little enterprise and expenditure by adding a coating of proper loam would make it one of the best in the State and attractive to all owners of horses. But the proprietors will not spend a dollar for its improvement, and so it languishes and suffers for want of patronage, and the city and districts in proportion. The county, however, patronizes horse-races to an unlimited extent, and the day will soon come when the management must rise to the comprehension of public rights, public necessities and public demands, or see another track built. From the nature of the litigation going on, many residents say that is just what is aimed at. In the meantime, the city and county have to suffer severely. You may rest assured there is not a man outside the management in Los Angeles county who will not endorse every word I have said in this connection for the benefit of the county. The BREEDER AND SPORTSMAN is popular and largely patronized here, and it is its duty to stand up for the people. A word from it, perhaps, may do much good. So in what I have said I have studied the public interest only.

I have mentioned certain things in which the directory and management were much at fault. It is only right, therefore, to give the latter praise where I can. In the absence of scoring and false starts, so observable all the week, they deserve every possible credit, for nothing so quickly wears out the interest and patience of the spectators. They are a robbery of time and money, and a terrible affliction on our northern tracks. Los Angeles is a bright, shining light in this respect. To Mr. Hewitt, the Secretary, I have to acknowledge many kind courtesies and attentions, which I do with much pleasure.

## Trotting Against Time.

With the first spare time that has come to me I turn to "Mambrino's" agreed upon "trotting against time," and ask for space to set him right, and myself where he has got me wrong. In the first instance he refers to Herod's 2:26, the 14th of last June, as a performance against time. Nothing of the sort was intended. Herod was matched against Lady Brazell for \$100 a side, withdrawn from the stand nine days, and then started against Hettie V. because Lady Brazell failed to put in an appearance. The start against Hettie was to provide disappointed people with some amusement. As Hettie had often beaten 2:30 on a half-mile track, it was thought she might make Herod extend himself. Failing to do so in the first heat, a runner was started in the second, Hettie also starting, her driver hoping she would do better. This was no race against time more than any contest between horses in which time is held. Therefore, as I have practiced what I preach, that branch of the subject is disposed of.

"Mambrino" next impudently my hatred of time contests to ignorance of their wonderful charms. A little reflection would or should have recalled to mind the fact that we have stood side by side and watched a few of them. But perhaps remembrance was with him drowned in an ecstatic, bewildering joy over the glorious spectacle of a horse plugging around alone, hauling two wheels and a man astraddle, to heat what? a watch! Well, I never supposed that the watch cared whether it was heated or not, or that the horse knew anything about it at all, except, perhaps, to think his driver an idiot for whacking him around all alone. I am sure the spectacle was disgusting to me, and could therefore spare a little cerebral energy for memory as well as for thought about the pernicious results of trotting against time. Me trot Herod against time! Why, I tried to show a doubting customer this Summer that the old horse could trot, and he heat 2:40 by a fraction, which proved that he had the most sense of the two that day. If it was not a look of contempt that he gave me out of his big hazel eye

then I am not an expert in horse language. Give him another horse to beat, and he would die a trying, but what did I know of a watch? How many of our great racehorses I this same effort against a shadow, staled, aoured, or given "nervous chill?" How many people saw Johnnetou pace 2:06? How many people would have been there to see him go a race with Mand S.? More people saw Silas Wight a Herod in their duel at Rochester, Minn., this season, than can be got out to see any living horse move against time. Why? Because it was a horse race, a bitter, determined struggle, from start to finish, and when postponed, the eager faces anxiously watched the last heat the next day. There is this much of the savage in us all—that we love real flesh-and-blood contest. The refinement of civilization has produced distaste for good red blood-flowing in the arena, perhaps, but the combativeness of the people is not yet so scientifically emasculated to prefer a trial to a horse race, and let me say it before that day comes.

"Mambrino" justifies the time trot because some one has outclasses all others. Possibly for a day; to-morrow an equal comes, and then there should occur a glorious struggle for supremacy. Does Haulan row against time? Does Sully fight a dummy? Do Myers or George continually run alone? Do they not all eventually find their man? Is there no Mand S. and a Harry Wilkes for Jay-Eye-See? a Mazy Co for Phallas? and the best of them for Johnston? True, they now fight the watch, but need they? Why not content with the highest honors with each other? A healthy public sentiment demands it. Racing associations should accord it adopting for their motto the old-time declaration of the era of liberty, paraphrased: "Thousands for a horse race, not a cent for a trot against time."

"Mambrino" tells us about the thousands made happy Providence when Jay-Eye-See moved a good mile—people "frantic for joy;" "old men kissing their wives as in the heyday of the honeymoon." Was it not one man frantic for a few thousands going into his pocket? A most pardonable sentiment, surely, and possibly a sufficient justification for public exhibition of osculation. A man blessed with a half some wife, as we all are, should not be ashamed to kiss her even in public. But I hope the time will soon be when men for shame will refuse to trot a horse against time.—*T. G. in Breeder's Gazette.*

## Punish the "Ringers."

It is to be hoped that, after having successfully unearthed a plot for robbing both the general public and horsemen, the management of the Cleveland track will not allow any infraction which may be brought to bear to in any way alter the determination to have justice done to the instigator of the scheme. It will be remembered that at the recent meeting Cleveland a mare called Baby Mine won the three-minute race after a prolonged contest, and that at the conclusion of the race she was protested by the owner of the second box as being a "ringer." Pending an investigation of the charge the money won by the so-called Baby Mine was retained by the Association, and very wisely, as a little inquiry developed the fact that Baby Mine was none other than the black mare Minnie Moulton, (record 2:27), that had trotted a number of races in the early Eastern circuits, but had never been West. The man who entered and drove the mare at Cleveland gave his name as Pat Hinchey, and claimed to be from Oil City, Pa., but when his career was hunted up it was found that his real name was J. L. Keene, of Lawrence, Mass. The owner of Minnie Moulton, a man named Goodwin, who also resides at Lawrence, is said to have been cognizant of the use to which his property was being put, and there is talk that four men, well-known on the trotting turf, were likewise engaged in the plot to rob the public means of the pool box.

Now that these men have been detected in the act of "ringing" a horse let the punishment be swift and speedy. It nearly ten years since Bill McCleigan, Charley Perkins and one of the Deyos made their celebrated campaign with Sm. Hopes, and during that time the amount of justice meted out to offenders of that class has been wholly inadequate. McCleigan was made the scapegoat of others in the Small Hop case, and after a few seasons of enforced retirement was reinstated, it being stated at the time this action was taken that in the future no mercy would be shown to men who descended to his species of trickery. But this virtuous resolve has not been carried out, although it is but fair to say that for the last four years there has been no great amount of "ringing" practiced on National Association tracks. But if Cleveland case is a good one by which to demonstrate a disposition of the National Association to do all in its power for the protection of horsemen and the public. Let the men who were concerned in the Baby Mine case be punished the full extent of turf law, and when the sentence has been pronounced let it be seen that there is no revocation in it in the course of a year or so. Men who will "ring" horses should be made at once to understand that detection means punishment that will not be suspended.—*Breeders' Gazette.*

## Fat Witted Frauds.

The following tale of the ringing expedition of the black mare Minnie Moulton lately expelled at Cleveland is from the New York *Spirit*. It illustrates the old idea of ho plainly green hands at crime leave a trail that brings about detection.

Now to the story of this freebooting expedition. The entry of Baby Mine was dated Oil City, Pa., Sept. 15. It was postmarked Boston, Mass., Sept. 15, 7:30 p. m. It was on a plain sheet of paper, and enclosed in a plain envelope. Another entry was made on the letter-head of the Crawford House, Boston, and mailed in an envelope of the same house. It was that of the hay gelding Picnic (spelled Picoick). It was also postmarked Boston, Sept. 15, 3:30 p. m., and was the identical hand-writing of the entry of Baby Mine. No one saw how the conspirators over-reached themselves. In Baby Mine's entry the request was made that the Association telegraph Pat Hinchey, 32 Seneca street, Oil City, whether the race had filled or not. Consequently a message was sent the operator at that point, who replied: "Our horses are numbered, and no such a man as Pat Hinchey is known here." This, together with the fishy look which the entries of Baby Mine and Picnic bore, caused the suspicion that something was crooked or strange in the case, and put the officers of the Association on their guard. The mare Baby Mine did not appear at the track until the Sunday evening before her race, which was set for Tuesday. She was driven through the park gates with a pail hanging to the axle of the sulky, and clothing enough on the seat to wad a shot-gun. Her sulky was red, and a good one, and her harness new. The Secretary showed the big man who drove her the stall assigned to her, and helped unharass the mare, taking at the same time an inventory of her and her effects, and like

wise those of her innocent driver. In answer to Mr. Fasig's inquiry, "Is this Mr. Hinchey?" he replied, "No; Hinchey will be here soon."

The Secretary then asked, "Where is Picnic?" and he replied, "I don't know whether he will be here or not." The driver jogged the mare Monday and Tuesday, but did not open her out. When pool-selling commenced the mare started low, but the rates kept increasing on her, until she sold for more than any other, Mr. Goodrich and another being her principal backers. From the best information that can be obtained, the parties were approached after the first heat by sports who had their money on other horses in the race, and were told that if they won with Baby Mine the mare would be protested, and would get no money. At the same time a bargain and sale was made of the 2:40 race, and that the black mare was to be allowed to win in peace. A shift was therefore made in the box, and the talent played another horse to win. It was evident that Hinchey was not trying to drive, and he was cautioned, but without effect; consequently Volney French was put up behind the mare, and won the race in the hollowest manner. Meantime, however, the sharpers had played more money on Lady Cleveland than they had previously played on their mare, and thus quit losers on the race.

At the time of making change of drivers, Mr. Frost, owner of Lena Swallow, remarked, on the stretch, "No matter who they put up, as soon as that strange mare wins a heat she will be protested." Goodrich heard the remark, flared up at once, and asked, "Who will protest her?" "I will," says Mr. Frost. Goodrich replied, "Do you know you will be fined \$100 for protesting without giving the name or record of the horse it really is?" Frost replied, "I can make her driver establish her identity, and, if I am fined \$100 for that, I'll try and rake around some place and raise money enough to pay it." After considerable "chin-music" between the two, and Goodrich found he had tackled a man who knew his gait and rights, the controversy ended. When the mare won the heat, Frost made his word good by lodging a protest, and asking that the man who drove be required to establish the identity of his mare and himself. In answering the protest the man said his name was Hinchey, and that he hired out to a man named Brown to drive the mare about four weeks previously; that he did not know Brown's address, nor anything more about the owner or the mare, etc.

The mare was allowed to continue in the race, and Hinchey was sent for in the evening again, it being the opinion of the judges that he was simply used as a cat's-paw by a lot of sharpers; he was given to understand if he would make a clean breast of the whole transaction his case would be considered with sympathy, and all the clemency possible would be extended to him. He, however, reiterated his former story, only changing the name of his employer to Russell. When his attention was called to that, and also to the fact that he had denied his name being Hinchey on his arrival here, he was completely flustered; and it became evident that he was as big a rascal as any of the others, and also not smart enough to tell even a plausible story.

The next morning Goodrich came out to the track, had a long conversation with the man, and they evidently mapped out a plan, as the man shipped his mare that afternoon; but he was shadowed by a follower he least expected. He did not ship, however, until he had been sent for by the judges, and sworn to the answer to the protest. While doing this he was given to understand that the association knew who gave him the money to pay his entrance, and also to get out of town, and he then acknowledged it was Goodrich.

This is the story, or so much of it, as we are permitted to make public. In time, the whole matter will be known to the world, for the association is determined to let "no guilty man escape."

Minnie Moulton was started in the 2:27 class, at Beacon Park, Boston, Oct. 9th, but Mr. Fasig identified the mare and man, and made the same known to the judges. After the first heat her controllers refused to bring the mare out for a start in the second heat, and either ran her off or locked her up in a stall. It is current report around her home at Lawrence, Mass., that this is not her first dishonorable escapade.

The Cambridgehire.

LONDON, Oct. 21st.—The result of the race for the Cambridgehire at Newmarket to-day created another "best on record," and was the case with the Cesarewitch, Mr. Hammond is the owner of the winner, Florence, who, with 127 pounds, beats Foxhall's previous "best," he having won with 126 pound in 1881. The only other occasion when any such weight was placed was when Sterling ran third with 133 pounds in 1873. Last year's winner, Bendigo, was second to-day, with Pizarro third. There were eighteen starters, with the betting at 10 to 9 against Bendigo, 10 to 6 against Pizarro, and 10 to 1 against Florence. The race was run under the following conditions:

Forty-sixth Cambridgehire Handicap, a sweepstake for all ages, at £25 each, £10 forfeit; only 55 declared by Sept. 1st, with £300 added the second to receive £100 out of the stakes and the third to save his stake; entrance £3 for all horses; the winner of the Doncaster St. Leger to carry 122 lbs.; the winner of a handicap of the value of £300, after the publication of the weights on August 28th, to carry 10 lbs.; of any other handicap, 5 lbs. extra; the winner of the Cesarewitch, 14 lbs., but if the winner of the St. Leger also, only 7 lbs. extra; closed with 120 subscribers, of which 22 declared; Cambridgehire course; one mile and 240 yards straight.

Mr. J. Hammond's br f Florence, 4, by Wisdom, dam Enigma, 127 lbs. 1 Mr. H. T. Barclay's br c Bendigo, 4, by Ben Battle, dam Hasty Girl, 113 lbs. 2 Mr. Mainley's b c Pizarro, 3, by Uncas, dam Lydia, 101 lbs. 3 Fifteen others ran.

The custom in England of naming the years after horses that had either won the Derby or carried off the greatest honors, or after some distinguished foreigner, as in 1881, which is still called the "American year" by reason of the successes of Messrs. Lorillard and Keene, will no doubt make the year known as "Mr. Hammond's year." For it certainly is Mr. Hammond's year, notwithstanding that the Derby honors were divided by him and Sir John Willoughby. Mr. Hammond is one of those small owners that by shrewd management and good luck became very rich, and with three or four horses will carry off honors that many large owners die in trying to win. Last year Mr. Hammond was credited with nine races won, worth a total of £1,502. This year with St. Gatien he divided the Derby, won the Queen's Vase at Ascot, and won the Cesarewitch, while with Florence, the winner of the Cambridgehire, as above, without including that race, he has won a total of nearly £6,300. Including the Cesarewitch, Florence had previously to the Cambridgehire, run in nine races this year. She was unplaced both for the Lincoln and the City and Suburban handicaps. She then in turn won the Manchester Cup and the De Trafford Welter Cup, at Manchester; at Ascot she won the High-Weight Plate; at Liverpool she was second for the Liverpool Cup, as also was she for the Goodwood Stakes at Goodwood, for which she was asked to concede Stockholm, who started the favorite for the Cesarewitch, no less than thirty-four pounds. Her failure to do so was attributed by some to her rider, Fred

Archer, and a sensational dispatch was cabled that Mr. Hammond and Archer had had a serious falling out. There was no truth in the story, for the week following Archer rode Florence and won the Queen's Plate, at Lewes. Late, in August, Florence was sent on a flying trip to Baden Baden, where on the 25th she won the Jubilee Prize of a gold cup and £2,300 in species. The race was at two miles, the filly carried 146 pounds and she beat a field of seven by a length. As a two and three-year-old Florence was a filly of no great promise, and up to July, 1883, she was the property of Mr. Wm. Arnall, who sold her to Mr. Hammond for a "good figure," which term will also describe his winnings in bets on the Cesarewitch and Cambridgehire, for one report made him a winner of £50,000 on the Cesarewitch alone.

Science in the Sulky.

"Were there any good races in the circuit?" "Not a great many—that is, not many races where there was any great skill displayed by the drivers, or where a horse that was not thought to have a chance to win got away with the money in a perfectly legitimate way, and without any outside help. Perhaps the most notable instance was at Rochester, where the Iowa mare Nellie won her race when it was dollars to cents that she could not do it. Young Rolfe, Montgomery and a lot of other good ones were in, and the Young Rolfe party were certain they could win. They concluded to lay up the first heat, in order to make good betting, and this resulted in Peter Johnston's winning it with Nellie L., the time being slow—about 2:27. In the second heat the Iowa mare fairly out-trotted Young Rolfe, carrying him to the three-quarter pole at a 2:20 gait, and the result of this was that he quit in the homestretch, both Montgomery and Nellie L. beating him to the wire, the mare winning in 2:23 1/2. It looked then as if she would win the race in straight heats, but soon after the word was given for the third mile Johnston found that she had been given a little too much of it in the previous heats, and instead of trying to win with a tired horse he very sensibly laid her up, Montgomery beating Rolfe. The last-named horse won the fourth heat, Johnston not making a move with Nellie L., being content to save his mare for a final struggle. This he did in the fifth heat, and drove it in about the only way that would have been successful. Instead of making pace with his mare he let Rolfe assume the lead and keep it until both horses were half way down the homestretch. Then he pulled out on him, and from that point to the wire it was the greatest whipping match you ever saw. Both horses were as tired as they could be, and it was really a question of which could be nursed the longest. They staggered away until within about two hundred feet of the wire, when Johnston, for the first time, made use of a spur which he had placed on his whip, and by using this at precisely the right moment he managed to get Nellie L. under the string a nose in the lead. To show you how little the mare was thought of, I knew a man who had a \$16 ticket on her that paid \$87. That is what I call good driving—to win a race that all the smart people think that you have got no business to be in.

"Splan made a great drive at Cleveland with Nobby. The horse is a fast one, but about the meanest actor you ever saw, wanting to break at just the times when there is not the slightest excuse for his doing so, and generally succeeding. As he was owned by W. J. Gordon, of Cleveland, his owner was naturally anxious to have him win there, and Splan was secured to drive. They went eight heats, and John finally dragged off the money after the greatest horse-race you ever saw. He beat horses that day with Nobby that ought to have led him from wire to wire every heat, and he did it by out-driving the other men in the race. Those were the two best races I ever saw, and it was worth a long journey to see either of them."—Breeder's Gazette.

The Tumble at Jerome Park.

The following account of the compound collision at Jerome Park, is from the New York Spirit's report:

The third race of the day was also a handicap, at a mile and a quarter, for which eight started. Topsy was a strong favorite. It was an odds against the others, so much as fifteen to one being offered against Lida Stanhope, whom fate had, through a combination of accidents, destined as the winner. It was a light weight race, and, as usual, the exhibition of riding, even early in the contest, was careless in the extreme. Before they had made the first turn, by the picnic grounds, there was crossing and jostling, and as they came down to the "Bluff" the youngsters were crowding each other, and their voices could be plainly heard shouting to each other to make room. As they made the turn of the "Bluff" there was more jostling. All hands were riding wildly without heads or hands, and the horses were zig-zagging about like a ship without a rudder. On the first turn, opposite the yellow barn, there was a general collision, and several were seen to fall. Burgomaster led around the turn, but Lida Stanhopa's jockey never let up upon her, and the old mare won by half a length.

When the collision occurred there was a great rush on the part of many to the scene of the action. No one had any idea of its extent; but of the eight only four finished, Topsy coming in behind them riderless and frightened. As we crossed the track we met Mr. Baldwin, who had just returned from the scene.

"Is your horse (Lucky B.) injured, Mr. Baldwin?" we inquired.

"No; he doesn't seem to be, but I'm afraid the little jockey is."

"How did it happen?"

"Oh! the wild riding around these curves. They're too sharp, and not half the boys know how to get around them."

A large number of people were gathered at the scene of the disaster. Economy was lying where she fell, Topsy, Richard L., and Lucky B. had been caught and led away, while Farley, who rode Lucky B., was carried off to a coach, apparently lifeless, as seemed Rivers, while Garrison was badly shaken up and unable to stand. Jimmy Donohue, who rode Economy, alone escaped injury, although he had fallen heavily. The mare's back seemed to be broken, and she was carried into the field, where she was soon relieved of suffering. As to the cause of the accident, it would seem that Richard L. fell first, Economy falling over him, she in turn being run into by Lucky B., while Topsy, from behind, fell over the lot. Farley and Rivers were not seen again, but later in the day Garrison came to the stand, after it had been reported that he was dead.

Mr. J. L. Hallett, of Dilly, Oregon, will be able to jog his horses all winter, as he has a covered track, the only one in the world.

National Association Trotting Horse Breeders' Sweepstakes.

The following nominations were made Oct. 15th, 1884, in a sweepstakes, for foals of 1884, to trot at three years old at the Association's annual meeting of 1887, as colts and fillies only; \$500 each, payahia in the following forfeits: \$50 to accompany nomination Oct. 15th, 1884, when the stakes will close; \$100 additional Jan. 1st, 1886; \$100 additional Jan. 1st, 1887; and the remainder, \$250, twenty days before the meeting of 1887; the winner to receive the entire stake; colts or fillies engaged can be sold with or without their engagements:

- F. Duhme's b c, by Belmont, dam Junnata, by Cuyler.
F. Duhme's b c, by Belmont, dam by Voltuteer.

Chas. Backman's blk f, by Kentucky Prince, dam Racola, by Hambletonian.

Race at Ventura.

The inaugural races over the new track at Ventura came off on the 23d and 24th. The running events in the programme seem to have been principally patronized by Messrs Hill & Gries; probably more to encourage this first venture of the association than from any prospect of profit to the stable. The following are the summaries:

- Oct. 23d.—Running; purse, \$150; half-mile heats.
Hill & Gries' blk m Dottie Dimple, by Ben Wade, dam unknown 4 years, 110 lbs. 1
Hill & Gries' br c Tom Paine, by Ben Wade, dam unknown, 2 years, 90 lbs. 2
G. G. Arnold's b g John G., 2 years, 90 lbs. 3
Time, 52 1/2.
Same Day.—Trotting; gentlemen's race; owners to drive; purse, \$150; mile heats.
Sorrel Dan, cb g—J. M. Kaiser. 1 1
Hamlet, blk g—Robert Ayers. 3 2
Gertrude, gr m—Geo. Willoughby. 2 3
Time, 3:05, 2:52 1/2.

- Same Day.—Running; purse, \$—; for two-year-olds; half mile heats.
Hill & Gries' b c Arthur H., by Hock Hocking, dam Maid of the Mist, 90 lbs. 1 1
Hill & Gries' br c Tom Paine, by Ben Wade, dam unknown, 90 lbs. 2 3
J. K. Gries' b m Fanny G., by Jack Gordon, dam unknown, 87 lbs. 3 2
Time, 52, 53.
October 24th.—Running; purse, \$175; one mile.
Hill & Gries' b c Babelor, by Hock Hocking, dam Maid of the Mist, 3 years, 109 lbs. 1
Hill & Gries' blk m Dottie Dimple, by Ben Wade, dam unknown, 4 years, 115 lbs. 2
Time, 1:34.

[Note.—There was a rule of the association providing that where the requisite number of starters did not appear the horses at the post might contest for the entrance money, which may account for the above double walk over.]

- Same Day.—Trotting; purse, \$175; 2:40 class.
Dimock, br g—J. T. Saxby. 1 1
Gertrude, gr m—Geo. Willoughby. 2 dis
Dick C., b g—A. F. McPhail. 2 dis
Time, 2:55, 3:02 1/2.
Same Day.—Novelty running; purse, \$125; \$25 to each quarter and \$25 for finish; one mile.
Hill & Gries' b c Arthur H., by Hock Hocking, dam Maid of the Mist, 2 years, 105 lbs. 1 1 1
Hill & Gries' br c Tom Paine, by Ben Wade, dam unknown, 2 years, 83 lbs. 1 2 2 2
P. Hanley's Seppie, by Ben Wade, dam unknown, 3 years, 83 lbs. 3 3 3 3
G. G. Arnold's b g John G., 2 years, 80 lbs. 4 4 4 4
Time, 2:31, 2:51, 1:25, 2:01.

Pacing at Sacramento.

- AGRICULTURAL PARK, Oct. 25th.—Pacing; purse \$150 for named horses.
Enigma, b m—Worth Olive. 3 1 1 1
Black Point, blk g—C. H. Todd. 1 3 3 3
Selin, br g—M. F. Odell. 2 2 2 2
George E., cb g—John Madden. dis.
Time, 2:41, 2:40, 2:53, 2:44.

The winnings of Tristan, the celebrated English racehorse, from the commencement of his career up to September are £20,906 10s. This does not include his French winnings, which amount to nearly 100,000 francs. A man only wants one of this sort in his stable to make it complete.

The races over the chute at Covington, Ky., except for the year-olds in stakes, are to be discontinued.

Racing in the South.

In the last issue of the paper, which is presumed to voice the sentiments of the breeders of Tennessee, Spirit of the Farm, a mournful view is taken of racing in the South: "There is no denying the fact that the interest in running races is rapidly dying out in the South. This is most noticeable to those who for the past ten or fifteen years have watched the gradual falling off in the attendance at the meetings of the various associations in this section; but the languishing financial condition of every association in the South is apparent to every one, and proof positive that the "Sport of Kings" has at last lost its fascination for the people among whom it had its birth, and who have nursed it from its infancy in this country. This can be attributed to various causes, but investigation will show they all lead to the same source, and can be stated in a single sentence, by saying that racing has fallen into the hands of the gamblers and horse jockeys."

The editor explains that he does not mean to charge that the gentlemen who compose and control the associations are not thoroughly honorable and responsible, but that he regards them as the slaves of a bad system:

"The Associations were loath to give up the old system of racing over a distance of ground, and when to "cut and come again" was the rule, and dashes the exception; when to win required a racehorse, and not some vile crab or stale old plater with only strength and heart enough to run five-eighths or three-quarters; and for a time an effort was made to catch a revenue from both courses, and while concessions were made to the pool-seller, there was yet some royal sport to be seen on our running tracks when such horses as Barney Williams, Foster, Nellie Gray, Wanderer and other good ones, turned the track two or three times in a single heat, and fought over every foot of the distance. But disagreeable as it was to give up this old system of racing, the temptation to realize ready cash for the pooling privileges was too strong; one concession to the gambler was soon followed by another, and gradually he has worked his way into a position where he can dictate the character of the racing and the terms to the gentlemen who own the associations, until now there is not a racing programme made out by any association referred to, that the pooling privileges are not one of the first things to be considered. For this reason horse racing is a thing of the past in the South, and in its place we have a miserable farce by which the gambler alone is interested, because it furnishes him his means of living."

The article concludes as follows:

"We are not averse to betting, or the pool-seller, or the bookmaker, but we are opposed to either or all of them dictating the programme of any association, and arranging it in such a way as to rob it of every attraction there is in racing, simply to increase the opportunities for betting. If our friends in the East prefer this style of racing and betting, let them take it, and our blessing go with them; but for us we prefer the old landmarks left by "Old Hickory," Berry Williams, Col. Elliott, Thomas Barry, Bailie Peyton, Gen. Harding, Joe Guild and others like them, who have made the brightest pages in the history of the American turf."

We doubt if the old system of long-distance racing in the South will ever again become the fashion. The people of Tennessee and other cotton-growing States will have to conform to the new order of things. This does not mean that the gamblers are dishonest, but that speed is at more of a premium than before the Civil War. The North, whose industrial system was not overthrown, and whose resources were not crippled by the conflict has taken kindly to thoroughbreds and it requires more of them to go round than formerly. The richer prizes are hung up by Northern clubs, and the owner of a stable gravitates toward a dazzling premium as naturally as a fly does to an open jug of molasses. The cracks are held in reserve for important meetings, while inferior material is prepared for the local gatherings. The home interest is not aroused, and the track managers, in trying to make ends meet, cultivate the professional speculators a little more than is actually for the best. Horse racing is an expensive amusement, and it will not flourish in communities which have to study the homely maxim once commended to the prostrate ex-Confederate States by Horace Greeley, "Root, hog, or die." The South was heroic in the days of its poverty. Men and woman used to fortune's smiles went to work with a will, and through perseverance and economy they rebuilt ruined towns and cities and reconstructed the industrial system. The South has grown richer from year to year, and the time is not distant when it will be just as able to support luxuriant pastimes as it was in the days when slavery was held to be a sort of divine institution. The new generation, however, is more earnest and practical, and less dreamy and impulsive than the old one, and the probabilities are that it will never become wholly absorbed in racing. Still, as love for the turf has been bred in the bone, racing in the South will not fail, even under adverse circumstances, to excite a good deal of enthusiasm.—Turf, Field and Farm.

Sir John Willoughby.

Little more than two years have elapsed since he appeared at the ring-side during the sale of Mr. Chaplin's yearlings at Newmarket, and by the simple uplifting of his umbrella successfully opposed the Australian sportsman, Mr. Long, for the possession of the filly by Hermit, out of Adelaide, now known as Queen Adelaide, until she was knocked down to him at 3,600 guineas. Even Mr. Tattersall was unacquainted with Sir John's petit figure and pale, passionless face, and with that performance the latest accession to Captain Macchell's stable may he said to have burst upon the turf world like a meteor. The young guardsman soon made his mark as a heavy bettor of the plunging school with checkered success, and his next sensational "auction deal" was when he opposed Mr. Matthew Dawson (on behalf of Baron de Hirsch) and others for Harvester at Lord Falkmouth's sale. For that horse he gave 3,600 guineas by the advice of his mentor, in preference to buying Bueybody. Harvester's immediate defeat in the Two Thousand Guineas, which he subsequently wiped out by turning the tables on Scott Free in the Payne Stakes, and his sensational dead heat with St. Gatien for the Derby, which was afterward divided, and his collapse in the St. Leger, after being so cruelly knocked about at Goodwood in the interim, are sufficiently well known to require no recapitulation. "Breaking the Ring" is easier said than done, as all the plunging school have found out to their cost since Lord Hastings "set the castor." Nor is Sir John Willoughby the only owner of a Derby winner that retired from the turf the same year, as the career of the Baltazis, who won the Derby with Kieber, will testify.—London World. His sale of thoroughbreds was more complete than that of Mr. "Manton's," and having volunteered for the expedition to Khartoum, Sir John left London for Egypt.

Professional Poisoners.

The Louisville correspondent of the New York Spirit makes mention of an infamous gang that has infested the western tracks this season:

Impressed with the evils of the touting system, the Jockey Club management has adopted the following new rule, which barring its bad grammar, will commend itself to a good many persons, although it smacks of unusual severity against an objectionable class:

"No touts allowed on the grounds, and anyone practicing touting, annoying, or endeavoring to induce others to bet for them or upon their information, will be promptly ejected and ruled off the track. Visitors so annoyed will confer a favor on the management by reporting such practices."

Col. Clark is justly indignant at the gang of touting scoundrels who have extended their operations to the poisoning and disabling of horses, and the severe rule quoted above is the natural consequence. Tom Redmond, otherwise known as "Texas Tom," and his pals have carried on their operations with such a high hand that self-protection suggested the most stringent precautions against them. Col. Simmons, one of the most vigilant of judges, ruled Redmond off at New Orleans, last Winter, for the poisoning of Carsan and other animals. Regardless of the expulsion verdict, Redmond turned up on the Louisville track in the Spring. Col. Clark, learning of his presence, ejected him from the grounds, and the detectives hounded him out of the city. Strange as it may sound, he subsequently attended the races every day at the Chicago Driving Park, and, by his own confession, "fixed" several horses. He was known to the official pool-sellers, but, all the same, his presence was tolerated and connived at. Honest old Mike Welch, trainer of Carson, pointing out the criminal one day, indignantly remarked: "There's that d—d tout, 'Texas Tom.' Why don't they do something wid him?" They did nothing "wid" him, however, and Tom next turned up at the St. Louis Fall meeting, where he was arrested and put in jail. He was recently released, however, the principal prosecutor, Sam Bryant, being compelled to leave the city. Bryant tells me he went to see Redmond in jail, and told him he would not be prosecuted if he would only disclose the names of the parties backing him in his nefarious work.

"All right," said Tom, "there were eight of them, and I'll give their names."

"Hold on," said a detective, who was present at the interview, "you are not compelled to make a confession."

"Very well, then," said Redmond, "I'll say no more," and refused to give the names. It is said he furnished the names to officers of the St. Louis Society for the Prevention of Cruelty to Animals. If so, it is to be hoped the disgraceful business will be probed to the bottom, and an example made of the guilty parties.

Mr. Pate says his fine horse, Boatman, who was showing up in great form, was undoubtedly poisoned, and has been turned out for the season almost a wreck. John Davis fared somewhat better, but he might as well be in the stable, just now, as facing the flag even in mediocre company.

So, if there are some who should be disposed to blame Col. Clark for the adoption of such a stringent rule, let them first remember the infamous doings of "Texas Tom" and his confederates.

One of Redmond's alleged pals, Tom Durham by name, was ruled off the track here yesterday, and the detectives gave him two hours to leave the city.

Aristides.

Mr. J. Lucas Turner, of the Kinloch Stud, in Missouri, purchased, Saturday last, of Mr. A. Hankins, of Chicago, the chestnut stallion Aristides. "I expect him to arrive here," says Mr. Turner in a note to us, "some day this week. I believe I can then say that I owe the best son of Leamington." We are personally pleased in Mr. Turner's purchase. Last Winter, when he asked us to select a stallion for him, we wrote in reply, "Buy Aristides—all the sons of Leamington are successful sires—there were none better than he as a racer, and he has sired winners in Henlopen and Blast." Mr. Turner wrote in reply that he had heard Aristides was not a sure foal getter. We discounted this, as we had heard similar rumors in regard to almost every stallion of note, and that too often it was due to barren mares and careless stud grooms. Besides, some of the best sires have not been the best foal getters. Australian, for instance, covered 547 mares while at Woodburn, not half of which produced foals. Still, Mr. Turner hesitated. He tried to get Skylark, but Lord Falkmouth would not sell at private sale. Mr. Turner then instructed us to open negotiations with England in his behalf. We priced Clairvaux at \$25,000, which was rather more than Mr. T. cared to pay. Mr. Bathgate wanted us to take Energy, but Mr. Turner did not fancy him. Southampton and Torpedo were also priced, but did not suit. We are satisfied that Mr. Turner has a better horse in Aristides than he could have purchased in England for the same money. Aristides was bred in 1872, by the late H. P. McGrath, and as a two-year-old won twice, running a mile in 1:44. As a three-year-old, he won the Kentucky Derby, Withers, Jerome and Breckenridge Stakes. He could also have won the Belmont, but was held to let his companion, Calvin, win. He was, however, the best of his year. As a four-year-old, he won both the races for which he started, beating Ten Brock two miles and a half in 4:27. In our judgment he was one of the very best of Leamington's sons, as he was a stayer, which many of them were not. In size, he was below the average, but was a horse of enormous frame and muscle, and with that daisy-cutting action which seemed to steal away the inches. His peculiarly blood-red color gave him the title of the "Red Horse," and we can recall nothing more beautiful than his romping home with Bob Swim, in the "green and orange," in front of the Withers field of '75. In breeding, he cannot be excelled, being by Leamington, from Sarong, by Lexington; second dam Greek Slave, by Glencoe; third dam Margaret Hunter, by Margrave.—N. Y. Spirit.

At Chicago, Ill., on the 11th inst., the pacing mare Katie Howard, by Almont, dam by Alexander's Abdallah, scored a record of 2:19.3, and won the race with ease. This was the second time she ever faced the starter and her first contest with a field of horses. Her blood lines are from the stoutest trotting strains, she being by a son and out of a daughter of Alexander's Abdallah, yet she is a natural pacer.

Small Hopes, that was sold at auction last June for \$400, recently trotted the half-mile track at Wilkesbarre, Pa., in 2:26.

The Case stable will winter at Lexington, in the charge of W. H. Crawford.

John Splan has left the service of Commodore Kittson, and will winter in Chicago.

Racing at San Bernardino.

The Fall meeting at San Bernardino commenced Thursday Oct. 23d, at Waters' track, situated four miles from the Court House near Mound City station. A lack of advertising caused the meeting to be rather slim both in numbers and quality. Many, in fact the majority of our local horse sharpe, were conspicuous by their absence.

A stallion sweepstake, mile heats, was No. 1 on the programme; \$50 a corner. Buck, Ethan Allen and Inca, Jr., contended. Pool selling thus far has not been brisk, s noted trait of the southern interior being short odds and sure things. Allen was favorite at even money against the other two. Horses were called promptly at 1 o'clock, Inca inside, Allen second, Buck outside. After two or three straggling starts they were gotten off fairly, but the heat was a song and dance affair. Buck alone trotting, but too slow for a place, Allen winning easily in 3:07. Inca, Jr., two lengths behind, Buck barely saving his distance. Second heat of no note.

SAN BERNARDINO, Oct. 23d—Sweepstake for trotting stallions; \$50 each; mile heats.  
Ethan Allen, ch s, by Ethan Allen, dam by Belmont—T. R. Roberts..... 1 1  
Buck, b s, by Arthurton, dam by Echo, 4 years—Kennistan & Brzelton..... 3 2  
Inca, Jr., ch s, by Inca, dam Black Hawk Belle—J. G. Whitney..... 2 3  
Time, 3:07, 3:05.

Same day—Running; half-mile heats; purse \$150.  
Kennistan & Brzelton, b b, Dublin Bay, by Grinstead, dam Amanda Fortune, 3 years, 106 lbs..... Wallace 1 1  
—Kelley's br g Tom, aged, 115 lbs..... Kelly 2 2  
—Culp's ch g Billy, by Exile, 4 years, 115 lbs..... Weaver 3 3  
Time, 5:23, 5:33.

Betting: \$10 on Dublin Bay to \$50 on field.

Second day, Friday, first race was three-minute trot for county horses. Cassius M., George and Ethan Allen drew positions in the order named. Allen, being a winner, started as favorite at \$10, Cassius M. bringing even money and George selling for \$2 to \$3 and few takers. The horse appearing George showed himself to be a veteran in steadiness and soon brought \$10 to \$5 for the other two. Cassius M. behaved badly, with little improvement on the part of Allen. George won the race and money in straight heats.

Oct. 24th—Trotting; purse, \$150; three-minute class; county horses.  
George, b g—Waters..... 1 1  
Cassius M., ch s, by Kentucky Clay—Ferral..... 2 2  
Ethan Allen, ch s, by Ethan Allen—Roberts..... 3 3  
Time, 2:55, 2:59, 2:53.

A mile dash for all ages had four entries; Boh Ingersoll, Billy, Tom and Lucy J. Lucy J. was drawn before the race. The name of the great lecturer made a favorite \$10 to \$6 for the other two as the field. They got a good send off and Ingersoll won hands down by two lengths, Tom, second, Billy third. Time, 1:51.

Same Day—Running; purse, \$400; for all ages; one-mile.  
Kennistan & Co's b g, Bob Ingersoll, by Sacramento, 4 years, 105 lbs..... Wallace 1  
—Kelley's br g Tom, aged, 115 lbs..... Kelly 2  
—Ralph's ch g Billy, by Exile, 5 years, 115 lbs..... Weaver 3  
Time, 1:51.

Saturday, Oct. 25th, opened with the best attendance of the meeting. Two races were on the card but the only one got off was the trot for the 2:30 class. The purse was only \$200, but the close contest of the last day at Los Angeles was supposed to make some interest, but proved, opposite as Mormon tastes were an exception. Hardman Dick J. and Lady Washington were entered, and Hardman picked a strong favorite with even money for the field. The usual amount of jockeying took place but these regulars got away after awhile and trotted an uneventful race of four heats, although it was the best ever seen on the track.

Oct. 25th—Trotting; purse \$200; 2:30 class.  
Dick J., blk g, by McEllan—J. N. Johnson..... 2 1 1 1  
Hardman, b g, by Echo—L. H. Mayberry..... 1 2 2 2  
Lady Washington, b m, by Whipple—C. A. Durfee..... 3 3 3 3  
Time, 2:35, 2:34, 2:35, 2:38.

Charley Durfee next drove Del Sur a fast quarter, much to the edification of all assembled. Night approaching the second race set for that day was postponed.

Sunday, Oct. 25th was an extra day and the attendance was good. A quarter mile dash for local horses and a half mile race of the same description made sport for the townspeople, but were of no especial general interest. A mile and repeat trot for county horses resulted as follows:

Oct. 26th—Purse \$—  
Kate Bender, blk m, by Chief of the Echoes—D. Payne..... 0 1 1  
Alph, b g, by Echo—E. Williams..... 0 2 2  
Time, 2:57, 2:47, 2:45.

Monday, Oct. 27th, saw a good crowd at the track and opened with a trot for 2:30 horses for \$200. Richard C., Cassius M., George and Ethan Allen answered the call. George was a favorite at \$20 to \$10 for Cassius and Allen as the field and \$5 for Richard C. It was a repetition of the county race on the first day, the spectators thinking a cooling out process was going on at the back of the track, so much time was consumed in the heats.

In the first George did all the trotting, winning in 2:47. Allen second, Cassius M. third, Richard C. distanced.

The second heat was the same, except that Cassius M. was distanced, and the time was 2:53.

In the third heat George showed tired, and Allen pulled through a winner in 2:53.

Hedging commenced; Allen selling 2 to 1 over George. George was weary, but sherry was freely used, and he came to the wire a winner of the heat and race. Time, 2:55.

October 27th—Trotting; purse, \$200; 2:50 class.  
George, b g—Waters..... 1 1 2 1  
Ethan Allen, ch s—Roberts..... 2 2 1 1  
Cassius M., ch s—Ferral..... 3 dis  
Richard C.—Cole P. Stetson..... dis  
Time, 2:47, 2:53, 2:53, 2:55.

The next was a trot for the 2:25 class with Don Tomas Kate Bender and Alph engaged. The race and trot was won by Don Tomas in straight heats. There was no betting. I was an easy victory for Durfee's colt, but it was a fine exhibition of speed for a three-year-old considering the track.

Same Day—Trotting; purse, \$200; 2:25 class.  
Don Tomas, blk g, 3 yrs., by Del Sur, dam by Mambrino Patchen—C. A. Durfee..... 1 1  
Kate Bender, blk m, by Chief of the Echoes—D. Payne..... 2 2  
Alph, b g, by Echo—N. T. Blair..... 3 3  
Time, 2:45, 2:43, 2:41.

Last was the postponed half mile and repeat between Ingersoll, Tom and Billy Slaughter. A good send-off was had, Tom winning hands down in :52, Billy two lengths behind, Boh at his throat latch. Darkness coming on it was again postponed to Wednesday the 29th, the management asking this that the people might pay their last respects to the memory of Mrs. J. G. Burt, deceased, wife of a well known citizen of this place. More anon, E. A. D.

Palo Alto Stock Farm has sold to Messrs. Kelly and Lynch of this city, the chestnut filly Glendair, 3 years, by Norfolk dam Glendaw, by imp. Glengarry, from Glenrose, by Lexington. Glendair was one of the bright particular stars of Henry Walsh's string, and first-class from every point of view.

## NEW YORK LETTER.

## Steeplechasing at Pelham-on-Sound—An Amateur Jockey Wins the Largest Purse Ever Given to American Jumpers—Closing Days at Pimlico, Baltimore—Brighton Beach Surprises—Washington Racing—General Notes, etc.

Wintry winds whistled weirdly with chilling emphasis across the rolling grounds of the Country Club racecourse at Pelham on Saturday last, proclaiming the approach of the "melancholly days," and the varied hues of the foliage and all the natural features of the occasion were typical of what our English friends would call the "back end" of the racing season.

And yet in spite of the bleak blasts, blowing belles and beaux around, regardless of disarranged toilets or the latest agony in *chapeaux a la dude*, society race-goers, as well as the more practical professional attendants at our out-door reunions in the sporting line, enjoyed a very pleasant outing, as most of the spectators, feminine as well as masculine, were amply provided with wraps, and, in addition, kept on the move most of the afternoon, a necessary matter to insure comfort.

To all, therefore, the many incidents of the day were fraught with peculiar interest, whether in the commingling and intermingling of the members of the *jeunesse doree*, the inspection of the mettlesome steeds and their venturesome riders, or noting the miscellaneous character of the hundreds of wheeled vehicles and their rustic occupants, gathered around the grounds in a half circle. During the intervals between the races the younger people would organize forays on the chestnuts and apples strewn the ground in the neighboring fields, and, returning, munch away till the chase was over, when the same operation would be gone through with again. Truly the products of Nature's preserves seem to be more palatable to the average gourmand than when retailed from the city grocery or on the street corners.

Most of these turn-outs, and many that made greater pretensions to style, were accompanied each by man's best friend, a dog, and these frisky brutes manifested more interest in the races of the day than many of their owners; more, indeed, than was consistent with perfect safety to the steeds and riders striving for mastery between the flags.

The spectacle of the canines racing with the equines as happened more than once during the afternoon was not exactly conducive to perfect ease of mind of either the riders or backers of the horses, however much it might have aroused the mirth of the crowd to see a yellow dog trying to jump an earth wall with a sixteen-hand hunter. Between the races the "peaky critters," as one country girl, with eyes as black as sloes, denominated them, organized extempore contests between themselves, in which sometimes four or five would take part negotiating in some shape or manner every jump over the full steeplechase course, except the water, of which they wisely fought shy. Before the big race was rung up, however, the officers corralled most of the dogs, giving the thoroughbreds a fair field and no favor.

Barometer, the son of Bonnie Scotland and Blondin, by Commodore, comes honestly by his sticking qualities, the gelding being brother to that good racehorse, Baton Rouge, and half-brother to that other good one, Vicksburg, to Standford Keller and others. In winning the most valuable purse ever captured by a steeplechaser in America, however, Barometer has to thank the handicappers who let him in light, considering his good showing at Rockaway last May, his clever amateur jockey, Mr. J. D. Cheever, who stole a march on the professionals the last circuit of the course, and the fact that Fat Maney, on Charlemagne, underrated the character of his antagonist, letting him open up a gap that could not be closed in time. All the way home, in spite of the forty pounds difference in weight, the chestnut from Canada gained on the bay from Rockaway, but the distance was too short for Charlemagne, who beat the others much worse than Barometer beat him. Had Trombone stood up he would certainly have been in the first three, but as regards the others the less said the better, as they were a well beaten lot. These hunt races are fast becoming features of the racing season, and 1885 is likely to see them renewed with still greater zest and a keener knowledge of the situation.

Pimlico did its share last week towards solving the problem of two and three-year-old superiority in 1884. That Mortimer's daughter, Wanda, is the best of her age in America that has shown in public, few will now refuse to affirm, including a well-known New York speculator, who saw her, as he thought, "ridden out" at Baltimore on Tuesday, and came back to Manhattan to back Eachus against her on Friday. Wanda's illustrious lineage has clearly brought her stamina as well as speed, and those who thought they could find her measure are as much in the dark as ever. If Katrina, her stable companion, is as good as she is, the Rancoas party will be in great strength next year in the three-year-old stakes. With Wanda, Unrest, Chimera, Cholna, and their "dark" stable companions, how can they beat them? Well, may their own announce his intention to race home-breds exclusively from now on. Where in America is there a stud farm that now equals Rancoas in the proven quality of the material there for turning out racehorses *ad libitum*?

Louiette, though, is not from Rancoas. Kentucky claims her as a daughter, and Islip as a representative, and she has carried the "orange and blue" so well as to fairly claim the laurels of supremacy over all other sex and age now running. Though not, of course, decisive, her two mile win for the Breckenridge in such easy style and good time, taken in conjunction with what she has achieved before, stamp her as the equal of any three-year-old of the year, not excepting Panique, Ellerslie, St. Saviour, the Mimi colt, or any of the earlier celebrities of the season. Of course, as regards Buchanan, Fallen Leaf, and other good performers West early this year, only an inference can be drawn; but, taken through Loftin, the line is one that looks to plainly point out Louiette as the champion. This week, at Washington, the final issues of the circuit were decided, and on Wednesday Louiette easily added the Anacostia Stakes to her increasing list of stake trophies. To-day, (Friday), she will meet a stronger field in the Potomac Stakes, and, if she beats Ratanplan, Audrian, and Boh Miles, will fairly earn champion honors.

Drake Carter redeemed himself in the Bowie Stakes last Friday from the stain on his escutcheon left by the defeat in the heat race of Tuesday. The gelding is a horse that requires the most vigorous riding, and to put up a light-weight on the son of Ten Brock is tempting defeat, especially when meeting such an unexpectedly good horse as Clonmel has now proved himself to be with light-weights. The latter could have been bought a month ago for a comparatively low price.

The half-brothers, Gen. Monroe and Foster, had had two tussles together at the late meeting. At the shorter distance, one mile and five furlongs, the best son of Foster prevailed over the best son of Tom Bowling, and the former also won a fast race on Thursday, a quarter of a mile further, beating a strong field. The Bowie Stakes was Foster's third hard race in successive days, and it is no wonder that he succumbed to both Carter and Monroe. The latter has gone back lately to a disappointing extent, and is evidently not within twenty pounds of his Spring form at Jerome and Sheepshead.

The last two days at Baltimore witnessed an almost unprecedented success of the favorite horses. True, the small fields in some degree accounted for this successive winning of ten races right off the reel by the choices of the *cogno scienti*, but still it was none the less a notable fact, causing more than one speculator to enlorge what they termed the "true running" at Pimlico. Combination bookmakers suffered to a corresponding degree. One metropolitan penciller, not a score of miles away from City Hall Park, lost \$4,000 on Thursday, and Friday saw more of the same sort. But as this is only giving the bettors at this most uncertain style of betting the chance they seldom get, the bookmakers can't complain, as they generally win all this money. Combination bettors could do better in the long run, however, and get larger returns for their money if they "doubled up" instead, and then if a horse fails to start they would be in just so much, combination bets being all play or pay. Still, the system is all wrong.

Speculators at the various sporting centres at all cities where pools are sold, seem to think that certain persons at Brighton Beach are on the inside, know it all, etc., by the number of telegrams received daily from these points, asking for points or tips on the daily events. A trainer of our acquaintance one day this week exhibited at Brighton about two or three score of telegrams from Baltimore, New Orleans, Louisville, St. Louis, Chicago, and perhaps from China or Calcutta, for aught we know, asking for the probable winners of the day. To all he sent back at their expense his five selections, and there was only one winner in the lot. Speculators at a distance should realize, therefore, that the "posted ones" get left as often as the greenhorns; in short, that the uncertain nature of the game makes true the oft-quoted adage in regard to racing, "The more you know the less you know." Many a man (and woman) has wished at times that they had been on certain well-remembered occasions in the past, blind, deaf and dumb, figuratively speaking, as having journeyed to the racecourse resolved to back a certain animal. Tom, Dick or Harry would shake their convictions and change their investments by proffered information about other horses who "couldn't lose." Speculator therefore backs the tip, lets his own fancy run loose, and enjoys the extreme felicity (?) of seeing his own first fancy win and the "tip" nowhere. This is a leaf out of the experience of hundreds of visitors to race-tracks, and should teach them to ignore what they hear, and that public form is nine times out of ten the safest guide to follow.

Scene at Brighton Beach on Monday—time before the second race, in which Wandering sells a decided favorite: Well-known speculator in close confab with well-known tout. The latter says to the former: "Now you can back Wandering freely, he's out for the money to-day, and will beat these other crabs sure." W. K. S. answers in most emphatic style: "My boy, I know Wandering can win this race from what I have seen myself, but I have sworn by all the Prophets of Tophet, not to put another dollar on a horse ridden, owned, or controlled by this party, and I would not back one of his runners against a trotter. Any other choice of yours that looks good I'll put five hundred on and give you one-quarter of the winnings, but don't ask me to back any horse in that stable." After Wandering wins easily W. K. S. smiles sardonically at W. K. S., and says: "You had better have broken your rule and taken my advice." W. K. S.: "Perhaps you are right, I think I will put \$500 on Strathspey. That looks like sure money. Will stake you as agreed if it wins." Does so, and is seen after the fourth race frantically tearing up some pool tickets and grinding them under his heel, as he joins in the sarcastic greeting to the rider of Strathspey after the race.

Pardee left Jerome Park on Sunday last to join his stable companions at Washington, and the many friends of the stable were surprised to see him an absentee from the list of starters for the Arlington Stakes on Tuesday, won by the Islip colt, St. Augustine. To-day (Thursday), however, Pardee was expected to run in the Capital Stakes, in which he receives an allowance of 7 lbs., St. Augustine being penalized 5 lbs. for his victory on Tuesday. The latter showed, by his defeat of Unrest, Eachus, and five others, that he is a better colt than most people thought, and, if the Winters well, St. Augustine is likely to take a prominent part in the Spring betting on the Withers Stakes. Since his dam Crucifix threw old Fair Play to Virgil, and Quito to King Alfonso, she has not been very successful in turning out winners, but her son St. Augustine, Quito's brother, bids fair to be a race-horse of the rough-and-ready type, good in any kind of going and in almost any company. Such a one was his half-brother, Fair Play, game as flint, and sbleto run mile heats in about 1:44, and repeat back in the same notch every time.

Favorites at Washington on Tuesday had a hard time of it in the majority of the events. That fast horse, Birch, secured his long-delayed win at last, beating a fast field of sprinters, and as the betting in some quarters was nearly 40 to 1 against him the buyers of outsiders profited correspondingly. A year ago at this track Birch was the speediest horse there, but this season he has failed thus far to come up to expectations, as have most all of the members of this South Carolina stable. Lytton also scored at a mile for Brighton Beach in rather unexpected fashion, several others being better thought of than he was. St. Augustine, as noted above, beat the favorites, Unrest and Eachus, the latter not being ridden by McLaughlin, as usual. Drake Carter, however, saved the talent from total overthrow, but it was money rather dearly earned to have to bet two to one on the gelding against a fast field at such a comparatively short distance. But the form of the son of Ten Brock, if noted above, is just now fully up to his best mark, and that is nearly, if not quite, first-class.

Mr. Charles Reed's Fairview breeding farm, near Gallatin, Tenn., has been further strengthened in the stallion paddocks this week by the addition of the imported horse, Mr. Pickwick, by Hermit, out of Tomato, by King Tom. It seems that Walton had the horse's running qualities, the horse reverting to Mr. Reed when his racing days were over. Being very fashionably bred, his being a poor racehorse should not necessarily be a bar to his success at the stud, with the good mares he will be mated with at his new home. Mr. Reed now has imp. Fechter, imp. Highlander, imp. Mr. Pickwick, Duke, by Leamington, and Longtau (Dave Moore), by Longfellow—five stallions of the best strains of blood to be had in any country. He is constantly adding to his collection of broodmares, and Fairview is next to Belle Meade, the principal establishment

of the kind in the State. The section of Tennessee around Gallatin is becoming more active in horse interests each season, and by next Spring the old Gallatin Jockey Club is likely to be revived in time to give a race-meeting in April.

There are now four hundred and fifty deer in Gen. W. G. Harding's park, adjoining Belle Meade, Tenn. Notwithstanding the Harding family's love for venison, and the large number of friends frequently supplied with the delicacy, the herd increases rapidly. Fifteen years ago it numbered but sixty head. The park has four hundred and twenty-five acres, and has many foxes within its bounds. Gen. Harding, now ninety years old, possesses a grand farm of 4,700 acres.

The result of the Cemburidge, at Newmarket, on Tuesday, shows what luck can do for a man when he is in the vein. Mr. John Hammond, the owner of Florence, who has now added the above great handicap to the Cesarewitch, won by St. Gatien, and the Ascot, Epsom and Manchester honors of the same famous pair is the most fortunate turfman of modern times. His career during the last twenty years from a menial position of almost abject poverty to the height of affluence reads more like a fairy tale than sober truth.

The non-sporting dog show, which opened at Madison Square Garden on Tuesday, promises to be one of the finest exhibitions of the kind ever made in this country, and great interest has been developed among owners and admirers of fine bred animals. The entries are greater in number than were ever made at a similar show, and the classes are all well filled. Of the dogs entered 100 have taken prizes at previous shows. Of the entries in the St. Bernard champion class seven have secured prizes. The mastiff classes have three champion entries, and a number of good ones in the open classes. The aristocratic fox terrier class is represented by forty-five entries. The greyhounds and deer hounds attract many visitors. A prominent feature of the show are the bull dogs, most of those entered being imported, and of pure breed. The display of pet and toy dogs is unusually large, 135 of this class being entered. The two surviving Esquimaux dogs of the Greeley relief expedition, which have been at Druid Hill Park, Baltimore, for some time, in charge of Surgeon Howard E. Ames, of the relief expedition, are also at the show, but are in poor condition.

The phenomenally mild spell of weather during the present week has been a surprising change from the blustering winds of the preceding one. Indeed, the whole season thus far has shown the eccentricities of nature as existing in our precocious climate. Up along the line of the Erie R. R., at Middletown and Port Jervis, farmers have been favored with fresh raspberries, blackberries and strawberries from vines and plants that did yeoman duty in their proper season. These second crops are said to be finer than the first ones. At Monticello apple trees are shown that have fruit on the lower limbs and a mass of pink blossoms on the top, and in other sections a second crop of clover grows heavy and rank to the height of four feet. Should the weather remain thus open next month it is not improbable that the American Jockey Club will give an extra November race meeting in addition to that on election day. On Wednesday at a special meeting, the club decided to race Saturday, November 1st, and Tuesday Nov. 4th.

NEW YORK, Oct. 21, 1884.

## Board of Appeals.

The Pacific Board of Appeals of the National Trotting Association, composed of L. J. Rose, Chairman; Capt. N. T. Smith and Judge J. McM. Shafter, held a session in this city last Tuesday, to hear the application of Sannel Gamble, David J. Colross and George Wiley for reinstatement. The following is the official ruling in the case:

On Tuesday, Oct. 23rd, 1884, the Pacific Board of Appeals met to take some action in the suspension of Sannel Gamble, David J. Colross and George Wiley, and after hearing the evidence, it is the belief of the Board that these parties were led to nominate colts in the Embryo Trotting Stake Association at the request of the owner of these colts, Mr. Daniel Cook, and that they had no money interest or exercised any ownership in these colts, and could not profit by such entries, and that when said Cook died that then all their powers ceased.

This Board believes that while the Embryo Stakes Association were justified in the suspension of said parties, yet the enforcement of subsequent payments or suspensions, acts as a hardship and is unjust, and recommend to the various parties at interest in these Stakes that they release the above parties from all liabilities arising under their subscriptions.

[Signed] L. J. ROSE, Chairman.  
N. T. SMITH,  
J. McM. SHAFER,

"Say what you will," says the *Journal of Lewistown, Me.*, of the evils of racing, these evils are not a necessary factor of the race. There really is an inspiring element in an honest match of two honest and able horses. It means that interest in the foremost that is a quality of sound ambition and a stimulus to effort in every line of human enterprise. It means that we don't like to take the dust on the road, and that a second or two in a mile is worth something on the highway, not perhaps chiefly for the economy of the small fraction of time involved, but mainly because a man likes to be there first and to be picking his teeth on the piazza when the disagreeable "other fellow" drives up. Human nature is our nature, and the philosopher must not degenerate into the cynic. Hence we say that whatever encourages the honest horse or the speed of the honest horse is our common interest. It is not only our interest that is made for on the score of sentiment, feeling and pride, but on the financial score quite as much.

Billy Ayers is in Oregon, and is not likely to return to California till next season, and the stable is for the present broken up preparatory to reorganization. Fred Collier has been sent to Kern county for the Winter, and it is reported that he has been sold to Ben Timmins for \$1,000. Joe Howell has been shipped to Oregon. Ichi Ban, the Joe Hooker colt purchased at the Winters sale last Spring, has been put into George Hanson's string and left at Sacramento. 1884 was a hard year for Billy. What with horses that went amiss and accidents to those that were fit, the stable showed a balance on the wrong side of the ledger.

The purses and stakes designated in the advertisement of Pacific Coast Blood-Horse Association close to-day.

A letter containing nominations, directed to the Secretary, and legibly postmarked November 1st, will be valid. See that the stamp is plainly impressed on the envelope.

THE RIFLE ASSOCIATION.

Arrangements for the Fall Meeting—Rules Adopted.

The Directors of the California Rifle Association met at the brigade headquarters, in the Nucleus building, Thursday evening, Oct. 23d, Brigadier-General Dimond presiding. The object of the meeting was to make arrangements for the fall meeting of the association. It was decided to hold the meeting at Shell Mound Park on the second and third Sundays of November, Captain George A. Tellar and Lieutenant George H. Strong were elected Directors of the association; Major A. F. Klose was elected executive officer of the fall meeting, with full power to decide all disputes on the grounds, and Lieutenant Sims and Sergeant Wash were appointed as the Range Committee. The rules governing the shooting will be those of the California Rifle Association. They were amended Thursday night in some respects, and read as follows:

- 1. The rules of this Association shall govern all its matches.
2. All teams must be certified by their commanding officer.
3. Two sighting shots shall be allowed in all five hundred-yard matches; none in two hundred-yard matches.
4. Weapons must not be loaded until at the firing point. Any violation of this rule will annul the score made.
5. Names may be entered at any time at the office of the Secretary, 422 California street.
6. Entrance of teams will close at the office of the Secretary at 2 o'clock on the day previous to the meeting. Post entries can be made upon the day of the meeting on payment of \$2.50 extra.
7. All matches will be called at 9 A. M. Teams not entering will forfeit entrance money.
8. Dues to the association may be paid at the range, and must be paid before shooting to entitle winners to receive a prize in competitions where membership is required.
9. The executive officer will decide at the time all questions of dispute.
All team shooting will be done on the first day and all individual shooting on the second day of the meeting. The champion marksman of the meeting will receive a valuable gold medal of the California Rifle Association.

A Closely Contested Shooting Match.

The shooting match at the Presidio Range, on Wednesday, proved to be one of the most closely contested match that has ever taken place in California. The competitors were Sergt. Nash and A. T. Fields on one side, and Sergeant Carr and Officer Linville on the other. The contest resulted in a tie, and the shoot off between the two highest scores also resulted in a tie. The scores:

Table with 2 columns: Name and Score. Rows include Nash, Fields, Carr, and Linville with scores for 200, 300, 500, and 600 yards.

Table with 2 columns: Name and Score. Rows include Carr and Linville with scores for 200, 300, 500, and 600 yards.

The shoot off between Nash and Carr resulted as follows:

Table with 2 columns: Name and Score. Rows include Nash and Carr with scores for 500 and 600 yards.

If being late in the afternoon, and a cold, disagreeable wind having sprung up, the affair came to an end, with an agreement that the same contestants should come together again under the same conditions at the earliest convenient date.

The Target at Sacramento.

The following scores were made at target practice last Sunday, at Sacramento, by members of the First Artillery Regiment:

Table with 2 columns: Name and Score. Rows include Captain Plant, Sergeant Hughes, Captain White, Private Pratt, Colonel Guthrie, Private Taylor, Private White, and Private Mott with scores for 200 and 500 yards.

The following scores were also made by members of Company A at the 200 yard range.

Table with 2 columns: Name and Score. Rows include Captain Stevens, Private Hogan, and Private Cook with scores for 200 yards.

There is a possibility of the revival next season of the international rifle matches inaugurated ten years ago between the picked marksmen of this country and Ireland. John Rigby, of Dublin, who did creditable work in the teams representing his native land at Creedmoor and Dollymount, has written to New York relative to a new system of long-range shooting introduced in Ireland, in which the cleaning of weapons between shots is not permissible, stating that scores of 219 out of 225 possible points have been made under such conditions, and asking for information regarding the probability of arranging a match with an American team in this style, to take place in America. The conditions would be as nearly as possible the same as prevail "at the front" in time of war, and the relative effectiveness of the different arms used by the opposing riflemen would be more clearly demonstrated than under the conditions governing matches. The results should therefore prove of great benefit to military men.

"Stubb and Twist," the Nevada correspondent of the American Field indulges in the following bragadoocio: "Nevada, out of her four hundred militia can pick three teams of ten men each good enough to beat California, and not consider it any feat at all."

The following are the scores made by Kellogg and Moore at the range last Sunday. Nineteen half-eyes out of twenty shots is something unknown on this Coast.

Table with 2 columns: Name and Score. Rows include Kellogg and Moore with scores for 200, 500, and 600 yards.

BICYCLE.

RACING RULES.

League of American Wheelmen.

The Racing Board of the League of American Wheelmen present the accompanying rules for the government of Race Meetings.

A. Any amateur willfully competing at races not stated to be held under the rules of the League, or rules approved by the League, shall be liable to expulsion from race track for such a time as the Racing Board may determine, and amateurs are notified that to compete against any rider who has been expelled will render them liable to the same penalty. The Rules of the National Association of Amateur Athletes of America are approved by the League.

B. The Racing Board will receive and pass upon all claims for records, and claimants must furnish a statement from the judges and timekeepers of the meeting, together with a sworn statement from a competent surveyor certifying the measurement of the track. When the record is proven to the satisfaction of the Board it will be published in the Official Organ, and stand as such on the books of the Board. No record made at a meeting not governed by League Rules will be considered.

No record made on the Lord's Day will be considered. The standard of measurement adopted by the League requires that a track shall be measured on a line drawn not more than eighteen inches from a well-defined and continuous inner curb or pole, and no record will be allowed on a track otherwise measured.

C. The Board reserves the right to exclude from the racing path any and all machines which in their judgment do not come within the commonly accepted meaning of the terms "bicycle" and "tricycle," either by the peculiarity of construction or by undoubted mechanical advantages which they may possess.

D. The following National Championships have been established by the Board: One-mile, two-mile, three-mile, five-mile, ten-mile and twenty-five-mile bicycle, and one-mile tricycle. The one-mile bicycle and tricycle events will be contested each year under League auspices, at such time and place as the Board may direct. Suitable trophies will be offered, which will become the property of the winner. The two and five-mile bicycle championships are held jointly with the National Association of Amateur Athletes of America at the annual games of that association. Suitable trophies are furnished by the N. A. A. A. The other championships shall be assigned yearly by the Board to such clubs or athletic associations as they may select, under such conditions as they may impose.

The National Championships are open to League members only resident in the United States, and no prize exceeding \$50 in value will be allowed.

Privilege to hold State Championships may be granted to clubs or authorized associations, when the importance of the meeting is sufficient to warrant the Racing Board's special sanction, although it is recommended that not more than one race be offered as a State Championship during the year, and that meeting must be announced at least one month in advance, in order to give intending contestants ample time for preparation.

At championship races, whether State or National, there shall be no limitation in the choice of machines, except in the case of such machines as may be officially barred by the Board.

E. The Board will appoint, at its discretion, a League handicapper, who shall for a stated remuneration, frame the handicaps of the League, and of such of its associate clubs as shall desire his service.

All handicaps and positions in class races will be judged from the date of entry, and this judgment shall not be changed by any record made between that date and the time of the event of which the entry was made.

Copies of these rules may be had of any member of the Racing Board by enclosing a stamp for return postage.

RULES.

1. Entries and awards in amateur events will be confined strictly to amateurs, and persons entering for these races, who are not members of bicycle or other athletic clubs whose rules of membership exclude professionals, must satisfy the judges that they are not professionals, either by their own statement in writing, or otherwise.

2. (a) An amateur is a person that has never competed in an open competition, (b) nor for a stake, (c) nor for public money, (d) nor for gate money, (e) nor under a false name, (f) nor with a professional when gate money was charged, (g) that has never engaged in any athletic sport for money, (h) that has never exhibited his skill in any branch of athletics for money, (i) and that is not a paid teacher of any branch of athletics. This rule not to apply to the teaching of the elements of bicycling solely for the purpose of affecting the sale of a bicycle, nor of the acts of minors under sixteen years of age that are not members of this Association. Pacing-making for a professional or accepting such service from a professional will violate this rule.

3. The officers of a race meeting shall be: a referee, two judges, two or more time-keepers, one scorer, one starter, one clerk of the course.

4. The referee shall have general supervision of the race meeting. He shall preside at all meetings of the judges and shall see that protests and complaints are properly laid before them. In case of a disagreement between the judges he shall hear a statement from each, and decide between them. His decision on all questions that are referred to him shall be final and without appeal.

5. The judges shall see that the rules are obeyed and shall decide all points in dispute. At the finish they shall stand at either end of the mark and shall decide the positions of the man as they come in.

6. Each of the timekeepers shall time every event, starting the timer from the report of the pistol. In case of disagreement, the average shall be the official time. In case of a record being broken, the slowest time shall be taken.

7. The scorer shall record the time made by each competitor; the order of the men at the finish, and the time as given to him by the timekeepers. Scorers shall have such assistance as may be necessary.

8. The starter shall see that the competitors are fairly on their marks. He shall announce to the men the distance

which they are to run and start them in accordance with the rules. He shall announce the commencement of the last lap by ringing a bell as the men pass over the marks for the final lap.

9. The clerk of the course shall record the name of each competitor who shall report to him and see that each is provided with a number to be worn. He shall report the contestants to the scorer and shall call their numbers as they cross the line at the end of each lap, so that the scorer may check the laps and the timekeepers take the time.

10. No person whatsoever shall be allowed inside the track, except the officials and properly accredited representatives of the press. Authorized persons shall wear a badge. Competitors not engaged in the race actually taking place shall not be allowed inside or upon the track.

11. Any competitor making a false entry will be disqualified and debarred from any place or prize.

12. Choice or change of machine, and choice of costume, are not limited, except that shirt and breeches must not bare shoulder nor knee. In races distinctly stated on the programme of events to be for a particular class of machine, this rule shall not apply so far as choice or change of machine is concerned.

13. Each competitor will receive from the clerk of the course, before the start, a card bearing a number, which must be worn during the race.

14. The drawing for positions in each race will take place at the judges' stand before the races.

15. All starts will be from a standstill, and the machines are to be held in position by an attendant (the driver touching the starting line) until the signal is given by the starter. Any contestant starting before the signal is given shall be placed one yard behind the starting line, and an additional yard for each repeated false start. The "pusher off" shall not be allowed to step over the starting line. In case of an accidental foul resulting in a fall within ten feet of the scratch line, the contestants shall be recalled and the race started over again. The signal will be the report of pistol by the starter, preceded by the words "are you ready?" Should the pistol miss fire, the start will be made at the word "go." Time handicaps shall be started by the word "go." There shall be no "push off" in tricycle races. The finish to be judged by the driving wheel.

16. Riders must pass on the outside (unless the man passed be dismounted), and must be at least a clear length of the bicycle in front before taking the inside; the inside man must allow room for his competitor to pass on the outside. Failing to have room on the outside, a rider must pass between his competitor and the pole; should a foul be claimed, the judges must decide if the rider was justified in his course. Riders are cautioned that they must not pass inside except as a last resort.

17. Any competitor guilty of foul riding will be disqualified and debarred from any place or prize.

18. Any protest against a competitor respecting his qualifications as an amateur, must be lodged with the judges before the start is effected; and any protest respecting foul riding or breach of rules must be made to the judges immediately after the heat is finished.

19. Competitors may dismount during a race at their pleasure, and may run with their bicycles if they wish to, but they must keep to the extreme outside of the path whenever dismounted. If a rider be dismounted by accident or to change his machine, he shall not be allowed a push off in starting again, but an attendant may hold his machine while he mounts it.

20. The right is reserved to the judges of refusing or cancelling any entry, if necessary, before the start; of adjudicating any questionable entry; of deciding any other point not provided for, and of making any alteration in the programme that they may deem necessary.

21. Ignorance of any of the foregoing will not be considered a valid excuse.

That Mt. Hamilton Climb.

MR. EDITOR.—In perusing the interesting columns of the BREEDER AND SPORTSMAN of last Saturday I could not do otherwise than particularly notice your comments re the Mt. Hamilton ride, which shows very truly its ridiculousness. Permit me to state that much of a day (between seven and eight hours) was consumed in the ascent, and were it not for the lightness (34 lbs.) and extreme rigidity of my wheel, it would have been a physical impossibility to have ridden up to the Observatory upon a bicycle at all.

Cyclingly and truly yours, H. C. FINKLER. SAN FRANCISCO, Oct. 27, 1884.

According to arrangement the members of the Bay City Wheelmen proceeded to Haywards, last Sunday, for a tour through that locality. The following gentlemen participated in the run: F. R. Cook, Ed. Mohrig, S. Booth, C. Davis, T. Hill, W. Meeker, H. Houseworth, D. O'Callaghan, E. Rideout, W. Riddall, C. Riddell, E. Ezekiel, A. Gambitz, F. E. Johnson, Albert Andrews, W. H. Gibbons, and M. R. Hall.

The number of American patents for velocipedes of all sorts, including saddles, is about 900. Of these, tricycles constitute the great majority, or nearly two-thirds of the whole. The bicycles, having the wheels arranged tandem, number about 210. The single wheels, or monocytes, number 23; the saddle and saddle-springs, 35; and the water or marine velocipedes, about 20.

Henda in his attempt to break the world's mile bicycle record, at Hampden Park, Springfield, on October 16th, made the mile in 2m. 42 1/2 s., which was a remarkable performance considering the state of the weather.

According to the London Times there are over 300,000 cyclists in England, and the capital invested in the production of bicycles and tricycles is about \$15,000,000, employing from 6,000 to 10,000 men.

The Bay City Wheelmen contemplate holding a bicycle tournament, at the Mechanics Pavilion early in December. All arrangements will be perfected in a few days.

Fred Wood, the professional bicyclist, rode a mile in a handicap race at Leicester, on Saturday, Oct. 11th, in 2m. 42 3/5 s.

N. H. Van Sicklan, of the Chicago Bicycle Club, has ridden over 3,500 miles on his wheel during the summer.

Eastern wheelmen are arranging for an excursion to the Bermuda Islands for January, 1885.

Abraham Lincoln rides a 45-inch Star. He is the son of Robert Lincoln, Secretary of War.

There are over 600 bicycles in daily use in Washington, D. C.

## NEW YORK AGENCY.

Mr. C. C. Pettus at the office of the "Sportsman," 46 Murray Street, is duly authorized special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptions and arrange advertising contracts.

## ADVERTISING RATES.

Displayed, \$1.50 per inch each insertion or pro rata for less space. Reading notices set in brier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent will be allowed on 3 months, 20 per cent on 6 months and 30 per cent on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 50 cents each insertion.

San Francisco, - - - Saturday, Nov. 1, 1884.

## Hoof of the Horse.

The first requisite in the treatment of the feet of horses is a correct knowledge of the component parts. So far as the bony, ligamentous and vascular structure is concerned, anatomists have succeeded in presenting clear statements of the somewhat intricate pedal machinery, and in nearly all the works on veterinary science lucid descriptions are given. The horny portion has not received the same attention, and further than to regard it as an outside box for the protection of the interior little is known among those who are not members of the veterinary profession. Question intelligent trainers of race-horses and trotters in relation to the feet of horses, and all of them will return correct answers about the bones of the feet—not one of them perhaps competent to tell how the horn is formed, or of what material it is composed. This is not surprising, inasmuch as standard works on the horse give little information in regard to the formation of the horn, and in some of them this portion is completely ignored. In one of recent date, the title of which is "Veterinary Medicine and Surgery in Diseases and Injuries of the Horse, compiled from standard and modern authorities and edited by F. O. Kirby," there is a mass of valuable information and clear instructions what to do in cases of disease and injury. We have no hesitation in pronouncing it a very valuable work, one of the best, as the letter press is made more clear by cuts, and definitions and explanations are given in terms which are easily understood. But in Chapter X, "Diseases of the Feet," extending over 30 pages and illustrated by 28 cuts, there is not a line to teach the student in relation to the formation of horn or the proper manner to preserve its natural functions. In addition to the ordinary cuts there is a colored plate which gives an admirable representation of the internal appearance of laminitis, showing the abnormal growth of horn, displacement of the bones, the filling up of the anterior cavity (occasioned by the tilting of the coffin-bone) by a sort of *callus* which is gradually transformed into a horny substance without further explanation. This oversight unquestionably comes from an underrating of the importance of this portion of the foot, and further than to state that the horn is secreted by vessels in the coronary band nearly all of the works are silent.

The prevailing impression that the horn has a limited duty to perform, that office being merely to guard the sensitive, inner structure, has led to wrong methods of treatment. In a natural state there is constant wear which necessitates constant growth. This growth has to be continued through life, and like the replacement of the covering of the body Nature has made ample provision to make good the waste. As the horn is worn away on the ground surface the depositing vessels are stimulated to increase the secretion. The horn is merely hair, the small tubes filled with matter, the whole solidified and agglutinated together so as to form a substance dense enough to sustain the pressure and friction of use. The wisdom of this construction is apparent. The minute tubes convey life to all portions of the wall. Like the sap in a tree it permeates all through, ready to replace what is lost by wear and keep up the balance. Then the collection of tubes form a stronger wall than if the whole was solid, that is solid as steel or brass is solid, as in that case there would be no

chance for replacing worn-out material further than to push it down in a mass by the matter deposited by the coronary vessels. The tubes can be forced apart and the splitting appears to be easiest the longitudinal way at the upper part of the wall, while below the transverse fissure seems to be the usual method of separation. The idea that the hoof is formed of layers like the leaves of a book is certainly erroneous. In that case the cracks and quarter-cracks would be of rarer occurrence, as the lamination would resist fracture with greater strength, though at the same time there would not be as much elasticity in the upper part of the foot. The tubes become flattened near the ground surface, the flattening being lengthwise of the foot, and this gives the appearance of lying in regular layers, though a magnifying glass shows that the tubes are not regularly placed. The elongation of the tubes, and the cement which binds them together, being also flattened, separation of the fibres is readily accomplished by the wedge-shaped nail. From even this slight description it is evident that any treatment that interferes with the natural properties of the foot is wrong, and though the duties which domestication entails are very different from what is found in a free life, it is just as manifest an approximation to Nature will be the wisest course to follow. When it is realized that the outside coating of the foot has animate properties, that in order to preserve properties essential to well-doing, there must be intelligent treatment, that treatment governed by *thought* in place of blindly following old traditions there will be a radical change from present practices.

In the work alluded to, Kirby, under the heading of "Sanderacks," is the following: "Definition—A sanderack is a longitudinal division in the fibres of the wall of the hoof, amounting to a flaw simply, or else to a cleft or fissure through the substance of the horn. It is usually found on the inside in the fore-feet (quarter-crack) and in front in the hind-feet (toe-crack)."

In most cases the fissure is due to brittleness of the crust. This brittleness may be constitutional, some horses being evidently predisposed to it, but it is more often due to the evil practice of cutting away the sole and of rasping the crust. The fissure may also be the result of contraction at the heels. Such contraction may arise from natural causes, but it is certain to be aggravated, if not produced, by the practice of cutting away the bars and so-called 'opening' the heels." The treatment recommended closes with the following paragraph: "The treatment of sanderack, as regards shoeing, consists in removing the shoes altogether. When the fissure is at the side, a three-quarter bar-shoe may often be beneficially applied. *Tips are an almost certain remedy for sanderacks.* Sanderacks can always be got rid of as long as the coronary band remains entire; but if by neglect the disease is allowed to involve the secreting substance, false quarter or a permanent separation in the crust at the quarter may probably be the result."

The italics under the sentence, "*Tips are an almost certain remedy for sanderacks,*" are ours, and in emphasizing that portion of the treatment we also state that leaving the heels bare is a certain preventive, as we have never heard of a single instance when barefooted horses or those wearing tips had a "sanderack."

The quarter-crack commences at the coronet, extending downwards, and in some cases there is also a horizontal fissure. The stiology may be given as occurring from double reasons. The full-shoe fetters the heel so that there is no chance for expansion at the lower portion of the wall, and from pressure and concussion there is a morbid state extending to the coronary band, and in place of a healthy deposit there is brittleness. Held by the shoe, for even if the nails are driven well forward the friction between the wall and the shoe restrains the motion, there is an extra force exerted by the coronary band, and the horn is split. There cannot be "constitutional brittleness," as in that case unshod horses would have quarter-cracks, but there may be a constitutional tendency towards feverishness aggravated by a radical departure from natural methods. Beside the restraint on the quarters and the hammering of the shoe on the angles formed by the bars and wall, there is a more potent injury arising from the non-use of the frog. This natural *buffer* is raised so high that unless there is softness of ground enough to bury the shoe there is nothing for it to do and it wastes away. It becomes almost as hard as the wall, the shrinkage extends to the sensitive frog, the atrophy of both affects the tendon which runs under the navicular bone, and in time the whole of the interior portion of the foot suffers. Thus injury to the wall entails disease of the pedal machinery, and in place of merely being a box to contain the complicated mechanism of the foot, it cannot suffer without exerting a baneful influence on all the parts. When it becomes evident to the trainer that the feet are more or less diseased—though in all probability he will claim "soreness" is the trouble—he will pursue a course of treat-

ment that can only afford temporary relief, and if persisted in will aggravate the malady. The soaking tub is held to be the only panacea, and though the filling the shrunken tubes with water may afford temporary relief, when that evaporates the collapse is greater. It is not a difficult matter to bring this to a test, at least in this vicinity, as we can suggest a trial that cannot be otherwise than satisfactory. We will take a horse that has not had a drop of water, or any kind of "stuffing" in his feet, excepting when driven on fresh roads for several years to the blacksmith shop in company with one which has been soaked and stuffed according to the formula in vogue, and which has worn shoes during the past Summer. When the shoes on the latter has been pulled off, shavings of horn of varying thickness can be cut from any portion of the lower part of the wall. Corresponding slices shall be taken from the wall of the unshod, unsoaked foot, and a test applied which will determine the elasticity and strength of the material. We will be pleased to make the trial for the sole purpose of instituting a comparison, but if this is not sufficient inducement to those who hold to a contrary belief, we will wager from ten to one thousand dollars that the parings from our horse will be found more elastic, capable of withstanding a severer strain, and in every respect better adapted for the purpose which Nature intended. Furthermore, if the slices of horn be laid aside when that from the soaked and shod foot becomes so brittle, as to be fractured with little effort, the other will be measurably elastic and nearly as tenacious as when first removed.

## Trotting-Colt Stakes.

It may be ascribed to more than a usual run of good fortune our present advocacy of stakes for trotting colts, but as the records will show we have labored assiduously for years to aid in developing this important branch of trotting sport, and in addition to advocating have entered into engagements, at home and abroad, whenever the opportunity offered. There has been a tendency of late in California to decline making nominations on the plea that there was no use in competing with the large breeding farms, especially Palo Alto and Sunny Slope, and men who had as fine stock as there is in any country withheld their support on the feeble plea that they would be beaten. The battle was given up long before a blow had been struck, and while this feeling existed there could not be much hope to show that the position was untenable. It had an effect after the nominations were made, as the same dread of discomfiture interfered with a proper working of the colts engaged, and a concession of inferiority militated against the chances of success. While it is true that the opportunity to select from a large number of colts gives an advantage, there are corresponding risks, and in order to secure that benefit a large amount of entrance money must be forthcoming. There is a risk to the owner of many colts which is lost sight of. The same care cannot be given, and there is a proneness to overwork induced by the knowledge that those which go amiss can be replaced by others in "the string." When the entries close before the colts are old enough to display their powers the whole guide is the breeding, and by closing stakes before there is a chance to learn much of individual quality the advantages of a large stud are not so potent. In the stake which was gotten up by the National Association of Trotting Horse Breeders, and which closed the 15th of October, for foals of this year, the right plan was adopted, and though the stake is so large, \$500 each, we anticipate a long list of subscribers. In all probability the Stanford Stake will be changed so as to close for 1887—foals of 1884—the first of January, so that there will be two Stanfords to close on that day. This will be a good test, as the number of subscribers will show which is the best method. The cutting down of the first payment from \$100 to \$25 was a good move, and should the change be made then the payments will be \$25 at time of subscribing, \$25 the first of January, 1886, \$25 the first of January, 1887, and \$100 thirty days previous to the time fixed for trotting. The Stanford for 1886, which closes on the first of January next, is for foals of 1883, the subscription being \$25, \$50 payable 1st of January, 1886, and \$100 thirty days before day of trotting. Should the California State Agricultural Society change the date for closing the Occident Stake in the same manner, we feel confident that the list of nominations will be doubled. It certainly will be to the advantage of the smaller breeders, and as the Occident is a stake of \$100 each, the payment at time of subscribing might be reduced to \$10, \$15 due the 1st of the following January, and the other payments the same as heretofore. With so small a nominating fee there is little hazard in predicting that there will be at least one hundred nominations, with a good chance for obtaining an aggregate of double the amount over those of preceding years.

### The Coming Race Meeting.

With favorable weather there is nearly a certainty that the race meeting of the Pacific Coast Blood Horse Association, which opens on Saturday, the 15th of November, at the Bay District Course, will be eminently successful. From all the training grounds come favorable reports of the condition of the horses, and so many are in training that full fields are assured. The programme we have already commended, and as it meets with favor from those having horses to engage, there is nothing in the way to curtail the entries. It was a wise move to leave some of the purses blank until the horses were on the ground.

The postponement will insure contests beyond peradventure, whereas if fixed beforehand there might be one-sided battles. Distances and weights can be fixed so as to bring the horses so closely together as to leave room for doubt until the very last stride, and this is the great desideratum in racing affairs. With one horse so much superior to his competitors that his winning is regarded as a "foregone conclusion," there is no interest. Speculators are disgusted at the long odds which have to be laid, and spectators are devoid of enthusiasm when there is no anticipation of rivalry. It is very different when there are expectations of a "heroic struggle." With "finishes" which leave the question in doubt until the goal is reached, the most stolid are aroused, and even the apathetic join in the cheers which nerve studs to the utmost exertion.

From all we can hear there is little risk in promising the rarest of sport at the coming meeting, and this is done without waiting for the entries to give a cue to the situation. We have the utmost faith that in the paper of next week, we will be able to give a list of names which will take part in the meeting, that will warrant still more sanguine prophecies.

### Purchase of Racing Colts.

Messrs. Kelly and Lynch have purchased at Palo Alto, the chestnut filly by Norfolk, from Glendew, by imported Glengarry, her dam Glenrose, by Lexington, the maternal family being one of the very best in the Stud-Book. There still remains an absurd prejudice against the daughters of Norfolk, although the natural inference would be that the Duchess of Norfolk showed that the female line is well worthy of a high place. That the Glendew filly will confirm the testimony, we have not the least doubt, and the price paid, \$3,500, was none too much.

The same parties have also bought the chestnut two-year-old by Joe Hooker, his dam by Norfolk, grandam, Big Gun. This youngster greatly resembles his celebrated three-quarter brother, Jim Renwick, and we know that he is a "fast-un."

### Bay District Trotting Meeting.

As the entries to the trotting purses did not close until Thursday, and those which come by mail cannot reach here for a day or two after; they could not be obtained in time for this issue. There is a fair prospect of the weather being favorable, the foggy nights and mornings being an indication that rains are not very close. The track is in fine order, and should the entries be full there is no question of the meeting being satisfactory. The opening day is Wednesday, the 5th, continuing until the close of the week.

The purses and stakes designated in the advertisement of Pacific Coast Blood-Horse Association close to-day.

A letter containing nominations, directed to the Secretary, and legibly postmarked November 1st, will be valid. See that the stamp is plainly impressed on the envelope.

## ATHLETICS.

### Scratch Man in a Sprint Race.

It is indeed an inspiring sight to the spectator, to see one of our finely built, sinewy and determined athletes on his mark, and during a race, at any of our field meetings. As he comes out of the dressing-room, if the race be an important one, he has a slightly nervous look, his face is pale, and teeth and lips firmly set together. Trotting down the track to the starting point in a springy anxious way he reminds one of a blooded horse in a similar position.

"Get-on-your-marks," calls the starter, as a friend is giving our hero's limbs a few last slaps to invigorate the muscles. He quickly throws aside any wrap he may have on his shoulders, and springs to his mark.

"Are-you-ready!" and now you see him at his best, with left foot on the scratch line and right close behind, right hand unraised, and left close to his side ready to assist in the first few strides, which are so often the means of winning a race. Nervously he prances on his mark like the war horse as described by the poet Job in scripture. "He paweth in the valley, and rejoiceth in his strength, he goeth out to meet the armed men." (Job 39, 21.)

His body is bent forward that he may shoot out like an

arrow at the report of the pistol, his eyes sparkling as he keeps them on the starter anxious to catch the first flash, you can see each muscle standing out like whip cords on his bare legs. Puff! he's up! and away he jumps with the field in front having handicaps on him of from ten to forty yards. The distance is 440 yards, and to catch all the runners in front, and win, requires no small amount of pluck, judgment; fortunately our ideal is not wanting in either. Before running fifty yards our man has broken into a long swinging stride that is beautiful to behold. See! he is on the heels of the man in black, who is considered his most dangerous foe in the race, now he is at his side, and there is a struggle, Black knowing full well that once to the rear of our man, his chances of winning are exceedingly small. Hurrah! our man has conquered Black, but is not among the rabble, and has no course to pursue, but to go clear outside of all, and he goes, each man he passes making an effort to follow.

Two hundred and twenty yards are passed, and still some are 20 yards away, but they are men who have put forth their whole force in the first half of the race, and he may yet catch them. Foot by foot he gains on them, and one by one they go to the rear. 175 yards from home, and still there are several in front, and now for the first time the crowd notices the head of the red trimmed snit, who has heretofore been unnoticed in the field, except by a few friends who have considered him a "dark horse."

At 125 yards from home the audience realizes there is to be a grand race to the finish, as Red is running strong with a lead of 10 yards on our hero, who, with teeth clenched and eye set, is making a desperate effort to win, the rest of the field having gone to the rear used up under the tremendous pace.

Look! the crowd on grand and side stands is becoming wild with excitement, as the runners, straining every nerve, come tearing down the homestretch.

Ladies and gentlemen forget themselves in the excitement of the moment and wave handkerchiefs, hats and umbrell at the same time screaming at the top of their lungs for the favorite.

Now they are 40 yards from home and but 5 yards now separate our man from the head of the red, who is evidently weakening, and although our man looks tired, and leg weary, he has that dogged "never-say-die" look, that means business, and he is still gaining. 25 yards away, Hurrah! our man is at Red's shoulder, but hold, Red does not die so easily, he makes a tremendous effort and holds his own for a few yards. At 10 yards they are level, at 5 the same, and here our hero makes his grand final effort, and—"three cheers and a tiger, our man wins by 6 inches." PAVSON.

### The Benefits of Training.

Aside from a competitive point of view, the benefits derived from a severe course of training are so little appreciated that we have ventured to pen these few lines to demonstrate the advantages obtained physically, and morally therefrom. Few people enjoy the measure of health for one day that the trained man possesses for seven days in the week; the bright eye, rosy skin, elastic step, the blood well charged with oxygen rushing and throbbing in the ecstasy of life through arteries and veins; muscles hard but flexible, ready and willing to obey the slightest mandate of the will. These are a few of the physical benefits obtained by such a course of action.

The mental advantages are as weighty as the preceding. Business over, the exercise is taken, followed by the rub down; shortly after, eight hours of sleep are taken with a relish that only a person, who is as tired as a healthy man can be, enjoys. Then what is to be expected the following day? How could it be possible that a creature in such a state of existence could transact business in anything but a cheerful frame of mind, with a clear brain, steady hand, in short a measure of health that is better felt than described, better practised than taught; a state of life seldom if ever enjoyed by the slave of luxury who is indifferent to the benefits in question. A person in the former condition can endure a tremendous pressure of business, far more than ordinary, and it does not follow that the mind is diverted thereby, for the brain being clear it can be trained into any channel desired.—*Amateur Athlete.*

### The Williamsburg Games.

The Williamsburg Athletic Club held their second Fall games on October 17th. Attendance very fair. Track in excellent condition. Performances very creditable, considering the cold weather and the high wind. Result:

120-Yard Run, (Final Heat)—J. H. Dunavan, 10 yds., 1st; Halpin, 8 yds., 2d. Time, 12 sec. Myers was beaten in the second trial heat in 11 4-5 sec.

2-Mile Walk—F. P. Murray, scratch, 1st; McDonald, 25 seconds start, 2d. Time, 14 min. 12 1-5 sec.

1,000-Yard Run—J. E. Sullivan, 70 yards, 1st; G. A. Walton, 90 yds., 2d, by six inches; Gilmore, 70 yards, 3d by a foot. A grand race. Time, 2 min. 20 1-5 sec.

Fifth of a Mile Run, (Final Heat)—W. H. Cammeyer 15 yds., 1st; S. S. Schuyler, 12 yds., 2d. Time, 41 3-5 sec.

Hurdle Race, (Final Heat)—S. Russel, 15 yds., 1st; A. A. Jordan, scratch, 2d. A splendid performance by Jordan, who was beaten by six feet in the splendid time of 15 2-5 sec.

Two-Mile Run—P. D. Skillman, scratch, 1st in 11 min. 3 1-5 sec.; P. J. McCarthy, scratch, 2d. Won easily. S. D. See hopped 80 yards as an exhibition in 11 1/2 sec.

London, Oct. 18th.—W. G. George, the amateur runner, to-day made an effort to lower Deefoot's famous performance of 11 miles 970 yards in one hour, and failed. George showed a great improvement in his appearance since his last attempt, when he was said to be too finely drawn, and looked well trained. There was little wind and the weather was warm and pleasant. A number of well-known runners were selected to set the pace for George, one of whom was always near him, forcing him forward, and encouraging him to his utmost speed. For the first two or three miles he did well, but when he had accomplished nine miles he was so distressed that he left the track. His time for the nine miles was 46m. 48 2-5s. George's apparently sudden collapse was a great surprise, and is believed to have resulted, not so much from inability to proceed, as his being disheartened by the fact that he had not succeeded in beating Bennett's record for the same distance, 45m. 21s., made in 1852. When he had sufficiently recovered he was presented by the Lady Mayoress with a gold medal "as an acknowledgment by the citizens of London of his abilities and honesty in all his attempts as an amateur runner." He will sail shortly for Australia.

Ford and Myers are at present engaged in newspaper controversy regarding their sprinting abilities.

If you place a limit on one event in a programme, the scratch men in the other events, who are called upon to concede heavy handicaps, will most invariably "kick." No limit should be placed in a two mile race. The Meriona placed a limit in the hurdle race at their last meeting, but they claim that it was done with the intention of limiting the number of entries, in order that the event could be run off, without resorting to heats. No such excuse can be offered for the two mile race at the next Olympic games, as the more competitors the merrier, particularly if they don't repair to the dressing-room in the early part of the contest. We refrain from mentioning the names of the performers, who have already gained distinction in that line of business. We are afraid we should get hurt.

In arranging a programme it is necessary to put in such events as will produce the greatest amount of rivalry and competition. Of course scratch events are the most satisfactory, but it nearly always happens that in order to make interesting events handicapping has to be called into requisition. What the gentlemen who arranged the Olympic programme were thinking of when they put a scratch mile bicycle race in the programme puzzles every one who has even the very slightest knowledge of our games. With Finkler on the retired list, we should very much like to know who are the riders that are expected to make Cook exert himself. Cook has a very soft affair.

It has been decided that the Hammersmith medal for the 440-440-yard race is open to members of the Olympic Club only. This will shut out such performers as Flynn, Creighton, Petersen, Tennant and Lucas, and, of course, will rob the event of a considerable amount of interest. We have long looked forward to a meeting of our best men in a quarter mile race, but we suppose it will be well in the new year when such an event will take place.

At the fair grounds, Worcester, Mass., in the running hop step and jump match between Burrows and Sullivan, the former won, clearing the unprecedented distance of 48 ft. 3in. in his first attempt. Burrows, it is reported, is the celebrated English jumper of that name.

We understand that quite a number of old-time performers intend to compete in the approaching games. They will find in the new men, who have been doing the work at the late meetings, foeman worthy of their very best efforts.

A one hundred yard maiden race has been added to the programme of events for the Olympic meeting on Thanksgiving Day.

The University games take place this afternoon at Berkeley.

### Answers to Correspondents.

Questions answered only through these columns. No replies by mail or telegraph.

G. A. S., Oroville, Cal.

Panama, b g, foaled 1880, bred by P. Conits' Matadero farm, Santa Clara county. By Shannon, he by Monday. First dam Abbie W., by Dan Victor, son of Belmont; second dam Mary Chilton, by imp. Glencoe; second dam by American Eclipse; third dam, Queen Mary, by Bertrand; fourth dam, by Brimmer; fifth dam, Woodpecker's dam, by imp. Buzzard; sixth dam, The Fann, by Craig's Alfred; seventh dam, Shepherdess, by Wormsley's King Herod; eighth dam, by imp. Traveler; ninth dam, by imp. Whittington.

H. W. P., Healdsburg, Cal.

I wrote you last week regarding the half-mile and repeat race run by Blue Mountain Belle, at Santa Rosa, etc. My friend still refuses to give up the proposition and wager you decided that AS was the fastest half-mile heat upon record, made in a race. He claims that Olitipa, 2 years, with 97 lbs. up, at Saratoga, N. Y., upon July 25th, 1874, ran a half in :47 1/2. Please answer. Answer.—Olitipa did make such a record at the place and date claimed, but your former note inquired as to the best half-mile "heat." Olitipa's run was a "dash." Trnr records discriminate between "dash" performances and "heat" performances. Of the former Olitipa's is the best; of the latter, Blue Mountain Belle heads the record. As the bet seems to have been made under a misapprehension you had better settle it by a draw.

It is possible that Mr. Gebhard will bring Eole back to America after the season has ended in England. The first engagement of the big horse is for the Liverpool Cup, Nov. 6th, in which he may meet St. Gatien, Florence, Thebias, and Clairvanx. It was Mr. Gebhard's intention to keep the horse in England only while he remained abroad himself, and when he left he hinted that he might return in November, and John Miller, who took the horse, said they would probably return before Thanksgiving Day. Thus, should Mr. Gebhard conclude to remain in Europe next season, Eole will no doubt stay there, and possibly St. Saviour will be sent over to join him. On the other hand, should Mr. Gebhard return to New York, it is likely that Eole will both up at Fordham some fine morning; hence it all depends upon Mr. Gebhard's own whereabouts.

Dan McCarthy has retired from the field as an owner of thoroughbred, having sold his two-year-old gelding, commonly known as the "brother of Jim Renwick," to Messrs. Kelly & Lynch, for \$1,000. This colt is not quite a brother to Jim Renwick, but is by Joe Hooker, out of Bay Kate, by Norfolk, second dam Big Gun, the dam of Renwick. He carries the same blood as Jim reinforced with a Norfolk cross that may carry him a little further than Renwick cares to go.

Roy S. Cluke has covered his sensational career by dying after the deciding heat of the last race, at Washington, on Wednesday. The cause of death is at present unknown, but no doubt it was due to the state of his lungs.

It is now an acknowledged fact that Dr. Henley's Celery, Beef and Iron is one of the purest and most useful tonics the world has ever seen. Those who are afflicted with impaired nervous systems will find this to be an invaluable remedy. It is made from Liebig's Extract of Beef, Extract of Celery, and Pyrophosphate of Iron, with condensed wine. When it is borne in mind that it is now an admitted fact that Celery possesses such powerful nervine properties as to be an absolute cure for palpitation and other affections of the heart, it will be at once seen that this is one of the finest combinations which has ever been placed before the public.

## HERD AND SWINE.

### Canned Beef Shipment.

A Chicago dispatch says: A cablegram from London recently announced that an American firm had been awarded a contract for supplying preserved meat for the British army in Egypt, to the amount of half a million pounds. This is the truth only half told. The horse in point was that of Armour & Co., of Chicago, and the contract for 1,000,000 pounds of corned beef and 1,000 cases of brawn. This is the largest individual contract for provisions ever awarded by the British Government, and the rations drawn from this supply are calculated to be sufficient for the meat-eating soldiers in Egypt for six or seven months. In illustrating the enormous capacity of America for feeding the world, it may be stated that half a million pounds of this contract was delivered to the Government officials at Woolwich Castle within an hour after the award, and the other half million pounds were loaded aboard the cars at Chicago the same day, and started as a special flying freight train towards New York. This latter shipment required an entire train, and by request to the various parties interested the New York Central Railway sidetracked all other trains to give the great Chicago provision train the right of way. All this haste was necessary in order to catch the steamer Britton, which was engaged to transport the beef to England.

This immense transaction was so quietly and successfully carried out as to excite extended comment in the British war office. Such are the gigantic facilities exhibited in the Chicago market that in case the United States should desire in the event of a foreign war to mass a million troops at any point on our coast line, the entire camp could be supplied with breadstuffs and provisions from day to day for an indefinite period, by merchants here, without causing more than a ripple in the ordinary channels of trade. The packing house above mentioned is only one of the many extensive canning and provision establishments which handle the enormous products of the west. The contract referred to required the slaughter of about 7,000 cattle, as only about 150 pounds of each beef is packed in tins as corned beef. This meat is first pickled or corned for fifteen days, and thoroughly hoiled and hermetically sealed in cans of two and six pounds each, the latter being packed in cases or pine boxes of one or two dozen cans each for transportation. The house mentioned slaughtered about 1,500 cattle daily, so the English contract only consumed a week's output of one of our establishments.

The corned beef is ready for table use upon being taken from the tins; but in Egypt or other tropical countries it is the custom of the soldiers to sink the cans in deep water when possible, for a few hours before using. This renders the meat more firm and palatable, and causes it to open out nicely from the cans. The brawn is a sort of headcheese made from pigs' heads, and is the most nutritious food in the world for hard working men. It is used largely in lumber camps and in the army.

### Management of the Berkshire Hog.

Each of the improved breeds of swine has many points of excellence to recommend it, and each has a large class of admirers who are satisfied that their favorite is a little the best. This is simply an honest difference of opinion, caused chiefly by the circumstances and surroundings of the breeder. The farmer who has the range of a large wood lot, or broad acres of pasture, naturally prefers the large breeds; while the man whose acres are few and valuable, justly believes in the smaller varieties. This being the case, it is not likely that any of them will be allowed to die out very soon.

For a general purpose hog, I value the Berkshire above all others, and my reasons for doing so are because it grows fast, is strong, quiet, healthy, easily fattened, and brings the top price in market, either alive or as pork. The meat is unsurpassed in flavor, firm, tender, juicy, lean and fat well proportioned, and of fine color.

Whatever breed is chosen, the male should be well bred—a good pedigree is of material importance. Special regard should be paid to length, and depth of body and symmetry of hams, shoulders and head. Also to vigor, health and strength. Fine, erect ears indicate fineness, alertness and vivacity; the eye and month, intelligence and tractability. Give him room for exercise, good water, and let his food be varied. When his tusks become too long saw the points off.

The sow should be well shaped, strong, healthy, perfectly docile and well grown. Very young sows deteriorate the stock; fully grown sows improve it. It is advisable to admit the male early in the season, especially if there are several sows to be served. About the 15th of November I consider none to early in latitude 40 deg. Probably the 1st of December would be better farther north. After sows are served keep them separate from all others. Their food should be bulky rather than strong, to satisfy but not fatten. Millstuff, slop oats, a little shelled corn, and plenty of pure water in troughs they can not get their feet into. Well cured clover hay, cut and steamed, or even soaked in water a few hours, and mixed with bran and corn-meal, chopped roots or apples is an excellent bulky food for them. Provide a warm, dry abed and plenty of bedding. Pet and handle as much as possible.

A few days before farrowing place each sow in a separate warm and dry pen, not over 8x10 feet square, and give but a few handfuls of short straw and forest leaves for a bed. This is an important matter. With too much bedding she will contract a deep nest and more than likely crush the young pigs to death in it. With but a small quantity she will make a flat nest and unless vexed or frightened will rarely injure one.

After farrowing she will eat very little for a day or two. A little bran and mill stuff, oatmeal or barley meal mixed with warm skim-milk and water is best. Gradually increased to all she can eat and drink.—*Prairie Farmer.*

### Washing Butter.

The only time that all the buttermilk and what it contains can be separated from the butter, and removed without requiring to knead or overwork the butter, is while the butter is yet in a granulated form. If the churning be so far advanced that the butter will be gathered in a large lump, in which buttermilk there will be some membranous or caseous or other solid matter. Not only will the grain of the butter be injured by the kneading required to remove this buttermilk, but the kneading will remove little else than the liquid in the buttermilk, leaving much of its solid matter incorporated with the butter. The kneading of the butter tends only to press and solidify all the solid matter of the mass, squeezing out only liquid. Moreover, when the buttermilk,

by closer, longer, even permanent contact with the butter, materially injures the quality of this butter.

If, on the other hand, the buttermilk and all it contains be drawn away before the butter has advanced beyond the granulated form, a more perfect result is secured. By washing this butter at a low temperature with water and brine, the buttermilk and all it contains may be removed from it, and before any taint or impurity has been given to the butter, and the grain be saved from the kneading that otherwise would be necessary. In this process butter will be taken out comparatively little affected by defects or taint in cream. Cream may be advanced more or less toward a bitter taste or decay, and the butter because being enclosed in and protected by the pellicle, not yet affected.

It is because of this protection that sweet butter may be made from sour cream. Sourness is an advancement toward decay. It is equally true that the cream may be more or less bitter and the butter hidden away in it be yet sweet. When churned, the sourness or bitter is in the buttermilk and the butter is yet pure. The buttermilk adds its sour or bitter taste to the butter according to the quantity and time of its presence with the butter. The obvious remedy is the quickest and most complete separation possible.—*London Provisioner.*

### Tobacco for Hog Cholera.

[*Prairie Farmer.*]

In the May number of the *Health and Home*, published in Washington, D. C., is an article from Gen. Clingman, on the curative properties of tobacco, and later numbers have brought a great many facts, incidents, inquiries and experiences of persons all over the United States. Among these is one from the Hon. W. H. Hatch, of Missouri, relating his experience with tobacco in the treatment of hog cholera, which I think every reader of the *Prairie Farmer*, who keeps hogs, should read. I do not wish to lose the paper, so will transcribe the article in full:

HOUSE OF REPRESENTATIVES, WASHINGTON, D. C., July 3d, 1884. GEN. CLINGMAN—*Dear Sir:* The following is an extract from a letter received by me from Dr. W. S. D. Johnson, of La Belle, Lewis Co., Missouri, an experienced and eminent physician, and a large and successful stock raiser and farmer: "The printed paper on the use of tobacco, in the treatment of local inflammations, by Gen. T. L. Clugman, of North Carolina, sent by you to me, on the 12th of last May, was duly received. I have carefully read it twice, and from observation of its effects on local inflammation, I corroborate the entire article, and I go further than he, for I do know that tobacco will destroy parasites, whether they are internal or external. I have used it in the treatment of hog cholera with perfect satisfaction to myself and relief to the poor hog.

In 1871 I came to this place, bringing with me 118 head of hogs. Hog cholera made its appearance among them, and they commenced dying, and in the course of six or seven weeks I lost 96 head. At this time I killed four on one day, and made post mortem examinations very carefully, and found that these animals were dying from the ravages of other animals—animals within. I made an infusion of tobacco and gave it to my hogs in buttermilk, and they stopped dying, and I have not lost a hog since by cholera. When I inspect the disease I give the tobacco infusion."

Respectfully yours, W. H. HATCH.

### Causes of Bitter Cream.

First—ragweed in the pastures. This is a frequent cause just now, when cows are fed in stubble or mowing lands. The flavor given by ragweed is a disagreeable intense bitter, quite different from that caused by fermentation of the milk.

Second—mildew, but especially the red spotted mildew, which forms upon the cream in damp cellars, and appears in spots about the size of a split pea. This is caused by the impregnation of the cellar with spores of the mildew, and is very difficult to get rid of. The only way I have succeeded in doing it is by burning sulphur in the cellar, which is kept tightly closed for a considerable time, until the walls are saturated with it, and afterwards by keeping the air dry by means of a box of freshly-burned lime kept in it until it is air-slaked.

Third—keeping the milk too long without skimming, until the whey separates and the cream floats upon it, also by keeping the cream too long without churning. Thirty-six hours is long enough for either, which makes the cream three days old when it is churned.

Fourth—imperfect cleaning of the milk pails or the churn, and leaving curd in the seams or corners. Putrid casein has a bitter flavor, and very rapidly communicates the same to milk and cream, the cream appropriating nearly the whole of it.

Fifth—the farrow condition of the cow, or her advanced state of pregnancy, will cause this trouble.

Sometimes the addition of as much powdered saltpetre as will lie on a silver three-cent piece, or about five grains, to a six-quart pan of milk, will prevent the bitterness, and to give the cow a dose of 2 drams a day for a week will have the same effect. I have found two grains of salicylate of soda to four quarts of milk will prevent mold even in a musty cellar. But I am inclined to think that at this season the cause of it, nine times out of ten, is in the feed, especially if it is aftermath or stubble grass. In this case the remedy is obvious.—*Country Gentleman.*

### Wheat as Food for Stock.

Commenting on the unprecedentedly low price at which wheat is selling in England, the *London Live Stock Journal*, in a recent editorial, advises the farmers of Great Britain to use it as feed for stock, instead of some of the grains ordinarily employed. Wheat is now selling in England at 34s. per quarter, and the tone of the market is downward. A large quantity of English wheat has already reached the market, for a series of bad years has rendered money scarce among farmers. Those who are not in immediate need of funds are holding on, hoping for an upward turn in prices. But, says the *Journal*, if no appreciable advance should take place, what is to be done with the stacks of wheat? Is the grain, most of which is of exceptionally fine quality, to be sold at the very low figure offered for it, or can it be turned to better account in any other way? Wherever circumstances favor, it should be used in the fattening of stock. Wheat now occupies a very different position from what it did formerly. Sir J. B. Lawes, in his well-known table relating to manurial values of feeding stuffs, places the average price of wheat at £14 per ton, that of barley at £8; oats, £7; Indian corn, £7, and linseed cake £10 10s., per ton. So long as these relative values were nearly maintained, wheat could not be used profitably by the cattle feeder. But

it is now selling at barley prices—34s. per quarter for good samples—hardly 15s. more than this average for oats! At this very low market value wheat may be advantageously substituted for the more costly foods which are purchased by farmers, notably, cotton and linseed cake. In comparison with barley also, it will be found, at the present relative prices, by far the cheaper food of the two, and, therefore, farmers should sell their barley and use in its stead wheat as food for stock.

Wheat contains about 12 per cent. of flesh-forming and about 68.50 per cent. of fat-forming matter. It exceeds, in these elements, barley by 3 per cent., oats by 4.50 per cent., rye by 5 per cent., Indian corn by 1.50 per cent., linseed cake by 7.50 per cent., and cotton cake by 7 per cent. Its manurial value is about the same as that of barley and oats.

It should, however, be used with caution, and never, under any circumstances, given to stock without being hulled. Its full fattening value could not be obtained if given whole, and its influence might even be destructive. Neither should it be substituted entirely for the feeding mixtures generally in use, as it has a beating and hindering tendency. This allowance at the outset should be very small and increased as the animals take to it.

### The Time for Breeding Sows.

The general custom among swine-breeders in the principal hog-raising regions of the United States is to breed their sows from about the 9th of November to the 25th of December, so as to have them farrow from about the 1st of March to the middle of April. Within these latter dates are produced the greater portion of all the pigs brought forth during the year. The ranges of four or five weeks, from the beginning to the end of the breeding season, in Fall and early Winter, allow for sows that failed to hold when bred in November, to be bred again, and still farrow by the middle of April following. In the most northern or colder States the time is usually extended so as to have the pigs come in May or even as late as June. Along the southern line of the great hog-raising portions of the country this season is often timed to have them come as early as the 1st of February.

There is but little variation from sixteen weeks as the time sows carry their pigs; the older ones not infrequently going beyond a few days, and the younger farrowing a few days earlier than this. If proper care be taken in the management of the hoar, allowing but one service to each sow, the dates at which the pigs should come can be made a matter of record, and the necessary attention given the sows as the time for their farrowing approaches.

The plan of only one service to each sow is recommended by many experienced and successful swine-breeders. By this method a mature and well-kept hoar will serve two or three sows per day for several weeks with less exhaustion than were he permitted to serve a single sow from three to five times a day, as by the common course of management. It is certainly as proper, and pays as well in proportion, to stand a good boar as to stand a stallion or a hull. Not only is his strength and vigor better sustained, and thereby stronger litters secured, but being under good control he is more docile and easily handled, and not liable to injure other stock.

In whatever latitude the pigs are to be reared it is best that the sows should not farrow earlier than the season of new grass. By this time there will be little danger of the loss of young pigs by their becoming chilled before they have learned to suck. The sows will have the benefit of grass or clover as a part of their diet, besides the advantage of daily exercise on pasture for themselves and their pigs; and the latter can be pushed right along on grass and a little grain daily at less expense than by any other course that would be practicable to any great extent.

The milk given by the sows may not be so rich and heating as when they are fed dry grain, but it will be more abundant, and on it the pigs will make the best growth. These March and April pigs, if rightly bred and well cared for through the Summer, will make excellent feeding stock the following Autumn, and will be ready for market at eight or nine months old. Pigs designed for feeding and fattening for market may be said to be rightly bred when their dams are of vigorous grade stock, showing one or more crosses by pure-bred hoars—the pigs themselves being sired by a pure-bred hoar of one of the approved breeds known to give size and feeding capacity to their progeny.

Pigs intended for breeding purposes may also come in March and April, as this will make them of good age for use in December following. The young sows will then drop their first litter when a year or more old. The sires and dams of pigs for this use are, of course, understood to be pure-bred and recorded animals.—*Phil Thriston, in Breeder's Gazette.*

### Causes and Treatment of Colic.

In nine cases out ten colic is the result of impaired digestive organs—the food runs into fermentation and involves carbonic acid gas. In view of prevention, then, it becomes a matter of importance to know what are the causes of indigestion, and the most frequent may be said to be immoderate feeding—eating or drinking whatever disagrees with the stomach, either in regard to quantity or quality. Every tyro in medicine knows that a drink of hard water will often produce colic both in man and beast, provided the digestive function shall be impaired. The treatment should consist first in the use of diffusible stimulants (not alcoholic) of a carminative nature; such, for example, as grains of paradise, caraway seed, ginger, etc., and these should be given in liquid form. Stimulants of a sensitive nature are always indicated in the treatment of colic, for if the stomach be distended with a load of semi-putrid food how can it be got rid of except by the ordinary way when parts are in a healthy state? Men have strangely erred in recommending medicine—castor oil, salts, aloes, opium, turpentine, etc.—for the cure of colic. The simpler the treatment the better. A dose composed of the following may be recommended, to be given from a bottle:

Powdered grains of paradise..... 1 teaspoonful  
Powdered caraway..... 1/2 teaspoonful  
Oil of peppermint..... 20 drops  
Powdered slippery elm..... 1 tablespoonful  
Hot water..... 1 pint

Also give injections of common soapsuds. Inflammation of the bowels is very apt to set in during an attack of colic from the use of spirits of oil of turpentine and other popular nostrums; and it is much to be deplored that so noble an animal as the horse should be made to undergo such torture as he is known to do from the administration of turpentine. To say the least of it, it is not a suitable article to introduce within the digestive canal, the surface of which is very susceptible to irritation. A few drops of the oil of peppermint or anise seed, dissolved in a small quantity of alcohol, and given as a drench in their gruel or warm water, are worth all the turpentine in the world for the cure of colic.

## STABLE AND PADDOCK.

### Teaching a Horse to be Caught in Pasture.

As your horse is an old one it will require considerable time and a good stock of patience to teach him to come to you in pasture. Make it in your way to pass through the lot where he runs two or three times a day for a week or so, carrying a dish of oats. Approach him carelessly until you get as near as you think you can without his running, and set your dish upon the ground. Have business in another direction, leaving the dish in sight of the truant. He will probably go to the spot and eat the grain very soon, and at the same time have an eye out for your approach. Don't disturb him, but after he has emptied the dish and left it, go back and pick it up and walk carelessly away, leaving the animal to look after you in astonishment. After repeating this a few times he will probably be prepared to meet you when he sees you coming, and in a short time will eat from the dish when held by you, and allow you to pet him, which you should not fail to do, but don't attempt to grab him, for that will excite his suspicions at once and destroy all you have accomplished. After he will come and eat the grain readily, have some apples or potatoes in your pocket and offer them from your hand when he has finished the oats. By persevering in this treatment he will soon be as anxious to put himself out to meet you when he sees you approaching as he was to run before. When this point has been reached the dish can be discarded, taking only a handful of potatoes or apples, as is most convenient for you and best relished by him. By persevering in this method and always having something when you go to his pasture, unless he is a hardened criminal, he will soon permit you to catch him at will. It is true that it takes time to accomplish the desired object, but it is less exhaustive to the system than chasing him with a club when one's patience is all exhausted and the blood is boiling with rage. Should this method fail after a reasonable trial, get him into the stable by some means, then take a small cord about ten feet long and make a Bonaparte bridle by tying a hard knot in one end and a loose knot about ten or twelve inches from it. Pass the hard knot through the loose one, and draw the latter close so that it will make a firm loop just large enough to slip over the lower jaw and into his mouth. Standing at his left side, slip the loop in his mouth. Carry the free end of the cord up over the opposite side of the head just back of the ears, and bring by the left side. Pass it through the loop which extends around his jaw, draw it up so as to fit closely and fasten with a half hitch. Braid a portion of his mane and tie so as to make a firm loop. Make another loop by braiding and fastening the hair of his tail near the roots. Pass the free end of the cord forming the Bonaparte bridle through the loops in the mane and tail. Tie to this a small strong line forty feet or more in length, and turn him to pasture with the cord dragging upon the ground, first tying to the end of it a small cloth so that it can readily be seen in the grass. Now, when he attempts to run as you approach him, seize the cord, call whoa to him, at the same time giving him a sharp jerk which will bring him to a standstill, a much surprised animal. Approach him, taking up the slack of the cord as you advance, so that in case he attempts to start you can call whoa, accompanying it with a jerk so that he will feel the cord directly after hearing the word. A few lessons of this kind will cause him to stop at once upon hearing the word whoa and stand until caught. If those who have the care of colts in the country would make it a point to always carry them something whenever the lot in which they run is visited, but few of them would refuse to be caught when large enough for use.

### How to Buy a Horse.

An old horseman says: If you want to buy a horse don't believe your own brother. Take no man's word for it. Your eye is your market. Don't buy a horse in harness. Unhitch him and take everything off but his halter, and lead him around. If he has a corn, or is stiff or has any other failing, you can see it. Let him go by himself a way, and if he staves right into anything you know he is blind. No matter how clear and bright his eyes are, he can't see any more than a bat. Back him, too. Some horses show their weakness at tricks in that way when they don't at any other. But, be as smart as you can, you'll get caught sometimes. Even an expert gets stuck. A horse may look ever so nice and go a great pace, and yet have fits. There isn't a man could tell it till something happens. Or he may have a weak back. Give him the whip and off he goes for a mile or two, then all of a sudden he stops in the road. After a rest he starts again, but he soon stops for good, and nothing but a dereick could move him.

The weak points of a horse can be better discovered while standing than while moving. If he is sound he will stand firmly and squarely on his limbs without moving them, feet flatly upon the ground, with legs plump and naturally poised, or if the foot is lifted from the ground and the weight taken from it, disease may be suspected, or at least tenderness, which is a precursor of disease. If the horse stands with his feet spread apart, or straddles with his hind legs, there is a weakness in the loins, and the kidneys are disordered. Heavy pulling bends the knees. Bluish, milky cast of eyes in horses indicate moon blindness or something else. A had tempered one keeps his ears thrown back; a kicking horse is apt to have scarred legs. A stumbling horse has hemished knees. When the skin is rough and harsh, and does not move easily to the touch, the horse is a heavy eater, and digestion is bad. Never buy a horse whose breathing organs are at all impaired. Place your ear at the heart, and if a wheezing sound is heard it is an indication of trouble.

### The Best Horses.

Prof. Knapp, in some remarks before the Iowa Stock Breeders' Association, said:

"If we want the general purpose horse on the farm—say a horse weighing 1,100 pounds, vigorous in every respect, not so immensely high-lifted that he will run away if opportunity be given; with such vigor and docility of temper and characteristics that when the rein is drawn on him he moves off with a good strong trot which will carry a light load to market eight or ten miles an hour and return in the same way; a horse of tremendous endurance possessed of some of the characteristics of the old Morgan blood—a wonderful animal in its generation, and a misfortune that it has not been bred more thoroughly in the Western as well as in the Eastern country; if we want a farm horse—say for plowing,

weight is not so much the question, though it is of some consideration of course. I have been amazed at this discussion respecting the Clydesdale and the Normau. Very rarely the question of specific purposes is brought into the discussion; but all sorts of opinion about the appearance, the looks, about the gray hair, and the rump. The question is really one of specific purposes. When you hitch the Norman and the Clyde to the plow, which takes the longest step and will make the most miles in the day and come out the most vigorous at night on the same amount of food? That is the determining question, and if the animal has not been bred for that specific purpose, then it does not meet the high requirements of the farmer. The animal that does best meet these considerations, together with a good constitution and health and soundness, is the horse, whether horn in France or Scotland, whether gray or bay. We have discussed breeds too much and valuable characteristics too little. I think, perhaps, there has been a tendency to go to the extreme on large horses; at least, on every well-regulated farm we want a team that can take us to town inside of half a day. I do not wish to object, however, to the fair traveling of the heavier horse; I have been surprised at their rapidity; but I think you will agree with me when I say that for the general purpose of moving about the country a lighter horse is more desirable; a horse not to weigh over 1,100 or 1,200. In such a horse we need some of the Morgan traits, I care not from what source they come. I speak simply of characteristics, not blood or family. If the Morgan can be grown to 1,100 or 1,200 we have about my ideal of a general purpose horse for the uses I have indicated."

### Arabs and Their Descendants.

Among the Anecdotes of Sport in the *Licensed Victuallers' Gazette* we find the following:

Sir Charles Bunbury used to say, "When the chest is broad and the animal stands wide on the ground, you may pass him as 'a racehorse.'" A speedy and stout runner will be deeper, yet narrower, between the forearms or the chest than others. Fisherman walked wide on the ground, but was narrow above. Another authority—Mr. R. H. Conperthwaite—says that some flat-ribbed animals, combined with an exceptional appearance of weakness behind the saddle, often stayed well. How often, however, this has occurred is not mentioned, and we fancy that the horse which is brought in best condition to the post, and if not overweighted, must win.

As a breeder and horseman, as well as a steeplechase rider, Mr. Digby Collins is an authority which cannot well be overlooked. He asserts, after giving a list of the tall and little racehorses which have won great events on the turf, that—"Whatever the weight may be, there must be length and size (otherwise strength) somewhere. I decidedly object to the small Arab head, which denotes cunning and temper." In this Mr. Collins evidently speaks of what he knows nothing about; for had he ever anything to do with Arab steeds he would have found them the most gentle of creatures, as they are brought up by hand, so to speak, and enjoy in the desert all the privileges which Paddy gives to his pig—namely to be considered "one of the family"—and allowed to walk in and out at all hours, and help himself to whatever is being cooked, as a privileged guest. We found these Arab horses, although stallions, the most gentle of creatures, and why they are not used more in England has always been a puzzle to us. For years the late Colonel Wilkie, of the 10th Hussars, and we are glad to be able to say, the present head surgeon at Sandhurst College, rode Arabs to all cavalry field-days without trouble or inconvenience; and while at Aldershot they could, when alongside the troop-horses there, be only looked upon as ponies, but so far as power and speed went they could outstay and outstrip the larger animals.

According to Abd-el Kadir, a horse should be broad in the forehead, the chest, the croup, and the limbs; long in the neck, the arms and thighs, the belly and haunches; and short in the loins, the pasterus, the ears, and the tail. From the foregoing a racehorse, to some extent, should resemble a greyhound in most respects. Mr. Collins, when describing these animals, says hundreds of them are bred yearly, the majority of them turning out to be too slow for the turf, and worth little for anything else. To his idea—one in which, to some extent, we concur—even a hunter is better for general use than a steeplechaser or racer, as the former can be used in following the hounds, while the latter is seldom of any good unless going over the flat. At the same time, it should be kept in mind that, although a favorite for the Derby came down some ten years ago to run in a cab at Waterloo Station, several of the misfits of the turf have made very good hunters.

The objections to the Arabian blood are, the small head and pointed ears; yet Touchstone, the winner of the St. Leger in 1834, was a famous sire of racehorses. One of his descendants was Orlando to whom the Derby was awarded in 1844; and Teddington, the winner of the Derby in 1851. Touchstone's pedigree goes back, through six sires, to Eclipse; yet we may remark that, although Motley, who never won a race, and was one of the numerous sons of Touchstone, in 1865, when at the age of 14, was exhibited at Islington, he received, on the express recommendation of Mr. Joseph Weatherly, of Old Burlington street, an extra prize, in consequence of his remarkable likeness to his Oriental ancestors. His head was thoroughbred Arab, but his fault was that his withers were lower than his croup—a fault, we may remark, in which the renowned Eclipse shared. He however, by his union with half-bred hunting mares, with good hunting shoulders, acquired a high reputation as a sire of hunters, which he enjoyed until his death.

### The Speed of Our Roadsters.

That a pacing horse with running mate should travel a mile so close to two minutes as to be almost within the limit does not surprise any one. That the records have been annually lowered several seconds, dispels any attempt to define limit, and that a few years more will find a number inside the tens is no longer doubted. It is a notable fact that the pacer always keeps ahead of the trotter in the records. When Pocahontas lowered the time she simply cut out the work for the trotters to emulate, and time showed that they were fast reaching her, and eventually did so. Then came Billy Boyce, who again placed the pacer far to the front, but the trotters gradually crept up until they reached his record and passed him. Now the pacer has opened a width of about eight seconds, and he has left a hard road for the trotters to travel in order to reach him, and no doubt given them plenty of time also within which to do so. That they will so lower their records is not doubted, but the advance guard will come to his record in straggling detachments, and not as a grand

army. The record is too close to two minutes to permit of general prediction.

We may congratulate ourselves and the country over the low record, for every time it is lowered it illustrates the fact that the propensity to trot or pace is more strongly fixed and inherent in our roadsters than before, and as the time may come when numbers will reach two minutes, so also will the sires hequeath a larger number of successors with fixed qualities than before. As the fittest will be selected for breeding purposes, every phenomenal horse may be considered the foundation of increased speed of our future stock, and the value of such horses is not confined to their individual purposes only while being used for the gratification of the owners. The whole country is interested in the performances and exploits of noted roadsters, and the gradual improvement of all our breeds may be traced to those competitive exhibitions that serve to stimulate breeders to new efforts and greater achievements. They are useful in their calling, and add millions of dollars to our national wealth.

### Rheumatism in Horses.

Rheumatism is of two kinds, acute and chronic. It is due to an unhealthy condition of the blood, which generally produces an inflammation of the joints, although sometimes the disease is settled in the muscles, ligament and tendons. It frequently follows or accompanies catarrh, colds or influenza. Acute rheumatism is always accompanied with fever, preceded by sudden lameness, and generally swelling of some joint, and frequently all the joints of the limbs are swollen, the enlargements being soft and puffy. The disease is not confined to any particular part, but passes from the legs to the neck, and sometimes to the back, producing what is termed lumbago. The pulse is rapid, the skin hot, and the horse often sweats profusely. In severe cases the whole of the muscles of the body quiver. The treatment is often unsatisfactory, as those medicines which cure some patients seem to have but little beneficial effect upon others. The following treatment has produced satisfactory results in most cases: Place the animal in a cool, airy place, if the attack occurs during warm weather, or in a warm but well ventilated stable if the weather is cold. Have the stall well supplied with clean, dry bedding. Cover the body with a woolen blanket, light or heavy, according to the weather. Give twenty drops of the tincture of aconite root every four hours until six doses have been given. Apply loosely to the legs cloths wet frequently, using warm water in the Winter time. If the stable is an open one, and the weather cold, the wet cloths had better be omitted, however. By the time the six doses of aconite have been given, the horse will generally be so much improved that he can be left to himself. Should the disease assume the chronic form, give one drachm of powdered meadow saffron seeds in his feed at morning and noon. At night give a half-ounce of the sulphate of soda. Continue for two days. Also give, twice a day, sixty drops of sulphuric acid in half a bucket of cold water. One of the latest remedies for acute rheumatism, according to "Teller," is to give a dose of one ounce each of salicylic acid and bicarbonate of soda in a pint of gruel, and repeat the dose three times a day until a cure is effected. It is sometimes difficult for an inexperienced person to determine whether a horse is suffering from acute rheumatism or founder. In the latter complaint the feet are always hot, while in rheumatism they are cool.—*American Cultivator*.

### Training Delicate Runners.

The success of Mr. Walton's filly Woodflower reminds us that we should correct the error of the dailies that she was trained by Lee. Woodflower was trained by Peter Webber, of Fordham. She was Pete's first thoroughbred, as he has been all his life with trotters. It was on the morning of the fifth, while coming along Jerome Avenue, near Sibbern's we met a thoroughbred mounted coming towards us at a rapid trot, followed by a man driving a buggy. We had only time to recognize Woodflower and salute Pete (for he it was driving) as they swept past.

"Were you coming from Brighton that morning?" we asked him after the race of the 9th.

"No; we came up Sunday."

"I thought you had been suddenly ordered up from the hurry you appeared to be in."

"Oh, no," he replied, laughing; "that was the way I trained her." "What?" we exclaimed, "fit a horse for a race, by trotting exercise?"

"Of course," answered Pete. "Your regular trainers gallop horses to death. Some can stand it, but Woodflower couldn't. Now, when I was a boy I rode racehorses, but, as you know, all my training experience has been with trotters. We trotting men have to be more careful with our horses than trainers of racehorses generally are. I found this filly wouldn't stand steady galloping, so I gave her her work on the roads, trotting her briskly eight or nine miles, while I drove behind her in a buggy like you saw me that morning. Then, for fast work, I'd take her to the track and give her a half mile. This moving delicate horses a mile at full speed breaks 'em all up."

Webber's success with Woodflower may not lead to a new departure in training, but it will certainly give thoughtful trainers something to ponder over. His mode of training, however, while opposed to all stereotyped notions, is not entirely new. The old English racer, Melbourne, was similarly trained. He had a had leg and would not stand ordinary methods. Mr. Henry Robison then took him in hand. Mr. R. had studied Combe, Capt. Barclay, and other authorities on the development of physical powers, and resolved to experiment. This was a system of fast walking for five hours per day, and for months the horse never had a gallop. The Yorkshire trainers ridiculed the "amateur preparation," but they looked unutterable things when he ran one of the best Chester Cups on record, being beaten only a head by Dey of Algiers, to whom he conceded 23 pounds for two years difference in age, with the great Lauercoast, Tuhai Cain, and the Cesarewitch winner, Cruisekeu, behind him; and then retired to the stud where he got West Australian, Bliuk Bonny, Sir Tattou Sykes, The Premier, Canezon, Cape Flyaway, Cymba, Prime Minister, Mentmore Lass, etc., becoming the sire of their best brood mares of their day, and at the same time preserved the male line of Matchem from extinction.—*N. Y. Spirit*.

It is the impression of some of the horse risers that trotting horses are a sort of a fancy breed, fit for drawing sulkeys, one hundred pound road wagon, and altogether too fragile and fine haired to draw a plow. In fact a sort of a dude of a horse. Now the fact is, there are no end of trotters that have served the farm well; dragged a plow and harrow, and jogged the dirty road with the heavy laden market wagon.

A farmer in Colorado has three old horses, all of which in good health and able to do regular work; one is 35 years old, another 24 years old, and the third 21 years old.

YACHTING.

Pacific Yacht Club Closing Day.

The only event exciting the attention of our local yachtsmen, is the closing exercises of the Pacific Yacht Club, which will take place to-day and to-morrow. The ferryboat leaves at 1:45 P. M. to-day, which is, as usual, city time, but as the standard Pacific Coast time goes into effect to-night, the boat to-morrow morning will leave on standard time, which is ten minutes earlier than our own city time, so parties wishing to catch that boat must be down ten minutes before the advertised time in the papers. The following yachts will probably participate: Halcyon, Larriue, Nellie, Virginia, Fleur de Lis, Annie and Rambler. The sailing orders for each day are published herewith:

ORDERS No. 1.

The Yachts of the Pacific Yacht Club will assemble off Meiggs' Wharf, on Saturday, Nov. 1st, 1884, at 10 A. M.

At 12:50 P. M., a preparatory gun will be fired; at 1 P. M., a second gun will be fired, at which signal the yachts will get under way.

The Course will be around midchannel buoy, passing same on starboard hand; thence to the anchorage off Club House, Old Sancelito, when they will occupy positions most convenient to each.

Yachts will dress ship on coming to anchor. Yachts of the club will observe gun fired from flag-ship for hauling down and hoisting colors, at sundown and at 8 A. M.

ORDERS No. 2.

The Pacific Yacht Club squadron will assemble off the Club House at Sancelito, on Sunday morning, November 2d, 1884, at 9 A. M.

At 9:15, a preparatory gun will be fired from flag-ship.

At 9:30 A. M., a second gun will be fired, at which signal the yachts will get under way for Vallejo, and return, passing stakeboat off Club House on port hand, thence to Vallejo, passing flag-buoy on the port hand, and return to San Francisco, passing Blossom Rock to the westward, and crossing an imaginary line from the intersection of Greenwich street and sea wall and north end Goat Island.

Time will be taken of all yachts from point of departure and arrival.

Yachts of the Club will carry Club flag. Other vessels accompanying fleet are respectfully requested to comply with these orders.

P. S. Steamer will leave ten minutes in advance of published time (7:50 A. M.) on Sunday morning.

The schooner Ariel, which has been a familiar sight to passengers on the Sancelito ferry, as she lay at her moorings off the Pacific Yacht Club House, has at last changed hands. She has been in the market for several months, but no yachtsman could be induced to buy her, on account of the bad name she made for herself in regard to being cranky and slow. She was built in New York in the sixties, and in 1873 was lengthened several feet and thoroughly rebuilt, and she is to-day, as far as her hull is concerned, in perfect condition. She is all composed of oak and hackmatack, and has everything necessary for a yacht except speed.

In her own waters she was considered very speedy, that is to say, that although she was unable to "keep her end up" with the extreme crack yachts of New York, she made very creditable showings. She was brought from New York through the Straits of Magellan at the expense of her late captain, Wilcox, who afterwards sold her to ex-Commodore Floyd. She won one race in these waters, but with that exception has made a miserable showing. Her owner, at considerable expense, had Capt. Turner experiment with her. He put in a new mainmast in one piece, on which he put his hobby, a Bermudian mainsail, but without much effect. She afterwards had a twelve-inch false keel put on her for the full length. This was heavily shod with lead, and although this increased her stability, it seemed to lessen her speed off the wind without any corresponding increase on the wind. She is by far the handsomest yacht in our fleet, and has excited the wonderment of our local yachtsmen, in this respect, that all agree that she should prove remarkably fleet, with her clean lines, while the fact remains that she is terribly slow.

The reported price is \$2,500, a miserable sum to realize on a yacht that cost in the neighborhood of \$20,000, to launch in New York; to say nothing of the expense of bringing her out here, and the money expended in trying to improve her. The new owner is a Portuguese, and whether he will use her for fishing or will hire her out for parties, is as yet unknown.

A weekly contemporary which has only lately published a sporting column, made a statement last Saturday, in which it stated that Captain White was the only professional yacht owner in this locality, because forsooth he sailed his own boat—the Fleur de Lis—in a race for money. We have never supported the idea of yacht racing for money, and do not do so now, but desire to show that Captain White deserves credit, instead of condemnation, for the spirit shown in matching his own boat, money and nautical abilities against real professional yacht sailors and seamen.

No one at all conversant with the facts, will deny that in nearly all the money races sailed in this bay, the stakes were put up by the owners of the competing yachts. If they are professionals enough to gamble on their vessel's bottom, they should certainly be professional enough seamen to sail their own yachts. Let us by all means keep this noble recreation free from money races, as this is one of the few sports on this coast into which collusion and jockeying have not as yet entered, and money matches immediately opens the gate for trickery. Other yacht owners, with few exceptions, not only decline to sail their yachts in money races, but always hire sailing masters in ordinary regattas, not from fear of being called professionals, but because they have not sufficient confidence in their own yacht lore and skill.

The Rambler will winter in Cordelia Slough, where she will be used to some extent as a shooting box.

The Dawn's sails are unrent, and she is at anchor in Oakland Creek, but ere long will be hauled up on the beach.

The purses and stakes designated in the advertisement of Pacific Coast Blood-Horse Association close to-day.

A letter containing nominations, directed to the Secretary, and legibly postmarked November 1st, will be valid. See that the stamp is plainly impressed on the envelope.

CRICKET.

Australians vs. All Comers—Heavy Scoring.

This match, adjourned from the previous week, was concluded last Saturday afternoon. The Australians had 7 wickets to fall and 54 runs to make in order to win the match. Clark and Ben Benjamin, the not out men, resumed their innings to the bowling of Miller and Banner. Clark very soon struck all round one of Miller's, and Bristowe filled the vacancy. Both batsmen scored rapidly notwithstanding that the bowling was repeatedly changed, and Bristowe made the winning hit, amidst the applause of the few adherents of "Kangaroo land" present. Bristowe was soon after neatly stumped by Theobald, after having put together 36 runs in vigorous style. Creighton guided one of Waterman's into his wicket. Sanderson was neatly caught at slip by the lively Benner. Aitken signalized his advent by sending Banner over the fence and followed it up by hitting the bowling rather lively in all directions until he ran himself out. Benjamin, in the meantime, lost his wicket to a shooter from Banner. Gibson and Nairn were not long associated when Gibson sent one into the willing hands of Carr. The innings closing for 131 runs, which is the highest total ever made on the Olympic grounds. The high score is of a very creditable nature, inasmuch as it was made against such a strong bowling team. The batsmen were aided considerably last Saturday by the splendid wicket prepared. Bristowe made a magnificent hit clean over the houses, and which is thought by many to be the biggest hit ever seen on the grounds. Burnett long-stopped very well. The complete score:

Table with columns for ALL COMERS, AUSTRALIANS, and BOWLING ANALYSIS. Lists names and scores for various players.

Jacobs and Ben Benjamin each bowled a no-ball; Clark and Aitken each bowled a wide; Ben Benjamin bowled four wides; Waterman bowled a wide.

M. John B. Thayer, Jr., one of the members of the Philadelphia Cricket Team, has just received from the renowned champion of English cricketers, Dr. W. G. Grace, a present of a bat, sent to him as a mark of the champion's regard, and as a souvenir of the remarkable catch by which he disposed of Dr. Grace, during the first inning of the match against the Gentleman of Gloucestershire. The bat is one that the gigantic "W. G." has used in many of the classic matches of the season of 1884, and shows the marks of numerous battles at the wickets.

The purses and stakes designated in the advertisement of Pacific Coast Blood-Horse Association close to-day.

A letter containing nominations, directed to the Secretary, and legibly postmarked November 1st, will be valid. See that the stamp is plainly impressed on the envelope.

PACIFIC COAST BLOOD HORSE ASSOCIATION.

Fall Meeting, 1884.

BAY DISTRICT COURSE. PROGRAMME

- First Day, Saturday, Nov. 15th. No. 1. LADIES' STAKE—For two-year-old fillies; \$50 entrance; \$25 forfeit; \$200 added; three-quarters of a mile; second to save stake. Nominations for 1884: 1. Theo. Winters' ch f, by Hooker—Puss. 2. Theo. Winters' b f, by Hooker—Abby W. 3. Theo. Winters' b f, by Hooker—Countess Zelka. 4. Theo. Winters' b f, by Hooker—Illusion. 5. Theo. Winters' b f, by Hooker—Kitten. 6. G. Pacheco's ch f, by Wheatley—Lodi. 7. James Mee's ch f Mischief, by Thad Stevens—Katie Pease. 8. James Mee's ch f Mistletoe, by Thad Stevens—Mistake. 9. E. J. Baldwin's br f, by Grinstead—Blossom. 10. E. J. Baldwin's b f, by Rutherford—Glenita. 11. Palo Alto's b f, by Shannon—Lizzie Whips. 12. Palo Alto's b f, by Monday—Playingth. 13. Palo Alto's b f, by Shannon—Katharion. No. 2. Sweepstakes of \$50 each; \$25 forfeit; \$250 added; for two-year-olds; three-quarters of a mile; Alta and Estill to carry rule weights; one hundred pounds on all others, with three pounds allowance to fillies and geldings. Second to save stake. No. 3. SAME DAY—THE VESTAL STAKE; for three-year-old fillies; one and a quarter miles; \$25 p; \$300 added; second to receive \$100; third to save stake. Closed with the following nominations for 1884: 1. J. K. Gries' b f Nettie Hill, by Joe Daniels, dam Mary Wade. 2. E. J. Baldwin's b f, by Rutherford, dam Gladie Emerson. 3. E. J. Baldwin's b f, by Rutherford, dam Gladie Emerson. 4. E. J. Baldwin's ch f, by Grinstead, dam sister to Clara D. 5. E. J. Baldwin's ch f, by Grinstead, dam Josie C. 6. E. J. Baldwin's br f, by Grinstead, dam Mollie McCarty. 7. Theo. Winters' ch f Prince of Norfolk, by Norfolk, dam Marion. 8. Theo. Winters' ch f Calbe Smart, by Norfolk, dam Mattie A. Jos. Cairn Simpson's b c Sir Thad, by Norfolk or Thad Stevens, dam Lady Ananda. 9. P. J. Shafter's b f Bonita, by Shannon, dam Napa Queen. 10. Palo Alto's h c, by Norfolk, dam Boydana. 11. Palo Alto's b c, by Norfolk, dam Nova Zembla. 12. Palo Alto's h c, by Shannon, dam Demipere. 13. Palo Alto's br f, by Monday, dam Riglin. 14. Palo Alto's f, by Norfolk, dam Glendew. 15. Palo Alto's b f, by Wildie, dam Frolic. 16. Palo Alto's br f, by Norfolk, dam Lizzie Whips. 17. Palo Alto's s f, by Norfolk, dam Frou Frou. 18. George Howson, Sacramento, br f, Augusta E., by Monday, dam by Norfolk. 19. W. L. Pritchard's ch c, by Bazaar, dam Minerva. 20. W. L. Pritchard's ch c, by Bazaar, dam Lotie Lee. 21. W. L. Pritchard's ch c Ed Smith, by Leinster, dam Tibbie Dunbar. 22. John A. Cardinell's b c John A., by Monday, dam Lady Clare. No. 17. BALDWIN STAKE; a post stake for all ages; \$250 each, p. p., \$1,000 added; second to receive \$400, third to save stake; dash of four miles. Subscribers: J. D. Christie, St. Louis, Mo. M. M. Allen, Sacramento, Cal. A. J. Stenler, Sacramento, Cal. Jas. Mee, San Francisco. No. 18. HANDICAP; 1 1/4 miles; stake \$50 each; \$25 forfeit; \$10 declaration. \$300 added. Weights announced second day of meeting at 1 P. M. from judges stand. Declaration following day at secretary's office at 1 P. M. Second \$75, third to save stake. No. 19. CONSOLATION PURSE; \$200; \$50 to second; one mile for non-winners at this meeting. Horses beaten once allowed 5 lbs., twice, 10 lbs., three times, 20 lbs.; entries to close five minutes after the finish of last race. CONDITIONS. Entries to stakes and purses not marked closed, except Nos. 5, 9, 10, 18, and 19, will close November 1st, 1884. Races to close will be run under weights adopted at the annual meeting of 1881. Starters in all races must be named at 6 P. M., the day preceding the race. Entrance free for starters in purses. Non-starters can declare out at 6 P. M., the day preceding the race, by paying five per cent. After that time they can only be excused by the presiding judge, and in such case ten per cent. on the amount of purse must be paid. Non-members will be placed on the same footing as members of the Association, in regard to the payment of purses and stakes advertised; and should there be a deficiency, the winners will receive a pro rata division. Parties making nominations will be required to record colors at time of making entries, and after record will not be allowed to ride in other colors. This rule will be strictly enforced. All entries in stakes and purses, except Nos. 5, 9, 10, 18, and 19, must be made on or before the same day of November next, 1884, directed to Jos. Cairn Simpson, Secretary, 508 Montgomery St., San Francisco. To be valid, they must be delivered to the Secretary personally or plainly postmarked, on or before that day—November 1st. The Association reserves the right to postpone races on account of unfavorable weather or other sufficient cause. JAS. V. COLEMAN, President. JOS. CAIRN SIMPSON, Secretary.

- 4. E. J. Baldwin's ch f, by Grinstead, dam Josie C. 5. E. J. Baldwin's br f, by Grinstead, dam Mollie McCarty. 6. Theo. Winters' ch f Calbe Smart, by Norfolk, dam Mattie A. 7. P. J. Shafter's b f Bonita, by Shannon, dam Napa Queen. 8. Palo Alto's br f, by Monday, dam Riglin. 9. Palo Alto's s f, by Norfolk, dam Glendew. 10. Palo Alto's blk f, by Wildie, dam Frolic. 11. Palo Alto's br f, by Norfolk, dam Lizzie Whips. 12. Palo Alto's s f, by Norfolk, dam Frou Frou. 13. W. L. Pritchard's ch f, by Bazaar, dam Tibbie Dunbar. 14. W. L. Pritchard's ch f, by Leinster, dam Minerva. 15. W. L. Pritchard's ch f, by Leinster, dam Flush.

No. 4. Sweepstakes of \$50 each; \$25 forfeit; \$250 added; one and one-eighth miles; for three-year-olds; second to save stake. No. 5. Purse; amount and distance to be announced Thursday, Nov. 13th; and entries made at Secretary's office at or before 4 P. M., Friday.

Second Day, Tuesday, Nov. 18th. No. 5. Purse, \$300; \$75 to second; heats of three-quarters of a mile; for all ages. No. 7. Selling race; one and one-eighth miles; purse, \$250; free entrance; second to receive \$75; horses entered to be sold for \$1,000 to carry regular weight, with two pounds deducted for each \$100 below \$1,000, and three pounds added for each \$100 above.

No. 8. Sweepstakes for two-year-olds of \$50 each; \$25 forfeit; \$250 added; one mile; same conditions as to weights as No. 2; winner of No. 2 to carry seven pounds extra and second four pounds extra.

No. 9. Purse; amount and distance to be announced on opening day; entries to close at Secretary's office, Monday, Nov. 17th, at 4 P. M.

No. 10. Purse; same as No. 9. Extra Day, Thursday, Nov. 20th. No. 11. Sweepstakes; for three-year-olds; \$50 each; \$25 forfeit; \$250 added; one and one-half miles; second to save stake; winner of No. 4 to carry five pounds extra.

No. 12. Purse, \$400; heats of a mile; for all ages; second to receive \$100; ten pounds deducted from regular weights.

No. 13. Purse; amount and distance to be announced on second day of meeting; entries to close at Secretary's office, Wednesday, Nov. 19th, at 4 P. M.

No. 14. Purse; same as No. 13. Third Day, Saturday, Nov. 22d. No. 15. THE FINGAN STAKE; for two-year-olds; dash of a mile; \$50 each; \$25 forfeit; \$250 added; second to save stake. Nominations for 1884:

- 1. Theo. Winters' ch c, by Norfolk—Lady Jane. 2. Theo. Winters' b c, by Norfolk—Ballinette. 3. Theo. Winters' ch f, by Hooker—Puss. 4. Theo. Winters' b f, by Hooker—Abby W. 5. Theo. Winters' b f, by Hooker—Countess Zelka. 6. Theo. Winters' b f, by Hooker—Illusion. 7. Theo. Winters' b f, by Hooker—Kitten. 8. J. B. Chase's blk c Hidalgo, by Joe Daniels—Electra. 9. G. Pacheco's ch f, by Wheatley—by Lodi. 10. J. W. Adams' br c Common Sense, by Hardwood—Cousin Peggy. 11. James Mee's ch f Mischief, by Thad Stevens—Katie Pease. 12. James Mee's ch f Mistletoe, by Thad Stevens—Mistake. 13. E. J. Baldwin's ch g, by Grinstead—Jennie. 14. E. J. Baldwin's b c, by Lexington—Mollie McCarty. 15. E. J. Baldwin's b f, by Rutherford—Glenita. 16. E. J. Baldwin's br f, by Grinstead—Blossom. 17. Palo Alto's b c, by Shannon—Robin Peyton. 18. Palo Alto's b c, by Shannon—Salt the Gardner. 19. Palo Alto's h c, by Shannon—Miss Bishop. 20. Palo Alto's c, by Flood—Planefia. 21. Palo Alto's e c, by Shannon—Bettie Bishop. 22. Palo Alto's br c, by Shannon—Riglin. 23. Palo Alto's b f, by Monday—Playingth. 24. Hill & Gries' b c Arthur H., by Hockhocking—Maid of the Mist.

No. 16. SAME DAY.—FAME STAKE.—For three-year-olds; dash of two miles; \$100 each, \$25 forfeit, \$800 added; second to have \$150, third to save stake. Closed with the following nominations for 1884:

- 1. J. K. Gries' br f Nettie Hill, by Joe Daniels, dam Mary Wade. 2. E. J. Baldwin's b c, by Rutherford, dam Gladie Emerson. 3. E. J. Baldwin's b f, by Rutherford, dam Gladie Emerson. 4. E. J. Baldwin's ch f, by Grinstead, dam sister to Clara D. 5. E. J. Baldwin's ch f, by Grinstead, dam Josie C. 6. E. J. Baldwin's br f, by Grinstead, dam Mollie McCarty. 7. Theo. Winters' ch f Prince of Norfolk, by Norfolk, dam Marion. 8. Theo. Winters' ch f Calbe Smart, by Norfolk, dam Mattie A. Jos. Cairn Simpson's b c Sir Thad, by Norfolk or Thad Stevens, dam Lady Ananda. 9. P. J. Shafter's b f Bonita, by Shannon, dam Napa Queen. 10. Palo Alto's h c, by Norfolk, dam Boydana. 11. Palo Alto's b c, by Norfolk, dam Nova Zembla. 12. Palo Alto's h c, by Shannon, dam Demipere. 13. Palo Alto's br f, by Monday, dam Riglin. 14. Palo Alto's f, by Norfolk, dam Glendew. 15. Palo Alto's b f, by Wildie, dam Frolic. 16. Palo Alto's br f, by Norfolk, dam Lizzie Whips. 17. Palo Alto's s f, by Norfolk, dam Frou Frou. 18. George Howson, Sacramento, br f, Augusta E., by Monday, dam by Norfolk. 19. W. L. Pritchard's ch c, by Bazaar, dam Minerva. 20. W. L. Pritchard's ch c, by Bazaar, dam Lotie Lee. 21. W. L. Pritchard's ch c Ed Smith, by Leinster, dam Tibbie Dunbar. 22. John A. Cardinell's b c John A., by Monday, dam Lady Clare.

No. 17. BALDWIN STAKE; a post stake for all ages; \$250 each, p. p., \$1,000 added; second to receive \$400, third to save stake; dash of four miles. Subscribers: J. D. Christie, St. Louis, Mo. M. M. Allen, Sacramento, Cal. A. J. Stenler, Sacramento, Cal. Jas. Mee, San Francisco.

No. 18. HANDICAP; 1 1/4 miles; stake \$50 each; \$25 forfeit; \$10 declaration. \$300 added. Weights announced second day of meeting at 1 P. M. from judges stand. Declaration following day at secretary's office at 1 P. M. Second \$75, third to save stake.

No. 19. CONSOLATION PURSE; \$200; \$50 to second; one mile for non-winners at this meeting. Horses beaten once allowed 5 lbs., twice, 10 lbs., three times, 20 lbs.; entries to close five minutes after the finish of last race.

CONDITIONS.

Entries to stakes and purses not marked closed, except Nos. 5, 9, 10, 18, and 19, will close November 1st, 1884. Races to close will be run under weights adopted at the annual meeting of 1881. Starters in all races must be named at 6 P. M., the day preceding the race. Entrance free for starters in purses. Non-starters can declare out at 6 P. M., the day preceding the race, by paying five per cent. After that time they can only be excused by the presiding judge, and in such case ten per cent. on the amount of purse must be paid. Non-members will be placed on the same footing as members of the Association, in regard to the payment of purses and stakes advertised; and should there be a deficiency, the winners will receive a pro rata division. Parties making nominations will be required to record colors at time of making entries, and after record will not be allowed to ride in other colors. This rule will be strictly enforced. All entries in stakes and purses, except Nos. 5, 9, 10, 18, and 19, must be made on or before the same day of November next, 1884, directed to Jos. Cairn Simpson, Secretary, 508 Montgomery St., San Francisco. To be valid, they must be delivered to the Secretary personally or plainly postmarked, on or before that day—November 1st. The Association reserves the right to postpone races on account of unfavorable weather or other sufficient cause.

JAS. V. COLEMAN, President.

JOS. CAIRN SIMPSON, Secretary.

Embryo Stakes.

The Embryo Stakes for Foals of 1881 and 1882 will be trotted on the Oakland Trotting Park SATURDAY, November 1st, 1884. Race to commence at 1 P. M.

JOS. CAIRN SIMPSON, Chairman. N. T. SMITH, Treasurer. BEN E. HARRIS, Secretary.

**Brittle Feet.**

Dr. R. A. Finlay, V. S., makes the following observations on brittle hoofs, and the effect of water thereon:

The feet of horses differ much in their structure. Some retain their natural toughness and elasticity much longer than others, while the feet of others part with moisture rapidly, and unless supplied occasionally by external means, they become so powdery and brittle that it is with difficulty a shoe can be retained on them. The direct application of water to the feet, if long continued, will produce a "cheesy" condition of the horn, and, when suddenly discontinued, the evaporation from the horn becomes so rapid, that the foot is left in a highly brittle state—worse, in fact, than before. Hence, in feet naturally brittle, the application of a substance is desirable which will prevent the internal moisture escaping. One of the best compositions we have found for this purpose is the following: "Take of beef-suet, two parts; beeswax, one part; tar, two parts; honey, one part; whale oil, four parts. Mix, and melt together over slow fire. Apply to the sole and wall of the foot twice a week.

The foal is born with twelve grinders. When four front teeth have made their appearance the colt is twelve days old, and when the next four asserts themselves its age will be about twenty-eight days. The corner teeth make their appearance when the foal is eight months and these latter attain the height of the front teeth at the end of a year. The two-year-old has the kernel—the dark substance in the middle of the tooth's crown—ground out of all the front teeth. In the third year the middle front teeth are being shifted, and when three years old those are substituted by the permanent or horse teeth, which are larger and more yellow than their predecessors. The next four teeth are shifted in the fourth year and the corner teeth in the fifth, giving place to the permanent nipper. At five years of age a horse has forty teeth, of which twenty-four are grinders far back in the jaw, with which we have little to do. The huyer must be particularly on his guard against having palmed off on him as fully five years old a filly of less age, by calling your attention to the fact that "she had no colt's teeth left" when the truth is they have been cunningly extracted; and we have known the same said of a horse, when it was thought the customer was green enough. But, he it remembered, horses invariably have fashes, which mares very rarely do.

The stud of the Sultan of Turkey is governed by the strictest of rules, some of which would sound strangely to American horsemen. Among them is the following, which is known to have been on record about one hundred years: "After the stallions shall have covered the mares, you are to make the former pass five or six times in front of the latter, in order that the foals may be of the colors and form of the stallions." The conservative character of all oriental custome renders it probable that this influence has been considered an acknowledged fact in the past, from the times of Jacob down to our own.

C. M. Chipman, of Sacramento, E. L. Craig and Jake Rittinger, of Auburn, bagged 106 quails in one day lately. They hunted about Newcastle.

If you would have sound, active, vigorous, handsome horses, have clean, well ventilated stables, sound food and pure water.

Something of a novelty is found in an advertisement in the English *Agricultural Gazette* which offers "twin-hed rams." These rams were got by twin rams, with additional twin blood further back. They are offered for sale in the belief that fecundity is transmissible, and that they have inherited a tendency to produce twine. A correspondent of the same paper says he turned a four year old ram in a flock of 200 ewes, removing the ewe as they were discovered marked from service, and that he had 212 lambs from the flock, the ram remaining with the ewe only four or five weeks.

**FOR SALE.**

—A PAIR OF—

**Hammerless Breech-Loading Guns.**

TEN BORES, ONE W. & C. SCOTT & SONS makers, 9 lbs. 12 oz. weight. Full choked. Triplex action. Cost \$225. The other a William & Powell, Liverpool, 9 lbs. weight. One barrel modified choke. **ASHLAND PARK**

**TROTTING STU**

NEAR LEXINGTON, KY.

B. J. TREACY, PROPRIETOR.

THIS IS STRICTLY A BREEDING FARM, FOR though training is done, it is only for the stock belonging to the place, or those purchased from the proprietor. The proprietor of Ashland Park has no pet trotting family; his aim is to secure and have at all times for sale choice representatives of each of the leading families, these being the Hambletonians, Mambrino Chief, Clay's Elita, Black Hawks. At Ashland Park may now be seen splendid specimens of the get of such stallions as George Wilkes, Almont, Mambrino Fatchen, Clark Chief, Edwin Forrest, Blackwood, Sentinel, American Clay, Administrator, North Star Mambrino, Bourbon Chief, Regular, Balsora, Howard's Mambrino and Homer. The steady aim is to possess nothing that does not trace through the best class of speed-producing trotting crosses, along all the blood lines, right to the thoroughbred. For catalogues or further particulars address 2 1/2 B. J. TREACY, Lexington, Ky.

Registered in the A. J. C. C. and A. G. C. C., of New York, the only standard register.

Jersey Belle of Scituate that made 25 lbs 4 1-2 ozs. of butter in one week.

A grandson of above cow is now in use in the Yuba Buena. This herd won all the herd prizes for 1882. Since then have been added young animals from Mr. Pierce's valuable herds East. He now has Jersey Belle of Scituate, Coomassie, Mary Ann of St. Lambert, Silver Cloud and Eurotas strains; also large selections from the Islands, without regard to cost.

He has interest in Eastern herds of 200, at the head of which stand only living son of Jersey Belle, Romeo de Bonair, (8 1/2 per cent. Mary Ann's blood), and Pierston, the best show bull in America. These hulls are valued at \$10,000 each.

**HENRY PIERCE, San Francisco.**

**IMPROVED HORSE CLOTHING.**

Secured by Letters Patent ISSUED MAY 27, 1879.  
REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extension B, to fit the fore and hind legs of the animal, front fastenings FG, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings FG, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J in combination with the elastic connecting-strip I, substantially as described and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingles is avoided, substantially as herein described.

**THREE DOG PUPS, OUT OF IMPORTED** Grugah, by Hector. Apply at this office, or to Capt. A. C. Hutchinson, on the Fair Grounds of either Sacramento, San Jose or Stockton, during their respective seasons, where a full-grown imported specimen of the breed and the pups can be seen.

**PATENT RIGHTS.**

**Inventors' Institute,**

105 STOCKTON STREET.

(Corner of O'Farrell.)

Patents Procured for \$65, and Patents Negotiated. Send for Particulars.

**KERR'S**  
**ASTHMA**  
**CURE**

Cures Asthma, Bronchitis, Throat and Lung affections, Coughs, Colds, Quinzy, Sore Throat, Soreness in the Chest or Lungs, Weakness in the Back, Pains in the Back, Bowels, Sides, Colic, Cramp, Pneumonia, Measels, Whooping Cough and Indigestion. It heals the entire system. Pleasant tasted as ice cream. For sale by all druggists. Price, 50 cents and \$1.00 per bottle. Post-office box 1870.

REDDINGTON & CO., Wholesale Agents, 529 and 531 Market Street, San Francisco.

The Firm also carries a large stock of **HARDWARE, RIFLES, GUNS, PISTOLS,** Of every make **CARTRIDGES, FISHING TACKLE, RODS and FLIES,** in every variety, and all articles belonging to the Sportsman's outfit on **REASONABLE TERMS.**

**PACIFIC COAST**  
**Field Trial Club**  
**DERBY FOR 1884.**

Nominations close Nov. 10th. Entrance \$10; \$3 to accompany nomination; \$7 additional when starters are named. Purse \$175; \$100 to first; \$50 to second; \$25 to third.

All pups whelped on or after April 1st, 1883 are eligible.

It is hoped that those desiring to compete will be prompt in making nominations.

Club dues are now payable to the Secretary.

THOS. BENNETT, President.

N. E. WHITE, Secretary,

Sacramento, Cal.

**For Sale.**

**A Nutwood Stallion**

**3 YEARS OLD, 15½ HANDS HIGH, WEIGHED JAN. 1, 1884, 1,985.** Has shown a 2:45 gait on one month's track work. His dam is by John Nelson. The colt will be at the State Fair if not previously sold.  
GEO. W. HANCOCK,  
Sacramento, Cal.

**HOLSTEIN CATTLE.**

WE EXPECT A CONSIGNMENT OF 50 HEAD about the last of November. For particulars address H. & W. PIERCE, 728 Montgomery street.

**DEER HOUNDS.**

WANTED TWO YOUNG DEER HOUND Address with price and other particulars  
123 California Street, S. F.

Suspensory Bandages.

A perfect fit guaranteed. Support, Relief, Comfort. Automatically Adjustable.

DISPLACEMENT IMPOSSIBLE.

Treatise on Nervous Tension and Circular mailed free. Sold by Druggists. S. E. G. RAWSON. Sent by mail safely. Patentee, Saratoga Springs, N. Y.

IMPROVED Blind Bridle & Winkers FOR RACE HORSES.

Secured by Letters Patent, July 25, 1882.

Having thus described my invention, what I claim as new, and desire to secure my letters patent, is:

- 1. The part D supported by the side straps of the bridle, extending back as shown, the front having an opening into which the blind is fitted, substantially as herein described.
2. In a bridle, in combination with the extensions D, the curved blinds F, secured to such extensions, and as shaped, to give full freedom and ventilation to the eye while circumscribing the vision, substantially as herein described.
3. In a bridle, and in combination with the extensions D, blinds E, and side straps A, the screw nut and washer B, to secure the blind and allow it to be set, substantially as herein described.
4. In a bridle, and in combination with the check-piece D and blinds F, as shown, the straps or bands G and H, connecting the branches or extensions above and below the eyes, and having the adjusting slides or buckles, substantially as and for the purpose herein described.
5. In a bridle, and in combination with the blinds F, supported and pivoted to the bridle so as to be movable about the point of support, the adjustable front straps or bands O and H, and the rear band I and the throat-latch or lash connected with the blinds, and adjustable, substantially as herein described.

The above are the claims allowed by the patent office, and through the corresponding letters do not appear on the cut, the general principle will be understood.

It meets with universal approbation, doing away with all the objections urged against blinds, and at the same time giving complete control of the line of vision. By throwing the lower portion of the blind up something of the same effect on the action follows as is induced by toe weights. This is especially the case when young colts are the pupils, teaching them to bend the knee without the strain of weights on the feet.

For bridle of all descriptions apply to JOHN A. MCKERRON, No. 230 and 232 Ellis St., San Francisco.

Thoroughbred SETTER PUPPIES.

ENGLISH SETTERS, FIN est breed imported, Irish Setters, from Champion stock imported by R. W. Hill of Oregon. Pedigrees guaranteed. \$25.00 each at six weeks old. Apply to E. LEAVENLEY, Gilroy.

CALIFORNIA Electro-Plating Works,

657 MISSION STREET, Gold, Silver and Nickel Plating on all Metals. SPECIAL ATTENTION PAID TO Plating Carriage Hardware and Harness Trimmings of All Kinds.

TABLE WARE AND BAR FIXTURES REPAIRED and plated at the lowest rates. Copper plates silver-plated for saving gold. All work in our line guaranteed. KEATING & FAGAN, Proprietors.

SUMMER ARRANGEMENT.

Commencing Sunday, May 1th, 1884. AND UNTIL FURTHER NOTICE. Passenger Trains will leave from, and arrive at, San Francisco Passenger Depot (Townsend Street, between Third and Fourth Streets) as follows:

Table with columns: LEAVE S. F., DESTINATION, ARRIVE S. F. Lists routes to San Mateo, Redwood, Menlo Park, Santa Clara, San Jose, Gilroy, Pajaro, Castroville, Salinas and Monterey, Hollister and Tres Pinos, Watsonville, Camp Goodall, Aptos, New Brighton, Soquel (Camp Capitola) & Santa Cruz, Soledad and Way Stations, Monterey and Santa Cruz.

\*Sundays excepted. (Sundays only. Theatrical train Saturdays only.)

STAGE CONNECTIONS are made with the 10:40 A. M. Train, except Pescadero Stages via San Mateo and Redwood, and Pacific Congress Springs Stage via Santa Clara, which connect with 8:30 A. M. Train. SPECIAL ROUND-TRIP TICKETS, at reduced rates to Monterey, Aptos, Soquel, Santa Cruz and Pescadero; also to Gilroy, Paraiso and Paso Robles Springs.

EXCURSION TICKETS.

For Sundays only, (Sold SUNDAY MORNING, good for return same day. For Saturday, (Sold SATURDAY and SUNDAY only, Sunday and good for return until following Monday, (day, inclusive, at the following rates:

Table with columns: Round Trip from San Francisco to, Sun. Tkt., Sat. Tkt., Round Trip from San Francisco to, Sun. Tkt., Sat. Tkt. Lists destinations like San Bruno, Millbrae, Oak Grove, San Mateo, Belmont, Redwood, Fair Oaks, Menlo Park, Mayfield.

TICKET OFFICE - Passenger Depot, Townsend street, Valencia-street station, and No. 613 Market street, Grand Hotel. A. C. BASSETT, Superintendent. H. R. JUDAH, Asst. Pass. & Tkt. Agt.

For points on Southern Divisions and the East, see C. P. R. R. Time Schedule.

TO Sportsmen & Pleasure-Seekers. THE SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE SUPERIOR FACILITIES

AFFORDED BY ITS LINE FOR REACHING with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing. TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTEREY,

THE MOST CHARMING Summer and Winter Resort of the Pacific Coast.

with its beautiful Groves and delightful Drives, Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best of shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Baracuda, Pompo, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING FACILITIES AT THE "HOTEL DEL MONTE,"

ARE UNSURPASSED, having a MAONIFICENT BEACH of pure white sand for sunbathing. The BATH-HOUSE contains

SPACIOUS SWIMMING TANKS

(50x50 feet) for warm salt water plunge and swimming baths, with ELEGANT ROOMS connecting with individual baths, with douche and shower facilities.

THE FAVORITE ROUTE to those well-known Watering Places: APTOS, SOQUEL AND SANTA CRUZ.

IS VIA THE Southern Pacific Railroad,

(Broad Gauge). The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety, notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known Retreats, PURISIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unrivaled scenery of range at and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets will be entitled to FREE TRANSPORTATION OF THEIR DOGS when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle will be carried free of charge. Gunstaken and securely packed in wood or leather cases may be taken in Passenger Cars.

TICKET OFFICE - Passenger Depot, Townsend street, Valencia Station, and No 613 Market st., Grand Hotel. A. C. BASSETT, Superintendent. H. R. JUDAH, Asst. Pass. & Tkt. Agt.

LINES OF TRAVEL.

C. P. R. R.

TIME SCHEDULE.

SATURDAY, NOV. 1st, 1884.

Trains leave, and are due to arrive at, San Francisco as follows:

Table with columns: LEAVE (FOR), DESTINATION, ARRIVE (FROM). Lists routes to Benicia, Byron and Martinez, Callista and Napa, Colfax, Delta and Redding & Portland, Deming, El Paso, Express, and East (Emigrant), Galt and Lone via Livermore, Galt via Martinez, Knight Landing, Los Angeles and South, Livermore and Pleasanton, Merced, Madera, Fresno and Tulare, Marysville and Chico, Mohave and East (Express), Niles and Hayward, Ogdan and Express, East (Emigrant), Red Bluff (via Marysville), and Tehama (via Woodland), Sacramento, via Livermore, via Benicia, Sacramento River Steamers, San Jose, Stockton and Milton, Livermore, Stockton via Martinez, Vallejo, Virginia City, Woodland.

Train leaving San Francisco at 8:00 A. M. meets Pacific Express from Ogdan at Vallejo Junction; and train leaving at 8:30 A. M. meets Pacific Express from El Paso and Mojave at Oakland Pier. \*Sundays excepted. (Sundays only. Daily from Martinez. Sundays only from Byron.

## TURF AND TRACK.

On the Threshold of Prosperity.

[Address of Mr. L. J. Rose before the Los Angeles Fair Association.]

*Ladies and Gentlemen:* I have been among you many years more than I care to remember. I have seen the great changes that have taken place in these southern counties forming this district. I helped to organize this association, and from small beginnings have seen it grow to what it is now. When I first came to Los Angeles county there was no general settlement about the Mission San Gabriel. There was no Pasadena, no Alhambra, no Riverside, Pomona or Ontario. They were waste places and unoccupied, where sheep, cattle and fleet wild horses roamed at will. The plow had not then broken the virgin soil nor destroyed the natural beauty of the flowers which annually reproduced themselves with renewed beauty and perfume. Our mountain streams, now imparting their loveliness to the colonies, then tumbled and foamed over boulders and obstructions in solitary cauyons, nursed and almost unknown until swallowed up in the sands of the plains. Springs sent forth their meandering, limpid rivulets through the shade of trees, or fished in the sunlight of the plains, being visited now and then by covies of quail, to quench their thirst, or flocks of birds, who, in fluttering delight, would take their evening bath. Then all was quiet and hushed in the oak-groved slopes next to the Sierra Madre mountains, and the silence was only broken by the varied notes of the mocking-bird as he sent forth his mimic melody from the top of his bowery home, or by the loud beating on some decayed tree of the woodpecker, the sound of which in the weird stillness required no very vivid imagination to believe it the call of some genie of the woods.

What a great change has taken place! Instead of all this quiet, perchance broken by some lone vaquero, now we have colonies of happy homes, each one vying with the other in the beauty of surroundings. Where there grew wild flowers, now are reared, by the hand of lovely woman, the violet, the rose, the lily and all the varied flora of the world. Where formerly was an uncultivated plain, where Pomona was only represented by the prickly-cactus, there now grows in profusion and beauty the apple, the pear, the olive and fig—in short, almost every variety of fruit grown in the temperate and tropic zones. It is a transformation scene which cannot be realized or believed except it is seen, and even then each year makes changes which fill even us with wonder.

We of Southern California, have much to be proud of, and we may be excused if we are elated. There is no portion of this State, a State which is the brightest jewel in the diadem of our Union, which excels us in any of the beautiful productions about which all Californians boast. We raise more corn than the balance of the State, our wheat will fairly average when compared with the whole State. We excel in the raising of barley, and we are the peer in grapes, in pears, in apricots, in peaches, and the admitted superior in semi-tropical productions. Nor is our live-stock department suffering in comparison. Take our sheep and wool clip, take our Jerseys, Durhams and Polled Angus cattle, and when critically compared with stock from other portions of the State, many blue ribbons are brought home. Take our horses the last year and they have created quite a ripple of admiration, both at home and abroad, and our small experiments in the breeding line indicate with much certainty that we will be the favored section for producing as fleet and beautiful animals as there are in the world. In view of all these varied industries, excelling, as we do, in all, can it be otherwise than that we must and shall be a prosperous people? We are only on the threshold of our growth and development. I see fair young faces and brave youths who will see and help make changes in this beautiful country, that will be the marvel of coming generations. Our whole country will be what now is seen in some bright spot at present made beautiful by the hand of man, for all of our soil is fertile and adapted to some variety of fruit culture. The growing of the orange, the lemon and the lime, will, in localities favorable to their culture, be always a specialty confined to this district.

The culture of the various fruits like the pear, the peach, the apricot, etc., is a growing industry and such fruits will be used for canning, for shipping in their natural state, or for drying.

The drying of fruits, no doubt, will in the near future assume large proportions, for it is especially adapted to every family home, for the young and the old, and can do some part of the easy task, teaching the boys and girls habits of industry, and making all feel that they are showing responsibility and labor for the benefit of the household.

Then there is the olive which in time will be grown on our hillside and waste places and make employment for young and old, and yielding good profits and making a new export. The growing of seeds both for the vegetable and flower garden should be an industry that would pay well. California now imports about three-fourths of her waxes. The making of perfumes no doubt will attract the attention of some specialist, and I can see no country that would have superior advantages for either.

We want varied industries to suit the various tastes, inclinations and desires of all. Nor is there any poverty of choice.

The wide range of production of fruits, of farm products and of the garden that can be grown, and grown to marvelous perfection and ease; the variety and choice of occupation that can be chosen and done well are almost confusing. It is not what can be done, but what shall be his specialty that troubles the beginner.

The growing of grapes for wine will no doubt be one of the leading industries; the raising of grapes for raisins in favored localities will be the choice of many.

Our moist lands will, too, play an important role in this general and diversified prosperity. Such localities are especially adapted for creameries, for the raising of pigs, for the growing of hops, corn, alfalfa, potatoes and a thousand other productions. In fact, there are so many industries, all promising fair returns for light and pleasant labor that it would be tiring for you to listen to their enumeration, for all these things are known and suggested to you daily in this favored land of grand and varied resources. As yet little has been done. We are as yet only pioneers in working out the diversified industries growing out of our unequalled climate and the fertility of our soil.

I would most respectfully urge the people of the southern counties to attend these annual reunions, and I specially ask the attendance of the ladies, for wherever they are you will find order, refinement, and pleasure. Wherever you find them you will find man on his best behavior, with a determination to appear at his best and with the desire to make the best exhibition in whatever department he may have articles competing for the wishes, the approval and smile of his sweetheart, even if that sweetheart be his wife. Bring too, your young folks, for

fairs are great educators for the young. They teach them to acquire correct judgment of the forms of animals. What is the best form or brand of a cow for milk, or for beef? What is the best form for a horse for draft, for light work, or for speed? The exhibition brings beautiful animals, with lines for utility and beauty, to his notice, and he will soon learn to compare one breed and form with other breeds, and by hearing them discussed will learn which is the best. Thus he will form the determination to raise the best stock; and this universal education of our youth, by creating desires, will in turn stock your country with the best of the various productions. Our girls observing how such beautiful preserves, canned fruits, butter or cheese are made, or by seeing the fairy productions of other maidens in fancy needlework, elegant painting or in the exhibition of beautiful flowers, either cut or growing, will go home with a new desire to beautify their homes with like work, and will train the rose, the honey-suckle and the jessamine, making shade, fragrance and beauty about your cottage, and fitting it for the abode of refinement, love and contentment. Recreation, too, is what is needed at times to all. "All work and no play makes Jack a dull boy." This continual strife and worry for the dollar wears you out prematurely and makes you an animal with a treadmill path, which is neither full of joy to yourself and certainly not to your friends or to your families. In fairs, as in everything else, to accomplish the greatest good or make it the most enjoyable, you want a boom. You desire to see everybody and his neighbor in order to have a good time generally, and talk over all the various productions that are exhibited. When this interest is once awakened I warrant you next year you, too, will have something nice which you will want your neighbor to see. There is as yet too little enthusiasm in these matters, and in the Eastern States, with less to exhibit, attendance is almost universal. A short time ago I read that in Kansas City there were forty-five thousand people who attended the fair in one day, and fifteen or twenty thousand is a common occurrence at these district gatherings; whereas take St. Louis, and one hundred thousand people would not be uncommon. This want of attendance is unfortunate, for your directors of this association cannot make it as useful and attractive as they desire, and although the citizens of Los Angeles city may be liberal in subscribing money, they could do much better by retaining their money, and by going and inducing the attendance of all. If they would do so the money need not be subscribed by any one. Take St. Louis, Louisville and other places, and these cities will choose one day in fair week and close up all places of business, making it a holiday, and everybody has a general day of enjoyment.

But I will not detain you much longer. It is ever a pleasure—yes, my very nature compels me to sing the praise of our favored locality, which is as perfect as can be found on earth, imparting health and buoyant spirits. To feel full of energy and full of life to accomplish ends with ease is common to us all. We have a generous soil, yielding abundance, with scarcely a failure whenever a call is made upon it.

We have an ocean at our door, which rolls its Pacific waves against our coast, which by its trade winds tempers the heat of Summer, and it is a highway for vessels that carry our products to the four corners of the earth. We have, too, railroads which in a few days carry us to every part of this continent, and they have been an important factor in our prosperity.

In fact it may be stated as a certainty that these railroads have more than doubled all values in Los Angeles county in the past five years. Nor is this created value a fictitious one, for it is based upon income, for these roads have opened up new markets for the sale of our products, giving us enhanced prices by carrying wheat, wine, wool and other products to every part of our land and to Europe, and bringing back in their return necessities or luxuries at reduced prices.

### The Los Angeles Fair—Notes of the Exhibits.

Along with the races, the Agricultural Fair deserves some notice, as in many respects it was creditable to the district. The exhibits in horses, cattle, pigs, poultry, cereals, vegetables, fruits, flowers, and fancy articles, were not large, but so far as they went were of excellent character. The only exhibits disappointing me were the fruits and vegetables. I naturally expected from the rich soil, abundance of water for irrigation, and the favorable climate, to have seen these exhibits much finer and more numerous than they were. While, however, in character they were unquestionably fine, they did not seem to me to excel—in some cases not even to equal, the same exhibits at the northern fairs, and as a fruit and vegetable raising country, Los Angeles county has to wait a few years to lead the State in such productions. The exhibits of wheat and potatoes were eminently good, the latter being better than I have seen for a long time. The largest squash or pumpkin, whichever it may be called, on show at the pavilion weighed 193 pounds. The dried fruits deserve special mention, for they embraced all kinds and were perfect. In canned fruits Los Angeles beats the State so far as my experience goes, and her local wines may be ranked very high in our products of that class. Here the mission grape, the best for wine manufacture, grows larger and sweeter than anywhere that I have seen. In oranges, lemons, citrous and deciduous fruits, of course, the exhibits were far ahead of State competition, and they might be favorably compared with the choice products of the Mediterranean. The best of these came from Pasadena, Downey, Duarte, and other suburban districts, at the foot of the hills, or where they were sheltered from fogs than around the city. Many samples of corn were immensely large and well developed. The banana trees with fruit on were interesting, but one of the exhibitors and owner of one of the best lots, told me that this fruit was not a success yet even down here. The desert palm of the Mohave and Colorado deserts was conspicuous and large. The fibre of this plant is the best material known for making paper, and it is intended to try it on our own desert places. There was a fine exhibit of newly obtained tropical and semi-tropical plants, which attracted much attention. The local tradesmen had generally a good display of their wares, and the mechanics of their handicraft, but it is out of my power to characterize them generally as they must interest the local residents. The best collection of photographs came from the Elite gallery. The art is a great success here. These exhibitions were made in the old hall of the Turfers, which is altogether inadequate to such a purpose. The directors among many other things they ought to do to make the annual fair a success, must build a pavilion of such efficient capacity to meet all demands. Until that is done the fair will always more or less be a failure and unworthy the progress, wealth and reconores of the county.

The exhibition of stock was small, but very good. For some reason none could explain, only one parade was had on Friday morning, the day before the races, and thus it was difficult for a stranger to reach their real merits and claims of

notice. Taking other district fairs as an example this was great mistake, an injustice alike to the visitors and the exhibitors. I shall not deal at length with the stock exhibit, as I send you the list of premiums awarded, but there are one or two cases I would like to refer on account of their excellence. The lot from Santa Anita Farm, with Grinstead, Rutherford and Maggie Emerson at its head, could not be beaten for thoroughbreds in the wide world. There was quite a string of youngsters, all splendid in their specialties of form, but I only care, at present, to say that Primo and Bomta, two of the Grinsteeds, which I had previously stated in print to be the best yearlings in the State, took the first and second prize. The next best of the yearlings was a trotter from Mr. Rose's farm, which Dr. Wise, of this city, I understand, purchased at a big figure. These I shall speak of more fully in due time. The stallions were well represented. Old Ben Wade, Del Sur and Don Victor came after Grinstead and Rutherford, all three looking well, and then came the Normans, of which there were several grand specimens, some weighing 1,600 and 1,800 pounds. Black Model, recently imported from Canada, took first and second prize, and justly, for he is a perfect all-purpose horse; though weighing fourteen hundred pounds, a trifle, perhaps, too heavy, his action is magnificent. Ben Wade, Del Sur and Don Victor respectively took prizes. The best of their get, I saw, came from Don Victor, all blue-ribbon colts, and belonged to Mr. Ernest, of Los Angeles. These were five; three two-year-olds, one yearling filly and one suckling. The gray yearling filly, Beatrix, took first premium; she stands 14.3 high. The dark brown colt, Tramp, two-year-old, stands 15.3 and is another beauty. As a trotting colt he would not disgrace Palo Alto. His dam was by Ben Wade, second dam by Sacramento, from a Rattler mare. Jeff, dam by Dashaway, by Belmont, is another grand two-year-old, and the three are likely in future to raise Don Victor's fame. There is, however, one more stallion, belonging to the Lugo family, of San Antonio, near Downey City, that I wish to mention. He did not, for some reason, take a prize, yet for an all-work horse he seemed to me superior to many others that did, and the best calculated of all I saw at the exhibition for that purpose. He is a bright bay, 17 hands high, with immense vitality, splendid action and perfect model. His strength is simply enormous, he weighs about 1,400. For the road, farm, coach, saddle, and it may be the track, with good maree, he cannot fail to produce valuable colts. He is called San Antonio Boy. He was sired by Vermont, from a mare by Jeff, by Independence, by Boston. Like his physical form his blood is unexceptional. The horn cattle were well represented, the Jerseys being especially good in both sexes, they and the hack cattle. Three of the Jersey bulls would do honor to any country, and were the best I have seen in California, though not the largest. The hack cattle of Messrs. Hancock Johnston & Page I shall refer to again when I visit their place in a few days. There was also a good display of poultry, the largest and best being made by Mr. Brown, of Los Angeles. H.

### Eastern Turf Dates for 1885.

[New York World.]

With the great increase in racing during the last few years and the promise that the increase will certainly be sustained next year, and perhaps for several years to come, the question of dates is one of the greatest importance, not only in the West, where it has already been made an entering wedge of discord, but also in the East. Fortunately, there may be said to be five weeks in May next year—that is, there are five Saturdays, and instead of the American Jockey Club waiting until May 30th, (Decoration Day), to begin its Spring meeting, it announces that the meeting will begin on Tuesday, May 26th, and continue every other Tuesday until June 9th. Whether these dates will exactly please the committee of the Coney Island Jockey Club, or not, has not as yet been made known. Assuming that they are satisfactory, the season at Sheepshead Bay will begin on Thursday, June 11th, or Saturday, the 13th, and continue until Tuesday or Wednesday, June 30th or July 1st, which will include three Saturdays, the same as for the meeting last June. The Monmouth Park Association will have Saturday, July 4th, to begin its meeting, and Saratoga, as usual, can wheel into line on or about Saturday, July 18th, the Monmouth Park meeting ending either on Saturday, the 22d of August, or on Tuesday, the 25th, and the Saratoga Association on Thursday, the 27th, leaves the field clear for the Coney Island Jockey Club to begin its Autumn meeting on the same Saturday, Aug. 29th, as it did last August.

The changes made by the American Jockey Club in the date of beginning its Spring meeting will not, however, affect the meetings of the National Jockey Club and Maryland Jockey Club at Washington and Baltimore, but will simply utilize certain days which were lost by the Club last Spring. The National Jockey Club will begin its meeting at Ivy City, on Tuesday, May 12th, and continue on the 13th, 14th and 15th. The week following the Maryland Jockey Club will throw its crimson, black and old gold banner to the breeze at Pimlico. Nearer home it is nearly certain that the races at Brighton Beach will begin on Saturday, May 23d, or Monday, May 25th, and as the last date is Whit-Monday, to many it is a holiday.

The question of dates in the South, Southwest and West is not, however, as easily arranged, although the fact that Lent is one week earlier next year than it was this year will help their earlier meetings. By force of circumstances the racing circuit in the Spring begins at New Orleans, where it is useless to talk of racing from a social, and therefore a business standpoint, until after Lent is over. Easter Sunday next year falls on the 5th of April. Assuming that the meeting of the Louisiana Jockey Club begins on Monday, the 6th, to be followed in turn by the meetings at Memphis and Nashville, taken in connection with rumors of a meeting at Gallatin, the whole of April and Friday and Saturday, May 1st and 2d, are required. Following the usual sequence of meetings, the Kentucky Association at Lexington will take the week beginning May 4th, with the Louisville Club followed on Tuesday, May 12th, with Latonia either on Saturday, May 23d, or on Tuesday, May 26th, and ending between the 1st and 6th of June. It is in connection with these few days in June that there is a possibility of trouble. The St. Louis Fair Jockey Club cannot well begin its inaugural meeting previous to June 9th, which is a week later than it desires, owing to the great heat of the weather in St. Louis about the middle of June. There is a possibility, however, that by crowding and curtailing the number of days at Louisville and Latonia, that the St. Louis Club could begin on Saturday, June 6th, and end on Saturday, the 13th, which in turn could be followed by the Driving Park Club at Chicago, on Tuesday, June 16th, and ending on Thursday, June 25th, which will enable the Washington Park Club, of Chicago, to begin on Saturday, June 27th, as announced, which meeting will continue until Saturday, July 11th, which is certainly a Spring season, taken in its entirety, that promises ample chances to all owners with good horses to win both fame and fortune.

Washington Park Club Stakes.

The stakes of this club, to be run at the June meeting, 1885, closed Oct. 15th. They all filled well, the California representatives being particularly strong. The following are the Pacific Coast horses named:

The American derby, a sweepstakes for three-year-olds (foals of 1882), at \$200 each, h f; or only \$20 if declared out on or before February 1st; or \$30 if on April 1st; or \$40 if on May 15th, 1885. All declarations void unless accompanied with the money; with \$5,000 added, the second to receive \$750, and the third \$250, out of the stakes. Winner of any three-year-old stake race, of the value of \$1,000, to carry 3 lbs.; of \$1,500, 5 lbs.; of three or more three-year-old stakes of any value, 7 lbs. extra. Maidens allowed 5 lbs. To be run on the first day of the meeting. 62 nominations. One mile and a half.

When a yearling Maud Messenger was sold at auction for \$12.50. She was a homely-looking youngster and nobody seemed to want her. An attempt was made to pace her when three years old, but it failed. Crit Davis finally got hold of her and developed her great speed.

A Chat with Splau.

"No," said John Splau, referring to the fact that he had left the employ of Commodore Kittson, and the rumor that the stable of trotters owned by Mr. H. V. Bemis, of this city, would be under his management, "I shall never drive horses again for one man. It is well enough to have a fixed and permanent income, and so far as that is concerned there could be no possible cause for me to find fault with Mr. Kittson, but the fact of the matter is, that when you are under contract to drive for one man, he feels that all your time belongs to him, and you cannot help seeing that there is some justice in his view of the case. And when a man has been driving for anybody that has a good horse, and has always felt free to do and say just what he pleased, it isn't just the thing to tie him up so that he feels a restraint. I like to be foot-loose—to come and go whenever I want to; and you may say that hereafter I shall have a public stable, and that it will not contain anything but good material. If an owner has one or two trotters that are first-class goods and wants me to take and trot them, I will do this, but there will be no use of my trying to train every horse that somebody else thinks will do to perform with."

"I think Johnston will go a great mile next year—close to two minutes if no bad luck befalls him. At Lexington he was better than I had ever seen him. You know the track there is not a perfectly level one, and on the day he paced it was a little rough. I had made up my mind not to go a mile with him as well as he could, as we were only advertised to beat 2:10, and that could be done without much trouble. So when the word was given I let him slip along to the half-mile pole well in hand, and my watch made the time to that point just 1:06. Then I gave him his head, and you ought to have seen him fly. The last part of the homestretch is a slight rise of ground, and you may know he was pacing some when we finished in 2:08, making the last half in 1:02, by the official timing, and 1:01 by mine. People smile when I talk of his going a mile close to two minutes next year, but they don't know the horse. He has been driven a quarter of a mile better than thirty seconds, and I am willing to bet a reasonable amount that he can go a half in one minute. Now what is to prevent a young, game horse from going a full mile nearly as fast as he can a half? Plenty of horses can rate their speed well enough for that, and Johnston is one of them. If he doesn't go a mile some day in 2:02 or better I shall be disappointed."—*Breeders' Gazette.*

A Wizard of the Sulky.

The express between Boston and New York was crowded, and a number of people got on board at Stamford who were unable to find seats. One of these had piercing eyes, a stoop in the shoulder and a dark mustache, and he carried in his hand a three-gallon milk-can. He stopped at the seat which we occupied, deposited his can in the aisle of the coach and remarked: "Been to Hartford, I suppose. Well, how's the mare? So help me Moses, I believe Maud S. can trot in 2:07 when just right. I saw her go a half-mile in 1:02, and she did it so easy that I set her down for a world beater. I need to tell Mr. Vanderbilt that she would beat anything that stood on four legs if he would give her a show. Jay-Ee-See never saw the day he could down her. Why, I went to Mr. Vanderbilt last Summer and told him that I represented a syndicate that would pay \$100,000 for her. But he would not sell to me. Said he could afford to keep her. What am I doing? Why, I have an eighty-acre farm here at Stamford with forty odd horses on it. I run up and back nearly every day, and always carry a can of milk home with me. No, I don't drive any more. I look full in the face, but I don't weigh as much by thirty pounds as I did. Neuralgia has pulled me down, and it will not allow me to pull against a horse. No one knows what I suffer at times. After a ride in a sulky I am completely prostrated. Not being able to drive I got together a stable of runners at Brighton Beach, and I have done pretty well with the thoroughbreds, although I have to keep my eyes open, you bet. Some tough fellows round with the gallopers. When you mention pole horses don't forget Pickard. He was worth twice what Mr. Bonner paid for him. I tried to have Ed. Gilmore buy him; but he was too slow in making up his mind. Pickard and Ruras ought to trot a great mile. Hopeful? Oh, yes, the gray horse is out at Fleetwood; but I have nothing to do with him. He has a great fight of speed yet, but is too old to make much of a fight in races. I tried to buy him, but Mrs. Richmond thought he was worth more than I was willing to pay. You like cider? I have any quantity of apples on my farm, but I do not make much cider. I sold 160 barrels of apples to-day at \$1.25 a barrel. But here we are at the Grand Central Depot. Good-night." And the speaker tipped his hat and made a grab for the milk-can. The voluble stoop-shouldered man was once regarded as the greatest reinsman that ever lived. He was called the "Wizard of the Sulky." His name is Dan Mace. —*Turf, Field and Farm.*

The Sires of English Horses.

The Beyerly Turk came to this country about 1689; the Godolphin Arabian, himself a pony of 14 hands, though his descendants were in every way great in the land, died at Gogmagog Hills, the seat of the Duke of Leeds, in 1753. From the third of the trio, the Darley Arabian, sprang Eclipse, whose son, Young Eclipse, won the second Derby in 1781. The Arab has always been the favorite horse of fiction. He has been described so often that a picture of a typical Arab, a descendant of Blundevill's Barbarian, will suffice. Here is the small head, the swelling nostril, the small sharp ear, the mild and gentle eye (in repose, for he is easily excited), the arched neck, the compact body—the Arab is rarely over 14 hands 1 inch in height—the clean legs and that peculiar set on and carriage of the tail, "carried out with a sweep like the curve of a palm branch," one enthusiast has said, which are characteristic of the desert born. It is not to be understood that the three Arabs—to use the term literally—named above are the progenitors of all English thoroughbred horses. This is by no means the case, but the blood of these three enormously preponderates. How it comes to pass that the thoroughbred Arab, from which the English thoroughbred sprang, through some intermixture of what is supposed to be an altogether poorer strain, should be so much inferior in speed and stamina to the English horse, which at its best has an existence of only three centuries, it is impossible to say.—*The English Illustrated Magazine.*

Imp. Great Tom, the property of Gen. W. G. Harding, Belle Meade Stud Farm, Tennessee, recently recovered from an attack of pneumonia and was again severely blistered, the effects of which he may lose the sight of one of his eyes.

Premiums at Los Angeles.

The following is the premium list of the Los Angeles Fair as published in the local papers. It is badly muddled but is clear in a few points:

CATTLE.

- Class 6—C. A. Page and H. M. Johnston, Los Angeles; first premium, fatted cow, Polled Angus cow Favorite.
Class 4—Herd of four head, bull and three cows, C. A. Page and H. M. Johnston, Los Angeles; first premium; names, Black Commodore, Miss Fyfe, Favorite and Blossom.
Class 1—Wm. Niles, Los Angeles; second premium; Fifth Duke of Alameda, Durham.
Class 1—C. A. Page and H. M. Johnston, Los Angeles; first premium, bull Black Commodore.
Class 1—C. A. Page and H. M. Johnston, Los Angeles; first premium; Fred Douglass (1-year-old bull).
Class 1—First premium, best 3-year-old cow; Miss Fyfe (entered by above named). Secoud premium, heifer calf, Miss Ella Eyfe.

JERSEY CATTLE.

- Class 2—F. J. Barretto, Downey; first premium, 3-year-old bull, Blythe Othello.
Class 2—First premium on 2-year-old bull, Joe Romero.
Class 2—First premium, 1-year-old bull, Buckboard.
Class 2—Second premium, Gold Foil.
Class 2—First premium, Spread Brow (bull calf).
Class 2—First premium on cow, Sun Maid, 3-year-old.
Class 2—Second premium, cow, Pomona.
Class 2—First premium, cow, Margarette Foulks, 2-year-old.
Class 2—First premium, 1-year-old cow, Belle Esprit.
Class 2—First premium, heifer calf, Miss Veda.
Class 4—Herd of thoroughbred cattle, 2-year-old; second premium.
Class 4—Herd under 2 years old, first premium.
Class 5—Sweepstakes—F. J. Barretto, Downey; second premium, bull Joe Romero; first premium, calf Gold Foil.
Class 3—Devons—Andreas Machsdo, first premium, bull, George the Fourth (2,618).
Class 1—Durhams—Wm. Niles, Los Angeles; first premium, heifer calf, Primrose.
Class 5—Sweepstakes—C. A. Page and H. M. Johnston, Los Angeles; first premium, Polled Angus bull, Black Commodore.
Class 5—First premium, Polled Angus cow, Miss Fyfe.
Class 3—Holstein—Wm. Niles, Los Angeles, second premium, cow, Annie Clifton.
Class 6—Graded cattle—Wm. Niles, Los Angeles; first premium, cow, Betty.
Class 6—Wm. Niles, Los Angeles; second premium, fatted cow, Cleopatra.
Class 6—F. J. Barretto, Downey; first premium, heifer calf, Blender.
Class 2—Jersey cattle—Wm. Niles, Los Angeles; second premium, one-year-old bull, Golddust.
Class 2—Second premium, one-year-old heifer Lady Handbell.
Class 5—Second premium, bull, Geo. Gilbert.
Class 3—First premium, heifer, Rosa Dale.
Class 3—First premium, heifer calf, Queen Adaline.

HORSES.

- Class 1—Thoroughbred stock—E. J. Baldwin; first premium, brown stallion Grinstead, aged.
E. J. Baldwin; second premium, brown stallion Rutherford, aged.
Class 1—E. J. Baldwin; first premium, brown colt, Brandywine, 2 years old.
Class 1—E. J. Baldwin; first premium, brown mare, Maggie Emerson, 4 years old.
Class 1—Sorrel mare, Hermosa; first premium.
Class 9—E. J. Baldwin; suckling colt, second premium for her above named colt.
Class 1—E. J. Baldwin; first premium, Mollie McCarthy's Last (b f), 1 year old.
Class 1—E. J. Baldwin; second premium, b f Bonita, 1 year old.
E. J. Baldwin; first premium to Maggie Emerson's suckling colt.
Class 2—Families—E. J. Baldwin; first premium, brown stallion, Grinstead and five colts.
E. J. Baldwin; first premium, Maggie Emerson and two colts.
E. J. Baldwin; second premium for bay colt, Silver Cloud.
E. J. Baldwin; first premium, sorrel colt, Primero.

GRADED HORSES.

- Class 5—Draft horses: Jacob Bertch, Springfield, Ventura county, first premium.
Class 2—Family: b s Don Victor, with five colts, (no competition.)
Class 11—J. W. Earnest, Los Angeles, g o Beatrix, yearling, first premium, (no competition.)
Class 4—Draft horses: Daniel Griadold, Westminster, first premium, b m Minnie, six years old.
Class 11—Daniel Griswold, Westminster, first premium, sorrel filly, (suckling), Alice.
Class 4—Draft horses: A. Rose, Ballona, Cal., first premium, dapple grey stallion, Napoleon.
Class 11—A. Rose, Ballona, Cal., first premium, b filly, (suckling).
Class 11—A. Rosa, Ballona, family of six colts, by Napoleon, first premium, (no competition.)
Class 10—H. A. Grewell, Santa Barbara, Cal., horses for general purposes, first premium, roau mare, Dolly, (no competition.)
Class 5—Roadsters: C. A. Durfee, Los Angeles, Cal., first premium, b s Del Sur.
Class 12—Sweepstakes: C. A. Durfee, Los Angeles, Cal., first premium, b a Del Sur.
Class 5—Roadsters: J. W. Gardiner, Santa Ana, Cal., first premium, b a Black Diamond, two years.
Class 3—Graded: J. W. Gardiner, Santa Ana, Cal., first premium, b Pacific, two years old, (no competition.)
Class 3—G. G. Arnold, Hueneme, Cal., first premium, b s Ben Wade, Jr., 5 years old.
Class 11—Colts: E. J. Baldwin, Santa Anita, Cal., first premium, b colt, one year old.
Class 5—Roadsters: Keniston & Co., San Bernardino, Cal., first premium, b m Nellie Monroe.
Class 8—Saddle horses: Andreas Machado, Machado, first premium, bay gelding.
Class 10—General purposes: E. P. Latour, Los Angeles, first premium, Black Model, ten years old.
Class 12—Sweepstakes: E. P. La Tour, Los Angeles, second premium, Black Model, ten years old.
Class 11—Graded horses: E. J. Baldwin, Santa Anita, first premium, b suckling colt.
Class 12—Sweepstakes: E. J. Baldwin, Los Angeles, first premium, b m Maggie Emerson.

SWINE.

- Class 1—Berkshire: C. A. Coffman, Ranchito, Cal.; first premium, boar, 6 month, Richmond.
Class 1—First premium, breeding sow Betsy Corbet, 1 year old.
Class 2—First premium, sow Miss S., under 1 year. First premium, pigs under 10 months, Richmond and Miss S.
Class 1—Sweepstakes, Berkshire: C. A. Coffman, Ranchito; first premium, boar Richmond.
Class 1—First premium, sow Betsy Corbet.
Class 1—First premium, pen Betsy Corbet and family.
Class 1—First premium, boar, 2 sows and 6 pigs.
Class 2—Poland China: F. Wakeman, Santa Ana, first premium, boar, 3 years old, General.
Class 2—First premium, sow Susy.
Class 2—F. Wakeman, Santa Ana, second premium, sow 1 year, Pride of Valley.
Class 2—First premium, 6 months. Primrose and Daisy 2d.
Class 2—First premium, pair pigs, Sambo and Queen.
Class 1—Berkshire: Wm. Niles, Los Angeles, Cal.; first premium, boar, 2 years or over, Royal Briton.
Class 1—Second premium, breeding sow Victoria.
Class 1—Second premium, sow, 6 months and under 1 year, Royal Maid.

POULTRY.

- George C. I. Starcey, Santa Monica, one pair light Brahma fowls, first premium.
James T. Brown, Los Angeles, first premium on each of the following: Best Plymouth Rock, white Leghorn, brown Leghorn, white-faced black Spanish, Houdans; also for best and largest collection of fowls; \$10.
Wm. Niles, Los Angeles, first premium for pstridge Cochin, buff Cochin, white Cochin, s. l. Hamburg; also first premium for bronze turkeys, Toulouse geese, raven ducks, peacocks and Guinea fowls.

National Association Trotting Horse Breeders.

In addition to the entries published last week the following are reported in the sweepstakes for foals of 1884. \$500 entrance:
G. S. Moulton's b c, by Vermont Messenger, dam Rauldolph Maid, by Dou Giovanni.
Palo Alto Stock Farm's br c Norcott, by Electioneer, dam Norma, by Alexander's Norman.
Palo Alto Stock Farm's b f Blonde, by Gen. Benton, dam Bruette, by Hambletonian.
Palo Alto Stock Farm's b f, by Gen. Benton, dam Violet, by Electioneer.
Palo Alto Stock Farm's h c, by Piedmont, dam Addie, by Hambletonian Chief.
Palo Alto Stock Farm's b f Macaria, by Clay, dam McCa., by Almont.
Ariel Lathrop's b f Maiden, by Electioner, dam May Queen, by Alexander's Norman.
Ariel Lathrop's br c, by Electioneer, dam Midnight, by Pilot, Jr.
Chas. Marvin's br f Lulaneer, by Electioneer, dam Lula, by Alexander's Norman.
Chas. Marvin's br c, by Electioneer, dam Beautiful Bells, by The Moor.
L. J. Rose's b f, by Sultan, dam Kitty Wilkes, by George Wilkes.

Miss Woodford, the acknowledged Queen of the running Turf, can be seen on any fair day at Brighton Beach, where she is led by the bridle for a two hours leg bath in the surf. The great mare struck herself on the inside of the right foreleg in her last great race of two-mile heats, in which she defeated Drake Carter and Modesty in 3:33 and 3:31, the best two-mile heat race on record. This was Miss Woodford's ninth consecutive victory this year, and it is barely possible that she will never face the starter's flag again. The great mare has not gone lame from her mishap, but she favors the right foreleg when first led out every morning. She will be blistered and fired, and may stand training again, but an experienced horseman who has seen the Queen often since the accident, thinks she has run her last race.

The Brooklyn Stable, property of Messrs. Dwyer Bros., will take a new departure next year. The stable will probably be divided, and most of the two and three-year-olds will be raced in the East, while the four-year-olds and upwards will take in the principal meetings in the Southwest. The Western Associations offer more open races at weight for age and fewer handicaps, and a first-class mare like the "Queen of the Turf"—Miss Woodford—will have a better chance. However, when the Western Associations see a first-class racehorse literally galloping away with everything started for, they will quickly adopt more handicaps, or else the races will be mere "walk overs," and the gate receipts will suffer in consequence.—Turf, Field and Farm.

Trotting at Portland, Oregon.

CITY VIEW PARK, Oct. 26th—Match trot, 3 in 5, for \$100 a side.
Kelly, ro g, by Copperbottom.....Mifner 1 1 1
Startle, b g, by Bellfounder.....Lindsey 2 2 2
Time, 2:44, 2:43, 2:41.
Same Day—Match for \$100 a side, 2 in 3.
Florence E., ch m, by Pathfinder, dam said to be by Jack Miner.....McManus 1 1
Nellie K., br m, by Mike, son of Vermont, dam by Vermont.....Clark 2 2
Time, 2:37, 2:33.

Tristau, who wound up his turf career by running a dead heat with Lucerne for the Champion Stakes at Newmarket last week, has won for M. Lefevre, his owner, in five seasons, \$22,910. St. Simon, the three-year-old racehorse who has cleared the board of the chief cup races and has won all his races, with great ease, has been put on the shelf for this year, so that the talk about a match with St. Gaten, the winner of the Cesarewitch, also unbeaten, is certain to end in smoke.

The value of the blood of the broucho, has commanded the attention of the Turks, as sixteen choice specimens of the breed lately arrived in New York from Texas, en route to Constantinople. The animals were purchased on an order from the Turkish Government, and are designed for the plains of Tartary, where they will be given their freedom and permitted to interbreed with the wild Tartar horses of the steppes of Asia.

The English Jockey Club is at last taking steps in the direction of effecting a reform which is badly needed in the old country, and which might not be out of place here. The tendency to reduce the distance of races has been growing so much that the home club has passed a rule to the effect that there must be at every meeting at least two races of a mile per day which are not selling races.

Maxy Cobb and Neta Medium.

Last Friday morning I received an invitation from Mr. Cohnfeld to come to the Driving Park and witness the first trial of his new team, composed of the champion stallion, Maxy Cobb, and his half sister, Neta Medium. As I plodded up the hill toward the park gates I overtook Mr. Frank Work driving Edward and Swiveller, the heroes of many an event.

We discussed the probabilities of what we were going to see, and both agreed, considering the weather and the fact that Neta Medium had never hesten 2:22 in a race, the team would not beat 2:20 right away. After driving around the track my opinion was strengtened, as it was soft in places and quite heavy near the pole, midway of second quarter. They were worked out an opening mile in 2:35. Shortly afterwards I had a brief chat aside with Murphy and the owner. Johnny was non-committal, but Mr. Cohnfeld was confident they would beat 2:20. He stood aloof in this opinion, s Col L. Kip. Messrs. Newbold Morris, S. F. Knapp, T. C. Eastman, Wm. Turnbull, S. F. Sniffen, John J. Quinn, Heury Hughes, T. J. Coe, Major Weeks, and, in fact, all present concluded it would be next to impossible for a pair of horses unacquainted with each other to beat 2:20 on such a day and track. The weather was raw, with a lowery sky, and every one buttoned their greatcoats tightly, until the time arrived for the start. Murphy scored up once and jogged around the track, then increased their speed inside the distance, and nodded for the word, which was given by Mr. Knapp. Away they went, Neta being very close to the rail as they rounded the first turn. They worked in unison, and reached the quarter pole in 33 1/2 seconds. On they sped at the same rate to the half, in 1:07. Murphy eased them up the hill, and the three-quarter pole was passed in 1:43, but down the homestretch they were full of trot. Their driver shouted, and touched Maxy with the whip. He responded, and Neta was not tired. They finished strong in 2:18. A number of watches indicated 2:17 1/2, which would make the last quarter 34 1/2 seconds. An old turfite loudly proclaimed that it was 2:17 1/2. Said he, "I never saw a pair of horses trot that middle half in 1:09 before to-day." They trotted to a utop road wagon, weighing 130 lbs. exclusive of pole.

The performance was received with acclamation, and Messrs. Work and Eastman were the first to extend their congratulations to the proud owner. Murphy soon came to the club-house, and he was quickly surrounded by the entire party, extending their hands and making all sorts of favorable comments at the same time. The gist of the talk was that Mr. C. had the coming team, and, given a warm day and dryer track 2:16 or better, is within their reach. I may add that the horses are not in training track, but were jogged from their owner's private stables, Fifty-eighth Street, that afternoon, and it was the fourth time they were hitched as a pair. Murphy says, "Maxy is a born pole horse; in fact, he is Al wherever you place him; but Neta kept her end up wonderfully well."

VERITAS.

The Finish at San Bernardino.

The races at San Bernardino were finished Wednesday. Attendance small, betting nil. Tom won the unfinished race with Ingersoll and Billy. Time, 51 3/4.
Oct. 26th.—Running; purse \$—; for all ages; half mile heats.
Kelly's br g Tom, aged, 115 lbs..... Kelly 1 1
Ralp's b g Billy, 5 years, 115 lbs..... Weaver 2 2
Kennistan & Co.'s b g Bob Ingersoll, 4 years, 119 lbs..... Wallace 3 3
Time, 52, 51 3/4.
\*First heat won Oct. 27th.
The trot between Dick J., Hunter, and Lady Washington was won in straight heats by Dick J.
Same Day—Trotting; purse \$—..... 1 1 1
Dick J., blk g, by McClellan..... 2 2 2
Hunter..... 3 3 3
Lady Washington..... 3 3 3
Time, 2:37, 2:35, 2:36.

E. A. D.

A meeting of the American Turf Congress is to be held in Chicago on the 21st day of November next, for the purpose of considering some needed changes in the racing rules which were adopted last Winter at the meeting held in Louisville. Representatives of the following leading racing Associations throughout the South and West will be present at the meeting: Washington Park Club, Chicago, Ill.; Louisville Jockey Club, Louisville Ky.; Kentucky Blood Horse Association, Lexington, Ky.; Nashville Blood Horse Association, Nashville, Tenn.; Latonia Jockey Club, Covington, Ky.; Louisiana Jockey Club, New Orleans, La.; Memphis Jockey Club, Memphis, Tenn., and many others.

The brown stallion Dirigo, formerly Geo. B. McClellan, by the Drew Horse, was destroyed on the 14th day of August. He had become impotent and worthless from age. He was foaled, as near as we can learn, in 1853. As a sire he got Camors, 2:25 1/2; Little Fred, 2:25 3/4; Bully Brooks, 2:28, and John Virgin, 2:29. He was undoubtedly the best son of the Drew Horse, and was a horse of fine style and disposition, great courage, and a fine turn of speed. He also sired many valuable roadsters and gentlemen's driving horses.—Maine Horse-Breeders' Monthly.

The California BREEDER AND SPORTSMAN is wrong in asserting that Ex-Gov. Stanford's mare, Flirt, is "the first Hermit mare ever sent to the United States." Mr. W. L. Scott owned Enone, by Hermit, but unfortunately she died last Spring of chronic indigestion. Mr. Belmont also, owns Fair Barbarian, by Hermit.—N. Y. Sportsman.

We stand corrected. Our authority for the statement was Gov. Stanford's catalogue of the mares, and we took it for granted that it was the first without giving the matter a thought.

Jimmy Rowe, who formerly trained the Dwyers' stable, is forming a stable of his own. He has recently purchased of T. J. Megibbon the bay gelding Strickland, three years old, by Springbok, dam Lorena, the price being \$2,500.

Mr. S. S. Huntly, of Helena, Montana, has a horse that is half-brother to more 2:30 horses than any man's horse, and has a record of 2:32. He is by Volunteer, dam Kentucky Girl, by Blue Bull.

D. S. C., the winner of the 3-minute and 2:40 classes at Lexington, Ky., obtaining a record of 2:26 3/4, was, up to a recent date, used in a wood cart. He was unharassed from a load and sold for \$160.

Herdie, the pool-seller, and Lem Ullman, the programme man, are in Texas. They will probably journey to California before their return East.

Farley, the jockey, who rode Lucky B., at Jerome, when the recent accident occurred, is steadily recovering.

Cracked Heels.

Some horses are, no doubt, more predisposed to cracked heels than others, but, nevertheless, the immediate causes, though various, may be summed up under the general head of neglect and mismanagement. The very sudden change from heat to cold, or from cold to heat, is very likely to derange the secretions of the skin, hence washing the legs, especially with hot water, is very apt to induce cracked heels. The use of caustics and active stringents frequently do irreparable mischief. Gummy-legged horses (those whose legs are apt to fill) are predisposed to cracked heels. Though this affection is usually associated with neglect and mismanagement we occasionally find it in animals receiving the best of care. Horses well groomed and regularly exercised sometimes suffer from cracked heels. The process of sweating induces this affection. The sweat runs down into the hollow of the heels, and the evaporation of the perspiration, strongly impregnated as it is with the different animal salts, will often excoriate with the skin, especially in thin-skinned or white-legged horses. In regard to treatment: First, the cause, if it can be discovered, must be removed; the heels should be carefully washed every night with blood warm water, and carefully enveloped in flannel bandages. Soap, though commonly used along with the water, is injurious, because the alkali contained in it spoils the material thrown out for the restorative process. Ointments of various kinds are used; the following if properly prepared is the most perfect application for inveterate cracked heels that is known: Take of oxide of zinc, two drachms; vaseline, one ounce; tincture benzoin, one drachm; carbolic acid, five drops; citrine ointment, one ounce. Mix thoroughly, and gently rub it into the cracks with the finger, so as to distribute it in a moderately thick layer over the whole of the affected part, and to insinuate it as much as possible under the crusts that may have been formed. Once properly applied it will prevent further crusts from forming or collecting, and still further aids in the formation of a new cuticle to the abraded skin, and a barrier to the oxidizing action always present in inflammatory action. The heels must not be washed after the application of the ointment. They may be wiped with a soft napkin as much as may seem necessary, but when the ointment is once applied it should not be removed by washing, unless there are accumulations of filth or sand or some like gritty substance is wished to be removed.—*Sportsman*.

The Jerome Park track is about to undergo several alterations. The painful accident of the closing day of the Autumn meeting has had the effect of opening the eyes of the Executive Committee to the dangers of the curve at the half-mile pole. They at once employed an engineer, who presented his plans, which embrace the entire doing away with the curve. From the club house "Bluff," the course will run straight into the meadow to the south of the present course, and a safe and easy turn will bring it into the present T. Y. C., thus giving a homesretch nearly three furlongs in length, which will render it the finest in the country, certainly the finest in this section, and the effort will be made to make the three-quarter mile course one of the fastest in the country. The club intends, at some future time, to do away with the upper turn also, by taking the course further to the north. The work on the lower turn will begin immediately upon the close of the November meeting. The fact is the Jerome Park people are awakening to their opportunities. The course is the most accessible of all others in this section, as it can be reached in twenty-five minutes from the city.—*N. Y. Spirit*.

The racehorses, General Harding, Tennyson, Harry Gilmore, Lute Fogle, Boz Sedam and Charley Marks, are all at Dr. Sheppard's at Ottawa, Ill., undergoing veterinary treatment, as they are all lame or otherwise suffering from the effects of campaigning.

Mr. S. E. Larabee, Deer Lodge, Mon., has sold to H. C. Jewett, Jewett Stock Farm, Buffalo, the black colt Patchen Wilkes, two years old, by George Wilkes, dam by Mambrino Putchen; 2d dam the dam of Anglin, 2:27, and Wilkes Boy.

The colors of Mr. John Hammond, the extraordinarily successful English turfman, are "white, red collar, cuffs and cap."

Jim Renwick will not return to this coast at present, but has gone into Winter quarters at Jerome Park.

ATHLETICS.

University Games.

Starter—Al Braverman.  
Judge—Frank Soule, Jr., U. C.; Lient. J. Hullon, U. S. A.; W. C. Brown, O. C.  
Timers—Col. Geo. C. Edwards, U. C.; Charles B. Hill, M. C. C.  
Clerk of the Course—W. A. Brewer.

A large attendance, including many ladies, witnessed the eighth Field Day of the University. The weather was splendid. The mud track was in good condition, but a great many runners complained of its hardness. The management showed a noticeable improvement over previous efforts and the events were run off smoothly. A great amount of judgment was exhibited in the handicapping of the open events; this is to be wondered at when the handicaps of '83 are remembered.

The various events were keenly contested, although the entries were not nearly as numerous as they should have been. Braverman handed the pistol in a satisfactory manner for a novice, but, as was expected, the runners in the open events beat the gun. At every meeting somebody gets ahead of the pistol. This state of affairs must be rectified, and the sooner the better. We have never measured the track, but judging by the time made in the relay race there certainly must have some mistake made regarding the measurement. The time is altogether too fast. The 100, 220, and 440 were measured off separately. Result:

100 Yard Run, (open to alumni as an undergraduate),—Pond, '80, 1st; Heller, '83, 2d. A splendid race. Time, 10 4-5 sec.  
Putting the Weight—Reed, '88, 27 ft. 6 in. 1st.  
220 Yards Handicap—Magee, '87 (5 yds), 1st; Sutton, '85, (scratch), 2d. A close race. Time, 25 sec.  
Mile race—High, '88, 1st. Time, 5 m. 10 s.  
100 Yards Handicap (open)—J. W. Flynn, scratch 1st; Brierly (7 yds.), 2d; Stewart (3 yds.), 0; B. A. Benjamin (5 yds.), 0; Jordan (6 yds.), 0; C. B. Hill, 8 yds, 0. A hard race, won by Flynn after a desperate struggle with Brierly. The watches showed 10 1-5, 10 1/2, and 10 2-5 respectively. All the runners beat the pistol. Flynn ran in fine form.

Standing Wide Jump—Woodham, '88, 9 ft. 1/2 inch.  
Mile Walk—McAllister, '85, 1st. Time, 8 m. 17 3/4 s.  
220 Yards Handicap (open)—J. W. Flynn (6 yds.), 1st; Brierly (12 yds.), 2d; R. S. Haley (scratch), 0; W. R. Stewart (6 yds.), 0; Jordan, 10 yds. It seems strange that Jordan was only given 4 yards from Flynn in this race, when he got 6 yards in the hundred. Haley ran himself to a standstill after traversing 120 yards. Flynn had another hard struggle with Brierly, and just managed to breast the worsted a few inches in advance. Stewart was out of condition. Time, 23 2 1/2 e.  
Three Legged Race—Downs and Chestnut, '88, 1st. Time, 15 1-5 e.

Running Hop, Step and Jump (open)—In his first attempt, Gibson jumped 38 ft 2 in., which stopped all the other competitors.

440 Yards Run—Sutton, '85, 1st. Sutton ran in splendid style and finished well in hand, in 55 1/2 s. There are very few on the Coast that can defeat Sutton in a quarter.

Running High Jump (open)—H. Germain, 4 ft. 9 in. 1st; B. A. Benjamin, 4 ft. 5 in., 2d.

Running Wide Jump—Ellis, '88, 16 ft. 1st.  
Cless Relay Race, 2 Miles—Class '87, Blanchard, Code, Magee, and Turner, defeated Class '85, McAllister, Heller, Putnam, and Dunn; and Class '88, Woods, Woodham, Bushby and Downs. Time, 3 m. 37 1/2 s.

Johnson to his Fellow-Professionals.

NEW YORK, Oct. 28, 1884.

EDITOR SPORTSMAN: There being so many disputes regarding my sprinting capability, I issue the following challenge, to remain open three weeks: I, the undersigned, do hereby challenge any man in the world to run me seventy-five yards, or I will make a match to run any man in America one hundred yards, for not less than \$200 or more than \$1,000 a side. I will take 2 1/2 yards start from Harry Hutchins in 100 yards and 4 1/2 yards in 125 yards for the same amount. I will allow the following men these starts in 100 yards: James Quirk, 1 yard; E. S. Tisdale, 3 yards; F. W. Stone, 2 yards; P. M. Duff, 4 yards; T. J. McQuigan, 2 1/2 yards; W. Mills, 2 yards; Fred Hurst, 1 1/2 yards; Archie McCombe, 2 yards; Fred Harmon, 1 yard; J. T. Crossley, 2 1/2 yards; Thomas Atkin, 4 yards; Gns Carruthers, 2 1/2 yards; Thomas Fitzgerald, 4 1/2 yards; W. Boyd, 2 1/2 yards. These races must all be for money or not at all, and the money posted in a reliable man's hands or some well known sporting paper. Start to be pistol shot. Sheffield rules to govern or mutual consent. If not off in thirty minutes to go by report of pistol. Race to be play or pay; the race to take place four weeks from signing articles. A deposit to the New York Sportsman will be promptly covered. Hoping to receive a speedy acceptance, I remain,  
Yours,  
HARRY M. JOHNSON.

An Australian in England thus refers to Hutchins in the Melbourne Sportsman:

"But, undoubtedly, the greatest wonder in the pedestrian world is D. Hutchins, the champion professional sprint runner. I saw him run in a 130 yard handicap. He was handicapped to give some of them 30 yards start, and the nearest man to him had 14 yards. The fastest Sheffield runners, who can do even time, get 7 yards from him. Those who ought to know say whenever it is wanted he can do 100 yards in 9s., and a quarter of a mile in 46s. Anyhow, in private trials, he used to give Myers 10 yards in a quarter, and beat him very easily. His style is simply perfection, and he runs remarkably low on the ground, and with his legs more in front of him than any man I have ever seen."

A Merion Wine at Harvard.

Our readers will be pleased to learn of the success of Tom D. Davidson, son of Professor Davidson of the United States Coast Survey of this city, and a member of the Merion Cricket Club, at the Freshmen Fall Meeting of Harvard University. Davidson won the quarter mile rather handily, in 60s. It will be remembered that Gaston M. Ashe, also a member of the Merion, won the event the year previous, with the greatest of ease. Davidson also started from the scratch in the quarter at the regular meeting, but was defeated by Churchill (10 yds.) in 56 4-5s.

When will these punsters stop. The Evening News remarks: L. E. Myers has challenged Malcolm Ford to run 100 yards on election day, for a \$50 gold medal. If Ford runs Myers it will settle the question in regard to who is the fastest runner at the distance. Myers has a national reputation as the amateur champion runner of America, and he can not at Ford to be beaten.

H. H. Baxter, M. W. Ford and C. A. J. Queckberner, of the New York Athletic Club, purpose visiting England in order to compete in the Championship Games. As a pole vaulter, Baxter is only second to Ray, while Ford will certainly make a better showing in the 100 yard run than did Waldron. Queckberner will no doubt hold his own with the best exponents of the hot end hammer in Great Britain.

We have, of late, been frequently asked whether a competitor in a school race is eligible to start in the maiden race at the Olympic games. We are of the opinion that he can start, but it rests entirely with the committee on games to solve the question. At any rate, there will be no harm in entering for the event.

Harry Hutchins, the most phenomenal sprint runner that the world has ever produced, was expected to arrive in New York, on Tuesday, Oct. 28th. When shall we hear from Kittleman, Rogers, Smitth, and Johnson again?

The entertainment presented by the managers of Whistler's benefit was well worthy of patronage. We have rarely seen a more interesting and better carried out programme than the one on last Thursday night.

Myers is not coming to California, so the joint meeting of the Manhattan Olympic Club has been abandoned. This is the result of the exorbitant demands of the Manhattan Club, of New York.

There is every probability that John Meagher, of Massachusetts, and William Edwards, of Australia, will shortly engage in a forty-eight hour heel and toe walking match.

Myers and Ford meet in a scratch one hundred yard race at the games of the Manhattan Club. We have no hesitation in naming Myers as the winner.

The meeting of the Olympic Club will be held on their grounds at Oakland. This will be pleasing information for many of the competitors.

At the Olympic games on Thanksgiving Day, a special race of 100 yards will take place between Flynn and Lucas.

BICYCLING.

A Contemporary, last week, having started a rumor that Cortis was dead, it is with much pleasure that we publish a portion of a letter received, this week, from him, by which it will be seen that he still takes the liveliest interest in cycling:

COONAMELE, August 10th, 1884.

MY DEAR NAIRN, I have just come back from a flying visit to Sydney, where I was present at the Sydney B. C. sports. They were a grand success and reminded me more of the well remembered Surrey meetings than any other I have witnessed. I am told there were 15,000 spectators there and I can quite believe it. There is keen competition between Victoria and New South Wales in every branch of trade and sport, so the presence of the Victoria representatives added zest to the meeting. For my own part, I was greatly pleased to see Bennet win the mile, and he has shown himself so good and consistent a performer on grass tracks at home, I fancy he is better there than on a sinder path, and was the more glad therefore to see his success. Lee's non-success certainly seemed a surprise to most of the spectators, but they impartially applauded good riding irrespective of club or colony. The dinner afterwards was a great success, and the Sydney club are especially to be congratulated on the fact that they seem to have brought about a complete understanding between the V. C. U. and the N. S. W. C. U. Curiously enough, they themselves have seceded from the union. I was very much surprised at reading the result of the mile championship; I never suspected Speechley of championship form, and should have handicapped Liles to give him 50 yards at least. Please don't forget me in my desert, which just at present is abounding in grass and water, and possesses an absolutely perfect climate, and with kind remembrances to all old friends, believe me,  
Yours sincerely,  
HERBERT L. CORTIS.

P. S.—Please remind Liles, Whatton, Gaskell & Co. (meaning the other crack riders) that at present Lees holds the record for one hour, and that it is the first duty of every amateur champion to beat the professionals at all distances from one to fifty. Hazelton, of Victoria, is rumored to have done, in private, some wonderful performances, so the fellows at home must look out for their reputations. Wilson, of the Surrey, ought to try 21 miles an hour.—*Wheeling*.

Tandem Tricycle Records.

The one and two miles tandem tricycle records were upset yesterday (Friday), at the Crystal Palace by R. Cripps, Nolts, and H. F. Wilson, Surrey B. C., who rode a Humber tandem—40-inch, geared up to 60—weighing only 65 pounds. The times were taken officially by Mr. Pembroke Coleman, the N. C. U. official handicapper and timekeeper, and were checked by two other watches. Appended are the times for each quarter of a mile, all of which are the best on record:

MILES	M. S.	MILES	M. S.
1/4	0 45	1/2	3 45
1/2	1 27 3-5	3/4	4 32
3/4	2 12	1	5 10
1	2 56	2	6 4

\* Denotes records.

This (Saturday) evening we learn from Mr. Coleman that the records have been cut again to day, on the same track, by J. T. Trister and W. Brown; The time then made by these riders are, says Mr. Coleman:

MILES	M. S.	MILES	M. S.
1/4	2 56 3-5	1/2	10 27
1/2	6 3	3/4	15 33 2-5
3/4	9 17		

\* Denotes records.

—*Referee*, Oct. 19th.

Tournament of the Bay City Wheelmen.

The Bay City Wheelmen will hold a bicycle tournament at the Mechanics' Pavilion on the evening of January 10th. The proceeds are to be devoted for the furnishing of Club rooms, which (for such an active organization as the B. C. W.) are an absolute necessity. All bicyclist are cordially invited to compete in the event and there is little doubt but that every rider of the "elent steed" can find something in the varied programme to his liking. The managing committee consists of F. R. Cook, Ed. Mohrig and — Munro. Entries will be received by Ed. Mohrig at 252 Market street. The following programme has been prepared:

- Maiden Race (scratch) Open.
- 1 Mile Race. Nearest to time of 3 m. 50s. Open.
- 5 Mile Scratch Race. Open.
- 10 Mile Handicap Race. Open.
- 1 Mile Grasshopper Race. Open.
- 1 Mile Skating Race. Open.
- Drilling end Fancy Riding.

M. Rousset, a well-known French bicyclist, has just performed an extraordinary feat. In twenty-four hours, comprising time for rest, he made the distance from Pau to Aire and back on a tricycle, accompanied by Prince Solaykoff. The double journey represents a ride of 340 kilometree (211 miles), and is said to be the longest distance ever effected with a tricycle of the pattern used by the travelers. Mr. Rousset is over fifty years of age.—*London Echo*.

To what extent bicycling is taking hold on the sporting world is partly shown by the fact that George Hendee, the Springfield champion, owns \$4,500 worth of badges and other prizes, a third of which he has won this year, and Louis Hamilton, Yale's Crack wheelman, possesses \$2,000 in the same sort of material.—*Times*.

We are glad to notice that some of our cyclists are taking to fancy riding. Redcut, Munro and Meeker are becoming quite expert. A competition would be in order at the meeting of the Bay City Wheelmen, on Jan. 10th.

Miss Florence Fuller, of the Dearborn Cycling Club, Chicago, has a record of over 1,000 miles on her tricycle. She expects to reach 2,000 before the snow flies.

In his attempt to lower the mile record on Oct. 11th, Hendee made the first quarter in 38 1-5e, which is now the best on record in the world by 4-5s.

A delegation of bicyclists have been appointed to wait on the Park Commissioners, urging the formation of a 1/4-mile track at the park.

The San Leandro Reporter compliments the wheelmen, passed through that locality, on their fine appearance.

The Bay City Wheelmen have been practicing at the Pavilion during the week.

A great many riders have been out for a run on moonlight nights.

THE GUN.

The Game Law.

Table with columns for months (January to December) and rows for various game species (Quail, Partridge, Rail, Grouse, Doves, etc.).

A Sportsman's Love.

A sportsman winged by Cupid's dart Said to the maid he loved, "My dear, Your wiles have fast ensnared my heart With lynx of steel, 'tis very clear.

"I quail to think of my sad lot, My hilted never-ending woe; Should my fawn dreaming come to naught, I think 'twould lay this buffalo.

"Heron my knees I do declare I'd gladly, freely diver thee; Owlet me all thy burdens bear— Thy sorrows, share them all with me!

"You utter know bow bad I feel, To your sea-duck-tive arts a prey, If you refuse, your heart is teal— Say weasel wed, and name the day."

She smiled, the minks, and, blushing, said, "Think not that I woodchuck you over, Knowing bow badger heart has bled— Besides, you'll make a hang-up plover!"

The Los Angeles Riflemen.

I was kindly invited by Captain Kührts, of the Los Angeles Rifle Club (Turners), to visit their range on Sunday, and had a pleasant time with that gentleman. Captain Kührts, is a prominent and wealthy citizen of this city, a member of the Recreation Gun Club, the Rifle Club, a thorough sportsman, and whole souled man, who by his courtesies has placed me under many obligations.

MONTHLY SHOOT.

Table showing monthly shooting scores for various participants like J. Kührts, E. Harris, H. Hazard, etc.

YEARLY SHOOTING.

Table showing yearly shooting scores for various participants like J. Kührts, E. Harris, H. Hazard, etc.

First Gold Medal, Henry Hazard; Second Gold Medal, E. Harris; Third Gold Medal, F. Eberle; Fourth Silver Medal, L. Odernott; which was won in a shoot-off with Captain Kührts by one ring.

In the advertising department will be found a notice of two guns for sale. These guns are strictly first-class, the property of a private gentleman who is an expert and who will give satisfactory reasons for selling.

The boys report pretty good snipe-shooting at the bay. They also say that some ducks have put in an appearance. But boys sometimes tell fearful tales in regard to hunting.—San Leandro Reporter.

There was quite a number of mountain grouse in market at Sacramento the past week. The birds came from about Cleco, and were fine, fat ones. They sold at 75 cents each.

A Sacramento sportsman has named his dog Bancho, because, like the latter's ghost, he "will not down" when ordered so to do.

Excellent quail shooting at Rocklin.

Gilroy Pigeon Tournament

The clay pigeon tournament held at Gilroy, on November 1st, was well attended by sportsmen. The first match was at 15 birds, for a purse of \$50 divided up among the three best shots.

Table listing participants in the Gilroy Pigeon Tournament and their scores, including names like H. Frutig, S. Short, H. Hazard, etc.

Table for Sweepstakes, \$1 entrance, 5 birds, listing participants and scores.

Table for Freeze out for second money, listing participants and scores.

Preserving Prairie Chickens.

The preservation of game is a common theme, but to "preserve prairie chickens for winter use," after the following method is something perhaps more generally practiced in the Western states, though less advocated.

An Easton, Pa., correspondent writes: The quail season opened in this section on October 15th, and a large number of the sportsmen were out. The majority of them scored a cipher, not even finding one bevy.

Says a Texas correspondent: "North Texas is alive with quail; 100 to 150 is a usual day's bag, dogs just on the point all day long. This applies to Clay and Montague counties.

Windsor Brown bagged one and a half doz. English Snipe, and a half dozen ducks last week, at the preserve of the Alameda Sportsmen's Club, at Mallard Station, near Niles.

To eat four quails a day for thirty days or forfeit \$1,000 is a wager, at Los Angeles, on the result of the election, at New York.

A gentleman paid a visit to Milpitas, at the end of last week. He reports ducks as being very scarce.

Gray squirrel shooting is reported good about Cloverdale.

THE RIFLE.

Programme—California Rifle Association.

The Fall meeting of the California Rifle Association will take place on Nov. 16th and 23d, at Shell Mound Park, commencing each morning at 9 A. M. sharp.

Honorary Directors for Life.—Major Gen. J. M. Schofield, U. S. A.; Brig.-Gen. Horace Brooks, U. S. A.; Major C. B. Throckmorton, U. S. A.; Major Gen. Charles Forman, N. G. C.; Brig.-Gen. John McComb, N. G. C.; Col. A. Andrew, N. G. C.; Brig.-Gen. J. C. Kelton, U. S. A.

Dimond Team Match.—Open to teams of six representatives from any military Company, Field and Staff, Board of Officers, Police Department or Rifle Club now in existence; with Springfield rifle at 200 and 500 yards, rounds, seven, at each distance.

Siebe Team Match.—Open to teams of six representatives from any Company of the National Guard who have never made more than 70 per cent. in any California Rifle Association matches.

with Springfield rifles, at 200 yards. Entrance fee \$6. First prize, a trophy, given by Capt. Ludwig Siebe, Retired N. G. C.

Centennial Trophy Team Match.—Open to teams of ten representatives from any Regiment or Battalion N. G. C. Distances 200 and 500 yards. Rounds, seven, at each distance, with Springfield rifles.

C. R. A., 600-Yard Match.—Open to teams of five representatives from any Regiment, Battalion, or Company of the National Guard, Army, or Company of Police; any military rifle under the rules; at 600 ysrde. Rounds, seven; let prize, a trophy; individual prizes, \$5, \$2.50, \$1. Entrance fee, \$5.

Dunphy Team Match.—Open to teams of six representatives from any military Company, Field and Staff, Board of Officers, Police Department, or Rifle Club now in existence, with any military rifle under the rules; at 200 and 500 yards. Rounds, seven, at each distance. Individual prizes, \$5, \$3, \$2. Entrance fee, \$10.

Townsend Consolation Match.—Open to competitor who have never won prize at the meetings of the C. R. A.; distance, 200 yards; five shots with any military rifle under the rules. Sixty per cent. of net receipts to be divided as prizes.

For the medal presented by Governor Geo. C. Perkins. Open to all members of the Association, the National Guard of California, Army and Navy. Entries unlimited. Rounds ten, with any military rifle under the rules. Distance 200 yards. Five cash prizes, namely: \$10, \$8, \$6, \$4, \$2, in addition to the medal, which is the first prize.

Short Range Match.—Open to all comers; distance 200 yards, seven shots with any military rifle under the rules, at a ring target; entries unlimited. Entrance fee \$1. Six cash prizes: \$15, \$10, \$7, \$5, \$2, \$1.

For the California Powder Works Medal.—Open to all members of the Association, National Guard of California, Army and Navy, distance 200 and 500 yards, seven shots at each distance with any military rifle under the rules.

200 yards, any military rifle under the rules. 10 cents a shot, 60 per cent. of net receipts divided among holders of bull's-eye tickets.

The competitor making the highest percentage in any five of the foregoing matches, taking only one score from each match, shall be known as the "champion marksman of the meeting," and a medal in recognition thereof shall be especially awarded.

Rule I. C. R. A. rules to govern. Rule II. All teams must be certified to by their commanding officers. Rule III. No fighting shots allowed in 200 yard matches. Two in 500 yard matches.

Rule IV. Weapons must not be loaded until at the firing point, and any violation of this rule will annul the score made.

Rule V. Entrance of teams will close at office of Secretary, No. 422 California Street, S. F., at 2 o'clock p. m., on day previous to match. Post entries can be made up to the opening of the match, upon the payment of \$2.50 extra.

Rule VI. All matches will be called at 9 A. M. Teams not answering, to forfeit entrance money. Rule VII. Dues to the Association must be paid before shooting, to entitle winners to receive a prize in competition where membership is required.

Rule VIII. The Executive officer of meeting shall decide at the time all disputed points.

Company C.

The following scores were made by members of Company C, Captain Levy, at the 200-yard range, at Shell Mound, last Sunday:

Magents..... 5 4 4 4 5 4 4 4 4 4-42 MacAlpin..... 5 5 4 4 3 4 4 4 4 4-41 Van Haltron..... 4 4 4 4 4 4 4 4 4 4-40 Stewart..... 4 3 4 4 4 4 4 4 4 4-40 Yager..... 3 2 3 3 4 4 4 4 4 4-35

Low R. Townsend shot off-hand at the 500-yard, and made very creditable etrings, as follows: Towuseud..... 5 5 4 5 5 5 4 4 5 4-45 5 3 4 4 4 4 5 5 5 5-46

The match between A. Johnson, C. Thierhach and P. E. Robertson resulted as follows: Johnson..... 200 yds.—5 5 4 4 5 5 3 5 4 4-45 500 yds.—5 5 5 5 5 5 5 5 4 4-48-93 Thierbach..... 200 yds.—4 4 5 4 5 4 5 5 4 4-44 500 yds.—4 4 5 4 5 5 5 5 4 4-46-90 Robertson..... 200 yds.—4 5 5 5 5 5 5 5 4 4-46 500 yds.—4 4 4 4 5 4 4 4 5 4-49-89

Mr. Thierhach used a Springfield, and the other gentlemen Sharp-Burchards.

The Science of Rifle Shooting.

A short time since, when Mr. W. Milton Farrow was in East Saginaw, Mich., a reporter of the Evening Express interviewed him as follows:

"How does the light affect the practice of rifle shooting at long range?" was asked.

"It seems mostly to affect it in radical changes of the elevations as we pass from a bright sunlight to a clouded atmosphere. The radiation from the earth occasioned by the bright sunlight causes the target to assume a place below its natural position. This has to be accounted for with a corresponding rise in the elevation. When a shadow is on the range, occasioned by a cloud, the radiation disappears, the target then rises to its natural position, and a corresponding lowering of the elevation must be effected."

"Does the change of light produce any other effect?" "The target will also move in a side direction occasioned by a different angle of the sunlight from midday to near sunset."

"Do heat and cold have any effect in a marked degree?" "It certainly does. In Summer time the elevations are a great deal higher than in Winter. For every 10 degrees of increase in the temperature we have to raise our elevations a 100th part of an inch."

"What, then, do you consider the most difficult element to contend with?"

"I consider the wind as the most difficult thing to contend with. It not only blows our bullets sideways, but if blowing from the rear it has a lifting tendency, and if blowing from the front it has a depressing tendency. These changes have to be corrected with a proper movement of the Vernier."

"How do you detect the different variations of the wind?"

"This is done by a number of flags placed at different intervals along the range. The velocity of the wind is judged as the flags rise and fall by the force of it."

"The above points are rather beneficial to a beginner?"

"That is quite so. I had been studying on this subject for nearly five years before I became thoroughly convinced of the points, and it is necessary to take them all into consideration before attempting a score in a match of any importance."

"Do not these elements affect the shooting at two hundred yards?"

"They are all present at the shorter range, but in a much less degree. The flight of the bullet at two hundred yards is of so short a duration that we can control the changes with greater certainty. A bullet that rises twenty-four inches above the line of eight in two hundred yards would not have the advantages of one rising but eight inches."

"Are there any bullets that fly at so flat a trajectory or curve?"

"The only cartridge that will give such straight lines is the 40 calibre, 75 grains of powder, which we use in the new Ballard repeating rifle. This I have learned from actual tests with the rifle and ammunition, shooting from a perfect rest. A person armed with such a rifle would have great advantage shooting deer or other game."

"Do you think the art of rifle shooting is becoming more popular than ever?"

"I do, indeed; for it is becoming encouraged and stimulated more than ever, as it gradually becomes known that the young men who desire to become experts with the rifle ascertain that it is beneficial to abstain from excessive indulgence in tobacco or stimulants."

"It is the general opinion that persons with light eyes are the most expert shots. Do you consider that the color of the eye has anything to do with their success?"

"I must admit that the great majority of riflemen have the traditional blue or grey eye, but I do not believe that the simple color of the eye has any bearing on their becoming experts with the rifle. The majority of those whose dispositions lead them to the enjoyment of sport of this character are those of light complexion and light eyes. I can point you to a number of expert riflemen whose eyes are exceedingly dark. The color of the eye has nothing to do with the proficiency which a person attains in the art."

An International Rifle Match.

General George W. Wingate requests us to state that the committee appointed by the National Rifle Association to consider the subject of a return military rifle match at Creedmoor in 1885, between the British Volunteers and American National Guardsmen, request that all riflemen who feel disposed to compete for places upon the American team, in case the match should be decided upon, will address the Secretary, Mr. James Duane, No. 31 Chambers street, New York City. The committee particularly request the co-operation of all rifle associations and military organizations as well as of individual riflemen throughout the country, so that a proper representation from all sections may be insured. The committee will be glad to receive suggestions from any quarter.

Sacramento Marksmen.

The following scores were made by Company G., First Artillery Regiment, Sacramento, last Sunday.

Table with 2 columns: Name and Score. Includes Sergeant Hughes, Captain Plant, Colonel Guthrie, etc.

Company E.

Company E, First Infantry, Captain Teller, held its regular monthly shoot for marksmen's badges, at Shell Mound Park, last Sunday. The following scores were made with Springfield rifles:

Table with 2 columns: Name and Score. Includes Lieut. Strong, Barrere, Browne, Ezekiel, Capt. Teller.

Swiss Rifle Club.

At the annual meeting of the Swiss Rifle Club, the following gentlemen were elected as officers for the ensuing year: President, Theo. Wetzel; Vice-President and Treasurer, M. Stuber; Secretary, Rudolph Hoff; Shooting Master, J. Leeman; Trustees, P. A. Giannini and H. Steinegger.

At the monthly shoot of the Swiss Rifle Club, at Harbor View, on September 28th, the result was as follows: Best centre shots—1st prize, P. Croce; 2d, S. Neuchwander; 3d, Rudolph Hoff; 4th, J. C. Huguenin; 5th, P. A. Giannini; 6th, Leemann; 7th, Debrunner; 8th, Wetzel.

Most bull's-eyes—P. A. Giannini and Rudolph Hoff. Afternoon pool shooting—Lehmann, 94; P. Giannini, 80; Huguenin, 75; Rudolph Hoff, 84, Gamma, 65—398. Croce, 83; Stuber, 79; Wetzel, 81; Bachman, 86; Neuschwander, 75—406.

At the monthly shoot held at Harbor View, on October 26th, 1884, the result was as follows: Best centres—First prize, J. C. Huguenin; 2d, J. Leeman; 3d, P. Croce; 4th, Marianni; 5th, Rudolph Hoff; 6th, Giannini; 7th, M. Stuber; 8th, Bessini.

Most bull's-eyes—P. A. Giannini and Rudolph Hoff. Afternoon pool shooting—Leemann, 91, Rudolph Hoff, 88; Giannini, 87; Walker, 83—349. P. Croce, 92; Golly, 90; Bachman, 74; Stuber, 70—326.

On Jockeys.

We sometimes hear a good deal from employers about their jockeys; most of them are delighted when they win, and if they lose it is more the other way. But how about the trainers, the men who bring the animals to the post, all being able to win, and would win but for some unforeseen circumstance which occurs? We sometimes fancy that "the plater," i. e., the farrier who fastens on the shoes, might occasionally be "got at," and when a case of this kind happens, owner, jockey, and trainer come in for their full share of public abuse. This is, however, only a surmise of ours, as we believe that the noble animal is generally used by the jockey for his own purposes.

By the way, it may be news to some people that in former days a few of the jockeys were supposed to be able to lead in mathematics, and in the translation of Latin and Greek, as well as to keep in front over the flat. At least, something of that kind must have drifted across Bill Scott's mind, and there is ample evidence of it. A classical friend happening to drop in one night upon Bill, the latter asked if his friend would mind trotting his (Bill's) son through Xenophon, Ovid, Virgil, etc., giving as a make-weight the first three books of Euclid, combined with a springing of Caesar. Bill, still in the vernacular he knew so well, would then add, "Don't make too strong running, sir, and so take all out of him in his first trial—remember, he's only a young 'un; but give him a fair taste of the whip, and a mile and a half, at four stone or fifty pounds, that will be about your cut." Then, turning to his son, he would embellish the argument by saying, "Try to hold on to the old 'un here without attempting to pass him, for he can ride through these books, every page of them, and if you can only manage to catch him up at the finish, until you see 'White Willie' (as the old man would always term the racing post)—I think, as your father is a man without the advantages of a classic education, he is still 'down to a dodge or two'—that I may have a reason to be 'sweet' with your performance; so I hope that in a year or two you'll be able to heat the schoolmaster at even weights. But first, cut away and ask for another bottle of wine."

When the wine was brought in, the old William told the young one to go to bed; but as he had a suspicion that his son had been having a quiet drink with Bob, the groom, a Yorkshire lad, he said in his hope and pride, in order to quite or confirm his suspicion, "Give me a kiss." As he, (Bill), expressed himself afterwards, he instantly "winded the lush," and having dismissed his son with some humorous advice as to the sin he had committed, went into the stable armed with a hunting whip, with which he "welled into" the unfortunate Bob for a good ten minutes "burst," till his, (Bob), halloas brought all Will Danby's bounds in the neighborhood into full cry. "When I had finished," William added, "I never laid into any living thing, saving perhaps, the luckless Mundig, (winner of the Derby in 1835), with more hearty goodwill than I did into Bob's bones for his audacity in 'palling my son.' Possibly Bill Scott, the younger, was the tempter, and Bob the victim; but as often as not, if not oftener the tempted gets the worst of it all in this world.

But, like poets, jockeys "must be born not dead." Education, or rather practice, improves them, but it is only one in a thousand, or perhaps ten thousand men who is ever born to flourish in the pig-skin across the flat. The scientific jockey belongs to a race peculiar to itself, and it should be remembered that, like famous sculptors, he has got to put the finish upon the figure, or whatever else it may be. On the other hand, we should not forget that the trainer produces the finished animal ready to run and win, while the sculptor simply produces a model in clay, and puts the finishing touch on. But as it frequently happens even now race-horses run "in and out" as much, if not more, than they did in the past; and an extraordinary incident took place in 1832, when Theodore won the St. Leger. As a two-year-old Theodore ran successfully, and his owner, who never flinched, came in for a pot of money; although as it seemed, all the world besides was ranged against him. The skilful jockey never wastes that preserves his horse, and it was this circumstance that gave rise to the memorable expression of Mr. Christopher Wilson, the then "father of the Turf," that "the skill of Chifney was equal to a saving of seven pounds in weight."

Naturally every one now, since they know that Lord Falmouth has cleared the trifle of £30,000 by the sale of his stud of 53 horses, wish to stand in his shoes, or, in other words, have the balance which stands to his lordship's name at his bankers. Fancy horses fetch, as a rule, fancy prices; but the wildest dreamer of a half century ago could never have imagined the prices that are given for horses in the present day. Still when the difference of the value of money is taken into consideration, we shall find that our grandfathers paid 4,000 guineas for horse, by no means an uncommon sum for a promising colt; and when we think that only the other day £70,000 was given for a pair, the amount derived from the sale of Lord Falmouth's studs is not so extraordinary after all.—Licensed Victualler's Gazette.

The grand stand and three of the tables adjoining at the Cote Brilliant race track, St. Louis, Mo., were burned Oct. 20th, together with the horse Lute Fogle, who refused to leave his stable. The loss is about \$35,000. It is suspected that the structure were set on fire by some horsemen who had been ordered off the track for disorderly conduct.

Mr. John Hammond, the owner of St. Getien, estimates his winnings on the turf during the present racing season at the enormous sum of \$750,000. His winning on the Derby alone were \$150,000, and those of the last two or three years amounted to \$400,000. Mr. Hammond's proudest boast to-day is that twenty years ago he was employed in cleaning boots outside of a sporting hotel at Epsom. He began his career on the turf as a stable boy. Next he became a jockey, and when he grew too heavy to ride he became a tont. He pursued this calling until he became financially strong enough to be an investor on his own account. His career as a winner has been meteoric, and his luck is phenomenal. He bought St. Getien and Florence for \$15,000 and has won more than ten times that amount with each animal in the one season, capturing the Derby, the Manchester cup, and the Ascot gold vase, the Cesarewitch and a dozen minor events.

While being trained to jump recently at Brighton Beech, Bushwacker, bay gelding, foaled 1874, by imp. Bonnie Scotland, dam Annie Bush, by Lexington, fell and received such serious injuries that he was destroyed on the 23th. Bushwacker was the first foal of his dam, and although so small and undersized when two years old that he was not trained, he afterward proved himself a racehorse of some merit. He failed to win as a three-year-old, but in 1878, when four years old, won two-mile heats at Baltimore, Md., in 3:36, 3:36, 3:38. Princeton won the second heat by a head from Bushwacker. Danicheff and seven others also ran. The race was one of the games ever run in America. Same meeting won the Bowie Stakes, four mile heats, in 7:31, 7:36, 8:29. Princeton won the second heat. Lon Lanier, Gen. Phillips and two others also ran.

Mr. A. A. Bonner, during his recent visit to Kentucky, cultivated at Woodburn the acquaintance of Lord Russell, the full brother of Mand S. He is a bay, and one of the handsomest and best-formed three-year-olds that mortal eyes ever gazed upon. Money will not buy him, as he is destined for the stud. Lady Russell, the two-year-old sister of Lord Russell, is a grey with a very speedy shape, having a good deal of pacing droop. Russia, the gray filly, one-year-old, has less finish than the others, but she will trot. Miss Russell is looking very well, not having nursed anything the past Summer. She is again in foal by Harold, and she outranks all living brood mares.—Turf, Field and Farm.

Frank Baldwin predicts that Belle Hamlin will trot in 2:16 next year and heat Mand S. in 1886.

POULTRY.

Cost of Chicks.

It is to be feared there are few who really know the cost per pound for raising young chickens, and it is very desirable that this should be understood. The Farm and Garden has an article on the subject with which some may take issue, but under favorable circumstances—and to secure those should be the first aim of the poultry keeper—the same can probably be done again. The writer says:

So far as early Spring broilers are concerned, we are satisfied that early hatched chicks grow faster and thrive better than those hatched later, although they do not get as many advantages in their favor as do the later ones. As they receive extra care, however, which is a necessity during the cold season, such fact may account for the greater growth of those hatched early. It is apparent, however, that when strict care and watchfulness is exercised with young chicks the percentage of loss will always be very small, no matter what the season of the year may be. We find that the actual cost per pound of raising chicks to the weight of two pounds, to be five cents, but this includes the heaviest feeding possible, with warmth and protection freely allowed. In other words, provided the chicks are kept warm, and not retarded by chills or exposure to dampness and cold, we may force them as fast as we wish, with high feeding, and five cents will pay for every pound of meat produced. We also find, in weighing chicks at stated intervals, in lots instead of singly, that they can be made to attain the weight of twelve ounces, (three-quarters of a pound), in four weeks, and one pound and three-quarters in eight weeks. Individual chicks we brought to the weight of two pounds in eight weeks, but the average of the whole lot was one and three-quarters pounds, the cost of feed for the production of each one and three-quarter pounds being nine cents. As the chicks were worth fifty cents per pound at the time, (being hatched early), the profit, in proportion to cost, was nine hundred per cent., but as the expenses for quarters, labor and heat must be deducted, the profit is therefore correspondingly reduced.

We do not claim that on every farm the chicks attain such weights in so short a period of time, for we paid them particular attention, but, that is no more than all should do. It demonstrates what may be done, however, with care, and proves, as we have often claimed, that there is a larger profit from poultry, in proportion to cost, than from any other stock on the farm, provided they are treated for profit, as in the case with crops and stock.

A writer in the Farming World on the subject of breeding for sex in poultry says: Having seen some dissections about the shape of eggs to determine the sex, I can say from experience that to obtain the desired result, or predominance, of either sex, you have to mate your fowls as follows: For cockerels, mate a one-year-old cockerel with hens not more than two years old, and you will get the desired results. For breeding pullets mate a three-year-old cock with one-year-old hens. I have never had any exception to this rule.

The Farmer's Home Journal thinks there is no ben feed, particularly for layers, which will be found to give better satisfaction than wheat. Feed mostly wheat and but little corn. Chicks one week old soon learn to eat whole grains of wheat and thrive on it. Corn meal should never be fed to young fowls in an uncooked state. We feed wheat, small seeds, (millet for instance), cracked corn meal, bran, middlings, and very little animal or bone meal, a perfect food for laying hens.

Perches in poultry houses are generally placed too high and made too narrow. Poultry fanciers must remember that their fowls are not the old fashioned kind which could fly as well as a hawk, but that many of the modern fowls are heavy, and often are injured getting on and off the roost. Narrow perches are calculated to injure the breast bone of the heavy varieties of poultry, and should in no way be allowed in the poultry-house.

Occasionally something appears in print concerning the sex of eggs. On this point a poultry raiser claims that eggs produce hen chickens and long eggs produce cock

JOSEPH CAIRN SIMPSON, - - - EDITOR

## NEW YORK AGENCY.

Mr. C. C. Pettus at the office of the "Sportsman," 46 Murray Street, is duly authorized special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptions and arrange advertising contracts.

## ADVERTISING RATES.

Displayed, \$1.50 per inch each insertion or pro rata for less space. Reading Notices set in brier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent will be allowed on 3 months, 20 per cent on 6 months and 30 per cent on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 60 cents each insertion.

San Francisco, - - - Saturday, Nov. 8, 1884.

## Notice.

H. P. Metcalf has not been connected with this paper since the first of September. Those holding receipts from him who do not receive the paper regularly, by sending said receipts to this office will be supplied, and other receipts returned. Receipts for subscriptions dated later than September 1st, 1884, and between that date and Nov. 8th, will also be made good, inasmuch as the notification of his dismissal has not been published before.

## Maid of Clay.

Very properly the matrons of the stud have occupied a prominent position in the literature of the turf, and several of the noted dams are as well known as are the sires of renown in the same field. Pocahontas, with Stockwell, King Tom, Ratsaplan, and others, Queen Mary, with her jewels, Bonnie Scotland, Balrownie, and Blink Bonny, the Alexander mare, the dam of Selino, Cartnell and Reubens, have left an enduring mark on the page of horse history and there are many American mares which emulate the fame of their relations on the other side of the ocean. The turf does not absorb the whole of the attention in this department, and the dams of noted trotters are now awarded a corresponding position to that of the blue-bloods. Anything like systematic breeding of trotters is of so comparatively late date that it cannot be expected to rank with that which for two centuries has been carefully carried on. Forty years ago is the outside limit that anyone can place on the length of time that breeding trotters can be said to have commenced in a regular way, and it was in 1854 that Mambrino Chief was taken to Kentucky, when there was not a single establishment in the State which could be termed a trotting stud farm. A few years after the advent of Mambrino Chief, R. A. Alexander commenced his breeding operations at Woodburn, and a trotting department was one of the features of the place. For practical purposes, then, thirty years ago may be fixed upon as the time when the systematic production of trotters were inaugurated, and in this short period the results have been wonderful.

At the close of the season of 1881, the compiler of the "Trotting Stud Book," J. H. Sanders, issued a supplement which contained a table of the great brood mares, those that had produced two or more trotters with records of 2:30 or better. There were forty-five, seven of them being credited with three of their produce which had trotted in the stipulated time. There were Dolly, by Mambrino Chief, Flora, by Sayre's Harry Clay, Green Mountain Maid, by Sayre's Harry Clay, Kate, by Bellaire, Lady Fulton, by Stub Tail, Minnehaha, by Bald Chief, and Stone Mare, by North American. Without taking the trouble to go over the records and pedigrees for the three years now drawing to an end, and depending upon memory for illustrations of the value of breeding on the female side, when the tables are compiled there will be found a number to add and also an addition in the seven dams, which have three credited. In this table California will make a good showing. At the head will stand Maid of Clay with her quartet of performers, Gretchen has three, Minnehaha has a bright star in her granddaughter Hinda Roso and Columbine's first and second foals have entered the circle. Sunny Slope holds its old position, and in our estimation bettered it with the produce of new mares which are coming

to the fore. Had Palo Alto taken part in the trotting of 1884, it is sure that there would have been a further augmentation, but there will be good data to build upon without technical records and public and undisputed trials give a basis of value to the breeder nearly as important as actual trotting in races. In summing up the evidence, it will be necessary to give more attention to the dams than has hitherto been awarded, and as in breeding racehorses the maternal line will be worthy of as much consideration as the paternal.

Maid of Clay, brown mare, bred by Catlin Webster, of Phelps, Ontario county, New York, foaled June, 1856. By Henry Clay, her dam Grey Fanny.

## PRODUCE.

May 11, 1873, b f, Lola Lee (dead), by Robert E. Lee.  
1874, bl c, Clay, gelded, (sold) by Fred Low.  
April 10, 1875, br f, Juniatta, by Fred Low.  
1876, br c, Capt. Smith, gelded, by Locomotive.  
1877, barren.  
1878, barren.  
Feb. 22, 1879, br c, Clay, by Electioneer.  
1880, barren.  
Feb. 25, 1881, br f, Carrie C, by Electioneer.  
Barren since 1881, but now thought to be in foal to Ansel, a son of Electioneer and Annette, by Lexington.

From a letter written by R. Huntington to Ariel Lathrop, dated February 25th, 1884, we copy her early history. Mr. Huntington questions the pedigree as heretofore given of the dam of Maid of Clay, in lieu of Dey's Messenger putting it Gray Messenger, and he rejects the Ballface Consul strain. There is little difference, however, in a material view, none at all in giving her blood as a combination of Clay and Messenger. The extracts from the letter are as follows: "Maid of Clay was bred by the late Catlin Webster, of Phelps, Ontario county, N. Y. She was got by old Henry Clay, the Summer of 1855, while the horse was owned by Zeff and Albert Bailey (brothers), and farmers of East Bloomfield, N. Y. The dam of Maid of Clay was a mare owned by C. Webster and called Grey Jenny. She was at that time called a Messenger and Morgan mare; her sire known as Gray Messenger or Nottingham's Norman. The late Captain Skinner, of Geneva, bought Maid of Clay, from Catlin Webster, of Phelps, the Fall of 1859, then three coming four years old. Skinner sold her to A. D. Platt, of Geneva, that Winter, 1859-60. A. D. Platt traded her to S. F. Cobb and John B. Day, of Geneva, for an old top wagon, harness and \$37.50 boot money, on November 9th, 1860. They trotted her in the hands of Ah Cleveland, who gave her a wagon record of 2:36 on a half-mile track in the mud. Matt Tanner, of Albany, came to see her in the Summer of 1869, driving her a half-mile to road wagon on the Waterloo half-mile track in 1:20, saying he would take her. November 9th, 1869, Mr. Sly, of Albany, sent his check for \$800, in payment for the mare which was supposed to be on account of Mr. Tanner."

That supposition was not correct, Mr. Lathrop being the purchaser, and he made a present of Maid of Clay to Governor Stanford.

From the list of her produce it will be seen that she has given birth to six colts in California, four of them by sons of St. Clair, two by Electioneer. The first born died, Juniatta was put in the stud when three years old, and had a foal in 1879, so that every one of her offspring that has been trained have obtained a record faster than 2:30. Both Clay, the gelding, and Captain Smith possess a wonderful flight of speed, and if as reliable as the Electioneers either one could easily get a mark in the teens. Clay, by Fred Low, got his record of 2:25½ in a third heat of a race in which he beat Starr King, Hancock and Susie, Nov, 5th, 1881, and on the 24th of the same month and year he beat Goldnote and Hancock in 2:28½, 2:27½, 2:26¼. Captain Smith has trotted fast quarters, so fast that it showed a capacity to emulate the great performances of those which had a mark within the teens, but he got in the habit of "pulling" and, with other characteristics, that rendered his great speed unavailable. His record of 2:29 was made when a four-year-old. The stallion, Clay, came after a gap of two years, making him three years younger than Captain Smith, and was the first Electioneer from the daughter of Henry Clay. This gave a double infusion of the blood, which Mr. Huntington regards as the best in the trotting world, and so far the X X has proved its efficacy. When the Stanford Stake was gotten up, one of the conditions was, that to fill required five subscribers. Fearing that the large amount of the stake, \$300, might interfere with the requisite number, we induced Captain N. T. Smith, who was an admirer of the colt, to name him in the stake, but this precaution was unnecessary, as there were fifteen subscribers and twenty-one nominations. Adair won the race, Clay getting the second heat in 2:36½. His second race was at Oakland, Sept. 4, 1883, when he beat Sister, who won the first heat, Bonnie Wood, who won the fourth heat, Le Grange, Olivette and Adrian, the time, 2:30½, 2:32¾, 2:31, 2:32, 2:31½. This shows that he could keep on repeating, the heats being all so close together, and this season, under the

able management of Marvin, he improved so much in speed that it was evident he could lower his record whenever called upon. His old friend Captain Smith was extremely anxious that he should do something and offered a harness as a prize should he beat 2:30. He accompanied the other colts to the Bay District Course, but he was attacked with rheumatism and the morning of the race he was quite lame. Thinking that there might be a break in the weather Marvin concluded to start him last Saturday, and while confident of being able to win the harness he was well aware that he would be several seconds outside of his race. He trotted so handily in 2:25 that the spectators conceded that if free from lameness he would trot very close to 2:20.

One year was the gap between Clay and Carrie C., so that the latter now as a three-year-old. She has all of the speed of the family, and by odds the best looking. Whether her dam possesses the blood of First Consul, or not it is certain that the daughter has a very high-bred appearance, few thoroughbreds showing more "quality" and with the quality in plenty of muscular power. In her two year old form she trotted three races never losing a heat and showing so much capacity as to work her among the best. She trotted in 2:30¼ at Oakland, that being the best time ever made in an actual race by a colt or filly of her age, and the next week at Sacramento she trotted a second heat, also in a race, in 2:27½, which is the best two-year-old performance in a race up to the present time.

## The Race Meeting.

A week from to-day, Saturday, the 15th of November, the Fall Race meeting, Pacific Coast Blood-Horse Association will commence. A reference to the advertisement will show that there is a good prospect for exciting racing all through the meeting, as the extra stakes and purses which closed last Saturday have brought out responses which can scarcely fail to be troublesome in one way, viz., a hother to the experts to fix upon winners that will be entirely satisfactory to hack at even odds. The Ladies Stake, the first on the card, has thirteen two-year-old fillies in it, and should one half of them start it will take sharp guessing to "place" them. No. 2 is the stake for two-year-olds in which Alta and Estill were penalized to the extent of ten pounds, or rather there was a concession to others of ten pounds. So that there would be no extra imposition over what the rules fixed. The two cracks of the California year did not put in an appearance, but two of the Santa Anita string that have been engaged in the Eastern campaign, Volante and Rapido accepted the terms and to meet them are two sons of Joe Hooker, Tom Atchison, from Bay Kate, and Ichi Ban from Queen. Volante won the Flash Stakes, at Saratoga, in the fine time of 49½ to the half mile, and a purse of \$500, at Chicago, running three-fourths of a mile in 1:17½. Rapido divided a purse of \$400 with Irish Pat, at Saratoga, the dead heat of three-fourths being run in 1:17. The two Hookers have never run in public, but as Tom Atchison is a three-quarters brother of Jim Renwick, Bay Kate being by Norfolk, from Big Gun, and Ichi Ban also from a Norfolk mare which has produced speed, it may be that after the arduous duties and long journeyings of the tried ones, the debutants will be on hand at the finish. The Vestal Stake will be anxiously looked for, and should the numbers of a few of the nominations go up on the telegraph board there will be no end to the speculation. The *New York Sportsman* has the following in its last issue:

By another season this noted question may be in a fair way to be definitely settled, with the addition, perhaps, of one whose short but meteoric career was very brilliant in the West. We refer to Fallen Leaf, the California filly, declared a veritable wonder by all the racing men who saw her run at Latonia and Chicago in June last. When she left Jerome Park week before last, with the rest of Baldwin's horses, Fallen Leaf was apparently sound again on her pins, and as she is among the entries made by her owner in the Pacific Coast Blood-Horse Association races, to be run at San Francisco the latter part of this month, the famous daughter of Griestead and Mollie McCarthy may record more triumphs yet in her three-year-old season. In Fallen Leaf Louisette and St. Saviour would have found a most formidable antagonist at any distance, and the three will be considered by many as the best of the year, Louisette's lack, of course, giving her precedence, and the pride of place.

It is scarcely probable that Mr. Baldwin will start Fallen Leaf, if even she has recovered from the injury to her leg, as among his own nominations are Savannah and the Sister to Clara D. and Glenita fillies, and he owns Freda which was named by Palo Alto.

The sweepstakes for three-year olds one and one-eight miles has a rare field named. Shenandoah, Beaconsfield, Jou-Jou, Philip S. and Prince of Norfolk are a quintet of flyers, anyone of which when in order will be found company for the best. If we are not greatly mistaken pools on this race will be "sold out," as there will be backers for each with no desire to see them glorified in the "field." The purse hereafter to be named will round out the sport of the day in a satisfactory manner, and

five such races should surely attract a large concourse of people to the Bay District Course.

The first race for the second day, Tuesday, Nov. 18th, is heats of three-quarters of a mile. Jon-Jou, Sweetbrier, Forest King and Jim Douglas, the entries. That this will be a fast affair and keenly contested "goes without saying," and it would be a bold operator who, at the present time, would offer odds on one of the four. The selling race has eight entries, Cito, Billy Johnston, Birdcatcher, Belshaw, Quebec, Duke of Monday, Bessie and Robin, taking a chance for the 1½ miles. As the valuations differ, running from \$300, which entitles an allowance of fourteen pounds, to the regular weights; this is likely to be an intricate problem which we are not inclined to endeavor to solve. The only race which did not receive the legal number of entries was a sweepstakes for two-year-olds, which was probably owing to penalties attached for winning and running second in No. 4. Another race will be substituted which, with two more purses will make a good bill for the afternoon.

Thursday, Nov. 20th, is an "extra day," with four races on the bill. The first is a sweepstakes for three-year-olds, 1½ miles; Shenandoah, Beaconsfield, Glendair, Philip S. and Prince of Norfolk, being named in it. As the winner of No. 4. has to carry five pounds extra, and the distance increased three-eighths of a mile, there are other elements that enter into the calculation, so that the running in the first may not give a true line for the second.

The next race is heats of a mile, for all ages, and Lucky B., Jou Jou, Billy the Kid, Nellie Peyton, and Jim Douglas are the entries. With the exception of Nellie Peyton, all are well known here, and also known to belong to the fast division. Nellie Peyton bears a high reputation for speed, and is quite likely to sustain it in her first essay on this Coast. The other races are to be named on the second day of the meeting, and will be so arranged as to meet the wishes of owners and trainers, and in this way prove more satisfactory than if fixed sooner, and also more attractive to spectators.

The fourth day has a very strong hill, and is a fitting culmination to a good programme all through. The Finigan Stake, a dash of a mile for two-year-olds, has twenty-four nominations, and there are so many good ones that it would be an invidious task to make comparisons. Theodore Winters is represented by seven, and as six of these were sold at his first sale, there is a likelihood that several of them will start. Mr. Baldwin has four in, one of them the Lexington—Mollie McCarthy colt, and our horse fanciers who visited Los Angeles, unite in awarding him the highest praise. At least one of the Palo Alto nominations has been sold, and then there are Hidalgo, Mischief etc., to join in the fray.

The Fame Stake, a dash of two miles for three-year-olds, is sure to result in a great race. Santa Anita has the same representatives as are named in The Vestal, and with Shenandoah to aid in securing the victory. Prince of Norfolk and Callie Smart, to uphold the colors of Rancho del Rio, and the Glendew filly lately purchased from Palo Alto, insure a glorious contest.

The Baldwin Stake is one of the great features of the meeting. It is the only race of four miles which takes place in California during the year, and as there are four subscribers, there are enough in to insure a good race. We learn that A. J. Stemler has transferred his subscription to Mr. Baldwin, which in all probability will secure Lucky B. for a starter. The capital race that be ran for the same stake last year, will secure him many supporters. The Handicap Stake 1½ miles has seven nominations; Birdcatcher, Beaconsfield, Jou Jou, Billy the Kid, Philip S., Nellie Peyton and Forest King. Until the handicap is announced, it would be manifestly wrong to offer an opinion of their comparative merits. The consolation purse appropriately winds up the Fall meeting of 1884, and that it is likely to be one of the best ever held, is as sure as anything in the future can be foretold.

#### Trotting at the Bay District.

The 2:24 class will trot at the Bay District Course this afternoon for a \$500 purse. The entries are B. B., Anteo, Cairo, Magdallah and Blanche; and a glance at this field is enough to establish the probability of a good race. The track is prime and the afternoons are pleasant to perfection, the finest of the year, and the roads to and from the track are in unexceptionable order. That portion of the public that feels with us that whatever the result of the count of votes may be no political, social or financial cataclysm is to be apprehended, can afford to spare the time for an afternoon at the races, for a few hours "breazing out" will renew vitality and encourage appetite. Those who hold to the idea that the continual existence of this planet depends upon the success of their favorite candidate may find grateful relief from the strain of the past few days by a day's indulgence in the most exhilarating of sports.

#### Finigan—Boysen.

We must congratulate our old friend P. A. Finigan, President of the California State Agricultural Society, on his marriage to Miss Boysen on Thursday last. He has been a lucky man, indeed, as far as we can testify from our short acquaintance with the bride, but even the limited time was sufficient to show that the external qualities were of a high order, and those who are still more fortunate in an intimate acquaintance with Miss Boysen agree that beauty and grace are allied to the more valuable characteristics of a happy disposition and cultured mind.

We trust that the wedding jaunt will not be so very long as to prevent their attendance at the coming race meeting, as Mr. Finigan has always rendered valuable aid in conducting the affairs of the Blood Horse Association, and then again the "Finigan Stake" has to be decided.

We still more sincerely hope that the race, in double harness, which was so auspiciously started last Thursday may be a long one, and that there may be the smoothest course and the brightest sunshine to the end.

Live stock from California finds its way to almost every part of the world, but the latest customer for goods of that sort is Corea. The Coreans maintain their exclusiveness to a great degree, but few foreigners being allowed there, but the desire for good horses and cattle has taken root and several consignments have been shipped from the city this Fall.

"Why do we swim?" will be the subject of a lecture at Irving Hall, next Thursday evening, by Dr. F. Reihl. The doctor's position as the leading exponent of the natatory art is well known, and his essay will be as interesting to hear as his startling feats of hay and ocean swimming have been to witness.

The Electioneer filly Regina will be offered at auction at the Bay District track to-day. She is a trotter of great promise, finely bred and should find ready bidders and a good price.

#### Tinkering at the Scale of Weights.

Judging from the comments of the English papers, there is work cut out for the Jockey Club since St. Gatien won the Cesarewitch. The theorists now insist that the weight-for-age scale is all wrong, and because St. Gatien won the long race with the highest weight ever carried successfully by a three-year-old. The basis of the argument is that so much racing at two and three years old nullifies those who participate in it from taking part in first-class competitions after that age; that, in fact, horses are at their best at three years old, and that at four and upwards they are at the mercy of their younger rivals.

We admit the force of their reasoning concerning the dangers of excessive racing at an early age. But they seem to ignore the fact that St. Gatien, when he won the Cesarewitch, was probably not less than three years and seven months old, allowing him to have been a March foal, which is late for English bred colts. This was one reason why he was so well backed by his fortunate owner to win the Cesarewitch. Another was, that at the weights he would be ridden by a most capable jockey, while if he was in at a stone less he would not be so well off in that respect. Still another was that he was lucky in not being required to meet high class horses, as was the case in Foxhall's year. In the Cesarewitch Foxhall beat Chippendale (124 lbs.), Fiddler, a very good horse at four years old (94 lbs.), Mistake, an excellent stayer (107 lbs.), and a lot of others. In the Cambridgehire Foxhall carried 126 lbs., and beat Lucy Glitters (third in the St. Leger), 91 lbs.; Tristan, 107 lbs.; Mistake, 102 lbs.; Wallenstein, 97 lbs., and a lot of others, the best handicap horses in England. Tristan has each year since then won the Champion Stakes and proved himself one of the most consistent performers on the English turf. Yet, he could not beat Foxhall or Iroquois at three years old. The fact is that it is only at rare intervals that the company is as good in these Fall handicaps as one sees in the more classic events. St. Gatien and Foxhall did not run in the St. Leger, and had nothing to interfere with their preparations for the Cesarewitch. When, therefore, horses of high class, as St. Gatien undoubtedly is, has an uninterrupted preparation for such a race, it is not such a remarkable thing that they should win. When George Kinney was started in the Grand National Handicap last year with 119 lbs., we thought it was unjust on the colt, for he had fulfilled his engagements in the Jerome Stakes, winning very easily, and still had to face Drake Carter and Iroquois at Washington and Baltimore. To run George Kinney against Gen. Monroe, giving him two years and one pound, was not quite right. Yet the three-year-old won. But no one raised a howl that something was wrong with the weight-for-age scale. And nothing is wrong with it except as to two-year-olds. Conent any practical horseman of the present day, and ask him if he likes the idea of running his three-year-old at weights within 5 lbs. of an aged horse, as the scale calls for at this time of year at distances under a mile. If this scale is wrong, and three-year-olds have much the best of it, how fearfully wrong was the scale prevailing prior to 1876, when three-year-olds carried 95 lbs.; four-year-olds, 108 lbs.; five, 114 lbs.; six and upwards, 118 lbs. Yet the old horses, even at this enormous disadvantage, won their fair share of races.

In brief, then, when the turf of any country has the good fortune to witness horses like George Kinney or St. Gatien successfully tackle those of more mature age, either in handicaps or at weight for age, let it not result in penalizing all future high class three-year-olds. Rather let owners of three-year-olds be encouraged to run under the circumstances noted. By this means comparisons can be made with much greater satisfaction.—Sportsman.

#### New Mexico and Arizona Horses and Horsesmen.

A correspondent of the Kansas City Journal writing from Albuquerque says: A particularly interesting feature of the Territorial Fair just closed was the fine display of live stock, and especially of blooded horses. Colorado, New Mexico and Arizona were here represented and entered into generous competition. Among the New Mexico horsemen, Mr. A. A. Grant, of Albuquerque, was prominent. He gained the first premium in the stallion class, and is the owner of Brittle Silver, a trotting horse with a record of 2:40. Don Santiago Baca is the owner and exhibited Revenge, a thoroughbred running horse, who won the novelty race over Brown Dick and other first-class horses. Mr. Baca is also owner of Saint Cloud, a well-known trotting horse, and is a successful breeder of fine colts. M. E. Wilbur, who is justly regarded as one of the most experienced and trustworthy horsemen in the West, represented several celebrated breeders of Arizona. He brought with him three and four year old colts, that speed from 2:40 to 3 minutes, the product of the stock farms of C. P. Head, O. Lincoln and the Gosper Horse Company, of Prescott. Mr. Wilbur states that Arizona is fast becoming one of the greatest stock regions in the United States, and the liveliest interest is taken in cattle, horses and sheep. The horsemen of that territory begin with the very best stock they can get from Kentucky, and then exercise the utmost care in the improvement of their breeds. The result is that every year witnesses a betterment in the quality of stock exhibited and an increase of speed in the ring. Mr. Wilbur also had charge of racing stock of Mr. Joseph H. Hampson, which he Winters in Prescott. Of the latter's horses, Comanche Boy, a trotter, is a Hambletonian, eight years old, and has a record of 2:35½; "Jumbo" is a four-year-old stallion, by Mambrino Champion, dam by Trojan, Jr. He is a very promising colt, weighs 1,150 pounds, and has a speed of 2:40, which, before two years have expired, he will undoubtedly lessen to 2:30. His owner refused an offer of \$2,000 for him the other day. Mr. Hampson, who is as well and favorably known in Kansas City as in Mexico, probably contributed more than any one man to make the races here a success this year, both by means of his purse and his activity in keeping up the enthusiasm of the people. Mr. Hampson's name is indissolubly linked to the era of progress in the southwest, and the part he has taken in railroad construction has been second to none. Since A. A. Grant and himself built the bridging on the Atchinson, Topeka and Santa Fe road, from La Junta to Albuquerque, in 1879, Mr. Hampson has completed one contract after another for the same railroad. In connection with Wm. Garland he built the Clifton and Lordsburg railroad, and did some heavy contracting on the Mexican Central. In all of this work his career has been one of remarkable and rapid success. He made money fast and became independently wealthy. He owns a splendid ranch on Eagle Creek, in Arizona, which is stocked with 4,000 head of cattle and a number of horses. His home is in El Paso, where he owns a good deal of real estate. He finds his money, however, only a means of being useful. Every day widens the scope of his usefulness, and identifies him with more new enterprises throughout the entire Southwest. Every public interest finds in him one of its foremost and most energetic votaries; and the present New Mexico fair furnishes but a single illustration of his magnificent methods.

#### Death of Lever.

Mr. D. Swigert, Elmendorf Stud, Lexington, Ky., lost Oct. 26th, 1884, the bay stallion Lever, foaled in 1863, bred by the late R. A. Alexander, Spring Station, Ky., by Lexington, out Levity, by imp. Trustee, her dam Vandall's dam by imp. Tranby, out of Lucilla, by Trampator, etc. Lever, owing to an accident when a yearling got his hind leg nearly cut off by a scythe, was never trained. For many years he did not get a thoroughbred mare to cover and has had a very limited chance at the stud. He has sired some good horses, such as Mahstick, Levelev, Essilah, Loneaneer, Sweetheart, Petrel, Levelev (dam of Lloyd Daly), Lemartine, Louise, Surprise, La Gloria, Okolona, Jeannie, Precious, Harry Mann, Exeter, Heartless, Marie, Major Hughes, Palanca, El Capitan, Arabia, Alexis, Richard L. Japonica, Miletta, Ghost II., Transit, Apollo, etc. Lever has been failing for a year or so, and died from no apparent cause.

We do not recollect of ever seeing as many thoroughbred yearlings broken and handled as is the case this fall in Kentucky. The weather has been charming and all that any one could desire for handling and galloping youngsters. There are a great many extremely promising youngsters this fall, some of which have shown remarkable turns of speed. Mr. George H. Clay moved his yearling filly, Trinkitar, by Thunderstorm, dam Midsommer by War Dance, a quarter in 23½ seconds, and she beat his yearling filly, Lady Longfellow by Longfellow, dam Ballet (Modesty's dam) by Planet, some two lengths. We have heard of a number of others who have made fast moves, a quarter and three-eighths of a mile. Amongst such a number of promising yearlings there should be a splendid lot of two year olds next spring.—Record.

General W. T. Withers has recently sold the following youngsters: Saxony, bay colt, foaled 1881, by Happy Medium, dam Alma Morris, by Almont, to Frank Howard, of Thatcher, Primrose & West's Minstrels; price, \$1,200. Evelyn, bay filly, foaled 1882, by Happy Medium, dam Kate Keene, by Mambrino Champion, to General W. S. Tilton, of Togns, Me.; price, \$800. Bestmont, chestnut colt, foaled 1884, by Almont, dam Maggie Keene, by Mambrino Hatcher, to Charles H. Tenney, New York; price, \$1,500. Bay filly, foaled 1884, by Aberdeen, dam Lizzie Downs, by Magic, to Charles H. Tenney; price, \$500.

It is said, says the *Germantown Telegraph*, that the largest black bass ever taken in the Potomac was captured by a fisherman about two weeks ago. It measured 23½ inches in length, 16½ inches in circumference around the belly, and weighed 6 pounds, 10 ounces. This was of the small-mouthed variety. One was taken in the upper Delaware last year which exceeded six pounds in weight, and another weighing 5½ pounds.

Fish are biting splendidly in Alder and Prosser creeks. Billy O'Neill caught a three-pounder out at Alder creek Thursday. The party made a catch of forty-six.—*Tenney Republican*, Oct. 25th.

## HERD AND SWINE.

### A Business That Pays.

The production of good grades of cattle appears to be the branch of agriculture for which there is, in the present outlook, the greatest promise of permanent prosperity for the future. With India and Egypt and Russia producing grain, and the possibility of good harvest abroad at any time diminishing the demand, and poor harvests at home enhancing the cost, it is difficult to perceive where the production of grain can produce any large measure of profit, or, for that, any profit at all, counting a series of years together, and allowing for deterioration of the land, save as it forms a part of a well-considered system of mixed husbandry in which live-stock production is given the chief importance. Competition abroad as affecting the sheep industry, and at home as affecting dairying, seem to indicate more of a depression in these important branches of agriculture than has been experienced for some time; and while they will work out from under the cloud in time, as they have strong, recuperative qualities, it will take time and patience to secure the old-time rewards. And as for hogs, while good stocks always seem to make money, the amount depends so much upon the corn crop that no one would attempt to forecast the results which would attend them many years in advance. But there seems to be nothing in the way of natural commercial conditions or complications likely to place the production of good beef cattle at any disadvantage; and while prices may fluctuate from time to time, there is no doubt this interest is entering upon a long career of prosperous times, in which it will be conspicuous for the steady profits and business satisfaction which it will bring to those most heavily engaged in it. There appears to be no other country which can compete with America in supplying the deficiency in the supply of beef which exists abroad, and which will probably never again be satisfied by home production. There is a market in this direction for everything we can spare at prices not likely to fall below a highly-remunerative standard until our own surplus is so large as to affect, to our disadvantage, the foreign market, and it will be a long time before such a contingency as this arises. Our surplus now is scarcely anything to speak of, and for years our own population has been increasing in a greater ratio than our meat supplies, and it is doubtful if, with all the increased attention which can be given to cattle raising, it will be possible to increase production much faster than the domestic demand and population increases. Restrictions upon the movement of live cattle may, to some extent, deprive American farmers of the full advantages of the market; but no excuse will be found for closing the market against us for dressed carcasses. It is upon the basis of the present dead-meat trade that present prices are adjusted, and any changes must be in the direction of admitting live cattle, which will be still more to the advantage of the American farmer. In the dressed-beef trade we have nothing to fear from the competition of far-away countries beyond the equator. The time involved in transportation and the passage through the tropics requires their meat to be sent forward in a frozen condition, while the quick and comparatively cool passage from America calls for but a moderate refrigeration, which does not to any very great extent interfere with the condition of the product or the manner in which it will cut up upon the block. From every standpoint from which the situation can be regarded the prospects appear to be secure.

The demand will be for beef of the best quality; nothing else is taken, or is likely to be taken, for the export trade, and the home demand has been for years growing more and more exacting in this particular. In every industry the best product brings the best price, meets with the readiest sale, and secures the largest and surest profits, and this is even more true in the case of beef than in any other product. Our farmers will have every encouragement, and such encouragement as they have never had before, to improve the character and quality of their cattle stocks. It costs no more to raise a good animal than to raise a poor one, and the difference in their relative value promises to be even greater in the future than ever in the past. The demand for prime beef is steadily and constantly increasing, while the demand for the inferior grades is relatively diminishing, and if there were sufficient supplies of good beef for everybody the poorer grades would scarcely be wanted at all. The advantages of improving the cattle stocks to the highest practical point will soon be so apparent that even those who, from instinct or defective education, are always found as far as possible behind the times will no longer attempt to deny it, and our friends, the breeders of thoroughbred cattle, from whose herds must come the blood with which the general stock of the country must be lifted to the desired standard of quality, will meet with a steady and legitimate demand for everything in the way of breeding stock which can be spared from their herds.

### Management of the Berkshire Hog.

As soon as the pigs are able to take care of themselves clean out the pen, and put in a good supply of fresh bedding. Open small doors so the litter can run out and exercise together in the sunshine. When about three weeks old let cows and pigs into one yard. Feed all together, but let each cow and pig retain their own pen for a bed. Well fed sows and warm, dry pens will make a difference of at least one-third in the growth of the pigs. Induce the pigs to eat and drink as early as possible, by placing a trough in a separate lot where they alone can get to it, and supplying them with corn meal, oat meal or barley meal, mixed to a slop with skim milk. As soon as the clover will furnish a bite let sows and pigs into pasture. Continue to supply all the slops and soaked corn they will eat, and also plenty of pure, cool water. Make a trough twelve or fourteen inches deep, put a hinged cover on it; through one end of the cover cut a snout hole, bank the earth against it over with the top, and keep it full of water. Scrub it out once a week. While suckling the pigs the sow is to be regarded simply as a machine for the production of pork; hence it is advisable to let the pigs run with her until she makes strenuous efforts to wean them. Then she should be removed. A short time before they are weaned the male pigs should be castrated. After weaning, ring them, using a ring with points meeting outside of the flesh. Set it firmly in the end of the snout, just full, so it will remain but not pinch. In ringing an old sow place one in the end of her snout, and one between the nostrils eame as a holl-ring. As hot weather comes on provide a dark shed with plank floor, eighteen inches above the ground so it won't harbor vermin, and in it feed green sweet corn. The pigs will rest therein and chew corn during the heat of the day, and feed on clover during the night. Sweet corn is invaluable for growing pigs, but it should be fed in a dark shed; it dries too rapidly in hot weather when exposed to sun and wind. It may be used from the time it begins to ear until frost. The large growing varieties are the best.

As Autumn and cool weather approach gradually increase the supply of solid, strong food. Four to six weeks before the pigs are to be marketed, close them up in a small pen attached to a warm, dry shed. Place the feed troughs inside the shed, and provide abundance of clean, dry bedding. Corn is one of the best foods for the production of nice solid pork. It should be the chief finishing food. Shell and soak it in water 24 hours. We soak hard corn to soften it, and render it more digestible. Some pigs have defective teeth, and cannot thoroughly masticate hard corn, and consequently waste a great deal. Soaked corn contains all the fattening qualities of, and is as digestible as cooked corn. Soaking is cheap, cooking expensive. Vary their food with boiled potatoes and heats, mashed and mixed with bran, oatmeal, barley-meal, millstuff, etc. Give them a ration of it at least twice a week.

As December comes on keep your eyes on the market, and get all the information obtainable concerning the supply of hogs and pork. Take advantage of a rise and sell. Your hogs being a nice, smooth, even lot of the very sort in demand at that season, you will be certain to obtain the top price paid at the time. If you reside over a mile from market it will pay you well to erect a chute, load the hogs into wagons and haul them. If this is too inconvenient, drive them. Start early and go slowly. Take some of their old bedding along in a wagon. Spread it on the first bridge and drive them over; they will walk over a bridge on their old bedding without a squirm. Gather the bedding again for use on the next bridge and you will have no trouble whatever. Breed from your selected sows two years, then fatten them for heavy lard hogs, and sell them when such hogs are in demand. To feed these old sows to the best advantage, begin feeding them corn about the 1st of September, while on grass and in full flesh. Confine them in a small, warm shed, about the 15th of that month, and feed all they will eat, varying their food with an occasional ration of boiled potatoes mashed and mixed with oats, bran, and water to a thick mush. Almost anything they will eat will do for variety. Under such treatment they will fatten rapidly. With wholesome food fed in clean troughs, pure water, dry, well-bedded sheds, the hog will naturally be a clean and animal. Kept in filthy quarters, exposed to all kinds of weather and fed on garbage, he is as unclean and offensive as a huzzard, and almost certain to be diseased. The breeder must be careful to guard against introducing disease into the herd when procuring a change of stock.—*Prairie Farmer.*

### Points of Beef Steers.

In many instances the feeder's whole profit depends upon his judgment in the selection of steers that have an aptitude to fatten. There are standard points which are unerring indications both of the quantity and the quality of the flesh which an animal will lay on, and should be diligently studied by every feeder who aims at success in his business. Different values are attached to these points according as the symmetry or constitution of the animal, or the prices of the butcher's cuts, are affected. We append hereto the main points as given by the London, Ont., *Farmers' Advocate*:

**Muzzle**—Large; wide nostrils required for easy and vigorous breathing, indicating a strong constitution. Prominent lips indicate good grazing qualities.

**Eye**—Full, bright, placid, indicating a gentle disposition, and therefore good fattening qualities. A vicious animal is seldom a good feeder.

**Ear**—Medium size, fine, and covered inside with soft, silky hair.

**Horn**—Fine, smooth; oval shape preferred. Large, coarse horns usually indicate a coarse frame and coarse bones.

**Head**—Small or medium. A wide forehead is indicative of intelligence; hence, animal easily tamed or taught, indicating good thriving qualities. The poll should be prominent and the jaw wide and smooth.

**Neck**—Medium length, gradually widening towards the shoulders—longer for a grazer than for a stall feeder; slightly arched; shoulder vein full.

**Chest**—Broad and full, indicating a good constitution. **Brisket**—Well forward and wide, but not too deep—should be a little lower than the under line of body. Chest and brisket should be destitute of loose flesh (dewlap). From a butcher's standpoint this is an important, though not a very valuable part, a small, skinny brisket having scarcely any value.

**Shoulders**—Wide across, without a depression between. A depression indicates looseness of frame, and hence a lack of strength to carry weight of body. Should not be set too perpendicularly.

**Ribs**—Should be well sprung, forming a wide back and a capacious barrel. Should be well ribbed home.

**Crops**—Here great fullness and girth are required, indicating lung-room, and a good constitution. The flesh here is also valuable.

**Legs**—Short, clean, flat; should stand well under the animal, and be graceful in their movements; leg bones fine and smooth. Hind legs should be straight as practicable and not in hooked. The eldows should have free play.

**Back**—Straight, broad from withers to tail attachment.

**Loit**—Broad and slightly arched.

**Rump**—Full, wide between pin bones, and tail attachment should be even, strong, and on level with line of back.

**Hips**—Full and deep; flesh on thigh should extend well down towards hock.

**Twist**—Full and deep.

**Flank**—Should be let well down on a level with the lower line of the animal.

In dairy work, all the senses require to be constantly brought into requisition. It is by the exercise of the sense of hearing that the hutter-maker learns when to stop churning, or, at any rate, when it is prudent for her to exercise her eyesight in order to verify the evidence of her ears. The sense of smell is probably the most necessary of all in a dairy, but it has this peculiarity of use—that it is chiefly employed in finding out what ought not to exist, and what we do not desire to find—very much like the holes in the old woman's stocking. It is quite needless to tell you how useful is the sense of taste, particularly in enabling you to judge of the quality of your products. The sense of feeling has, to a large extent, been superseded in the dairy by the extended use of the thermometer; but still the delicate touch of the experienced dairy-woman enables her to judge of the progress and finish of a number of dairy-operations, in which the question of temperature does not find a place. It is not necessary to enter into any details with regard to the need in the dairy of these five senses of our school days; but I should mention the use of what some people now call a sixth sense—namely, the sense of heauty, because it enables you to place your products attractively before your customers.

### Feeding Alfalfa to Stock.

We had the pleasure of meeting Mr. Dudley Chase, of Harrisville, Utah, the other day, and the information obtained is of such importance that we give it to the public. You frequently hear them remark that alfalfa is a good feed, and that it will put fat on either a cow or a horse. But when interviewed as to exact result, very meagre information is obtainable. In fact, Mr. Chase is the only gentleman we have ever met who had positive, exact information to impart on the subject. He put up forty head of two and three-year-old steers on the 20th of December, 1883, and fed them entirely on alfalfa from that day until April 13th, following. These were wild steers of the range. After feeding about thirty days he caught up one three-year-old that had become gentle enough to lead, and weighed him. At the end of the next thirty days the steer had gained seventy-five pounds. At the end of the next thirty days he had gained sixty pounds. The gain would probably have been greater the second sixty days, but for the fact that the weather was bad and the hay was fed on the ground in the mud. The fourth head of steers consumed 62 tons of alfalfa between the dates above named, about a ton and a half per head for the time, 114 days. Mr. Chase believes that all of the steers took on flesh as rapidly as did the one he weighed, though that is not susceptible of proof. He is a practical man, however, and his judgment counts for considerable. A ton of alfalfa, on this basis, will lay on 90 pounds of beef. A 1,200 pound steer, the 1st of December will, by the middle of February following, weigh 1,300. The additional hundred pounds will increase the price three quarters of a cent a pound; and then it rarely happens that there is not a cent and a quarter advance in February over September prices. This gives us two cents a pound on 1,300 pounds, or \$26. Add to this value of the extra 100 pounds, at say 5½ cents, equal to \$5.50 and we have \$31.50 per head as the increased value of our feeders. To accomplish this we have consumed about 2,200 pounds of hay, or a little less than a long ton. Thirty-one dollars a ton for hay is a pretty good price, especially if we consider that the valley lands of Utah and in some parts of Colorado, will yield an average of five tons to the acre. These figures seem very flattering, but they are as near the truth as it is possible to get. And from all the data accessible we are led to believe that they are below, rather than above what can easily be done. Under these circumstances it behooves the farmers of the Salt Lake valley and our granger neighbors in Colorado to stand in with the cattlemen and encourage the breeding of good steers to be placed in the farmer's yards during Winter and fed. Wheat made on any of our Rocky Mountain valley lands is too far from the markets of the world to be handled at a profit—tide-water is too far off, and transportation too high. Beef, made on grass and topped on alfalfa, will stand shipment to any part of the world where wanted. Twenty-five bushels of wheat at 80 cents, (above the average both in price and yield), is only \$20 an acre for your land, as against \$150 per acre if in alfalfa and fed to steers. The labor of seeding, harvesting and hauling to market of the wheat crop, is almost equal to that of saving the hay crop and feeding it out. Can you afford to raise wheat under these circumstances? Give this matter careful thought, and if we are in error, send in your corrections.—*N. W. Live Stock Journal.*

Milk can easily be kept for an indefinite period if properly prepared for preservation. If brought to the boiling point, then poured immediately into cans and sealed air tight, it will keep indefinitely. As the air is expelled by boiling, the milk keeps just as canned goods do. If glass jars are used they must be heated so that the boiling milk will not break them. Many families keep but one cow, and this plan will enable them to have milk during the weeks that she is dry.

## STABLE AND PADDOCK.

### Twisting of the Intestines.

This trouble is quite common among horses, yet at post-mortem examination it is not always evident; this may arise in consequence of the intestine having slipped into place, either from handling the bowels or from the relaxation that takes place at death. A circumscribed strangulated and discolored spot, we may suspect that intus-susception has existed. Intus-susception may arise from various causes, the chief of which is a deranged state of the digestive organs. It is well known that the difficulty often follows both flatulent and spasmodic colic, and these maladies are the sequel to the former. It is also well known that in colic a large amount of carbonic acid and other gases are generated within the intestinal canal, by which their volume is inordinately increased and their position so changed that one would not be surprised to find them at times twisted into all manner of shapes. In cases of intus-susception strictures are often met with in various parts or the small intestines. These contractions or constrictions of this canal may possibly be the cause of intus-susception. If so, then the treatment should be nauseating and relaxing. In the human subject intus-susception is generally relieved by vomiting—inverted, peristaltic action; but as that is rather an uncommon occurrence in the horse one must not expect relief in that way. The symptoms of volvulus do not differ materially from those attending colic, with this exception, that the animal is more tranquil when lying down, and does not paw with his fore feet when up, as he invariably does when suffering from colic. The paw also seems more persistent as evinced by the distressing look and uneasiness of the head. The disease is apt to terminate in rupture of the intestine, diaphragm or stomach—for which there is no remedy.

**TREATMENT.**—Administer the following drench: Tincture of Ginger, 2 ounces. Oil of Peppermint, 20 drops. Chloric Ether, 2 drachms. Thin Gruel, ½ pint.

Rub the belly, and give clysters of salt and water. It is better to give the above medicine prior to the administration of nauseants, especially in the early stage of an attack (when the symptoms are more of a colicky nature), because it has been known to accomplish wonders in relieving the animal of flatulency and freeing him from pain in the course of a very few minutes. It is unwise to resort to blood-letting, as this is one of the most painful affections to which the horse is subject, and in the course of a very short time the pain has so perverted the functions that blood cannot be spared, it being a well known fact that the blood undergoes material change during pain.

## Care of Animals Recovering from Disease.

After the subsidence of an active disease, the restoration to perfect health commonly proceeds with rapidity. The appetite being often excessive and the assimilative powers proportionately active in such cases, little care in the arrangement of the food is necessary, so that a liberal allowance of nutriment be given. The ordinary food will be eaten with avidity and with benefit, so that the animal be not allowed to eat to repletion. In other instances the patient advances slowly to the convalescent state, a fastidious appetite and impaired digestion retarding the recovery by preventing the animal eating, or at any rate appropriating, the material which the system really requires. In the meantime the animal's taste may be consulted and any tempting morsels offered; the admixture of condiments is sometimes the most ready method of provoking appetite and aiding digestion; salt, turmeric, anise-seed, and various spices are at times effective combined with the ordinary diet.

One golden rule deserves unceasing repetition, viz, never to leave any food which the animal has refused, in his sight or within his reach; and second only to this maxim is another, which insists on scrupulous cleanliness in the hand which touches the food and the vessel containing it. Let those who question the necessity for such delicacy observe how the horse and other animals test everything by the sense of smell, and judge how important it is that the extreme sensitiveness of the sick subject should not be outraged by even an offensive odor.

When extreme debility is present, food must be selected with care, as the digestion function is easily disturbed. The diet for such cases is to be tolerably rich in starch and sugar, as deficiency of reparative material is often more serious than diminution of the muscular structure; hence the value of mixtures containing oil-cake, linseed, potatoes, etc. But no amount of nutriment is of the least use to the organism so long as there is a deficiency of fuel for the respiratory function. The development of the muscular system will follow as soon as the animal is sufficiently recovered to take exercise; for during the period of absolute inaction, it is in vain we try to preserve the integrity of this structure, but no difficulty is found in keeping up the proper quantity of fatty texture, while the patient is yet too prostrate to be exercised with safety.

An appetizing surface of any extent is usually associated with considerable debility, sometimes with dangerous and even fatal prostration; the healing process may proceed satisfactorily for a time, and suddenly be arrested for a time, a general languor affects the system, although the appetite may remain good. The proper dietetics in such instances will include not only nutritious, but stimulating food; thus, if the digestion remains active, ground oats, barley, and corn may be allowed together with good hay, also any preparation containing condiments; the medical treatment at the same time will principally consist of tonics and cardiac stimulants, the object being to increase the energy of the circulatory and nervous systems as well as to furnish abundant material for the reparative process.

Under extreme prostration digestion is invariably suspended, consequently no advantage can possibly follow the introduction of food into the system at such a time, if we except aliment of the blandest and most soluble kind. The practice of giving a horse an extra allowance of oats, and probably corn, after an extra amount of work has produced absolute exhaustion, is, to say the least, extremely injudicious; the animal would be far better left entirely without, as an alternative, although, as we have stated, a bland and soluble diet, a well-cooked gruel, will be beneficial, and will answer all the purposes of a heavy meal.—*Prairie Farmer.*

Horses required for fast work, says an exchange, should have the pasterns of the fore legs moderately long and fairly sloped, in order to obviate the risk of sprain to the suspensory ligament, and of concussion to the bones and fetlock joints. In fact, the harder the ground, and the faster the pace, the more imperative is the necessity for sloping pasterns, which, however, are a disadvantage when strength is the desideratum. As the chief office of the fore limb is to act as weight-bearers, while that of the hind extremities is to serve as propellers, we find that in the true-shaped horse the hind pastern are more upright than the fore. Among horses that work unsold it will be found that the slope of the hind hoof at the toe will be about 60 degrees, while that of the fore-foot will be about 50 degrees. These facts should be borne in mind by shoeing-smiths, so that, by an improper method of shoeing, they may not force the hind limbs to work at a mechanical disadvantage. The saddle-horse, as the old saying expresses it, should be short above and long below. In other words, his back should be comparatively short; while his sloping shoulders and long pelvis should enable him to cover a considerable distance of ground. The light harness-horse and lady's horse may have more length of back. For horses that are used at fast paces, the traverse action of the chest should be decided oval so that the increase of capacity during inspiration may be as great as possible. The points of conformation in which the heavy cart-horse differs from the light saddle animal are that his shoulders should be more upright and massive, chest broader, pasterns shorter and straighter; while his muscles of locomotion should be distinguished by their thickness rather than by their length; and, consequently, the bones of his limbs will be thicker and stronger.

## Feed the Brood Mares Well.

Many farmers think after they are through working the brood mares in the Fall, that they can be turned out to shift for themselves, and that they need no care, and but little food. They are left exposed to the storms, and have but little frosted herbage to subsist upon. They are through the Winter in poor condition in consequence. This is bad treatment, and its effect upon the mare is injurious, as well as upon the off-spring she carries. There is a heavy draft upon the system to sustain the colts she bears. With poor food and exposure her young suffers, for she has not enough food to sustain herself and that also. The result is a stunted colt and the mare so treated, if she have strength to give birth to her colt is so poor that she can give but little milk after its birth. Brood mares should be liberally fed with the best of food—not to get them unduly fat—but to keep them strong and vigorous, so they may bear vigorous off-spring, and be in condition to give them ample nourishment after they are born. They should be sheltered from rain and snow and piercing winds, and have comfortable beds to lay down upon. With this treatment they require less food, and it is in every respect more economical, and humane. Good food and good treatment are very important factors in improving the quality and even breeds of stock.

## Preservation of Colts' Feet.

I have a yearling colt out of a Star Mare, by a horse out of a Star Mare. He is very large and rangy, but has as you may suppose, a star foot, small and hard. The frog is ragged and does not look healthy. Please advise what course to pursue with his feet. Answer.—Have your colt's feet examined carefully every four weeks. All colts' feet are subject to more or less irregularity of growth, also the splitting and fractures of the wall, bruising of the sole from hardness and irregularity of the ground, the insinuation of sand and other foreign bodies within the cleft of the frog. Irregularity of growth is a matter which should receive every attention. Sometimes it manifests itself by an overgrowth of horn at the foot, sometimes by a similar overgrowth of horn at the inside quarter, each of which unless checked, will produce a turning in of the toe, and in time an outward projection or bowed state of the fetlock-joint. Numbers of horses have this peculiar projection of the fetlock-joint, arising in the first instance from the want of proper care and attention to the feet when young. All such tendencies of growth in the foot from whatever cause should receive prompt attention. In attending to the feet of the colt the shoeing smith should take each foot forward upon his knee end having seen exactly how much hoof is to be removed and from what parts, take the rasp and pare it vertically, so as to take off the outer edge to the extent required; then, placing the foot between the legs, remove the exfoliated sole, and detaching parts of the frog—the first by means of the buffer, raising the loose flakes of horn from the front backwards by tapping the foot with the hammer. The superfluous exfoliations of the frog are then removed with the drawing knife not by paring it at all or much cutting, but more by raising the flakes with the left thumb and finger and detaching them with the knife. This done, the bearing surface of the wall is to be adapted, and holding the foot in the ordinary way from behind, the rasp is passed over the point to reduce it to the proper depth carrying the flat surface of the rasp transversely across the bearing surface at the point (toe), and then over the surface of each quarter from behind forward, being careful that both heels of the foot are of equal depth, and that an equal depth, and that an equally appropriate firm surface be given to the toe if the instructions just given be intelligently carried out the quarter (the surface across the bottom of the foot) will be fairly provided for, viz., a fullness in the surface across centre of the foot. The centre of the foot is the region of the greatest breadth and depth of its arch. On the preservation of the breadth and depth depends the strength of the arch and of the foot itself, and the firmness, safety and power of the colt's action.—*N. Y. Sportsman.*

## Breaking a Spirited Horse.

Mr. A. B. Allen thus relates, in one of our contemporaries, the manner in which he broke a spirited horse: "When a young man, and breeding horses, I found, on taking up a nearly thoroughbred filly to break to harness, that she was very high-spirited and nervous, and that, unless I was particularly careful, she might take to kicking and rearing during the process, with attempts to run away. I first bitted her well by letting her walk around a short time for several days in succession, in a strong fenced yard with ample dimensions. I then gradually accustomed her to the harness, standing in the stable, letting her first look at it piece by piece, and then smell and rub her nose and head against it; then placed it upon her and led her out and around the premises to look at the different vehicles and touch them with her nose. After a few days of such exercise, I hitched her up to a sleigh—in the open road, so nothing could obstruct the start—alongside of quite a fast-trotting and very gentle gelding. Some snow had fallen the night before, and only a few sleighs had passed over it—just enough to show the track. One man stood at her head to hold her, while another jumped into the sleigh to drive. All ready, he touched the gelding with his whip, and he instantly started at a rapid gait. The filly gave a wild jump, and then attempted to kick up behind, but her mate in the harness moved so rapidly she had no time for such action—in fact had to gallop smartly to keep up to the other's rapid trot. After going a couple of miles in this way she began to tire a little, when the driver slackened the gelding to a slower pace, and she settled into a square trot. Soon after this he turned the sleigh and returned home, gradually trotting slower and slower, till the last half mile, which he finished in a walk. The profuse sweat caused from her first rapid action had nearly dried up when unharnessed and put into the stable. She was then blanketed, and, when well cooled, rubbed down. We used her with this fast horse alone—it being necessary, because she herself had a fast natural gait—for over eight months before harnessing her single to a sleigh, and subsequently to a light wagon and buggy, and never had any trouble with her. She retained her high spirit, and wanted to move rapidly on the road, but was always gentle, never offered to kick or rear, or run away in harness or under the saddle. She rarely shied, and then only slightly, and proved one of the safest and most serviceable road-horses I ever owned."

## Scientific Colt Breaking.

Smith, a Texas farmer, had a colt to break, a little roan, half mustang and half Morgan. He had told his wife there was no sense in breaking a colt's sides in to break it. He had been reading "Rarey on Horse Training," and told his wife to come out in the barnyard and see how he, with kindness, could master a colt. This colt was easily bridled and would lead anywhere. Some old harness was gently laid across its back, and though a trifle scared it worked eighteen carats fine. Smith was delighted. He took off the harness and told his wife he was going to ride the colt. She gave a little scream and pleaded with him to wait until to-morrow.

"Never put off until to-morrow what ought to have been done yesterday," said Smith getting funny. "Woman are all right in their place, I allow, but when a man is breaking a mustang-Morgan silence is a regular Comstock mine." At this juncture the colt stepped on his foot.

"Go'dang your eternally do-d-blasted feet! Ain't there room in the bull barnyard for them infernal talons of your'n?" and he gave the colt a slap on the neck and hacked and pulled to get his foot out.

"Kindness, John, kindness!" said his wife wildly. "Lookahere, Susan J. Smith, I want to know who is breaking this ere colt," he said in tones of enforced calmness. "I suggest that I am breaking this—this measly mustang." "Did it hurt, dear?" "Oh, no, it was perfectly delightful; never had anything to feel so good in all my life," he replied with infinite sarcasm. "I supposed if this barn'd fall down on me I'd hear you a coonin' through the fence, 'Did it hurt you, dear?' Some women are born handsome an' 'eome ain't got no sense. I've eed lots o' handsome women in my time, but I'm not acquainted with any at present," and with this annihilating remark he returned to the colt.

He made a leap and got on the colt's back. There was a movement of legs, and Smith was setting on air for a second, and then tumbled headlong into a fence-corner.

"Oh! oh!" screamed his wife.

"Oh, what?" said Smith, getting up and trying to look unconcerned while he wiped the blood off his ears.

"I thought that—that—" faltered his wife.

"Will you state to the audience your valuable thoughts? I'll get 'em framed. Never wanted anything since I was born so bad. Did ye think I didn't get off on purpose? Maybe you thought that the colt throwed me. Do you suppose I've monkeyed around horses as long as I have to let a little calf like that throw me?" he roared. "Susan J. Smith, what'd I marry ye for? I tell yer to yer teeth I got off. Lots of consolation I can get from a woman chattering like a Guinea hen. No wonder the colt is scared. Poor colty, poor colty, come now," and the colt followed as meek as a lamb. "Maybe you wouldn't get on the colt, Susie, dear," and he looked very bard at his wife. "Would you, Susie?" he drawled in killing irony.

"John, please—don't—get off so quick this time, and—if you have to get off very quick, please get off further away from the fence."

Smith got on, determined to stick or die. A few people may have an idea of what a mustang Morgan can do, but the majority of humanity will remain in sublime ignorance until time is no more. It went every possible direction except straight ahead, and made every possible motion except a decent one. Smith stuck well, so did the colt. The wife, remembering the bread in the oven, returned to the house, and an hour later came out on the field of conflict and saw her husband still making w's in the air. The barnyard wall plowed up.

"Suse, Suse," he called between bucks, "make my will. Tell Jim to bring my gun, and tell the neighbors I died game," he called out, trying to get his wife excited. "I'd me on the colt, and it's nip and tuck, with the chances in favor of the colt."

Suddenly the colt walked straight ahead in a peaceable manner. Smith came riding up to the fence, his hat off, his face as dirty as a fireman's, and his ear still bleeding.

"Talk of breaking a colt with kindness, woman. If I had Rarey here I'd shoot the eternal daylight out of 'im. A colt wants to be killed, killed, d'ye hear?"

He got off and struck it in the flank with his fist. Quick as lightning the colt wheeled and kicked him through the fence. "Oh!" screamed his wife, "are you hurt?"

"Oh, no, Susie, I'm not hurt. I'm just killed, that's all," he said in a weak voice. "If you ain't tired, Mrs. Smith, you might get me a little cold water. Just a little bit; wouldn't that have you strain yourself for anything?"

When his wife returned he was standing by the fence very pale and weak.

"If you will return, Mrs. S., and bring me the gun, I'll kill something. Blood has to be spilled now. I'll wipe this out with gore—the reddist kind of gore. What are you standing there for, staring at me like a lunatic asylum? Maybe you'd like to be kicked through a rail fence, or a barn or suthin'?"

"Oh, John, dear, there's some horrid blood on your ear!" and she threw her apron over her head.

"On my ear? My boot is full of blood. I tell you I'm killed, k-i-l-l-e-d," he spelled.

"Let me give you a pointer, Mrs. Smith," he said, as he hobbled to the house. "If you want to die, die hard, die all over, you just get knocked through a rail fence by a mustang Morgan. If you want to be an angel, and die by still waters, try this eternal, God-forsaken colt of mine."

## Training and Overtraining.

Mr. Peter Webber, who has trained, among other thoroughbreds, Woodflower, for Mr. Walton, but whose experience has been mainly confined to trotters, said to us the other day that he found it comparatively easy to get on with the runners. He doubted if the trainers of thoroughbreds study their horses as carefully as the trainers of trotters. They certainly do not give as much attention to the legs and feet. The trotter ponds more and on a harder track than the runner, and he is often called upon to fight through six and eight heats of one mile each. He also carries more weight in the shape of shoes, toe weights and boots; consequently, if the trainer neglected his legs and feet he would soon have a horse not able to much more than crawl. The runner seldom enters a heat race now, and the soft track breaks the concussion, for which reason his legs can longer be neglected. When Webber took hold of Woodflower she was so sore forward as not to be dangerous in any kind of a race. By keeping her shoulders warm and by putting plenty of elbow grease on her legs, she was brought to a winning edge. The criticism is also made that some of the trainers give their horses too much work. They get them stale and keep driving away at them, and burning them up with grain instead of trying the virtues of rest and a light mash. Corsair became so rapid that his owner was glad to part with him for \$350. As soon as he changed hands and had been cooled out by grass and recruited by partial suspension of work, he appeared at the post an entirely different horse and surprised the speculative division which had rated him as of no account. He won four races in quick succession. Gen. Monroe came out of Winter quarters fresh, and in his early engagements he ran like a horse which relished sharp work. He scored victory after victory until his winnings amounted to \$24,000. When he got stale, instead of giving him a short let-up and cooling food, his trainer hammered away at him in the hope that he would run into form as he had run out of form. The result of this system of handling is that Gen. Monroe closes this season with \$4,000 to the bad. The old-fashioned trainers may sneer at their critic as a freshman, but as he has shown what he can do with cripples, it would be wiser to look around and explain just wherein his suggestions lack practical force.—*Turf, Field and Farm.*

Professor Colin, of the Alfront Veterinary College, says that "in the horse mastication is unilateral; that is, for fifteen minutes or so mastication is performed on one side only, it is then changed to the opposite side, and so on alternately during the meal. The horse's upper jaw is broader than the lower one from side to side; the latter moves on the former laterally, or from one side to the other. If this movement is not complete, the molar teeth do not approximate completely, and consequently a ridge of unworn tooth-material is left on the external aspect of the upper and the inner side of the lower teeth, wounding the tongue and cheeks, and preventing complete trituration of the food. Many other dental troubles affect the horse, such as irregular growth, diseased alveolar processes, caries of the fang, neck, and crown of the teeth, all of which require attendance of the qualified practitioner. I never visited a cavalry troop during my life that at least half the horses were not literally being starved, owing to some defects of their dental apparatus."

Early Maturity and its Results.

Between 1839, when the greet heudicpe was established, and 1861, the Ceserewitch was won ten times by three-year-olds and thirteen times by four-year-olds and upwards. In the last six years the race has been won five times by three-year-olds. These figures, it is argued, indicate that the decline in the number of racehorses aged four years and upwards is on the increase. Nearly forty years ago Admiral Rous predicted that the tendency towards early maturity in thoroughbreds would prove injurious to the horse. He pointed out that yearlings were often tried in October and in December to ascertain if they had sufficient promise to warrant entering them in the two-year-old stakes closing January 1, and remarked: "Many two-year-olds are trained to the highest state of perfection in the month of May, and consequently few horses retain their racing powers after four years of age." London Field takes this for a text and preaches quite a sermon:

"The truth is that good old horses—and by 'old' we mean four years or upward—are now so rare upon the British turf that until the arrival of the year 1900 and possibly for all coming time it is to be expected that "borses of the century"—which, by the way, are always three-year-olds—will spring up twice or thrice in every decade. There are, however, men of the old school still left in abundance whom it would be difficult to persuade that St. Simon and St. Gatien are one whit better than Teddington, Newmiuster and Naucy, the great three-year-olds of 1851, or than Spruce, The Flying Dutchman, Volgieur and West Australian, each of them winners of a double first in the Derby and St. Leger. Forty, thirty and even twenty years ago there was no lack of old horses whom no three-year-old that ever was foaled could have tackled at even weights over a long course. Nowadays we have no aged meters or standards to tell us the truth about our so-called 'borses of the century.' Thus, when Mr. Padwick's wonderful three-year-old filly Virago beat Mr. Greville's five-year-old colt Muscovite for the Metropolitan Handicap in 1854, it was the general opinion that no three-year-old in the world—let alone one which had already run for and won another big handicap upon the same day—could get the best of Muscovite when in receipt of 17 lbs. from him. With all our respect for Virago, we doubt if she could have beaten Muscovite, who was no more than a good second rate, at even weights in the Ceserewitch of 1854, which he won. And, although it is probable that for many years to come good three-year-olds will occasionally win both the Ceserewitch and Cambridgeshire with weights oscillating between 8 st. 7 lbs. and 9 st. 7 lbs. upon their backs, it will be futile to ask men of the old school to believe that modern 'borses of the century' are superior to those three-year-olds which graduated with honor when four, five and six-year-olds horses abounded, out of which their hearts had not been galloped at two and three years old."

And this is the conclusion: "We can well remember that upon the evening of the day when, in 1845, Mr. Greville's Alarm won the Cambridgeshire in a canter, with 7 st. 9 lbs. on his back, Admiral Rous shook hands warmly with the famous Clerk of the Council, and told him that no three-year-old would repeat the feat in either of their lifetimes. So far as Mr. Greville was concerned, the prophesy was true. No three-year-old won the Cambridgeshire, carrying so much as 7 st. 9 lbs. between 1845 and 1865, in which latter year Mr. Greville died. The Admiral, however, was spared to see Montargis heat Alarm's record by carrying 7 st. 13 lbs. to victory in 1873. Another French three-year-old, Jongleur, surpassed both his triumphant predecessors by winning the Cambridgeshire in 1877 with 8 st. 4 lbs. on his back; but in that year the gallant Admiral had passed away. Were he alive now, his experiences of the Ceserewitch and Cambridgeshire during the last five years would warn him that the old "Scale of Weight for Age," which he framed in 1846 and which, with slight alterations, has remained in force until this day, stands in need of radical reformation. According to Admiral Rous, a three-year-old was to carry 7 st. 7 lbs. against a five or six-year-old's 8 st. 12 lbs. over two miles. Our existing code of weights prescribes that over two miles a three-year-old is to carry 8 st. 11 lbs. against a five, six or aged horse's 9 st. The time has evidently come when a further approximation of the weights is imperatively needed. It is almost certain that no old horse in England or in the world could now beat St. Gatien at level weights over a distance of ground. In 1880 Isonomy, as a five-year-old, would undoubtedly have beaten Robert the Devil, a three-year-old, at even weights. But in 1884 we have to Isonomy, and according to the sacrificial system now in vogue, good staying four and five-year-olds will become scarcer and scarcer. William Day's assertion in his Racehorse in Training, that modern thoroughbreds are at their best toward the close of their third year, has been more than confirmed since the appearance of that excellent book. To those, however, who realize that "early maturity means early decay, many a sigh will be permissible over the stout and gallant aged stayers which gained their fame upon cup courses in the brave days of old."

Judicious road work, when a horse is used for ordinary business purposes, often tends to a rapid development of speed in animals which have inherited through sire and dam a good degree of trotting instinct. A horse called Yankee Boy, owned by a Melrose gentleman, is a case in point. He was raised in Fern, Me., and kept for a stallion until about four or five years old, then gelded. He was brought to Massachusetts last Fall, and although showing a handy way of going, did not promise much speed. He has been driven on the roads this Summer, and a few weeks since his owner had him sent a mile to wagon over Saugus track in the neighborhood of three minutes. The following week he was given another mile, which was trotted several seconds faster. A few days since he was put into a sulky and made his mile with ease in 2:30, showing such a burst of speed on the last quarter as to warrant a belief that he is a trotter. He is by Lone Star, out of a mare by Champion Black Hawk. Lone Star was by Hampton, he by Jnpter, by Loug Island Black Hawk, by Andrew Jackson, son of Young Bashaw. Mr. J. G. Rounds, of Malden, is having a similar experience with a young horse raised in Vermont. He lately trotted a mile over Saugus track in 2:37, the last quarter in 37 1/2 seconds, a 2:30 gait. Neither of these horses has ever had any track work.

Weight cannot be taken as an unerring indication of strength and endurance in a horse, any more than of superior quality in a beef animal. Other things being equal, it usually signifies the possession of these qualities, but so many other points go to make up the character of a horse that the mere possession of bulk is insufficient to determine its special adaptation to heavy work. Experienced buyers of horses for draft purposes understand this so well that size is only one of several points carefully canvassed in stock brought out for their inspection.

Weaning Colts.

The usual time of weaning foals is when they are from four to six months old, yet if one has time to properly care for it and proper feed, the foal can just as well be taken from its dam when three months old or later, and with advantage to the mare. Before weaning, the foal should be halter broken and taught to eat ground oats mixed with shorts or coarse flour, the latter being preferable. This can easily be accomplished by wetting and mixing a small quantity and feeding to the dam once or twice daily in an open, shallow trough or box, into which the little fellow can easily get his nose. In halter-breaking, use a head halter made of soft, pliable leather, and of such size that it can easily be fitted to his head. Have a roomy, double stall or pen, with two firm, iron rings in front, one on each side. Hitch the mare on one side and the colt on the other, tying them so that the foal cannot reach its dam. Two adjoining stalls, separated by a low partition permitting them to see each other, will answer. It will be well to let the foal suck a little, morning and night, for the first two days, and after that let it partially draw the milk once a day for a few days, feeding the mare sparingly in the meantime on dry hay without grain, so as to cut off the flow of milk. After this the mare can be turned out or put into another stall, yet it may be necessary to milk her a few times to prevent inflammation of the udder. Should she be restless or attempt to kick during the process of milking, take a strong strap, a pole strap of double harness, or hold-back of single harness, if strong, will do; raise one forward foot hending the knee so as to bring the foot against her forearm, pass your strap twice around her forearm and cannon bone, between the knee and fetlock, and buckle tightly, which will render her powerless to kick. The foal should have all the bright, early-cut hay or well-cured ryeen it will eat, and a pail of pure water, changed three times a day, should be kept within its reach. Probably the best feed for a foal at the weaning season is a gruel made from first quality of ground oats and fine feed, using equal quantities of each and adding to it from one to two quarts of skimmed milk. Begin with a half pint each of the oats and fine feed, stirring it slowly into boiling water into which a pinch of salt has been thrown, let it cook well, then remove from the fire and partially cool, after which add a quart of skimmed milk and feed about milk warm. The quantity of meal and shorts or fine feed can be gradually increased until a pint or more of each is used at a feed. After the youngster eats his feed with relish, sour milk can be substituted for sweet, and some think they will do better on the latter. It is said that colts fed on sour milk are never troubled with worms. The floor of the stall should be of earth, and unless it is such, a few inches of dry loam should be thrown in, so that it will not be compelled to stand on the hard planks. It should be led out and exercised a short time every day for a fortnight, after which it may be turned loose in the yard or paddock, which should be so arranged that it can go into its stall at will. The ground oats and shorts should be continued through the Winter, and the amount can be more than doubled without injury to the colt.—American Cultivator.

PACIFIC COAST BLOOD HORSE ASSOCIATION.

Fall Meeting, 1884.

BAY DISTRICT COURSE.

PROGRAMME

First Day, Saturday, Nov. 15th.

- No. 1. LADIES' STAKE—For two-year-old fillies; \$50 entrance; \$25 forfeit; \$200 added; three-quarters of a mile; second to save entrance. Nominations for 1884: 1. Theo. Winters' ch f, by Hooker—Puss. 2. Theo. Winters' b f, by Hooker—Abby W. 3. Theo. Winters' b f, by Hooker—Countess Zelka. 4. Theo. Winters' b f, by Hooker—Illusion. 5. Theo. Winters' b f, by Hooker—Kitten. 6. G. Pacheco's cf f, by Wheatley—by Lodi. 7. James Mees' ch f Mischief, by Thad Stevens—Katie Pease. 8. James Mees' ch f Mistletoe, by Thad Stevens—Mistake. 9. E. J. Baldwin's br f, by Grinstead—Blossom. 10. E. J. Baldwin's b f, by Rutherford—Glenita. 11. Palo Alto's b f, by Shannon—Lizzie Whips. 12. Palo Alto's b f, by Monday—Plaything. 13. Palo Alto's b f, by Shannon—Katharon. No. 2. Sweepstakes of \$50 each; \$25 forfeit; \$250 added; for two-year-olds; three-quarters of a mile; Alta and Estill to carry rule weights; one hundred pounds on all others, with three pounds allowance to fillies and geldings. Second to save stake. 1. E. J. Baldwin's b c Volante, by Grinstead—Sister Anne. 2. E. J. Baldwin's ch g Rapido, by Grinstead—Experiment. 3. T. Lynch's ch g Tom Atkinson, by Joe Hooker—Bay Kate. 4. W. Ayer's g lchi Ban, by Joe Hooker—Queen No. 3. SAME DAY—THE VESTAL STAKE; for three-year-old fillies; one and a quarter miles; \$25 p p; \$300 added; second to receive \$100; third to save stake. Closed with the following nominations for 1884: 1. J. E. Gries' b f Nettie Hill, by Joe Daniels, dam Mary Wade. 2. E. J. Baldwin's b f, by Rutherford, dam Glenita. 3. E. J. Baldwin's b f, by Grinstead, dam sister to Clara D. 4. E. J. Baldwin's ch f, by Grinstead, dam Josie C. 5. E. J. Baldwin's br f, by Grinstead, dam Mollie McCarty. 6. Theo. Winters' ch f Callie Smart, by Norfolk, dam Mattie A. 7. Palo Alto's br f, by Monday, dam Napa Queen. 8. Palo Alto's s f, by Norfolk, dam Glen Dew. 9. Palo Alto's b f, by Wildie, dam Frolic. 10. Palo Alto's br f, by Norfolk, dam Lizzie Whips. 11. Palo Alto's s f, by Norfolk, dam Frou Frou. 12. W. L. Pritchard's ch f, by Bazaar, dam Tibbie Dunbar. 13. W. L. Pritchard's ch f, by Leinster, or Bazaar, dam Minerva. 14. W. L. Pritchard's ch f, by Leinster, dam Fusch. No. 4. Sweepstakes of \$50 each; \$25 forfeit; \$250 added; one and one-eighth miles; for three-year-olds; second to save stake. 1. E. J. Baldwin's b c Shenandoah, by Shannon—Demirep. 2. Garland & Goldsmith's b c Beaconsfield, by Hock Hocking—Aileen Allannah. 3. T. Lynch's b g Jon Jon, by Monday—Plaything. 4. P. Siebenthaler's b c Philip S., by Leinster—Lilly Simpson. 5. M. M. Allen's ch c Prince of Norfolk, by Norfolk—Marion. No. 5. Purse—; amount and distance to be announced Thursday, Nov. 13th; and entries made at Secretary's office at or before 4 p. m. Friday.

Second Day, Tuesday, Nov. 18th.

- No. 6. Purse, \$300; \$75 to second; heats of three-quarters of a mile; for all ages. 1. T. Lynch's b g Jon Jon, 3, by Monday—Plaything. 2. Rancho del Paso's b Sweetwater, 3, by Vigil—Innudence. 3. S. J. Jones' b b Forest King, 5, by Monday—Abbie W. 4. Geo. Howson's b b Jim Douglas, 6, by Wildidle—Yolone. No. 7. Selling race; one and one-eighth miles; purse, \$250; free entrance; second to receive \$75; horses entered to be sold for \$1,000 to carry regular weight, with two pounds deducted for each \$100 below \$1,000, and three pounds added for each \$100 above. 1. J. C. Simpson's ch g Cito, 2, by Joe Hooker—Too Soon, \$500. 2. G. E. Ramsey's ch g Billy Johnson, aged, by Glenjeu—Planetarium, \$500. 3. W. M. Murry's br b Birdcatcher, 5, by Spectre—Pet. 4. T. Lynch's b g Belshaw, 5, by Wildidle—Squire Williamson, \$300. 5. G. L. Richardson's ch g Quebec, aged, by Norfolk—by Belmont. 6. Rancho del Paso's b g Duke of Monday, 5, by Monday—Demirep, \$500. 7. Wm. Boot's b m Beatie, aged, by imp. Hercules, \$600. 8. Wm. Boot's cb g Robin, 4, by Bob Wooding—Lizzie Maraball, \$600. No. 8. Sweepstakes for two-year-olds of \$50 each; \$25 forfeit; \$250 added; one and one-half miles; second to save stake; winner of No. 1 to carry the pole; same conditions as to weights as No. 2; winner of No. 2 to carry seven pounds extra and second four pounds extra. 1. J. C. Simpson's cb g Cito, by Joe Hooker—Too Soon. No. 9. Purse, —; amount and distance to be announced on opening day; entries to close at Secretary's office, Monday, Nov. 17th, at 4 p. m. No. 10. Purse, —; same as No. 9. Extra Day, Thursday, Nov. 20th. No. 11. Sweepstakes; for three-year-olds; \$50 each; \$25 forfeit; \$250 added; one and one-half miles; second to save stake; winner of No. 1 to carry the pole; same conditions as to weights as No. 2; winner of No. 2 to carry seven pounds extra and second four pounds extra. 1. E. J. Baldwin's b c Shenandoah, by Shannon—Demirep. 2. Garland & Goldsmith's b c Beaconsfield, by Hock Hocking—Aileen Allannah. 3. T. Lynch's ch f Glendair, by Norfolk—Glendew. 4. P. Siebenthaler's b c Philip S., by Leinster—Lilly Simpson. 5. M. M. Allen's ch c Prince of Norfolk, by Norfolk—Marion. No. 12. Purse, \$400; beats of a mile; for all ages; second to receive \$100; ten pounds deducted from regular weights. 1. E. J. Baldwin's b c Lucky Boy, 4, by Rutherford—Maggie Emerson. 2. T. Horses beaten once allowed 5 lbs., twice, 10 lbs., three times, 20 lbs.; entries to close five minutes after the finish of last race.

CONDITIONS.

Entries to stakes and purses not marked closed, except Nos. 5, 9, 10, 13 and 14, will close 8 o'clock p. m., 1884. Races to close will be run under weights adopted at the annual meeting of 1881. Starters in all races must be named at 6 p. m., the day preceding the race. Entrance free for starters in purses. Non-starters can declare out at 6 p. m., the day preceding the race, by paying five per cent. After that time they can only be excused by the presiding judge, and in such case ten per cent. of the amount of purse must be paid. Non-members will be placed on the same footing as members of the Association, in regard to the payment of purses and stakes advertised; and should there be a deficiency, the winners will receive a pro rata division. Parties making nominations will be required to record colors at time of making entries, and after record will not be allowed to ride in other colors. This rule will be strictly enforced. All entries in stakes and purses, (except Nos. 5, 9, 10, 13 and 14), must be made on or before the first day of November next, 1884, directed to Jos. Cairn Simpson, Secretary, 508 Montgomery St., San Francisco. To be valid, they must be delivered to the Secretary personally, or by post, on or before that day—November 1st. The Association reserves the right to postpone races on account of unfavorable weather or other sufficient cause. JAS. V. COLEMAN, President. JOS. CAIRN SIMPSON, Secretary.

YACHTING.

Last Saturday according to arrangements, the Pacific Yacht Club fleet assembled off Meigg's Wharf, and after being photographed, both singly and in the group got under way for Sancelito.

On Sunday, at 9:30, the appointed hour for the start, there was not enough wind to stir the lightest bit of hunting, but all the vessels hoisted their after sail, which by the way was contrary to the sailing orders, and it was 10:15 before a light breeze came out of the southward and eastward, when the Commodore fired the starting gun.

The only drawback to the comfort of the participants was the crowded condition of some of the boats and the lack of edibles. The result only goes to show the inadvisability of attempting to make such a long trip at this season of the year.

The Aggie started last Sunday sometime after the fleet had got under way, and the last seen of her was when she was off Martinez, on her way up to Antioch, where she will winter.

The old yawl, Enid, has been changed into a sloop, has had her mast stepped farther aft, has lead on her keel and is very handsomely fitted up inside. She is now known as the Gracie.

The Rambler was out on Tuesday with a party of ladies on board, but was compelled to tow home.

The Fleur de Lia went up this week to Antioch to wait for Spring.

A New Way to Buy a Horse.

The Turf, Field and Farm says that previous to the \$10,000 race at Hartford, J. D. Kipley requested Charles H. Raymond to put a price on the grey gelding, Philip Thompson, who has entered for the purse and was regarded as having a good chance to win.

Mr. Ripley remarked in an off-hand way, "I will give you double what you paid Mr. David Bonner for his half interest in the horse."

"Say double and \$3,000 additional and the horse is yours."

"No, but I will make it \$1,000." Mr. Raymond reflected a moment and then remarked, "I will take it."

"All right, now tell me what you paid David Bonner for his half interest."

"What, you do not know?"

"No."

"Well, it was \$3,500."

"The devil, you say. Then I owe you \$18,000."

Horses in Russia.

In European Russia, exclusive of Poland, there are nearly twelve million horses; in the Caucasus there are about half a million; while in Siberia and Central Asia there are nearly five millions.

That horse-breeding in Russia has made important advances there can be no doubt, for it appears that ever since the thirteenth century great attention in particular has been paid to the studs of members of the various princes and emperors, while at the present time there are five imperial studs which from time to time are carefully replenished and the increase disposed of every four years by auction, this increase going to all parts of the country.

Says Bell:—The last of St. Simon has probably been seen on a racecourse, the son of Galopin being unlikely to stand another preparation. It is rumored at Newmarket that the Duke of Portland will not run the risk of quiet breaking down the colt, but that he will stand at Welbeck next season, though he will only serve a few of the Duke's mares.

S. C. BOWLEY, FIDDES & CO. Auctioneers.

ASHLAND PARK TROTTING STU

NEAR LEXINGTON, KY.

B. J. TREACY, PROPRIETOR.

THIS IS STRICTLY A BREEDING FARM, FOR though training is done, it is only for the stock belonging to the place, or those purchased from the proprietor. The proprietor of Ashland Park has no pet trotting family; his aim is to secure and have at all times for sale choice representatives of each of the leading families, these being the Hambletonians, Mambrino Chiefs, Clays, Black Hawks, etc.

E. J. TREACY, Lexington, Ky.

Stick-Fast Toe-Weight.

This Toe-Weight, wherever introduced, has effectually supplanted every other kind. All prominent saddlers and horsemen in the U.S. recommend them in preference to any other.

Sizes 2 to 12oz. Ask your dealer or send to MILES & ANDREWS, Sole Manufacturers, Fentonville, Mich.

California Coursing Club, FALL MEETING,

MERCED, Nov. 20th and 21st.

THE GOLD CUP WILL BE CONTESTED FOR AT this Meeting.

The drawing for Places will be held at 539 California Street, Saturday evening, Nov. 15th, 1884, at eight o'clock.

All lovers of this grand old sport who wish to witness a meeting between the fastest Greyhounds in California, will assemble at the ferry landing, foot of Market St., San Francisco, on Wednesday, Nov. 19th, at four o'clock, P. M. Tickets for round trip, \$5.00, for sale at ticket office.

JOHN HUGHES, President, J. J. MURPHY, Secretary.

Arno Stock Farm

TO RENT FOR ONE OR A TERM OF YEARS.

All of the 1,201 acres conveyed to me as my separate property by my father, John E. McCauley, March 4, 1875, except the part thereof leased heretofore by me for grain raising to Messrs. Journeay. The land and premises hereby offered embrace all of the grass and pasture lands of the Arno Stock Farm, except one field, and includes the Family Residence furnished or unfurnished, Hay Barns, Horse Barns and Stables, Granary, Blacksmith Shop, Trainer's Cottage, Men's House, Corrals, Paddocks, Track and Outlets, Orchard of Bearing Trees, Windmills, Engine, Tanks, etc., etc., all and singular the improvements and fixtures upon or belonging to said farm; and also the Stable Pasture upon the land cropped by the said tenants, and one-half of the Thrashed Straw. Possession given immediately. For further particulars apply to Messrs. Beatty & Denson, attorneys-at-law, Sacramento, or to the undersigned upon the premises.

MRS. ALICE M. VALENTIN.

Found at Last! GOLD SEEKERS FRIEND! A CONTENTS that will help you to more READY CASH AT ONCE than any other method in the world. It never fails. World's Fair Co., 122 Nassau St., New York.

### JERSEYS and GUERNSEYS,

Registered in the A. J. C. C. and A. G. C. C., of New York, the only standard register.

Jersey Belle of Scituate that made 25 lbs 4 1-2 ozs. of butter in one week.

A grandson of above cow is now in use in the Yerba Buena. This herd won all the herd prizes for 1882. Since then have been added young animals from Mr. Pierce's valuable herds East. He now has Jersey Belle of Scituate, Coomassie, Mary Ann of St. Lambert, Silver Cloud and Eurotas strains; also large selections from the islands, without regard to cost.

He has interest in Eastern herds of 200, at the head of which stand only living son of Jersey Belle, Romeo de Bonair, (87 1/2 per cent. Mary Ann's blood), and Pierson, the best show bull in America. These bulls are valued at \$10,000 each.

HENRY PIERCE, San Francisco.

### IMPROVED HORSE CLOTHING.

Secured by Letters Patent ISSUED MAY 27, 1879.  
 REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J in combination with the elastic connecting-strip I, substantially as described and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose sirringles is avoided, substantially as herein described.

Manufactured and for sale by  
 L. D. STONE & CO.,  
 422 and 424 Battery St., SAN FRANCISCO, CAL.

### DIETZ'S PATENT

### CHECK HOOK.

Simple in its Structure and Practical in its Use.

The horse never loosens the check-rein when this Check-Hook is used.  
 Horsemen can appreciate the value of a Check-Hook of this kind.  
 There being no springs or hinges to break connected with it, makes it serviceable and easily appended, as the check-rein passes through a solid ring attached to the front of the book.

A. C. DIETZ.

No. 9 Front St., San Francisco, Cal.

Will receive prompt attention.  
 When ordering state whether gold or silver plate required.

Sole Agent for the Coast.

SEND FOR CIRCULARS.

**FAIRLAWN, 1884.**

TENTH ANNUAL CATALOGUE

Now ready for distribution. Contains descriptions and pedigrees of 252 head of High-Bred Trotting Stock now at Fairlawn. Will be sent free to all applicants who enclose 3 cents in stamps to prepay postage.

25 HIGHLY-BRED BROOD-MARES,

Bred to the Fairlawn Stallions, and

130 HEAD OF VERY PROMISING YOUNG STOCK,

Consisting of Young Stallions, Fillies and Roadsters, are offered at *Private Sale*.

**THE ONE PRICE PLAN** is strictly adhered to at Fairlawn, and the price of every animal for sale is printed in the catalogue. Purchasers from a distance can buy on orders at exactly the same prices as if present in person. All stock sold on orders can be returned if they do not come fully up to the descriptions given.

The Stallions in use at Fairlawn are

**ALMONT 33.**

Represented in the 2:30 list by 24 performers, with records ranging from 2:15½ to 2:30. Limited to 20 approved mares at \$300 the season.

**HAPPY MEDIUM 400.**

Sire of 18 performers with records of 2:30 or better. Limited to 25 mares at \$150 the season.

**ABERDEEN 27.**

Having ten of his get with records ranging from 2:15½ to 2:27½. Limited to 40 mares at \$150 the season.

**ALECTO 2548.**

By Almont, out of Violet, by Rysdyk's Hambletonian. Limited to 30 mares at \$50 the season.

**STARLIGHT 1526.**

By Almont, out of Starling, by George Wilkes. Limited to 50 mares at \$50 the season.

Ethan Allen, Jr., 473, used as a Private Stallion.

The Fairlawn Stallions in 1883 had eight new ones of their get to make records of 2:30 or better, and three new ones to enter the 2:20 list. The sons of each of these stallions are siring trotters. Almont has six different sons that have sired 2:30 trotters. Mares failing to get with foal can be returned in 1885 free of charge. For further information, and catalogues containing full particulars, address

Lock Box 392.

WM. T. WITHERS, Lexington, Ky.

**FOR SALE.**

Brood Mares,  
Fillies, Colts, Etc.

THE GET OF

Electioneer Gen. Benton,  
Piedmont,

AND OTHER NOTED STALLIONS OF  
PALO ALTO.

These horses are all highly bred and are sold only on account of the crowded condition of the quarters at the farm, caused by the rapid increase in numbers. For further particulars apply to

Charles, Marvin,  
PALO ALTO STOCK FARM.  
MENLO PARK.

**FOR SALE.**

—A PAIR OF—

Hammerless Breech-  
Loading Guns.

TEN BORES, ONE W. & C. SCOTT & SONS makers, 0 lbs. 12 oz. weight. Full choked. Triplex action. Cost \$225. The other a William & Powell, Liverpool, 9 lbs. weight. One barrel modified choke. The other, left, full choke. Cost \$50 in England. Both are first-class guns, and guaranteed to be such. Can be seen at Messrs. Cotrel & Co., gun dealers, 628 Montgomery street.

**RACING PLATES.**

PACING PLATES OR TRAINING SHOES OF any size or weight, forwarded on receipt of price, \$2.50 per set. All plates and shoes guaranteed to be of the best material and workmanship. Samples can be seen at the office of the BREEDER AND SPORTSMAN. Address, M. J. O'LEARY,  
San Buena Ventura, Cal.

**Deer Hound Pups**  
FOR SALE.

THREE DOG PUPS, OUT OF IMPORTED Graugab, by Hector. Apply at this office, or to Capt. A. C. Hutchinson, on the Fair Grounds of either Sacramento, San Jose or Stockton, during their respective sessions, where a full-grown imported specimen of the breed and the pups can be seen.

**PATENT RIGHTS.**

Inventors' Institute,  
105 STOCKTON STREET,  
(Corner of O'Farrell.)

Patents Procured for \$65, and Patents Negotiated. Send for Particulars.

**KERR'S**  
**ASTHMA**  
**CURE**

Cures Asthma, Bronchitis, Throat and Lung affections, Coughs, Colds, Quinzy, Sore Throat, Soreness in the Chest or Lungs, Weakness in the Back, Pains in the Back, Bowels, Sides, Colic, Cramp, Pneumonia, Measels, Whooping Cough and Indigestion. It beats the entire system. Pleasant tasted as ice cream. For sale by all druggists. Price, 50 cents and \$1.00 per bottle. Post-office box 1870.

REDDINGTON & CO., Wholesale Agents, 529 and 531 Market Street, San Francisco.

The Firm also carries a large stock of  
**HARDWARE, RIFLES, GUNS,**  
**PISTOLS,**  
Of every make  
**CARTRIDGES, FISHING TACKLE,**  
**RODS and FLIES,**  
in every variety, and all articles belonging to the Sportsman's outfit on REASONABLE TERMS.

**PACIFIC COAST**  
**Field Trial Club**  
**DERBY FOR 1884.**

Nominations close Nov. 10th. Entrance \$10; \$3 to accompany nomination; \$7 additional when starters are named. Purse \$175; \$100 to first; \$50 to second, \$25 to third. All pups whelped on or after April 1st, 1883 are eligible. It is hoped that those desiring to compete will be prompt in making nominations. Club dues are now payable to the Secretary. THOS. BENNETT, President. N. E. WHITE, Secretary, Sacramento, Cal.

**For Sale.**  
A Nutwood Stallion

3 YEARS OLD, 15½ HANDS HIGH, WEIGHED JAN. 1, 1884, 1,085. Has shown a 2:45 gait on one month's track work. His dam is by John Nelson. The colt will be at the State Fair if not previously sold. GEO. W. HANCOCK,  
Sacramento, Cal.

**HOLSTEIN CATTLE.**

WE EXPECT A CONSIGNMENT OF 50 HEAD about the last of November. For particulars address 11. & W. PIERCE, 728 Montgomery street.

**DEER HOUNDS.**

WANTED TWO YOUNG DEER HOUNDS, 12 months old. Address with price and other particulars 123 California Street, S. F., Room

Suspensory Bandages.

A perfect fit guaranteed. Support, Relief, Comfort. Automatically Adjustable.

DISPLACEMENT IMPOSSIBLE.

Treatise on Nervous Tension and Circular mailed free. Sold by Druggists. S. E. G. RAWSON. Patentee, Saratoga Springs, N.Y.

IMPROVED Blind Bridle & Winkers FOR RACE HORSES.

Secured by Letters Patent, July 25, 1882.

Having thus described my invention, what I claim as new, and desire to secure my letters patent, is:

- 1. The part D, supported by the side straps of the bridle, extending back as shown, the front having an opening into which the blind is fitted, substantially as herein described.
2. In a bridle, in combination with the extensions D, the curved hindrs F, secured to such extensions, and as shaped, to give full freedom and ventilation to the eye while circumscribing the vision, substantially as herein described.
3. In a bridle, and in combination with the extensions D, blinds F, and side straps A, the screw, nut and washer E, to secure the blind and allow it to be set, substantially as herein described.
4. In a bridle, and in combination with the cheek-pieces D and blinds F, as shown, the adjustable front straps or bands G and H, and the rear band I and the throat-latch or lash connected with the blinds, and adjustable, substantially as herein described.
5. In a bridle, and in combination with the blinds F, supported and pivoted to the bridle so as to be movable about the point of support, the adjustable front straps or bands G and H, and the rear band I and the throat-latch or lash connected with the blinds, and adjustable, substantially as herein described.

The above are the claims allowed by the patent office, and though the corresponding letters do not appear on the cut, the general principle will be understood.

It meets with universal approbation, doing away with all the objections urged against blinds, and at the same time giving complete control of the line of vision. By throwing the lower portion of the hind up something of the same effect on the action follows as is induced by toe-weights. This is especially the case with young colts as the pupils, teaching them to bend the knee without the strain of weights on the feet.

For bridle of all descriptions apply to JOHN A. MCKERON, No. 230 and 232 Ellis St., San Francisco.

Thoroughbred SETTER PUPPIES.

ENGLISH SETTERS, FIN est breed imported, Irish Setters, from Champion stock imported by R. W. Hill of Oregon. Pedigrees guaranteed. \$25.00 each at six weeks old. Apply to E. LLAVERLEY, Gilroy.

CALIFORNIA Electro-Plating Works,

657 MISSION STREET, Gold, Silver and Nickel Plating on all Metals. SPECIAL ATTENTION PAID TO Plating Carriage Hardware and Harness Trimmings of All Kinds.

TABLE WARE AND BAR FIXTURES REPAIRED and plated at the lowest rates. Copper plates silver-plated for saving gold. All work in our line guaranteed. KEATING & FAGAN, Proprietors.

SUMMER ARRANGEMENT.

Commencing Sunday, May 4th, 1884. AND UNTIL FURTHER NOTICE, Passenger Trains will leave from, and arrive at, San Francisco Passenger Depot (Townsend Street, between Third and Fourth Streets) as follows:

Table with columns: LEAVE S. F., DESTINATION, ARRIVE S. F. Lists routes to San Mateo, Redwood, Menlo Park, Santa Clara, San Jose, and Principal Way Stations.

STAGE CONNECTIONS are made with the 10:40 A. M. Train, except Pescadero Stages via San Mateo and Redwood, and Pacific Congress Springs Stage via Santa Clara, which connect with 8:30 A. M. Train.

EXCURSION TICKETS.

For Sundays only, for return same day. For Saturday, Sunday and Monday, good for return until following Monday (lay inclusive), at the following rates:

Table with columns: Round Trip from San Francisco to, Sun. Tkt., Satto Mon. Tkt., Round Trip from San Francisco to, Sun. Tkt., Satto Mon. Tkt. Lists rates for various destinations like San Bruno, Millbrae, Oak Grove, etc.

TICKET OFFICES.—Passenger Depot, Townsend street, Valencia-street station, and No. 613 Market street, Grand Hotel. A. C. BASSETT, Superintendent. H. R. JUDAH, Asst. Pass. & Tkt. Agt. SOUTHERN DIVISIONS.

Sportsmen & Pleasure-Seekers. THE SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE SUPERIOR FACILITIES AFFORDED BY ITS LINE FOR REACHING with speed and comfort the best places in the State for Sea Bathing, Shooting and Fishing.

MONTEREY, THE MOST CHARMING Summer and Winter Resort of the Pacific Coast.

with its beautiful Groves and delightful Drives. Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best of shooting may be had in season. THE BAY OF MONTEREY is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Baracoda, Pompano, Spanish Mackerel, and Flounder.

THE BATHING FACILITIES AT THE "HOTEL DEL MONTE," ARE UNSURPASSED, having a MAONIFICENT BEACH of pure white sand for surf bathing. THE BATH-HOUSE contains SPACIOUS SWIMMING TANKS (150x50 feet) for warm salt water plunge and swimming baths, with ELEGANT ROOMS connecting for individual baths, with douche and shower facilities.

THE FAVORITE ROUTE to those well-known Watering Places, APTOS, SOQUEL AND SANTA CRUZ, IS VIA THE Southern Pacific Railroad, (Broad Gauge).

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably Quail, Pigeon, Sulpe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known resorts, PILARCITOS, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHER'S for RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets will be entitled to FREE TRANSPORTATION OF THEIR DOGS when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

TICKET OFFICES.—Passenger Depot, Townsend street, Valencia Station, and No. 613 Market st., Grand Hotel. A. C. BASSETT, Superintendent. H. R. JUDAH, Asst. Pass. and Tkt. Agt.

LINES OF TRAVEL.

C. P. R. R.

TIME SCHEDULE.

SATURDAY, NOV. 1st, 1884. Trains leave, and are due to arrive at, San Francisco as follows:

Table with columns: LEAVE (FOR), DESTINATION, ARRIVE (FROM). Lists various routes and destinations like Benicia, Byron and Martinez, Calistoga and Napa, Colfax, Delta and Redding & Portland, etc.

Train leaving San Francisco at 8:09 A. M. meets Pacific Express from Ogden at Vallejo Junction; and train leaving at 8:30 A. M. meets Pacific Express from El Paso and Mojave at Oakland Pier.

LOCAL FERRY TRAINS, VIA OAKLAND PIER.

From San Francisco Daily.

Table with columns: TO EAST OAKLAND, TO FRUIT VALE, TO ALAMEDA, TO BERKELEY, TO WEST BERKELEY. Lists departure and arrival times for various destinations.

To San Francisco Daily.

Table with columns: FROM FRUIT VALE, FROM EAST OAKLAND, FROM BROADWAY, OAKLAND, FROM ALAMEDA, FROM BERKELEY, FROM WEST BERKELEY. Lists departure and arrival times for various destinations.

CREEK ROUTE.

Table with columns: FROM SAN FRANCISCO, FROM OAKLAND. Lists departure and arrival times for the Creek Route.

\*Daily, except Sundays. †Sundays only. \*Standard Time\* Furnished by RANDOLPH & Co Jewelers, 101 and 103 Montgomery St. S. F.

A. N. TOWNE, Gen. Manager. T. H. GOODMAN, Gen. Pass. & Tkt. Agt.

## OUR NEW YORK LETTER.

### Deaths of Noted Racehorses—Old Bushwhacker and His Deeds—The Stallion Lever—Yearling Race in Tennessee—General Notes from Home and Abroad.

The accident list of the year has been an unusually long one. Lloyd Daly was killed in a race in Canada last week, and De Soto and Bushwhacker, the two latest unfortunates, ended their racing careers in short order, the former high-priced graduate from Rancocas evidently laboring under an adverse star from the very first, though his winning bracket for his new owner at the second essay made it look as if Mr. Walters had secured a bargain. Poor old "Bush" ended his sensational career at work that might well have been spared the old veteran, in view of the years and honors that had fallen to his lot. The writer well remembers one of the most sensational wins of the "Tennessee runt," as he was at first styled, and one that seems to have outgrown the memories of most racing men on account of its being over a short course. It was at Pimlico, late in May, six years ago, and the opening day of the Maryland Jockey Club had been postponed from Tuesday to Wednesday on account of bad weather. The track was, of course, rather heavy, but not so bad as it might have been, heats being run in 1:46 during the afternoon. The attendance of representative stables at that Spring meeting was large, and the Rancocas stable opened the ball in grand style, winning with Garrick and Judith the two first races of the meeting, the dash for maidens and the Chesapeake Stakes, both from strong fields, the late Billy Barrett riding both winners. The Rancocas Handicap was the fourth race of the day, and as it was the first year of the stake, the stable it was named after naturally made a strong bid for first honors. Perfection, the three-year-old sister to Parole, was in at 92 lbs., and as the field opposed to her was not rated as a very strong one, the filly with Barrett in the saddle was a strong favorite. Danger, destined to afterwards show great deeds for Islip, was next in favor, then came Oriole and Viceroy in public estimation, while the Virginia pair, Bushwhacker and Majestic, sister to Kingfisher, sold low down in the pools, which were very heavy. Five others started, eleven in all, and as the race was only nine furlongs, there was not much waiting after the flag fell. The Lorillard candidates were out of it before the last furlong, the favorite from being outrun, and Danger from getting away badly at the start, and the finish was between Bushwhacker and Viceroy, the "all yellow" on the former reaching the wire a length ahead of the "yellow sleeves," worn by Evans on the latter, amid the greatest excitement at the victory of the despised Tennessee runt. Danger was a close fourth to Oriole, and the next day he shouldered 10 lbs. more in the Vernal Stakes and ran the mile in 1:42, the best performance at the distance ever shown at Pimlico. The writer put a friend on who landed odds of 30 to 1 by the victory of Bushwhacker in the Rancocas Handicap, and he has always regarded the old gelding with a peculiar interest.

The death of Lever at Elemendorf last week is a great loss to Mr. Dan Swigert. The gentleman was in this city the day prior to the stallion's demise, and to be met with such news on his reaching Kentucky was unfortunate enough. Lever was one of the most successful of the sons of Lexington in the stud, and in Mahlstick, Loulanier, Leveller, Apollo, and the California mare Precious, he sired some good horses, able to go fast as well as stay. If Lever had not been so crippled when a yearling as to prevent his ever being trained, and had he not been comparatively neglected by breeders until Mahlstick's appearance, it is likely that he would have made more of a name than he has. Lever's sire and dam have both preceded him to the unknown shores, but Legatee, a full brother of his, is standing at ex-Gov. Bowie's stud farm, near Baltimore.

The day previous to Lever's death the Preakness Stable's valuable broodmare Virgillette, foaled 1879, by Virgil, out of Regan, by Lexington, etc., was gored to death by a bull at the farm of Mr. Leslie Coombs, near Lexington, Ky. As the mare was a full sister to Virgil, Vera Cruz, Jennie D., Jennie B., etc., she bade fair to have been a successful stud matron, and being in foal to that noted racehorse and promising young sire Macduff, by imp. Macaron, the accident is particularly unfortunate to her well-known and popular owner, coming on the top of the many disappointments he has experienced on the turf this year. That Himalaya and his stable companions, now in winter quarters, may in 1885 compensate the master of Preakness for 1884's run of ill-luck, is the wish of every lover of the turf in this vicinity, for no colure that are seen on our courses have a larger public fol-

lowing than his well-known "black body, yellow sleeves and cherry cap."

Coming on the heels of the premature rumors regarding McLaughlin's engagement to ride next year for the Rancocas Stable at a fabulous salary, comes the intelligence that the well-known young Kentucky trainer, Mr. J. H. McCreary, is now at the farm near Jobstown, N. J., where he has been retained by Mr. Lorillard as second trainer. In other words, while Byrne directly looks after the horses during the racing season, McCreary will handle the home lots, from which drafts are constantly being made as required. In this new accession to his training corps, Mr. Lorillard has the right man in the right place, and a rising light in his profession. The open weather in Kentucky this Fall has greatly increased the ranks of the thoroughbred yearlings that have been initiated into their future labors, in so far as breaking and handling consists. Many fast moves by the young things are reported, the latest being that of a filly of Mr. Clay's, who is said to have moved a quarter in 23 1/2 seconds.

Reports from Gallatin, Tenn., indicate that quite a local interest has been awakened in the yearling stake that will be decided over the old Albion course on the 10th of November. While deprecating any such public trials of these embryo racers, as tending to result in harm if pursued in to any extent, it is not likely that the Mulberry Stakes and its dash of a quarter of a mile can do the youngsters much injury, provided they are not "ridden out." Some ten or dozen entries have been made to this affair, the winner's prize to be innumerable bottles of champagne, contributed by the losers and one of the local Bonifaces. We can imagine the afterpiece, with the inevitable game supper sure to follow after the sport.

Mr. A. J. Cassatt, better known as Mr. Kelso, has further strengthened the stock department of his Chester Valley Farm in Lancaster County, Pa., by the purchase of some fashionably-bred Shropshire sheep. In Mexico City recently, at the residence of Mr. Hanly quite a notable event was the recording with appropriate ceremonies the foaling of the first thoroughbred foal ever dropped in the province. The youngster was foaled in June last, and is by the ex-Canadian sire Princeton out of the imported mare Castaway, by Zetland, etc. He was christened Anahuac.

At Sherman, Texas, during the running races that took place there last week, an affair took place on the last day, Friday, Oct. 31st, in some respects similar to the disastrous accident at Jerome Park last month. In a dash of a mile and a quarter, with seven starters, the leader fell, the second horse fell over him, and most of the others did some tall jumping across the prostrate animals and riders to avoid a like fate. One of the fallen horses (Harper) was killed, and a jockey's skull fractured, so that it was thought that he would not recover. The well-known horse Aretino, formerly owned by the Powers of Illinois, but now in G. Cooke's string, proved to be the winner of the race, and will probably now be schooled to jumping, after his skill in that line on this occasion.

Brighton Beach track will be still further improved next Spring. The enlargement of the grand stand was a much-needed improvement, and by Spring the track will be widened to better accommodate the constantly increasing fields. This will, of course, necessitate changes around the entire mile circuit, and with more room for the horses, raised turns, etc., Brighton will be one of the safest racecourses in America.

Many well-known New Yorkers have been enjoying the hospitality of the Genesee Valley Hunt Club during the last two weeks, and some very exciting runs have been chronicled in and around the picturesque vicinity of Genesee, N. Y. Visitors from other hunt clubs have also signaled the sport with their presence, and the present "meet" will have the effect of popularizing cross-country sport in the interior of the State. On Wednesday, the 22d, a hunt was held from Oak Forest, the Piffard residence, and on Saturday, Oct. 25th, Mr. Enos Armor's, at Groveland, was the rendezvous. The meetings will be kept up as late in November as the weather will permit.

Eole is entered in the Liverpool Cup, run to-day (Thursday) and his weight (118 lbs.) would not stop him, perhaps, if he had been longer in Albion, but we do not anticipate his starting. In the Shrewsbury Cup, two miles, run on the 22d, he has been allotted 116 lbs., and perhaps British racegoers may then make his acquaintance for the first time.

For St. Gatien, who won the Free Handicap and Jockey Club Cup during Houghton week at Newmarket, in addition to the Cesarewitch and other good races already noted, one hundred thousand dollars were refused by his owner, lucky "Jack" Hammond. The Sterling-Casulty colt, winner of the Dewhurst Plate, for two-year-olds, was also the subject of a large offer, £10,000, (\$50,000) being refused for him. He

is likely to be the Winter favorite for the Derby, as Melton, the Middle Park Plate winner, has bad legs, which may trouble his trainer.

The large entry made by California stables in the stakes of the Washington Park Jockey Club, Chicago, shows that your State will be foremost in the fray in 1885. Out of 444 entries to the seven stakes, over one hundred, or nearly 25 per cent. of the aggregate, are California bred colts and fillies. This showing speaks for itself.

Yours,  
NEW YORK, Oct. 31, 1884.

PACIFIC.

## The Same Thing the World Over.

It is no secret that James Roe declared time and again that the Dwyers were piling in on him too many horses to train. More than one eminent trainer has found this out, but few had the frankness to acknowledge it, as was the case with Roe. The following remarks by the special commissioner of the London *Sporting Life* show that they are beginning to find this to be the case in England also:

There is everything in the constitutions of racehorses, and whilst some, as it were, must be allowed to run their own race, as the saying goes, others come to hand almost for the asking, but there is no hard and fast line to be laid down—in the matter of training, I mean. To some the forcing process may not come much amiss; to others it would simply mean ruination. It is nothing against the abilities of a trainer to say that he is never in a hurry with his charges, and fortunate for him it is when an owner is too good a sportsman to overlook the point of the maxim as to "the more haste the less speed." In some ownerships Prism [a case in point] would probably have been a ruined horse, as, naturally more time for development, the go ahead system now-a-days in practice, and encouraged—nay, insisted upon by a certain class of owners—would long ere this have lost to the turf an undoubtedly smart horse, and a real good-looking one.

I repeat, hurried preparations have killed many a useful, well-bred, and good-looking horse, the system being the offshoot of a want of practical knowledge, as well as the results of the demands made upon such "instruments" racehorses have become, and no sooner is the thoroughbred out of the breaking tackle than a speedy victory upon which money can be won is expected of him.

Whilst acknowledging that the 'prentice hand in the calling of a trainer is not infrequently rewarded by turning out a winner, I also suggest that the losers from amongst a stud of horses should likewise be taken into consideration in gauging professional abilities. It comes as no evidence that the non-practical and inexperienced should be successful with one or two out of a charge of thirty or forty; but the test is, how many more horses would be made to blossom and bear fruit did those training them know their business? The oldest man in the "trade" can have too many "irons in the fire," or, in plainer terms, too many horses to train. As a consequence, some of the latter must suffer from neglect, not willful, and for the very reason that it is impossible to thoroughly understand and know the different constitutions and requirements; at any rate, it certainly takes a longer time to learn the subject, and then the experience may have to be purchased dearly. I think my meaning is plain enough. I have mentioned two horses requiring what I will term special attention; at any rate, I have a strong opinion in this direction. I could name others that, with a like advantage—which could only be obtained in schools with a limited number of pupils—would hardly have known defeat. In a word—were the homes of our English thoroughbreds, on less gigantic proportions, we should have more St. Gatien's. A long string from a big stable was filing past by the side of the Cambridge road one morning last week; a question and the answer came almost in the same breath from an individual, a comparative stranger, who, like myself, had noticed the promising looks of a vast majority of the nags: "How is it this man does not win more races? He has too many horses."

R. Porter Ashe has become the owner by purchase of the thoroughbred horses Alta, 2 years, by Norfolk, dam Ballinette, and Patsy Duffy, aged, by Leinster, dam Ada A., by Asteroid, and these horses will carry Mr. Ashe's cherry jacket and cap hereafter. It is reported that Mr. Ashe and M. M. Allen have also an option on the four yearlings purchased by W. R. Toddhunter at the Winter's sale last Spring, viz: chestnut colt Amphion, by Norfolk, dam Illusion; chestnut colt King of Norfolk, by Norfolk, dam Marion; chestnut colt Ed. Corrigan, by Joe Hooker, dam Countess Zeicka; chestnut colt by Norfolk, dam Mattie Glenn.

## Lessons from the Trotting History of 1884.

Every year brings surprises in the annals of the trotting turf, but this season, which is now drawing rapidly to a close, seems to be more startling in results than any previous year. Both the trotting and pacing performances form important epochs in the campaigns of 1884.

Nearly every king or queen of the turf has had a reign equal to the average dynasty of the ancient Saxon monarchs, but this year has been one of rapid horse enthronement and dethronement. Smuggler, among trotting horses, for eight years was the emperor of all stallions, living or dead. Now he is forever dethroned. Phallas, in a genuine race, has beaten his 2:15 by one and a half seconds, and Maxy Cobb, in a favored trial, has eclipsed the mighty Smuggler by two seconds, and his short lived successor by one half of a second. The converted pacer has thus surrendered to two grandsons of Hambletonian the crown of the fastest trotting stallion, and now it is in order for them to wager hettle for the sole supremacy. It is late in the season, but before the snowflakes whiten the trotting courses, it is an open question whether Phallas or Maxy Cobb will reign supreme.

The fastest trotting record for all ages and sexes has been trembling in the balance with equal uncertainty. Jay-Eye-See came out early from his Winter quarters, with his feet shod with the speed of the wind. He was indulged in his flights of swift trials weeks before it has heretofore been deemed prudent to consider the muscular system to be gradually hardened for long-continued efforts. Before Maud S. had beaten 2:16, he had shown a mile in 2:11, and the indications pointed to the obliteration of the fastest record. These indications were speedily justified. In a few weeks after his fast trial at Cleveland, he lowered the record at Providence, by one quarter of a second. Then predictions of his still further reducing the record came thick and fast. At first 2:09, then 2:08, and as low as 2:06 were claimed to be within the limits of his capacity. But the inflexible laws of nature soon began to assert their sovereignty. Jay-Eye-See had been forced too rapidly. His powers of endurance had been sacrificed to undue haste of preparation. He endeavored, under favorable circumstances, to eclipse his own performance. He has trotted half miles—aye, three-quarters of a mile—fast enough to perform the feat, but the early work began to tell upon his capacity to keep up this wonderful stroke. His vitality had been severely mortgaged. Congestive chills, and consequent debility demanded recuperative rest, and the strong probabilities are that Jay-Eye-See has made his best mile for the year 1884.

Maud S. came to her speed more gradually, yet more certainly. Like a jealous queen—a very Sbeba among female sovereigns—she waited till Jay-Eye-See had beaten her record, and then before the sun had gone to rest on the succeeding day, she had again placed the diadem of ephemeracy upon her own head. The mornings and evenings are becoming unfavorably cool; the Autumn winds are beginning to blow fiercely, and the days are now quite uncertain for great speed trials; but her racing form is again steadily improving, and before the merry-makings of the holidays bring the jingle of sleigh bells, she may have still further reduced the time in which she can trot a full mile. May this be her good fortune, for in all probability she will never again appear on the trotting turf after the close of this eventful season of 1884.

But the pacers have challenged almost equal interest, not only by their rate of speed, but the confusing lines of their breeding. It is a singular coincidence that till within the past month only one quarter of a second separated the records of the two fastest trotters, and only one quarter of a second separated the fastest trotting and the fastest pacing records.

Heretofore the pacing action was considered to be the swiftest movement. This conclusion was not only based upon the great wagon record of the superbly-crested pacer Pocahontas, of 2:17½, in 1855, but upon the well-established unfairness of pitting a trotter against a pacer in public races. But time for a season seemed to reform all these conclusions. The trotting horse for the past five years has steadily led the pacer in speed. When St. Julien had beaten the 2:12 of Blind Tom, and Johnson, the pacer, came to the front to heat the trotting record of St. Julien, then Jay-Eye-See quickly appeared on the turf, to match on the trot the best pacing record of Johnson, and Mand S. completed the trotting triumph by eclipsing by one quarter of a second the fastest pacing record. These reductions of the record by only one quarter of a second seemed to indicate that both the pacing and trotting records were certainly being reduced to their lowest marks, when suddenly Johnson appears on the course at Chicago, and not only paces a half-mile in 1:03½, but finishes the other half in 1:02½ without a break, making the full mile in 2:06½. Now the champion trotters have a mark to overcome that it was never dreamed would be placed before them by the once despised pacer.

The records of 1884 have consigned to the vast realms of error another apparently well-settled fact. The pacer is no longer considered a quitter. His breeding is no longer regarded as the synonym of cold blood, nor his endurance stamped as of unknown frailty. In a race for blood, when the heats are severely contested and broken between rivals; when the contest is punishing to spirit and body to the end, the average pacer has not only shown courage and lasting powers this year, that will match the game of the highest-bred trotters, but he has challenged the most splendid exhibitions of the redoubtable thoroughbred. Johnson paced his first quarter in thirty-two seconds. This amazing speed he increased by one-half second on the second quarter. To pace, as well as to trot, the first half of the mile in 1:03½, has always been deemed fatal to a game finish. But he paced the third quarter in exactly the same time (thirty-one and a half seconds), and then bade defiance to all precedents by pacing the last quarter in thirty-one and a quarter seconds, which was the fastest quarter, by just one-quarter of a second, in the mile. The great reinsman, John Splan, drove him in this remarkable performance. After all, it seems to be the moral of this year's records, stoutness, courage, and capacity to repeat at great speed are the results of training and conditioning and skillful manipulation, as much as the infusion of thoroughbred blood. The trotting horse is now the visible admixture of thoroughbred, pacing and trotting lineage. If the representative examples of these three lines of admixture, singly as well as in their combinations, evince courage as well as speed, who can estimate the limits of improvement in the trotting horse? What will be the *ultima thule* of his capacity?

In another aspect the pacer still leads the trotting horse, and that is in regard to wonderful speed when assisted by a running mate. H. B. Winship or Frank, with the thoroughbred Firebrand, can make the record of Ethan Allen, 2:15½, with a running mate, seem to be comparatively slow, but they in turn are relegated behind the distance flag, by Westmont's 2:01½, or even Minnie R.'s 2:03½, with a runner for a harness companion. If this method of showing speed is any indication of future capacity when fully developed without assist-

ance, then the pacing action would seem to be more gifted than the trotting movement. But the performances of the year 1884 present another novel and instructive feature. Many enthusiastic prophets of the future greatness of the trotting horse claim that when he has been as steadily developed for as many generations as the running horse, he will not only equal him in form, but in performances. In whatever space of time, they claim, the thoroughbred can run a mile, the trotting horse can match the performance on the trot, all the conditions being equal. Now, these prophets triumphantly exclaim, the conditions are disparagingly unequal, to the prejudice of the trotting horse. He draws behind him from two hundred to two hundred and fifty pounds of combined live and dead weight, while the running horse carries compactly upon his back, in the very centre of his motion, from ninety to one hundred and twenty pounds of live weight. When the running horse, say these speculative enthusiasts, is handicapped as heavily as the trotting horse, then the disparagement of their speed capacities will be reduced to the minimum. The only two methods of making the burden equal, is either to ride the trotting horse, or to harness the running horse. The day of riding the trotting horse in public races is numbered among the crudities of the past. Many potent reasons have been advanced for its revival, and both John Murphy and Charles Green have appeared on the backs of famous trotters to prove that they can show more speed to saddle than to harness. Nevertheless they have failed to revive this neglected practice. The trotting horse and the trotting jockey, to saddle, alike lack dignity and grace. They receive little favor in the eyes of spectators, and less patronage from trotting associations. The trotting horse must achieve his future greatness to harness. If the handicap is to be equal, therefore, the running horse must also submit to the restraint of harness. This seems to be the indication of the near future. Already, it is said, that progressive trainer, John Murphy, has yoked a pair of thoroughbreds to the pole, and the result of their performances has not only been a surprise to the authorities of the running turf, but rather a source of discouragement to the trotting horse prophets we have quoted. They ran, it is asserted, a full mile together in one minute and forty-five seconds to wagon. If the report is correct this makes a fearful gap of nearly twenty-five seconds for the fastest trotting performer to bridge over when driven singly, and the greater gap of more than one-half minute for the fastest trotting double team to overcome. Will the trotting horse ever be equal to the emergency?

Then again it has been asserted by the seers of horse lore, that the running horse is unable to keep up his greatest stroke and utmost speed throughout the brush of a mile. This wonderful running team, it is claimed, rated all their quarters from start to finish more uniformly than the swiftest trotting horses. It must be remembered, too, that they are unhoused to such performances. After they have had generations of training for such contests, how much greater will be their performances no one can mathematically estimate. Verily the wonderful American trotting horse has an exceedingly difficult task to accomplish if he expects to equal the performances of the grand running horse, even under equally favorable conditions. But the breeders of the trotting horse need not hopelessly despair. He has reduced the trotting records already below the most sanguine expectations of advanced writers who recorded the 2:19½ performance of Flora Temple as the ultimatum of trotting capacity. Already seven trotting horses have marked upon the calendar 2:14 or better. Already one has crossed 2:10, the predicted limit of trotting capacity. Already with a running mate, the trotting horse has trotted below 2:08, and the number of new aspirants for turf honors, who have already made trotting records in 2:30 or better, is greater thus far in this remarkable trotting year than up to the same time in any previous year. Verily any writer who would fix the limit of trotting capacity in the limitless future, is endowed with more hardihood than he is gifted with caution.—S. T. H. in *Live Stock Journal*.

## Campaigning in Minnesota.

M. T. Grattan has in the current number of the *Breeders' Gazette* another chapter of the experience of himself and his eighteen-year-old stallion, Herod, in the Minnesota circuit this season.

There is one thing to be said for Merrell Clough, the part owner of Silas Wright—he is a game man. Not like the owners of certain stallions in neighboring States, forever blowing and matching and never trotting. Not like his partner, Ike Simonds, who will do the bazoo work to provoke a horse race and then getting a "nervous chill" before it comes off swear he will shoot his half of the horse but what he will draw. Clough pays no attention to him but goes right on, sanguine after every defeat and determined to win next time. It is an admirable quality in man or horse and goes a long ways with me in atoning for "ways that are dark and tricks that are vau."

The day after Herod's defeat of Silas in the special, Clough came around to my stable when I happened to be gone and said to Andy, Herod's groom:

"Well Andy, how's the old hoss?"

"First rate, sir."

"I won't do him any good, I am going to down him to-day."

"No you won't, not until Silas can trot faster."

"He can run the fastest if he can't trot the fastest."

"That won't go with the judges."

"Yes it will, with those we are going to have to-day."

On my return Andy with great courtesy detailed this conversation, but I told him Clough was trying to scare him, for I thought if it was really intended to pack the stand against me an open boast of it to my man would be the last thing indulged in. Still the taste Silas had given of his aptitude at changing gaits made me somewhat anxious as to the occupants of the stand. The terms of the special had given Clough and myself the right to each choose a judge, the two so chosen to select a third. But in this, a regular purse, without special conditions, the society would select their own judges. Having confidence in the honor of the society's officials I did not venture to insult them by requesting that non-partisan judges be selected, never dreaming but what non-resident and disinterested men would be called to the delicate and important duty of adjudicating between the rival stallions. Imagine my surprise then to find the judges all residents of Rochester! The starter, John Groesbeck, had been Clough's choice in the previous race. Common fairness would have dictated that if he remained in the stand I should have been permitted to select an offset to him.

But instead of an offset his most active associate was Mr. Geo. Leonard, who had made himself wonderfully obnoxious to me in the previous race by log-rolling for Silas Wright when his duty as timer did not require him to act as advocate for either horse. The third judge, Mr. Cooley, I believe to

be a fair man, but he is advanced in years, with dimmed eye-sight, and must rely upon the vision of his associates in many instances. If they are united in looking biased, and vigorous in their stubbornness, his fairness would fail to insure the rights of a stranger against a home horse. He would be glad to believe in favor of the latter, and if he did not, could be out-voted. In scoring I quickly found that Groesbeck did not propose there should be an even send-off. With several fair starts the hell promptly jingled, and as an experiment I came up nearly a length behind. Without the slightest hesitation, before the wire was reached, came the word "Go." Herod, on the outside and behind, had a long mile to trot, and Clough, with confidence in the stand, did not labor to make it shorter. Still the studs swung into the homestretch on even terms. The driving brush having proved too long and too fast for Silas on a trot he jumped away at an easier gait. Somehow when Clough went to catch him he did not recover so handily as he had, and by shaking Herod up I was with him again before he got squared away. Again Herod beat him, and again he ran into the lead, but repeated his previous clumsy effort at recovery, so that when squared Herod was again to the front. Clough now used his whip, while Herod got a couple of reminders which he promptly responded to. The game was up. Herod could beat Silas; but, under strong persuasion, the latter run up, finishing at that gait a trifle behind. A decision of the heat did not come promptly from the stand. Mr. D. P. Smith, the owner of Maggie Kevin, standing by, said: "What are they waiting for? You were here first in spite of his running." Just then came the announcement: "Silas Wright wins this heat, Herod second, Black Jim third; time, 2:23½."

This determined me, and stepping to the stand I said: "Gentlemen, I ask permission to draw Herod from this race;" which was promptly refused. I then appealed to the officers of the Society for permission to withdraw; they refusing, I demanded as a right that a new starter be appointed who did not live in their county or my own. Every demand, no matter how fair or reasonable, was stubbornly refused. It was evident that the element which gained Rochester such an unenviable reputation years ago in the Star-Mac races, was again predominant. At the announcement of this first heat, so unfairly awarded to Wright, a splendid floral offering was presented him, with speeches and glorifications that impressed outsiders from all quarters as most inappropriate and inopportune. It called to mind the mournful hymn composed by that great humorist "Old Butch" one day when the judges took a race from him that he will die believing he won. Who among the horsemen of the northwest will forget the refrain?

"With Smithy in the stand  
And a nigger in the race  
Good-bye Alice Ward."

To present a floral offering to a horse that had been sent off ahead, that had run most of the home stretch, and then been beaten by a trotter which had not made a skip, would have been ridiculous if it had not been so exasperating. Perhaps, though, it was wise. Possibly the donors had a premonition that here, at home, with three friends for judges in the stand and the track crowded with rough clacquers, Silas Wright would achieve his only victory of the year. Is not Herod more than even with the ill-mannered mob who called him quitter, duffer, dung-hill, and who hissed my every just and honorable demand with cat-calls, cries of "kicker," and free threats of rougher treatment? Has he not his revenge written upon the record at Owatonna, Ean Claire, Sparta and Prairie du Chien, where the eighteen-year-old "quitter" and "duffer" beat the recipient of floral offerings every time he met him? Inasmuch as this was the only race in six where the judges placed the son of Alexander better than Herod, can not the honorable gentlemen at Rochester, to whom earnest appeal was made for a fair show and a square race, see that possibly they were wrong, that events have proved them to be so?

Very reluctantly, under compulsion, mad clear through, I eent Herod for the word in the second heat. Knowing the tactics of the starter I laid out to beat him at his own game and caught him fair. The word came with Herod behind but going strong, while Wright was slowing up. The unexpected word and sudden effort to get off fast must have unsettled him, for he was hobbing most of the way, while Herod rated an even mile, finishing very fast in 2:25½, with such a lead as to insure getting the heat, although it was awarded most reluctantly.

For the third heat word came to me that Clough would make no effort, meaning to lay up and get in shape for a fast record. Not knowing but this was a blind, I drove until it was evident that such was really his purpose, and then came home easy, winning by several lengths in 2:30½. Wright had run when tired the first heat, eased himself with ruse throughout the second, gone a fair exercising heat the third, and was in admirable shape to make fast time. John Groesbeck was careful this time to get him off going fast and square, with a good lead as usual. Down the backstretch he set the pace very fast, and at the half-mile took the lead without Herod's getting any taste of whalebone, while I eased him up through the sand and let Herod go home as he liked. Wright did not make a skip in the heat, was pulled up a little just a few feet from the wire, not enough to change the time in my opinion, a fraction of a second, finishing in 2:25½. At Stillwater or Chicago this heat would have been much faster and it would have been three or four seconds faster at Rochester on a still day with the track well worked and the sand kept put in condition with a sprinkler or by a shower. Rochester track could be made very fast with work and care; but now the turns are flat, the footing is rough, the up-hill of the lower turn is hoof deep in sand and gravel. Make the whole mile as good as the second quarter and Silas Wright will soon have a record better than 2:20, while Herod might have had one three times over this year. Wright has a future with many years of his prime to bank upon, but when Herod faces the starter again, if ever, he will have passed his nineteenth birthday, when the shadow of old age must, it would seem, begin to dim the light of his great brilliant eye and chill the ardor of a courage that has thus far answered every call I have made upon it. If fate had sent him to me when a youngster, before whisky, accident, neglect and bad management had squandered his great natural speed, what would be his fame to-day? Shod right which he never was; harnessed right, which he never was; properly conditioned and driven with the confidence begot by love of driver for his horse and love of horse for his driver, the trotter or pacer is not yet horn that could have heated this horse one mile or ten. A gait that was perfection, a courage that was matchless, feet and legs as good as Nature's workshop ever turned out, the jaw of a bull-dog and the determination of one, an iron constitution and, oh! such a turn of speed—all wasted, until now, when Nature's laws have almost been set aside, to in part demonstrate that here was a great horse, the peer of any.

The race now stood: Silas Wright two heats, Herod two, Black Jim cutting no figure whatever. Soon after the word was given Wright showed that the previous heat had dulled the edge of his speed; he was neither fast nor steady, and

Herod could keep him hobbling, trotting into the lead only to be run by. Down the homestretch this was repeated several times without the slightest attempt at concealment.

Yes, to win, but not to steal a race. He won a heat for which no one gave him greater credit than myself.

As to the eligibility of John Groesbeck to act as starter without my naming an offset, there could not seem to be any question. His career of home and abroad may be regarded as guaranty of a fair arbitration.

"I want you to win; I have backed Herod." "Who did you bet with?" "John Groesbeck."

Trotting at the Bay District.

Last Saturday afternoon was rather unfavorable for the trotting races on the Bay District Course. There was a chilly breeze and still more frigid fog at times drifting in from the heads.

After the heat pools were, Anteeo \$20, Magdallah \$18, the field \$4. Hickok surrendered his seat behind Magdallah, and there was a change of drivers to pilot B. B.

BAR DISTRICT COURSE, Nov. 8th.—Purse \$500; 2:24 class. Anteeo, b. h. by Electioneer, dam Columbine—J. De Turk..... 1 1 1

Poor Old Bush.

"Well, den! Hard Koppig Peter been gone at last," said the old burgomasters of Nien Amsterdam as they puffed their Dutch pipes and reflected upon the news of the death of their old Governor, Peter Stuyvesant.

Maxy Cobb in Nebraska.

R. S. Moloney, Jr., one of the former owners of Maxy Cobb, furnishes the New York Spirit the following notes of Maxy's life in the West: Thinking the public would be interested in learning additional facts about Maxy Cobb, I beg to write you that Mr. E. Pyle brought Maxy West in January, 1880, coming to Lincoln, Neb.

I thought that was pretty stiff work for an invalid just becoming convalescent. When the horse came home we closed out our business, and I took Maxy at \$2,500. I took some good mares in the division, and some very fine colts of Maxy's.

He stayed in the stud until July 15th, 1882, and then Frank Pearson worked him at Lincoln until Sept. 1st. We took him to Des Moines, Ia., and Omaha, Neb.

Mr. A. H. Swan, of Cheyenne, Wyo. T., bought him of me at Omaha, to be delivered in Council Bluffs after showing a sale trial, and your sketch contains a slight error on this point.

I think it was as good as 2:18 over Chicago track and good day. A pretty good performance for a horse only seven weeks out of the stud, and green.

You can see from this letter that he has had no opportunity to be the horse he is. What would he have been if Murphy could have got him in the first place?

Maxy will prove a success in the stud. He served very few good mares here. Most of the mares were just common stock, but nearly all his colts are good gaited and show they were sired by him.

The National Pastime.

The wind-up of the Washington meeting brings the season proper to a close. Racing, of course, will be continued by the sea waves at Brighton Beach for a month or so longer, and there will be what may be called "snag" meetings at minor points down South.

The name of the great pacer, Bull Dozer, has been changed to Marlowe, being after a celebrated poet, of whom Mr. Stoddard writes: "The career of Marlowe was more illustrious, it seems to me, than that of any other English poet; for no other English poet, so far as I remember, ever surpassed all his contemporaries at so early an age as he, or ever achieved so much distinction by his first work."

Commodore Kittson's Stable.

The St. Paul Globe, of Oct. 27th, publishes the following concerning the stables of Commodore N. W. Kittson:

Commodore Kittson's trotters and pacers are now safely housed at Midway, having returned on Friday. Mr. John Splen, who has driven the string in all the races in which they have appeared, although not any longer in the employ of Commodore Kittson, accompanied Mr. Woodmansee and the horses as far as Hastings, where he left the train and went to Stillwater for the purpose of looking at Lulu Judd, with a view of purchasing her for a gentleman in the East.

During the talk Mr. Woodmansee informed the Commodore that Johnston had on the same shoes that he wore when he made 2:10 and 2:06; that the front shoes weighed twelve ounces and the hind ones seven ounces, and asked the Commodore how many of them he wanted.

Splen told, in his interesting way, something of his experience in fast driving. He claims that traveling around with horses is not calculated to bring out their speed and keep them in good health so that they can be ready for work at all times.

Mr. Splen has great admiration for Minnie R. She won every race she paced in single harness, and made a record of 2:16. She, like Johnston, is one of those horses that never breaks. She has shown in private trials a degree of speed that leaves no doubt on Splen's mind that she will have no difficulty whatever in cutting down her record.

Mr. Splen has great admiration for Minnie R. She won every race she paced in single harness, and made a record of 2:16. She, like Johnston, is one of those horses that never breaks. She has shown in private trials a degree of speed that leaves no doubt on Splen's mind that she will have no difficulty whatever in cutting down her record.

During the conversation of Splen and Woodmansee the Commodore occasionally put in a few words, but for most of the time he listened with great interest to what was said. He evidently has the highest estimate of Splen's ability as a driver, and values highly his temperate habits and pleasant, gentlemanly ways.

The name of the great pacer, Bull Dozer, has been changed to Marlowe, being after a celebrated poet, of whom Mr. Stoddard writes: "The career of Marlowe was more illustrious, it seems to me, than that of any other English poet; for no other English poet, so far as I remember, ever surpassed all his contemporaries at so early an age as he, or ever achieved so much distinction by his first work."

L. E. Simmons, of Lexington, Ky., has a full brood mare, Guy Wilkes, 2 years old. He is called W. L., and it is reported that he came into Simmons' possession in exchange for \$10,000.

Thoroughblood without Magnifying Glasses.

[Turf, Field and Farm.]

We always take pleasure in answering the questions of those who are in positions to mold public opinion. If we can keep them from going astray and leading others astray, we shall be amply recompensed for the trouble they give us. The following is conspicuously printed in Colman's Rural World:

"What will our friend Bushey, of the Turf, Field and Farm, do now? Whenever a trotter puts himself to the front, smashing former records, he gets a magnifying glass, and if he can find one drop of thoroughbred blood in a thousand of trotting-bred blood in his make-up, he points with pride to that drop, and says, see what thorough blood does for the trotter. But with magnifying glasses of the largest dimensions, he can find not a speck of thorough blood in Maxy Cobb, who has pushed himself to the front, establishing himself as king of trotting stallions. He was sired by Happy Medium, son of Rysdyk's Hambletonian. The dam of Happy Medium was the famous trotting mare Princess, that best Flora Temple. The dam of Maxy Cobb was the trotting-bred mare Lady Jenkins, by Jupiter, son of Long Island Black Hawk, a renowned progenitor of trotters. Maxy Cobb comes honestly by his speed through trotting inheritance. He is a grand stallion, having size and substance as well as speed."

According to recent investigations Lady Jeukius was got by a horse called Prince Nebo, a son of Long Island Black Hawk. She is described as a mare of good form and great courage. The unknown quantity in her, like that in many other famous light harness performers, may rest upon a thoroughbred foundation, but this is a point upon which we shall not dwell. Long Island Black Hawk was a game horse. He trotted in 1848 three heats, of three miles each, to wagon, winning the second in 8:30, and the third in 8:34. The wsgons of that day were heavier and the tracks slower than those of the present time. The best one mile wagon performance of Black Hawk was in 2:38, made in 1847. If Black Hawk had not shown courage he would have belied his breeding. His sire was Andrew Jackson, by Young Bashaw, a son of imp. Arabian Grand Bashaw, and his dam was Sally Miller, by Tipoo Saib, son of the thoroughbred Tippoo Saib, he by imp. Messenger, dam imp. Northumberland. The dam of Andrew Jackson was also largely thoroughbred. The hardy blood of the desert, which is the base of the English thoroughbred structure, blended with other racing strains in the veins of the sire of Prince Nebo, who sired Lady Jenkins, the dam of Maxy Cobb. Happy Medium, from whose loins came Maxy Cobb, is now owned at Fairlawn, and that careful student of genealogy, Gen. W. T. Withers, enters him in his catalogue: "By Rysdyk's Hambletonian, dam the famous trotting mare Princess, (ten-mile record, to wagon, of 29 minutes 10 2/3 seconds, two-mile record of 5:02, made in 1859, trotting the first mile in 2:28, and beating the renowned Flora Temple), by Andrus' Hambletonian, son of Judson's Hambletonian, he by Bishop's Hambletonian, thoroughbred son of imp. Messenger; second dam by Brudick's Engineer, by Engineer, son of imp. Messenger." Princess demonstrated in public that she was not faint-hearted, but for some reason the sons and daughters of Happy Medium bred in the North have not shown much stomach for broken-heat battles. The only logical explanation offered is that Happy Medium is not very deep through the heart. Princess was in agony from crippled feet when carrying him, and the pain spasms may have dwarfed to some extent the growing fetus. But in one thing Happy Medium excels. His harness gait is frictionless, and this he transmits with great uniformity. All of his colts have pure trotting action, and there is no reason in the world why those from the stoutly bred mares at Fairlawn should not go the distance. The thoroughbred foundation will help him as it helped Mambrino Chief, and has helped a score of other trotting and pacing stallions taken from the North to Kentucky. Maxy Cobb has the faultless gait of his sire, and he has shown remarkable speed. His 2:13 1/2 at Providence was a great performance, although the stallion finished tired. The final quarter was at the rate of a mile in 2:21. How the horse would have repeated is purely a matter of conjecture. He was not started again, and the owner declined to have his expenses paid to Cleveland to trot Phallas three in five for \$5,000 and the entire gate receipts. Should Maxy Cobb meet Phallas on the turf next year and should both be fit, the son of Dictator would start the favorite, for the reason that he has proved his courage. The 2:13 3/4 of Phallas was made in the fourth heat of a race against Catchfly, Clemmie G., and Fanny Witherspoon, and the last quarter was in 33 seconds, a 2:13 gait. The figures are more eloquent than any words that we are able to make flow from the point of the pen.

But leaving Phallas and Maxy Cobb to the stern judgment of the future, let us inquire into the breeding of the horses whose names were most often on the lips of students during the season now practically closed. For registration purposes a Breeder's certificate is just as good as a record acquired under National Trotting Association rules, therefore we shall quote the registration achievement without stopping to specify. Mand S. is the trotting queen by virtue of her record of 2:09. Next to her is Jay-Eye-See, with a six-year-old record of 2:10. Early in the season Clingstone was presumed to be the rival of both of these, but he went wrong and was not seen in public. The 2:42 of Nutbreaker stands unapproached for a yearling in 1884. The two-year-old time of Silverone, 2:26 1/2, is the best of the year, and the best four-year-old record is that of Elvira, 2:18 1/2. Another four-year-old, Oliver K., obtained a record of 2:24 1/2, and trotted a trial in 2:22 1/2. The two six-year-olds that rose into sudden prominence were Guy Wilkes, 2:19 1/2, and Kenilworth, 2:21. The king of pacers is Johnstone, 2:06 1/2, and the queen of variety performers is Minnie R., trotting record 2:19, pacing record in single harness 2:16 1/2, and pacing record in double harness, 2:03 1/2. In the free-for-all hatdle Fanny Witherspoon, 2:16 1/2; Harry Wilkes, 2:15, and Edwin Thorne, 2:16 1/2, were prominent. Now let us arrange the blood lines of these so that the ruling strains can be seen at a glance.

Nutbreaker, bay colt, one year old, 2:42 1/2, by Nutwood (son of Harold and Miss Russell, by Pilot, Jr., and the out of Sally Russell, thoroughbred daughter of Boston); dam Bouny Doon, by Aberdeen, son of Hambletonian and Widow Macree, by Seely's American Star. Pilot, Jr., by Old Pilot, out of Nancy Pope, by thoroughbred Havoc.

Silverone, bay filly, two years old, 2:26 1/2; by Aleyone (son of George Wilkes and Alma Mater, by Mambrino Patchen, and the out of Estella, thoroughbred daughter of imp. Australian); dam Silverlock, by Mambrino Time (son of Mambrino Patchen and Puss Prall, by Mark Time, son of thoroughbred Bertbune). Mambrino Patchen, by Mambrino Chief, out of a daughter of Gano, thoroughbred son of American Eclipse.

Elvira, black filly, four years old, 2:18 1/2, by Cuyler, son of Hambletonian, out of Mary Mambrino; by Mambrino Patchen,

and the out of Belle Wagner, thoroughbred daughter of Embry's Wagner.

Oliver K., bay colt, four years old, 2:24 1/2 (trial, 2:22 1/2), by King Wilkes, son of George Wilkes, son of Hambletonian, dam Bessie Turner, by Virginias, thoroughbred son of Lexington; second dam by a son of thoroughbred American Eclipse.

Guy Wilkes, bay horse, six years old, 2:19 1/2, by George Wilkes, son of Hambletonian, dam Lady Bunker, by Mambrino Patchen; second dam by Seely's American Star. Mambrino Patchen, by Mambrino Chief, dam a daughter of thoroughbred Gano. Seely's American Star, by Stockholm's American Star, son of thoroughbred Ducoc, dam by Henry, thoroughbred son of Sir Archy.

Kenilworth, bay gelding, six years old, 2:21, by Lothair, by Woodford Mambrino (son of Mambrino Chief and Woodbine, by thoroughbred Woodford), dam a thoroughbred daughter of Wilkes Booth; second dam by Eudorser. Dam of Lothair, Craoienne, by Alexander's Abdallah, and she out of a thoroughbred daughter of Cracker, son of Boston.

Mand S., chestnut mare, ten years old, 2:09 1/2, by Harold, son of Hambletonian, dam Miss Russell, by Pilot, Jr. (son of old Pilot and Nancy Pope, by thoroughbred Havoc); second dam Sally Russell, thoroughbred daughter of Boston, sire of Lexington.

Jay-Eye-See, black gelding, six years old, by Dictator (son of Hambletonian and Clara, by Seely's American Star), dam Midnight, by Pilot, Jr. (son of old Pilot and Nancy Pope, by thoroughbred Havoc); second dam Twilight, thoroughbred daughter of Lexington, son of Boston.

Clingstone, bay gelding, nine years old, 2:14, by Rysdyk (son of Hambletonian and Lady Duke, thoroughbred daughter of Lexington, son of Boston), dam by Chosrees, son of Hambletonian; second dam Lady Fallis, by Seely's American Star.

Harry Wilkes, bay gelding, eight years old, 2:15, by George Wilkes, son of Hambletonian, dam Mollie Walker, by Capt. Walker, (son of Tecumseh and Almaro by thoroughbred Whip); second dam by Darabury's Copperbottom, and third dam by thoroughbred Kosciusko.

Edwin Thorne, chestnut gelding, nine years old, 2:16 1/2, by Thorned, out of Lady Lightfoot, daughter of Ashland, he by Mambrino Chief, out of Utila, thoroughbred daughter of Imp, Margrave.

Fanny Witherspoon, chestnut mare, ten years old, 2:16 1/2, by Almont, out of Lizzie Witherspoon, daughter of Gough's Wagner, thoroughbred son of Wagner.

Johnston, bay gelding, ten years old, 2:06 1/2, pacing. The breeding of this horse has not been clearly traced, but enough of him is known to state that he is highly charged with thoroughbred. Joe Bassett, his sire, was got by Billy Bashaw, out of a mare by Champion Goldust, and she out of a running-bred mare.

Minnie R., bay mare, twelve years old, 2:19, 2:16 1/2, 2:03 1/2, by John C. Brockenridge, a thoroughbred, dam a hind mare partly running-bred.

This list could easily be extended, but we prefer to confine it to what we regard as the most prominent light harness performers of 1884. It requires no magnifying glass to discover the thoroughbred in them. It stands out conspicuously and knocks all the pith from the arguments of the theoretic who want no "running foolishness" in theirs. The judicious blending of trotting, pacing and running strains has given to us the horses which have been foremost in conquering time on the trotting turf, and with the performances of these sturing us in the face, only cranks can muster up sufficient courage to denounce one element of the combination—to demand that the strongest of the speed-producing forces, the thoroughbred foundation, shall be destroyed.

To show the power of the brood mare, the strength of the female line, we name three mares whose second dams were strictly thoroughbred, and who notwithstanding this fact have thrown great trotters to different stations.

MISS RUSSELL, gr m, by Pilot, Jr. (son of old Pilot and Nancy Pope, by thoroughbred Havoc), dam Sally Russell, thoroughbred daughter of Boston.

Nutwood, by Belmont.....2:18 1/2

Mand S., by Harold.....2:09 1/2

Cora Belmont, by Belmont.....2:24 1/2

Nutrouse, by Belmont (trial).....2:26 1/2

MIDNIGHT, gr m, by Pilot, Jr. (son of old Pilot and Nancy Pope, by thoroughbred Havoc), dam Twilight, thoroughbred daughter of Lexington.

Jay-Eye-See, by Dictator.....2:10

Noontide, by Harold.....2:20 1/2

ALMA MATER, ch m, by Mambrino Patchen (son of Mambrino Chief, and daughter of thoroughbred Gano), dam Estelle, thoroughbred daughter of imp. Australian.

Aleatara (4), by George Wilkes.....2:23

Aleyone, by George Wilkes.....2:27

Alice (3), by George Wilkes.....2:29

A Grand Lot of Broodmares.

It has always been a source of mortification to highminded admirers of the turf, that Foxhall was allowed to remain in exile after his splendid achievements in 1881. Why it was that a stallion of his credentials was not at once brought back after his turf career was over we could never understand. The English journals of this and last week are filled with column after column of praise, extolling the performance of St. Gatien in the Cesarewitch. To their credit be it said, and as ample evidence of their fair-mindedness, all the more honorable English newspaper writers invariably couple Foxhall with Robert the Devil and St. Gatien, on account of each having won the Cesarewitch under such heavy imposts at three years old. On all hands it is acknowledged that Foxhall was one of the giants of the century. Yet there was no American breeder patriotic enough to outbid all competitors to obtain the precious blood of this great horse. Perhaps our breeders thought that, being American bred, he would not be successful when coupled with our own mares, but the same argument ought to apply to Springbok, Luke Blackburn, Hindoo, Bramble, or any other good horse, and no one can gainsay the chances of any or all of these horses to become the greatest sires of their time.

It was with extreme gratification, therefore, that we noticed among Mr. Stanford's superb collection of imp. mares a number which had been covered by Foxhall. That far-seeing gentleman was determined to do something towards perpetuating the honestly won fame of the son of King Alfonso and Jamaica. Six of England's choicest mares, by such fashionable sires as Hermit, Parmesan, North Lincoln, Adventurer, Stratheouan, and Kisber, have all received Foxhall, and though the chances are against it, it is to be hoped that all will prove in foal. The delightful climate at Palo Alto will nourish the foals, and in time Eastern racegoers will see the get of Foxhall giving battle to the sons and daughters of Mortemer, Rayon d'Or, Sensation, Springbok, Eolus, Prince

Charlie, Billet, Falsetta, King Alfonso, Hindoo, Luke Blackburn, Bramble, and other celebrated horses.

Mr. Stanford also secured for his other mares the services of such famous horses as Isonomy, Sefton, Peregrine, Peter, Macgregor, Wenlock, Mask, Fetterlock, and Laureate. Nurtured in the "Garden of Eden," the produce of these mares may yet revolutionize racing. That so costly a venture deserves the most complete reward possible, none will deny.—New York Sportsman.

Namee Claimed.

By J. P. Sargent, Sargent's Station, Cal.

BROWN JUE for dark brown stallion, right hind foot and ankle white, foaled June — 1879, by Nutwood. First dam Young Mollie, by Beecher's Budd Doble, son of Geo. M. Patchen, Jr.; second dam Mollie Trussell, by Gen. Taylor; third dam the Livingston mare.

JOHN SEVENAKES for black stallion, foaled June — 1881, by Nutwood, dam Sam Juan Belle.

Col. Caleb Dorsey has lost the bay horse, Stanislaus, 4, by imp. Partisan—Lady Melrose by an unlucky kick from another horse which cut Stanislaus in the throat and caused his death.

ATHLETICS.

The Lucas and Flynn Race.

The special race of 100 yards, between Flynn and Lucas, which comes off at the Olympic meeting, is exciting a great amount of attention. Both are comparatively speaking new men on the cinderpath. Lucas made his first appearance at the Merion Club games, on December 8th, 1883, and won the 100-yard handicap very easily from the 2 yard mark in 10 1/2 sec. Lucas made his next appearance at the Olympic games on last Decoration Day, when he and Flynn started in the final of the 100-yards (open), and which resulted in a dead heat after a desperate struggle. In the run-off Lucas proved victorious in 10 1/2 sec. Flynn was penalized one yard. Lucas also started in the 100-yard handicap, but failed to win his heat. On the same day he also won the running wide jump with 19 ft. 7 in., and the putting the shot with 32 ft. 4 in. to his credit. Flynn made his first appearance at the O. A. C. games on July 4th, 1883, in the 100-yard handicap, and won his heat from the 9 yard mark, but the final heat proved a fizzle, owing to some misunderstanding concerning the start. Flynn also started in the 250 yards, but failed to secure a place, Stewart winning in 28 sec. At the O. A. C. games, on last Thanksgiving Day, Flynn 4 1/2 yards ran second to Lubbock (scratch), in the final of the 100 yards. Lubbock got considerably the best of the pistol. In the scratch 220 yards he was defeated by C. A. Robinson of the University in 24 3/5 sec. At the M. C. C. games, on December 8th, 1883, Flynn (scratch), was defeated by Lucas (2 yards), in 10 1/2 sec.; with 6 yards was also defeated in the 220 yard for first position in 24 3/5 sec. On Decoration Day Flynn, (8 yds.) finished second to Phillips (7 yards), in the 220 in 23 sec. At Stockton, on July 4th, Flynn (scratch), secured second position in the 100-yard handicap, and won the quarter in 5 1/2 sec. On September 9th, at the M. C. C. games, he was just defeated in the final of the hundred, by Creighton (4 yards), in 10 1/2 sec., and in the 220 ran second from scratch to Tennent (5 yards), in 24 sec.; he started in the hurdle race but was unplaced. The reader by perusing these records will at once see there is very little difference between the men, and should both strip in good condition, a very close race will be the result. Flynn at the present time is in excellent condition, and we understand that Lucas has started in for solid work up at San Rafael. Palmam qui meruit ferat.

Athletic Grounds.

In a recent issue of the BREEDER AND SPORTSMAN, we volunteered a great amount of wholesome advice, regarding the laying out of the new athletic grounds on the corner of Eighth and Market streets. The article referred to coincided with the views of the members of athletic and bicycle clubs in this city, who are interested in the matter, notwithstanding the notices to the contrary, that have appeared in the daily papers, and which, by the way, were handed in for publication by the manager of the grounds. We are also aware of the fact that a delegation of athletes, representing the active organizations of this city, waited on the manager of the grounds for the purpose of convincing him of the error in the arrangement of the track.

A visit to the grounds (where you can see the elevated railroad at work) will demonstrate to the most sceptical of our readers the utter disregard shown by the management to the clubs of this city. The manager matured his plans, with his eyes wide open notwithstanding the condemnation he on his own head. We are happy to state however that the athletes, cricketers, bicyclists, and footballers, etc., are not to be left quite out in the cold, as there is every reason to believe that certain negotiations now being carried on will result in the preparation of a new ground where you will have a 220 straightway and a quarter mile track. The location is easy of access. We expect to be in a position to give our readers full particulars before the beginning of next month.

Why We Should Swim.

Rather a slim audience gathered at Irving Hall, on Thursday evening, to hear Dr. Fredrich Reibh discourse on the above subject. The doctor demonstrated in a concise manner the many advantages that accrue by indulging in swimming. He urged upon all parents the necessity of teaching their children to swim. In conclusion he advocated swimming as the very best restorative for consumptive people.

"Chips," in the Canadian Sportsman, never fails to show up the shady events that transpire in the sporting world. In the last issue to hand, he lays out the ex-amateur runner Moffat, rather effectively, while the McKeesport sculler comes in for a correct amount of showing up over his late match with Gaudaur.

It is more than likely that the opening game of football will take place next Saturday afternoon. The grounds have not been decided upon.

D. McTaggart won the cross country run of Montreal Club in 45 min. 52 1/2 sec. W. Kerr finished second in 46 min. 56 1/2 sec.

The complete entry list of the Olympic games will appear in the next issue of the BREEDER AND SPORTSMAN.

Harry Hutchens.

Harry Hutchens, the Putney wonder, arrived in New York on Thursday, the 25th of last month. He is accompanied by Mr. Squire, who will back the sprinter for any sum from \$1,000 to \$10,000, for 100 to 300 yards against any man in the world.

"Harry Hutchens appeared upon the track somewhat later in the afternoon; his purpose was to beat his record at 120 yds. At this snip of the pistol Hutchens started at a tremendous rate of speed. This he kept up for about fifty yds. From this point to the finish he lowered his speed so much that it became evident to all experienced trackmen on the grounds that he did not put forth his greatest efforts.

There are a great many runners in America that lay claim to championship honors. Runners who at times have run matches for large stakes (?) Hutchens now offers any man in America 5 yards in 150; yet none of our runners have as yet accepted this liberal offer.

Manhattan Athletic Club Games.

Their annual election day games were held on Nov. 4th. 2,000 people braved the inclemency of the weather. The path was in good condition but softened under the steady downpour. The principal attraction was the match race of 100 yards between Myers and Ford.

100-Yard Match—L. E. Myers, M. A. C., 10 1/2 s.; M. W. Ford, N. Y. A. C., 2, by a foot and a half. 100-Yard Handicap Run, final heat—J. J. Smith, 8 yards, 10 1/2 s.; R. Hodgson, 7 yards, 2, by a half yard.

Two-Mile Handicap Walk—J. Gibbons (Im. 25s. start) 1st; E. D. Lange, (scratch). Time, 16m. 10 3/5. Half-Mile Handicap Run—D. Z. Southward, 23 yards, 1st; E. L. Crabb, 60 yards, 2d. Very close race. Time, 2m. 1 1/2 s.

220-Yard Handicap Run, final heat—C. S. Busse, 20 yards, 1st; R. Levie, 27 yards, 2d. Won by half a yard. Time, 23 1/5 s. Two-Mile Handicap Run—E. McMahon, scratch, G. W. Gibbert, 50 yards. Won easily. Time, 10m. 21 1/5 s.

220-Yard Handicap Run, boys under 15 years, final heat—A. C. Menge, 12 yards, 1st; A. G. Dilser, 21 yards. Time, 26s. The Spirit says that if half of the contestants in this race were not 18 years old they must have been raised under glass.

One-quarter-Mile Handicap Run—J. N. Wheeler, 50 yards 1st; L. P. Sharp, 48 yards, 2d. Time, 49s. The Cross-Country Championship.

The second race for the amateur cross-country championship of America, under the management of the New York Athletic Club, was run Nov. 4th. The course was not quite five miles. The result was as follows: D. D. McTaggart, Montreal (P. Q.), A. A. A., 29m. 53 1/2 s.; P. D. Skillman, M. A. C., 30m. 23 1/5 s.; W. Kerr, Mont., A. A. A., 3, by 75 yards; P. J. McCarthy, Gr. A. C., 4, by 100 yards; T. A. Collett, P. A. C., 7; W. H. Robertson, W. A. C., 6; E. Kennedy, N. S. A. C., 7; W. Skillman, Etna A. C., 8; C. M. Smith, N. Y. A. C., 9; G. D. Phillips, N. Y. A. C., 10; G. Waddell, New York City, 11; H. S. Clark, 7th Regt., N. G. S. N. Y., 12; J. E. Sullivan, P. A. C., 13; W. C. Herring, M. A. C., 14; R. Beveridge, Blackheath (England) Harriers, 15; F. H. Romaine, N. Y. A. C., 16; J. Hatfield, W. A. C. and J. Gassman, N. S. A. C., did not finish.

D. McTaggart is the champion cross-country runner of Canada.

The Turf, Field and Farm says: "It is proposed to erect a new polo ground in this city. A contract has been signed with the administrators of the estate of the late William Lynch for the purchase of four blocks of land on the Harlem river, commencing at One Hundred and Fifty-fifth street and Eight avenue and extending to One Hundred and Fifty-ninth street. A hotel and tennis court will also be erected on the grounds. The site faces the new High Bridge Park, which has been selected for an extension to the present High Bridge by the Park Commissioners, who are now appraising the value of the ground. Seventh avenue will be extended along the water front so as to enable the driving public to enter the grounds without passing underneath the elevated railroads and the incorporators are making efforts to have the Third and Sixth avenue elevated roads connect the terminus of both roads by a branch—one running from One Hundred and Fifty-fifth street and Eighth avenue to One Hundred and Thirtieth street and Third avenue.

At the late Harvard games the mile race was started without Root and Geo. Davidson, two of the competitors entered for the event, owing to the miserable mismanagement of the officials. The race in question was fixed for a certain time, but without notifying Root and Sanderson, who were known to be starters, it was run off at a different time. Such conduct in the management of athletic games is simply reprehensible. After the race was over Root got out and ran the mile in quicker time than that made in the race. We know that Geo. Davidson, of this city, can beat the time all to pieces. San Francisco has been robbed out of the honor of a victory through the blundering officials of the Harvard meeting.

A New York paper is responsible for the following item: "Myers, the American champion, will run for President at the next election. He has a great many records, and they are all good ones."

Smith Beats Moffatt.

Concerning the quarter-mile race which marked the entrance into the professional ranks of Thomas Moffatt, the Canadian amateur runner, a dispatch from Montreal to the Toronto Mail says: "About 250 people went up to the Montreal Lacrosse grounds on Saturday, November 1st, to see the quarter-mile race between Tom Moffatt, the ex-amateur, and George Hudson, of Oshawa. The race was for \$500 a side, nominally, but the chances are that Moffatt has begun his professional career by a fixed race. It was known among the sporting men for the past few days that Hudson was none other than Geo. Smith, of Pittsburg, Pa., a man, who it is said, can run his quarter every day in the week under 50 seconds. One of the papers here was made temporary stakeholder, but the money was put finally in the hands of Elliott, of Port Hope, before the race. The race was made a very pretty one, and Smith won by a yard and a half, the referee giving the time as 51s. Your correspondent had several watches on the men, and all gave it a trifle over 52s., going to show that neither man ran himself out. When this is taken into consideration, with the fact that the track was 44 feet short, it may be seen that there is doubt about the race. There was a lot of money on Moffatt."

In our report of the University games, we omitted mention of the one-fourth mile consolation race. There were starters for this event, viz., Jordan, Brierly and Barney Benjamin, and which barely was won by the letter after a hard struggle with Jordan, in 58 seconds.

Jordan made his first appearance at the Merion games on September 9th, and his fine showing in this quarter was quite a surprise to his many friends.

Intending competitors are once again reminded that entries for the games of the Olympic Club on Thanksgiving Day, close with the Secretary of the club at 9 o'clock next Thursday night.

CRICKET.

The Prize Bats.

There is every possibility that the fifth and last game for the "bats" will not take place, so we have prepared the averages as they stand at the present time with the following results:

Table with columns: BATTING—MERIONS, OCCIDENTS, BOWLING ANALYSIS—MERIONS, OCCIDENTS. Rows include Spiro, E. S. Benjamin, Jacob, B. A. Benjamin, J. Sanderson, H. O. Bristowe, Miller, B. A. Benjamin, A. Jacobs, C. B. Hill, I. H. Spiro, C. Banner, A. Waterman, H. H. Cookson, A. Gray, B. Clarke, J. S. Purdy, J. Sanderson.

If the final game should not be played, Miller and Spiro of the Merions and Waterman and Sanderson of the Occidents, will be entitled to a bat each under the conditions governing the contests.

Annual Dinner of the Portland Cricket Club.

It was about twenty minutes to 9 o'clock last night when some twenty solemn-looking gentlemen filed into the dining room of the St. George at the summons of the sylphlike Manceli. They were the members of the Portland Cricket Club, with Mr. Rome in the president's chair in the absence of Mr. Molano, who had gone to San Francisco. (Get thee to a brewery, Opeha!), The ecclesiastical face of Mr. Vice-President Bourne had evidently gone to some place "whence no traveler returns," for he failed to show up during the evening. Had the election of Blaine resulted otherwise than his being requested to stay at home, Brother Jonathan and Mr. Jonboul might have met and clasped hands across the blasted bloody chasm, you know. Brother Kinross, the emaciated knight of the wheelbarrow tone, was also expected, but did not come. He had a bad cold, and was at home taking cherry pectoral; therefore, in the absence of your uncle, expect your aunt. The solemn-looking men sipped the gumbo, trifled with the fillet de sole nibbled at the val au vent, and finally found themselves face to face with roast turkey and cranberry jelly, bacoma of beef and saddles of mutton. An English plum-pudding, blazing a Venfer, was then brought on, followed by a jorum of punch, brewed in the green tea that will make the boys' heads crack this morning ("Mul, tur-r-n the ho-ase on me!"), and a variety of toasts were drunk. An election was then held, and resulted in the choice of the following gentlemen as officers for the ensuing year: President, Jonathan Bourne, Jr.; vice president, Samuel Gilman; treasurer, Hy. Dobinson, secretary, A. M. Crocker; captain, James Reedman. After the election of officers Colonel Fred Holman was called on for a speech; and made a few very pertinent remarks, followed by Vice President Gilman, James Reedman, Gerald Robertson and several others. A poetical effusion, entitled "Absolom's Lament over Spokane Falls," a parody on Willis' poem, was received with roars of laughter, and the happy party broke up just as the bells were tolling for the death of another day.—Oregonian, Nov. 9th.

The reception in honor of the cricketers who had returned from the England tour; took place at the Union League Club, Philadelphia. The reception which took the form of a banquet, was tendered by the cricket clubs of Philadelphia. The efforts of the committee in charge were most successful, as more than 100 gentlemen, prominent not only in cricket but in the various walks of life, sat down at the table which had been laid in the spacious back room of the club, handsomely decorated for the occasion. A screen of palms and ferns only half concealed Hassler's orchestra which performed during the evening selections from operas. The tables were covered with floral designs, emblematic of cricket, the whole making up a scene of brilliant beauty that reflected great credit on the committee.

An Uninteresting Game.

The fourth match for the "bats" was contested last Saturday afternoon and resulted in a easy victory for the Merions. Waterman won the toss and elected to field first. Notwithstanding that the Merions were well represented, they were all dismissed for this small total of 52. Spiro and Burnett were the only batsmen that offered any assistance to the bowling of Waterman and Cookson. The Occidents, with their scanty team were sent right out about for the insignificant total of 8. Banner proved very destructive. The Occidents were but poorly represented and were obliged to resort to outside aid in order to fill up. The scores:

Table with columns: MERIONS, OCCIDENTS, BOWLING ANALYSIS. Rows include C. Goewey, H. O. Bristowe, J. Sanderson, B. Banner, I. H. Spiro, L. G. Burnett, B. A. Benjamin, J. Miller, C. B. Hill, M. Dejonge, B. Banner, Miller, Total, Waterman, Cookson, Sanderson, Banner, Miller.

STABLE AND PADDOCK.

Balance of Power in the Stallion.—How to Secure It.

A sire, perfect in his general appearance, and, as it appears on short acquaintance, in his action, is not all that we should expect of him, unless he is capable of making his impression quite distinctly upon his get, no matter what kind of a mare he is bred to. While perfect symmetry is best for show, it is not, as a rule, the avenue through which we get great achievements. Say what you will about the necessity of good blood—and no one in possession of his senses doubts the necessity—we must have peculiarities of form, remarkable in proportion as we obtain remarkable results. Lexington was full of the hood of running horses, but had he not possessed a measure of stoniness and a development of muscle in certain parts, not strictly in keeping with mere symmetry, apart from great power and speed, he could not possibly have made the leaps and covered the space he did in a given time. Yet it is right to say, also, that without what is called breeding, line of descent, and inherited peculiarities, no matter what his form, he could neither have made the leaps nor could he have kept them up during the required repetitions of four-mile heats. Lexington, on his mere size and capacity for show, would have sold for a couple of hundred or so. On his breeding, with fair average form and muscular development, he would have probably sold for two or three times this sum. But with his strong combinations, and the resultant speed from these, Mr. Alexander was a willing buyer at \$15,000. But the mere fact that a horse goes very fast, and wins most of his races, is a point of limited range, and of really small consequence, because that dies with him; but when, with these capabilities, his entirety is preserved, and he becomes the progenitor of long line of good stock, then great value hinges on this, as it does in the case of a sample of very fine wheat, depending upon whether its individuality is lost in a loaf of bread, or it is used to reproduce quantities of its kind.

It is true of the stallion of any sort or breed as of seed grain, that marked individuality gives guarantee against breeding back to specimens not so good. In case of the grain, the balance of power is exerted against reversion alone, while in the case of the stallion, the balance of power must face the personal peculiarities of the mare he is bred to, as well as the strong tendency to reversion, fixed through her own line of descent as well as through his. These are fearful odds to be put upon a sire, and explain quite clearly why so few stallions are successful, as such, on all classes of mares. A man is hardly safe with an untried horse unless he is so imbued with the characteristics of his kind as to hardly seem to need any other voucher. In this connection, there are general features that can be plainly seen and estimated, while there are other obscure and hidden from sight, only to be seen when they appear in the progeny. Thus, if a stallion of a wild breed is crossed upon a home-bred mare, it would not require one to draw heavily upon his imagination to anticipate that the colt from such a sire would almost from the very start, outfoot and outwind its dam. This is a proof of how the unseen and deeply-hidden qualities may cut such a figure as to greatly please; then, again, they may come to the surface when least expected, and confound the breeder.

Strongly marked individuality in a sire, and the ability to perpetuate this through the progeny, is a matter of breeding to quite a degree, yet not altogether this, for a modification of the term, "inured to hardship," has an application to all living tissues that take part in either voluntary or involuntary motion. Pointed illustrations are seen in the trained athlete, and in the sailor upon a strictly sailing vessel. The vigorous use of the horse's muscles causes an increased flow of blood to those most used, consequently in increase of growth, and while in this way the vigor and development of a sire may, be added to, on the other hand, it is not generally sufficiently understood that the life of inertia to which the average stallion is subjected, takes away all chance of his having the balance of power in his own loins. The mare that does a reasonable amount of work upon the farm or road, and for a portion of the year has the run of the pastures, has a better chance for retaining the balance of power within herself than has the horse that is kept within his stall, walked perhaps three or four miles a day—exercise in no wise in keeping with the horse's nature, organized as he is for swift movement and long-continued exertion. It is claimed that a limb of a tree kept confined in such way as to be debarrd from motion through the force of the wind, from the time it is an inch or so in diameter until it be six inches, will not bear as great a weight as though it had been permitted to sway to and fro. This illustration but feebly represents the effect of insufficient use of the locomotive parts of the horse, and inertia from little use is as transmissible as the vigor that comes of great and long continued exertion. When it is considered that the skin upon the inner sides of the hands of infants, is thicker than upon other portions of the body, we are compelled to admit that parts whose growth is

increased by exercise are transmissible, and this, too, in a broad sense. Again, referring to the effect of motion upon a growing tree or limb, a prominent authority has declared that the swaying motion of a tree accelerates the flow of sap up the trunk and through the limbs, and that the growth and strength gained are in the ratio of the motion. The stout of the hog grows in size, and becomes elongated in a brief time after he is turned out to hunt his own living. This growth, once started, the period at which it may be transmitted comes early. Through the action of the principles here contended for, the breeding stallion becomes much more an animal of culture and acclivity in his physical characteristics than he is usually credited with being; and as he is made capable of great possibilities so will his progeny have like capabilities.—*Live Stock Journal*.

The Origin of the Horse.

Much interest has been felt in discoveries relating to the natural history of the horse, of the remote ancestry of which noble animal much is now known. Some time ago it was learned that America was the original home of the horse, which had, in the earliest form of which distinct remains have been found, four toes and a splint bone, the rudiment of the fifth toe. Equine animals with three toes on each front leg and those with two toes have left unquestionable evidence of their existence. In a recent issue of the *Edinburgh Scotsman* is an article which says that six or seven wild species belonging to the family of horses are known, but these all belong to that section of the family of which the ass is the type, and which are distinguished from the true horses by the absence of warts upon the hind legs, by contracted hoofs, and by the long hairs of the tail being confined to the extremity of that organ. Recently, however, the Russian traveler Przewalsky, while journeying in the Dzungarian desert lying between the Altai and Tianshan mountains of Thibet, discovered a new species of wild horse, which seems to have more claim than any of the already known wild kinds to be regarded as the primitive stock of the domestic horse. Like the latter, it has warts upon the hind legs as well as on the fore legs, it has also broad hoof, while the long hairs of the tail hang about midway, being in this latter aspect, therefore, intermediate between the horse and the ass. It differs from the true horse, however, in having a short, erect mane, and in the absence of the forelock, while it has not the stripe down the back found in many horses. Przewalsky's horse, according to an account contained in *Nature* (August 21st) keeps to the wildest parts of the desert, where it is met with in troops of from five to fifteen individuals led by an old stallion—the other members of the troop being apparently mares. They are hard to approach, being shy in disposition and possessing highly developed organs of sight, hearing and smell. Przewalsky only met with two herds; "in van he and his companions fired at these animals. With outstretched head and uplifted tail the stallion disappeared like lightning, with the rest of the herd after him." A single specimen subsequently procured is now in the St. Petersburg Museum, and is the only one in Europe. It has since been pointed out by Mr. W. Watts that the figures of the horse found incised on antlers in the cave of La Madelaine bear a close resemblance to Przewalsky's horse. There is, he says, "the same massive head, the same long mane, absence of forelock, pointed ears, short body and powerful legs, while there seems even an indication that the long hairs of the tail spring first from the middle of that organ."

Rich as prehistoric America appears to have been in horses, they had, as already stated, become utterly extinct long before the advent of the Spaniard. Their introduction by the settlers led in a comparatively short time to the restocking of the entire continent. Straying from their masters, or, as sometimes happened, abandoned by them when a settlement was broken up, the horses took kindly to the rich prairies and pampas, where they multiplied exceedingly. In 1537 they were first landed at Buenos Ayres, and little more than forty years afterwards wild individuals were to be found at the Straits of Magellan. They scoured the plains in vast herds.

A thousand horse—and none to ride—  
With flowing tail and flying mane,

as Byron described them in "Mazeppa." The Indians, both of North and South America, managed to capture and claim for their own use horses out of these formidable troops, and many of those savage tribes, to whom the horse was an entirely new animal, because the most daring and accomplished horsemen in the world. The horse was also known in Australia until introduced by European settlers. It then found congenial conditions, and individuals escaped from man's control soon reverted to the wild state. These in so sparsely-peopled a continent have multiplied until, like many other "home" animals in the colonies, they have become a nuisance. Brumbies, as these Australian wild horses are called, do considerable mischief to the settlers by enticing away their domesticated brethren and so deteriorating the breed. How numerous they have grown in certain districts is shown by the fact that in 1875 no fewer than 7,000 were shot at a single station in New South Wales.

It is held by many that the domesticated horse, with all his various characteristics of shape, size, and disposition, has descended from a single wild form inhabiting "the roof of the world." Its spread into regions so remote from its habitat must of itself have had considerable influence in producing varietal changes. It has been observed that everywhere in mountainous regions and in islands the horse has dwindled into the pony. Iceland and Shetland, Corsica and Sardinia, the mountainous regions of Northern Europe, and the Cordilleras of America, all possess their native ponies. The horse was only introduced into the Falkland Islands in 1764, yet it has already become so greatly deteriorated in size and strength that, for hunting the wild cattle of the islands, horses have to be imported from La Plata. This dwarfing of the horse in mountainous and insular situations is greatly attributed to want of nutritious or sufficiently varied food. Influential as the conditions of life may thus have been in modifying the horse, it is scarcely possible to doubt, as Darwin remarks, "that the long-continued selection of qualities serviceable to man has been the chief agent in the formation of the several breeds of the horse."

Scratches is a most troublesome disease, and is sometimes difficult to get rid of. An exchange recommends the following plan for doing this: Put the horse's feet and legs in bran poultice for 36 hours, then wash clean with warm water and castile soap, and when dry rub the pits of his heels with the following: Take Gonlard's extract and olive oil, equal parts, mixed. Do not allow them to get wet after the first washing, but keep them clean by rubbing well with a coarse cloth. Give the following powders night and morning in his feed: Take nitrate of potash, five ounces; pulverized resin, one ounce; mix; make into 12 powders; give regular daily exercise.

Crib-Biting and Wind-Sucking.

The habit of seizing the manger, bending the neck, and emitting a noise similar to that of eructation, has been termed crib-biting or stump-sucking. The expression "wind-sucker" has been applied to the same habit of the horse when the teeth are not apphed against any solid object in the act of sucking. Crib-biting and wind-sucking have been defined conditions in which there are morbid movements of the oesophagus, derangement of the stomach and intestines, with eructation, or deglutition of air.

In regard to the nature of the act of crib-biting, as well as of wind-sucking, the condition is at all times the same, viz: an act of swallowing air. Some horses swallow but little, and others swallow much. It is a fact that crib-biting is a voluntary act, and it is quite opposed to our knowledge of physiology that any act of disengaging air from the stomach should be under the control of the will. This is more especially unlikely in the horse, in which animal the act of vomiting cannot readily occur with the normal stomach. Young horses, in the most healthy condition, acquire the habit very rapidly, and this cannot be accounted for by supposing the sudden occurrence of disease of the cardiac end of the oesophagus, which is found in a few inveterate cases. The swallowing of air is known to occur in some animals in which bloating occurs very rapidly; and this affords the most positive proof on the subject.

Crib-biters liable to bloating are sure to suffer from gaseous distension of the intestines if allowed to crib; but the occurrence may be prevented by applying a broad strap around the neck, or otherwise interfering with the crib-biting. It is evident that the abnormal condition of the oesophagus and of the stomach are rather results than causes of crib-biting. Post mortem examination has revealed, occasionally, dilation of the gullet, enlargement of the stomach, and thickening of its coats, disease of the pylorus, and even affections of the liver.

This troublesome vice occurs mostly in well-fed young horses that are insufficiently worked. They get fretful, and bite or lick the manger, and by degrees contract the habit. There is no doubt also of a special predisposition to the habit. With some horses it appears to arise naturally, as though the sucking of air gave them pleasure, or a relief from some sort of suffering; and it has been observed that horses at all disposed to it may be easily led into it by the practices of some men while cleaning them; for if they clean them in their stall, and irritate them with a too severe curry-comb, and in parts where they can not endure it, they seize hold upon the manger for a counter-action to their suffering, and in doing this they first get a habit of it, which may afterwards tend to remove other pains or distressful feelings.

The act of sucking air is observed under different circumstances. As a rule, crib-biters require a manger, rack or stall-post to lay hold of, but they will avail themselves of any object, even as small as a nail or ring, and in the absence of all these, they may press with the chin against a knee, or grasp the halter-strap or bridle-rein. Wind-suckers need no resting point; and in examining horses to detect this defect, we must not mistake another habit, consisting in a noise produced in striking the lips firmly against each other, and which is simply playing with air. This is frequently done by horses that are neither crib-biters nor wind-suckers; the noise they make in smacking the lips is considerable.

In the act of crib-biting, respiration is momentarily suspended, the glottis closed, the head flexed, neck arched, and muscles of the chest and abdomen fixed. At this moment there is a noise produced in the pharynx very similar to that of eructation or belching. The larynx and hyoid bone are depressed and fixed, the pharynx expanded, and the air which passes into this is on the relaxation of the parts partly swallowed and partly returned by the way of the nose. According to the dexterity with which the act is effected, is little or much air swallowed and partly returned by way of the nose, and some horses become rapidly bloated or tympanitic.

When horses first begin to crib-bite, and sometimes inveterate crib-biters, they only indulge in the practice at intervals, some while eating, and others while standing in the stable without food before them. During attacks of acute and painful diseases, the animals do not attempt the act. Crib-biters are very liable to attacks of colic. When from long practice of this vice, the oesophagus (stomach-pipe), has undergone changes, there is tendency to choking, and in some instances the animals become subject to vomiting. Crib-biters are unfit for continued hard work, and from the weakened condition of the system are liable to other diseases.

To prevent this practice, the horse should be placed in a stall, where the manger is lower than the horse's knees, and the lowest part of the hay rack, as well as the window or air-hole, are above a level with the withers. The arrangement of the muscles of the neck and jaws is such that a horse can practice the act of cribbing only when these can be brought into exertion at a certain leverage. Therefore, remove all objects that protrude within the heights mentioned, as he can not crib while stretching the neck high up or low down. When young horses are found continually licking the manger, which generally precedes the habit of cribbing, the above mentioned arrangement should be made forthwith, and some common salt constantly kept before them, and the habit may thus in the start be effectively prevented.—*Prairie Farmer*.

Beautiful form, superlative action and a kind disposition are what constitutes the value of family horses. It costs no more to raise a high-priced horse than it does a low-priced moulgril. The difference in their relative values is more than the cost of production. The more good qualities concentrated in one family, the higher will rise the market price of the produce of that family. If we can succeed in breeding docility into our steeds, a good, kind, fearless disposition, and the absence of all vices that horse flesh is heir to, the family could ride after such a model disposition without the risk of life or limb.

The purchasers of horses for the French army always endeavor to obtain a first look at the animal when he is tranquil and in the stable, noting if the animal snorts itself equally well on all its legs. The eye ought to be more dilated when in the stable than when exposed to full light. If the hollow over the eye be profound and temples gray, old age is to be concluded. Wounds about the temples suggest attacks of staggers, and when the end of the nose presents circular scars, it may be concluded the horse has been twitched with a cord to insure his quietness while being shod.

Never let a horse stand out of doors unblanketed after driving in cold weather. Neglect of this has caused more alleged epizootic than was ever caused by contagion.

THE GUN.

Grouse Shooting in America.

"Grouse in America! Bosh! Who ever heard such rubbish!" exclaimed an acquaintance of mine—one of those people who believe and try to make all think that "what he does not know is not worth knowing." Now, this egotistical individual is no *rara avis* in England; in fact, I am not aware that the species is confined to our island home.

Instead of there being no grouse in North America, (writes Captain Parker Gillmore in the *Echo*), there are twenty-seven well-defined and distinct species. But, knowing the value of your space, I will simply allude here to one, the probably most popular and best known, the prairie hen, or chicken, (*Tetrao cupido*).

It is only a small minority of our people who have enjoyed the pleasure of grouse-shooting, but all educated persons have some idea how the sport is pursued and of the pleasures and delights that surround it. The country where the red grouse are found, carpeted with fragrant heather, surrounded by hills glorious in their purple coloring, with lakes and rivers freely scattered in every direction that the eye may choose to wander, are sufficiently attractive to entice hosts of visitors, even supposing they know next to nothing about a gun, or still less about setters or pointers; but when the sportsman is a naturalist, or *vice versa*—no uncommon circumstance now-a-days—we cannot cease to wonder with what avidity he looks forward to the 12th of August.

But in America the advent of grouse-shooting is quite as eagerly anticipated as here, and justly so, for the rolling prairies, with their innumerable varieties of beautiful wild grasses and flowering shrubs, numerous streams, ponds of water, and islands of timber, form as attractive and striking a picture as can be seen in any part of the world. The prairie hen is equal to our bird, or any bird in the world, in all sporting requisites. In size it (*tetrao cupido*) surpasses the British bird (*tetrao scoticus*), in plumage it is its equal, and is quite as good, if not superior, to its rival here when served at table.

The United States possesses a great number of excellent sportsmen, and a superabundance of good shots, but these gentlemen, as a rule, much more closely approach the English school of a century ago, than our "masher" breed of the present time. Thus battues and driving are unknown among them, and the setter and pointer stand high in their favor.

The true sportsman of America would never dream of commencing his day before the birds have done feeding, or say 9:30 A. M., for, as in England so here, disturb them at such an unreasonable hour and they will remain wild for the rest of the day; therefore, about ten in the morning, on the edge of cultivated land, such as wheat, corn, or oats, the dogs will be uncoupled and ordered to beat such places as never have been subject to the plow.

Of course success here, as elsewhere, will much depend on the abundance of the game, but if the district of country selected by the shooter be sufficiently far West, say across the Mississippi, then as heavy bags can be made as upon the most choice moors of Aberdeen or Ross.

Commencing work upon the gentle slopes and snells that face the sun, the prairie hens will be found at the commencement of the season to be exceeding well, often flushing within ten yards of the sportsman; but as the day advances so the locality for successfully pursuing them must be changed. When the sun is at its greatest heat the birds invariably seek the damp edges of the sloughs, from whence they go to roads or bare ground for the purpose of anning and dusting themselves. After this the grassy ridges are again frequented till feeding time, about two hours before sundown, after which the prairie grouse will be found on the stubbles, or if nngathered corn or buckwheat be in the vicinity, especially among it.

Towards the end of the season, particularly if the weather be stormy, the prairie hen becomes remarkably wild, and packs in exactly the same way as does our British species, but although this is the case far on in the Autumn, on a still, warm day, on the speers and ridges, where cover is abundant, they will lie wonderfully close.

When shooting on the prairies those conversant with the sport to be expected there always use ten-bore guns, and this selection I thoroughly endorse, for numerous shots at ducks and geese are of daily occurrence—birds which, we all know, require a deal of hard hitting to bring down. Moreover, where reeds and rushes abound deer are not unfrequently found, when a charge of No. 5 out of a big bore, delivered at, say, thirty yards, will seldom fail to stop them.

As staunch dogs will invariably stand deer, I have frequently been surprised to see one of that beautiful species (*corvus virginianus*) spring up almost under my setter's nose. Such a *contretemps* occurred to me in Southern Illinois, when I killed a doe with one harrel and a half-grown fawn with the other. But such luck was not vouchsafed a city friend of mine a few days after the episode I have alluded to. A stag and doe sprang from their forms a few feet in advance of a brace of his dogs, which were pointing. Not dreaming that the game would be otherwise than birds, at the sight of the deer he became so disconcerted that he totally forgot for the moment that he had a gun in his hand, but kept gazing stupidly after the quarry till they were out of view.

"It is very well to tell us all this, but how about the cost?" I hear some of your readers say, so to the best of my ability I will answer that question.—Return ticket to New York, £25; from New York to prairie and back, £5; ten weeks' board and lodging at £1 a week, £10—Total, £40. Forty pounds sterling, or quite one fourth the sum for which you could enjoy the same sport in Scotland. The cost of grouse shooting at home is prohibitory to all but a small portion of our population, but grouse shooting in America is within the means of many.

Snipe Shooting in Oregon.

Lake Wapato, as familiarly called, is situated in Washington and Yamhill counties, about thirty-five miles from Portland, being on the line of the railroad. We have two trains daily. The beautiful village of Gaston overlooks the lake, which is one of the best snipe grounds we have, being so near at hand and so easy of access; it is nearly a mile wide and from three to five miles long. The walking is the best, the ground being firm and no mud, with high grass and weeds. During the winter months it is a vast sheet of water, and is used by ducks, geese and swans as a rendezvous during the day, and at night time they repair to the adjacent wheat fields and feeding grounds.

Messrs. W. L. Curry and George Bills were the first to visit the lake from the city, in the early part of the season, and succeeded in bagging a hundred and two nice snipes and a few ducks and geese, hunting only in the afternoon from two o'clock and next day until eleven in the morning. Mr. Curry is one of the best shots of our State, and always makes a good bag. Mr. Bills is our average shootist. The next visitors to the lake were Messrs. David Loring, F. H. Lamb and N. L. Curry, four days after the above shoot. They reported the birds very wild, taking wing one hundred and fifty yards in advance of the dogs, having been pretty well shot at during the previous day. During the forenoon they continued to fly wild, and not until the afternoon did they get any shooting to speak of, and then succeeded in bagging only ninety, with the usual proportion of ducks and geese. Mr. Loring is an inveterate walker and will cover more snipe ground in one day than any three men in Oregon. He is what we call a good average shot, and only a little more experience on the snipe grounds will place him among the best of them. Mr. Loring is right of way agent of the Oregon & California Railroad, and is a very courteous and agreeable gentleman. Mr. Lamb is superintendent of the Western Union Telegraph Co., and is an affable gentleman, the best of social men, and is what we term a good shot, being especially adapted for shooting the jack snipes, and understands it thoroughly. Mr. Curry is one of our amateur shooters and bid fair to rank with the best of them, having made his first debut at snipe shooting this season; he is a jolly good fellow and genuine sportsman, either with rod, gun or hound.

The week following the above shoots, Mr. Lamb not being satisfied with his former shoot, made another trip to the lake, accompanied by his father, who, by the way, is a thorough sportsman. They found the birds quite wild, but succeeded however in bagging a hundred and seven together with several ducks. Mr. Lamb used an English gun 12-gauge and did effective work. Mr. Loring used the Clabrough gun 10-gauge, which when loaded properly kills at a good range. Mr. Curry used a Wm. Moore, 12-gauge, 7 1/2 pounds, which will kill with any of them as to distance. Should any of Portland's "crack shots" visit our lake, will give you a few lines. I believe this is the best three days' shooting ever done in our section, the total bag being two hundred and ninety-nine, all Wilson or jack snipe. Should any of our Portland friends claim a better bag in three days I am willing to retract.—*Wapato, in the American Field.*

Small Bores.

Guns of small bore are coming into favor. A circumstance was brought to our notice the other day, which may be taken as showing that the demand for small-bore guns of a certain character exceeds the supply. A country dealer wanted six 20-gauge guns, of moderate price. He could not find them in New York city.

The change of fashion—as far as it is a change—is not set by the dealers themselves. Given a price, the maker would prefer to furnish for it a large bore gun. The raw material for the two guns, one large bore and the other small bore, costs practically the same. To make the smaller requires more skill and care; it is a more delicate task than to make a gun of the larger bore. As a rule, the grades being equal, to make the smaller gun costs the more.

There is much to be said in favor of small bore guns; and the tendency of the day is toward them. They are lighter, and weight is an important consideration, especially in the last part of the day's tramp. Once let the man who has been used to lugging around nine or ten pounds of gun, find out that he can do just as good work with a weapon weighing from five to seven pounds, and the chances are that, his common sense and skill as a shot being highly proportioned, he will choose the smaller bore and the lighter weight. Add to this the satisfaction that comes with the use of finer tools. The shooter who brings down his game with a small bore gun is in very nearly the same position as the angler who catches his fish with delicate tackle. A small bore will not scatter so broadly as a large gun; more skill is required to hold on; but its penetration is practically the same; and the two will kill at equal distances.

There is a growing sentiment among expert shots that he is a little more of a sportsman who uses a small bore gun than his companion who is armed with the larger gauge. Some men, indeed, have made the mistake of going to the extreme of small bores. For ordinary work the gauges from sixteen to twenty, and weighing from five pounds to seven pounds, will prove satisfactory.—*Forest and Stream.*

The ducking season is now fairly at its height and after yesterday deer-stalking becomes unlawful. For the past week the market has been fairly surfeited with wild geese, which sell at seventy-five cents for "honkers" and fifty for brant. But the duck crop does not seem to be quite so abundant, for while mallards sell for seventy-five cents per pair, the lowest quotation for canvas backs has been \$1.25 per pair, and the ducks have not been over fat or tender either. The steamer Calliope goes down the river this morning with the usual two dozen stalwarts, who will pour out their leaden showers into the streaming files of mallards and teal, and hope for a rain of canvass backs. Snipe have been unusually plentiful to date, and should the rains of the next thirty days continue as warm and murky as those of the past fortnight scolopax will continue to make his abode with us for some time to come. The prairie chicken from eastern Oregon continues to arrive in small lots, but will not meet with any great sale in our markets until there is a falling off in the supply of pheasants, which are unusually plentiful this year. Quail have not been very abundant about here, and no effort has yet been made to secure supplies of valley quail from Jackson county by rail as yet.—*Oregonian.*

Last Sunday Messrs. Stewart, Manning, George, Marker, White, Boase and Goldsmith went to the foothills for a hunt. They had good luck, getting plenty of quail and rabbits. Their description of the etev which they had is a little aggravating to a hungry man.—*Marysville Appeal, Nov. 5th.*

Senator Beck as a Sportsman.

A correspondent of one of our Kentucky exchanges thus alludes to Senator Beck as a sportsman tourist, giving his own experience in the field: He had just returned from a visit to his son, who is established on a ranch in Colorado, where he had gone in pursuit of pleasure for himself, and health for Mrs. Beck, who was much benefited by the invigorating atmosphere there. The Senator was elated with his trip, and gave glowing descriptions of the western country, the climate there and unexcelled places for hunting and fishing. Said he: "I never felt but once in my life that I would like to have my photograph taken, and that was when I returned to the ranch from a day's hunt and met my wife at the door in waiting for me. I started out one morning very early, all alone, save a fine horse I rode, and three magnificent deerhounds. The dogs were real beauties, greyhounds, and the fastest dogs on the prairie. I was armed with a good breech-loader, fishing rod and bait. I had about forty pounds of speckled beauties and killed a number of grouse, when I concluded to strike homeward well pleased with my (former) unparalleled success with my gun and line, when the dogs jumped a noble specimen of the black-tailed deer and went for him with a whoop! I secured my trophies of land and water to my saddle and followed in rapid pursuit. The dogs had not run over a half mile before they had overhauled the deerhip, and had him stretched upon the grass before I came up with them. I dismounted, cut the deer's throat, and with great difficulty finally got him tied across my saddle, and I'll tell you, when I marched up to the cabin door I called out to Mrs. Beck to come out and admire her liege lord. I said, 'Mrs. Beck, behold your husband, the senator from Kentucky! This is the proudest moment of my life.'"

On a recent trip across the bay, the writer casually met a young sportsman who is well known to be a splendid shot, and unusually well posted plougher of "upriver" sloughs, and a quiet, companionable man. A petted son of wealthy parents, he is not trammelled as to time or funds, and while having all the means to gratify his desires, he never goes to the extreme of being extravagant. In fact, it is well known that he spends on his various amusements scarcely as much as an ordinary merchant's clerk, yet he derives as much satisfaction from the different sports he patronizes as those who squander ten times as much. After a few commonplaces the conversation was turned to his favorite hobby, shooting, and the following is about the substance of what was said: "I have just been up the river 'prospecting,' not for gold, silver or precious stones, but for fresh-water ponds. Up there there are many changes constantly taking place. What is found to be a good shooting ground one season is shunned by the birds the next; and those who perhaps last season located a place which they have set down as the ground, may go up this year and meet with disappointment. It is always better, if one has the time, to take a trip up there and jot down the different places he considers most promising, in order to be on the ground when the flights commence. By choosing, say half a dozen places, in this way, there is no time lost. If one does not meet expectations, the anchor can be taken aboard and the next best place visited. Pretty much all the ducks being shot now are those wounded in former seasons or their young. Every year there are thousands of birds so wounded which escape the sportsman, but are unable to migrate with the flocks, and these are about all that will be found up there until we have had a cold rain. I shall not go for quail any more this season. The old places in Marin county were very good for those who knew the land-owners around there, but the outsider has got to travel farther now for quail, and the same will soon apply to those who seek the canvasback, mallard and teal. I intend to stay in the city until after the election, as I do not want to lose my vote, and then I will get away as soon as I possibly can."—*S. F. Call.*

George Basler and Willie Pember, two boys living with their parents near Hamilton ferry, had a fine hunt last Saturday in the thickets along Feather river. Besides a dozen quail, they killed fifty beautiful gray squirrels, this game being numerous in that locality. They disposed of the lot to an Oroville gentleman who happened along the road. California hunters do not pay much attention to squirrel hunting, preferring to go gunning after quail on the nplands or wading through marshes for ducks. Back in the "States" squirrel hunting is one of the principal out-door sports, old fashioned long barreled rifles, shooting a ball about the size of a pea, being used. But this would be rather dull and slow amusement for our hunters, nearly every man who has any taste for each sport at all, owning a fancy breech-loading gun that requires neither time nor trouble to load it.—*Biggs' Hamilton Policy.*

The following is from the *Sacramento Bee*: James Burns, of this city, recently wrote to Crittenden Robinson asking him upon what terms he would make a shooting match, at live birds, with James Parrott, of Sacramento, and whether a hundred-bird match, for \$100 a side would suit. Mr. Robinson replies that he does not care to shoot a hundred-bird contest for "so trifling a sum as \$100." He adds, "If Mr. Parrott's friends are agreeable, it will give me pleasure to try conclusions with him for \$500 or \$1,000, at one hundred birds, any rules that may suit him. By any roles I mean any style of shooting, Hurlingham, twenty-one yards, or double birds." Mr. Robinson is now duck hunting on the San Joaquin marshes.

It is currently reported that a new enterprise has been entered into by one of our former townsmen. He has made arrangements to kill ducks and geese on Goose lake, can them nicely and ship to San Francisco. A thousand tin cans have already been ordered, as a starter, and also a lot of wood sacks to hold feathers. If the scheme meets with the success anticipated a narrow gauge railroad will be built from the lower end of the lake to Redding, next summer, in time for the fall and winter shipment of canned meats.—*Inake Co., Oregon, Examiner.*

Our county is chief for game. Deer, ducks, quail, rabbits and fish are here in abundance. This is shown by the fact that even our ladies can bag them. Ye who love to sport with the gun or rod take notice.—*Lower Lake Bulletin.*

Sportsmen in the neighborhood of Cloverdale are going after the wild pigeons that are plentiful in that region.—*Petaluma Argus.*

George Church, while out shooting quail on Monday morning, near St. Helena, was killed by the accidental discharge of his gun.

Pheasants sell for 75 cents a pair, and blue grouse for \$1 a pair, in the Portland markets.

Wild pigeons are plentiful in Sonoma.

THE RIFLE.

Los Angeles Rifle Club.

Last week I gave the details of the shoot of the German Rifle Club or Turners, of Los Angeles, at their annual meeting; this week I give the details of the annual shoot of the Los Angeles Rifle Club, composed of American born citizens. On Sunday last, as with the German Club the week before, the shooting was not up to the average standard of the members, owing to the incessant racket of the election for every night of the past week, but taken as a body, I think they can beat the other club in a given number of matches. The shooting was at 200 yards, off-hand, at a twelve-inch target, which in a string of five shots would give a possible of 60. On Sunday, with a view to Thanksgiving dinner, the prizes were turkeys, which like the horses grow large in this county. Ten turkeys were shot off, costing a trifle over \$3 each. From nine points upwards, at this target, is good shooting. My old bed-fellow, at the State Association hunt, Fred Holbrook, is a prominent member of the club, but not being able to attend himself, gave me a note to the President, Mr. Lockwood, a subscriber to the BREEDER AND SPORTSMAN, and the members present received me very kindly, in fact in the true spirit of sportsmen. The best shot of the day, perhaps, of the club was Mr. Ready, the attorney, but when in practice, which it is not now, it could put forth a team of ten men, which I think in a match would average from 44 to 45 out of a possible 50. It would do a great measure of good if a team of ten or fifteen were to shoot a match with a similar team of San Francisco, by being the means of making our riflemen better known to each other. If such matches took place periodically it would induce a more steady practice in all parts of the State, and give vitality to the enthusiasm in rifle shooting, which now happily prevails. Of course the BREEDER AND SPORTSMAN seeks this result, and is doing much to produce it by its copious, liberal and correct reports every week. On this occasion, for the fifth bird, I chipped in a quarter and selected Mr. Ready to do the shooting. The report shows how ably he acquitted himself. Each man had two shots at each bird, and Mr. Ready made two bull's-eyes, or 24 out of a possible 24. The turkey will go for the Thanksgiving dinner of Dr. Cowper, the Veterinary Surgeon, whose family have showed me courtesies I can never forget. The club numbers about thirty active members in good standing. The officers are: Lockwood, President; R. W. Ready, Vice-President, and Ben Straus, Secretary. In some cases two turkeys were shot for at once, but these and the ties I have not given separately. The score could not be given otherwise and make it intelligible:

NAMES.	THE SCORE, (Two shots at each bird.)					
	1st Total	2d Total	3d Total	4th Total	5th Total	6th Total
Ready, R. W.	9. 8-17	10. 8-18	6.10-16	3. ...	9.11. 9-20	11.10-21
Vincent, C.	7. 9-16	9. 8-17	10. 9-19	8. 9-17	6. 5-11	10. 4-14

Frick, R. W.	12.11-23	...	...	...	...	...
Harnett, Legh, by Ready.	...	...	12	12-24.	...	...

The lucky winners were Messrs. Ready, (two), J. C. Pridham, Thacker, Platt, Vincent, Frick, R. W. Pridham, Straus and Legh Harnett, of the BREEDER AND SPORTSMAN, one each.

Fusileers vs. Eintracht.

The match between the Fusileers, Captain H. Stettin, and the shooting section of the Eintracht Verein, Captain Fred Kuhle, for the gold medal, came off at Shell Mound on Sunday, and resulted in a victory for the Fusileers after a close contest. The distance was 200 yards, twenty-five men of each company firing five shots. The scores are as follows:

FUSILEERS.	
Hagemann	21.1
Volkmann	21.1
G. Schafer	19
Wolf	19
Schroeder	19
Dahse	18
Tietjen	18
Voelke	18
G. Schafer	18
Ludke	17
Schuckman	17
W. Schafer	17
Captain Stettin	17
Total	398

EINTRACHT.	
Capt. F. Kuhls	23
Klotz	20
Klare	20
Roehke	20
Sherder	19
Kaufung	18
M. Schneider	18
Hartmatsen	18
Schuck	17
J. Jung	16
Gunnbl	16
Schuber	16
Whele	16
Total	396

The Nationals, Company C, held their monthly medal shoot at Shell Mound last Sunday, with the following result:

	FIRST CLASS.		
	200 yds.	500 yds.	Total
F. Cummings	42	49	91
J. E. Klein	43	47	90
T. E. Carson	46	44	90
Wharf	36	30	66
FOURTH CLASS, (Handicap, 200 yds.)			
Palm	45	Koch	39
Luckbaum	45	Simpson	39
Johnson	42	Kennedy	34
Dier	42		

None of the members of the third class were present.

The competition for the Fall meeting of the California Rifle Association promises to be of the most spirited description. The first match will start at 9 A. M., sharp, to-morrow morning at Shell Mound Park.

A discount of 10 per cent will be allowed on 3 months, 20 per cent on 6 months and 30 per cent on 12 months contracts. No extra rate charged for cuts or cutting of column rates. No reading notice taken for less than 60 cents each insertion.

San Francisco, - - Saturday, Nov. 15, 1884.

Tying on the Ribbons.

When the race meetings at Baltimore and Washington closed "the season" of 1884 came to end so far as the Eastern country is concerned, and now turf chroniclers are busy summing up the results and crowning the victors with emblems of superiority. It is not a very easy task to award, authoritatively, first places in the calendar. There are many things to take into consideration, and when rivals have not met, performing on courses which are wildly separated, there must be divergence of opinion. In establishing the place of sires, English customs are followed and the stallion whose get have won the most money is given the highest rank. This is manifestly a false basis as the winning of a few of the rich two and three-year-old stakes settles the question.

It may require a far superior animal to win a purse of a few hundred dollars than to capture a stake in which are thousands, and then again a sire may be favored with a score of representatives whereas another is restrained to a single colt. The standing of the sires can only be fixed after the close of the year. Already the "pride of place, individually, has been awarded with striking unanimity by the "sporting" writers of the Orient. Wanda is given front rank among the two-year-olds, Louisette is credited with being among the best of the three-year-olds. Miss Woodford wears an undisputed crown in the four-year-old ranks, while in the "aged" division General Monroe is honored although he trained off in the latter part of the season.

In instituting comparisons with California horses only those which have taken part in Eastern racing are considered. Had Fallen Leaf escaped injury there is scarcely a question that she would have occupied a high position, and the Santa Anita two-year-olds also made a good showing in their first engagements. If Wanda should come here and engage in a race with Alta the latter would be a strong favorite in the betting, the estimate being gauged by his performance at Sacramento and not by a bias occasioned by being bred here. The rule he ran with his weight up in 1:42 1/2 is the best performance under like conditions ever made in the United States, and as it was the only very fast run made during the meeting it cannot be justly claimed that it was owing to a very "fast track." Although Estill carried five pounds more than Alta, and was a fair second in the race, it is generally conceded that he is inferior to Alta, though rating next in the estimation of a large majority of racing experts. Alta and Estill are credited to be "ten pounds" better than any other two-year-olds which have run in California this season by a large majority, if not all, of those who have witnessed the racing, and this was shown by the few nominations in the extra stake of three-quarters of a mile, while in that for a mile there was only one which to our certain knowledge was not named with any expectation of getting a place, notwithstanding the concession. It is manifestly premature to give at this date decided preferences, as the running at the coming meeting may upset several "pots," and prove how futile are the prophecies of those who lay claim to a foreknowledge beyond their fellows. Even the voicing of opinions of so large a majority of turfmen in placing Alta so far above his home contemporaries may turn out somewhat risky. Therefore, before "summing up" which is entitled to the blue ribbon we will await the full testimony of the closing of the year, and then, even, it may be difficult to publish the verdict.

Persistent Misrepresentations.

From the thoroughbred mares that were mated with Electioneer and the other trotting stallions owned by Gov. Stanford not a single trotter has yet come, and now that the experiment has been tried for five years without even a glimmer of success it is not likely that it will be longer continued, while the pacing mares at Palo Alto are held in greater esteem than ever.

It is astonishing to what lengths some of the advocates of dunghill blood will go in misrepresenting the breeding of fast trotters. The above is from the Breeders' Gazette of a late date, and though the paper is published in Chicago the writer makes statements as confidently as though he really knew something of a subject of which he is totally ignorant, or either determined to carry his point regardless of the truth. Stating authoritatively as he has that there has not been a "glimmer of success at Palo Alto," the readers of the Gazette will probably come to the conclusion that he has visited that famous breeding establishment, or that he has information which will warrant him in taking the ground he does. The truth is that when it is considered that the thoroughbred mares which were placed in the trotting department at Palo Alto were allotted, in a measure, indiscriminately the success has been beyond what the most sanguine could anticipate. Among the first bred to Electioneer were Annette, by Lexington, Lizzie Whippy, by Enquirer, and Waxy, by Lexington. These had foals in 1880, every one of which has shown inside of 2:30, the trials as public as though done for a record. Miss Peyton, by imported Glengarry, her dam Rumping Girl, by Jack Malone, was bred to Electioneer in 1880, and her foal, dropped March 29, 1881, showed quarters when a two-year-old in 37 seconds. He became lame and was thrown out of training and was bought by Wash. James. He could trot handily this season inside of 2:30, was named in all the three-year-old purses which were open this year, but again met with an accident which prevented him starting. Dame Winnie, by Planet, from Liz Mardis, by imported Glencoe, foaled an Electioneer colt on February 15, 1882. On three occasions he has trotted half miles in 1:10, and has never exceeded 1:12 since his sojourn at the Bay District Course. Through the advice of O. A. Hickok, Robert Morrow offered \$5,000 for him, and Mr. Hickok informed us the other day that \$6,000 would be given, and if he had been named in the Eastern trotting colt stakes, \$10,000, the price asked would be cheerfully given. When there is leisure we will compile, from the Palo Alto catalogue, a statement showing what the results of the various combinations of blood have been. Without the desire to take away an iota of the fame which those of other blood are so richly entitled to, it will be found that the admixture of near crosses of thoroughbred has proved that it is showing its "potency" as well as in other States.

Colonel Sanders must not be misled by the position he took so many years ago, a blind adherence to which will leave him where misrepresentations will not avail. Denials of well-established pedigrees, dogmatic assertions will not answer much longer. There may be a feeling of humiliation in acknowledging that facts do not sustain theories promulgated with so much confidence though a fair share of caudor will surely be appreciated by a large proportion of his readers. From Colonel Sanders we expect that much whoever has charge of the horse department of the Gazette is evidently so "wedded to his idols" that a straight path will not suit.

Maud S., 2:09 1-4!!!

We are well pleased to announce that Maud S. has once more vanquished time and placed first and second to her credit in the great race for supremacy in the trotting world. It will be better to say delighted as none can be worthy of the gratification of owning the fastest trotter in the world than Robert Bonner. After the former owner of Maud S. assumed the "high morality" dodge people were disgusted and outside of a few sycophantic adherents the course of the great railway king was condemned on all sides. The performance at Cleveland was done so slyly that while it was beyond question that the time was made it was so ordered that failure would have been slipped over.

There is no subterfuge not a trace of secrecy in Mr. Bonner's management. It is known for weeks beforehand that an attempt will be made to lower her record. She is started under the most adverse circumstances at Hartford, when it was nearly impossible that she could accomplish the task and then publicly proclaimed that she would be sent to Lexington when the conditions were more favorable. Few anticipated that she could "do the trick" so late in the season, and, judging from well-established precedents, the time of the year was at least a handicap of one second to the mile. We heartily congratulate Mr. Bonner on the success of the Empress, and hope that in the more genial Summer-

time she will place a still brighter mark on the sheet which contains so many brilliant performances of the daughter of Harold and Miss Russell. The following is the telegraphic account:

LEXINGTON (Ky.), Nov. 11th.—To-day Maud S. proved herself a greater mare than ever her late owner, Vanderbilt, or her present owner, Robert Bonner ever thought she was. Hiram Woodruff, the old-time trainer of trotting horses, laid it down as an ironclad law that you could never have a fast mile after froet had struck the ground. Last week ice formed repeatedly and took the elasticity from the soil, and sober-headed men like Dr. Herr said it was too late for Maud S. to attempt to do what no horse except herself had ever done. Enthusiasts, however, predicted that her record would be broken. The day was bright for November, but the expert does not look for muscles to be flexible when Indian Summer comes. There was a large gathering of the very best people of the blue grass region at the fair grounds track.

A placard was conspicuously posted on the grand stand, "No Betting Allowed." At 11:30 Bair came out behind the queen and gave a warming-up mile in 2:26 1/2. The judges and timers were Major H. C. McDowell, Colonel R. West and W. H. Wilson. In an opposite stand Mr. Bonner had his watch, flanked on both sides by General G. F. Robinson, Mr. L. F. Brodhead, Mr. Richard Anderson, and Hamilton Bnsby. The conditions under which the performance was made were written in the record-book:

Maud S. will start to beat her own record of 2:09 1/2, and should she heat the record, Woodburn Farm, where she was bred, will commemorate the achievement by awarding to her, through the Kentucky Trotting-Horse Breeders' Association, a cup with the time made by her engraved thereon.

Bair jogged around the track, went to the head of the stretch, came down and nodded for the word. The mare did not make a single mistake. The time of the first quarter was 32 1/2, the half mile 1:04, at the three-quarter pole in 1:37, and here Mr. Bowerman joined her with a runner hitched to a sulky. The finish was strong, as the judges stopped their watches at 2:09 1/2. A majority of the outside watches made it 2:09. A scene when the queen returned to the stand for Bair to weigh was indescribable. It was the greatest performance of the kind ever witnessed in the world, and the Kentuckians shouted as only Kentuckians can do. Mr. Bonner's first congratulatory dispatch was to Vanderbilt. The mare will now be turned out for the Winter.

Race Meeting.

The Fall meeting of the Pacific Coast Blood-Horse Association, which opens to-day, Saturday, the 15th inst., on the Bay District course, promises to be one of the best ever held on this coast. As we write, Friday morning, the indications are that the weather will be favorable, and should there be sunshine and a drying breeze the track will be in good order for the first races. It may not be as "fast" to commence with as it will be on the succeeding days, but with anything like fair weather Friday afternoon and Saturday morning it can only be a trifle "slow," and as "safe" as it is possible for a race-course to be. We could fill a dozen columns with descriptions of the horses which will participate without overdoing the subject, but farther than to state that nearly every one shows to be in good condition and there are fewer ailments than usual, it is unnecessary to enter into minute particulars. The horses from Rancho del Paso are "blooming" to the eye and under the capable tutelage of Captain Moore it is a fair inference that their performances will be in keeping with their good looks. The same can be said of those which are trained by James Brown, Lee Shaner, Matt Allen, Geo. Howson, Tom Delaney, William Murray and others. In fact so far as we have seen it would be invidious to make comparisons, as in all our experience we never saw horses which so generally reflected credit on those who had them in charge. The Sants Anita Stable, though showing unmistakable signs of the long and arduous campaign, appears far better than we expected, and, in our opinion, are likely to run better than could be hoped under the conditions.

It is not our practice to award victories before they are earned; we have no desire to pose as a 'turf prophet,' and if so inclined would be extremely puzzled to give preferences. Many 'sure things' are upset in racing, as well as other pursuits, in which Dame Fortune plays a prominent part, and advice to those who are inclined to speculate how their money should be placed is generally provocative of loss and ill-feeling.

The programme, which is printed in another part of this paper, will show what the races are, with the exception of those which are left purposely blank. No. 5, which is the concluding race of Saturday afternoon, and that is a dash of a mile for all ages. There is no question if there being a large number of starters in this race and that it will be a good "round up" to the sports of the afternoon.

Belle Echo in Texas.

Mr. Titus is going through the Texas circuit with his mare and to all appearances doing well. The following are the races in which he has taken part up to the latest report:

Table with race results including names like Belle Echo, Deck Wright, Albert Fraunce, and Felix, with times and positions.

## Binnette.

Chicago, Nov. 11—Binnette, the sensational 3-year-old, daughter of Billot, whose wonderful performance at Louisville and Latonia in the fall caused her to be regarded as the Miss Woodford of the western turf, has been leased, so it is stated, to California parties by her owners, Parson & Co., and will run in a four mile dash at San Francisco week after next, at the meeting of the Pacific Coast Blood Horse Association, in which Baldwin's, Haggin's and other well known stables will take part.

The above telegram has raised quite a commotion among those who are subscribers to the Baldwin Stake, and a corresponding interest in the ranks of the bettors. That she is a good filly is manifest from the races run at the meeting of the Latonia Jockey Club; that she can beat our horses which will start in the big event is not so certain. Should she accomplish the feat many California dollars will reward the venture. There are so many conflicting rumors in regard to the filly that one will not hazard further conjecture.

## Great Three-Year-Olds.

Few will dispute the claims that the three-year-olds which are named in the extra stakes to be run on the first and third days of the meeting, are superior to the same number which have come together at one time on a California race-course. Prince of Norfolk, Shenandoah, Beaconsfield, Jou Jou and Philip S. will take part in the race to-day, Glendair takes the place of Jou Jou on the third day. It is safe to assert that either one of them, when the conditions are favorable, can run a mile inside of 1:43, and it might be that with a little extra luck the "black" would be knocked out of 1:42. The coming together of these colts should attract a crowd of people to the track if that was the only race of the day. With the other good things on the bill there should be an immense concourse of people. We have tried to "figure out" which will be the favorite in the betting and have now come to the conclusion that three, at least, will occupy that position as the pool-selling progresses.

## Mutuel Pools.

In all sections of the system of mutuel pool-selling is growing in favor. There cannot be a fairer way of speculating on races and there are advantages which are apparent without long arguments. In auction pools the person who is desirous of backing the horse he fancies is out-hid and he may be disappointed in obtaining a single pool. In the mutuel he knows the exact price of each ticket and can regulate his expenditure with exactness. At the approaching races the tickets will be \$5.00 each in place of \$2.50 as heretofore has been the case. This will be a good change reducing the number of tickets and being less troublesome to make change.

## Lady De Jarnette's Fortunes.

Friday, Oct. 10, she was shipped by freight for Lexington, Ky. When passing through Louisville a wildcat train ran into Mr. Wilson, a car breaking his road wagon and hurling Simmons, Ravenswood, and Lady de Jarnette in a heap together. The mare was badly skinned on the face and back. Tuesday she arrived at Lexington to be exhibited at the meeting of the Kentucky Trotting Horse Breeders' Association. Wednesday she was carefully walked, while her wagon was being repaired. Thursday morning Mr. Wilson jogged her a little, and then drove her, to wagon, a quarter in 36 1/2 seconds—a 2:25 clip. That afternoon she was put in a sulky, and, after a warning up mile, John Splan drove her for a Breeders' record making 2:24, whereupon many were reminded of the *Courier-Journal's* remark that "Lady de Jarnette is a handsome animal, but she has too much knee action to show great speed."

This great performance—great, for where is the horse that, under the same disadvantages, could do the same?—settled at once the question whether her shares would or would not be sold. It was announced that Mr. Wilson still had some shares for sale. Men leaped the fence and besieged Mr. Wilson for tickets. The ten-dollar bills were handed in faster than the names could be written. Many would-be buyers, with all their haste, were too late. "They are all sold," said Mr. Wilson. The time for the drawing was set for Oct. 31, two weeks off, that the date might be generally known. The committee selected to guard the interests of the shareholders was as follows: W. B. Shattuck, General Passenger Agent, O. & M. Railway, Cincinnati, O.; Hon. T. J. Megibben, Cynthiana, Ky.; Mr. Samuel J. Look, Louisville, Ky.; Col. R. West, Lexington, Ky.; Hon. R. P. Tansey, St. Louis, Mo.; Gen. Shattuck, detained by pressing business appointed Mr. T. W. Zimmerman, of the Burnet House, Cincinnati, O., as his substitute. Hon. R. P. Tansey, being ill, could not come, and his place was filled by Judge West, of Cynthiana. Hon. T. J. Megibben, finding that he must remain in New York till after the election, appointed his son-in-law, Mr. E. W. Bramble, of Lairs, Ky., to act in his stead.

By half-past one, Oct. 31st, the hall where the drawing was to be held was full, many ladies being present. When the committee arrived the representatives of the press were invited to the platform to witness the counting of the ticket stubs. Of these there were five hundred, each numbered to correspond with the ticket to which it belonged. Each of these was now sealed up in a small envelope and placed in the large glass lottery wheel that stood in full sight of the audience. Then five hundred blank cards were counted out, "Lady de Jarnette" written upon one of them, and each of these then sealed up in a large envelope and placed in the wheel.

Judge West then pointed out to the audience how great had been Mr. Wilson's anxiety that all should be done in a perfectly fair and open way, and how careful he had been from the beginning that all should be justly managed.

Mr. Bramble stood behind the wheel, with Col. West and Judge West at his left, and with Mr. Look and Mr. Zimmerman at his right. The wheel was turned, and then two blindfolded boys drew each one envelope from it—a large one and a small one. The large one was handed to Col. West, who opened it, examined the enclosure, and passed it to Judge West. Mr. Look opened the small envelope, looked at the stub it contained, and passed it to Mr. Zimmerman, who called out "No. 79." Judge West then exclaimed "Blank!" showing the white card to the audience.

The idea of winning, perhaps, so fine an animal as Lady de Jarnette for \$10 had caused a great excitement. From Massachusetts, from California, from Texas, and from Canada letters came asking for shares. In Cynthiana tickets were re-sold and re-bought at the very time of the drawing. While it was in progress one gentleman offered thirty dollars for a certain ticket, and was refused.

The drawing proceeded in silence, broken only by calls of numbers and blanks. Over four hundred blanks had been drawn, and the excitement of the spectators had reached a high pitch, when it was announced that No. 368 had drawn the prize.

Mr. Wilson left his seat in the audience to announce the name of the lucky stakeholder. Having found the number in his carefully kept list he turned to the eager audience and said:

"LADIES AND GENTLEMEN:—While it would have given me greater pleasure to know that Lady de Jarnette was still owned in Cynthiana, I am glad to find that her new owner lives in Kentucky. My book shows me that, at the Louisville Exposition, No. 368 was purchased by John Hoggins, of Walton, Ky."

Mr. Wilson then sent this telegram:

CYNTHIANA, KY., Oct. 31st.

Mr. John Hoggins, Walton, Ky.: Number three hundred and sixty-eight has drawn Lady de Jarnette. She is here subject to your order. W. H. WILSON.

Next day the following was received:

WALTON, KY., Nov. 1st.

Mr. W. H. Wilson, Cynthiana Ky.: I will be at your place Tuesday night. If you want the mare you shall have the refusal of her. JOHN S. HOGGINS.

Lady de Jarnette is still at Abdallah Park quietly awaiting the arrival of her new owner with share ticket No. 368.

## THE KENNEL.

## Pacific Coast Field Trial Club Entries for '84.

## DERBY.

H. H. Briggs, San Francisco, black and white English setter bitch Czarina, bred by D. M. Pyle, Gilroy, born April 1, 1884, by Carl (Leicester-Dart) ex Daizette (Regent Daisy).

H. H. Briggs, black and white flecked English setter bitch Hilda, litter sister to Czarina.

H. H. Briggs, white, black and tan English setter bitch Sibyl III, bred by Thomas Bennett, San Francisco, born June 18, 1884, by Regent (Royal Duke-Gift) ex Sibyl II (Dan-Sibyl).

H. H. Briggs, solid red, Irish red setter bitch Rose B., bred by H. M. Briggs, San Jose, born Nov. 1st, 1883, by Race, Jr. (Race-Ruby Jane), ex Fern (Don Zooler-Mollie Plunkett).

H. H. Briggs and W. S. Kittle, white and lemon pointer bitch Surf, bred by F. Charles Hume, Galveston, Texas, born April 29th, 1883, by Champion Bow (Champion Bang-Luna), ex King's Maid (King Phil-Sleford's Maid).

John T. Baker, Chico, blue-bellied English setter dog Chico, bred by Thomas Hendricks, Chico, born June 28th, 1883, by Duke (Belton II-Belle), ex Fanny (Macgregor-Lulu Laverack). Geo. W. Bassford, Vacaville, white and lemon pointer dog, Yuba B., bred by owner, born Nov. 1883, by Prince Ranger (Ranger Boy-Jessie), ex Josie Bow (King Bow-Josie).

Jos. M. Bassford, Jr., Vacaville, white and lemon pointer dog, Lemmie B., bred by Geo. W. Bassford, Vacaville, born Nov. 1883, litter brother to Yuba B.

C. N. Post and G. W. Watson, Sacramento, white, black and tan English setter bitch, Sweetheart, bred by D. C. Sanborn, Mich., born Aug. 17, 1883, by Count Noble (Count Wind'em-Nora), ex Dashing Novice (Dash II-Novice).

C. N. Post and G. W. Watson, white, black and tan English setter bitch, Janet, litter sister to Sweetheart.

W. W. Van Arsdale, Truckee, orange and white Gordon-English setter dog, Taft, bred by F. A. Taft, born May 26, 1884, by Dorr (Dou-Lady), ex Daisy.

I. N. Aldrich, Marysville, white, black and tan English setter dog, Phoenix, bred by owner, by Macgregor (Rob Roy-Queen Mab), ex Posha (Druid-Pocahontas).

P. Chatterton, Sacramento, lemon belton English (Laverack) setter dog Gale, bred by John Gale, Oroville, born July 3, 1883, by Prince Laverack (Thunder-Peerness) ex Lulu Laverack (Carlowitz-Petrel).

George Crocker, San Francisco, solid red, Irish red setter dog Jerry, bred by H. M. Briggs, San Jose, born Nov. 1, 1883, by Race, Jr. (Race-Ruby Jane) ex Fern (Don Zooler-Mollie Plunkett).

Chris. L. Ecklon, Folsom, orange and white, native setter dog Trix, bred by J. H. Corbin, Sacramento, born August 1883, by Count Rouge-Queen.

W. J. Golcher, San Francisco, black and white English setter bitch Flossy, bred by D. M. Pyle, Gilroy, born April 1, 1884, by Carl (Leicester-Dart) ex Daizette (Regent-Daisy).

J. C. Nealon, San Francisco, white and lemon English setter bitch Pet, bred by owner, born April 18, 1883, by Dick (Dan-a-Belton II-Belle bitch) ex Belle (Belton II-Belle).

John Paine, Gilroy, black and white ticked English setter dog Jack, bred by H. D. Bartlett, Gilroy, born Oct. 25, 1883, by Rob Roy (Joe-Queen) ex Rose (Drake-Queen).

E. Leavelley, Gilroy, white and orange English setter bitch Lola Montez, bred by P. E. G. Anzar, born Sept. 24, 1883, by Rob Roy (Joe-Queen) ex Ola (Count Warwick-Leah II).

John B. Martin, San Francisco, white and lemon English setter dog, Dashing Money, bred by J. M. Arent, Tennessee, born May, 1883, by Dashing Monarch (Dash II-Countess Moll), ex Armida (Leicester-Pocahontas).

Geo. W. Ellery, Sacramento, white and lemon English setter bitch, Beautiful Snow, bred by E. L. Mayberry, Los Angeles, born April, 1883, by Dan (Prince-Dora), ex Sibyl (Leicester-Doll).

Geo. W. Watson, Sacramento, liver and white pointer bitch, Dotsy B., bred by Geo. W. Bassford, Vacaville, born Nov., 1883, by Prince Ranger (Ranger Boy-Jessie), ex Josie Bow (King Bow-Josie).

Henry A. Bassford, Vacaville, liver and white pointer dog, Napa B., bred by Geo. W. Bassford, Vacaville, litter brother to Dotsy B.

## ALL AGE STAKE.

E. M. Arthur, Portland, Oregon, solid red, native setter

bitch Belle, (winner of 2d in All Age Stake, Gilroy, 1882, and 3d in All Age Stake, P. C. F. Trials 1883), (Sborb's Dog Nina).

J. G. Edwards, San Francisco, white and liver English setter dog Dash (Belton II-Belle).

Thomas Bennett, San Francisco, black and white flecked English setter bitch Sibyl II (Dan-Sibyl).

J. M. Bassford, Jr., Vacaville, white and lemon pointer dog Lemmie B. (Prince Ranger-Josie Bow).

J. M. Bassford, Jr., Vacaville, liver and white pointer bitch Beautiful Queen (winner of 2d, P. C. F. Trials, 1883) (Ranger-Queen).

Fred. A. Taft, Truckee, black and tan Gordon setter dog Dorr (winner of 3d, Nebraska Trials 1881, and 1st P. C. F. Trials 1883) (Dou-Lady).

E. H. Farmer, Gilroy, white and black English setter bitch Queen (winner of 1st, Gilroy 1883) (Belton II-Belle).

G. B. Crosby, Sacramento, white and liver pointer dog Bow, Jr., (winner of 3d, Derby, P. C. F. Trials 1883) (Ranger Boy-Josie Bow).

Chas. V. B. Kaeding, San Francisco, black, white and tan English setter bitch Fanny (winner of 2d Derby, Gilroy, 1883) (Traylor's Fred-Locan's Gypsey).

Chas. V. B. Kaeding, San Francisco, solid red Irish red setter dog Dnke (Colgate's Pat-Howe's Gypsey).

P. E. G. Anzar, San Juan, S., black, white and tan English setter bitch Ola (winner 2d, All Age Stake, Gilroy, 1883) (Count Warwick-Leah II).

J. W. Orear, Downieville, black and white English (Laverack) setter bitch Pearl Laverack (Prince Laverack-Lulu Laverack).

Jas. Mervyn Donahue, San Francisco, black and tan Gordon-English setter bitch Maude (Orear's Joe-Juno).

Crittenden Robinson, San Francisco, names John De Vuall'a white and lemon English setter bitch Wildflower (Regent-Beauty).

Geo. W. Bassford, Vacaville, liver and white pointer bitch Gracie Bow (King Bow-Gracie).

H. C. Chipman, Sacramento, solid red Irish red setter bitch Beatrice (Shokoe-Nellie).

Geo. W. Ellery, Sacramento, white and lemon English setter bitch Beautiful Snow (Dan-Sibyl).

Henry A. Bassford, Vacaville, liver ticked pointer dog Butte Bow (Ranger Boy-Josie Bow).

C. N. Post and Geo. W. Watson, Sacramento, black, white and tan English setter bitch Sweetheart (Count Noble-Dashing Novice).

C. N. Post and Geo. W. Watson, Sacramento, black, white and tan English setter bitch Janet, litter sister to Sweetheart.

## Pacific Coast Coursing Club.

This club held their regular Fall meeting at Merced on Wednesday and Thursday last. The officers were: President, Judge J. C. Pennie; Field Steward, J. J. Bryan; Judge, H. Boyd; Shipper, P. K. Jacoby. The following is a summary of the runs:

First ties—D. Sexton's Talleyrand defeated J. L. Nichols' Earl, J. L. Nichols' Sybil defeated J. C. Pennie's Belle, J. C. Pennie's Pennie defeated T. Cronin's Lily of Killarney, P. A. McDonald's Thornfield defeated D. L. Levy's Mardigras, T. Cronin's Rose of Tralee defeated D. L. Levy's Pacific Life, Thos. Brady's Wee Nell defeated F. Callaghan's Sierra, J. McCarthy's Tribute defeated D. Sexton's Oceanic, Jas. Kelly's Mollie Bawn defeated John Egan's Mollrose, Thos. Brady's Culverine defeated John Egan's Ten Broeck's, Thos. Ford's Foxhall defeated J. L. Nichols' Diana, Thos. Hall's True Blue defeated J. J. Bryan's Berkeley Boy, M. Mercedite's American Girl ran a bye, P. K. Jacoby's Wildidle defeated J. McCarthy's Tampete.

Second ties—Talleyrand defeated Sybil, Pennie defeated Thornfield, Rose of Tralee and Wee Nell ran a "no course," and in the run off the former won; Tribute defeated Mollie Bawn, Culverine defeated Foxhall, True Blue defeated American Girl, Wildidle ran a bye.

Third ties—Pennie defeated Talleyrand, Rose of Tralee defeated Tribute, Wildidle defeated Culverine, True Blue ran a bye.

Fourth ties—Rose of Tralee beat Pennie, and Wildidle beat True Blue.

Fifth ties—Wildidle beat Rose of Tralee, and True Blue beat Pennie.

Wildidle took first prize, \$75; Rose of Tralee second, \$50; True Blue third, \$30, and Pennie fourth, \$20.

Young Dog Stakes—First tie, T. Cronin's Snow beat James Kelly's Little Wanda, William Halpin's Little Willie beat Thomas Hall's Sleepy Joe, Thomas Hall's Muldoon beat James Kelly's Nannie O., and T. Cosgrove's Sarsfield ran a bye.

Second Ties—Snow beat Little Willie and Muldoon heat Sarsfield.

Third ties—Sarsfield beat Little Willie. Muldoon took first prize, \$25; Snow second prize, \$15; Sarsfield third prize, \$5.

Talleyrand won first prize in the Consolation Stakes and Lily of Killarney the second.

There were two special contests, in which Thornfield defeated Pacific Life and Oceanic defeated Ten Broeck.

## Edward's Dash.

On Tuesday last, Nov. 11th, Dash, owned by J. G. Edwards, of this city, died from typhoid distemper. He was over worked on the first day of the season, and did not recuperate, but steadily grew weaker until he died. He was by Belton II., out of Belle, a brace of dogs formerly owned by J. W. Knox, of San Jose. In blood Dash was quite the peer of any English setter, and in field qualities the superior of most. His courage was unflinching, his power above the average, his nose good, and his obedience more than fair. He was a sturdy, pony-built dog and a ceaseless worker. In his death the best of the Belton II.-Belle cross is lost, and a good dog as well.

## Pacific Coast Field Trials.

We publish elsewhere the entries made for the trials of the club, which will begin Dec. 2d, near White Rock station on the Sacramento and Placerville R. R., on what is known as the Walltown Timber Preserve above Folsom. The list is gratifying in size, and the entries are equal in excellence of breeding to those of any club in the East or in England.

The trials will be run, and run if only the owners are present, precisely as they will if many visitors attend. Those who can do so, and who are interested in field sports will well be present.

## HERD AND SWINE.

## Skimmed-Milk Cheese-Making in Denmark.

To all dairy proprietors (says Mr. Ryder, U. S. Consul at Copenhagen, in his report), it is a well-known fact that, while outer is an article at all times eagerly sought after and easily disposed of, skimmed-milk cheese, on the other hand, is hard to sell. Many methods have been tried, in its manufacture, in the attempts to bring this description of cheese more into repute, but, unfortunately, so far without much success. The following mode of procedure would, however, appear to have met with much approval in many quarters. As soon as the milk is separated from the cream by the centrifuge it is taken, fresh and sweet, for cheesing which in a great degree contributes towards the attainment of favorable results. There has then to be added a sufficient quantity of rennet, so that the milk can be curdled in the course of 30 minutes at a temperature of 28 deg. C. (22 deg. C. to 24 deg. R.). It is also of importance that the temperature should be carefully watched, and that just the right quantity of rennet is added so that the cheesing shall be completed in the 30 minutes, for if the commencement is faulty so surely will the result be of an unfavorable nature.

As soon as the milk is well curdled, it is cut up with the cheese knife in a circular form, and with the aid of two cheese forks the pulp is broken up until it is subdivided into small, irregular pieces, which will be effected in from four to five minutes. The pulp is then left quiescent for about 15 minutes, during which period as much whey as possible is run off. The cheese mass is then rapidly stirred about for another five minutes at a temperature of 28 deg. C. (22 deg. R.). During the heating in the caldron this should be kept over the fire, but in such manner that the temperature is never allowed to rise or fall more than 2 deg. C. at the utmost—namely, from 30 deg., (21 deg. to 22½ deg. R.). With this mode of treatment the cheese pulp has the appearance of clean snow down, and it may be removed after lying over for another five minutes. When more rennet is added, or the pulp allowed to lie over for a longer period, the cheese will become harder and more coarse. The cheese pulp is then placed upon the table in large moulds, and is carefully distributed into these. These moulds are subsequently replaced by others of a proper size, which have a breadth of 60 and depth of 10 centimetres. The cheese is then pressed slowly and, at the commencement, very lightly with a screw, but later on greater pressure may be made by placing heavier weights upon it. During the course of this work, the dairy-maid should on no account absent herself from the cheesepress, for the cheese being in a soft state, its position may require to be frequently changed. After the lapse of ten or fifteen minutes the cheese is taken up and turned, and the cloth drawn more tightly together, and it is then put into the press to be treated in the ordinary manner. The cheeses must be turned frequently and the whey entirely squeezed out, which is a point of much importance. Thus, for example, if the cheese be first taken out of the press at noon, by five o'clock in the afternoon it should have been turned five times, and each time encircled with a fresh cloth, namely, at twelve o'clock, one, two, half-past three, and at five. In the evening at nine o'clock, and again next morning at six, the cheese must be wrapped in fresh cloths, and at nine to ten o'clock it may be placed in the press without a cloth; but in a short time with a mould covering, so that its exterior may be perfectly smooth and even.

The cheeses are afterwards laid down without any covering into the salt pickle, where they should be left for at least three, and at most six days. The brine should be very strong, and should be kept of uniform strength, so that the pickle need not be drawn off, but may be carried over to another salting-tub, and there again be brought up to the required strength. If the brine is not of sufficient strength, the cheese becomes sticky, and does not acquire a good rind, and the effect of the brine on the cheese pulp is not sufficiently strong. The pickle should have the effect of hindering the pulp together, so that the poorer substances which it contains become harmless, and a firm rind for the protection of the cheese is formed.

All cheeses slightly swelled in the stage of pickling, but when after the lapse of a few days they have become soft and mellow, they will receive a good shape, and will have neither cracks nor histers when salted daily for about 14 days in a damp place, where the temperature can be raised to 15 deg. C. (12 deg. R.). The cheese should thereafter be laid upon dry shelves in a humid chamber with a temperature of 17 deg. to 18 deg. C. (13½ deg. to 14½ deg. R.), and there daily dried, turned and salted. For the ensuing four weeks they should be dried, turned and salted every second or third day, and in the last four weeks this should be done once a week, when the cheeses will be ripe and in fit condition for keeping, so that they may be sent to the warmest climates. If the cheese have not been disposed of by the time they are three months old, they should be kept on dry shelves, and in a room that is not too humid. Here they should be dried and turned every eighth day, but should never be allowed to be edgeways, as this tends to damage the interior of the cheese. Great care should be taken that the cheese is turned daily during the time it remains in the brine, otherwise it is liable to bulge out on the one side more than on the other. They must never be allowed to lie one on top of the other in the pickle, but should be entirely covered by it.

Cloths should not be used on the cheese; they only do damage. The size of the pickling tubs must be regulated by the number of cheeses which are made daily. A tub with lid, calculated for eight cheeses, will cost about \$9.00, and such sized tub will be required when the daily make is two cheeses. On an average, from 100 lbs. of milk, 3½ lbs. of fine butter and 7 lbs. of cheese will be obtained. The following striking experiments which have been made at the same time worthy of mention: When the cheeses are taken out of the pickle after the lapse of two or three weeks, they were put for about fourteen days into a room without being salted. The room was kept heated by steam to 22 deg. C. (18 deg. R.), so that the cheeses were made to sweat freely, thereby causing a deposit of a large quantity of impure matter, which was wiped off at intervals. The cheeses treated in this way, as compared with those made in the ordinary manner, showed so great a difference in respect to the state of the inner pulp as would scarcely be imagined. The cheese pulp was soft and pliant, and seemed to be richer than the other cheeses. As soon as this experience had been obtained, a room for the reception of 300 cheeses was arranged with powerful steam, another of similar dimensions with less powerful steam, so that the same cheeses might gradually receive a lower temperature and less moisture. It is maintained that, in spite of all methods which may be used, nothing but poor-class cheese will ever be obtained from skimmed milk. This, however, need not be so. It is quite certain that if, by some proper mode of treatment, such change can be successfully introduced,

that from the hydrogenous substances in the cheese fat can be formed, then it will be possible from the poor cheese, which is rich in these substances, to obtain a better quality and this is undoubtedly within the range of possibility. It is unquestionable that strong brine operates against such fat formation, and it is maintained after these experiments that if the strong brine could be avoided and the cheeses be exposed to a treatment of heat and moisture, there may be good grounds for thinking that this change may be brought about.—*London Live Stock Journal*.

## Hereforde on the Range.

A correspondent of the *Breeders' Gazette*, who signs himself "J. C. B.," gives the following description of an experiment made by Lee & Reynolds, of the Texas Peninsula, in 1879 and 1880, of placing Herefords and Shorthorns on the same range and under the same conditions.

"They purchased at a sale of Shorthorns held at Dexter Park by the Bow Park Company a lot of hulls, and, before they were shipped, bought of a well-known Hereford breeder, six Hereford hulls. The entire lot was sent to their ranch in Oldham county, Texas, placed on the same range, in care of the same man, who, by the way was strongly prejudiced in favor of Shorthorns. Now I will tell you what this man says the two breeds did there.

"The Herefords got fat on the native grass alone; came through the first winter in splendid condition; went on the range in the Spring and got a host of white-faced calves. The Shorthorns, on the contrary, did not take kindly to their condition; plied away; refused to eat the grass on the range, (corn was bought for them at six cents a pound), and they came out so poor in the Spring that they could hardly walk. A number died that year; and when this man left, after caring for the lot two years, the Shorthorns were all dead but two or three; only one Hereford had succumbed to fat, and that in the shape of a broken leg.

"Now, I think, we have here an instance of a fair trial, and there must be hosts of others, else why is there such a difference in prices of Shorthorns and Herefords for range purpose? The average ranchman is an eminently practical man; he has as few fancies as any man; yet he will, and does, pay as much for a grade Hereford as for a full-blood Shorthorn. The superior hardiness of the Hereford is not his only recommendation. He is capable of producing the most uniform cattle, and cattle, too, which are unrivaled feeders, and, when fed, bring the highest price per pound of any breed in existence. See what they are doing on the plains for the Swan Company. They are able to sell grade Herefords, plain-bred, at seven cents per pound when fat, when our best native cattle bring only six and a half cents per pound. The breeders in America of Herefords, with very few exceptions, were breeders of Shorthorns previously, and I have yet to find one who is not satisfied with Herefords—and this is experience. These men had bred and fed Shorthorns—knew practically what they were. They were familiar with their excellencies, and also with their failings; and now they have the same experience with the Herefords, and I have yet to see one who does not prefer the Herefords. I will close by quoting one of your Shorthorn authorities. If the Hereford is an inferior animal, and the Shorthorn superior one, why does a cross produce better heats than pure-bred Shorthorns?"

## Remedy for Hog Cholera.

A few days ago while in conversation with a neighboring physician, one who takes great delight in raising and caring for fine hogs, we learned of a new remedy for hog cholera—at least it was new to us—and as this dreadful scourge is reported in some localities, we propose to give it publicity. If the remedy proves efficacious it will be valuable to hog raisers, and if it fails, the expense attending a trial amounts to but little, as the vine grows in nearly all parts of the country. The common name of the plant is Poison Oak, or Poison Ivy; Latin, *Toxicodendron*; German, *Giftsumach*. It is found in the forests growing closely to the bark of trees. The vine often attains the size of one's arm. As some persons are so sensitive to the poisonous vapor that is emitted from the plant, causing an eruption on the skin, it is best to handle it with gloves. Cut the vine into pieces an inch or two in length, boil a quantity of them in water until the fluid becomes a strong decoction, and use this "without any stint" either in swill or—if the cases are so bad as to refuse food—by drenching. The doctor informed us that he had used the remedy for several years in cases of the hog cholera where he had to drench them, and that he had never lost a case. Of course success cannot be expected every time. We hope those who are so unfortunate as to have the disease in their herd, will give it a trial and report results. He says there is no danger from over-doing.—*D. H. Webster, Austin, Mo., in Swine Breeders' Journal*.

The day has gone by when size is considered before quality in cattle. The big, rough hulks of enormous weights are passed by in the sole pens for smaller, but smoother and neater cattle. These compactly built, smooth-bodied heaves are subject to less shrinkage both in shipping and in turning into beef, require less feed, and give evidence of possessing a greater hardiness of constitution, and are by all means the most profitable for the farmer to handle. If farmers, in selecting cattle either for breeding or feeding purposes, would be assured that they are obtaining stock that will be profitable, they must hear these points in mind, and select more for quality than for size.

It is probable that the Jersey, as well as other breeds of cows, is undergoing constant changes. It is quite probable that forty years hence our breeders will have developed from the Jersey a breed distinct from and better than the original importations. It is believed by many that we have already secured most of the valuable stock in the channel islands, and that the home breeders will have to build up their herds by careful selections, and perhaps by taking some of our imported stock again.

Leaky teats, says a correspondent of the *Rural New Yorker*, are prevented by inserting a smooth and short wooden plug in the opening. I have never seen evil results from this practice. I have used such a plug also to distend an opening too small, and make the cow milk more easily. The plug must be cleaned every time, and he used for a month or two.

Salt is a restorative, anthelmintic, antiseptic, atympanic, and tonic, and therefore should be always within reach of every herbivorous animal. It is an actual and physiological necessity to them. One animal may require little, the next one a great deal, but without it perfect health cannot be maintained in horses and cattle.

## The Advantages of Large Breeds of Swine.—A Contrast with the Smaller.

Like Prof. Sanborn, I have changed my opinion regarding the comparative value of the small and large breeds of hogs. I have bred all sorts of pigs—of the different breeds and cross-breeds—and I can not consistently recommend the small breeds as the most profitable. I do not wish to imply that the small breeds have no merits, or are not nice little things for those who fancy them. What I mean is that there is less money in them for the average farmer than in the larger breeds. It is just as much trouble to hother with pigs horn little, and always little, as with larger ones. I have Duroc-Jersey pigs horn in April, which are as large now as some of a small white breed horn last Autumn. It may be true that the red ones have eaten more in the same time, but this does not begin to offset the difference in the entire cost and labor in getting the same weight. The pigs of the larger breeds are generally twice the size of the smaller when horn. This gives them such a start that the small ones can never overtake them. They begin life with larger stomachs, or, in other words, with a greater capacity for eating, digesting and assimilating food; they are machines of greater power, and, as a matter of course, are capable of greater results. Now, when a year old, it will take at least two of the small ones to make the weight of one of the larger, and I am not sure but as they average, it would take a part of a third. There are at least two lives to be kept going, two sets of legs, and other organs to be grown and supported, and it is manifest to me that this double set of machinery takes more fuel, or food, than one. This is not all the difference, the power of digestion and assimilation in the larger pig is so much greater, that it will grow on food which the smaller one would reject, or of which at least it would not eat enough to thrive. A strong appetite and an ability to consume food go together, and one is the natural sequence of the other. This may be illustrated in the fact that I can winter a Duroc-Jersey and keep it in good condition on bright clover hay. This may be the case with other large breeds.

No one seemed to question the statement that animals when young take on flesh faster than when older. I am not disposed to accept this as a sweeping fact, and I have been charged with being 25 years behind the age, for arguing against the stuffing notion with pigs. "Early maturity," is the cry. "The sooner matured the more profit," is one of the trite sayings. What is maturity? With the stuffers it means a condition so fat that the animal must be slaughtered; with me it means such a condition of age and growth, that it is profitable to kill, and the flesh is in a healthy condition to eat. The "early maturity" talk implies that it is a special virtue of little breeds, whereas it can only mean that they reach the full limit of growth at an earlier age than the larger ones. Hogs are rarely kept until full grown, hence there is no particular merit in the claim. The question of profit depends not so much on how fat a pig may be when killed, or how heavy, but on its actual cost, on which a balance is now to be struck. A pig of a small breed may dress one hundred pounds, and one of a larger breed the same; the difference then, is only in the cost and quality of the two carcasses. Both of the differences, in my judgment, should be reckoned in favor of the larger breeds, because it would not be so fat, and hence would be more salable, and it could have been produced from cheaper food, and hence cost less. This is not a fair example for the large breed. Two pigs should be killed at the same age—say nine months—when it will be found that the one of a large breed will weigh twice as much and bring double the price of the other, having cost no more for care, and probably not more than 25 per cent. more for food.—*Col. F. D. Curtis, in Rural New Yorker*.

## The Oregon Hog.

The hog is a subject of much interest to your readers, and I thought I might interest them by telling of the leading breed in Southern Oregon. It is known here as the "Cayuse" hog. In color it is usually black or spotted with white. He is usually, when fully developed, about five feet long, two and a half feet high, and about six inches across the back. He attains these dimensions at the early age of three years. He is an excellent forager, always hungry, and when pine cones, acorns and hunch grass on the outside fail he kindly volunteers as a harvest hand. He is not at all particular as to whom he shall help in harvesting. He is as apt to enter a neighbor's as his own owner's field. Nor is he particular where he begins operations, but enters a field at the point of approach. Very few fences daunt him. If he is a wire fence with a space of five inches between the wires he will manage to enter; if a rail fence he will lay off one or two rails and walk over. He is early and constant at this work. He is well acquainted with dogs, no stranger to shot-guns, and nothing short of a Winchester rifle has a mortal effect. He never was known to have the swine plague. He is an accomplished mountaineer, and can climb anything in the shape of a hill that presents an angle of less than the perpendicular. He can outrun and outwind everything except a "Cayuse" pony.

He is corralled late in Autumn. His owner takes him by the ears. If the nose end, and that end is prominent, overbalances the ham end he is discarded and turned out to "rustle" during the Winter. If the ham end is the heavier he is dispatched in some way and is turned into light breakfast bacon. The lard product is not much of a burden to the owner as there is usually a good home market for it, no matter how many hogs are slaughtered.

In the sticky lands the "Cayuse" hog often suffers greatly for sleep and lose flesh thereby. It is occasioned by the mud falling on his tail to such an extent that his upper eyelids are drawn back so far that his eyes are always open.

Attempts have been made to improve the breed by crossing with some of the sickly Eastern breeds, but the result is not satisfactory. By the time Winter is over the cross has all rustled out of him by the way of the nose. It were better to cross him with a loaded freight train. It would be tough for the train, but perhaps if it killed the hog the Berkshire or Poland China would have a show. This is not an advertisement, as I have none of the stock to sell. Perhaps I could fill a few orders from my neighbors' "bauds" if the hogs can be corralled. Prices subject to change without notice, especially the step stone style.—*Scott Morris, in Jacksonville Times*.

The *American Dairyman* insists that if the dairyman wants to make a first-class article of butter he must churn often. Never let the cream get over three days old, no matter how cold it may be kept. If cold it will get old, flat and frinky. If sour, the whey will eat up the best butter globules. Churn as often as you can.

When a cow holds up her milk, says the *Farm Journal*, tie her calf near by while milking or give her something to eat. The idea is to divert her attention while being milked.

## That Boar Pig.

I know of no more uncertain quantity raised on the farm than a boar pig, unless it be a boy. How the pig or the boy will develop after leaving the mother's care is what no man can tell. If when they arrive at the age of puberty they are allowed to follow their own desires, it is safe to say they will soon go to the bad.

There is so much disappointment among buyers of fine boar pigs, that it may be well to give the subject a little attention. The value of the male at the head of a herd depends so much on his condition at time of service that it is strange men who see them do not see to it that the animals are properly kept. It is a well-established principle in breeding that if the parents are diseased, or weak and feeble at the time of conception, the offspring will be weak, and sooner or later the frailties of the ancestors will manifest themselves. Even the temporary mental condition of parents at the time of conception affects the offspring. These points have been so well fortified by facts in physiology that we need not here cite proofs.

The breeder or farmer who sends off for a choice boar pig, and pays from twenty to one hundred dollars, and expresses charges for him, would be expected to think enough of his purchase to give it good care and to have a place for it when it arrives at the farm. But truth compels the statement that the majority of the buyers of improved stock do not know how to handle it to secure the greatest benefit from it, nor to keep it up to the standard it had attained before its purchase.

The male that is to develop into a strong, vigorous animal, with the greatest amount of vitality and force, must be fed so as to produce force and fibre, and not fat only.

This the seller may not have had in view. He may have fed only for plumpness and fine appearance. His interest is to please the eye and sell the pig. Fat covers defects and rounds out imperfections. Because of this it is hard for the buyer of a boar pig to find one in the hands of successful breeders that is not overfed and in such a condition that it will be difficult for the buyer to move the pig into new quarters and put him on new feed without the pig falling off in flesh.

Then, too, the average buyer of high-bred pigs is not as good a handler of pigs as is the successful breeder. When the pig arrives at his new home the buyer and the boys give the new pig extra care, that is, feed him more and oftener than the other hogs. They are often disgusted to find that the new pig does not eat like the home-bred pigs, which are always hungry. They are disgusted that the new pig falls away in flesh and will not eat.

This may come from various causes; the most probable cause is, the pig has got the smell of a strange boar or sow, and his ambition is up and he can't get quite enough to eat, or his digestion may have been deranged by the change of feed and drink. He arrived there tired, lank, hungry and dirty. The new owner or boys have given him at once, as soon as led out of his box, all the corn and sour slop he would eat. He ate greedily one heavy feed, and by the next morning he was out of condition. He didn't care for feed. He munched and munched it over and upset his trough in disgust. He is restless, uneasy, and, as a customer once said of the choice pig he had selected out of the Glenellen herd and taken home, he "seemed lonesome and homesick."

Instead of the full feed of corn and sour slop, he should have had a drink of pure water and all the filth washed off of him. A little exercise in a clean grass lot, out of sight and hearing of other hogs, would have put him in condition for a moderate feed. By a moderate feed I mean not more than half the amount he should have after a few days, when he has rested up, and his feed has gradually increased. The kind of feed he should have at first is important. The pig may have been boxed several days. His feed has been dry, and of drink he has had none. His stomach is empty and he may be feverish. His tendency will be to constipation; hence laxative, nutritious feed is the kind suited to him now, until he has recovered from the effects of his trip and has come back to his normal appetite and condition.

There are some boar pigs which never fret if changed to new quarters, but the great majority of them, when they get old enough to notice a sow, will be more or less restless when taken to new quarters.

Before the pig is brought home a grass lot should be arranged for him out of sight and hearing of other hogs. Here he should have shade and shelter from storms and chance for exercise and grazing. He is half the herd, and he must be kept quiet and in strong condition if he is to improve his qualities with surety on the coming pig crop.

There is no place better for the young boar than a grass lot large enough to furnish him fresh grass and room for exercise out of sight and hearing of other hogs. Here he will exercise enough to keep strong and in prime condition if fed regularly and judiciously.

A pig thus cared for, if well-bred, will not likely prove a delusion and a snare. A pig of equally good breeding and qualities turned into a dry lot, with corn and a mud hole, and brimming sows always in sight, will soon be out of condition. He is likely to be a restless, thriftless boar by breeding time, without the strength and force that should belong to the successful sire. He will be nervous, fretful in his appetite, and losing flesh and strength, until by the time the season closes he is a scrawny, bony brute, and his owner is disgusted with his late purchase; and as soon as the last sow is bred he makes a barrow of him and denounces the breeder of the pig. Whereas, the fault is not in the pig or breeder, but in the ignorance and carelessness of the owner.—*L. N. B. in Breeders' Gazette.*

## Goat Farming.

Some three or four years since a society was formed in England for the purpose of improving the breed of goats. This was officered chiefly by distinguished noblemen, gentlemen and ladies of England, in order to more rapidly popularize the movement. Any one possessing the pasturage of an acre or two of poor land, with a small garden, could keep a she goat, which, if properly bred, would supply a moderate sized family with milk. Up to the year 1870 a few nannies could be found in England that gave over one quart of milk per day. Now, through the improving efforts of the Goat Society, the yield of the best is from three to four quarts per day. Goat milk is rich and nutritious, and it is supposed to possess curative properties in several diseases. A goat farm, stocked with a considerable number of animals, is now in successful operation, not far from London. The milk produced there costs, delivered in sealed bottles in this city about twenty-four cents per quart. This sells for thirty-six cents, thus leaving a handsome profit on the milk. Whenever the Goat Society hears of large milking nannies, they import them for the purpose of more rapidly improving their present stock. Some of the best of these have been drawn from the Island of Malta.

## Benjamin F. Butler's Great Cow Ranch.

Three years prior to the conquest of Mexico, by General Scott with the United States troops, or in the year of Our Lord 1843, one Mannel Armijo, a native of the menor horn of Old Mexico, was governor and military dictator of the State of New Mexico, a province of the old dominion. He had absolute control of the public domain, and gave and controlled it at will. On one occasion, he conveyed all that country along Red river to the summit of the Raton mountains, which now covers Colfax county, to one Bobain, a Canadian Frenchman, in consideration of a promise that a large number of frog eaters from Lower Canada and France should be induced to settle in that country and improve the native stock, as it were, as one would improve the equine with Norman blood. In fact, this Armijo tossed lands about as cheaply as he would have tossed corn to the chickens. One day, however, in the year of grace 1846, or thereabouts, the United States troops marched into Santa Fe and deposed him.

Santa Anna, the then president of all the Mexicos, had become arrogant—so quarrelsome with old Sam Houston, President of the Lone Star State—the first little republic that had been established on the continent of America since the formation of our government—that it became necessary for the Congress of 1846 to take a hand in the fray, and curb that military dictator, which it did. The advance of our armies cut short Armijo, but not until he had conveyed away one-third of all the country over which he ruled.

At the time we speak of, and prior to the march of the troops on Santa Fe, old Mexico claimed all of that country now in Colorado, south of the Arkansas river. Whether that claim was a good and valid one the historian is unable to say, but as a matter of fact will state that Armijo had given away all, or nearly all of the land north of the Raton mountains, a country that now embraces a large portion of six of the largest counties in Colorado, an area greater than either the States of Michigan or Ohio.

Well, in 1843, this governor of New Mexico, in consideration of some paltry sum, conveyed to Cornelio Vigil and Colonel St. Vrain, 4,096,000 acres of land lying south of the Arkansas and north of the Purgatorio rivers. In 1848, by the treaty of Guadalupe-Hidalgo, this grant was confirmed. By an act of Congress, approved June 21st, 1860, Mr. William Craig, who had acquired rights therein in the meanwhile, was awarded 71,638 acres of the grant. The award was made February 23d, 1874, approved by order of the President of the United States, March 2d, 1877, further approved by our present cattle king, Mr. W. L. Campbell, then surveyor general of Colorado, May 26th, 1877, and confirmed by a patent therefor, signed by R. B. Hayes, President, dated January 8th, 1878.

Now Mr. Craig, while in possession of this immense farm, built him a palatial residence twenty odd miles south of Pueblo, on the Huertano, and gave it, or the location, the name, "HERMOSILLA." This "Hermosilla" is now the home ranch, or place of business of Benjamin F. Butler, of Boston, who came into possession of the property as we shall soon tell. On the 18th day of December, 1878, Mr. William Craig and wife deeded 71,638 acres of this farm to a certain cattle company, of which P. T. Bernum, of Bridgeport, Connecticut, was a member. In the next link of this great chain of landed history, we find that the new proprietors, through the instrumentality of one Thomas Mears, then United States deputy surveyor, extended the boundaries so as to include 81,000 acres, while their deed called for but 71,638 acres.

This cattle company was of short duration, and went where the woodbine twineth, and we find by the records of the United States Court in Pueblo, Colorado, where Benjamin F. Butler, as a "plaintiff" brought suit "to recover possession of the property, and was awarded judgment for possession by consent of parties." This property was the Hermosilla ranch, etc., and was incorporated under the name of the "New York and Boston Cattle Company," with a capital of \$6,000,000. The company is composed of men of national reputation. Among the directors are the names of Benjamin F. Butler, of Massachusetts, and Roger A. Pryor, of New York.—*Denver Record.*

## How to Make Good Milkers.

No matter what breed you have, something further is necessary in order to reach the best success in raising good milkers. Good blood, whether Shorthorn, Jersey, Devon, Ayrshire, grade or native, is not everything, but lies at the foundation; something cannot come from nothing. Treatment in raising a milker should be somewhat different from that in raising a beef animal, or an animal for labor. Begin as soon as the calf is a day old; see that it has sufficient to eat, and is kindly treated and regularly attended to. Never pamper or over feed, but give it good food, generous food, to cause a regular, early and steady growth. Accustom it to be handled, but not to such an extent as to acquire objectionable habits as a cow, but rather to be fond of the presence of the keeper. Kindness helps to create a quiet disposition, so important in a dairy cow, and this education must begin when the calf is young—every habit acquired when young are apt to cling to the cow when grown.

For a milker I would have the heifer come in at two years old. She is then old enough to become a cow. I would not, as a rule, allow her to go to farrow, but milk her up to a few weeks of calving, even if I did not obtain but little at a milking. A cow thus trained will give more milk and be more likely to hold out longer in milk, if her after care is judicious and liberal, as it should be. Such treatment tends to form the habit of giving milk, and, as we know, habit is a sort of second nature. Couple the heifer with an old bull, one or two or three years older than she is, is preferable to a yearling, and better stock is likely to come from such. After the heifer has come in her feed should be regular and liberal. Good clover hay is best of all, but we all may not have this for stall feed; then we must make up for what is lacking in some concentrated feed such as oat meal, shorts, oil meal or the like, but great care and judgment must be used not to overfeed or crowd as the future cow may be ruined. Undue forcing shortens the useful life of a cow very rapidly.—*W. H. White in Country Gent.*

Iowa is the greatest pork State in the Union. According to the last census she had 6,000,000 head of swine, while Illinois had 5,170,266 and Missouri 4,553,133. There has since been a large decrease in these numbers in all these States, owing to the short corn crops, but Iowa still holds the supremacy, and with this year's magnificent yield, will soon go back to the census figures, if not surpass them.

## Open-Air "Ensilags."

M. Goffart was the apostle of the ensilage plan of conserving green forage in trenches constructed in masonry, or simply opened in a dry soil. M. A. Ronviere, of Aussillon, (Tarn), is the Peter the Hermit, of the plan of conservation, by stacking in the open air. He has been perfectly successful, and invites all whom it may concern to come and see. Nothing more conclusive. Thus all the expense is saved of constructing silos in masonry, with cement, and under special shd. There is nothing at all extraordinary in the process. The whole principle of ensilage lies in the absolute exclusion of the air by a regulated pressure from the green mass, and if such can be secured in a "stack," the preservation must be as efficacious as in a covered trench.

M. Ronviere has employed the stacking in open air of green forage since 1853. He has given the analysis of his preserved fodder, and which shows it to be as rich as that conserved in silos. This Spring he saved his whole lucern crop by stacking it green, as the Spring was incessantly wet, and so prevented its drying. The following is the way to proceed: select the site where you please, immaterial if exposed to wind, rain or snow; cut around an open drain to carry off the rain water, so that the bottom of the stack will be secured dry; commence the stack, which should be rectangular in form, having a width of six feet; pile the forage in even horizontal layers, and tramp down firmly at sides; place planks one inch thick and seven wide, across the stack, then another row of planks to cover the joints like slates on a house; next range planks perpendicular to the first, nailing them at the ends. Let the cross planks project a little over the side. On the planks heap large stones at the rate of 16 cwt. per cubic yard; but apply only the one-half this weight the first day, and the remainder the following, when the rest shall have shrunk. The temperature will at first run up to 119 Fahr. degree but will speedily fall, and remain stationary at 93 degrees. Leave the stack then to itself; only a slight external skin will be deteriorated. When it is desired to use the preserve, remove two or three, as may be required, of the planks and their stones, and cut the exposed mass, as if a hayrick. By not placing all the stones on the stack when completed, its leaning is thus avoided. A farmer has now no excuse for not trying this plan, with some maize, lucern, clover, etc.

## Mohair.

Mr. Jenks, of Boston, writing to the *Rural World* says: "That you may see what is being made in one mill in this country from mohair I send you samples of plenehes of various patterns and qualities made from the raw material I sent you heretofore. These plenehes are used for trimming furniture, and hangings in upholstery work, for railroad car seatings, lap robes, inside carriage linings, etc., etc. There is a domestic consumption of one variety alone—of which I send you a pattern—that would require the fleece of 500,000 goats to supply. The mohair goods of the varied styles and qualities in demand, made up with hemp, cotton, flax, wool and silk as component parts are sold in the finished fabric at from 75 cents to \$20 the yard. Some of the robes made from mohair and wool and mohair and silk sell readily at from \$50 to \$200 each. They constitute one of the most beautiful and durable fabrics in use. As I have said, the little mill that makes the goods as per sample herewith, netted \$50,000 clear profit last season. The goods made in the factory referred to, of which I now send samples that have given the best satisfaction, were made of *American grown mohair*. You can see by this tangible evidence that the growers of mohair need feel no solicitude as to a permanent and profitable market if they will put a good staple into the market. I know from experience that such a fibre can be grown at cost of 15 cents a pound; and I never sold less than thirty cents and sometimes as high as 75 cents. Rightly located and handled, there is no stock husbandry that will yield better returns."

## POULTRY.

It is not always the amount, nor yet the quality of feed that best embowers the interests of the poultry breeder, or what amounts to much the same thing, the health of his flock. These, combined with regularity of supplying the same, are all necessary. No matter how good a breed a person may have, says H. S. Waldo, in the *American Poultry Journal*, if he does not feed judiciously he will make a failure of the poultry business. Crowding, forcing or over-feeding, all of which are about the same, cannot be tolerated with poultry any more than with any other of the farm stock. We all know that a cow which has been overfed will soon become dainty and not eat anything for awhile. The same is true with poultry. They should have all they will eat with comfort and relish, and no more. Regularity is also very important and helps to keep their digestive organs in good shape, which of course gives them a good appetite, and they eat their food eagerly and seem to relish it. Let their food be nutritious and abundant, but not so as to be a burden to the fowls. A variety of food is not only highly appreciated by the fowls, but also aids digestion, and serves to keep them healthy and in good thrift. By variety is meant both raw and cooked food—meal, vegetables, scraps of meal, green food, gravies of all kinds, pounded bones, etc. Either for laying hens or growing stock, a variety of feed is always most beneficial. Healthy digestion is what is wanted, and as long as it is kept up the fowls will be in good trim and will make a good profit for their keeper.

Plymouth Rock hens are disposed to take on a superabundance of fat when deprived of a full amount of exercise. To avoid the evil effects of this abnormal condition, or rather to avoid the condition itself, the surrounding circumstances must be understood, and if more exercise cannot be allowed, then feed of a less fat-forming nature must be provided for them. They are good foragers and if allowed all the exercise they want, they can be well fed without detriment and the production of eggs will be satisfactory. The young chicks grow rapidly and are very hardy. Feathering out quickly and coming into market early makes them a useful bird.

We are aware that Asiatic fowls are often adjudged wrongly, and what is considered a natural fault is only an habitual one, which can be cultivated like any other propensity. The tendency to inertness and internal fatness is not natural to any bird while at liberty, and obliged to procure its daily sustenance by its own labors. It is only when inactive and under artificial conditions that the Asiatic fowls become loggy, fat and lazy.—*Am. Poultry Journal.*

There is no prettier sight about the farm than a nice even lot of like-colored and uniformly marked chickens. Like so many soldiers, so they be uniformly dressed if matters not so much what shall be the color of the dress.

BICYCLING.

The following suggestion is respectfully submitted to the managing committee of the tournament of the Bay City Wheelmen. In the time race, let all the competitors come to the scratch and then have the referee inform the riders of the time they should attempt to ride upon. As it is at present the competitors can practice riding a mile in 3 m. 50 s., and when the race comes off there will be so many in the locality at the finish that it will not be so interesting to the spectators. Withdraw the time of 3 m. 50 s. and allow the referee or starter the privilege of naming the time.

The N. C. U. thus defines a "novice": "A novice, or person eligible to compete in a 'novice's' or 'maiden race,' is a rider who has never, up to the time of starting in such a race, won any prize in any 'cycling race other than a race confined to members of his club. In any qualified novice's race, such as a race open to those who have not won a first prize, the definition of novice, as contained in the foregoing definition shall still be held to apply, so far as circumstances admit."

Bicycling is becoming a very common pastime on our streets, both day and evening, and some of the riders of these two-wheeled steeds are becoming very adept and graceful in their movements. The prejudice formerly existing against their common use seems to have died away, as they no longer frighten teams and occasion runaways, so far as we can learn.—Yolo Democrat.

J. S. Prince, since his accidental victory over Howell in the mile at Springfield, has been indulging in a great amount of gush in various sporting papers. He also tries to make out that the mile made by Sellers at Hartford is not genuine. If Sellers and Prince should ever meet in a race of any distance up to 10 miles, we should certainly put our trifle on the amateur rider.

We should like to see good sized tires on the rear wheels of bicycles. We believe that much unpleasant jar will be saved by good, generous tires. This of course means weight, but a pound or two there, will, we think, be an advantage, and render 'cycling comfortable, enjoyable and beneficial.—Bicycling World.

The Bay City Wheelmen have secured the privilege of practicing at the Mechanics' Pavilion. Should the track and day be favorable we shall see the Coast record of a mile dashed down by many seconds. We expect to see the mile made in time that will astonish a great many of the knowing ones.

A small wheel well geared up seems to be the coming favorite both in bicycles and tricycles. The old objection that you are down where the dogs can reach you, is balanced by the fact that you can more easily kick the canine.—The Wheel.

Oakland rejoices in the possession of a young lady tricyclist. In a few years there will be many lady tricyclists in Oakland as the roads are so well adapted for the amusement.

It is said that Sewell does a back somersault from the saddle, and catches the bicycle before it falls, and also stands on his hands on the handle bars.

An Oregon bicyclist has two wooden legs, and he hasn't had his bicycle much over six months, either. This is unusually quick work.

The Blue Jay Bicycle Club is the novel name of the bicycle club at Santa Cruz. There are about 15 riders in the town.

The Bay City Wheelmen will indulge in a moonlight ride in a few weeks. This will be the last run of the season.

At a rough estimate there are about 350 riders of the "silent steed" in California.

An unusually large number of 'cyclists are suffering from the effects of "beaders."

Motto for wheelmen in search of a mount: Tribefore you bi.

There is some talk of reorganizing the Oakland Bicycle Club.

SHEEP.

How to Tan Sheepskins.

Where farmers kill but a few sheep during the season they can make better use of the pelts than to sell them if they know how to preserve them. For mats take two long-wooled skins and make a strong suds, using hot water; when it is cold wash the skins in it, carefully squeezing them between the hands to get the dirt out of the wool, then wash the soap out with clear, cold water. Then dissolve alum and salt, each a half pound, with a little hot water sufficient to cover the skins and then let them soak in it over night for twelve hours, then hang over a pail to drain. When they are well drained spread or stretch carefully over a board or tray. When a little damp have one ounce each of saltpeter and alum pulverized and sprinkle on the flesh side of each skin, rubbing in well, then lay the flesh sides together and hang in the shade for two or three days, turning the under skin uppermost every day until perfectly dry, then scrape the flesh side with a blunt knife to remove any remaining scraps of flesh. Trim off projecting points; rub the flesh side with the hands. They will be very white and handsome, suitable for a door or carriage mat. They also make good mittens. Lambskins, or even sheepskins, if the wool be trimmed off evenly to a half or three-fourths inch long, make beautiful and warm mittens for ladies or gentlemen and the girls with a little practice can make them.

Australian Wool.

The following is an extract of a letter from Consul-General Spencer, of Melbourne, Australia, in relation to the wool trade of that country with America: "One of the principal features of the Melbourne wool sales during the present season, has been the lively competition on the part of American wool buyers, which has practically cleared the market of that class of wools most suitable to American demand, namely, long stapled Merino wools in the grease, and extra light in condition. These descriptions of wool this season have been remarkably well grown, sound, and free from fault.

"There has been a keen competition for them on the part of English and Continental buyers, but the Americans have outbid them, and thus secured in the Melbourne and Sydney market, over 21,000 hales, representing, perhaps, as fine a selection of the kind as has ever been shipped from Australia.

The following table will show the shipments of this staple from Australia to America since 1879-80, from which it will appear that the number of bales shipped during the present season slightly exceeds that of any previous year."

SHIPMENTS OF WOOL FROM AUSTRALIA TO AMERICA.

Table with columns: Season, Melbourne, Sydney, Adelaide, Total. Rows: 1879-80, 1880-81, 1881-82, 1882-83, 1883-84.

Wool at the New Orleans Exposition.

Col. A. Andrews, of this city, Commissioner for California has received a circular from the division of sheep, wool and goats of the New Orleans Exposition, from which we make the following extracts:

"It has been decided that the general wool display be made separately by States. In that way each State will get its direct exhibit of wool distinctly before the public. I therefore ask co-operation in getting up this exhibit. It is desirable that each State should send thirty fleeces, ten of fine wool, ten of medium wool, and ten of coarse wool. It can be sent down with the collective exhibits of each State, free of charge to the exhibitor or can be consigned to John A. Cross, Superintendent of Sheep, Wool and Goats, care of G. Y. Johnson, Superintendent Department of Agriculture, New Orleans. Each fleece should be tagged with the name and address of the grower, together with the age, sex and weight of fleece."

"Ten-pound washed fleeces and one hundred and twenty-five pound mutton carcasses," says the Sheep Breeder, "should be the average for Merino flocks at no distant date."

Fine hay or cut or well broken straw makes good nests for hens. As good, perhaps better nests, can be made of shavings of soft wood, from the carpenter's bench, or chips from a turner's lathe. This material can be sprinkled with diluted carbolic acid which will keep vermin away, all the longer for the reason that, being porous, the shavings or chips absorb the acid and retain the scent of the acid better than most other materials of which nests are usually made.

PACIFIC COAST BLOOD HORSE ASSOCIATION.

Fall Meeting, 1884.

BAY DISTRICT COURSE.

PROGRAMME

First Day, Saturday, Nov. 15th.

- No. 1. LADIES' STAKE—For two-year-old fillies; \$50 entrance; \$25 forfeit; \$200 added; three-quarters of a mile; second to save entrance.
No. 2. SWEEPSTAKES of \$50 each; \$25 forfeit; \$250 added; for two-year-olds; three-quarters of a mile; Alta and Estill to carry rule weights; one hundred pounds on all others, with three pounds allowance to fillies and geldings. Second to save stake.
No. 3. SAME DAY.—THE VESTAL STAKE; for three-year-old fillies; one and a quarter miles; \$25 p p; \$300 added; second to receive \$100; third to save stake.
No. 4. SWEEPSTAKES of \$50 each; \$25 forfeit; \$250 added; one and one-eighth miles; for three-year-olds; second to save stake.
No. 5. PURSE, —; amount and distance to be announced Thursday, Nov. 15th; and entries made at Secretary's office at or before 4 P. M., Friday.

Second Day, Tuesday, Nov. 18th.

- No. 6. PURSE, \$300; \$75 to second; heats of three-quarters of a mile; for all ages.
No. 7. SELLING RACE; one and one-eighth miles; purse, \$250; free entrance; second to receive \$75; horses entered to be sold for \$1,000 to carry regular weight; with two pounds deducted for each \$100 below \$1,000, and three pounds added to each \$100 over.
No. 8. SWEEPSTAKES for two-year-olds of \$50 each; \$25 forfeit; \$250 added; one mile; same conditions as to weights as No. 2; winner of No. 2 to carry seven pounds extra and second four pounds extra.
No. 9. PURSE, —; amount and distance to be announced on opening day; entries to close at Secretary's office, Monday, Nov. 17th, at 4 P. M.
No. 10. PURSE, —; same as No. 9.
No. 11. SWEEPSTAKES; for three-year-olds; \$50 each; \$25 forfeit; \$250 added; one and one-half miles; second to save stake; winner of No. 4 to carry five pounds extra.
No. 12. PURSE, \$400; price of a mile; for all ages; second to receive \$100; ten pounds deducted from regular weights.
No. 13. PURSE, —; amount and distance to be announced on second day of meeting; entries to close at Secretary's office, Wednesday, Nov. 19th, at 4 P. M.
No. 14. PURSE, —; same as No. 13.

Third Day, Saturday, Nov. 22d.

- No. 15. THE FINLAIN STAKE; for two-year-olds; dash of a mile; \$50 each; \$25 forfeit; \$250 added; second to save stake. Nominations for 1884:
No. 16. SAME DAY.—FAME STAKE.—For three-year-olds; dash of two miles; \$100 each, \$25 forfeit, \$300 added; second to have \$150, third to save stake. Closed with the following nominations for 1884:
No. 17. HANDICAP; 1 1/2 miles; stake \$50 each; \$25 forfeit; \$10 declare a tion. \$300 added. Weights announced second day of meeting at 1 P. M. from judges stand. Declaration following day at secretary's office at 1 P. M. Second \$75, third to save stake.
No. 18. HANDICAP; 1 1/2 miles; stake \$50 each; \$25 forfeit; \$10 declare a tion. \$300 added. Weights announced second day of meeting at 1 P. M. from judges stand. Declaration following day at secretary's office at 1 P. M. Second \$75, third to save stake.
No. 19. CONSLATIGN PURSE; \$200; \$50 to second; one mile, for non-winners at this meeting. Horses beaten once allowed 6 lbs., twice, 10 lbs., three times, 20 lbs.; entries to close five minutes after the finish of last race.

CONDITIONS.

Entries to stakes and purses not marked closed, except Nos. 5, 9, 10, 13 and 14, will close November 1st, 1884. Races to close will be run under weights adopted at the annual meeting of 1884. Starters in all races must be named at 6 P. M., the day preceding the race. Entrance free for starters in purses. Non-starters can declare out at 6 P. M., the day preceding the race, by paying five per cent. After that time they can only be excused by the presiding judge, and in such case ten per cent. on the amount of purse must be paid. Non-members will be placed on the same footing as members of the Association in regard to the payment of purses and stakes advertised, and should there be a deficiency, the winners will receive a pro rata division. Parties making nominations will be required to record colors at time of making entries, and their record will be allowed to ride in other colors. This rule will be strictly enforced. All nominations in stakes and entries in purses, (except Nos. 5, 9, 10, 13 and 14), must be made on or before the first day of November next, 1884, except to Jos. Cairn Simpson, Secretary, 508 Montgomery St., San Francisco. To be valid, they must be delivered to the Secretary personally or plainly postmarked, on or before that day—November 1st. The Association reserves the right to postpone races on account of unfavorable weather or other sufficient cause.

JAS. V. COLEMAN, President.

JOS. CAIRN SIMPSON, Secretary.

The Fast-Walking Horse.

The writer has spent considerable time recently in examining the catalogues of the various county and State fairs of the West, for the purpose of ascertaining how much encouragement, in the way of premiums, is offered for that most valuable of gait, the fast-walking movement. Strange to say, the fast-walking horse is almost entirely ignored. Generous premiums are given to trotting, running, saddle, and to even the recently despised pacing horses; but the improvement of the walking gait is rarely rewarded. The mania for the trotting action has spread from the horse centres of New York and Kentucky to every county and State in the Union. The teamster dotes upon the trotting speed of one or more of his draft horses; the ploughman dilates upon the trotting action of his plough horse, the dealer of coach horses boasts of their trotting movement, and even importers of Clydesdales and Percherons or Normans boast of their superior trotting action. The fast-walking capacity is now rarely mentioned as a merit of any of these grades of horses, and yet the habit of fast walking means volumes of praise in favor of the horse thus gifted. It is the foundation of superiority in all other gaits. The horse that can walk rapidly, and keep it up over hill and valley, brings his journey to an end quicker than if he trots rapidly and walks slowly. He will accomplish a long line of travel, either to the draft or pleasure wagon, with less fatigue to himself, and less weariness to his driver, than any other horse. If the horse has the capacity to walk fast, he has the earnest of ambition to speed fast in his more rapid movements. The fast runner, the rapid trotter, the active draft horse is proverbially the fast-walking horse. The counterfeiter in all these grades is the slow, droning, creeping, walking horse. The fast walk is, therefore, the foundation of all horse excellence. It should be generously encouraged by all our agricultural and fair associations. Purchasers should insist upon it as a necessary qualification, and it should be the aim of every breeder to have his colts broken, first, to a clean, square, rapid walk. This would insure an economy of time beyond the most sanguine expectation; and equally with the economy of time would be the saving of the whip-lash, the patience of the driver, and the cruel destruction of horse flesh. Nothing is more pleasurable to the roadster than the relief from the swift trot, when his horse indulges in a swinging, rapid walk up the grades; nothing is more desirable to the teamster than that his horses briskly walk forward with their load, and nothing shows off the stylish coach team to greater advantage than a hold, graceful, rapid walk. Every stimulus to create and encourage this gait should, therefore, be given to the breeder of all grades of horses by the horse community.—*Live Stock Journal.*

The Entries at Chicago.

From Alabama, Louisiana, Texas, Tennessee, Kentucky, Missouri, Ohio, Illinois, Colorado and Montana, trainers have sent in nominations in addition to the Pennsylvania owned stakes noted above; but by far the most noteworthy feature of the entries is the long lists from the Pacific slope, from the golden State of California.

Remembering the great success of the Baldwin string at the inaugural meeting at Washington Park, it is not surprising, therefore, that these stakes have commended themselves so strongly to other California turfmen, Chicago being nearly a thousand miles nearer their homes than the Eastern seaboard.

In the seven stakes just closed no less than nine owners from the Pacific slope are represented, and when we say that these raiders from the Golden State are responsible for 150 nominations between them, or nearly one quarter of the total list, which numbers 444 to the seven stakes, it can readily be seen that the Californians are determined on an aggressive campaign for 1885.

One of the most prominent of these stables from the Pacific, the Rancho del Paso of Mr. Haggin, will send a batch of horses East early in December, we are advised, and Capt. T. G. Moore, who has them in charge, has already decided in taking them direct to the famous old Bascomb course near Mobile, Ala., recently purchased by Messrs. Cottrill & Brown, with some thirty acres of land adjoining. Altogether the prospect of some great sectional races next year is very promising, and these Pacific alopers can be assured of receiving a hearty welcome, a fair field, and no favor.—*Sportsman.*

Hon. August Belmont had the ill fortune to lose, on the 31st ult., the broodmare Attraction, from inflammation of the kidneys. Attraction was a bay mare bred in 1866, by Mr. John Hunter, at Pelham, N. Y. She was by Bairownie, from Mand, (Alarm's dam), by Stockwell; 2d dam Connness of Albemarle, by Lanneroat. As a race-mare Attraction had a fair share of success, heating Mr. Jerome's Rapture in a big match at Jerome Park, in 1869, and was a mare of great beauty, speed and substance. In the stud she foaled several colts and fillies, but her best was Magnetism, by Kingfisher, who was one of the best fillies ever bred at the Nurery, a stud famous for the speed of its fillies.

Sir John Willoughby, in the extremity of his grief, has vowed to het no more. Moral: When you cannot manage your own stud, never plunge on your own horses.

Timing in Australia.

The great turf event of Anatralla is the Melbourne Cup, which is run on the first Wednesday in November. Usually from eighteen to twenty horses start, and as the chances of each have been discussed for months, interest is aroused and much money is wagered. People flock to Melbourne from all parts of the colonies, and the attendance numbers from sixty to seventy thousand. The Melbourne racecourse is one of the best appointed in the world. The grand stand will seat ten thousand, and the field stand will accommodate twenty-five thousand people. Half of those who witness the races do not patronize either stand. The time of each race is taken by electricity. Over the judge's box a clock with a dial six feet in diameter is suspended, and this is connected by wires with the posts which mark the fractional distances. If the race is two miles and a quarter, the button on the quarter post is touched the moment the flag goes down, and the electric current sounds a gong at the judges' stand and sets in motion the clock. Thousands are thus able to follow the recording hands while watching the fluctuations of the equine battle. The instant the nose of the winning horse crosses the score the judge touches a button which stops the clock. The time is thus accurately taken, and there is no chance for misrepresentation or room for dispute. This is an excellent feature, and it would be well to make use of it in this country, especially on our trotting tracks, where time is made the basis of the handicap and the temptation to shade a performance one way or another is always very great. In matches against time the clock with its long and relentless hands would add, so far as the general public is concerned, a new element of excitement, because not one man in ten carries a stop watch. And in the fight for the best record Jay-Eye-See would be judged with the cold impartiality visited upon Mand S. It would also make authentic the running record. The fact is notorious that some men enter the timing stand who are so nervous that they cannot stop their watches within a second of where they should be stopped.—*Turf, Field and Farm.*

An enthusiastic follower of the trotters and pacers has compiled the following interesting statistics on the season just closed: The total number of heats trotted during the grand circuit was 236 for the trotters and 73 for the pacers. The heats are apportioned as follows: Pittsburg, 30 trotted and 8 paced; the fastest mile, 2:13, by Harry Wilkes and Catchfly. Cleveland, 29 trotted and 7 paced; fastest mile, 2:09, by Maud S. Buffalo, 37 trotted and 8 paced; fastest mile, 2:16, by Edwin Thorne and Phallas. Rochester, 33 trotted and 10 paced; fastest mile, 2:17, by Harry Wilkes. Utica, 34 trotted and 7 paced; fastest mile, 2:18, by Clemmie G. Hartford, 25 trotted and 5 paced; fastest mile, 2:15, by Maxy Cobb. Springfield, 35 trotted and 13 paced; fastest mile, 2:15, by Harry Wilkes. Providence, 32 trotted and 11 paced; fastest mile, 2:15, by Clemmie G. Albany, 31 trotted and 4 paced; fastest mile, 2:16, by Harry Wilkes.

It is a common propensity of horse dealers to assure their customers that "he has never had a day's track work, but he can trot a 2:30 shot now. Put him in training, and he'll go in 20 snrs," and such talk, in describing some handy going trotter, whose legs have been encircled by many a bandage, and his visits to the track have been as regular as the sun. But among the anomalies which have lately come to light are the following pair: chases: Mr. Kilpatrick happened to see a rapid going mare in the hands of an expressman. She was taken to the New York Driving Park, and turned the track in 2:29. She was purchased by Mr. Newbold Morris for less than \$2,000, and is without track experience. She is by Crown Imperial. Another and still greater wonder is the horse Mr. M. Riley bought of a milkman. This horse is a mountain of strength, but is destitute of trotter's form and symmetry. He cuts a better figure when he moves at a 2:20 gait on a pace or a 2:30 gait trotting. He has been sent to James H. Lewis, Bridgeport, Conn., for training, and should be called Atlas.—*Veritas.*

Hannaford Ventilated Rubber Boot.

THE IMPROVEMENT CONSISTS OF AN ELASTIC MIDDLE SOLE WITH A series of compressible air cells, whereby foul air is expelled and fresh air is admitted to the feet. Their use for months in the Boston Fire Department, Brighton Slaughter Houses and large manufacturing establishments has fully demonstrated that the

Hannaford Ventilated Boots

WILL NOT SWEAT OR CHILL THE FEET. WILL NOT MAKE THE FEET TENDER. WILL KEEP THE FEET DRY. These Improvements add but little to the cost of the boots, while their comfort and durability are greatly increased. Persons who have been unable to wear rubber boots can wear these with comfort.

NO METALLIC SUBSTANCE which will rust, corrode, or act as a conductor of cold is used in these boots. PRICE FOR HIP BOOTS, \$6.50.

E. T. ALLEN, Sole Agent.

## JERSEYS and GUERNSEYS,

Registered in the A. J. C. C. and A. G. C. C., of New York, the only standard register.

Jersey Belle of Seltuate that made 25 lbs 4 1-2 ozs. of butter in one week.

A grandson of above cow is now in use in the Yerba Buena. This herd won all the herd prizes for 1882. Since then have been added young animals from Mr. Pierce's valuable herds East. He now has Jersey Belle of Seltuate, Coomassie, Mary Ann of St Lambert, Silver Cloud and Eurotas steers, also large selections from the Islands, without regard to cost.

He has interest in Eastern herds of 200, at the head of which stand only living son of Jersey Belle, Romeo de Bonair, (87 1/2 per cent Mary Ann's blood), and Pierston, the best show bull in America. These bulls are valued at \$10,000 each.

HENRY PIERCE, San Francisco.

## IMPROVED HORSE CLOTHING.

Secured by Letters Patent ISSUED MAY 27, 1879.  
REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J in combination with the elastic connecting-strip I, substantially as described and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingles is avoided, substantially as herein described.

Manufactured and for sale by

L. D. STONE & CO.,

422 and 424 Battery St., SAN FRANCISCO, CAL.

NEAR LEXINGTON, KY.

B. J. TREACY, PROPRIETOR.

THIS IS STRICTLY A BREEDING FARM, FOR THOUGH training is done, it is only for the stock belonging to the place, or those purchased from the proprietor. The proprietor of Ashland Park has no pet trotting family; his aim is to secure and have at all times for sale choice representatives of each of the leading families, these being the Hambletonians, Mambrino Chiefs, Clays, Pilots, Black Hawks. At Ashland Park may now be seen splendid specimens of the get of such stallions as George Wilkes, Almont, Mambrino Patchen, Clark Chief, Edwyn Forrest, Blackwood, Sentinel, American Clay, Administrator, North Star Mambrino, Bourbon Chief, Regular, Balsora, Howard's Mambrino and Homer. The steady aim is to possess nothing that does not trace through the best class of speed-producing trotting crosses, along all the blood lines, right to the thoroughbred. For catalogues or further particulars address  
2 1751 B. J. TREACY, Lexington, Ky.

## TURF AND TRACK.

### Famous American Trotters.—Toppallant.

The first horse on the American trotting turf to attain more than local celebrity was Toppallant, a son of the imported thoroughbred stallion Messenger, from whom the great family founded by Rysdyk's Hambletonian is directly descended, and the story of his wonderful performances over a distance of ground at an age when most horses have outlived their usefulness, is of special interest in these days when mile heats in harness are the only form of trotting offered to the public, and such an event as a three or four-mile race can only be learned of by reading in books of horses that lived and died long ago. That the great speed of the present generation of trotters has been attained at the expense of stamina does not, as some assert, at all follow, because it is the universal testimony of drivers that a race of mile heats at the clip that a trotter must go in these days to get any part of the money, is a much more exhausting affair than would be one of the old-fashioned two or three-mile contests, and Budd Doble made a practical and successful application of his ideas on this subject when he prepared Monroe Chief so well to beat the two-mile record that he did it with ease at the first time of asking. He was simply given the ordinary amount of work to fit him for a race at Lexington in which he was engaged, and as that affair turned out to be a hard fight of six heats, all of them in 2:21 or better, there was more prospect of overwork than any lack of it. With five days' rest after this race, and absolutely no fast work except a mile and a half at three-quarter speed on the day before the trial, Monroe Chief trotted two miles in 4:43, setting a mark which still stands as the best. So that in the matter of gameness and endurance there is not the slightest evidence that the trotters of 1884 are one whit the inferiors of those of 1850, and as to the question of speed there is no room for argument.

Toppallant, like many another of our early trotters, was wholly unknown to fame until the prime of his life had been reached, and when this fact is considered his performances are all the more remarkable. Foaled in 1807, he was used on the road by his owner, a resident of Long Island, until fourteen years old, and while not considered a horse of remarkable speed even for those days, was known as one able to go the length of the road in a game manner. In color he was a dark bay, nearly 16 hands high, and had the rattail and wide action behind that characterized so many of the immediate descendants of Messenger. Spavined in both hind legs, this blemish in no way affected his gait, the horse never taking a lame step from that cause, and although a raw-boned and not at all prepossessing customer he soon showed the turfmen of that day that he was the superior of anything that had yet been seen when it came to a hard-fought race of from two miles up. After being used as a trotter for many years Toppallant fell into the hands of George Woodruff (uncle of the famous Isaac Woodruff, who gave Budd Doble and John Murphy their education as riders and drivers), and when twenty-two years old he trotted four-mile heats at Philadelphia against Whalebone, a horse concerning whose pedigree nothing was known, but that was both fast and game. The contest between him and Toppallant was a famous one, the pair going four heats, or sixteen miles, before the battle was decided in favor of Toppallant, and one of the heats was dead, the time being 11:16, 11:06, 11:17, 12:15. Here were sixteen miles trotted in less than 46 minutes, the average rate being a little over 2:52 to the mile, and when we remember that the winner was in his twenty-third year, even the most confirmed of skeptics must admit that the trotters of the olden time had plenty of courage, even if they were somewhat deficient in speed when judged by modern standards. From what Toppallant did in this race Hiram Woodruff, who was in all things a conservative man, judged him to be capable of going twenty miles within the hour, and it must be confessed that even at the present day twenty-milers are not to be picked up in every stable.

But this race did not by any means end Toppallant's career, as two years later he met Whalebone and six others on the Hunting Park course, in Philadelphia, for a three-mile-heat affair. Collector won the first heat of this race in 8:16, and was such a good horse that day that Peter Whelan, who rode him, was of the opinion that he could have distanced the others had he not been kept back by orders. In the second heat Toppallant was first home, and in the third Dread, the first horse, by the way, to beat 3 minutes in a three-mile race, was successful. This left the three mentioned as starters for the fourth and deciding heat, and although Toppallant had the speed of the party and led for more than

two miles, he was in the end easily defeated by Dread. Here were twelve miles trotted in one afternoon by the old horse at twenty-four years, and yet the following week he went to Baltimore and beat Whalebone a race of three-mile heats, thus making one four-mile and two three-mile heat races trotted on successive weeks by a horse that lacked only a few months of being a quarter of a century old.

This was certainly a remarkable season's work for a horse of the age of Toppallant, and Hiram Woodruff truly says of him: "So far as I am informed there is not another instance in the annals of either the running or the trotting turf of a horse which has raced and won, especially at three and four-mile heats, when upwards of twenty years of age. The oldest I can find on the running turf was Buckhunter, who ran in England when upwards of sixteen years old, and who might have run on some time longer if he had not broken a leg. The Messengers were always a lasting and long-lived breed of horses. Toppallant was twenty-eight when he died." That the descendants of Messenger continue to train on far better than any other breed of trotters can readily be seen, even at this day, the Hambletonian family being a conspicuous illustration of the point in question. The first filly ever got by Abdallah, the sire of Rysdyk's Hambletonian, was Lady Blanche, and after being trotted numerous hard races and banged about on the road until so used up that she was sold for less than \$100, she came out and trotted good races when twenty-four years old, drawing a wagon in which sat Sim Hoagland, who weighed something over 200 pounds. Ajax, a horse less than fifteen hands high, by Abdallah, trotted and won a twenty-mile race when sixteen years old, and four years before that distanced Brown Rattler in a four-mile race under saddle in 8:04, carrying 160 pounds. Goldsmith Maid, a great-granddaughter of Abdallah, and out of a mare by that horse, was perhaps the most remarkable of our modern campaigners. She was the first to beat Dexter's 2:17 $\frac{1}{2}$ , and her record of 2:14, made when she was seventeen years old, and again equalled by her when she was nineteen, stood as the best for many years, and in her nineteenth year she trotted the best race of her life, beating Smuggler, Bodine and Judge Fullerton at Hartford, in a five-heat race, the first and second heats being won by Smuggler, the third dead between him and the Maid, and the fourth, fifth and sixth falling easily to the Maid. The time of this remarkable contest was 2:15 $\frac{1}{2}$ , 2:17, 2:16 $\frac{1}{2}$ , 2:17 $\frac{1}{2}$ , 2:18, 2:19 $\frac{1}{2}$ . That year she trotted fifteen races, against other horses and against time, and yet in 1877, when twenty years old, she was at it again, and went twelve races. The double infusion of Abdallah blood was worth something to her.—*Breeders' Gazette.*

### The Belle Meade Breeding Farm.

The famous Belle Meade breeding farm, located six miles from the city of Nashville, was originally settled by the father of Gen. W. G. Harding, who emigrated thither from Vermont in 1805, entering two and a quarter sections of land from the Government.

Both the father and grandfather of Gen. Harding were breeders of the blooded horse, and he therefore came naturally by his fondness for the science. He began nearly fifty years ago with one mare, Juliet, by Kosciusko, which he bred to imported Leviathan, producing the mare Beta, which achieved a local reputation for great speed. He then purchased the celebrated four-mile mare Gama, by Pacific, at a year old, and shortly afterwards her full brother Epsilon. These formed the nucleus of his breeding stud, which was added to from time to time by the purchase of other high-bred animals. He trained and ran his own horses with great success, and achieved a wide reputation on the turf. After a successful career with Carmargo, Voltiger and Ventilator, by Vandal, Gen. Harding retired from the track, sold his horses and started the system of annual sales.

At the time of our correspondent's visit to the farm there were on the place four stallions, eighty broodmares and forty-two colts, all of the best breeding, and comprising some of the most valuable stock in the country. The stallions include Enquirer, by Imported Leamington, out of Lida, by Lexington, who was a celebrated racer. He is a great sire. Among his progeny are Falsetto, Getaway, Pinafore, Little Phil and other noted animals. He is a blood bay or brown, 16 hands and 1 inch tall. Imported Great Tom, by King Tom, dam Woodcraft, by Voltiger. He is the sire of Ella Tangent, Standford, Keller and Taurus. He is a chestnut, 16 hands tall, weighing about 1,300 pounds, and was bought of Lord Falmouth and imported by General Harding. Bramble, by Bonnie Scotland, dam Ivy Leaf, by imported Australia. Out of fifty-one races in which Bramble started he won forty-five. He is a solid bay, about 15 $\frac{1}{2}$  hands high. Luke

Blackburn, by Bonnie Scotland, dam Nevada, by Lexington. He started twenty-four times and won twenty races in one year. He is a bay with star and two white feet behind. The combined value of these four horses is near \$100,000. The mares are highly and fashionably bred, of which Vesper Light, Woodbine, Ivy Leaf, Sue Walton, Melrose, Mariposa, Nubia, Dnel, Capitola, and Blondie are the most distinguished, they being the dams of horses of national reputation. Among other noted horses General Harding has bred are Bramble, Belle of the Mead, Vandalite, Carmargo, Voltiger, Nellie Ramson, Ethel Sprague, Brambleta, Bombast, Bayard, By-the-Way, Bride Cake, Beautitude, Boulevard, Brooklyn, Book Maker, Bye-and-Bye, Bergamot, Bonnce, Ben Hill, Duke of Kent, Roebuck, Eland, Helmet, Ventilator, Tennessee, Gazelle, Gamma, Theta and Selene. The live stock of Belle Meade, representing at least \$250,000 in value, is in charge of Robert Green, a colored man, now silvered over with gray. He was born on the estate and has always remained there. He handles the valuable stallions and mares and superintends everything pertaining to the blood stock, department, assisted by three or four subordinates. It is a pleasure to see him handle the horses, Enquirer, Bramble, Great Tom, and the other noted animals, which in his hands are as docile as kittens.

Gen. Harding has one son, Mr. John Harding, who owns a farm of 1,200 acres within a short distance of the home- stead of Andrew Jackson, six miles from Nashville. He has also two daughters, one of whom is the wife of United States Senator Jackson, of Tennessee, a distinguished lawyer and large planter, and the other is married to his brother, Gen. W. H. Jackson, one of the leading men of the South; who for the last fifteen years has been managing Gen. Harding's farm and business, and to whose intelligence and labor the high position of both are largely due. A graduate of West Point, he served with distinction in the war, and has brought a degree of practical farming information, great executive ability, superior method and system to bear on Belle Meade, which entitles it to the highest rank.—*Sporting and Dramatic Journal.*

The breeding of horses in Kentucky is a prosperous business properly conducted. We found the breeders well satisfied with the prospects. Those who have the best sires and the best dams are finding good sales for their produce. Those who have simply bred without developing speed in their young find they have made a mistake, and now there is hardly a prominent breeder that does not have his young things handled. The colts and fillies are showing more speed than it was expected such young animals would show. Most of them are broken as weanlings, putting on the bridle, and working them by the side of a horse that is rode. In this way the colt bears no weight and soon learns to trot fast. The speed they show after a few weeks handling would astonish those who had never seen what a little practice would accomplish. Of course there is a difference of speed shown on different farms, some sires imparting the trotting propensity in greater degree than others. No one can see the bold trotting action of these younglings without being impressed with the idea that there is great progress going on in breeding the trotting gait. We doubt if there is a single breeding establishment in Kentucky that would not make money by selling off their old broodmares and keeping the best of their fillies for broodmares in their places. The fillies have longer lines of trotting inheritance, and would naturally transmit the trotting disposition in greater degree than their dams. Every generation shows greater speed and greater disposition to trot. This is in keeping with the laws of heredity. And practicing the young ones at the trot as most prominent breeders now do, intensifies the trotting disposition.

The extraordinary time made by our horses has attracted the attention of the Russian government to the American modes of rearing, training, and driving the trotter. It is pursuing a wise policy in endeavoring to secure the services of a competent and reliable trainer for its establishment at Chrenovio. The matter has been referred to us, but we fear the conditions and terms will not meet the views of a first-class man. Budd Doble has been approached on the subject, but he could not be induced to leave his thriving business in Chicago. We asked John Splan, on whom Dan Mace's mantle seems to have fallen, if he would like to go to Russia on a two years' engagement at a salary and percentage on prizes, also free lodgings, heating, and furniture. "No! no! None of that in mine. A Nihilist might blow me up, or the government send me to Siberia on some wrong kick he could give me 'the proper conversation' in Russia."—*New York Spirit.*

The Chicago Driving Park.

The history of the Chicago Driving Park is one of strong contrasts, great triumphs and final collapse. A careful study of the leading events is not without a valuable lesson, and though the experience of the past season has been painful, it will have a salutary effect in the future.

The Rancocas Stable in 1884.

With the retirement of the large racing stables for the winter, those who have followed them through good and bad fortune for the season begin to ask for information as to the total results of the season.

Table with columns: Horse, Total times started, Times first, Times second, Times third, Gross amount won. Lists various horses and their performance statistics.

In connection with the total earnings of Mr. Lorillard's horses, as above, it can be said that while there is considerable of an increase this year over the earnings of the stable last year, none of the stables can present such a credit as the Dwyers did in 1883.

Of the earnings of the several horses the honors are entirely with Wanda, the two-year-old daughter of Mortemar and Minnie Minor, with Drake Carter a good second and Aranza a fairly good third.

The three-year-old honors of the year was the success of Young Duke, who won the Tidal Stakes at Sheephead Bay in June, but who, after being badly beaten for the Coney Island Derby by Graystone, went so completely amiss from injuries received that he never again carried the "cherry and black."

The oldest horse in the list is the erratic Aranza. Want of space forbids any extended details of her winnings or losses. Her career for the season can be summed by saying "that when she was good she was very good, and she was bad she was horrid."

The riding honors for the Rancocas Stable during the past season are young Olney's. He had 95 mounts out of the 181 starts, of which he won 21, was second 19 times, third 10 times and won \$50,740.75, out of a total of \$84,202.50.

had 37 mounts, of which he was 6 times each first, second and third, and earned \$8,875. The other riders were "Jimmy" McLaughlin, whose single mount was a win—the Seabright Stakes, on Wanda—which was worth \$2,535.

Mambrino on Barbed Wire.

It is most gratifying to note the growing interest in veterinary science and the encouragement increased attendance is giving to our new veterinary colleges. The future is certainly brilliant with hope for the new graduates, and we soon expect to see the demand for veterinary surgeons far exceed the supply.

But yesterday a mare with her foal was brought in from the pasture; the filly had a deep, ugly wound across her breast, as if cleaven with a knife. How did it occur? Why, a neighbor had a barbed wire fence, the mare got out of the pasture, and into this device of the —; my colt became entangled.

Only a few days since we read of a representative of the humane society attempting to take charge of a horse about to start in a race. Why? Because upon information received he had reason to believe that the poor, dear, dumb creature was a sad sufferer from a saddle gall, or a chafe.

We should rejoice to see Mr. Bergh, as the recognized head of the humane societies of America, make an organized movement against the use of barbed wire.

Running in Harness.

At the New York Driving Park on the 7th, there was a novelty to the eastern tracks of a running race of double teams to harness. This style of racing was tried in California several years ago and the time made, 1:54, by Mr. P. A. Fingan's Jake, by Oliver Cromwell, dam Jennie C., by Norfolk, stands as the best on record at that way of going.

"Murphy's day" at the New York Driving Park will afford any quantity of talk during the winter for those in the habit of discussing horse matters at the clubs, at boarding stables and at other resorts where horsemen meet during the winter when a drive up the road is impracticable.

cheered heartily as both teams dashed under the wire at the end of the heat.

The second heat was not nearly as good a good a race. The Herrington team won the inside position and was given the word fully a length in front of Murphy, which on the turn was made two lengths, and as the "hays" dashed down the incline to the quarter they increased the lead to nearly three lengths. Along the lower stretch and up the hill to the rocks the chestnuts gained some, but at the three-quarters they began to tire, when Herrington brought his team away under the whip, winning the heat and race by nearly three lengths. Time to the quarter, 27 3/4 seconds, to the half, 55 1/2 seconds, three-quarters, 1:24 1/2, the mile, 1:55 1/2. Murphy, although beaten, was warmly congratulated after the race for introducing so thoroughly new and exciting a feature in racing. But at the same time it is a dangerous innovation that with less competent drivers may at some time result in a serious if not fatal accident.

Sale of Imported Broodmares and the Stallion Uhlan.

Mr. Thomae H. Swope, Kansas City, Mo., has purchased from Baron Von Zuylen, Cimarron, New Mexico, the following highly bred imported mares, and the stallion Uhlan, which were brought over to this country in 1881.

Uhlan, hr s, foaled 1869, by The Ranger, dam Le Mechant, by Turms, her dam Traviata by The Lihel. Uhlan won the Ascot Stake, Goodwood Stakes, Doncaster Cup, and other races. Uhlan made four seasons in France and sired a dozen winners and was then sold to close an estate.

Cam, hl m, foaled 1870, by Camerino, dam Corheille, by Newminster, her dam Tronssean by Gameboy.

Ledy Lena, h m, foaled 1876, by Adventurer, dam Summer's Eve, by Stockwell, out of Summerside (winner of the Oaks), by West Australian.

May French, ch m, foaled 1875, by Distin, dam The Selected, by Umpire, out of Smtt, by Womersley.

English Lass, h m, foaled 1878, by Paul Jones, (by Beccaneer), dam Matchless, by Stockwell, her dam, Non Parelle, by Kingston.

Crash, ch m, foaled 1877, by Thunderbolt, dam Malpractic, by Chevalier d'Industrie, her dam, Dutchman's Daughter, by Flying Dutchman.

Christmas Gorse, h m, foaled 1878, by Winslow, dam Miss Byng, by Brother to Strafford, her dam, Miss Evelyn, by Orlando.

Lady Wentworth, b m, foaled 1878, by Restitution, dam Ada Byron, by Blair Athol, her dem Effie, by Wild Dayrell.

Rachel Rae, hr m, foaled 1870, by Wild Dayrell (winner of the Derby), dam Boadicea, by The Nahoh, her dam Princess by The Merry Monarch.

Cleopatra, h m, foaled 1878, by Rosicrucian, dam The Spynx, by Newminster, her dam Madem Stodere, by Sleight of Hand.

Fredy, hr m, foaled 1878, by George Frederick, (Derby winner), dam Phoebe Athol, by Blair Athol, out of Phoebe, by Touchstone.

Sleepy Eye, h m, foaled 1876, by Orest, dam Lady Mand, by The Prime Minister, her dam Peasant Girl, by The Major, out of Gance, by Waxy.

Annapolis, ch m, foaled 1878, by imp. Mortemer, dam Virginia, (sister to Regalia, winner of the Oaks), by Stockwell, her dam The Gem, by Touchstone.

King Cup, ch m, foaled 1878, by Kingcraft, (winner of the Derby), dam Nutbeam, by Lord of the Isles, out of Chow, by Surplice.

Znleika, ch m, foaled 1877, by Scottish Chief, dam Cerintha, by Newminster, out of Queen Bee, by Amorino.

Royal Title, ch m, foaled 1875, by Kingcraft, dam Lady of the Dehen, by Dundee, her dam Lady of the Lake, by King Tom.

Lady Lyon, ch m, foaled 1870, by Lord Lyon, (Derby winner), dam Lenky Bet, by The Cossack, out of Giselle, by Emilius.

Greek Maiden, b or br m, foaled 1869, by Blair Athol, dam Sparte, by Pyrrhus the First, her dam Hornpipe, by Venison.

Angelia, b m, foaled 1877, by Lord Lyon, dam Lady Inglis, by Ely, her dam Heroine of Lucknow, by Nutwith, out of Pocahontas, (dam of Stockwell, Rataplan, King Tom, etc.), by imp. Glencoe.

Ethel Mortlock, h m, foaled 1878, by Lord Lyon, dam Camilla, by Saunterer, out of Eastern Princess, (dam of imp. Prince Charlie), by Surplice.

Ute Maiden, h f, foaled 1882, by See Saw, dam Lady Lena, above.—Live Stock Record.

A Race Between Yearlings.

At Gallatin, Tenn., on the 10th, there was a race for yearlings that had been the leading topic in Tennessee turf circles for some weeks. The following is the telegraphic report to the New York World:

The weather and track were fair, and there was a good attendance at the old Alhion track to-day, drawn together to witness the decision of a race between six thoroughbred yearlings. The race was the outcome of a friendly rivalry between several owners as to who had the best yearling, and the result was an open sweepstake, each to carry 100 pounds, with sex allowances, and run a quarter of a mile. The starters and jockeys were E. Searr's brown colt Lafete, 104 pounds, by Longfellow, dam Sne Wynne (St. Clair); J. T. Carter's bay filly Allie Long, 101 pounds, by Longfellow, dam Alice Burford (J. Scott); W. R. Rogers' bay gelding Gov. Bate, 97 pounds, by Glangary, dam Alherta (W. Mack); J. Franklyn's bay filly Long Range, 97 pounds, by Longfellow, dam Sierra Nevada, (R. Sedge); T. Bates' chestnut filly Eastlake, 97 pounds, by Enquirer, dam Bonnie Park (D. Ward), and W. R. Tomkins' J. Wynne, 115 pounds, by Brigadier, dam Henrietta of the West (J. Burford). The six were sent away well together at the second attempt, and finished in the order in which their names are given, Lafete winning by a neck, with Allie Long a neck in front of Gov. Bate, Long Range, who was expected to have won, not being placed. Time, 25 1/2 seconds. The judges were C. H. Gellock, J. O. Bruton and W. T. Linck, and the timers B. Franklin and Major Elliott.

The Board of Review of the National Trotting Association will hold a regular meeting at the Fifth Avenue Hotel, New York, on Tuesday, December 2d, at 7 P. M.

Stoval, the colored jockey, has been engaged to ride for the McGrathiana Stable, property of Mr. Milton Young, in 1885.

George Lorrillard has bought the Bannatyne farm, south of Eatontown, N. J., for \$14,500. He will use it as a stock farm.

The Blood Horse Association—Fall Meeting at the Bay District.

There was a sudden sky early Saturday morning, the fog clouds hung heavily on the hills, and as they lowered into the valleys there were drippings and discomforts worse than actual rain, as the water fell so gently that it was all left on the surface not current enough to seek a lower grade, dew-like and shining in millions of globules from every spray and leaf. There was a sombre pall on the ocean, dreariness on land and water. The early visitors, who thronged to the Bay District course to witness the early gallops of the racehorses, took a look at the track and wended their weary way homeward, disgusted at the outlook. No one imagined that there could be anything like racing at such an unpropitious time, and up to 9 o'clock it appeared hopeless, scarcely an anticipation of any sport. The fog still hung with perverse pertinacity on the hill to the south of the track, lifting at times and then sinking denser and more drearily. After that the sun was struggling to overcome the vapor, and when it shone for a moment there were hopes that the potent beams would be the victor in the fight. Those optimistically inclined hacked old Sol, while the pessimistic divisions were willing to wager long odds that Jupiter Pluvius would knock his majesty out. A minute's sunshine, ten of shadow, until the forenoon was well nigh gone. Then those who knew that there is always a silver lining to the blackest cloud were gratified that this day was not an exception, and the trainers, joining in the belief, brought out their horses for a spin around the muddy course. Banged tails were enveloped in bandages, though the sleek coats were soon bespattered with mud, and grooms sighed over polish which would soon hear a sombre hue. Right merrily the youngsters galloped and threw showers of clay-colored globules behind them.

Anxiously those were watched which were designed to take part in the battles of the afternoon, and the spectators, who were guided by the morning spire, were all ajoy as one after another brushed through the stretches. When the gallops came to an end the harrow was set at work and every round ameliorated the sloppy course. At the best the track must be slow, but if it could be got safe owners would be well satisfied to run. When the hell rang to call the horses at the advertised hour it was assuredly safe, and though there were slippery places, these were on the first turn, which would not interfere with the first and second races on the programme, as both of these were three-quarters of a mile. There was a fair attendance when the order was given to saddle and the throng increased until there was quite a concourse on balconies and stands. Conspicuous among the carriages were an English drag of E. J. Baldwin and the four-in-hand of P. A. Finigan. The former was a new feature on a California race-course, and attracted a great deal of attention from its hearty and novelty; and certainly the four-in-hand was so well appointed as to merit a full share of praise.

The first race was the Ladies' stake for two-year-old fillies—a dash of three-quarters—and of the thirteen nominations only two started. These were La Scala and Mischief. La Scala, by Joe Hooker, from Abbie W. by Norfolk; Mischief by Thad. Stevens from Katie Pease. This was the fourth filly by Joe Hooker to start in a race, but the fame of her half brothers and the form she had displayed in her private trials were sufficient to install her as the favorite at the long odds of \$20 to \$5. Even this estimate was more than justified by the running, as she took the lead at the start and never surrendered it, winning with a good deal to spare in the very good time—when the condition of the track is taken into consideration—of 1:20.

BAY DISTRICT COURSE, SAN FRANCISCO—Pacific Coast Blood Horse Association Fall meeting. First day, Nov. 15, 1884.

First Race—The Ladies' Stake, for two-year-old fillies; \$50 each; \$25 forfeit, second to save stake; three-quarters of a mile. Closed with 13 nominations. Rancho del Paso's b f La Scala, by Joe Hooker, dam Abbie W., by Norfolk, 107 lbs. ....Duffy 1 Jas. Mees' cb f Mischief, by Thad Stevens, dam Katie Pease, 107 lbs. ....Long 2 Time, 1:20.

The second race was also for two-year-olds, and at the same distance, three-quarters of a mile. There were three starters, Rapido, by Grinstead, his dam Experiment, by Monarchist, granddam Cornflower, by Lexington, which gives him three crosses of the greatest of all American sires. Tom Atchinson is by Joe Hooker, and is a three-quarter brother of Jim Renwick; and the other starter, Ichi Ban, is also by Joe Hooker, from a Norfolk mare. In this race the pool-selling was quite lively, Rapido and Ichi Ban alternating as favorites, but just before the start the rates were \$50 on Rapido, \$48 on Tom Atchinson and \$17 on Ichi Ban. A very good start was given without delay, and Ichi Ban being the quickest on his feet took the lead soon after the dropping of the flag. At the half-mile pole, which was reached in twenty-five seconds, Rapido and Ichi Ban were head and head, Tom being two lengths in the rear, but from that point the Santa Anita colt showed his superiority, leaving his competitors and winning quite handsly in 1:18 1/2. As the weights in this race were ten pounds less than the fillies carried, the time was about equal, though it was evident that in both cases the winners could have run somewhat faster. Ichi Ban was second, Tom Atchinson, third.

Second Race—Sweepstakes for two-year-olds; \$50 each; \$25 forfeit; \$250 added; second to save stake; Alta and Estill to carry rule weights; all others one hundred pounds. With sex allowances; three-quarters of a mile. Four nominations. E. J. Baldwin's cb g Rapido, by Grinstead, dam Experiment, 97 lbs. ....Peppers 1 W. R. Tomkins' g b Duke of the Hooker, dam Queen, 97 lbs. ....Jo quin 2 T. Lynch's ch g Tom Atchinson, by Joe Hooker, dam Bay Kate, 97 lbs. ....Long 3 Time, 1:18 1/2.

The next race was the Vestal stake for 3-year-old fillies, 1 1/4 miles. There were fifteen nominations made when the fillies were yearlings, and of these three came to the post. The contestants were: Freda, by Wildidle, from Frolic; Glendair, by Norfolk, from Glendew, and Lizzie Dunbar, by Bazar, from Tibbie Dunbar. Freda and Glendair were bred at Palo Alto, Freda having been purchased by E. J. Baldwin, and Glendair by Messrs Kelly and Lynch.

It was a close fight for position in the pools between Freda and Glendair, though towards the close Freda had the most supporters, the rates being \$70 on Freda, \$65 on Glendair, and \$20 on Lizzie Dunbar. Again there was a capital start, and without a waste of time. The three were locked as they passed the stand, Freda and Glendair having their head parallel, Lizzie a neck behind. The latter was yawed all over the track by the efforts of her rider to restrain her, and ran under a great disadvantage. The quarter was made in 27 seconds, and the half in 55 seconds, Freda slightly in the lead of Glendair. When three-quarters were run Freda and Glendair were still locked, the time 1:21 1/2, but going around the turn Freda gained the advantage, and when the mile was completed in 1:49 1/2 it looked as though she had the race safe. But Glendair was running strong, and overhauling the leader, so that at the seven-furlong pole she was only a trifle behind.

Holloway took a pull at Freda, wisely husbanding her strength, but Petsy Duffy was coming fast with Glendair and at the draggate Holloway was forced to apply the whip vigorously. From there the race was intensely exciting. Neither feltered under the driver; both ran resolutely. It was too close for the usual cheering and every eye was eager to catch the finish. Only those who were in a position to note the difference to an inch could designate which was the winner, and the Judges aware of the necessity of exactness, were leaning over the stand to get the range over the donkile wire. Their bet gave the race to Freda by a "short head," Lizzie not very far behind. Time, 2:13 1/2.

Third Race—The Vestal Stakes; for three-year-old fillies; \$25 each; p. p. \$300 added; second to receive \$100; third to save stake; one mile and a quarter. Fifteen nominations. T. Lynch's ch f Glendair, by Norfolk, dam Glendew, 115 lbs. ....Duffy 1 W. L. Fritchard's ch f Lizzie Dunbar, by Bazar, dam Tibbie Dunbar, 115 lbs. ....Flowers 3 Time, 2:15 1/2.

The fourth race was the most eagerly anticipated of any on the programme. It was a stake for three-year-olds, of one and one-eighth miles. The starters were Shenandoah, Beaconsfield, Philip S. and Prince of Norfolk. The betting was the best criterion of how evenly their chances were regarded by the speculators. For instance, in one pool Shenandoah was the favorite at \$70, the second choice was Beaconsfield at \$80, the third Philip S. at \$80, and the fourth choice was Prince of Norfolk at \$95. As the pool selling progressed there was an increase in the amount wagered in each pool, Philip S. bringing \$140, Prince of Norfolk \$130, Shenandoah \$115, and Beaconsfield \$90. Several times the favoritism went from one to another, and each could claim the first position in the estimation of the bettors. The start was from the seven-furlong pole, and they were sent off so evenly that it could not be told which had the advantage, though as they passed the stand Prince had his nose in front. At the quarter pole in 40 seconds all were in a bunch, Prince of Norfolk running very wild on the turns. Down the backstretch the four were so close that the leader could not be determined, and when five furlongs were accomplished in 1:06, the situation was the same. From that point Philip S. drew away, so that at the head of the stretch he was two lengths in the lead, Prince of Norfolk second. That only an accident could deprive Philip S. of the victory, was the unanimous opinion of the lookers-on, and it also seemed that the Prince would be second. Beaconsfield had plenty of vim, however, and he ran past his competitor, winning the second place by a neck, Shenandoah some distance behind. Time, 2:00.

Fourth Race—Sweepstakes for three-year-olds; \$50 each; \$25 forfeit; \$250 added; second to save stake; one mile and an eighth. Five nominations. P. Siebenthaler's b c Philip S., by Leinster, dam Lily Simpson, 118 lbs. ....Duffy 1 Garland & Goldsmith's b c Beaconsfield, by Hock Hocking, dam Aileen Allamab, 118 lbs. ....Easterbrook 2 M. M. Allen's ch c Prince of Norfolk, by Norfolk, dam Marion, 118 lbs. ....Williams 3 E. J. Baldwin's b c Shenandoah, by Shannon, dam Demirep, 118 lbs. ....Holloway 0 Time, 2:00.

The fifth race was a dash of a mile for all ages, the entries Jim Douglas, Gano and Forest King. Jim Douglas was the favorite at \$110, Gano bringing \$45, and Forest King \$22.50. When the flag fell Jim Douglas jumped off with the lead, and selecting the best ground to run upon, never lost the advantage, Gano running a fair second to the half mile in 52 seconds. At the three-quarters Forest King was in second place, but he could never get near enough to endanger the chances of the favorite, who won with quite a margin to spare in 1:46. And thus closed the first day of the Fall meeting, and it was pronounced by all the most successful opening which has ever been known since the organization of the association.

Fifth Race—Purse \$250; \$50 to second; for all ages; one mile. Geo. Howson's b h Jim Douglas, by Wildidle, dam Yolone, 6 years, 118 lbs. ....Howson 1 Rancho del Paso's b f Sweetbriar, by Virgil, dam Impudence, 3 years, 110 lbs. ....Duffy 2 E. J. Baldwin's b c Gano, by Grinstead, dam Santa Anita, 4 years, 118 lbs. ....Peppers 3 Time, 1:46.

On Tuesday, 18th, the settled weather had brought the track into good condition and no Spring day was ever more cheering and inviting for an outing. The attendance was very good, the best second day ever known in the history of the association, and two of three races were spirited affairs. The first was heats of three-quarters of a mile, in which started Jim Douglas and Sweetbriar. Jim was largely the favorite before the start, an average of the pools being \$70 on him to \$16 on Sweetbriar. That these or larger odds were justified was satisfactorily proved by the result of the race, the favorite winning so easily that all description required is to say that Jim won the first heat in 1:16 1/2, the second in 1:18 1/2.

First Race; Purse, \$300, \$75 to second; for all ages; three-quarter mile heats. Geo. Howson's b h Jim Douglas, by Wildidle, dam Yolone, 6 years, 118 lbs. ....Howson 1 Rancho del Paso's b f Sweetbriar, by Virgil, dam Impudence, 3 years, 110 lbs. ....Duffy 2 Time, 1:16 1/2, 1:18 1/2.

The next race was a selling race, in which were eight entries, all of which started. These were Cito, Birdcatcher, Belshaw, Duke of Monday, Quebec, Bessie, Billy Johnson and Robin. The positions awarded were in the order their names are written, the starting point was at the seven-furlong pole, the distance to be covered one and one-eighth miles. Duke of Monday was an immense favorite some time before the start, the rates being \$60 on him to \$17 on the field, which comprised all excepting Birdcatcher, who brought \$8. When the flag fell the horses were in a good position, and were sent off very evenly, Billy Johnson having a trifle the advantage. He was running very fast from the outset, and keeping up his rapid rate, left the others in the rear when the stand was passed. Around the first turn the pace was still faster, and when three furlongs were compassed in the last time of 36 1/2 seconds he was several lengths in the lead, Duke of Monday, and Cito being second and third. Billy still kept up a rate quite unlooked for by a majority of the spectators, and at the half-mile pole was a good twenty lengths in the lead of Duke of Monday. From that point the latter gained on the leader, and when fairly straightened into the stretch was only a few lengths behind. Cito was also improving his position, and when the mile was finished in 1:44 Billy and Duke were nearly parallel, Cito three lengths behind. From thence Duke easily beat his competitor, winning a very good race in 1:57. Cito was a fair third, the others in a ruck behind. It was generally conceded that if Billy Johnson had been more judiciously ridden the result would have been otherwise, and in that case the "holders" would have scored a notable victory.

Second Race—Selling; purse, \$250; second to receive \$75; horses offered to be sold for \$1,000 to carry entitled weight, with two pounds off for each \$100 below \$1,000 and three pounds added for each \$100 above. One mile and an eighth. Rancho del Paso's b g Duke of Monday, by Monday, dam I. aged, 6 years, 107 lbs. ....Duffy 1 C. E. Ramey's ch g Billy Johnson, by Grinstead, dam Pleasant 5 years, 105 lbs. ....Peppers 2 Time, 1:57.

J. C. Simpson's ch g Cito, by Joe Hooker, dam Too Soon, 2 years, \$500, 70, (carried 74), lbs. ....Ginnie 3  
 G. L. Richardson's ch g Quebec, by Norfolk, dam by Belmont, aged, 31,000, 115 lbs. ....Holloway 3  
 W. M. Murray's br h Birdcatcher, by Spectre, dam Pet, 5 years, \$1,000, 118 lbs. ....Hercules, dam unknown, aged, Young 0  
 Wm. Boot's br m Beattie, by Imp. ....Young 0  
 T. Lynch's h g Beshaw, by Wildidle, dam Snie Williamson, aged, 380, 101 lbs. ....Joachim 0  
 Wm. Boot's ch g Robin, by Bob Wooding, dam Lizzie Marshall, 4 yrs, \$600, 107, (carried 110), lbs. ....Appleby 0  
 Time, 1:57 1/2.

The third race was the same distance, 1 1/4 miles, the starters Philip S., Glendair, Billy the Kid, Lucky B., Forest King and Nellie Peyton. The betting was quite heavy part of the time, Nellie Peyton being slightly the favorite when the pole were first offered, though Philip S. soon passed her, and a fair average for some time before the start was Philip S., \$120, Nellie Peyton \$100, Glendair \$75, and the field (Billy the Kid, Lucky B. and Forest King), \$27.50. Philip S. had the pole, with Glendair second, Billy the Kid third, Lucky B. fourth, Forest King fifth, and Nellie Peyton outside. There was some delay in getting them off, and when the flag fell Philip S. had a decided advantage. This he made the best use of by retaining his inside position by outrunning the others, and passing the judges' stand, for the first time, he was a length in advance. At the quarter pole in 39 1/2 seconds, he was half a length in front of Glendair, the others in a rack behind, and there was no change at the half, the five furlongs run in 1:05. So far it seemed as though the favorite had the race safe, and when the mile was completed in 1:44, he still led, though Forest King was coming, and soon after it was evident that he was closing rapidly on the leader. He continued to gain, and amid shouts of vociferous applause from those who had hacked the field, he won by a length from Philip S., with Lucky B. third. Time, 1:57 1/2. This was the first race so far when the backers of the short end had made such a decided "killing." The night before Forest King sold for \$5 in a pool of \$150, and in all probability \$1,000 investment won over ten times as much.

Third Race.—Purse \$250, \$50 to second; for all ages; one mile and an eighth.  
 S. J. Jones h h, Forest King, by Monday, dam Abbie W. 7  
 P. Siebenthaler's h h, Philip S., by Leinster, dam Lily Simpson, 3 years, 109 lbs. ....Howson 2  
 E. J. Baldwin's h h, Lucky B., by Rutherford, dam Maggie Emerson, 4 years, 118 lbs. ....Holloway 3  
 T. Lynch's ch f, Glendair, by Norfolk, dam Glendew, 3 years, 100 lbs. ....Long 0  
 Rancho del Paso, ch f, Nellie Peyton, by Imp. Hurrah, dam Emily Peyton, 5 years, 115 lbs. ....Duffy 0  
 G. L. Richardson's h g Billy the Kid, by Leinster, dam Lily Simpson, aged, 115 lbs. ....Williams 0  
 Time 1:57 1/2.

Thursday, the 20th, the "extra day" of the meeting proved, like those which preceded it, very satisfactory to the spectators. Some of the high-rollers among the spectators came to grief when Nellie Peyton beat Douglas, with the odds so long against her, but as three favorites in the four races won, those who make a practice of supporting the cream of the entries could not find much fault. The track was very good, and, with the exception of a portion of the first turn, was unquestionably fast. The weather was fair and the attendance very good. The betting was quite spirited, more money going into the box than on any of the preceding days, and there was nothing to mar the sports of the afternoon.

The first race was a sweepstakes for three-year-olds, a dash of one and a half miles. There were three starters, Philip S., who had incurred a penalty of five pounds for his victory on the opening day, Shenandoah and Beconsfield. The places allotted were in the above order; in the pools Beconsfield being a decided favorite. A very good start was given them soon after they were marshalled at the starting point, the favorite taking the lead soon after the flag fell, Shenandoah second. In this order they passed the stand for the first time in 56 1/2 seconds, and there was no change when three-quarters were run in 1:22. The first mile was completed in 1:48. Shenandoah lapped on the leader, Philip S. moving up. Soon afterward Shenandoah faltered and Philip S. passed him, though despite the efforts of his jockey he could not endanger the chances of Beconsfield, who won with a good deal to spare in 2:40. Shenandoah pulled up so lame that his rider was permitted to dismount at the lower tier of stables, his middle tendon of the foreleg being so badly sprung that it is unlikely he will ever race again.

Nov. 20th.—First Race.—Sweepstakes for three-year-olds; \$50 each; \$25 forfeit; \$250 added; second to save stake; winner of No. 4 to carry 5 pounds extra; one mile and a half. Five nominations.  
 Garland & Goldsmith's b c Beconsfield, by Hook Hocking, dam Alleen Alannah, 18 lbs. ....Holloway 1  
 P. Siebenthaler's b c Philip S., by Leinster, dam Lily Simpson, 123 lbs. (including 5 lbs. penalty) ....Hennessy 2  
 E. J. Baldwin's h c Shenandoah, by Shannon, dam Demirep, 118 lbs. ....Holloway 3  
 Time 2:40.

The second race was heats of a mile for all ages, ten pounds below rule weights. Jim Douglas, Nellie Peyton and Billy the Kid were the starters, the position being in the above order. Jim was largely the favorite, his supporters being willing to wager \$100 on his chance to \$22.50 on both the others. Many pools were sold with Douglas out, so confident were the bettors that he would win, with a corresponding lack of confidence on those who took the other side. The first heat was a splendid contest between Douglas and Nellie Peyton the whole of the mile. Both were admirably managed, Douglas striding along at a rapid pace every inch of the way, the rider of Nellie patiently waiting until there was only a furlong to run. That final 220 yards was a "cooker," as the boys say, Douglas managing to win by a short length in the fast time of 1:42.

The mare had shown so well that, notwithstanding the loss of the heat, she advanced in the estimation of the sharp observer so that the pools ranged \$40 to \$100 that she would win, or rather that Douglas would not. Billy essayed to make the running this heat, and to some purpose, as he carried Douglas to the quarter in 25 1/2 seconds. From there Nellie pushed the leader to the half in 50 1/2 seconds, and at the three-quarter pole, in 1:16 1/2, she was at his hannah. From thence it was an exciting struggle. Nellie was surely gaining, though Douglas was not easily beaten. At the drawgate their necks were on a line. Inch by inch the handsome daughter of Hurrah was getting the best of an arduous struggle, and when they came under the wire he was half a length in front. Time, 1:43. The betting was then \$110 on the field to \$24 on Douglas, as it was nearly certain that, after two heats in such fast time, it could not be expected that he would come back a third heat enough to endanger the chances of the mare. The prophecy was correct, as she galloped in the lead from the quarter pole home, and finished with a good deal in hand in 1:45.

Second Race.—Purse \$400; heats of a mile; for all ages; second to receive \$100; ten pounds deducted from regular weights.  
 Rancho del Paso's ch m Nellie Peyton, by Imp. Hurrah, dam Emily Peyton, 5 years, 106 lbs. (carried 107 lbs.) ....Duffy 2 1  
 Geo. Howson's h h Jim Douglas, by Wildidle, dam Young 6 years, 108 lbs. ....Howson 1 2  
 G. L. Richardson's h g Billy the Kid, by Leinster, dam Lily Simpson, aged, 105 lbs. (carried 109 lbs.) ....Appleby 3 3  
 Time, 1:42, 1:43, 1:45.

The third race was a selling puree, a dash of one and a quarter miles, with the same allowances as in the race of

Tuesday. The starters were Billy Johnson, Cito, Duke of Monday and Nick of the Woods. The Duke was largely the favorite, bringing \$80 to \$25 on all the others, the hopes of the fielders being centered on Billy Johnson from his wonderful exhibition of speed in the previous race, while a few thought that the gameness shown by the 2-year-old Cito might prove of avail. The hopes were illusory. Cito went away with Johnson at a good pace and led to stand by half a length. When half a mile had been run there was a trifle in favor of the colt, but going down the backstretch Duke moved up and all three were abreast at the half-mile pole. At the completion of the mile in 1:46 Duke led Cito a neck, and taking the track rather quickly Cito was dropped behind both the Duke and Billy Johnson. It was evident then that the Duke had the race safe, and the contest was narrowed to a fight between Billy and Cito for second place. This the youngster won by half a length, two behind Duke of Monday, who won in 2:13 1/2.

Third Race.—Selling; purse, \$250; second to receive \$50; horses entered to be sold for \$1,000 to carry entitled weight, with two pounds off for each \$100 below \$1,000 and three pounds added for each \$100 above. One mile and a quarter.  
 Rancho del Paso's h g Duke of Monday, by Monday, dam Demirep, aged, \$600, 107 lbs. ....Duffy 1  
 J. C. Simpson's ch g Cito, by Joe Hooker, dam Too Soon, 2 years, \$700, 74 lbs. ....Ginnie 2  
 C. E. Ramey's ch g Billy Johnson, by Glendew, dam Planetarium, aged, \$700, 109 lbs. ....Howson 3  
 G. L. Richardson's ch b Nick of the Woods, by Leinster, dam Little Sophie, aged, \$600, 110 lbs. ....Thompson 0  
 Time 2:13 1/2.

The concluding race was a dash of five-eighths of a mile, for two-year-olds, the starters, Ichi Ban, Tom Atchison, Billy A. and Mistletoe. Ichi Ban was the favorite, bringing \$50, Tom Atchison and Mistletoe coupled, \$30, and Billy A., \$15. There was a lively contention among the bettors at these odds and a large amount of money was posted. The race was a very pretty quarrel. Ichi Ban from the outside position made play as soon as the starting signal was given and secured the lead before reaching the half-mile pole. As they swept around the further turn the gray still led, and as the homestretch was reached there was none to dispute his claim to first money, excepting Tom Atchison. The white fleck of the latter was the only distinguishing mark, but, unlike the plume of Navarre, it was never in the lead, Ichi Ban winning a capital race, and in the fast time of 1:02 1/2.

Fourth Race.—Purse, \$150; \$25 to second; for two-year-olds; five-eighths of a mile.  
 Geo. Howson's g g Ichi Ban, by Joe Hooker, dam Queen, 107 lbs. ....Howson 1  
 T. Lynch's ch g Tom Atchison, by Joe Hooker, dam Bay Kate, 107 lbs. ....Duffy 2  
 G. Pacheco's ch f Mistletoe, by Thad Stevens, dam Mistake, 107 lbs. ....Kelly 0  
 W. L. Appleby's ch c Billy A., by Wildidle, dam Bonanza, 110 lbs. ....Appleby 0  
 Time 1:02 1/2.

California Entries at St. Louis.

The following California horses appear in the stakes of the St. Louis Fair Jockey Club, to be run at the Spring Meeting 1885:

St. Louis Fair Derby, for three-year-olds (foals of 1882) at \$100 each; half forfeit, or only \$20 if declared by April 15, 1885, with \$3,000 added; the winner of any three-year-old stake race of the value of \$2,000 to carry 5 lbs.; the second to receive \$500; third \$200 out of the stakes; to be run on the first day of the Spring meeting, 1885; one mile and a half.

J. D. and J. K. Christy's ch g Bonanza, by Joe Hooker, dam Mattie Glenn.

Stemler & Todhunter's b c Alta, by Norfolk, dam Ballinette. E. J. Baldwin's br c Brandywine, by Lexington, dam Mollie McCarty.

E. J. Baldwin's hr f Mira, by Grinstead, dam Blossom. E. J. Baldwin's b f Mission Belle, by Grinstead, dam Josie C.

E. J. Baldwin's ch c Verano, by Grinstead, dam Jennie D. E. J. Baldwin's b c Volante, by Grinstead, dam Sister Anne.

E. J. Baldwin's ch g Rapido, by Grinstead, dam Experiment. Rancho del Paso's blk c Hidalgo, by Joe Daniels, dam Electra (Belle).

Rancho del Paso's ch c Tyrant, by Great Tom, dam Moselle.

St. Louis Fair Oaks, for three-year-old fillies (foals of 1882), at \$100 each; half forfeit, or only \$20 if declared April 15, 1885, with \$1,500 added; the winner of any three-year-old stake race of the value of \$1,000 to carry 5 lbs.; second to have \$300, and third \$200 out of the stakes; to be run on the third day of the Spring Meeting, 1885; one mile and a half.

E. J. Baldwin's b f Mira, by Grinstead, dam Blossom. E. J. Baldwin's h f Mission Belle, by Grinstead, dam Josie C.

E. J. Baldwin's b f Glencross, by Rutherford, dam Glenita. Rancho del Paso's b f La Scala, by Joe Hooker, dam Abbie W.

Charles Green Stakes, for three-year-olds (foals of 1882), at \$100 each, half forfeit, or only \$20 if declared April 15, 1885, with \$2,000 added; the winner of any three-year-old stake race of the value of \$2,000 to carry 5 lbs.; the second to have \$300; third \$150 out of stakes; to be run on the fifth day of the Spring meeting of 1885; one mile and a quarter.

J. D. & J. K. Christy's ch g Bonanza, by Joe Hooker, dam Mattie Glenn.

A. J. Stemler & Todhunter's b c Alta, by Norfolk, dam Ballinette. E. J. Baldwin's b c Volante, by Grinstead, dam Sister Anne.

E. J. Baldwin's br f Mira, by Grinstead, dam Blossom. E. J. Baldwin's ch g Rapido, by Grinstead, dam Experiment.

E. J. Baldwin's ch c Verano, by Grinstead, dam Jennie D. E. J. Baldwin's b f Mission Belle, by Grinstead, dam Josie C.

E. J. Baldwin's br c Brandywine, by Lexington, dam Mollie McCarty. Rancho del Paso's blk c Hidalgo, by Joe Daniels, dam Electra (Belle).

Rancho del Paso's ch c Tyrant, by Imp. Great Tom, dam Moselle. Rancho del Paso's b f La Scala, by Joe Hooker, dam Abbie W.

St. Louis Fair Stallion Stakes, for two-year-old colts and fillies (foals of 1883) at \$100 each, half forfeit, or \$20 if declared by April 15, 1885, with \$2,000 added; the winner of any two-year-old stake race of the value of \$1,000 to carry 5 lbs.; second to receive \$500 and third \$250 out of stakes; to be run on the sixth day of Spring meeting of 1885; three-quarters of a mile.

E. J. Baldwin's Grinstead. E. J. Baldwin's Rutherford. Rancho del Paso's Longfield.

OUR NEW YORK LETTER.

Brighton Beach's Indian-Summer Racing Season—Unusual Good Character of the Sport—McLaughlin's Hundredth Win—General Notes, Etc.

Brighton's bold brigade of heach-combers have, during the past week, monopolized the exclusive attention of the turf world, and are likely to do so until snow flies. Winter racing in these latitudes has been an unknown quantity in the experience of metropolitan race-goers until the last two seasons have demonstrated the indefatigable nature of the management by the sea, who have shown that if good material is provided the public interest can be sustained long after the racing season proper has ended. Indeed, nothing short of a cyclone or an invasion of the track by floating icebergs daunts the enterprising nature of the Brighton Beachers, and the open weather of late, though at times rather uncomfortable, 'ably low in temperature, has been all in favor of this, in some respects, the most popular racecourse in America. To-day (Friday) the Brighton Beach Racing Association give their hundredth day's racing for 1884.

The representative rider of Yankeeland, James McLaughlin, won his hundredth race at the Beach on Friday, accomplishing another notable feat in the same connection, in that he brought the ex-Marylander, Nettie, home first over the short distance of the T. Y. C., generally believed by those best acquainted with the gelding's abilities, an impossibility even in the most ordinary company. Ever since this now widely and favorably known young jockey began his career at Saratoga years ago the writer, who benefited largely by his first big win on Princeton, lauding odds of nearly 40 to 1, has watched his upward progress, taking occasion from time to time to defend "Bill" Daly's former apprentice from sneering remarks directed against his style of riding. This was characterized as crude, ungraceful, amateurish. Jimmy's detractors, in short, intimating that nothing but luck and good monnt had gained him his success. The friends of the jockey always would reply: "Never mind about his seat, or the way he holds his hands, his style is a 'get there' style, and that will do very well." This season has turned into ridicule the derision of these deriders, and these "sore heads," who have seen McLaughlin get home with poor racehorses generally well beaten in the fray, have hidden their diminished heads in the dust, and their discreditable envy in their hearts. As a specimen of this jockey's keen sense of improving his own chance through even the slightest mistake of his opponents, his one hundred and second win on Friday, on George Singler's, is an instance. His main opponent, young Berrett on Royal Arch, had, as every onlooker will testify, the race as good as won as he made the straight. McLaughlin on Singler's was beaten a furlong from home, and Royal Arch's jockey realizing this all too soon, unwrapped the lines from his wrists, letting go of his horse's head. Shadowing him closely, Singler's pilot instantly perceived the other's mistake, and redoubling his exertions, McLaughlin won the race out of the fire in the same manner as he did with Brookdale's graduate against his brother Frank on King Fan. The great secret of every profession is to never lose an opportunity of learning something new. The persons in any walk of life who fold their hands in complacency and imagine that they know everything constitute a spectacle of egotism at once sad and mirth-provoking, and the sooner they realize that progress is always possible the better for their chances of reaching fame and preferment. The other jockeys at Brighton Beach are getting to be close observers of the methods of the American Archer, and in many cases with benefit to themselves and their employers.

Old Telemachus on Friday and the colt Nitot on Saturday won their races, after innumerable seconds and thirds. Both had been regarded by the talent as "done" some time since, and each may now be looked for to score yet again before the curtain drops for good on 1884's turf struggles. Telemachus, when known as The King, was the medium of a very sensational winning by Plunger Walton at Saratoga, in which the terror of British bookmakers landed a "killing," estimated at \$20,000, the stake he put up being just a tenth part of the amount won. Clapham Smith, the Marylander, was in immediate control of the colt at the time, and he was better known as Smith's colt than by the name of The King. In the race under discussion the Dwyer Brothers' Quito was a big favorite over the field, with Sioux and Smith's colt next in favor respectively, the latter, with Costello up, gaining the judges' fiat by an open length. After the race he was named Telemachus, and the same Fall he ran two nailing good races, a mile and a quarter at Brighton Beach in 2:09 1/2, and a mile and a half at Sheepshead Bay in 2:37, in the latter race with 100 lbs., beating a strong field in Girofle, 107; Elias Lawrence, 98; Ingomar, 90; and Fernelife, 115. Since this race four years have elapsed without a winning bracket for Telemachus until his win on Friday last.

Foster's win was the most interesting race of Saturday's card at Brighton. The field that contested the handicap was a flattering tribute to the good judgment of the handicapper, and the best in quality that has started at this track in some time. The overnight betting evidenced the closest kind of a contest, and when thirteen starters were saddled, fully half the lot figured at one time or another as favorites in the betting, though Delilah and King Lion's apparent advantages both in the pigskin and at the weights, made them the closing choices of the cognoscenti. Lumped in the field in most of the auction pools was Foster, the white-faced half-brother to Gen Monroe, whose form at the recent Washington meeting was so high that it is surprising how he retrograded so rapidly in the pools, unless the journey was considered too short for him. But to our mind this son of the four-miler Foster, whom the writer saw win at San Francisco, with Billy Lakeland up, in the largest purse ever won on an American racecourse, has shown that his forte is speed as well as stamina. His Summer Handicap win at Chicago, and his defeat of Monroe at Saratoga, were over a mile and a quarter and a mile and five hundred yards respectively, and he has shown speed on other occasions since then. With this in our mind, and bearing in view the gelding's gallops on election day at Jerome, when he moved remarkably free and strong before he dumped little Wethers out of the saddle, we advised a speculative friend, who asked our opinion, to back Foster at the good odds obtainable. Herbert's abilities for a mile, and perhaps half a furlong further, were canvassed, but he has always chucked it up at a longer distance, and Foster was elected to carry the "boodle," with at the last moment, a saver on Herbert.

When the ex-Rancocas sprinter, Herbert, showed the colors of his Boston owner to the front a quarter of a mile from the finish most persons looked to see him retain his position to the end, but the length of his tether was exactly the mile and a sixteenth aluded to above, and, poor jockeyship also being responsible, half a furlong from home both Foster and Lizzie Mack headed him, the gelding outlasting the mare in

clever style. Since Foster and the other members of the Louisiana stable were sold to their present owner the son of Foster has won the entire party out with interest, and as he appears to be tolerably sound on his pins he is likely to add to his victories when not overburdened with weight. In that respect he is inferior to his noted relative, Gen. Monroe, whose conformation, however, is more adapted to weight-carrying than that of the "wreath" gelding, his half brother.

The Indian-Summer weather of Monday drew a great crowd to the racecourse by the sea, and those present witnessed probably the fastest racing that ever took place in these latitudes at this season of the year. The interest of course centered in the meeting of Little Fred and Royal Arch, and in spite of the great speed shown by the older horse, the colt had many backers. In the preliminary gallop Fred moved a quarter in 25s. with such ease that all connected with him were confident of his invincibility on this occasion, and testified their faith by their works, to the extent of backing him heavily in the pools. The half-brother to Blue Lodge, however, with little Church up, led their champion a dance that they little expected, and with head up, under a stout pull, Royal Arch took the track and kept it all through, showing greater speed than he had been credited with. The race showed how good the son of Fellowcraft is when ridden properly, and instead of winning only two races in the past eight weeks he should have been credited with three times that number at least.

The various hunt clubs are having great sport this golden Autumn weather. Near Baltimore the Elkridge Hounds have had meetings at Towson's end Long Green Valley, with some exciting runs and no casualties. The Meadow Brook Hunt's "point to point" steeplechase on Saturday was cleverly won by Mr. Stokes on Jericho, over fourteen others, of whom young Mr. Keene had a nasty fall, breaking his collarbone. But by far the most interesting affair of the week was the wedding on Tuesday, at Far Rockaway, of Miss Stevens and Mr. Ladenburg. The happy pair were united at high noon, and two hours later the bridegroom risked his neck in the pink coat steeplechase of members of the Meadow Brook and Rockaway Hunts. Fortunately no accidents were reported, and the fair bride was presented with the brush of Reynard after the hunters' return. In the evening the pair went on an extended bridal tour.

Yours,  
New York, Nov. 11th, 1884. PACIFIC.

A Wise Course.

A healthy sign of the times is the fact that a number of trotters that have shown an inclination to pace have been allowed to do so. The conversion of a pacer to the trotting gait has invariably resulted in injury, in many cases of a permanent character. The time is not in the remote distance when the pacing gait was unfeasible and had looked upon as a blemish. No one cared for a pacer, and if he had one, hastened to convert him to trotting. The result of this system has been a number of horses who, while occasionally making very fast record as trotters, have failed to make great campaigners. The wear and tear of the weight carried has, by a natural course, unfitted them for continuous work. Great exceptions have been the remarkable horses, Smuggler and Red Cloud, but what could these two have done had they been allowed to go their chosen gait?

Inch by inch the pacer has fought his way into pulic favor, until to day Richball second to no horse as a money-winner, and as game, speedy, and resolute as any animal that ever drew a sulky. The pacer is no longer the pariah of the turf, but has taken his rank as a worthy claimant for public honors. One has but to look at the programmes of our great trotting meetings to recognize the truth of this assertion.

Close observers have always inclined to the belief that conformation and not pedigree is accountable for the pacing gait else why do we hear of pacers that are of trotting lineage? Westmont, Lorene, Eddie C, Felix, Richball, Fuller, Jim Jewell, and a host of others are by sires and out of dams with not a drop of pacing blood near them. On the other hand, many pacing sires, like Blue Bull and Pocahontas Boy, get natural trotters as well as pacers.

The present season is remarkable for the number of trotters that have been allowed to take the pacing gait, as preferred. Minnie R., a fast but unreliable mare as a trotter, has scored a fast record as a pacer, and is improving. Jewett, by Allie West, is now a side-wheeler, Mike Wilkes, a son of the great George, has abandoned trotting for pacing. Quechee Maid, long known to the turf, has also taken the gait. Blue Bull's son, Little Wonder, with a trotting record of 2:30, is liable to beat the mark as a pacer, and Novelty, the inbred Champion, has shown her liking for lateral progression and will go eo. Last on the list to date is Gledietor, our old friend, who, when he comes from the hands of the veterinary, will enter in the pacing classes. We think this is a wise course. Let weights alone and allow the horse to go its natural gait, for there is more money in it in the end.—Sportsman.

ATHLETICS.

The Olympic Games.

The Fall meeting of the Olympic Club will take place next Thursday afternoon, (Thanksgiving Day), at their grounds in Oakland. The sport should be of the best description, as the very finest performers on the Coast are entered for the various events. Great interest is centred on the match race between Flynn and Lucas. Should the track be in good order, there is little doubt but that the winner will have to make 10½s. in order to win. We don't think that either man can beat 10½s. Cook will put forth his very best efforts in the mile bicycle race, and with all the conditions favorable, we shall expect the time to run very close to 3m. 5s. The runners in the maiden race are an unusually good string and fast time will be made; we could name the winner but as the handicaps are not yet arranged it would not be justifiable. A rider, whom great things can be expected from in a few seasons, will make it rather lively in the five-mile race. The half-mile and two-mile handicap bring together a great many excellent runners, and if the handicappers do their work in an intelligent manner, fine races can be confidently expected. The high jump and pole vault promises good performances. The sprint races will, as usual, be hotly contested. The following is the complete entry list:

- Maiden Race—J. Clark, W. McConnell, L. D. McDonald, C. J. Schuster, Geo. Jones.
100 Yard Handicap Run—G. E. Peterson, M.M. Martin, J. W. Flynn, E. B. Freeze, W. R. Stewart, B. R. Brierly, H. R. Hertel, G. W. Jordan, B. A. Benjamin, H. W. Thompson. Geo. Jones, A. B. Tennent.
220 Yard Handicap Run—G. E. Peterson, J. W. Flynn, E. B. Freeze, W. R. Stewart, B. R. Brierly, H. R. Hertel, A. B. Tennent, W. McConnell, Geo. Jordan, M. M. Martin.

440 Yards Scratch, Olympic Club—M. M. Martin, W. R. Stewart, B. A. Benjamin, C. J. Schuster, R. S. Haley.

One-half Mile Handicap—M. M. Martin, W. R. Stewart, W. Connors, T. Jennings, W. McConnell, G. W. Jordan, R. Gibson, T. C. Kelly, L. D. McDonald, C. W. Scanlin, W. A. Scott, M. McIlwaine, G. W. Hupers, C. B. Hill, F. M. Day, M. W. Dejonge.

Pole Vault—W. F. Scott, H. Germain, O. Giersch, C. Hartman, C. Himbert, C. J. Schuster.

Running High Jump—Albert Lean, W. F. Scott, H. Germain, O. Giersch, F. W. Randolph, C. J. Schuster, B. A. Benjamin.

One Mile Handicap Walk—W. J. Kennealy, M. McIlwaine, T. J. Spencer, H. Coffin, C. B. Hill, J. B. Benjamin.

Obstacle Race—W. A. Scott, C. Hess, Jr., C. Hertman, B. S. Benjamin, M. M. Martin, W. R. Stewart.

Match Race, 100 yds.—T. W. Flynn and H. J. Lucas.

One Mile Scratch Bicycle Race—F. R. Cook, E. Mohrig, W. H. Day, H. Tenney.

Five Mile Handicap Bicycle Race—S. F. Booth, E. Mohrig, Ed. Slack, H. Tenney, F. E. Johnston.

Two Mile Handicap Race—T. Jennings, C. W. Scanlin, R. Gibson, W. A. Scott, M. McIlwaine, C. B. Hill.

Muscular Beauties in Motion.

"What are we coming to?" asked a lady visitor at a gymnasium up-town devoted to ladies.

The sight was indeed inspiring. Young ladies with bulging muscles were performing feats of strength and agility heretofore supposed to belong to the province of man. Half a dozen rowing-machines were in active use.

"Those are favorites," said a lady attendant. "Very probably the ladies using them have just returned from the seaside or lake shore, and are rowing partly for association sake and partly because this exercise is one of the best to be had. If you notice, you must have seen how women have improved at the oar."

At the horizontal bars were trembling, twirling, and swinging beauties, who have also the skill to protect their beauty from street insult.

"In fact," said the attendant, "women are becoming more self-reliant daily, and I am not sure (this with a smile) but we shall soon be able to transport the men. Some of these ladies are married, and you may be sure the broom is discarded. It is no longer woman's weapon. Now, watch that girl vault."

"Mercy! won't she fall and hurt herself?" "Not much; she's used to that act. Now what do you think of our trapeze performers?"

Looking upward, whence floated silvery laughter, were three finely-knit fairies—rather too heavy for fairies perhaps, but not very big for women. They appeared as much at home up there as if they stood on the floor, and their graceful actions would have done credit to Barnum's arena. This thought being spoken to the attendant, she replied:

"O, yes; last Winter we had with us Mr. Barnum's best lady trapeze performer, and she was as modest as she was gifted. She was our only professional; all these are amateurs and they are as much at home in Delmonico's ball room as they are here."

"I suppose you have not introduced glove-fights?" asked the visitor, with a smile which said, "That's an awfully foolish question."

"Well, we have had no glove-fights, but we have the necessary ingredients—gloves, and ladies with the skill to use them. We open a new class next Tuesday, and would be pleased to see you here."

The caller went away with a vivid picture of the womanly prize fighters of the future before her eyes.

The BREEDER AND SPORTSMAN, which usually takes things quietly flies into a bad temper because the managers of the Central Park did not follow its advice and lay out a 220-yard straightway and a quarter-mile track. The scold who wrote the article evidently never studied geometry, or he would not have blundered so egregiously. The dimensions of the lot are 550x275 feet. The hypotenuse of this base and perpendicular will give about 614 feet, so that a 220-yard straightway could not possibly be laid, even from corner to corner, while there is no allowance in these calculations for a finish.—S. F. Chronicle.

This lecture, administered us by the sporting editor of the Chronicle, on our lack of geometrical knowledge is rather severe, particularly when it is borne in mind that we have never in any article published in this paper, advised the manager of Central Park to lay down a 220-yard straightway. We do not mind criticism on any article that appears in this column, but we can't say that we relish getting laid out for a statement that originated in the imagination of the Chronicle editor, and not in the columns of this paper.

M. W. Ford will compete at the games of the St. Louis (Mo.) Athlete Association on Thanksgiving day. He will endeavor to beat the record for the standing broad and running high jumps.

After working the country, the professional sprinter generally heads for this city to spend the winter months. Three or four have arrived in the city during the present month.

The regular edition of the Amateur Athlete will be known as the "Cyclist and Athlete" on and after Dec. 4th.

T. F. Delany has challenged P. Golden to a ten-mile run.

BICYCLING.

We still look to the Greeks as our examples in the cultivation of mind and body, as the best exponents of the finest physical, mental, and artistic capabilities of the race. "But the glory that was Greece, and the grandeur that was Rome," were nurtured in the open air. The doctrine of oxygen was a cardinal point in the creed of those old pagans. Doubtless the need of it is even yet a matter of faith with the majority of mankind; but there is still a deplorable lack of those good works which give the lungs full chance for it. However, the most pessimistic of mortals cannot help seeing that a great revival of respect for the body is upon the earth. The Olympian games were, doubtless, of great interest to the spectators, and Socrates himself once took a suburban trip to witness them. But the tournaments at Hartford and Springfield brought out some splendid exhibitions of muscle and endurance. And among the men who distinguished themselves there were several who stand as well in their college classes as, for example, the classic youths from the Lyceum groves.—Outing.

It is said that there are 300,000 bicycles in Great Britain.

Common sense generally dictates how a wheel should be cared for, and more or less complete directions are so accessible in many little manuals that a few simple directions are the most practical. Always wipe off well on returning from a ride. Oil a little at a time and often. Watch screws, nuts, and spokes, and keep them tight. See that the tire is firm and repaired if much out. Carry oil, a cloth, twine and wrenches in your saddle bag. Familiarize yourself with all parts of the machine, but do not unnecessarily take it apart. See that any luggage you may carry is firm. If anything gets out of gear and you cannot fix it, consult some one who is posted, or take it to a competent mechanic.

October 17th, Hendee made an attempt to beat the five mile record at Springfield. There was a high wind blowing, and the times were as follows: 1 mile, 2:51; 2 miles, 5:51 3-5; 3 miles, 8:55; 4 miles, 12:02; 5 miles, 15:03. The individual miles were, 2:51, 3:00 3-5, 3:03 2-5, 3:07, 3:01. There is no doubt whatever that Hendee can knock out, or equal, any record in America, and we look forward with interest to next season, when we hope he will again attack, with more success, the records that circumstances have opposed his beating.—Wheel.

The wheelmen of Santa Cruz made a trip to Watsonville and return on last Sunday. The ride was a pleasant one notwithstanding that the cyclists were obliged to walk through a mile and a half of sand. The trip down was made in 2 hours, 30 minutes, while the return occupied 3 hours, 15 minutes. The following riders participated in the run: Ed. C. Abraham, Ellery Young, Robert Effe, J. H. Bailey, Lawrence Williams, A. Radke and John Tufts.

The machine known by the name of the Grasshopper in this country is none other than the Xtraordinary challenge so familiar to the British riders of the "silent steed." This statement is made for the express purpose of enlightening the sporting editor of a weekly paper, and it is to be hoped that it will satisfactorily solve one of the many mysteries he so strenuously battled with in a recent issue.

Acting upon the suggestion contained in the last issue of the BREEDER AND SPORTSMAN the managing committee of the Bay City Wheelmen have decided to leave the time in the "time race" blank until the riders are mounted on their machines ready to start in the race. Every rider has a show in this event.

Intending competitors in the Grasshopper race should lose no time in securing a machine. There are only six in the city. Riders can arrange for a machine by making application at 16 Golden Gate avenue.

Captain Eggers has called a run for the members of the San Francisco Bicycle Club for Sunday morning. The party will ride through Haywards.

Milton Berolzhime will ride a 46-inch machine in the Grasshopper race on the evening of Jan. 10th. This is the smallest machine of the kind on the Coast.

The drill corps of the Bay City Wheelmen are composed of the eight best riders in the Club. They are rapidly becoming experts.

Lonise Armaindo made two attempts to lower her record of 1:42 for half a mile, and failed. Her time was 1:51, 1:45½.

The roads in the locality of Santa Cruz are considered very fair by the riders of the "silent steed."

THE GUN.

The Game Law.

Table with columns for months (January to December) and rows for various game species (Quail, Partridge, Rail, Grouse, Doves, etc.). Blank indicates open season, Star (\*) indicates close season.

The Season of Bangs.

'Tis now the hunter takes his gun— The fields he rambles over, From early dawn to set of sun, In search of snipe and plover. A gloomy, disappointed wight, A bandaged hand caressing, Returns he sadly home at night, With several fingers missing.

Fox Hunting in America.

Fox hunting for Americans is an especially desirable sport. They require a diversion that will develop robustness of frame, and one that is entirely separated from the excitement of the wager. Although there are but few men in this country of sufficient means to maintain hunting establishments exclusively their own, yet by clubbing together, as is most frequently done in England, establishments can be supported by subscription. One of the pleasantest features of the chase is that it can be shared by the female sex. The introduction of the chase into the amusements of ladies not only compels them to be fine horsewomen, but it greatly eradicates the weakness and diseases so prevalent among American women, which arise from lack of exercise in the open air. Fox hunting is a peculiarly gentlemanly sport, for the reason that it is only health and amusement that are gained in its indulgence. There is nothing to be won but the possession to him who is first in at the finish, of the mask, pads and brush. For this reason the chase will be most salutary as a sport for Americans, who, in these times, look to their amusements for gain.

Every hunting establishment is under control of an experienced person termed master, and under him ranks the huntsman, whipper-in, earth-stoppers and kennel servants. A kennel is composed of from twenty to sixty couples of hounds. The master in the field is the director of proceedings; he superintends servants, hounds and horses at all times. The huntsman is practically the most important person in the field, as he is required to see that his hounds

properly managed in the kennels, and that they find and hunt their foxes in the most improved manner. He must be a man of pluck, heving a clear voice and quick eye. He must perfectly understand the country over which he travels, and he an accomplished horseman. It is customary for those for whom he provides the sport to treat him with respect. He is always well mounted, conducting the hunt from find to finish. The duties of whipper-in are arduous. He manages the hounds in the kennel, conducts them to the meet, and aids the huntsman during the run. The second whip's duty is that of urging on lagging hounds by lashing and talking to them.

The tail of the fox is called the "brush." The tail of a deer is known as the "single"; of the wolf, the "stern"; of the hare, the "scut." Feet of foxes are called "pads." Their faces are called "masks" or "frents"; of dogs in numbers, in hunting parlance, a "brace" of greyhounds, a "couple" of hounds, a "leash" of the former, a "couple and half" of the latter. A "kennel" of fox hounds; "pack" belongs more appropriately to harriers. To "stern" the young is take off a portion of the tail. Ears, when shortened, are said to be rounded. When hounds run without any cry, they are said to be "run mute"; when disobedient, to "run riot." When a fox takes to ground he is said to be "run to earth," but when he descends to a slough or drain, he has then "run to ground." A fox is "dragged up to," he "finds," "unkennel" a fox. If hurt in the foot, a fox is "halled" or "padded." He is "run up" and "down" a cover. He is said to be "beaded" when turned back. Death of a fox is termed "worried." "Whoop-whoop," death cry of fox. Terms of the chase—"Tally ho" means back. If the hounds come out it is "dark back." A "sharp burst" is the first run when very quick. If the scent is good it is called a "burning scent." When the hounds throw up or stop for want of scent, it is then a "check." If, on the contrary, the scent is so good they have no need to stop for it, they are said to run "breast high." In drawing the cover the first hound who throws his tongue is said to "challenge." The fox, when killed as soon as found, is said to be "chopped." Hounds thrown into cover are said to be "drawing" it. The scent left by the fox on his return to his kennel is called the "drag." When fresher than a "drag" it is a "moving scent." When the vermin taint or scent of the fox extends itself, so that a majority of the hounds "feel," that is, smell it, and crowd together to pursue it, they are said to "carry a good head." When the reverse is the case, they "dwell on the scent." When it is so faint as to be scarcely perceptible, they cannot "feel the scent." The fox is said to "run his foil" when he retraces the ground he has before been over.

Hounds, when they have recovered a lost scent, are said to have "hit it off." When hounds are pressed too hard the huntsman's rate, "hold hard," is the check. "Hold them on" is the reverse. Should a fox meet with obstructions and be turned back, he is said to be "headed." Should the hard driving of his followers cause the death of the fox unfairly, he is said to be "headed to death." The good hound that abides by the scent only is called a "live hunter." When hounds are slack, muddled in their hunting, they are said not to "stoop to their scent"; but when in one line they go at the top of their speed, they are then said to be "screaming away." If dogs run mute, they are said to be "tight in their tongues." The good hound "throws his tongue" freely. If too noisy, he is called a "habbler." The live hunter is to be commended, but some hounds are given to "tailing," which means following each other, which is only excusable when there is an indifferent scent. When hounds enter the first cover it is then they "throw off"; when the dogs have carried the scent to a given point, and no longer stoop their noses in search of it, they are said to "throw up." When the track of the fox has been gone over, either by cattle or the dogs, it is said to be "stained." A hound that has a habit of running wide of the pack is called a "skirter." When the print of the foot of the fox is detected, we "pad the fox." When the scent fails altogether, and huntsmen take their dogs forward, it is called "lifting them." When hounds are running with the wind behind them, they are running "down the wind."

The modern fox hound is a cultivated species, produced from the original hunting dogs of Great Britain. A kennel of hounds of pure breed are very costly, and require great care and conditioning to keep them in proper trim for the chase. In some instances these dogs are fed only on meal and crackers for fear of destroying their scent, but generally they are given the entrails of animals with scraps and meal.

The country requisite for fox hunting is best when there is a covert of underwood. The fox feeds all night when he leaves his burrow in the earth, not returning until morning. When the day of the meet is settled on, the night before the coverts to be drawn are visited by the earth-stopper, who, knowing the foxes are absent, travels from one hole to another, and with a spade, fills them up with earth and hrambles. The fox returning and finding ingreess impossible takes refuge in a neighboring covert, where he makes a temporary lair. The number and localities of the earths closed are reported to the first whip, which guards him in his course when the hunt takes place. At the hour of the meet the whole field assembles, master, huntsman, whippers-in, hounds, ladies and gentlemen, who are to follow the sport. When a covert is reached, the huntsman, calling "Eu in! Eu in there!" urges in his dogs, following after them with the first whip. The mounted gentlemen take their directions from the master, who from this time directs the field. All eagerly wait the first signs of the approach of the fox. This is discovered by a whine from the challenging hound, which is always an old and experienced one. In large coverts a fox sometimes "hangs" before taking to the fields. When he is really off, the huntsman blows his horn to collect his hounds; the riders are restrained until the huntsman and hounds have "settled to" their fox, when all join in the chase. The etiquette of the chase allows the huntsmen and the hounds to get away first, when the riders choose their places and follow after. Now begins the excitement of the day. The fox rushes on at a furious speed, the hounds giving chase with loud cries. When the fox is killed the rider who is first in at the death jumps off his horse, and with "whoop-whoop" drives off the hounds, and cuts off the head, feet and tail. He then throws the remainders to the dogs, who devour it. The brush is presented to the lady first in at the death. Often hounds outrun their followers, and kill the fox miles away from a rider. A strong fox will live an hour and a half before the hounds they have been known to last all day.

Among the feathered creation the eagle and the raven, the swan and the parrot, are each centenarians. An eagle, kept in Vienna, died after a confinement of 114 years; and on an ancient oak in Selbourne, England, still known as the "Raven Tree," the same pair of ravens are believed to have fixed their residence for over ninety years. Swans on the river Thames—about whose ages there can be no mistake, since they were nicked annually by the Viuter's Company, under whose keeping they have been for five centuries—have been known to survive 150 years and more.

### How a Queensland King Hunts Opossum.

A correspondent writing from Queensland describes the method of hunting possum practiced by Kombo, the native king of a once-powerful tribe of savages: Having informed the chief that I wished to see him hunting the opossum, he at once went to his tent and brought his tomahawk. That was his only weapon, its use being to enable him to climb the gum trees by making notches in the trunk for his feet, and his hole into the hiding places of the opossum. In Victoria, when two civilisngs go "possum-hunting," we choose a bright moonlight night, when we can see the ring-tailed marsupial among the branches of the trees and bring him down with the breech-loader. But Kombo chooses broad daylight, when the little animal is asleep in its snug retreat in the hollow gum tree. He goes into the forest among the gum and box trees and narrowly surveys the ground at their roots to see if there are any traces of the creature's footmarks, and if there he any marks on the trunks indicating that it has been climbing. Then, if he suspects its presence, he pitches a small stone into one of the apertures in a broken, hollow limb, ten or even twenty feet from the ground. If the possum is present it will stir when the little stone rolls on to it, and he (Kombo) is listening for that desired movement. If it gives no sign he passes on to another tree and tries the same tactics. If he hears its movement into the hollow he climbs the tree, and by making an opening he probes the limb with a long twig or branch to ascertain the position of the animal as to whether it is above or below that hole. If higher up then he climbs higher and makes another hold and inserts his hand, pulls out his victim by the tail, and dispatches it by rapping its head on the trunk of the tree. He never makes a mistake. When he concludes that there is an opossum in the tree it is always certain that there it is, and he never fails to bring it out. The sense of hearing on the part of the hunter is most acute. When he pitches the little stone into the hollow his attention in listening to the movement within is very eager, and he decides in an instant to depart from the tree or climb it and bring out his quarry. That mode of hunting is devoid of noise, and is most effectual in filling the game-bag in a very brief time. The skins are nice trophies.

### An Old-Timer's Bear Hunt.

W. F. S., of Petaluma, thus describes an old-timer's bear hunt in the latest issue of the *American Field*:

"Many old Californians will remember old Davy Hopper, the subject of this sketch. He was a pioneer, as kind-hearted as could be, but awfully profane, and withal a famous bear hunter. Well, on one occasion, some years ago, while out hunting with his old muzzle-loader, he ran across an unusually large bear which he crippled at the first shot. The bear made for Davy in a hurry, and he, not having time to reload, dropped his gun and climbed a tree. The bear followed. Up, up went Davy, and out on a slender limb. The bear followed as far as it dared, the limb bending and swaying terribly. A gap of only a few feet separated them, but the bear could not embrace so small a limb sufficiently to cross, and there they were. Our friend was actually frightened. He howled for help, he raved, he cursed, he swore, until finally, the bear, shocked at so much profanity, backed down the tree to the ground and squatting directly under Davy's limb waited for him to fall. True the bear kept watch for several hours, but at last became disgusted and beat a retreat. Of course our friend lost no time in making his way home, where with bulging eyes he related his fearful experience.

"Next day a number of friends visited the spot with Davy, and while describing the adventure, he climbed the tree to illustrate the affair, as it were. The moment he reached his old seat on the limb it broke off, and down he came to the ground. That fall started the old sinner to thinking. If that limb had broken the day before, what a terrible death would have been his. Nothing but the hand of Providence could have sustained that immense weight. One thought led to another until finally he made up his mind to show his appreciation by a changed life. The last I heard of him he had ceased swearing, joined the church, and was a most devout christian."

### Sight for Shooting in the Dark.

Gleivum writes as follows in the *Shooting Times*: "Seeing Chinese white recommended for rifle sights in the gloaming, I would, in preference, advise those who shoot with either rifle or shot-gun, late in the evening or during the night, to try the following: Take a fine elastic band or a piece of black elastic, and tie it so that it will slip over the muzzle and fit tightly, and get a narrow strip of fine white linen, wind it round the elastic; when sufficient, sew it to prevent its coming off. I have used this for late evening and night shooting, for many years; have tried many other things but find this the best. It is not likely to knock off. Now you will say only fancy shooting during the night. Well, I have shot very many times at all hours of the night and morning too. I like to have a go at the badgers. Last May, at about midnight, I shot two badgers, one with right barrel, the other left, and killed both dead. One weighed 30 lbs., the other 26 lbs. The luminous paint answers very well, but I like it best in a small short tube, so that you can dab a good lot of it in the tube; and even then I like the elastic and white linen best.

"The only effective method," says the *Forest and Stream*, "of enforcing game protective laws is by game wardens, or commissioners, appointed by the State. Such officers are responsible to the State, and the State becomes the prosecutor. Individual responsibility ceases, and with it all thought of personal revenge. The warden can have no interest in winking at the offense of hunters for mere pleasure, nor can he, except in extraordinary cases and at rare intervals, suffer vengeance from the pot-hunter. The wide field of his service would make that service all the more effective and the more feared and respected by violators of the law. Settlers, too, could then become informers to the warden without endangering themselves and their property."

There is good shooting around Modesto, the *Journal* stating that during the past few days the sporting fraternity of the town have been having a big time on the rivers. The sloughs and bottom are full of ducks and it is no trouble for a good shot to go out early in the morning and return with his game bag full to overflowing. Ducks are very fat for this season, and as the sports have not hunted much, they are quite tame. The chances are that hunting will be good this month.

Wild pigeons are said to be plentiful about Cloverdale, Sonoma Co.

### Multnomah Rod and Gun Club.

The recent club shoot of the Multnomah Rod and Gun Club of Portland, Or., was a very enjoyable and successful affair. The day was bright and clear; had it been rainy there is no telling how much game would have been turned in. The club reports game to be very abundant, especially geese and swans. After selecting such birds as they required for their annual dinner the committee divided the remainder among the charitable institutions of our city. Five fine sand hill cranes were the most conspicuous objects, but all kinds of feathered game were represented in the bag.

Sides were chosen on the way down the river by E. W. Moore and R. E. Bybe, captain. Following are the names and number of points made by each:

Moore.....	485	Bybe.....	163
Jeffery.....	56	Bye.....	30
W. Curry.....	523	G. Curry.....	149
Stuart.....	310	Bodley.....	89
Loring.....	129	Abell.....	52
D. Morris.....	242	Myrick.....	76
Campton.....	54	W. Morris.....	19
Monroe.....	57	Stone.....	10
Eberly.....	527	Keeney.....	10
Gordall.....	87	Whalley.....	102
Stuart.....	17	Williams.....	261
Capen.....	28	Bliss.....	340
Nicoll.....	117	Smith.....	10
Strowbridge.....	24	Hudson.....	114
Walker.....	30	Zan.....	146
Total.....	2,668	Total.....	1,611

The sportsmen, although tired and hungry, were very happy and well satisfied with their day's sport and were unanimous in pronouncing their trip one of the most enjoyable they ever made.

The club dinner took place at the St. George Hotel on the evening of the second day after the shoot, and was a very pleasant affair.—*Wapato in the American Field.*

The following items of interest are taken from the *Call*: White geese are quite plentiful over in Suisun marsh. The hunters do not care for them much, as they prefer the gray geese.—Austin Tubbs, of the Cordelia Shooting Club, stands at the head of the list on general average in shooting so far this year.—Sam Priest and one other hunter have charge of a hunting ark located on Well's slough, Suisun marsh. They are making big bags of English snipe.—Mr. Whittier, of the Teal Shooting Club, killed 140 ducks in two days last week.—A market hunter at the head of Suisun Bay is said to be getting from 80 to 140 birds a day.—One of the best English snipe grounds is said to be near Collinsville. One bag of thirty-one was made in an hour and a half one day last week.—The hunters are all anxiously expecting the canvas-backs. The Teal Shooting Club have all the modern conveniences in the way of hunting and now ought to have a telephone from their station to Suisun, and from there to the city, so word could be sent when the ducks are coming into the ponds.—A good many people shoot in the marshes around Oakland and Alameda.—Numbers of black ducks are congregating in the lower bays.—The hunters are hoping for a good, heavy wind and rain storm, so as to "settle" the ducks.—A new hunting ark has been built in Oakland.—The marshes near Alviso now afford good hunting.—A white deer was recently brought to Portland, Oregon, from Lewie River. After being landed on the sidewalk it was inspected by a large number of sportsmen and others, many of whom had never seen one before. When weighed it tipped the beam at sixty-one pounds, and was sold to a butcher for \$6.50.

The *Valley Record* of Gilroy contains the following item: Ducks and geese are tardy making their appearance in this section. Quails are reported abundant in the mountains, but on account of the excitement attending the election, not many have been killed. But they will probably suffer during the next two months.

The Emperor of Austria, King Albert of Saxony, and Princes William of Prussia, and Leopold of Bavaria, had several grand battues in Styria, with the result that nine stags and sixty chamois were shot on the first day, and equally satisfactory bags were made on the following days.

The hunting season in Texas has begun in earnest in the German settlements around Houston, Texas. Wild duck, geese, turkey and prairie chickens are being killed in large numbers, while the nobler game, as deer, are brought to the city at the rate of eight or ten a day.

Reports of deer being killed still continue to come in. When will these pot-hunters ever learn to regard the game law?

Duck shooting is said to be excellent these days about the islands in the lower Sacramento and San Joaquin rivers.

A gentleman who visited Point Reyes for a few days' shooting reported game plentiful in the locality.

Archduke Rudolph, of Austria, has killed, in the Tyrol, an old bear which weighed no less than 370 lbs.

## THE RIFLE.

### CALIFORNIA RIFLE ASSOCIATION.

#### The Police Successful.—Splendid Shooting.

On Sunday last there assembled at Sbell Mound Park a throng of the leading marksmen of California, to run through the programme of the Fall meeting of the California Rifle Association. The result of the meeting is most flattering in every particular. The weather was splendid, the entries were numerous, while the financial result has not panned so well for many years. The honors of the day certainly belong to the Police team, who made excellent shooting throughout the day. Captain Douglass, who was an interested spectator throughout the proceedings, is to be congratulated upon the success of the Police. The trophies presented by Messrs. Dimond and Dunphy are very elaborate. Major A. F. Klose was the executive officer of the meeting. We acknowledge courtesies extended us by the indefatigable secretary of the Association, Capt. Ed. G. Sprowl. The following is a detailed record of all the matches:

1-Diamond Team Match.

Open to teams of six representatives from any military company, Field and Staff, Board of Officers, Police Department or Rifle Club now in existence; with Springfield rifle at 200 and 500 yards, rounds seven, at each distance. First prize, a trophy. Presented by Gen. W. H. Dimond. Cost \$75. Individual prizes, \$5, \$3, \$2. Entrance fee \$10. To become the property of the team winning it three times at regular meetings of the C. R. A.

Table listing scores for Police Team members: Officer Geary, Officer A. T. Fields, Sgt. Chas. Nash, Officer Linville, Officer Peckinpah, Officer N. T. Fields. Distances: 200 yards, 500 yards.

Table listing scores for Company C, First Infantry Team members: Lieut. Klein, Private Perkins, Private Cummings, Private Carson, Private Raye, Private Merriweather. Distances: 200 yards, 500 yards.

Table listing scores for Presidio Rifle Club Team members: Sgt. Connell, Sgt. Brede, Sgt. Kaest, Corp. Ogilvie, Corp. Hopkins, Sgt. Leowen. Distances: 200 yards, 500 yards.

Table listing scores for Company C, Second Artillery Team members: Priv. Kuhls, Lieut. Mangels, Sgt. Lemcke, Private Robertson, Private Thierbach, Capt. Bruer. Distances: 200 yards, 500 yards.

Table listing scores for Board of Officers, Second Artillery Team members: Lieut. Lanfenberg, Lieut. Mangels, Capt. Breen, Lieut. Sime, Lieut. Warren, Capt. Sprowl. Distances: 200 yards, 500 yards.

Lieutenant Klein, Officer Geary and Private Kuhls won the individual prizes in the order named.

2-Siebe Team Match.

Open to teams of six representatives from any Company of the National Guard who have never made more than 70 per cent. in any of Cal. Rifle Association matches. Individual prizes, \$5, \$3, \$2. Rounds seven, with Springfield rifles, at 200 yards. Entrance fee \$6. First prize a trophy, given by Capt. Ludwig Siehe, Retired N. G. C.

Table listing scores for Company C, Third Infantry members: J. M. Dolan, A. C. McAlpine, George Yager, H. Van Halten, M. T. Vogt, T. Wheeler. Distances: 200 yards, 500 yards.

Table listing scores for Company E, First Infantry members: Lieutenant Brown, Private Provost, Private Pendleton, Private Brady, Private Pritchard, Private Duffy. Distances: 200 yards, 500 yards.

Table listing scores for Company C, First Infantry members: Private Simpson, Sgt. Jansen, Private Kennedy, Lieut. Palmer, Private Sloan, Sgt. Ruddock. Distances: 200 yards, 500 yards.

Table listing scores for Company A, Second Artillery members: Sergeant Adams, Private Isaacs, Captain Simmons, Sergeant Slothers, Private Martin, Lieutenant Byrne. Distances: 200 yards, 500 yards.

Table listing scores for Company G, First Infantry members: Private Koch, Private Diers, Sergeant Baldwin, Private Lochbaum, Private Pembroke, Private Palm. Distances: 200 yards, 500 yards.

Individual prize winners: George S. Simpeon, first; J. W. Dolan, second; A. C. McAlpine, third.

3-Centennial Trophy Match

Open to teams of ten representatives from any Regiment or Battalion N. G. C. Distance 200 and 500 yards. Rounds seven, at each distance, with Springfield rifles. Prize, the silver trophy presented to the Association by the City of San Francisco in 1876, and won by the First Infantry Regiment, N. G. C., in competition, for five years previous to and including 1882. To become the property of the Regiment or Battalion winning in the most times in five years, commencing in 1883.

October 28th, 1883, First Infantry Regiment.

Table listing scores for First Infantry Team members: Private Cummings, Private Carson, Lieutenant Klein, Private Barrere, Lieutenant Perkins, Captain Teller, Private Merriweather, Private Raye, Lieutenant Strong, Private Johnson. Distances: 200 yards, 500 yards.

Table listing scores for Second Artillery Team members: Lieutenant Lanfenberg, Private Thierbach, Private Kuhls, Lieutenant Mangels, Private Robertson, Lieutenant Warren, Lieutenant Sime, Capt. Sprowl, Sergeant Lemcke, Captain Bruer. Distances: 200 yards, 500 yards.

Table listing scores for Third Infantry Team members: Private Dolan, Sgt. Stuart, Private Maginnis, Sgt. Middleton, Private Yager, Corp. Hammock, Sgt. Bruguire, Private McAlpine, Sgt. Poulsen, Sgt. Perrin, Sgt. Gano. Distances: 200 yards, 500 yards.

4-C. R. A. 600 Yard Match.

Open to teams of five representatives from any Regiment, Battalion or Company of the National Guard, Army or Company of Police, any military rifle under the rules, at 600 yards. Rounds, seven; 1st prize, a trophy; individual prizes, \$5, \$2.50, \$1.

Table listing scores for First Police Team members: A. T. Fields, Sgt. Chas. Nash, Officer Geary, N. T. Fields, Officer Peckinpah. Distances: 200 yards, 500 yards.

Table listing scores for Second Police Team members: Officer McCarthy, Officer Linville, Officer Fleming, Officer Stanley. Distances: 200 yards, 500 yards.

Table listing scores for Presidio Rifle Team members: Sgt. Connell, Sgt. Brede, Sgt. Leowen, Corporal Ogilvie, Corporal Hopkins. Distances: 200 yards, 500 yards.

Table listing scores for Second Artillery Team members: Lieut. Sime, Lieut. Warren, Lieut. Mangels, Private Robertson, Private Kuhls. Distances: 200 yards, 500 yards.

Officer N. T. Fields, Lieut. Sime, and Officer McCarthy won the individual prizes in the order named.

5-Dunphy Team Match.

Open to teams of six representatives from any military company, Field and Staff, Board of Officers, Police Department or Rifle Club now in existence, with any military rifle under the rules, at 200 and 500 yards. Rounds seven, at each distance. Individual prizes, \$5, \$3, \$2. First prize a trophy, presented by Wm. Dunphy, Esq. Cost \$75. To become the property of the team winning it three times at regular meeting of the C. R. A.

Table listing scores for Police Team members: Officer A. T. Fields, Officer McCarthy, Sgt. Chas. Nash, Officer Linville, Officer Peckinpah, Officer N. T. Fields. Distances: 200 yards, 500 yards.

Table listing scores for Inter-State Rifle Club members: Kuhls, Cummings, Barrere, Perkins, Klein, Waltham. Distances: 200 yards, 500 yards.

Officers A. T. Fields, J. P. McCarthy and Sgt. Charles Nash, won the individual prizes.

6-Townsend Consolation Match.

Open to competitors who have never won a prize at the meetings of the C. R. A., distance 200 yards; five shots with any military rifle under the rules. 60 per cent. of net receipts to be divided as prizes. First prize, presented by Corp. L. R. Townsend, Co. B, First Infantry, N. G. C.

other prizes 25, 15, 10, 10 per cent. respectively, of net receipts. Entries unlimited.

Table listing scores for Directors' Match members: Private H. A. Brede, Corporal Hopkins, Private Johnson, H. L. Pendleton, Teller, Sgt. C. Adams, Fennell, Haake, Brooks, Marcuse, McAlpine, Fleming, Sloan, Capt. S. D. Simmons, A. McMartin. Distances: 200 yards, 500 yards.

Directors' Match.

For directors of the association. Prize, a gold, enamelled medal; 200 yards; rounds, seven.

Table listing scores for Directors' Match members: Lieut. Sime, Sgt. Nash, Major A. F. Rice, Capt. George Teller, Lieut. George H. Strong, Corporal L. R. Townsend. Distances: 200 yards, 500 yards.

On Sunday the meeting will be brought to a close by individual shooting for medals and cash prizes.

The prizes won at the meeting of the California Rifle Association will be presented the winners at an entertainment, which is to take place at the Verein Eutracht Hall some night next week.

Suggestions as to Army Target Practice.

The smoke has now cleared away from the rifle practice of 1884, and the results, as ascertained and promulgated are undoubtedly such as to be gratifying to the military authorities who have done so much to encourage army marksmanship. A few years ago, when the present rules governing target practice were established, there was a lack of interest in the matter throughout the army. But year by year the interest and zeal have increased, the practice has become universal and skill has been developed in a remarkable degree. The time seems ripe, therefore, for the adoption of a few changes which have occurred to us as now necessary, in order that further advance may not be prevented by the influences of methods that belong to an earlier day.

The present voluminous reports, which tax the time and the patience of those charged with their preparation, might well be simplified by reduction to a single report, giving figure of merit, etc., and omitting the calculation of percentages, which seems unnecessary. Skirmish firing should be sedulously encouraged, for it is the highest order of firing, as that principally required on the field of battle. The target year, should, we think, be made to end October 31st, instead of September 30th. Such, we believe, was the original intention, and the benefits to be derived from the change are obvious. Some favor a target year extending from April let to September 30th, the remaining six months of the year to be devoted to gallery practice.

It might be better also to calculate the figure of merit on the strength of the command on the last day of the target year, and not for the whole year, with its many casualties from discharge, desertion, etc. The establishment of an army range at a suitable point, equipped in all respects so as to be a credit to the country, seems now to be a necessity, and if we are not mistaken, the matter is already under consideration, and before another year has passed the army may have its own central range, accessible to all the divisions and departments, and fitted so as to accommodate detachments of any strength.

Gallery practice, the sure foundation of success on the range, should be provided for at each military post by the erection of a suitable building, which might be utilized also as a gymnasium and bowling alley, and thus combine amusement with instruction. There should be a larger supply of medals for Department, Division and Army teams than there is now, of less value, if there must be economy, but liberality in this direction will reap a sure reward. A suggestion came to us recently that the additional service pay be dependent upon the soldier's record as a marksman, for it is argued that the soldier who takes not the slightest interest in his military duties, but manages to scrape through from year to year, and keep out of the guard-house, gets just as much for his poor service as the able and efficient man does. There may be objections to this innovation, but, at any rate, it is a point worth looking into.

Interest in the competition for places in the Army team would be greatly enhanced by entering for it the three Division teams. We have biennially a rare assemblage of Army expert officers to witness the competition, but should there be thirty-six competitors, instead of twelve, all proved marksmen, what an event it would be. Last week we adverted briefly to the necessity for the most stringent rules to obtain correct results of each shot, so that nothing remains to be said on that head.

We have thus presented a few suggestions which have occurred to us in this most important matter. If they shall aid to further the cause of rifle practice, now so firmly established, we shall be more than gratified.—Army and Navy Journal.

Target Shooting at Sacramento.

At Sacramento, on last Sunday, the following scores were made by members of Company G, First Artillery Regiment:

Table listing scores for 200 Yards target shooting: Sergeant Hughes, Colonel Guthrie, Private White, Captain White, Captain White, Lieutenant Flaberty, Private Masser, Private Hefferman, Private Klein, Private Taylor. Distances: 200 yards.

Table listing scores for 500 Yards target shooting: Sergeant Hughes, Colonel Guthrie, Captain White, Private Masser. Distances: 500 yards.

The following are the scores made by Company G, First Artillery Regiment, Sacramento, at their last target practice:

Table listing scores for 200 Yards target shooting: Captain White, Sergeant Hughes, Lieutenant Flaberty, Lieutenant Sheehan, Sergeant Sheehan, Corporal Coyne, Private Masser. Distances: 200 yards.

JOSEPH CAIRN SIMPSON, - - - EDITOR

NEW YORK AGENCY.

Mr. C. C. Pettus at the office of the "Sportsman," 46 Murray Street, is duly authorized special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptions and arrange advertising contracts.

ADVERTISING RATES.

Displayed, \$1.50 per inch each insertion or pro rata for less space. Reading Notices set in brier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent will be allowed on 3 months, 20 per cent on 6 months and 30 per cent on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 60 cents each insertion.

San Francisco, - - Saturday, Nov. 22, 1884.

Mr. Judson's Sale.

On Tuesday next, the 25th inst, at the Antioch ranch Messrs. Killip & Co. will sell some 20 head of thoroughbred by order of H. C. Judson. The ranch having been sold, together with Mr. Judson's desire to retire from the breeding business, are the causes of this clearance. The list is given beneath, and the animals speak for themselves. In addition the catalogue contains ten head of work and driving horses. Antioch may be reached in time for the sale by either the 8 o'clock or 9:30 trains from this city, and conveyances will be in waiting at the station to convey visitors to the ranch.

Amateurs vs. Professionals.

The Olympic games which take place on Thursday, at Oakland, consist of a well-selected and varied programme and embrace the names of all the leading amateur athletes in the city. The complete entry list is given in this issue. That the management will be of the best description, the list of the officers will speak for itself. Referee, L. McLane, Jr.; starter, W. C. Brown; judges, W. Greer Harrison, Col. G. C. Edwards and E. L. Emmane; timers, C. L. Slater, M. I. Weed and P. McFutry; clerk of the course, R. Stombs; assistant clerk, R. T. Ballinger.

The reader of this column who is hesitating which game he shall patronize, let him visit the Oakland grounds, if he is desirous of witnessing the best sport. We have repeatedly cautioned athlete to be very careful of the games they take part in, if not under the management of one of the local clubs, that is, if they wish to retain their amateur standing. All the bicycle riders who take part in the two-mile amateur bicycle race, advertised to take place at Central Park next Thursday, will forfeit their amateur standing. See the racing rules of the League of American Wheelmen, published in the BREEDER AND SPORTSMAN of Nov. 1st. The general public who are interested in the elevation of athletic sports should certainly cross over the bay next Thursday and visit the grounds of the Olympic Club, and see Young America engaged in the various outsets. The first event is called at 1 p. m. sharp.

The Story of Mambrino Chief as Told by  
James B. Clay and Edwin Thorne.

It was a late August sun which beat down upon the fields, and yet it was cool and pleasant in the shade of the vine-draped porch at Thorndale. Mr. David Bonner knocked the ashes from his cigar preparatory to emphasizing a point in a little discussion with Dr. Smith, when the appearance of Daisy Thorne under saddle, on the serpentine drive, awakened in the mind of the hoet recollections of the past. He said: "In Daisy the blood of Mambrino Chief is blended with that of Burr's Washington. A paragraph has gone the rounds of the press pretending to give the reasons for Mr. Clay's purchase of the horse. The truth of the matter is, Ike Woodruff had no more to do with having the Chief sent to Kentucky than either of you. Shall I tell you the story?"

The unanimous response was "Yes."  
Mr. Thorne took a bunch of keys from his pocket, selected one from the many, and handing it to his son, said: "Percy, you will find a bundle of papers in the drawer of my desk. Let me trouble you to bring them to me."

The ribbon which bound the papers was faded, and as soon as he had untied it Mr. Thorne began: "In the Summer of 1853, Mr. James B. Clay, of Ashland, came to New York with Mr. Shelby, of Lexington, to look at some cattle. Among the places visited was that of Lewis G. Morris. Mr. Clay asked me if I knew of a trotting stallion which would do to take to Kentucky and cross on the well-bred mares of that State. I suggested Mambrino Chief. This horse was then owned by Mr. James M. Cockroft, who spent his Summers at Washington Hollow. The Chief had a large foot, subject to quarter crack, but he looked well in harness, and had so much speed that Mr. Cockroft took great pleasure in driving him on the road and track. Titus Williams, who had a farm (twelve miles from the Hollow, took care of Mambrino Chief for Mr. Cockroft, allowing the stallion to serve all mares that came along. On the way back to New York from Duches County, Mr. Clay and Mr. Shelby stopped at the Red House, Harlem, where they met several gentlemen who spoke in praise of Washington, sire of Rose of Washington, who had the previous Summer trotted under saddle in 2:30 at the Union Course, Long Island. Mr. Clay returned to Kentucky, and here is a letter dated Sept. 20, 1853, in which he playfully alludes to himself as a Western farmer, and then says: 'Mr. Shelby and myself went to Washington Hollow, and were well pleased with Cockroft's horse. We got the refusal on him. We also visited the beautiful place of your father.' Two months later—the letter is dated November 26th—Mr. Clay wrote: 'I could have bought Washington for \$3,000, but considered that too much to pay for any horse to be used exclusively for breeding. I want to buy a stallion between now and Feb. 1st. The great success of the Kentucky horse, Prince, has given me faith that I can make trotters of thoroughbreds. Hope to show you some day several at Ashland.' Prince, as you know, gentlemen, had just won two ten-mile races for big money, one at the Centreville and the other at the Union Course, Long Island. He was a son of Woodpecker, and has to his credit a wagon record of 2:36. But I read again: 'Mr. Cockroft offered me, by letter, Mambrino Chief for \$5,000. This is beyond my views. I am so busy on improvements at Ashland that I cannot come to New York. The essential point is to show the people here in April a stallion that can trot in three minutes or under. The horse must also have fine size and appearance and be well bred on both sides. I think Washington will suit. Crean, brother-in-law of Bennett, Treasurer of the Herald, asks \$3,000 for him. I will give \$2,000 if he is sound and not over eleven.' The next letter I open is dated Jan. 2, 1854, and here is another reference to Washington: 'If the horse is not more than eleven, is perfectly sound, a sure foal getter and you approve of his stock, I will give \$3,000 for him, half cash. Please send some competent judge to see him. I shall expect a warranty from Crean. I want the horse at once.' I went and looked at Washington myself and not liking him wrote Mr. Clay to this effect. In his reply, Jan. 14th, he says: 'Notice what you say [with respect to the style of the horse. If you have not acted on the request to purchase another stallion, please do so if you find one that suits your judgment. I want him soon. He must be here to be exhibited at show on second Monday in March. I prefer Mambrino Chief to Washington, but will not give over \$3,000 for him.' The next day a letter came to hand, dated Jan. 15th: 'After I wrote you yesterday I determined to send to New York Josiah Downing, who is a good judge of horseflesh, and who knows what will suit this country. If you have not purchased, please give full weight to his opinion. The stallion must be 16 hands, bay or brown, and able to trot in three minutes. I suppose the Cockroft horse is out of the question, as I will not give over \$3,000 for any horse in existence. If the seller will not part with horse without money down, let Mr. Downing wait.' Mr. Downing, wearing a slouch hat, followed Mr. Clay's last letter into my office, and expressed surprise when I told him I had not purchased Washington. I explained to Mr. Downing that I had delayed buying because I did not like the horse, and invited him to ride over with me and take a look at the stallion. We found Washington in the barnyard at Tim Jackson's, Jamaica, Long Island. As soon as Downing clapped eyes on him he exclaimed: 'Well, is that the brute? By God, a nigger will have to lead him into Lexington. I won't. I am no longer surprised that you did not buy him. He will not do for our country.' We left Washington and went to look at Biggart's Rattler; found Rattler tied to a post in front of a tavern, and Biggart inside and drunk. The next day Downing paid a visit to Dutchess County and saw Mambrino Chief.

Cockroft was in my office when he returned to the city. Downing said that Mambrino Chief would suit if the price was made satisfactory. I then remarked to Mr. Cockroft that Mr. Clay wanted the best trotting stallion in the East, and that there was nothing in my opinion to fill the bill except Mambrino Chief. I asked him if he would take \$4,000. He finally consented, and Mr. Clay authorized me by telegraph to buy at this figure. A later mail brought from Ashland Mr. Clay's draft for \$2,000, and his note for \$2,000. Mr. Cockroft demurred at the note, and I jokingly said I would guarantee it for 2½ per cent. He took out a fifty dollar bill, and handed it to me with the request to write my name on the back of the note, which I did. That was the first and only note I ever indorsed."

Mr. Thorne leaned back in his chair and looked up at the blue sky while he rested, then took a sip of water and resumed the broken thread of his story.

"Here is a letter dated Feb. 6th, 1854: 'I have just received your dispatch saying that you have purchased Mambrino Chief for \$4,000. I send you check for \$2,000 and my note for \$2,000, payable Aug. 1st. I am glad that I have got this horse, as I preferred him to Washington, and I am greatly indebted to you for the purchase. If Downing has not started hurry him off, as it is possible that I will match the

Chief against any horse here. Please send me the time of his best mile.' The next letter was written Feb. 12th: 'I purchased Mambrino Chief in the belief that he was the best road stallion in the world. Regret I did not know sooner Cockroft had a colt by him so prominent. The only reputation Washington has is due to Lady Washington. Our people had heard of him through her. They are disposed to brag and to back their brag with money. There are several Canadian stallions here, and one of them is disposed to banter me. I would not back out of a race if I thought the Chief could beat him. I want your opinion. As soon as the Chief reaches here I will advertise him. He will have some fine mares, and I want to notify you now that you will be presented with a colt, one of his first crop in Kentucky.' The next letter is dated five days later, Feb. 17: 'I inclose note with interest stipulation added. In matter of interest do not think Cockroft acted with liberality. Objection too small.' Feb. 26: 'I beg to acknowledge bride sent for Mambrino Chief, and am happy to advise you that he arrived on Tuesday. Although a little thin he is in fine condition. He surpasses sanguine expectations, and in an hour twenty mares were engaged to him. He is, limited to eighty at \$25 each, and will get that number. Downing would walk on his knees ten miles to serve you. His only vice is drink. He will be a fixture on the farm.' March 5, 1854: 'Fifty mares are engaged to Mambrino Chief. He will have earned \$2,000 before Aug. 1. Will breed myself but four mares, one of them by Lexington, the horse that ran in the \$20,000 stake at New Orleans. Several other thoroughbreds are engaged to him, so your colt will be a fine one in blood. I wish you would obtain for me statement of treatment of the horse, as I shall have him trained lightly this Fall.' In a letter of March 29 the allusion to the stallion is brief: 'Mambrino Chief doing finely. Five or six mares bred to him already. Next Monday is April Court and Great Show day. April 27, 1854: 'We had quite a display of horses on Court day, with Mambrino Chief at the head of the procession. There was great anxiety to see him move, but I have adhered to the resolution that harness shall not be put on him until Fourth of July. After a month of green food I will have him trained and test his speed. The Canadian banner which I send you in paper is aimed at the Chief, but I will not notice it. The sum named is smaller than I will trot for. When I find just where the Chief will stop the watch I will make banter for from \$2,000 to \$5,000 against any horse in Kentucky. Will also match his produce. I want to see him trot a private trial under 2:40, as the impression is that I have been deceived. Some people don't believe he was ever in harness.'

"I shipped to Mr. Clay a sulky and sent him by post written instructions for working the stallion in harness, and he replied, 'I received your letter about shipping track sulky. The Chief has now been taking exercise two weeks. I have secured the services of an excellent trainer, who will drive him under Cockroft's directions. He supposed the horse was high in flesh. He has never missed since coming here from walking from two to three hours a day, which made his order right; and he has never missed feed or water, or been amiss. He now walks fourteen miles a day—seven in the morning. I shall quicken his gait by degrees. I have a mile and a quarter drive around a woodlawn pasture where I will test him. Will think him invaluable if he should show speed.' June 26th, 1854: Think Cockroft's directions judicious. Downing has the horse too fat, but otherwise he is fine. The parties here who have Canadian horse raised a purse of \$2,000 to banter my horse, two-mile heats. I do not want to race the Chief, but if a public banter is made it would injure me not to accept. Think the stallions should go in 250 lb. wagons, as I believe weight would tell against the Canadian.' The Canadian thus sneeringly alluded to was Pilot, Jr., sire of the dams of Maud S. and Jay-Eye-See. The challenge published in the Lexington papers was as follows:

'Knowing I have a fast stallion, though not a world heater, will trot Pilot, Jr., against any horse for \$1,000 a side, \$500 forfeit, either two, three or four mile heats, Lexington Association Course, on the 11th of October, 1854; race to be governed by the rules of the New York Trotting Club. Forfeit money with D. A. Sayre & Co. W. J. BRADLEY.'

"Mr. Clay had been informed that Mambrino Chief had trotted a mile for Mr. Cockroft, under saddle, in 2:32, and when the etalloon began to develop speed in Kentucky the confidence of his new owner became great. In the fore part of June Mr. Clay wrote: 'My object in having the Chief trained this Fall is not to match him, but to show him. The fact that I refused to allow him to go to halter lost him many mares. It is thought I will be bantered by a nasty little Canadian that has never gone in 2:40.' But later, when the challenge of Pilot, Jr., was thrown to the breeze, and Mambrino Chief was getting into trotting form, Mr. Clay boldly talked match himself. August 20, he wrote: 'Yesterday, to the disappointment of the other party, I closed match with Pilot, Jr., \$1,000 a side, two-mile heats. People were saying that I was afraid, and so I was compelled to accept. I have no scruple myself against racing, but have objected to it on account of my boys. The horse has had five weeks' exercise, and he has been driven five or six times. The best time shown me is 2:50. From now on I will not have him speeded more than two times a week. A new quarter-crack offers some discouragement. I will use a soft track and light bar shoe. Think 2:50 will beat the other horse.' The situation was more cheerful Sept. 8th: 'We have a great drought and stock sold at low prices. As the weather gets cooler the Chief improves. I timed him this morning in 2:47 on my drive, which is five or six seconds slow.' The letter I now open is dated Oct. 7th: 'Pilot, Jr., has paid forfeit to Mambrino Chief. He never saw the day the Chief could not have beaten him any distance. This assures the stud success of the Chief. He was never broken for a racehorse. Cannot catch; breaks bad to a standstill. His hoofs are bad; has three quarter cracks. I shall exhibit him on the course next Tuesday. He has shown on my drive a mile in 2:42, which is equal to 2:37. I am confident he could make 2:30 if his hoofs were right. He will pay for himself next season.'

"As Mr. Clay confessed that Mambrino Chief was a bad breaker, and had three ugly quarter cracks, possibly it was just as well for him that the "nasty little Canadian," Pilot, Jr., paid forfeit.

"Oct. 12. 'Tuesday I made public exhibition. The person who was to drive Pilot, Jr., got here and was much disappointed because he could not exhibit his skill. The Chief jogged a mile in 2:44, making a bad break, and the last half in 1:19 He could have gone, I think, in 2:35. Many were present, and all were satisfied. I publicly asked if further exhibition was desired, and all said no. Public sentiment was against the Pilot, Jr., crowd. The horse lost money and reputation. I want the Chief to grow new hoofs for next season. After a warm and dry season the verdure is beautiful.'

Mr. Thorne laid the letters aside, having grown weary in hunting up the passages that would interest me, and then Mr. David Bonner asked him if he considered Mambrino

Chief against any horse here. Please send me the time of his best mile.' The next letter was written Feb. 12th: 'I purchased Mambrino Chief in the belief that he was the best road stallion in the world. Regret I did not know sooner Cockroft had a colt by him so prominent. The only reputation Washington has is due to Lady Washington. Our people had heard of him through her. They are disposed to brag and to back their brag with money. His hoofs are bad; has three quarter cracks. I shall exhibit him on the course next Tuesday. He has shown on my drive a mile in 2:42, which is equal to 2:37. I am confident he could make 2:30 if his hoofs were right. He will pay for himself next season.'

"As Mr. Clay confessed that Mambrino Chief was a bad breaker, and had three ugly quarter cracks, possibly it was just as well for him that the "nasty little Canadian," Pilot, Jr., paid forfeit.

"Oct. 12. 'Tuesday I made public exhibition. The person who was to drive Pilot, Jr., got here and was much disappointed because he could not exhibit his skill. The Chief jogged a mile in 2:44, making a bad break, and the last half in 1:19 He could have gone, I think, in 2:35. Many were present, and all were satisfied. I publicly asked if further exhibition was desired, and all said no. Public sentiment was against the Pilot, Jr., crowd. The horse lost money and reputation. I want the Chief to grow new hoofs for next season. After a warm and dry season the verdure is beautiful.'

Mr. Thorne laid the letters aside, having grown weary in hunting up the passages that would interest me, and then Mr. David Bonner asked him if he considered Mambrino

Chief a coarse horse. He replied that he did not; that, while the head was not handsome, it was full of character. The neck was good, and the shoulders excellent. His legs were strong, with quality, but his feet were large and flat. The sun was getting low, and I begged Mr. Thorne to go through with the unopened letters. He cheerfully complied, but I was not called upon to make voluminous notes.

"Feb. 24, 1855: 'My father continued his fondness for everything connected with agriculture to his 76th year, the year of his death. The Chief looks splendidly, and his hoofs are growing finely. I have fed him but moderately, and given him two or three hours' exercise every day. Will have fifty colts from sixty-five mares. Will have some difficulty, I fear, in wintering mares. I have been compelled to discharge Downing for drunkenness.' April, 1855: 'I have made arrangements with the best portrait painter here for a portrait of Mambrino Chief. When the picture is finished I shall have it lithographed. Come to Ashland and select the colt I am going to raise for you. The Chief has entirely recovered, but he is reduced in flesh, and I shall not be able to train him until November.' Mr. Clay was disturbed by the claims set up for Edwin Forrest, as well as Pilot, Jr. In one of his letters he wrote: 'They are making a great deal of gas over Edwin Forrest.' And in another: 'I find that \$40 is looked upon as an enormous fee, but I understand that \$2,200 has been offered for six of the Chief's get. The Edwin Forrest parties talk, in order to make an impression, a great deal as to how much money he cost. They, however, make no particular brags on his speed.' The home of Edwin Forrest, while in Kentucky, was at Woodburn. I now open a letter written in 1858: 'Mambrino Chief, as a stock horse, is in the highest repute, but I fear his wind is irreparably injured. It is my opinion that you of the North will have to come to Kentucky for fast horses. I know of more than one Mambrino colt that can heat 3:10.' The prediction of Mr. Clay with regard to the North going to Kentucky for fast trotters has been verified. I went there myself after the war and purchased a number, among them, as you know, the stallion Thordale. From this letter I read: 'The old horse has been amiss all season, owing to too much having been required of him.' In the Autumn of 1857 Mr. Clay wrote me with regard to his sire: 'As Mambrino Chief has thick wind I thought he had been passed by the auctioneer, but after lunch he was put up and the bids ran up \$5,030.' The purchasers were Gray & Jones, of Woodford County, and the stallion died in March, 1862. The storm was gathering, and my relations with Mr. Clay grew colder. In 1859 he wrote: 'I think you and I, after Harper's Ferry, will have to shake hands across the line.' After Fort Sumter the lines were firmly drawn, and Mr. Clay and I saw no more of each other. I once, however, forwarded through the Federal lines to him a letter written to him by his wife, from whom he had been separated for months. But on those troublesome times I prefer not to dwell."

After Mr. Thorne had refolded the letters and tied them again with the faded ribbon I asked with regard to Ashland. "I am glad you reminded me of him," said the host. "The colt which Mr. Clay selected for me in embryo was Ashland. He bred Utila, thoroughbred daughter of Margrave, to Mambrino Chief in the belief that he could get something which would please my fancy. In 1857, when a yearling, the colt was turned over to me and I named him Ashland, after the home of Mr. Clay. I brought him to Dutchess County and he thrived, but when two years old, while out in the pasture, he was struck by lightning and almost paralyzed. In the belief that his usefulness had been impaired by the accident I parted with him. As a three-year-old I traded him to Mr. George C. Hitchcock, and in the twenty-eight mile drive from Thordale to New Preston, he staggered. The first of his get in the stud was Surplus, out of Eureka, who, as a three-year-old, in October, 1863, defeated Green Boy, by Green's Hambletonian. After the race I purchased Surplus. Lady Lightfoot, the dam of my chestnut horse, Edwin Thorne, 2:16½, was the sister of Surplus. The descendants of Ashland have added to the renown of Thordale. If this son of Mambrino Chief and Utila had not been injured, he would have made more of a mark in the breeding ranks. Thordale, the sire of Edwin Thorne, is, as you all know, out of Dolly, daughter of Mambrino Chief, and so I am strong in the blood of the horse which I was instrumental in having go to Kentucky."

The descendants of Mambrino Chief now swell the tide of victory on every trotting course. Mr. Clay added millions of dollars to the light-harness property of Kentucky when he sent Josiah Downing to Washington Hollow to take to Ashland the big brown son of Mambrino Paymaster. The "Western Farmer," the son of the great commoner, Henry Clay, builded better than he knew when he increased his three thousand limit and bought Mambrino Chief in preference to Washington. Lady Thorne, daughter of Mambrino Chief, once disputed for the crown of the turf with Goldsmith Maid, and prominent among the prepotent sons of the "Cock-roft horse" are Alcalde, Ashland Chief, Clark Chief, Ericsson, Idol, Joe Hooker, Mambrino Patchen, Mambrino Pilot, Woodford Mambrino, Fisk's Mambrino Chief, Stonewall Jackson and Mambrunello. And of distinguished grandsons in the male line are Princeps, Kentucky Prince, Mambrino Gift, and Cahban, Mambrino Dudley, Trinket, Black Cloud, Hannis, Lady Thorne, Croxie, Keene Jim, Parana, Tony Newell and Abbottsford, all with records of better than 2:20, are descended from Mambrino Chief in the male line. And Phallas, Wilson, Edwin Thorne, Majolica, Director, Piedmont, Santa Clans, Proteine, Monroe Chief, Rosa Wilkes, Pickard, Cleora, Romeo and Maud Messenger, who have records ranging from 2:13½ to 2:19½, are descended from Mambrino Chief in the female line. Each year adds to the renown of the horse who was foaled in 1844 and who died in 1862. The more turf battles we have the broader and higher is the triumphal arch.

At Lexington, where the oldest active racing club in America unfurls its flag and where the vigor and nerve force crystallized by racing strains enter so largely into the horses which graze over succulent pastures, Mambrino Chief found his golden cross. He was brought in contact with mares highly charged with thoroughblood, and the quality which he lacked most and which was mainly inherited from his untraced dam, was thus imparted to his progeny. The words of Mr. Clay were prophetic. The judicious blending of the racing blood at Kentucky with that of what at the time was considered by many as the best trotting stallions of the North, gave a fame to Blue Grass breeding farms which they had never before enjoyed, and attracted to them buyers of fast trotters not only from New York, but from every State and Territory of the Union, as well as from England, Scotland, Ireland, the Sandwich Islands and Australia. The seeds planted by a clear-headed, far-seeing man often enrich, through honest and ever increasing harvest, the generation who succeed him.

All men who love the light harness horse and who respect power should walk with uncovered heads by the spot where Mambrino Chief was buried.—*Turf, Field and Farm.*

### Early and Late Two-Year-Olds.

The two-year-old who ran most races last year was Boh Miles, who went to the post twenty-seven times. If he ever was a good colt that campaign took all the juices out of him. Thackeray ran nineteen times. What has he done this season? Treasurer ran twenty-three times. How many races has he won this year? Unknown was campaigned from February to December, and is now almost nameless. Granits was run in twenty races, but we miss his name from Krik's "Guide" this year. Tolu ran nineteen races last year. Eclet started seventeen times. And so it goes. Now, we submit to any disinterested person if this is not killing the goose. The following sensible remarks on early and late two-year-old racing from an English contemporary ought to be read with care by all our owners and trainers:

There may be differences of opinion as to the probable future of early or late performers from the two-year-old ranks, and there have been many cases in favor of both sides of the question. I am rather inclined to take a medium view of the matter, as I should look with some apprehension upon a very fine two-year-old brought out by a young trainer or hasty owner, very fit by about March; and in the same degree I should scarcely expect great deeds from a raw, green youngster making his debut about October. It much depends on who brings them out, as old experienced trainers may have good reasons of their own for bringing on a two-year-old early. A youngster may require plenty of work to keep him right, and if so he must be all the better if he runs; but because there are rich stakes to be run in the Spring it must be bad policy to bring a half developed animal out hastily, and I can quite believe that such a system spoils a number of two-year-olds every season. From all the precedents we have seen I should be inclined to select for future Derby, Oaks, and St. Leger winners, youngsters that have been brought out after the first of July, and from that date to the second week in October had run about half a dozen times. The majority, I think, of really great horses commenced their life in somewhat this sort of way. The Flying Dutchman ran his first race on July 4, and then ran five times between that date and Sept. 15. Both Voltigeur and West Anstralia were late in beginning, as it was October before they were seen; and Gladiateur was another not seen until the Autumn; but the great mare Beeswing first appeared on a racecourse on June 15, though she was probably only partially trained then, as she won the Champagne Stakes at Doncaster and a race at Richmond later in the year, whilst she ran nowhere on making her debut. Alice Hawthorn and Caller On I have always coupled with Beeswing as extraordinarily good mares, not only for their actual performances in beating the best of the day, but for maintaining their form for such a number of seasons. Beeswing won the Doncaster Cup when she was nine years old, and Alice Hawthorn never ran better than when she was six, the year she carried 134 lbs. in the Chester Cup, and ran second to Red Dee under 56 lbs. (Kitchener np), and again when she won the Aetor Cup in such a canter from Robert de Gorham and Delapre. Caller On, without being of the same class as the other mares, won more races than anything to be found in the *Calendars*, and she ran well as an aged mare. To match such a trio in modern days one would have to name Corrie Roy, and it may be useful to note at what dates these four famous mares commenced their juvenile days. Beeswing, as above mentioned, ran first on the 15th of June, when palpably unprepared. Alice Hawthorn never started until late as a three-year-old, her first race being one of two-mile heats, at Northallerton on October 14. Caller On ran in about the same way as Beeswing had done in a two-year-old race on the 20th of June at Beverly, and she then ran in five races before she gained a bracket on September 19 at Leicester, running altogether thirteen times during the season. Corrie Roy did not make her appearance until very late as a two-year-old, as she ran first at Worcester on November 5, and twice again that season. The four best mares that can almost be named were decidedly late beginners, and in modern racing I think we are more accustomed to expect the best to come out, at any rate, after Ascot.

### A Novel Race.

A few days ago, in the pasture in which Dr. Wm. Sheppard keeps a number of his patients after they are treated, a singular sight was witnessed. Strange it was, yet true, and showed the intelligence of track horses, and their fondness for racing. The pasture is a mile long and nearly as wide, and there is quite a number of horses there, among them May H., 2:26½; Novelty, 2:23½; Billy M., pacer, 2:23½; and a green horse, good for about 2:30. On Friday last it was noticed that a few horses were apparently having a race, and on going out and watching them the above four horses were found to be in a race in which there were no drivers to fine or any false scoring. They would go to the far end of the pasture, turn about, come at about half speed to a certain spot, where, invariably, their heads would be even, and the start as nice as one as even C. M. Smith could give. Across the field they would come a-dying, Billy M. pacing, Novelty sometimes trotting and sometimes pacing, and the other two trotting for dear life; now Billy M. leads, then Novelty lets out a lunk and passes him; at the finish May H. comes with a grand rush, and beats them out. When about a hundred yards from the fence they would slacken their gait, turn in either direction, follow the fence back to the starting-point, and come again as before—sometimes one ahead, sometimes the other; making but few breaks when finishing. This was continued for sometime, and, I think, could those who say racing horses is cruelty to animals, have seen the apparent delight these horses took in their novel race, they would never again say aught against racing.—*Dunlop's Spirit of the Turf.*

### England's Great Three-Year-Old.

Our mail advices from Albion show that St. Gatien, now regarded as the best of his age in England, vice St. Simon retired (for good it is feared), kept up his great reputation during Houghton week at Newmarket.

Two days after his stable companion, Florence, had won the Cambridgeshire St. Gatien made his first appearance since his victory in the Cesarewitch on Oct. 7, in the free handicap for three-year-olds, over a course 1 mile 2 furlongs and 73 yards in length. One of the two opposing horses was Duke of Richmond, by Hampton, a colt rated close to St. Simon in point of merit. St. Gatien, however, beat the Duke in clever style, and the next day made a show of the French colt Archiduc in the Jockey Club Cup, two miles, with odds of 8 to 1 on him. St. Gatien, therefore, will go into Winter quarters with an unblemished reputation, and though his two-year-old career was uneventful, save that he won each time he started, his running of 1884 stamps the son of Rotherhill or The Rover as one of the best three-year-olds ever bred in any country or in any year.

### An Argument for More Handicaps.

In a recent edition of a contemporary, a short editorial discussed the question of handicaps on the future of racing in this country. Inasmuch as the views therein expressed are identical with the opinion contained in a letter I wrote the *Sportsman* a long time ago, I was naturally much interested. In the first place it is always agreeable to have the intelligent sympathy in a opinion, and in the next place, the question is a serious one for the Maryland Jockey Club. Owing to the increased number of track and end meetings, the racing is continuous and by May till November, and the result is that the Dixie and Breckenridges, two of our leading stakes, rarely afford a good race. The fields are reduced in numbers, and the performance of the colts have so determined the question of superiority that the interest in the race has gone. Besides, with the breakdowns, inseparable from continuous racing, there are no colts to make a contest. Under these circumstances I see no chance hereafter to make these stakes the successes they were heretofore, except by attaching to them penalties or changing the conditions in such a way that they shall become handicaps. This, of course, is the result of the change in the style of racing in this country and the season of the year in which the races are run. There has always been a prejudice in this country against handicaps, which exist because the masses of our people have not been educated up to the point of being judges of the sport. Now, the test of a good racehorse is the capacity to carry weight and speed; and while the handicap does place the inferior horse on a level with the superior, it affords a test of the capacities of each which no other kind of race can give. I have always considered Luke Blackburn the best racehorse I ever saw; not because he beat Glidelia, Ferncliffe, Grenada and Oden, colts of his own year, but because in handicap he gave away lots of weight and won his races with ease. I recollect, in the race alluded in this editorial, where he gave away lots of weight to Glenmore. One Dime, General Philips, and others at Saratoga, and won with ease. I witnessed it with the late Mr. Sanford and Mr. Clabaugh, and they both conceded it to be the best test of his greatness that could be given.

In years to come it will be said here, as in England, that a second, under certain conditions of weight, is more creditable than to be first with a feather. I think, too, the art of handicapping will improve with the more frequent exercise of the handicappers' judgment. Hitherto there has been too much disposition not to put weight where it properly should go; or, in other words, the good horses have not been compelled to carry an amount of weight which would comply with the requirements of the law. Besides, what is often considered the test of a good handicap, that the highest and lowest weights should finish first or second, is not, in my judgment, conclusive of the merits of the handicap. It may be a very good handicap so far as those two horses are individually concerned, but lamentably wrong in regard to the rest of the horse in the race. The true test is that all the horses should finish together. After all, the theory of racing is that it is to benefit the breed of horses, and not our friends, the liberal bookmakers, and if any better scheme can be devised to prove the quality of our horses, I do not know it. The fact that a horse wins all his stakes shows he is the best horse of his year, and affords no test of his comparative ability with those not of his own time. He may belong to a very bad year, and have the luck to be the best of a bad lot, just as we have seen a fourth-rate horse win a very valuable stake, owing to the misfortune of the other entries. Of course all handicaps are liable to criticism, and I suppose to the end of time there will be grumblers at the weights, but when the public is gratified by a real contest, instead of a walk-over, and the owner believes there will be less and less complaint. When that time arrives racing will be more interesting than ever before in this country, even to the lovers of that relic of barbarism, a heat race. I am satisfied that owners will look upon a victory in a race similar to the Cambridgeshire or Cesarewitch in England, as conferring greater honor upon a horse than a triumph in half a dozen weight-for-age races, and I also feel assured that unless some such system is adopted, that the Fall racing will gradually decline in interest, and that the Fall meetings in course of time will cease to be held.—*Potomac in N. Y. Sportsman.*

### Yearlings on Racecourses.

While not fearing that the precedent of yearling racing set at Erie, Pa., a year since, and followed up in Tennessee on Monday last, will take any root in the turf world at large, we desire to continue our protest against public trials of this nature.

While not alone tending to injure the future development of the embryo racer, if persisted in to any extent, they are not true tests of the future quality of the yearling that participate. Of those that rumor credited a year ago with fast moves in the West, how many showed a good form this season over the T. Y. C.? And does any unprejudiced person imagine that the yearling, who, perhaps, moves his gangling frame without the quick dash necessary for the racehorse of the present day, is not capable of improvement consequent on the maturity and education of the immediate future?

We do not believe, however, that such races will ever grow to be a feature of the sport. If excessive two-year-old racing draws down on it the criticism it now receives, in many cases justly so, what will be said against struggles between yearlings? As well have weanling contests as those of this nature, which are contrary to all laws of reason and good sense.

In anything we have said we do not mean to reflect on the gentlemen managing the late affair at Gallatin, which from all that we can learn was merely a friendly tussle between the yearlings, with none of the attendant "riding out" of a race.—*Sportsman.*

### Names Claimed.

By Fred Brown, Windsor, Cal.

ELLEN B, for bay filly, star in forehead, foaled May 17th, 1884, got by Eugene Casserly, sire of Gen. Taylor. First dam Kitty, by Inauguration, son of Alexander; second dam, by Ben Franklin, son of Easton's David Hill; third dam by Novato Chief, son of old Vermont Black Hawk.

The public will please take notice that a cheap, spurious and vile imitation of Henley's Celery, Beef and Iron has been put on the market and sold in many instances as the genuine article. Celery, Beef and Iron is sold only in bottles bearing our stamp and labels, and consumers are cautioned to be careful to purchase from reliable parties and see that they are not imposed on. To fill or sell any but the genuine article out of our empty bottles is a misdemeanor, and those detected doing it will be prosecuted to the extent of the law. Trade applied at 537 Clay street.

## HERD AND SWINE.

### Aberdeen-Angus.

No breed has ever done more to bring polled or hornless cattle into prominence and favor than have the Aberdeen-Angus. They are a smooth glossy black, when in high condition, shining like seals, and are about as compact, round and free from waste as seals would be fit for Christians to eat. A more impressively beautiful sight than that presented by a herd of these cattle, glistening in the sunlight on a grassy hillside can scarcely be found in all animal creation. Like their rival homeless Scottish consins, the Galloways, the Aberdeen-Angus race has been known in Scotland from a time not reached by the memory of man. Their origin is hidden in the mist of ages long since forgotten, and will never be known with certainty. A few traces of the breed appear in the works of the earlier British writers upon agriculture, but these traces are scarcely more than enough to show that long before the Durham, the Norfolk-polled, or the Hereford become recognized as established breeds, the sturdy black "doddie" of Northeastern Scotland was firmly established in the affection of the canny Scot. For a "boom" in Shorthorns, which reached Scotland, threatened to loosen the hold of the black upon the confidence of the Scotch, but there is now little danger of anything of the kind ever happening again.

The first Aberdeen-Angus herd of importance ever seen in America was established by Messrs. Anderson & Findlay, at Lake Forrest, 28 miles north of Chicago, where they now have a hundred or more representatives of this magnificent race. In the very few years since the breed was introduced in this country, it has grown with great rapidity in favor with cattle men, particularly for use on the plains. This rise in estimation may be correctly gauged by the following showing of the general average results of the public sales that have been held in this country previous to July 1, 1884. The first lot of Aberdeen-Angus cattle ever offered at auction in the United States was put up on September 20, 1882 in Chicago, by Messrs. Grey Brothers, who obtained for 15 females an average of \$751.40, and for 6 bulls an average of \$415.53. The general results of all public sales of this breed are:

Years.	Females.	Average.	Males.	Average.
1882.....	51.....	\$680.00.....	39.....	\$500.28.....
1883.....	126.....	583.75.....	160.....	467.20.....
1884.....	54.....	407.50.....	85.....	309.56.....
General.....	235.....	\$561.13.....	287.....	\$423.34.....

The Aberdeen-Angus typical animal should be deep, wide lengthly, even and round in body, with well-proportioned limbs, without prominent hooks, or hip-bones. There should be no appearance of "patchiness," or laying on of tallow in great masses in some parts of the carcass, nor should the ripest Aberdeen-Angus show much tallow between the skin and the flesh. The fet should be inter-mixed throughout the lean, and the animal when fully ripe for the butcher's block should be full, round and smooth, showing very little fat as compared with the Short-horn or the Hereford. Indeed, the Aberdeen-Angus will, under the skillful breeder's care, go on to the last increasing largely in flesh and but little comparatively in fat. The head of the bull should not be large and heavy, but well put on, with fine muzzle, wide nostrils, short face, mild eyes, high poll, ears of fair size and rather hairy. The throat should be clean, with no loose skin and flesh beneath the jaws; the neck rather long, clean, and rising from head to shoulder top, with a moderate crest. The neck should fit evenly into the body, the neck vein full. The shoulder blades should not lie outside of, but fit neatly into the body. The coat should, as a rule, not be long, but reasonably thick, soft and glossy. In the better sorts there should be two coats, or lengths—one long and thin; the other short, thick and furry.

Those who wish to buy the poppler and valuable Aberdeen-Angus cattle have been advised to carefully note the difference between them and the Galloways, as by some people in this country both of these breeds have been described under the broad general name "Scotch Polled Cattle," which was calculated to mislead those not fully aware that the Galloway and the Aberdeen-Angus are two entirely distinct breeds. The Rev. John Gillespie, editor of the Scotch Galloway Herd-Book, and a high authority on matters relating to the history of the breed, writes that "There is a close resemblance even at the present day between a well-bred Galloway and a West-Highlander, minus the horns. Indeed, the similarity is so great that when we bear in mind that previous to the close of the eighteenth century almost all the Galloways were horned, it is easy to understand how any difference which now exists between the two types of animals may have been produced by the different circumstances in which they have long been placed, and the different treatment to which they have been subjected." In the same paragraph he states that while "Galloways are now almost all black, many of them were in former times red and brindled, and even at the present day pure bred animals with red skins are occasionally to be met with." That the Galloways were universally a horned race is declared to be a well-founded tradition, and that there should be occasional reversions, or at least approaches to the old characteristic, in the form of scurs, is no more surprising than that some pure bred Galloways, as well as an occasional Aberdeen-Angus, have red coats.

In 1880 a movement was started for the purpose of forming an association of breeders of Aberdeen-Angus cattle in America, and for the establishment of a herd-book for the breed. This purpose was accomplished last Autumn at a large gathering of breeders in Chicago, Kansas City being selected as the headquarters of the Association. The first volume of the herd-book of this Association is to be issued next year.

In hardiness the Aberdeen-Angus rank with the Herefords and are nearly if not quite equal to any established race of cattle. On the plains they have given satisfaction wherever tried, while in the older settled parts of the country their young have shown qualities that stamp them as the equal of any other known race. In quality of flesh they resemble closely the West Highlander and the Galloway; meet, finely marbled, juicy and tender.—*Prairie Farmer.*

### Feeding a Few Steers.

It is gratifying to see how the animal industry branch of agriculture is making steady progress, even in the older States. There was a time when the farmers of the Middle and Eastern States despaired of being able to compete with the West in growing beef, even for their own local needs. But as they have studied this question more closely, they have learned that the old system of slow growth, by which a steer was brought to a weight of 900 or 1,000 lbs. in three years, must be abandoned; that the steer must be matured for market at 24 to 30 months of age, and that this is done at

a less cost of food than was formerly expended on the store steer at three years, while the present well-fed and early matured steer brings 50 per cent. more money.

They thus find that under the improved system of feeding, they get better pay for their food and labor than when the West was not competing in their markets. Besides, they find that dairymen can raise a good calf as cheap in New York as in Illinois, and that it is only during a few months feeding on grain, at the finishing up of the steer, that the Western feeder has much the advantage.

In some districts at the East, a good demand has arisen for beef 18 or 20 months old, averaging about 1,000 pounds, and bringing \$50 to \$60 per head. The feeders say this pays even better than dairying; that they get quite as much, or more, for the same amount of food, besides saving a good deal of labor. There is growing up among dairymen in favorable localities, the idea that they had better divide up dairying with young beef feeding. In this case they keep, say, 12 cows instead of 20, and raise their calves to feed off for young beef, save the labor of milking the other 8 cows, and get quite as much money for the year's operations. This has also the good point of producing an income at nearly all parts of the year, from the dairy through the Summer, and from young beef in early Spring, and sometimes at other periods in the year.

This brings into the best use the refuse milk of the dairy, and turns it into cash. The farmers, in having from 6 to 12 young beef animals to feed every Winter, and knowing that their value, at 18 to 20 months old, will be just in proportion to well ripened weight, soon learn the necessity of feeding them in the best way to produce rapid growth. They find that liberality is strict economy, and that the most generous feeding produces the largest profit. We know some instances where dairymen, who have fed a few steers for several years, have also learned that the most profitable dairying is found with the most liberal feeding. They find, also, that feeding the cows well, when dry, will improve the calves which they are to raise, as well as increase the production of the cow through the season.

We hope this plan of raising a few steers, each year, will grow in favor till the bad custom of dairymen, in some parts, of deaoning or killing their calves, on being dropped, will be abandoned for the better plan of raising them for beef. Under this system, all the small local markets of the Eastern and Middle States might be well supplied. This would also have a very decided effect in improving the soil of those States. It would largely increase the amount of manure applied to the farms, and, in this respect, would be imitating the system of beef raising in England, as there almost every farmer raises a few young beefs. Every calf is there most scrupulously kept, and is considered worth \$10 at a few days old. But in New York, probably 200,000 calves are killed and skinned and thrown away by dairymen every year. This is a wicked waste, and should be reformed altogether. They should be grown into one hundred million pounds of good beef.—*Live Stock Journal.*

### An Opulent Square Mile.

A fine specimen of the great agricultural wealth of Southern California is shown by the square mile of land belonging and used by the Wright Brothers, situated three miles southwest of Florence, and the same distance northwest of Compton. It has a road on two sides, the one on the east side leading to Los Angeles, and the one on the south to Green Meadows. The residence of the owners, a large and handsome edifice, is on the west side of this opulent 640 acres. Several other smaller houses are scattered through this large tract, for the use of the workmen, most of whom have families, and always stick by their employers, as they are always well treated and are content. The entire square mile is enclosed by a substantial fence, with no passage through at any place. At the house where the owners live there is a shallow well and windmill, sufficient for domestic purposes, the cultivation of flowers and a twenty-acre garden of vegetables and fruits, which supply every one on the farm. This enclosure is separated from the rest of the rancho, as also is a chicken ranch of two acres adjoining. The remainder of this dairy farm is divided by fences in each direction into twelve parts, of fifty acres each, which, with the grounds around the house, the vegetables and chickens, make up the entire acreage. In nearly the centre of this rich land there is a live spring, which makes a pond about five acres in extent, which is used to water stock the year around, so that dry seasons never come to this favored spot. There are gates through the partition fences, so that stock can be led to different fields, or led to water. Half of this farm is devoted to the raising of cattle, both for dairying and beef. The other half is used for pasturing horses and cows, at a cheap rate per month. The place has for years been owned by the Wright brothers, who have made a competency out of it, and the place it is not for sale. People who never saw this extensive farm, and who are in the vicinity, always stop to look at it, and admire its order and system, and long for the golden profits which it brings during all the year, where Summer and greenfeed never go and Winter never comes. This is one of the specimens of California dairy farming that is a surprise to people from the East, who are at work half the year to provide and store up food for their stock during the rest of the year. The profits of dairy farming and stock raising in Los Angeles county are more than double what they are in any of the Atlantic States. The Wright brothers' rancho is a good illustration of this proposition.—*Los Angeles Herald.*

### Swine Breeding.

In a prize essay written for the *Rural New Yorker*, by S. J. Pelton, of Wisconsin, he says swine breeding and feeding in the central and western portions of the United States have become a business of almost gigantic proportions. It is a common thing to meet with farmers who keep from 25 to 100 head on farms of 160 acres, where ten years ago only three or four were kept for family use. Of the different breeds, the most common are the Berkshire and Poland-Chinas, with an occasional herd of Essex, Chester-White, or the latest novelty, Duroc-Jersey. There seems to be considerable rivalry between the breeders of Berkshires and Polands; in some localities the majority favors one breed, and in others, the other.

The principal aim of the breeder should be to get healthy, vigorous pigs, that will come to maturity quickly, and furnish the most pounds, from a given amount of food. The days of breeding sows to scrub males are past; what we now want is careful selection of both male and female. Choose the best natives, or the common stock of the country, and cross them with pure-bred males, and the results will be very satisfactory. The pigs seem to take all the qualities of the male, while the excess of bone and offal, common to the natives, is greatly toned down.

A little personal experience in breeding may not inappro-

riately be mentioned. In September, 1879, I purchased a pure-bred Berkshire boar, and crossed him on common stock; the results were very gratifying—so much so that many of the neighbors patronized the animal, some even coming the distance of ten miles, and all obtained equally satisfactory results. The idea that I most wish to impress is, that money judiciously expended in the purchase of pure-bred males is money invested at a good rate of interest. What investment will pay a man better? I had 40 pigs that made an average of 339 pounds when 14 months old as the result of a first cross between my Berkshires and the common stock. For breeding, select long, rangy sows that are from good mothers; cross these with a fine boned, compact, heavy-shouldered and shouldered male; care should be taken to select males that have short legs and small heads and ears. It is always best to breed from old sows; there is less risk to run, they are better mothers and produce more milk for the young ones.

I prefer to have my pigs come in March or even as early as January, and then keep them thriving until, I am ready to sell. Pigs reared in this way should be kept in a warm stable or pen, with the sow, till two or three hours old. Great care should be used not to feed the sow much for two or three days after farrowing, for fear of creating fever. After that time, she may have all the bran, corn-meal and barley-meal with milk that she can eat up clean. The pigs will soon learn to eat. When warm weather comes and clover begins to start, they may be turned into a small range after "ringing," and there is no danger but that they will thrive. The days of feeding swine in a mudhole of a pen are past; now, plenty of range in the pasture with pure water, is the most preferred of all conditions of profitable hog raising.

In many localities, where from 40 to 100 more acres of corn are raised, the swine do their own feeding; they are turned into a portion of the field and allowed to husk for themselves. While this method is in favor with many, I still adhere to the good old way of saving the stalks for fodder, and feeding the corn by the basketful. Pretty good pork may be made by feeding pumpkins in the Fall. Hogs of this kind, which were very numerous last season, are called "skips." I have grown pork on nothing but clover and water in the Summer, and finished with slops, soft corn, pumpkins and boiled potatoes, with good results. The main item in feeding is to keep the animal healthy, and then it will eat well.

A few years ago it was a very common practice to keep June to September pigs over Winter, and with much crowding get them fat by the next October; such a practice now seems a little too long and expensive. Competition and the market demand quickly-made pork, which shall be healthy and eatable. Who wants to eat pork that has been stunted and half-starved through the first half of its existence? Quickly-grown pig pork, tender and juicy, will always be in demand at the highest prices.

Keep your herd of swine respectable and clean; feed them clean and proper food and drink—breed well, feed well, and then sell well, and your efforts will be crowned with success and a good profit.

### Devon Cattle.

I am gratified to observe, from various reports which I have recently looked over of fairs held in different States of the Union, that specimens of the beautiful and highly useful Devon breed of cattle have been increased considerably in exhibition during this Autumn, for they are unquestionably the best general purpose cattle of medium size in existence. The cows excel in the quantity and quality of their milk, when selected for the dairy; the steers make first-rate beef, and no oxen equal them for docility and power in the yoke, or quickness of movement. Their grades also are quite superior in all these requisites, as has been long well known in New England, and has later been shown in Ohio and other Western States. For hardiness and foraging in rough weather for a good living, on the great plains bordering the Rocky Mountains, and in their valleys, they are showing themselves of high value, and are becoming quite popular there when known.

As an example of what a half-bred Devon out of a New Hampshire native cow did in the dairy, I recollect an account given to me, some years ago, of one belonging to Mr. William Bellows, of Walpole, N. H. From June 17th to 24th, fourteen milkings made 16 lbs. 10 oz. of choice butter, the only feed being grass pasture. It never required over five to ten minutes to bring the butter from this milk, it was so rich. In the following October, with three pumpkins per day, and on short pasture the latter part of the month (which is always short enough then, in the cold climate of New Hampshire), in nine days she made 16 lbs. 12 oz. butter, and furnished cream for tea and coffee during this time for three persons. The live weight of this cow was supposed to be under 700 lbs. How many Jersey cows are there now in America which would equal the butter yield of this little grade Devon on the same kind and quality of feed which she consumed?—*Live Stock Journal.*

Five per cent., and perhaps ten, can be added to the amount of milk obtained from the cows of this country, if the following rules are faithfully followed: 1. Never hurry cows in driving to and from pasture. 2. Milk as near as equal intervals as possible. Half-past five in the morning and six at night are good hours. 3. Be especially tender to cows at milking time. 4. When seated, draw the milk as rapidly as possible, being certain to always get all. 5. Never talk of anything besides what you are doing while milking. 6. Offer some caress and always a soothing word, when you approach a cow and when you leave her. The better she loves you, the more free and complete will be her *abandon* as you sit at her side. We append the not uncommon practice: 1. Let some boy turn the cows away and get them who is fond of throwing stones and switching the hind ones every chance he gets. 2. Milk early in the morning, and late at night, dividing the day in two portions, one of fifteen hours and the other nine. 3. Whack the cow over the back with the stool, or speak sharply to her if she does not "so" or "hoist." 4. Milk carelessly, and stop at the slacking of the fluid. 5. Keep the animal in a tremble all the time you are milking, and when done give her a vigorous kick.—*Hearth and Home.*

The following is from the *Chicago Dairyman*: If we were asked what is the vital moment with milk, we would say, the hour after it comes from the cow. Milk, as it leaves the udder, is about 98 deg. Fahrenheit, and if poured in large cans will retain a heat of over 90 deg. for hours, if the weather is warm. Decomposition may be said to begin with milk the moment it leaves the udder, and there is nothing like heat to accomplish this. To avoid the danger, the only way is to cool the milk at once. Place the can in a trough or tub of fresh, cool water. If ice can be put in the water, all the better. If milk is to be kept over night to go to the factory in

the morning, the above practice is imperative. The cool nights of the Fall months are particularly misleading to dairymen. They think because the nights are cool, there is no need for taking the trouble to cool the milk when first drawn from the cow. No one should ever trust his own feelings as to the condition of the weather. Always consult the thermometer, but even the coldest nights will not save the milk, if it is allowed to remain hot in the cans for any length of time.

Mr. George Simpson, an English dairyman, says, he has found, to his cost, that the ordinary practice of drying continuous milkers giving from twelve to sixteen quarts daily, does not answer at all. Instead of attempting to dry cows giving large quantities of milk, he now finds it better to turn them into a loose box and feed on oat straw. By this means the flow of milk is reduced, and gradually they dry themselves off, without any evil effects following. The practice of suddenly checking the flow of milk of good milkers by the ordinary method has resulted, in his case, in three of his cows slipping their calves within forty-eight hours after the drying process had begun. It has been observed that, where it has been attempted to dry large milkers suddenly, the uterus and breast became inflamed. Dairymen will find it highly important to pay particular attention to their cows, especially those of the Guernsey and Jersey breeds, which are great milkers.

## STABLE AND PADDOCK.

### Cruelty to Animals.

The following is the just issued report of a committee appointed by the British National Veterinary Congress, in 1881, for further considering the subject of cruelty to animals from a veterinary point of view, and publishing a declaration in the name of the Congress, on certain practices and painful operations relating to and performed on animals, namely, whether such practices and operations are sometimes necessary, and if so, under what modification or qualifications they may be performed, or whether they are necessary, and therefore cruel.

Lameness may be painless or painful. Those cases where the lameness passes off with exercise are *prima facie* cases, being accompanied by pain, this specially applies to cases of navicular disease and spavin. In such cases horses ought not to be worked, and when worked it is cruelty. Gungering is decided cruelty. Wounds are not causes of unfitness for work, unless pressed upon by harness, or affected by the movements of the animal.

Twitching: The practice called "twitching" causes acute pain, and is frequently unjustifiable, especially when a twitch is used by stablemen and others in charge of horses. Burning gums for "Lampas" is cruelty. Knocking out wolf teeth is cruelty. Extracting temporary teeth, save for surgical reason, is cruelty. Docking and nicking horses are cruel operations when done for fashion, and not to remove malformations or cure disease. Docking sheep under well-known conditions is necessary.

Marking and branding animals, when necessary, should be performed by the quickest and least painful method.

Worming the tail, docking and cropping the ears of dogs are unnecessary, and therefore cruel operations, when not performed to remove malformations or cure disease.

Castration of male animals is necessary, but should be performed in the least painful manner, and by a skilled operator.

Spaying of female animals is unnecessary, and ought to be abolished.

Parturition. Unnecessary pain is often inflicted by ignorant persons when attempting to deliver the young by forcible and cruel means. A skilled and experienced veterinary surgeon should always be called in to render assistance in difficult cases.

Operations of various kinds are frequently performed on animals by ignorant persons, and much cruelty is caused thereby, which ought to be publicly deprecated and prevented by law. All painful operations not required for the good of the animal operated on are of a cruel nature. No operation causing pain to an animal should be performed by an unskilled person. All necessary operations ought to be performed in a scientific manner, and by the most humane methods, in order thereby to prevent the infliction of unnecessary pain.—*Exchange.*

### Ponies and Pony Breeding.

Every one visiting England, says Colonel M. C. Weld, must be struck with the number of ponies in constant use, not as ladies' and children's pets and playthings, but put to steady light road work. Of course they are not adapted to hard labor and heavy draft, except in mines and peculiar situations, and in such one rarely sees them. They are, however, used many times in preference to mules and donkeys, to which they are superior on account of their quickness, willingness and docility.

Single or in pairs they are used for business by tradespeople, by farmers, market men and others; in the town for the delivery of orders by butchers, green-grocers, and all that class of dealers, and in the country for all sorts of errands and "lacking around." Many of them are well adapted to pleasure driving, and are extensively employed. They are often speedy, taking a four-minute gate and keeping it up, and somehow they seem to require less care than horses—less blanketing, less attention to keep them out of draughts when warm, and all that. They have relatively better feet, for, while the horn of the hoof is, no doubt, fully as hard as that of horses, if not finer and harder, the wear and tear of use on paved or macadamized roads cannot be nearly so great; hence it is rare to find ponies with unsound feet.

In size the ponies vary greatly, the common range being from 13 to 13½ or 14 hands. If larger, horses are called "cobs" in England if of the blocky, pony build, and are from 14 to 14½ or 15 hands. Of this class we have a good number in this country now, but, of course, they may be improved in quality.

For breeding of rather large ponies, or cobs, no class of stallions could equal Arabians of the short-legged, blocky type, like those shown at the recent horse show in New York. The size and style of the mare would determine the size of the progeny to a great extent. Good-sized sires will often get very small colts. At the show alluded to there was a very stylish black pony of a little over 13 hands, perhaps, said to have been sired by Black Hawk.

Small ponies must, of course, be bred from small progenitors, and those as a rule, must be imported. We have no small native ponies. The Indian ponies are small horses, and when removed from the rough life of the plains they increase

in size. There is a very desirable class of ponies bred on the Isthmus, or rather, brought from Panama, for they really run almost wild. Among them are many of small size and good points, and they are tough as whips, good natured, strong, hardy, and handy. No doubt they would cross well with the finer and more blood-like, the improved English and Welsh ponies, so of which were so much admired at the recent national horse show. They are clean-limbed, short coated, and like little horses. In these respects they differ from the compact, short-necked, rough Sbeltdans and Highland ponies which have the typical build.—*Rural Nebraska.*

No breeders of horses, perhaps, are more painstaking or more successful than those of Scotland; and their methods are sufficiently peculiar to merit special mention. The selection of stallions for neighborhood service is thoroughly systematized, and is an altogether different matter from the method, or rather lack of method, in vogue in the United States. The mode of procedure is something like this: Those in any given neighborhood who are especially interested in horses choose among their number a few men well fitted for that work, and have them attend stallion shows, which are instituted for the purpose of giving the public a chance to select horses for neighborhood service. The committees visit these shows, inspect the animals on exhibition, and contract with some horse owner or owners for the exclusive use of their horse or horses by his clients for the period of two years. The terms of service are agreed upon, all the details are arranged, and not infrequently a handsome premium is given in addition for an unusually desirable stallion. The good points of this system are obvious. Among others the community has an opportunity of bidding for the best, under circumstances where proofs of merit must be forthcoming. Besides, those who are not prepared to choose intelligently for themselves have the advantage of expert judgment from others. There are some points in this which American horsemen can think over with profit.

Stallions on exhibition in Scotland are not awarded premiums as in this country. The awards are decided there by their get, which circumstance actually excludes the uncertain foal getter from successful competition. This is certainly a much more thorough test of merit than the American system, and that far at least is a decided improvement upon it.

Horses are not injured by labor any more than men, and it is only by exposure, over-exertion and neglect that they become jaded out at a time when they should be in their best condition for usefulness.

## THE KENNEL.

### Doctored Dogs.

The recent non-sporting dog show in Madison Square Garden, New York, proved that the care of highly bred animals is more generally understood now than a few years ago. Everywhere there was evidence of it and Superintendent Lincoln commented on the excellent condition of a majority of the specimens exhibited. But though Mr. Lincoln has a large experience in dog matters, there were specimens shown which were adjudged prize winners and upon whom more than legitimate care had been bestowed. Of course those things were not in his province but in that of the judges, and it is strange that some of the dogs were awarded prizes when on subsequent examination they were pronounced "doctored" and the prize was awarded to the dog whose good points were real and not artificial. The "doctoring" of dogs is really a science and there are few who are possessed of the secrets or who would stoop to use them if they did. One of the cases noticeable at the late show was the "painting" of a pug dog. The majority of the competitors in a class were not sufficiently well marked to warrant the judges to commend them and the first prize was awarded to a dog of almost perfect markings of black. So handsomely marked, indeed, was the dog that the owner of the second prize winner became suspicious. He examined the dog and found that coloring matter had been used to change an inferior brute into a superior looking one. A protest was lodged and the painted pug was disqualified. The owner of the latter was greatly surprised at the denouement. He had ordered the purchase of the animal in England only two weeks before the opening of the show and had not made a critical examination. There were other cases, though, where the owners cannot claim ignorance of the "made points" of their dogs. Probably one of the most petted bull terriers in the show, and which was awarded a first prize, was pronounced by "one of the knowing ones" to be a made-up beauty." The mouth of the animal had been doctored. The upper lip of a bull terrier should overhang slightly where the jaws meet. This overhanging flesh had been cut off some time ago, and though the wound had healed the scars were plainly seen when the lip was turned out. The cutting had been done to secure the evenness of the lips which was so generally admired. Among the full-blooded bull dogs there were also specimens whose lips had been "Bishoped." That is the *supra labial* cord, which binds the lip to the gums, had been severed to allow the lip to fall and produce an abnormally large jaw. This is regarded as a point of beauty by some people, but it renders the animal powerless to raise the lip. These are only few of many styles of "doctoring" which experts pointed out.

### Smart Dog.

A rancher living near the Princeton bridge across Butte Creek has a canine blessed with unusual "instincts." It is a very fond of fish. The rancher has had a coal oil can nearly full of tar at his blacksmith shop for several weeks. At various times during the past fortnight the gentleman observed the dog drop the end of his tail in the tar, wag it several times, and then go to the creek. Sunday he decided to see what the canine was up to and followed it. The dog backed down into water, keeping his front feet in shallow water close to land. His tail, weighted with the tar, was under the water. After standing perfectly still for a few moments the dog suddenly jumped out of the water on to dry land, and then adroitly turned and grabbed a catfish that had hold of his tail and proceeded to eat the funny fool. This sounds like a tough yarn, but the party informing us of the occurrence, asserting that he witnessed it, is a christian gentleman whose word will not be doubted by those acquainted with him.

### Names Claimed.

By J. B. Giffen, Truckee, Cal.

BLAZE for red and white setter dog, by F. A. Taft's Dorr (Gordon), out of Sisson's Daisy (Irish).

By W. W. Van Arsdale, Truckee, Cal.

TART for orange and white setter dog, by F. A. Taft's Dorr (Gordon), out of Sisson's Daisy (Irish).

By Cara A. Burekhalter, Truckee, Cal.

DORRIS for black setter bitch, by F. A. Taft's Dorr (Gordon), out of E. L. Brown's Queen (English).

### Gilroy Field Trials.

Judge Leavesley informs us by a note that the Gilroy Club have fixed upon December 16th, on which to run their field trials. This will give parties whose dogs may not be successful at the Pacific Coast Trials another chance under different auspices.

### Visits.

Nov. 18, 1884, Chas. N. Post's Gordon bitch Nettie F to F. A. Taft's Gordon dog Dorr.

## FISH.

### The Fish Commission.

The commission held a stated meeting at Sacramento on Monday. The following is the *Bee's* report:

Secretary and Treasurer Dibble was absent, being unwell, but Commissioners Buckingham and Redding were present, the latter having delayed a trip East to attend. He will be at a meeting of the American Piscicultural Association in New York in December. He stated that the District Attorneys seemed to pay little attention to the fish laws. In New York draughtsmen were employed to go over the State, make maps of streams and obstructions and send copies to each District Attorney and show them places to which they must pay attention. He believed such a course should be pursued here.

President Buckingham said that there ought to be a statute making a violation of the fish laws a felony, and if such were the case there would now be 150 men in San Quentin. He said that the damage to fishing interests is great at the head of the streams where there are no navigable waters. Tourist catch great numbers which cannot be sent away. Great quantities of female fish, unfit for food, are caught there for market all along above Tehama. The fish go into the ripples, and drop back into the pools in a sickly and bruised condition. There seems are dragged, and in October and November such salmon are sold in Marysville, Grass Valley and other towns as "Tehama trout." Some of them are in such condition that bruised spots are cut out. A San Francisco business man last Summer caught and shipped several boxes of trout and salmon from above Redding and they spoiled en route. They were fish several years old. Further damage is caused by the Chinese bag nets on the lower streams. There, too, fine nets are operated to catch shrimp and many tons of small fish, flounders and other varieties, not larger than one's finger, are caught and not released. But more salmon go into the tules and are lost than go up the river. The fish go across all along from Steamboat slough to Cache creek. Last Winter there were more salmon at the headwaters than during the Summer, because the fish going up then were strong and no one was fishing for them.

Mr. Buckingham reiterated the charge that the spawn of salmon on the Clond river are sold to tourists, and that the spawn of each female represents thousands of young fish. He said that 700,000 cases of salmon were taken during the last run on the Columbia, where the number has not decreased. There the water is from three to eighteen fathoms deep, and the nets used are not thirty-five or forty feet long. There used to be deep water here, but now, when the river is only a few feet deep, the nets are like those used in olden times. In the tule lakes 10,000 young salmon are spawned in July, six weeks earlier than on the Clond. That the spent fish are used up North is proved by the fact that none float down now where thousands used to come. In Fisherman's Lake in this county, last season were taken 1,000 spent sard that had gone from the rivers.

Commissioner Redding said that the lower part of the streams had become like a great swamp, instead of salmon rivers, and he was inclined to think Sacramento salmon had in disgust gone to the Columbia, but Mr. Buckingham did not agree with him.

Judson Johnson, a Deputy Constable at Modesto, was appointed with the powers of a Sheriff to patrol the San Joaquin, south of the railroad bridge, arrest illegal fishermen, and prosecute people who obstruct streams. His territory lies in Merced, Stanislaus, San Joaquin and Fresno counties. Deputy Jones looks after the country below Stockton and the Sportsman's Club there also has an eye on the streams.

Mr. Johnson said he had been informed that there were no screens at the head of an irrigating canal that runs from Fresno slough, which connects with the San Joaquin, to the north, in the direction of Hill's Ferry. The canal is a large one. Many fish are thus brought down and left to rot. In some places they become so offensive as to stop travel along the banks. There is no law at present concerning screens for canals. At La Grange is a dam that fish cannot pass. There is one at Merced Falls.

Mr. Buckingham says there is a dam, forty feet high, at Six-Mile Bar, up the San Joaquin river, that fish cannot pass and it has not been used in four or five years.

Mr. Redding said that some new fish laws were badly needed and should be passed this Winter. He said he was willing to come here about the middle of December from the East and remain a week drawing new statutes.

Mr. Buckingham agreed with him in this, and said the States Sportsman's Association will by that time have made suggestions. A meeting will then be held at which Treasurer Dibble will submit his financial report, now due. An appropriation of \$15,000 will also be asked of the Legislature.

The Commission then adjourned.

### Catarrh Cured.

A clergyman, after suffering a number of years from that loathsome disease, Catarrh, after trying every known remedy without success, at last found a prescription which completely cured and saved him from death. Any sufferer from this dreadful disease sending a self-addressed stamped envelope to Dr. J. A. Lawrence, 199 Dean St., Brooklyn, N. Y., will receive the recipe free of charge.

## POULTRY.

## Breeding and Feeding Turkeys.

A writer in an English paper offers the following advice on this subject:

Considerable difference of opinion exists as to the best age for the stock birds. Undoubtedly a two or three-year-old gobbler, and hens from two to four years old, would give the strongest and best stock; but I find the disadvantages arising from keeping old birds so great that I almost always fatten my stock birds, and bring up young birds for the next season, saving only special favorites for a second year. The advantages, I believe, gained from using young birds are that the eggs produce a larger number of gobblers than from older birds, and these are much more valuable than hens, and I find that young hens commence to lay ten days or a fortnight before older birds. The young gobblers are not so savage as the older ones, and fewer hens are injured and killed by them.

Hen turkeys generally lay about 20 eggs. It is a good plan to set the eggs first under hens, giving the turkeys about 15 of their own eggs to sit upon. It is an unwise, as well as a cruel plan, to set all the turkey eggs under hens, and make her lay all the season. Late hatched turkeys never thrive as the early birds do, and they never grow to a size to realize a profitable price. The turkey's services are lost to her own offspring, for turkeys rear their own young much better than hens do; and it almost invariably happens that a turkey becomes so debilitated by laying all the Spring that she wastes away and dies in moulting. The time when turkeys require the greatest care is until they are six weeks old, when the young cocks begin to show a little red on their heads. Dryness is of the first importance; large, roomy coops, with covered runs are desirable, that the young birds be not allowed to roam about in wet weather or when the dew is on the grass.

The food for the newly hatched birds should be principally hard boiled eggs, with dandelion, lettuce, or onions, chopped up with a little bread crumbs; to this may be added a little rice boiled in skim milk (if quite sweet), a little snet or greaves, in wet or cold weather a little cayenne pepper, with grain of all sorts as the birds grow older. A fresh site for the coop every morning is indispensable, and a little exercise if the mother is a turkey—but not if she is a fussy old hen—is also advantageous as the chicks get on. A good sign is to see the young turkeys catching flies. In order to get fresh, untainted ground, it is a good plan to hurdle off part of the field—a newlea, if handy—for the coops, and the grass should be mown closely to the ground.

Turkeys will take to any young turkeys, whether hatched by themselves or not; so when our young birds get fairly strong, we generally transfer those hatched under hens to the turkey. One has to be careful that the chicks do not perch on the rails of the hurdles or the tops of the coops; crooked breasts would be the inevitable result. They should be induced to sit on the ground as long as possible, and then taught to perch on low bushes and trees, and until they are shut up for fattening they are better never to have entered the fowl-house. Having reached the age of two or three months, the birds are perfectly hardy, requiring little care, but generous feeding. A more economical food is now desirable, and barley meal, and perhaps a little scapapea, maize, barley, and small wheat is the usual food.

In conclusion, let me advise never to mate birds of their own breeding with one another; every year purchase a new bird for stock, unless the old bird is retained and hens of his breeding are not used. There is no economy in buying a cheap bird; a little extra expense about the gobbler will probably give three or four pounds weight in each young bird next year.

## Plymouth Rocks.

Of course each one will have his or her preferences and the breed that pays the best will be the choice of the breeder; but that which pays the fancier the largest, may not be the best general purpose chicken for the farmer.

There is no better proof that the farmer is progressing than the change in the manner of treating their stock, which has been made within the last few years.

But I began to write about chickens, and the reason was because I have a word to say in favor of Plymouth Rocks. I have nothing to dictate to fanciers, but for the farmer, or any one who wants chickens for general purpose, there is no better breed than the Plymouth Rocks. I have been breeding them for the last three years and want no better. Not one has even been sick, and there was not a week I failed to get eggs during the coldest weather, during the past Winter, and what pretty chickens they are. Mine have been the admiration of all who have seen them. There may be strains that do not give such satisfactory results but realizing that in most things the best is the cheapest. I procured my stock from the best. It was expensive, but it has paid.

Of course one must be master or mistress of any business to make it a success and chickens will respond to good treatment quite as much as do other kind of stock. Mine always have a morning feed of all the scraps that have been saved from the table during the previous day, mixed with ground feed, and how they do relish it! I have to watch my steps to keep from treading upon them when I take their feed to them, so quickly and so closely do they gather around me. I handle them as often as I please while they are setting and not an egg is injured. The children will go out and pick up one and bring into the house whenever they want something to eat. I do not feed oyster shells, ground bones nor any of the so called eggshell materials but think such materials are contained in the cereals. Within the last eight days I have had 212 eggs from twenty-seven hens, and they would have averaged the same since the first of March. —Mrs. F. M. Cooper, in *Indiana Farmer*.

Pit games are different from those bred for beauty, being stronger, larger, and more vigorous. In breeding game for the table, the Pit games should therefore be preferred, as the cocks are savage, and quickly attack hawks, while the hens make the most careful of mothers. Pit games are not pure bred fowls, in one sense, as they are sometimes produced by crossing several breeds of games together, but no blood but game is permitted. A game crossed on Partridge-Cochin hens produces an excellent fowl, one that is hardy and large, and which is splendid for the table.

Milk, either fresh or sour, buttermilk, skimmed milk mixed with meal, or in any other form, is just the thing for fowls. It will pay better to give waste milk to fowls than to pigs.

The cold, damp, disagreeable weather of Fall often does greater damage to fowls than the cold days of Winter.

In England no fowl is as highly appreciated as the Dorking, which, like the Houdan, has five toes. It is a very compactly built, fine-boned fowl, though not so much a favorite here as in England. There are three varieties—the colored, silver-gray, and white. The silver-gray may have either a rose or single comb, the colored has a single comb, while the white has a rose comb. The colored Dorkings, when crossed on dark Brahma hens, produce the largest and best capone, and they are also used for giving compactness of form to other breeds.

Fences are more expensive than coops, and must be built as cheaply as possible if a large number of yards are intended to be used. Lath is the cheapest material that can be used, but dear if the fences are not properly made. We suggest that lath fences be made six feet high by using half laths at the bottom and full length ones at the top. Experience during the past year demonstrates that a fence so constructed is very durable and cheap, compared with the cost.

By cutting an old fruit can into half, the lower portion may be used for holding ground bone, charcoal, sulphur, or ground shells. They can be easily nailed to the coop or in any sheltered location, where the fowls may at leisure eat what they desire from them. If they are trimmed off at the top, a hole cut near the bottom, and the cap filled with water and inverted over a tin plate, they answer well as drinking fountains.

There are ten varieties of ducks recognized, the Pekin, Rouen, Aylesbury, black East Indian, gray Call, white Call, colored Muscovy, crested white, and white Muscovy. Of these the Pekin is the largest, the Rouen the most beautiful in plumage, and the Aylesbury the most prolific. The Muscovy makes an excellent cross on the common kinds, but the offspring is sterile. The others are more ornamental than useful.

The *Rocky Mountain Husbandman* says that Montana is proving to be all we have claimed for it as a poultry producing country. Fowls are generally healthy and very prolific. It requires a warm house, to be sure, but these are not difficulty or expensive.

Now that the gardens are dispensed with, the hens can do good service by eating the seeds of many undesirable plants, as well as finding quite an amount of insect food.

If the combs of your fowl are tall and thin, cut them off, as is done with the game. It is better to have no combs on the fowls than to have them frosted.

## Kentucky Trotting Horse Notes.

Mr. Bushey, of the *Turf, Field and Farm*, who went down to Lexington to see Mand S. trot, sends his paper the following bits of observation:

I drove out to Mr. Rhody Patterson's farm, three miles from Lexington, to take a look at Phallas and Jay-Eye-See. We found both running in large paddocks, separated by a narrow lane. Jay-Eye-See had the pink-eye when he landed here, but he is over it now. We came upon him first. Mr. Patterson's son attempted to put the halter on him, but for full fifteen minutes he would have none of it. He would saucily toss his head and sail away over the blue glass carpet with a swinging stride, skillfully dodging the big oaks and the slender locusts, as much as to say "I don't care whether you like me or not." Finally he was tempted by a pint of oats in a small measure, and with the bridle on him we were able to look him over at our leisure. He has grown rugged, and his legs and feet are free from fever. The run which he is now enjoying will renew his life and place him in a position to dispute again next year with Maud S. for the crown. He is turned out every day at 9 o'clock and is taken up and hooded at 4 o'clock in the afternoon. Phallas receives the same treatment, and he already has lost his joded look. Mr. Case may trot him early in the season and then put him in the stud. He wants Mr. Todhunter to take him when he leaves the track, Mr. Todhunter, by the way, feels confident that the fifth dam of Phallas was a daughter of inn. Tranby. He says that Jack Glass, who used her under saddle, was a thoroughbred man, and that he bred a number of mares to imp. Trauby when the latter stood on the Todhunter farm.

Previous to leaving for home on Friday, Mr. Fred Bonner held his watch on his two-year-old colt Almont Dudley, in 2:36. The mile was trotted on the track at Ashland Park Stock Farm, and it was a great one, for the reason that the colt has had very little training. Almont Dudley is a handsome, stout built, blood-like chestnut, by Mambrino Dudley, out of Lady Almont, by Almont, and she out of a mare by Brown Chief. She is level-headed, has pure action, and is the best colt of her age in the State.

I also saw at B. J. Treacy's the black colt Bermuda, one year old, by Bauer, out of Pattie, by Mambrino Patchew. He is wonderfully gaited, and Barney says he will put him in a stake of \$1,000 each with Castro and other yearlings to trot next Summer as two-year-olds. He does not subscribe to the opinion that Gen. Treacy has the fastest yearlings in the country. A stake contest would prove interesting.

I have not space in this letter to notice all that I saw at Ashland Park Stock Farm, but I wish to draw attention to the fact that the sire of Kemlworth is owned there. He has dropped the name of Lothair and is now called Woodford Abdallah. He is twelve years old, stands 16.1, and shows a great deal of breeding, with many of the characteristics of his sire, Woodford Mambrino. One of his hips is down, which accounts for his not having been trained. He has shown Treacy a mile in 2:29.

Across the road is Ashland, the old home of Henry Clay and the present home of Major McDowell. Dictator is looking rugged, and I am satisfied that he will demonstrate his prepotency in the Spring. Mr. Bouer relieved him greatly by balancing his feet. King Rene is in good health, and he is a great favorite. His colts certainly are trotters when led by the side of a saddle horse. Maxwell says Fugue will hold her own with the best of the five-year-olds next season. Major McDowell is anxious to meet with her Hinda Rose, Elvira, Eva, Dou Carole and all her old rivals.

A new addition has been made to Ash Grove Stock Farm in the shape of a two-year-old stallion, the full brother of Guy Wilke, six-year-old record 2:19. He is a handsome, stoutly formed colt, and will, it is expected, be fast. Early Dawn has been turned out, but before she was taken from the track she showed a mile in 2:20. Eagle Bird is a well balanced two-year-old, and I shall expect to see him go fast in his three-year-old form. The stars are shining brightly, as I close this hasty letter, which augurs well for to-morrow.

H. B.

W. W. Bair will probably train and drive Commodore Kittson's stables of pacers and trotters during the season of 1885.

# PACIFIC COAST BLOOD HORSE ASSOCIATION.

## Fall Meeting, 1884.

### BAY DISTRICT COURSE.

#### PROGRAMME

#### Third Day, Saturday, Nov. 22d.

No. 15. THE FINIAN STAKE; for two-year-olds; dash of a mile; \$50 each; \$25 forfeit; \$250 added; second to save stake. Nominations for 1884:

1. Theo. Winters' ch c, by Norfolk—Lady Jane.
2. Theo. Winters' b c, by Norfolk—Ballnette.
3. Theo. Winters' ch f, by Hooker—Puss.
4. Theo. Winters' b f, by Hooker—Abby W.
5. Theo. Winters' b f, by Hooker—Countess Zeika.
6. Theo. Winters' b f, by Hooker—Illusion.
7. Theo. Winters' b f, by Hooker—Kitten.
8. J. B. Chase's blk c Hidalgo, by Joe Daniels—Electra.
9. G. Pacheco's cf f, by Wheatley—by Lodi.
10. J. W. Adams' br c Common Sense, by Hardwood—Cousin Peggy.
11. James Mee's cb f Mischief, by Thad Stevens—Katie Pease.
12. James Mee's cb f Mistletoe, by Thad Stevens—Mistake.
13. E. J. Baldwin's cb g, by Grinstead—Jennie.
14. E. J. Baldwin's br c, by Lexington—Mollie McCarthy.
15. E. J. Baldwin's b f, by Rutherford—Glenita.
16. E. J. Baldwin's br f, by Grinstead—Blossom.
17. Palo Alto's b c, by Shannon—Robin Girl.
18. Palo Alto's b c, by Shannon—Sallie Gardner.
19. Palo Alto's bc, by Shannon—Miss Peyton.
20. Palo Alto's s c, by Flood—Planetta.
21. Palo Alto's c g, by Shannon—Betty Bishop.
22. Palo Alto's br c, by Shannon—Rightin.
23. Palo Alto's b f, by Monday—Plaything.
24. Hill & Gries' b c Artur H., by Hochhocking—Maid of the Mist.

No. 16. SAME DAY.—FAME STAKE.—For three-year-olds; dash of two miles; \$100 each, \$25 forfeit, \$500 added; second to have \$150, third to save stake. Closed with the following nominations for 1884:

1. E. J. Baldwin's b c, by Rutherford, dam Maggie Emerson.
2. E. J. Baldwin's b f, by Rutherford, dam Glenita.
3. E. J. Baldwin's cb f, by Grinstead, dam sister to Clara D.
4. E. J. Baldwin's cb f, by Grinstead, dam Josie C.
5. E. J. Baldwin's br f, by Grinstead, dam Mollie McCarthy.
6. Theo. Winters' cb c Prince of Norfolk, by Norfolk, dam Marion.
7. Theo. Winters' cb c Sallie Smart, by Norfolk, dam Mattie A.
8. Jos. Cairn Simpson's b c Sir Thad, by Norfolk or Thad Stevens, dam Lady Amanda.
9. P. J. Sbafer's b f Bonita, by Shannon, dam Napa Queen.
10. Palo Alto's b c, by Norfolk, dam Boydiana.
11. Palo Alto's b c, by Norfolk, dam Nova Zembla.
12. Palo Alto's b c, by Shannon, dam Demirep.
13. Palo Alto's br c, by Monday, dam Rightin.
14. Palo Alto's s f, by Norfolk, dam Glenview.
15. Palo Alto's bl f, by Wild Idle, dam Frolic.
16. Palo Alto's br f, by Norfolk, dam Lizzie Whippis.
17. Palo Alto's s f, by Norfolk, dam Frou Frou.
18. John A. Cardinell's bl c John A., by Monday, dam Lady Clare.

No. 17. BALDWIN STAKE; a post stake for all ages; \$250 each, p. p. \$1,000 added; second to receive \$400, third to save stake; dash of four miles. Subscribers:  
J. D. Christie, St. Louis, Mo.  
M. M. Allen, Sacramento, Cal.  
A. J. Steiner, Sacramento, Cal.  
Jas. Mee, San Francisco.

No. 18. HANDICAP; 1 1/2 miles; stake \$50 each; \$25 forfeit; \$10 declared entry. \$300 added. Weights announced second day of meeting at 1 p. m. from judges stand. Declaration following day at secretary's office at 1 p. m. Second \$75, third to save stake.

1. W. M. Murry's br b Birdcatcher, 5, by Spectre—Pet.
2. Garland & Goldsmith's b c Beaconfield, 3 by Hook Hocking—Allen Allaband.
3. P. Lynch's b g Jon Jon, 3, by Monday—Plaything.
4. G. L. Richardson's b g Billy the Kid, aged, by Lester—Lilly Simpson.
5. P. Siebenbaler's b c Philip S., 3, by Lester—Lilly Simpson.
6. Rancho del Paso's ch f Nellie Peyton, 5, by imp. Hurrab—Emily Peyton.
7. S. J. Jones' b Forest King, 5, by Monday—Abbie W.

No. 19. CONSOLATION PURSE; \$200; \$50 to second; one mile, for non-winners at this meeting. Horses beaten once allowed 5 lbs., twice, 10 lbs., three times, 20 lbs.; entries to close five minutes after the finish of last race.

#### CONDITIONS.

Entries to stakes and purses not marked closed, except Nos. 5, 9, 10, 13 and 14, will close November 1st, 1884.

Races to close will be run under weights adopted at the annual meeting of 1881.

Starters in all races must be named at 6 p. m., the day preceding the race.

Entrance free for starters in races. Non-starters can declare out at 6 p. m., the day preceding the race, by paying five per cent. After that time they can only be excused by the presiding judge, and in such case ten per cent. on the amount of purse must be paid.

Non-members will be placed on the same footing as members of the Association, in regard to the payment of purses and stakes advertised; and should there be a deficiency, the winners will receive a pro rata division.

Parties making nominations will be required to record colors at time of making entries, and after record will not be allowed to ride in other colors. This rule will be strictly enforced.

All nominations in stakes and purses, (except Nos. 5, 9, 10, 13 and 14), must be made on or before the first day of November next, 1884, directed to Jos. Cairn Simpson, Secretary, 508 Montgomery St., San Francisco. To be valid, they must be delivered to the Secretary personally or plainly postmarked on or before that day—November 1st.

The Association reserves the right to postpone races on account of unfavorable weather or other sufficient cause.

JAS. V. COLEMAN, President.

JOS. CAIRN SIMPSON, Secretary.

**Belle Echo's Campaign.**

The New York *Spirit's* Texas correspondent gives the following report of a race at Gainesville that Mr. Titus failed to win:

As the 2:20 class sold in the pools last evening, so it sells to-day. They play Echo up against the field stiff and strong. "It will be hard work to beat them fellows," said Mr. Titus a few moments before the start, "with every one of them driving against me." That was a natural supposition, and it seemed to that it was too much to ask of the mare to trot around that party. I had no idea that any one of the drivers would do him dirt; they respected him too much for that, but they would make him trot around them, and as all of them were said to be at a feather edge, the outlook was gloomy.

First Heat—The mare drew the pole, and went away fast on the journey for the first heat. France was trotting fast and level, and clung to her to the quarter. The other two were here so close it was a bunch of four as they moved down the backstretch at a clever clip. Echo gained slightly, but could not shake off France. As they pass the half France goes up alongside the mare, and Felix begins to act as if he was in it too. They dash by that point in 1:11. Quite a good whirl for the time of year, but down here the sun is warm and favorable for speed. As they swing around the upper turn France is nose and nose with the mare. He out trots her. She is up, and the short enders shout with delight. My heart goes out for Titus. He settles his mare, but she is too far back to make any rush, and he lays her up. France has a good, safe lead, coming home easy from the half in 1:11.

Second Heat.—Now the scene changes. Echo is yet the favorite, but the field brings just as much, sometimes more than she does. France scored fast, and looked all over the winner. Wright, too, was going level. When they got the word France had a shade the best of it, but before he had gone twenty lengths he made a jimtown, and when he recovered was away last. Echo goes off ahead with a steady stride, and it pleases her backers mightily. They show it by their cheers and yells. Knap has his head with him, and Felix his heels this trip. On after the mare they go. Clear around to the long distance she has kept in front. Right here Felix draws up to her wheel. His nose waves from side to side. He is the most steady horse I ever saw. Knap sits cool and calm. He knows he has Echo nailed. Forty yards from the wire Echo makes a tired break, and Felix has won. Again the time is fast.

Third Heat.—Felix outtrotted the party and did not appear to be urged.

Fourth Heat.—This was more of a struggle. I heard that Vau Ness had his money on his horse, and I expected they would go some. As they got away France skinned out ahead, Felix, who had got to be favorite in the pools, taking last place: Wright was going on, a smooth second. At the half Echo had worked up to second place, and Felix had gathered speed for the last end. Before reaching the three-quarters Echo made a bad tangle, and was out of it. France was two lengths in advance. Felix was overhauling him hand over hand as they headed down for the wire. Both grabbed ground with a desperate endeavor, and it was either of them to the distance. Just here France left his feet, and it was all day with him.

This was a very fast race throughout, and I don't expect to see it equalled down the line.

GAINESVILLE, Nov. 5th.—Purse, \$800; 2:20 class. Felix, ch g, by Nutwood.....W. H. McCarthy 2 1 1 1 Albert France, b g, by George Wilkes.....  
.....F. Van Ness 1 4 2 2 Belle Echo, b m.....L. H. Titus 4 2 3 3 Deck Wright, b g.....A. Coleman 3 3 4 4 Time, 2:22, 2:22, 2:23, 2:24.

Mr. W. H. Stevenson, who is a partner in the racing stable of Mr. C. R. Jaynes & Co., states that there is an eight of a mile track under sheds at Versailles, Ky., where many of the horsemen are now proposing to winter, and that horses can be kept in training there the season through. He is already preparing a number of yearlings for two-year-old engagements in the Spring, and giving Littlefellow, the stable's entry in the race for the American Derby, his morning gallops. "I don't mean to have them stop on me next year for lack of work," he remarked, with a merry twinkle of his eye; and the way that Springer quit on several occasions is probably still fresh in his mind.—*Chicago InterOcean.*

Florence with her beautiful action, and running near the ground, as she does, must go a great pace, and as she has developed power she stays. Last Spring, when I looked her all over as she walked under the farside hedge of the paddock at Epson, I thought Florence one of the most beautiful mares I had ever seen. To carry her in my eye she is a long, powerful bay mare, with black points, standing something over 15 hands 2 inches high, with great length of neck and forehead, and the best of shoulders, very strong back and loins, and great propelling quarters, standing a bit higher behind than in front. She is quite the sort to carry weight by reason of those backloins and quarters.

Mr. Cohnfield's team of Happy Medium, Maxy Cobb and Neta Medium trotted at Fleetwood Park last Thursday to beat Edward and Swivellers' record of 2:16, and turned the track in 2:15.

**The Key to the Horse's Capacity for Exertion.**

We are never in a position to do the horse exact justice until we have found a key to his precise state under the greatly varying conditions that grow out of lack of tone in the digestive organs from indigestion, eating too much, or of the muscular and nervous systems from too much or too severe work. Is there a key? Yes, the governor, or in other words, the heart. The heart, to horse and man alike, is the governor, and when this pulsates in the man about 76, and in the horse about 40 times in the minute, we may know that, as a rule, there cannot be any serious disturbing influence in the system. Indigestion, accompanied by flatulence sometimes quickens the pulse, but as frequently lowers it. Any great exertion accelerates the heart's action, but following this it quite often drops as much below the normal beat as it rises above, while the exertion continues.

Now, we may at all times know the condition of this governor, if we will examine it direct, by placing the ear over the heart region or indirectly by placing the finger upon the little artery which comes off the external carotid and comes within the reach of the finger at the lower portion of the upper third of the jaw bone, there taking a turn from within to the outer surface of the bone, becoming subcutaneous, hence within easy reach of the finger. The pulsation here, as elsewhere, indicates the action of the heart, and it is not extravagant to say that no man should require great exertion of a horse on the track, on the road, or simply drawing a heavy load, when an examination shows the circulation to be materially above, or, on the other hand, below the natural standard. When the governor, or in other words, the heart, is running wrong, the vital powers are overbalanced, and anything more than the most moderate exertion will put the animal in jeopardy.

Now, as this pulse is the evidence, pointing unerringly to the condition of the vitality, showing whether it is up or down, saying nothing about diseased states, of which the breeder or mere horseman is not expected to be able to take cognizance, it would be wise in all horsemen to study the pulsations of the arteries, as through this means alone can the condition of the heart be estimated. Indigestion, with the resultant gas in the intestines, will sometimes cause the heart to beat abnormally fast, and in another case it will drop down below the normal state. In either case, vital integrity and resistance are weakened, and in cases of slight impediments to full exertion, we can detect that the forces are enfeebled.

The horse does not show by the pale look, as in the human being, that something may be wrong, and, while the experienced veterinarian can, at a glance, read the signs of fatigue or illness in the countenance, the novice can not do this, though he can quickly learn to time the pulsations of the heart, and in a reasonable time may learn to pass upon the rhythm of the heart's action, looking to this as a simple and accurately fitted key to bring out and make plain the points so briefly here touched upon. If the horse be subjected to great exertion when the circulation has, from any cause, dropped, then his work will be done under distress, and with lack of courage and ability to endure, as the result will always show.—*Live Stock Journal.*

**Titus Acknowledge the Corn.**

The Texas correspondent of the New York *Spirit* writing from Sherman, reports the following talk with L. H. Titus, owner of Belle Echo:

Meeting Mr. Titus, I said, "They didn't beat you, yesterday."

"No," he answered, "but it was a pretty hot race. During the last heat one of the boys gave a yell, and that was the key-note for the crowd. I got away from all of them, after all. It was not quite like a race I had in Omaha, this Fall. There the outsiders yelled like wild men, to help me along. 'Go in, old man,' 'You've got 'em,' 'Give it to 'em,' and I never recalled before that I was getting along in years. I wrote home that I should call myself 'old' always, after that."

Garrison, the jockey, is pushing McLaughlin hard in the race for reputation. Many people now think him far the best finisher, his utility at the post having secured for him the cognomen of Snapper.

**Plant Trees.**

Now is the time for farmers to plant trees. As the dying Scotchman said to his son: "Be aye stickin' in a tree, Jock. They'll be growing while you're sleeping." Let every farmer make a beginning, if he only sets out half a dozen trees along the highway against his land. The honest pride which he and his family will feel as his trees grow, will cooperate with certainty of profit to brace him up in further efforts. Farmers having native wood on their land can with profit imitate the land owners and foresters of Europe, by making it a rule to plant one or more trees for every one they remove. In France and Germany the utmost care is taken to have continued successions of forest growth, and the same rule is observed in England and Scotland. In Europe, men of capital plant timber as an in-

vestment, assured that nothing will pay a better or more certain interest. In the United States the day has, perhaps, not yet arrived for this to be done on a large scale. Capital, especially in the West, is yet comparatively scarce and dear; and so many opportunities present themselves to realize immediate returns, that a smaller near profit is apt to be preferred to a greater remote one. Besides, the whole subject of forest culture is so new in our country that we need not wonder that the attention of capital has not been turned to it. Scarce ten years have elapsed since the prospective exhaustion of the forests, and the consequent timber famine that impends over us, have become the subjects of earnest discussion. Great movements require time to organize themselves; and so it is with forest planting by moneyed men. Time must be taken for consideration, especially as we have yet no trained class to take practical charge of the work. Inquiry is to some extent directed to the possibility and probability of creating future estates of great value, by judicious investment of money in tree planting; and such inquiry will lead to action. That such investment would be profitable is the conviction of those who have given the subject more attention. But, however successful be may be, the capitalist, remote perhaps from the scene of operation, and depending on others, is yet shorn of many advantages enjoyed by the farmer. The latter, on his own farm, sees personally to all parts of the work, and possibly does it with his own hands. If it can be profitable to the capitalist, as such, to plant a forest, it must of necessity be more profitable to the farmer.

A great deal has been said and written of late on tree culture, yet very little has actually been done. Now is the time to begin; and remember to plant your trees closely, with evergreens for shade nurseries. Those who plant orchards want large, spreading trees with broad tops, but, though such forest trees may not die, they will not by any means make a vigorous or healthy growth. On the other hand, if the trees are small they are scarcely checked at all in their growth, and if planted thickly they soon begin to shade the ground and protect each other, and from these two causes combined the borers do little or no damage. Again, if the trees are far apart much labor is required in keeping the ground clear of weeds, while with thickly planted trees they will cause far less trouble. When trees are far apart we cannot secure length of body even by the most careful training; but if planted thickly nature will do her own work, securing smooth and straight trunks with little artificial training.—*Cultivator.*

**Branding Cattle.**

[Montana Husbandman.]

The tanners who have long been raising objections to our system of branding range cattle, propose to hold a convention in St. Louis next week for the purpose of trying to induce Western stock growers to adopt some other system of marking their cattle, as burning with hot iron greatly damages the hide. What such a convention will accomplish we can not tell, yet we do not anticipate that it will be successful in its undertaking. The humanitarians of the far East have, like the tanner, long been crying out against branding stock as a useless cruelty to animals, but neither have yet been able to devise a system that will do away with the hot iron. It is possible if there was a sufficient difference in the price of branded and unbranded hides that a few growers might be induced to brand on the flank, under the tail, on the jaw or neck, where the burn would not materially injure the hide; but unless there is more than one dollar's difference in the price of the hide—which is estimated to be the difference—it is not likely that they will pay any attention to their appeals. This wail of the humanitarian, has been echoing through the land for ten or twelve years; yet we find that instead of decreasing, brands are becoming larger and cowmen becoming more brutal towards their stock. In Texas large and numerous brands, and all manner of knife marks have long been in vogue, but in Montana, until recently, brands have been small and only once with few or no knife marks; but a visit to our round-ups now would reveal a very different practice. Brands are being enlarged and put on on both sides. This is done as a matter of convenience to the cowboy, and every conceivable knife-mark is used. The ears are cut, jaws wattled, nose wattled, brisket, dulap, shoulders, legs and neck wattled; so that when then the calf comes out of the branding pen it looks more like it had been butchered than branded and marked. That much of this burning and knifing is unnecessary there is no question, but we do not see how it can be prevented so long as our system of range growing is in vogue. Possibly owners may be induced to use smaller irons and in other ways curtail what seems to the looker-on to be wanton cruelty, but we do not anticipate such a result.

**HOLSTEIN CATTLE.**

WE EXPECT A CONSIGNMENT OF 50 HEAD about the last of November. For particulars address H. & W. PIERCE, 725 Montgomery street.

**DEER HOUNDS.**

WANTED TWO YOUNG DEER HOUNDS, DOGS. Address with price and other particulars, 123 California Street, S. F., Room 9.

Jersey Belle of Scituate that made 25 lbs 4 1/2 ozs. of butter in one week.

A grandson of above cow is now in use in the Yerba Buena. This herd won all the herd prizes for 1882. Since then have been added young animals from Mr. Pierce's valuable herds East. He now has Jersey Belle of Scituate, Comassie, Mary Ann of St. Lambert, Silver Cloud and Eurotas strains; also large selections from the Islands, without regard to cost.

He has interest in Eastern herds of 200, all the head of which stand only living son of Jersey Belle, Romeo de Bonair, (87 1/2 per cent. Mary Ann's blood), and Pierson, the best show bull in America. These bulls are valued at \$10,000 each.  
**HENRY PIERCE, San Francisco.**

**IMPROVED HORSE CLOTHING.**

Secured by Letters Patent ISSUED MAY 27, 1879. REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J in combination with the elastic connecting-strip I, substantially as described and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the nap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingles is avoided, substantially as herein described.

### OUR NEW YORK LETTER.

Centennial Days at Brighton Beach—Accident to James McLaughlin—Indian Summer Checked by Snow—General Notes at Home and Abroad, Etc.

Centennial week at Brighton closed in a halo of Indian Summer haze, and the soft mellow atmosphere being strongly suggestive of California weather to those who have ever experienced the golden balmy zephyrs of the Pacific. The three latter days of the week, each in itself constituted a gala occasion, the attendance looking as if there had been a shifting of the seasons, and that it was Midsummer instead of Autumn. The truth is that the racing public fully realize that such exceptional weather cannot last much longer, that it is liable any day to receive the icy check of frost and snow, and loth to abandon their favorite pastime for the year people are determined to make the most of their present opportunities. Those who are out on the season, to endeavor to recoup their past losses, those who are in, to swell their gains, and those who are neither out nor in, or who, in other words, do not bet, but attend racing for the sport itself, to see the closing struggles of a memorable turf year, mindful of the immediate vicinity of the melancholy days, the shortest of the year, when racing to Northerners will exist only in memory as they recount before the blazing log fire or around the festive boards the deeds of the equine champions that were and are, discussing also the possible future of hosts of embryo ones yet to make their fame and fortunes on the racecourse of the land.

George Singerley's tumble on Thursday, following only a few days after his namesake, a gentleman of our neighboring City of Brotherly Love, had been thrown from his buggy and badly shaken, suggests that perhaps when the astute "Daniel came to judgment" with the aforesaid cognomen instead of the old one of Caesar, he was saddling the colt with ill-luck, "though in other respects he was doing quite well." Probably if the true inwardness of the unfortunate collision that resulted so disastrously for Singerley, McLaughlin, and their unfortunate companions in trouble was known, it would be found that Huron, claimed to be the offender causing the damage, was not so much to blame, as a certain rider or riders, who, by crowding and jostling the others, precipitated the fiasco. These accidents, alarmingly frequent this Fall, are denbly annoying, as well from the danger to horses and jockeys as from the unsatisfactory results attained thereby. If many more occur patrol judges around our racecourses will become attendant fixtures of racing, and then woe betides the jockey who rides foul, away over on the far side of a track where he is generally comparatively safe from observation. He will find racing officials and the public less lenient than his brother riders, who are too slow to make complaints against sherp practice of this sort.

McLaughlin's accident however, with Singerley, noted above was fortunately not of such serious moment as at first feared. The favorite jockey had intended to make the race his last one of the season, as the work of reducing flesh constantly is not one of the pleasantest of occupations. How near he came to riding the last race of his life he probably fully realizes, and those who saw him picked up senseless and bleeding, after Singerley, Ecnador, and Girofia were down in a heap, feared for the worst. On Saturday, however, he was out again and at the races for a short time, looking a trifle worn and pale, but not much the worse for wear. Truly, the desperately-ridden races of the present day cause many a jockey to take his life in his hands on more occasions than one, and McLaughlin, to the amazement of his friends, tried it again on Monday with the same horse who nearly gave him his quinquets.

Superstitious bettors have multiplied lately, judged by the many accounts one hears of how A. B. and C. were led to back certain winners. On the occasion of Tilford's second large dividend of late at Brighton, no less than three lucky persons came under the writer's observation, who claimed that their investments were influenced by seeing that day one of the wagons of a well-known metropolitan grocery firm that bears the same name. Another had a dream the night before Unknown won her last race, and that in his vision he saw a race run, but could not for the life of him remember the name of the winner when he awoke. Therefore on scanning the racing lists of the day at the Beach, Unknown at once caught his eye as the unknown racer of the night, and backing the one-eyed gray he benefited accordingly. Still

another dreamer dreamt that he was crossing a field, and the closest resemblance to his dream in the card of the day being Garfield, he plunged and came out ahead. But for every time these dreams and signs come true there is probably scores of disappointments.

The feminine plungers at the Beach are getting more and more reckless each day, now that the beginning of the end of the racing season is at hand. The mid-afternoon trains home from the beach afford almost any close observer full evidence of this fact, for the giddy girls and matrons are so enthused with the excitement of their investments that they give audible utterance to their thoughts. Several of them habitually talk over their heavy investments of amounts, sometimes ranging up into four figures, as coolly as if it was a common occurrence, while scores of them wager their hundreds every day with as much nonchalance as the most nervy speculator. One robust lady remarked the other day that she was saving all her pool tickets, and had enough already to very nearly supply a small pool-room. When asked why she saved these evidences of ill-luck, she gave a woman's answer, "Oh, because." In the same breath almost, she remarked with a sigh of relief, "Oh, I'm so glad we caught this train. I would not have missed it for all the money at the old track. You know it gets me home about fifteen minutes before Mr. —." Just then the speed of the train was such that the car gave a lurch, and the voluble lady's companion caught her arm, nervously saying that the car would upset. "Let it," she said spitefully, "I wouldn't care if it did." But it didn't.

The uncertainty of two-year-old racing was well exemplified in the case of the colt, Miller, who on Thursday, with the crack jockey up, could not run the T. Y. C. in 1:19, yet two days later makes a show of Skookum and others over the same distance, and with the same weight up, in 1:16. This time, however, was generally discredited. Nearly all of the outside timers made it fully a second slower than did the gentlemen in the stand. Miller, however, showed a vastly different animal on Saturday from the one who was beaten on Thursday by Islette and Skookum, but he was meeting the latter colt on 5 lbs. better terms, which may account for the contradictory form. Verily racing of youngsters is very nn. certain.

Choctaw and Comanche are the latest of the Ranocas cast-offs to earn brackets at Brighton, and when one looks back to the sale list of a month ago, the number of bargains secured on that occasion is apparent at a glance. Comanche, while not perhaps so fast a horse as his ex-stable companion Herbert, is certain to be a profitable bread-winner for his present owner, although the two-year-old Alfred gave him a pretty close tussle before he was successful in conceding him the 35 lbs. weight between them.

Royal Arch and Fosteral are at present, however, the most popular horses at the Beach, vice Little Fred, whom both in turn have beaten in sensstional races. The two geldings, about as unlike in appearance and character as it is possible for two horses to be, both ran meritorious races on Saturday, the older horse having the hardest race of the pair. Fosteral, however, won cleverly enough at the end, and by the way he answered the whip in the last quarter, could probably have made the victory a more decisive one if required. Little Fred is a fast horse, but it is natural enough that the incessant racing he has had lately should now begin to tell against him. Centennial's finish was a good one, and he would have beaten Fred home in a few jumps more. But Fosteral was the champion of the party, and a race between him, Royal Arch, and Topsy, at a mile and a half, light weights, would be productive of a fast and hotly contested struggle. Fosteral's clever colored trainer, Albert Thompson, is a very capable, trustworthy man. Unlike many other trainers, he does not disdain to take a hand in himself after a race in personally attending a horse, and the last the writer saw of Fosteral on Saturday was as the elevated cars passed the stable, where Thompson himself was carefully rubbing the gelding down.

The rumor that one of the principal hotels at Coney Island is to have one of its wings refitted and opened in December as a Winter resort, is again revived, and, judging by the parties who are said to have it in charge, there is every probability that the project will be carried out. It is claimed that Coney Island is ten degrees warmer than New York in Winter, and also that it has features and attractions equal to Atlantic City, where so many Philadelphians congregate during cold weather. This experiment will be watched with more than ordinary interest. Possibly the result will solve the problem what to do with Coney Island hotels six months in the year.

Tuesday's weather down by the sea was mor. reasonable, if a decidedly sudden change from the charming temperature of the past ten days. With snow in Maryland the same day, our turn is not far distant, to the sorrow at racegoers, be it said. The attendance, however, held good, and the sport

was highly exciting, though the cold weather undoubtedly influenced some of the races as much as it undoubtedly did the time. The thrilling finish in the selling race was one worth a long journey to see, and as Huron, Sister, Lillie B., Farewell, and Monno rushed past the wire nearly parallel, the excitement was intense, especially as four others were almost head and head, directly behind the leaders. The sport was kept up in the handicap, and Ten Strike's fouling of Centennial caused the race to be taken away from him, and given to old Corsair, who came with a wet sail at the end, under Garrison's vigorous riding. Skookum prevailed over Frank Mullens and Islette in the youngsters' struggle, and Puritan made the outsiders happy by large dividends. The day ended with a suspicion of snow in the air that became a reality in a few hours.

Chicago's Turf Congress last week was commendably unanimous in their efforts to suitably revise existing rules. The one relating to post hookmaking by bookmakers owing horses was eradicated entirely, and the decision of the delegates that no entry emanating from a bookmaker would be accepted, and no horse owned in any such interest be allowed to start in a race, will be approved in all parts of the country. There has been entirely too much scandal the past season resulting from this cause, and whether of just or unjust foundation, it is high time that some action was taken on this question by our Eastern associations also. The racing boom is a great one, and evidently on the increase, but if anything tends to shake public confidence in the integrity of the sport, the obnoxious matters should be investigated, and if found necessary for the well-being of the turf, done away with altogether. Some persons may perhaps be harshly treated, but the interests of the many are paramount over those of the few.

Cable notes from England are to the effect that the jockey, Fred Archer, accompanied by Capt. Bowling, the Newmarket turfman, sailed from Queenstown, for this port, on Sunday last. It will be the famous rider's first visit to America, and he proposes to make a stay of some months—probably until May.

Judge Curtis, formerly General Duke, another of Lexington's sons in the stud, has followed Lever to the happy hunting grounds. Owned at the time of his death by Messrs. Barnum and Robinson of Monmouth, Ill., the stallion ruptured a blood vessel while at play, and the accident proved fatal. Better known in these parts as General Duke, the deceased son of Lexington and Lilla, by imported Yorkshire, etc., foaled in 1865, was one of the best racehorses of his day at intermediate distances. When running at Jerome Park and Saratoga, in 1868, 1869, and in 1870, participating also at Monmouth Park's inauguration meeting in the latter year, he carried in succession the colors of McConnell and Harness, and John O'Donnell. A rare performer at mile-heats, General Duke won the Belmont Stakes at its second renewal in 1868, and defeated some good horses while he was on the turf. Since he has been at the stud he has not had a fair chance to show what he could do, few good mares having found their way to his harem, which was located in Canada until the last few years.

Yesterday we had our first snow of the season, but only a few inches fell and it did not lay long.

NEW YORK, NOVEMBER 20th, 1884.

PACIFIC.

### Bermuda's Fast Mile.

At Lexington, Ky., on Saturday last, Nov. 15th, B. J. Treacy drove his yearling colt Bermuda his first mile, which he made in 2:39. The first quarter was made in 42 seconds and the half in 1:22, so that he trotted the last half in 1:17, a 2:35 gait. On the day of this performance he was just seventeen months old. This is the fastest time ever made by a yearling colt of the Rocky Mountains, and has only been surpassed by one other, the California filly Hinda Rose, who leads the record with a mile in 2:36, made in 1881; but she was twenty-one months old, so that, taking into consideration the difference in age, the feat of the Kentucky youngster may be said to equal, if not surpass, the record of Hinda Rose. Bermuda is by Banker, dam Pattie, by Mambrino Patchen; 2d dam by Stanhops's Blood Chief, Banker is by Rysdyk's Hambletonian, out of Lady Banker, by Roe's Abdallah Chief; 2d dam by Saltram; 3d dam by Campdown. Banker has trotted a trial in 2:25, and made his first season in Kentucky in 1881, so that his oldest get in the Blue Grass region are but two years old. Bermuda is a black colt, with off hind ankle white, possesses high form, with plenty of bone and substance, and will probably develop into a horse of 15½ hands.—Turf, Field and Farm.

The Blood Horse Association—Close of the Fall Meeting.

The "weather clerk," or the good genius who has had charge of that department of the universe, has assuredly smiled upon the Association and granted favors which could not be expected at this season of the year.

The first race on the programme was the Finigan Steke, for two-year-olds, a dash of a mile. This is one of the two fixed events which close on the 1st of August, when the colts rank as yearlings, and there were twenty-four nominations.

Nov. 22d.—First Race, The Finigan Steke; for two-year-olds; dash of a mile; \$50 each; \$25 forfeit; \$250 added; second to save stake. Twenty-four nominations.

The second race was the Fame stake for 3-year-olds, the stake being \$100 each, \$25 forfeit, with \$300 added. There were twenty-four nominations with three starters.

Second Race—The Fame Stake—For three-year-olds; dash of two miles; \$100 each; \$25 forfeit; \$300 added; second to have \$150, third to save stake. 24 nominations.

The great attraction of the afternoon was the Baldwin Stake; a dash of four miles, in which were four subscribers, three starting. The stake was \$250 each, p. p. \$1,000 added, which made the handsome sum of \$2,000, \$500 to second, and third to save stakes.

the course cleared, there was scarcely a sound to be heard, so that the voice of the auctioneer sounded sonorously from his rostrum. The flag fell and the eager speculators turned their attention to the prominent figures in the play.

Third Race—Baldwin Stake; a post stake for all ages; \$250 each, p. p. \$1,000 added; second to receive \$400, third to save stake; dash of four miles. Four subscribers.

The next race was a handicap of one and a quarter miles, the starters being Nellie Peyton, 110 lbs., Forest King, 107 lbs., Beaconsfield, 105 lbs., Philip S., 105 lbs., and Birdcatcher, 100 lbs.

Fourth Race—Handicap; one and a quarter miles; stake \$50 each; \$25 forfeit; \$10 declaration. Weights announced second day of meeting at 1 p. m. from judges' stand.

\*Left at the post. The consolation purse, a dash of one mile, was won by Sweetthair, beating Billy Johnson, Lizzie Duubar, Quebec and Nick of the Woods in the order named in 1:44.

Fifth Race—Consolation Purse; \$200; \$50 to second; one mile; for non-winners at this meeting. Horse beaten once allowed 5 lbs., twice, 10 lbs., three times, 20 lbs.

Mr. Cohnfeld's Team.

The following in the World's report of the second trial of Maxy Cobb and Neta Medium on the 13th, when they scored 2:15 1/2.

Of the many gentlemen who drove home through Central Park last night none of them did go with a greater degree of pleasure than Mr. Isadore Cohnfeld with Maxy Cobb and Neta Medium.

The performance by Mr. Cohnfeld's team took place at the New York Driving Park between 1 and 2 p. m. yesterday in the presence of a large delegation of the members of the club and with Messrs. Nathan Strauss, Morgan L. Mott and L. W. Parker, in the judges' stand.

hitched on the inside and the stallion on the outside. Murphy, without the loss of time, gave them two miles, at the end of which he announced his intention of coming for the word, which he got with both horses well up in the collar and trotting as steadily as well-put-together machinery.

Naturally with so many admirers of fast trotting present, who had driven up either with teams or single, there was considerable speed shown during the afternoon.

Wild Horses on the Plains.

Mr. Livingston, of Sydney, Nebraska, gave the representative of one of the local newspapers some interesting facts relating to the wild horses of the plains.

The range of the wild horse at present extends from Texas to about the Dakota line. Probably he is more numerous in Northern Colorado and South-Western Nebraska than anywhere else on the plains.

The wild horse of the present day is a compact little animal, weighing sometimes as low as 500 pounds, and in other cases as high as 1,100, but probably the majority will run between 700 and 800 pounds and standing about fourteen hands high.

Six or seven years ago no one, in this part of the country at least, seemed to understand the method of catching these animals, but the business was profitable, and several men have followed it for years past as a means of livelihood.

will be tried to the utmost; the hunch must be kept moving, and there is no chance to change saddle horses until they turn of their own accord and pass near the camp. Day and night, on they go; if the weather be clear and the night not stormy the rider will continue close after the animals, sometimes within a hundred yards, it makes no difference whether it be dark or light, the horse that is ridden, trained to the business, follows after the herd. When the first rider succeeds in turning the hunch and bringing them back to the camp, he is relieved by the second, who with a fresh horse starts after them, while his companion turns in and takes a much needed rest. This time they will probably not go so far, after awhile they become tamer, and the hunter can tame them at pleasure. This may require a week or it may be done in a couple of days. If the horses do not become scared they will not run so far and are more easily managed. When the hunch becomes worried and started out it is driven toward the nearest corral. Formerly corrals were erected especially for the purpose, but now ranches are so numerous they are not needed any more. Once inside the wildest of the gang are caught and chains fastened to their legs so they cannot run. Men walk among them and they soon learn that there is nothing to be feared. They are turned loose in an ordinary pasture, and when any of them are wanted they are driven to the corral and "roped."

If two men can gather a bunch of ten or a dozen horses in a week, they of course make a nice sum of money out of the transaction, as the ponies will sell at from \$30 to \$40 each. But misfortune sometimes overtakes them when in pursuit. A bunch may run away from their pursuer entirely and not be found for several days, or a storm coming up in the night may prevent his following them and compel him to give up the chase, or possibly he will overestimate the strength and endurance of his horse and ride the faithful animal until he drops. Then he can only pack his saddle on his back and seek the camp.

**The Turf and Its Consequences.**

[San Francisco Alta, Nov. 24.]

The turf will always be a pastime for gentlemen, a source of delight and excitement to all. It has its exhilarating accessories, its advantageous concomitants, its highly beneficial results. Next to the development of the human species by ascertaining whether the commingling or crossing of races does not improve more than the preservation of a single race in unbroken line, the experiment applied to the domestic animals most profitable to the uses of mankind, comes first in order. And the turf, more than any other agency, gives cause and effect to this. Our own progressive country has furnished to the world the best and most convincing exemplification of the beneficial results which flow from the intermarriage of different nationalities—all descended from the original Caucasian stock, it is true, but moulded into different races nevertheless by the operation of those natural laws which have their proofs in the Latins and the Anglo-Saxons, in the Teutons and the Gallic peoples. It is no longer a boast to say that the American people are the most active and the ablest in enterprise and invention, in energy and accomplishment, for the Old World peoples admit it, and this is unquestionably the consequence of the intermarriage of the better races of the Old World's various nationalities, for we all descended from these.

Similarly with the better and higher development of the domestic animals—horses, cattle, sheep, etc. And as horses are most valuable they come first in consideration. The native Arabian horse was for centuries believed to be the fleetest and most capable of endurance of any in the world. Breeding racers for the turf long ago exploded that fallacy. The thoroughbreds of England, France and our own country have developed these qualities to an extent so much beyond even the fabled performances of the Arabian that there is no longer any question of their superiority. And in cattle and sheep the breeders of the United States have in late years so far surpassed England that, at the great sales of noted breeders, the purchasers of the best and most costly are the agents of English stock breeders, who have learned that so great has been the improvements upon the identical choice breeds years ago imported here, that the choicest of their own suffer in the comparison. And so it is generally with other species of domestic animals. In horses the triumph of American breeders was most signally evidenced in the victory of the Derby and its grandly prized blue ribbon by American Iroquois, and the other great victory of Foxhall, upon the English turf. The results which are thus most conspicuously shown in racers are none the less developed in giving to the farmer the best horse for his uses, and so on through the category down to the dray horse and the horse of all work.

Were it not that the pleasures of the turf have been the means of developing the superior qualities of the racers and trotters, these other substantial and universally useful improvements in stock of different species would not, it is probable, receive the attention which is now paid to it more and more every year. It requires wealth to make the experiments which lead to these gratifying and beneficial results; and the tendency is, therefore, so long as the wealthy shall feel encouraged in this development, not only to the perfection of the horse in blood and speed and endurance, but also to the elevation of the sports of the turf. It is like every other matter that men engage in, it can be elevated to a noble purpose, or it can be debased to the condition of an evil. And to encourage our men of wealth in it is, consequently, to do good. California is singularly adapted to the breeding of the horse to perfection, by reason of our soil as well as our climate. This has been manifested in convincing manner by the exploits of California-bred horses in rivalry with the best bred and fleetest of the famous racers and trotters of the East within the past two years, and especially during the present year, in the victories gained by the racers of Leland Stanford, bred at Palo Alto, and those of E. J. Baldwin, bred at his noted farm in Los Angeles.

There is in California a Blood Horse Association. Among its members are some of the wealthiest and most distinguished citizens. During the week just closed this Association has held a Fall meeting at Bay District grounds. Saturday was the finishing day, and while through the week the sport was excellent, that of Saturday was superior to any that had gone before. In some of the races—and only California-bred horses run—the time was the fastest ever made in the State, and very near to the fastest time ever made in the East. The scene at the grounds was in itself inspiring. When one recalls the attendance that was ordinarily witnessed at races years ago, such as used to gather, for instance, at the Old Union Course on Long Island, or the Beacon Hill Course, at Hoboken, the consequence of elevating the turf can be better estimated. It would be difficult in any American city to bring together for such an occasion so fine a body of men, so handsome an assemblage of ladies. There was a great throng of thousands, but they were respectable; many of them are first and distinguished

citizens, the ladies first in the rank of society. There were splendid equipages on the field—the imposing four-in-hand, with harness gold and silver mounted, and superb trappings; elegant carriages and costly turnouts of every description, and handsome vehicles without number. The array of loveliness which filled the broad balcony of the Club-house and occupied the front seats of the upper piazza of the hotel was enchanting. There was scarcely an ill-dressed person upon the grounds. It seemed a dress parade of gentlemen; a gathering of feminine beauty and grace, of fashion and display. Not an accident occurred to mar all this. Perfect order reigned. There was no occasion to command it. The sport was exciting; the spectacle was a demonstration of the elevation of the turf in San Francisco to such degree of pleasure and propriety combined that none can make reasonable objection to it. To the Blood Horse Association is due the credit of this great improvement.

**The Westbrook Stable.**

Mr. Crickmore, in the New York World, in reviewing the operations of the principal racing stables during 1884, says of the Westbrook stable:

Without assuming that Mr. George L. Lorillard is second in rank of winning owners, but to oblige several correspondents, the gross earnings of the old Westbrook stable are given herewith.

Horse.	Times started.	Times first.	Times second.	Times third.	Gross amount won.

Totals.....	166	31	27	24	\$47,135

The entrance money for all of which amounted to \$8,445.

Although the total amount won as above is a fairly creditable sum, the followers of the stable experienced a harder time than ever before. Few stables have so many loyal followers as that of Mr. George L. Lorillard, and the stable's continued defeats during the first half of the season were so serious that backers were unable to regain their losses by subsequent successes. That such is the case will be seen by the fact that the stable only had 31 wins out of 166 starts, while of the 31 races won, only 16 fell to the stable's share up to the end of the Monmouth Park meeting, Aug. 23d, out of 112 starters that it had sent to the post between that date and the beginning of the season at Jerome Park on Decoration Day.

It is unnecessary to recall the repeated failures of Glideaway, Economy, St. Augustine, Trafalgar and Thackeray. Ill-luck seemed to be their fate all through the Summer. Thackeray was badly hurt on the last day of the meeting at Monmouth, and has not run since. Economy was killed on the last day of the October meeting at Jerome Park, while Glideaway proved so thoroughly bad that she was sold before the end of Monmouth. Of the others all more or less had their share of ill-luck during the season, which seems to have begun with Louissette going to pieces at Jerome Park in May, after showing in most promising form. She in turn was beaten for the Mermaid Stakes, Ocean Stakes, Monmouth Oaks, West End Hotel Stakes, Monmouth Handicap and other races, her first win being a handicap sweepstakes on Aug. 14th after which she slowly improved, and on the last two days of the Monmouth meeting won two creditable races. She was also fairly successful during the Autumn meetings, winning twice at Sheepshead Bay, including the September Stakes. At Jerome Park she landed the Hunter Stakes and one other race. At Baltimore she in turn took the Vestal and Breckinridge Stakes, while at Washington the Anacostia and Potomac Stakes fell to her share. She was beaten several times during the same period, the special disappointments being for the Consolation Twin City and Bridge handicaps.

Much disappointment was also experienced over Monitor's running during the year, he only winning four out of nineteen races, all of which were over-night affairs, while to add to his general ill-luck he pulled up so lame after his last race at Baltimore that it is very doubtful if he can be trained again. As to Thackeray, he was an immense disappointment, his only important win being the Stevens Stakes at Monmouth, worth \$3,220, which he won by reason of Bob Miles, who finished first, being disqualified for a foul. The other races won were mostly purses, with the exception of Triton's Juvenile Stakes at Jerome Park in June, which began and ended his career for the year, and the Nursery Stakes, won also at Jerome Park by Hopeful in October. The stable was also very uncertain in the matter of riders, no less than seventeen different jockeys wearing its colors during the season. Of the 166 starters J. Donohue rode sixty-seven and won twelve races, worth \$19,280; Blaylock won even out of fifteen mounts, worth \$10,870. The next in money value was Billy Hayward, with four wins out of ten mounts, which added \$5,970 to the total. Brennan had thirty-two mounts, of which he won four, worth \$4,725. J. McLaughlin had two mounts, winning one worth \$3,090. Isaac Murphy had two mounts, of which he won one, the race being worth \$1,100. Gerbardy and Purcell each won once, while of the others Fitzpatrick, Church, Meaton, Hughes, Fisher, Feakes, Spellman and J. Hyslop all failed.

What the stable will do in 1885 is comparatively unknown. Mr. George L. Lorillard has recently purchased the property known as "The Locusts," near Monmouth Park, and where his stallions, Tom Ochiltree and Sensation, with some eight or ten broodmares, are now located. The racing stable has gone into Winter quarters at Monmouth Park, in charge of Mr. K. K. Alcock, who has been Mr. Lorillard's trainer since the resignation of Wyndham Walden in 1882.

James McLaughlin, the Dwyer Bros.' jockey, on Nov. 7th, scored his hundredth win and two over for the season of 1884, he on that day winning three races at Brighton Beach.

Bartley Campbell, the playwright, is going in for racing. A week or two ago he laid out \$20,000 on some thoroughbreds.

**French Sporting Notes.**

[New York Spirit.]

Paris, enjoying, as it does, the happy privileges of being quite self-sufficing in the matter of sensations and scandals, which, unlike wheat and wool, it never needs to import, but produces on the spot, has of late been hugely exercised over, and entertained by, the disclosures forthcoming as to the manner in which many of the principal Paris clubs are managed, and the doings of some of the most notable devotees to the blind goddess. Respecting the lower order of gambling-saloons—for clubs, in the accepted and social sense of the word, such haunts of hazard cannot be called—it has, of course, surprised no initiated individual to be informed of their unlawful and reprehensible character. For years past it had been an open secret that the thousand and one clubs established in Paris under such high-sounding and seductive titles as "Cercle des Arts Liberaux," "Cercle des amis des Arts," were nothing but clandestine clubs for gambling, and what is worse, gambling of the most unsavory sort, largely partaking of the original sin of all gaming, that is "rooking." For, in the matter of light-fingered gamblers, who, as a French writer has delicately put it, "correct chance," Paris is most liberally endowed. No Chinese cheats need apply. Ah Sin is most unworthy of having been immortalized by Bret Harte as the bean-ideal of the skillful card-sharper. With all his Celestial serenity and inimitable sleight-of-hand, he would find himself put to the blush and bereft of all his earthly possessions if he pitted himself against some of our well-known Grees, as the gentry are denominated in French. It would take columns to expose even a portion of the swindling and trickery daily and nightly indulged in with impunity at some of the most prominent Paris clubs. And here, indeed is the rub—that such nefarious practices, far from being confined to the lowest class of clubs, should, on the contrary, flourish like a weed in its chosen soil in the very highest and most select places. The scandal at the Cercle de la rue Royale, or les Moutards, as it was familiarly but somewhat flippantly called, is of too recent occurrence to need more than passing reference as a case in point. Similar scandals of a no less spicy sort have, as mentioned in the first few lines, since filled the public mind for the nonce, and gratified the Parisian craving for scandal, which craving by the way, is quite a national characteristic, and alone explains the success of such sheets as the *Gil Blas* and the *Figaro*. The matter had indeed assumed such proportions that really the Government could not do otherwise than they have—that is, step in and check the evil ere it went beyond control. This course was imperiously indicated, and should have been adopted, long ago. But the plain truth of the matter was that the authorities were loth to do away with such a fruitful source of revenue as the gaming clubs, paying heavy licenses, have proved for many years past. At the eleventh hour, however, though not until the passion of play has more or less permeated and tainted all classes of French society, the governing powers have decided to do their duty, and lay down this fast-growing ill-weed, which, unlike Jack's beanstalk, was not only shooting upwards and entwining itself around the higher branches of the social tree, but also spreading and encircling the very trunk and roots. Several noted clubs have already been closed by the action of the police, and among the number are one or two that have always been considered—especially by provincial visitors, who, as a rule, have paid dearly for a personal inspection of them—very *chic* indeed. The good work has thus been begun, and everyone acquainted with the extent of the evil and the urgency of reform, will hope to see it continued with vigor, and concluded with complete success.

Perhaps as a consequence of the suppression of the gambling clubs we had a report dinned into our ears that the French Jockey Club intended to put down betting outside the enclosure at Longchamps and Chantilly. It is true that there was a rider to this report, explanatory of the reform said to be contemplated, on the score of its being a measure of retribution on the Longchamps crowd for their riotous behaviour at a previous meeting, of which more anon. There was, of course, not the slightest foundation for such a report, and indeed, had such a step been contemplated by the Societe'. Encouragement there would have been no little difficulty experienced in uprooting betting on the course. Similar attempts have been made previously both in England and France, and always resulted abortively. However, the rumor has brought the subject of speculation upon the turf once more prominently before the public, and thus directed considerable attention to a pamphlet on racing recently published by M. Edmund Henry, the deputy in the French Chamber for the Department of Calvados, that great horse breeding center. In this smartly written review of sporting matters the author treats at some length of betting on the turf as compared with betting at the clubs, and inclines the scale very much in favor of the former, which he considers much less dangerous and destructive to society than gambling in the resorts of rooking. M. Henry, indeed, is severe upon the government for having so long tolerated gaming clubs as an unfailling source of revenue. They could long ago have been suppressed without difficulty, for here the authorities are acquainted with every card saloon in the town, unlike the New York police, of whom it may be relevantly remarked that whereas they will sometimes pass several years before stumbling on an illicit gambling den, a stranger to the town, if he wishes, can generally manage to find it in a single night.

The racing during the month has been of the accustomed sort, with no very salient features calling for extended remark. Indeed the only out of the way occurrence on the race-course has been supplied, not by the performers, but by the public. I refer to the shocking scandal to which brief allusion was made above. At one of the Longchamps hack-end meetings of the beginning of this month, a race took place in which a mare called Blonde II. started favorite. She ran well and strong all through the earlier part of the race, and at the corner held foremost position, appearances certainly pointing to her as an easy winner. Just opposite the stands, however, the mare escaped from the control of her rider, Sharpe, a mere lad, and tried to jump the rails, whereupon he was, of course, obliged to pull her up, the race thus escaping him. To all initiated sportsmen, placed anywhere near the winning post, the cause of the occurrence was perfectly clear, and such among them as had backed the mare, however much annoyed at the untoward accident which alone had upset their bets, certainly never for a moment thought of visiting their disappointment upon the lad. Not so the ignorant public, the aggressive *oi polloi*. The mare having started, as mentioned above, in considerable demand, there was, of course, a large portion of the public pecuniarily interested in her winning, and these unsportsmanlike and prejudiced spectators at once invaded the course, intercepted Sharpe on his return to the paddock, and assaulted him in a dastardly and brutal fashion, pulling him from his horse and beating him mercilessly. This row of ruffians even carried their ferocity to the pitch

## Famous American Trotters—Dutchman.

A famous trotter of the olden time, especially when there was a race to be decided at two and three-mile heats between the best horses of his day, was Dutchman, and of the many notable animals which Hiram Woodruff had in his charge he and Dexter were the ones he liked the best.

Concerning the blood lines of Dutchman there is nothing known to a certainty, although after he had made a name for himself on the track there was no lack in the way of evidence, such as it was, as to his breeding, but none of the stories put forward were known to be absolutely true, and they were so contradictory at all points that to one who has examined them it seems that the pedigree of one of our earliest and best long distance trotters is hopelessly involved in doubt. Be this as it may, it is certain that the first notice taken of Dutchman was when he was five years of age, and at that time he was one of a team which hauled a brick cart near Philadelphia, so it is not likely that even then, when the opportunities for such knowledge were best, there was any reliable information as to his sire. The man who drove the brick wagon discovered that the bay colt was a much faster horse at the trot than the average roadsters, and it was not long before it became apparent that he was capable of doing a mile in three minutes or thereabouts, which at that time was a rate of speed as creditable as 2:30 would be at the present day. It was by reason of his having shown this natural and early speed at the trotting gait that the bay colt was purchased by Mr. Jeffers, of Philadelphia, and by him he was named Dutchman. He was owned however, by that gentleman only a short time, being sold to Mr. Peter Barker, of New York, who immediately proceeded to have him pricked and doctored, as was the universal custom with road end trotting horses at that time. Before Dutchman had entirely recovered from the effects of this operation he was matched to trot mile heats on the Harlem track against a horse called Locomotive, and he won this, his maiden race, so easily that general attention was drawn to him, although the time of the heats was not recorded. This was in 1835, and later in the Fall he was trotted a four-mile race to road wagon against a horse called Yankee Doodle, the race taking place along what is now known as Third avenue in New York city. This was also easily won by Dutchman, and the following Spring he was entered in a sweepstakes of \$1,000 each, two-mile heats, against Fanny Pullen and Confidence, both these horses having made reputations as trotters, and the contest between the three was marked by heavy betting, the Philadelphia men backing Confidence, while the New Yorkers stuck to Dutchman, and he won it for them in two heats, the time being 5:17, 5:18. The first heat was the fastest two miles that had ever been trotted in harness up to that time, and stamped Dutchman as a horse of uncommon speed as well as gameness. So well was he thought of by this time that a match against a mare called Lady Slipper, four-mile heats, was at once made, to be trotted over the Centreville course. Dutchman, who was ridden by Wm. Whelan, won it handsily enough, and later on in the season he went a match under saddle, three-mile heats, against Lady Warren, Teambat and Norman Leslie. This race came off at Trenton, N. J., and was won by Lady Warren, but on the following week Dutchman had his revenge, as in a three-mile-heat race with Lady Warren, trotted at Philadelphia, he won easily, the track being heavy from recent rains, and Dutchman liking that condition of affairs as well as any horse in the world. Not long after this race he went lame, and ran out for a year and a half, being sent to Hiram Woodruff, when he recovered from his trouble.

Perhaps the best race of Dutchman's life was one that he trotted soon after Woodruff took him in charge, it being one of three-mile heats under saddle against Rattler, a celebrated long-distance horse of that day, and that afterwards went to England, where he performed successfully. The first heat in the race was won by Rattler in 7:25, Dutchman making a break when the distance was nearly completed, but in the second heat Dutchman managed to get home first in 7:50, although during the entire three miles the horses were never separated from each other. The third heat was a notable one, and of it Hiram Woodruff has written: "Over the whole distance of ground, three miles, it was literally a neck-and-neck struggle. Nothing could have been finer to the spectators than the desperate and long-sustained efforts of these capital horses, aided by the exertions and judgment of the riders. Neither horse was clear of the other at any time; and, when we had both used our utmost endeavors to land a winner, if only by a half head, the judges declared that it was a dead heat in 8:02. In the fourth heat the struggle was again as close as could be for upwards of two miles; but then the unrivaled bottom of Dutchman obtained the superiority. At the end of the eleventh mile the pace and distance began to tell on Rattler, and Dutchman won it handsily in 8:24.

"Just such a race as this it has never been my fortune to see since, and nobody had seen such a one before. For eleven miles the horses were never clear of each other; and when Dutchman left Rattler in the twelfth, it was by inches only. Moreover, there were but two breaks in this race, and each horse made but one in his twelve miles."

After this race the fame of Dutchman began to reach its height, and in the Spring of 1839 he began work by trotting against Lady Suffolk over the Beacon Course, New York, two-mile heats under saddle, and won it in 5:09, 5:11. This race was trotted in April, and the following month Dutchman won a three-mile heat race at Baltimore over Lady Suffolk and two others in 7:56, 7:53. A short time afterwards he distanced Awful, having been matched to go three-mile heats against him in harness, in 7:41. This was the fastest three miles in harness that had ever been trotted up to that time, and when it is considered that the sulky which he drew weighed eighty-two pounds the race would not be at all creditable to many of our present trotters, although, of course, a really first-class one that was not a confirmed quitter could hardly fail of beating it. The present record for that distance, as everybody who is posted in such matters knows, is the 7:21 of Hnntress, and in considering this subject the fact should be taken into account that for years no trials against the long-distance records have been made, and it is a moral certainty that if some such really first-class horse as Mand S. or Jay-Eye-See started to go three miles they would have no difficulty at all in cutting down the present figures a great deal. But for all that Dutchman was unquestionably a great long-distance horse. He was a thoroughly honest and game trotter, and was kept going at pretty near his best rate of speed all the way.

This three miles in 7:41 at once raised the question of how fast Dutchman could go that distance, and the result of all the talk was that he was matched to go under saddle against 7:39. Hiram Woodruff, who still had him in charge, and who rode him in the race, considered the match as good as won unless some accident happened to the horse, and the result proved the correctness of his views. The race occurred on the 1st of August, a running horse being sent along to keep Dutchman company. He trotted the first mile in 2:34,

the mere, which they poked in the ribs with umbrellas and thrashed with canes. It was with no little difficulty that the rider and his mount were rescued from the hands of these infuriated fools, one of whom, on their invading the paddock and attempting to force the entrance to the weighing-room, was promptly seized upon by Sharpe's comrades, who, justly incensed by the disgusting cowardice and brutal barbarity of his assailants, at once stripped their captive and were for hanging him high and dry from the ceiling of the dressing-room. He was fortunately rescued by the police, who, by the way, found no little difficulty in repelling the onslaughts of the crowd outside. Sharpe was found to be so grievously injured that his immediate removal to the hospital was not feasible, and he had to receive medical succor on the spot. The incident is not pleasant to dwell on, indicating, as it undeniably does, the greatest decadence on the part of the French racing public. Only a measurable span of years ago one would have been about as likely to witness such a degrading scene at Longchamps, as a bull-fight in Central Park. But of late years there has been a steady and unceasing infusion of rowdiness and riot in the attendances even at the headquarters of flat-racing; and, unhappily, the day does not seem distant when Longchamps and Chantilly will witness as rough scenes as any Epsom can boast.

Apart from this interesting little *hors d'œuvre*, the racing at headquarters has progressed through its Autumn stages somewhat uneventfully. The season at Longchamps has been wound up, and the rendezvous changed to Chantilly, where the presence of so many large training establishments always ensures good fields. One of the last events at Longchamps of distinguishing importance, the Prix Gladiateur, was secured by Satory, M. Bumonte's somewhat uncertain four-year-old, who only had two opponents to overcome, and both of them were very moderate class. Satory, on whom as much as 2 to 1 was betted, won very easily. At Chantilly so far nothing of note has occurred, and the running of the two-year-olds has been so very in-and-out as to make the two-year-old form, in the eyes of the perplexed turfite, more than ever assume the similitude of a tangled skein. From the very debut of the coming generation, during the Summer at Deauville, to the present advanced period, the youngsters have shown erratic performances. Roughly speaking, they have, indeed, evinced regularity and consistency only in one point, and that is in succumbing to their seniors in the few classic events in which the two have met. This record is not, of course, very greatly to the honor of the production of 1882, but it is a fact which must be faced. Their mediocrity is, however, all the more disappointing from the fact of their being so many good names on the list of stallions responsible for this season's two-year-olds. At the conclusion of this month flat racing will be virtually ended for the year, and will remain in abeyance till the commencement of March, when the resumption of the legitimate expression of the sport, however numerous the intermediary meetings of the suburban tracks, will doubtless be as welcome to sportsmen as usual.

The news of the hour is the ultimate overpowering of the league of suburban racing societies known under the head of Societe des Champs de Course Reunis, by the omnipotent Societe d'Encouragement, whose cause, as representing disinterestedness and the established order of things, I have always, when the occasion offered, espoused against that of their recent and pigmy rivals, which meant catch-penny speculation and subversive policy. The conversion of the latter to the tenets of the former, as all along foreseen, has now come. Hereafter the racing code elaborated by the departed Adolphe Denettier will no longer be in force at the suburban resorts, where all idea of seeing the establishment of two-year-old races before the recognized date of Ang. 1st, must now be relinquished by such among horse owners as desired an early outlet for inferior youngsters.

As a somewhat sad proof that fatal accidents in riding are not confined to racing, there has occurred recently the death of an estimable lad, James Horan, employed in one of the training stables at Maisons-Laffite. The poor boy was exercising over sticks a mare named Corona, when a movable hurdle, knocked flying by one of the leaders, struck his mount on the chest and she instantly turned over, falling heavily on her unfortunate rider, who was rendered unconscious by the concussion. He died on the following Friday at Sir Richard Wallace's Hospital, without recovering his senses.

That eccentric personage, Henri Rochefort, so widely known for his pamphlet warfare against the Third Empire, has, since his return from his enforced trip to New Caledonia, blossomed forth in the autumn of his life with the verdant tints of a youthfully enthusiastic turfite. Only a short while back, he was to be seen every afternoon at some meeting or other, patronizing the hole-and-corner gatherings at Saint Germain, Maisons-Laffite, and elsewhere, just as eagerly as the important meetings at headquarters. Latterly, however, like rollicking Rip Van Winkle, he "swore off" to the extent of not including the suburban reunions in his diary. He is quite a celebrity of the race course, being known for the chagrin he experienced at a run of bad luck, his readiness to lend an ear to all tips, from whatever source emanating, and, lastly, he it said to his credit, for his good nature and total freedom in speech from that scathing sarcasm which forms the staple of his style. Thne he is a general favorite, and lately, when it became known in sporting circles that he had a duel "on" with Commandant Fournier, of China treatise fame, everyone expressed a hope Rochefort would come out of the encounter cheaper than his indifferent fencing, as compared with his antagonist's reputed swordmanship, seemed to foreshadow. In the result the pamphleteer proved quite a match for his opponent, whom he pinked in the side somewhat severely, inflicting a much greater loss of blood than he himself suffered from a slight neck wound. In fact, so insignificant was this injury, that the following Longchamps meeting was Rochefort once more at his post in the paddock, punting as hopefully as ever, and collecting tips with the same belief in their genuineness.

Charlie Shauer, the jockey, has severed his connection with Mr. P. Lorillard's stable, and will next season don the black jacket of Mr. D. D. Withers. Shauer's connection with the cherry jacket of Rancocas may be said to have had its origin through his really magnificent finish on Uncas for the Grand National Handicap of 1880, for which he beat Hughes and Monitor by a head, after a finish of unexampled severity. It determined Mr. Lorillard, who offered Charlie an engagement on the spot, and he began 1881 in the cherry jacket, which he has continued to wear ever since. During the past season Shauer did not ride up to his old form, in which for cool courage and dogged determination he had no superior. His donning the black jacket of the Brookdale stable may, however, prove the opening of a new era in his career, and it is possible that he will recover the prominence he possessed three years ago, when he stood quite at the top of the tree.—*Vigilant*.

and when entering upon the second mile a by-stander shouted to Woodruff that he was going too slow, whereupon he let go of the old horse's head and he trotted the second mile in 2:28 very easily indeed. He went on strongly for the third mile, doing it in 2:30 and finishing at a walk, the time for the three miles being 7:32. Hiram Woodruff never thought that this was the full measure of Dutchman's speed for the distance, and he has not it on record in his book that he believes the horse to have been capable that day of going the three miles in 7:27.

Soon after this Dutchman was purchased by some Philadelphia gentleman and went on trotting races until 1847, when he died from an injury caused to his spine by being cast in the stall, and in commenting upon his death Hiram Woodruff says, "Then departed one of the best trotters, take him for all in all, that I have known."—*Breeders' Gazette*.

## Mr. Judson's Sale.

There was a fair attendance of hiders at the Antioch ranch last Tuesday, but on account of the depression in business and the scarcity of the circulating medium, prices realized were not encouraging to breeders. The following is the report:

Lottie L., bay mare, 7 yrs., by Wildidle, dam Vixen, by Belmont. Dan McCarthy, \$197.50  
Lizzie K., bay mare, 4 yrs., by Wildidle, dam Vixen, by Belmont. Dan McCarthy, \$102.50.  
Black Colt, yearling, by Wildidle, dam Vixen, by Belmont. Mr. Brooks, \$50  
Bay Filly, 2 yrs., by Wildidle, dam Vixen, by Belmont. Dan McCarthy, \$175.00.  
Susie Williamson, bay mare, 12 yrs., by imp. Hercules, dam Vixen, by Belmont. Dan McCarthy, \$97.50.  
Princess, bay mare, 2 yrs., by Wildidle, dam Susie Williamson, by imp. Hercules. Dan McCarthy, \$105.00.  
Bay filly, weanling, by Wildidle, dam Sniee Williamson, by imp. Hercules. Dan McCarthy, \$112.50.  
Sierra, chestnut mare, 2 yrs., by Wildidle; 1st dam Duchess, by Antelope; 2d dam, imp. Lady Edgertou. Jno. McQuade, \$127.50.  
Bay filly, yearling, by Wildidle; 1st dam, Dnchee, by Antelope; 2d dam imp. Lady Edgerton. M. F. Tarcy \$57.50.  
Bonanza, bay mare, 11 yrs., by Lodi; 1st dam Brigantine, by Billy Cheatham; 2d dam Eva Ashton, (dam of Trade Dollar), by Ashland. M. F. Tarcy, \$65.  
Hillen, brown mare, 4 yrs., by Wildidle, dam Bonanza, by Lodi. M. F. Tarcy, \$120.  
Chestnut filly, weanling, by Wildidle, dam Bonanza, by Lodi. M. F. Tarcy, \$117.50.  
Sour Grapes, bay mare, 11 yrs., by Norfolk, dam Shingo Rector, by Lodi. M. F. Tarcy, \$87.50.  
Bay colt, weanling, by Wildidle, dam sour grapes, by Norfolk. M. F. Tarcy, \$62.50.  
Neilson, bay filly, 3 yrs., by Wildidle, dam Susie Williamson, by imp. Hercules. W. L. Appleby, \$210.  
Jennie Belshaw, bay mare, 5 yrs., by Wildidle, dam Susie Williamson, by imp. Hercules. M. F. Tarcy, \$205.

## ATHLETICS.

## The Olympic Club Games.

REFEREE—Louis McLane, Jr.  
STARTER—W. C. Brown.  
JUDGES—W. Greer Harrison, Col. G. C. Edwards, E. S. Emmons.  
TIMERS—M. H. Weed, P. McIntyre, A. Harris.  
JUDGE OF WALKING—Isaac G. Burnett.  
CLERK OF THE COURSE—R. T. Stomps.

The Fall meeting of the Olympic Club took place on Thursday afternoon (Thanksgiving Day) at their grounds, Oakland. The weather was simply magnificent. The attendance was very fair, but suffered considerably for the want of a little judicious advertising a few days prior to the meeting. A great many people visited the Central Park, thinking that the games were to be held on those grounds. The officers of the day discharged their onerous duties satisfactorily. Of the vile handicaps arranged by the handicapping committee we shall refer to hereafter. The track was not in the best condition, being rather damp, particularly so near the fence. In the sprint races all the competitors made for the inside running. This, of course, resulted in great many of the contestants being hooked. Jones, who won the maiden race, proved himself to be a runner of more than ordinary ability. The match race resulted in a victory for the muscular representative from San Rafael. We think that Lucas can make it very warm for any amateur runner in America for 100 yards. Cook, who lowered the record in the mile bicycle race, is deserving of every praise for his splendid performance. Briery was in splendid form, but was shnt out from everything through spraining his ankle in the first heat of the 100 yards. Hupers, Gibson and Martin proved themselves good men by their fine running in the half-mile race. The walking of Benjamin and Hill was the best that has ever taken place at any amateur games held in this city. Germain appreciated the knowing one by his splendid pole vaulting. Hartman, Humbert, Giersch and Schuster also jumped well. Stewart signaled his last appearance in California games by winning the 220 yards. Stewart, who has been sojourning upon this Coast for a few years for the benefit of his health, is shortly to return to his home in New York. Scott won the two mile race in 9m. 56<sup>3</sup>/<sub>4</sub>s., which is a rattling good performance. Scott is the coming man. Martin showed a great improvement over previous efforts. The officers' race did not take place. The result follows:

100 Yards Maiden Race—George Jones (O. A. C.), 1st; W. McConuell (M. C. C.), 2d; J. Clark, 3d; C. J. Schuster (O. A. C.), 4. All wore penalized one yard but Clark. Jones assumed the lead at the start, and won handsily, with McConuell a good second. Time, 11s.

100 Yards Scratch Race (special)—H. J. Lucas (Carlton A. C.), 1st; J. W. Flynn, 2d. After half a dozen laps starts the men were dispatched, with Flynn slightly in the lead, which lead he had increased to about 4 or 5 feet at the 10-yard mark. From this on Lucas gradually overhauled his man, and finishing with a splendid burst of speed, breasted the tape a few feet ahead of Flynn. Lucas was in splendid condition, while Flynn, as is usually the case, appeared to be over-trained. Time, 10 2-5a.

One Mile Scratch Bicycle Race—F. R. Cook (B. C. W.), 1st; Ed Mohrig (B. C. W.), 2d; H. Tenney (B. C. W.), 3. At the crack of the pistol, Cook pedaled furiously to the front, and leaning well over his machine, made the fastest riding ever seen on a track in California. The first lap was made in 35s., the second in 34s., the third in 33s., the fourth in 37s., and the last lap in 40 4-5s.; this makes 4m. 4 4-5s. for the complete mile. This time is over ten seconds better than any mile ever made by any amateur rider on the Pacific Coast. Mohrig finished second and must certainly have lowered the old record, but unfortunately his time was not caught. Time 4m. 4 4-5s.

100-Yards Handicap Run.—First heat—A. B. Tennent, (M. C. C.), 4 yds., 1st; B. A. Benjamin, (M. C. C.), 6½ yds., 2d; E. B. Freese, 6½ yds., 0; T. H. Palache, (M. C. C.), 8 yds., 0. Time, :10 1-5. Second heat: M. M. Martin, (O. A. C.), 10 yds., 1st; B. K. Briarly, 6½ yds., 2d; J. W. Flynn, scratch, 0; H. W. Thompson, 8 yds., 0. Time, :10 1-5. Third heat: Geo. Jones, (O. A. C.), 8 yds., 1st.; W. R. Stewart, (O. A. C.), 4 yds., 2d; H. R. Hertel, (O. A. C.), 7 yds., 0; G. W. Jordan, (M. C. C.), 9 yds., 0. Time, 10 s. Final heat: Geo. Jones, 1st; B. A. Benjamin, 2d; M. M. Martin, 3d; W. R. Stewart, 0; A. B. Tennent, 0; J. W. Flynn, 0. Briarly was unable to start in this race owing to a sprained ankle. A had start as Benjamin was right on top of his men at the crack of the pistol and long handicapped men raced home for the honors, which resulted in a victory for Jones, with Benjamin close up and Martin only half a foot in the rear. Time, 9.4-5 s.

Running High Jump Handicap—W. F. Scott, Livermore, 6 inches, 5 ft. 7½ 1st; B. A. Benjamin (M. C. C.), 5 inches and H. Garman, 3 inches, were announced as having tied for second medal. O. Giersch (M. C. C.), Scratch 0; C. J. Schuster (O. A. C.), 4 inches, 0; F. W. Randolph, 6 inches, 0. The handicapping in this event was simply wretched. The Livermore representative cleared the bar at 5 ft. 1½ in., consequently Giersch was required to jump 5 ft. 8 in. in order to win. No man in America could have won this event from the scratch on that ground. Benjamin and Randolph, who run from the left hand side, were compelled to jump with the sun in their eyes. This accounts in a great extent for the poor showing made by the latter, who balked at 4 ft. 8 in., while a few days previous he cleared 4 ft. 11 in. with apparent ease.

440 Yards Scratch Race for the Hammersmith Medal, Members Only—R. S. Haley, 1st. All other competitors in the event failed to come to the scratch, so Haley ran over the course unopposed in 55.2-5 sec.

One Mile Handicap Walk—J. B. Benjamin (O. A. C.), scratch, 1st; C. B. Hill (M. C. C.), 25 yds., 2d; H. Coffin, 100 yds., 0; M. McLwaine (M. C. C.), 125 yds., 0; T. H. Palache (M. C. C.), 100 yds., 0. The men in this event started off at a rattling pace. Benjamin, who was in splendid condition, overhauled Hill on the first lap, but the Merion representative stuck to him like a leech right throughout the race. Coffin was overhauled just before the completion of the last lap. McLwaine while holding a good position stopped through some misunderstanding. Palache after negotiating a few hundred yards found the pace too severe so he retired to the seclusion of the dressing room. Benjamin won the race in 7 min. 31.4-5 sec., which is the quickest mile ever made by any amateur on this Coast. Hill finished second about 20 yards in the rear, and his mile was fully worth 7 min. 40 sec.

Five Mile Handicap Bicycle Race—F. E. Johnston, 150 yds., 1st; S. F. Booth (B. C. W.), 100 yds., 2d; H. Tsaney (B. C. W.), scratch, 0; Ed. Slack (B. C. W.), 150 yds., 0. Booth forfeited his handicap. Johnston, who is comparatively speaking a novice, rode in fine shape and was never headed, winning by over a 100 yards. Booth did not ride anywhere near private trials. Time, 17 min. 22.2-5 sec.

One Half Mile Handicap Run—G. W. Hupers, 40 yds., 1st; R. Gibson (M. C. C.), 25 yds., 2d; M. M. Martin (O. A. C.), scratch, 3d; W. W. Dejonge (M. C. C.), 25 yds., 0; W. Conners, 40 yds., 0; P. C. Kelly, 40 yds., 0; C. W. Scanlan, 45 yds., 0. This proved to be the event of the day. After keeping the men on the mark for a long while the starter dispatched the large field on their journey on splendid terms. The long handicap men made the pace a "cracker." For some inexplicable reason Jennings stopped after completing a lap. Conners, Kelly and Scanlan were the next to quit. At this stage Hupers had a strong lead with Gibson and Dejonge next and Martin last. 200 yards from home Dejonge retired. From this point on the race was of the most exciting description, Gibson and Martin gradually overhauling the leader, but Hupers managed a spurt and won a splendid race by two yards from Gibson, Martin being right at Gibson's heels. Hupers, Gibson and Martin deserve special praise for the plucky manner in which they ran. Martin misjudged the race as he laid back a little too long. Time, 2 m. 7.3-5 s. Martin made the half from the scratch in 2 m. 8.1-5 s., which is the best amateur time for the Coast.

Pole Vault—H. Germain, 3 ft. 10 in. 1st; C. Hartman (S. F. T. V.) and C. Humbert (S. F. T. V.) tied at 3 ft. 8 in. for second medal. O. Giersch, (M. C. C.), 3 ft. 6 in., 0; C. J. Schuster, 3 ft. 4 in., 0; W. F. Scott, 0. This event elicited much applause for the contestants. The jumping was very good and resulted in the most keenly contested match that has ever taken place on the Coast.

220 Yard Handicap—W. R. Stewart (O. A. C.), 8 yds., 1st; J. W. Jordan (M. C. C.), 17 yds., 2d; J. W. Flynn, scratch, 0; A. B. Tennent (M. C. C.), 6 yds., 0; E. B. Freese, 13 yds., 0; H. R. Hertel (O. A. C.), 14 yds., 0; W. McConnell, (M. C. C.), 16 yds., 0. A good start. Stewart caught his men in fine style and landed the race rather comfortably. Jordan finished second after a desperate struggle. A great many of the men in this race were blocked owing to the large number of starters. Time, 23.3-5 s.

2 Mile Handicap Race.—W. A. Scott, (O. A. C.), 200 yards, 1st; C. B. Hill, (M. C. C.), 200 yards, 2d; T. Jennings, (O. A. C.), scratch 0; M. McLwaine, (M. C. C.), 200 yards, 0. Scott started off at a steady pace, and gradually increased his lead and it was patent to everyone that he could not be caught. He finished the 2 miles very strong in 9m. 56½ s. Hill came in second.

Obstacle Race.—B. A. Benjamin, 1st; B. S. Benjamin 2d. This event as usual created a considerable amount of amusement. There were four competitors, viz: B. A. Benjamin, B. S. Benjamin, C. Hartman and C. Hesa, Jr., who were required to jump over hurdles, get under obstacles, climb over a greasy pole, jump over a formidable water ditch, crawl through swinging barrels, pick up a number of potatoes, one at a time, and roll sugar barrels, etc., etc. Hartman started off with the lead followed by Ben Benjamin. The adept manner in which Hartman got through the suspended harrel gained him much applause, but he failed to negotiate the greasy pole, try after try, resulting in a failure. The two Benjamins jumped the hurdles together on the second round and both made for the ditch together, B. S. jumping in while B. A. jumped over. But from this point out Barney had the race to himself as his older brother was clean played out.

London, Nov. 15.—The coming six-days' pedestrian match in London bids fair to prove the greatest event of the kind that ever came off in England. The track will be nine laps to the mile and will be elevated eight feet above the floor, in order to give the entire audience a full view of the racers and all their movements. The men will start at 12:05 Monday morning, the 24th inst. Among the entries are Charles Rowell, Littlewood, Samuel Day, Simpson and a lot of novices. The betting is already large, and is greatly in favor of Littlewood. One thousand pounds was placed on him to-day, in amounts of £500 to £200.

Our account of the games at Central Park, as well as certain other local events, are held over till our next issue.

C. A. J. Queckberner, of the New York Athletic Club, has just received a medal from the Government for life-saving. He had previously received four other medals for like work. The Williamsburg Athletic Club has accepted the challenge issued by the American Club for a two mile relay walk. Frank P. Murray, R. McCausland, W. Page and A. Kraft will represent the Williamsburg Club.—James Grant, who recently broke the three-mile record of America, issues a challenge offering to run any man in America a like distance for the championship of America, for \$250 or more a side.—The *Turf, Field and Farm* says that a high-toned walking match took place at Newport, R. I., on the morning of Nov. 16th. The contestants were John Whipple, son-in-law of the late Governor Swan, of Maryland, and Charles M. Oelrichs, brother-in-law of Theodore A. Havemeyer, the Austrian Consul-General at this city. The course was from the Club-house down Bellevue Avenue, then to and around Ocean View and back to the starting point, a distance of ten and two-fifths miles. Whipple was allowed five minutes' start, but was obliged to walk heel-and-toe, while Oelrichs went as he pleased. Oelrichs won easily, time 1h. 37½m., beating Whipple 12½m. The referees were Isaac Bell, Jr., Russell Forsyth and Charles Binninger. The race was for \$100 a side, Walter L. Kane backing Whipple. Oelrichs backed himself.

### Plunging.

The Amateur Swimming Union of England has adopted the following laws of plunging: "A plunge is a standing dive, made head first from a firm take-off. The body is to be kept motionless, face downwards, and no progressive action is to be imparted to it other than the impetus of the dive. Such plunge to terminate when the competitor raises his face above the surface of the water. The distance traversed to be measure in a straight line, to a line at right angles, over the furthest point reached by any portion of the competitor's body, (while fulfilling the above conditions), at the finish of the plunge. In championships such competitor shall be allowed three plunges, and the best three competitors of the first round shall be allowed one more trial each for the final. The farthest plunge of the four attempts shall win. In club or open handicaps the number of plunges to be left to the discretion of the promoting club."

The Los Angeles Athletic Club is in a flourishing condition. They have 250 members of good standing on the roll. The initiation fee of the club is \$10, and the monthly subscription \$1. Their quarters, located on Downey Block, consists of five suits of rooms, all handsomely furnished. The main room is 80 by 35 feet, and is supplied with all the paraphernalia necessary for a well equipped gymnasium. The expenditures for furniture and fixings cost over \$5,000. At the last annual election the following officers were appointed: President, E. A. Preuss; Vice-President, B. E. Taney; Recording Secretary, J. S. Thayer; Financial Secretary, V. L. Mitchell; Treasurer, W. M. Caswell; Executive Committee, A. M. Lawrence, H. W. Galloway, J. F. Ponder, O. Lockhardt and H. T. Payne.

We shall do our best to boom cross-country running this year, and hope our runners will join heartily in this winter pastime which is becoming so popular in the East.

The Crescent Athletic Club of San Diego is in a very stationary condition. The great enthusiasm over its organization is being followed by the usual reaction.

Wm. Wood, the Secretary-Treasurer of the New York Athletic Club, anticipates a pleasurable trip to this Coast some time in January.

The Olympic Club expect to move into their new quarters in the early part of next February.

An amateur athletic club is shortly to be organized in Merced.

## BICYCLING.

### The Bicycle Tournament.

The following is the revised programme for the bicycle tournament, to be held at the Mechanics' Pavilion on the evening of Jan. 10th, under the auspices of the Bay City Wheelmen:

- Five mile scratch bicycle race.
  - One mile maiden bicycle race.
  - Ten mile handicap bicycle race.
  - Seventy-five yards slow bicycle race.
  - One mile time bicycle race.
  - One mile roller skating race.
  - Two mile race, Grasshopper (Extraordinary Challenge) machines.
  - Two mile scratch bicycle race.
  - One mile handicap bicycle race. (For boys under 16.)
  - Fancy riding, by Ernest Rideout.
  - Exhibition drill, by the Bay City Wheelmen's drill corps.
- Entries will be received up till Jan. 1st, 1885, with Edwin Mohrig, 252 Market street.

A minister in Cleveland rode to church last Sabbath on a bicycle. As he swept up to the sacred edifice a large Newfoundland dog, belonging to the senior deacon, came lumbering out to greet the pastor. The bicycle struck the canine head on, under a full head of steam, and ran him down with a shock that could be plainly felt with the naked eye. The reverend took a header, and jammed his high silk hat down over his ears so tight that he had to crawl through it to get out of it. The scattered leaves of a seven head sermon flew around the avenue like a theological snowstorm. The dog made Rome howl with his wails, and attracted a crowd of 300 people. The parson's coat was split down the back, and his trousers ripped across the knees. He pinned up the knees, and had to wear a pepper-and-salt sack coat the sexton loaned him. When he appeared in the pulpit in this garb the congregation smiled, and when he announced his text—2 Kings xii. 6, "But it is so" the priests had not repaired the breaches"—there wasn't a dry eye in the convective.—*Burlington Hawkeye.*

The membership of the L. A. W. has now increased to 5,000.—The *Bicycling South* is the title of a new paper to be published at New Orleans, on or about Dec. 1st.—Karl Kroun has now 2,083 subscribers to "Ten Thousand miles on a bicycle."—The League meet of 1885 will, no doubt, be held at Buffalo.—English is reported to be laying up for next year's championship.—Keen, James and Howell will shortly measure speed on Safeties.—Galvin Dalzell (a cooper by trade), of Lesmahow, Lanarkshire, constructed and rode the first practical bicycle, in the year 1836.—In England \$15,000,000 are invested in the manufacture of bicycles and tricycles, employment being given to 10,000 persons.

This tendency of the makers towards safety machines with small drivers and large trail wheels is fast bringing the modern bicycle back in appearance to its prototype, the velocipede, and will, if not soon checked, eliminate all the graceful lines of the bicycle, thus depriving it of one of its chief charms, and causing it to become the hobby horse instead of the poetry of athletics.

Some of the handsome bicycles of San Jose came gliding into town last Sunday morning. J. E. Gibson, captain of the Garden City Bicycle Club, and Mr. Al. Hyman and G. Bailey, members of the same club, left San Jose Sunday morning at 9:05 A. M., and arrived here at 11:45, making the run of thirty miles in the very quick time of 2:40 minutes including stoppages.—*Gilroy Advocate.*

From all accounts there are several speedy riders in the interior towns, and it is to be hoped that some of them will enter the competitions at the tournament of the Bay City Wheelmen. There never has been, in the cycling history of the Pacific Coast, so many opportunities for wheelmen as is presented in the programme of the B. C. W.

San Diego boasts of ten riders of the "silent steed." The roads are at the present time in rather poor condition for this sport, owing to the severity of the past winter. There is, however, an excellent track between old and new San Diego, which is only distant from the town about three miles.

The wheelist who is obliged to wander about a tack besprinkled floor at three o'clock in the morning, in search of a light, is invariably the one who can't find his match.

The following recipe makes a good lamp oil: Sperm oil, 16 parts; colza oil, 16 parts; paraffin or petroleum, 2 parts, and camphor (finely cut up) 1 part.

The only club represented in the bicycle races at the Olympic games, on Thursday, was the Bay City Wheelman. Why does this state of affairs exist?

Harry Tenney is the San Francisco correspondent to the Springfield (Mass.) *Wheelman's Gazette.*

We expect to announce in our next issue the list of prizes for the bicycle tournament.

Robert Effe, the mayor of Santa Cruz, rides a 60-inch machine.

## POULTRY.

### Successful Poultry Breeding.

Paper read by Chas. F. Rhodes before the Topeka Poultry Club October 4, 1884.

The mystery that lies hidden to many poultry keepers is natural devotion and love for the business, combined with personal attention to all the little details.

Many do not understand, or do not seem to, why it is they do not meet with success equal to those who occupy the first rank among poultry breeders. It may be they have purchased their stock from the choicest strains and the most noted breeders; yet in the course of a few years their attempt at breeding prime stock proves a failure. Then they are apt to say it is a humbug, and are liable to condemn pure or fancy poultry, and say poultry breeders are not honest, their stock does not reproduce themselves.

Now, it is from a lack of natural devotion; they do not take proper care with what their money has purchased for them. They seem to think their birds will take care of themselves to a great extent. Here they make an error; for unless they have unlimited range they will soon show the sad results of neglect; and I think poultry shows it quicker than any other stock.

I once gave a friend a sitting of Partridge Cochins eggs. He hatched nine chicks. When they were nine months old, the pullet's average weight was four and one-half pounds; the cockerels five and one-half. Chicks that I raised from the same stock and same age were seven and one-half pounds for pullets, and nine pounds for cockerels. This illustrates neglect. My friend sold his chicks for 50 cents each; I received an average of \$4 each for mine. Pure blood is a good deal, but it is not all. Good feed is as essential as purity of stock. In the hands of some men it is very profitable, while under the neglect of some others, it is worse than common stock. Choice fowls are the result of continual care, and when they do not receive proper attention, they soon lose their beauty of plumage, admirable proportions, and desirable qualities.

Another prime cause of trouble in the management of poultry is overstocking. This is a source of trouble in more ways than one. We find in the yards where cholera prevails more fowls are kept than there ought to be to have their quarters clean and wholesome. A good many poultry men neglect their best interests when they leave poultry houses uncleaned for weeks at a time and then wonder why their fowls do not thrive.

The reason that in many fowls the proper markings are lost, is because they do not make proper selections, and hence raise from the worst as well as the best. By proper selection and mating properly some of the choicest specimens would be owned by those who have hitherto been unsuccessful.

It has been said a good breeder is a good killer. This is true; not how many breeders follow this? Birds are often seen that are disqualified; still they are kept for breeding in the hope that nature will outdo herself, and produce something in the progeny that will make them prize winners. This has been tried, but with no degree of success. Like hegets like is a good rule to go by. The good points are hard to transmit, while the bad ones are intensified if the faults are slight ones in both parents.

One other cause of disgust to the disappointed breeder is vermin, or, to use a vulgar word, lice, which infest all poultry unless great care is taken. An eminent writer says that all chicks hatched under a hen leave the nest with from two to forty lice on its head. If this is true it is a wonder so many chicks are raised to maturity. By proper care and attention these pests can be avoided.

Changing from one breed of fowls to another each season is practiced by unsuccessful breeders in the hope of getting up a reputation, because some breeders of the same variety are making a success of it.

All our varieties of poultry have each their admirers, and if the men who enter the ranks will select the variety that pleases them best and stick to it through successive seasons, using judgment in the care and management, paying heed to the causes of failure I have mentioned, they will have no cause to regret it. There is room for us all. The supply of truly meritorious fowls will always be limited, and all honor to the breeder who is successful in producing them.

And bear in mind the more care and attention you give on your pets, the greater will be your reward.

Deer Hunting in Oregon.

The Malheur country (pronounced by the residents thereof Malhsuer), lies in eastern Oregon. On the map you may observe a landmark called Castle Rock in the northeastern corner of the old Malheur Indian Reservation. This is a prominent butte covered with hunch grass and crowned with a cubical rock some four or five hundred feet in perpendicular height. From the top of this rock, which is accessible on one side to a hold climber, looking eastward one can see an extensive piece of country, unsettled, consisting of mountains devoid of trees, but watered by numerous streams, a great country for hunch grass, granitic rock and gravel, and deer brush. At this time of the year the deer which summer in the higher ridges of the Blue Mountains, north of here, come down upon these foothills retreating from the snow. With them also come the ibex, mountain sheep, bear and antelope.

These species of deer found here, called the mule deer, is the largest animal of the kind known to naturalists. I asked an old hunter what the distinction is between this deer and the black-tailed deer of the Rocky Mountains. He replied that the chief difference is in the size of the former, its large ears, and the tail, which resembles that of a mule, and that his opinion is that this male deer is a cross between the silk and black-tail.

About a week since two men and a lad, accounted for a hunt with dogs and guns and pack horses, stopped at my sleep camp about supper time. They dismounted, picketed their horses and came in placing their rifles in a corner of the room. They soon made themselves known; were directors of the Bully Creek school district and invited my brother Louis and myself to join them in a hunt among the foothills back of Castle Rock. Mr. M. is a middle-aged man and although his hand is not the hand of a hunter, yet I judged from the steady poise of his carriage that his Remington with its set trigger would be in his hands a very deadly weapon at any reasonable distance. Mr. R. carried a Ballard and is somewhat noted among his neighbors on lower Clover Creek for his skill as a marksman. He is a keen sportsman.

The next morning Louis and I took a pack horse on which we carried tent and blankets, and with our Winchesters (forty-five calibre and seventy grains of powder) we started with them. We rode together up the canon three or four miles, crossed the military road which connects the Dalles and Boise City and entered the confines of the hunting grounds. A trail followed up along the bottom of the canon. R. left us saying he could find our trail and follow us to camp. M. rode in front; his dog, tied to the saddle, trotted at his horse's heels. The boy George, who rode behind and kept a sharp lookout, suddenly exclaimed: "Look out! There is a deer behind that rock. It's coming out—will be out in a minute." We three in front dismounted quickly, M.'s dog, which he had untied, kept close beside him, and the horses pricked up their ears at the click of the rifles. A doe trotted out from behind the rock indicated, and seeing us, bounded over the grass. She was very plainly seen, her long ears erect, her nostrils dilated, as she sprang staff-legged up the hill with the greatest ease and grace of movement. Then she was followed by two more. "Don't shoot, they are nothing but does," Louis said, and as we did not wish to kill them we rode on. They disappeared around a cliff. They were, perhaps, three hundred yards away and several hundred feet above us. After we had ridden awhile I asked Mr. M. if he thought he could have killed one of them. "Well, I don't know; I think I could, but I might have missed, you know. My gun would have dropped a ball that fur mighty handy," he replied. He was cautious. He did not want to forswear what he fondly hoped to do in the next few days.

When we reached a high hill from which we could see about where we desired to camp, Mr. M. left us and rode to the left, and before we arrived at camp, R. caught up with us, having killed nothing. He was anxious to kill a fawn for camp meat and rode ahead. As we descended the last hill to the level bottom where we would camp (we were walking and leading our horses), a doe ran out of the willows followed by two fawns. R. got ready to shoot, but the fawn behind got over the hills before he shot. Then another fawn ran from the willows. It was a long shot, and down hill, but I shot hardly expecting to kill it. It ran a few paces, stopped and commenced backing and went back into the brush. R. ran down with his dog as much excited as if I had killed a grizzly bear. The dog ran through the brush and started after the other deer and then being called back came back near the wounded fawn. The fawn ran across the brook, alongside the hill, and when the dog would catch it by the hind leg it would turn upon him. Finally the dog caught it by its nape of the neck and held its head to the ground while R. ran up and his hunting knife quickly dispatched it. A good dog would have caught it by the throat.

Dinner over we started out, M. and R. on horseback, Louis and I and George afoot. We had no dog with us. We had not gone far before we saw a band of deer nearly a mile away, and half way to the crest of the foot hills, and they saw us. We marked out the best way to go to get within range of them, and struck out while George remained where they could see him. It is said they will not run away so long as a man keeps in their view, and, of course, at a proper distance. But the rule met with an exception in this case, for these deer took alarm and ran away before we had gone half way to them. On the way, however, we observed two bucks feeding, ourselves unseen. We slipped on our moccasins, and leaving our boots and hats we stole on noiselessly. When we arrived at the top of an intervening ridge and looked over they had both lain down. We could see their horns above the grass. Then we stole along on all fours until we were within two hundred yards of them, when the larger one raised his head and looked at us. "Now's the time," said Louis; "let's both shoot the old one." He fired at its head, and as it jumped from the grass I fired at its body. We shot

several times more before it disappeared, running its best over the hill. We went up to its bed, and there were near it splashes of blood on the grass. We followed this blood stains about half a mile, and there found it lying in the grass by a little stream, dead. His first shot had cut its jugular vein. We cleaned it, cut off its head and dragged it perhaps some twenty yards down hill to some stout cottonwood trees. Here we pissed it as high up as we could upon two poles, leaning in the forks of the trees, endeavoring to lift it out of the reach of coyotes, but they could have eaten its fore-shoulders as we left it had any come that night. Then covering it over with our coats to keep away ravens, jackdaws and magpies, we went back to camp. Mr. M. afterwards told me that the best way to hang up a deer which one cannot lift is to bend down a stout tree by climbing it and swinging down from the top. Then tie the deer to the tree top, and when the bent tree is relieved of your weight, its elasticity will lift a great part of the weight of the deer. Then take two forks and place under it on either side, and by moving the bottom of the forks in gradually, the deer can be lifted to any desired height. This deer was a seven "pint" hunk; its neck was shaped like that of a Durham bull. When skinned afterward it was white all over, and upon its saddle the fat was an inch and a half thick. I do not wish to try the reader's credulity; but even the truth concerning these deer has about it a suspicion of exaggeration in the ear of one who has only known the white tail deer of the East or the black tail of the hunch grass country. We could together lift this buck from the ground, and we judged that it had weighed between 350 and 400 pounds. It is a common report that deer have been killed here weighing 400 pounds, and from which 40 pounds of tallow could be rendered.

The next day M. killed a cinnamon bear, which he found eating choke cherries. The bear had made a noise in the bushes, and M. dismounting, thinking it was a deer, perhaps, was much surprised when it arose on its hind feet and showed its white teeth. He shot it and hastily mounted his horse standing near, and sent his dog in after it. But the dog would not go, and as the bear made no noise, M. went to look for it and found that he had shot it through the heart, though it had afterwards come about fifty yards towards him before it had fallen. He came to camp and was so elated with his success that he started soon after dinner and as nothing succeeds like success he seared up from its bed a buck deer and shot it behind the ear as it ran, killing it in its tracks. It was a fine one, with five points on its antlers. Mr. R. also came in having killed a doe by mistake, and a buck. The latter he left on the ground during the night, as he said a coyote would never disturb it the first night it was killed. But here again fell an exception, for the next morning when we went around to collect our deer, this one had nothing left of him but his bones. The coyotes had made a clean sweep of him.

We packed our trophies after making a hunter's division and came home. Lean venison, be it noted (and that is the only kind killed from Montana to Colorado), is about like "crow" to the palate. Fat venison cannot be distinguished from Southdown mutton. In the ham of the fat deer lean and fat alternate, the fat predominating to such an extent that some of it is removed before cooking.

The sport of hunting deer where there are numerous amounts to nothing. One shot will bring down enough meat to supply a ranch as long as the meat can be kept, and any man who would needlessly kill one of these deer has the heart of a coyote. This is the home of the noblest of the species, made for them and not for man, and here they live naturally to a great age and attain their greatest perfection.—*Oregonian in Turf, Field and Farm.*

Gun Notes from Los Angeles—The Hunting Fields of Southern California.

It has often been asserted by the BREEDER AND SPORTSMAN, that in no other country in the world has the sportsman the same grand range of country stocked with every kind of game, to roam over at will, or the same grand privilege in doing so as in California. It has also been asserted, with equal truth, that these facts together ought to make the American citizen, of every class, rise to a conscientious appreciation of his privilege, and while proud of the country which bestows them, also make him careful not to abuse them. From the details I have gathered of several recent expeditions, I propose in this communication to select two, which best shows the extent of the country open to the sportsmen of Southern California, in hopes they may increase the conscientiousness, and improve the manhood of the average hunter. In August last, two members of the Los Angeles Recreation Gun Club, Messrs Bright and Ingalls, fixed up a two-horse wagon, with cooking utensils, dogs and other necessities, and started out on a hunting trip to Fresno, camping out whenever night overtook them. I know nothing better than this trip to enforce the views I hold of the responsibility of the California hunter to remember he is not owner of the public game, only a trustee, and that whenever he slaughters unnecessarily and indiscriminately, he is a thief, who steals from his fellow-citizens the share of the game which rightfully belongs to him—for taking the square of the Territory these young men traveled over, it is big enough to hold the entire State of New York, and the whole of England, with a large slice of Wales and Scotland thrown in. The line of route was first along the San Fernando Valley to the Teoyong Pass, where hares, quail and cotton-tails abounded, but like the true huntsmen, they only killed such game as the law allowed and only enough of that for their actual wants. In three days they crossed the intervening mountains, and came out about forty miles below Bakersfield, and passed through Fort Tejon Valley, a beautiful valley used as a stock range by Gen. Beale. Here deer and antelope were abundant, but the General will not allow hunting, so that if these animals had then been in season they would have been unmolested. It is pleasant to think there is one small spot in this grand domain of ours where these beautiful animals can live and multiply in peace and security. Passing through Tulare valley to Visalia they found a magnificent country well stocked with game, until they reached King's river, where they spent a day catching outfish which they found large and plentiful in that stream. From this point they steered to Fresno, completing the first division of the trip which by railroad is about 240 miles, but by the road traveled about 340. At Fresno they stayed three days shooting doves which exist there by the thousand. A party of five went out and killed from 5 to 7 dozen each, the poorest of the party never bagging less than 3 dozen for the day. After rearing their team and enjoying themselves at Fresno, they started west for the Coast, and passing through a rough, mountainous country full of deer, quail, and other game, including bears, they reached San Luis Obispo in due time, adding another 140 miles to the distance traveled, but on reaching the valley of San Luis Obispo the game became scarce. I found it so in 1863 when

I visited that district for a fortnight's sojourn, so I conclude it is not a good region for the hunter. Perhaps, I may mention here, with pardonable vanity or pride, whichever you please, that Senator Lovell, of Monterey, and myself, opened the campaign of that year for the immortal Lincoln, and the county, though thoroughly Democratic, voted the Republican ticket at the ensuing election for the first time. I do not mean to say we influenced that election to any appreciable extent, but it is an historical reminiscence, showing the spirit of the times, worthy of passing mention. After again resting, they started homeward along the Coast, and reached Santa Barbara 150 miles distant. Between these places as they neared the latter, game again became abundant, and the drive was very delightful until they struck the rugged old mountains which they had to cross to reach Santa Barbara. From this place they traveled to Ventura, celebrated for good duck shooting and in season for quail shooting, the Los Angeles market in season being largely supplied with quail from Ventura. This year the wild blue pigeon a fine eating bird, has visited Ventura by the million, as it did this district between Anburn and Folsom in 1856, and afforded grand sport. From Ventura homewards until the mountains leading into San Fernando valley, this original starting point was reached, the hunting was excellent, and taken altogether shows what the hunting fields of Southern California really are in character and extent. It will not be amiss to recapitulate these distances as traveled: From Los Angeles to Fresno, say 350 miles; from Fresno to the ocean, at least 180 miles; from San Luis Obispo to Santa Barbara, 140 miles; from Santa Barbara to Ventura, 20 miles; from Ventura to San Fernando valley, 50 miles. Total 690 miles. This total, however, large as it is really, is only a miserable little hole when compared with the hunting fields of Southern California, and an insignificant paltry hole when compared with the hunting fields of the whole States, yet it is a hole, as I have said, big enough to swallow up the greater part of Great Britain and the whole of New York State. Such is the hunting heritages of the American citizen. For the enjoyment of such priceless privileges, the government only enforces two conditions upon the individual enjoying them—that is to a man, and to sacredly observe the rights of private property. Should not such privileges vitalize our moral and social lives and make us worthy of them? If not, what is the benefit of being so highly privileged? Wherever there is a want of conscientious appreciation of the blessings of American citizenship in the individual, we may rest assured he is only fit for the penitentiary or the chaingang, and that in one or the other he is sure at last to be found. I had intended to give the details of a trip of young Charley Northcraft, an enterprising young merchant of this city, to the Mojave Desert after antelopes just before the season closed, but my young friend must let me off until another time or I shall miss the mail as I have two other incidents to give this week which are expected from me.

THE EFFECT OF THE STATE SPORTSMAN'S CONVENTION.

It is pleasant to record this influence because we all came down here to do good. Soon after the deer season closed, a consignment of several head were received by a prominent butcher here from Arizona, and impudently exposed for sale. On the road, Mr. Taggart, of the local Gun Club, and Mr. Lockwood, of the local Rifle Club, both subscribers to the BREEDER AND SPORTSMAN, happened to see them on the cars, and the fact was immediately telegraphed to the members in town. On exposing the deer for sale, the butcher was there and then arrested on complaint of Mr. Hazard, the attorney. He pleaded innocence in the matter and telegraphed to the shipper stating his arrest and asking instructions what to do. The answer came from Arizona: "If you cannot sell the deer in Los Angeles, give them away;" so they were divided among the benevolent institutions of the town. Exposing the deer for sale in this hold way so soon after the convention caused considerable comment, and the earnest and determined action of the local gun club to stop such rascality and defiance to the law was strongly approved by all classes. They deserve great credit for their promptness. It is now generally admitted no more deer will be sent from Arizona for sale here during the close season. May the law in its omnipotence always be found strong enough to put down wrong in this fair land of ours. The club members, no doubt, would have acted with the same promptness if the Convention had not been held here, but the case would not have caused so much attention, nor the satisfaction among outside classes at the result been so general. It is in this that the good influence of the Convention lies.

A MISHAP.

Mr. T. W. Jeffress, of the San Francisco Brass Works, Mission Street, is not only a prominent member of the above club, but as a business man well-known and very popular all over the State. He recently paid a visit to this city, and took a day's duck shooting at Balloona, pronounced Byona, with Mr. F. E. Browne, of the local club. The birds were scarce and so they had considerable rowing about the lake to do. Somehow they had a high stool in the boat on which Jeffress took his seat. After a while a couple of black coots came along, and Browne, who was rowing, suggested that Jeffress should take a spot to try the gun, which belonged to Mr. Watts, of the California Livery Stables. Watts is pretty much of a wag, and it is supposed he had loaded the gun so that it would kick like a young rhinoceros. Anyhow, when the gun went off Jeffress and the stool went overboard in some sixteen feet of water. Browne looked round to see why the second barrel was not discharged and then realized what had happened. Loaded with gun, heavy clothing and cartridges, of course Jeffress made a straight dive to the bottom. To his credit, be it said, he held on to the gun and brought it up with him. Cursing and spluttering he was safely hauled in the boat, taken to the club house, dried out and made happy. However, he declined any more shooting with Watts' gun for that day, if not forever. As I took a smile with him after wards over the mishap, he declared to me confidentially that Watts put up the job on him. Please don't say I told you all this, for Watts, who now subscribes to the BREEDER AND SPORTSMAN, may get mad and withdraw. Well, you have got his cash so it is all right anyhow. Yet, in all honesty, I believe Watts did put up the job on poor Jeffress. This item is for the members of the Alameda Club and no one else.

Two youthful sportsmen of this city—Neely J. Stanley and Willie Smith—lately returned from a three months' hunting and fishing expedition through the wilds of Northern California. They brought back with them numerous trophies of their skill and much knowledge of woodcraft.

The Forester Gun Club, of Sacramento, has now a comfortable club house on the banks of Goulrie's Lake, near Freeport, when its members may stay over night in comfort. The club has also a small wharf, where its boats are moored ready for convenient use.

A Shoot Over Gladstone.

"Look to your laurels, Gladstone, for your son and daughter are going to measure with you to-day, and there is nothing short about either of them," was a little speech I made to the "boss" when Gem and I met him, Sport and the Major for a little round.

The old champion looked up at me, raised that flag that had waved triumphantly over many a hard fought field, and gave it a wag or two, as much as to say "I have heard that sort of talk before."

It was a fine day for a shoot, neither too cold nor too warm. It had rained a few days before, and there was just enough wind to keep the scent on the breeze. All three of the dogs were keen for a run.

Gem came very near giving me the slip two or three times before I could get off, and taking a hunt on her own hook; but I detected her in time to prevent it. I felt uneasy for the "boss," for I knew Gem had the go in her, and all she wanted was the opportunity to let it out.

The Major said he thought Glad would enjoy a little hunt, and he wanted to make his visit as pleasant to him as possible, so the hunt was for his enjoyment, and I did not want to mar it by beating him.

We were soon among the birds. I let fly at one; the feathers flew in every direction, but the bird flew on its winged way; not enough powder. The Major took one down with each barrel of his number ten; both dead he said; he could always tell when a bird fell dead. We found one, but could not find the other. The Major said he knew exactly where it fell, and that it was deader than the one we found. We had about given up finding this very dead bird, when we missed Glad, and in looking for him found him over the fence not far from where the bird fell on a very rigid point. The Major walked in ahead of him, the bird flushed, but could not finish very high, for it was winged, and this was that very dead bird. It was all I could do to keep the Major from shooting it on the ground. I told him that I had concluded to write for the American Field, and I may just as well commence with this hunt, that I wanted to write the truth, and I did not care for the American sportsmen to know that I would hunt with a man who would shoot a bird on the ground. This put him to thinking, and he soon cooled down, and let the dog catch it.

I do not think the Major makes a regular habit of shooting birds on the ground, but this was an aggravated case, and he was mad with this bird for not being as dead as he had pronounced it to be.

The young dogs performed finely, and several times I thought the "boss" laurels were in danger; but his large experience was a little over a match for their natural gifts. Sport showed in this hunt the advantage of a well-bred dog; he dropped to wing and shot as promptly as if he had been thoroughly drilled to it, and did not attempt to chase a single time; and this was his first hunt with the gun. The Major had hunted him without the gun to make him familiar with the scent of game, and had shot over him a few times to see that he was not gunshy, but had let him have his own way all the time.

Gem was the same way; the first time I took her out with the gun, I thought at first she dropped from gunshyness, but now that she is excessively fond of the gun she still keeps it up. It must be an inherited trait from a long line of well-trained ancestors. We did not make a very large bag in this hunt; we bagged about a dozen of the strong flyers, and left the others to grow stronger. We boast not of our heavy bag. Of such let others brag; we glory in the fun we had, shooting over Gem, Sport and Glad.

Old Gladstone looks a little old in the face, but his vital forces are in full vigor. The Major says his breeding qualities are as good as ever; and I would like to see the dog hunt that can get away with him in the field.

Such grand sweeps he makes! He always seems to know where the gun is and ranges accordingly.

He is certainly a grand old dog, and long may he live; and long may he wag that broken old tail over the land of the free and the haunts of the quail.—Spectacles in American Field.

A Farewell Dinner.

Last evening Mr. Robert Eckert gave a farewell dinner at his place to Major Leigh Harnett, of San Francisco, and invited guests. There were seven courses, served in Eckert's best style, which means that everything was faultless. Major Harnett was toasted and responded at length, speaking eloquently of the pleasure his sojourn in Los Angeles had afforded him. The banquet lasted three hours and was a most enjoyable affair throughout.—Los Angeles Times.

The Piche (Nev.) Record says: While down at Culverwell's milk ranch last Sunday we were shown a white snipe. This is the first white bird of that kind that we have seen. There was quite a flock of these birds in the swamp, and all were of the ashen color except the one bird mentioned. When the birds flew, or were on the ground, the white bird kept near the centre of the flock. This is the first white bird of the kind ever seen there, and its appearance attracted the attention of all at the ranch. The bird was as white as snow, and the same size and shape as the other birds. The snipe were of the small species, commonly known as the "butter snipe" on the Mississippi river.

"Almo" says in the American Field: "Below are the velocities or striking powers of different gauge guns just obtained by one who has perfect instruments to work with: 16-gauge, 1,164 ft. per second; 12-gauge, 1,248 ft. per second; 10-gauge, 1,344 ft. per second; 8-gauge, 1,452 ft. per second; 4-gauge, 1,460 ft. per second; 2 in. punt, 1,542 ft. per second; 2 in. punt, 1,717 ft. per second. These muzzle velocities were obtained from good shooters with the best of loads, and it shows that the larger the bore is the greater the muzzle velocity will be, and consequently the greater the penetration. The guns were all choke-bored for hard shooting, by one of the best of makers."

From Lieutenant Greeley's report of the monthly killing of game in the Arctic regions, the following summary of what was killed during the whole stay at Lady Franklin Bay is made up: 7 wolves, 7 foxes, 8 ermines, 8 lemmings, 103 musk oxen, 19 seals, 37 hares, 44 king ducks, 53 long-tailed ducks, 30 eider ducks, 60 dovecats, 1 diver, 6 burgomaster gulls, 1 Sabine gull, 21 Arctic terns, 178 skuas, 84 breast geese, 1 raven, 79 ptarmigans, 100 turnstones, 1 sandpiper, 1 sandling, 27 knots, 2 ringed plovers, 18 owls, 2 phalaropes and 1 walrus.

A few canvasbacks have found their way to the markets, but the season is quite backward. A good rain storm would vastly improve the duck shooting in this vicinity.

Apostrophe to the Cactus.

The following feeling ebullition was filched from among the memoranda of a member of the State Sportsmen's Association, who attended the late Convention, at Los Angeles, and took part in the quail hunt on the Temecula:

Oh, cactus, inedible pear, how unassuming thy pretensions, how mighty are thy works! Humbly thou crouchest below the gramineal herbage that thou mayest not be detected; peacefully thou liest at the foot of the beautiful flower—thy own progeny—and patiently await the tenderfoot equestrian's hasty arrival from the ungracefully humped-up back of a fun-loving broncho, with whom thou art in collusion. When he involuntarily cometh to yield himself to thy pleasure, via air line, his reception is cordial in the extreme.

And how heartily thou clutchest the unwary victim who in an abstract moment pauseth to rest by sitting on the earth's verdured surface. Thou canst apparently perambulate in ghostly haste and quietness for a distance of several cubits that when the unsuspecting traveler sitteth, it shall be on thy heartless amalgamation of protruding spears instead of the flowery bed he premeditated. Stopping not after perforating the victim's nether clothing, thou continuest thy diabolical research till thy depraved appetite for gore is satiated. I pause to weep, oh, cactus, for my feelings are in sympathy with the subject. I, too, have been a victim of thy carverous predelection for human blood; and even now carry a partially healed source of the inspiration which has caused me thus to address you.

A friend in San Diego writes as follows under date of Nov. 18th: "Game is very plentiful this season, excepting hare, among which a disease has committed great ravages nearly exterminating them, in fact. Duck are fast coming in, mallard, however, being unusually scarce, especially near the Coast. Some good bags can be mentioned, two of our local nimrods bagging 180 webfoots in four hours in the Cajon some days ago. Quail are fortunate this season—the thickness of undergrowth and lack of means in shipping to San Francisco markets having drawn the pot hunters further north. Deer are commencing to come down to the valleys and seem to be quite plentiful. Shall give you particulars of my next hunt providing it is worthy of mention."

The Waldo Game Club, of Oregon, met on the 16th, Vice-President Umphlett in the chair. There being no violation of the game law reported the meeting adjourned until Dec. 21st, at one o'clock, P. M. W. J. WIMER, Secretary.

The Recreation Gun Club of Los Angeles has incorporated with the following officers: Captain, H. T. Hazard; Lieutenant, C. A. Vignolo; Secretary, H. T. Payne; Treasurer, E. C. White; Commissary, J. P. Taggart.

Good duck shooting around Oakdale.

THE RIFLE.

California Rifle Association.

The last day's shooting of the California Rifle Association was carried out last Sunday, according to the programme published in the BREEDER AND SPORTSMAN. The matches provided by the directors were all keenly contested, and carried off by high scores. The weather throughout the entire meeting has been remarkably fine. For the first time in the history of the association a clean score of 50 was made at the 200 yard range. The Directors of the Association are to be complimented for their wise management, which has resulted in a handsome balance to the credit of the Association.

7—Governor's Medal Match.

For the medal presented by Governor Geo. C. Perkins. Open to all members of the Association, the National Guard of California, Army and Navy. Entries unlimited. Rounds ten, with any military rifle under the rules. Distance 200 yards. Five Cash prizes, namely: \$10, \$8, \$6, \$4, \$2, in addition to the medal, which is the first prize. To become the property of the marksman winning it three times at regular meetings of the C. R. A.

Score. November 21, 1880, Capt. J. Robertson..... 47 May 29, 1881, Sergt. N. Williams..... 47 October 16, 1881, Lieut. Fred Kuhnle..... 48 October 29, 1882, Lieut. Fred Kuhnle..... 48 May 26, 1883, Lieut. S. I. Kellogg..... 48 October 28, 1883, Officer P. D. Linville..... 49 May 11, 1884, Officer P. D. Linville..... 49

The following are the prize winners in the match:

Lieut. Fred Kuhnle..... 5 5 5 5 5 5 5 5 5 5—50 T. E. Carson..... 5 5 5 5 5 5 5 5 5 5—47 P. D. Linville..... 5 5 5 5 5 5 5 5 5 5—47 Ed. Hovey..... 5 5 5 5 5 5 5 5 5 5—47 L. Barrere..... 5 5 5 5 5 5 5 5 5 5—46 Howard Carr..... 5 5 5 5 5 5 5 5 5 5—46

This is the third time Lieut. Kuhnle has won the medal, consequently it is now his own individual property.

8—Short Range Match.

Open to all comers; distance 200 yards, seven shots with any military rifle under the rules, at a ring target; entries unlimited. Six cash prizes: \$15, \$10, \$7, \$5, \$2 \$1.

The following are the scores of prize winners. Lieut. Fred Kuhnle..... 11 10 10 8 11 5 12—68 L. Barrere..... 4 11 12 7 11 5 12—64 P. D. Linville..... 9 10 11 1 11 10 12—64 Howard Carr..... 7 10 6 10 10 8 11—62 J. E. Klein..... 12 5 8 11 9 7 10—62 Charles Carr..... 10 11 3 9 9 10 10—62

9—California Powder Works Medal Match.

Open to all members of the Association, National Guard of California, Army and Navy, distance 200 and 500 yards, seven shots at each distance with any military rifle under the rules. Entries limited to one each. To become the property of the marksman winning it three times at regular meetings of the C. R. A. Competitors for this trophy to use powder manufactured by the California Powder Works. Individual prizes, namely: \$5, \$3, \$2.

Oct. 23, 1883, Private Geo. C. Thaxter..... 64 May 11, 1884, Officer P. D. Linville..... 63

The following are the records of prize winners:

Sergt. Chas. Nash..... 200 yards—5 5 5 5 5 5 5—34 500 yards—5 4 5 5 5 5 5—34 E. Pierce..... 200 yards—5 5 5 5 5 5 5—33 500 yards—5 5 5 5 5 5 5—37 Howard Carr..... 200 yards—5 5 5 5 5 5 5—31 500 yards—4 5 5 5 5 5 5—34 A. Johnson..... 200 yards—5 4 5 4 4 5 4—31 500 yards—5 4 5 5 4 4 5—34—65

Fancy Shooting.

A crowd of Summer tourists were on the beach at Los Angeles one day, watching some fancy rifle shooting by a party of professional otter hunters who had come over from the Channel Islands. These really wonderful marksmen, most of them native Californians, were killing gulls, on the water, breaking bottles, and hitting dollars thrown into the air, with great exactness, when a "dandish" looking young man from Frisco yawned in a bored manner, and remarked in a very audible voice to a companion that he did not see anything very wonderful in that sort of shooting. This produced a series of sarcastically polite retorts on the part of the original lords of the soil. Perhaps the gentleman could show them something better? "Well, I don't know," replied the young man, languidly taking one of the hunters' Winchester. "I might if somebody would hold a cork or something on his head for me." The riflemen showed their white teeth with amusement. "Doubtless," said one of them, winking at his companion, "doubtless the gentleman's friend would oblige him." "Why, to be sure!" drawled the "dude," looking round. But his fellow "dude" had sauntered away, and was standing some three hundred yards further along the beach meditatively smoking a large cigar. "Ah, there's Cholly!" said a languid party, cocking the gun. "Let me see. You observe that he has a cigar in his mouth. Very well. I'll put a hole through it," and, taking a careless sight, he fired. At the report the smoker gave a sudden start, took out and examined his Havana, and then shook his fist angrily. The entire crowd ran towards him. Sure enough there was a hole through the centre of the cigar, almost cutting it in half. "That's the fourth cigar you've spoiled for me," said the smoking "dude, in a vexed tone, "I wish you'd stop that sort of thing!" As for the other hunters, they looked at each other in mortified silence, and then climbed into their boats and set sail. "That's the most wonderful shot I ever saw," said an old gentleman to the shooter the next morning, "such a risk too!" "Nothing wonderful about it," said the Californian Tell, confidentially, "all you have to do is to have your confederate cut a hole in the cigar with a penknife beforehand. It's a boss scheme!"

Fields and Nash Successful.

The return match with Sergeant Charles Nash and Officer A. T. Fields on one side, and Officer P. D. Linville and Howard Carr on the other, took place last Saturday at the Presidio Range. The shooting was excellent, notwithstanding the disagreeable wind that prevailed at intervals throughout the day. Following are the scores:

Fields..... 200 yards—4 4 5 4 5 4 5 5 4 4—44 300 yards—5 4 5 4 5 4 5 4 5 5—45 500 yards—5 5 5 4 4 4 4 5 5—45 600 yards—4 4 4 4 4 5 5 5 4 4—177 Nash..... 200 yards—5 4 4 4 4 5 4 5 4 5—45 300 yards—4 5 5 4 3 4 3 4 4 4—40 500 yards—4 5 5 5 4 5 5 4 4—46 600 yards—4 5 5 5 3 5 4 4 5—44—175 Total..... 352 Linville..... 200 yards—5 5 5 5 4 5 5 4 4 4—46 300 yards—4 4 5 3 4 4 4 4 3 4—39 500 yards—4 4 4 4 5 3 5 5 4 5—43 600 yards—4 5 5 4 3 5 5 5 4 5—45—173 Carr..... 200 yards—4 5 5 4 5 4 5 4 5 4—45 300 yards—4 4 4 3 4 3 5 4 4—39 500 yards—3 5 4 4 5 5 5 5 5—45 600 yards—4 4 5 5 4 4 3 3 5—41—170 Total..... 243

Target at Petaluma.

On November 16th, there was an interesting shooting match at the Petaluma range, between Mr. Houx, of Company C, and Lieut. Fred Kuhnle. Lieut. Kuhnle gave his competitor 32 points, and was only beaten four points; Mr. Hnox making 440, which added to his 32 made him 472, against Kuhnle's 468. The score:

Kuhnle..... 4 5 5 5 4 4 5 5 4 5—46 4 5 5 5 5 4 5 5 5 5—48 5 5 4 5 5 4 5 5 5 5—45 3 5 5 5 4 5 5 5 5 5—48 5 5 4 5 4 5 5 5 5 5—48 5 4 5 5 5 4 5 5 4 5—47 5 5 4 5 4 5 5 4 5 4—46 5 5 5 5 5 5 5 5 4 5—49 4 5 5 4 4 4 4 4 5 4—43 4 5 5 4 5 5 4 5 4 5—46—468

Target at Sacramento.

Last Sunday, at Sacramento, the following scores were made by members of the First Artillery Regiment at 200 yards.

COMPANY O. Lieutenant Flaherty..... 5 4 4 3 5 5 4 4 5—43 Sergeant Hughes..... 5 5 4 4 4 4 4 4 5—44 Corporal Masser..... 3 4 4 4 5 5 5 4 5—44 Sergeant McNiff..... 4 4 4 4 4 3 3 5 5—44 Captain Neary..... 4 4 4 4 4 4 4 4 4—37 Private Klein..... 4 4 2 3 4 4 4 4 4—36 Corporal Taylor..... 3 4 4 3 4 4 4 4 4—36 Private Ronsir..... 4 3 4 3 3 4 3 4 4—36 COMPANY B. Sergeant Woods..... 4 3 5 4 4 4 4 5 4—41 Private Smith..... 3 3 3 4 4 4 4 4 4—38 Private Lambkin..... 5 4 4 3 4 5 3 4 4—36

Captain Parker, of Carson, Nev., engaged in a contest with Mr. Barrere with the following result:

Barrere..... 4 4 5 5 5 5 5 5 5 5—47 Parker..... 4 4 5 4 5 4 5 4 5 5—45

W. P. Burch's horse, Jim Nelson, broke his leg in a race at the National Jockey Club meeting, Washington, D. C., October 28th, but was not killed, as at first intended, and is now reported to be in a fair way to recovery. When the horse fell on the stretch his owner called on Officer Slack to kill him. "Don't do that; give him to me if you don't want him," said the officer. "It's a shame to kill him." "All right," said the owner; "you can take him, but he won't be of any use to you." Officer Slack took the horse to a stable and put him in a swing, as is customary in treating injured horses. He made a hurried examination of the broken member and found that the right foreleg was slightly fractured. Officer Slack secured the services of a well-known veterinary surgeon and the horse has been under skillful treatment since. A well-known horseman called to see the horse and offered Officer Slack \$150 for the animal. The offer was refused, and the horseman has since offered \$400 cash for him, which was refused also.

A discount of 10 per cent will be allowed on 3 months, 20 per cent on 6 months and 50 per cent on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 60 cents each insertion.

San Francisco, - - Saturday, Nov. 29, 1884.

The Fall Race Meeting.

The race meetings of the Pacific Coast Blood Horse Association are the great turf events of the California year. The only real racing affairs, as at the others there is a combination of trotting and running, and consequently, not purely "legitimate" according to the tenets of those who favor the gallopers and look at the harness division with feelings nearly allied to contempt. This is a peculiar phase of sports in which horses play a prominent part, and though to "outsiders" there is much to gratify in either of the divisions the enthusiasts of the turf can not see any good in the mixing of gaits, and are prone to anathematize those who fancy the American trotter. This feeling is not shared by the knights of the snuky, and they become just as much interested in the doings of the highly bred aristocratic performers as those who have them in charge.

In all of the meetings which have been held by the Association not one can be called more satisfactory than that which closed on Saturday last. The racing all through was good. There were spirited contests in nearly every race. The issues in doubt to the last fraction of a second, and even then the winners could only be placed by the judges, or spectators who had the same points for observation. More than all there was not a shadow of ground for suspicion as to the motive and whatever the temptation to go astray the only thought was to win. Some ascribe this to the certain punishment which would follow transgression, but we do not share in the belief that the rod is necessary to keep people in the right path, and that those having control can only be guided by fear of the consequences of wrongdoing. At all events there was nothing of the sort to mar good feeling and the universal verdict was that the racing from the opening to the close was the best that had ever been seen on the Coast. There were many notable races. In the handicap of one and a quarter miles the fastest time of the season was made, and the contest was so close that there was scarcely half a length between the first and the last. The Baldwin stake was equally as exciting and the time made the fastest on record for the weight carried. The nearest approach to the 7:26 1/2 of Lucky B. was that of Ildewild who ran a quarter of a second faster, but with two pounds less than the schedule now impose, and, consequently, the victory of the Santa Anita horse will take the first place in the calendar of heavy weight performances. That of Freda, two miles, in 3:32, is also in the "top notch." Hindoo ran in the same time with 118 pounds up, and as that was run in August, it may be considered worthy of a higher place than can be given to the daughter of Wildidle. But she galloped in so easily that it is fair to infer that this was not her limit, and had there been anything to press her a fraction of a second, at least, would have been subtracted. While it would have been eminently satisfactory that a California-bred filly had beaten the records, it must rest now on what has been done, and with that we are satisfied. Hereafter we will have a good deal to say of the Fall meeting of the Pacific Coast Blood Horse Association. In the turmoil and tumult consequent on the racing we have little time, and particularly inclination, to amuse farther. Hereafter we will endeavor to show how eminently successful the past meeting has been.

Mr. J. B. Haggin claims April 16th and 17th, 1885, as the dates for his annual sale at Rancho del Paeo, when a long catalogue of high bred stock will be offered.

O'Kelly and Eclipse.

The history of the owner of the famous race horse, English Eclipse, is thus given by the London Field:  
The Fleet Prison, curiously enough, was the starting point of those very successful gamblers, Charles Lewis and "Colonel" O'Kelly. The former was born in the "Fleet," and while there used to repair the raquets. Subsequently his mother became housekeeper to a gentleman, who, at his death, left her son Charles £500 a year. On the strength of this he went in for gambling in all its branches, and eventually became engaged to a Miss Edwards, a young lady possessed of a considerable sum of money. She, too, died, and left him the whole of her money, out of which, it is fair to state, he provided liberally for her relations. All that is known of O'Kelly is that he was born in Ireland; where, or who were his parents nobody ever knew. Arriving in England in 1748, he became a sedan chairman, at £30 a year, to a nobleman living in Hanover Square. His first step upwards was to captivate the affections of his master's wife, with the result that the "Colonel" and her ladyship were sent about their business. The Fleet Prison received him after the money he derived from his attachment was lost at play, and in his confinement he was made potman of the tap. In the discharge of that duty he made another conquest in the person of the notorious Charlotte Hayes, whom O'Kelly eventually married. After about three years he and Charlotte were released, and the former again took to gambling. This time, however, he was more lucky. Wildman, a Smithfield salesman and a friend of O'Kelly, had bought Eclipse of the Duke of Cumberland for 75 guineas and, after much entreaty, O'Kelly was allowed to have first a one-eighth share in the horse, and then a half, for which he gave 250 guineas. Subsequently he bought the remaining half at 750 guineas. On a wager being made that Eclipse would beat two particular horses, O'Kelly, having backed his own heavily, was asked how much he thought he would win by, his answer was that sentence, the origin of which is not generally known, though it has been quoted hundreds of times since, "Eclipse first and the rest nowhere." This was Eclipse's last race, and his owner, when asked to put a price upon him, replied, "£25,000 down, an annuity of £500, and the privilege of sending six mares to him every year." He also stated that Eclipse had brought him in £25,000. O'Kelly's military career began 1760, when he obtained a commission in Westminster Militia, in which he rose to be Lieutenant-Colonel. This was a truly "ragged" regiment from all accounts, the officers claiming almost every nationality under the sun, but hardly one had a character that would bear investigation. When the offspring of Eclipse came on the falling fortunes of O'Kelly were revived, and the victories of Soldier, Mercury, Bondrow, Dunganon, Ticklepitzer and others enabled him to live in great style at Clay Hill near Epsom, where he entertained royal dukes and all the best known people. At this time he was racing as well as gambling, and was lucky at each. Among other races he won the Derby twice, viz. in 1781, with Young Eclipse, and three years later with Serjeant. O'Kelly retained a jockey to ride for him, and one of the stipulations was that "you must not ride for any of the blacklegs." "Very good, but who are they?" asked the jockey. "Why, the Duke of Grafton and all the rest of the Jockey Club," was the answer. At the gaming table one night he was seen turning over a quire of bank notes. He was looking for a "little one, something about £50," he said. On another occasion, when anxious to play for a very large stake, he was asked where his estates were, "You need not fear, I have a map of them here," retorted the "Colonel," and he drew from a bag notes to the value, it is said, of £20,000. Like Hodges he would not allow those who benefitted under his will to gamble, and, like Hodges, he prescribed a five years' forfeiture of income for every act of gambling of which the legatees should be guilty.

Thanksgiving Day at the Bay District.

Four races were run at the Bay District Course on Thursday under the management of the Bay District Association and as the afternoon was a holiday the attendance was large. Three favorites were downed in the four races which was a stroke of good fortune for the short enders not often met and there was happiness among the small buyers in consequence. The following is a resume of the events:

Nov. 29--First Race. Purse \$150; \$50 to second; for two-year-olds; five-eighths of a mile.  
Geo. Howson's g g Ichi Ban, by Joe Hooker, dam Queen, 105 pounds ..... 1  
E. J. Baldwin's cb g Rapido, by Grinstead, dam Experiment, 107 pounds ..... 2  
Jos. Mee's cb f Mischief, by Tbad Stevens, dam Katie Pease 65 pounds ..... 3  
Time, 1:32.

Pools: Rapido \$50, Ichi Ban \$25, Mischief \$5. Won easily by two lengths, half a length between second and third.  
Second Race—Purse, \$200, \$50 to second; for all ages; one mile.  
E. J. Baldwin's b c Gano, by Grinstead, dam Santa Anita, 4 years, 118 lbs. .... Holloway 1  
R. P. Ashe's cb c Prince of Norfolk, by Norfolk, dam Marion, 3 years, 120 lbs. .... Kelly 2  
O. L. Richardson's h g Billy the Kid, by Leinster, dam Lily Simpson, aged, 115 lbs. .... Howson 3  
Time, 1:43 1/2.

Pools: Gano \$100, Prince of Norfolk \$40, Billy the Kid \$25. Won by two lengths, half a length between second and third.

Third Race—Purse, \$400; \$100 to second, \$50 to third; for all ages; two miles and a quarter.  
E. J. Baldwin's h c Lucky B., by Rutherford, dam Maggie Emerson, 4 years, 118 lbs. .... Holloway 1  
R. P. Ashe's b f Patsy Duffy, by Leinster, dam Ada A., aged, 120 lbs. .... Johnson 2  
Jas. Mee's br g Garfield, by Langford, dam by Lodi, aged, 106 lbs. .... Kelly 3  
Time, 4:01.

Pools: Lucky B. \$100, Patsy Duffy \$85, Garfield \$30. Won hand, down by two lengths, a length between second and third.

Fourth Race—Purse \$200; \$50 to second; for all ages; one mile and a quarter.  
S. J. Jones's b b Forest King, by Monday, dam Abbie W., by Don Victor, 5 years, 100 lbs. .... Kelly 1  
T. Lynch's cb f Glendair, by Norfolk, dam O'Glendair, 3 years, 103 lbs. .... Long 2  
P. Siebenbaler's bc Phillip S, by Leinster, dam Lily Simpson, 3 years, 107 lbs. .... Howson 3  
Time 2:11.

Pools, Phillip S \$60, Forest King \$30, Glendair \$20. Won easily by two lengths; Phillip S a poor third.

If this should meet the eye of Otto Adams he is requested to send his address to this office.

Any one having Shetland ponies for sale can hear of a buyer by addressing this office.

Western Two-Year-Olds of 1884.

[Dempsy, in New York Sportsman.]

Nothing has impressed itself more favorably upon my notice than the strength of the two-year-olds of 1884. I don't say they are equal to those of the year that produced Bassett, Spinaway, Hindoo, Crickmore, and other bright lights, among which Eole might be mentioned, but they are certainly stronger than any since that period. While in Louisville last Fall I had a conversation with Mr. Milton Young on this subject, and that gentleman agreed with me entirely. Mr. Young said he did not think the two-year-olds of 1883 belonged to the same class with those of 1884, and cited as an instance that he himself had five better than any in the West last season, viz. Troubadour, Pegasus, Doubt, Bootblack and Harrigan. If performances speak for anything, I don't see how he can be contradicted. This is certainly a grand lot, but they do not comprise all the good ones in Kentucky, to say nothing of those owned in Tennessee, Missouri, Illinois and the Pacific Slope.

Where there are so many good ones, it would be dangerous to say which is the best, and this is doubly true in the great changes that are frequently noticed between two and three-year-old form. As a general proposition, a good two-year-old will make a good aged horse, yet the rule often fails, as anyone who has followed the turf at all can recall in his own experience. To go no further back than this season, take Bob Miles and General Harding, the two by all odds the best of their class in the South and West last year, yet neither worth a song among racehorses at any time during the past season. And what is true of them could be cited in hundreds of other instances. It is true, if a great searcher after truth goes below the surface and makes a thorough examination, he can often find a cause for this change; but the devotee of the turf is rarely a student and seldom has time to make such examinations. He seeks to learn in advance rather than demonstrate a theory which has only come under his observation at the cost of his hard-earned bank-roll. So, in speaking of two-year-olds, we must take them as we find them, and build our calculations upon their achievements since their advent upon the turf.

Judging from this standard, in the South and West the foremost performers are Favor, Troubadour, Pegasus, O. B., Red Stone, Volante, Bonanza, Bootblack, Verano, Ten Stone and Keokuk; while the best among the fillies are Lizzie Dwyer, Mission Belle, Lady of the Lake, Wanda, Rhadma, Belle Pate and Anna Woodcock. Of course, each of these has admirers who will insist the horse he prefers is the best among them all, whether it be Favor or Anna Woodcock. I don't mean to name them thus as the best and the meanest of this array, for while I think Favor the best I certainly do not class Anna Woodcock as last on the list. Favor has started eight times, of which he was five times first, once second, and twice unplaced. In the races won by him he beat all the best of his class, excepting Mr. Baldwin's lot, and in his races in which they started, and wherein he was unplaced, the colt was notoriously unfit. He had just left Covington, at which place he could not be started at all; yet his owner thought so highly of his horse that he unwisely tried him in the Chicago Stakes, although he knew his colt was far from fit. Since early last March, when first I saw Favor work at Louisville, I have known he was a great racehorse, and so told the readers of *The Sportsman*, when the tips were going the rounds on those wonderful two-year-olds that have since done nothing; but I was never so fully impressed with his powers as I was this Fall by his performance in the race won by Bonanza. Just before the start Mr. J. D. Christy, owner of Bonanza, came to me and told me to back his horse, for that, barring accident, he did not think he could lose. I thanked him for the information, but told him I had at last taken my own advice and ceased betting; adding, however, that if I had not, I did not think I could back Bonanza, as I believed Pegasus would win. Mr. Christy said: "You were never more mistaken in your life: neither of Mr. Young's colts will get a place. Favor is the horse I have to beat, and as you won't bet I want you to go up in the stand with me, not to watch my colt, but to see what a great racehorse Favor is; for I tell you now, that he is not right, and this I know. If he were in condition neither my colt nor any of the others would have any show, notwithstanding he is carrying 117 lbs. in this stiff mud."

I had heard before the colt was off, and in fact it was only determined to start him at the last moment, so of course I could not believe he had any chance whatever. The rain had been falling for four days, the mud was very deep and stiff (strange as that may appear), for the Louisville track is different from almost all others—it dries out very quickly, and it takes a great deal of rain to make it very heavy, and this track was about as heavy as I have ever been it. The field in this race was of unusual strength. Bonanza got much the best of the start, while Favor had a very poor end-off, but he cut his horses down one by one until well in the homestretch, when he ewered very badly, and yet ran a good second. All things being equal I am sure he would have won, although giving weight to all the party. As Mr. Christy predicted neither of Mr. Young's colts was placed. Pegasus seems to be somewhat uncertain, for, although a horse of considerable merit when just right, he is not right often enough to suit me, but even at his best he does not equal several of those named. His race at Nashville in the Spring was considered very extraordinary, still it was hardly a fair test, as he ran down the beaten path on the outside. I consider the race at Louisville which he won, and on which Mr. Young bought him, as his best venture, and in that race Keokuk, with 110 lbs., was the best horse he met. Colonel Hnn's colt did not get a place, but could have been third had he not have pulled up. He and Pegasus got very much the worst of the start yet Pegasus ran first, Jim Guest (100 lbs) second, and Keokuk could have been third. This was a true race, and, judged by Jim Guest's and Keokuk's subsequent performances, Pegasus can't be so good as Favor, Troubadour, Bonanza, and perhaps a couple more of the colts. Keokuk is a colt of merit, although he did nothing this Fall, as far as the record shows, but just prior to his shipment from St. Louis, with 94 lbs. up, he made a mile in 1:44, while the best Davis' April Fool or any of the aged horses could do over the same track was 1:47; yet Keokuk was not good enough to win at Louisville or Covington, and in fact did not get place, although he showed well in each of his races. Troubadour's mile in 1:43, with 118 lbs., was certainly a great feat, but still I do not think him equal to Favor, nor even equal to Redstone, judging the latter by his Spring performances. People who witness a great race are liable to go wild over the greatness of the present performance and forget still greater which have preceded it. Before going to Covington Mr. Young tried Bootblack, Troubadour, and Doubt. The track was rather heavy, and the colts were ridden by his stable boys. I don't know the weight carried, but judging from Troubadour's Covington race I think they must be nearly equally weighted. In that

triel Boothlack beat Trouhadour a head, and he beat Douht a short length. Now, at Covington, Boothlack, with 110 lbs. up, could have beaten Troubadour, with 118 lbs., had he not eased up to let the latter win, while Jim Guest, with 102 lbs., was a good third. Yet Pegasus, with 110, heat Guest, 100 lbs., very easily, whilst Douht, 110 lbs., was nowhere. Pegasus certainly gave Guest a ten-pound beating, yet I can't believe him as good as Bonanza, but Favor gave Bonanza 11 lbs. and beat him a mile in 1:45, which seems to show that Favor outclassed Troubadour even at his great race at Covington. Of course he outclassed him before, as he beat the son of Lisbon whenever he met him. That the race in 1:45 was one of real merit can be shown from Bonanza's work. This colt ran three-quarters of a mile in work, with his shoes on, 1:14 lbs., up the week preceding the Lexington meeting in 1:18, and a little later went the mile out, 1:12, in 1:45; in the last trial he was plated, but worked alone. Then he came out in his race with 102 lbs., and was second to Favor (113) in 1:45. My doubt of Favor is not in his ability, but he does not seem as reliable as he should be. He does not hold his form like such horses as Hindoo, Miss Woodford, or George Kinney, nor do I believe he classes with any of these even at his best, but that cannot be told until he has more age and can be tried at a greater distance, with heavy weights and against some of the older horses.

It is quite difficult to draw a line on Verano and Volante as compared to these colts, as it can only be done by their Chicago races, in which Boothlack, Favor and Redstone were not fit, and through Harrigan while East. At Chicago Joe Cotton and Exile showed pretty well with Baldwin's pair, while Harrigan was about as near to them at Saratoga, which makes me think Baldwin's colts too good as the best of those I am now discussing, for Cotton, Exile, and Harrigan could not possibly show with Favor and Troubadour, Bonanza and Pegasus, Redstone and O. B. The latter did too little to form a judgment upon, yet what he did was of high order, though not so good as Redstone, a colt that I should like all the better for not having been run to death as a two-year-old.

Answers to Correspondents.

Questions answered only through these columns. No replies by mail or telegraph.

Geo. W., Wakesha, Wis.

1. In either 1881 or 1882, I saw one or more races trotted by a bay mare named "Empress," that was entered in your name. Can you tell me where this mare is now? What her age and present record is? Is she in sound and in good shape, and if she is for sale what price would you pay her? Also her pedigree, if known. I ask because I have a pet theory about breeding, and I know a horse that, in connection with a mare of "Empress" form, etc., will test that theory, and if the mare can be bought reasonably, would like to make the experiment. 2. Also, if convenient, please give me the same information about a sorrel mare named "Magdalena," I think. She was owned at Stockton, I think, when I saw her. Answer.— 1. Empress was by Whipple's Hambletonian; her dam, Katy Tricks. If still alive she should be eight or nine years old now. She has a record of 2:24, made in the Summer of 1881, and was sold to E. S. Stokes, now of New York. We have no knowledge of her movements or whereabouts since the sale. 2. You probably refer to the chestnut mare Magdallah. She was bred in Stockton, by Jas. M. Learned, and was foaled in 1873. Got by Primus, son of Marshall Chief, ne by Vermont Hero. Her dam was Maud, a pacing mare, by Mambrino Rattler, son of Biggart's Rattler, her dam, by a son of Vermont Black Hawk. Magdallah has a record of 2:24 and is owned, we believe, in this city. A letter addressed to I. N. Killip, 116 Montgomery Street, San Francisco, would probably put you on the track.

Louis G., Sacramento, Cal.

I made a bet to-day with a friend of mine that the time made by Lucky B. in the Baldwin Stake 7:26 1/2 has never been beaten in California with the exception of Wildidle in a race run at either single dash or four miles and repeat in this State. We agreed to leave same to you. Please answer through the BREEDER AND SPORTSMAN? ANSWER—You are correct. Lucky B.'s 7:26 1/2 has never been beaten anywhere with the same weight up.

Belle Echo's Texas Campaign.

The following is from the letter of the special Texas commissioner of the New York Spirit dated Fort Worth, Nov. 11: As the boys drop in from the track to-night I get their ideas about the speed shown before the rain. Wagner says: "They went some, I tell you. I can go as fast here as anywhere down East." B. J. Johnson remarks: "There isn't a horse on the grounds that can't beat his record over this track. I've timed some of them so fast they scare me." Mr. Tins says: "If the boys beat me here they will beat 2:20."

"Do you fear a record on the mare?" I asked. "No," was his rejoinder; "I would like to have it 2:15 or better. I never could make money skinning around to shun a record. I have seen a good deal of trotting, and have made up my mind that it is a delusion. If I don't win to-morrow I'll give them another trial at Waco, then go straight home. Say one word for me: While I have no special reason to complain about the fellows pitted against me, I want to say that McCarthy has driven square all the way through. When I couldn't win at Gainesville I was glad to see him win."

For many years to come the memory of L. H. Titus and Belle Echo will remain with the Texans. They honor him because he gives them a horse-race every time. The third race was the one in which the most interest centered and upon which the most money was placed. Echo was the choice at \$25 to \$10 for the field, and both ends kept up the clip merrily. It was no sure thing for the mare, but she had shown a terrific trial over this track. Mr. Titus wanted to win regardless, and his backers were, therefore, sanguine and sandy. It was no game of bluff—the money talked for itself.

The first heat Echo led from one end to the other. The heat was not exciting, save just at the finish, when Felix and Wright had a hard struggle for second place. Wright saving the place by a briefness.

The second heat contained a good deal more life and anxiety. As they passed the wire the first time Wright was leading and going steady as a clock. By the way, he has in a great measure quiet that constant dancing, for which Andy Coleman deserves a heap of credit. Echo was second, Felix third, France too far back to make a fight for it. Around to the lower turn the three leaders were close together. As they straightened for the wire the mare broke; the other two

surged ahead and had a hot finish, both going into the air near the distance, but Wright was the first to recover, and won heat by a length.

The third heat Felix got the best of the send-off, France was lapped on his wheel, then Wright, with the mare last. So they made the turn and shot down the backstretch. At the half France had poked his nose in front of Felix, the other two right near by. At the three-quarters France was slightly in the lead, but when they swung into the homestretch Echo and Felix ranged up even with him, and thus they weaved together. The mare broke seventy yards from the wire, Felix and France going for each other gamely, but Felix was too much for the other fellow.

The fourth heat Wright, who was going the fastest when the word was given, took the pole at once, which he held to the quarter. Felix and the mare were going pretty well, and before they reached the half had passed Wright. The mare outtrotted the party around the lower turn, and was not headed coming to the wire. Felix was at himself and came in a good second.

The last heat was trotted in the dusk of the evening, the mere proving the better horse.

Purse, \$800; 2:20 class.

Belle Echo b. m. by Echo	L. H. Titus	1	3	3	1
Felix ch. g. by Nutwood	W. H. McCarthy	3	2	1	2
Deck Wright b. g. by Hinsdale Horse	A. Coleman	2	1	4	3
Albert France b. g.	F. Van Ness	4	2	4	4

Time, 2:21 1/2, 2:22 1/2, 2:21 1/2, 2:23 1/2, 2:23.

Pilot, Jr., and Mambrino Chief.

I read with a good deal of interest the account of the purchase and history of the advent of Mambrino Chief into Lexington, Ky., which city at that time was my home. I am induced to write this because of the slur thrown at the little Canadian, Pilot, Jr., whom I christened and had been the half owner of up to two or three years previous to his going to Lexington to make a season in the hands of Mr. W. J. Bradley. Pilot, Jr., has become famous through his descendants, so much so that I cannot consent to let it go to the public that he was but a little plug, and that Mambrino Chief could trot all over him. While in our possession (Mr. D. Heinsohn end myself) I trotted Pilot five races and lost but one, the last, which was won by Dr. Herr's bay gelding Neddie, afterwards called O'Blennis, a race of four-mile heats, which O'Blennis won, Pilot second, Sir Peter Teazel, rung in as Stranger, by Jessie Eoff and Murdock, distanced. I handled Pilot, Jr., for all his races except the last one on the road, without ever holding the watch on him on the track, except for the four-mile race, when I rode him three miles rather to see whether I could last through a race of that length than to see what Pilot could do, because we were perfectly satisfied that he had plenty of speed and could stay all day. Pilot showed a great deal of the thoroughbred in his qualities. Neither he nor any of his colts would stand the whip or harsh treatment.

When Mr. Jas. B. Clay bought Mambrino Chief and it was given out that he had paid a larger price for him than had ever been given for a trotting stallion in Kentucky, we, the horsemen, were all on the qui vive to see him, and everybody was expecting to see a great trotter.

We were all disappointed, however, when Si Downing arrived with the horse, and showed him by the bridle only for months after his arrival, and many doubts were expressed as to whether he was a trotter or not.

On the "court day" mentioned by Mr. Thorne, I well remember the crowd that gathered around the Chief, and I also remember that Will Bradley, knowing that Pilot, Jr., and I knew each other, requested me to get up behind him, and, as he said, let the people see a trotter; that I did so, and soon drew the crowd away from Mambrino Chief, and won loud applause from the crowd, notwithstanding the fact that the road was too short for me to let go his head. When Pilot's challenge was accepted by Mr. Clay he was placed in the hands of Wesley Jackson, a high-tempered negro man to handle, and Mr. Heinsohn, who then owned him, wrote, requesting me to look after the horse and advise Wesley as to his management.

I gave such advice as I thought best; but Wes went directly the reverse way, so much so that ten days before the time appointed for the race Pilot could not trot a mile over my track, where the trial took place, in three minutes.

This, for a horse that could play with a 40 gait, was a bad showing. I should state that Gordon Abrams caught Pilot, the third mile on the trial I rode at Oakland, in 2:41.

Dr. Herr handled Mambrino Chief for his match and drove him an exhibition mile for the forfeit in 2:42 over the Association course at Lexington and not "through the woods at Ashland." As to speed, Pilot could not, in shape, better than a 30 gait; but was a nervous, hard horse to manage in a race. Now that the queen and king of the turf, Maud S. and Jay-Eye-See, John Morgan and many other good ones have descended from the loins of the "little Canadian plug," I think it but justice to him to say this much in his favor.—Cor. Turf, Field and Farm.

THE KENNEL.

California Coursing Club.

This club held their Fall meet at Merced last Thursday and Friday with fine weather and superb sport. The ground was very favorable to the horses and the runs were in almost all instances long and undecided courses many. The following is a summary of the results:

S. Shear's Lolita beat D. Shannon's Quick Return; S. Shear's Ellitta beat J. W. Sharkey's Bute; H. Hart's Let-Him-Go heat Mercedites' King John; J. Hughes' Speculation beat J. Franklin's Lady Woodruff; J. Perigo's Wee Lassie beat Mercedites' Limerick Boy; W. Cronan's John Hughes beat W. F. Fallon's Lucy Glitters; Mercedites' Muldoon beat P. Lyman's Penelope; John Hughes' Emma defeated J. F. Carroll's Dan Jones, after an undecided course; E. A. Packer's True Blue beat J. Franklin's Thornhill, Jr.; J. F. Carroll's Monarch beat W. R. Yan's Talleyrand; J. Hughes' Belfast Maid beat J. F. Carroll's Apache; J. C. Murphy's Stonewall Jackson beat D. Shannon's Stray Shot; D. Shannon's Gliding Maud beat W. J. Bryan's Duke of Thornhill; J. Hughes' Lady Franklin beat Livermore's Wild Mout; D. Shannon's Maater Pippin beat P. J. Murphy's Fannie; J. M. Farrelley's Pennie beat P. Lyman's Lillie Jackson.

Second Ties—Let-Him-Go beat Lolita; Speculation beat Ellitta; Wee Lassie beat John Hughes; Emma beat Muldoon; True Blue beat Monarch; Belfast Maid beat Stonewall Jackson; Lady Franklin beat Gliding Maud; Master Pippin beat Pennie.

Third Ties—Speculation beat Let-Him-Go after an undecided course; Wee Lassie beat Emma; True Blue beat Belfast Maid; Lady Franklin beat Master Pippin, after an undecided course.

Fourth Ties—Wee Lassie beat Speculation; Lady Franklin beat Wee Lassie after an undecided course. Lady Franklin was awarded the first prize, \$75 and a gold cup; Wee Lassie the second prize, \$50; True Blue third prize, \$30, and Speculation fourth prize, \$20.

Eastern Field Trials.

On Thursday, Nov. 14th, the sixth annual trials of the Eastern Field Trials Club opened at High Point, N. C., the members' stake being first on the programme. The attendance was unprecedentedly large, partially owing to fine weather, but principally because of the rapid growth of public interest in this branch of field sports. The running of the members' stake consumed the greater part of three days, Thursday, Friday and Saturday. The quails were found to be quite plentiful, and with fair weather to facilitate the progress of the trials, the members' stake was disposed of in good style. The dogs performed well. Out of twenty-one nominations there were fifteen starters—twelve setters and three pointers. Following is a summary of the running in the members' stake:

W. A. Coster's Buckallew (Druid—Ruh), orange and white setter dog, beat B. F. Wilson's Dashing Novice (Dash II.—Novel), blue helton setter bitch.

W. A. Coster's Brimstone (Gladstone—Swaze), lemon and white setter bitch, beat F. R. Hitchcock's Vision (Croxeth—Vinnie), liver and white pointer bitch.

Bayard Thayer's Slocum, black and tan setter dog, beat D. S. Gregory's Lucia (Croxeth—Belle), liver and white pointer bitch.

J. O. Donner's Princess Helen (Thunder—Bessie), orange and white setter bitch, beat Bayard Thayer's Rue (Snapshot—Ruh), lemon and white pointer bitch.

Chas. Heath's Diana II. (Dash III.—Diana), black and white setter bitch, beat B. F. Wilson's Katie D. (Count Noble—Dashing Novice), blue helton setter bitch.

J. W. Orth's Gertrude (Gladstone—Nellie), blue helton setter bitch, beat Geo. T. Leach's Corinne (Peter—Coutess), red Irish setter bitch.

Geo. T. Leach's Brock (Bosco—My Dnchess), red Irish setter dog, beat Chas. Heath's Belle of the Ball (Pontiac—Rhoda), black, white and tan setter bitch.

J. W. Orth's Gus Bondhn (Dashing Bondhn—Novel), black and white setter dog. A bye.

SECOND SERIES.

W. A. Coster's Buckallew beat Bayard Thayer's Slocum. W. A. Coster's Brimstone beat J. O. Donner's Princess Helen.

Chas. Heath's Diana II. beat J. W. Orth's Gertrude. Geo. T. Leach's Brock beat J. W. Orth's Gna Bondhu.

THIRD SERIES.

Buckallew beat Diana II. Brock beat Brimstone.

FOURTH SERIES.

Buckallew beat Brock. Washington A. Coster's Buckallew won the first prize in the Members' Stake—the Eastern Field Trials Cup.

In the final heats to decide upon the winner of second prize, Dashing Novice beat Diana II., and Brock beat Dashing Novice. Geo. T. Leach's Brock won second prize.—Turf, Field and Farm.

The biggest dog at the late New York dog show was a great fawn colored, big-boned mastiff known as Hero, II., weighing 180 pounds. He seemed to be in his second childhood. He is full of play, but is too big to get any fun out of it. Daily he was exercised in the ring with an agile deer-hound. The hound and the mastiff were an excellent team. The hound would sneak up, give the mastiff's tail a nip, and before the big dog could turn around the shaggy dog was at the other end of the garden. The mastiff always gave chase, but the deer-hound invariably met him, jumped over him, and was at the other end of the ring before an owl could wink. A mastiff can't jump, whatever else he is good for. And the hound would perch himself on a table, chew the mastiff's nose as he put his tail over the edge, and wriggle his tail in glee. This daily exercise of these two dogs has been the subject of several sketches by prominent artists, which, they claim, will develop into paintings.

Pacific Coast Field Trials.

It is gratifying to me the interest taken in field trials by the sportsmen of California, as evidenced by the number of entries and the quality and breeding of the dogs. It will also be interesting as a test of the superiority of pointer or setter on quail. All that is wanted to make the meeting a perfect success is fine weather, plenty of birds and competent and thoroughly impartial judges, as without them the whole affair will degenerate into an unsatisfactory muddle. We would suggest that the judges be furnished with printed cards, so that they could make notes of the points of merit or demerit obtained by each dog, and hand a copy to each contestant after a heat is decided. "LAVERACK."

Fox Terriers.

Mr. W. Greer Harrison, of this city, has received from the Brocklebank Kennels, Cheshire, England, a brace of very fine fox terriers. The dog, Spot, is by Buff, (Joe-Nettie), out of Nell. The bitch, Merry, is by Sam, (Tyant-Vixen), out of Gypsy, (Mecdongal Boy-Jess). They are of the highest type of the class, Sam, Tyant, Vixen, Gypsy, Maccdongal Boy, Nell, Buff, Joe and Nettie having all been first prize winners.

CRICKET.

Cricket Match.—San Francisco vs. H. M. S. Swiftsure.

A cricket match will take place to-day at the Olympic Club Grounds, Oakland, between a representative San Francisco team and a team selected from the officers of H. M. S. Swiftsure. It will be remembered that a match played about a year ago, resulted in a splendid game and was largely attended by a fashionable audience. All lovers of cricket are cordially invited to visit the grounds to-day. The Swiftsure team will be composed of the following gentlemen: Captain Brand, Lieut. Bethel, Lieut. Garforth, Messrs. Luard, Neat, Petch, Palmer, Home, Fowler, Dawson and Lieut. Shortland. We are unable to give the list of local players. The game will start at 10 o'clock sharp and will end at 4:30. As no admission money is charged for cricket games, the audience will no doubt be present.

## HERD AND SWINE.

### A Talk About Cows.

I do not design in this article to pass upon breeds, although I shall refer to some of them, but I shall call attention to several points, which, in my judgment, the farmer's cow ought to possess. She should be a good size, that she may produce a calf that will be profitable to raise for beef, if a male, and also that she herself may be profitably turned into beef as soon as by age her milking powers show signs of failing, and here I wish to make this point. A majority of farmers keep their cows too long. I believe that except in the case of those which prove extraordinarily profitable for milk or butter, or possess some qualities which render them superior, it will be more profitable to fatten cows at from five to eight years old than to milk them longer. If you will look at the market reports in any of our papers you will find the poorest grade of cattle quoted at from \$1.75 to \$2.55 per hundred, and in the same papers you will see good fat cows quoted at from \$4 to \$5 per hundred. In visiting the stock yards I have seen pens of old bony cows, with wrinkled horns, and protruding hips, and have ceased to wonder at these low quotations. Aside from the difference of two cents per pound or more in price at selling time, these cows have often been kept for some years at a loss, and if sold five or more years sooner this double loss might have been avoided. If a cow milks hard or does not prove to be gentle, I never milk her more than one season. If she is a fair, ordinary cow, I turn her for beef when in her prime, but occasionally I find a cow that possesses such a combination of valuable qualities that I keep her to old age, and I have kept such cows at a profit till nearly twenty years old.

Another point I will make is, that for the farmer it is more desirable that the cow give a large amount of milk, than that it be very rich. I know this is contrary to the general opinion, and that the fact that a small quantity of milk will make a pound of butter in ordinary considered decision of a good cow. I affirm that for the farmer the cow which gives four gallons of milk a day, from which ten pounds of butter a week is made, is worth more than the one which produces the same amount of butter from two gallons of milk per day. The average price of butter is so low that when we take into consideration the labor to produce and prepare it for market, there is often a greater net profit from the skim milk fed to stock than from the butter. If I have described the cow most profitable to the farmer, she certainly is not a Jersey, for most of this breed are undersized and give but a moderate quantity of very rich milk. In addition to this, her milk, though rich in butter, is quite poor after it has been skimmed, so that it is worth much less for feeding than that of some other breeds. I have found it a decided advantage to the quality of the product to have one Jersey cow to each two or three others in the herd, as their milk gives butter of a better color and firmer texture than from most other breeds.

After careful experiment I conclude that, as a rule, more profit can be had from a cow that comes in fresh in the Fall than in the Spring. There are several reasons for this: 1. The cow is usually in better condition in the Fall than in the Spring. After a cow has run dry on pasture for two months or more in the Summer, she is usually in better flesh and condition for calving and giving milk than if she comes in in early Spring after months of dry feed. 2. Again, the cow that calves in the Fall goes on fresh pasture just at the time she would naturally begin to shrink in her milk, and the season of flush milk is prolonged. 3. The average price of butter is considerably greater from October to May than from May to October, so that is fresh in the Fall. 4. The most disagreeable season of the year to milk, and the hardest to make a good quality of butter is during the heat of Summer, and at this season it is wise to produce only what the family requires. 5. I find a Fall calf can be raised with less trouble than one born in Spring, for the reason that it does not require the same care to Winter a calf that is a full year old, and has had an entire season on grass, that it does the Spring calf that is weaned in the Fall, and must spend six months on dry feed before it goes to pasture. The profitable way to fatten a cow is to fatten and milk at the same time. If you do not breed the cow she can usually be milked at a profit from eighteen months to two years, and occasionally you will find one that can be milked a much longer time. A cow in her prime—say from 6 to 8 years old—that has given milk a year or more can be milked all Winter and dried the first of April, and in four weeks go to the butcher at the season of the year when beef is always scarce and highest in price. The fattest cows I ever sold were milked up to the day the butcher took them, and I calculated that the milk through the Winter paid the entire expense of fattening. I have often bought in the Fall a thrifty cow—with the marks of a good feeder—that under the treatment she was receiving, was giving but three or four quarts of milk a day, but under full feed soon increased to two gallons and kept up the flow till she went to the butcher in the Spring, and I usually sell at an advance of from \$12 to \$25 above cost. The quality of the milk from a full fed farrow cow is very superior to that from a fresh cow. I have found this plan of milking for a long time without breeding especially valuable with old cows. Occasionally one gets hold of a cow that possesses so many valuable qualities that he wishes to keep her as long as possible. After such a cow passes her prime, breed her to come in in the Fall when in good order, and then feed her up as to keep her up and milk as long as she will pay for keeping. I have milked for thirty-seven months, and have known cases where a cow has been milked for five years without breeding.—Waldo F. Brown, in *Country Gentleman*.

### Mode of Making Dutch Cheese.

We clip the following extract from one of our English exchanges:

There are few cheeses more popular among the poorer classes in this country than the round Dutch, or, as it is known in its own country and in the trade in England, the Edam. The following is a description of the system of manufacture. The milk is strained through two sieves—one finer than the other—into a round wooden receptacle or vat, and the rennet added at a temperature of 90 to 94 deg. Fahr. in Summer, and 94 to 96 deg. Fahr. in Winter, the quantity used varying with different makers, but it should be of such a strength that coagulation will be effected in not more than a quarter of an hour's time, in which case a cheese of the best quality will be manufactured. The material used for coloring is mixed with the milk when the rennet is added, this, too, varying in quantity according to the time of the year at which the cheese is made, the richness of the milk, and other circumstances. The mass is now broken up by means of a brass frame, to which about a dozen wires parallel to each other are fastened at both ends. It is also provided

at one end with two handles, and is inserted and worked in the curd in a vertical manner. When the lumps have been allowed to deposit themselves, the cheeseman should take two bowls to extract the whey, and then unite the whole by working with his hands. The larger bowl should then be weighed with a weight of some 20 lbs. to 40 lbs., and placed upon the contents of the vat, after which the curd may be put into the moulds. In doing this part of the work, the cheeseman should take two handfuls of curd at a time, and thoroughly knead them before placing them inside, and so on, until the whole are filled, using, in Summer, a little salt during the process to prevent excessive fermentation. Each mould should be provided with a hole and plug at the bottom, so that all the whey which collects there may be drawn off. In a short time the cheeses are dipped for a minute or two in a quantity of fresh whey, the temperature of which in Summer should be 129 deg. Fahr., and in Winter 131 deg. They are then put back into the moulds, afterward taken out and turned, folded in a linen cloth, and again replaced. They are next pressed for eight to twelve hours, the pressure being at first equal to double the weight of the cheeses, and increased according to the time they are to be kept. Other moulds are now used, into which the cheeses are put without any covering, slightly salted on their exposed surface, and are placed in boxes standing on an incline. Next day they are taken out of the moulds, rolled in salt which has been wetted a little, and again put back into them, the operation (which should be conducted in a room the temperature of which is 68 deg. Fahr.) being repeated daily for a week or more, the cheeses becoming at the end of that time salted throughout their entire body. They are then steeped in the brine which has been collected during the salting process, and placed upon shelves in the cheese-room in position according to their age, being turned once a day for the first four weeks, every two days for the second four weeks, and once a week afterward. When they have remained here for about a month they should be soaked in water for an hour or two, the temperature of the water being 68 to 77 deg. Fahr. They should be then washed, brushed and dried, and again placed upon the shelves, these operations being repeated at the end of a fortnight, and luscious oil also used for rubbing them. The temperature of the room in which they are finally deposited ought not to be lower than 58 deg. Fahr. in Winter and 68 deg. Fahr. in Summer. The Dutch cheeses which are so largely imported into this country are colored with a mixture consisting of linseed oil and a small quantity of annatto. The whey extracted in the process of manufacture is utilized in making butter and in other ways. It is frequently remarked that the Dutch cheeses of all kinds are much inferior to what they used to be some years ago.

### Cause and Remedy for Bloody Milk.

This trouble is one of the most frequent in the dairy, and is one of the most difficult to manage. After having investigated it and experimented with it carefully, I came to the conclusion that it was a constitutional defect and depending upon defective milk secretion. This made it necessary to investigate it physiologically to find the cause of it. No doubt it may be produced occasionally by injury, but in this case the bloody appearance of the milk is wholly different from that of the usual and unexplained trouble. When a cow is injured by blows or by violence of any kind, as chasing by dogs, riding each other, etc., the milk is streaked and mixed with actual blood, which differs very much from the usual red fluid, which is not apparent, or scarcely so, until it separates from the milk at the bottom of the pan; so that the difference between the accidental and the constitutional causes is easy to distinguish. The red fluid in the latter case is not blood; that is, under the microscope it presents quite a different appearance; and the strings of red blood globules which are seen in blood did not appear. Moreover, it will not form a clot, and fibrine cannot be produced from it. It is, in fact, milk in its transitive stage from blood, uncompleted and secreted before it is wholly changed. It contains albumen and no casein, but the fatty globules of the sugar exist in it about the same proportion as in milk; and just here comes in a very pertinent fact, well known to physiologists, viz., that "potash is perfectly indispensable to the formation of milk from the blood, because it is the agent by which the albumen of the blood is converted into the casein of the milk in the body of the cow" (Playfair). This is a most important thing for dairymen to know, because it is a key to a right system of feeding for milk product, and will enable them to choose such foods as are rich in potash as the best means of increasing the yield of milk, and for avoiding this very prevalent trouble, which we are here discussing. For if a cow is fed with food rich in nitrogen, by which blood rich in albumen is produced, and there is a deficiency in the indispensable potash, it is quite reasonable to expect this very result, viz., a partly formed milk, or milk in which the elements of blood exist to excess; and these elements may carry with them the red coloring matter of the blood, along with the excess of albumen; or the albumen alone may be excessive in the milk, and this will give rise to many difficulties which occur in the dairy from this unsuspected cause. It would occupy too much space if I were to mention a small part only of the tests I have made in this direction, as well as in others, in regard to the effects of feeding upon the milk of cows. But one in particular will perhaps be interesting. It was the case of a pure-bred Ayrshire heifer with her first calf. I was then feeding cottonseed meal and malt sprouts, the most highly nitrogenized food we can use. This heifer's calf refused the milk which seemed to be good at the first milking.

None of my calves ever sucked, but all have been taught to drink from the first. The milk was set aside, and in a short time separated into two layers—one the rich yellow colostrum, and the other a red fluid like blood, and about half of each. This heifer's milk remained so for several weeks, during which I waited patiently for a change. I then changed her food, giving malt spirits (containing 2 per cent. of potash), linseed cake meal (1½ per cent. potash) and rye bran (2 per cent. potash), and no cottonseed meal. The milk gradually improved until it could be set for cream. I then gave one-ounce doses of carbonate of potash (the common saleratus), choosing this rather than the commonly-used saltpetre (nitrate of potash), and in two weeks the red coloring matter wholly disappeared.

Saltpetre, in one-ounce doses, has long been a common remedy among dairymen for this trouble; but it invariably acts upon the kidneys too much, and so reacts unfavorably upon the milk production. I think if your correspondent (page 842) and others who so often complain of this trouble will follow out this plan, and will guard against giving cottonseed meal, but use more linseed and rye bran, they will be greatly relieved from this trouble. One more point should not be missed, which is that there are several weeds frequently found in pastures which seem to cause this trouble and others, and these, as indeed all weeds, should be carefully exterminated.—H. Stewart in *Country Gentleman*.

### Late Fall Management of Pigs.

There is probably nothing in farming more diversely managed than pig feeding, in no two sections alike, and you might almost say, by no two farmers alike.

One has a clean, dry, warm and well-ventilated pen, with everything convenient for feeding or cleaning. In such a pen, as soon as the cool weather sets in, the pigs eat their food and rest as comfortably as in Summer. Animal heat is kept up at the least cost of food, and the pigs put on weight at the least cost of food.

One who has such a pen of pigs, will be found to have studied the value of the different foods, and make a point to grow or purchase a variety to suit their taste, promote growth and health. Although Indian corn is the best single fattening food grown in this country, or perhaps any other, yet as peas and corn are better than either alone, so oats and corn in equal weight, wheat middlings and corn, linseed oil-meal, middlings and corn, one of the first to four of the last two, or in the South, decorated cotton-seed cake meal with oats and corn, in the same proportion as in the last, and many other combinations of food will be found to produce excellent results in pig feeding.

In a good pen, with a variety of food, pigs will go on growing and fattening in November just as well as in September. They make a steady progress without regard to the weather. And the experienced pig-feeder has learned that all his efforts to make the pigs comfortable, and to furnish them with such food as their appetite craves, is paid for more liberally when he sends his pigs to market.

But another pig-feeder reverses all this. His pigs are not "coddled" with a comfortable house, he does "not go into any of that nonsense." His pigs can stand the weather, and they are fed in an open lot, subject to winds and rain or snow storms, or whatever else comes. He does not even have a floor to feed on, but the corn is thrown into the mud and the pigs dive for it. He has, in fact, no real conception of what results from his mode of feeding. His pigs stand in the mud hours every day, trying to get food enough to keep them warm. In a rain or snow storm their hair and skin are soaked, and the food they eat must be expended in evaporating this water or keeping their bodies warm, and the consequence is, if the weather is bad, they do not gain in weight from all they eat, and he expends all this food to do what a comfortable pen would do—keep them warm. But he is profoundly ignorant of the real situation—does not believe that this food is all wasted. All he observes is that his pigs do not grow as fast as they should, but he lays this to the pigs, and not to his own management. The agricultural press can do little or nothing for this class of pig-feeders, because they do not read any such paper. Their reform must come from intercourse with those more intelligent.

There is still a large class who let their hogs follow cattle and eat the undigested corn from the droppings, and this often proves profitable, when the weather is not bad. But it is somewhat difficult to have a shelter for hogs when following cattle.

Yet when the field in which the cattle are fed is not too large, there could be shelters made just outside the fence, and openings made for the hogs to go through, and the hogs would avail themselves of this shelter at night and in storms. A shelter to break off storms is so easily made with the aid of corn-stalks and poles, that there seems no excuse for not providing it. Such a shelter should also be made for the cattle inside the lot fence. Most people have ingenuity enough to devise these shelters. Such shelter would make a large difference in the gain of pigs following cattle, especially in a stormy season.

When only a few cattle are fed in this way there can hardly be a reasonable excuse for not having a good shelter for both cattle and hogs. And in that case, a much better result would be produced by running the shocked corn through a cutter, and reducing stalks, ears and all to a fine condition, and feeding it all in troughs. Not quite so many hogs could then follow the cattle, because they would digest the corn better, as well as more of the stalks.

The hog crop is very important, producing a large revenue to the farmers of this country, and we hope to see the system of feeding constantly improved, that its profits may be greatly enlarged. The pig is, no doubt, the greatest economizer of food among farm animals—that is, it takes less food to put on a pound live weight on the pig than upon sheep or cattle, and the price of the pig, live weight, is generally higher than that of either sheep or cattle, thus producing a larger profit. Surely we will pay farmers to study closely everything relating to feeding pigs, improving their pens and their rations, so that 30 lbs. may be reached at the earliest date—never going much beyond 300 days—marketing the pig as soon as he reaches that weight. We have feeders who have no difficulty in reaching this weight at this age, and they are satisfied with the profits of the business.—*Live Stock Journal*.

### Model Stock Farm in Minnesota.

A correspondent of the *Dundee Advertiser* gives in that paper an account of Mr. J. J. Hill's stock farm in Minnesota, which we quote below:

I had not driven many yards before I came upon one of the finest sights any breeder could desire to see. Right and left were the breeding cattle, those with calves being in a separate enclosure from those that have to calve. Amongst these magnificent groups I was able to point out many familiar forms to me when on this side the Atlantic, but must at once state that they have not suffered from the change of country and climate, but the reverse, judging from the grand crop of calves around—a lot of youngsters it would be difficult to equal. In so large a crowd of extraordinary individual merit it would be invidious to select any one for special notice, but either individually or collectively they will bear comparison with any in herd existence. They are in the most blooming condition, reflecting the greatest credit on Alick Smith, their herdsman (formerly at Kinnard Castle, etc.). Amongst this season's calves, the Eifers, from Martha 5th and Novice, the latter by Lord Chancellor, the Highland Society's first-prize yearling at Glasgow in 1882, and the bull from Craigalleck 2d, are very superior. Among the sires in use are Lord Chancellor, alluded to above. This bull, perhaps, might have grown out a little more, but he is a wonderfully-fleshed bull, neat and level all over, an extraordinary short legs, enormous width, and fine bone. His calves are of great excellence. Prince of the Pitts, the recently imported Princess bull, has done well. He is a two-year-old of great style and heavy flesh, that cannot fail to develop into a grand bull, and prove an acquisition to North Oaks. A heifer calf from an ordinary scrub cow of the country is a perfect model of an Angos, which would defy all the most experienced breeders in this country to name her lineage.

The Short-Horns, like the Aberdeen-Angos, are a grand lot of animals, bidding fair to take the foremost position both for

personal merit and valuable breeding. I did not see the late famous Bates importation that has attracted such favorable comment throughout the country, as they were still in quarantine; but all experienced breeders who have seen them (and they are not a few), pronounce them individually to be an undeniably good lot, of faultless breeding, including as they do, the only pure bred Duchess in America, safe in calf to Duke of Whittlebury, Mr. Loder's famous sire; an Oxford cow of the purest branch of this fashionable tribe, who has commenced well by producing a very good red heifer calf to Duke of Leicester a few days after landing; two grand Duchesses from the celebrated Sholehroke sale, the first of their family ever imported into the United States; whilst the popular Barrington and Wild Eyes tribes have excellent representatives. The thousand guinea sire Berkeley, Duke of Oxford 2d, bred by Lord Fitzhardinge, after his lordship's famous Duke of Connaught, has developed into a very handsome hull, rich roan in color, of great size and extra length, his massive frame being evidently covered with solid, lean, natural flesh of super quality. He is of true Bates' character, very active, and an excellent getter. The sire at the head of the herd of Scotch-hred Short-Horns, Gambetta, a very massive roan, is a wealthy, thick-fleshed animal, and his calves are most promising.

At North Oaks are collected together one of the most valuable and fashionably bred herds of Jerseys to be found in any country, embracing as they do many representatives of the highly prized Alpha, Lady Mary Signal, etc., blood of the greatest hatter records. They form a beautiful group, mostly of solid color and striking uniformity. The sire in use, Polonius Jr., son of the famous Polonius (a great prize-winner, and who sold by auction some years back when prices were not so high as now for 900 guineas), is a beautiful hull, squirrel gray in color, splendid carveline escentcheon, and his calves are of exceedingly great merit.

Flocks of Shropshire and Highland sheep are kept, both breeds thriving admirably, the crop of lambs this year being of great size and well fleshed.

Half a dozen excellent Clydesdale mares were imported last Autumn, and I saw two very good foals from them.

### Galloways.

A polled head, a shaggy black coat, covering a compact, round, smooth, long body set up on short and strong legs, thickly clothed with flesh to hock and knee, are the typical characteristics of the Galloway. The breed is extremely hardy, being second to none other domesticated race of cattle, excepting possibly but not certainly the West Highlanders, a breed that, except in horns and color, resembles the Galloways. The Rev. John Gillespie, Secretary of the Galloway Society of Scotland, and a student of Galloway history, writes as follows concerning them: "This hardy and impressive breed of Polled cattle took its name from the province of Galloway, which is now confined to the two southwestern counties of Scotland, but which in ancient times comprised the six countries that lie to the west of a line drawn from Glasgow to Carlisle on the English border. The same race of cattle have been kept from time immemorial in Cumberland, the most northwesterly county of England. This is accounted for by the fact that in remote times that border county was under the same rule as the part of Scotland lying immediately to the north of it, and also that in the time of the old border feuds the inhabitants on each side of the border, who seemed to think 'cattle lifting' a virtue, secured an interchange of blood by stealing beasts at every available opportunity.

"The origin of the Galloways is lost in the mists of antiquity. While suggestions have been made as to the composite character of other varieties of live stock for which the province at distant periods gained celebrity, an allegation has never been made in any well-informed quarter that the Galloway is not an original and distinct breed of cattle. Moreover, the earliest notices of them specify them as possessed of the very same qualities as have characterized them in modern times. Oreltius, the celebrated geographer and author, who wrote in 1573, says as the result of personal observation—"In Carrick (part of Galloway) are oxen of large size whose flesh is tender and sweet and juicy."

Smith, in his Agricultural Survey of Galloway, writing early in the present century, says: "But what above all may be regarded as decisive of the merits of the Galloway breed is the uniform testimony of the Norfolk graziers, who have long given them the preference to every other breed of cattle. Their average price is £2 (\$10) per head above that of any other breed of the same weight. In the London market, where all the breeds of the island come in competition, they are generally allowed a decided preference. It need not be added that the meat is in great request, being of the very best quality—of a delicate grain, firm fat, juicy, and finely marbled." As an indication of the early improvement of the breed it may be mentioned that the "points" of Galloway cattle, specified in detail by writers at the beginning of this century, almost exactly correspond in every particular with the statement of characteristics drawn up by the Council of the Galloway Cattle Society in 1833, which are quoted above. So much for the degree of improvement already effected on Galloways as early at least as about 1800. We may add that the demand from Norfolk and the southeast of England continued until turnip husbandry was introduced into Galloway, and since then the Galloway breeders have fattened their own cattle for Smithfield, Liverpool, etc. The red Polled Cattle of Norfolk mainly owe their origin to Galloway blood, red Galloway hulls being crossed with native cows.

In America few pure Galloways have fallen into the hands of butchers, but the unvarying testimony of those who have eaten of their flesh is that it is unsurpassed in texture, flavor and juiciness, while the carcass is, as a whole, exceptionally free from masses of tallow so offensive to taste, and so costly to the feeder, to the butcher, and to the consumer.

The first importation of Galloways to America was in 1852, when Capt. Graham, of County York, Canada, brought from Scotland a number of animals from which some of the best of the American families of Galloways descended. A few years later, the breed was introduced into the United States, but because of an absurd prejudice against "muleys," and the black color, they grew very slowly in public favor until in 1880 the *Prairie Farmer* and other agricultural papers began mentioning their good qualities frequently. Of their subsequent rise in popular appreciation an idea can be gained from the fact that at public sales in 1882 a general average of \$310.55 was obtained for 34 females and 11 males; the next year 185 males and 122 males brought an average price of \$417.20; and sales, during the first half of the current year, of 66 males and 55 females, resulted in a general average of \$314.62, the decline of 24 per cent, resulting from overstocking a market in which the breed was comparatively new.

In 1881 a majority of the representative breeders of Galloways in Canada and the United States organized the North American Galloway Association, and issued the first volume

of the American Galloway herdbook, a work which was compiled by Hon. Henry Wade, Secretary of the Ontario Agriculture and Arts Association, assisted by Mr. David McCrae, now president of the American Galloway Association, a body formed in Chicago last November, and that purchased from the original association the herdbook mentioned above, which must ever remain the foundation of all pedigrees of American families of Galloways.—*Prairie Farmer*.

### Value of a Pure-Bred Animal.

"The maxim among breeders," says the *New York Times*, that 'like produces like,' is only true in a narrow sense, viz, that it only applies to animals that are purely bred from a line of blood that has some permanent and peculiar characteristics. For instance, the Scotch polled breed is invariably black and hornless and has been so for many years, and every animal of the race possesses these particular marks. And in this case 'like produces like,' and every calf in a herd of polled Aberdeen cattle is black and hornless. It is this persistence in character in a pure breed that gives value to it, and induces breeders to give high prices for the best specimens of the breed. A noted example of a valuable animal is afforded by the history of the Shorthorn cow, 10th Duchess of Airdie. This cow was one of the descendants of the famous Duchess tribe, bred and brought to a high condition by the noted English breeder, Mr. Bates, and improved—beyond a question—by the course of breeding practiced by Mr. A. J. Alexander, of Kentucky, who bred the cow under notice. The progeny of this cow, which is still living and has recently, in her seventeenth year, produced her twelfth calf, having lost two, has sold for more money than the produce of any cow that ever lived. Her second daughter sold in 1870 for \$21,000, another for \$18,000, another for \$14,000, another for \$10,000, others sold for \$5,900, \$7,100, 4,750 and \$3,205. Some of her granddaughters, out of her first daughter, sold for \$7,000, \$5,075, and a great grandson brought \$3,550. The old cow is still in a condition of usefulness, and may yet add to the total sum of her product."

## STABLE AND PADDOCK.

### Glanders.

At the biennial meeting of the Illinois Veterinarian Association held in Chicago last week, Dr. Withers read a paper on the subject of "Glanders." He said the symptoms of the disease were obscure. Precautionary means should be taken to quarantine the animals in order to see whether a clear case of inoculated glanders existed. The flow from the nostrils was no indication that glanders prevailed, because it might be caused by a variety of causes, such as nasal catarrh, congestion, or deposit of foreign bodies in the nostrils. In one case in a stable of thirty horses one of the animals was inoculated. Iron and bitter tonics were administered, and improvement begun. Two weeks afterward he was sent for to treat the horse for lung fever. He administered stimulants, but shortly afterward the animal died, and the post mortem showed it to have been affected with glanders. Other horses in the stable were taken down with the same disease. He did not believe in antiseptic treatment. It was true that no remedial agent existed for the poison of glanders. It was an open question what the germ was. Glanders was not produced spontaneously. It was classed with syphilis and tuberculosis, and the system must be predisposed to the disease. It must be received by inoculation. Farcey was not a scientific term, and should be got rid of in order to express the glandular form of glanders.

Dr. Baker wanted to know if glanders was or was not of germ origin.

Dr. Withers said it was infective glandular matter. If it was spontaneous it would be more widespread. If it was infective it would be epizootic. In reply to Dr. Sheppard the essayist said the disease was communicable to man by inoculation. It assumed the chronic form in human beings and caused death. Dr. Hughes said glanders existed in every county in Illinois, but was not infectious. Dr. Withers said nature resisted the progress of disease. In tuberculosis people lived on for years, and people sleeping with them would contract it and die before the patient would. He did not know why this was, except on the theory of the survival of the fittest. Glanders could exist in chronic form for years and not be a suspected source. Dr. Baker inquired if the germ was of vegetable origin why could it not originate glanders spontaneously. The essayist replied that if that theory was correct it would be seen by a regular epizootic.

### What's a Broncho?

Pale, sedentary reader, who sittest in the calm seclusion of thy home and propoundest questions to the omniscient opinion-moulder, we will enlighten thy childish mind, and give you some pointers which we have been at great pains to gather. We use the word pains advisedly, and in its fullest sense. A broncho is a horse. He has four legs like the saw-horse, but he is decidedly more skittish. The broncho is of gentle deportment and modest mien, but there isn't a real safe place about him. There is nothing mean about the broncho though, he is perfectly reasonable and acts on principle. All he asks is to be let alone, but he does ask this and even insists on it. He is firm in this matter and no kind of argument can shake his determination. There is a broncho that lives out some miles from this city. We knew him right well. One day a man roped him and tried to put a saddle on him. The broncho looked sadly at him, shook his head and begged the fellow, as plain as could be, to go away and not try to interfere with a broncho who was simply engaged in the pursuit of his own happiness, but the man came on with the saddle and continued to aggress. Then the broncho reached out with his right hind foot and expostulated with him, as that he died. When thoroughly roused, the broncho is quite fatal, and if you can get close enough to him to examine his cranial structure, you will find a cavity just above the eye where the hump of remorse should be. The broncho is what the cowboys call "high-strung." If you want to know just how high he is strung, climb up onto his apex. We rode a broncho once. We didn't travel far, but the ride was mighty exhilarating while it lasted. We got on with great pomp and a derrick but we didn't put on any unnecessary style when we went to get off. The beast evinced considerable surprise when we took up our location upon his dorsal fin. He seemed to think a moment and then he gathered up his loins and delivered a volley of heels and hardware, straight out from the shoulder. The recoil was fearful. We saw that our seat was going to be contested, and we began to make motions to dismount, but the beast had gone under way by this time so we breathed a

silent hymn and tightened our grip. He now went off into a spasm of tall, stiff-legged hucks. He pitched us up so high that, every time we started down, we would meet him coming up on another trip. Finally he gave us one grand, farewell boost and we clove the firmament and split up through the hushed ethereal air until our toes ached from the lowness of the temperature, and we could distinctly here the music of the spheres. Then we came down and fell, in a little heap, about a hundred yards from the starting point. A kind Samaritan gathered up our remains in a cigar-box and carried us to the hospital. As they looked pityingly at us, the attendant surgeons marveled as to the nature of our mishap. One said it was a cyclone, another that it was a railroad smash-up, but we thought of the calico-hided pony that was grazing peacefully in the dewy mead, and held our peace.—*Santa Fe Democrat*.

For many years draft horses have been raised in this country, and few have been the days when those of good weight would not sell for figures which would give a round profit. But, although this fact has been quite widely recognized, the vast majority of American farmers are content to raise the scrub horse. They seem to have a realizing sense of the full value of the few dollars extra demanded for the use of the stallion of good breeding, and but a dim appreciation of the difference between the value of the offspring of a good draft horse and that of some mongrel. With them a dollar in the purse is worth ten in the future of improved stock. The *Western Agriculturist* recently said: Draft horses are the most profitable stock that can be raised on the farm; the heavier the better. The rapid increase in price for horses over 1,200 pounds shows the last hundred pounds brings as much as the first thousand. Draft horse centers or breeding districts attract buyers from all the large cities, and breeders starting in the draft horse business in any community want all the draft horse competition they can get, to increase as rapidly as possible the number of young grades that will attract the buyers from abroad. This is true, as will be generally admitted by those who have taken care to inform themselves upon the subject. But, says the doubter, if everybody goes to raising draft horses the business will be overdone, and there'll be no money in it. That is true, but everybody will never go to raising one class of horses, or one breed of cattle, or any other one description of stock or crop; and so long as a thriving two-year-old Clydesdale, Percheron, or English Shire colt will sell for from 10 to 20 cents per pound, live weight at that, while the best three-year-old heaves go at six or seven cents, there seems to be little reason for fearing that horse-raising will not pay. There is a fair margin for shrinkage in the market before actual loss will come from the business.

"The causes of bad feet with horses are very numerous," said an old blacksmith, and now a veterinarian: "You very seldom see a young horse with bad feet. You can work a horse barefooted all his life and his feet may wear down and get tender, but they will always be sound. One great cause of trouble with the feet is that after they are shod, horses are allowed to stand in filthy stalls, and another is keeping shoes on too long. Consequently they get out of shape, and corns and narrowing at the heel follow. Then the horse is taken to a blacksmith and a first-class job ordered. Now, in this case, if the blacksmith could make a foot then shoe it, he could fill the order. After the horse is shod, his feet are sore, and he travels no better, but if anything, worse than before. Then the shoer is blamed. The foot is certain to have some inflammation in it, and the slightest fever in the hoof will damage it very badly. Shoeing too close at the heel, setting shoes too far back, and fling the toe off are bad practices. The shoe should always be as large as the foot. No one ever sees a foot that is too wide. Hard riding or driving often causes bad feet. If a horse gets foundered, instead of doctoring for founder the owner loses about a week in going from one smith to another to get better shoeing. Any good shoer can tell by looking at the shoe whether it hurts or not; but instead of being frank about it, many shoers will say that the fault is with the smith who did the job just before him, and not with the foot. Now, brother blacksmiths, this is wrong, and you know it. Why do you do this? The blacksmiths have less brotherhood about them than any men of any other trade or profession in the world. Why don't they come together for their mutual interests instead of trying to pull each other down? They have got prices so low that they can't make a living. If prices were better, I have no doubt that many jobs would be done better, many horses would have better feet, and skilled workmen would be in many places now occupied by hotches. So do not work against one another, brother smiths, for when you do you are hurting yourselves."

The *North British Agriculturist* thus speaks of the health of horses in England: "There are no reliable statistics of the sickness and mortality amongst horses, but the records of public companies using many horses, and the general opinion of horse owners and veterinarians, alike testify to improving health, and diminishing frequency as well as shorter duration of disease. Even lamenesses, which constitutes one-half of the ailments of hard-worked horses, are less common than they were forty years ago. Asphalt and wooden pavements in London and other towns have notably diminished the percentage of navicular disease in well-bred nags. Soundness of legs and feet has also been conserved by more careful rational shoeing, which might, however, be still further improved and more widely extended. Serious incurable disease is, moreover, lessened by early observation and more intelligent treatment of slighter lameness."

The Commissioner of Agriculture, Hon. Geo. R. Loring, thus speaks of the farm horse, in the columns of an exchange: "A good farm horse should be well balanced, strong and sagacious. His head should be mild, clean, long, expressive; his eye full, clear and gentle. His neck should be well arched, muscular and of medium length. His shoulder should be strong and solid at the base; his back should be straight, firm, hairy, having what Virgil calls a double spine, and joined to the rump by an even mass of muscles. His barrel should be round, his chest deep; his wind should be strong and his digestion perfect. Now a horse of this description may be of any size from 900 pounds to 1,500 pounds; of any height from 15 hands to 16½ hands; of any color, although bays, browns, sorrels and grays are the best, and he will be capable of great endurance on the road or at the plow. He should be selected with reference to the work he is to perform and the locality in which he is to live."

Many Clydesdale horses are now being shipped from Scotland to Australia, but the *London Live Stock Journal* says that, "as a rule, the Australians are not so particular about pedigrees as the Americans, if they get the right sorts." American stockmen of all kinds have the credit of being highly discriminating buyers beyond the Atlantic.

## The Model Farm Horse.

The outlook from the library windows of our suburban home commands a view of a village that was platted two years ago, upon which beautiful houses are rising, with turrets and towers, under the more than talismanic wand of the Old World fictions, namely, the sleepless energy of American enterprise. Rapidly the country homes are decorating the picturesque hillside. They grow from their foundation stone to their handsome gables, without pause from the severity of the winter, or the intense heat of the summer. The road leading to these new homes passes through an avenue of forest trees, through the vistas of whose branches can be seen the teams hauling the building materials—stone, sand, timber, and all the varied articles that make up the complicated structure of a modern house. They belong to the neighboring farmers, and the comparative difficulty with which they draw their burdens over the country road, especially when recent rains have made the hauling extremely laborious, has engaged to the writer the subject of the "Model Farm Horse."

The horses in these several teams are as diverse in size, strength, and courage as the most fanciful mind could imagine. One team of hardy roans, about 15 hands high, quite heavy-bodied, and full of pluck, came slowly struggling through the mud, with about three-quarters of a perch of sand for a load. The owner was walking at their side, and vigorously urging them up to their best efforts by voice and whip. Still they required frequent rests, and cried lustily through their roaring windpipes for more air for their overtaxed lungs.

"My good man," said the writer, "it seems to be hard pulling for your horses."

"Yes," he replied, "it is very hard for my ponies, they are not used to working much off the farm."

"Did it ever occur to you that possibly they are too small for even the heaviest kinds of farm work, as, for instance, ploughing in hard, stubborn ground, or even subsoil ploughing?"

"Yes," he answered, "they often bother me in a desperate pinch, when the roads are heavy and the load is high; but they are game pullers and I manage to get along with them."

"Did it ever occur to you, further, that if you had a heavier, larger, stronger team, that could throw more weight into the collars, they could not only pull greater loads, but that it would be more humane to your ponies to sell them for lighter work purposes?"

"Probably you are right," he replied, reflectively, "but you see I raised these ponies, and the stock has been among my kindfolk longer than I can remember, and I expect to hold on to them as long as they are able to work." So with a flourish and crack of the whip that would have been the envy of the postilion of a coaching club, he drove on, with the exclamation, "Get up, ponies, you've had a long rest, and the stone-masons are already grumbling because we don't haul sand fast enough for them."

Within the space of 30 minutes came after them a team of tall, thin, weedy horses, drawing a loaded stone wagon. They wriggled and squirmed, and twisted their long hackbones almost into a knot, and finally came to a standstill, and neither entreaties nor lashes, neither blinding nor tying up one ear, neither yelling nor placing mud in their mouths could induce them to move out of their tracks. Their frail limbs and delicate bodies had been tried to the point of extreme exhaustion, and they balked, and snaked, and stopped, simply because they had not power enough to overcome the burden. After their hides had been welled till they looked like the cross-threads on the reverse side of a carpet, and the teamster's throat was swollen with the violent oath he had heaped upon them, at least one-half of the load had to be thrown off, and they moved on with the other half, only to be compelled to donk the journey and to return for the balance on the roadside. An account of how often this extra labor is imposed upon teamster and team by the physical incapacity of the horses devoted to hard pulling, would make an annual volume of plethoric proportions.

Not far behind them came a team of mules, drawing an enormous load of lumber. They struggled doggedly, moving as slow as oxen on travel through a primeval forest, but they made the journey after very frequent stops, and the administration of punishment that called loudly for the interference of the Society for the Prevention of Cruelty to Animals.

"Why do you prefer mules for a team on the road and on your farm?" was my query to the hard-visaged owner.

"Because," he said, "they eat less, stand more abuse, are never sick, and can do more work than horses."

"But are they not much slower?"

"Well, yes," he reluctantly admitted.

"Do you not have to punish them more than horses, or will they just as readily yield to kindness?"

"Kindness!" he broke out, with a derisive guffaw; "kindness is thrown away on a mule. You might as well be kind to a mountain-bred donkey. Why sometimes these mules sulc so badly that I can only start them by wearing out a fence rail upon them. You must be awfully savage with mules at times to make them mind you. Unless they are afraid of you, they will do nothing for you. They are as cunning and as treacherous as a trick mule in a circus."

"Then why do you prefer such beasts of burden to a span of powerful, yet more docile horses? They do not look so well they are ungainly in your family carriage; they do not make so comely an appearance as you drive with your family, either to the fairs, or to the city, or to the church door. Why do you persistently prefer them to the pair of horses I have mentioned?"

"Simply because they cost less to buy and to feed, and to take care of than horses. I am used to them, and they are used to me."

With this unsatisfactory reasoning, he drove on with his slow mules, careless of the loss of time their dromedary-crawling wasted, or the exhaustion of his own strength and finer sensibilities, which their ceaseless labor brought upon himself.

At last came in sight a noble team of powerful bay geldings. They were dark bay in color, full sixteen hands high, deep, yet broad in the shoulders, massive over the hips, large around the girth, with flanks full and well let down, while their joints, limbs, and feet displayed those strong proportions that enabled them to overcome astonishing burdens. On they came, bending down to the work, and throwing their massive frames into the collars, with a resolute determination to ascend the hill without stopping to catch their wind, had not their merciful

driver called upon them to rest. Their load was a mass of black slate for the roof.

"How much does your load weigh?" was my query.

"Well on to thirty-eight hundred," he promptly answered.

"That seems to me to be an enormous load up this road," I added.

"Well, yes, it would be to most teams, but it is play for mine. That is not all. They are both good huggy nags, and the off horse can trot a mile in four minutes to a huggy. They make as fine a carriage team as any farmer wants to own, and they can travel their eight miles an hour without hurting themselves in the least."

"What stock are they?" was my eager question.

"I bought them at the fair. Their owner exhibited their sire and five of his colts for a premium in the general-purpose ring. They were all about the same in height, weight, color, and style, and each one weighed about thirteen hundred pounds. I can do more work with them, and have more pleasure at the same time, either to the wagon or to my carriage, than with any other team I ever owned. They can pull as much of any kind of stuff as I can put into this big wagon, and when they are in condition, they look as well with a fine set of harness on them as any one's team. I can always take first premium at the fair with them."

Their rounded bodies and glossy coats evinced the pride their owner had in keeping them in superb order. Then came the conviction to the writer's mind, stronger than ever before, that he had seen a pair of model farm horses. There is nothing which the broad acreage of this great country lacks so much as the existence of first-class farm horses. There are more inefficient horses used on our farms, more horses undersized, more horses deficient in frame work, more horses lacking in muscular capacity than in the rural districts of any other civilized nation on the face of the globe. An average sample of them can be found at the horse auctions in our large cities, where they are gathered in during the fall months for sale, to save winter feeding, for hundreds of miles, in the neighboring regions. They are a sorry spectacle. Ring-boned and spavined, halt and blind, piebald and patched in color, with, now and then only, an exceptional one worth the money he brings under the hammer, no matter how insignificant may be the price. This state of facts is in singular inconsistency with the American characteristics of thoroughness, and the ready adaptation of adequate means to desired ends. We lead the inventive world in working out machinery, not only for manufacturing the world's needs, but for farming purposes. The reaper and the mower, the seed drill, and the binder, are American inventions. In these respects, are rural communities in the wide world wide world acknowledge their obligations to our skill. But strange to add, they are all superior to us in the possession of distinctive type of farm horses, that must do, for all time, the work of transportation on the farm, which no machinery can ever accomplish. Great Britain has her Clydesdales, her Suffolks, and her Shire-horses, France her Normans, and Germany her agricultural horses, that answer the purposes for which they are designed in their respective countries; but America has no type of the all-purpose farm horse. Yet we have all the materials out of which such a horse could be bred, superior in form and usefulness to the farm horse of any other country.

Ours is an age of intense progression, and that progression is particularly intensified in America. We are a nation of workmen. Neither night nor day, neither youth nor old age, neither poverty nor affluence circumscribes our unceasing energy to labor. It has been very well said that very few Americans know how to live, for they have only one portion in life, namely, all work and no play. We are always in a hurry—hurry to eat, in order that we may hurry again to our never finished work. Work robs us of digestion and deprives us of recuperative sleep. The old-fashioned methods of farming were too slow, so that we have called into requisition the combined energies of steam and machinery to hasten the labors of seed time and harvest. When, therefore, intelligent attention is paid to the breeding of the model American farm horse, two elements will be absolutely prerequisites. We mean speed and power. He must be able to haul enormous burdens, and he must be ambitious to walk off with them at a brisk pace that would astound the old-time farmers, whose horses imitate, in their movements, the pausing motion of yoked oxen. If the horse is a fast walker he will necessarily prove to be a brisk trotter, that is, he will move with energy and eagerness up to the limit of his trotting speed. In order to possess power, it is unnecessary to encumber him with the unwieldy frame and the tremendous weight of the heavy draft horse. Seventeen or eighteen hands in height, and two thousand pounds in weight, means a slow, heavy, elephantine tread, not in harmony with the rush and push of American civilization. All these classes of ponderous horses, like the Norman, the Clydesdale, and the English draft horse, that have been so numerous imported into this country, will answer valuable purposes by judicious crossing. They will become necessary factors in the evolution of the American farm horse. They will contribute height and weight, and the inherited ambition to overcome great burdens. But, unassisted by our own strains of blood, they could never produce the model farm horse. Their weight and slowness of motion would never bring them into general use for long journeys or transportation, where quick transit is a desideratum. This is evidenced by the fact that in our large cities where heavy transfer wagons are in daily use, these monstrosities in horse-flesh have been tried and discarded, just as the sluggish canal has given way for the rushing railroad.

Crossed with the more ambitious thoroughbred, large in type and strong in bone structure, there might be produced a superior animal, that would inherit sufficient stamina, size, and power from the European draft horse to throw great weight into the collar, and sufficient ambition from the thoroughbred to move at a brisker walk with a load, and a more nimble trot in light harness.—*Live Stock Journal*.

A writer in the Philadelphia Press says that long experience in England has proved that brown-colored horses, and especially those of tanned muzzle, prove the hardest. Next to these come the darker shades of bay. The same has been found to be the case in America, and then follow the clear dapple-gray. Other colors seem to be about equally hardy, although pure white and red roan are considered the least so. But we know horses of these two colors, as well as others varying from the first three above mentioned, to be perfectly hardy and enduring. As a rule, it is the breed, coupled with the soil and the food on which they are reared, which make the difference in hardiness and endurance of horses.

Horses for harness purposes are scarce and hard to obtain in some parts of Great Britain, and prices are consequently quite strong and strengthening.

## New Jersey's Wonderful Climate.

When Ponce de Leon finally landed in Florida, thinking that he found the land of eternal youth, he was mistaken. Jersey was the land he sought, and that country, already famed for its justice, its mosquitoes, its applejack, and its iron-ore soil, has another just claim to pre-eminence over its less fortunate neighbor, the United States, which I will demonstrate as follows:

In the writer's early youth, when he used to attempt the dangers of the maternal strap by climbing under the fence to lend aid and encouragement to country horse trots, one of his earliest acquaintances was a small chestnut stallion called Horace Greeley, owned by one Ben Dnell, who used him for stud duty and trotting races; trotting, I say, for I did not know of his winning any. He used to run away, kick men through the stable door, etc. On account of these little diversions he was unsexed, and made his next how to the public under the name of Roscoe Conkling. He seemed to change his name, for good and sufficient reason, every time he changed his hair, and after a lapse of about a dozen years I made his acquaintance again, under the sprightly name of Champagne Charley. He meanwhile had acquired a spavin on each hind leg, and like the deacon's vehicle, had a "general flavor of mild decay." His wild, intractable youthful spirit had given place to the sober second thought of maturity, and he could now do a mile in about 2:40, and as a snow horse had no equal in these parts. He was then sixteen years old. About three years ago a horse hitched to the rail at Waverly Park, N. J., attracted my attention by his great interest in the races, and a closer inspection revealed the friend of my childhood's happy hours, spavins and all! The old fellow looked fat and well cared for. A young man, who regarded me suspiciously, told me that I did not know him, and that he was just eleven years old! Here the rejuvenating effect of a residence in Jersey began to dawn upon my mind. He had, of course, another name to add to the series. The marvel of marvels is now to come. The latest returns show a net average reduction in his age of two years and a half each year, with some districts still to report. This fall he won a five-year-old race with ridiculous ease! I want to say here that next year I expect he will beat Nutbreaker's yearling record—such is my confidence in the land of eternal youth.—*Defendum in N. Y. Spirit*.

## Stockwell and Newminster Again on Top.

Hermit is an old horse now. He won the Derby of 1867, and is consequently verging into his twenty-first year. His owner, Mr. Henry Chapin, has managed him with exquisite skill. He seems never to have been overdone at the stud. His yearlings for the past few seasons have sold at fabulous prices. Beyond a doubt the get of Hermit are the speediest foaled in England. The case of the mare Thebia, whose last notable achievement was winning the Liverpool Cup, 130 lbs. on her back, giving a fair horse like Goggles no less than 35 lbs., shows, however, that speed is not their only possession. A glance at the pedigrees of Thebia shows that her dam was a daughter of the famous Stockwell, whose blood has recently demonstrated its invincibility through the wonderful performances of that other equine prodigy, St. Gatien. Beyond a doubt this colt was got by The Rover (a son of Blair Athol, he by Stockwell), who for years was hawked about at a nominal price, with no buyers. Now, observe the success of the Stockwell and Newminster blood when crossed, as exemplified by Thebia and St. Gatien. The mare is by Hermit (son of Newminster) out of Devotion, by Stockwell. St. Gatien is by The Rover (grandson of Stockwell and also of Newminster), through Crinon (Rover's dam); moreover, St. Editha, dam of St. Gatien, was by Kingley Vale, grandson of Newminster. For a long time the watchword of English breeders has been Newminster or Stockwell.—*Sportsman*.

## The Thoroughbred Stallion

JOE HOOKER,  
BY MONDAY.

First dam Mayflower, by Imp. Eclipse.  
Second dam Hennie Farrow, by Imp. Shamrock.  
Third dam Ida, by Imp. Belshazzar.  
Fourth dam Gamma's dam, by Sir Richard.  
Fifth dam, by Imp. Eagle.  
Sixth dam Bet Bosley, by Wilkes' Wonder.  
Seventh dam, by Chanticleer.  
Eighth dam, by Imp. Striding.  
Ninth dam, by Clodius.  
Tenth dam, by Imp. Silver Eye.  
Eleventh dam, by Imp. Jolly Rogers.  
Twelfth dam, by Partner.  
Thirteenth dam, by Imp. Monkey.  
Fourteenth dam, Imp. mare from the stud of Harrison of Brandon.

Terms, \$50 the season to a few Mares of approved breeding. Good pasturage for mares from a distance at \$4 per month. Care will be taken to avoid accidents and escapes, but the owner must take the risks.

My place, where Joe Hooker will make the coming season, is five miles from Sacramento, on the Freepoot road. This young stallion has proved to be one of the most successful racing sires, and every one of his colts that has been trained can run fast. Among them are Fred Collier and Jim Renwick. For history of Joe Hooker, see BREEDER AND SPORTSMAN, January 20th, 1883.

THEO. WINTERS, Sacramento, Cal.

## Fairlawn.

In front of the stallion stables at Fairlawn are two graves, over which the grass has not yet begun to grow. In one of them rests Cassius M. Clay, Jr., and in the other sleeps the great Almont. The fame of each will brighten as the years roll by. The seed was sown in fertile soil, and the harvest will multiply with succeeding generations. The prepotent sire always lives in his descendants. Young Mr. Withers has proposed to his father that one of the best colts on the place shall be christened Tombstone, and sold with the understanding that the proceeds shall be devoted to the erection of a monument over the spot where Almont and Cassius M. Clay, Jr., slumber side by side. The work of the turf season now drawing to a close has added to the renown of Happy Medium. His son, Maxy Cobb, wears the stallion crown, 2:13. There is a good deal of Happy Medium in Maxy Cobb, both horses being cast in the same mould. Aberdeen is in good flesh, and the impression prevails at Fairlawn that he will get more really fast colts than Happy Medium. The latter, however, will transmit the trotting gait with a higher degree of uniformity. Ethan Allen, Jr., the brother of Daniel Lambert, we found running in a large paddock, and he is very active for a horse of his age, twenty-four. One of the young stallions is Electro, a bay, four years old, by Almont, out of the sister of Peacemaker. He stands 16.1, and is a little leggy, but will fill out with age and make a good-looking horse. Shiloh, bay, colt, three years old, by Almont Lightning, dam by Star Davis, is stoutly bred, and has a pure harness gait. He is powerfully put together, and should make his mark in the stud Grandmount, two years old, by Almont, dam Badoura, by C. M. Clay, Jr., unites the blood of the two dead stallions, and he a rangy, well-balanced fellow and a trotter. Among the fillies Rosa Lee, three years old, attracts much attention, because she is a fast pacer, although strictly trotting bred. She can pace a 2:30 gait in the lot. Her sire was Happy Medium, her dam Sally M., by Almont, and her granddam by Alexander's Edwin Forrest. Jerusalem, a roan filly, two years old, by Happy Medium, out of Maggie Keene, by Mambrino Hatcher, and she out of Laura Fair, the dam of Keene Jim, is oddly shaped, but she is a natural trotter. She slopes something like a giraffe, having a positive arch to the back, and hind legs with as much bend as a sickle. Standing still, she looks deformed but start her up and she is the very poetry of motion. She illustrates the old maxim that trotters come in all shapes. She will try her fortune in three-year-old stake battles next season. Mambrino Hatcher, the sire of her dam, was got by Mambrino Patchen, out of Lady Scott, (dam of Lookout, sire of Keene Jim), by Woodford, thoroughbred son of Kosciuszko. From the loins of this same Woodford came Woodbine, dam of Woodford Mambrino and Wedgewood.

Sally Anderson, the dam of Almont, was owned for a while at Woodburn, where Almont himself was bred, and Mr. Brodhead gives her history in brief. She had a ewe neck, with Mambrino Chief characteristics, and stood 15.3. She was purchased of Mr. Anderson, of Ohio, the price being \$200, and she was as poor as a Winter starved crow when she arrived at Woodburn. Mr. R. A. Alexander was disappointed in her appearance, but said, "Never mind, her blood is right." She was bred to Alexander's Abdallah and produced Almont, who resembled her a great deal. Her sire was Mambrino Chief, and her dam was Kate, by Pilot, Jr. She died, in the closing years of the Civil War, at Indianapolis, on her way to Illinois. She passed through no hands except those of Mr. Anderson and Mr. Alexander.

Gen. Withers was stretched on a sick bed all last Winter, and at one time his life was despaired of. In the Mexican war a bullet went clear through both hips, but the wound healed and gave him but little trouble. A year ago it opened and his system began to waste. The General is stronger now, but he cannot get about without the use of crutches. He is unable to give much attention to the details of Fairlawn. He sits in his library answering letters and conversing with his city friends through the telephone, while his son superintends affairs out of doors.—*Turf, Field and Farm.*

## American Racing Association.

This Association at their late meeting in Chicago made some changes in the code adopted last Spring. Hereafter the name of no horse shall be changed, after he has once started in a race, and no Association shall accept the entrance fee or allow a horse to start whose name has been unlawfully changed. The question of forfeits, which has occasioned much trouble owing to owners' habits of laxness in collection, has been brought down to a mere business question by the adoption of a rule requiring that parties starting horses, must have money to their credit with the secretary of the association over whose track they start. At the suggestion of Secretary Bruce, a clause was added to the racing rules that prohibits the racing of yearlings, and provides that no horse that is three years old or upward shall be run a less distance than three-quarters of a mile after July 1st, 1885, the object being to do away with the short dashes that are now so common, and that are no test of a racer's abilities. The rule in relation to jockey fees, providing

that "In the absence of a special agreement the fee to a winning jockey shall be \$25 and to a losing jockey \$10," was made to apply to stake races only, while the fees in purse races were reduced to \$15 for a winning and \$5 for a losing mount. The question of bookmaking provoked considerable discussion, and a rule was finally adopted providing that "In case any Association permits post bookmaking, no bookmaker shall be permitted to make a book on any race in which a horse is to start in which he is directly or indirectly interested, and in case of any violation of this rule both he and the horse will be expelled." In the betting rules two important changes were made, the first making it imperative that all bets and pools on the race shall go with the decision of the judges making the award, while the second provides that "In auction pools, in all cases where three or more horses start, there shall be at least two of them sold out, and where seven or more horses start, three of them shall be sold out before the field is disposed of." The object of this rule is to do away with the practice of selling out the favorite in a pool and then selling the entire field against him, making it only necessary, in order to rob the people of their money, to "fix" one horse in the race. The scale of rates for 2-year-olds was also raised for the months of July, August, September, October, November, and December. Prior to the change the weights carried by 2-year-olds in these months in races of six furlongs were: 80, 84, 87, 90, and 90 pounds, while according to the new scale they are 90, 93, 97, 100, and 100 pounds, respectively. For a mile dash run during the same months 2-year-olds carried 75, 77, 81, 83, and 83 pounds, while according to the new scale they will now have to carry 80, 87, 95, 100, and 100 pounds in these months. The object of these alterations was to do away with the advantages that a 2-year-old nearly approaching his 3-year-old form had during the past Fall season over the 3-year-olds by reason of the great difference in weight between them. Several minor changes of no particular consequence were made, and after re-electing Ben. G. Bruce, of the Kentucky Live Stock Record, to the position of Secretary for the ensuing year the association adjourned, to meet in St. Louis the second Wednesday in November next.

## The Wreck of the Chicago Driving Park.

Charles F. Grey, executor of the late Wendell R. King, who died March 30th last, on Monday of this week filed a bill in the Circuit Court against the Chicago Driving Park Company to foreclose a mortgage given Oct. 13th, 1884, on its leasehold interest in its Driving Park, race tracks, and buildings. The mortgage was given to secure a loan of \$6,000 made to the company on the above date. The bill states that at the death of Mr. King the Driving Park Company owed him \$20,000. The executor received \$12,500 on account and took a new mortgage for the balance. Several renewals were made and small sums paid until the present mortgage, which provides that \$3,000 should become due on Nov. 15th instant, and the balance in one month thereafter. On default of payment of either principal or interest the executor was empowered to declare the whole amount due, and apply to the Court for an immediate sale and the appointment of a receiver. On the 1st of the present month the Driving Park Company gave another mortgage on all its property to Benjamin H. Campbell, Edward Corrigan, Dewitt H. Curtis, George G. Newberry and S. K. Dow to secure an indebtedness of \$16,478.37, due Jan. 1st, 1885. These mortgages now claim a right to an immediate sale under the summary terms of their mortgage. Besides this, the Chicago Evening Journal and the Chicago Herald, and some other creditors have recovered judgments, and are also threatening to sell the property. The Driving Park Company is stated to be wholly insolvent and its property going to ruin. An answer was filed by the company agreeing to an immediate sale and the entry of a decree for \$6,161.34. Judge Tuley during the day appointed a receiver for the concern.—*Chicago Horseman.*

## Narragansett Park in Trouble.

The Narragansett Driving Association, at Providence, R. I., which started two or three years ago with a great flourish of trumpets, seems to be in extremes as regards financial matters, and the famous Narragansett trotting track and buildings are advertised to be sold at a foreclosure, Dec. 5th. The Narragansett track has always been a bottomless pit for money. Its original cost to Amasa Sprague was \$332,000. When the Sprague property was sacrificed at auction by Trustee Chaffee it was bid off for \$25,000 by J. B. Barnaby, a rich clothier who has a liking for a speedy horse. Mr. Barnaby, with his partner, H. B. Winship, organized the Narragansett Driving Association, with a capital stock of \$35,000. The surplus over the cost of the track was sunk in the first year in trying to put the track in good condition. The second year \$15,000 was spent on the track, and as a result the track was made one of the fastest in the world, but a \$20,000 mortgage was fastened on the property. The bank holding the same will foreclose Dec. 5th unless some arrangement is made in the meantime. Of the one hundred and eighteen stockholders only about twenty have taken any active in-

terest in the association, and it has been uphill work to raise money. The stockholders have been appealed to for the last time to see if they will do anything. Only the grand circuit meetings have been profitable. The distance of the park from the city, together with the great expense incident to the meetings, have kept the treasurer's balance on the wrong side of the sheet. There are many horsemen of wealth there, and it is possible that some means will be taken to bond the debt.

## Bits from Bygone Days.

Some men are clever enough at the same time to take advantage of an enemy by a ruse de guerre, one instance being that of a former Lord Grosvenor, who had a horse heavily engaged at the Craven meeting, when a few days before he was to run the report went about that he coughed. It seems that a man had been hired to lie all night on the roof of the box in which this horse stood, and he set the report abroad. His authority, however, being doubted, another worthy man was employed to perform the same office on the following night, when he gave a similar report. Now the fact was that the first of these two men told his lordship's trainer what he had been asked to do, and having been duly fed, received instructions accordingly, and gave false information. When Lord Grosvenor was told of it, as well as that another man was to be on duty the following night, he asked, "Have we no horse that coughs?" "We have one, my lord," was the reply. "Then," said his lordship, "let him be put in the box over the fellow is to pass the night, and if he does not catch his death of cold from this north-east wind and sleet, we shall do very well." Of course, the odds became heavy against the horse, from the report of the second man, and his lordship landed a good sum, as his horse won the race with ease. So the biters were bitten, and that very severely.

The Duke of Cleveland, as they say in Yorkshire, had "money forever," and so did nearly as he liked on the turf. His match with his horse Pavilion against Colonel Mellish's at Newmarket, in 1806, brings the latter accomplished and gallant fellow to our memory. The Colonel was a little less than a meteor in the sporting world and dazzling world of fashion, being, probably, the most finished example of a high bred turfite who ever trod the race-course in ancient or modern times. He would have taken the "whiphand" from Philip of Macedon, and all but out-Brummel'd Beau Brummel in his dress and fastidious habits. With a princely fortune, good tastes, many accomplishments, and the pluck of a British gentleman, it need not be a matter for surprise that he galloped through his wealth as quickly as he did across a field when the hounds were in full cry before him.

Colonel Mellish was an artist—painting far beyond the performance of most men—a splendid horseman, a brave soldier, a skillful coachman, and a scientific farmer, while so far as handicapping of matches was concerned, few could excel him. His establishment was immense, having at one time thirty-eight horses in training, seventeen carriage horses, a dozen of hunters, besides four charges at Brighton, and hacks innumerable, with, of course, any number of servants to look after the steeds. In the meridian of his career the Colonel made his appearance in a way never approached. Driving four white horses, with outriders to match the animals he drove, his barouche painted in exquisite taste, he was truly the observed of all observers when, whirling up to the Grand Stand at Epsom or Doncaster, and descending in the quietest manner from the box, he would mount one of his thoroughbred hacks, led by the saddle horse groom in the rear of his retinue, like the rest of his people, in crimson liveries.

His racing career was most successful one; but playing at chicken-hazard proved his ruin. It is said of him that he once staked £40,000 upon the throw of the dice, and lost it. Like Charles James Fox, he thought that the greatest pleasure in life was to gamble and to win, and the next best enjoyment to play and to lose. What a study is the career of Fox—the greatest gambler, rone, and politician of his day; never forming a creditable or desirable connection with any woman, losing three fortunes at play; and above all that he was worsted in politics by the boy with character, Pitt. We may add that people who gamble do not always lose, for Messrs. Crockford, Gully, Riddsdale, Sadler, the Chifneys, etc., made a lot of money on the Turf as well as elsewhere.

There was Jim Knox—you know him—he had the ambition to make money selling crockery and spending it on trotters, until he tumbled on Nutwood. Before that he used to try his hand on one or two green ones on the old half-mile track, and Woodruff's book was law and gospel to him. He did everything by the book, and, true as preaching, used to read it on the track if he forgot his lesson.

"Oh, nonsense!" "Fact; ask Sam Keyes, who saw him stop one day at the quarter pole with a nerry horse, pull Hiram out of his pocket and begin to read. But when I passed by on the outside, and laughingly abouted, 'What does Hiram say?' he tumbled, and closed the book."

The Trotting-horse Breeders' Association of Minnesota was formed in St. Paul a few days ago. Among the members are Commodore Kittson, W. R. Merriam, George W. Sberwood and Messrs. McGrath, Finkle, Oswald, Hendricksou, Judson and Grattou. The object is the better development of trotting stock with regard to speed.

## TIPS AND TOE WEIGHTS.

A Natural and Plain Method

Horse Shoeing,  
With an Appendix,Treatise of the Action of the Race Horse  
and Trotter as shown by instantaneous photography.

**JERSEYS and GUERNSEYS,**

Registered in the A. J. C. C. and A. G. C. C., of New York, the only standard register.

Jersey Belle of Seltwater that made 25 lbs 4 1/2 ozs. of butter in one week.

A grandson of above cow is now in use in the Yerba Buena. This herd won all the herd prizes for 1882. Since then has been added young animals from Mr. Pierce's valuable herds East. He now has Jersey Belle of Seltwater, (Commons), Mary Ann of St. Lambert, Silver Cloud and Eurotas strains; also large selections from the Islands, without regard to cost.

He has interest in Eastern herds of 200, at the head of which stand only living son of Jersey Belle, Romeo de Bonair, (87 1/2 per cent. Mary Ann's blood), and Pierson, the best show bull in America. These bulls are valued at \$10,000 each.

HENRY PIERCE, San Francisco.

**IMPROVED HORSE CLOTHING.**

Secured by Letters Patent ISSUED MAY 27, 1879. REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap G, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap G, and the extension B, to fit the fore and hind legs of the animal, front fastenings FO, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings FO, in combination with the elastic neck-extension H, substantially as and for this purpose herein described.
4. The blanket A and hood J in combination with the elastic connecting-strip I, substantially as described and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap G, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingles is avoided, substantially as herein described.

**ASHLAND PARK TROTTERING STUD**

NEAR LEXINGTON, KY.

B. J. TREACY, PROPRIETOR.

THIS IS STRICTLY A BREEDING FARM, FOR though training is done, it is only for the stock belonging to the place, or those purchased from the proprietor. The proprietor of Ashland Park has no pet trotting family; his aim is to secure and have at all times for sale choice representatives of each of the leading families, these being the Hambletonians, Mambrino Chiefs, Clays, Pilots, Black Hawks. At Ashland Park may now be seen splendid specimens of the set of such stallions as George Wilkes, Almont, Mambrino Patchen, Clark Chief, Edwin Forrest, Blackwood, Sentinel, American Clay, Administrator, North Star Mambrino, Bourbon Chief, Regular, Ball sora, Howard's Mambrino and Homer. The steady aim is to possess nothing that does not trace through the best class of speed-producing trotting crosses, along all the blood lines, right to the thoroughbred. For catalogues or further particulars address  
2 Myl B. J. TREACY, Lexington, Ky.

**HARNESS AND SADDLERY.**

DISPLACEMENT IMPOSSIBLE.

Treatise on Nervous Tension and Circular matted free. Sold by Druggists. S. E. G. RAWSON. Sent by mail safely. Patentee, Saratoga Springs, N. Y.

IMPROVED

Blind Bridle & Winkers

FOR RACE HORSES.

Secured by Letters Patent, July 25, 1882.

Having thus described my invention, what I claim as new, and desire to secure by letters patent, is:

1. The part D supported by the side straps of the blind, extending back as shown, the front having an opening into which the blind is fitted, substantially as herein described.

2. In a bridle, in combination with the extensions D, the curved blinds F, secured to such extensions, and as shaped, to give full freedom and ventilation to the eye while circumscribing the vision, substantially as herein described.

3. In a bridle, and in combination with the extensions D, blinds F, and side straps A, the screw, nut and washer E, to secure the blind and allow it to be set, substantially as herein described.

4. In a bridle, and in combination with the check-pieces D and blinds F, as shown, the straps or bands G and H, connecting the branches or extensions above and below the eyes, and having the adjusting slides or buckles, substantially as in and for the purpose herein described.

5. In a bridle, and in combination with the blinds F, supported and pivoted to the bridle so as to be movable about the point of support, the adjustable front straps or bands G and H, and the rear band I and the hroat-latch or lash connected with the blinds, and adjustable, substantially as herein described.

The above are the claims allowed by the patent office, and though the corresponding letters do not appear on the cut, the general principle will be understood.

It meets with universal approbation, doing away with all the objections urged against blinds, and at the same time giving complete control of the lines of vision. By throwing the lower portion of the blind up something of the same effect on the action follows as is induced by toe-weights. This is especially the case when young colts are the pupils, teaching them to bend the knee without the strain of weights on the feet.

For bridles of all descriptions apply to JOHN A. McKERRON, No. 230 and 232 Ellis St., San Francisco.

Thoroughbred SETTER PUPPIES.

ENGLISH SETTERS, FIN est breed imported. Irish setters, from Champion stock imported by R. W. Hill of Oregon. Pedigree guaranteed. \$25.00 each at six weeks old. Apply to E. LEAVENLEY, Gilroy.

A. C. BASSETT, Superintendent. H. R. JUDAH, Asst. Pass. & Tkt. Agt.

For points on Southern Divisions and the East, see C. P. R. R. Time Schedule.

Southern Pacific R. R. Co. SUPERIOR FACILITIES

AFORDED BY ITS LINE FOR REACHING A with speed and comfort the best places in the State for Sea Bathing, Shooting and Fishing.

MONTEREY,

THE MOST CHARMING Summer and Winter Resort of the Pacific Coast.

with its beautiful Groves and delightful Drives. Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best of shooting may be had in the bay.

THE BAY OF MONTEREY

is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Baracuda, Pompano, Spanish Mackerel, and Flounder. The above-named attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING FACILITIES

AT THE "HOTEL DEL MONTE," ARE UNSURPASSED, having a MAJESTIC BEACH of pure white sand for surf bathing. The BATH-HOUSE contains

SPACIOUS SWIMMING TANKS

(100x50 feet) for warm salt water plunge and swimming baths, with ELEVANT ROOMS connected for individual baths, with douches and shower facilities.

THE FAVORITE ROUTE to those well-known Watering Places,

APTOS, SOQUEL AND SANTA CRUZ,

IS VIA THE Southern Pacific Railroad,

(Broad Gauge).

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known Resorts, PURISIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets will be entitled to FREE TRANSPORTATION OF THEIR DOGS when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle will be carried free of charge. Gunstaken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

TICKET OFFICES: Passenger Depot, Townsend street, Valencia Station, and No. 613 Market-st., Grand Hotel.

A. C. BASSETT, Superintendent. H. R. JUDAH, Asst. Pass. and Tkt. Agt.

LINES OF TRAVEL.

C. P. R. R.

## TURF AND TRACK.

### Shall We Have a National Horse, or Enthusiasm and Prejudice As Relating to All Progress, Including the Breeding of Horses.

I have learned to dread to appear in public print for our daily and weekly journals are too often the mouthpiece of prejudice, seeking to kill what it cannot understand. Does the reader know what prejudice means? It is the hydra-headed enemy of enterprise and enlightened progress. It retards discoveries and inventions through ridicule or false statements. It beggars and kills the enthusiastic inventor and discoverer, after which, reflection to appreciation hastens to place a monument over the poor bones which incased a broken heart. Did prejudice ever discover or invent anything? Did it at any time in the history of man have good and laudable endeavors? Never! Prejudice is envy and malice, seeking an opportunity for its inevitable "I told you so!" or sinking away like a cur-dog when success is assured. The life and soul of progress is enthusiasm, which prejudice delights to ridicule before the young and inexperienced. Does the reader know what enthusiasm means? The Greeks said it was of God: the life of all valuable men and women; that by it man was progressive. Enthusiasm is quick of perception, is very sensitive, but hides its wounded feelings for the good of its object. Enthusiasm is a deep-seated fire in man, burning from his innermost soul. Prejudice is superficial, lazy and loud-mouthed, ignorantly jumping at conclusions with no idea of results, leading men of capital through its bluster into ruinous investments and speculations. Indeed there is no end to the damage done by prejudice to humanity, good men, good women, and many a valuable enterprise has been killed by prejudice. What good has prejudice ever done? Truth replies, none? What has enthusiasm done for America? Through it, Columbus discovered our country, but Columbus was poor as enthusiasm usually is when devoted to progress; but it fires the heart of a co-laborer called philanthropy, and thus enthusiasm in Columbus fired the heart of a good queen, who furnished the means necessary, even to the selling of her costly jewels, so that despite envious prejudice, the enthusiastic Columbus won the glory of discovery of the continent of America, to become through enthusiasm the greatest nation upon the earth. Again, enthusiasm placed the Puritans upon this continent, and the same enthusiasm made the American colonists a free and independent people against untold odds. Enthusiasm wrote the Declaration of Independence, which enthusiastic men signed, and stood by. Enthusiasm always champions truth and justice, but loud-mouthed prejudice goes round with its wethanket to smother its fires, or to kill if possible. Nations can be enthusiastic, but what have not enthusiastic men accomplished. Robert Fulton applied steam to machinery in a boat, and as he steamed his trial trip up the Hudson, prejudice sat upon the river banks ridiculing the steam and smoke, but the enthusiasm of Robert Fulton lives to-day, blessing the financial, commercial and social interests of the world. Enthusiasm proposed a canal across the great State of New York from the lakes to the ocean, but prejudice ridiculed the idea as an impossibility. The noble De Witt Clinton enthusiastically declared it should be done, and it was done. Has it not for many years blessed our country as the Erie Canal? Ben Franklin played with lightning in the clouds from curiosity, but the deep thinking enthusiastic Morse experimented practically until he made a successful application of electricity to telegraphy, then overflowing with enthusiasm, he sought Congress to help him with means to apply his discovery; but prejudice ridiculed him, until philanthropic intelligence at Washington talked with capital in Baltimore, over his wires at government expense, after which, enthusiasm in the hearts of intelligent enterprise, furnished capital sufficient to girdle the earth in forty minutes with Morse lightning in harness. Enthusiasm hurries on in time, and Morse having established his fact, his fire burned low; re-kindling, however, in Cyrus W. Field to lay the Atlantic Cable beneath the ocean that nations separated thousands of miles might communicate, instantly. Well do I remember how prejudice ridiculed enthusiasm in Cyrus W. Field, and when the cable broke, took a drink and cigar, with "I told you so!" But Cyrus W. Field's heart was young, and his enthusiasm laughed at obstacles, for capital was with him, and to-day, his impossible cable reaches to the ends of the earth to bless the financial, commercial, and social interests of all people. Did prejudice with its wet blanket ever do so much good? After a time, enthusiasm lights our large and small cities with electricity, and enables people who can neither

read or write, to hold oral communication long distances apart, with lightning harnessed by enthusiastic Morse, Edison, Bell, and Brush. Our daily and weekly papers which delight to ridicule enthusiasm for the pleasure of prejudice, are now only too glad to devote space in their columns to telegraphic summary of the day, which financial and commercial as well as marine interests are eager to scan before the paper and printer's ink is dry; and yet the enthusiastic Morse and Field whom they ridiculed, caused this great application of Ben Franklin's toy to their (the papers) monetary gain. What of the great Suez Canal? did prejudice build it? No, it came along with its wet blanket, saying it would cost a great deal of money which would be thrown away upon an impossibility; better keep the money and have a good time, for life is short; or keep it locked up (the money), so it could be counted and looked at with selfish glory. However, De Lesseps with gray haired enthusiasm came along saying the Suez Canal could be built, and he did build it. The same enthusiastic De Lesseps is now cutting a canal across our continent from ocean to ocean to bless the world. Has prejudice helped De Lesseps in these two great enterprises? Who were the pioneers to our Eldorado, California? Who unearthed its hidden treasures, and put under cultivation its maiden soil to bless the earth with its product; was it not brave enthusiastic men? Did prejudice do anything to help? Both elements, prejudice and enthusiasm went there, and well do I remember the circumstances. My business location was in lower Maiden Lane, New York City, and I was called daily much among the shipping, so the events of those days are vivid in memory. Many was the vessel fitted to luxury, and freighted with delicacies for a pleasure trip round "The Horn," where bags could be filled with gold as children scrape up sand. Together with cake, candies, and sweetmeats, with wine and cigars, an occasional piano was set up in the saloon for music and dancing on the way, little dreaming that the music of the elements in the rigging of their ship, would bring them to their knees in supplication to an unknown God, rather than to their toes as they expected to be from piano music. This class mostly represented idle prejudice, unaccustomed to, practical labor. They were the quitters! Landing in California, the necessity of becoming common day laborers, chilled their narrow souls; so they lay round wearing out their nice clothes, eating and drinking up their delicacies, waiting until dear mamma and papa could get money to them through which to return. When they did return, they came with the toothache, the headache, the stomachache and "rhenmatiz;" not forgetting the wet blanket of prejudices. Now and then reflection and reason together invited enthusiasm into the heart of some, and they would resolve to return like men, joining the do or die class of enthusiasts. To this class of enthusiasts do we owe the unearthing of untold wealth, also the settling which is now known the world over as the Eldorado of America. This class started the overland route, marking the way from Omaha to the Pacific with long mule and ox trains, and the bleached bones of the brave hearts that fell by the way; for we must remember that enthusiasm does not always win. As San Francisco and Sacramento became facts, enthusiasm said they must have a railroad across those desert plains and Rocky Mountains, but prejudice shrugged its shoulders, exclaiming ridiculous! but Stanford, Crocker, Huntington and Hopkins, were not to be intimidated by prejudice with fraudulent attempts, so stamping prejudice under foot, they said the road should be built, and it was built. To-day prejudice buys his ticket from the Atlantic to the Pacific, bundles up his gouty feet, and rides a distance in six days by enthusiastic road, which by prejudice route round the Horn, took six months. So we can look into all the advances in civilization, and find it has been the God-soul in man that has caused them. Enthusiasm is bold, daring, liberal, generous and sympathetic. Prejudice is selfish, cold, deceptive, and cowardly; is the quitting come-back element of laziness. Enthusiasm despises deception and is never afraid of work. God said man should work, but the devil could play; thus the enthusiast is a live man with the God-soul in him; and when he seeks to add wisdom and judgment to enthusiasm, he becomes the greatest of all created things. Prejudice stripped of his cloak, displays the devil's ornaments in horns and tail, while in its body hands is the assassin's poniard dipped in poison, ever ready to stab enthusiasm to the heart from the back in the dark, if ridicule fails to kill. Now, God made the fowls of the air, the beasts of the fields and all kinds of cattle, each true to its kind; also the fish of the waters of the earth, giving man dominion over all as He did the vegetable and mineral kingdoms, but told him he must work for all of them; and knowing man would be lazy, He put the God-soul of enthusiasm where he could get it, to stimulate him to work for the application of all these possible blessings; at the same time telling man that He should let the devil loose upon the earth to thwart all good ambitions, God also put curiosity into man

to inquire into these different kingdoms above, on top, and beneath the earth as well as into the depths of the sea; but in all his ambitions the devil was to stand in the way with a wet blanket, called by man prejudice. However, man has kept at work, driven by enthusiasm into unheated, pathless adventures, often dying by the way, but history records his efforts by way of land marks for others to follow up. The scientific history of the mineral kingdom is emblazoned with the names of enthusiastic discoverers. The natural science shops of Professor Henry A. Ward of this city of Rochester, N. Y., speak of the naturing industry of enthusiasm in mineralogy, ortology, and zoology, from which shipments are continually being made to museums, scientific institutions, and universities in the old world as well as our own country. Enthusiasm has driven Professor Ward repeatedly to the ends of the earth for investigations and discoveries in the animal, vegetable, and mineral kingdoms for the good of mankind—progress. If we look into the ethereal kingdom, we have to do so through the enthusiast's glasses, without whom we should not to-day have the charts and chronometers so important to marine service, nor should we be able to give beforehand the weather indications of such vital importance to the agricultural as well as marine service. Thus we can go on and learn that the God-power in man, ridiculed by prejudice, is the one, great, powerful element for progress. Success, I have said, does not always bless the one individual possessing enthusiasm largely; and yet he may set the ball of progress rolling, to unwind its silken threads for prosperity to those who lay hold upon and follow them up. Circumstances too often thwart the individual enthusiast; he may not be able to make himself understood, or his ends may overthrow capital involved in a similar but less positive, hence less valuable way; but his attempts are certain to live after him, to be adopted by a less prejudiced people, because more informed. To be enthusiastic beyond the conceptions of a people is to be in advance of the age. He may carry his discoveries to a point where as a practical man he can see and know that possibilities are before him; and yet a want of means or capital which prejudice prevents him from getting, (for prejudice is the sworn enemy of enthusiasm), often causes his defeat, after which his shattered possibilities are gathered up by prejudice, and presented to the people as his achievement in new and important ways, plagiarizing from published matter, pirating of sketches and pictures all come under this head of prejudice. Because of my defense of Clay Arabian blood in the American road and trotting-horse prejudice has called me enthusiastic. I thank him for the compliment, and may I continue to be worthy the name. As animal life relating to the American Road Horse has long been with me a special, practical study, I have come greatly in the way of prejudice heavily invested. In nothing has there been, and still continues to be, so much fraud and deception as in the reputed breedings of our trotting horses; and yet there has been vast improvement in results, through improved mechanical influences since I began my defense of the Clay Arabian blood; and with these increased rates of speed, it must be remembered that Arabian influences have all the time continued at the front, whether through Clay, Pilot, or Morgan. As I have just spoken of Ward's Great Natural Science Shops, permit me to refer to the fact that at his shops both the skeletons of Henry Clay and Lexington were prepared and mounted before presentation to Smithsonian Institution at Washington, D. C., Lexington's being taken from the freshly dead body; while those of Henry Clay had for thirteen years been subjected to the decomposing action of mother earth; and still the old experienced ortologists who prepared and mounted both skeletons, knowing nothing of the breeding of either animal, pronounced the bones of Henry Clay by far the finest in texture, showing a superiority in animal life, i. e., blood and breeding. Although I had old Henry Clay taken up, mounted, delivered and myself assisted in placing him upon the pedestal by side of Lexington, the presentation was made by Hon. Erastus Corning, of Albany, who defrayed the major part of all expense. But to continue, because I so strongly advocated the blood of old Henry Clay, it was not for the sake of the name; although like all intelligent American citizens, I do reverence the memory of that noble statesman. In the horse it was the superior blood instinct with general superior qualities. Abounding in trotting speed, with a disposition tractable and pleasant, constitution like iron, sound in all ways, and free from physical infirmities to be entailed, he also possessed a legitimate name. A knowledge of all these facts, caused me to feel that his blood would make a reliable foundation upon which to build a "National Trotting Horse," and from which to obtain a more uniform, perfect and valuable coach horse; but prejudiced men fought me, and continue to do so; from one reason, others for another; but all are condensed in the few words, ignorant prejudice, or financial prejudice.

There is but one central cause for each object desired or demanded by man; but there are different causes for different effects. The steamer that crosses the ocean, or the train of cars our continent, both reach their destination from the one same cause that Fulton experimented with in his little boat upon the Hudson. The messages you read by the electric light is but the same element, or identical cause that Ben Franklin played with in the clouds; so in the trotting and running horses there is but one cause, and although used in different forms the highest attainments in either case can only be reached uniformly through purity of cause or blood. Leaks from the steam pipe or electric wires we will compare to mongrelization of blood, canss for high rates of trotting speed. In my long years of study into causes relating to animal life in the horse, I found that history over and over again credited the Arabian as original cause or central force for all desirable qualities; and the breeders of the world, up to this writing, concede that fact. This English breeder resorts to it to-day as an original cause from or by which to regenerate his degenerating racehorse; and in the American trotting horse both history and facts prove that the instinct in its highest and most positive form, came from that same Arabian blood, as the original and positive cause for trot. Justin Morgan was inbred to that blood; Imported Messenger was inbred to that blood; Henry Clay was inbred to that blood; the Canadian "Ksnuck" or "Pilot" was of that blood, and Dorsey's Goldust was really inbred to that blood. In these five representatives there, we have one or two decads between the advent of each, and yet mongrelized as each representative has been from its start as a producer, we do not and cannot get a high rate of speed without one or the other being represented, and often both in the one horse; while a want of information prevents us from knowing how many strains there are from this Oriental cause centered in the meteor horse. Justin Morgan and old Henry Clay both presented strong characteristics of the Arabian horse, in build, height, disposition and constitutional endurance, which they imparted to their get in such positive and superior manner, that mongrelization found it difficult to obliterate its influences of the five representatives named: Justin Morgan came first; near fifty years had elapsed before Henry Clay came on as a producer. During that fifty years the blood of Justin Morgan, although largely inbred, had become so mongrelized and scatters through wars and emigration, as to preclude a possibility of making it a foundation for a national thoroughbred trotting horse. Messenger had suffered in like manner, and worse yet, was largely crossed upon running horse blood. Upon the principles of once out and twice back, Henry Clay seemed to me to be the one corner stone to secure for the purpose of a national horse. His name and blood were honest. We are a young country with great opportunities, and it is the duty of every man professing a gift to study himself for the one most prominent for good, and to cultivate that gift to eminence. Thus doing, he will become an enthusiastic worker, and although not successful himself (all men cannot be), he will do good for others. The one whose gift is for gain exclusively may be termed a miser or "money-grabber," and yet the money maker is of vital importance to the world, for through him are nations carried through financial troubles resulting from war, pestilence or famine. Through him are inventions and discoveries made available. The penninary privations and sufferings of inventors and discoverers are seldom known to the world; but such men as prejudice terms "money-grabbers" have brought their labors before the world. While enthusiasm is essential to progress in the arts and sciences, the money making man is as important to their development as the fuel that generates the steam to drive the machinery in steamships, locomotives, or manufacturing industries, astronomy, mineralogy, oteology, zoology, or mechanics are all sciences, yet each one is helpless without the money-making enthusiast. Each man lives for a purpose, having his part to play, even to the prejudiced man, with his wet blanket, for he fulfills the promise of God when He said the devil was loosed in the world for all time as a chord of dissention among men, and a destroying element in particular. But to animal life domesticated we find that sheep, cattle, swine, poultry, and horses, each have their enthusiastic special student. Sheep, with Edwih Hammond, of Middleburg, Vermont, were a speciality, and he is to-day largely credited for the prominence of the American Merino. He discovered superior values in the Spanish Merino as imported into New England, also that as a family they were fast degenerating through neglect and ignorant out-crossing. Enthusiasm stimulated to collecting and close breeding the prrest specimens he could find, until through his labors, the American Merino became famous throughout the world. So too with Bates and shorthorned cattle, through his untiring enthusiasm the merit of the "shorthorn" became Excelior among stockmen. Through the enthusiasm of James I., Cromwell and Charles II. is due the English thoroughbred running horse. Now cannot America produce a national horse to be proud of as its own production? A national thoroughbred trotting horse is possible, but out-crossings must be done away with until you know what you are crossing and how you are crossing. I have repeatedly written that out-crossing meant degeneracy, indeed the word becomes a slang term in journalism. The breeder of horses must be an intellectual worker, as well as a practical, physical worker among his stock, not one day in a week, but seven days in the week, a good part of each day, from the early morning until past noon must be spent with horses, and again at night before he retires, must be looked to the condition of each animal. The remaining portions of each day must be devoted to intellectual study. Every publication treating scientifically upon animal life he must inquire into, and all publications treating upon his special subject he must read from cover to cover, or as old Mr. Harper said about his horse, he must run from end to end. The practical horse breeder will find that the road is not paved with gold, nor are there drinking houses on the way. As such a breeding student progresses in years and information, he will become a detective in the matter of publications. He will learn to know the writers whether they are plagiarizers, compilers, practical breeders. The weekly and monthly journals are outlets for public opinion, and are valuable to all breeders, whether they published fact or imagination. I would not have the young breeder think there was no good in journals devoted to breeding because the editors seldom know anything of the subject practically, on the contrary they are of vast importance, but I would have him study well, think deep, cultivate memory and observation, making practically daily tests of what he reads. Through such means he will soon become a critic upon a writer, no matter what the initials or signature may be at the bottom of an article that attracts his attention. Thus he will learn to separate the wheat from the chaff. Prejudice that has strongly condemned me for my prejudice is applied to myself.

I have been condemned for my denunciation of the horse called Rysdyk's Hambletonian. To all such I will say that I was never prejudiced against anything except fraud, decep-

tion and untruth. The name Hambletonian, as appropriated by William M. Rysdyk for his Abdallah horse, was a theft, and base deception. Rysdyk we suppose to be the legitimate family name of the man, but Hambletonian was the name of a royally bred son of imported Messenger, born near fifty years before Rysdyk's Abdallah colt was, and even before William M. Rysdyk himself was. The Tichborn pretenders in England presumed no greater evil than W. M. Rysdyk actually perpetrated. The Tichborn claimants had their strong friends and backers, as did W. M. Rysdyk in his deception. In the beginning God called Adam and Eve one; the misls being the representatives in the one family, but all descendants bore different representative names, that each living being might be held accountable for his sins before the world, and these sins should be entailed upon his get into the third and fourth generation. From that day to the present, all heathen and civilized nations of the earth have held the misappropriation of a representative name of another man, or animal, or family, to be an unpardonable offense; and this was just the sin Rysdyk committed against all the breeders of the land then living, and to come after. Hambletonian, as I have said, was a noble son of imported Messenger, royally bred, and a strong producer of great excellence; but he was neither the sire, grand sire, or great grand sire of Rysdyk's stud horse. The children of Cain and Abel marked a less distinct line than did the blood of Messenger's son, Hambletonian, and especially Wm. M. Rysdyk's son of Abdallah he called Hambletonian. Now, what was the reason for this deception in name? If Abdallah represented good blood in a good sire, why did Mr. Rysdyk wish to change the name of his colt he called young "Abdallah," to that of Hambletonian? There certainly must have been a strong reason with him, which I will explain. The merits of the good son of Messenger called Hambletonian, were recognized proverbial facts. William M. Rysdyk was not a breeder, nor was he a well-informed horseman for even his day. He had this old mare and colt, without information either as to the breeding of the mare, or of the sire of the colt, except as "Abdallah." As the colt matured, Rysdyk found his colt would not do business as Young Abdallah. Hambletonian blood was highly prized but nearly extinct; so to make his colt go in the stud, he called him Hambletonian, and the people believed it as they do many other falsehoods. Now, why was Abdallah unpopular? I will explain. In the first place as a horse, he had no merit. He was large and very coarse. His head was a bucket head with mean hog's eyes, long, coarse lop ears, called sow's ears. His neck was badly ewed, his mane very slight, and tail almost bare at the roots, called a rat's tail. His legs were coarse, filling badly when standing, and hocks turned soft. Added to these physical infirmities was a bad disposition inherited from his sire, Mambriño, which horse was also unsound and badly string halled. Added to all these facts, Abdallah was unable to trot, or to run; nor could his sire Mambriño, nor could Rysdyk's Abdallah horse Hambletonian. As all these facts were realized by William M. Rysdyk, he decided upon the deceptive name. I have for many years urged a national thoroughbred trotting horse, and am now writing again to that purpose. Orange county, N. Y., and joining counties in New Jersey, had much of the Arabian blood in the mares, as well as through remnants of Messenger blood, which was inbred Arab. In those days the geldings were sold, but the mares remained as workers; thus there were mares by the Arab bred Andrew Jackson, also several sons, including Young Andrew Jackson and Long Island Black Hawk, also grand sons through Henry Clay. All William M. Rysdyk had to do to establish his deception, was to breed his colt to these mares as he traveled him about, then in the produce ignore any name but that of "my colt Hambletonian!" As men were not educated up in breeding in those days as they are at present, the description was complete; added to which, was newspaper endorsement of public opinion to a growing prejudice for Hambletonian. There is a sentence which reads "Be sure your sin will find you out," and it was fast doing so when Rysdyk and his horse died; for as the Arabian blooded dams which made Rysdyk's horse famous, were fast dying off, Orange county ceased to produce either coach horses or trotting speed, because the blood of Abdallah through Rysdyk's horse predominated, to prove its worthlessness. Here then is the curse of sin in one man entailed upon the multitude. As I have said, all domestic animals can be bred up if breeders can secure dams of a higher type than the sire; and thus the second and third removes from Rysdyk's horse secured better ears, better heads, better tails, legs, and joints; but in such improvement we have no right to entail the fraudulent name, knowing it to be so. When I read in sporting journals the name of the great stallion Maxy Cobb with strong encomiums to name of Rysdyk's Hambletonian as cause for superiority in Maxy Cobb, I am not only astonished at the writer's want of knowledge of blood influences, but am disgusted. Now let us, please, as an intelligent breeding public put aside all prejudice for name, and reason together as to what were the real blood influences which made "Maxy Cobb" the wonderful horse he really is. According to the laws of Moses, we should begin first with the sires; but, as I have explained it would be a deception, we will take up the maternal line. The dam of Maxy Cobb was a game trotter with great constitutional vigor and endurance. Her sire Jupiter was as fine and bold appearing stallion as I ever saw led out to a bridle. In the maternal line he represented Arabian blood through "Almack" to Mambriño and Messenger, added to which was Arabian blood through Morgan in the granddam of "Almack." Now the sire of "Jupiter" was the Arabian blooded son of Andrew Jackson called Long Island Black Hawk; thus all through on the dam's side of Maxy Cobb, we find blood of breeding and great trotting instinct. No man can dispute these facts. Andrew Jackson was of close Arabian breeding, and the only stallion to date that was never beaten a heat or a race at the trotting gait. His son, Long Island Black Hawk, took his blood in a diluted form, but was a trotter and producer of trot. Jupiter, by L. I. B. H., was a trotter and producer of trot, and was the sire of the dam of Maxy Cobb, herself a trotter. Now on the sire's side of Maxy, we find Happy Medium, by Rysdyk's Hambletonian. The dam of Medium was the famous old trotting mare Princess. She could beat 2:25 or could trot heats in 2:30 all day long. She was a legitimate, lineal descendant from Messenger's great Arabian blooded son Hambletonian, reinforced with Morgan Arabian blood; hence Princess was a game, fast mare, and bred to Rysdyk's Abdallah horse, produced Happy Medium. Now, no amount of training could make Happy Medium trot as did his better blooded dam; the Abdallah load from his sire, Rysdyk's Hambletonian was too heavy; he could, however, twice double distance his sire in 2:45 and better. Now as we know Rysdyk's Hambletonian could not trot in three minutes, nor his sire Abdallah in four minutes, or the next sire any better, and the blood of both Abdallah and his son, the sire of Happy Medium, was cold mongrel blood, it is not more consistent to credit Maxy Cobb to the pater, warmer, finer, better, and more positive Arabian inheritance in the maternal line, which is honest, than to force in the dishonest,

incpsphle, cold-blooded influences of his grandsire, Happy Medium through his dam's blood is a great producer, when bred to mares possessing blood akin to those in his dam, but when bred to mares possessing his sire's blood in prponderance, the produce verifies John Splan's statement in print, "that the Mediums were the worst quitters in the world." This statement General Withers will understand, and breed the horse to mares accordingly. The principle of breeding-up is hers in a measure explained. It cannot be accomplished through out-crossing, but by breeding back to the prims factor of blood cause, or blood instinct; and there is no representative credited to Rysdyk's Hambletonian that I cannot explain away in the same manner. In many instances I have become discouraged in my efforts to have truth in blood of our trotting horses recorded as it should be. In the matter of Geo. Wilkes' dam, I contended for years before it was accepted and even then prejudice would lap on in the granddam a falsehood, which I would not take the trouble to explain away, as my intended Clay history would do all that. The Highlander granddam was not thoroughbred Highlander as prejudiced journalism insists upon having it, but was plain Morgan, and here again we have a cause for superiority in Geo. Wilkes over any other son of Rysdyk's Hambletonian. Wilkes' dam was by Old Henry Clay, and his granddam was Morgan, called in that section in those days, "Highlander," and why I will here explain. Early in the twenties, Uncle Tom Kellogg, who always kept stallions, brought to his home, East Bloomfield, Ontario County, N. Y., from the East, a son of Justin Morgan, the inbred Arab horse. The Morgan difficulty started at Canandaigua, eight miles east from Bloomfield. Morgan was arrested and put in jail at Canandaigua, soon after which the excitement and prejudice against the name of Morgan became so intense all through that section as to reach even a horse bearing that name; so Mr. Kellogg called his son of Justin Morgan, plain Highlander, perpetuating the name in his sons and grandsons. The granddam of Geo. Wilkes was by a grandson of Thomas Kellogg's son of Justin Morgan, called Highlander, and no drop of running horse blood was in that granddam. Thus in Geo. Wilkes we have an overpowering influence of Arabian blood through Morgan and Henry Clay, sufficiently so to stamp down and out, the cold, mongrel blood of Abdallah through Rysdyk's Hambletonian to Geo. Wilkes. I am speaking as I have repeatedly done these years past, for a national thoroughbred trotting horse, in hopes that ignorant prejudice may be put one side by our American breeders, for reason with intelligent judgment. These long letters to the public consume my time and impoverish me; but my zeal in behalf of my cause has driven me on. God knows why. If my reasonings have not been with logical breeding intelligence, then I am no judge of blood influences. There has never been to my knowledge either a horse or a mare with phenomenal trotting speed, but what careful investigation into blood and breeding has revealed the one cause of Arabian blood influences in a marked degree, whether through Morgan, Messenger, Clay, or the "Kannack" horse Pilot. Thus in Maud S., Jay-Eye-See, St. Julien, Rarus, Hopeful, Maxy Cobb and the entire Wilkes family, we find it the case through one of the channels I have named. While many gentlemen endorse my advocacy of a national thoroughbred trotting horse, the question came up as to what family name should be adopted as a foundation name. That of Hambletonian representing the multitude in ownerships, was naturally suggested; but I am sure men of intelligence and even the slightest moral principle, would not feel satisfied that in years to come the breeders of our land and other lands should relate the fact as to how our national horse had been built up and established upon fraud in name and fraud in blood. To begin with, we must have a blood that will sustain itself upon its own blood as does the English thoroughbred running horse; and we know that neither a low type, nor a high type of mongrelization can do it. Take for example the scattered *Tutbury Stud* of King James I. of England. After the restoration did they try to build up upon mongrels? By no means. They hunted for the best bred specimens of their Arabian crosses, and imported fresh Arabian stallions. James, Cromwell, Charles II. and numbers of the nobility, all imported Arabian stallions, and thus through combined, intelligent effort, the English racehorse was created and established. And what do they do to this day to sustain their national horse? do they resort to out-crosses? By no means; they go for the fountain head of blood influence, the Arab of the desert. There is no better illustration of the damage possible through out-crossing, than to cite the old Goldust family. The starting point was Arabian blood through Morgan, not out-crossed, but bred up through union with its original blood from the imported Arabian "Tilcaadi," when Goldust came as a whirlwind of trotting speed, and was a positive producer of the same. But prejudice had its influence even over the enthusiastic Dorsey, and the thoroughbred running horse blood was introduced in mares, so that the light of Dorsey's Goldust was really meteoric, ataying as it were for a day. While I could continue my arguments for pages, citing multitudes of cases by way of evidence, my paper is already too long, so I will close with good wishes towards every breeder in the land.

RANDOLPH HUNTINGTON.  
ROCHESTER, N. Y., Nov. 21, 1884.

#### Mr. John Hammond.

Wherever racing has been discussed during the past year, which is equivalent to saying wherever Englishmen have met together, the name of Fortune's favorite, Mr. John Hammond, must very often have come uppermost. When, on a certain afternoon in May, down the green strip of turf which lay between dense dark masses of men on either side, a rider in a white jacket, with red collar and cuffs, desperately contested the finish for the Derby against a rider in white, with a yellow cap; when, after shouts of "St. Gatien wins!" "Harvester wins!" there had followed a pause, and then a yell, as "O O" was hoisted above Judge Clark's head, Mr. Hammond's name was enrolled on the famous list of Derby winners, for as victory in dead-heat may be accounted. There are people who imagine that Mr. Hammond, in receipt of about the income which he now pays to his gardener, bought St. Gatien for the price of a Shetland pony, and has won since that May afternoon a fortune most conveniently expressed by the fraction of a million. About every successful man whose name comes prominently before the world stupid stories are related. As a matter of fact, Mr. Hammond first went on the turf some sixteen years ago. His friends do not assert that he was a man of capital, but he had that which is of infinitely more value than capital in the business of racing, a sbrew head, a keen eye for a horse, and a sound knowledge of the world. Long before St. Gatien was foaled, or Florence's dam had emerged from the shafts of the cart to which she was doomed, Mr. Hammond had purchased his present property, The Lawn, Newmarket, a place which must represent some £10,000 to £12,000, so that these legends of the almost instantaneous rise from poverty to wealth may be dismissed

fabulous. Many a well-placed commission has been worked by the owner of St. Gatien, and men who have commissions to work for great stables are engaged upon a very remunerative occupation. It was in 1880 that Mr. Hammond, being in a good position, determined to gratify his taste for horse-flesh by purchasing three foals, it being his design, by degrees, to form a small breeding establishment. The Dutchman and a couple of others were bought, under the advice of Tom Brown, and so the white jacket, red collar and cuffs, was first selected and put to service. On two or three occasions it was borne to the front, and Mr. Hammond began to increase his stud. Last Winter, his horses then being under the care of Robert Sherwood (Ryan has also trained for Mr. Hammond), St. Gatien was a stable companion, and the trainer was instructed to get rid of the colt, which had run thrice in moderate company and won each time, for £1,500. Sherwood offered him for this sum to Mr. Hammond, who had taken rather a fancy to the animal, but did not see on what sound reckoning so large a price was asked. True, he had done all he had been asked to do, but then this was too little to make him worth £1,500. It may almost be said that St. Gatien was hawked about. Two or three people, at least, had the refusal, and did not avail themselves of the chance. The more Mr. Hammond saw of the colt meantime, the more he liked him, and at last determined—how wisely the event has shown—to give £1,500 for a horse that has proved to be worth about fifteen times as much. Florence, which has done her owner so many good turns since, once did him what at the time looked like a bad turn. Mr. Hammond had made tolerably certain of winning a race at Yarmouth, and had backed his animal with confidence, to find that it had no chance with Florence, who cantered away from it. To buy Florence was his immediate determination, and the filly soon after passed into his possession for £1,000. That Florence was a really good mare was soon made evident, but when it was found before the Derby that she could not live with St. Gatien at even weights, Mr. Hammond began to feel a justifiable confidence in his chances. The story of the dead heat need not be repeated. That St. Gatien would inevitably have won his owner had no doubt, and how little doubt he need have had subsequent running seems very clearly to have shown. Captain Machel and Sir John Willoughby displayed a wise anxiety to divide, and it must be admitted that Mr. Hammond's conduct in giving his rivals the option of doing what they pleased was marked by great generosity. This was certainly felt and acknowledged by Sir John Willoughby, who, with a very commendable access of good feeling, went up to Mr. Hammond at Ascot, and expressed to him the regret he felt at having been induced, on the spur of the moment, to make the unfortunate objection to St. Gatien at Epsom. How Mr. Hammond dissented from the general opinion that a three-year-old could not win the Cesarewitch with 122 pounds in the saddle—when that three-year-old was St. Gatien—is a matter of turf history too recent to need recapitulation, and the ease with which the now famous animal left his horses when Wood gave him a hint that it was time to get home, will not readily be forgotten by those who witnessed the race. More exciting still was Florence's head victory from Bendigo, with 127 pounds in the saddle. No one but the judge could say what had won till "No 4" was hoisted.

"I congratulate you, Mr. Hammond!" his neighbor, who stood by his side and watched the desperate struggle home, said, as the issue was made plain.

"Well, I am glad to say that you can congratulate my friends as well, for I told them just what I knew about the mare," was the reply, an unselfish answer which, spoken in that first moment of excitement, when many men would have thought only of themselves, seems well to justify the opinion of those friends that "Hammond is a very good fellow." On the subject of the relative merit of St. Gatien and St. Simon, it need scarcely be said that Mr. Hammond is a hearty believer in the superiority of his own Saint. He thinks there is little doubt that St. Gatien would beat St. Simon over the latter's best course, which appears to be generally set down as about a mile and a quarter; over the Cesarewitch course he has no doubt whatever of St. Gatien's invincibility. "Over a distance of ground I believe my colt is the best ever seen!" he says, with honest pride in the good horse.

The breeding establishment is at present on rather a small scale, but the only three young ones Mr. Hammond has bred have all been returned winners—Alaska, Insignia and Miss Galopina. There are, moreover, "two or three nice young ones coming on." There is every reason to suppose that the triumphs of the jacket are not by any means at an end. Few men who "go racing" are unfamiliar with Mr. Hammond's appearance.

The Heir to a Dukedom.

Lord Mandeville has evidently got into very bad odor. The New York correspondent of the Boston Globe, speaking of noblemen who condescend to spend their time in the Empire City, says some of them are decidedly off. "There is Lord Mandeville, for example, who will probably be the Duke of Manchester one of these days and who married a very charming New York girl a few years ago. He came to financial grief on the turf not long ago, and for reasons which seemed ridiculously small for the heir to a dukedom. Both Lord and Lady Mandeville have been prominent in the social world as members of what is known as the Vanderbilt set for some time past, and have done their best to keep pace with their wealthy American friends. The Viscount himself has divided his time with members of the Murray Hill aristocracy and the rather shady hangers-on of the turf and stage. A pleasing reminiscence of His Lordship still lingers about Charley Collins' Criterion, a saloon on Union Square much affected by actors. Lord Mandeville was introduced to Charley, as he is familiarly called, by Pony Moore, a London negro minstrel. Mr. Collins acknowledged the honor in the usual way and drank the health of his new acquaintance in bumpers of his best wine. The scion of nobility entertained the company present with a flood of agreeable reminiscence, and departed after having promised to call again. He kept his word. The door of the Criterion opened one afternoon and the wind blew Lord Mandeville across the floor and up to the bar behind which Charley Collins was standing. His Lordship bent over and whispered something in the ear of the dispenser of drinks. "Certainly," said the latter, rubbing his eyes to see if he had been dreaming. Then he dived into the depths of his cashdrawer, produced therefrom five crisp, new five-dollar bills and handed them to his friend. Again the door opened, but the wind had changed now—there are English men who can change as well as raise it—and the future Duke of Manchester floated out to the square, and the Criterion knew him no more. Charley Collins has a tender heart, and whenever he tells the story he knocks a small sum off the amount loaned. He has got it down to \$10, and very soon it will be wiped off entirely. That's the only way it ever will be wiped off."

The Season of 1884.—The Corrigan Stable.

[N. Y. World.]

Among the most prominent winning stables of the year is that of Mr. Edward Corrigan. It is the most successful of the Western stables, and, in fact, Mr. Corrigan is the largest winning owner claiming a residence west of the Mississippi. Mr. Corrigan is comparatively new to the turf, for, although he has raced for some years, it was not until the season just passed that his horses became important factors in many of the great stakes. That Mr. Corrigan is no novice in racing he showed by the admirable management of his stable and the skill with which he placed his horses, so that, aided with good luck, he makes one of the best averages ever recorded, winning no less than 53 races out of 122 that he started for and for which he sent only 136 starters to the post. The full record is as follows:

Horse.	Times Started.	Times First.	Times Second.	Times Third.	Gross amount won.
Modesty, 3, by War Dance.....	14	6	3	2	\$23,115
Freeland, 5, by Longfellow.....	10	10	1	1	14,430
Lizzie Dwyer, 2, by King Alfonso.....	9	4	1	1	12,170
Isaac Murphy, 2, by Virgil.....	6	2	2	1	5,035
Pearl Jennings, 5, by Delaps.....	12	6	3	1	4,750
Ada Glenn, aged, by Glennig.....	10	3	3	1	2,625
Banana, 2, by King Ban.....	6	2	2	1	1,930
Swiney, 3, by Ten Broeck.....	10	3	2	1	1,820
W. R. Woodward, 3, by Ten Broeck.....	13	5	1	1	1,750
Ida Hope, 2, by King Alfonso.....	12	2	1	1	1,425
J. W. Rogers, 2, by Faustus.....	5	3	2	2	1,225
Bonnie Australian, 4, by Regent.....	12	1	1	1	800
Wedding Day, 6, by Dudley.....	5	1	1	1	300
Irish Pat, 2, by Pat Malloy.....	6	1	1	1	250
Court Ban, 2, by King Ban.....	5	1	3	1	150
Vigilance, 2, by Virgil.....	5	1	1	1	100
Glit, 4, by Tom Sawyer.....	3	1	1	1	100
Totals.....	136	53	17	16	\$71,765

The entrance money for all of the above races amounted to \$5,000.

Mr. Corrigan began racing at Nashville in May and continued on at Lexington, Louisville, Latonia, St. Louis, Chicago (both at the Driving and at Washington Park), Saratoga, Sheepshead Bay in September and back to Latonia in October. After the Washington Park meeting in July, the stable was divided. The larger number, in charge of J. W. Rogers, was brought East, the remainder being left at Chicago to run at the midsummer meeting under the care of Abe Perry. One feature of Mr. Corrigan's racing is the number of stakes won by him, especially in the West, his leading off at Nashville, where Pearl Jennings won both the Fairview and Kirkman Stakes. At Lexington, Freeland took the Distillers' Stakes. At Louisville, Freeland in turn won the Dixiana, and Merchants' and was second to Modesty for the Nantura, which was a "walk-over" for the pair. Modesty, at the same meeting, won the Kentucky Oaks and the Moet & Chandon Champagne Stakes. At Latonia, Freeland won the Merchants' Stakes, as also he did the Turf and Citizens' handicaps at St. Louis, while of the two-year-old stakes at the same meeting, Ida Hope won the St. James Hotel Stakes. It was at St. Louis that Mr. Corrigan added the two-year-old Bill Adle, which he afterwards renamed J. W. Rogers, to his stable. This youngster was entered in a two-year-old race by Gray & Co., his then owners. After a long delay a fairly good start was effected, and Bill Adle finished first. To the surprise of nearly all present the judges decided that it was "no start," and ordered it run over after the last race of the day. During the afternoon Mr. Corrigan purchased Bill Adle, and ran him in the actual race as his property. Bill again finished first, and as Mr. Corrigan backed him to win heavily, he won him clear in the first race.

From St. Louis the stable traveled on to Chicago, where, especially at the Washington Park Meeting, it had great success, and as Mr. Corrigan is not afraid to back his horses when he knows that they are right, "he scooped," the boys said after the meeting, "a barrel of money." Of the stakes run at the Driving Park Meeting, Mr. Corrigan only won the Flash, for two-year-olds with Isaac Murphy. On the inaugural day at Washington Park, however, he made amends, for with Modesty he won the American Derby, the net value of which was \$10,700, and as he started against eleven others with a penalty of 7 pounds, Mr. Corrigan got the most of his money on at good odds, the starting price being 2 to 1 against. Until the day of the race it was expected that Baldwin's filly Fallen Leaf would run. She was the favorite the night before the race, but at the time she was so completely amiss with a bad leg that she has not run since. Had Fallen Leaf continued well it is possible that Modesty would not have had the success which subsequently marked her career, especially at Saratoga. For even at Chicago she proved unable to beat Mona for the Englewood Stakes, at a difference of 5 pounds, but as she subsequently won the Woodlawn Stakes she in a measure recovered her reputation. Mr. Corrigan's big winnings at Chicago were made, however, with Freeland, who on the 3d of July won the Boulevard Stakes and on the fourth the Columbia Stakes, when he beat a field that included Audrain, Gen. Monroe, Lucky B., Blazes and John Davis. Mr. Corrigan also did well when Isaac Murphy won the Kenwood Stakes for two-year-olds, with the odds at 4 to 1 against him, and when Ada Glenn won the Commercial Stakes, with the odds at 7 to 1 against her. Of those that were left over at Chicago to run during the Midsummer meeting at the Kriving Park, Banana was the only one successful, she winning the Boulevard Stakes.

The Saratoga division of the stable did much better, winning as it did seventeen out of twenty-eight races for which it started, one of which was a dead-heat, however, for which Irish Pat divided a purse of \$400 with the Californian Rapido. Taking the races in rotation, Pearl Jennings led off by winning the sweepstakes for four-year-olds and upward on the first day. On the second, Wedding Day won a purse of \$300, while on the third day Freeland won the Excelsior Stakes. The Saratoga Stakes for two-year-olds then in turn fell to Lizzie Dwyer and that promising three-year-old, W. R. Woodward, won a purse of \$300. Early in August Modesty won the Sequel Stakes and W. R. Woodward was again bracketed a winner of a purse of \$300. On Aug. 7th Lizzie Dwyer won the Virginia Stakes, and on the 12th she added the Kentucky Stakes to the stable's credit. Woodward and Swiney each in turn won two races, and on the 19th Modesty won the Pocahontas Stakes and on the 26th the Relief Stakes, she, with Lizzie Dwyer, making a flying trip to Monmouth between the two races, but did not run owing to some misunderstanding as to the conditions of certain races announced. The interval between the Pocahontas and Relief was not entirely a blank, for Ada Glenn, after a dead-heat with Mr. Baldwin's Gano, paid for her trip to "horse haven." With the end of Saratoga the stable joined the crowd at

Sheepshead Bay, where it won five out of fifteen races, its greatest disappointment being the defeat of Lizzie Dwyer for the Flatsh Stakes by Mr. Lorillard's Wanda and of Modesty for the Great Long Island Stakes by the famous Miss Woodford. The victories were not altogether barren of honor, for Swiney beat Monitor, Kosciusko and Jim Carlisle at a mile and a half, with the odds at 4 to 1 against him, while Pearl Jennings in turn won three good races in two of which she beat Aranza. The two-year-old, J. W. Rogers, also won a good race at three-quarters of a mile when he beat Exile, Tallie Doe and six others.

From Sheepshead Bay the stable proceeded to Latonia where it was joined by Ida Hope and Banana, both of which had run without success at Lexington and Louisville. They did better, however, at Latonia, and during the eight days of racing at that point Mr. Corrigan won seven races, viz., purse races each with Modesty, Pearl Jennings, Ida Hope and J. W. Rogers, and two with the aid of Banana, while of the stakes, the Zoo-Zoo, for two-year-old fillies, at three-quarters of a mile, fell to Lizzie Dwyer. With the end of the meeting the stable went at once into winter quarters at Latonia, with a promise that it will make an even more aggressive campaign next year, a promise that is amply confirmed by the staunch support to the stakes to be run at St. Louis and Chicago. It is understood that there will be no change either in trainer or first jockey, that Rogers will remain trainer, and that Murphy will continue to wear the "green with white sash," his stable record for the season, as above, showing twenty-seven wins out of forty-nine mounts, and a total of \$48,625. Young West is second, with ten wins out of thirty-four mounts, which were worth \$9,840. The third in value is Taylor, with a single mount and win worth \$4,870. Next is Fuller, with seven wins out of eleven mounts worth \$2,500; Wathers, with two wins out of nine mounts, \$1,830; Ellis, two wins out of eight mounts, \$1,675; Kelly, one win out of four mounts, \$1,350; McLaughlin, a single mount, which was a win, \$675; Conklin, two wins out of four mounts, \$550, and Duffy, a second out of two mounts, \$100. While the others, including Holloway, Stoval, Leary, Harris, Cooper, Lewis, Tankersly, O'Hara and Bryant, each failed more or less.

England's Great Jockey.

[New York World, Nov. 23.]

Within the next twenty-four hours Fred Archer, the most successful jockey that has ever worn silk, will have probably arrived in New York. Many who have heard of his wonderful skill, courage and other traits necessary to make a great race-rider will wish that the visit could have been made during the racing season—an impossibility, however, in view of the great demand on Archer for his services, especially during September and October. Archer's visit at the present time is a sad one. On the 7th inst. he rode the Duchess of Montrose's mare Thebias and won the Liverpool Cup at Liverpool. Immediately after the race he received a telegram from Newmarket announcing that a daughter had been born to him during the afternoon. On the day following it was generally known that Mrs. Archer was seriously ill, and her death took place at a late hour on Friday night. At last mail advices the child was alive and promising, while the cable announces that on Saturday the 15th the grief-stricken husband and father sailed for New York. Their married life was brief, the ceremony having taken place at Newmarket, on Jan. 31, 1853, attended with all the joyful surroundings and honors that the English racing world could pay to the first jockey of the country, whose bride was the daughter of a famous trainer, J. Dawson, Jr., and niece of another, none other than Matthew Dawson, under whom Archer had served his apprenticeship with so much honor and faithfulness that the cancelled indentures as a jockey were after a few years' interval followed by articles of copartnership as a trainer. The home to which Archer took his bride was a house that he had built, and which he named the Falmouth Lodge, after his first and best employer, Lord Falmouth, for whom he had worn the famous magpie colors—black body, white sleeves, red cap—since he was but a featherweight boy. Once before during their brief married life death threatened the home which on the day it was first occupied had been almost filled from cellar to roof with presents both useful and ornamental by friends and employers, beginning with the first gentleman in the country down to the stable boys of Heath House, which had been Archer's home for nearly fifteen years.

Fred Archer was born on Jan. 11, 1836, and that he came legitimately into the scales and saddle the records show, his father, William Archer, having ridden and won the Liverpool Grand National Steeplechase with Little Charley at 147 pounds in 1858. By the time Fred was ten years old he showed that he was cut out for a jockey and in due time he was apprenticed to Matthew Dawson at Heath House, Newmarket. On Sept. 28, 1850, he was first given a mount in a race which began such a brilliant career. It was a winning mount, too, for he guided Athol Daisy to victory in the Nursery Handicap at Chesterfield. The boy's skill gradually brought him into prominence and his first great win was with Salvanos for the Cesarewitch in 1872 at 77 pounds. In 1874 Archer led the season by winning the Lincolnshire Handicap with Tomahawk, and although his personal weight was but little over 84 pounds, so great was the demand for his services that at the end of the year he was at the head of the list of winning jockeys. It was during this same year that Lord Falmouth had such great confidence in his ability that he gave him the mount on Atlantic, with which he won his first great three-year-old race, the 2,000 Guineas, riding against such famous jockeys as H. Jeffery, Fordham, Chaloner, Custance, Cannon, Goater, Maidment, and the two Osbornes. It was also in 1874 that he won his first great two-year-old race, the Woodcote Stakes, with Ladylove, while he also won the Great Cheshire Stakes with Andred, the Stewards' Cup at Godwood with Modena and the Clearwell Stakes at Newmarket with the then Repentance colt.

Since this period Archer's success has been somewhat extraordinary, not only in the classic events, but in all sorts of contests, both at short and long distances. Of the great three-year-old races he won the Derby three times, in 1877 with Silvio, 1880 with Bend Or and in 1881 with Iroquois. The St. Leger four times—in 1877 with Silvio, in 1878 with Jannette, in 1881 with Iroquois and in 1882 with Dutch Oven. As to the 2,000 Guineas, since his boyish win with Atlantic, he has ridden and won with Charibert in 1879 and with Galliard in 1883. For the two filly stakes he won the 1,000 Guineas in 1875 with Spinaway and in 1879 with Wheel of Fortune, with both of which he also won the Oaks, as he also did with Jaquette in 1878. Of the French races Archer won the French Derby in 1880 and in 1883 with Beaumont and Frontin and the Grand Prix in 1882 with Bruce. It is impossible to give a list of other important races which he has ridden winners in all except the Cambridgeshire, which was not until this year that he was able to add to the Park Plate to the list.

In a conversation with Mr. Bathgate some time ago that gentleman described Archer as without an equal on any kind of a horse, young or old. With an ill-tempered brute like Peter, who would stop in a race to kick, he would lean over and pat him on the neck and with a "Go on, old fellow," he would cut a big field down as if they were standing still and then win, or, reversing the tactics, he can use his whip with such effect that some horses have almost turned round at the post to get away from the punishment. With the American stables in England during 1879 and subsequent years Archer rode repeatedly for Mr. Pierre Lorillard. With Parole he won the City and Suburban, Great Metropolitan and the Great Cheshire stakes in 1879; while in 1881 he in turn rode Iroquois, when he won the Derby, Prince of Wales and St. James' Palace stakes at Ascot and the St. Leger at Doncaster. Early in 1883 it was generally supposed in England that Archer would be seen less in the saddle; that his marriage would cause him to be more careful; that he would not take the risk of possible injury in making such turns as Tattenham corner in the Derby, all of which were mere conjectures, and his record in 1883 was larger than ever before, and which record he had already excelled this year when he rode Thebias at Liverpool, that being his 577th mount, of which he won 241. Wood, with 519 mounts and 148 wins, is second on the list, so that while Wood may possibly exceed Archer in the number of mounts this year, as he will naturally get some that Archer would have had but for his retirement (the season not ending until yesterday, the 22d), he cannot possibly reach him in the number of winning mounts. Archer's full record for 1883, back to 1878 inclusive, is as follows:

YEAR.	Total mounts.	Times first.	Times second.	Times third.	Unplaced.
1883.....	531	232	134	100	165
1882.....	514	219	118	79	157
1881.....	532	220	127	56	129
1880.....	342	120	75	58	109
1879.....	570	199	126	89	155
1878.....	519	228	130	83	177

In 1877, Archer had 218 mounts; in 1876, 207 mounts; in 1875, 172 mounts; in 1874, 147 mounts; in 1873, 107 mounts, and in 1872, 27 mounts.

As to what may be Mr. Archer's intentions on his arrival nothing is known. It is to be assumed, however, that Mr. Pincus, Mr. Bathgate, Mr. Walton and others will see that any special wishes he may express will be carried out. That he left England with the sympathy of all connected in any way with the turf is certain, as "Angur," of the *Sporting Life*, in his announcement of the death, so kindly says as follows: "No greater misfortune can befall any man than the loss of a loved wife, whether it occurs in the heyday of his manhood or when age has silvered his locks, his shoulders stoop, his step eves and again falters, and the long-experienced loving kindness and careful, disinterested attention to every want are no more. Yesterday the news reached town in the morning that Fred Archer had lost his wife. Wherever one went, the expression: 'Poor Fred!' seemed to be on everybody's lips and in everybody's eyes. It was the same in the city, the same in the suburbs and the same at Alexandra Park, where racing was going on. Indeed it may be truly said that never was sympathy more generally felt and expressed for anybody in the time of trouble than with poor Fred Archer on the loss of his helpmate. Coming as the blow had done at a period when he was on the point of concluding one of the most successful seasons that either himself or any other jockey ever experienced, the blow is all the more terrible by the contrast. What would have been a bright, a happy, a cheerful winter after the triumphs, toils and privations of the Spring, Summer and Autumn, will now be unenjoyable for the want of that one bright star which would have gilded with a wifely luster the brilliancy of her husband's unparalleled position. Fred Archer, however, may know this and know it to a certainty, that the thousands and tens of thousands who have cheered him often and often in the height and pride of his success, will feel a correspondingly deep sympathy for him in his great trouble. That it is that we all have our troubles, and often, even though surrounded by everything that heart could desire, something may happen to cause a man to feel that all the world is a blank. Fortunately, time is a great healer, and to that and the sympathy of friends must poor Fred Archer and the bereaved family trust for repatriation."

**A Thirty-Two Mile Race.**

[Columbus, in Chicago Horseman.]

About 1860 a race of thirty-two miles was run at St. Joe, Mo., and as it has never been written of, it is thought best to present the facts to the public before all the participants are dead, else the history of the affair might be buried with them.

The race was originally made to be run between Leavenworth and Lawrence, Kansas, a distance of thirty-two (32) miles, and grew as the result of several friendly trials run while wolf hunting, this sport being a favorite pastime with the residents of Leavenworth. The principals in the race were Jan Rice, proprietor Planters' House, and Wm. Thollen, both of Leavenworth, the amount of the wager being \$1,000 a side.

Through the influence of friends the race was transferred to St. Joe, Mo., and was run over the first mile track west of St. Louis, part of which is at the present writing, a channel for the river. Both animals were condemned U. S. Cavalry horses, and were sold by the Government officials at Leavenworth. Rice's horse was said to be by Grey Eagle, and showed by his form at the post that he was a well bred horse; he was a gelding, grey in color and about 7 years old. Before and during this race, he was handled by Warren Harris, of Platte City, Mo.

Thollen's horse was of no particular breeding, a heavier limbed and better developed animal than the Grey Eagle gelding, whom he could beat for 700 or 800 yards; in short, they were both more than average animals as the test they were put to will clearly prove.

Thollen's horse was conditioned, and handled by Jim Brown, of St. Louis, and Lou Williams, of Leavenworth. Each horse was in training four weeks previous to the day of race, and came to the post in fine shape. The day appointed for the race was one of those hot, sultry days so common in August.

The judges were B. F. Akers, of the Kansas Stud Farm, Z. D. Washburn, and a third party whose name has slipped my memory; Akers timed the race, while Washburn started the horse and acted as official recorder of the miles run, the third man keeping a record of the positions of each horse as the various miles were made.

The horses were ridden at catch weights; at half past 2 o'clock, Mr. Washburn gave the word, and in the presence of

hundreds of spectators, the two condemned cavalry horses started on the longest jaunt ever made by horses in an actual race in this western country, if not in the entire Union.

The first mile was run in exactly two minutes as was the second, at the end of which both horses came lapped under the wire. At this junction, Harris shouted to Wells, the rider of Grey Eagle saying: "For G— sake, Wells, pull up your horse, you are going too fast."

The jockey on Thollen's horse dismounted at the end of the sixth mile, and a second took his place.

Up to the sixteenth mile the animals were well together, after which time the pace began to tell on Thollen's horse, and Grey Eagle gradually drew away, increasing his lead at the twentieth mile to above two hundred rods. At the completion of the twentieth mile Jim Wells, the jockey on Grey Eagle, gave way to a new rider, who rode the horse four miles farther, when he dismounted and Wells again resumed his seat in the saddle and continued to ride the animal until the race was completed.

In the meantime the jockeys on Thollen's horse had been changing places in the saddle every sixth mile, and at the end of the twenty-fourth mile the animal halted and proved himself beyond the control of the boy who rode him.

Lou Williams, one of the trainers, then mounted the horse and managed to ride him four miles farther, but that effort was too much for the animal who stopped for good and laid down on the track. At this moment, Grey Eagle had assumed a lead of one and a half miles, and went on, finishing the thirty-two miles in good shape. To judge of his spirit and wonderful endurance, we will say by way of illustration, that while running the last quarter, Wells was joined by a gentleman mounted on a sprightly saddle horse, who endeavored to lead the champion home, but the game scion of a great racehorse would not give up and finished the thirty-second mile two lengths in front of the Platte County sandler, going the quarter under a pull with his mouth wide open.

The time of the race as given by B. F. Akers, official timer, was one hour and twenty-four minutes, an average of two minutes and thirty-five seconds (2:35) for each one of the various miles.

Thollen's horse died at sundown of inflammation of the bowels, so called; while Grey Eagle recovered nicely, and the following day showed but few signs of distress; within a week he was apparently as fresh and hardy as ever, and afterwards went on many a wolf hunt over the grass grown prairies of Kansas.

The defeated party submitted gracefully, giving as a reason for the failure of their animal, that they made the pace too fast the first ten miles, thinking to break down the Grey Eagle gelding, and then run the balance of the race at their leisure. As they soon learned they had missed their calculation, for the little leaven of thoroughbred blood, which was Grey Eagle's by right of heritage, enabled him to outlive his colder blooded competitor, and likewise defeat the plans of those who counted so little on his powers of endurance. The principals and their immediate friends met that evening at one of the leading hotels, where several cases of champagne were drank over the result of the race and to the health of the wonderful horse, thus, acting in a manner becoming the true sportsmen.

One incident and I have finished. At the completion of every mile Warren Harris would sprinkle Grey Eagle with water thrown from behind, giving as a reason for this strange procedure, that he "had always noticed that a horse ran further on a 'misty' day, than during a dry day and he proposed to mist him."

**Racing in the Colonies.**

By the steamer which arrived last Tuesday, we have dates to Nov. 4th. The Spring meeting of the Victoria Racing Club begun at Flemington, on the 2d. The following is a resume of the principal events:

Melbourne Stakes—A sweepstakes of 5 sovs. each, £2 10s. ft., with 250 added; 200 sovs. and all the sweepstakes for the first horse, 30 for the second, and 20 for the third. For three-year-olds and upwards. Weight for age. One mile and a quarter.  
 Mr. J. O. Inglis' b Malua, by St. Albans—Edella, 5 years, 129 lbs.  
 Mr. J. Redfern's h b The Plunger, 5 yrs., 129 lbs. Pigott 1  
 Hon. W. Pearson's h b Commotion, 5 yrs., 129 lbs. Power 3  
 Four others ran.

Time, 2:40.

Betting: 5 to 4 against Malua, 2 to 1 Commotion, 5 to 1 the others.

The lot were dispatched by Mr. Watson in good order, Malua being quickest upon his legs, jumping off with a slight lead of The Plunger, next to whom were Commotion, Off Color, and Brown and Rose, in that order. Before a great distance had been traversed, however, the son of Argus Scandal ran up to the leader, and passing the latter on his flank, held command until nearing the bridge, when Commotion assumed the lead, Plunger dropping back into second place, the order of the others being Malua, Off Color, Brown and Rose, and The Broker, the last named of whom was running very indifferently. At the back of the course Commotion was at the head of affairs, two lengths in advance of Plunger, the positions of the rest remaining the same. The same order was maintained past the abattoirs and the sheds, where Malua was observed to be pulling double, and still occupying third position. As they swept round the turn, and entered the straight, Plunger once more got his head in front, whilst Commotion was also passed by Malua, who came on with great determination, and, overtaking Plunger, soon had the latter in difficulties. From this out the issue was never in doubt, as Malua galloped over his opponents hard held, and won a capital race with great ease by half a length from Plunger, next to whom came Commotion, Off Color, Brown and Rose, and The Broker, in that order.

The Maribyrnong Plate—A sweepstakes of 30 sovs. each, h. ft., or 5 sovs. only if declared; with 500 added. For two-year-olds—colts, 8st. 10lb., fillies, 8st. 5lb. The second horse to receive 200 sovs., and the third 100 sovs. out of the stake. Five furlongs.  
 Mr. J. B. Hill's b Newstead, by Neckersgat—Ada, 122 lbs. Quinn 1  
 Hon. J. White's b or c Monte Christo, by Chester—Kathleen, 122 lbs. Ellis 2  
 Mr. A. F. Smart's h b Bureldah (late Osric), by Goldsborough—Lady Sophia, 122 lbs. Gough 3  
 Fourteen others ran.

Time, 1:03.

Betting: 3 to 1 against Melodious, 4 to 1 against Uralla, 8 to 1 against Newstead; from 10 to 20 to 1 against the others.

The field having been got in a line they were soon given the order to "Go," Newstead, who occupied a splendid position, almost next to the rails, getting away with marked advantage, his nearest attendants being Umhra and Bureldah, Melodious, on the stand side, being also close up, a little ahead of Uralla and Lady Claudia. As they galloped over the turn crossing the colors of Newstead, Umhra, Bureldah and Melodious were still most conspicuous, the first named having a lead of about a length. The son of Neckersgat maintained his advantage as they came down the straight, and as he had increased his lead to several lengths a good distance from home, his victory was loudly proclaimed by antipa-

tion. The race, indeed, may be said to have ended three hundred yards from the judge's box, as at this point it was evident that Newstead had the field at his mercy; and as he was never eased until the post was passed, Newstead won with remarkable ease by nearly four lengths from Monte Christo, Bureldah being third, Uralla fourth, and Melodious, Lady Claudia, and Manchester close up in a bunch, Burford was a had last.

The Victoria Derby—A sweepstake of 25 sovs. each, 5 forfeit, with 650 added; 500 sov. and all the sweepstakes for the first horse, 100 for the second, and 50 for the third; for three-year-olds—colts, 8st. 10lb.; fillies 8st. 5lb.; one mile and a half.  
 Mr. M. Jacob's h c Rufus, by King of the Ring—Princess Alice, 122 lbs. O'Brien 1  
 Mr. G. Davis' h c David, by The Gondolier—Alice Drew, 122 lbs. Power 2  
 Hon. J. White's h c Bargo, by Maribyrnong—Guelder Rose, 122 lbs. Hales 3  
 Eight others ran.

Time, 2:41 1/2.

As the candidates took their preliminaries past the stand they were closely scanned by the spectators—the favorite, of course, attracting most attention. No time was wasted in marshalling the field to the post, where Mr. Watson took them in hand, and dispatched them to a good start without delay. Sandal, who was close to the rails, was quickest away, whilst the favorite was very slow in moving, and acted as one of the whippers-in soon after the start. The first to establish a decided lead was Merrima, who was closely pursued by Gratitude, Tremando, and Sea Horse, Rufus being badly situated in the rear. Bargo soon began to improve his position and as they ran along by the river, was lying about fifth, half a length behind his stable companion, Tremando, Merrima still holding command with Gratitude second, and the others following in irregular fashion, Rufus being amongst the rear division a couple of lengths behind the favorite, who was at Tremando's girths. Mr. Whittingham's colt continued to lead until the abattoirs were approached, when he relinquished the command to Gratitude, who proceeded to lead her field at a great bat. At this juncture David, who had occupied a good position in the centre all the way round, commenced to get through his horses, whilst Rufus was also seen to make a sudden advance and improve his situation. Gratitude led round the home turn and came into the straight just clear of Merrima, next to whom were Sea Horse, Tremando, and Bargo, the last named coming very rapidly on the outside. Rufus was now lying sixth, side by side with David, the pair continuing to better their prospects. Once fairly in the straight the favorite made his effort, but it was at once seen that he was done with, as the son of Maribyrnong almost immediately dropped back, and was passed by Rufus and David. Gratitude having in the meantime been deprived of the lead. A grand race home then took place. Rufus, gallantly responding to O'Brien's calls, passed to front at every stride, vigorously pursued by David and Bargo, as written, Tremando being fourth, and Leporello last. The efforts of David and Bargo to catch Rufus were futile, the son of King of the Ring winning a splendidly contested race by half a length from David, who finished very gamely. Bargo was third, three-quarters of a length away, Tremando, Mozart, and Hippogriff being next, and Leporello absolutely last.

Rufus is a slender dark bay, with black points, and the only specks of white about him are on the hind hocks. He is the ordinary stamp of the Ace of Clubs' stock—quite resembling his sire, King of the Ring—rather below the average size, with the elegant small head popularly described as bloodlike. A shortish, and bit of a ewe neck, leads on to rather indifferent shoulders, while he is narrow and nipped up in the chest. The strong point, to the eye of a racing judge, is in his quarters, with plenty of size and propulsion. Rufus came in pretty well distressed. When walked towards the shed he was stiffish in the rear hip, and shaly in the rear foreleg. One would not imagine that he is likely to reach much further distinction. His training was very fine and hard—wired up to the nick of this day out.

Melbourne Cup—A handicap sweepstakes of 20 sovs. each, 10 ft., or 5 sovs. only if declared to the secretary of the V. R. C., A. J. C., S. A. 1. C., or C. J. C. before 4 p. m. on Monday, August 4th, with 1,000 added. The handicap weight of the winner of the A. J. C. or V. R. C. Derby to be not less than 7st. 5lb., and the winner of any handicap race of the value of 100 sovs., after the declaration of the weights, to carry 3 lbs. extra; for any such race of the value of 200 sovs., 5 lbs. extra; for any such race of the value of 500 sovs., 7 lbs. extra; penalties non cumulative. The second horse to receive 300 sovs., and the third 200 sovs. out of the stake. Two miles. (134 subs.)  
 Mr. J. O. Inglis' h b Malua, 5 yrs., by St. Albans—Edella, 135 lbs. Robertson 1  
 Hon. W. Pearson's h b Commotion, 5 yrs., by Fanny—Evening Star, 138 lbs. Power 2  
 Hon. W. Pearson's h b Plausible, 5 yrs., by Yagabond—Plaudit, 97 lbs. Murphy 3  
 Twenty-one others ran.

Time, 3:31.

Betting: 6 to 1 each against Malua and Hastings, 10 to 1 against Plausible, 100 to 8 each against Vergy, Hill Top, and Plunger; 100 to 7 against Bargo; 20 to 1 each against Commotion and Tremando; 25 to 1 against Claptrap; 33 to 1 against Battalions.

The horses were soon ranged in their places, Bargo, Vergy, Claptrap, Plausible, Anchorite, and Merrima being on the outside, while Hill Top, The Plunger, Off Color, Bookka, Battalions, and Hippogriff were on the inside. Seizing a favorable moment, Mr. Watson sent the field away to a splendid start, Merrima, Bookka, and Battalions being slightly in front, the others moving after them like a troop of cavalry. As they came up the straight Signor, on the inside, got in front, Broker and Hill Top being at the head of a close body of about a dozen who were jammed against the rails. Malua was running very prominently in the middle, Bargo and Merrima were leading the outside division. Entering the course proper Signor was leading next the rails. The Broker, Bookka, and Hill Top were next, and very close up, at the head of about a dozen followers. Bargo was showing well forward on the outside, with Bristol immediately behind him. Passing the stand Signor had the lead. The Broker, Bargo, Hill Top, Bristol, and Claptrap were at the head of the main body that came rushing immediately behind. Malua was running near the centre, with Anchorite, Bonnie Bee, and Battalions close behind him. Plausible was next, and swerving a good deal, Hippogriff, Lord Wilton, and Off Color were lying well back, and Merrima was last. Signor held his place in the van as they swept round the first turn, where Broker and Hill Top were running him close for the lead, Bookka, Battalions, Bargo, Commotion, and Bristol were at the head of the second division. Tremando, Vergy, and Malua were about the centre. The Plunger, Lord Wilton, and Hippogriff formed the rear guard. Signor led along the back stretch, a good length in front. Hill Top was second, Bargo was nearly level with him on the outside, The Broker with Bookka very close up. Behind them followed a dense cluster of about eight or nine horses, Battalions, Bristol, and Vergy being the most prominent of the lot. Brown and Rose, Off Color, and Anchorite were near the rear of the main body. Tremando was with them, and apparently going unkindly. Merrima was bring-

ing up the rear. As they went on The Plunger, who had been obliged to pull out of the crush near the river, went up on the outside, and the colors being dark, he was not noticed. Senior had a decided lead as they rounded the far turn; the Broker and Bargo were next. The Plunger then ran past them, and joined Signor in the lead, jostling Lord Clifden as he went on. At the ahatoirs The Plunger was leading, and increasing his advantage as he came on, he soon had a lead of two lengths. At the half-mile post The Plunger had a lead of three clear lengths; Hill Top and Bargo were next, and immediately behind them Bookla, Commotion, Plausible, Bargo and Battalions were showing well forward, with Malua on the outside. The Plunger held his position in the lead as they came on to the turn, where Commotion was gaining on him fast. Anchorite made an attempt to get up on the inside, but was disappointed. The Plunger then died away, and Commotion came on with the lead. Hastings, who had come forward out of the second body, was close behind the leader, with Plausible, Battalions and Malua for close companions. Commotion came up the straight in the lead, Plausible taking second place. Malua made a run half way up the straight, and coming on at a tremendous pace, joined Mr. Pearson's pair in the lead. Malua soon passed Plausible, and at the distance he was on even terms with Commotion. The Panic horse struggled home gamely, but half-way from the distance, Malua, who was being called on in earnest by Robertson, was fully a length in front. Commotion answered Power's call like the good horse he is, and gained a little on the leader at the finish, but Malua passed the post half a length in front of him. Plausible was third, two lengths and a half behind the second horse. After a gap of four lengths followed Hastings, behind whom were Bargo, Battalions, Bristol and Anchorite, pretty well spread out. The others came up in straggling order, Tremando and Merrim being last.

The winner is a powerful upstanding bay horse, with great bone and substance. He was bred by Mr. J. Field, of Calstock, Tasmania, and was bought by the Hon. Thomas Reiby when a yearling. As a two-year-old he performed creditably in Tasmania, and won at Carrick, Hobart and Lanneston. As a three-year-old he started five times in Victoria, under the name of Bagot, his best performance being winning the Yan Yean Stakes, one mile, carrying 102 lbs. He was not placed in the Coburg Stakes, in the Spring Handicap, Malvern Handicap, and Newmarket Handicap. As a four-year-old he started eight times, his best performance being his victory in the Newmarket Handicap, carrying 119 lbs., in 1:15; Le Grand, 122 lbs., and Claptrap, 110 lbs., filling the other situations. He won the Oakleigh Handicap, five and a half furlongs, carrying 133 lbs., in 1:11, with Victress, 106 lbs., second and Duenna, 119 lbs., third. At Adelaide he won the Adelaide Cup, one mile and a half and a furlong, carrying 126 lb., and doing the distance, in deep ground, in 2:55; Conjecture, 87 lbs., was second, and King of the Vale, 106 lbs., third. This season at Randwick he won the Spring Stakes, one mile and a half, 131 lbs., Off Color, 126 lbs., second, and Reginald, 102 lbs., third. Time, 2:41. Carrying 130 lbs. he ran second to Sir Modred, 130 lbs., in the Craven Plate, one mile and a quarter, and in the Randwick Plate he was second to Off Color. He was sold by auction at Newmarket in November, 1882, his present owner purchasing him for the sum of 500 guineas. Up to that time he had run under the name of Bagot, but his name was then changed to Malua—a Fijian word signifying to linger.

### The Trotting Turf from 1810 to 1835.

In the same year (1834) that Edwin Forrest acquired a record to saddle of 2:31, then the fastest mile ever trotted in public, his competitor, Sallie Miller, trotted at Philadelphia, Nov. 21st, a race to saddle against Gypsey and Lady Hope, winning and acquiring a record of 2:37. In 1836 two noted horses appeared on the turf—Awful, bay gelding, foaled 1829, by American Boy, dam by imp. Expedition; and Dutchman, about whose antecedents there have been vague assertions. As he was one of the most prominent horses that ever appeared on the turf, I will give a sketch of his supposed breeding or the lack of any knowledge as I find it recorded. Hiram Woodruff, who afterwards handled the horse, says in his "Trotting Horse of America": "Dutchman was a bay horse, 15 $\frac{1}{2}$  hands high, raised in New Jersey, but I never knew his pedigree, nor ever met anyone who did."

Another authority says: "He was a horse that formerly worked in the lead of a team which carted bricks at Philadelphia." By chance he was harnessed to a light wagon to convey his owner on a short business trip, and the account continues: "He performed so well that his owner concluded he would make a trotter, and he left the brick yard forever." Mr. J. H. Wallace in his "American Trotting Register" says: "Dutchman, bay gelding, foaled 1828, got by Captain Tufts' Tippoo Sahi, Jr., dam by Mambrino, son of imp. Messenger; bred by David Denny, near Salem, N. J., and sold, 1834, to B. Tindall, of Philadelphia. It is an astonishing fact that with all his triumphs was connected the story of his being a 'chance' horse brought out of a brick cart." Of course, in the main, these two narratives contradict each other, and undoubtedly his early history and breeding are enveloped in doubt. That he was a remarkable horse is beyond question, and this is strong proof that he was well-bred, for it was then, as now, equally true "blood will tell." His owner, Mr. Jeffries, of Philadelphia, sold him to Mr. Peter Barker, of New York, and he could then show a mile in less than three minutes. His first race was against a horse called Locomotive, whom he easily defeated in straight heats. In 1836 he was entered in a sweepstakes; to harness, \$1,000 each, two-mile heats, against Faney Pullen and Confidence, and the race took place over the Centreville, L. I., course, Dutchman winning in straight heats—time, 5:17, 5:18, the first being the best record for the distance to harness. Later in the same year he was matched to go four-mile heats, to saddle, against Lady Slipper, over the same course, and as his fame had now spread abroad, an immense number gathered to witness the contest. Dutchman again won "off the reel." Time, 11:19, 10:51. In Autumn of the same year he was again entered for a sweepstake race, to saddle, three-mile heats, with Lady Warrenton, Teambat, and Norman Leslie, and for the first time suffered defeat, Lady Warrenton winning, but he turned the tables on the following week by beating her over the Hunting Park, Philadelphia, in a race of three-mile heats, to saddle.

Soon after this he went lame behind, and was turned out. In 1837 Awful, who during the previous year had shown himself a trotter, was matched against Screwdriver, for \$2,000 a side, three mile heats, and won. Time, 3:23, 3:16.

In this year, also, Rattler became prominent. He was a bay gelding, 15 hands high, foaled 1825, said to be by Bishop's Hambletonian, by imp. Messenger, dam unknown. He was a very game horse, and subsequently defeated both Dutchman and Lady Suffolk. May 11, 1837, he defeated Lady

Warrenton at three-mile heats, under saddle, in 8:35 and 8:43.

1838 was an eventful year in the annals of the trotting turf. Dutchman, after a run of eighteen months, was taken up and placed in Hiram Woodruff's hands, and became even more noted than before. His first start in this year was against Greenwich Maid, over the Beacon Course, N. J., and he was defeated. Best time, 5:16. Shortly after this he tried conclusions over the same course with Washington; and again suffered defeat. He then defeated Rattler and Lady Suffolk, in a race of two-mile heats to saddle, in 5:11, 5:13. Oct. 6th he trotted against Rattler, over the Beacon course, a match race to saddle, three-mile heats, for \$1,000 a side; and it was one of the most stubborn contests that ever went on record. In the first heat, at any time during the three miles, a blanket would have covered both horses. But Rattler won it by a neck. Time, 7:45. In the second heat the same close struggle ensued, Dutchman finally winning in 7:50.

The third heat was one of the finest ever seen on any course. For the entire three miles it was a head and head struggle, resulting in a dead heat. Time, 8:02.

In the fourth heat Dutchman outlasted his game competitor, and won in hand. Time, 8:24.

This was indeed a remarkable race. Each horse made one break only in the entire twelve miles, resulting in each instance in his opponent winning the heat, and for eleven miles at no time was either horse clear of the other. Soon after this Rattler was taken to England, where he easily vanquished all competitors, and his managers issued a challenge, open to the world. It was very nearly decided to send Dutchman in charge of Hiram Woodruff across the ocean to meet Rattler, but the arrangement was not consummated.

In this year Lady Suffolk, long afterward known as the Queen of the Turf, first made her appearance. She was a gray mare, 15 $\frac{1}{2}$  hands high, foaled 1833, by Engineer 2d; he by Engineer, he by imp. Messenger, dam by Don Quixote; he by imp. Messenger. In February 1835, Lady Suffolk trotted her first race at Babylon, L. I., the stakes being eleven dollars, and she won, her best time being three minutes. Her first public race was June 22d, over the Beacon course, N. J., where at two-mile heats to saddle she defeated Lady Victory, Black Hawk, Cato and Sara Paff, all but the first being distanced in the first heat. Time, 5:15, 5:17.

July 4th, Rattler and the Lady trotted a race of two-mile heats, to saddle, over the same course, Lady Suffolk winning the first heat in 5:29, losing the second in 5:17, and was distanced in the third.

Oct. 8, she tried conclusions with Awful, at the same place, again at two mile heats, to saddle, and was defeated. Time, 5:23, 5:21.

Oct. 15, at Hunting Park Course, Philadelphia, she trotted a race of two mile heats, to saddle, against Polly Smallfry and Mariame Royal, defeating them, and distancing the latter in the first heat. Time, 5:18, 5:26.

This closed her performances for that year, her successes and defeats being about equally divided, and she then gave but little promise of the long, illustrious career that lay before her.

Aaron Burr also first appeared in this year. At Centreville, L. I., June 1st, he defeated Greenwich Maid, Apollo, and Unexpected, at two mile heats, his best time being 5:24. Edwin Forrest also won a number of races during the season and at Philadelphia, Oct. 16, defeated Henry Clay, also called Ice Pony, at two-mile heats, his best time being 5:13, which then stood the best on record for that distance to harness.

These comprised the most notable performances for the year. Of course, I do not intend to give a *resumé* of every race, but only such as were most prominent.—*Sportsman.*

### Dual Male Influence.

The wonderful speed and stamina evinced by St. Gatien, the "best on record" winner of this year's Cesarewitch, in his public career, invests the "doubtful" parentage of this grand three-year-old with peculiar interest to physiologists, and induces the question whether by any possibility, his rare combination of virtues may be in a measurement due to dual influence. Many, I doubt not, will laugh at the idea, and say at once, "As he could not have had one dam so he could only have had one sire." And yet I am far from convinced that this dictum is necessarily correct. In one of my articles upon pig breeding I gave several instances within my own experience that favored the opposite theory; and in the vegetable kingdom the judicious mixing of pollen, when aiming at new varieties, oftentimes leads to surprising and gratifying results. And we must remember that the one chief principle of procreation is alike a vital requisite both to animal and vegetable development; so the teachings of analogy must not be disregarded.

In addition to the instances already enumerated by me bearing on this subject, I give the following, which came to my notice this year: In a yard of Plymouth Rock poultry, where pure-bred hens were running with a pure-bred cock, a Dorking cock obtained an entrance in the temporary absence of its lawful lord; two or three of the after eggs, when hatched, produced chickens unmistakably showing the *mesalliance*, but none of these could be termed *half-bred* Dorkings (though all the eggs had been set and all the chickens reared), a few feathers, a slight difference of shape or extra length or carriage of tail; these were all the evidences of alien blood. Nine-tenths at least, of these impure birds were Plymouth Rock, and the other tenth was Dorking. Now if the latter was the sole sire why should they in direct contradiction to the teachings of practice show so little of their paternal origin, while if the Plymouth Rock was their sire whence these Dorking traits? If it is conceded that the inert ova might receive a dual influence, the phenomena is easily explained but not otherwise.

The subject is surrounded by mystery, but a series of experiments might readily be instituted that would probably throw some light on it and should the possibility be proved of thus combining desirable qualities, the advantage to breeders would repay research. Perhaps rabbits are about the most favorable subjects to experiment with. Were some good silver-gray does mated successfully with a Lop and an Angora, it would be readily perceived if any one of the young possessed in itself both of the distinctive male characteristics, in which case it would pretty conclusively settle the matter, but all must be pure-bred, the principle of animism in cross-bred animals is too strong for dependable deductions. It is a matter of great interest to myself, but I have few facilities for thoroughly testing it. However it may be, we shall all agree that the possession of such a sterling animal is of great importance to the country, and it is to be hoped that our home studs may benefit rather than the foreigners by the services, when the time comes, of a sire possessing the two rare combinations of speed and endurance.—*W. Goodwin, Jr., in London Live Stock Journal*

### English Notes.

[Correspondence N. Y. Sportsman.]

Thebias won the Liverpool Autumn Cnp in grand style, carrying 130 lbs., the best performance in this race after Sterling's. She always has been a great favorite of mine. You know how it is sometimes. You take a fancy to an animal, and because you like it, and perhaps also a through its doing you a good turn, you feel quite a proprietary interest in it after a while. Ever since Mr. Crawford's daughter of Hermit and Devotion made her debut I have been fond of her, and over and over again I have said that she was the best mare in training. Whether I should go that length now I am not quite certain, but if she, Florence, and Geheimniss could have met after the Cambridgeshire, and granting that they were all fit and well, I should not have backed either of the others at a mile and a quarter to a mile and a half. She certainly is the prettiest of the three. Florence, of course, has only recently, or comparatively recently, established herself in the first class, but for a long while the respective merits of Geheimniss and Thebias were freely discussed. My belief is that the latter was always the better of the pair. I know that mine is not the general opinion, but I shall always hold it. Last year I went for Thebias for the Cambridgeshire, mixed, he it said, with Bendigo, who won, and Tonans, second. This Spring I stood her to win the City and Suburban, and in the Autumn declared for her in the Cambridgeshire. She was well up after being very leniently treated in the 1883 Cambridgeshire race, ran second for the City and Suburban with top weight, though kept at the post for about three-quarters of an hour, did not start for the 1884 Cambridgeshire, as she was allowed to earn a penalty, and her owner preferred to keep her for this Liverpool Cnp. If she had been meant for the Cambridgeshire, I do not fancy that Florence would have returned winner of that race.

On Thursday she won very readily, but was not first favorite at the start, as Beauchamp, on the strength of a trial, was rushed to the front. This Beauchamp, three years old, 91 lbs., is just one of the North Country stamp whose company I am always anxious to avoid. He is very good-looking, well bred, and trained in a Yorkshire stable, reputed very clever. When he ran in the Derby, everyone who thought he knew something, said, "Look out for Beauchamp in the St. Leger." We did look out for him, and at length, when his time was supposed to have come, the poor British public fell over each other in their hurry to get on. He ran just as well as these wonderful Yorkshire good things generally do—that is to say, very badly. Boulevard, 4 yrs., 115 lbs., was a great tip for a long while, but went queerly at the finish in the betting, and I fancy that most good judges deserted the Irishman for the winner.

It is said that Thebias will now go to the stud, whither Geheimniss has preceded her. Geheimniss is a fair illustration of the proverb, "Handsome is as handsome does." Of course, because she turned out a flyer she was begrudged for her shapely form, but nothing could make her pretty to look at. Of course she has a lot of rare good points, but, except in performances, is not a beauty.

Acrostic, after his form earlier in the week, could hardly lose the Great Lancashire Handicap of one mile, even with a 9 lbs. penalty, and naturally won easily.

The Irish two-year-old Mallow followed his Knowsley Nursery Stakes win by taking the Downe Nursery, giving Fair Lillian, who has shown great speed, 18 lbs. They say that this distance—five furlongs—is quite as far as Mallow cares to travel, but I fancy that the Irishman ought to go farther. I told you, did I not, that the Patlanders declare that they can find two or three youngsters better than Mallow. They talk quite confidently of naming two, but as these are to run this week at Derby I may as well leave them till we see how they get on.

Shrewsbury meeting petered out very quietly. The final meeting was more noteworthy for the tameness of its sport than anything else. As a matter of fact, it has died of inanition. Twenty years ago there used to be a spell of four days; now two are rather more than plenty.

Wood was reported by Robert Fanson, who officiated as starter at Alexandra Park on Nov. 8th, and at once suspended for the day. Fanson has done good service by this action, for some of the "big" riders poach a lot of advantage at the start, and not in exceptional cases, but in race after race, day after day. The youngsters cannot get away with a bit in hand, because the swells simply won't move unless they are in front.

### Magdallah or Magdalene.

EDITOR BREEDER AND SPORTSMAN: Seeing a question asked in your last issue in regard to a mare he called Magdalene, I presume the gentleman refers to Magdalene instead of Magdallah as you have answered. Magdalene trotted at Stockton in the \$500 district pure, for two-year-olds, in 1882, and won both heats, time, 2:43 and 2:45, beating Alpha, by Mambrino Wilkes, Almoone, by Algona, and several others. She was bought from Dennis Vischer, of this city, by D. C. Horton, of Tulare, who is her present owner, and promises to be very fast, as I saw her trot a quarter in her work at San Jose this season, driven by Mr. Horton, better than a 2:20 gait. She is said to be sired by Peerless, a son of Gen. Knox. Her dam was by Washerman, by Easton's Dave Hill. If the gentleman from Wisconsin desires any further information, a letter addressed to D. C. Horton, Tulare, Cal., I am sure would bring all the particulars concerning the mare, and I am satisfied that it is Magdalene instead of Magdallah he is inquiring about.

STOCKTON, Dec. 1st.

J. T. SPRINGER.

We had two reasons for thinking that our correspondent meant Magdallah. One was that he stated distinctly that the animal he inquired after was a "chestnut" mare, whereas our recollection of Magdalene is that she is a bay mare. The other reason was that we had an impression that our Wisconsin correspondent was not in California as late as 1882, and could not have seen Magdalene perform. In this, however, we may be mistaken and as "Geo. W." is a regular reader of the BREEDER AND SPORTSMAN he will have all the facts before him and can settle the question of identity for himself.

Thursday night, Nov. 20th, while pool-elling on Friday's races was going on at Roper's Palace saloon at Waco, Tex., several men entered the saloon, passed through the large crowd present, and commenced hazing away with revolvers without the slightest notice of their intention. There was a general stampede of those present, and in a few moments the saloon looked as if it had been struck by a hail-storm, all the mirrors, chandeliers and glass panels being shattered into fragments and the ceilings and walls perforated with holes. No one was injured. The raid is said to have been the work of the gamblers of the town in retaliation for having the place closed while pool-elling was allowed.

## OUR NEW YORK LETTER.

## Brighton Beach Still Holds The Fort—The Longest Continuous Race Meeting Ever Given at Any Race Course in the World—General Notes, Etc.

Ex-Governor Stanford and his wife left this city last week en route for their home on your Coast, taking with them the remains of their late son. In their sad affliction the Governor and his lady have the sympathy of all. Let us hope that time, that great healer of griefs, will assuage this bereavement of the master of Palo Alto. The absence of his horses from the turf this year has been felt to a corresponding degree, and we trust that in 1885, the Palo Alto colors will be seen frequently in action and that Major Rathbone, with the runners and Charles Maui with the trotters, may have a fair share of success.

Brighton Beach goes bravely on, already well ahead of their high water mark of last year, in spite of the necessary postponement of last week, since which the track has been very heavy. That this has altered some of the results in as great a measure as it has the time records is very likely, but the fields still keep large showing that there are many owners whose balance sheet still needs evening up. Overhead the letter days of last week were fully equal to the best of the week previous, and in consequence the crowds at the course have showed very little diminution. Monday, however, was the most wintry day of the season thus far, and Tuesday's low temperature caused another postponement. The special programme of to-day (Thursday), will doubtless draw largely from the ranks of reecoers, with favorable atmospheric conditions, and though, of course, all cannot be successful, losers as well as winners, will, no doubt, unite in "joint" appreciation of the great-National festival—Thanksgiving.

Jockey Ed. Garrison's remarkable spell of luck on Friday was quite phenomenal, though not unprecedented in the annals of sport among the beach-combers. To ride four successive winners in one day's racing is, however, a feat that seldom falls to a jockey's lot in these days of short races, that make the results so much more uncertain. Expecting also to ride the favorite in the fifth and last event of the day, Garrison is said to have had a large combination, ending with Valley Forge, but the gelding's defeat upset the good thing, which would probably not have come off had Garrison ridden the colt instead of Wethers, as Valley Forge did not seem to like the going a bit. It is said that he had run away that morning, and covered several miles before he was stopped. The next day Garrison tried his hand again, his mounts starting favorites in each of the first three events, but four losers showed that the fickle goddess had got chery of such emphatically bestowed favors in that direction.

Little Fred showed to good advantage on Friday, his rest of a week having clearly not been in vein, but with a less desecrate rider up than Garrison he would never have beaten Ten Strike home. The letter, with a more capable lightweight in the pigskin, must have won in spite of what looked like a close approach to "hornng" on the part of Garrison during nearly the whole of the last furlong. This jockey must be careful not to let his praiseworthy ardor lead him into overlooking the rights of others, in default of which he is liable to get into trouble. In the very next race he was accused of cutting down King Ban, and Daly's horse certainly suffered from the hoofs of one of his competitors, none of the others being near enough to do the damage but Herbert. As there was a doubt as to which of the riders, Whyburn or Garrison, was to blame, the latter got the benefit of the doubt, but another time he is not apt to fere so well.

In my last letter I commented upon the starter's difficulties in having to deal not only with refractory horses and riders, but also with gamblers and kickers galore who pile on him every time a horse fails to get away well, which frequent occurrences at Brighton Beach make it all the more conspicuous in their eyes. The case of Lily B. on Saturday again brought out the growlers in force, several greeting the writer as he left the paddock after the race with deprecatory remarks about the start which was characterized as "shameful, etc." Stopping a moment to assure one personal friend that he was mistaken about the matter, that the mare alone was to blame for the fiasco, the writer at once sought the elder Dwyer, the owner of Lillie B., resolved to see what this gentleman had to say about a matter that naturally would interest him more than any one. A brief search found Mr. Dwyer, who, though acquiring anything but a gold mine since the purchase of the Hurrah mare, did not seem to be a bit downcast over the most recent exemplification of his poor luck in this connection. He responded courteously to an inquiry as to whether he had noted the start. "Yes, my mare was left at the post through her own stuhnnhness. She was well up as the starter dropped his flag, but wheeling round almost on the instant, she did not get away, and that is all there is to it." On being asked if he blamed the starter in the matter, Mr. Dwyer unhesitatingly replied: "I have no complaint to make against anyone. Least of all Mr. Cadwell. The mare is a bad actor at the post, and has shown this same pigheadedness in every race that I have started her in. She alone was the offender in the occurrence of to-day, and it was no fault of jockey, starter, or anyone else. You remember Joe Blackburn, whom we gave away last Summer? Well, it would have been just about as sensible for us to have blamed the starters who dealt with him for his unruly disposition, as for me to blame anyone for Lillie B.'s fractiousness to-day. When you put head tempered horses in races you must abide possible disappointments." Leaving Mr. Dwyer, the writer could not help but admire his calm philosophy, in such abrupt contrast to the small-hearted spirits composing the bulk of the malcontents, whose judgment is generally in strict accordance with their depleted pockets, as they hasten to ascribe interested motives to innocent parties. That the latter are successful in causing the recoil of the insinuations, boomerang fashion, back upon their originators, must please every lover of justice, many of whom still exist among racoers, all the carpers to the contrary notwithstanding.

Polham's Pete, the farmer's horse from Westchester, alias Carlyle of Brighton Beach, out a poor show down by the sea on Friday and Saturday. Whereas at the Country Club matinee he ran as if that plow was still hitched to him, believing the extraordinary rig of the supposed country humpkin on his back, at Brighton he failed to show himself capable of beating a mule. Though showing considerable speed, enough perhaps to down another lot of country plugs, when it came to racing, "Pete" Carlyle as he is now called, could not apparently live with the poorest "crabs" that vainly endeavor to secure a share of the purses for maidens. If McCarthy wants to make a match with Sweet Evelina, let him pit her against "Pete" Carlyle, and it will be a good betting race.

Royal Arch's and Foster's meeting on Thursday in the mud was rather against the chances of the heavy weight, who has shown a decided aversion to much over 110 or 112 lbs.,

while the colt is a glutton for weight as well as distance. And yet the heavy support awarded Foster showed the high estimation in which he is held by his party, who must have dropped considerable of their previous winnings on the white-faced gelding. If a race could be arranged at special weights, say Foster, 105 lbs.; Royal Arch, 100 lbs.; Hartford, 105 lbs.; Lida Stenhope, 95 lbs.; and open to others at favorable imposts, over a mile and five furlongs, or a mile and three-quarters of ground, it would be a very interesting contest from a speculative as well as a racing point of view. The colt would, of course, be a decided favorite, but on a good track he would be forced to duplicate his race with Little Fred, when he was carried along from "end to end."

Herbert's unbroken succession of victories received a check on Saturday through his being set a task previously demonstrated as beyond his compass, namely to compass a greater distance than nine furlongs successfully. And yet his improvement has been so marked, and he has shown himself so much more reliable than when he sported the silk of the Ranoccos stable, it was to be expected naturally that he would now be able to win at a distance only a furlong farther than the accepted measure of his abilities. His half brother, Cresote, could go a distance of ground, and the Glenelg blood in Herbert ought, by all the laws of breeding, to carry him as far and as fast as the Lexington cross which Cresote had through his grandsire, Asteroid. Theory, however, is one thing, and practice is another, the fact still remaining that Herbert, though bred for a four-miler, has thus far shown himself woefully deficient in stamina. His Boston owners on Saturday were much chagrined after the race in which tough old Hartford, for the second time of late, upset the "pot" completely, more especially as several well-known gentlemen from the Hub were on hand to see Herbert win. The latter's frequent contests of late may, perhaps, be beginning to tell on him, however, and two races in the mud on successive days must have taken the edge off his speed. Then Hartford is an improved horse which he showed by capturing the handiecap on Monday from Foster and others.

Greenland's two races on Friday having the effect of starting anew his old complaint of blood-vessel-bursting, the half-brother to Luke Bleckburn is likely to be put to the stud. His size and breeding should make him a successful sire, and when at his best Greenland was one of the fastest horses of his day, his Cash Handicap win at Saratoga, of nine furlongs in 1:54, being the best race at the distance and weights ever run in America.

There was great solicitude felt among sporting men in our metropolis Saturday forenoon, regarding a Coney Island baby. The infant (?) in question, however, proved to be a decided freak of nature in that it weighed half a ton, had four legs, and in short was P. H. Duffy's old baby, now known as the Baby of the Woodlawn stables. The cause of the unusual interest in Baby on Saturday was a rush to back her to win the six furlong dash, the "tip" sending her price down to a trifle over even money after some large bets had been registered at 4 and 5 to 1. At the track, however, there was always good betting against Baby, and the recipients of the "good thing" got on all their spare cash only to see it just fall of coming off, though she did beat all but the feather-weighted two-year-old filly Windseil. The latter has, however, been "due" some time since.

At Lexington, Ky., a trial of yearlings between Messrs. Clark and Bristowe, resulted in favor of the latter's filly, by Glenelg, out of Marmot, who beat the King Alfonso filly, out of the dam of Salvie, in a quarter of a mile run. Time, 23 1/2 seconds, a very fast spin, if it does not hurt the young things.

Other promising yearlings at Lexington are Wm. Young's ch. c. Enright, by Enquirer, out of Matagorde; Tiara, bay filly, by Glenelg, out of Cemo; Lewin, bay colt, by King Alfonso, out of Simplicity; and Bon Soir, bay filly, by Bertram, out of Good-Bye. Tiara recently moved a quarter in 24 1/2 seconds.

Saturday last, the 22d, saw the close of the English flat racing season. Of course, hurdle racing and steeplechasing will be carried on up to March next, when the regular season of 1885 will be inaugurated, but the November meeting at Manchester is recognized by common consent as the close of the year's campaign.

Mr. Wiley Buckles, of Illinois, is also to renew his connection with the turf, and in 1885 will have some promising youngsters in the field. The "black jacket and red cap" of Mr. Buckles was a promising feature of Western courses when carried by that good horse Harkaway, and we should be glad to see him come East next year.

An item in the New York Sportsman three weeks ago regarding the chances of Binette, Messrs. Bowen's fine filly, making a trip to California to run in the four-mile dash at the Pacific Blood Horse Meeting at San Francisco, was telegraphed by Chicago parties to California and created quite a sensation there, more so than the circumstances warranted. The rumor was unfounded, as Binette is now in Kentucky, where Mr. James Murphy, of Lexington, last week purchased the filly from Bowen & Co. It seems that Murphy owned a half interest in her, and he has paid Bowen & Co. \$2,500 to become her sole owner.

Indian Summer, as if loth to leave us, lingered on well in spite of the break that brought the first "feathery flakes" of a season unprecedented in its favors to lovers of out-door sports, to whom the dalliance of "Autumn in the lap of Winter," is none the less appreciated, because of its long drawn out enjoyments. Fresh Fall pasture, November strawberries, and peaches, up the Hudson, and apple trees in full blossom are some of the freaks of nature in the rural districts, where vegetation was supposed to have become dormant a month ago, but the older farmers say that all this ethereal mildness only precedes a severe Winter—one of arctic severity. Then Jack Frost will fasten his icy fangs in the throat of the mellow sunshine, and squelch the warm glow of the crimson sunsets. Leaden, misty skies will imprison the earth, shutting out the warmth that would fain reach her bosom. Winter birds will lurk beneath the dead and matted branches in the corners of the fences and fields. Bare, denuded limbs will picture on the dead air a tale of forest woe and woodland misery. Over all a white mantle of snow, and the man who has looted his overcoat on an election wager will think of what might have been as he huddles around to keep warm.

NEW YORK, NOVEMBER 29th, 1884.

PACIFIC.

In chatting with Geo. Rye this morning he told me a good story of Milton Young. They were at the Latonia meeting, and staying at the house of some very fine people of the place. In the course of conversation, the lady of the house expressed very great surprise that such a man as Mr. Young should be in the horse business, and said she had taken him to be a gentleman of higher aspirations. His answer was quite characteristic of the man; said he, "Madame, I have as high aspirations as any man living, I reckon, but I would rather own the winner of the Kentucky Derby than be Governor of the State." Nothing more was said in that household about the ambition of horse-owners.

## Trying the Yearlings.

At this season of the year, wherever turfman gather, their talk is all of yearlings and their trials, which have occupied considerable of their time during the brown and gold days of October. Nearly every one of the owners of the prominent stables has sent word to his trainer a fortnight in advance, and slipped away to the trial grounds with a party of friends, and the following morning the "rising generation" have had the question put squarely to them. Of course, there have been disappointments. We know several owners who can scarcely conceal their chagrin at the poor showing made by what they considered their best yearlings. But several owners have been made happy by the unexpected speed of their cheapest colts.

Of the merits of the different lots of yearlings we have heard much but seen little. On the evening of Omnibus day, at Monmouth, we accompanied Mr. Withers, with a select party, to enjoy the hospitalities of Brookdale, where, on the following day, the yearlings were tried, as it was Aug. 15, the day on which the great stakes of 1885-86 closed, and Mr. W. desired a general trial as a guide to making his nomination. We saw five colts tried at a quarter. As to what was done it would be violating the confidence of our host to state, although, not being a betting man, he has no secrets. But, to our notion, the best was a bay brother to Marsh Redon, by Stonehenge-Juhetta, although the Ventilator-Mise Bassett colt is a nice one. There is also a speedy sister to Duplex, but she is rather small. Nancy's filly is fast, but the finest looking is the Longfellow-Brenne filly. Of the Ranoccos lot we know only through hearsay, which has it that the second batch of Mortemer's are even better than the first. Vandebite's colt is said to be the finest, but among the speediest is the Florence filly, the brother to Wanda, and the Sly Boots colt. Mr. George Lorillard's lot were tried during the first week of October, and Mariner, a full brother to Triton, showed considerable speed. The Dwyer string is thought to be a pretty good lot, the sister to Bernes showing it unmistakably, and Richfield and Portland are both considered dangerous colts. Mr. Kelso's yearlings are reputed a wonderfully clever lot, the brother to Brookwood and one of the Stretfords especially so, while the Bradamante colt is esteemed a good one. Of Snedecker's lot, the best is Gladys, a full sister to Little Minch. She is a grand filly, and certain to win in the best company. In the Clipseana Stable we rather like the Minnock filly, which has been named Belle Garrison, in compliment to a sister of the stable's jockey. The Miss Herdaway colt is also a grand looking fellow, with a great turn of speed, and has been named Ben Fryor, in honor of his trainer. Bonnie Prince, a full brother to Bonnie Lizzie, has outrun all the Preakness team, but the general opinion is that there is another in the lot who will reverse it. Appleby & Johnson are said to have a rasping good colt in the brother to Richmond, by Virgil, and the new racing confederacy, called the Monmouth Stable, are said to have a real world-beater in a colt called Saxony, by Saxon, from Enquiries. Rumor says he is the fleetest colt in Monmouth County. Of the Eerdenheim lot the best are Mink, a full brother to Eachus, and Promenade, a son of Dalnacardoch and Glidelia's dam. Mr. Scott is said to have a wonderful yearling at Algeria, but its identity we cannot determine. We have also heard that it was one of the English-bred fillies, but have also heard it was the filly called Charity, by Sensation—Emma.

As to the value of yearling trials doctors disagree. Waugh, who trained with signal success for the late Mr. Merry, in England, is said to have held that "well broken yearlings will tell you the difference between them to a dot, and if it's changed at two there's something wrong with the winner of the first trial. Mr. Withers, however, has but little faith in them. Probably he speaks out of the fullness of his heart, as he has more than once built upon the rock of yearling promise, which the following year rent to atoms. Mr. Waugh's experience was, however, exceptional, as Mr. Merry was an enthusiast for two-year-old racing, and developed more great ones than any turfman of his age, notably Thorntony, Belladrum, Marksman, Sunshine, King of the Forest, etc., and his yearlings were thoroughly prepared. Mr. George Lorillard's yearling trials have been more reliable than any we know. Sensation's trial was true, but it was a wonder; Harold's trial was correct, and so was Spinaway's, and last season Triton gave an index to his future by beating his lot out of hand. The reverse was the case at Ranoccos, where Wanda did little to foreshadow how great she was destined to become, the best being Katriue, who has never seen the post. Onondaga's trial as a yearling was correct, but the same cannot be said of Pontiac, whose three furlong races such as to set the Ranoccos people to thinking they had another Iroquois, and he was hurried off to England, where he performed only moderately. We well remember Katie Pease's first trial, but it was at two years old, and it was so good that McDaniel could not believe it, and had them out again the very next Sunday. But whether the trials of the past few weeks are true or untrue, they have shown enough to promise a pretty good class of two-year-olds for 1885.—*Vigilant in N. Y. Spirit.*

## Jewett and Richball.

The Texas correspondent of the New York Spirit gives this account of the race between Jewett and Richball at Fort Worth:

In the language of Johnny Campbell, "When Baldy goes he brings out the crowd." The assertion proved correct, for the ground was well filled with an excited, enthusiastic multitude, nearly 5,000 people being present. The weather since Tuesday has been all that could be asked, the sun shining its brightest, the clouds their fairest blue. Jewett was the first pacer to appear. People looked at him; called him a hand some horse, and let him pass along. When Baldy came out, shortly after, there was a buzz of voices, and everybody stretched their necks to give him recognition. He has been here before; they know him; it's like meeting with an old acquaintance, and they cannot help showing their preference just a little. They do not dream that in a few minutes they are to see the fastest mile ever gone over in the State to harness. Baldy was a big favorite at \$25 to \$10. I notice both Schatz and Wilson buying their own end of it, and I accent blood, "he-lud" in the air. The track is good; the conditions favorable, and I have an innate feeling that they will go fast. Alone, with watch in hand, I hurry down to the starter's stand. Knap, sees me there and hails me, as he jogs by, "What are you there for?" "Only to satisfy myself how well you'll go," Campbell nods, but says not a word. Only twice to the wire do they come. They are off at a terrific clip; Jewett is first by half a length to the quarter in 33 1/2 seconds. The pace is hot. Still the black leads to the half in 1:07 1/2. My watch is a split, and I'm getting it without guessing. I hurry on to the wire, missing the three-quarters, but the clip is the same steady and even stride. "Jewett

will win," say the boys. As the black rushes under the wire I have marked 2:15; that is the slowest watch I find. The others are all at :14 1/2 or :14 1/4. He has beaten his record, and, as the word passes from one to another, that it is the fastest mile ever shown in the South, a wild applause peals forth, to be followed by more cheering as 2:14 1/2 is rung out of the stand. Had Richbell not left his feet a few rods from the wire the time would have been a shade faster. The second heat Baldy broke badly before reaching the quarter, where Jewett was first in 33 1/2 seconds again. He was at the half again in 1:05 1/2, Richball four or five lengths in this rear. Around the lower turn he left his feet again, and Jewett finished in almost a walk in 2:20 1/2. The sun was now down, and the race postponed until to-morrow.

Another bright, sunny day, and another great crowd of people on the grounds. The unfinished pace brought many of them out. During the morning I had been taken one side by numberless letters for an opinion as to the probable winner. My answer was worth just nothing. Yet a faint idea pervaded my cranium that, if Jewett went for it, he would be mighty troublesome. He had paced the fastest mile yesterday that he ever went in a race, and Knap looking round the last fifty yards; then finished fresh as a lark. Besides, Jewett never makes a jintown break, while Richball off his pins is pretty certain to lose a deal of ground before he recovers. The owners ars keeping apart, too. I hear they talked of a match for big money last evening. The signs ars plainly written on the wall. I reckon it will be paced out. I am at the track on time, and before they are called out. The audience were discussing the chances.

The pool-selling was brisker than it had been during the meeting. The pacers sold at even money, \$25 each, something that had not before recurred during the circuit. Both sides stood pat. They warmed up for the third heat with many eager eyes fastened upon them. The very first attempt they got away, Richball in the lead; to the quarter he went in 33 1/2 seconds. Down the backstretch the faint breezes was at their backs, and they whizzed by the half in 1:07; still, Baldy held the lead, and was at the three-quarter in 1:42. On they come, the pony seeming to go easy; he wins all the way, and it looks a dead sure thing for him to go ahead with the other two heats. The fourth heat Baldy left the starting point with the best of it, but Jewett was half a length in advance ere they had gone a hundred yards, and was pacing strong and within his powers; they got to the quarter in 33 1/2 seconds. Down the backstretch Jewett still held the front, reaching the half in 1:06 1/2. Around the lower turn he increased the gap to the three-quarters in 1:40. In the straight Richball paced over himself and left his feet; Jewett jogged home an easy winner of the heat and race in 2:15 1/2. There is no doubt he could have finished much faster.

Exceptions to the Trotting Rules.

I think I could indicate a few weak points in the operation of the National Association:

1. It serves as a coat of mail for the member, and puts the horseman at its mercy. An irresponsible member can put himself under the sheltering wing of the Association for a few dollars in a few days, and proceed to deal with owners and drivers as he pleases. The modus operandi makes it possible for them to be expelled with or without cause, and also levy punishment for unpaid entry fees, even if the member is irresponsible and fails to pay his premium to the winners. Of course the victim has the right to appeal, at considerable expense to himself, whilst shark dreams "Sweet dreams of yore."

2. Horses that have been protested, and whose owners have established their rights, have in many cases failed to receive their premiums. Protested money should go out of the hands of the local association as soon as the race is decided into the hands of some responsible party, subject to the order of the National Association.

3. The antiquated three-in-five style of killing good horses should be changed. After three heats are trotted any horse not winning a heat should go to the stable, and any horse winning two heats subsequently should be declared the winner.

4. In a field of ten or more horses, five per cent. of the entrance money should be returned to the owners.

5. No association should have recourse against an entry not made according to the rules, or accepted after closing of entries or conditionally.

6. Any owner whose driver is taken from the sulky should be guaranteed at the end of the race the position he holds at the time of change.

7. Any man who does not wish to win should be allowed to drive for second place, provided he declares his intention before the race.

8. All "helping" should be punished by prompt and severe measures.—Cor. N. Y. Spirit.

Dr. Hicks and the Yearling Records.

EDITOR BREEDER AND SPORTSMAN: Knowing a few items from Sacramento will be of interest to you, I will write you what we did on Thanksgiving afternoon over the State Fair track.

Transit, a yearling colt, trotted an exhibition mile for a valuable driving whip to beat his previous record of 2:51 in a race a week ago, in which he succeeded admirably, trotting this mile without a skip or a break in 2:45, trotting the first quarter in 42 seconds and the half in 1:22, which is getting very close to the record of the wonderful Eastern yearling colt Nutbreaker, by Nutwood, who trotted a few weeks since in 2:42, which is the fastest record of a yearling outside of California.

Dr. M. W. Hicks, who drives the colt, says he is confident that he will reduce his record below Nutbreaker before the close of the year.

Transit was bred and is owned by Morrie Toomey of this county, was aired by Prompter, he by Blue Ball, dam by Cal. Dexter, is a grand, big bay colt, 15 1/2 hands high, and has beautiful action and pure gait.

To close the afternoon's sport, Dr. Hicks drove his phenomenal yearling pacer Brilliant a half mile without a skip in the remarkable time of 1:14, a 2:28 gait, though the Dr. has on several occasions driven him a quarter in 35 seconds, a 2:20 gait. Now this may seem a little fast for most people to believe, but they can be convinced by coming up to Sacramento most any fine morning and time him for themselves. To see the colt in harness he looks too young to be driven, but when he is speeided has all the appearance of an old horse, going as smooth and level as an old campaigner. This colt was bred by Dr. Hicks, and was sired by Sterling, he by Egmont, dam by Flaxtail. You may expect to hear something more wonderful of these colts in the future. Sacramento, Nov. 25th. F. L. P.

CRICKET.

San Francisco vs. H. M. S "Swiftsure."

The long anticipated match between the officers of the Swiftsure and a representative team of local players came off at the Olympic Grounds, Oakland, last Saturday. Considering the short notice the attendance throughout the game was very gratifying. The Swiftsure team felt very much the loss of Lieut. Evan-Thomes and Mr. Dawson, while the team deputed to uphold the honor of Californian cricket was only a moderate one, inasmuch as many of the leading players, through business engagements, were unable to take part in the game. The coin favored the local cricketers, and about 40 minutes after the announced time of commencement Barney Benjamin and Carr opened proceedings to the bowling of Luard and Horne. Carr was dismissed in Luard's first over. Ben Benjamin joined his younger brother, when the score mounted rapidly. Ben Benjamin eventually spounded one to Lieut. Goldfinch which was gladly accepted. Two for forty-five. Jacobs, the new comer, started in scoring very rapidly, but soon lost his partner, Barney Benjamin, who retired with 30 opposite his name. Sanderson helped to bring the score up to 78, when an adjournment was made for lunch. Upon resuming the game Jacobs was cleaned bowled after having made 21, and Sanderson, with a score of 19, met the same fate soon after. Gray had his three wickets knocked down after breaking his egg. Bristowe, just as he appeared to be dangerous, was placed hors de combat to a good from Luard. Waterman was splendidly caught at point by Neat. De Golia, after adding four to the total, failed to stop one from Luard. Banner was caught at point. Goewey carried out his bat. The innings closing for 120 runs.

Captain Brand and E. H. Neat started to the defense for the Swiftsure to the bowling of Waterman and Banner. Captain Brand was bowled off his pad by Waterman. Lieut. Goldfinch, J. S. Luard, F. Henderson and Lieut. Bethel were rapidly sent back to the seclusion of the grand stand. Neat, who throughout all these misfortunes had been playing splendid cricket, was unfortunately, at this stage of proceedings bowled off his leg by Banner. Neat's innings of 23 was characterized throughout by sound cricket. Lieut. Garforth and N. Palmer scored 6 and 7 respectively, but the remaining members of the team could not make much headway against the local bowling, the innings closing for 55. After an intermission of fifteen minutes the Swiftsure team followed up their innings, but the second venture did not prove so successful as the first, as the whole side were out a few minutes before the time of drawing stumps for 42, Neat and Palmer being the most successful batsmen. The match thus resulted in a victory for the local team by an innings and 23 runs. The fielding of both sides was very fair. The following is the complete score:

Table with columns for SAN FRANCISCO and H. M. S. SWIFTSURE, listing players and their scores in 1st and 2nd innings.

Grass Valley vs. Nevada City.

The cricket match between the Unions, of Grass Valley, and the Capitals, of Nevada City, came off last Sunday week, at Nevada City, and contrary to expectation, resulted in a victory for the Capital Club after a very exciting game. Gilbert handled the willow in the most effective style for the Capital Club, while Hampton carried off the bowling honors. For the Union, Wilson was the highest scorer with 29 to his credit. Stewart, Wilson and Luke shared the bowling honors. The following is the complete score:

Table with columns for CAPITALS OF NEVADA CITY and UNIONS OF GRASS VALLEY, listing players and their scores in 1st and 2nd innings.

In a village match, on the border of Surrey and Kent, last season an umpire was appealed to for leg before wicket, the very first ball of the match. His reply erred on the side of mercy: "Well, he's out, but he hasn't had a knock. Let 'im finish the over."

J. C. Shaw, never a very great bat, was once asked to explain how he was bowled. This was how it happened: "The ball coom back a bit and mar hat warn't level."

POULTRY.

The Speckled Hen.

[Iowa Homestead.]

The number of eggs imported into the United States seems astounding in view of the cheapness with which they can be produced. In the year ending June 30, 1883, we paid to foreign countries the sum of \$1,808,540 for eggs. The trouble is not that there is no profit in producing them, but that the American farmer has heretofore regarded this as too small business for him. His talk has been of land covered with golden grain. When he raised more grain than the world would take at a paying price he began to talk of large pastures and vast ranges, "cattle upon a thousand hills" or ewine by the score.

The butter and eggs were regarded as pin money for the good woman, something it would pay her to look after since she had nothing else to do but take care of six children and the cooking and baking and washing and ironing for the family and hired hands and could, therefore, just as well as not look after a few cow and chickens.

By and by it leaked into his head that it would pay to keep cows to get milk for his pigs and the butter being in the cream he might as well churn it, and gradually the butter business got out of his wife's hands and she was left to take charge of the speckled hen. She failed to furnish eggs enough to go round, did this same speckled hen, and our people being exacting in this matter, have paid out this cool two million dollars to foreigners.

Let us look into the egg business. The farmer gets, we will say on an average of 15 cents per pound for his butter and nearly the same for his eggs. Which is raised at the greater profit?

The speckled hen is not half so particular about what she eats as bossy. She requires warm quarters but they are cheap as compared with bossy's. She turns out her product in finished shape which no art of man can improve. It is easier to feed two hundred chicks when they are little mites of things than one calf; and when they are a few weeks old they will gather their own living if bugs are plenty.

The speckled hen must be kept at work in Winter as well as in Summer, if she is to be run at a profit, and to keep her right down to business requires a good worm place and plenty of feed of the right kind. We can't play the Egyptian taskmaster on her and ask her to make "bricks without straw." She must be surrounded with Summer conditions if she is to turn out the Summer's product at Winter's prices. And so we propose a conundrum to farmers. Eggs will be 20 cents per dozen this Winter and pork say four cents a pound. Can't you produce a dozen of eggs cheaper than five pounds of pork? Will it not take less feed, less shelter, less hard work? Farmers, butter will be, say 20 cents. Can't you produce a dozen eggs with less grief than a pound of butter? And then the rascal in Chicago can't come the oleomargarine business on the speckled hen. They might make the yolk and the white but they can't put the shell on. Don't you see the point?

Now don't rush out of the cow business or the pork business and start a chicken ranch, but fix up a nice warm place and look after some of the last Spring's pullets and put them to work and you will see how the shakles tumble into your exchequer.

You would rather come to town with 30 bushels of corn at 20 cents a bushel would you? Well, think how many dozen eggs that thirty bushels of corn would make if you let the speckled hen run her factory. Condense your freights, man, and give the speckled hen a chance to turn the corn into eggs worth 20 cents a dozen. It may not be so fashionable to haul eggs to town instead of corn, but there's lots more money in it.

Growing chickens should be fed often. Very young chickens cannot consume enough food at once to last them a half day, as their crops are small; their rapid growth of flesh, bone and feathers, and habitual exercise, demand material proportionately nourishing and active, to develop a vigorous constitution. The food should be of the very best, and preferably mixed. Ground oats with barley and cornmeal should be fed together, one-third more of the oats with barley than the cornmeal. This is better than to feed each kind by itself.—Poultry Monthly.

A wetting in a storm is almost sure death to young turkeys, even of good size, but I doubt if my turkeys were injured much by running in the grass covered with dew, which they would drink. This grass, however, was short and thin. Young turkeys need plenty of exercise, and the mother hen, especially if she is a chicken, should not be confined, except perhaps for the first few days. Start with good stock and make the young turkeys "at home," and there will be a good number to be kept from haws and vermin.

If fowls are kept on a single diet they will not always accept a new kind to which they are not accustomed. They should then be deprived of all other food until they eat up that which was placed before them, when they will afterward show no objection, but eat the new as well as the old.

If the earth is used for the bottom of nests, sprinkle it with a few drops of carbolic acid in a cup of water, or crumble up a cigar stump very finely and scatter over the earth. Either process is cheap, and not only assists in disinfection, but makes it disagreeable to the lice should they appear.

Very often the fowls refuse food to which they have not been accustomed. If they refuse to eat when placed before them, the best plan to pursue is to allow them nothing else. Hunger will initiate them, and once they begin but little difficulty will be experienced afterward.

A bushel of good, sound wheat is better than two bushels of screenings. Musty grain, though eaten by poultry, is not good food. During the time when eggs are desired the pure wheat and matured corn is better than a surfeit of inferior grain.

A quart of coal tar in half a barrel of water should always be kept on hand. Stir it up well, and sprinkle the water over the floors of the coops or against the sides, and it will kill lice and purify the coop.

If plenty of skim buttermilk be placed where the hens can get it there will be no necessity for allowing water, and it will assist materially in increasing the number of eggs.

JOSEPH CAIRN SIMPSON, - - - EDITOR

NEW YORK AGENCY.

Mr. C. C. Pettus at the office of the "Sportsman," 46 Murray Street, is duly authorized special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptions and arrange advertising contracts.

ADVERTISING RATES.

Displayed, \$1.50 per inch each insertion or pro rata for less space. Reading Notices set in brevier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent will be allowed on 3 months, 20 per cent on 6 months and 30 per cent on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 60 cents each insertion.

San Francisco, - - - Saturday, Dec. 6, 1884.

The Stanford and Occident Stakes.

Some time ago we offered a suggestion that the time for closing the Stanford and Occident Stakes be changed so that hereafter the nominations would be made the 1st of January after the birth of the foals, and we are pleased to record that in both of them this change has been made. Thus on the 1st of January next, the stakes for 1886 and 1887 will close, that is for foals of 1883 and 1884, and from that time when they rank as yearlings. As the advertisements give the particulars, there is no necessity for repetition here, and we think that few will dispute the wisdom of the change. It gives a better chance for the smaller breeders, as when the animals are under one year there cannot be the same opportunity for selection, breeding and form being the main guide the action, of course, being more in the dark than when harness work has been given. Now that the practice of training yearlings has become general all over the country, some of them showing phenomenal speed before the season is closed, those of minor powers would not be engaged though subsequent payments will be kept up notwithstanding the difference in ability.

There is always a good chance for rapid improvement in trotting colts, and an ordinary performer at two years of age develops into a "crack" a twelvemonth thereafter. Thus when the entry has been made there is an additional incentive to persevere in the education and few who subscribe will not stay until the final payment is called for. The following note is from the Secretary of the California State Agricultural Society, giving the reasons which induced that association to make the change:

EDITOR BREEDER AND SPORTSMAN.—You will observe by the enclosed that the conditions of the Occident Stake after 1886 are changed somewhat. The only change made in the stake for 1886 is that the race is made with heats 3 in 5, in place of 2 in 3. The object in closing the stake for 1887 at this time, is to enable breeders to enter their colts in their yearling form. Heretofore the stake has closed when colts were 2 years old. The society is of the opinion that by reducing the first two payments, and compelling the entry of colts when not so far advanced as to develop more fully their trotting qualities, that a greater number would enter, thereby enhancing the value of the stake, making it more profitable to the actual starters. This year, however, owners can enter their yearlings for the 1887 stake, and their two-year-olds for the 1886 stake, but hereafter this stake will close for colts when one year old. EOWEN F. SMITH, Secretary.

In making the change from "2 in 3" to "3 in 5," there will also be a concurrence of opinion in the value of it. Whatever may be the hereafter in trotting a divergence from the usual plan awakens suspicions at the present day. Some claim that it is done to favor particular strains and offers a premium for speed at the expense of endurance. Whether that has any foundation or not, there is ground for the claim that with a greater number of heats the result might be different, and as nearly every breeder is ready to assert that the stock he fancies has "game" as well as "foot," he rejects the imputation with emphasis. By adding twenty yards to the "distance" the fear of being on the wrong side of the flag is reduced, and there will be starters which would not take the risk otherwise.

That there will be a long list of nominations in all of these stakes, we feel assured; that a greater number will be named in the stakes of 1887, than in those of the preceding year, we are just as certain, and should this view be correct it must be accepted as proving that the change is a wise one.

Heat Racing.

While so far as we are concerned an abolition of heats in running races would be satisfactory, there are a great many people in California who prefer the old style. As nearly as can be foretold from the running in dashes and the adjustments of weights the race on the Oakland Course to-day will be a close contest. Glendair, from her capital performance in the Fame Stake, when she ran a good second to Freda in the very fast time of 3:32, proves that she can go one heat at a good rate, whether she can repeat or not remains to be proven. Patsy Duffy has been tried at nearly all distances and found capable, and the question is whether he can carry the weight imposed to the front for two heats. Then Garfield, with a concession of so many pounds, must not be left out of the calculation, so that as the matter stands it is likely to turn up a very "pretty quarrel" all around. Should Glendair win one heat and Patsy another Garfield will find staunch supporters, as, under the rules adopted, he will be entitled to start for a third. That there is a great difference of opinion among those who are usually prone to agree is shown by the animated discussion whenever a group of turfites are engaged in canvassing the result. Bets have been offered that the best time for two heats ever made on this Coast will be beaten and this is not unlikely to be the case. The course will be well adapted for fast time, and as the "glorious weather" that has prevailed for the past three weeks is almost certain to continue for some time yet, that essential condition will also be favorable. That the track is now fast was shown by Blue Mountain Belle on Thursday when "galloping over" for the stakes in the match against the Big Mare. She galloped the half-mile in 48½ seconds. She came so easily at the finish that it looked as though she could have knocked the hlock out of forty-eight. As will be seen from the programme published elsewhere there are other good races on the cards so that there are additional inducements to visit the Oakland Course this afternoon.

"Clay Arab."

We heartily agree with our correspondent, Randolph Huntington, in his estimate of what enthusiasm has done for the world, and partially so in his denunciation of prejudice. Enthusiasts have been the governing power and though at the present day many are prone to call those who present their differences with vim and resolution "cranks," there is scarcely a renowned name which has not been coupled, at times, with opprobrious epithets. The proofs of this are too numerous to present if even it were necessary in this connection; and Mr. H. could have carried his illustration far farther than he has and then not told only a small part of the story. While we admire the enthusiasm which has carried him for so many years through the hot strife he has awakened by his advocacy of his favorite breeds, we cannot possibly agree with him in many of his deductions, especially in his low estimate of Abdallah and Hambletonian. Is there not a grain of prejudice in his mind when he writes so savagely about the founder of the greatest of all trotting families? It may be that the old intolerant and bitter antagonism which characterized the partisans of rival equine houses forty years ago has left a trace of its influence so as to warp his better judgment, and when he thinks of the many ignorant assertions which were hurled at horses he knew were worthy of encomiums in place of abuse, the rankling of long ago still leaves a trace of gall in his inkstand. He discourses pleasantly, however, and even those who do not agree with him can find a fund of information in his articles.

Racing at Oakland To-day.

From the bill appended it will be seen that there is good promise for fine sport on the Oakland Course this afternoon. The entries are sufficient to give good fields of starters and the weights so appointed as to leave the issues in doubt in each of them.

Apart from the racing there are other reasons to induce a large attendance. The weather could not be finer and the trip from San Francisco to the course will well repay the time and outlay required. It is one of the most enjoyable short journeys that can be conceived. The sail across the bay on one of these bright afternoons is so pleasant that the passengers crowd the spaces outside of the cabins and the large ferry boats have the appearance of a moving grand stand when filled to its utmost capacity. Notwithstanding the lack of rains there is verdure on the hills, and the contrast between the lovely December days here and the reported snows and blizzards of the East, will strike the duller of observers. Thirty-five minutes from the foot of Market street is all the time that is needed to land people at the course. The following are the entries and weights:

First race—Purse, \$100; dash of five-eighths of a mile; \$25 to second horse.  
C. E. Rainey's ch g Billy Johnson, aged, 115 lbs.  
G. L. Richardson's ch h Nick of the Woods, aged, 113 lbs.  
J. Lynch's ch g Tom Atcheson, 2 yrs., 87 lbs.  
R. P. Ashe's ch c Prince of Norfolk, 3 yrs., 113 lbs.  
Second race—Purse, \$300; two miles and repeat; second horse to receive \$75; third, \$50.  
R. P. Ashe's b h Patsy Duffy, aged, 118 lbs.  
J. Lynch's ch f Glendair, 3 yrs., 103 lbs.  
James Mee's br g Garfield, aged, 100 lbs.  
Third race—Purse, \$150; dash of one and one-eighth miles; \$50 to second horse.  
S. J. Jones' h h Forest King, aged, 112 lbs.  
P. Siebenthaler's b c Philip S., 3 yrs., 109 lbs.  
G. L. Richardson's b g Billy the Kid, aged, 90 lbs.

America is threatened with an invasion from the South Seas. In the turf gossip of the Melbourne *Sportsman* we find the following:

Mr. D. M. Robertson tells me that he contemplates taking a trip to America with one or more of his race-horses. Australian horses have, so far, never been pitted against Yankee cattle, and it would be interesting to learn how Messrs. Colstoun, Hannibal and Countryman would acquit themselves over their favorite distaces in the land of the stars and stripes.

We hope nothing will occur to cause this gentleman to change his mind and we hid him hail and welcome in advance. We have long desired to see a closer relationship between the horsemen of the Colonies and those of the United States, especially this Western Coast, and it may be that Mr. Robertson's modest beginning will bring about that result. A fair trial of Australian horses on American courses will enable us by comparison with colonial records to set up a standard by which their quality may be correctly judged. At this distance there is something impressive, almost startling about the recorded performances of the Colonial horses at home. The details of the first two days of the Spring meeting of the Victorian Racing Club, run at Flemington on Nov. 1st and 4th, will be found in another column, and present some features that to the average American turfman will seem little short of wonderful.

The Melbourne Stakes, one mile and a quarter, was won by Malua with 129 pounds up in 2:10½. The Maribyrnong Plate, the two-year-old event of the meeting, five furlongs, was run in 1:03, the winner carrying 122 pounds. "This is a "lumping" weight for a two-year-old in the Spring of the year. The Victorian Derby was not brilliant this year but a trifle sensational as it was won by a rank outsider, Rufus, who started at 20 to 1. The Cup also fell to Malua, who ran the two miles in 3:31½ with 135 pounds up, Commotion, with 138 pounds, second by half a length. When we come to digest these races in the light of the weights carried and the time recorded there is a great difference in favor of the Colonial bred racer and against our own. Tom Cannon, we believe, is credited with saying "weight don't stop a good'un when he's fit;" but that phrase, which in its face appears to be more epigrammatic than logical, is not true of American horses. We should be pleased to see the Australian weight carriers tried under the same conditions that prevail here, and if they do possess that extra power which the records seem to credit them with, a dash of the hood might be introduced into Yankee land with good advantage.

Any reader of the *Breeder and Sportsman* who knows of a farmer or stock raiser in Placer county, at or near Auburn, who marks his stock with a "J." on the left shoulder will confer a favor by sending to this office the name and address of the owner of that brand.

Answers to Correspondents.

Questions answered only through these columns. No replies by mail or telegraph.

N. B. E., San Jose.

Seven gentlemen make a race to rule to be trotted over the track offering the most added money between the first of September and the first of November. Each of the above put up fifty dollars to be divided as follows: Three-fifths of the whole, including the added money, to the first horse; three-fifths of the remainder to the second horse, and the balance to the third horse. One of the horses dies before any place or time is selected for the race to come off. Is the owner of the horse that died entitled to his fifty dollars in consequence of the death of his horse?

Answer—The race is a stake and the death of the horse does not release the nominators. He forfeits the money. Geo. W., Covelo, Cal.

I would be glad if you would be kind enough to let me know in regard to the best time on record for a horse running 300 yards, if you know what it is? We have a match race for 300 yards and would be glad to know what is considered good time for that distance.

Answer—There is no record for that distance and we never heard of such a race that was accurately timed. A good horse ought to run it in from fifteen to seventeen seconds. Old Scribe, Vacaville.

B. bets C. that Cleveland would not get the popular vote of the State of New York. Who wins? Answer. B. wins. The total vote of New York was 1,167,169, of which Cleveland received 563,154 or 20,431, less than half.

Fred Bonner timed his two-year-old colt, Almont Dndley, in 2:36½ at Ashland Park Stock Farm, Ky., last week.

The Blood Horse Association.

The adjourned annual meeting of this association was held at the editorial rooms of the BREEDER AND SPORTSMAN, on Saturday evening, November 23d. The old board of officers was re-elected for another year. From the Secretary's reports we summarize the business of the current year:

SPRING MEETING.	
Number of races run.....	16
Number of nominations and entries.....	183
Number of starters.....	51
Stakes and forfeits involved.....	\$3,750.00
Purses and added money.....	5,550.00
Total.....	\$7,400.00
Cash receipts—Gates and privileges.....	\$2,437.55
Stakes and forfeits.....	985.00
Penalties.....	20.00
Total.....	\$3,442.55
Disbursements—Printing and advertising.....	\$ 383.10
Sundry expenses.....	89.95
Winnings, balances.....	2,961.50
Total.....	\$3,434.55
Balance in hand.....	5.00
FALL MEETING.	
Number of races run.....	17
Number of nominations and entries.....	188
Number of starters.....	61
Stakes and forfeits involved.....	\$3,960.00
Purses and added money.....	5,130.00
Total.....	\$9,110.00
Cash receipts from all sources.....	\$7,083.90
Disbursements—Printing and advertising.....	\$ 487.90
Sundry expenses.....	172.10
Winnings, balances.....	6,015.00
Total.....	\$6,675.90
Cash on hand.....	\$ 433.70

Senator Beck, of Kentucky, and Representative Wilkins, of Ohio, were talking recently, when the Kentuckian espied the picture of a horse hanging on the wall. "There," he exclaimed with rapture, "is a picture of Lexington, the grandest horse that ever stood on four feet!" "Yes," said Mr. Wilkins, "he was certainly a very remarkable horse. Was he a trotter or a runner?" A look of ineffable scorn passed over Senator Beck's broad, expressive countenance. "Was he a trotter or a runner?" he repeated, astonishment, pity and profound disgust being blended in the tones of his voice. "Was he a runner or a trotter? Well, well, well, I do declare. I never heard of such astounding ignorance before in the whole course of my life, excepting on one occasion, and that was three years ago, and a fellow Senator was the frightful example. Iroquois had won the English Derby, and we Kentuckians naturally felt proud of the success of the American racer abroad, and waited with breathless anxiety for news from France that would tell us of the victory or defeat of the Kentucky-bred Foxhall, who was entered for the Grand Prize of Paris. The day of the race I opened up my newspaper and looked for the Paris date line the first thing. I was overjoyed to find that Foxhall had indeed won, and sent a page for Senator Allison. When he came over to my desk I pointed to the Paris telegram and asked him to 'Read that.' He read the paragraph, and calmly expressed his great gratification over the victory. After he had run on awhile he paralyzed me by the inquiry: 'Was it a trotting or a running race that Foxhall won?' Imagine my feelings. Words could not express them. I fell back in my chair speechless, and didn't speak to the Senator for Iowa for two weeks. Brother Wilkins, I would like to see you in Kentucky, but as a friend I must advise you to read up on Lexington before you cross the Ohio. If the Kentuckians should suspect you of not knowing whether Lexington was a trotter or a racer it might go hard with you." —National Republican.

Transit Makes a Good Record.

At Sacramento, last Friday, Dr. Hicks drove Mr. Toomey's yearling colt Transit a race against a local pacer for a stake of \$25 a side, and won without a skip in 2:51. He went to the first quarter in 45 seconds, and the half in 1:28.

AGRICULTURAL PARK, Nov. 21st.—Match for \$95 a side. Transit, b c (yearling), by Prompter—M. Toomey..... 1 Roden, b g (pacer)—C. Schlutins..... 2 Time, 2:51.

After the race a large field of roadsters started for a trot for a whip, the prize to go to the one that came nearest to 3:20. Worth Ober was the winner in 3:21. Morris Toomey second in 3:17½.

Suits at law are becoming quite common of late between trainers and riders on the one part, and employers on the other. This is one of the most regrettable things in connection with the seamy side of racing. It seems to us that this was and is a fit subject for interference on the part of turf legislators. Lawsuits commonly develop so much of the lowest and meanest side of human nature that the most ardent and thick and thin supporters of the turf as a national pastime feel sick at heart when confronted with such cases. The rules of racing are supposed to provide for all such matters, and no racing association should permit suits for salaries to get into court. No good ever comes to racing when the dirty linen inseparable to the meanest side of racing is washed in public. Upon satisfactory evidence of the existence of debts, every jockey club in the country should see to it that such obligations are promptly discharged.—Sportsman.

Any farmer or breeder in search of a young stallion will do well to take a look at Mr. Heller's May Boy. This colt is four years old, 16 hand high, dark bay in color, and a horse of magnificent proportions and great beauty. He is trotting-bred, being by Chieftain, his dam by Henry Clay, and is a pure-gaited, unmistakable trotter, and combining as he does the size and power desirable for a general purpose stallion he will be an acquisition to any breeding farm. He is for sale at a reasonable price, as the present owner has no use for him, and the horse can be seen any day by applying to Mr. Heller, at the Charter Oak stable, 775 Market street.

At Gainesville, Texas, there are two race tracks, one within the other. The inside one, seven-eighths of a mile in length, is exclusively for runners. The outside course, for trotters, is forty-five feet more than a mile. The stables are commodious, and number about 100. In front of every half-dozen stalls stands a good-sized, well-built house, where men can make their home while travelling.

Canvassing the Candidates.

Although the Kentucky Derby is a very remote event, the chances of the different colts engaged are already being canvassed. This is probably for the reason that it is the best betting race of the Spring, and for that matter the best ante-post betting event of the year, the amount of Winter betting on it being surprisingly heavy, when it is considered that ante-post betting has never been the crsre here that it has long been in England. By common consent the position of favorite seems to be accorded to Mr. G. D. Wilson's colt, Favor, by Pat Malloy—Favorite, by King Ernest. It cannot be denied that the colt fairly earned the post of honor by his record last season, as he appeared in eight races, winning five, viz, the McGrath Stakes and Post Stakes, at Lexington; the Runnymede, at Louisville; Clark and Thomss, at Lexington, (Autumn).

He ran unplaced to Isaac Murphy for the Kenwood of Chicago, with a five pound penalty; unplaced to Verano for the Hyde Park Stakes, at Chicago, with 10 lbs. penalty; and second to Bonanza for the Sanford Stakes. Next in favor are Swiney's Redstone and Green Morris' Ten Stone. Whether or not the latter will start will be one of the questions which must decide his status, as Green Morris is well known to be at loggerheads with the Louisville Club over a trivial matter, and has asserted he would run no more horses over its course. Should he reconsider this determination, Ten Stone would be well backed, as he showed a pretty good sort of colt in his races here in September and October. Redstone is a chestnut colt, by Wanderer—Katie Pearce, and, therefore, a full brother to Lizzie L. and De Soto. He began by running unplaced to O. B. for the Alexandra Stakes, and then beat a field of twelve, at Louisville, following it up by beating Troubadour and others in the Tennessee Stakes, and the Harold Stakes, at Latonia, and was unplaced in the Kenwood and Hyde Park, at Chicago.

Of the other Derby candidates, one of the best is Corrigan's Isaac Marphy, by Virgil, dam Pearl Jennings' dam, who won twice out of six times, viz., the Flash and the Kenwood, at Chicago, in the latter beating Verano, Troubadour, Jim Guest, Redstone and Favor. Another very useful colt was Milton Young's Bootblack, by King Alfonso, out of Beatitude, and if his owner has any sentiment in his soul, Bootblack is the colt he will desire to win with, as he is his first homebred, Mr. Megibben showed a very good colt in Orlando, a son of Billet and Eolia, who ran well up in the best company, and the same may be said of Capt. Cottrill's Jim Guest, a full brother to Buchanan, who won the Derby last season. Jim Guest was a hard one to heat, at the back end of the season, as he was second to Pegasus for the Walnut Hill Stakes, and third for the Barret Stakes to Troubadour. Col. Hunt's Keokuk was a good sort of colt, but did not class with Favor, Redstone, Troubadour, etc. Mr. Speth also showed a very fair colt in Thistle, a son of Great Tom and Ivy Leaf, the dam of Bramble, and the same might be said of Mr. Williams' Joe Cotton, a very bloodlike colt, by King Alfonso, out of the imported mare Inverness, by Macaroni. Warrenton, a son of Wanderer, in Mr. Nichols' stable, also showed well later in the season, winning the Belle Meade, at Louisville, beating Pegasus, Bonanza, etc. As a matter of fact, the Kentucky Derby, on paper, looks quite an open race, as it did last season. The colts engaged have hardly shown first-class form, and Troubadour, who is probably the best in the West, is not in the Derby. Of course, there are plenty of rumors as to promising "dark" ones, the most talked of being McFadden's Lepanto, a son of Longfellow and old Nora Creina, who seldom has thrown a bad colt, but forecasting the result of a race half a year distant is rather too previous, especially when there is no Leonatus, Runnymede, or Hindoo among those engaged.—Vigilant.

The subject of color among horses is an interesting study, and there is more than fancy in it. Deep bays and browns, with black points, are in the greatest demand, because the coat is so easily kept clean, its richness pleases the eye, and they possess the concomitants of endurance and longevity. A black horse is not held in such high esteem, and yet many a superior animal wears a coat of sable hue. It has been said by gatherers of statistics on the subject that chestnuts have good constitutions, but are often high tempered, while the black or red roan wears well and is not moved by every shadow that crosses his path. The piebald and soft colors, with white markings, do not find favor for racing or general purposes. It is also noteworthy that few gray or white horses wear the laurel wreath in the best company. As the trotting records stand to-day the queen is a chestnut and her predecessor was a bay. The rival stallions Mary Cobb and Phallas, are bays, and the retiring champion, Smuggler, is a brown. The best yearling, two-year-old and three-year-old performances belong to youngsters of hoodred hue. But Elvira, who lately deposed the bay filly Bonita as ruler of the four-year-old record, is a black. Among the pacers which have beaten 2:13 in harness, we find the unapproachable Johnston is a solid bay; Little Brown Jug is a beautiful brown, so is Richball. Sleepy Tom is a dark chestnut and Buffalo Girl a bright bay.

Tiffany, the great jeweler of New York, has on hand a commission to make a solid silver cup to perpetuate the memory of the great performance of Maud S., 2:09½, on Nov. 11th, at Lexington, Ky. The designs are original, and the cup is known as the loving-cup. It is gold lined, stands about twelve inches in height, and has three handles. On one side is engraved a head of the famous mare. On the other is an inscription: "Woodburn Farm Cup, awarded through the Kentucky Trotting-Horse Breeders' Association to Maud S., owned by Robert Bonner, to commemorate the great achievement of trotting on the Lexington Fair grounds, Nov. 11, 1884, against her own record of 2:09½."

The Toronto Mail states that Mr. W. Clendenning, of Chicago, was in Toronto looking for broodmares, in behalf of Mr. P. Lorillard. Of Mr. J. C. Smith he purchased the brown mare Evelyn Carter, foaled 1872, by Australian—Miss Carter, by Sovereign, 2d dam Dollie Carter, by Glencoe. Of Mr. Wm. Hendrie he purchased the mares Austrine and Wildbriar. Austrine is a chestnut, foaled 1870, by Australian, from Kate Hayes, by Albion; 2d dam Eudora by Prim. Wildbriar is a chestnut, foaled 1872, by Australian—Wild Duck, by Eclipse; 2d dam Slipper, by Yorkshire.

The Napa Journal says: The expediency of a trotting race for yearlings, to take place some time in the near future, has been under serious discussion by some of our local admirers of horsemesh, and if the proprietors of the undertaking meet with the approval they hope for the enterprise will be a grand success.

In Chicago.

EDITOR BREEDER AND SPORTSMAN:—Would you like to hear from Chicago? Of course you would, for friend Simpson once resided here. This 30th day of November, and a lively day it is—the Fall has been charming—and all the lovers of horses have been on the road, day in and day out. Charles Schwartz with Sam Hill and Charley Hogan comes first. Hill can trot very fast, Hogan still faster. Ben Stauffer owns and drives a Blue Bull colt that can trot in :24 or :25 and never was handled a day. Ben drove him a mile out at the Chicago Driving Park this Fall in 2:25½. How is that for a green one? Potter owns Hardie, Ira Homes' old pet, he can trot fast. Ira used to drive everybody with him. Messrs. Kimball & Co. are making some very light speeding cutters, the finest they ever produced, if we have any snow, what a lively Winter we will have with our fine boulevards. Washington Park Club House, good horses, pretty women, and everything which is good to eat and drink at the club. Mr. Shaw owns a pacer, Fred Wolf, that can pace very fast for a young one. John T. Geltmacher, owns and drives Rose Belle only daughter of Flora Belle, she is pretty and fast. Ira Homes has bought the bay gelding Rienzi, record 2:25½. Ira thinks he will make it lively for the boys this Winter. Nichols, of Henry W. King & Co. drives a bay colt that can trot fast. Our old time friend Harry Mulligan has got one or two that can brush along about as fast as he wants them to.

You know Sam Turner, of the Pacific, well he has got a g g that came from Kentucky about a year ago, that has plenty of speed, but Sam is afraid to let him out. Ed Mungler, of the Matteson House, drives a white g that can trot better than forty. Ed wants something faster however, and will buy as soon as he finds what suits him. Nat Fisher will manage to go into the country and get one that will scare the boys, if we have any sleighing. Comes pretty near knowing whist makes a good horse. W. W. Boyington, of the Board of Trade, owns Robin and one or two that can make the snow fly. Harry Beemis always drives some pretty fast ones. Harry likes a good horse and will give up good money for them cheerfully. John A. Hamlin, of the Grand Opera House, owns Reel and mate, they can trot very, very fast. When our snow comes the owners of fast ones want to look out—Hamlin will be on hand. W. F. Havvell owns and drives Gen. Mausen, the bay pacer; they claim he can go fast. Floyd Deyo owns a b g that he thinks will make the snow fly this Winter. J. L. Day is the owner of Kate Allen. She is the finest pacer, if not the fastest one, in Chicago, by Almont.

CHICAGO, Nov. 30th. ON THE ROAD.

Just before Maud S. started to beat 2:09½ Bair was alarmed at the rumbling of her bowels. The queen had been allowed to indulge herself a little too freely on grass, and the result was a slight fermentation. To get rid of the evolution of gas the trainer took from his pocket a handful of strong peppermint candy, of which he is very fond himself, and gave it to the mare. Maud S. has a mouthful of sweet teeth, and she rolled her eyes with delight as she devoured the candy. The peppermint corrected the disordered stomach and bowels.

It can now be stated upon good authority that the driving of Commodore Kittson's trotters and pacers next season will devolve upon Budd Doble. After Splan had decided to open a public stable the question of who should succeed him in the management of the Midway horses was for some time an open one, but last week Doble went to St. Paul and had an interview with Commodore Kittson, the result being that an agreement was arrived at between them.

The Sierra Valley Leader claims that \$50,000 worth of hooded horses are annually sold by the ranchers of Sierra Valley, and it advises the raising of nothing but the best, as it costs as much to rear a mustang as one which will sell for something.

Jay-Eye-See had the pink-eye when he landed in Kentucky but he is over it now. He and Phallas are turned out in adjoining pastures every day at 9 o'clock and housed again at 4 o'clock. Both looked rugged.

Edwin Thorne, the famous chestnut trotter, is running out to his old home at Thoroudsle. He is perfectly sound, and Mr. Thorne, his owner, thinks he will be a better horse than ever next year.

The Maryland Jockey Club is about to lose one of its officers in the resignation of Major J. D. Ferguson, Secretary. Mr. Ferguson has held the position since the Club's organization.

Dan Mace has devoted many hours of study to a hoof-expanding spring.

THE KENNEL.

Pacific Coast Field Trials.

The trials of the Pacific Coast Club have been in progress this week at Walltown Timbers, near Folsom, but up to the time of going to press have not been concluded. The attendance has been good, the weather clear and a trifle warm, but birds are reported scarce and wild. The telegraphic reports of results are confused with gaps that we are unable to close or explain, consequently we must defer an account of the trials till next week.

Eastern Field Trials.

At the trials of the Eastern Clubs at High Point, N. C., the All Aged Pointer Stake was won by Neversluk Kennel's Drake (Croxeth-Lass), D. G. Elliott's Scout (Croxeth-Belle), and J. T. Perkin's Mainspring (Mike-Romp), dividing second. The All Aged Setter Stake was won by C. F. Crawford's Foreman, (Dashing Monarch-Fairy II.), Dr. G. G. Ware's Gladstone's Boy (Gladstone-Sue), and Chas. Heath's Diana II. (Dash III.-Diana), dividing second. After the decision Mr. Crawford was offered \$2,000 for Foreman, but the proposition was declined.

The San Joaquin Valley Coursing Club, of Stockton, held their Fall meet at Cowell's ranch, on Thanksgiving day. The officers were: President, Judge Buckley; Judge A. A. Bontin; slippers, H. Conklin and P. Kearney; stewards, P. Apple, Ed Gross, Chas. King and G. Eberhardt. Eleven started in the old dog stakes, and thirteen in the puppy stakes. The winners were: Old Dog Stakes—Ben. Samuel's Staten Island, first; A. A. Bontin's Ben Butler, second; Judge Buckley's Lodi, third. Puppy Stakes—Wm. Hutchinson's Daisy, first; G. L. Wolf's Nellie T., second; P. Garvin's Stockton Belle, third.

## HEED AND SWINE.

## Straw as Food for Stock.

[Canada Farmers' Advocate.]

In our article on manure we pointed out that straw, being a poor absorbent, was ill adapted for litter. The farmer will now want to know its exact worth as food for stock. The market price of straw must be set down as nothing. Farmers who will sell it on the city markets at two or three dollars a load and stand most of the day before they can effect a sale, lose heavily by the transaction.

Let us reason from a hay ration standard. A steer weighing 1,200 pounds will require about twenty-five pounds of dry matter per day to keep him in a good thrifty condition. This may be represented by thirty pounds of timothy, which contains the right proportion of flesh and fat forming materials for the purpose mentioned. Reckoning hay at \$10 a ton, the cost of a daily ration would therefore be fifteen cents.

Let us now compare this with a straw ration. The objection to feeding straw alone is that it contains too great a proportion of fat and beat producing material, so that the animal has to eat enormous quantities before it gets sufficient nutriment to repair the waste of or increase the other tissues of the body. It will thus be seen that it will require the addition of some other food rich in flesh forming constituents to raise the straw up to the hay standard. This can best be accomplished by the use of the most concentrated food that can be purchased in the markets, viz., linseed cake or linseed meal. There are, however, a few other foods rather more concentrated, but they are not so readily procurable. A daily ration of fifteen pounds of wheat straw, and five pounds of oil cake, has almost the exact nutritive equivalent of the hay ration. Calculating the straw at nothing, and oil cake at the average price of \$30 a ton, or one and a half cents a pound, we get seven and a half cents as the cost of the straw ration—that is, exactly half the price of the hay ration. In other words the value of the straw is raised to \$6 per ton. In this computation pure straw is taken; the chaff has a much higher nutritive value, and if the quantity of straw mentioned is made up of one-fourth chaff, the ration will then be as good as the best mixture of timothy and clover. These figures, combine with the experience of feeding cattle on straw alone, lead to the conclusion that straw is the cheapest ration when fed with concentrated foods, and the dearest when fed alone; for in the former case animals can put on flesh; in the latter case they lose in condition, which reduces the value of straw to a minus quantity.

But the objection may be taken that the straw is of some value as manure. To this it may be answered that the manure value of a ton of straw is about the same after it passes through the animal system as before, if we take into consideration the more direct availability of the dung as plant food and the injurious effect which straw has on the mechanical conditions of soil that are not stiff.

There is another important consideration. While straw is a far better absorbent for litter when cut than when whole, it is necessary to have it cut when fed with concentrated foods.

If ground grains are fed instead of oil cake, the meal and straw should be well mixed in the manger and moistened with water, so that when the mass gets into the stomach it will be in a condition to induce free circulation of the gastric juice, and there will be no danger of the mass forming into an impenetrable ball.

Any grain, with the exception of corn, can be formed into a feeding ration with straw, but each would require a separate calculation before the proper proportions and cast of the different rations could be ascertained. Some animals would require a frequent change from a straw and oil cake ration.

## Make Cows Comfortable.

The American *Dairyman* says: As chilly nights come on, their evil effects are to be noted at once upon the milk yield of the cows. This is one of the prime causes that sends the price of butter up, and if the dairyman desires to reap the benefit of these high prices, in what way can he do it better than in guarding against the evil effects of these chilly nights. To do this we would suggest the propriety of putting the cows in the stable at night and not letting them out again until late in the morning and until the sun has had time to warm up the atmosphere, which it will always do after nine o'clock, even if the day is cloudy, unless there is something in the nature of a cold wave prevailing to force the thermometer down. Then again, there is nothing so detrimental to a good yield of milk as to compel the cow to fill her stomach with ice-cold water. The cow may be called a tropical plant that dries up and withers when subjected to a cold hitting atmosphere. If you have the appliances, keep both her food and water warm and, of course, never let her body get chilled if you can help it. This is the time of year that farmers are most apt to be careless about the comfort of their stock and by a little thoughtlessness damage is done that afterward can not be repaired at any cost. Leaving the cows out one cold, wet night, will do them more damage than a month's coddling can repair.

There is perhaps no trouble against which the dairyman has to guard more constantly and carefully than against garget. This trouble may be caused in various ways. Lying in a cold, wet spot out in the field at night, a sudden change from hot weather to cold, squeezing the full udder as she lies down, chasing about with a full udder, indigestion from any cause—all these will cause it, and so will bad milking, such as leaving some bad milk in the teats. When it happens the case should be discovered and the proper remedy applied. Usually a dose of a pint of linseed oil or a pound of Epsom salts with a teaspoonful of ground ginger, and rubbing the udder with camphorated ointment, will remove the trouble in twenty-four hours, says an exchange. The udder must be completely cleared of the matter and milk in it.

An old farmer, says an exchange, tells us that there is no feed so good to keep animals in flesh as scalded oats. For mares, cows and sheep that are to raise young ones it is superior to almost any other feed, as it not only puts the animal in good condition to furnish milk abundantly, but the young at birth are strong and active. Wheat bran is also an excellent feed for breeding animals given in the form of a mess.

A muddy barnyard is one of the greatest nuisances with which many farms are afflicted. The stock is allowed to run in the yard, a portion of the time at least, and so tramp it up in wet weather that it is almost impossible to get through.

Keep the stock growing and keep none but growing stock, except brood animals and horses.

## The Rivalry of the Breeds.

While marked at times with perhaps more of personal feeling than seems necessary, a generous rivalry between the breeds is by all means to be encouraged. The dissensions in which the friends of each engage, in order to show their favorites to be the best, attract wide attention and do fail to demonstrate to the general farmer the superiority of all as compared with common and unimproved stocks. He may not be exactly satisfied with the arguments advanced by the friends of Short-horns or Herefords, for instance, as to which stock is the best, but he cannot fail to perceive, from what the friends of each advance and concede, that either stock is a vast improvement upon the ordinary stock he has been handling, and capable of augmenting very largely the profits of the farm. And so, while disposed sometimes to deplore the warmth with which the friends of one breed or the other move to the attack or stand upon the defense, we cannot help but feel that the general cause of live-stock improvement is all the time being advanced. Men will disagree and dispute about what is good and desirable but they hold no discussion over those things which are poor and valueless; the fine gold is the subject of their emulation, while the dross which flows with it from the furnace receives no thought. Whole communities may divide in their opinions as to whether Short-horns or Herefords or other breeds are the better, but to champions appear to maintain that common and unimproved stock is the equal of any. And at its best it is so far below the improved sorts that there is no discussion among its owners as to whose is the best and whose the poorest. So we say let this generous rivalry continue. Words spoken to advance the interests of one breed advance the interests of all, and the effect upon the general cause is good. If neither side can quite succeed in convincing everybody that they are just right, no matter, or between them they are convincing the country that only the farmer and ranchmen who maintain unimproved stock is entirely wrong.

Besides, it is quite evident that such a competition as this, and a constant comparison of the merits of the respective breeds, one with another, on the range, in the feeding lots, in the markets and at the shows, must stimulate the friends of each breed to hold their favorites constantly to the highest standard. There is an ever-present inducement not only to work improvement where that is possible, but to watch for and correct the earliest tendencies to deterioration. Breeders are compelled to improve and correct their methods or lose place in the face of these rivalries.

To the general farmer these discussions may at times appear perplexing, and some may feel uncertain as to what particular breed to give their attention to. But really there should be no hesitation in the matter. If there is any decided taste or preference, consult that by all means in making selections. And if that is absent, any one of the improved breeds will prove a source of immense satisfaction and profit, and which ever one the farmer selects will prove so much more profitable than all the other stocks with which he has had to do that likely he will be ready to maintain it is "the best on earth."—*Breeders' Gazette*.

## Raising and Buying Cows.

It can be shown conclusively that a cow can be raised for less money than one can be bought, and just as certainly that one can raise a better cow than he can buy. This should be obvious at the first thought, because no man will sell a thing—even a cow—for less than it costs him, and if one man can produce a cow for a certain profit another man should, and also when a dairyman gives his mind to the improvement of his stock by selecting the best and breeding carefully, he cannot fail to produce better cows than another man who only takes ordinary care—or, let us say, exercises ordinary carelessness—in raising his calves. A calf is to be considered and thought of and prepared for before it is brought into the world, and perhaps the most important part of the business of rearing cows is that preliminary to the birth of a cow—its breeding, in fact. For, if the stock is poor to begin with, the produce will be poor; but if one has but poor cows, and will yet select the best and take especial care with the produce of these, he cannot fail to effect a great improvement in course of time and with patience and persistence. But how much time is saved by making a good beginning—and to begin well should be the aim of every owner of cows. The first step in the improvement of a dairy herd is the introduction of a good bull, selected for its inherited qualities. Then one has a foundation to build upon.

The rearing of the calf should begin as soon as it is embryo, and this is done through the dam. The dam should be well fed, kept docile, and petted so that her disposition may be gentle and friendly. Her milking capacity should be encouraged in every possible way, and extended to within a few weeks only, and not more than six at the most, of the birth of the calf. It is a maxim among breeders that the dam confers upon the constitutional peculiarities and the mental, or rather instinctive characteristics, while the sire gives the form and other qualities.—*N. Y. Times*.

## The Scrub Cow's Meditation.

The scrub cow looked over the fence that divided the raw prairie from the clover patch and her mouth watered as she saw the improved, aristocratic cow in clover six inches high, eating a bran mash and some choice pumpkins, chopped fine and made palatable with corn meal. "It seems to me," she said, "that things are not going right in this world of late. Here I am, the standby of this family for years, furnishing a healthy calf each year for the last five, and last year two, keeping the family in milk and cream, and helping to keep down the grocery bills with butter, left to feed on this miserable, dry prairie grass in October, while this upstart, with her fine pedigree, as they call it, and blue blood, get the nicest young clover and all the other good things that the farm afford. And then we shall hear about her astonishing milk records. Give me that feed and I will make a record that will count.

"But then I'm only a scrub and it is not fashionable to speak of the merits of scrubs. And that is why it seems to me the world is going all wrong. Even the black man has his defenders who would die for him, and every boy will fight for his yellow dog; but there is no man, even though his children were raised on her milk, that will fight the hard battles of the scrub cow.

"Possibly when I am dead and gone, when the race of scrub cow is nearly extinct, somebody will experiment by giving the scrub cow the same feed and care with the improved cow, and find out that, whilst she is not much for beef, she fills the pail.

"Then he will give her a name, the 'Jersey Red with the crumpled horn,' perhaps, and time will bring it revenge. But that does not make this prairie grass taste any better."

## A Fine Farm.

We were over on the flat to the Fairbanks place, one day this week, looking at the live stock and noting the improvements that have been made of late. A band of mares, colts, horses and mules, had just arrived from the San Joaquin country that had been purchased at the McLaughlin sale. The mares and mules will be sent to the mountain ranch in Humboldt county, while the young horses will be kept down here. We were pleased with the appearance of several Dan Voorhies fillies, from good mares. They have the exact color of Dan-sorrel, which is the prevailing color of the McClellans—good size, plenty of flat bone in their legs, and they look like trotters. Most of the horses from the McLaughlin ranch were as wild as deer, and it reminded one of the early days in California to see the boys, with their Spanish rigs, riding these "bucking brocs." It is a curious fact, but nevertheless true, that well-bred horses which are allowed to run wild till grown, will, in this country, "buck" like Spanish mustangs—though we never saw a horse "buck" in any of the other States. Mr. Fairbanks has some full-blood Jersey cows that are really very fine. Two, that we think, are superior to any that were exhibited here or at the Santa Rosa Fair. These cows are being bred to "William of Scituate," and it will not be many years until the place is stocked with gilt-edged cattle. A. J. Fairbanks is the bog fancier of the firm, and a believer in the "Durocs." He showed us several pens of nice ones that much resembled the Berkshires, except in their bright red color. It is an easy thing for a man like H. T. Fairbanks—possessing good judgment and plenty of means—to fix up a place so that it would be a pleasure to operate upon it. He has a large and conveniently arranged barn, windmill and tank, with plenty of water bandily distributed over the farm. In short, a place for everything and everything in its place. They were chiseling up adobe in tolerably good shape, but it caused six good horses a strong pull to do it. Most of the seeding is done on the place, and now they are anxious for rain.—*Petaluma Argus*.

## Live Stock Markets in Australia.

From the market report of Messrs. Brown Bros. & Co., stock agents, Pitt St., Sydney, received by the last steamer, we extract the following notes. Mr. C. Bruce Lowe, the well known expert in pedigrees is a member of the above named firm:

Cattle—Fat, prime up to 37s. 6d. per hundred pounds. Middling, from 30s. to 32s. per hundred pounds. Store, from £3 per head to £4 10s. and £5 10s., according to quality and locality. Bulls, herd, from £15 to £25; stud, from £50 upwards to £1,000.

Sheep—Fat, in wool from 12s. to 15s; shorn, 8s. to 10s. Ewes for breeding (off shears), from 6s. to 15s. according to quality. Rams, studs, from £15 to £1,000, according to quality; flock rams from 10s. to £5.

Horses—Heavy draught, from £30 to £60 for geldings; from £30 to £100 for stud mares. High class stud mares bring from £100 up to £500; stallions, from £200 to £500 and £1,000. At the Melbourne show a stallion was sold for £1,700. Carriage horses, from £40 to £100 apiece. Light harness, from £30 to £80 and £100. Hackney, from £25 to £60.

We sold several pedigree blood mares (7) at prices ranging from £150 to £250. Also (5) blood stallions from £100 to £250. Also several heavy draught stallions at from £100 to £500; about 50 heavy draught mares in one lot at from £90 to £70 apiece; also about 30 Ayrshire heifer cows in one lot at from £20 to £40 apiece, and about 30 Alderney heifers and cows from £20 to £60. We also sold an imported Hereford bull at our bazaar, Castlereagh street, this week, for £315.

The growing of mohair and its manufacture into finished fabrics is fast becoming an important business in this country, and, as many think, susceptible of large increase before the demand is supplied. It is thought that many of the Western sheep men will invest in Angoras, in addition to their flocks, as the goat can run upon the range they are now using, with but very little injury to the range, as the food required by the goat is different from that of the sheep. Mr. C. Jenks, of Boston, in a letter to the *Rural World*, says: That you may see what is being made in one mill in this country from mohair, I send you samples of plushes of various patterns and qualities made from the raw material I sent you heretofore. These plushes are used for trimming furniture, and hangings in upholstery work, for railroad car seatings, lap robes, inside carriage trimmings, etc. There is a domestic consumption of one variety alone—of which I send you a pattern—that would require the fleece of 500,000 goats to supply. The mohair goods of the varied styles and qualities in demand, made up with hemp, cotton, flax, wool and silk as component parts are sold in the finished fabric at from 75 cents to \$20 a yard. Some of the robes made from mohair and wool and mohair and silk sell readily at from \$50 to \$200 each. They constitute one of the most beautiful and durable fabrics in use. As I have said, the little mill that makes the goods as per sample herewith netted \$50,000 clear profit last season. The goods made in the factory referred to, of which I now send samples which have given the best satisfaction, were made of *American grown mohair*. You can see by this tangible evidence that the growers of mohair need feel no solicitude as to a permanent and profitable market if they will put a good staple into the market. I know from experience that such a fiber can be grown at a cost of 15 cents a pound; and I never sold at less than 30 cents and sometimes as high as 75 cents. Rightly located and handled there is no stock husbandry that will yield better returns.

The best time to sell butter or cheese, and indeed all farm produce, says the *National Live Stock Journal*, is the earliest date at which it can be got into condition for market. Whoever holds butter or other perishable goods, holds them at a risk. Butter depreciates from the moment it is made until it is consumed, and is always liable to fluctuations in price, which is as often against the holder as in his favor, and he is always losing the interest on its value as long as he holds it. Holding for a higher price is one form of speculation—a business farmers have no right to indulge in. It is true a rise in property may sometimes be foreseen, making it pretty safe to hold for a time, but when a dairyman would not think it wise or safe to buy butter or cheese to hold for a better price he had better not hold his own. The fact that it turns out that he might sometimes have done better by holding than by selling, when his goods are first ready for market, is not a sufficient reason for his holding at another time, for the chances will as often be against him as for him, and whichever way it is, he must always endure the losses from injury, shrinkage, depreciation, waste, and of capital. Therefore, as a rule, we say it is most prudent to sell always when products are ready for market, and most especially so with butter, which is always suffering from depreciation in quality.

STABLE AND PADDOCK.

The Science of Feeding.

It is an error to suppose that the horse can be fed with discretion or without, as one pleases, the result being the same. It is equally an error, says an exchange, to dose the horse for every indication of disturbed digestion. There are peculiarities of structure, and hence variations in functional manifestation; each horse, like each person, having these differences marked by strong lines. These differences require to be heeded, as no success will attend any attempt to set up a new standard. When indigestion is assured then fermentation begins, because food cannot long remain in so warm and moist a place as the stomach and bowels of a living beast without fermentation following. Skill is required to feed a horse, exposed daily to hard driving or labor, in such a manner as always to secure immunity from some one or more of the evidences of indigestion. With some horses long continued use of one kind of grain, or of ground feed, will create disturbances within; gas being generated freely and the bowels becoming bound up. Food cannot be given to the horse as grain is shoveled into the hopper, that is not to this average horse, for only a very few have such a vigorous digestion that they assimilate all the stomach will contain. Such as may have inherited this exceptional kind of digestive force will part with it little by little if the organs involved are repeatedly abused. The fact is not generally well understood that exercise after feeding retards the digestive process. It is a law of the system, whether of the horse or other animals, that all the functions of the body cannot go on in full force at the same time. Even tolerably active exercise after eating will detract from the stomach's force, through the increased demand upon the circulation and nervous force of the heart and muscular system, and prompt action upon the food eaten does not take place, hence fermentation follows, the horse showing dullness, sweating easily, and the breathing is disturbed upon his being sharply driven or required to pull hard. Gas is expelled from the stomach, and later from the bowels. The animal has less thirst than usual, drops his head and looks dejected upon coming in from work. He takes his food without zest. When in this condition it would be unwise to put the animal upon full feed, because the stomach is already laboring at its unfinished task, and then again because an exhaustive state from recent labor is incompatible with active digestion. The state of the parts involved is not merely a functional disturbance, with no change made in the appearance of the parts. On the other hand an irritated state is set up, more than the usual amount of blood being sent to the organs involved. This excess may be but temporary. If so, and it has not often been repeated, then no mark upon the mucous lining of the stomach has been made. If of frequent occurrence then the turgid state of the blood vessels of the part will pass into a permanently reddened state, the natural result of excessive determination of blood. Then follows habitual indigestion, more or less aggravated, and a horse in this condition is in very unsafe hands when handled in an ordinary way, that is, with an attendant having permission to feed as he likes and work the animal alongside a mate in good health. A horse when in this disordered condition will be quite likely to get nearly his usual ration, and he will at the same time do his best to keep up his end at work, though it be done in a spiritless manner. The most effective remedy in case of this kind is simply rest. This is the paucity given to the horse when he returns at night from his work. Any rule relating to tired muscles applies with a like force to a tired stomach. Nearly all horses will eat to excess if allowed to do so, while there are but few that are so spirited as to overwork from choice. Indigestion may be confined to one part of the viscera, or it may be diffused. Nature seldom makes bold or sharp lines. The troubles generally accompanied by a cold surface, or at least the tendency is that way, in any but the warmest weather, and the legs are also inclined to be cold. This condition of the circulation aggravates the trouble by sending the blood unduly to the stomach and bowels, and the circulation should be invited to the surface and legs by the use of a blanket and rubbing. Corn should not be fed, but oats and clean hay instead, with an occasional mash of ground feed.—Pittsburg Stockman.

Diabetes in Horses.

Horses sometimes suffer from this disease, which is characterized by excessive thirst and a profuse flow of urine. Among the several causes to which this complaint is attributed, the most common are thought to be faulty feeding and giving medicines containing something which stimulates the kidneys to over-exertion. Hay which has been heated in the mow or has become musty is liable to produce this disease, and the feeding of damp, mouldy oats, or damaged bran is also thought to be one of the causes. The symptoms are very great thirst, also the voiding of large quantities of urine as colorless as water and sometimes amounting from three to five gallons daily. The appetite at first may be ravenous, but soon fails and often becomes depraved, as is shown by the animal licking the walls and floor of his stall, the skin grows harsh and dry, the pulse is weak and the animal becomes reduced in flesh and strength. Whenever the above symptoms are manifest the diet should be changed at once and the food given should be of the best possible quality. Give one pint of linseed oil from a bottle or horn. Give three times daily in a pailful of water one tablespoonful of common baking soda. Get from a druggist six powders, each containing iodine, one-half drachm; sulphate of iron, two drachms; powdered gentian, one-half ounce. Mix one of these powders with two tablespoonfuls of linseed meal, add sufficient water to make a stiff dough, mix and roll into a ball two or three inches long and to a point at one end, open the mouth, draw the tongue gentle forward and place the ball upon the tongue as far down the throat as possible so as to insure its being swallowed. In ordinary cases one dose in twenty-four hours is sufficient, but in severe ones it will be best to give the above dose morning and night. In administering the ball great care must be used not to draw the tongue out of the side of the mouth, for there is great danger in such cases that it will be bitten off, as was that of the celebrated trotting mare, Cozette, a few years since. Six doses of the above will effect a cure. Feed liberally so as to build up the wasted system in the shortest possible time.

Ventilating Hay Mows.

After adding his testimony to the correctness of our theory as to the cause of frequent fires in barns, an architect from Iowa writes to the American Architect, into which paper our article was copied, the following letter: We believe the idea of the writer is not new, and patents have been granted for similar models of ventilating hay mows and grain bins, nevertheless the suggestions of the writer are good.

As this matter is of more vital importance than most people, even scientific men, are aware of, I will, says the Architect's correspondent, venture to suggest a mode to ventilate hay lofts, and to give veterinary surgeons something to think of. I believe that one-half of the disease in horses and cattle is brought on by feeding spoiled hay, either taken from hay mows or stacks, also from grain feed, that has been heated and spoiled.

I believe that the heating process, the moldy parts and must that it produces, will create germs of various kinds that cause diseases in horses and cattle and perhaps swine. I will now venture to suggest a mode of ventilating hay mows, stacks or granaries. I will suggest introducing various air ducts through the hay mows, both horizontal and perpendicular, opening directly outside, so as to admit a current of fresh air, which will cool and cure the hay or grain, and leave it in a healthy state. This may be done by building board ducts and perforating them as much as possible, and then running from the horizontal ducts perpendicular ducts up through the mow, not more than eight to ten feet from each other. Or this may be accomplished in another manner, by using some round instrument, six to ten inches or even larger in diameter, say a galvanized iron tube; stand it over the openings in the main air duct, and as the mow is filled up, draw these pipes up through the hay, until the top is reached. This will afford complete ventilation, which will be increased as the mow becomes heated; hence the fresh air drawn in will cool and cure the hay or grain, and by this process thousands of tons of hay and grain can be saved and a vast amount of property will be saved from the destroying elements.—Scientific American.

An important feature in raising horses is the proper handling of colts. When taken up for weaning the beginning should be made and it should be kept up as long as it is possible to do so. Put halters on them, rub them and learn them to lead. Lead them to water and give them salt and feed. There is no estimating the difference between colts thus treated and those that are herded about and allowed to go wild until the age when they are needed for use. A colt that is halter-broken and handled at weaning time, though he may not be again touched until he is three years old, will not forget it. When the halter is placed on his head he will understand that no harm is meant, and will be easily broken to harness or saddle. Colts that are allowed to run wild until grown before being handled are often injured in breaking. The work of training is arduous and sometimes dangerous. Buyers greatly prefer to get horses that were handled when young than those that were wild until they reached the age of maturity.

The Texas screw worm has appeared in Kern county. It is a dangerous cattle pest, and also affects horses, sheep and hogs. This worm is the larva of a peculiar fly which deposits its eggs wherever it can find a wound or a chafe on an animal. The larva soon hatch, and immediately screw themselves into the flesh. Young calves are commonly attacked in the navel, and many thus affected have lately died in Kern county. A number of horses there have also been killed by the pest. Its attacks are usually fatal unless remedies are promptly used. Turpentine and carbolic acid, applied to or injected into the parts affected, are found efficacious.

THE GUN.

The Game Law.

Table with columns for months (January to December) and rows for various game species (Quail, Partridge, Rail, Grouse, etc.). Blank indicates open season, Star (\*) indicates close season.

The Trap at Stockton.

The annual pigeon shoot of the O'Neil Gun Club, of Stockton, was held on Thanksgiving Day, at Hank Mount's place. The pigeons provided were strong flyers. The first match was made at twelve birds, thirty yards rise, Hurlingham rules, from ground traps. Entrance, \$5, and money divided into four purses. This shoot also included the Club shoot for the medal, the first ten birds counting. The scores showed as follows:

Table listing names of participants and their scores for the trap shoot at Stockton.

Another match was made between seven of the "cracks," to shoot at twelve birds, at twenty-one yards rise, plunge traps, under State Sportsman's Association rules, \$5 entrance. The scores showed:

Table listing names of participants and their scores for the second match at Stockton.

The five who took eleven birds each divided the pot. The outsiders afterwards indulged in a match in which some wild shooting occurred.

N. A. Rideout, George Ditzler and Harry Biggs spent last Saturday night and Sunday morning on Butte creek. They had very poor luck and only killed five geese.

A. J. Wells and son killed thirty geese in the Butte creek along last Sunday.

He Won't Loan Them.

The editor of the Evansville (Ind.) Argus, who is a thorough sportsman, and there ore knows what he is talking about, has this to say on the subject of loaning and borrowing guns:

As this is the season of the year when the average friend comes to you and wants to borrow your gun or dog, we want to define our position, as it were, and keep from hurting some good fellow's feelings. Now, we wouldn't lend our gun or dog to our dearly beloved friend, President Arthur. If Chet came to us for either we should be compelled to say gently but firmly: "Chet, old boy, we are willing to lend you mousby, but we can't lend you a gun or dog, because, Chester, it's directly agin our principles." Now, there is a vast difference between lending a dollar and lending a gun. You lend a man a dollar and he can knock around with it all he wants to and it don't hurt it. He can't let it fall over a dog or on a rail fence and dent in the barrels. He can't get mud in the muzzle and all over the faucy work in the stock, and if he leaves it lay a week without cleaning it don't hurt it. He can't take it and try to force shells a size too large into the breech, and then try close it by mainforce and awkwardness. He can't try the locks forty times a day to see if they work well and hear how loud they snap, and he can't get tired and lie down under a tree and give the dollar to some grauger who never saw a breech-loader, and let him go all over a farm with it, shooting at marks and woodpeckers, and getting shells fast in it and trying to dig them out with a knife. No, you can't do all these things with a dollar, but you can with a nice breech-loader, and that's the difference. This is why we would rather lend the dollar, and this is why it is that, when a good friend come in, we always look him directly in the eye and tell him that the cases he sees under the desk are empty, and that both our guns are over in Illinois. Yes, we will tell him a good square lie, and it don't strain our conscience a bit, for we believe that a man gets forgiveness for a little thing like that.

Tales of the Plains.

Miss Gussie Harris is an expert in hunting and fishing. The other day in company with her aunt, Mrs. E. C. Michaels, she went on an expedition along Deer Creek, near Vina. One shot, with a shotgun, killed five quails for Miss Gussie, and before she returned she speared four salmon, two over four feet long, one five and a half, and one three. This is a better showing than nine-tenth of the lords of creation can make. The Marysville Appeal tells of two hunters killing 116 geese in eight hours, and says that record gets away with any made by the hunters of Butte. Possibly it did when the item was published, but Harry Biggs and Dick Sliagar went hunting on Butte creek last Sunday. They didn't get there until 9:30 in the morning and started home at three in the afternoon, yet they killed 167 geese, 33 ducks and 17 jack rabbits. How's that for 5 1/2 hours' work for two men?—Gridley Herald.

Suisun has been affording good sport of late. The biggest shoot so far has been made by a Mr. Whitten, who bagged sixty-three birds. The Italian fishermen about Suisun bay have been going at night into ponds on the preserves of some of the shooting clubs and shooting the ducks. Remonstrance seems ineffectual. One of the keepers of one of the preserves recently, hearing shooting at night, went down and fired ten or a dozen shots with a rifle across the ponds. On the next occasion when he went a dozen or so shots were fired at him from a revolver, which he answered with his rifle. The bullets flew around quite lively, but no one was hurt, it being too dark to see persons. Since then, however, the preserves in question have been undisturbed.—Benicia Era.

Ducks and geese have begun to come in, but they are still scarce on this side of the bay. Several Martinez nimrods secured small bags at Bay Point this week. Water fowl will not be plentiful until we have had a good rain.

A market hunter at the head of Suisun bay is said to be getting from 80 to 140 birds a day.

White geese are quite plentiful over in Suisun marsh. The hunters do not care for them much, as they prefer the gray geese.

One of the best English snipe grounds is said to be near Collinsville. One bag of thirty-one was made in an hour and a half one day last week.—Contra Costa Gazette.

Among the captures of L. S. Melvin and Henry Armitage, two Constantine, Mich., hunters, was a pure white raccoon, which they brought home alive. The animal is about the size and same shape as the ordinary raccoon, and the fur and hair are of the same texture, but entirely white. The eyes are pink. It was caught in the township of Constantine, on the farm of Henry Lugin.

C. F. Lumis, an Ohio journalist with a penchant for athletic sports, is on his way on foot from Cincinnati, Ohio, to Los Angeles, California, by the Southern route. He carries a rifle, fishing rod, a gum coat, and about thirty pounds of baggage. He reached Santa Fe Thursday evening, having walked over 2,292 miles since Sept. 12th.

Mr. Charles Stock, of Peoria, Ill., died Oct. 28th last, at his home, of disease of the liver. Besides ranking as one of the finest shots in the country, and a perfect gentleman at all times, he was recognized by sportsmen as one of the best posted men relating to guns and shooting in America. The news of his death will prove a surprise to many.

John B. Taylor, Charles Stnderus, Joseph Stnderus and C. Dellening of Patterson's station, and Peter Shields of Sacramento, left last Saturday morning for Jake Broder's place in the foothills above Folsom, and returned Sunday afternoon. They found quail abundant and bagged over two hundred.

Quail shooting is not as good as it was expected to be in Maryland and Delaware, owing to the dry and warm weather. There are coveys enough, but they keep indoors, i. e., in the swamps, and have hardly begun to use the stubble to feed.

Mr. Heygate, the well-known pigeon shot, has left England for America on a shooting expedition to the Rocky Mountains.

Duck-shooting in the vicinity of Sacramento is improving. Cavanaugh's have made their appearance in considerable numbers.

John Abernethy shot a California lion on Suisun Creek a few days ago that weighed 150 pounds and measured six feet in length.

A Morning's Sport in Redloamshire.

On the 15th of October in this present year of graces, my sporting friend and neighbour, who I will particularize as H., and who is as keen a gunnist as you will meet between Land's End and Jack o' Groat's, came across in a violent hurry about 10 A. M. to inform me that one of his men had seen a "Noble covey of burrds fly out of the taters into the barley stubble." On H. questioning him as to quantity he received for reply: "Indeed, sir, I cenna tell, but there wor sure to be over twenty!"

To take my trusty breacher from the shelf and cram my pockets with No. 6 cartridges did not take longer than the "twinkling of a gete-post"—not that I ever saw one twinkle, but no matter.

Off we started in pursuit of our "noble" quarry. We heat the barley stubble—blank. We tried the meadows below—blank. We searched some rough ground still further in the line—blank again, at which we stared rather blankly at each other, and poor old "Silk," the setter (now, alas, deaf and somewhat stiff), looked blank also, and asked ns, in her doggy way, if we were not hunting wild geese. In fact, I began to suspect Mr. Chawhacon of "dreaming dreams no mortal ever dared to dream before" (Edgar Allen Poe, hem!) and that his "noble covey of burrds" was but a vision of his imaginative brain. However, on we went, tried the next meadow for a hare, and, although, usually a sure find, that morning "Sarab" was conspicuous by her absence. The next field was four acres of swedes, and into that we trudged, hoping yet fearing. Blank also! No, by Jupiter, the bitch has stood. With fluttering hearts we hasten towards her, expecting every instant to see the air dark with the "20 noble burrds," but again we are doomed to disappointment. "Silk" begins to draw rapidly and seven birds only rise wild from the far corner. Mark! down they go in a distant stubble and run into the hedge. Seven birds in a fence to our minds being better than a score in a myth, we start after them, priding ourselves that we are in for a nice hit of hedge popping. Vain delusion, once more our unlucky star is in the escendant. The birds have run through the fence and risen the other side, vanishing we know not whither. While cogitating on the next move, my attention is called to a rising mass of feathers at the extreme end of the stubble.

"Mark, mark, for your life!" I yell, "the noble burrds, hegorra!"

On they go, skimming just above the ground like swallows, 18 at least; slower now, gently down they go kerwollop into the meadow we beet in vain before. H. dispatched me to start one of his men to a distant bank to mark, and knowing they would not stay to be killed in the grass, proceeded to try and get them in the roots, and I was to keep my north eye open and meet him at a given point. Bang! I heard in the meadow, and straightway saw eight birds skim over and drop in the swedes. Shortly after I heard a whistle, and obeying the signal, went for orders. The birds had divided, and one lot was on the barley stubble. I was to follow them while H. kept the other side of the hedge. Round the field I went, but no birds rose, and I was just thinking there was some mistake, when up they got out of the ditch 30 yards away. Bang! says I, over he goes. Bang again, feathers only. Off they go just right for our market, but hid from my view by the rookery, which they topped.

"Let us go and dress the flaus" (Anglice: Knock the feathers) "off those eight birds in the swedes first," says I; and, full of valour, with murderous intentions, we enter the "turmits." Silk's sensitive nose soon wined them; but alas, we plainly saw by her roading it was no go, and sure enough off they went in a straight line after their butties. We both screamed "Mark!" till we were hoarse, and felt sure it was all serene. Arrived alongside our marker, he told us they were down in some rushes in the next field. "How many?"

"Nine, sur." "Where did the eight go when we shouted mark?" "Never 'ard yer oller and never seed no burrds." Politely requesting him to keep his "dual optics" wide open next time, we made for the rushes. "Silk" is on her belly, now, a sure sign of close game. Whirr! hullahalloo! Bang, slap, slap, bang! Result, three birds only bite the dust, the first two shots going crack into the first bird that rose. Of course, the usual playful banter ensued about: "My bird, sir," but we are too old hands to squabble over a dead bird. We failed to mark the remaining six of this lot, so turned into a big field of turnips to look for the others. Presently our marker shouted out that there was a covey feeding in the oat stubble beyond. Knowing those in the roots were safe we started for the stubble to try and drive them in the turnips also. I was told off again to walk them up, and keeping my eye on the marker proceeded according to his signals. Down the field he motioned me, down, etill down, when whizz-z-z they rose 40 yards behind me. Bang! bang! in desperation I sent after seven frightened birds, but seven still continued "the even tenor of their way." H. marked them down in some rushes, and "Silk" stood like a "statue," and four barrels secured three again. I got a right and left; H. used both barrels for one bird. The remainder scattered and we picked up a brace, the other two going off our bent. Back to the turnips again. A single bird goes an awful crasher 50 yards if an inch to my gun. "Silk" now behaves badly, and flushes the other out of range. They fly for the swedes, and, lying well, we get a brace, the smoke somehow hanging preventing the second barrel. We each marked our birds to the very swede as we thought, and went to pick them up. Foot by foot we carefully searched, but in vain. They did not fall like runners! What does Madam "Silk" say? Nothing. The provoking old girl never will look for a dead bird, just because she was educated with a retriever, and no amount of coaxing will persuade her to "seek dead." She preferred rambling off on her own hook, and flushed five more birds, for which she "cotched snuff."

We were just about to give up in despair, when H. stumbled on my bird, and almost at the same instant his rose again, and, getting fairly on the wing, would have wished us good day, only I persuaded her to stop by administering a doze of No. 6. Following up the birds, "Silk" flushed, H. succeeded in bowling over a brace, and I should have done so too, but somehow the dust was in my eyes that time. That finished our morning's sport for the dinner bell warned us it was teedding time. Seven and a half brace of "noble birds" in about two hours was not very bad work for a rough country. Reader—what do you think?—T. S. Kington, in the Shooting Times.

The Rod and Gun Club have received five dozen Eastern quails or bob-whites, from Tennessee. It is the intention to turn them loose in this vicinity, where they will be allowed to propagate, until the country is stocked. The prime object of the importation is to have a suitable bird for field trials. Bob-whites are a little larger and plumper than California quails, but not as handsome.—Gilroy Record.

Montana Game.

In the latest issue of the Forest and Stream to hand, Chas. E. Bandin writes as follows from Fort Custer, Montana:

I supposed I was coming into a paradise of a game country, but what changes a few years bring about. Only as late as '80 the buffalo came within a mile of the post, and bleached skulls are scattered about here everywhere; but to-day you cannot hear of even one buffalo. In Big Horn Mountains, which used to swarm with elk, etc., are now also about barren of them, and deer seem to be remarkably scarce. I have been here now nearly two months, and have to see my first piece of venison yet. We have no game birds excepting the sharp-tailed grouse and sage chickens, with a few ducks passing through. The sharp tails are plenty, and these are the only birds that are so. It is really a surprise to me to see how quick the large game has vanished from the face of this country, and I had no idea how nearly the buffalo was exterminated. If you want a robe now that is worth anything you have to send to St. Paul for it. Our Indian neighbors, the Crows, whose agency is twelve miles south of the post, have none to sell any longer; and I believe this season there will be scarcely any robes shipped from the trading posts north of here. The only game which seems to hold its own is the rattlesnake. These are as plenty as ever. One of the officers while out driving a few days ago ran into quite a colony of them and shot fourteen. He says that he saw at least 100. The next day he went to the same place again and killed fifteen more. There seems to be a perfect den of them in that locality, and I presume they collect there to occupy some of the vacant prairie dog burrows for Winter quarters. I am going to investigate some of these burrows after the cold weather sets in and see what I can find.

Nov. 15th—I do not believe that I shall have to change my opinion about the game very much. Sharp-tailed grouse are very plenty, sagefowl moderately so in the immediate vicinity of the post. Of ducks there are none at present. Earlier in the season a good many pass through, but none stay very long, on account of scarcity of feed. In the Big Horn Mountains, sixty miles south of here, one can find a few elk yet, and some deer, mountain sheep and bear; the latter, I understand, are not at all uncommon. The buffalo are gone. The southern slope of the mountains has not been hunted as much as the northern, and game is more plentiful there than on this side, which is constantly hunted by the Crow Indians, who have driven the game away since the agency has been moved over to the Little Horn River. The streams contain some catfish, sturgeon and other inferior kinds of food fishes, and in the mountains good trout fishing can be had, none, however, nearer than fifty miles that amounts to anything. One thing is certain—the days for plenty of large game in this region are over, and it is astonishing how rapidly it has almost been exterminated. But if the large game is gone, you can have plenty of sport in killing rattlesnakes, which seem to be more abundant here than anywhere I have yet been in the West. I believe I told you what Dr. Price saw one day in this line, and that he killed fourteen one day (Oct. 14th), and fifteen the next. Another party I learn has killed 123 in the same vicinity, having to pass in the neighborhood daily. The latter number have all been killed since Oct. 15th. One was killed as late as Nov. 8th. What she was doing out as late as that puzzles me. If I do not find it too much work I am going to investigate one of their dens this Winter and see what it looks like. There is no question in my mind that this particular place is the gathering point of nearly all the rattlesnakes in the neighborhood to hibernate. Strange to say a species of ballsnake seems to live in the same holes with the rattlesnake, at least it would appear so, finding four right among them. I have two of these now in alcohol.

THE RIFLE.

Lieutenant Kuhnle Wins the Championship Medal.

At Petaluma, Snnday, the last of a series of three rifle matches between Lieutenant Fred. Kuhnle and Sergeant Hovey, for the championship medal, came off. The match was shot over the Petaluma range, the terms being 100 shots each at 200 yards, and resulted in a victory for Kuhnle, who defeated his opponent by 17 points. Kuhnle will now hold the medal, having won it twice before, and it is now his private property. In addition to this, the victory of Sunday gives to him the championship of the State, and he will figure as such until some other marksman wrests the laurels from him. The score of Sunday's match is as follows:

Table with columns for names (Kuhnle, Hovey) and scores for 200 yds and 500 yds. Kuhnle's total is 462, Hovey's is 445.

In practice on the same range the following scores were made, ten shots each at 200 and 500 yards:

Table with columns for names (Private Haux, Lieut. Kellogg, Col. Hamlett, Private Zartman, Capt. Fairbanks) and scores for 200 yds, 500 yds, and Total.

At Shell Mound, last Sunday, some remarkable shooting was made by R. C. Moore, of Company A of the Fifth, at 200 and 500 yards. His score was as follows:

Table with columns for 200 yards and 500 yards scores for R. C. Moore.

Total. Moore also shot three 10-shot strings at 200 yards, making Charles Carr made the following score:

Table with columns for 200 yards scores for Charles Carr.

The following marksmen proved prize winners at the Thanksgiving Day shoot at Lodi: Will Smith, T. Corwell, Harvey Smith, John Brown, J. Taylor, J. E. Levius, Geo. Woods, Wm. Taylor, Overhiser, and Knox Thorp.

Swiss Rifle Club.

The monthly meeting of this club was held last Snnday, at Harbor View range, and was well attended. The following members took prizes for best centre shots: 1st, J. C. Huguenin; 2d, Rndolph Hopf; 3d, Theo. Wetsel; 4th, J. Leemann; 5th, S. Nuschwander; 6th, Marianni; 7th, P. Croce; 8th, Stuber. Most bull's-eyes: P. Croce, 11, J. Leemann, 8, Theo. Wetsel, 7, K. Hopf, 6. Mr. Kohrbach, an old member of the club, in starting with a trial shot made a most excellent centre, and would have carried off the honors of the day, had he taken out his tickets for the customary shots a few minutes sooner. The bad scores made in the afternoon pool shooting, are to be attributed only to the had light thrown on the target by some bushes and foliage, which at one moment would partly cover the hull's-eyes and balance of the target, and again leave it bright and shining. We hope that the management of the range will remove such obstacles before next meeting. Pool shooting gave the following results: P. Croce, 90, Rudolph Hopf, 84, Theo. Wetsel, 85, Walker, 78; total, 337. J. Leemann, 88, Stuber, 76, Huguenin, 76, Bachmann, 78; total, 313. The former shooting master, P. Croce, made even bull's-eyes, in succession out of his eleven, which is remarkably good shooting.

ATHLETICS.

Dishonest Sprinters.

During a recent discussion on the dishonesty of sprinters, a Boston gentleman gave the following as his experience with them. No doubt there are many backers who can relate an almost similar tale. "Yes, I followed them for over two years, at the end of which I didn't have a coat to my back, and my family were in want. I will tell you how this came about. In 1879 I made the acquaintance of a sprinter, and, after seeing him exercise, I became interested in sprinting. Well, the first race I went to see was four years ago, when my man ran Tom Aiken 400 yards at Myetic Park, Medford. I was green in the betting business, but still there seemed to be something queer about the race. After several inquiries I learned that a sport had given my man \$150 the week previous to stay behind. I asked my man what I should do. He said: 'Back me to win, as I intend to double-cross them and hold on to that \$150.' I heeded him and won \$60. After the race he told me that it was customary to give a winner half of the outside bets. I gave him half. I had made \$30 so easy that I was encouraged, and I determined to look for more. My man was next matched to run a man in Lynn. This I was given as a dead sure thing. I went there early in the day and waited around for all enap bets, when who should I see but my man riding into the park with the man he said was to be the sucker. This set me thinking, and I refused to bet any money and the race never came off. I think that I was to be the sucker. My man then agreed to reform and run honest races. Well, he put me in the hole for over \$200 on the next race. Of course he said he tried to win. A year or so later on my man went to Canada, and before he was there a great while I heard that he was matched to run a man near Brantford, Ont., and that he lost. I saw the man who ran him some time afterward and he told me it was a job, and that my man used to lay awake night after night telling him how he would down one sucker alone in that race for \$1,500. After the race they divided \$15. Suckers seemed to be scarce just then in Canada. My man returned home again and soon after ran a race near Weymouth, Mass., which took the cake. My man gave "Mrty" Downing both ends well split. All of us got the dump. I found my sprinter to be an expensive instrument, so I gave him the shake. Last year he called around and said he would like to pull me out even, and that a Canada sprinter was to allow him to win a 100 yard race at Lowell, Mass. I was soft enough to believe him. It was the same old story; the race cost me some fifty odd dollars. I had got desperate now, and followed my man to New York where he had Broadbent, the English sprinter, in training to run Kane of New Britain, Conn., 125 yards. My man said: 'Go and put up every dollar you've got on him; he's a flyer.' I did, and had to write home for my fare. This last straw broke the camel's back, and I quit. I have been working ever since, and find that I am out of debt. I know better than to ever touch another sprint race. To-day I came out to see who was to be the sucker. When I got in the hotel to warm myself, I heard a mau say: 'Well, we worked the suckers for our Summer's board; now we must down them for our Winter's keep, or else carry the hod, eh?' The other man said: 'Cheese it; don't crack it so loud; they will get on to us and make a big kick. I had the young fellow play in my \$75 on Garrity, so I am solid.' When I heard this I put all my friends on their guard. Now they have dumped the mau who has supported them all Summer. Tell me; do you think that the average sprint runner has any principle? Not much. I am done with them, and don't you forget it."—Pittsburg Sportsman.

The English professional champion walker, J. W. Raby, is shortly coming to this country in the hope of getting on a match with Meagher.—H. H. Baxter, the champion pole-vaulter of America, sailed on the Alaska, last Tuesday week, accompanied by his mother and sister, for a five months' visit to England and France.—Almost 10,000 people attended the fifth annual games of the Seventh Regiment Athletic Association of New York.—A wrestler of Newcastle, N. S. W., Australia, named Keating challenged Donald Dinnie or any man in his combination, to a wrestling match, collar and elbow and Cornish style, with a toss up for the third style. The challenge was not accepted.—SPRINGFIELD, Mass., Nov. 21st.—J. H. Robinson defeated Edward Mitchell on Hampden Park this afternoon by two feet in a hundred-yard race. Time, 9 3/4. The race was for \$250 a side. Robinson is believed to be Hutchens, the sprinter, who was said to have left a week ago for England. Mitchell is believed to be Rogers or Carleton.—On Oct. 25th J. Keenan, of New South Wales defeated B. Farrel, of Melbourne, for the hand-ball championship of Australia.

William Miller writes as follows in the Melbourne Sportsman: "For the information of your readers the best wrestlers in America are: Greco-Roman style, Wm. Muldoon and Clarence Whistler; collar and elbow style, Colonel J. H. McLaughlin, John McMahon and H. M. Dufur; catch-a-catch style, Joe Acton, Tom Cannon and Edwin Bibby."

It appears as if all the wrestlers of America are heading for this city. At the present time we have in our midst Clarence Whistler, Tom Cannon, Duncan C. Ross, Holcomb, Greek George, Shoemaker, Marc Christol and a host more of the lesser lights of the arena.

Central Park.

The Central Park grounds on the corner of Eight and Market were formally opened on Thanksgiving Day. A large crowd assembled to witness the games provided by the management. As all the prominent athletes were taking part in the Olympic games on the same day, the events at these grounds were left to the second and third class performers, consequently all the records made were of the most ordinary description. In the evening a miscellaneous programme, consisting of club swinging, wrestling, etc., was given. Last Sunday another large audience gathered at the grounds principally to see the halloon ascension. A very interesting game of baseball was also played between mixed teams. The 100 yard footrace between Ryan and Johnson for \$500 a side proved a terrible fiasco. Both men got away together, but before a quarter of the distance had been covered, it was evident that Johnson was a very tame runner, and judging by his Sunday performance it looks extremely problematical whether he can beat 11-2-5 sec. Of course the usual announcement that the race was for \$500 must be taken *cum grano salis*. Do any of the readers of the BREEDER AND SPORTSMAN think that a man of Johnson's calibre would race Ryan for money. We guess not. The bicycle race did not take place.

The manager of the female walking match at Allegheny, skipped out with all the money. Besides the principals in the match, 8 or 10 men who were trainers, walkers and employees generally are left without any money. It is to be hoped that this last escapade will help to diminish such demoralizing spectacles as female walking matches.—Smith challenges any man living, bar Hutchens, for a 200-yard run. A forfeit is up in support of the challenge.—A novel weight throwing contest took place at Toronto, Ont. Nov. 1st. T. Johnson won by throwing a 56-lb weight over a car 11 feet high; McNamara was second putting the same weight over the car 10 feet 6 inches high. Johnson is reported to have run 50 yards in 5 1/2 s., at the behest of the veteran trainer, Jack Goulding, at the Polo grounds, New York.—The great Hanlon family of gymnasts attribute the brilliancy of their career as gymnasts to the fact that they never allowed themselves to get out of condition. The Hanlons have made it a rule to abstain wholly from stimulants at all times and under all circumstances, and to take a certain unvarying amount of exercise every day, whether performing or not.

The North Side Athletic Club held their annual games at Williamahurg, L. I. Attendance large. The events worthy of record were:

Exhibition One Standing Long Jump, with Weights—L. Hellwig, 12 ft. 3 in., 12 ft. 5 in., 12 ft. 3 in., 12 ft. 9 1/2 in. He used 16 lbs. dumb bells. The jump, 12 ft. 9 1/2 in., is now the longest amateur jump in the world, supplanting the 12 ft. 6 1/2 in. made by W. S. Lawton of this city on May 13th, 1876.

12 Mile Handicap Run—P. D. Skillman, M. A. C., scratch, 1h. 12m. 13 s.; J. Gassman, N. S. A. C., scratch, 1h. 13m. 45 s.; 2d; Skillman's time for 10 miles, 1h. 2m. 43 s.; 11 miles, 1h. 5m. 55 s.; 11 1/2 miles, 1h. 9m. 10 s.; and 12 miles, 1h. 12m. 13 s., are now the fastest American amateur records. Skillman's times, however, are far behind English records.

The English professional team won their opening match in Australia against fifteen of South Australia, by 3 wickets. The Southern Australians scored 217 and 144. The Englishmen realized 239 in their first attempt, and made the necessary number of runs in the second, after losing 7 wickets. Ulyett was the most successful batsman, scoring the century in his first innings.

Tom Cannon and Dnnean C. Ross wrestle a match, best three out of five, at the California Theatre on Monday evening.

The medals won at the late Olympic meeting were handed over to the winners on Thursday evening. The medals, which we understand were designed by J. Hammersmith, are very elaborate, and reflect great credit on the manufacturers, John Levy & Co.

The opening game of football will probably take place next Saturday afternoon.

BICYCLING.

Experiments are being made at the "Howe" factory on a new hearing for bicycles, the invention of a Dundee gentleman.—M. Rousseau, of Marseilles, claims to have constructed a bicycle like the Kangaroo long before it was made in England.—H. W. Gaskel was tendered a public banquet by the Ranelagh Harriers, of London, in honor of his American victories on the evening of Nov. 9th.—The late bicycle tournament at Kansas was a great success.—A Hartford jewelry firm has just finished a beautiful trophy of gold, valued at \$50, to be presented to Mr. Sellers, the English bicyclist, who beat the bicycle record of the world, at Charles Oak Park, at the September tournament.—An electric headlight for bicycles will shortly be placed on the market.

The following gentlemen will act as officers for the tournament of the Bay City Wheelmen: Referee, Geo. H. Strong; starter, W. C. Brown; judges, C. B. Hill, H. C. Finkler and T. Jennings; timers, Hiram B. Cook, P. McIntyre and H. J. Lucas; clerk of the course, Geo. F. Day. The committee on handicaps consists of S. F. Booth, E. Mohrig and T. Hill.

A mistake, which we greatly regret, crept in our account of the Olympic games. By some inexplicable humor the time in the mile bicycle race was given as 4m. 4-5s. instead of 3m. 4-4-5s. Our statement in the issue of the 22d, that with conditions favorable Cook was capable of making the mile in 3m. 5s., was not very wide of the mark.

We are in receipt of an invitation to attend the "Housewarming" of the Citizen's Bicycle Club of New York. The programme consists of a varied musical entertainment by the Club members, humorous selections by Mr. Robert J. Burdette, and a brief lecture by Mr. Thomas Stevens, who recently rode from San Francisco to Boston on a bicycle.

At the annual election of the Portland Bicycle Club the following officers were appointed for the ensuing year: H. W. Nickerson, President; Dr. C. C. Newcastle, Secretary-Treasurer; F. T. Merrill, Captain; E. J. Partridge, Vice Captain; C. N. Scott, Bugler.

Cook, who lowered the record in the mile bicycle race at the Olympic games rode a Royal Premier, the weight of which was 32 lbs. Johnson, the winner of the 5 mile race was mounted on a British Mail, which only weighed 30 lbs.

We are told that it is very likely that a track will be put in at the park, as the park commissioners have signified their willingness, and it now remains only for the athletes to push the thing forward. This would undoubtedly be a great improvement to the park, and an extra attraction for those visiting it. As it now is the bicycles are being pushed out of everything by the teams, and it would be a good thing if they had a good track and an open space within, where teams could not go, in fact, what they could call exclusively their own. We look forward to this very anxiously.

The five-mile bicycle race to be held by the B. C. W. Tournament bids fair to break the record, as some of the best riders on the Coast have already entered for it. It's a good thing it is a scratch race, as the best man will win it; whereas, if it was a handicap, the scratch man (who is always considered the best) may all but beat the man ahead and well deserve the prize, when he gets "left."

Mr. Mohrig, the leader of the Bay City Wheelmen's Drill Corps, is now confident that they can successfully compete with any Eastern Company. The Drill Corps consists of: Mr. Mohrig, Geo. Day, W. Day, F. R. Cook, S. F. Booth, W. Munro, W. Meeker and E. Rideout.

Quite a large number of our bicycle men are training for the Bay City Tournament, and by the list of entries already made, the contest will probably be very close and exciting.

The B. C. W. have added another event in the shape of a one half mile, and if the 1:29 1/2 record is not broken, we will acknowledge the Eastern "Yaorks" as our better.

The Bay City Wheelmen had a most enjoyable moonlight run Tuesday evening to the Cliff House, quite a number of outside cyclists accompanying them.

To-morrow a tandem bicycle will be wheeled through the streets of San Francisco for the first time.

The roads in Portland are very fair and possess the great advantage of being near the city.

There are about sixty "wheels" in Oregon, and new ones are arriving every week.

Ten members of the B. C. W. were out for a moonlight ride on Wednesday evening.

Some excellent time has been made in trials at the Mechanics' pavilion.

A son of Alexander Badlam is the latest convert to the bicycle.

C. Morrison rides the only "Star" bicycle in the city.

FISH.

The Fish Commission.

A special meeting of the Board was held at Sacramento on Monday. The proceedings are thus summarized by the Bee:

This morning a special meeting of the Fish Commissioners was held at the Union Hotel, Commissioners Buckingham and Dibble being present. Secretary and Treasurer Dibble stated that his financial report is ready and will be forwarded from his home soon to go to print.

A letter was received from Shaw & Son, at Cedar Rapids, Iowa, offering to sell salmon trout eggs for 65 cents per thousand if 100,000 should be ordered. The Commissioners to-day accepted the terms and sent an order for 200,000. They will be placed in the Shehly hatchery, and the young fish will in time be planted in the lakes and reservoirs in the various parts of the State. The eggs come packed in moss.

President Buckingham reported that at his recent visit to the Shehly hatchery he found about 75,000 young trout ready for distribution, and they are to be sent to Santa Cruz and other places soon.

The State Fish Commissioners are making an effort to secure black bass eggs or young fry for California waters. Livingston Stone, of the United States Fish Commission, says the eggs are not to be had in the Eastern markets, but he can procure young fish. The black bass is a very game fish and is said to afford finer sport than trout. Years ago the Fish Commission here planted some in private preserves and reservoirs about San Mateo, with the understanding that they could be drawn upon to supply other places. There are black bass there now, but no one is even allowed to fish there without a permit from George Hearst or other owners, and boats to go out where the fish stay are not allowed even by those who have permits to go to the ponds. A sixty-pound black bass is reported to have been caught at Humboldt Bay. President Buckingham says it was neither a striped bass, which are frequently caught, nor black bass, but a variety now found in Monterey Bay, and which were once so numerous as to glut the San Francisco market. But few black bass are caught in California, yet the fish do well in the rivers and lakes. Nearly all varieties of Eastern fish have done well here, and as many more varieties as can be obtained are to be purchased from time to time.

In the Shehly hatchery are various kinds of trout hatched in different ponds and boxes. There are but few pure Eastern trout to be found in the mountains, though many have been planted, and the reason seems to be, not in the death of the fish, but that they lose their identity by mixing and breeding with native fish.

To-day the Board determined to at once inspect the headwaters of the Sacramento to find a place suitable for hatching salmon. The State has never had a salmon hatchery, and has depended upon that of the United States on the Cloud river. This has recently been abandoned, practically, proper appropriation for it having not been made, because the salmon have not thrived in the East when sent there. A Deputy is still there, however, to look after the trout hatchery three miles above, for the trout sent East have done well. The Government is willing to allow the California Commission to take the salmon hatchery, but the Commissioners do not want it. They say that the water-wheel is out of repair, and the dam broken, and that \$6,000 or \$3,000 would have to be expended in fixing things up properly. They propose to establish a new hatchery, if the State will make an appropriation, and try to again fill the river with salmon, which seem to have almost deserted the Sacramento.

The Board adjourned without date, but will meet about the middle of December, when Commissioner Redding will return from the East. Then some statutes will be drawn up and submitted to the Legislature.

Robert Bonner superintended the shosing of Dictator while in Kentucky, with the view of balancing his feet.

The racing public in England have their trials and tribulations as well as those of America. Mr. R. L'Ausou, one of the family made famous by Blink Bonny and Blair Athol, is lately filling the position of starter at certain meetings on the other side. In one race recently there was a delay of three-quarters of an hour, "owing to the general fractiousness of the entire field." After the race Charles Wood, who occupies a position in England similar to that occupied by Garrison on this side the water, was reported to the stewards, and promptly suspended. On the same day, in the Alexandria Handicap, five furlongs, (and by the way, out of seven races on the programme of the day, there were five five-furlong dashes, and the remaining two were at a mile), thirteen of the fourteen starters ran the entire distance on a false start. This illustrates the difficulties of the starter's position, even in England, where they ought "to know it all."

Catarrh Cured.

A clergyman, after suffering a number of years from that loathsome disease, Catarrh, after trying every known remedy without success, at last found a prescription which completely cured and saved him from death. Any sufferer from this dreadful disease sending a self addressed stamped envelope to Dr. J. A. Lawrence, 199 Dean St., Brooklyn, New York, will receive the recipe free of charge.

THE STANFORD STAKES 1886

A SWEEPSTAKES FOR TROTTING COLTS AND FILLIES OF 1885, \$15 each, \$25 payable on the 1st of January, 1885, at which time the stakes will close, \$50 on the 1st of January, 1886, and \$100 thirty days before the day fixed for trotting, whatever amount up to be considered forfeit, and the neglect to pay at the stipulated time incurring forfeiture of the previous payments. The race to be heats of a mile, best three in five, to harness. First to receive six-ninths of the whole sum, the second two-ninths, the third one-ninth. In addition to the stakes and forfeits, the proportion of the gate money, profit on pool sales and all other sources of emolument will constitute the gross amount to be divided in the foregoing proportions. Five or more subscribers to fill. The race to be trotted in 1885, not sooner than the latter part of August. The exact date to be fixed and announced on the 1st of January, 1885, or sooner.

Race to be governed by the Rules of the National Trotting Association. Nominations to be made to N. T. SMITH, Treasurer, N. P. Railroad office, Fourth and Townsend streets or JOS. CAIRN SIMPSON, Secretary, BREEDER AND SPORTSMAN office, on or before the 1st day of January 1885. The colts must be named, the name and pedigree, so far as known, given. Under the new trotting rules letters legibly postmarked January 1st will be eligible.

N. T. SMITH, Treasurer.  
JOS. CAIRN SIMPSON, Secretary.

STANFORD STAKES FOR 1887.

A SWEEPSTAKES FOR TROTTING COLTS AND FILLIES of 1884, \$175 each, \$25 payable on the 1st of January, 1885, at which time the stake will close, \$50 on the 1st of January 1886, \$25 on the 1st of January 1887, and \$100 thirty days before the day fixed for trotting, whatever amount up to be considered forfeit, and the neglect to pay at the stipulated time incurring forfeiture of the previous payments. The race to be heats of a mile, best three in five, to harness. First to receive six-ninths of the whole sum, second two-ninths, third one-ninth. In addition to the stakes and forfeits, the proportion of the gate money, profit on pool sales and all other sources of emolument will constitute the gross amount to be divided in the foregoing proportion. Five or more subscribers to fill. The race to be trotted in 1887, not sooner than the latter part of August. The exact date to be fixed and announced on the 1st day of January, 1887, or sooner.

Race to be governed by the Rules of the National Trotting Association. Nominations to be made to N. T. SMITH, Treasurer, N. P. Railroad office, Fourth and Townsend streets, or JOS. CAIRN SIMPSON, Secretary, BREEDER AND SPORTSMAN office, on or before the first day of January, 1887. The colts must be named, the name and pedigree, so far as known, given.

Under the new trotting rules letters legibly postmarked January 1st will be eligible.

N. T. SMITH, Treasurer.  
JOS. CAIRN SIMPSON, Secretary.

The Thoroughbred Stallion

JOE HOOKER, BY MONDAY.

- First dam Mayflower, by Imp. Eclipse.
- Second dam Henrie Farrow, by Imp. Shamrock.
- Third dam Ida, by Imp. Belsazzar.
- Fourth dam Gammus's dam, by Sir Richard.
- Fifth dam, by Imp. Eagle.
- Sixth dam Bet Bosley, by Wilkes' Wonder.
- Seventh dam, by Chanticleer.
- Eighth dam, by Imp. Stirling.
- Ninth dam, by Clodius.
- Tenth dam, by Imp. Silver Eye.
- Eleventh dam, by Imp. Jolly Rogers.
- Twelfth dam, by Partner.
- Thirteenth dam, by Imp. Monkey.
- Fourteenth dam, Imp. mare from the stud of Harrison of Brandon.

Terms, \$50 the season to a few Mares of approved breeding. Good pasturage for mares from a distance at \$1 per month. Care will be taken to avoid accidents and escapes, but the owner must take the risks.

My place, where Joe Hooker will make the coming season, is five miles from Sacramento, on the Freeport road. This young stallion has proved to be one of the most successful race line sires, and every one of his colts that has been trained can prove it. Among them are Fred Collier and Jim Renwick. For history of Joe Hooker, see BREEDER AND SPORTSMAN, January 20th, 1883. THEO. WINTERS, Sacramento.

Secured by Letters Patent ISSUED MAY 27, 1879. REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J in combination with the elastic connecting-strip I, substantially as described and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose arcingles is avoided, substantially as herein described.

Manufactured and for sale by

**L. D. STONE & CO.,**

122 and 424 Battery St., SAN FRANCISCO, CAL.

**Hannaford Ventilated Rubber Boot.**

THE IMPROVEMENT CONSISTS OF AN ELASTIC MIDDLE SOLE WITH A series of compressible air cells, whereby foul air is expelled and fresh air is admitted to the feet. Their use for months in the Boston Fire Department, Brighton Slaughter Houses and large manufacturing establishments has fully demonstrated that the

**Hannaford Ventilated Boots**

WILL NOT SWEAT OR CHILL THE FEET. WILL NOT MAKE THE FEET TENDER. WILL KEEP THE FEET DRY.

These Improvements add but little to the cost of the boots, while their comfort and durability are greatly increased. Persons who have been unable to wear rubber boots can wear these with comfort.

**NO METALLIC SUBSTANCE**

which will rust, corrode, or act as a conductor of cold is used in these boots.

PRICE FOR HIP BOOTS, \$6.50.

**E. T. ALLEN, Sole Agent.**

416 Market Street,

San Francisco.

**ASHLAND PARK TROTTERING STUD**

NEAR LEXINGTON, KY.

**B. J. TREACY, PROPRIETOR.**

THIS IS STRICTLY A BREEDING FARM, FOR though training is done, it is only for the stock belonging to the place, or those purchased from the proprietor. The proprietor of Ashland Park has no pet trotting family. His aim is to secure and have at all times for sale choice representatives of each of the leading families, these being the Hambletonians, Mambrino Chiefs, Clays, Pilots, Black Hawks. At Ashland Park may now be seen splendid specimens of the get of such stallions as George Wilkes, Almont, Mambrino Patchen, Clark Chief, Edwin Forrest, Blackwood, Sentinel, American Clay, Administrator, North Star Mambrino, Bourbon Chief, Regular, Bull-sora, Howard's Mambrino and Homer. The steady aim is to possess nothing that does not trace through the best class of speed-producing trotting crosses, along all the blood lines, right to the thoroughbred. For catalogues or further particulars address 2 1/2 771 **B. J. TREACY**, Lexington, Ky.

FIVE DOLLARS A YEAR.

## Sketches of Los Angeles.—No. 1.

It has long been our conviction that California, by uniting the two great oceans under the same government, and thus extending and at the same time consolidating the commercial, social and political influences of the country, has done more for America, during the last twenty-five years than all the other States in America put together. When once this idea is properly regarded, and kept uppermost in the mind, as a person travels over this State and comes in contact with its vast resources and endless products, it will grow stronger and stronger until, as in our case, it becomes a conviction of life. Of course the character of the districts visited, the variety, excellence and quality of their products, will have much to do with confirming it after it has been matured. For years we have personally been in the habit of travelling over the Pacific Coast from the far South to the headwaters of the Columbia and Frazer rivers, where standing between the two a man can almost throw a stone into each of these mighty streams, and thus having seen our State in all its phases of merit and demerit we thought we had a very extensive and correct knowledge of both. There was one section that some how we had never visited until lately, and we now freely confess that not having seen the extreme southern region of the State, that grand stretch of country lying between Los Angeles and San Diego, North and South, and the ocean and the Sierra Madre mountains, East and West, we knew comparatively nothing of California, the beauties of her climate, the richness of her valleys, the extent of her general capacities, or her unlimited power and glory in future, highly as we had estimated all of them previously. Books, it is true, have been written, maps have been published far the information of our people at home and abroad on the districts referred to, but for all these, voluminous as they are, we think there are many people, as we were until lately, deplorably ignorant of their extended richness, and charming climate. We propose, therefore, to give some sketches of our glories south, to tell our readers what we saw and learned, because it is right they should know the truth, and because a newspaperman if at all observant or intelligent, can reach the inner life of that truth sooner and more correctly than either book makers or map makers, and oftentimes do more good than both together.

Our readers will recollect the object of our visit to Los Angeles was to attend the Convention of the State Sportsmen's Association which we held in that city in the early part of last October. Through the means of this connection we were fortunate, so far as getting correct statistics go, in being brought into communion with the best people of all classes, and we again say no people could be more hospitable, kind, and attentive, than the citizens of Los Angeles city and county were to us during our prolonged visit. We were thus enabled to collect a vast amount of varied and valuable information which we have yet to classify and put in proper form, and which we cannot, in this article, deal with properly. We have, however, to make a beginning, and so this week, we shall deal with the wants of the travelling public and confine ourselves to the steamboat and hotel accommodations. We do this first because the traveling community are always on the move, and in their journeyings, need most to be told where they can be best treated and accommodated. There is another reason why we make these topics the subject of our first article, viz., the liberality of the Steamship Company, and the hotel proprietors to the members of the Convention, a liberality that deserves a grateful acknowledgement, and which is most readily given.

On leaving San Francisco, as time was an object with the business men of the Association attending the Convention so far away, application was made to the railroad people for a reduction of fare of accredited members to the Convention, but the application was promptly refused. The members then applied to Messrs Goodall, Perkins & Co., of the steamboat line, as all unanimously determined not to go by rail, and by this company, the members were met in a most courteous and cordial spirit, who at once acknowledged the justice of the claim and made a very liberal reduction in the fare of each member, in our own case, as representative of the BREEDER AND SPORTSMAN being still more liberal. Of course the *Santa Rosa* was chosen, and of this grand steamboat we wish to say a few words. On leaving and during the trip we had ample opportunity of observing her merits for it blew a half hurricane to which some of the people succumbed on getting outside the heads. It is scarcely possible to say too much in praise of the *Santa Rosa* as a sea-boat, and her strength and steadiness in the water are marvellous. Her appointments, table, and general accommodations are fully equal to her other qualities, her staterooms being marvels of elegance and comfort, and the attendance and civility of the officers unexceptionable. The main, cabin and dining room,

each magnificently furnished, are grand samples of naval architecture. The whole ship is lighted with electricity from the engine room to the staterooms so that a moment, at the proper time, the whole interior is a blaze of brilliant or softened light as the locality requires. To complete the electric-light department cost \$10,000. The speed of the *Santa Rosa* is almost phenomenal, having once, when turned loose for the purpose, made the whole trip in twenty-two hours, a feat that beats the railroad. Of course she does not make that time on the average trip, but, including stoppages at Hartford and Santa Barbara, she always averages from twelve to fourteen knots an hour. When time is not a particular object, though there are only few hours difference with the rail, we advise all parties going South to take the *Santa Rosa*. The total cost of the vessel was \$600,000.

On landing at San Pedro, the port of Los Angeles, the members of the Convention were met by a delegation of the local gun club, and escorted to the St. Elmo hotel, where the enterprising and gentlemanly proprietors, Messrs. Dunham and Schieffelin, also made a reduction of rates in favor of our people. At this point I reach the next thing of importance to travellers—the hotel accommodations. In this respect Los Angeles is not behind her easter cities of the State, the St. Elmo and the Pico House, both under the joint control and management of the gentlemen mentioned above, in management, living and general comfort being equal to any interior hotels we know in California. The table, at both houses, in variety and character is faultless. The interior economy of the houses is of the highest order for quiet and comfort, and when one retires it means rest and sleep, a virtue by no means peculiar to our California hotels. The steward of the St. Elmo is a general in his way, who cannot be beaten. The clerks understand their business, and are at all times polite and reliable. Nor must we overlook the St. Elmo bar. The presiding genius, Uncle Billy, as he is familiarly called, is a genius in his way. The Pico House was built by the old Governor of that name, Pio Pico, whom Fremont knocked out in one round, and who is now a bright, hustling old man of ninety-three, with a physical activity that is marvellous. The home comforts of this house are equal to the St. Elmo, and the two together are an honor to the city the residents may well be proud of. The furniture of both houses cost over \$60,000.

The average rates are from \$2 to \$3 a day. On leaving for home the last civility we enjoyed was an invitation from Mr. Duhamel to lunch with him at the Pico, and we had a right cosy time. In the hotel line, Los Angeles, however, certainly wants a house between those mentioned, and the two-bit house, for people who wish and can only afford to live moderately. Such a house would receive a large patronage. We are not aware of one existing.

On returning we again took the steamer, this time selecting the *Eureka*, a fast, steady sailing boat, for the purpose of seeing the wharves and their products, all these giving a correct idea of the progress and development of the State. When not sick, for we are a wretched sailor, we enjoyed the trip very much. It is scarcely possible to realize the vast improvements during the last fifteen years. On leaving San Pablo we touched at ten ports, staying more or less at each place to take in freight of almost every kind and quantity. The ports were Hueneme, San Buenaventura, Santa Barbara, Gaviota, Port Harford, Cayucos, San Simon, Monterey, and Santa Cruz. Most of these ports represent prosperous agricultural locations back from the Coast, the produce of which comes to our market by steamboat. We found Captain Hanna, and the purser, Mr. Ames, very attentive and obliging.

At this season and the Spring Los Angeles is most sought by invalids. At all times it is well worth visiting, and will teach many things unthought of. In selecting the way of going, if you do go reader, take our advice, go by water, have a good sea-sick spell and add ten years of vigor and enjoyment to your life.

Daughters of Mambrino Patchen have already produced not less than twelve 2:30 performers, which is a better showing in this direction than has ever been made by any other stallion at his time of life. Seven of the twelve are by George Wilkes, two of which have records better than 2:30, viz., Roa Wilkes (2:18½) and Guy Wilkes (2:19½).

Speaking of the race in which Jewett got his record of 2:14½ a short time since, Knapp McCarthy, his driver, states that he could have easily driven him out in 2:12 or better, and predicts that he will make it hot for the best of them in the free-for-all next season.

It is proposed to increase the capital stock of the Coney Island Jockey Club from \$350,000 to \$525,000.

## A Talk with Archer.

[New York Herald.]

"I have come here," said Archer, "to pass about three months. I wanted to get away from the long nights at Newmarket, and for a while I was undecided whether to visit India or America; but now I am in New York I am glad this country was decided upon. My trip is a sight seeing one, I am in search of distraction. With a few days rest we shall go up the Hudson to Albany, thence to Niagara, thence to Chicago, thence to Salt Lake City, and San Francisco. Upon our return I shall visit, if opportunity is afforded, the breeding establishments of the North, West, and South."

"Will you ride any races during your stay?"

"Please say that I would not ride a race during this trip for £5,000."

"Will you again ride upon your return to England?"

"That I cannot say now, but if all goes well I hope to appear in the saddle next year in England."

"Of the twenty-three hundred or more winners you have ridden, can you recall any particularly sensational victory?"

"My winning the Derby on the Duke of Westminster's Bend Or, in 1880, you may properly term sensational. A fortnight before the race Miley Edris 'savaged my right arm—that is, bit it to the bone, cutting into the muscle, and thoroughly disabling it. A case was made for the arm, and a spring of peculiar contrivance arranged to support the hand. In that way I rode Bend Or, and it was nip and tuck throughout the fight. It was only the last few strides—the last try—that I rushed Bend Or to the front and won, beating Robert the Devil by a head. It was right out of the fire, I can tell you, sir."

"As you were the first to revive interest in American horse abroad, please to give me your impressions of those seen by you in England."

"As a rule the American horses sent to England have been first-class. I found Iroquois a magnificent animal—kind, willing and gentle—and I was the happiest man you ever saw when I won the Derby with him. Foxhall was another good one, and his Cambridgeshire victory, with his 126 lbs. net, was a tall performance. Iroquois winning the Derby was a popular victory, and so I believe were all the victories of the American horses. Parole was a good handicap animal, but not really a tip-top. I rode him a winner and was glad of it."

"About the English turf?"

"The horses this year are an average lot. There was nothing very wonderful about the three-year-olds, but St. Simon, I imagine, is about the best, and St. Gatien's a good one greatly improved of late. All in all, the horses of the year in England are a fair average lot, and some of the two-year-olds are very promising."

A stranger to Archer is very favorably impressed with his quiet manners and the modesty which underlies any reference to his many achievements on the turf.

## The New Orleans Fair.

Mr. Dexter Curtis, superintendent of the department of horses at the New Orleans Exposition, says that about 400 horses will be stabled at the exposition. He did not think there would be much of an exhibit of racing or trotting stock, but that the draft horses, both Norman and Clydesdale, would be exhibited in large numbers. He could furnish a partial list of those owners who had engaged stalls. This list included Dunham, who has engaged stalls for forty horses; Virgin, for twelve, Porry, for sixteen and Holloway, for forty. All these horses will be of the imported draft stock. Galbraith, of Janesville, Wis., will send twelve horses; Beith, of Ottawa, Canada, twelve; Huntington, of Syracuse, N. Y., thirteen; Adams, of Lexington, Ky., twelve, and Hughes, of Lexington, two car-loads. The horses of these last three will probably be matched teams of driving horses. Commodore Kittington, of St. Paul, may send down his stable, including Johnston, the champion pacer of the world, time 2:06½. All applications for stalls must be in before Dec. 25. The horse-show will last from Dec. 25 to Jan. 15. After it concludes purses may, perhaps, be made up for trotters.

The annual rental of the Paris, France, Jockey Club's grounds has been \$18,000 for fifteen years until last year, when it was raised to \$20,000.

It is probable that there will be a Winter meeting of short duration at New Orleans in February.

The best Austrian trotting records are: One mile, 1½ miles, 3:40; 2½ miles by a double team, 5:53½.

## TURF AND TRACK.

### The Trotting Turf from 1810 to 1885.

[New York Sportsman.]

Trotting is purely an American institution. In no other country is it as popular, as compared with this, and we may justly lay claim to the trotter as an American production, for while trotting matches were occasionally heard of in England, long before they were known in this country, and while other countries, especially Russia, have undertaken to breed trotters, none have attained anything that could compare with our flyers, from the early, long-distance champions, down to our Mand S., Jay-Eye-See, or Harry Wilkes of to-day. To enter into the reasons for our success in this particular direction would be foreign to this article. Judicious breeding has in a large measure contributed to it, and that part of the question will be taken up at some future time, and treated on in a series of articles.

But no matter how strong the instinct imparted to adopt the trotting gait as a means of locomotion, it is only by careful patient development, that it is brought to the highest degree of perfection. Leaving aside the question of our excelling in breeding, we unquestionably do, in developing, and also in the different facilities that all combine to make speed possible, such as the construction of tracks, lightness and strength of vehicles, etc. Many hold to the theory that a horse will ultimately trot or pace as fast as the same distance can be covered by a runner; that trotting is a natural and not an acquired gait, etc. Of all these theories I leave the reader to judge as he follows my researches from year to year, and realizes that the trotter of to-day is a creature really of only about fifty years' development. With another half century of improvement, where will the record be?

Although the first trotting contest is generally supposed to have been by Boston Blue in 1818, when, in a match for \$2,000, he won, acquiring a record of 3:00, it is now well established that trotting contests took place in this country long prior to that time.

A correspondent of an English publication, writing from Philadelphia, in 1810, says: "On August 25th, (1810), a chestnut horse from Boston trotted to a snail one mile in 2:48, for a stake of \$500, to the astonishment of all present." From the fact that no mention is made of this performance in the Philadelphia papers, although it was then considered extraordinary, we can easily understand that no "Veritas" or "Straightedge" then looked after "Track and Road" or "Trotting Gossip," and it was not until 1819 that we find any notice of trotting matches in the press. Thus, whatever occurred prior to 1818 was lost for want of being properly recorded.

The match wherein Boston Blue won fame, and partially laid the foundation of the present trotting turf, was the result of a friendly banter. At a Jockey Club dinner where trotting was being discussed, a wager was proposed that no horse could be produced that could trot a mile in three minutes. The bet was accepted by Major William Jones, of Long Island, but so little faith had the public in the feat being accomplished, that the odds on time were immense. The horse, however, won, as we say now, "in a jog." He was then purchased by Thomas Cooper, a tragedian, who frequently drove him from New York to Philadelphia, thus being enabled to play in each city on alternate nights.

Subsequently the horse was taken to England, where he trotted eight miles in 28:35, winning a hundred sovereigns, but in shorter distances he never excelled about three minutes.

Boston Blue was a gray gelding, 16 hands high, breeding unknown.

In 1824 a horse called the Albany Pony trotted a mile on the Jamaica turnpike, near New York, in 2:40, which is the first record we have of a horse covering a mile in that time at this gait.

In 1825 the New York Trotting Club was organized, and a trotting course was laid out on Long Island.

In 1828 the Hunting Park Association was organized in Philadelphia, and a course laid out about four miles north of the city.

A writer for the English press, writing of the most famous trotters of that time, mentions Toppallant, "who has trotted twelve miles in harness in 35 minutes, and three miles under saddle in 8:31, and can now trot a mile with one hundred and fifty pounds in 2:45."

As this horse was foaled in 1810, it was a very creditable performance for one of his years. Indeed, we read, "on account of his superior speed, it was customary to har him from race." He was also a very fast runner for a short distance.

Among other distinguished horses of that time the same correspondent describes Betsy Baker, a brown mare foaled 182-, who "beat Toppallant three miles under saddle, carrying one hundred and fifty pounds, in 8:16. This mare, when sound could trot twenty miles within the hour."

Trouhle, by Bishop's Hambletonian, by imp. Messenger, trotted two miles in 5:25.

Sir Peter, by Bishop's Hambletonian, trotted three miles in 8:16.

Whalebone, brown gelding, foaled 1820, by Hambletonian, dam by Coffin's Messenger, trotted three miles in 8:18. These latter two were counted very fast, and we read a match was desired, "either against Rattler or Tom Thumb, now in England, for any amount."

Scrowdriver, foaled 1819, by American Commander, dam by Mount Holly, was prominent on the turf from 1824 to 1828, and in a race against Betsy Baker, trotted two three-mile heats in 8:02 and 8:10. This horse was very famous, and when he died, in 1828, we find the following obituary notice in a Philadelphia paper of that time: "The Emperor of Horses is No More—Scrowdriver is Dead. He died suddenly on Sunday, Oct. 19, 1828, in his training stable at Philadelphia. This is the noble animal that trotted and won at Philadelphia, the silver cup and \$300 on the 15th of last May, beating Betsy Baker and Toppallant. On Oct. 7th he won the \$300 purse on Long Island, and was intended for the \$300 purse to be trotted for at Philadelphia on the 21st instant. He was considered the best trotter ever known in this or any other country."

At that time most of the races were at long distances, two, three, or four mile heats, and speed alone was not so much a desired qualification as staying qualities.

In 1829, Toppallant, then nearly twenty years old, trotted a four-mile heat race against Whalebone, requiring four heats to decide it, Toppallant winning the first heat in 11:16; the second was declared a dead heat, in 11:06; the third was won by Whalebone in 11:17, and the fourth by Toppallant in 12:15. This was a great performance for a nineteen-year-old, spinned in both hind legs.

Up to this time there had been but comparatively little interest taken in trotting matters, but now trotting began to

be fashionable, and plank roads were becoming popular. Many of our readers will remember the old-time slang phrase, "Two-forty on the plank road," as common then as to say now, "She's a daisy," or "He's a dandy."

In 1833, Paul Pry, a bay gelding, foaled 1824, by Mount Holly, by imp. Messenger, dsm by Hambletonian, by imp. Messenger, was matched to trot 17½ miles in one hour. Hiram Woodruff rode him, and he won "hands down," trotting over 18 miles in 58:52.

May 9, 1834, Edwin Forrest, a black gelding, foaled 1824 pedigree unknown, trotted at Centerville, L. I., a race against Sally Miller, to saddle, winning in straight heats—time, 2:31½, 2:33, then the fastest time on record, and considered a wonderful performance. Soon after this his owner issued a challenge open to the world for four-mile heats, for \$5,000 or \$10,000 a side, but was unable to find a competitor.

### Splan on Rigging Trotters.

John Splan gives the Chicago Horseman the following notes of his experience;

"The first thing wanted is to find out what kind of a bit will best suit the horse, the easier the bit you put on him the better he will act. I like a large snaffle bit covered with rubber, then an overcheck, but do not check too high, and long martingale, and have the harness made to fit the horse. Be sure to have the sulky so that he cannot hit himself in any position he may get in, as I find that a great many horses are driven to sulky that the axles are low, and sure to hit their hocks.

"The next thing is the booting and shoeing; this part of the training is the most essential of all. I would suggest that the horse be protected in such a way that he cannot hit himself; do not wait until he hits himself, but put them on at first. Some people say that boots interfere with their trotting action, but in my judgment the hocks that are made now do not retard a horse's speed, and no horse trots with so much confidence to himself or driver after hitting himself as he did before. In shoeing I would suggest to shoe a horse after Mr. E. G. Simmons's plan, which he gave me when I was a boy, and as he was the first man to shoe a horse in that manner, I will have to give him the credit of it. His idea was to shoe every horse as light as he possibly could, and have him properly balanced claiming that the less weight you had on him, the easier and further he could go. After trying this plan I was surprised at the number of horses that could trot in a very light shoe. As an example of those that I have had in my charge, I would name Kansas Chief, which was the first horse I shod in that way. I had seen him trot several races and he could not trot better than 2:32 with toe weights. Mr. Simmons bought him and gave him to me to train, and proposed to shoe him after the new plan. I remember distinctly, people thought he would not be able to go any in the light shoes, in which opinion I myself concurred. You can judge somewhat of my surprise, when after about four weeks' work I drove him a mile in 2:23, and as that was the first time I had ever ridden that fast, was correspondingly delighted. When he obtained his record of 2:21, he had on eight ounces in front and five ounces behind. Johnston, who paced a mile in the wonderful time of 2:06½, had a ten ounce shoe in front. Mattie Hunter, with an eight ounce shoe, paced in 2:12. Rarus, who trotted a mile over a half mile track in 2:16, which is the best mile ever made over a half-mile track, wore just eleven ounces in front, and went all his best miles in not over twelve ounce shoes. Fannie Witherspoon trotted a trial for me in 2:15½, and a heat in a public race in 2:16½ wearing only thirteen ounces in front. These are but few of the many instances I could name in which the horses have all improved and reduced their records by the adoption of light shoeing. As to toe weights my experience has been very limited, considering the number of horses I have trained; Wedgewood being the only horse of any note that I have ever had that wore them. I think the most danger in people using them is that they put on too much weight. Toe weights, I think, in the hands of an intelligent person are a good thing to develop and bring forward a certain class of horses. My advice would be to use them with a good deal of caution, particularly with young horses."

### Track Talk in New York.

There will be racing at Brighton Beach as long as the weather remains good and the track safe is the assurance made by Mr. Engeman to owners at Brighton and to the general public. The popularity of Brighton Beach as a racing resort is of all things the most surprising to old followers of racing. Ten or twelve years ago a Spring and Autumn meeting of four or five days each was looked upon as not only the longest period that any one section of the country could stand at any one time, but it was about as much as any stable owner thought that his horses could stand and remain in condition. One of the arguments used ten years ago when Saratoga and Monmouth threatened to conflict was that owners would not be able to keep their horses in condition and run them at both places in July and August. The idea was but slowly shown to be imaginary, and during the last few years owners have raced at both places with success. But the present season at Brighton completely upsets all previous conceived ideas, not only as to management, but also of the work horses are capable of standing and the sustained interest of the public. The last named is perhaps the most surprising feature. The season began on May 24th and has continued three, four, five and sometimes six days each week, so that unless there is a break in the weather this will be the 112th day of the season. Some people are in the habit of thinking and saying "Who goes to Brighton?" That question can be answered by saying that on Friday, when it rained nearly all day, there were between twelve and fifteen hundred persons present, and that on Thanksgiving Day, although the weather was anything else but warm and pleasant, there were nearly if not fully 10,000 spectators. The betting is also as phenomenal as the crowd, and on Thanksgiving the receipts in the mutual boxes alone footed up over \$111,000—the largest receipts of any one single day since the racing began in June, 1879. With such a showing it is not surprising that rumors are continually being floated of opposition racetracks in this vicinity. The surprise is that they do not take shape and become a reality. The latest rumors are that a racetrack will be constructed on Coney Island in the vicinity of Norton's Point. Another says that the old Prospect Park Fair Grounds have been leased by a syndicate of New York and Brooklyn politicians, and that they will race in opposition to Brighton next year. Both rumors are probably untrue. As to the Prospect Park scheme, Mr. Engeman says he has a lease of the grounds for four years to come, and that there will be no racing there other than if the proper persons will take and manage occasional trotting meetings.—World.

### Racing at Oakland Park.

All the weather prophets were wrong, at least those who predicted favorable weather for the races Saturday afternoon at Oakland, as a more disagreeable day is rarely seen on that side of the bay. Before the sun rose there was a fierce wind from the north, and it had cutting edges after the contact with snows and ice in the quarter from which it came. The morning gallop were witnessed by a few shivering mortals, and the trainers hurried the blankets on the racers after finishing the work. There was a lull about 10 A. M., and as the sun shone brightly there were fond hopes that the afternoon would be more in accordance with the desires of every one. Ere the sun reached the meridian, however, there was a resumption of speed and old Boreas came at a rate that would try the fastest of the thoroughbreds. Had it not been for the cold and roughness of the day there would have been a large attendance, and as it was there was quite an assemblage when the horses were called out.

The first race was a dash of five-eighths of a mile, the starters Prince of Norfolk, Tom Atchison and Billy Johnson. Pool-selling was very lively, and at first there was little difference in the prices of the three. Prince of Norfolk would bring \$20, then Billy Johnson the same, while Tom Atchison had supporters of \$22. As the selling progressed Billy Johnson became a strong favorite, Atchison holding his own, the Prince falling away and away until about \$10 in the largest pools was all that was offered. The start was from the three-furlong mark, which is about midway of the back stretch. It was not long until the flag fell to a very fair send-off. Though Prince of Norfolk was a length or so behind he was moving well, and it was better for him even than if his horses had been recalled. Anomalous as it may appear, this rear position was an advantage, as his rider let him stride along in place of "pulling his head off," as has been so many times the case heretofore. Atchison and Billy Johnson were running fast, the Prince retaining his position until when about half way around the turn he moved up and was second to Tom at the three-quarter mark, which the leader made in the very fast time of 36 seconds. From that point the wind was in their favor, and all of them coming down the stretch at a great rate. Prince was running the easiest, however, and won by two lengths over Tom Atchison, who was a length in the lead of Billy Johnson. The five furlongs were run in the grand time of 1:01½. Taking the unfavorable day into consideration, this can be ranked with the best on record, which is three-quarters of a second faster.

OAKLAND PARK, Dec. 6th.—Purse \$100 for all ages; \$25 to second; five-eighths of a mile.  
R. P. Ashe's ch Prince of Norfolk, by Norfolk, dam Marion, 3 yrs. 113 lbs.  
T. Lynch's ch g Tom Atchison, by Joe Hooker, dam Bay Kate, 2 years. 87 lbs.  
C. E. Rainey's ch g Billy Johnson, by imp. Glenelg, dam Planetarium, aged, 115 lbs. Time, 1:01½

The second race was heats of two miles, and speculation was very brisk. The starters were Patsy Duffy, Glendair and Garfield, the positions awarded at starting being in the order their names are written. A great deal of money was betted, Patsy, the favorite, bringing \$60, to \$32 on Glendair and \$17 on Garfield. When the flag fell all were on a line, though immediately after Glendair shot to the front, the pace was so slow that they were 28 seconds in reaching the quarter, and not much faster down the backstretch, the one-half being marked in 55 seconds. Glendair had to be pulled all out of her stride to restrain her impetuosity, though several lengths in the lead of Garfield, who was about as far in advance of Duffy. At the three-quarter pole in 1:23 they held their relative positions, and as Glendair mended her speed coming home, the others closed some of the gap.

The first mile was run in 1:49, Glendair still anxious to go faster, though her rider kept her back, so that the one and a quarter mile were run in 2:16. Duffy closed up somewhat, as the one and a half miles were made in 2:44, and rounding the turn for the second time he passed Garfield and laid with in striking distance of the filly when they came into the stretch. For 300 yards it was a fierce struggle, and when 200 yards from the wire it seemed as though the filly would win the heat. Both jockeys were "rolling," but Duffy had the most speed to finish, and beat Glendair by a neck. Garfield not far behind, the time being 3:35½. This was a capital performance, as the filly carried the rule weight, while Patsy Duffy had 118 pounds up and Garfield 100 pounds—a concession of 17 pounds. As the forte of the filly appears to be a steady raking pace, it was thought that if she had been allowed to make a faster pace from the start the result would have been different; but, as it was also conceded that a three-year-old could not be expected to compete with an old and tried campaigner like Duffy, he was a greater favorite than before, bringing \$70, and as Garfield had not run for the heat, it was in the minds of many betters that he stood a good show to win, so that he brought \$35, and Glendair only \$13.

For the second heat there was a good start, and again Glendair took the lead, though the pace was slow, so that 28 seconds were occupied in making the first quarter. The half was reached in 54 seconds, Glendair having a good lead, Garfield and Duffy side by side. From the half the filly came faster, and as she passed the stand in 1:47 she was four lengths in front of the others. At the quarter pole there was no change, but when at the half, which the filly made in 2:42, Duffy had passed Garfield and taken a position for a fight down the stretch. As before, it was a nobly contested battle, which Patsy won by half a length over Glendair. Time, 3:35½. This must be awarded a high place in the racing calendar, as there are few races at the distance when the retarding influences of a very high wind are brought into the calculation. In a long race the drawback is greater and to face such a gale means a pressure of many pounds which the relief of going with it does not nearly compensate.

Second Race—Purse \$300; for all ages; \$75 to second; \$50 to third; two mile heats.  
R. P. Ashe's b b Patsy Duffy, by Leinster, dam Ada A., aged, 118 lbs.  
T. Lynch's ch g Glendair, by Norfolk, dam Glendair, 3 yrs., 103 lbs. 2 2  
Jas. Mee's br g Garfield, by Langford, dam Lodi, aged, 100 lbs. 3 3  
Time, 3:35½, 3:35½

The concluding race was a dash of nine furlongs, the entries being Forest King, 112 pounds, Philip S., 109 pounds, and Billy the Kid, 90 pounds. Although Forest King had the best of the weights, according to the rule scale, the big bettor plunged on Philip S. as though the race was a foregone conclusion in his favor. The rates were \$110 on Philip S., \$40 on Forest King and \$30 on Billy the Kid. The starting point was nearly midway of the homestretch, and thus the horses have the advantage of a straight furlong to get under way. Forest King had the pole, Philip S. second, and when the flag fell all were abreast. The favorites started off in dead earnest, the little jockey on Billy apparently being somewhat rattled. Forest King and Philip S. never faltered from the rapid rate, the former slightly in the lead. It did not need a watch to realize that they were going at a fearful pace, and it did not seem that it could be possible for them to keep up

the lick to the end. When a mile had been run in 1:43, Forest King had gained such an advantage that it was evident that without mishap he must win. In the effort to overtake and pass, Philip S. swerved to the outside, Forest King winning by two lengths in the very fast time of 1:55.

And thus ended what was voted an afternoon's capital sport notwithstanding the disagreeableness encountered, and showed that the equine actors played well their part.

Third Race—Purse, \$150; for all ages; \$50 to second; one mile and an eighth.

S. J. Jones' b h Forest King, by Monday, dam Abbie W., by Don Victor, aged, 112 lbs. . . . . 1

Time, 1:55½.

### Famous American Trotters—The Gray Lady of Suffolk.

With the possible exception of Goldsmith Maid and Dexter, there is no trotter of the olden time with whose name the public is more familiar and in whose achievements on the turf it took a greater interest than the gray mare Lady Suffolk. To begin with, she was the first trotter to beat 2:30 by a sufficient number of seconds to make the event a notable one, and in addition to this she was such a long time in active service, trotted such a vast number of races, and had such marked personal peculiarities that it is not likely her name and fame will ever be forgotten so long as there is any interest at all taken in the sport of trotting.

Lady Suffolk was an exceptionally high-bred trotter, and her blood lines were of the most fashionable order, her sire being a son of imported Messenger, while her dam was also by a son of that horse, thus making her strongly and closely in-bred to the grey stallion that founded the great family of trotters and trotting sires that are now known as the Hambletonians. Lady Suffolk was foaled in 1833, and of course at that time little or no attention was paid to the breeding of trotters, so that it is not likely she was particularly thought of in connection with speed at the trotting gait, especially, as she was sold when two years old for a nominal price to a man named Dave Bryant, who was a hard-riding, hard-driving and roystering fellow generally; and had not the grey tilly possessed an iron constitution, and bones and muscles that seemed able to stand any amount of abuse and neglect, it is hardly possible that she would ever have achieved a tithe of the greatest that came to her in her later years; and as it was, there can be no doubt that had she been handled in a more careful and intelligent manner her success would have been even greater than it was. She was a compactly-built mare, standing a trifle over 15 hands high, and with the exception of her small feet no fault could be found with her general conformation, although when at speed her appearance is described as having been anything but graceful, she having a habit of going with her head very low down and sticking her nose out straight, so that when fighting for the lead with another horse she was aptly compared to a goose in full flight. To summarize her turf career briefly, it may be said that her first race was trotted in 1833, she being then a trifle less than five years of age, and that she continued to appear in public until the Fall of 1853, making more than fifteen years, during which she was in active service every season, and in training pretty much all the year round. During this time she trotted 138 races, and won eighty-eight of them. Besides this she had three matches forfeited to her, and when it is remembered that at least half of the races in which she took part were at two, three and four-mile heats, it will be seen what a wonderful piece of machinery she was. Then, too, as has already been stated, she was trained and driven by a reckless and cruel master, one who knew nothing at all of the principles of fitting a horse for a race or of driving him after the contest had begun. She was banged about from pillar to post year after year, and yet in spite of all this continued to stand up under the rough treatment, and to trot good and game races until she was past twenty years of age.

Her first race was trotted at Babylon, Long Island, in February, 1830, Bryant entering her in a mile-heat trot under saddle, for a purse subscribed on the spot, the total amount to be contested for being \$11. Hiram Woodruff rode the grey mare in this race, her opponent being a horse called Sam Patch, and Lady Suffolk won the first and third heats in 3:01, 3:00, Sam Patch taking the second heat in 3:03. Seeing from this race that he had a trotter of at least some merit, Bryant at once began training her, and the following June she came out again to trot a two-mile heat race in harness against Black Hawk. She was beaten in straight heats, the time of each being 5:42, and soon after this she started again against Lady Victory, a mare that had been brought from Virginia and given a trial in 5:09. There were four horses in the race, and so little chance did Lady Suffolk appear to have that Bryant could get no one to ride her, and in this dilemma was forced to take the mount himself. She won the first heat in 5:15, the second in 5:17, and as she had been beaten only the week before in 5:42 under saddle, it showed what a rapidly-improving mare she was, and two weeks later she was matched against the then famous Rattler, two-mile heats, under saddle. She won the first heat in 5:29, and would have ended the race in the second had a competent man been riding her; but Peter Whelan, who bestrode Rattler, was one of the best horsemen of his day, and it was only by virtue of his superior equestrianship that Rattler was able to win by a nose, but in the succeeding heats he had less difficulty in getting home first, the two previous hard races which the mare had taken part in being too much for a five-year-old of even her calibre. She trotted a good many other races that season, meeting Dutchman at two-mile heats under saddle on October let, and being distanced by him in 5:07. She started a week later against Awful, the distance being the same, and was again beaten, only to be dragged out again seven days afterwards to trot two-mile heats against three others, Napoleon winning. Two days later she started at Philadelphia and went at two-mile heats in 5:13, 5:26, and the following day went three-mile heats against Rattler and two others, Rattler winning over a heavy track in 8:11, 8:17. With a rest of three days she was again started in a two-mile-heat race under saddle against Dutchman and Rattler, Dutchman winning; and not satisfied with all this killing work Bryant started her three days afterwards in a mile-heat contest against Dutchman, she being distanced in the first heat in 2:49. In this, her first season on the turf, she trotted eleven races, two of them being mile heats, eight two-mile heats, and one three-mile heat. In the present day a man who would trot a five-year old such races as these would be thought both ignorant and inhuman, and yet this was only the first season of fifteen that Lady Suffolk appeared on the turf, and it should be remembered that the horses with whom she contested were the best of their day.

In 1839, her second season on the turf, Lady Suffolk trotted twelve races. Eight of them were two-mile heats,

two mile heats, one a mile and repeat, and one four-mile heat. She began work on the 26th of April, and after winning her first victory met Dutchman at two-mile heats under saddle, the bay gelding winning with ease. The first week in July she beat Cato two mile heats, and then went to Philadelphia, where she was to meet Lady Victory at two miles, a match between the two being made on account of the closeness with which they contested the event referred to. Although Lady Victory had beaten Lady Suffolk in the previous race, the grey mare seemed to recover her form the quickest and won the race, taking the first and third heats in 5:33, 5:40, while Lady Victory secured the second in 5:35. She had now trotted seven two-mile heats in two days, and Bryant must have imagined that there was no end to her powers, as he matched her to trot mile heats against Lafayette the following day, and of course she was beaten, being utterly unfit to trot. The leanness which came on as a result of all these hard races forced Bryant to let her alone during the month of September, and in October she was at it again, trotting two mile heats against Henry and two others, and beating them. They trotted another race the following week, the mare being beaten, and less than a week after that she went two mile heats against Don Juan. Taking her to Boston Bryant trotted her four-mile heats under saddle on Nov. 15, winning handily in 11:22, 11:34; and to show how utterly without sense Bryant was it may be noted that on the very same afternoon he trotted her mile heats in harness, three in five, against Independence, he winning in 2:45, 2:45, 2:47. Even this did not satisfy Bryant, for he matched her to go the same race against Independence the following day, and was beaten; that ending her career for the season.

In 1840, having then been two years on the turf, the little grey mare began operations by a couple of matches against Dutchman—which horse, by the way, she was not at all certain to beat when he was in shape to show his best powers—and lost both of them, Dutchman winning the two-mile heats in 5:05, 5:06, and the three-mile event in 7:51, 7:51. Then she beat Napoleon and Celeste, two-mile heats, and soon after this took part in a rather curious race, it being a match to trot against 2:40 over the Stevens running course, near Hoboken. Napoleon, referred to above, had been trained on this track, the surface covering of which was a light sand, and so confident was his owner that no horse save his own could beat 2:40 over it, any way of going, that he offered to back the watch against Lady Suffolk. She did the distance handily enough under saddle in 2:32, and three weeks later, June 30, started in a four-mile heat race against Bonaparte, concerning whose staying powers much talk had been made, beating him as far as she liked in 11:15, 11:58. She was then let alone for a while her next engagement being to trot two-mile heats against Aaron Burr, that horse being in Hiram Woodruff's stable. Burr won the first heat, but the mare was too much for him in the second and third, the time of the fastest being 5:21. Then she beat Dutchman, two-mile heats under saddle in 4:59, 5:03, and was to have gone against Dutchman and Washington, but enemies laid her up for two months, when she came out as good as new, Don Juan paying forfeit to her Nov. 28th.

It was in 1841 that Lady Suffolk trotted the first of her famous races against Ripton. She had beaten Dutchman at two-mile heats in harness and three-mile heats under saddle in the latter part of May, and on the 13th of June gone a hard four-heat race of three-mile heats with Aaron Burr. Then on July 5th she came out and beat Ripton at mile heats, the time being nothing remarkable, and on the 22d made Awful lower his colors at two mile heats, he winning the first in 5:26½, and the mare the second and third in 5:23, 5:24. With a rest of but five days she distanced the pacer Oneida Chief in the first heat of a two-mile heat race under saddle in 5:05 and finished the season with a match against Americans, five-mile heats to wagon, being beaten in 13:54, 13:58½. This was a large amount of trotting for one season, when the weights and distances are taken into consideration, but after being driven on the road all Winter by her owner, Lady Suffolk was in the games again early in 1842, meeting Ripton and Confidence on May 12th in a two-mile heat affair, which Ripton won. Three days after that he beat Ripton over the same distance of ground. Hiram Woodruff, who drove Ripton always thought that he had been tampered with previous to that race, and so they came together again on the 31st of the month, the white-legged pony being able this time to turn the tables on the mare, trotting the first heat in 5:07, which was the best harness record for two miles up to that time, although now the figures stand at 4:46, Monroe Chief having them to his credit, while either Maud S. or Jay-Eye-See could easily lower the mark to 4:40. Two days after her race with Ripton, the Lady of Suffolk was hooked double with a horse called Apology, and they distanced the team that opposed them, doing two miles in 5:19, which showed that the grey mare was a good one wherever she was placed. Then Ripton beat her at two-mile heats, and on the 1st of August he had both the mare and Confidence behind him at the finish of a three-mile heat race. But she was not down long, winning at two-mile heats from Independence, whom she distanced in 5:37, and this race finished her trotting for the season of 1842.

The following year she did not appear in public until the Fourth of July—the event being a race at mile heats against Beppo and Independence. This horse Beppo was one of the speediest of his day, and long before meeting Lady Suffolk had been ridden half a mile in 1:09. The pair had a hard race of it, however, five heats being required to decide the question of superiority, Lady Suffolk winning. After a week's rest she started in a race with Beppo and the pacer Oneida Chief—the latter being in harness and the trotters under saddle. With 143 pounds on her back the grey mare won in straight heats—the time being 2:26½, 2:27, 2:27, and it should be noted that the time of the first heat stood for ten years as the best on record, Tacony being the first to beat it. She went seven other races this season, three of them being against Oneida Chief, beating him in only one of them, that being at mile heats, which she reeled off in 2:29, 2:30, 2:28½. She was gaining in speed at this time, but in spite of this fact did not seem able to hold her own at long distances as well as formerly, and another reason for her numerous defeats was the fact that Bryant insisted on driving her himself, instead of letting a man with more skill and judgment handle the mare.

Five races were all the grey mare trotted in 1844, winning two at mile heats, one at two-mile heats, one at three-mile heats, and losing one at the last-named distance. But in the four following seasons—1845, 1846, 1847 and 1848—she was kept busy pretty much all the time, it being in those years that her races with Brown Columbe, Americas, Moscow, Hector, Roanoke and James K. Polk, of which Hiram Woodruff has written so entertainingly, took place, and at the close of 1848 she was so lame that her reappearance on the turf was deemed exceedingly doubtful. But the double cross of Messenger blood enabled her to go on and trot where others would have broken down, and so we find that in

1849 she came out as good as new, with spirits unimpaired, and before the snow fell again she had taken part in no less than twenty races. Twelve of them were mile heats, however, the mare winning six of the dozen. She captured four out of six two-mile-heat races, and divided honors with her opponents at three miles, losing one of those races and winning the other. After this the career of the grey mare was not brilliant, although for several seasons she continued to trot. She never had a colt, and died in comfort, having trotted no less than 133 races, of which she won 88, and in addition to this received three forfeits. Her best mile in harness was 2:28; under saddle, 2:26; and in addition to this she had a two-mile harness record of 5:03, a three-mile saddle record of 7:40½, and a four-mile saddle record of 11:15.—*Breeders' Gazette.*

### A Great Broodmare and Thorough Blood.

Alma Mater is a chestnut mare, foaled in 1872, and got by Mambrino Patchen, out of Estella, thoroughbred daughter of imp. Australian; second dam Fanny G., by imp. Margrave; third dam Miss Launce, by Launce, son of American Eclipse, and fourth dam Aurora, by Aratus. She was bred by Capt. O. P. Beard, a close follower of the fortunes of McGrath on the turf, and she was purchased expressly for a broodmare by Dr. A. S. Talbert, of Lexington, who had great faith in the thoroughbred foundation for light harness purposes. Alma Mater was bred as a three-year-old, and her produce, with the exception of a yearling, is as follows:

1876—B c Alcantara, by George Wilkes; record, 2:23.

1877—B c Aleyone, by George Wilkes; record, 2:27; trial, 2:22½.

1878—Blk c Arbitr, by Administrator; trial, 2:25.

1879—Ch f Almeta, by Almont; 2:30.

1880—Br f Allie, by Belmont; trial, 2:32.

1881—Br f Alicia, by George Wilkes (Breeder's certificate), 2:29.

There is no question about the ability of Almeta to trot down in the twenties, but her performance at Lancaster, Ohio, the past season, as been reported in two ways. The local report is as we give it; but should it turn out to be an error, the fact will remain that Almeta can enter the 2:30 list at any time that her driver chooses to give her her head. Alcantara made his record as a four-year-old in a race against aged horses. He injured himself while rolling in his box, but previous to the hurt he trotted a half mile in 1:06, and a quarter in 32 seconds. Had he kept sound, an effort would have been made with him to beat the four-year-old time of Maud S., 2:17, and it probably would have been successful. Since his retirement from the turf, Alcantara has been in the stud at Highlawn, in the Berkshire Hills, Massachusetts. Arbitr is also owned in Massachusetts, and is being used in the stud. Aleyone will gain a record of 2:20 next year, if trained, but as he has a two-year-old, Silverone, which has trotted in 2:26½, thus demonstrating his ability to transmit harness speed, the greater profit will be in keeping him in the stud. Highly bred as Alma Mater is, being by Mambrino Patchen (son of Mambrino Chief and daughter of Gano, thoroughbred son of American Eclipse), out of Estella, thoroughbred daughter of the famous sire of performers on the running turf, Australian, no mare of her age, living or dead, or what the theorists call strictly trotting-bred, has produced harness speed with so much uniformity to the cover of different stallions. And her sons and daughters can cut and come again as well as trot fast exhibition miles. The thoroughbred crosses in Alma Mater are close up, and as fashionable as any in the stud book, and you cannot conceal this fact from the minds of intelligent readers by any such sneak-thief, idiotic arrangement as the following:

Alma Mater, got by a son of Mambrino Chief, dam by a chestnut horse.

There is no daughter of Hambletonian or of Mambrino Chief which can be compared as a producer of trotting speed to the chestnut mare, still in her prime and full of the grace of the thoroughbred as she grazes over the slopes of Iuwood, that has contributed to the world in rapid succession performers like Alcantara, Aleyone, Arbitr, Almeta, Alline and Alicia. For one bred as she is there are scores bred without regard to the thoroughbred foundation, and so the odds ought to be on the other side. But there she stands almost isolated in the teeming ranks of the trotting-bred matrons which are free from what has been stigmatized as "running foolishness." Match her, if you can.

One of the first animals bred by the late Dr. Talbert, whose sales, covering a period of twenty years, averaged \$750, was Mary Mambrino, now owned at Glenview. She was got by Mambrino Patchen, out of Belle Wagner, by Embury's Wagner; second, Lady Belle, by Bellfounder, Jr.; third dam, Multiflora, by Monmouth Eclipse; fourth dam, Multiflora, by Rosierucian; fifth dam by Young Bedford; sixth dam by Arian, and seventh dam by Brilliant. Her first foal, by Cnyler, came in 1874, and is dead. The second, a filly, was not trained, but placed in the breeding stud. The third is dead, the fourth was sold from Glenview and not trained, and the fifth was Elvira, by Cnyler, who has gone into Winter quarters with the fastest four-year-old record ever made, 2:18½. The structures which Dr. Talbert, with wonderful foresight, raised on the thoroughbred foundation, have not yet felt the corroding touch of disappointment. On the contrary, they glow, as do Saturn and Jupiter in their orbits, to the planetoids.

Understand ns. We do not proclaim as worthless mares tracing only through remote branches to the thoroughbred; they are winning distinction in their way; but we insist that mares shall not be discarded simply because the thoroughbred foundation is closed up. If the combination has been made with judgment the warmer blood will prove as tractable in harness as the colder blood, with the advantage of making a more stubborn fight, when the heats are broken. And horny handed practice, not gloved theory, points with unmistakable force to the truth, hazarded by the 2:09 of Maud S. and the 2:10 of Jay-Eye-See, that without plenty of thoroughbred blood you cannot soar on the extreme flights of speed in light harness. The dam of the mother of the queen and of the king, like that of Alma Mater and also of Mary Mambrino, was strictly thoroughbred.—*Turf, Field and Farm.*

Maud S. is now at Chester Course, Cincinnati, where she will winter. She will be put in training next Spring. She was weighed before her hooves were removed, and she tipped the beam at 946 pounds. Her front shoes weighed fifteen ounces each when she trotted in 2:09½. In addition to the shoe she carried a three ounce toe weight. She is now so nicely balanced that Bair feels confident she will trot a fast mile next season without toe-weights of any kind.

The proceeds of the reporters' benefit at Brighton last week were divided between Messrs. Higginson, McGuire, Plummer, Sass and Salmon, each being the sum of \$490.35.

## Reminiscences of a Veteran Pool-Seller.

Verites, of the New York *Spirit*, having been bidden to the anniversary dinner on the fiftieth birthday of Col. Edwin Morse, the pool seller, jots down the following notes of the after-dinner chat:

After the guests dispersed I had a chat with him about old times, and jot down a few incidents in his career:

Ten years ago he sold through the South on the runners, viz: at Charleston, Augusta, Macon, etc. He remarked: "The Southerners are good buyers and satisfactory to do business with. In fact, running races generally are attended with less wrangling, as they are usually dashes, and a few minutes settles them, whereas trotting races are frequently prolonged contests, attended with continuous anxiety on the part of the buyers."

He said the largest pool he ever sold was \$2,450, on the Blanchard \$10,000 stallion race, which Smuggler won, ten years ago. In it Billy Armstrong bought Mambrino Gift for \$1,000. Commonwealth, Defiance, and Vermont Abdallah sold about even, and Smuggler brought \$300. "I bought the Smuggler ticket," said Ned, "for Charlie Morris and myself. Frank Berker claimed it, although I did not see him bid, but let him have a third of it. It is surprising how many different kinds of pool-buyers there are. Men who will not pay their honest debts were never known to refuse to take their losing tickets out of the box."

"Uncle Ben Wright was one of the most persistent buyers I ever knew. He is one of a class that is bound to have what they want, at any odds: in that way, such buyers hoon a rank steer that hasn't a chance to win." Other buyers will take the big end, and stick to it, even until after the second heat, when they see it is dead against them, and thence begin hedging at any odds. Others will buy favorites, and commence immediately afterward to buy fields to save themselves in case of loss. I can tell a new pool-buyer when he opens his mouth. He acts as much as to say, 'I am taking in the races, and must buy a pool, like the others.' If he is fortunate enough to pick a winner the first or second time, I can count on him for a customer. The most profitable class of patrons I have, and, at the same time, safest for themselves, are those that, if they are in doubt, make a book by buying a ticket on every horse that starts, and trust to the fluctuation in the selling for a profit. Most of that class have their memo, and pencil, and go at it in a business way. The most wonderful buyer of the kind I know of is Bill Scollins. He buys a little of everything, and keeps the run of them all in his head. I have known him to have as many as forty tickets in the box at one time, and when he came to settle he could tell to a dot how he stood, and never put a pencil to paper to assist him.

"A man that will buy the short end, and keep on doing it through the season, will come out ahead. I have frequently seen a rank fielder, that sold for \$1 in a \$100 pool, win. A few years ago, the chestnut gelding Arthur, from Concord, N. H., started in a race here. Good horses he was up country. The night before the race he went begging at \$1 in \$100, until the New Hampshire delegation arrived, when they showered their money in on him. The talent took the alarm, and said, 'We are in wrong, and must square ourselves,' which they did. Arthur went on and won in 1, 2, 3, order.

"The professional pool-buyers, as a rule, are men of quick perception, and can usually rectify a mistake in time to save themselves, although, occasionally they get left, as they did several years ago at Mystic, in the Billy Barr-Hotspur race. A number of other good ones were in it. The race finally centered on Billy Barr, driven by Dan Mace, and Hotspur by Budd Doble. They carried the bulk of the pool money. It was a great betting race. Barr and Hotspur got in two heats each, when Barr struck dead lame, so much so that the knowing ones commenced to sell all the tickets they had on him, as it was thought he did not stand a ghost of a show to win. Bill Scollins sold one that called for \$500 that he had on him for \$5. Meade sold an \$800 card for \$10. Thus the best posted ones fooled their tickets away. Mr. Jones, the owner of Billy Barr, sat on the piazza, where Dan Mace consulted him in regard to drawing the horse. Mr. J. said, 'Dan, you have got the horse, do as you think best' with him.' Dan exclaimed, 'I have a game owner and a game horse, and I'll go on and play the game out.' He put a rubber bandage around Barr's leg, and went on and won it, sure enough, much to the surprise of all.

"Boston is the best betting city I ever visited," continued Ned. "I have frequently sold pools on a trotter that amounted to the horse's value. The dull times for the past few years has affected the business considerably; perhaps no more here than in other places.

"Surprises often come. I could mention a number of cases where it looked as if a horse came up out of the ground and won. As owner, driver or no one else expected him to win, it was probably the day of his life.

"It sometimes occurs that a good horse is overlooked by the fraternity. Even if he shows up well, they haven't confidence in him or the driver. The best illustration in a case of that kind was when Pete Manee drove W. H. Allen over Mystic. Surprise, Denmark and several others were in the race. Four of them got in two heats each, W. H. Allen among the number, notwithstanding that he never sold at any time as choice. Pete wanted them to divide. The race was carried over until the next day. Pete struck them again for a divide. They gave him the laugh. Pete got his dander up, and said, 'I'll go on and lay you all out.' True to his word, down they he did. 'Now will yer divide,' chuckled the bold Pete. He was familiarly known after that as 'Divy.'

"Another time Pete had Mary A. Whitney in the 2:37 class, at Mystic. The late Miko Carroll had Essex in the same race. The latter was a big favorite. Pete did not want to get Mary out of her class, although he knew he had a good mare. He tackled Carroll for a divide before the start, but 'Careless' could not see it. They got the word for the first heat. Essex led to the half, when Pete moved up and felt of him, again saying, 'Divy.' 'No,' answered Mike, and he called on Essex for another link. Pete came at him again on the stretch and exclaimed, 'For de last time, will yer settle?' 'No,' said Miko. 'Well, I'll have to take the record and first money,' which he did.

"How often have I heard men say in their advice to others when buying pools: 'If you have any money to throw away give it to me.' That was the expression a 'know it all' made to several parties who were buying the field against Proteine in her last race at Hartford. She won all down through the Circuit, but when she got to Hartford she was sore from her nose to the tip of her tail. Even then they thought it was like finding money to back her, and were surprised that people would be such fools as to bet against her. She was

hadly beaten, as might have been expected of a mare in her condition.

"Oh, yes, I can always tell when a job is pending. There are certain unmistakable signs that open the pool-seller's eyes. For instance, if one or two strangers, that were never known to invest a dollar in the poolbox, persistently buy a horse, it is usually for the ring. Yes, there are more square races trotted than the general public are led to believe, and the cry of jobs and jockeying is raised by those who are sensational writers, or are not well posted. If any of my friends ask for my opinion I freely and truthfully give it to them, except in cases where an owner entrusts me with an order to back his horse; I consider myself in honor bound not to expose his business. Then all inquirers must expect an evasive answer. My motto is serve all patrons alike, and be faithful to my position as stakeholder between them."

## The Fate of St. Gatien's Sire.

Nearly every Derby that is run has some sensational feature in connection with it that singles the great race out above all others. This year the fact that it was the second dead heat on record, and that while one of the winners was a horse of comparatively humble, and even doubtful, parentage, the other was of most decidedly aristocratic lineage and surroundings, was surely enough sufficient to provide the necessary halo; but, no, just as the season is about to close, another exciting incident arose up to form a sequel to the result on May 28th last. It is nothing more or less than a barbarous and fatal outrage on the reputed sire of St. Gatien—The Rover. He was located, the London *Sporting Life* says, at Mr. Shine's stable, Listowel, Co. Kerry, and as the owner is in the Court of Bankruptcy, and the horse's future destination was in doubt, considerable excitement prevailed in the neighborhood, especially as the horse had for some time been in the hands of the Court's officers. On the night of Wednesday, Nov. 19th, The Rover's throat was cut, and when found in his stable he was quite dead. The Rover, by Blair Athol out of Crinon, by Westminster, in his yearling days cost 1800 guineas at Cobham, but he never won a race, and, sinking by degrees in the social scale, passed into the possession of Mr. Knowles, a well-known Epsom "day" proprietor, who in turn sold the horse—after unsuccessfully advertising him for sale at £50—for a few pounds to Mr. Shine. But previous to his being banished to Ireland, the Rover's services had been called into request for two or three mares at the Worcester Park Stud, owing to the illness of Rotherhill, hence his alliance with St. Gatien's dam. It might be noticed, the *Life* adds, that The Rover was in conformity with the order of the Court to be sold at Sewell's Repository, Dublin, for the benefit of Mr. Shine's creditors, and the last offer refused for him—a totally inadequate one—was 700 guineas.

It is gratifying to note that there is a prospect of the villains who perpetrated this dastardly outrage being brought to justice, for we are told that the detective department has the matter in hand and that two arrests are deemed imminent. It does not seem that the act had any political significance, but is believed to have arisen from a desire for personal vengeance. Whatever the motive, there can be no possible excuse for so wanton and cruel a crime.

Byrnes reports all the horses at Rancocas as doing well and look well after so hard a campaign. Wanda, he says, looks as fresh as a green horse, despite all she has done, and Chimeria has thickened somewhat, he thinks. There was certainly room for it last Summer, when she was a trifle on the greyhound order. Matt doesn't seem to think much of Cholula—at least, he did not say much in his favor. Araza, he says, will be trained again, although he had understood she would be retired. As to the Mortener yearlings, he was as mute as an oyster, and as journalists never ask questions, we have no information on that point. Old Parole roams at will in his paddock, enjoying his deserved rest. They never comb and brush him, and the old fellow is as rough as a buffalo. Byrnes' principal regret is the breaking down of Pizarro, who he says, was a race-horse of the first water. Matt says the horse was a greater racer than the public thinks, but he had a peculiar lameness in his shoulder—a sort of rheumatism. His temper was so bad that he rebelled against being ridden, and his Suburban preparation was a world of labor. Finding the light jockeys unable to control him they got Charlie Sait, who mastered him, but in running a trial the horse gave way. Thus, according to Matt, it was run, rheumatism and rebellion that settled Pizarro.—*Vigilant*.

Mr. Harrison Robbins, the Philadelphia jeweler is proud of the distinction of having bred Maxy Cobb, but his pride is said to be at least equalled by his regret at having parted with the great stallion of the future for the paltry sum of \$400. Every now and then a stranger enters the store and the colloquy runs:

"Is this Mr. Harrison Robbins?"

"Yes, sir."

"I understand that you bred Maxy Cobb?"

"I did, sir."

"He is a wonderful horse. No doubt you realized a small fortune from his sale?"

At this point the conversation suddenly terminates, and Mr. R. retires to a secluded place and metaphorically kicks himself black and blue. Singularly enough another Harrison, surnamed Durkee, is said to be in a similar frame of mind because he sold an equal and undivided half of Jay-Eye-See for \$125.

Rancho del Paso has lost by death the chestnut mare Belle Dale, by Owen Dale, dam Bonnie Belle, by Belmont, from Liz Givene, by imp. Langford. Old Belle had seen twenty years of life, but appeared to be in good health, and dropped dead without having showed any signs of sickness. Her last foal, a weanling filly, by Longfield, is one of the most promising young ones on the ranch.

Mr. J. D. Christy, of St. Louis, owner of the two-year-old colt Bouanze, by Joe Hooker, out of Mattie Glenn, reports his colt as wintering well at Lexington, Ky., and states that he is engaged in all the principal three-year-old events to be decided in the West next season, with the single exception of the Kentucky Derby, which he thinks is a gift for Favor, barring accident.

Mr. L. H. Titus and Belle Echo have arrived at home, both in fine fettle after their triumphant tour through the Texan circuit.

Efforts will be made to make the track at Buffalo, N. Y., equal to the fastest in the country.

The American-bred Sachem evidently doesn't relish being left in England when others of his countrymen have been transported to their native shores. He has become a great kicker, and recently at Derby was very nearly sending Mr. W. J. Ford, the judge, who was passing him in the paddock, to join the large majority. He launched out wickedly with his heels and by a mere hair's breadth missed Mr. Ford's head. The expatriated son of War Dance and Sly Boots was made favorite in the race for which he was entered—the Belper Handicap over hurdles—but with 172 lbs. up finished second to Comrie, by Blair Athol, carrying 153 lbs., both being five-year-olds.

Mr. Baldwin's bay colt Shenandoah, 3 years, by Shannon, dam Demirep, by Melbourne, Jr., from Methilde, by imp. Scythian, has been sold to go to the Sandwich Islands. The colt sprung a tendon during the Fall meeting of the Blood Horse Association, and it is not expected that he will stand training for some time to come. If he proves to be permanently disabled he will be used as a stock horse. He was a great two-year-old, but made no fame or money for his owner this season.

The old Scotch saying that "gude gear is aye pliced in little compass," holds remarkably true in horsemesh. Captain Nolan, in his hook on Cavalry, speaks of an officer in Madras who on a heavy wagger rode his charger of 14 hands in heavy marching order six hundred miles in six days; the officer died under the effort, but the pony finished his great task showing no distress, and on the following day was in modern parlance "fresh as paint."

Patsy Hennessey, the well-known jockey, has again made his appearance in the pigskin, riding at Brighton. It was his first mount since he rode General Monroe at Chicago, last June, and those who remember his brilliant riding of former years will regret that he is not seen oftener in the saddle. Hennessey, ten years ago, was one of the crack "jocks" of the country, and in 1874 was in California, with A. S. Gage and Katie Pease.

The Santa Cruz County Agricultural Fair Association held a meeting at the Pacific Ocean House Saturday evening. The Secretary's report showed that there was over one hundred members, and the Treasurer's that there was \$248.59 in the treasury. E. J. Swift, Elmer Dakan, H. F. Wright, O. H. Willoughby, John Soper and J. E. Cunningham were elected Directors for the ensuing year.

## THE KENNEL.

## Pacific Coast Field Trials.

The second annual trials of the Pacific Coast Field Trial Club were run at Walltown Timber, El Dorado county, Cal., commencing Tuesday, Dec. 2d, and continuing through Tuesday, Wednesday, Thursday and Friday. The club had secured the use of a house, barn and appurtenances belonging to a Mr. Barton, about two miles north and east of the spot on which last year's camp was located. The Secretary had been informed that the accommodations were ample, and the birds more plenty here than at the old camp, and it was thought that the frosty air of the December nights might make camping out unpleasant. So a cook and attendant were engaged, supplies forwarded, and on Monday, December 1st, the medley of dogs, handlers, judges, and onlookers proceeded from Sacramento by special train to the scene of competition. But two of the judges were able to attend, Hon. Joseph McKenna, Congressman elect, from the Third District of California, being one of them, and Mr. Henry C. Brown, of Sacramento. Hon. D. M. Pyle, of Gilroy, was so pressed by business engagements preparatory to the January session of the Legislature, of which he is a member, that he was forced to send regrets. The number of visitors was large and they were genial. The father of all the Bassfords, Joseph M. Bassford, Sr., turned out with as keen relief as any of the younger men. He was made Grand Marshal for the meeting, and appointed Mr. W. S. Golcher, his deputy. The two white haired, rosy cheeked old gentlemen, by strenuous efforts kept very good order, but it was questioned whether the Grand Marshal did not make more noise in the performance of his duties than any eager crowd could. On Monday evening the dogs were drawn for the Derby, and on suggestion of Mr. E. Leavesley, Mr. A. G. Platt, of Alameda, was chosen as judge in place of Mr. Pyle.

For the Derby there were but eight starters out of twenty-three nominations. Six of the puppies died during the recent epidemic of distemper, two others were not permitted to start because their owner had to report the trials and did not desire to leave room for the auspicious of prejudice through fondness for his own animals, still others did not come to decent form and were withheld because they were not fit. In the All Aged Stake thirteen dogs were drawn out of twenty entries. In both stakes the entries were well bred, handsome brutes, some of royal lineage in a field trial way, but not, with one or two exceptions, fit for public inspection and exhibition.

There were doubtless good reasons for the lack of breaking shown, but such reasons however good are not sufficient to excuse the presentation for public criticism and judgment of rank, untamed, unhandled dogs. A field trial run with such dogs is a force for evil rather than good. One record in the common estimation is as good as another, and when a dog is shown as a field trial winner, it should be a dog of great natural merit, to which skill has added such accomplishments as are necessary to make a well broken dog. It is an affront to reason to gather heedless, headstrong, dogs and award prizes to them not because they are good, but because they are not utterly bad. In respect of breaking our experience has taught us little. In fact the handling this year was more pointless and worse than it was last. The dogs had things their own way and as a consequence the trials were not so satisfactory as they might have been.

The first place in the Derby was won by Trix, a reddish native setter of unauthenticated breeding owned by C. L. Eeklon, of Polson. Trix is a dog of unobtrusive form, but is of fair size, trimly built, good nose, and capable. His owner had hunted him from three to five days each week since October 1st, and the experience had made him a perfect quail hunting machine. He did not fault at all, was steady to fur and under the gun and at all times in hand. Second and third in the Derby were divided by Lemmie B. and Sweetheart, owned by J. M. Bassford Jr., and C. N. Post, respectively.

Lemmie B. is a squarely framed, low, sturdy pointer, bred by Mr. Geo. W. Bassford; a very nice looking pup, but as well content to hunt over a carpet for birds as anywhere else. Sweetheart is a very handsome, game looking setter bitch, recently imported from the Sanborn Kennel, blue belton in color, well boned, with good head, nose and feet, and of more quality than we have hitherto had, but under poor control. In the All Age Stake General Cosby's pointer, Bow,

Jr., also bred by Geo. W. Bassford, took first. Since last year Bow, Jr. has taken on matured form, and is as game looking as one could wish. In form he is not far from standard, and in his work is particularly stylish, while his nose is very good. Second and third in this stake were divided by J. M. Bassford Jr.'s pointer bitch, Beautiful Queen, and P. E. G. Azuar's setter bitch, Ola. Beautiful Queen did not show as well as last year, but has one virtue that covers a multitude of sins: she never trips birds, and is staunch on point and back.

Ola is a nice-looking black, white and tan bitch which has been in the hands of Mr. Leavesley for breaking. She is growing deaf, showed poor judgment on game, and a poor nose; but it must be said of all of the dogs but two or three that they have been hunted in heavy cover, and were at a loss when unobstructed range was offered them. The way in which they behaved made some think that perhaps it would be well for us to so change our rules as to lessen the points for pace, etc., and in place give points for work of the character demanded by the field shot on ground such as that most commonly found in California, viz: ground thickly covered with chemical, chapparral and briar tangle.

On Wednesday evening the annual meeting of the club was held, and twenty-eight new members elected. For the coming year Mr. C. N. Post was elected President, J. G. Edwards, 1st Vice-President; E. Leavesley, 2d Vice-President; N. E. White, Secretary and Treasurer; H. H. Briggs, G. W. Bessior, E. L. Mayberry, J. H. Burnham and E. L. Craig, members of the Executive Committee.

Puppies born on or after January 1st of this year, preceding trials, were made eligible in Derby. A committee was appointed to revise and modify the rules to meet the local needs.

At 9:30 A. M., on Tuesday, the judges called the second brace drawn in the Derby, one of the first brace having been delayed in transit.

## DERBY.

Sweetheart—Lola Montez.—At 9:34 C. N. Post's English setter bitch Sweetheart, by Count Noble—Dashing Novice and E. Leavesley's Lola Montez, by Roy Roy—Ola were put down on an oak covered point near the club house. Lola running rank and unmiudful of Mr. Gilroy's whistle. Sweetheart making wide casts, but leaving much likely ground uncovered. Soon a brood was flushed and marked in some oats and weeds a half mile distant. Working in that direction Sweetheart running around and up a knoll dropped to scent at very long range, and held her point until after the bird flushed and until she was ordered on. Lola ran in on a bird and broke when it flushed, chasing for some sixty yards. At 9:30 the brace was taken up and the heat given to Sweetheart.

Trix—Pet.—At 10:03 C. L. Ecklons, native setter dog Trix and J. Mervyn Donahue's English setter bitch Pet were sent in on the point to which the brood first flush had been marked. Pet put up a here and chased it out of sight. Trix ranged freely and quartered like an automaton. A hare was put out before Trix, and the dog dropped and remained till ordered on. At the point Trix began drawing stopped twice uncertainly, but finally moved in and pinned his bird in nice style, and staunchly. The bird flushed wild, Trix steady, and was shot by Ecklon. Trix ordered to retrieve, picked the bird up, but it was only wing tipped and it got away, the dog not breaking. Pet soon came to heel, and only by repeated orders could be induced to leave her handler. Moving on a bird flushed wild, and Trix drew on its hiding place and false pointed. At 10:50 the dogs were sent back and the heat given to Trix.

Dashing Money—Lemmie B.—At 11:07, the delayed dog, Mr. J. B. Martin's English setter Dashing Money, by Dashing Monarch—Armida and J. M. Bassford, Jr.'s pointer dog Lemmie B., by Prince Ranger—Josie Bow were started on an open slope, and at once moved off at great pace. Dashing Money in poor style, head low and tail down. Lemmie B. with better action.

Soon Dashing Money chased a hare and refused to stop to whistle. Then Lemmie B. began a chase but stopped to loud orders from his handler.

A hare tempted Dashing Money, but his handler managed to prevent a chase. After twenty minutes Dashing Money slowed somewhat. Both passed birds which they had a fair opportunity to point. In some weeds Money false pointed in pretty style and was backed for a moment by Lemmie B., who soon moved in and broke Dashing Money's point.

Passing on Dashing Money established a point on a quail several feet from the ground in a bush and Lem. refused to back. The bird flushing, Dash broke and chased. Each dog then made two flushes and chases and at 1:50 were ordered up and the heat given to Lemmie B. There was a difference of opinion about this heat, many believing that Dashing Money should have won.

Chico—Beautiful Snow.—At 3:20 Mr. J. T. Baker's English setter dog Chico, by Duke—Fanny, and Mr. Geo. W. Ellery's English setter bitch Beautiful Snow, by Dan—Sibyl, were ordered down.

Beautiful Snow showed great pace and fair style, but made atrocious flushes, as did Chico and at 3:48 the brace was ordered up for lack of merit, neither showing any nose or disposition to hunt.

## SECOND SERIES.

Trix—Sweetheart.—At 3:53 this brace was started in the first heat of the second series. Trix working high ground systematically, and abowing judgment. Sweetheart caring like a wild thing over an extraordinary range. Trix almost immediately, while at speed wheeled into point staunchly, Sweetheart brought up, refused to back ran in put up the bird and broke in, Trix steady to wing. Moving on a few yards and over a fence, Trix fastened another bird, Sweetheart refusing to back. The bird was put up, and killed by Ecklon, Trix being steady to shot, while Sweetheart broke shot and retrieved the bird nicely. A hare was then pointed by Trix who stood staunchly when it moved and at 4:08 Trix was awarded the heat.

Trix—Lemmie B.—At 4:14 this brace started to run off first money. Trix soon drew beautifully up wind, dropping, rising and cautiously moving in until he had located his bird where he stood. Lemmie B. brought to hack did so momentarily but soon ran in and put up the quail which was killed by Ecklon, Trix retrieving tenderly and well.

At 4:26 the dogs were called in, and the heat and first money awarded to Trix.

Lemmie B.—Sweetheart.—At 4:32 these dogs ran for second place; Sweetheart at speed, and her handler holding her neck to neck in the race. She soon flushed a bevy, and broke in and immediately thereafter put out a single bird, in neither case having the wind fair, Lemmie B. doing as he had before done, chasing the beaten way and open ground for his constitutional, and carefully avoiding such spots as might harbor a quail. At 4:52 the judges ordered the dogs up for the night, and expressed the opinion that neither of the others could hope to be placed in heats with Lemmie B.

and Sweetheart, so Mr. Bassford and Mr. Post divided the nurses.

## SUMMARY.

Walltown Timber, Cal., Dec. 2nd, 1884—Derby of the Pacific Coast Field Trial Club. Open to all setters and pointers whelped on or after April 1st, 1883, and owned on the Pacific Slope. Entrance \$10. Prizes, \$100, \$50 and \$25. Judges, Hon. Jos. McKenna, H. C. Brown, A. G. Platt. Stake closed Nov. 10th with twenty-three entries.

## I.

C. N. Post's blue belton setter bitch Sweetheart by Count Noble—Dashing Novice	beat	E. Leavesley's white and orange English setter bitch Lola Montez by Roy Roy—Ola
C. L. Ecklon's red native setter dog Trix by Count Range—Queen	beat	J. M. Donahue's lemon and white English setter bitch Pet by Dick—Belle
J. M. Bassford Jr.'s white and lemon pointer dog Lemmie B. by Prince Ranger—Josie Bow	beat	J. B. Martin's white and lemon Eng. setter dog Dashing Money by Dashing Monarch—Armida
J. T. Baker's blue belton English setter dog	Choice by	Duke—Fanny and Geo. W. Ellery's white and orange English setter bitch Beautiful Snow by Dan—Sibyl ordered up for lack of merit.

## II.

Trix beat Sweetheart—Trix beat Lemmie B. and won.

## III.

Sweetheart and Lemmie B. divided second and third after an undecided heat.

NOTE.—On account of the demand on our space the report of the All Aged Stake is deferred till next week.

## Death of Charles Lincoln.

This well-known promoter and manager of bench shows died suddenly of pneumonia, in New York, on the 3d inst. Mr. Lincoln was born at Darlington, England, in 1842, and was chief promoter of the first dog shows of importance in that country, beginning with the bench show at his native town in 1862. Interest rapidly grew, and he became identified with nearly all subsequent shows up to the time of his departure for America, in 1869. After his arrival he resided in Canada for a time, and finally removed to Detroit, Mich., where he made his home up to the time of his death. About ten years ago he was engaged to superintend a bench show of dogs at Detroit, under the auspices of the State Agricultural Fair. Thenceforth his services were in demand, and he acted as superintendent at several exhibits of minor importance, until, in 1876, the Centennial Dog Show, at Philadelphia, created a national interest in exhibitions of this character. The following year the Westminster Kennel Club, of New York, an organization at that time in its infancy, projected a bench show of greater magnitude than any previously held in this country, and Mr. Lincoln conducted this very successfully. The rapid growth and development of bench shows and the ever-increasing fancy for blue-blooded dogs may be attributed directly to Charles Lincoln. He has been aptly termed the father of dog shows.

During the present year 4,800 guineas have been given away in England, Scotland and Ireland for Queen's plates. This money was distributed among thirty-three races, in which there were 106 competitors. The English prizes, excepting that for the Newmarket, which is worth 300 guineas, are of the uniform value of 200 guineas. This year there were fourteen, which were paid for from the Queen's privy purse. The seventeen Queen's plates carried off by Ireland and the two falling to Scotland are only worth 100 guineas each.

## Fox Hunters' Vernacular.

DEAR BREEDER AND SPORTSMAN.—The article "Fox Hunting in America," published in your paper of November 22d, contains one such glaring mistake that I cannot refrain from drawing your attention to it, viz: that "Tally Ho! means back." The writer of the article, has I am sure never sat on his horse by the covert side, anxiously listening, timidly dreading, lest the old vixen should have stolen away, when of a sudden the air is fairly rent with the soul stirring "Tally Ho! Tally Ho! T-a-a-l-l-y H-o-o! Gone Away! G-o-o-n-e A-w-a-y," from some true and well-known sportsman, or he would never imagine it could mean "back," especially if followed immediately by the cheery "Hoick Holloa! Furrard! F-o-r-r-a-r-d," of the now delighted huntsman. Tally Ho! is the view halloo of the fox hunter as "See Ho!" of the hare hunter and the "who gaze?" of the otter hunter. It is true that "Hally Ho back" is used when a cunning fox runs a short way from cover, eludes the hounds and is known to have again made cover; used, but in a very different tone from the well known "View Holloa" of the famous John Peel. The writer reminds me of the old story of the Frenchman who, when he heard that the fox had "gone away" concluded the sport was over, and making his bow returned home himself. In sporting parlance hounds are never spoken of as dogs.

Los Angeles, Nov. 25th.

A. J. H.

At a meeting of the Gilroy Rod and Gun Club held Tuesday evening, it was decided not to have any Field Trials this year.

## FISH.

We reproduce a paragraph from the report of the Fish Commissioner, appearing in our columns last week, for two purposes, to show how stupidly and erroneously matters are sometimes placed before the public, and to do justice to the enterprise and liberality of the California Sportsman's Club, who were the first to introduce black bass into our State, at a cost to the members of \$1,000 in gold coin, paying at the time \$100 each for ten fish. The paragraph says:

"The Commissioners are making the most strenuous efforts to secure the eggs or young fry of the black bass for our waters. Livingston Stone, of the United States Fish Commission, says the eggs are not to be had in the Eastern market, but he can procure young fish. The black bass is a very game fish and is said to afford finer sport than trout. Years ago the Fish Commission here planted some in private preserves and reservoirs about San Mateo, with the understanding that they could be drawn upon to supply other places. There are black bass there now, but no one is even allowed to fish there without a permit from George Hearst or other owners, and boats to go out where the fish are not allowed even by those who have permits to go to the ponds. A sixty-pound black bass is reported to have been caught at Humboldt Bay. President Buckingham says it was neither a striped bass, which are frequently caught, nor black bass, but a variety now found in Monterey Bay, and which were once so numerous as to glut the San Francisco market. But few black bass are caught in California, yet the fish do well in the rivers and lakes. Nearly all varieties of Eastern fish have done well here, and as many more varieties as can be obtained are to be purchased from time to time."

Now, in reference to getting black bass for propagation, we beg to say the Fish Commissioner, or any private gentlemen, could have had an ample supply for that purpose from the Association mentioned as they are anxious to have the State supplied from their superabundance of young fish. But, in no case, have the members of the California Sportsman's Club been applied to by State officers or private gentlemen for young fish for that purpose. The original fish were placed in Lake Temescal, near Oakland, and have multiplied abundantly, but in that water, from some reasons, they have not grown to any particular size. A few months ago we were present with the members of the club when they had Lake Temescal seeded for the purpose of transplanting the young stock to Lake Merced. Speaking from memory, we think the first day's catch was 960 fish from one to six inches long. Considerably more than that number were turned into Merced, now in charge of the club, when the seeding was completed. If the Fish Commissioners, or any private gentlemen, will apply to Mr. Chas. Lohse, of the California Powder Works, California Street, we take upon ourselves to say they can have all the young stock next year they can reasonably want for propagation without meeting with rebuffs and incivilities from dog in the manger men. We thought these facts had been known to everybody in the State long ago.

## A Good Dodge.

A fortnight ago, one week day, there was a terrible commotion among four or five Chinamen fishing off Tiburon Point, in the neighborhood of a few of our well known Isaacs who were also out for the day. The Chinamen had gathered in a nice lot of fish, among which was a rare catch in a splendid nine pound salmon trout. All of a sudden the Chinamen, scared to death, came, running to the gentlemen in question shouting and gesticulating as they only do when in mortal terror. "Comee Leree, comee now; comee light alongee; we catchee fishes that whistlee and says bad cussee words allee same as Mellican man; Chinamen catchee the devil this timee sure; comee along." So to see and hear so strange a fish they all ran hack with the scared heathens, and there sure enough was the splendid salmon trout whistling Yankee Doodle, and anon cursing like a drunken, enraged dragoon. "What'yon think?" again asked the Celestials, "that fishee the devil?" By this time our local leech, smart as they are in the art, were puzzled also for there was no mistaking the whistling and cursing of the fish, and soon retired scared and puzzled almost as badly as the Chinamen, for the fish at times was awfully profane. Sitting close by and taking but little interest in the matter, was Manuel Millzner, the jeweler, of Kearney St. Of course the Chinamen would not touch the fish after what happened, but not so Millzner. He quickly helped himself to the salmon trout, which kept up uttering curse words, and one or two others worth taking, and quietly marched off, grinning a grin that reached from ear to ear. We can explain the whole business. We happen to know both Manuel and John Millzner are most expert ventriloquists, and that on this occasion he had resorted to apparently, unnatural powers to dodge the beautiful salmon trout from the grip of the thieving heathen. If the Fish Commissioners will engage these young men to hunt up the Chinamen in their nefarious practices round the bay our salmon, or at least such as the sea-lions leave, will come back to our river, and regain their wanted fatness. Let the Millzners make the fish "talk curse words all the same as Mellican man," whenever the opportunity serves, and the thieving, destructive Chinaman is swept from our waters. They have defied all State authority and evaded all police surveillance for years, but it seems as if we had them by the hip at last.

We clip the following from Tuesday's *Chronicle*, showing, as it does, the criminal wicked waste of public food matter that prevails in all parts of America. In California, in addition to this natural or unnatural waste, we keep 2,000 voracious sea-lions to devour our salmon, and 6,000 Chinamen to catch the small fish on which the salmon feed and fatten, and then wonder that the salmon have deserted the Sacramento river. Salmon here, like the white fish in the East, must be fairly protected or no natural or artificial means will keep up the food supply. Let the following be read with care, and, if you like, with prayer:

"Shad are never seen in the Eastern markets save in the Spring of the year, when they pass up the rivers to spawn. It is supposed that they then return to the warm deep waters of the Gulf Stream. It has often been a subject of remark that the same fish are caught here at all seasons of the year and the general opinion prevailed that this was owing to the choice and abundant feed to be obtained in Monterey and the adjacent bays. Recent experiments in Lake Michigan would point to another more potent reason why the shad do not take to the deep water on our coast. It has thus been found, that although the lake has been freely stocked with millions of whitefish, that thrive admirably, yet year by year the catch is diminishing, until now there is a danger of this valuable species being exterminated in these waters. Research has been made as to the cause, and the experiments have proved that, unlike many other hardier varieties, the whitefish hug close to the shore, where the water is shallow and warm. These shallow reaches of the lake, from Chicago to Buffalo, are almost literally lined by trap nets, set by the dwellers along shore. In such nets, with fish of larger size, the partially grown whitefish are caught. When the nets are pulled up these later are not preserved for food, but thrown back into the water dead, being too small for use. Thus thousands upon thousands are killed every year on almost every mile of shore line along the lake. Here, then, is the reason why the food stock of delicate whitefish in the lakes is not increased, but rather steadily diminished year after year. By the light of such experience we may explain the more migratory habits of the shad on this coast. They have no gulf streams to resort to after spawning and the deep waters of the ocean are probably too cold for the young and tender fish, that in consequence take to the warmer waters of shallow bays."

A leading daily last Tuesday tells a tale with much circumstantiality about sharks swimming round certain ships after their heads were cut off as if nothing had happened. Well, we raise that yarn \$5. It is an historical fact that Charles I. of England, in spite of old Cromwell, walked and talked half an hour after his head was cut off, just as if nothing had happened. With the sharks, however, as with the king, it is the application of the comma, and the infection of the voice while speaking that does the business. The shark yarn and that of the salmon weighing 111 lbs. may be true, but they should both have been turned loose a little sooner, before the holidays.

THE GUN.

On returning to work after a most delightful vacation, prolonged beyond the time originally intended, we have been much gratified by the hearty welcome given by all classes whom we are in the habit of meeting in business connections. The reception given us by the members of the gun and rifle clubs was very gratifying. Together their kindness will form an additional incentive to increase our efforts if possible in their behalf, and the interests of legitimate sport generally, which it is pleasant and encouraging to find are bearing rich fruits in all parts of the State.

The different clubs since Thanksgiving Day have all had good sport. Ducks of all kinds are reported abundantly plentiful and in fine condition, a fact that those who have seen in the market this week prove. We never saw birds generally in finer condition. (They sent up fifty sacks of grain, last week, to their grounds.) The Teal Club, with three members and two visitors, Messrs. Joseph Grant and Geo. S. Ledd brought down 400 birds for last week's work, the birds being mixed with a few canvassbacks.

The Cordelia Club has not done so much, though they had some very good sport. A party of three gentlemen were up at their place last week and bagged about sixty birds.

The Tule Belle Club had a party of three last week, Messrs. Bogart, Wilson and A. L. Bencroft. They bagged about eighty birds. The gale at Sherman Island was simply fearful on Saturday, from which the party lost more than half their birds; the water being so rough that, on falling, they were immediately covered with weeds and lost. It was impossible for a man to stand up in the boat and shoot. Mr. Holmes was up to the Island last Thursday and bagged 59 ducks and three dozen snipe. All parties have been crying out for more wind during the late pleasant weather, and Saturday and Sunday they had more than they wanted.

The Alameda Club have also had good sport at their preserve. On Thanksgiving Day Mr. Adams, the champion of the Club, with Dr. Belh and Mr. Cunningham, went down to Mallard and made good bags, Dr. Belh also getting about three dozen snipe, which are abundant there. Nick Williams is Major Dome of the camp this season, and the members of the Club feel the benefit of his abilities as a cook. On Thanksgiving Day he surprised those out shooting with a sixteen-pound turkey cooked in his best style. Williams is the right man in the right place. On Thursday last J. K. Orr, Messrs. Miller, of the Oakland Bank, and Mr. Chisholm went down and Williams prepared them a duck stew of such splendid character that they cleaned out the whole at one sitting, though enough for a dozen men. Mr. Orr says this is not true, but Williams hits back by saying he will not cook for the same party again unless he gets a week's notice of their coming beforehand. Mr. Adams, the champion shot of the Club, has killed 169 birds in three trips to Mallard. Among these were three cinnamon teal, a drake and two ducks. He has also killed a "lesser" bittern, a rare bird in California; this, with the male cinnamon, he intends having stuffed.

While speaking of the Clubs we feel called upon to notice a silly and offensive paragraph appearing in one of the dailies last Monday. The paragraph insinuated that members of different clubs making "big" bags had hired men of ability with the gun to help them. Such a statement displays deplorable and inexcusable ignorance in a public journal pretending to speak on sporting matters. Messrs. Whittier, Fuller and Smith, of the Teal Club, are more than average field shots, while Messrs. Upham and Goodall are men of established reputation at the trap. The same may be said of members of the Alameda, Cordelia and Tule Belle Clubs. Out of the latter we could mention thirty or forty names that are good for ten, often clean scores, at their Club pigeon matches. It is a poor business for a public journal to be insolent in its attempt at smartness, and we feel it our duty, in justice to the parties insulted, to correct and expose its ignorance.

English snipe, according to all account, never were so plentiful in California as this season. The markets are glutted with them. Messrs. Auradon & Co., of the Washington Market, informed us this week they could buy them from the hunters at one dollar per dozen. Canvass backs are also plentiful. We heard of one sale at three dollars a dozen, the usual price for a good brace. Messrs. Mowry and Benton & Co., of the California Market, promise abundance of game for Christmas. When the happy season comes in this grand State of ours, let the rich remember the poor.

The Pierce Brothers, of Oakland, have all the late alterations and additions to their store completed. There is now no handsomer or more perfect establishment in the State. The reading room for the members of the Alameda Sportsman's Club, with the BREEDER AND SPORTSMAN as its prominent light, is as comfortable and pleasant as money and trouble could make it. The people of Oakland, the members of the Alameda Club especially, are under many obligations to these enterprising young merchants. They have now in their possession a very handsome shot gun, valued at \$150, to be competed for next season in a series of matches by the members of the Alameda County Sportsman's Club. The gun was presented by Mr. Baird, of Pittsburgh, Pennsylvania, for attentions paid him by the club when on a recent visit to this State. The man who will be lucky who wins this splendid gun.

Mr. John Pollak informs us duck-shooting was good at Byron's, on the San Joaquin, until the late storm. Then the birds huddled together out of reach, and could not be approached.

Mr. Bogart says he never, in California, before saw so many canvassbacks as last week flew over Sherman's Island, heading up the San Joaquin and its tributaries. We think it very probable they seek the ponds of the upper rivers, where they find an abundance of good fresh food, and that they will do so until forced down to the lower waters by necessity. On Tuesday we saw a pair in Golcher's store that we judged weighed three and a half pounds each. All canvassbacks so far seen are in splendid condition.

Those who enjoy snipe shooting—it is the highest kind of sport—can find good grounds near Collinsville. Indeed they can scarcely go astray this season in places where the birds frequent at all.

On returning home we called upon our old friend Tom Pearson and regretted not finding him at his office. We learnt, however, that he is preparing a pigeon match at Fresno for early next week. Murphy will supply the birds. Pearson will find some men round Fresno who can handle the gun right handily. During that trip it wont do him a bit of harm to keep his weather eye open.

The Italian fishermen, of Suisun Bay, now they can no longer steal the public fish, are supposed to be marauding the private duck preserves of the Clubs. Rifle and pistol shots have been exchanged on dark nights, but so far no one hurt. We should not be sorry to hear a stray bullet from the keeper's rifle struck down one of these marauders, for private property must be preserved, and night shooting at ducks will drive the birds away sooner than anything.

While speaking of night bird shooting on preserves we regret to hear the Alameda County Club have passed a resolution sanctioning the abominable practice at Mallard this season. Nothing is more fatal to the reputation of sportsmen or to sport than this vile practice. Neither game animals, birds, nor fish will frequent their haunts if disturbed during the feeding hours at night. The Alameda Club is composed of a number of true gentlemen and sportsmen and we cannot understand the passage of such a resolution. Let it be rescinded without delay.

The Placerville Republican says: "We hear it rumored that some deer were found 'froze' to death, near this city, last Sunday. There is some wood at the court house to be sawed and the whites should do it, not Indians like last Fall, for violating the deer law."

The suggestion about the white man and the Indian is a good one. It is just in such practices that the distinctions and privileges of birth fail to have weight and the white man falls lower in manhood than the red man. Let both of them go to the chaingang together for poaching.

Mr. Platt, a member of the San Francisco Gun Club, has recently had a hunting trip to Lake County, and informs us he never enjoyed better quail shooting, the birds being strong and numerous. He thinks Lake County the sportsman's paradise. We wish we could speak as favorably of the local residents, as men, gentlemen, or American citizens. There is, in truth, no more vagabond lot of poachers in the State, almost every man making a practice of killing deer out of season, to the most disgraceful extent. This has come to our knowledge repeatedly of late. Here is a case in point which truly pictures the manhood of these people: Two men, notorious deer killers at all times of the year, recently quarrelled and out of spite one had the other arrested. At the trial the prisoner was fined \$25, the lowest penalty the judge could impose. There and then, his fellow vagabonds, stained deep with the same crime, chipped in one dollar each and paid the fine. But that is not the worst of the tale. Since the trial the judge sentencing, the attorney prosecuting and the sheriff arresting the prisoner, have all been known to commit the same offense, and to do so at all times, with as little compunction as the dirtiest vagabond poacher in the county. Does not this monstrous case of law breaking by State officers elected to sustain the law demand executive interference? We call upon the State Sportsman's Association to take this case in hand, and see that these doubly-dyed vagabonds are removed from office with every possible ignominy, if they cannot be punished in the courts they preside over and degrade. In the meantime, we have been named a committee of one to look after these penitentiary candidates, and we shall do so.

There is a new gun to be seen at the stores of Mr. Golcher, of Montgomery, and Mr. Allen, of Market streets, which at present is attracting some attention and some controversy among our sportsmen. This is the repeating shot-gun made by the Spencer Arms Co., of Windsor, Conn. It has a magazine and discharges seven cartridges without reloading, by pushing a lever below the barrel backwards and forwards with the left hand. We never start off in a hurry about such inventions, but if the principle is good in the rifle, why should it not be so in the shot-gun? We can certainly see conditions and positions in which it would be very useful, if it possesses the merits claimed. The gun is handsome, well made, well balanced, and light. Mr. Frank G. Smith, attorney, of this city, has bought and used one, but we have not been able so far to interview the gentleman on the question of its actual merits. We shall know more next week.

Los Angeles Notes.

We have got some sporting notes of the sunny south still unused, which will be found quite worth reading. The first is a trip made by Mr. Lockwood, of the railroad telegraph office, president of one of the local rifle clubs, and a perfect sample of the true sportsman. About a month ago, in company with some friends, the gentleman made a hunting trip to the Santa Ana river, about twenty-five miles below the city. They had gone up stream a few miles when they reached a branch, and as they did not exactly know on which arm of the water their intended camping place lay, prospecting parties were sent out. Lockwood took the branch by himself, the others, the main river, and they were soon more widely separated than they imagined. The result of the investigation was that the place of destination was not on the branch, and so he returned back to rejoin his comrades, but this proved no easy matter. He had gone a great deal farther than he supposed; darkness was crowding in upon him, and he soon found he had nothing before him for the night, but to build a fire and camp out alone, hungry and tired. The preparations were soon made; a fire started; a bed of grass, leaves and pine tops made, and amid the comfort of both he was fast asleep in a few minutes. Unfortunately he had built the bed too near the fire, and after a while the dry rubbish got aflame and set fire to his coat loaded down with cartridges. It did not take long to explode these, and in the rapid shooting all round him he supposed he was attacked by Indians and

jumped down to the water like a deer to hide. In the meantime he had discovered the cause of the real trouble, for his surroundings had become unpleasantly warm. We need not follow his calamities farther, for he was soon under the cold water putting out the fire in his clothes. When found by his friends in the morning he was in a truly delapidated condition, but the particular part of his breeches and person most damaged can be as well imagined by others as told by us.

The dog-poisoning fiend, it seems, dwelle everywhere. Mr. F. G. Browne, a prominent member of the local Gun Club, recently lost a most excellent setter, perhaps one of the best duck dogs in the State, by these foul means. The intelligence and fidelity of Bob were rarely equalled, and it is almost impossible to do either justice. He was quite well when the family retired for the night, and the next morning early he was found on the veranda on his hack, ewelled out and dying. How can a Christian man or woman go down to their grave with such a crime on their souls?

After the election, and it was real hot in Los Angeles, Col. Mayberry, of whom we shall have to speak hereafter as he deserves, gave Col. Markham, the Republican congressman elect, a three days' quail hunt at Puente, selecting Mr. Hollenbeck's cattle ranch at that place for the shoot. Mr. Mayberry is the owner of the celebrated dogs, Dan, Gunner and Sybil, and so with plenty of birds the sport was everything to be desired. They averaged about three dozen a day, as much as gentlemen ought to kill. Col. Markham, we learn, is well named, for he brought his bird down every time. If he is only as successful in dropping the Democratic birds in Congress his party, county and State may be well proud of him. Mr. Isaac Cooper, of San Gabriel, accompanied the party and for the three days a total of 154 birds were bagged.

The local Gun Club this season is unfortunate in its fine preserve at Balloona near the ocean. The continued storms and rains of last Winter carried away the embankment of sand which formerly made their lake, so that at low tide the water all runs out to sea. This is a great loss to the members of the club in other ways besides sport. The entrance fee of the club is \$100 each, and this season the members will have to resort to other places for birds.

We saw a very rare duck in the market one day while out with Mr. John Kuhrts examining the different kinds exposed for sale. These were something we had never seen before, and are rare in California, only at intervals and in small numbers being seen on our northern waters, and only seldom on the southern. They were the Mexican wood duck. Like the California bird of the same name, they are very fine eating.

In our last week's issue there was an apostrophe to King Cactus, of Southern California, taken from the note book of a hunter. In principle the thing was all right, except in this case locating the detestable produce in the valley of Temecula, one of the richest valleys in Los Angeles county, and more free from cactus than any other region in the county. We accepted the invitation of Messrs. Charnock, Morrell, and Robinson, who have the land for sale, in their excursion and thus speak from personal knowledge. It would look treacherous and unjust in us if we did not correct the error thus made. Temecula valley has no cactus.

THE RIFLE.

Our rifle column this week is not as copious as we desired it should be, but there are many reasons for this which our friends will easily understand, and we trust kindly overlook.

On Sunday last, the gale which astonished our people by its severity, of course greatly interfered with the day's shooting both at Shell Mound and at the Alameda Park. The morning was so unfavorable that we imagined the events advertised would be postponed, and, therefore, did not visit the butts as usual. Nothing in the shape of weather, it seems, intimidates our riflemen, and to their credit, be it said, they turned out in number at both of the favorite resorts, and did good work in spite of the unfavorable day.

At Schuetzen Park, Alameda.

The event here was the regular medal shoot of the crack California Schuetzen Club. In number, wealth and ability as marksmen, this is unquestionably, as a private organization, the most important in the State if not in the Union, and we have often regretted its meetings should be so poorly reported. During the last year we have endeavored very diligently to correct this error, but for some reason we cannot understand we have failed to do so. We think it quite time more importance should be attached to their proceedings, and we can only say, if aided at all, we shall only be too happy to accomplish so desirable an object. On Sunday, Philo Jacoby maintained his position as a sharpshooter, though his score, as well as others, fell behind the usual standard. In fact, in such a gale, we are surprised such good scores should be made. The score:

Philo Jacoby, champion prize, 406 rings; F. Boeckman, first class prize, 396 rings; Klotz, second class, 396 rings; Helm, third class, 336 rings; C. Mangels, fourth class, 332 rings. At the same time and place the San Francisco Schuetzen Verein, the parent organization of the Schuetzens, whose history we recently published, also had a prize medal contest and the shooting with these gentlemen was very close. The winners were:

F. Brandt, first prize, 25 points; F. Boeckman, second prize, 24 points; F. Freese, third prize, 24 points; K. Wertheimer, fourth prize, 24 points; Wm. Ehrenpfurt, fifth prize, 24 points.

The Eintracht Club.

The members of this enterprising club were also out on Sunday, but as with the other people out, the gale reduced the general score largely. Capt. Fred Kuhls seemed to be the only man whose nerves were equal to the racket. The score:

Kuhls, champion medal, 406; Stamer, 370; Kauffnug, 342; Koltz, 1st class medal, 355; Streuber, 236; Weisel, 291. Gumbel, 2d class medal, 287. Hagerup, 3d class medal, 310; Klare, 250; Brockenwager, 252; Wolff, 247; Young, 69.

In another column will be found a new advertisement of Mr. E. T. Allen, 416 Market street. The guns advertised are all first-class articles, and, at the prices offered, a holiday bargain not often met with.

## At Shell Mound.

The gathering here was quite respectable considering the day, and showed a degree of enthusiasm which speaks volume in praise of our military marksmen. What shooting was done was all at the 200 yard range, the howling, fitful wind entirely precluding any attempt being made at the outside 500-yard range. The third Infantry had a delegation present to shoot for regimental marksman's badges. All things considered the shooting was good though under the necessary percentage, and the final shooting was postponed until a more favorable day. We were promised the score on Wednesday morning for publication, but failed to get it although we put ourselves to some trouble to do so. During the day Messrs. Townsend, Johnston, Klein, Salm and Despauz, for the fun of the thing, had several handicap matches, at 200 yards, for sandwiches, cigars, and the other things, but the shooting was not particularly good. The best scores out of a possible fifty were made by Klein, 46, 44, 45, and 43. To-morrow there will be a delegation of the Fifth Battalion out at this range, who with other marksmen of repute will make the shooting worth seeing.

## Remarkable Scores.

Our brother riflemen in the East seem to question some of the remarkable scores made in this State during the current year. Perhaps, in this case as in others where the thing is not relished, the wish is father of the thought. If the Eastern men will send a team of six, eight, ten, or twelve men to us next Summer, they will be met in good spirit and be taught a lesson which will convince them our records are correctly reported. In the meantime we give them one or two more cases which we collected during the week. The first is Lieutenant Kuhnle's record in six shoots of 100 shots each, with a possible of 500.

1st, for champion medal, 460; 2d, with St. John, Co. C, 464; 3d, with Houx, Co. C, 463; 4th, for champion, with Lieut. Kellogg, 463; 5th, with Houx, Co. C, 463; 6th, with Sergt. Hovey, 462. Total, 2,750.

These records were all made shooting with members of the Fifth Battalion, except the first. If we could have got the number of bull's-eyes in the whole the record would have been still more remarkable. The percentage of the whole is over ninety-two. There is no doubt of the correctness of the figures given. The next are records of Lieutenant Kellogg, at Shell Mound and Petaluma, about five weeks ago. At 500 yds., in 23 shots, he made 22 bull's-eyes. At Petaluma, two weeks later, in 17 shots he made 16 bull's-eyes, or in 40 shots altogether, 38 bull's-eyes. Then comes Howard Carr's champion record of 471 out of a possible 500. We have a photograph of the target in this case, the bull's-eye of which was eight inches. In this shoot Carr made 71 bull's-eyes, while a twelve inch square from the centre of the bull's-eye will include every shot made out of the one hundred. Captain Siebe, of Shell Mound, kept the score on this occasion, and the original target bears his stamp in proof of its correctness. With such instances of marvelous shooting, our Eastern brethren may well wonder and doubt, but with the rifle, as with everything else, California must take a leading place. Let them come and contest our shooting.

## Matches to Come.

On the 23th instant, at Shell Mound, Messrs. Carson and Klein will shoot a 100-shot match, at 200 yards, against Cummings and Perkins. All these gentlemen belong to the celebrated "Big Six" of the Nationals. This will be the second time of their coming together in an endurance match, and the shooting will be for victory, and to heat, if possible, the grand score they made in their former match. The contest will excite much interest. There is another match on the tapis causing much speculation among riflemen, but we forbear saying more about it at present, lest we should scare one of the parties by our ideas of the winners.

The California State Rifle Association held their meeting at Eintracht Hall, Post street, last Wednesday night, for the distribution of prize won at the Fall meeting of 1884. The meeting was largely attended and passed off with spirit. We cannot give particulars until next week.

## POULTRY.

## Requisites for Success with Poultry.

In the poultry business and everything else we are looking for that which yields us the greatest amount of profit. There is, without doubt, much difference in fowls, and care and keeping tell more and with quicker results on some than on others, yet the true groundwork of success lies with the owner or keeper. If the attention be turned principally to market chickens, they must be hatched early to be profitable. To do this we must make preparations the previous season, and when the chicks come have warm, comfortable quarters. For this purpose there is no fowl quite equal to the light Brahma. With a cross of Leghorn blood they are quite hardy, and mature earlier than the pure bred. The Leghorne feather early, and for the first chickens of the season this is an advantage that cannot well be dispensed with. The hens require a comfortable place to sit in when the weather is cold. They should not be allowed to sit on the ground. A half barrel or old cast off corn basket, filled pretty well with fine straw or hay, forms a good nest for an early sitter. The first sitter should be a Brahma, or a cross with Cochon blood, as their larger bodies and greater amount of soft feathers impart and retain a greater degree of animal warmth to the eggs. The early sitters should have a place in some building where they will not suffer from the annoyance of the layers. It is better and lessens the trouble to have the eggs all set at one time. The sitters can be trained to come off at a certain period of the day with a little care and forethought, and as the eggs are apt to take a chill if left too long, the attendance of the keeper is necessary to avoid mistakes. In warm weather the eggs may remain uncovered for several hours and take no harm, but when the mercury is considerably below freezing the case is different. A larger percentage of the eggs hatch in warm weather than in cold, for, in spite of every precaution, the outside one will get a chill. The chicks should have a warm, sunny cover with gravel floor to run and scratch on. The first thought of a hen is to scratch for her brood. For sitters, pullets are to be preferred, as they are more tractable and easier of management; besides they care better for the chicks. There is little danger if kept well housed, fed and cared for. Medium-sized flocks are more successful than larger broods.

There is more profit in small flocks well tended, than in large ones half neglected. When the hens are crowded, half the profits are lost. For layers, the chicks should come off early, that the pullets may get done growing and into laying before cold weather sets in; although for layers we may wait until April, or even May, when the weather is more congenial, and, with the smaller breeds, later still. Indeed with the small breeds, where fowls for eggs are the only consideration, it is quite as well to wait until July, and feed well. All this season the little birds come out strong and healthy, and require little attention beyond feeding. If plied with hearty food they will eclipse the cold weather chicks the following Winter, as they are perfectly hardy and robust. They have about ten weeks at the finest season of the year, and the leg-horns at the expiration of this period are fully feathered; but the feed must not be neglected. For show birds we must set early, and also for extra fine large chicks; although, as far as the latter are concerned, I have raised as fine large hens from the late broods, and they were early and persistent layers, too, as ever came from the early hatched. The Leghorns and Spanish require warm weather, and will not hear neglect. On these two breeds care and feed tell marvelously. Although they tell on any breed, still the Brahmas, beyond the greater amount of flesh, are more tardy in return. It is certain that the smaller hens yield the largest amount of eggs in a year, just as the small cows give us the greatest quantity of milk. It is a noteworthy fact large hens more often drop small eggs, while the reverse may be credited to the lesser birds. In choosing eggs for sitting, or rather in choosing hens to lay for hatching, there should be some care taken. For market chickens select hens that have size and plumpness, with small, neat heads, well shaped and healthy. The cock should be small—that is, not over-sized for his breed, with heavy shauke, plump, straight breast, and rather long neck. Many make a mistake in choosing a large, heavy cock; in fact, an over-grown bird is not fit to breed from at any time. His progeny are apt to be misshapen or otherwise disfigured. The neat, snug, compact bird is the one to choose for breeding purpose, no matter whether we breed for eggs or chickens. There is a difference in seasons in regard to the health of fowls as well as stock of every description. When the spring is cold, backward and inclement, the chicks will not thrive, for prepare as we may, we can not entirely shield them from the cold blasts. Still, the little things will brave considerable cold if well fed. Laying hens suffer about as much as any poultry from the cold. They are extremely sensitive in this respect, their feed must be regular and never neglected.—C. B. in Country Gentlemen.

## SHEEP.

## Hints on Selecting Sheep Ranges.

Henry Stewart, in the New York Tribune, gives some interesting points about the kinds of soil which are suitable for sheep culture: Many a shepherd who has done well with his flock in a certain locality, having become experienced in the care of sheep, is surprised to find when he moves to another place that his flock wastes and comes to grief. "Experience teaches" and must teach in this respect, for one-man's life and opportunities are not sufficient for him to learn all that needs to be known in regard to keeping sheep successfully. Therefore the shepherd may well study "shepherd's lore" in regard to many things appertaining to the flock, and not despise it for its ancient flavor. Old shepherds firmly believe that some localities are unfit for sheep keeping, and avoid them because the sheep "pine" upon them. Such lands are often called "pinning" land upon this account, and sheep farmers in Scotland and England would refuse to occupy such a farm rent free. Perhaps we have in our own country no more notable instance of such a condition of soil than that afforded in the comparison of the limestone blue-grass region of Kentucky and the adjoining sandstone country which stretches off to the Northeast corner of that State. For cattle, sheep and horses, the former region is perhaps the finest and most productive in the world in quality and extent, while the latter is so poor as to have remained a wilderness up to this day. Similar instances exist in England, where the finest mutton in the world, the Southdown, is produced on soils that are underlaid with chalk (lime) and overlaid with the sweetest and most nutritious pasture. Lime and phosphoric acid are indispensable to the welfare of an animal; because they supply the necessary element for the growth of bone, and flesh cannot be produced unless the bony frame for it is first laid. The natural herbage of soils rich in lime and phosphoric acid differs very much from that of sandy soils or soils derived from granite or quartzite rocks. These soils may be rich in potash, but this alone is not sufficient, and when in excess it tends to produce un-nutritious herbage, and the cultivated crops upon such soils, are found by experience to be unfit for feeding sheep, and to encourage disease. In our own country we find Vermont, Western New York, Western Pennsylvania, Iowa, parts of Illinois, Kentucky, Ohio, Wisconsin, Michigan and Kansas all abounding in limestone. And in these localities we find sheep thriving and shepherds prospering. On the granite and sandy soils of Long Island, Southern New Jersey and other localities very few sheep are found, and farmers who have worried for years with their flocks have at last given them up. Facts are for wise men to learn wisdom from and all the facts in the history of sheep husbandry prove that sheep do best on limestone soils and worst on soils derived from sand and flint rocks; and the latter are precisely the kind which abound where my friend has had a most unfortunate experience with his flocks, and it might be a useful warning to persons intending to keep sheep in a new country to avoid all localities where he cannot find lime within reasonable distance.

V. P. Richmond, before the Illinois Wool-Growers' Association, said: "I am satisfied that the free use of sulphur will prevent, if not cure, the scab in sheep. Two flocks of sheep on farms adjoining mine were badly gone with the scab, and several times, for three or four years, a scabby sheep would occasionally be with mine, and I did not then and never did have scabby sheep. While these scabby flocks were near me and for two or three years after, I fed freely of sulphur. Should I ever have scabby sheep I would use sulphur freely inside and outside before trying any other remedy."

Governor Stoneman has appointed and commissioned the following members of the Board of Directors of Agricultural District No. 4: P. J. Shafter, of Marin county, vice J. McM. Shafter, resigned; J. N. White, of Sonoma, vice W. T. Coleman, resigned; Robert Crane, of Sonoma, vice A. P. Overton, term expired; H. Meacham, of Sonoma, vice self. They are to serve for four years ending December 1st, 1888. Edward Yonger has also been appointed as a Director of Agricultural District No. 5.

## The Trouble with Trotting Pedigrees.

[Live Stock Journal.]

The student of the trotting-horse problem has daily occasion to bemoan the neglect to publish the pedigrees of horses entered in the trotting circuits of the country. This matter has been frequently insisted upon by turf and agricultural journals alike, but it has been just as persistently neglected by horse owners and breeders, as if it were of no historical consequence.

When pedigrees have been stated with the entries, it has been done in such an imperfect, slovenly manner, that the information given is an aggravation, tending so often to mislead as to furnish definite facts. Frequently the name of the sire is given, but the dam is as totally neglected in the mention of the pedigree, as if the entry never had a dam, or if it had, that fact was of no importance whatever. The entries to all the important trotting meetings are published in the daily as well as the sporting journals. The names of the horses are given, but the most intelligent horseman would read them in vain if he hoped thereby to keep abreast of the lines of breeding that are in the ascendant in the composition of the American trotting horse. This fact should be borne in mind: The trotting horse is rapidly increasing in numbers every year. The most remarkable memory can not now hope to retain the name of the myriad trotters, much less to recount the lineage of their breeding. It has become imperative that the pedigree should be given in brief as often as the horse is entered in races or make a notable public performance. No one who is not perplexed by these omissions can estimate the amount of labor this neglect entails upon the turf writer. Many months and years of research, more painful than the traugue of epitaphs of "Old Mortality" upon the time-worn tombstones, would have been saved to our makers of stud books, and compilers of trotting pedigrees, if this simple precaution had been taken from the earliest history of the trotting horse. Think of it! the dam of Ethan Allen would not now be recorded as simply a white mare, supposed to be of Meeceger origin; but her lineage would be recorded as correctly repeated by her breeder, and thus a great mystery would never have shadowed that great horse to the grave. Hundreds of other "unknowns" would be definitely established and forever known. In the earlier history of the trotting horse when he had only a feeble existence—when he was regarded with contempt in comparison with the more royally bred and pampered thoroughbred racehorse, there might be some excuse for the absence of recording and dating his lines of breeding; but now that he has assumed such proportions as one of the leading sources of national amusement; now that his form and speed approximate more nearly to those of the pure racehorse; now that he is being written about as in his best estate a thoroughbred trotting horse; it is high time that every precaution should be taken to record his name and color and pedigree as inseparable, every time he makes an entrance to the lists of impending races, as strictly as the names and colors and pedigrees of thoroughbred horses are invariably published with each entry. This practice would familiarize the general reader with the trotting lineage more perfectly than its publication in trotting registers, that come under the inspection of the comparatively few interested in horses. Moreover it would soon educate the average reporter of races for the daily press so that the egregious blunders relating to trotting pedigrees that so frequently mar their reports, would not be committed by the mere tyro.

The National Association has done nearly everything in its power, by official enactment, to secure the publication of trotting pedigree. One of its rules provides that the name of both the sire and dam shall be given with every entry to a trotting race on all courses under the control of the association. Furthermore it commands that, if the name of the sire and dam are unknown, that fact must distinctly accompany the nomination. The pedigree thus given, if further provides, shall be published with the entries. If these injunctions were implicitly obeyed by trainers, breeders and horse owners then a world of confusion, error, and ignorance would be avoided. But unfortunately, with the conspicuous exception of the published entries of the rees under the auspices of the Breeders' Association, these requirements are almost universally neglected by even the associations in the grand trotting circuits. All they seem to demand is the payment of the entrance fee, and the historical, as well as scientific, information contained in the pedigree is about as interesting to them as the old red sand-stone formation in geology. Unless these associations are aroused to the importance of these requirements, the owners of horses will continue to be careless in the matter of pedigrees that should accompany their entries. Moreover, the past conduct of these associations gives little encouragement for hope of reform in this regard. The general neglect calls for important action on the part of the National Association. The rule should be so amended as to visit a penalty upon owners and associations alike. No owner of an entry should be eligible to receive any portion of the purse unless his entry is in full form as prescribed by the rule regulating the giving of pedigree of sire and dam. Furthermore, every association that receives an entry and permits the horse to trot, when the rule requiring the name of sire and dam to be given is not complied with, should be visited with a fine for each offense, sufficiently severe to enforce compliance with the rule.

But the requirements should not end here. While the name of the entry, with the name of the sire and dam added, might be sufficient for general publication of horses that have made a record, yet it is not sufficient for horses that have yet no place in trotting annals. All entries of horses without records should be required to give not only the names of their sire and dams, but their age, places of foaling, and names of breeders. If these are unknown, then this fact should be stated.

These precautions would obviate profound confusion in future pedigrees, and hasten the day when ignorance and misrepresentations as to trotting pedigree would be relegated to the earlier history of the trotting horse. This matter demands rigid enforcement. It appeals to the co-operation of all turf and agricultural journals. If the pedigree of trotting horses are to be fully and scientifically tabulated in the future, it becomes all intelligent horse authorities to insist upon the enactment of provisions similar in scope to the suggestions we have made. Then, instead of being either a puzzle or a ludicrous joke to read of the fragmentary pedigrees of trotting horses, the information given even by the secular press, would be reliable and accurate. We know of no greater help towards the establishment of the thoroughbred trotting horse.

The entire weight of the 2001 outfit at Lexington—mare, driver, sulky and harness—was 1,145 pounds.

Phallas will probably trot the first of next season and be put in the stud.

THE  
**Breeder and Sportsman.**

PUBLISHED WEEKLY BY THE  
BREEDER AND SPORTSMAN PUBLISHING CO.

THE TURF AND SPORTING AUTHORITY OF THE  
PACIFIC COAST.

OFFICE, 508 MONTGOMERY STREET  
P. O. Box 2603

Five dollars a year; three dollars for six months; one dollar and a half for three months. Strictly in advance.

MAKE ALL CHECKS, MONEY ORDERS, ETC., PAYABLE TO ORDER OF BREEDER AND SPORTSMAN PUBLISHING CO.

Money should be sent by postal order, draft or by registered letter, addressed to the "Breeder and Sportsman Publishing Company, San Francisco, Cal."

Communications must be accompanied by the writer's name and address, not necessarily for publication, but as a private guarantee of good faith.

JOSEPH CAIRN SIMPSON, - - - EDITOR

NEW YORK AGENCY.

Mr. C. C. Pettus at the office of the "Sportsman," 46 Murray Street, is duly authorized special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptions and arrange advertising contracts.

ADVERTISING RATES.

Displayed, \$1.50 per inch each insertion or pro rata for less space. Reading Notices set in brier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent will be allowed on 3 months, 20 per cent on 6 months and 30 per cent on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 60 cents each insertion.

Palo Alto Catalogue.

The catalogue of the trotting stock, Palo Alto Stock Farm, 1884, has been received and a very handsome volume of 123 pages it is. Neatly gotten up in every respect it will bear comparison with the elaborate compilations which are presented by the breeders of all parts of the country. Although it is nearly impossible to obtain perfect accuracy in a work which contains hundreds of pedigrees, so far as we have looked it is as free from errors as can be expected. The gravest mistake is ascribing to Shanghai Mary the maternity of Electioneer, Prospero, Elaine, etc., and this will correct itself to a majority of those who will read it. The error came from a transposition of Shanghai Mary for Green Mountain Maid after the final proofs were corrected. There are eleven stallions catalogued and two hundred and fifteen broodmares. When the progeny of the mares are counted it will show a very large total, and in this respect we do not know of a breeding farm that can compete with it. The quality of the procreative animals is in keeping with the numbers, and the eleven sires and the two hundred and fifteen dams there is scarcely one that has not a good title to be classed among the best. Every noted trotting strain of the East reinforced by those of California which have been proved and with thoroughbreds to fall back upon. There is no question of the benefits which will follow, to the people at large, the establishment of this great breeding farm. Already the system of development and training adopted has been of vast service in teaching the best methods to arrive at certain results. The phenomenal success that has followed the observance of the plans laid down by the proprietor has had a great effect in the East, and now the records for trotting colts has been reduced from what was held to be the "top notch" a few years ago. We do not speak of what California has done, or rather what has been accomplished at Palo Alto, but of the results in the East the past season, especially in regard to yearling trotters. While there are certain advantages in our climate; these advantages being at first accredited with the marvellous results, it was evident that in addition to climatic influences there were other reasons for the superiority shown. There was no desire to hide anything at Palo Alto. The fullest information in regard to the rearing and handling of the foals, from the time of weaning through all the stages of colthood until maturity, have been presented in "print time and time again. These lessons have been received, the teachings made use of in all parts of the country and corresponding benefits obtained. Stakes are now opened at the East with no talk of debarring the Californians, and the demoralization in the ranks of Eastern breeders after the victories of our colts, has been overcome and trepidation been replaced by confidence. There are intricate questions in connection with the breeding of trotters beside those which relate to rearing and training. The mysteries of reproduction it is not likely will ever be

fully revealed. It is fortunate that it is so, or the pursuit would lose its greatest charm. There must be chances of failure as well as fortunate "nicks" to give zest to the business, for could trotters be turned out with the certainty of machinery the only enticement then would be the money return. To eliminate as far as possible the obstacles to success by diligent study, and careful consideration of the subject in all of its phases in place of the haphazard breeding of the early days will stimulate to further study.

Palo Alto is destined to be a famous school for the advancement of knowledge regarding the breeding of fast trotters. Among the stallions are two sons of Rysdyk's Hambletonian, one of them, Electioneer, taking the highest rank as the progenitor of the fastest trotting colts with the single exception of that for four-year-olds. Piedmont represents the great tribe of Almont. General Benton, several lines of Messenger through his son, Bishop's Hambletonian, and his grandson, Abdallah. The young Electioneer stallions, Fallis, Clay, Ansel and General Schofield are, of such strains on the side of the dams as to give a fair test of the merit of the different mixtures. The dam of Fallis is by Messenger Duroc, so that there is a double infusion of Rysdyk's Hambletonian, and her dam by Seely's American Star, the next dam by Long Island Black Hawk. The American Star mare is the dam of Socrates and Kisbar, and the granddam of Clingstone. Clay is from Maid of Clay, by Henry Clay, which gives him two strains of Clay, and as he is the fourth son of Maid of Clay to come into "the list" with a record of 2:25, our friend Huntington can point to him as an exemplification of his pet theory. Ansel is from the thoroughbred mare Annette, by Lexington, and General Schofield, from Lizzie Whips, by Enquirer. Ansel and General Schofield have shown inside of 2:30, both being foals of 1880, so that if their colts do not show good form it will be a strong argument against the use of so much high blood in trotting stallions. The sons of General Benton in the stud are Bentonian, whose dam is Lucetta, by Rysdyk's Hambletonian, Benton Frolic, from Frolic, the dam of the great filly, Freda, and Norway, a son of Norma, the dam of Lucy Cuyler. The neophyte in trotting pedigrees will understand from this slight sketch that there is no lack of the right kind of stallions to couple with all sorts of mares, particularly when informed that everyone of them have admirable action and superior form.

It is manifestly beyond the range of a short article to give much of an idea of the broodmares when there are two hundred and fifteen embodied in the book. The Alpha and Omega, however, will give a key and though it may appear as though the introduction and finis had been arranged for effect, the first and last positions are due to the names bringing them in that order.

"No. 1. Abbie, b m, 16 hands, gray hairs on off front ankle; foaled 1875, bred by Col. R. West, Lexington, Kentucky.

BY ALMONT.

First dam, Norma, by Alexander's Norman.

Second dam by Sir Wallace.

Third dam, Eagletta, by Grey Eagle.

Fourth dam, Mary Howe, by Tiger.

Fifth dam, Lady Robin, by Robin Grey.

Sixth dam by Quicksilver, son of imp. Medley.

Seventh dam by Mead's Celer.

Norma is the dam of Lucy Cuyler, 2:15½.

"No. 215. Winona, bl m, 16 hands; scar on off hind leg; foaled 1870; bred by Col. R. West, Lexington, Kentucky.

BY ALMONT.

First dam, Dolly (dam of Thorndale, 2:22½, Director, 2:17, and Onward, 2:25¼, by Mambrino Chief.

Second dam by a son of Potomac.

Third dam by Saxe Weimar."

On nearly every page are the names of celebrities, and when it is stated that there are the get of fifty-six trotting-bred stallions, in addition to those by the home horses, and these of the most fashionable blood, it will readily be admitted that Palo Alto is a trotting world in itself.

We have written of the lessons in training which Palo Alto has publicly given. Fully as interesting will be the results of the various admixtures of blood, and though the short time since the establishment was organized will forbid as comprehensive account as can be given in the future, the numbers bred will, in a measure, obviate the difficulty and much valuable knowledge accrue from an investigation. Even at this early day it will be a work of magnitude to summarize. Fortunately the records are so complete that a synopsis can be given with a good deal of accuracy, and ere long we hope to be enabled to present this interesting chapter of the story to our readers. There is a feature which must be borne in mind. The brilliant, phenomenal performances of some of the colts and fillies have so dazzled the imagination that good and extra good work is lost sight of and what would be held a "grand showing" in other cases is dwarfed into insignificance by the glamour of

figures which startled the world. Then again nearly all of the colts bred at Palo Alto have been trained at home. Good as that training has been there is little doubt that if disseminated into many hands the result would have been better. We have not the least hesitation in saying that in all probability there are colts, practically untaught, which have the elements of greatness in them in fair proportion to those which wear the crown. With so many to handle, the apt pupils are the only ones which receive the attention of the teachers, and the scale of points is so high that anything which has not the genius to reflect the lessons without an error is ignominiously dismissed. "An ounce a day" is held a poor recompense when "nuggets" are found on an adjoining claim, and the mill is so busily engaged in working high grade ores that all others have to rest on the dump crude and unstamped as dug from the mines.

"Luck."

We have a great respect for the Goddess of Luck. Furthermore, we can add that to respect is joined admiration, especially when we are the recipient of her smiles. This is so frequently the case that many acknowledgements are necessary for the favors vouchsafed, and highly gratified for what she has done in the past hope for a continuance in the future. There have been many "breaks in the run," but retrospection shows that had the smiles been properly handled the frowns could have been met with equanimity. More than that there was in very many instances a reckless disregard of the gifts, and in other cases a blind stupidity in not taking advantage of the grandest strokes of good fortune. For this she was not to blame and after lining never so many black clouds with gold and silver, it is not surprising that non-appreciation was met by a display of sombre colors, a punishment richly deserved.

There is luck in everything as well as odd numbers, and what writers have called the "glorious uncertainty" of the turf can be more tersely, if not so elegantly phrased *luck*. It plays the most prominent part from the time the foal is dropped until its last race is run. Even before the early era mentioned it is an element which cannot be ignored. Though the utmost care may be taken of the broodmare there may be untoward circumstances that no watchfulness could avert. Lucky, indeed, is the foal which arrives at weaning time without mishap of some kind; still more fortunate the youngster which escapes the trials of breaking without some drawback to interfere with its future career. The dangers attending the period of training are too well known to require extended elucidation. A slight blow on the tendon may be followed by a rupture of the sheathing, and then it is long odds that this will be followed by a "break down," if active work continued. Apart from the usual injuries to feet and legs which incapacitate, there are many other ailments which the most skillful treatment and watchful care cannot prevent. Epizootics, colds, rheumatism, derangement of stomach or kidneys, are always to be feared, and then there are trials to the temper which in some cases render of no avail the greatest powers. While in a majority of instances bad temper results from improper treatment there are animals which are peculiarly nervous in their temperament and though tractable enough in exercise, and run trials without giving any indications of being "upset," when brought before an assemblage on a racecourse are completely demoralized. But apart from all these considerations there are still more palpable instances of the good and evil which follow good or bad fortune. Sometimes the start decides the race and the question is settled as soon as the flag falls. Without being absolutely left at the post enough ground is lost at the commencement to take away all chances of victory. There may be disappointment, too, in "getting through," and in consequence thereof, be forced to run so wide as to entail running over a good deal more ground than the others. Those who witnessed the racing at the last meeting of the Pacific Coast, Blood Horse Association will agree with us that luck had a good deal to do with the winning of several races. When the head of Freda only showed like a black band in front of that of Glendair it was hard fortune for the latter to lose in a race of 2,200 yards by the width of a ribbon. The dark background for the old gold to rest against showed the few inches so distinctly that it was easily measured; had the head been tossed for the hundredth part of a second as the fillies went under the wire the extended nostrils of the loser would have been in front. In the handicap when the four horses reached the winning post a yard measure would nearly cover the difference between first and last, scarcely more than six inches between first and second, with the third not a foot behind. That victory was surely not the need of excellence entirely and the slipping of a plate the least bit from its hold on the ground, a change of feet, a waver or tremor of a muscle, a falter of the brain would have

turned the scale. The four-mile winner was not without his share of good luck, the loser could blame his unlucky star for its baneful influence at the supreme moment. The race was won and lost within thirty feet of the goal, and though there were the usual criticisms it can justly be ascribed to the bad luck of Patsy Duffy. It was a remarkable race in many respects and the close finish was more like that for a much shorter distance. There was a feature in it which so far we have not heard discussed. Lucky B. came up to Duffy on the last turn and seemed to have the race in hand, he "sulked" and the other drew away from him, again he came and at the drawgate, which is a little over one hundred yards from the winning post, he swerved to the inside, making such an abrupt angle that it looked as though he was going into the fence. As soon as he struck the deeper ground close to the rail, he straightened up, and in that short space overcame the loss of at least two lengths, and shot to the front the winner by five or six feet. Now the cause is apparent. He had just returned from a long campaign. From early Spring he has been running in races and the many times that shoes and plates have been set, left numerous nail-holes. This left his feet in bad condition and the narrow rim of steel pressing on the heels, confining the wall so that the "spring" of it was destroyed. The continual hammering for so long a route caused intense pain, and when he struck the hard ground on the outside, the pain became unbearable. The softer cushion, the track was quite deep on the inside, brought relief, he resumed his long stride and the race was won.

But after all that can be said on the side of the importance of luck in horse affairs; after all the admissions of the prominent part played by Dame Fortune on the equine stage, it will not do to trust implicitly in her smiles or become disheartened at her frowns. The best of luck is of "no account," if not seconded by active exertions to deserve it; a stout heart to climb the steep hill of adversity; a strong resolution to persevere to the end of the lane which must surely turn in the long run, will bring success at some time. The oftentimes repeated story of the spider which the Bruce watched until it completed the web after six failures, has been worth a dozen sermons, whole volumes in fact, to inculcate the value of perseverance. It is safe to assert that in the centuries which have elapsed since the story was first told, it has given courage when there was the darkest outlook, and restored tone to homes which were becoming flaccid at hope deferred.

Keep on trying then you folk who have lost races time and time again, and in the future it may be that the nose of your favorite colt will "come to the string" many times in the front, former defeats adding zest to triumphs in store.

#### Lady Richmond nee Coila.

In a letter which appeared in the *Turf, Field and Farm* of the 28th ult. there was a description of some of the Philadelphia trotters. In mentioning the horses belonging to Colonel Fred Gerker the writer speaks of Lizzie M. thus: "Prior to the race at Albany I had been authorized to sell her for \$10,000, but after that victory 'Uncle Fred' as he is sometimes called, remarked to me, 'I guess we had better keep her, Chess, for we can have plenty of fun with her next year.'"

Further along in the description he states, 'Lady Richmond owned by Colonel Gerker; a bay mare by A. W. Richmond, dam by imported Bonnie Scotland, whose natural speed is claimed to be greater than that of Lizzie M.' Lady Richmond is a sister to the dam of Anteo and Antevolo, and she is recorded in the American Stud Book under her dam, Columbia, as Coila. She is a year younger than Columbine, and we hope that Col. Gerker will resume the original appellation so as to have no conflict between the registry of the blue bloods and that of the trotters. If we are not much mistaken Columbia is destined to take high rank among the great names in the trotting calendar, and her descendants rival those few in the other mares which now figure so conspicuously in the annals of the track. And then, too, as we bred and christened her there is a personal desire that she should wear the name first given.

#### Stanford and Occident Stakes.

Bear in mind that the Stanford and Occident Stakes to be trotted in 1886 and 1887, for foals of 1883 and 1884, close on the first of January next. The conditions are given so clearly in the advertisements that it is unnecessary to repeat them. There should be a hundred nominations in each of them, in the Occident for 1887 twice that number owing to the little risk, as \$10 in all that is required to take a chance. A weanling which is claimed to be "trotting bred" will lose caste if the owner fails to name it in the stake. Owners, especially breeders, "can not afford" to let the opportunity slip.

#### Eastern Racing Stakes.—Coney Island and Latonia Jockey Clubs.

Oftentimes we have written of the advantages which California breeders will find in making nominations in the colt stakes of the East. It is so palpable that it would seem that the only thing required is to make the announcement and point to the advertisements for particulars. But there is a feeling among a few that support given them is detrimental to home interests, and that the proper plan is to ignore engagements at a distance and concentrate the forces for the battles to be fought here. This would be a narrow policy defeating in place of advancing the breeding of racehorses here for it must be apparent to the careful observer that already far more colts are bred than can be profitably engaged at home. Restricted to home wants the market will be so greatly overstocked that breeders will be compelled to curtail their operations, and this curtailment will necessitate the selling of the best procreative animals; the poorer retained. Owing to our Winters being so 'open' racing and training can be continued throughout the year, early and late meetings can be held. The early will enable those who intend to make the Eastern tour to get a true line of what may be expected, and as the main meetings close in time for the horses to reach here and take part in Fall racing the campaign can be commenced and ended at home. That this can be done was proved by the Santa Anita Stable, as after all the hard racing of the Eastern season their performances were better than before. It also certain that more interest was taken in the late meeting from the horses participating which had ran in other countries, a greater anxiety to witness the contests than if they had met before. The stimulus to breeding arising from a foreign demand insures a supply outside of those to be sent away, and hence at intermediate meetings of the racing at the Autumnal fairs, there will be no lack of entries.

In the Eastern Stakes which closed on the 15th of October there are many nominations from California, and there is scarcely a doubt that in those which are advertised in this issue the same support will be given. By referring to the advertisements it will be seen that there are great inducements offered by the Coney Island and Latonia Jockey Clubs, and certainly when an Eastern trip is to be made there is a palpable advantage in adding to the engagements when there is so little to risk and so much to gain. The forfeits are small the added money large; the risk in some cases being less than one per cent. of the sum to be won. It is needless to say that at Covington and Sheepshead Bay every comfort and convenience that could be asked for are found, and the management faultless as far as it is in the power of the clubs to effect.

#### A Good Showing

Sixteen of the Palo Alto trotting colts were sent to the Bay District Course the latter part of October, with the intention of driving them some fast miles. Marvin had only got them in readiness to trot half miles, when the heavy rain came a short time before the opening of the Fall race meeting. That of course limited the work to jogging on the road, and consequently what condition had been acquired was lost. Half miles had been made in time ranging from 1:05, 1:07 to 1:13, and there were great expectations that very fast miles would be recorded. Those who witnessed the exercising were confident that the four-year-old record of Elvira, 2:18½ could be lowered by two fillies of that age, Hinda Rose and Sallie Benton, and a few were sanguine enough to think that Mauzanita or the Dame Winnie colt might come very close to the two-year-old mark of Wildflower. An order came to send the colts home before the return of the Governor, and Mr. Lathrop resolved to give few of them a trial, if trial it could be called under the existing conditions. The track was harrowed deeply for the runners. The next day the four mile race was to be run, and Colonel Dickey was determined that the most exacting could not ask for a safer course to go the long route upon. Not even the hypercritical could find fault with it, and to think of dragging wheels though the inches of loose soil at any rate of speed seemed out of the question. Bonita was the first to essay the task. To the half in 1:11, the mile in 2:22½ was an index of what could be expected. From what she had shown 2:15 was not an extravagant anticipation, so that to deduct five seconds was surely the least allowance that could be made. Aihan, the three-year-old son of General Benton, marks the mile in 2:27, and the Dame Winnie two-year-old, went to the half in 1:14½, the mile in 2:29¼. The fractional time showed that there was no falling off, and even the drag of a driver over weight, and the wheels sinking well up on the spokes, not to speak of the feet hurrowing hoof deep, did not pull him back. It was certainly a good showing."

At a meeting of the Medical Society connected with the Ontario, Canada, Veterinary College held Nov. 25, a paper on "Nephritis" was read by Mr. H. E. Carpenter of San Francisco. The essayist is a son of Dr. W. H. Carpenter the well known veterinary of this city.

Mr. Theo. Winters has fixed on July 16 as the date of his annual sale of thoroughbred yearlings at Sacramento.

#### Maud S. and the Recorder.

[New York Times].

There is now being made in this city a solid silver cup, after original designs, to commemorate the remarkable performance of Maud S., at Lexington, Ky., on the 11th ult., when she trotted a mile in 2:09½, lowering the best previous trotting record. The cup is known as a loving cup. It is gold-lined, stands about 12 inches in height, and has three handles. On one side is engraved a head of the famous mare. On the other is an inscription: "Woodburn Farm Cup, awarded through the Kentucky Trotting-Horsesh Breeders' Association to Maud S., owned by Robert Bonner, to commemorate her great achievement of trotting on the Lexington fair grounds, Nov. 11, 1884, against her own record of 2:09½, and making a record of 2:09½." Woodburn farm is where Maud S. was bred, and it was near her home that she astonished the world by a performance that was deemed almost impossible, all things considered.

"It may not be generally known," said a horseman, who has every record for the past twenty years on the tip of his tongue, and who writes as knowingly as he talks, "that until this Lexington trial Mr. Bonner never before started a horse for a record. There was no betting allowed on the track, and, it being known that Mr. Bonner was a churchman, and one who owned horses for the love of the horse alone, such a gathering came out to see the trial as was never before together on a racetrack. There were half a dozen clergymen present, and scores of people who never before witnessed a trot. If Maud S. trots in the same way next year—and I can say that she will—it will be of inestimable value to the trotting turf in bringing out a new class of people and a better class. All know Mr. Bonner and his principles, and no one could raise objection to seeing the queen where gambling is prohibited and where there are no stakes.

"Maud S., you know, until this season had been practically off the turf for two or three years. When, in August, Jay-Eye-See made his record of 2:10 at Providence, this impression was that it would remain unbroken. It may hurt Mr. Vandershilt a little, but the truth is Maud S. was not in the best condition, and trainers who saw her early in Spring didn't think she could 'stand up' to the necessary preparation for fast miles. Even her driver, Bair, expressed that opinion. Her legs were in bad shape, swollen and weak. Mr. Vandershilt finally said to go ahead and train the mare at his risk. Bair went to work as directed. On August 2d, the day after Jay-Eye-See made his record, she was given a trial at Cleveland. It was a warm day, and had been raining. The sun came out just enough to dry the surface of the track, leaving it moist underneath. It was just suited to Maud's tender legs, and she regained her title of queen by trotting in 2:09½. Then Mr. Bonner bought her. The first thing he did was to remove her shoes and balance her feet to give the proper articulation to the joints. This swelling in her legs disappeared, and she was soon herself. When she appeared at Lexington three months later, there was no soreness about her legs, the puffs were gone, and she was as sound as she was when a four-year-old. No horse ever on the turf took as many fast miles in preparation as Maud S. has this year."

"You consider her Lexington performance in every way remarkable?"

"In every way. It wasn't dreamed of, and came to horsemen like a clap of thunder. No horse can trot or run as fast in November as in August. That is a well known fact. Their coats become long and their muscles tied up, contracted, so that they can not extend themselves as in warm weather. Then again the frost takes the elasticity out of the ground. Before Maud trotted at Lexington the track had been frozen three times. Her coat was so long that it took two hours to dry her out. All these things considered, her performance was one that none of us horsemen deemed possible. Now, a half a second doesn't seem very much, but at a 2:09 gait it represents about twenty-two or twenty-three feet. In a race, if one horse beats another out that distance it is considered a pretty bad heat."

"Maud S. will be trotted again next season?"

"Yes, and I have no doubt of her being able to trot very much faster."

"And Jay-Eye-See?"

"In shipping the little horse West, after his trial at Prospect Park, there was such a strain on his system, that he was taken with a nervous chill, from which he has never recovered. An attempt was made to get him in shape, but it was fruitless, and he has been turned out with Phallas, at Lexington. The question whether the nervous prostration will injure him permanently can not be told until he is trained next year. If he is in shape, I certainly think he will lower his own record. Whether he can beat Maud S.'s time is a question. A good little horse is better than a poor big one. But a good big horse should be just that much superior to a good little one. Maud S. is just as well bred and as well built as Jay-Eye-See, and has the advantage in size. Therefore I think Maud S. will keep ahead of him on the record question."

"How have the 'side-wheelers' held up their end in 1884?"

"It used to be thought that pacers would not last; that they were a soft-hearted class of horses and had no staying qualities. Well, you need not be told that this opinion has changed. Lately more of the thoroughbred has been put into pacers, and now they can carry their speed. Last Fall the pacers went to the front with Johnston's record of 2:10. On August 2d last Maud S. regained supremacy for the trotters. But at Chicago soon afterward, Johnston paced a mile in 2:06½. Think of it! I believe he will further reduce this record next season, and I doubt if the trotters ever again overtake the pacers. Westmont, with running mate, paced a mile at the Chicago meeting in 2:01½. He was carried along by the runner, and this hybrid way of going is not considered seriously, so that Johnston's record stands at the head. It was a wonderful performance. Some of the pacers who were so promising a year or two ago are not heard of now, but others with more of the thoroughbred in them are rapidly coming forward."

Budd Doble desires the statement contradicted that he has made an engagement to train Commodore Kittson's Western stable.

## HERD AND SWINE.

### The Indefiniteness of the Term "Grade."

[Canadian Stock Raisers' Journal.]

The word *grade* as ordinarily used is very vague, embracing as it does in this country almost every phase of animal, from the first cross upon the original or scrub stock of the country to a succession of crosses which may give the unregistered animal a much longer line of the most excellent ancestry than is possessed by very many of the thoroughbreds registered in the herd book.

As a vast majority of our farmers are doubtless not aware of its elasticity of application, and the general looseness with which it is used, and to others the meaning of the term is shrouded in the mistiness of a settled haze, a word or two upon the subject will not be amiss, and is all the more necessary when we consider the vast importance of a right understanding of its meaning and application.

The term *grade*, as we understand it, properly signifies a cross or a succession of crosses of some distinct breed upon the original or common cattle most prevalent in any country. *Grade* cattle in Texas, therefore, signifies the progeny of some distinct type or types of foreign cattle crossed with the original Texan Longhorns. In Britain its precise application is not so easily defined, as in that wonderful little island many races of cattle have emerged from the confused breeding of a remote past, the exact methods of which have been buried with the Druid and the hard. The priority of race is likely always to form a battle ground with the champions of not a few of the breeds of Britain, inasmuch that when its cattle-men have formulated a consensus of opinion universally subscribed to as to its exact meaning and application there, men will assuredly conclude that the golden age has dawned. In Canada the term is ordinarily understood to signify a cross or repeated crosses of Shorthorn blood upon the native stock, because that form of cross has till recently been almost the only one known, especially for beefing purposes. A cross, however, of the Ayrshire or the Devon, or of any other distinct breed, can lay equal claim to the use of the term.

A cross bred in this country is a very distinct thing from a *grade*, although in a land possessing but two distinct breeds, the term might be synonymous and interchangeable. It properly signifies the progeny of two distinct pure-breeds, as that of a Hereford hull and an Aberdeen Angus Poll cow, although in its ordinary application we might almost say that it meant the progeny of some of the other distinct breeds upon highly graded Shorthorns.

Although it is an open question, we are of the opinion that the growing of *grade* stock at present outweighs in importance the production of thoroughbreds, as the latter for a long, long time must vastly outnumber the pure-breeds if indeed they do not do so always, yet the production of the two classes must in the meantime go hand in hand, or retrogression will be the order of the day.

One class of men will in all probability produce males for another, and a far more numerous class, to use, as it is of vital importance which steps to take in the successive stages of an upward progression, it cannot be a matter of indifference to understand the principles that underlie a successful graduation in an ever ascending scale. It is of immense importance to stock raisers that the indefiniteness attending the present usage of the word *grade* be removed. Men should be taught that some grades are inferior in some respects for certain purposes to scrubs. The ordinary Canadian cow is certainly more serviceable for ordinary purposes than her daughter, the get of some miserable Shorthorn bull possessed of no one redeeming quality. Our farmers should know that while in all probability good pure-breeds will for generations be immensely more valuable than inferior registered animals, yet many well graded animals are at the same time of unquestionably more value than inferior pure-breeds, though possessing a registration of an ancestry ever so remote.

All cattle-men should know that other things being equal, there is a wide gap in the value of animals, the one claiming but a single cross, the other possessing half a dozen equally good, and also that the character of the various sizes used in producing the graduation is a matter of prime importance.

How are these truths to be taught, and by whom? By the cattle-men themselves, we answer, and in various ways. A wider distinction must obtain in the prices than has hitherto been observed. When men like Mr. Ross, of Greenhank; Mr. Shore, of White Oak; Mr. Fothergill, of Burlington, and others whom we might name, become more numerous, who produce *grade* cattle that average \$100 each and upwards at sale, others who usually put a valuation of but half the sum on these will begin to study the question. True, these were sold by auction, but it is for the holders of first-class breeding grades to say what the price shall be, if sold for breeding purposes. We think it is perfectly legitimate to insist on a higher price for a good class of breeding stock from the farmer than from the butcher, otherwise there is but little encouragement for the breeders to produce superior animals for breeding purposes.

Private registers should be kept of the breeding of *grade* animals by those whose aim is highest excellence, in which case the purchaser knows exactly what he is getting. We can see no disadvantages arising from this practice, while the advantages are numerous.

In the first place, the practice will react favorably upon the individual himself. It will enable him to trace the exact breeding of every animal in his herd, and by comparison to ascertain which crosses have given the best results, and also just where mistakes have been made. This latter is a great gain, as the knowledge thus obtained may be of much value to the successor in the work, and may indeed do good service in the wide field of universal practice when added to the record of the determined in the annals of stock lore.

In the second place, it cannot but react favorably upon the young men of the household, who are desirous of treading in the footsteps of their fathers. Being thus trained to habits of exactness in everything relating to the lineage of stock, cannot but react favorably with their future life-work.

In the third place, it enables the buyer to know just what he is getting, so far as this can be known. To know that a cow intended for breeding purposes was sired by a certain hull of unquestioned excellence is not enough, but to be assured that the breeding has from the first passed through a succession of such crosses is certainly a great matter, as then the tendency to breed on the retrograde is reduced to a minimum. But where is the guarantee that the register will be correct? We say the staid honor of him who keeps them, and if this is not considered a sufficient guarantee, then keep shy of such a man. The manner of keeping these registers may be precisely similar to that adopted in keeping such registers of pure-bred stock, which may be curtailed or simplified at the pleasure of the breeder, although we deem it

nwise to curtail the accustomed form in the slightest degree. In these and in many other ways will the indefiniteness that clings to the term *grade* be removed.

We are satisfied that it will abundantly repay the trouble. The cost of keeping such a register would not, perhaps, exceed ten dollars a year, while its value in connection with the sale of but one animal even might be worth more than that sum.

While this hope that our *grade* stock shall ever become anything else than *grade* has forsover been cut off by legislation of those controlling the herdbooks, the hope of improving it and making it very valuable is in no way affected. The rigid regulations of the recent past were no doubt needed, and will ultimately prove a blessing to the live stock interest. In the meantime let it be distinctly understood that the term *grade* as used at present does not necessarily brand an animal as being superior to many a scrub, or inferior to many a pure bred, about the pedigree of which the owner may be eloquent.

### The Kerry Cow.

[Colorado Live Stock Journal.]

You have heard of the Kerry Cow—an Irish drama made famous by Jos. Murphy—and a great many of you have seen it, but few of my readers, I think, have ever seen the Kerry cow, for in all America there is but one small string of this rare family. On the breeding farm of the Prowers estate, at Prowers station, in the southern part of the State, are found Kerry animals, and more out of curiosity than anything else, I paid a visit to the hunch last week.

Mr. Asa D. Hudnall, a son-in-law of the late John W. Prowers, and a most agreeable young gentleman withal, kindly accompanied me to the breeding farm from his home at West Las Animas. I must confess that I was more than curiously interested in the Kerries, and my wonderment was only intensified when I gazed upon the black-horned animals from their native heath in the mountains of the North of Ireland.

"They are in fine form, as you see," said Mr. Hindall, pointing out the three Kerry cows and hulk. "The cows are splendid milkers, good rustlers on the range, and stand the Winters better than anything we have. As you see they are doing splendidly and are in fine condition for Winter."

The long-horned blacks stood contentedly chewing their cud while being inspected. They were imported from the Emerald Isle by Mr. George Whitfield, of Quebec. Coming to Colorado in April, 1883, they have since been in the Prowers herd. Once they have been bred to Short-horns and have produced a very satisfactory cross. The cows are now with Kerry calves, and by Spring the little hunch will be increased and the breed put upon its ascendancy on American soil. As they are the only Kerry kind on the continent their growth and progress will be watched with interest by everybody in the cattle line.

What little I saw of the Kerry convinces me that it is an animal well adapted to our mountainous districts and that it has a recognized future in Colorado.

The Kerry derive their name from the country in the southwestern extremity of Ireland. The district is rugged and mountainous; the beautiful Lakes of Killarney are in its centre; the climate is damp and bleak rather than cold, many a week occurring when the beast would have a wet hide all the time. They are shorter and stouter than a Jersey, but often weigh more. They give a larger quantity of rich milk, more than the Jersey and richer than English breeds. Says the best authority I can get on the subject: "The origin of the Kerry, Old Red Irish, Devon and West Highland breeds, were the descendants of the cattle kept by the ancient Celtic people of the British Islands, altered by circumstances and selection."

### Packing Butter.

The following system of packing butter, particularly for small dairies and where a few crocks of the same are put down early in the season, is recommended by an exchange: The butter is first made with all possible care, and after being worked is rolled into small cylindrical shapes, four or five inches long and not more than a couple of inches in diameter. These rolls are then wrapped in muslin cloths and the ends drawn over. A large crock is next nearly filled with strong brine, and these rolls of butter are immersed in this solution. A weight is put into the crock to keep them from floating. The butter as wanted can be secured without disturbing the mass as is necessary when packed into tubs, and it is then always fresh. It will not absorb salt from the brine, for the reason that salt and butter never make alliances, and as the butter will not take up additional moisture there can be no possibility for it taking up extra salt. Being immersed in the brine it is seen that it is uninfused by the air, and this in itself would hold natural changes in the butter in check so that the development of lactic acid would go on so slowly that if the brine were kept in a place of quite low temperature and quite uniform, the possibility of the butter becoming rancid would be very small, at least before needed for the table. Another method is to thoroughly wash out the butter, while in the granular state, with weak brine, and when free from buttermilk place this granulated butter without much further salting or working in small muslin bags holding two or three pounds each, tie them up and put in brine the same as mentioned above. At a dairy fair at Milwaukee some extra Spring butter was shown in the granular form, put up in two quart glass fruit cans. The can, it is said, was first filled about one-third full of strong brine made of the best dairy salt. The fine, unworked butter was then put in until the can was running over, when it was allowed to stand for awhile to permit all the air to escape, when the cover was put on and sealed perfectly. Butter was shown, made two years before that, which was in every respect equal to that made during the fair.

A correspondent of the *Rural New Yorker* asks: "Does it affect the quantity of milk a cow will give if conversation is carried on between milkers when milking?" We do not think there is any doubt about it—especially when the dairy is made up of young cows. We would not have a loud-talking milker in the stable. We remember, some years ago a dairyman to assert at a meeting of a farmers' club, that he had discharged a man because he would talk and interrupt the milking in his dairy, and that in three days the increase in milk was equal to the man's wages. Such are important facts, if established.

A milk cow is said to require three per cent. of her weight of hay per day. A sheep, full grown, requires three and one-half per cent. of live weight. An ox requires two per cent. if he does not work, and two and one-half if he does.

### Grassing Pigs.

As the pig is a grass-eating animal, this taste for grass or roots should always be gratified. Many farmers have no pig pasture, and keep their pigs in a pen, or pen and small yard. They seem quite to forget the nature of the pig, and treat him as if he were only fitted to digest grain or other concentrated food. This may be responsible for many of his ailments.

It is easy for the farmer to furnish clover or other green food to his pigs. This animal is not very particular; there are many weeds in the garden that he will take and return his thanks with a polite grunt. He appreciates all such attentions shown him, and will testify it by better health and growth. This is a matter of much importance, as a hushel of green feed with clover will often produce as much growth as a hushel and a half fed alone. Animals grow best when they are in good health and have a vigorous appetite, and the clover or other green food keeps their digestion good. That great pest, the Canada thistle, when the stalk is green and succulent, is eaten with a genuine relish by pigs. In this condition this thistle is preferred to grass by many other animals on the farms.

When the clover is large, the pigs will eat it better if it is run through a cutter. This mixes stalks and leaves so as to render it more succulent. The pig will eat more clover or grass than is generally supposed. Shoats of 50 to 80 lbs. will eat from 6 to 8 lbs. of green clover per day. We have found in pen feeding the best way was to run the clover through a cutter and mix with meal. In this way, the clover and meal was eaten together, and this mixing of the bulky and concentrated foods results in a more perfect digestion of the corn meal or other ground food. We tried so accurate an experiment on this, that the result is not left to conjecture. We divided a litter of six pigs, and to three fed clover and meal, and to the other three fed meal alone, soaked in cold water. The latter, every two or three weeks, would be dainty in eating and appear to be feverish, but after fasting and taking only water for a day or two, would eat again for some weeks, when the same fasting period would be repeated. But the other three, fed on meal and clover, always had a good appetite and made a steady and rapid progress. Each lot ate the same amount of meal, but those fed clover dressed nearly 30 per cent. the most.

### Sugaring Butter.

The salting of butter has a very great effect upon its quality. It is a great mistake to suppose that the salt is merely put in to flavor the butter, and that it is a simple matter of adding and roughly mixing one ounce of salt to every pound of butter, so that the salt merely disappears; to the point, when all that is necessary is supposed to be done. On the contrary, the salt is really added to the butter for its chemical effect, and as it is well-known, or should be, the chemical action occurs in such a case as this only when the salt is dissolved, it is clear that any undissolved salt is injurious to the butter in which it may remain. Again, salt in dissolving draws the moisture from the butter, and makes it drier, and, of course, firmer; so that the salt has also a valuable mechanical effect in improving the condition and texture of the butter.

In my various experiments in salting butter, I have tried several additional substances, as saltpetre, borax, the various so called preservative salts and sugar. I cannot recommend any of these substances to good butter makers excepting the last. When pure white sugar, finely pulverized, is added to the salt in the proportion of three of salt and one of sugar, and one ounce to the pound of butter is used, the flavor and the keeping quality are both improved, provided care is taken to have both completely dissolved in the butter. I have taken the care to pulverize the salt and sugar together in a porcelain mortar, with advantage, and believe it would very much aid the fine butter maker to have the salt made as fine as flour for his use. Moreover, if this pulverized salt is sifted, it would get rid of the occasional pan scales which are at times found in the best kinds of salt; but I would do this grinding myself rather than have it done, both for the sake of purity and to avoid damage and loss by deliquescence, by reason of absorbed moisture. It is very little trouble.—Henry Stewart, in Country Gentleman.

### Points of a Good Shorthorn Bull.

A hull ought to be the most handsome of his kind. He should be tall and well made, his head should be rather long, but not coarse, as fineness of head indicates disposition to fatten; as it is designed by nature to be the chief instrument both of offense and defence, it ought to present every mark of strength. Horns clean and bright, large black eyes, lively and protuberant; ears long and thin, hairy within and without; muzzle fine; nostrils wide and open, neck strong and muscular, not incumbered with a coarse, wretched skin, but firm, rising with a gentle curve from the shoulders, tapering to the part where it is connected with the head; dewlap thin, and but little loose skin on any part.

His shoulders should be deep, high and moderately broad at the top; bosom open, breast large and projecting well before his legs; back straight and broad, even to the setting on of the tail, which should not extend far up the roof, but be strong and deep, with lauk hair on the under part of it; ribs broad and circular, rising above another, so that the last rib shall be rather the highest.

The fore thighs should be strong and muscular, tapering gradually to the knees; belly deep, straight, and also tapering a little to the hind thighs, which should be large and square; roof wide, particularly over the shins and hips or hooks; legs straight, short jointed, full of sinews, clean and fine boned; knees round, big and straight; feet distant one from another, not broad nor turning in, but easily spreading; hoofs long and hollow; hide not hard or stubborn to the touch; hair uniformly thick, short curled, and of a soft texture, and the body long, deep and round, filling up the shoulders and into the groin, so as to form what has not improperly been termed a round or a barrel-like carcass.—Tribune and Farmer.

After mature deliberation, J. A. Rose has finally determined to use his Bolsa land for the raising of hogs. He is fencing the land (about 750 acres) with a hog-tight fence, the same being three boards on the bottom and two wires on top. To do this will require all of 60,000 feet of lumber, not including the wire nor posts. This is a big undertaking, but J. A. is the man to do it. He already has nearly 500 hogs and expects to have 1,000 shortly. He is going into the hog business on a large scale, and having nearly everything necessary for that kind of business will, we hope, make a success. On part of the land he will raise beets, carrots, etc., to feed them on. There is no business that gives any better return now than the stock business, especially the hog part of it.—Pleasanton Star.

### Scour in Calves.

Calves which run with their dams, or which are fed with new and warm milk, are seldom, if ever, troubled with scouring. It is when they are fed upon skim milk—sour or sweet—or whey, or other food not natural to this young bovine—food good enough, perhaps, in quality, but given too cold—that this complaint mostly occurs.

The stomachs of no young animal will endure much chilling without creating serious disturbances, nor is chilling good for the stomachs of older ones. The stomachs of young ruminants are not only not as well fortified against the effects of cold food as adults of that class, they are not even as well prepared to hear up against chilling as the stomachs of non-ruminants. In adult ruminants the paunch or rumen—the first and largest division of their huge compound stomachs—receives nearly all the cold foods and drinks taken in by them. After being warmed up in this department and softened and remasticated, its contents go to the other divisions, which, always receiving them warm, never become accustomed to taking in cold materials. This is especially true with respect to the fourth division, or true stomach, it being necessary for the food to pass through all the others before reaching it, as it is the last division in the series. In the young ruminant this fourth or last division is the only active part of its stomach. The other divisions, especially the paunch, exists in a somewhat rudimentary condition, and are, at first, inferior in size, and useless, and only come into activity by slowly developing as life advances.

Cold food given to a young ruminant must, therefore, go where cold food was never intended to go—into a receptacle designed by nature for the reception of warm materials only. To force them to take cold food before the other divisions are developed enough to at least share in the labor of warming it up is to war against nature, which always demands a penalty for the infraction of her regulations, and the young ruminant pays it.

Those who thoughtlessly follow the practice of giving calves in their nursing age only cold liquids invariably weaken their stomachs and impair the digestion of their food; and one of the consequences of their indigestion thus induced is sour. When, by the use of grass or hay, or other solid food, the paunch and other divisions of the stomach begin to develop and share in the reception of food, the temperature of its ration may with safety begin to be very gradually reduced, but never before.—*Bell's Weekly Messenger.*

To make good butter requires pure air, proper temperature of milk, and the most perfect cleanliness, from the time the milk is drawn from the cow till the completed article is ready for the consumer. It also requires the exercise of observation and common sense to know exactly when to skim, when to churn, how much working it requires, how much salt to put in, and how to pack. Particular attention must be paid to the cellar or dairy in which the milk is kept; for as milk readily absorbs volatile matters it is of the first importance that the air of the milk room be kept pure and untaunted. The room should be of a temperature of about 50 to 55 deg., moderately light, easily kept clean, and well ventilated. A well-drained, dry, porous, earthen floor is best for maintaining a pure atmosphere, as fresh earth is an excellent absorbent. If it can be accomplished, the best way is to have a "spring-house," as there is no better way of preserving the equal temperature necessary for the dairy than the use of a permanent spring of water. The temperature of a spring is, as nearly as possible, that at which cream rises most rapidly and completely. The odor of milk fresh from the cow is disagreeable, and if not dispelled remains in the butter, injuring its flavor and keeping qualities; water flowing through a milk room will absorb this odor, besides keeping the air moist, so that the cream does not become dry and leathery, as in dry, airy milk rooms.

The difference between well-bred stock and the scrub is so marked that we often wonder why farmers will persist in raising and feeding stock which does not give the best returns for the feed consumed, and which when placed on the market is sure to be sold at a discount. The difference in the prices commanded by the two classes of stock should open the eyes of the intelligent farmer to the importance of keeping none but improved animals. In these close times, when the range of profits in every business is very small, the importance of making a change for the class of animals which will pay the greatest return in growth and in prices which they will command must impress itself on the minds of all thinking men.

When cows calve in cold weather their teats are quite apt to be sore, ceneed generally, I think, by their being wet with milk. When the calf sucks, the teats are sure to be wet, and some pereo, when they commence milking, always wet the teats the first thing. As far as my experience goes this always makes them sore in cold weather. The best preventative is to wash them thoroughly in cold water as soon as the milking is performed. The best remedy that I know is a mixture of tar and lard melted and stirred together in such proportions as not to be very sticky and applied once or twice a day.

Calves at this season and onward through the winter are subject to the attacks of a parasitic threadworm which inhabits the lungs and air passages, and causes a dry, hacking cough, with falling off in flesh when the disease is worse than usual. The only effective remedy is to give turpentine in half-ounce doses in milk every morning, one hour before feeding, for three or four days running, and then stop for a few days and repeat. The turpentine is absorbed, and passes off through the lungs in part and destroys the worms.

A member of the Rochester (N. Y.) Farmers' Club lately stated that spraying cows is considerably practiced in Bavaria and Hungary, for the double purpose of prolonging the flow of milk and accelerating the fattening process when the time for slaughtering comes round. Its effect does not extend beyond two years, when the cows will go dry, and are no longer useful except for beef. In Switzerland some practice spraying heifers for the purpose of rendering them fat and able for farm labor.

A gentleman in the New York Farmers' Club says: "I think, among other things, I have proved this, that calves ought never to be fed together. Each should have a mess separate, as no two drink alike. Some drink faster than others, therefore get more than is for their good, while the others do not get enough. I think it does pay to watch them closely, and see that they get just enough and no more."

Mr. Geo. Wiley, of the Cook Stock Farm, Danville, has returned from the East, bringing with him twenty head of Polled Angus cattle purchased in Kansas City.

At the London, Eng., Dairy Show, this Fall, the champion milkster was a short horn. Quantity of milk yielded was the most important point noted by the milking judges; next, the quality of that milk; and then, the duration of the milking period. The champion milkster, Mr. Phillip's Red Chisray, a Short Horn without pedigree, has been in milk for five months; his day's milk in two milkings was 51.75 lbs., containing 12.31 per cent. of total solids and 3.26 per cent. of fat. Mr. Glynn's first prize Guernsey, having been in milk seven months, gave only 20½ lbs., of milk, but of such richness that it contains 14.99 per cent. of total solids and 6.28 per cent. of fat. Mr. Champion's second prize Jersey, in milk for only 1½ month, gave 36 lbs. of milk, with 13.52 per cent. of solids and 3.76 per cent. of fat. Captain Ross's first prize Welch cow, in milk only one month, gave 46 lbs. of milk; and Mr. Thomas Birdsey's second prize Short Horn and Ayrshire cross, in milk three weeks, gave 37½ lbs. of milk. Mr. Walter Gilbey's fine Dutch cow, with a most remarkably developed udder, yielded at her two milkings in this day no less than 52½ lbs. of milk, but this of the poorest quality of any tried, containing under 2 per cent. of fat.

## STABLE AND PADDOCK.

### Development of Colts.

It requires intelligence, skill and perseverance to grow up and develop into low down speed before they are matured, without injuring their constitutions. If the trainer overworks them before their joints are settled, and the muscular appendages developed to give strength for powerful exertions, they are in danger of straining their joints, causing them to throw out curbs, spavins or other bony enlargements that will destroy their future usefulness. It is not safe to force colts to their utmost exertions before they are matured at five years old. There is not only danger of contracting unsoundness, but the risk of breaking their hearts, so that they will quit and never attain the full speed that their early training promised.

There are some examples where colts have been trained at two years old, and continued to train on into fast horses. They were not forced down to their speed till they were in condition to stand the exertion without injury to wind or limb. They were gradually exercised, with due regard to their capacity to perform their work, without impairing their constitution. The fact that early training has proved successful in several experiments, shows what skillful training can do in educating and bringing out the latent energies of young colts. Early maturity insures an early market, and fast time insures high prices. If the breeder can show, at three years old, the time of first-class aged horses, his colts will command high prices. They will sell for exorbitant prices on account of their prospective increase of speed. They will out-sell aged trotters in proportion as they have out-ranked them in their early records.

It is one of the best signs of a good trainer that his horses continue to train on and increase in speed from year to year, till age has exhausted their energies or enfeebled their constitution. The man who understands his business will not risk that bruising labor that destroys the ambition and causes premature decay. Common sense is the best schoolmaster to bring out the speed of colts, without impairing their physical powers. Horse killers are an expensive luxury to the breeder. The trainer who is controlled by his destructive propensities will destroy every youngster put into his hands. He ought to be given a wide berth from overseeing triplings. The breeder can not afford to have his well-bred, promising colts trained off, broken-hearted, by ignorant jockeys. Fond hopes have been centered by the owner upon some favorite colt; in comes the despoiler with his forcing system; he forces the colt out of health, beyond recovery, and forces the owner out of pocket to the amount of the cost of production; still the despoiler has the assurance to advertise himself as a professional horse trainer.

It is one thing to put colts in condition to perform their work, without pounding out their feet or stiffening their joints, and another thing to keep them in condition after they have gone through the grand preparation. The instruments to keep them in superb condition, to endure hard service, are exercise, sweating, grooming, good food, warmth and cleanliness. When colts are kept in the highest state of health and vigor, they will perform great tasks without exhausting their physical powers. Speed is the result of clear wind, the effect of sweating out the surplus fat, and converting the system into strong muscular vigor, together with active co-operation of the vital functions with the physical force that forms the motive power to move the body. Condition is the essence of trotting form. Great speed follows great muscular energy, as effect follows cause. These are the sources from which action is converted into rapid movement.

After colts put on the form of matured horses, they will stand more exertion than in their younger form. Age ripens their powers, gives them more bone and substance, so they will stand more work with less fatigue than in their colt form. The experience of the trainer will discover when they are over-worked, by their emaciated form, dull and spiritless action, and should apply the remedy. The work should be apportioned to meet the capacity of each subject. The hard-bottomed horse, with bibulous temperament, will stand more work than one of nervous temperament. Here is where the skill of the trainer comes in to make the discrimination. If the trainer understands the temperaments of his pupils, he can avoid all the consequences of under or overtraining. They will not stand overtraining long without destroying the prospects of remunerating the owner. Gentle exercise, with short brushes of speed, will give health and vigor to the recipients, and leave the subjects sound in wind and limb for future usefulness.

The breeder who rears the best specimens of the equine family, ought to be amply rewarded for his genius and enterprise. The public reap the reward of his labors in the possession of the faithful horse—the cheapest motive power and great labor-saving servant of industry. Any improvement in the breed, such as increasing their capacity for labor, would save the wear and tear of human hands. High-bred horses are increased in exchangeable value, and they yield a better return than low-bred mongrels. The best are the cheapest to the consumer, besides there is pleasure in using a valuable servant. The delightful occupation of rearing the noblest servant of man, that has shared his toils and has served him with fidelity in adversity and prosperity, through good and through evil report, is one of the most enchanting inspirations of the human mind. The blood that has made the horse famous, is transmitted as an inheritance that furnishes capital stock for the future breeder to improve the race.—*Live Stock Journal.*

### Grooming Horses.

The skin of the horse, like that of other animals, not only affords protection to the parts within, but by the pores affords an outlet to a large part of the waste of the body, in the form of sweat. In out-door life—this natural state of the horse—this membrane becomes thickened and tough, capable of resisting changes of temperature; and by continual exercise the pores are kept open, giving free exit to all of the exhalation. But this alone will not give the smooth, glossy coat which adds so much to the animal's beauty. Confining the horse to the stable, as is generally done for at least a large part of the year, renders his skin tender, especially when he is warmly blanketed. Expose him now to a great change of temperature; take him out and drive him until heated; return him to the stable, and let him stand unshed for over night, or even for an hour; the skin is rapidly chilled by the evaporation of the sweat; the pores suddenly closed; and often a cold, rheumatic stiffness, or some other disorder, results. Proper grooming prevents this by toughening the skin; keeping it in healthy action; equalizing the circulation; removing obstructions from the pores, and what is of more importance, by rousing the action of the muscles at the surface, which compensates for the want of exercise consequent of stable life.

Carrying and brushing should not be done in the stable; the dust and scrub will be scattered in the manger to mix with the food, besides keeping the stable uncleanly. The animal should be taken out into the lot, securely tied, and handled so gently that he will enjoy rather than fear the application of the curry-comb. A sharp toothed comb roughly scraped over the tender skin is anything but pleasant, as the shrinking, retreating animal will soon show. The instrument should be lightly applied and dependence placed mainly upon the brush. Currying should be begun at the head and the comb passed lightly on and down until all the dandruff is loosened, when it should be removed with the brush. Much particularity should be observed around the edges of the fore-top and the mane. It is always a good plan to sponge off the head and ears, using but little water and smoothing the hair down to its natural position. In going over the back, quarters, loins, etc., the comb should be used in one hand and the brush in the other, and the work quickly done. Great care should always be observed where the skin lies in folds, as at the union of the legs with the body; but every part should be thoroughly freed from dust and dandruff. It must never be overlooked that grooming is to a horse what bathing is to a person; and in order to clean his skin it must be carefully and thoroughly done.

Many farmers will be surprised to learn that a well groomed horse will keep fat on less food than one that is neglected, but this is an unquestionable fact. When an animal is well attended to his general health is kept in a better state and he more thoroughly assimilates all of his food. The horses and mules of the southern farmers are generally efficiently fed, but it is an exception where they are well groomed.—*South and West.*

### Care of Harness.

Our farmers are prudent in buying harness, demanding the best leather, the best work, etc., but they put the harness in use and allow it to be exposed to all kinds of weather without further care, and, in a very few years, it is ripped, dried and cracked, and almost worthless. Then the harness maker has to take all the blame. The careful farmer will have a good place to hang his harness where it may hang up straight, and away from the gas of the manure. One man will oil his harness only in hot weather with some cheap fish oil; then hang it in the sun to dry. When done it is no better than before.

I have owned tanyard, harness shop and shoe shop, and claim to understand the principles of making and pressing leather. Now, to oil harness properly, in early Spring, before Spring work begins, take it into a damp cellar, or some damp cool room; take all apart, soak well in a tub of warm water, and, with coarse rag and old knife, rasp off all gum and dirt. As soon as the outside is dried a little, put on, with a rag or brush, as much oil as will stick to it, and place all in a heap on a board to dry; if one coat is not enough, go over it again till filled with oil; then when all dried in, take warm soft water and castile soap and rag, wash well and put together. Castor oil is the best of all; good neatfoot oil is very good, in which mix enough lampblack to color well. After being exposed to a soaking rain, the harness should be rubbed over with a rag and good oil while wet. Never expose leather to hot sun or drying winds till dry after oiling, or the oil will do harm, rather than good. Harness well treated in this way will be soft, pliable, less liable to chafe or rub off the hair of the horse, and last some years longer than if neglected.—*Country Gentleman.*

The ailment in horses, commonly termed scratches or grease-heel, is a skin disease, in which the heels become more or less tender and hot or feverish; small pustules form, which burst and leave a sore, ulcerating surface. There may be stiffness of gait, pain, and sometimes itching. In slight cases the skin of the heel appears merely chapped. The ailment is often superinduced by a plethoric condition of the system, or it may be caused or aggravated by exposure to much wet or filth, and especially during Spring and Autumn, during which time, especially when horse's legs are much trimmed or deprived of their natural hairy covering, the disease may assume a chronic or inveterate form. It may become so aggravated as to cause fissures in the skin, with hardened edges, and a slow, sloughing process tends to incapacitate the animal for work. The treatment consists in moderate diet, cleanliness of the whole body, keeping the limbs clean and dry, and using mild astringent lotions, such as a mixture of half an ounce of Goulard's Extract and half a pint of soft water; or, an ointment made of one part of subacetate of lead and eight parts of hog's lard. Advantage is derived from the use of oxide of zinc, in powder, which may be applied alone upon the raw surface, or mixed with one-half or an equal quantity of finely powdered starch. Do not expose the horse to wet or filth, and keep his place in the stable free from draft, especially from behind. Suspend all washing of the heels and keep them clean by wiping with a moist chamois skin. A tablespoonful of flower of sulphur may be mixed among the food every evening, and common salt. Keep common salt within reach of the horse, but do not mix it among the food.

Take good care of your colts, no matter how insignificant they may appear. Mand Messenger was sold as yearling for only twelve dollars and a half. She now has a record of 2:16, and is worth several thousand dollars. They may not all be worth the more for having good care and plenty to eat.

Growing Colts.

[Live Stock Journal.]

Breeding horses in this country is now a large item in our agriculture. We have over eleven millions of horses, representing a capital of about one thousand millions. The horse, with us, is almost wholly the motive power in our farming. In other countries, oxen are more used, and even milch cows are yoked to the plough; but here the horse furnishes the power. Farmers are also seeing the necessity for heavier animals to do their work, and are now favoring the introduction of the heavy foreign draft breeds. But they would be wise to study the effect of judicious and generous feeding, for a few generations, upon the smaller-sized breeds also. The nine and ten hundred horses, so often seen on farms, would soon become established at eleven and twelve hundred pounds, with good feeding for a few generations. Colts do not get that generous kind of feeding required to develop them fully. The larger breeds could easily be reduced in weight by scanty feeding while young, for a few successive generations.

But the feeding of colts must be done on different principles from that of animals intended for meat. The horse is valued for his muscle, not for his fat. Surplus fat is an indication of weakness, not of power. We think breeders may be liable to feed the large breeds of horses, when young, on too fattening food, and thus add to their weight, but deduct from their strength. This mode of feeding also makes them more clumsy or logy in gait. Colts should have plenty of exercise, and a diet calculated to develop the frame and muscular system. There need be no fear of too little fat with any system of full feeding. There will always be plenty of fat to cushion the joints and muscles, even when fed upon the best muscle-forming food. Our Western farmers have always been strongly tempted to feed corn, because it is the grain always nearest at hand. But they should remember that corn contains some 60 per cent. of starch, the basis of fat production, and only some 8 to 10 per cent. of muscle-forming food. This makes it highly injurious food for growing colts.

It is important that the foal should be full fed from birth, and in case the dam does not yield milk enough to give a strong and steady growth, this should be supplemented by cow's milk. The foal can easily be taught to take warm cow's milk, and it will still take all the milk of the dam. The foal should be handled from the first, and learn to regard man as its friend. It can usually be taught to drink warm milk from a pail. Some, however, think it easier to teach it to suck from a bottle. It will not be necessary to give it new milk more than a few days, when sweet, warm, skim milk, with occasionally a little flaxseed in it, will produce just as good results.

When it becomes necessary to wean such a foal, it is only required to increase the amount of cow's milk, and also to teach it to eat a few oats. And when the foal has had sufficient milk from the dam, it will only be necessary to teach it to drink milk and eat oats some two weeks before weaning. Skim milk is perhaps the very best food to wean a colts on, because, having lost most of its cream, or oil, it still retains its casein, or cheese principle, its whey or sugar, and its phosphate of lime, being well adapted to give a strong growth to the muscles and bones. After the colt gets used to taking milk, it may be given moderately sour without injurious effects. A few oats or quarts of bran or middlings should also be given the colt at weaning. The object is to keep the colt growing steadily, without losing anything, in weaning.

Dairying is now so extensively carried on over large districts of country, that skim-milk can easily be obtained if the colt raiser does not have it himself. It can always be purchased at twenty-five cents per hundred, and usually for less. It will be an economical and most effective food for at least two months after weaning. Two to three gallons a day for each colt will be the proper quantity. A little boiled flaxseed will prevent all constipation, and being a nutritious food, will be worth all it costs as food, besides aiding in maintaining health.

We think prevention of disease is much better than cure, and therefore we advise that each food should be given as will keep the digestive organs in a healthy condition. When cow's milk is not to be had at weaning, then teach the colt to eat oats and wheat middlings, to which a little boiled flaxseed is added each day, or one pint of linseed-oil meal. This will answer instead of the flaxseed. During the first winter early cut and nicely cured clover hay free, from dust, will be found excellent fodder to assist in rainy growth.

Colts should have a good-sized yard to exercise in, which ought to be dry, not allowing them to fill the hair on fetlock and pastern with mud, which must be well cleaned if this occur.

A horse's head indicates his character very much as a man's does. Vice is shown in the eye and mouth; intelligence in the eye and in the breadth between the ears, and between the eyes; spirit in the eye and in the pose, in the mobile nostril, and active ear. The size of the eye, the thickness of the skin, making the face bony, the large, open, thin-edged nostril, the fine ear, and the thin, fine mane and fore-top, are indications of high breeding, and accompany a high-strung nervous organization, which with good limbs and muscular power ensures a considerable degree of speed in the animal. The stupidly lazy horse that drivers call a "lunk-head," has a dull eye usually, a narrow forehead, and contracted poll. He is not represented in this group, but occurs not infrequently, is always a blunderer, forgets himself, and stumbles on smooth ground, gets himself and his owner into difficulties, talks himself, is sometimes positively lazy, but often a hard goer. He needs constant care and watchfulness on the driver's part. A buyer of equine flesh should be able to detect the good and bad qualities of the animals he contemplates purchasing. This valuable knowledge is only acquired by a careful study of the various parts of horse physiognomy.

Over-feeding is one of the common injuries to horses. All cannot be fed alike. Dyspepsia is a frequent disease with them. When a horse is windbroken, heavy, or has indications of either trouble, he should be given but little hay, and this should always be wetted. In all such cases it is better to give out feed and wet. Such horses should never be overloaded, overdriven, or obliged to do anything which requires excessive action of the lungs. There is no "cure" for a windbroken horse. Many an old horse has died of starvation because he could not grind his food, which, with a little dentistry, would have lived and done well for years. In such cases the front teeth should be shortened so that the grinders can work together. Also, often old horses, and horses that are not old, have jagged or rough teeth, which prevent them from eating well. These teeth should be smoothed with a file or a float, an instrument made for the purpose.

The hoof of the horse, when in a normal condition, ought to be almost perfectly cool to the touch. After hard driving on a beaten road, or over stones, particularly in dry weather, or when he stands in bedding, a little warmth will generally be perceptible; but this should subside after two or three hours' rest in an unbedded stall. If the feet appear to the hand unusually warm, distrust should be awakened, more especially if there is a marked difference between the temperature of two or more of the feet. A simple way of assuring one's self of the accuracy of the observation, is by washing the hoofs thoroughly and noticing whether any of them dries more rapidly than the others. The feverish foot will always become dry first, and will recover its unnatural warmth in a few minutes, while the sound foot will remain cool.

The New York Tribune says that farcy can be cured by feeding well, giving moderate exercise regularly, and at the same time administering daily six grains of arsenious acid, a dram of bicarbonate of potash, and eight grains of powdered nux vomica, in food. Apply over the farcy buds an ointment composed of equal parts of bi-oxide of mercury and lard. On ulcers apply powdered sulphate of iron, to check the morbid process and discharge and induce a healthy action.

The farmer who parts with the best and most trusty horses on his farm for no other reason than that he is offered a good round price for them is certainly foolish, and will find it not sooner or later. To no one else can a horse be more valuable than to the man who has raised it and trained it to suit his own purpose, and when a man is the possessor of something that will tempt others to offer big prices he ought to feel the more sure that it is valuable to him.

There are many brood mares in the country owned by men who are so careless in regard to the kind of horses they raise that the true value of them is not known. Were such animals in proper hands they would soon make their mark as breeders. The man who is judge enough to select such mares as would produce a good colt each year could find but few better ways to invest his money, should he handle them properly and breed them with judgment.

The groom should ingratiate himself with the foal as early as possible, constantly handling him until he can lift up his legs and tan the feet, first with his hand, then with a stone, because when a foal is three months old, owing to standing either on grass or a straw bed, his feet require to be rounded at the toes and the heels kept open, and this process ought to be attended to every month.

A farmer says that if you want to fat a horse that is hide-bound, give him one teaspoonful of the following once a day in wet feed: Salt-peter, four ounces; crude antimony, one ounce; sulphur, three ounces; pulverize and mix the whole together. Dose, a tablespoonful once a day in a bran mash.

One hour's excitement in the beginning of a day's work will do a horse more harm than three hours' hard labor at the close. If you want to get all the work possible out of a team in a day keep them quiet as possible and go slow at the beginning.

Dismal Jeems.

We believe the love of the trotter is too deep in the hearts of the people to be easily eradicated, but we are also prepared to believe that the miserable hippodrome business of the past few years is at last reaping its righteous reward, and that reward is empty grand stands and deserted quarter stretches.

No syndicate of modern times has been a closer combination than the union of prominent trotting horse drivers on the American turf. He who was in the "swim" had the key to the combination and found it clear sailing, but woe betide the unfortunate owner or driver of a good horse, who from choice or necessity was outside the circle; he might own a good horse, but he would require a whirlwind of speed to beat the combined efforts of the combination. Honest racing not only attracts a crowd but it proves a sticking plaster that keeps continually drawing, whereas the sort of racing served up by the syndicate alluded to has been of that kind which best suited the interests of their own wallets.

It has been a veritable case of killing the goose that laid the golden egg. Thousands of people used to pay their dollars at the gates of trotting meetings that now are conspicuous by their absence. Wherefore their absence? Echo answers, they got tired of their monkey business, they got weary of looking on at a gag of sharps whose performance for the afternoon had been regulated the same as if they were members of a circus troupe and had been signaled to their allotted tasks in the ring. The summaries of Buffalo, Cleveland, Rochester, Providence, Springfield, Hartford, and other representative tracks, tell many a queer tale to the observant mind that troubled itself to keep track of the tricks of the lout tails; to such a one it speaks a very plain language, and it reveals that when a horse was "meant" was the time when the pool box had been worked to suit the interests of the controllers. —Canadian Sportsman.

The Style in Texas.

The Chicago Horseman mentions the following incidents of the episode in the pool room at Waco:

Kuap McCarthy had a taste of the bold Texans at Waco. The pool room was packed with the horse crowd one evening. Herdic had unlimbered, and was getting in the money right and left, when bang! bang! went a gun, and down dropped the chandelier, the same instant the mirror at the back of the bar was shattered into a thousand pieces. About that time most of the boys thought the battle was to the vigilant and active, but I'll let Kuap tell it in his own words: "As the first gun went off, I was standing near the back door, and you bet I went down the alley flying. Mr. Smith ran up against the door trying to get out, and got a black eye. Lem Ulman shouted 'fire! fire!' and scooted at the head of the procession. Frank Herdic hollered: 'Hell's out for noon,' and we lost sight of him in the rush. The room was crowded with men. In about a minute only one was left, Herdic's cashier, who was frozen fast to his chair with scare. In half an hour we awoke back kind of carefully one and two at a time, but Herdic was among the missing. We hunted around, but couldn't turn him up. At last he crawled out of the big safe, and looking on the wreck gently asked: 'Has the cyclone passed?'"

To see the stuff laying all around the floor you would have thought two tornadoes had traveled through that room. Mr. Smith said he heard men tell about shooting in Texas, and had read about it, but this time he had seen it himself. There was no more pool selling that night."

Billy Blair, the Queen's driver, weighs 151 pounds.

THE STANFORD STAKES 1886

A SWEEPSTAKES FOR TROTTING COLTS AND FILLES OF 1886, \$175 each, \$25 payable on the 1st of January, 1885, at which time the stakes will close, \$50 on the 1st of January, 1886, and \$100 thirty days before the day fixed for trotting, whatever amount up to be considered forfeit, and the neglect to pay at the stipulated time incurring forfeiture of the previous payments. The race to be heats of a mile, best three in five, to harness. First to receive six-ninths of the whole sum, the second two-ninths, the third one-ninth. In addition to the stakes and forfeits, the proportion of the gate money, profit on pool sales and all other sources of emolument will constitute the gross amount to be divided in the foregoing proportions. Five or more subscribers to fill. The race to be trotted in 1886, not sooner than the latter part of August. The exact date to be fixed and announced on the 1st of January, 1886, or sooner.

Race to be governed by the Rules of the National Trotting Association. Nominations to be made to N. T. SMITH, Treasurer, S. P. Railroad office, Fourth and Townsend streets, or JOS. CAIRN SIMPSON, Secretary, BREEDER AND SPORTSMAN office, on or before the 1st day of January, 1885. The colts must be named, the name and pedigree, so far as known, given.

Under the new trotting rules letters legibly postmarked January 1st will be eligible.

N. T. SMITH, Treasurer.  
JOS. CAIRN SIMPSON, Secretary.

STANFORD STAKES FOR 1887.

A SWEEPSTAKES FOR TROTTING COLTS AND FILLES OF 1887, \$175 each, \$25 payable on the 1st of January, 1885, at which time the stake will close, \$50 on the 1st of January, 1886, \$25 on the 1st of January, 1887, and \$100 thirty days before the day fixed for trotting, whatever amount up to be considered forfeit, and the neglect to pay at the stipulated time incurring forfeiture of the previous payments. The race to be heats of a mile, best three in five, to harness. First to receive six-ninths of the whole sum, second two-ninths, third one-ninth. In addition to the stakes and forfeits, the proportion of the gate money, profit on pool sales and all other sources of emolument will constitute the gross amount to be divided in the foregoing proportion. Five or more subscribers to fill. The race to be trotted in 1887, not sooner than the latter part of August. The exact date to be fixed and announced on the 1st day of January, 1887, or sooner.

Race to be governed by the Rules of the National Trotting Association. Nominations to be made to N. T. SMITH, Treasurer, S. P. Railroad office, Fourth and Townsend streets, or JOS. CAIRN SIMPSON, Secretary, BREEDER AND SPORTSMAN office, on or before the first day of January, 1885. The colts must be named, the name and pedigree, so far as known, given.

Under the new trotting rules letters legibly postmarked January 1st will be eligible.

N. T. SMITH, Treasurer.  
JOS. CAIRN SIMPSON, Secretary.

1885. RANCHO DEL RIO. 1885.

The Thoroughbred Stallion

JOE HOOKER, BY MONDAY.

- First dam, Mayflower, by imp. Eclipse.
- Second dam, Hennie Farrow, by imp. Shamrock.
- Third dam, Ida, by imp. Belshazzar.
- Fourth dam, Gamma's dam, by Sir Richard.
- Fifth dam, by imp. Eagle.
- Sixth dam, Bet Bosley, by Wilkes' Wonder.
- Seventh dam, by Chanticleer.
- Eighth dam, by imp. Stirling.
- Ninth dam, by Clodius.
- Tenth dam, by imp. Silver Eye.
- Eleventh dam, by imp. Jolly Rogers.
- Twelfth dam, by Partner.
- Thirteenth dam, by imp. Monkey.
- Fourteenth dam, imp. mare from the stud of Harrison of Brandon.

Terms, \$50 the season to a few Mares of approved breeding. This young stallion has proved to be one of the most successful racing sires, and every one of his colts that has been trained can run fast. Among them are Fred Collier, Jim Renwick, Bonanza, La Scala and Ichi Ban. For history of Joe Hooker, see BREEDER AND SPORTSMAN, January 20th, 1883.

The Thoroughbred Stallion

THREE CHEERS,

By Imported Hurrah,

SON OF NEWMINSTER.

- First dam, Young Fashion, by imp. Monarch.
- Second dam, Fashion, by imp. Trustee.
- Third dam, Bonnets o' Blue, by Sir Charles.
- Fourth dam, Reality, by Sir Archy.
- Fifth dam, by imp. Medley.
- Sixth dam, by imp. Centinel.
- Seventh dam, by Mark Anthony.
- Eighth dam, by imp. Janus.
- Ninth dam, by imp. Monkey.
- Tenth dam, by imp. Silvereye.
- Eleventh dam, by Smoker.

Terms, \$50 the season for mares of approved breeding. Good pasturage for mares from a distance of \$4 per month. Care will be taken to avoid accidents and escapes, but the owner must take the risks.

Rancho del Rio, where these stallions will make the coming season, is five miles from Sacramento, on the Freepoor road.

THEO. WINTERS, Sacramento, Cal.

BICYCLING.

Amateur Racing.

Every year racing in one form or another comes more prominently to the front, and the public is being educated up to the point of believing that a good bicycle race is quite as interesting, if not more so, than a horse race.

Bicycle racing has created quite a sensation during the past season; the wonderful records made by some of the great riders causing many people, who have had the old notion that the bicycle was a toy, to open their eyes in wonder and consider if, after all, there was not a deal of practicability about a machine that, with a good rider, is capable of beating a first-class horse for a distance and make him lift his feet pretty high to show many yards of daylight between them at a mile.

As a practical demonstration of the value of the bicycle as a vehicle, road racing should receive every encouragement, besides it, as a rule, develops a different species of athlete from him who makes his specialty the track, and thus tends to a wider distribution of honors.

From indications the men who will win the L. A. W. championships, next Spring, will have to extend themselves, for, since the last championships, many fast riders have come to the front and will make a strong bid for honors.—Amateur Athlete.

Geo. Nash, the sixteen-year-old fancy rider, is credited with the following remarkable feat: A miniature step-ladder, with steps upon both sides, having been placed in the middle of the road, Nash, with the small wheel still detached, and standing on the pedals, balanced himself in mid-air. The fearless bicyclist then rode up one side and down the other, bringing forth rounds of applause from the spectators.

The uniform of the Bay City wheelman is very neat. It consists of bottle-green knee breeches and shirt, black stockings, white hat, with low cut shoes.

Wing Hing, of Cedar Rapids, Ia., rides a fifty-inch bicycle, and wears his full Chinese costume when aboard his wheel.

There are six wheelmen in San Felipe. The roads in that neighborhood are very good.

Mark Lane rides a fifty-six-inch machine. This is the largest machine in Stockton.

Very few wheels were out last Sunday, owing to the inclemency of the weather.

Stockton has eleven riders of the silent steed.

ATHLETICS.

A meeting has recently been held at Thurloe for the purpose of forming a "Gaelic Association for the Promotion and Cultivation of Irish Pastimes." The movement has received high patronage.—A hockey club has been formed at Harvard College. It is proposed to play the game on scientific principles.—At the Aquarium, London, Eng., A. W. Sinclair failed in his attempt to lower the amateur record of 100 miles.—Littlewood won the Aetley belt in the seventy-two hours go-as-you-please race, at the Aquarium, England, on Nov. 30th.—At the Clay Hall grounds, London, Eng., J. W. Raby won the four hours' walking championship with 26 miles 8 laps to his credit. Heberd was second with 26 miles 2 laps. The track measures ten laps to the mile.—The American Athletic Club Harriers of New York, the New York Hare and Hound Club, and the Obstacle Hare and Hound Club of New Jersey held successful cross country runs on Thanksgiving Day.—The Williamsburg lacrosse team triumphed over the Philadelphia lacrosse players on Thanksgiving Day.—An international curling match between eight from Canada and the United States will be played Jan. 29, during the Winter carnival at Montreal.

At the games of the Schuylkill Navy, Nov. 29th, at Philadelphia, W. B. Page cleared 5ft. 9in. in the running high jump. The jump was over a rope drawn tight.

Nate Clark, the champion roller skater of the United States, defeated Charles Downing in a two-mile race at the Erie (Pa.) Casino, Nov. 27th; time, 6 minutes.

W. H. Richardson.

Another one of our local cricketers has joined the benedicks. We refer to W. H. Richardson, who was married at Honolulu on the 22d of November, to Miss Annie Wilson, an accomplished society young lady of this city. Mr. Richardson, it will be remembered, left San Francisco a few months since to take charge of the extensive drug firm of Benson, Smith & Co., of Honolulu. The young couple have the best wishes for their future happiness of a large delegation of San Francisco friends.

The first athletic meeting of the St. Louis, (Mo.) Athletic Association was held at the Union grounds, on Thanksgiving day. The weather was splendid and the attendance very large. The principal performance of the day was the splendid jumping of Malcolm Ford, of the New York Athletic Club, in the standing long jump without weights, in which he cleared 10 ft. 7 1/2 in., thus beating his own best on record of 10 ft. 5 1/2 in. The principal events were:

Putting the shot—Daniel Small, 1st, with 34 ft. 11 in.

Pole vault—Henry Wether (9 in. start), 1st, with 9 ft. 2 in.

Two-mile bicycle race—final heat—C. E. Stone, 1st, in 6m. 30s.

Standing long jump without weights—M. W. Ford, 10 ft. 7 1/2 in. first, defeating Spencer, Rudolph, Taylor, (Glenville and Sigrid).

Running high jump—Henry Wether, 5 ft. 5 1/2 in., first.

We understand that Scott, the winner of the high jump at the late Olympic games, is not an amateur, consequently he will not receive the medal. Benjamin and Geimain will jump off for the gold and silver medals.

FOOTBALL.

The following notice was issued to the students of Harvard college on Wednesday, Nov. 26th: "The Committee on Athletics, having become convinced that the game of football, as at present played by college teams, is brutal, demoralizing to players and to spectators, and extremely dangerous, propose to request the faculty to prohibit the game after the close of the present season. Students interested in the game, and wishing to show cause why such action should not be taken, will be heard at a special meeting of the committee at the gymnasium on Monday, Dec. 1st, at 7:30. John William White, W. E. Byerly, D. A. Sargent, Committee on Athletics."

The inter-collegiate football match between Yale and Harvard, which took place at the Polo grounds on Thanksgiving Day, was witnessed by 10,000 people. The play was of the roughest description. The game resulted in a draw, owing to disputes. The conduct of many of the players was reprehensible in the extreme.

The Maories of New Zealand have for some time past been taking considerable interest in football. It is expected that next season a Maori football team will be in the field.

ATTENTION SPORTSMEN!

Hammerless Guns

Edwin F. Smith, Secretary.

## FOR SALE,

THE GAME  
HAMBLETONIAN  
TROTTER STALLION

## "HA HA!"

Four-year-old record 2:31, (can trot much faster), is offered for sale during this month at a bargain. Cause for selling, closing out business.

"HA HA" is brown, 16 hands, weighs 1100 lbs., and is stylish, sound and kind. For pedigree see Wallace's Standard Stud Book, No. 1219.

"HA HA'S" colts took first premium at the Stockton Fair for the best trotting suckling. He trotted three races this season as a four-year-old, one at Sacramento where he won second money, and twice at Stockton where he won both races.

FRED ARNOLD,  
Stockton, Cal.

# Corrin's Great Horse Liniment.

Sure Cure for Swinney, WEAKNESS OF THE SPINE, SPRAINS, STRAINS, ETC.

It neither blisters nor causes the hair to fall off, and does not incapacitate the horse from work during treatment.

Though there have been many drugs on the market which are claimed good, the observer will readily see their deficiency, from the number of lame horses which he everywhere meets, and that are mostly suffering from that scourge, Swinney, which not only causes the shoulder to gradually shrink away, but also the body to emaciate. Now where is the horse-man so blind to his own interest, as to refuse this new remedy a fair trial.

Mrs. A. C. JOSEPH, Prop., San Francisco.

All Rights Secured in U. S. Patent Office.

PRICE, \$1.00 PER BOTTLE.

JNO. A. McKERRON, Agent,  
232 Ellis Street.

Secured by Letters Patent ISSUED MAY 27, 1879. REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J in combination with the elastic connecting-strip I, substantially as described and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingles is avoided, substantially as herein described.

**ASHLAND PARK TROTTING STUD**

NEAR LEXINGTON, KY.

**B. J. TREACY, PROPRIETOR.**

THIS IS STRICTLY A BREEDING FARM, FOR though training is done, it is only for the stock belonging to the place, or those purchased from the proprietor. The proprietor of Ashland Park has no pet trotting family; his aim is to secure and have at all times for sale choice representatives of each of the leading families, these being the Hambletonians, Mambrino Chiefs, Clays, Pilots, Black Hawks. At Ashland Park may now be seen splendid specimens of the get of such stallions as George Wilkes, Almont, Mambrino Patchen, Clark Chief, Edwin Forrest, Blackwood, Sentinel, American Clay, Administrator, North Star Mambrino, Bourbon Chief, Regular, Balsora, Howard's Mambrino and Homer. The steady aim is to possess nothing that does not trace through the best class of speed-producing trotting crosses, along all the blood lines, right to the thoroughbred. For catalogues or further particulars address  
2 1/2 St. **B. J. TREACY, Lexington, Ky.**

SUBSCRIPTION  
FIVE DOLLARS A YEAR.

## TURF AND TRACK.

### The Big Winners of 1884.

[New York Sportsman.]

In computing the amount of winnings, we have taken the purse at their advertised value. Where a horse started against time, if winning, we credited the full amount of the purse; if losing, we credited nothing. Where two horses started for a special purse, we credited the winner with 60 per cent. and the loser 40 per cent. of the purse. Where the amount was not given, of course, we could not make a credit, and in such cases mention the fact, as so much more to which the horse is entitled. For obvious reasons, no attempt was made to include the winnings of Jay-Eye-See or Phallas, almost all the contests of each during the past season having been mere hippodromes, either trotting for gate money under their own managers, or for a share of the receipts from others, consequently no one but their owners or managers can form any idea of the amount earned by them during the season. The figures in each case represent net winnings, entrance deducted:

Harry Wilkes, bay gelding, sired by Geo. Wilkes, dam by Captain Walker, record, 2:15. During the season he started in seventeen races, winning thirteen, and was second in four, one being in his trial against time—2:16—at Island Park, when he trotted in 2:16½, his net winnings in purses, premiums, etc., being \$11,510.

Felix, bay gelding, sired by Nutwood, record, 2:19½. During the season he started in twenty-five races, winning ten, was second in seven, third in six, and fourth in two, his net winnings in purses being \$6,175.

Johnston, bay gelding, sired by Bashaw Goldust, dam by Ned Forrest, record, 2:06½. During the season he started in ten races, winning six, losing four against time, his net winnings in purses, premiums, etc., being \$6,100.

[This includes \$3,000 of the special \$5,000 for which he defeated Richball at Minneapolis, and includes nothing for his losing performances against time, in which he undoubtedly received compensation each time.]

Catchfly, bay mare, sired by Administrator, dam by Almont; record, 2:13½. During the season she started in fifteen races, winning nine, was second in five, and fourth in one, her net winnings being \$5,580.

H. B. Winship, black gelding, sired by Aristos, dam by Col. Moulton, record, 2:20½. During the season he started in six races, winning two (one against Frank and mate at Chicago, another with running mate against time at Providence), was second in two, third in one, and fourth in one, his net winnings in purses, premiums, etc., being \$4,255.

Billy S., bay gelding, sired by Corbeau, dam Nannie Abbott; record, 2:14½. During the season he started in seventeen races, winning three [and at Chicago distancing all but Fritz, winning in addition third and fourth money], was second in seven, third in six, and fourth in one, his net winnings being \$4,150.

Guy Wilkes, bay horse, sired by George Wilkes, dam by Membrino Patchen; record, 2:19½. During the season he started in nine races, winning all, netting in purses \$4,100.

Belle F., bay mare, sired by Masterlode, dam by Magna Charta; record, 2:20½. During the season she started in thirteen races, winning six, was second in four, third in two, and lost her entrance in one, netting in purses \$4,092.

Westmont, chestnut gelding, sired by Almont; record, 2:13½. During the season he started in sixteen races, winning seven, was second in seven, third in one, and distanced in one, netting in purses \$3,829.

[Three exhibitions with running mate are counted as losing performances, and nothing credited for them, although, of course, he received compensation in each case.]

Maud Messenger, bay mare, sired by Messenger Chief, dam by Gentle Breeze; record, 2:16½. During the season she started in six races, winning two, was third in three, and did not win her entrance in one, netting in purses and match \$3,750.

Bessie M., black mare, sired by Pocahontas Boy; record, 2:16½. During the season she started in fifteen races, winning eight, was second in five, and fourth in two, netting in purses \$3,745.

Richball, brown gelding, sired by King Pharaoh; record, 2:12½. During the season he started in eighteen races, winning nine, was second in six, third in two, and distanced in one, his net winnings being \$3,740.

[This credits him with \$2,000 of the special \$5,000 with Johnston at Minneapolis, and deducts \$2,500, lost in the match at Chicago against Johnston.]

Young Rolfe, bay horse, sired by Tom Rolfe, dam by Draco; record, 2:21½. During the season he started in eleven races,

winning eight; was second in one, third in one, and distanced in one by dropping dead, having won in purses, net, \$3,560.

Phyllis, brown mare, sired by Phil Sheridan; record, 2:17½. During the season she started in nineteen races, winning four, was second in eight, third in five, fourth in one, and distanced for foul driving in one, winning, net in purses, etc., \$3,520.

Edwin Thorne, chestnut gelding, sired by Thornedale, dam by Ashland; record, 2:16½. During the season he started in nine races, winning five, was second in three, and third in one, winning in purses, net, \$3,135.

Belle Echo, bay mare, sired by Echo, record 2:20. During the season she started in fourteen races, winning seven, was second in two, third in one, and fourth in four, winning in purses, net, \$3,090.

Clemmie G., chestnut mare, sired by Magic, record, 2:15½. Starting during the season in eight races, she won three, was second in two, third in two, and fourth in one, winning, net, in purses, \$2,975.

[In one purse at Chicago, when she won third money, the amount of purse is not given.]

St. Albans, black gelding, sired by Van Giesen's Patchen, dam by Foxhunter, record, 2:20½. Starting during the season in thirteen races, he won six, was second in four, third in one, fourth in one, and did not win entrance in one, netting in purses, \$2,810.

Minnie R., bay mare, sired by John C. Breckenridge, pacing record, 2:16½; trotting record, 2:19. During the season she started in eight races, to harness, winning all, netting in purses, \$2,740.

[Her exhibitions with running mate were not taken into account.]

Jewett, black gelding, sired by Allie West, dam by John Innis; pacing record, 2:14½; trotting record, 2:22½. During the season he started in fourteen races, winning four, was second in six, third in one, did not win entrance in one, and was distanced in two, in which he started as a trotter, netting, in purses, \$2,550.

King Almont, bay horse, sired by Almont, dam by Crockett's Arabian; record, 2:21½. Starting in seven races, he won three, and was second in four, netting, in purses, \$2,470.

Eagle Bird, roan colt, sired by Jay Bird; record, 2:30½. Starting in two colt stakes, he won both, the value being \$2,400.

Onward, brown gelding, sired by Knickerbocker, dam by By Reserve; record, 2:20½. During the season he started in fourteen races, winning five, was second in four, third in three, and fourth in two, netting, in purses, \$2,347.50.

Montgomery, bay horse, sired by Inheritor, dam by Kentucky Chief; record, 2:21½. Starting in fifteen races, he won nine, was second in three, third in one, fourth in one, and did not win entrance in one, netting, in purses, \$2,353.

Zoe B., bay mare, sired by Blue Bull; record, 2:20½. During 1884 she started in thirteen races, winning three, was second in two, third in four, fourth in two, and did not win entrance in two, netting, in purse, \$2,355.

St. Denis, bay horse, sired by Blue Bull; record, 2:23½. Starting in six races, he won five and did not win entrance in the other, netting, in purses, \$2,390.

Bedford, bay colt, by Strathmore; record, 2:30. At Lexington, Ky., Oct. 14, he won the Kentucky Stakes, for three-year-olds, value, \$2,285.

Walsnut, brown gelding, sired by Florida; record, 2:20½. During the season he started in eighteen races, winning eight, was second in three, third in four, fourth in two, and did not win entrance in one, netting, in purses, \$2,222.50.

Butterfly, bay mare, sired by Red Wilkes, dam by Geo. Wilkes; record, 2:19½. During 1884 she started in seven races, winning four, was second in one, and third in two, netting in purses \$2,180.

Frank, bay gelding, sired by Abraham, record 2:20½. Starting during 1884 in seven races, he won one, was second in three, third in two, and fifth in one, netting in purses \$2,140.

[This includes 40 per cent. less, entrance of special purse, \$5,000, at Chicago, where he was defeated by Wiusbip and running mate.]

Deck Wright, bay gelding, sired by Hinsdale horse; record 2:19½. During the season he started in twenty-two races, winning four, was second in nine, third in four, and fourth in five, netting in purses \$2,105.

Adelaide, bay mare, sired by Milwaukee; record, 2:20½. During 1884 she started in fourteen races, winning seven, was second in two, third in one, fourth in two, and did not win entrance in two (one being the \$10,000 purse at Hartford), netting in purses \$2,065.

Fritz, gray gelding, breeding unknown. During 1884 he started in eighteen races, winning four, was second in seven,

third in two, fourth in three, and did not win entrance in two, netting in purses \$1,982.50.

Prince Middleton, bay gelding, sired by Middleton; record, 2:24½. Beginning at the Chicago Fall meeting and extending through the Texas Circuit, he has started in twelve races, winning seven, was second in four, and third in one, netting in purses \$1,965.

[We did not compile his races through the Grand Circuit, where he did not win a race or heat, but probably averaged winning entrance money.]

Manon, bay mare, sired by Nutwood; record, 2:21. During the season she started in five races, winning all, netting in purses \$1,960.

Lorena, black mare, sired by Col. West, dam by Edwin Forrest. During 1884 she started in twelve races, winning seven, was second in three, fourth in one, and fifth in one, netting in purses \$1,950.

Harry Velox, bay gelding, sired by Velox; record, 2:24½. During 1884 he started in eleven races, winning six, was second in two, third in two, and fourth in one, netting in purses \$1,840.

Early Dawn, brown mare, sired by George Wilkes; record, 2:21½. At Lexington, Ky., Oct. 15, she won the Blue Grass Stakes, for four-year-olds, value \$1,720.

Lizzie M., bay mare, sired by Thomas Jefferson. During 1884 she started in fourteen races, winning six, was second in five, and third in three, winning in purses \$1,635.

[In two races which she won at Taunton, Mass., the amount of purse was not stated.]

Fritchard, chestnut gelding, sired by a son of Pulaski; record as a trotter, 2:24½; as a pacer, 2:32. During 1884 he started in nineteen races, winning ten, was second in four, third in three, and did not win entrance in two, netting in purses \$1,627.50.

Revenue, bay horse, sired by Smuggler, dam by Daniel Lambert; record, 2:22½. During 1884 he started in six races, winning four, and was second in two, netting in purses \$1,605.

Will Collender, brown gelding, sired by Strader. During 1884 he started in eight races, winning two, was second in two, third in three, and fourth in one, netting in purses \$1,595.

Fannie Witherspoon, chestnut mare, sired by Almont, dam by Gough's Wagner; record 2:16½. During 1884 she started in nine races, winning five, was second in two, third in one, and fourth in one, netting in purses \$1,570.

[Several of her races were exhibitions with Fritz, and we could not credit amount won, as it was not stated.]

Fides, chestnut gelding, sired by General Stanton; record 2:22½. During 1884 he started in five races, winning four, and was second in one, netting in purses, \$1,550.

Fuller, bay gelding, sired by Clear Grit; record, 2:13½. During the season he started in fourteen races, winning two, was second in four, third in four, fourth in three, and distanced in one, netting in purses \$1,464.50.

Bessie, chestnut mare, sired by Blue Bull; record, 2:21½. During the season she started in nine races, winning two, was second in five, and did not win entrance in two, netting in purses \$1,420.

A. V. Paulind, bay gelding, sired by Hamlet, dam by Goodrich horse; record, 2:20½. During 1884 he started in seven races, winning three, was second in three, and did not win entrance in one, netting in purses \$1,355.

Tony Newell, bay gelding, sired by Clark Chief, Jr., dam's breeding uncertain; record, 2:19½. During 1884 she started in eleven races, winning four, was second in three, third in one, fourth in one, and did not win entrance in two, netting in purses \$1,237.50.

Aleddin, bay horse, sired by Jay Gould, dam by Price's St. Lawrence; record, 2:27½. During 1884 he started in six races, winning all, not losing even a heat, netting in purses \$1,200.

Myrtie, bay mare, sired by Louie Napoleon; record, 2:27½. During the season she started in eleven races, winning five, was second in four, and third in two, netting in purses \$2,190.

Albert France, bay gelding, sired by George Wilkes; record, 2:21. During the season he started in fifteen races, winning three, was second in five, third in four, fourth in one, and did not win entrance in two, netting in purses \$1,185.

Frank Landers, bay gelding, sired by Saddling Buck; record, 2:18½. During the season he started in six races, winning three, was second in one, third in one, and fourth in one, netting in purses \$1,125.

Elmer, brown gelding, sired by Gooding's Champion; record, 2:22½. During 1884 he started in five races, winning four, and was second in one, netting in purses \$1,120.

Kenilworth, bay gelding, sired by Lothair, dam by Wilkes Booth. Starting in three races, he won them all, netting in purses \$1,120.

Jerome Turner, bay horse, sired by Byerly's Ahdallah, dam by Pacing Ahdallah; record, 2:22. Through the Texas Circuit he started in nine races, winning six, and was second in three, netting in purses \$1,115.

Black Prince, black gelding, sired by Wilkins' Micawher, dam by Hambletonian, record, 2:25. During 1884 he started in ten races, winning five, was second in three, third in one, and fourth in one, netting in purses \$1,110.

[So many horses trotted under this name last season that we were often puzzled to distinguish one from the other, and may have failed to credit this horse with all of his winnings.]

Smuggler's Daughter, brown mare, sired by Smuggler, record, 2:24. During the season she started in four races, winning two, was fourth in one, and did not win entrance in one, netting in purses \$1,100.

Gurgle, hay mare, sired by Pocahontas Boy, record, 2:20. Starting in three races, she won one and was third in two, netting in purses \$1,090.

Burt Sbelton, sired by Warwick, dam by Henry Clay. During 1884 he started in twelve races, winning eleven straight and was fourth in one, netting in purses \$1,080.

Col. Wood, bay gelding, sired by Charley B., dam by Gooding's Champion. During 1884 he started in seven races, winning six and was second in one, netting in purses \$1,060.

Betsy Ann, chestnut mare, sired by Hoagland horse. During 1884 she started in fourteen races, winning four, was second in six, third in two, and fourth in two, netting in purses \$1,040.

Breeze Medium, bay mare, sired by Happy Medium, record, 2:24. During 1884 she started in fifteen races, winning two, was second in four, third in fourth, fourth in three, and did not win entrance in two, netting in purses \$1,030.

Harry Mills, brown gelding, sired by Sweepstakes, record, 2:25. Starting in nine races, he won seven, was second in one, and third in one, netting in purses \$1,010.

St. Cloud, bay gelding, sired by Conklin's Star, dam by Bay Richmond, record, 2:21. During 1884 he started in twelve races, winning three, was second in six, third in two, and fourth in one, netting in purses \$1,000.

The following are some of the prominent horses who won less than \$1,000 above entrance fees:

Pilot Knox, brown horse, sired by Black Pilot, dam by Col. Ellsworth, record, 2:21. During 1884 he started in six races, winning five, and was second in one, netting in purses \$990.

Minnie Moulton, black mare, sired by Lamhart Chief, record, 2:27. During 1884 she started in fourteen races, winning six, was second in one, third in two, fourth in four, and did not win entrance in one, netting in purses \$985. [Is now under expulsion.]

Capt. Emmons, chestnut gelding, sired by Continental, record, 2:19. During 1884 he started in fourteen races, winning four, was second in three, third in two, fourth in three, and did not win entrance in two, netting in purses \$982.50.

Nellie L., hay mare, sired by George Wilkes, dam by Gill's Vermont, record, 2:23. During 1884 she started in seven races winning three, was third in one, fourth in two, and did not win entrance in one, netting in purses \$970.

Billy Binton, chestnut gelding, sired by Hambletonian Prince, record, 2:20. During the season he started in nine races, winning four, was second in two, third in two, and did not win entrance in one, netting in purses \$965.

Spinella, brown mare, sired by Louis Napoleon. In the Texas Circuit she started in four races, winning all, netting in purses \$960.

Buffalo Girl, hay mare, sired by Pocahontas Boy; record, 2:12. During the season she started in five races, winning two, was second in one, and third in two, netting in purses \$955.

Eva, bay mare, sired by Sultan, dam by Bald Chief; record, 2:25. Starting in three races she won one, was third in one, and seventh in one, netting in purses \$925.

King Wilkes, brown horse, sired by George Wilkes; record, 2:22. During the season he started in twelve races, winning two, was second in two, third in three, fourth in four, and ninth in one, netting in purses \$915.

Charlie Hogan, hay gelding, sired by Virgo Hambletonian; record, 2:22. During the season he started in four races, winning two, divided second and third money in one, and was fifth in one, netting in purses \$900.

Ezra L., roan gelding, sired by Gideon; record, 2:21. During the season he started in five races, winning three, was second in one, and sixth in one, netting in purses \$820.

George V., chestnut gelding, by Masterlode; record, 2:20. During 1884 he started in eight races, winning one, was second in two, third in two, fourth in one, and fifth in two, netting in purses \$795.

Kitty Ives, gray mare, by Dolan; record, 2:23. During the season she started in twelve races, winning six, netting in purses \$775.

R. F. C., hay gelding, by Darley, dam by Denmark; record, 2:23. During the season he started in thirteen races, winning five, netting in purses \$750.

Amelia C., hay mare, by Dexter Bradford; record, 2:21. During the season she started in thirteen races, winning two, netting in purses \$745.

Judge Davis, hay gelding, by Joe Brown; record, 2:21. During the season he started in eight races, winning one, netting in purses \$525.

Phil Thompson, gray gelding, by Red Wilkes; record, 2:16. During the season he started in seven races, winning two, was second in two, one being in his match race against Mand Messenger for \$5,000, was fourth in one, fifth in one—the \$10,000 purse at Hartford—and distanced in one, the net loss on his season being one thousand six hundred and seventy-five dollars.

Racing Results of 1884—The Dwyers.

[New York World.]

The uncertainty of racing was never so thoroughly illustrated as during the past year by the running of the horses owned by the Dwyer Brothers. At the end of the season of 1883 they were so far ahead of all competitors in the amount of gross winnings that the difference between them and the second in the list (Mr. Pierre Lorillard) was nearly \$20,000 more than the amount credited to the second, while it was very considerably larger than the amount won by any English or French owner during the last five years. Through the winter and spring of 1884 the chances of the Dwyers were canvassed by their friends and others, and, having the favorite for the Withers and Belmont in their stable, it was any odds that they would again head the list for 1885. But a more disappointing lot of horses were never turned out than those so carefully taken care of at Sheephead Bay last winter. The favorite for the Withers and Belmont—Burton—never won a race for the stable and it was not until late in November that he won any race, and then he only beat a field of Brighton Beach "maidens" at three-quarters of a mile. As

to a majority of the two-year-olds they proved to be so far below the Dwyers' form that many of them were sold for vastly less than they cost as yearlings. Even in buying and selling the stable had its ill-luck, and although the brothers no doubt won Panique clear when he captured the Belmont, they sold a fairly good horse in Xenia (the Glenelg-Crownlet colt), which, as Palinurus, won several good races, including the Foxhall Stakes at Saratoga, for his lucky purchaser, Mr. Bryson. The full record of the stable for 1884, including Hartford's five races won at Brighton in November is as below, of which \$12,020 was paid in entrance money, including \$5,000 in the match between Miss Woodford and Drake Carter:

Table with columns: HORSES, Times started, Times first, Three third, Gross amount won. Lists horses like Miss Woodford, Ecuador, Richmond, Hartford, etc., with their respective race records and earnings.

At the head of the list stands perhaps the best horse that the Dwyers have ever owned, not excepting Luke Blackburn and Hindoo. Both were grand specimens of the American thoroughbred, and when in condition were unconquerable. But as neither was able to train on through a four-year-old career, taking short and long races as Miss Woodford did during the past season without sustaining defeat, she is certainly not only entitled to be considered the best horse that the Dwyers have owned, but she is also worthy of the title with which her admirers and backers so frequently hailed her, that of "Queen." Some exceptions were made that she has never carried weights. That is true, inasmuch as her owners steadily refused to run her in handicaps at excessive weights; but as she won seven out of her nine races at full weight for age, she certainly was in no degree favored. That she could have won under considerably more weight than she did, judged by the ease with which she won a majority of her races, is certain, while that a good opinion was held by some that she could carry English weights is also a certainty, especially by those who asked the Dwyers to put a price on her with a view of sending her abroad. Of the races won, Miss Woodford began at Sheephead Bay with two purses, one at a mile and a half, the other at a mile and a quarter. She next took the Coney Island Stakes at a mile and a furlong, which she followed by winning the Ocean Stakes at Monmouth Park. A long rest followed, and she next won the Eatontown and Champion Stakes. From Monmouth Miss Woodford was returned to Sheephead Bay, where she in turn won at seven furlongs, two miles and a half and at two-mile heats. For the seven furlongs she beat a good field in the fast time of 1:23, while at two miles and a half she beat Drake Carter, the race being a match in which the sum of \$12,000 was involved as between the Dwyer Brothers and Mr. Pierre Lorillard. The ninth and last race of the year run by Miss Woodford was the Great Long Island Stakes, at two-mile heats, for which she again beat Drake Carter and Mr. Corrigan's clever three-year-old Modesty. One of the features of the race was that it caused a rupture in the relations of employer and employee between the Dwyers and their trainer, Jimmy Roe. The latter was of the opinion that Miss Woodford was not equal to winning the Great Long Island Stakes by reason of the possibility that he would break down, and as the orders to run were imperative, Mr. Roe left the stable, and as he has not been invited to return, he is still an absentee.

Ecuador's winning of the rich Lorillard Stakes at Monmouth makes him second on the list. Nothing he had previously done, nor anything that he has since done, warrants the belief that this result was a "fluke," and that if Himalaya had not been knocked down soon after the start, he or Welcher would have won. Ecuador's stable companion, Panique, was not equal to the task any more than was Vocalic, Orator, Leo or Greystone. The last named, perhaps, would have been the most dangerous candidate had he not run a severe race in the mud a few days previous. Of the other three-year-olds, Panique, which the Dwyers bought a day or two after he won the Withers for Mr. Kittson, went so completely amiss after he won the Belmont for his new owners that the best he was able to do was to run third for three races at Saratoga, two of which were the Foxhall and Kenner Stakes, nor was the running of the other three-year-olds, Burton, Eldorado, Jennings and Greenhush, in any degree better, the only one that earned money was a solitary "five hundred" that Burton secured by running second to St. Saviour for the Newark Stakes.

As to the two-year-olds that carried the "red and blue" during the season, which included Richmond, Detective, Elmendorf, Petersburg, Lenoxx, Miss Palmer, Executor and Emmet, the first named was the only stake-winner, taking the Hopeful Stakes at Monmouth in the rain and mud on the fourth, and having previously won a purse of \$500 at Jerome and a sweepstakes worth \$750 at Sheephead Bay. Of the others, Elmendorf and Petersburg each won purses, the latter at Brighton, but Detective beat both in money won, thanks to a surplus over the selling price for Cricket at Monmouth Park. Of the others named, Lenoxx, Miss Palmer and Emmet were sold out of the stable and have had more or less success for their several buyers at Brighton Beach.

Of those four years old and upward Hartford fairly won the honors, his ten wins and ten seconds out of thirty-five starts bringing no less than \$6,000 to the stable's credit, of which no less than five races were won at Brighton after the racing had ceased elsewhere; in fact the old veteran proved the stable's "feed winner" for at least part of the winter, thus repaying in some degree what he cost the brothers when they "bought him in" after two selling races at Monmouth. Of the ten races won, the only important one, the value of which was over \$1,000, was the Jockey Club Handicap, at Jerome in June, when George Kinney ran second. As to Barnes and George Kinney, they were more or less under suspicion all summer, both owners and trainer fearing that every gallop would produce a breakdown, but Jimmy Roe's

care and patience was in a measure rewarded by Barnes winning four races, which included the Monmouth Cup, George Kinney winning three purses of \$500 each. Checkmate also did well by winning five out of eighteen races, each of them purses. He and George Kinney and Barnes were much fancied for several handicaps and stakes, but the handicappers as a rule so thoroughly respected their several reputations in the matter of weight that they only showed prominent in the Shrewsbury and Navesink handicaps, for which Barnes was respectively second and third. Of the others in the list none need any mention but Joe Blackburn, who proved so thoroughly worthless that he is said to be "doing time" in harness somewhere in New Jersey.

McLaughlin's loyalty to the Dwyers in keeping himself down to the weights is forcibly shown by his having rode 142 of the 156 starters, including 32 of the 38 wins. The remainder were divided as follows: Fitzpatrick, 9 mounts, of which 2 were wins, including the Lorillard Stakes on Ecuador. Potter also had 2 wins out of 4 mounts, while Garrison and Burke each had 1 out of 2 mounts. The non-winning mounts were: Purcell, 9; Brag, 5; M. Donohue, 3; Grant, 2; with 1 each for Maynard, Brennan, Meaton, Farley, Wethers and J. Donohue.

As to what the stable proposes to do next year, time alone will show. Below may be found a list of horses that will in due time be put in training. The present arrangements are that the stable shall be made into two divisions, with Frank McCahe and William Stoops as trainers. McLaughlin will be, as heretofore, first jockey, he having decided to refuse Mr. Lorillard's handsome offer. In doing this he showed considerable wisdom, for taking what he earns from the Dwyers and outside mounts into consideration, with the advantages of being "at home" with his family in Brooklyn, he will be as well off at the end of the season, and perhaps better, than if he had gone to Rancocas. The list of horses to be trained is as follows, ages dating from January, 1885:

- Checkmate, hr g, aged, Glen Athol—Full Cry.
Hartford, b g, aged, John Morgan—Calomel.
Barnes, b h, 5, Billet—Mercedes.
Geo. Kinney, b h, 5, Bonnie Scotland—Kathleen.
Miss Woodford, hr m, 5, Billet—Fancy Jane.
Panique, ch c, 4, Alarm—Maggie B. B.
Detective, blk c, 3, Virgil—Tincture.
Elmendorf, b c, 3, Virgil—La Polka.
Executor, br c, 3, Enquirer—Brunette.
Petersburg, hr c, 3, Monarchist—Bon-Bon.
Richmond, h c, 3, Virgil—Alert.
Sumner, br c, 3, Gleggarry—Kathleen.
Preciani, br f, 3, Alarm—Preciosa.

TWO-YEAR-OLDS.

- Brambleton, b c, by Brsmhle—Valerian.
Buffalo, h c, by Billet—Belle Palmer.
Envoleur, b c, by Enquirer—Collosa.
Hawley, h c, by Virgil—Regan.
Peekskill, hr c, by Billet—Eppie L.
Richmond, blk or br c, by Virgil—Finework.
Quincy, b c, by Lishon—Maggie Hunter.
Richard, br c, by Virgil—Echless.
Ruthland, br c, by Virgil—Finesse.
Lula, h f, by Virgil—La Polka.
Lydia, h or hr f, by Billet—Mercedes.
Millie, h f, by Billet—Distraction.

Great Racing.

Saturday morning there was a tinge of blue on the noses of those who were out early, and the frost lay heavy on the ground. There was an eager and nipping air which made the fingers tingle and reddened the ears. There was a proneness to huddle around the fire in place of getting the horses out for the morning exercises. The hoar frost lay heavily enough to dampen the sand on the hills adjoining the Bay District Course, and at 10 o'clock the track was moist. The sun at that hour was laboring behind a veil of broken clouds and there was a mackerel sky which is thought to be a portent of rain. There were eager faces on the stretch of the Bay District Course. Kentucky had wreathed the sceptre in one of the ages of colthood and the pride of the Blue Grass region, the four year-old filly, Elvira, stood at the head of the list with a record of 2:13. This was one-quarter of a second lower than the time of the California filly, Bonita, and was the only break in the record to the credit of the Occident. It was known that Palo Alto had determined to regain the laurels, and had sent three fillies of that age to recapture the lost colors. Experts shook their heads and pronounced the task hopeless under the conditions. Hinda Rose was held to be the only one which could hope to lower the figure, and she had not been driven a mile better than 2:30 in three months. Sallie Benton was the next choice, but as her best public performance was a mile in 2:29, it could scarcely be expected that she was equal to the task. Then there was Helen, with a record of 2:30, but she had also met with mishaps, and had there been any one reckless enough to offer a wager that the record would be beaten it would have been thought an oversanguine estimate, prompted by the desire to see "our colts" again victorious. Accompanying the fillies were the five-year-old Bonita and the two-year-olds, Manzanita and Electioneer—Dame Winnie colt.

The first brought out was Hinda Rose, the wearer of the garland for yearling and three-year-old performances. Her mile, when a yearling, of 2:36, still stands a good deal the best, and 2:19, as a three-year-old, is well inside of the record of all others. But being so "short of work" it was held out of the question that she could accomplish the feat, and for all that an accident was all that prevented her. In order to come within the rule, judges, timers and clerk of the course were selected, and John A. McKernon offered a track harness of the best make to any of the four-year-olds which could reduce the record. The judges were A. K. Grim, C. C. Bemis and Jos. Cairn Simpson, the timers, C. M. Chase and O. A. Hickok; clerk, H. Hinchman. The driver, Charles Marvin, was seventeen pounds overweight. After the "warming up" process Hinda was started, and she took it easy, so that she was 36 1/2 seconds in making the first quarter. From there the pace was accelerated, so that the half mile was reached in 1:10. About that point she lost a hind shoe, and under that disadvantage she scored 1:45 at the three-quarter pole. She came rapidly home, when it is considered that the feet were out of "balance," making the mile in 2:20. When Hinda failed to accomplish the arduous job it was thought all chances were gone, and when Helen, the slashing daughter of General Benton and Alameda Maid, was brought out it was not expected that anything but a mediocre showing would be made. Her record was 2:30, and she, too, had been ailing. The quarter in 37 1/2 seconds confirmed this belief, and the half in 1:12 was not an augury of success, but the next quarter was made in 35 seconds and the mile in 2:23.

This was capital work, if even below the record by 4 1/2 seconds, and when Sallie Benton appeared the arguments were

based on whether she would beat the 2:20 of Hiuda Rose or not. This was acknowledged to be settled when the quarter-pole was made in 0:35, one second faster at that point than Hinda Rose. At the half-mile pole, in 1:09, there were still greater hopes, and when three-quarters were made in 1:43 it was known that only an accident would prevent the consummation of so many wishes. She came flying down the stretch, safely past the seven-furlong mark, without faltering or shortening of stride. She is within 150 yards of home, and the watches showed that there was plenty of margin to come within the mark. The runner which accompanied her is at her girth. At the drawgate she shoots away from him, but alas! too rapidly. She breaks, makes two or three bounds as though she would run away, Marvin tugging at the bit and using every effort to make her trot. The frantic bounds, two or three jumps at the most, are succeeded by a lumbering gallop, and then she "catches" and trots faster than at any time before. Disastrous as the break was, she goes under the wire in 2:17, and there are shouts and hurrahs before the timers announced the result. The record was beaten by three-quarters of a second, and had it not been for the break the grand trial of Maud S. would have been beaten by at least half a second. This was enough glory for one day, and every one present would have been well pleased without further display. Sallie Benton is a young handsome gray filly, bred at Palo Alto; foaled March 27, 1880; by General Benton; her dam Sontag Mohawk, by Mohawk Chief; granddam Sontag Nellie, by Toronto Sontag. Thus the sire and sire of the dam are both owned by Governor Stanford, and Toronto Sontag was by Toronto Chief, from the old-time celebrity Sontag, one of the celebrities of thirty years ago, among other feats having beaten Flora Temple in a match for \$2,000 to wagons, winning in straight heats in 2:31, 2:33, 2:35.

Bonita was the next to show. She has a record of 2:18, made last year in Kentucky, when she was a four-year-old, and which was the best until lowered by Elvira. She was evidently not quite right, and though she went to the half in 1:09, she was 2:21 making the mile.

When the unnamed two-year-old colt by Electioueer, from Dame Winnie, by Planet, was brought on the track there was a hum of excitement. He has been regarded as one of the notables of the great breeding farm, and from his dam being a thoroughbred mare of the purest breeding, the advocates of plenty of racing blood in fast trotters expected that he would show that it was not altogether theory. He is a remarkably well shaped colt, of fine size, beautiful color, a bright bay, and so much "quality" that he would readily pass for an animal of royal breeding. His action is perfect, gliding along with so little exertion that the eye, unaided by the watch, would greatly underrate the speed he was going at. He started at a moderate pace, the quarter in 37 seconds, the half in 1:13, three-quarters in 1:48, and the mile in 2:23. He trotted as steadily as an old campaigner, never a semblance of a break, and as the last quarter was made in 35 seconds it seemed as though he could equal if not lower the record of Wildflower when called upon. As it is, his time is the fastest by 61 seconds ever made by a stallion colt of his age. Two victories for the day are inscribed on the banners of Palo Alto. His pedigree is ultra good: His dam by Planet, whose dam was by Boston; his granddam, Liz., by imported Glencoe, and the next dam, Fanny G., by imported Margrave, a St. Leger winner; the next being Lancers, by Lance, a son of American Eclipse. To this family belong some of the most noted animals on the turf, and not a few have also distinguished themselves on the tracks.

A sister to Wildflower, Manzanita, two years old, was the last on the card. Like her sister in blood, Bonita, she also appeared to be "off," making the mile in 2:32. In almost any other country this would be held as a good showing for a two-year-old, though far below her mark.

Lem Ullman in the Sulky.

Lem Ullman is in town straight from San Antonio, Texas. I opened on him with: "The boys talk a good deal about your getting up behind a horse the last day at Waco. What is there in it?" "Well, it was a local race," he answered; "there was a gray horse in called Lexington that I thought could win, and I bet my money on him. The first heat the fellow that drove him couldn't drive a little bit; he sat there like a log, and did not try to help the horse along. I was dealing on the colors to the jocks and tending to their wants in general. You know I'm always right by the stand. The owner knowing I had money on the horse wanted me to steer him the second heat, so I thought I'd get up and show this man I could handle him myself. Why, say, the horse had no clothes, no blankets, and just about no harness. He was in bad shape, I tell you; in that chilly wind, and it looked like rain every minute. I took the horse and we scored four or five times. You bet I was there every crack. When we got the word I laid along side of Kirkow, thinking I would beat him in the stretch. I was giving him a good race for it, and he was making me go along, too. Just about the three-quarter pole I had him beat sure, and I gave the driver a little Hebrew talk, to make him lose his grip. It didn't do any good; he lifted that old horse along right at me; but I kept with him all the time. At the distance I was a good head in front and I felt safe. Herdic and his men had made my horse favorite, and Stiles had bet \$10 to \$3 that I would win that heat. They all had to get out of the stand and come on the stretch to see the finish. When they saw I had the best of it Herdic hollowed out "Come on there Lem," and the gang gave me the razzoo. Say, the horse stuck up his ears, didn't know what to make of it, make a jim jam and lost me the heat by a neck. If they had just kept still I had the heat won. After the heat so many wanted to help me cool the horse out I couldn't get near him; they took him right away from me. I got a heavy blanket and twenty men helped me wrap him up. I had him red hot when we got ready for the third heat. I offered to bet \$50 I'd win it, but nobody wanted to take me. We scored six or seven times and I could out-trot them to the wire every pop. The judges kept telling me they would fine me if I didn't stay back, but I didn't care for that; I kept going up ahead. I wanted to win that money. About the time we got the word it began to rain hard. I didn't know what kind of a mud horse he was, but he went pretty glib. Around the turn I was three open lengths ahead; and say, I wouldn't have given any man fifty cents to insure me the race. At the quarter pole I thought I would see what he had in him. I touched him with the whip; he got away from it, but got out of the harness at the same time. All at once a trace came down, the holdbacks lust on me, and he fell on his knees. Stopped? Of course I stopped dead still; had to. I led the horse back to the stand through all that rain and mud, and reported to the judges. I wanted them to call it an unavoidable accident, but they wouldn't do it. When I come to look over that harness, I found it had been tampered with. One trace was cut almost in two, and the hold backs

tied up with strings. Was I mad? Say! You can bet I was, and I wanted to match that other horse right there. Some of them made a laugh over it, but it wasn't any laughing matter. I might have been killed. I want to get at that horse once more, and get even with him. I don't want to lose my reputation as a driver in Texas. I'll match that horse Lexington against Kirkow, for \$200 a side, to rule, to be trotted at Waco during the Texas Spring Circuit. Say! I mean business. If they think they can beat me, tell 'em to come on and put up."

Lem was in dead earnest, and will make the match. He says, Frank Herdic will back him, and I've a notion he will. —Chicago Horseman.

The Trotting Horse Breeders.

The Association of National Trotting Horse Breeders held their annual meeting, in New York, on the 10th, with President H. W. T. Masi in the chair. When Secretary L. D. Packer called the roll the following gentlemen answered: Gen. F. B. Tracy, F. D. Norris, J. W. Gray, Alden Goldsmith, J. H. McFarren, C. A. Willis, E. D. Slater, T. Louchran, G. Condit, Carl Burr, M. Pratt, G. Miller and A. H. Van Brunt.

The Association has 178 members, and the amount of money trotted for in the 1884 stakes was \$20,940. On the ten stakes now open for the ensuing year 351 nominations have thus far been received, with payments amounting to \$10,415.

On motion of Gen. Tracy, section I of article 9 was amended by adding "votes by proxy shall not be received except as hereinafter provided." Section I of article 10 was then made to provide that no amendment to the constitution can be made unless three months' notice is given, and notice served, with copy of proposed amendment, on each member four weeks before the meeting. Members can then vote by proxy on such amendments.

Mr. Willis then referred to the fraudulent description of animals advertised for sale, and on his motion a committee of three was appointed to seek redress at Albany, asking the Legislature to pass a bill making the advertising of false or garbled pedigrees a criminal offense.

Messrs. Goldsmith and McFarren deplored the influence of the pool box at trials of speed, and another committee, of three was appointed to urge the enforcement of the law on the subject.

Mr. McFarren believed that more stakes for two-year-olds would be found beneficial to trotting interests. He argued in favor of beginning early to make great and valuable trotters.

The Executive Committee of the ensuing year elected were Messrs: Alden Goldsmith, F. V. Baker, Jr., F. D. Norris, J. P. Wiser, and J. W. Willis.

Smiling Peter.

Some graceless fellow has caused an Eastern sporting paper to print the following story about a genial and well-meaning habitue of our California tracks:

Peter Brando is a man well known to the horsemen, and is a good deal of a character, over there, besides he was one of the original forty-niners. He was in the days gone by, an honest fisherman by profession, and in that way made quite a little money. One day it dawned upon Peter that he was originally intended for a trotting horse driver, so he hustled around, sold his fishing outfit for cash, and began hunting for something to do up the boys. He couldn't get a trotter to suit him, so he bargained with a man for a pacer, that showed a pretty fair clip, and left the horse to be sent to him.

When he arrived at Peter's stable, he was a pacer, sure enough, but it wasn't the horse he had bought. That did not make any difference, as he showed some speed and acted well. Peter named him Swindle, and started out with him. As a money making scheme, the horse was a failure, but Peter didn't mind that, as about all he cared for was a chance to ride in a sulky and be around with the gang. Finally he picked up a trotter or two that went along a little better, and with these he was fortunate enough to get a place once in a while.

When Dohle and Hickok went out on their first trip, Peter got a chance to drive in a local race against these two noted pilots from the East, and he was in his highest glory. After a pretty hard tussle he beat them both, consequently he was tickled nearly to death. As he came off the track with the air of a conqueror and the broadest kind of a grin on his face he called out to a friend: "I'm happy, and ready to die. I've beat the right and left bowers."

Death of George Sutcliffe.

George Sutcliffe, who for the last few years has been a public trainer at Jerome Park, died at his residence in Fordham, recently. Mr. Sutcliffe has been seriously ill since a day or two after election day. He came to this country some fifteen years ago, having learned to both ride and train in the stables of the late John Osborne in Yorkshire. He at once began to ride in steeplechases and hurdle races in company with Clem Alloway, John Hylame, Harvey Welch, Jim Henry and the late Hugh Gaffney, and one of his first wins was with R. B. Connolly at two miles over hurdles, at the inaugural meeting of the Maryland Jockey Club at Baltimore, in 1870. Among the horses Mr. Sutcliffe rode, with more or less success, were Astronomer, King John, Blind Tom, Vesuvius, Village Blacksmith, Mary Clark and Diavolo. He owned a half interest in the last-named horse when he broke down at Jerome Park when carrying 175 pounds. When too heavy to ride Mr. Sutcliffe began to train, and considering the somewhat inferior class of horses that he took hold of, he exhibited very fair success. Among those handled by him during the past season were Greuland, Goufalou and Bull's Eye.

Blood for Oregon.

Mr. Thos. H. Tongue, of Hillsboro, Oregon, who made a trip to Europe this season, took a passing glance at the Kentucky breeding establishments en route, and purchased from J. C. McFerran, a two-year-old colt that will bring some choice blood to the web foot State. The colt is by Pancoast, dam Lucia, by Ryadyk's Hambletonian, second dam, Trusty, by Herring's Young Trustee, son of Imp. Trustee; third dam, by Henry Duroc.

Pancoast, by Woodford Mambrino, dam Biara, by Harold (sire of Maud S.); second dam, Belle, by Mambrino Chief; third dam by Brown's Bellfounder. Belle is the dam of Alexander's Belmont, and McCurdy's Hambletonian. Lucia is the dam of Day Dream, 2:21, and her dam Trusty is also the dam of Scotland Maid, 2:25. The colt in question is a big, finely formed, handsome fellow, and Mr. Tongue confidently expects something more than ordinary from him.

A Reckless Rider.

[N. Y. Sportsman.]

A few particulars concerning the short but meteoric career of the latest jockey to create a sensation in running circles, Garrison, will be interesting. The lad was born at New Haven, Conn., on February 9th, 1868, and is consequently not yet seventeen. Garrison first began to ride for W. C. Daly, in 1882. The latter had the services of the lad for three years, and but for the check put to his racing career last Fall at Washington the redoubtable Daly would still have had the benefit of the boy's ability even now, for the engagement did not expire until the close of 1884. But the misfortune which befell Daly at Washington vitiated all his claims to Garrison's services, and he made an engagement this Spring with H. O. Bernard which has proven very profitable to both employer and employe. It was he who first won on Goano, and he always claimed that he could have beaten Wanda in the Champion Stakes for two-year-olds but for Olney's running him into the fence. Goano certainly showed the marks of the fence rails, and it was due to this that Bernard backed the colt heavily in all his subsequent races, for if he could hold Wanda in speed, he ought to be able to beat anybody's horse. Garrison is by no means a neat or graceful rider. His riding is more of the windmill order, and does not begin to compare with that of many of the older jockeys. But, like the famous Shoe-wae-cae-mette boat crew, this is the "get thar" style, and so far it has proved good enough to land him a winner on many occasions. He certainly gets a great deal out of a horse. This is what a writer who often seen Garrison ride says of him: "Some time ago they used to call Fitzpatrick Dare-Devil Fitz, and it was a good name. He took risks over the sticks that no other cross-country jockey would think of doing, but Joek Garrison seems fairly bent on out-Heroding Herod in the taking of desperate chances. The way he pushes, shoves, and squeezes through a field of flying horses, jostling first one and then the other in his eagerness to get to the front, is enough to make the hair stand on end and the flesh creep. Nor is it only his own life that he imperils, but also that of every other jock in the race. Take the last two races he rode at Brighton Beach. In both of them his riding was most decidedly of the get there or die pattern, with the chances considerably in favor of the latter alternative. In the handicap he crowded Ten Strike so close to the rails and kept swerving over in such a manner that I expected to see both of them go crashing through the rails. He worked the same game once before on Little Fred with Dan K. I advise him not to do it again. In the King Fan race he deliberately galloped Herbert on top of the Fan, and cut him so badly that poor Bill thought he would never be worth a dollar again. He acknowledged this action, and said in defense that he had warned Whyborn not to cut him off, and as the latter had done so "he deserved what he got." Garrison stood to win a heavy combination bet if Herbert and Valley Forge won, and those who heard of the means he took to secure the first rejoiced when he was refused the mount on the other, I was among the first, I believe, to hail Garrison as the coming man. Early in the Summer I wrote that before snow fell he would force his way to the front rank of American jockeys. Well, he has done so. Now let him rest on his laurels for a moment and listen to me: "Snapper, if you want to fill an early grave, go on in your hull-headed course; if you don't, then stop."

An Intelligent Colt.

EDITOR BREEDER AND SPORTSMAN: We have a colt, Delta, three and a half years old, which has been shod sometimes with shoes and at others with "tips." One smith has done the shoeing, who, besides being a good mechanic, is kind and gentle in his treatment of horses wherehy, he secures the friendly confidence of every animal within his business range.

A few days ago the shoes were removed from our colt, his feet shaved down with a view of letting him go a few weeks barefoot. But Delta's feet were then tender and the lack of shoes was uncomfortable to him. He preferred to be shod. Only an hour or two after the shoes had been removed the colt was driven on the street leading past the smith's shop, but instead of going on he turned with a headstrong motion and shot into the shop like an arrow. With difficulty he was driven out but he would back and turn round and round and would not leave the shop door until a smart lash of the whip across his hack decided the question. He was then driven to a stable two blocks away and unharassed. When in the street, on his way home, the hitching rope was disconnected from the headstall and the animal set at liberty. But instead of going directly home he at once made his way to the smith's shop, went in, and waited till the good workman came in and replaced his shoes.

This incident cannot but be regarded as a notable example of rational acumen. Delta is the son of a Morgan mare, is wide between the eyes, has a most beautifully modelled head, is intelligent, spirited, and has been made quite a pet. Through kind treatment he is glad to see his attendants, is attracted to them in place of fearing from and avoiding them. Respectfully Yours, A. I. HUDSON, M. D. Stockton, Cal., Dec. 14, 1884.

Principal English Winners.

The London Sportsman of the 29th contains the winning owners of 1884, of which the following are the first fifteen:

	Races won	Amount.
Mr. J. Hammond.....	20	£12,379 07
Mr. R. Peck.....	37	11,306 12
Duke of Westminster.....	22	11,769 10
Duchess of Montrose.....	24	11,424 00
Mr. L. de Rothschild.....	28	10,931 05
Mr. C. J. Lefevre.....	19	9,783 14
Sir G. Chetwynd.....	42	9,213 15
Duke of Portland.....	16	8,702 17
Mr. R. C. Vyner.....	26	8,647 17
Lord Zetland.....	24	8,680 01
Mr. R. Jardine.....	27	8,465 06
Lord Abington.....	15	7,856 10
Mr. B. Clot.....	8	7,179 11
Mr. G. B. Clot.....	4	6,346 00
Lord Rosebery.....	17	5,557 04

The largest winner on the Continent, including races run in France, Belgium, Baden-Baden, etc., was the Duke de Castries, with £20,207. Of the English winners, as above, Mr. Lefevre won £19,708 on the Continent and Mr. Hammond £2,300. Both Mr. Hammond's and Mr. Peck's increase since 1880, when the former won £250 and the latter £190, is an apt illustration of fortune won on the turf. Mr. Hammond's case being very conspicuous, he having had a credit of £102 in 1881, £303 in 1882, and £1,502 in 1883. The only American names in the list are those of Mr. F. T. Walton, with a race worth £166.17, and Mr. Ten Brock, with one race worth £145.

### The Chicago Driving Park.

At a meeting of the stockholders of this association in Chicago a few days since, Mr. S. K. Dow stated the situation of affairs to the stockholders present, who represented 621 shares out of the total of 1,000. Mr. Dow pointed out the fact that the financial difficulties of the association were owing to insufficient gate receipts during the past season, on some days not a tenth part of the amount of purses given being taken in at the gate. The *Inter-Ocean* also further states that Mr. Dow offered the following resolutions:

"WHEREAS, The financial condition of the Chicago Driving Park at the beginning of the fiscal year of 1884 necessitated the raising of the sum of \$20,000, and other sums to enable the association to transact business and carry on its racing meetings as advertised, pay rent, wages, insurance, and the indebtedness for 1884; and

"WHEREAS, The Board of Directors did borrow the sum of \$20,000 of Wendell R. King and others, and did cause the property of said corporation to be mortgaged to secure said sums; therefore, be it

"Resolved, By the stockholders at their annual meeting assembled that the Board of Directors, in causing the mortgages of said association to said Wendell R. King, and subsequently to Charles F. Grey, executor of the estate of said Wendell R. King, deceased, and to Benjamin H. Campbell and others, he and the same are hereby approved, ratified, and confirmed."

On an affirmative vote of all the stockholders present the resolution was carried, and a committee of three appointed to compile a directors' ticket for 1885, and the meeting adjourned to convene again on January 10th, 1885.

In conversing with a prominent stockholder, after the meeting adjourned, he stated that no decree of sale had been made; and that he thought that the property would, in all probability, be bought in; and an assessment made on all the stock for the purposes of paying off the debts of the association.

### Stable Lads.

Trainers treat their apprentices very differently. We are told that the veteran English trainer, Matthew Dawson, one of the oldest and likely the most respected of his class, cares for the lads that are bound to him almost as much as if they were his own children. Family prayers are held morning and evening, and every night for a couple of hours or so the lads, of whom there are never less than forty or fifty attached to the establishment, are instructed until they acquire a fair common-school education. They are fed with the purest and most wholesome food, decently and comfortably clad, and but for the fact that they are engaged during a portion of the day in riding horses at exercise, and that each lad has the "doing" of a particular animal, the life they lead is very much the same as that in daily progress at a good boarding-house. Of course, out of say twenty boys who are apprenticed to learn the trade of a jockey, at least fifteen will, in the course of a few years, increase in weight to such an extent as to be practically useless for riding in a race. Of the remainder perhaps only two or three will develop into promising horsemen. They may ride well enough to be able to stick on a horse, but yet may lack judgment in the matter of pace and be unequal to squeezing the last ounce out of a horse in a close finish. As time goes on, the boy whose weight has fortunately for himself increased but slightly and who has proved to the satisfaction of his master that he possesses a head as well as hands, will be at length entrusted with a mount in public, and then, should he by chance be successful in his first essay, he will find the road to fortune an uncommonly easy one to travel.

Every horse turned out for winter grazing should have a shed, well protected from the north, west and east, and well littered with straw, to which he can resort whenever he desires rest or protection from the cold and wet. If no shed be provided, then the horse should be taken into the stable every night. All horses are not benefited by a run at winter pasture; some, on account of their thin skin and delicate constitutions, rendering exposure to cold productive of coughs and other complaints; while others are provided with a long and thick coat of hair, that protects them against cold but not wet, and therefore are not so readily affected by extreme changes of weather.

Since becoming the property of Mr. Robert Bonner Maud S. has trotted twenty-eight miles better than 2:30. Ten were in 2:13 or better, seven in 2:12 or better, four in 2:11 or better, three in 2:11 or better, two in 2:10 or better, and one in 2:09. She will be trained next season with a view to a further reduction of her record, and will be exhibited in public trials against time.

The McGrathiana Stable, property of Milton Young, with Brown Dick in charge, has gone into winter quarters at the track of the Old Kentucky Association, Lexington, Ky. The stable embraces the following, viz.: Troubadour, Boothblack, Spalding, Spanish King, Tantrum, Diamond, Pegasus, Ten Booker, Harrigan, and fifteen head coming two years old.

The three most successful sires in France this season have been Trocadero, the sire of Fra Diavolo, Satory, and many other horses, whose progeny have won nearly \$15,000; See-Saw, who, owing to the four victories of Little Duck, is credited with £12,000; and Consul, whose offspring have won over £11,000. The latter is the sire of Arch-duc.

A telegram from Brighton Beach on Thursday afternoon, says that the Dwyers' yearlings, Brambleton and Sister to Burton, ran a trial of three furlongs in 39½s., the former winning.

### Sketches of Los Angeles—No. 2.

Having shown the traveler last week how to reach Los Angeles in the most pleasant way, when time is not a special object, we shall speak this week of the town itself and the many attractions it offers the visitor. In its aspect at the present time, the city may be considered the wonder of the State, for what it is, it has become within the last five years. Its growth in extent and in the character of its public buildings and private homes, resembles that period of progress, when in our own city we saw the Western Addition rise as it were by magic, and travel from Nob Hill, in its unoccupied barrenness, almost to the shores of the open ocean, and become a city of itself. Five years ago the city of Los Angeles proper was confined chiefly to what is now known as the old city, or the Spanish section, composed of one or two small lanes of adobe houses, while to-day it covers six miles square, with streets, public buildings, parks, theatres and private residences, that are not excelled in Sacramento, Stockton,

Oakland, Marysville, or any other town in the State outside of San Francisco; and in many respects they would not disgrace the metropolis itself. What has led to this marvellous growth in so short a time and will perpetuate its continuance for all time, must form the subject matter of subsequent articles, if it is to be rightly understood, as in this article I desire to confine myself to the city as it appears.

Like other cities in California on the commencement of their growth, when land was not at its present high value, and could be had for the asking, Los Angeles shows the same fatal mistakes in its design or laying out, and unfortunately these mistakes can never be remedied in future, as in the widening of Kearny and Dupont streets in San Francisco except of a terrible or perhaps ruinous expense to the property holders. In most of our principal and wealthy mining towns, such as Nevada, Grass Valley, Mariposa, and others of equal rank, the final growth clung to and radiated from the original blacksmith's shop, grocery store and saloon. To a certain extent some such casual landmarks in their origin, governed the after-growth of Stockton, Sacramento, Marysville and towns of their rank. In laying out Los Angeles there was less excuse for these mistakes than in her sister cities, for at the time it took its present growth, any amount of land could have been or was controlled by the city fathers, for wide, straight, commodious streets with proper intersections. But this blunder in Los Angeles is most conspicuous in the main business centre formed by Main and Spring streets, which really are only one street, and only ought to be one. At present, the block of buildings, intervening between them, makes both altogether too narrow for the present traffic, and valuable as they are, must some day be taken out whatever the sacrifice to the general population may then be. If the streets now get blocked with vehicles and become dangerous to people on foot, what will they be in five or ten years hence, when the city population is 100,000 or more, as it most assuredly will be? The same blunder in laying out the main business centre is still more perceptible at the railroad depot a mile below towards the river. This thoroughfare, crowded now at all hours of the day, and destined some time to be a grand feature of the city, is at least a hundred and fifty feet too narrow, and for which it seems to me, so far as space was concerned, there was no real necessity. In the design of the city, however, these are the chief blunders. Alameda street, along which the overland train goes out, and Los Angeles street, the Market street of San Francisco, with all the streets east and west containing the private residences, are wide enough, straight and well laid out. The judgment shown in these streets is good. In no country in the world, however, do the principal streets assume their final form and course at first, at least, in rare cases. In America, and especially in California, where the needs of the day and hour govern our actions, perhaps, we must not be too exacting for strict accuracy or perfection in laying out the designs of our cities, however wise and economical it may be in after years. In California, where our lives are passed in a whirlwind of excitement and haste; where marvels of material construction unknown to-day, as it were, stand forth in their matchless glory to-morrow; where, as a people, in redeeming this vast land of waste, and converting it in thirty years into a storehouse whence endless millions can draw the necessities and luxuries of life, we have much to be proud of, justly proud, and first among these labors accomplished are our cities of the North and South, eternal monuments as they are, to the constructive genius of the American people. Viewed in this light, Los Angeles is no exception to the rule, and so with her own citizens the people of the State may be proud of it also.

In many respects Los Angeles possesses natural advantages and attractions which none of our other cities enjoy, but in their make-up there is so much that is novel, charming, new, that it is by no means an easy city to describe. Physically, except in the northern division, the site was well suited for a city, flat and level, needing little grading, with ample grade for sanitary requirements, and with the exceptions mentioned, these advantages have been judiciously applied. In the northern section the land was much torn and rent as if by earthquakes or volcanic eruptions, but even here, though a work of great labor and time, the deep ravines are being filled in, the high points cut down, the rough places made smooth, by the enterprise and pluck of the two Canadian brothers, who own the larger portion, and a valuable and extensive suburb created which is already largely covered with pretensions and humble homes. Passing over the long, high, hilly range that bounds the town to the north, stretching from the river almost to the race track, some four miles south and then east to Boyle's Height and to East Los Angeles, the site was naturally everything that could be desired for a town, but this range even is intersected by several long, handsome streets filled with the residences of the wealthier classes, many of which must have cost from \$20,000 to \$75,000 or even \$100,000. Most of these streets and homes are so embosomed in shady trees, flowering shrubs, richly perfumed plants, and grassy lawns, the *real rus in urbe* principle, that Virgil, in his pastorals, so loved to write about, that one can hardly tell whether they belong to town or country, or which they are in, for within a stone's throw almost from these lovely homes, are the immense orange groves and vineyards, and walnut orchards, lined with the lemon, the citron, the lime, and the banana tree, for which this blessed spot on earth is so justly celebrated in song and prose. Of this charming admixture of town and country, so peculiar to the site of Los Angeles, nothing is more illustrative than a ride from the Washington Gardens at the extreme south of the town proper, to Mr. Hancock Johnston's place at the extreme east, a distance of over five miles. Along this wide, long, level boulevard, a continuous, unbroken street, in places called by different names, yet in reality one and the same, the stranger is never out of the city, and never out of the country, while along the whole line, agriculture, commerce, architecture, horticulture, turmoil, solitude, activity, quiet, all engage attention, and which together speak volumes in praise of the taste of the people, who possessing such natural advantages for a great and beautiful city, have so charmingly blended them together.

Much more might be said about the physical advantages of the site of Los Angeles for a great and beautiful city. Enough, perhaps, has been said to excite a proper appreciation of those advantages, and, therefore, I shall say no more under that head. For the time since which the town commenced its present growth, only about five years, there is also much to be said about its religious, moral, educational, business, social and benevolent institutions, for its citizens have been very diligent in these respects and attained in each a degree of excellence as striking to the visitor as the material and physical characteristics of the city. In fact the churches, public schools, benevolent asylums, private academies, places of amusement, manufactures, lumber yards, livery stables, etc., all bespeak a spirit of enterprise, an advanced life, and represent a capital, as creditable to the citizens as the character of the hotels of which I spoke last week. All these I hope to deal justly with in due time. H.

## ATHLETICS.

### American Athletic Club.

The above Club held an indoor meeting at Madison Square Gardens on December 6th. Attendance estimated at 2,000.

There were over 325 entries for the various events. The path was a eighth of a mile in circuit and was made of packed sawdust. Management good. Result:

Seventy Yard Run.—Final heat: Young, (6 yds.), 1st; Bahcock, (7 yds.), 2d. Very close. Time, 7s. There were 97 entries for this event.

440 Yard Handicap.—L. E. Meyers, (scratch), 1st; S. Derickson, (25 yds.), 2d. Time, 53s.

Relay Walk.—A. F. Copeland, G. D. Baird, M. Austin and W. E. Nixon, of the American Athletic Club, defeated F. Gotschalk, J. Gibbons, J. T. McDonald and E. F. McDonald, of the Westside Athletic Club. Time, 13:26 3-5.

One Mile Run, (For men who have never beaten five minutes).—G. G. Smith, 1st; Robert Turner, 2d. Won by over twenty yards. Time, 4:55½.

Jack McMaster's dog, Tommy, ran 70 yds., in 5½s.

220 Yard Run.—Final heat: Kretzer, (11 yds.), 1st; Van Sann, (7 yds.), 2d. Time, 25½s. There were 68 entries.

Two Mile Bicycle Race.—Final heat: Roberts, (scratch), 1st; Renton, (125 yds.), 2d. Won easily. Time, 8m. 3½s.

One-Half Mile Run.—Cunningham, (60 yds.), 1st; Crabb, (80 yds.), 2d. A close contest. Time, 1m. 59½s.

220 Yard Hurdle.—Van Holland, (18 yds.), 1st; Ruesel, (13 yds.), 2d. Time, 29 2-5s.

One Mile Walk.—A. F. Copeland, (45 yds.), 1st; E. A. Kraft, (20 yds.), 2d. Time, 7m. 39½s.

Two Mile Run.—Ed. McMahon, (scratch), 1st; T. A. Collett, (60 yds.), 2d. Time, 10:33 2-5s.

C. O. Walton, of East Boston, is credited with making five miles on roller skates in 17 min. 1 sec., at the Institute Rink on Dec. 8th. The best time heretofore made was 17 min. 23 sec., made by Skinner.—The new track and athletic field attached to the University of Pennsylvania, is now finished. The track is oval shaped, and measures a quarter of a mile in circumference, being eighteen wide in the straight, and fifteen wide the remainder.—A fine feat in heavy dumb-bell lifting is done by William H. Howard, of the Wells Gymnasium, Boston. He stands 5 feet 4 inches, weighs 140 pounds, and has been a member only eleven months, never having trained before. He can put up 101 pounds with his right arm, and 95 with his left. Pushing straight from the shoulder simultaneously, he can put up 75 pounds with his right arm, and 70 with his left.—Most of the daily papers laid out the Brady-Slade fraud in good shape.—Professor Dimpless, of the Minneapolis Athletic Club, has not been engaged by the Olympic Club of this city.

Germain and Benjamin jumped off for the medals last week in the presence of Messrs. Gibson, Dejonge and Lornegan, with the following result: Running High Jump, (handicap).—H. Germain, (3 inches), 5 ft. 4 in., 1st; Barney Benjamin, (5 inches), 5 ft. 3½ in., 2d. In connection with this event we are given to understand that the athletic committee in charge of the late games have decided to make all the contestants in this event to jump over again, because the heights at which the jumpers hauled at were not correctly kept. On the day of the sports it was patent to the most casual observer that after Scott, Germain and Benjamin were next in order of merit. (All the competitors admit this). After the disqualification of Scott, Germain and Benjamin were notified to jump off, which they did, with the result as given above. The jumping of Germain must certainly be accounted good, when the short time that he has been connected with athletics is taken into consideration. Germain and Benjamin are entitled to the medals no matter how the new arrangement should pan out. The action of the Committee is simply ridiculous.

### Louis Gerichten.

Mr. Gerichten will shortly leave the city under engagement to the Turn Verein, of Sacramento. For seventeen years past Mr. Gerichten has been teacher of gymnastics in this city. During that period many thousands of our citizens have been pupils of Mr. Gerichten. He was instructor of the Olympic Club for fourteen years, besides which he has also taught the Turn Verein and Verein Eintracht Societies for a number of years. Prior to his departure it is intended to give him a gigantic benefit, at which all the leading lights of the many athletic clubs of this city will take part. The programme of the entertainment will be published in the BREEDER AND SPORTSMAN.

The Olympic Club give up the Oakland grounds at the end of the present month. With the Olympic Club grounds gone the outlook for the active athlete is very dismal indeed. Of course we are to have a splendid new ground, but it will take all the way from 6 to 9 months to have them in readiness. In the meantime we will not have a decent track in California, and yet we boast that we are the second city in America both in the number and ability of our athletes. Something has got to be done and that very soon.

The gymnasium of the Olympic Club will be furnished with the apparatus as designed by Mr. Sargeant of the Hemenway gymnasium of Harvard University. The many skillful contrivances arranged by Sargeant for the purpose of physical development have earned for him a world-wide reputation.

A one mile handicap walk has been added to the programme of the Bay City Wheelmen for the evening of January 10th. Entries can be made with Ed. Mohrig, 252 Market street, up till Saturday, Jan 3d.

We are promised the very demoralizing spectacle of a six day skating contest, at the Wigwam, sometime in January. We are afraid (at any rate it is to be hoped) that the public will stay away.

By telegraph we learn that Myers is credited with running 50 yards at New York in 5½s. There are no particulars to hand yet.

B. R. Brierly will leave for his home at Port Gamble in a few days.

An athletic club has been organized at Phoenix, Arizona,

## Talks with an Athlete.

[Amateur Athlete.]

"Do you find that athletics really do you so much good," we asked a well-known athlete, whose name is familiar to every reader of our paper. "Most assuredly," was the response; "the benefit I derive cannot be estimated; benefits that accrue from training, from the exercise I take." "Well, would you explain a few, that our readers may have the benefit of practical experience." "With pleasure; I desire that others may enjoy what I know. Athletic exercise is not a secret; all can reap the benefits that nature confers on those who obey her laws. Athletics are not patented—all can indulge to their heart's content. Before commencing I desire that you do not reveal my identity, not that what I say would not hurt me, but it will be necessary to say things that a modest man would not care to have published over his name." On being assured that his favors would be published without his name the champion went on. "The well-trained athlete enjoys life to its very maximum. I am confident that no person but a trained one can so take advantage of the unalloyed pleasures of nature. What he eats is relished, digested and afterwards appreciated. When he sleeps it is a steady, quiet slumber, unbroken, restful. My mother often asks me how I slept, and my reply always is (the only one that would convey the idea) 'I don't know.' I have not laid awake for ten minutes at a time for many years; I speak guardedly and positively; if there have been any exceptions they have just about been forgotten, they occurred so long ago. Before going into training, during my boyhood days, I was sadly afflicted with a sleeplessness. Many a night have I gazed for hours into the blank, empty air, trying to go to sleep, and found that the more I tried the wider awake I became, until I finally dropped off out of exhaustion, often hearing the clock strike the small hours. As I have said, thanks to the cinder path and the gymnasium, such experiences have passed away with the years in which they occurred. Do I dream? well, I suppose I do, but I confess I can't say positively, I only dream once a week now, while I used to dream every night during the time of which I have spoken. I do not think dreaming is restful to the mind; it denotes that while the body is resting the mind is not tranquil—too much blood keeping it in action. Do I have dyspepsia? never; once in a prolonged period I have a faint touch of indigestion which informs me that I am unconsciously deviating from the path of rectitude that Nature has laid down for us all, and any little pains and aches that I have are the sentinels that warn me to get in the middle of the road—and stay there. Indigestion is aggravated by various causes. Too much liquid taken with the meals; indigestible viands of innumerable kinds; a complete change from an habitual diet; over-eating; holding; irregular periods for meals, and many more reasons that every person experiences that violates any of these natural rules. The diet should be the same at all times if possible—do not understand me to mean the same articles—no; I signify that regularity of eating and drinking is most necessary to avoid the slightest touch of indigestion to stomachs liable. The period, the quantity and the quality should not vary. Different articles of food are necessary to avoid nausea but let them be wholesome." "Is your diet the same all the year round," we now asked. "Similar; when in training I stop what little pastry and confectionery I indulge in and settle down to what everybody—trained or untrained, athlete or otherwise—should eat. Simply common sense fare. Do I drink? I suppose you mean liquors; no, I have no faith in their virtues and a great deal in their vices; they are injurious, both for the alcohol they contain and the volume of superfluous liquid it puts into the stomach, overloading it and filling the system, clogging the muscles and vitals, preventing an untrammelled action. No, I do not have headaches; have not had a headache for—well, I cannot remember; don't know what a headache, earache or toothache is. Use tobacco? Never, in any form. You see I go on the principle that nature is a spring. It is quite easy to push a spring, however strong, when it is loose, but as you apply force it becomes harder to control, as a person discovers who abuses and trifles with his faculties. The spring is pressed so tight and is accumulating such a volume of power that it becomes uncontrollable and finally hurls the offender to the dust. Do I drink coffee or tea? Yes, I indulge in one cup of coffee each day, but seldom drink tea. When I have a severe race on hand, I drop coffee entirely for a few days. I cannot tell by experience whether they are injurious or not; I wish I could; one thing is certain—it does me no harm as far as I am able to detect; it does not follow that because it does not hurt me that it is harmless, because I knew an athlete who suffered almost like Carlyle from dyspepsia until he discovered that coffee was the cause of his complaint. No, cramps are something I never had in a race and never expect to; no well trained man need have them. If a man loses a race by reason of a cramp, tell him it is good for him, he has not trained correctly; eaten too much or drunk too much or abused his stomach in some way or other."

The sweepstakes walk of forty-eight consecutive hours between Henry Vaughan, of England, William Edwards, of Australia, and John Meagher, of Massachusetts, each putting up \$500, came off on a 24-lap track in the City Hall at Lawrence, Mass., commencing at 10 p. m. on Thanksgiving night. At the conclusion of the 48 hours the score stood: Vaughan, 181 miles 8 laps; Edwards, 170 miles 1 lap; Meagher, 143 miles 9 laps.—The 1,000 yards swimming championship of Scotland was decided at Dundee, Nov. 12th. Four preliminary heats were decided, which left Miller, Petrie, and Forwell, of Dundee, and Hardie, of Edinburgh, to contend for the final, which resulted in the victory of Miller, the holder, by four yards. A capital struggle for second place resulted in Forwell (ex-champion) beating Petrie by two feet. Time, 17 min. 20 sec.—O'Leary is organizing a pedestrian match in Cincinnati.—Moffat beat Robinson a quarter at Toronto, on Dec. 3d. Robinson quit after going 150 yards, and Moffat cauterized in. Considerable money changed hands.—Edwards, the Australian, announces his intention of retiring from the pedestrian field.—J. C. Seymour who accompanied Edwards on his tour, is shortly expected to arrive in the city.—Greek George attempted to throw Matthews four times in the hour last night.

## BICYCLING.

F. R. Cook.

"Spokes" writes as follows in the *Mirror of American Sports*: While the now defunct League of Champions were in San Francisco and were running the six days' race, horses va. bicycles, Preece and Armaido being the bicyclists, a fine looking lady was seen to take an extraordinary and close interest in the contest, being there nightly, and on

several occasions conversed with the lady contestant. In the course of the conversation the lady remarked: "I have a son who I think would make a good bicycle rider if he learned to ride. I will bring him down to see your race to-morrow night." On the following evening the lady and son were at their post, and when Armaido dismounted at the end of her hour, the lady introduced the son, with the remark: "Well, what do you think of him?" The eagle eye of the fair Louise sized the proportions of the young Californian up and said: "If ever he learns to ride a bicycle he will make a good one." The young man seemed pleased with the remark, and saw the conclusion of the race in which he became very interested. The next day mother and son posted themselves off down to the bicycle agent of the city and purchased a fifty-four-inch Harvard bicycle. The next Sunday the champions were taking an airing in one of the parks, when some of the bicycle riders were seen to be approaching at a good rate of speed. Prince suddenly wheeled around with the remark, "Why, I believe that is the young man who asked us on Thursday if he would make a bicycle rider." Another circuit of the riders revealed the fact that it was the person in question. Always after that the young man was seen studying the professionals' style of riding, especially that of Prince. To-day, which is not quite nine months since he first learned to ride, he stands at the head of California's fast men. His name is F. R. Cook, and he is a member of the Bay City Wheelmen, is champion of the Pacific Coast, and is the scratch man in all events. What will not perseverance do for a man?

Canary, the professional fancy rider, is said to get \$6,000 per year and all expenses paid for performing about the country.—John S. Preece is established in the bicycle business at Washington.—Charles Le Roy, who is well known in professional bicycle circles and among long distance horse riders, is in a little trouble with a widow. Judging from the widow's testimony she will get away with the great long-distance rider.—The *Turf* says: W. J. Morgan denies that he traveled through the West winning races under the name of Johnson. Morgan writes that recent events have proved that "Johnson" was another man, who has the shortest name of any among the professionals. Eek, what have you done to Morgan?—The Kings County Wheelmen, of Brooklyn, are to have a club room fitted up with all modern conveniences to cost in the neighborhood of \$10,000.—The Indianapolis bicycle club have arranged for an excursion to the world's fair at New Orleans.—J. W. Lambert, of Union City, Ind., rides a 64-inch machine.—The proposed six-day bicycle race, to take place at Chicago between Armaido and Morgan, on the one side, and Woodside and Brooks on the other, is not yet definitely arranged. At last account the Armaido-Morgan party were backward coming up with the money.

## Hi There! St. Louis and Chicago.

The riders of St. Louis and Chicago are at the present time engaged in a wordy controversy over the relative merits of their speedy wheelmen. There is a slight chance that the best men of both cities will meet on the 25th to contest for the coveted honor by racing on the track instead of racing in the newspapers. The distance between Chicago and this city is altogether too great to admit of the possibility of San Francisco's champion meeting the champions of Chicago and St. Louis in order to measure wheels with them, and which, in our opinion is the only true test. But we are prepared, however, to wager a new hat that the time made by F. R. Cook on the evening of Jan. 10th, in the ten mile race, will surpass any time ever made by N. Van Sicken and Phil Hammill, of Chicago, or C. E. Stone, of St. Louis. Gentlemen, watch for the BREEDER AND SPORTSMAN of Jan. 17, 1885.

In describing the mile bicycle race of the Olympic A. C. games won by F. R. Cook, on Thanksgiving Day in 4m. 4.4-5s., a contemporary gushes about the remarkable performance (it beat the old coast record 10 sec.) and the "furiousness" of the pace. When we compare it with Sellers 2:39, or the 2:40-41 and 42 of our Eastern flyers, all the "furiousness" is taken out of it and it becomes snail-like.—*Amateur Athlete*.

The time for the mile bicycle race was 3m. 4.4-5 s., but through some error it appeared at 4m. 4.4-5 s. in our account. The editor of the *Athlete* should certainly have detected the error, as we gave the time for each lap, and which if our friend had taken the trouble to add up would have given him 3m. 4.4-5 s. We also stated that the performance was ten seconds ahead of any previous coast performance, and as we only lately published a list of the coast records, and which was also republished in the *Athlete*, there can be no excuse for the editor of *Athlete* falling in any such blunder. A little more knowledge of coast athletics, if you please.

On Dec. 8th, at the Exposition building, Chicago, W. M. Woodside lowered all the American records from 12 to 50 miles. The fifty miles was made in 2 hours 54 minutes and 11 seconds. The track measured 3½ circuits to the mile. Intermediate records were held by W. J. Morgan, J. S. Preece, R. James, H. W. Higham, W. M. Woodside, D. Stanton and D. Bilard.

The following wheelman have already entered for one or more of the various events of the tournament of the Bay City Wheelmen: Ed. Mohrig, F. R. Cook, W. J. Monroe, H. Houseworth, W. M. Meeker, H. Teaney, Wm. H. Day, W. H. Gibbons, G. R. Butler, W. F. Fisher, Albert Cook, S. O'Callaghan, M. Berolzhime, S. F. Booth, Jr., and George Dixon.

The ten-mile bicycle race between Bert Hatch and F. T. Merrill, for the championship of Oregon, came off last Saturday evening at Portland before a fair-sized audience. Hatch won choice of positions, but Merrill dashed off with the lead, which he kept throughout, although Hatch made a plucky effort near the end to catch up. Time, 36m. 30s.

Charles Leouard went through some fancy riding for the rinkers last Tuesday evening, at the Pavilion. We thought Charles had quit the business.

At the Mechanics' Pavilion on Sunday the drill corps of the Bay City Wheelmen went through some very pretty evolutions.

Twenty members of the Bay City Wheelmen participated in a run to the Park last Sunday.

The drill corps of the B. C. W. are to be photographed in a group. We expect one to adorn our sanctum.

Mr. Wedgewood, the captain of the Los Angeles Bicycle Club, is visiting our city.

The track at the Pavilion will most probably be eight laps to the mile.

## OUR NEW YORK LETTER.

## Indomitable Brighton—Incidents at the Track—Tom Moore's Old Protege Bloesoms into a First-class Racehorse—Archer's Movements—General News—Closing of Stakes at Latonia and Sheepshead Bay.

December racing in this vicinity, after Brighton's opening wedge, must now be regarded as part and parcel of our regular turf seasons, always providing, of course, that future years vouchsafe to us the unusually late Autumn we are still enjoying. That this is likely to become a precedent, however, there will be many skeptics found to deny, unless, indeed, the theory set forth by some wiseacres is true, viz., that our climate is gradually changing. Be that as it may, race-goers evidently believe in making the most of the present, letting the future take care of itself, and with their opportunities in this respect gradually lessening, as each day may see the final curtain fall, the fun has lately been at times fast and furious at Mauhatau's most popular race-course, even though many of the stables are "folding their tents, like the Arabs, and silently stealing away" to other climes.

Fitzpatrick's advent among the Beachers has caused both McLaughlin and Garrison to look to their laurels with a vengeance. The dare-devil from Fordham has done good work of late, some of his bits of riding being fully up to the highest style of the art. The race of Saturday between Fitzpatrick on Herbert, McLaughlin on King Lion, and Garrison on Glegarine, was one of the most exciting incidents of an exciting season. What with the heavy betting in the pools, the wagering between the jockeys themselves, the two first-named each betting the other a century on their respective mounts, the storm of wind and rain, huddling the spectators under shelter, and the sloppy condition of a previously good track, there was sensation enough to please the most sensational. In the auction pools King Lion's backers ran him up until he sold even with the field, an incomprehensible state of affairs, considering that it was Herbert's favorite distance, and that he was as much at home in the mud as any of the party. To non-bettors and unprejudiced persons it looked as if the odds should have been just the other way, for, in spite of the late improvement of Robinson's new purchase, he has never shown quite an ability to go seven furlongs as fast as Herbert has. In the race the latter was away quicker than his most dangerous rival, and soon heading Loud's colt, Herbert showed the party his heels to the wire, landing a pot of money for his backers at better odds than they have obtained this season. Fitzpatrick was a sung winner, having about all the ready money he possessed bet on the race.

Fosteral keeps on the steady "even tenor of his way," and the high opinions always expressed of him in these columns have been more than verified. Not as fast as some, nor as good a weight-carrier as others, perhaps, the fact still remains that the waspy, long-necked gelding is such a "game 'un" that he wears out faster horses than he is. A match at a mile and five furlongs between Royal Arch, Fosteral, and Hartford, special weights, would be a grand struggle.

Archer has met some jovial hosts in Washington in the persons of Tom Ochiltree, John Chamberlain, Hugh McIntyre, and other gentlemen of the Washington Jockey Club. The famous jockey is represented as saying that Washington "was the finest city he had ever seen." Rather extravagant praise, considering the many architectural beauties of London and Paris. What will he say by the time he reaches Chicago or San Francisco, the town where, if it ever froze hard, the people would have to slide down hill to business, as they could not ride or walk? Fortunately, however, this contingency has never yet arisen at the metropolis of the Golden Gate.

The Washington *Capital* says that at a meet of the Hoskins hounds recently, the hounds "put up" a fox about a mile northeast of Silver Spring Station at sunrise, and after about three hours' run he was bagged. During the run, as the fox started across a field, with the hounds about fifty yards behind him, and the hunters another fifty yards in the rear, an old farmer, probably fifty-five or sixty years of age, who was plowing, dropped his lines, listened a minute, and then quick as a flash unhitched his horse, mounted, and was away after the hounds, driving as though he were riding a quarter race. The old man turned around once and shouted, "By gum, you darn fellers never let a feller work when he wants to." About this time, Mr. Tompkins, who was leading, tried to take a short cut, and got a bad fall in a ditch about ten feet deep by twenty wide. At this point the farmer assumed the lead, the others riding after him as hard as possible. Mr. Tompkins meanwhile got out of the ditch, and once more taking a short cut, tried to catch the old man, who was riding like Tam O'Shanter. It was no use, however. The farmer got the brush before anyone got near him. After the hunt a delightful dinner was served by Miss Fannie Freeman.

Reports from Baltimore indicate that the recent "settlement" of the Maryland Jockey Club's troubles is not likely to heal the breach between the parties. The most intense bitterness exists between the friends of Secretary Ferguson and the other gentlemen opposed to him. At the last Fall meeting there were not a sufficient number of horses to make more than three or four good fields during the week. This the disaffected portion declare was because of the seeming indisposition of Secretary Ferguson to accommodate those who made application for quarters for their horses. The friends of the secretary, however, declare the rules adopted for the government of the track and grounds has given offense to some owners whose horses will not fill any engagements at Pimlico.

Reports from Canada speak of a two-year-old brother to that good mare Princess, by our old friend Princeton, out of Roxaline, etc., that is expected to develop into a great three-year-old. He can outrun all the other horses in Mr. John Forbes' stable, so it is said, and he is expected to stay better than his speedy sister, whose limit was nine furlongs, and she liked a mile the best.

The Canadian papers lament the recent sales of broodmares to parties in the States. They say that there are too few good thoroughbreds in the Dominion now, and with these being steadily lessened, the prospect is not very cheering. Reports from Favor, Tronhadour, Bonanza, Redstone, and others of the great two-year-olds now in Kentucky are very favorable. We will soon begin our usual Winter's remarks on the great Spring stakes, beginning, of course, with the Kentucky Derby.

Blue Grass, the four-year-old son of Pat Malloy and Amy Farley, by Planet, almost succeeded in crediting this country with the last great event of the English flat-racing season, the November Handicap, run on November 22d. A quarter of a mile from home he was in front, but in the final furlong, want of condition told, and he was beaten by Keir.

Tartar, finishing a fair third. The critics said that if Marsh could have got another gallop or two out of him he would have won. Blue Grass has not run for over a year, going wrong almost on the eve of the St. Leger of 1833, for which he must have run very close, judged by the victory of Ossian, whom Blue Grass had beaten a head.

The winter race-meeting at New Orleans is evidently an assured fact. A special from New Orleans to the New York World of last Friday says that "Arrangements have been made by Leon Lamothe & Co. for a Winter racing meeting to begin here on Tuesday, January 20th, and to continue three days each week until about the middle of March. It is understood that Lamothe & Co. have received assurances from a majority of the owners that have been working the Texas Circuit that they will come to New Orleans at once which, with a number of the stables now at Mobile, Charleston, Nashville, and other points, will give over a hundred head of horses fit to run. Col. Simmons, President of the Louisiana Jockey Club, who is now presiding judge at Brighton Beach, will have returned home before the date fixed for the beginning of the meeting, and will aid in every possible way to insure its success."

Commissioner Hoynes was occupied at Chicago, last week, in hearing testimony on the demand for the extradition of Joseph Raeside of Wankegan, on the charge of forging pedigrees. The trial was to have been continued shortly. The English Government asks that Mr. Raeside be given into its custody on the charge of forging certificates by which he secured the registry of three horses in the Stud-book of the Clydesdale Society of England and Ireland. The society is prosecuting the case. Joseph Raeside, it is claimed, purchased the horses of David Riddell and sold them in this country as thoroughbred Clydesdales, the strain not being pure. The horse had no pedigree of record, and to get them registered for the purpose of securing a pedigree, Mr. Riddell's secretary says that Joseph Raeside came to him with certificates properly filled in with the names and descriptions of the horses, and said their breeders had authorized their names to be signed to the certificates. The secretary thereupon signed these names, which he says was done upon the representations of Raeside. Raeside then took the certificates to the secretary of the Clydesdale Society and had their pedigree registered. The society afterwards discovered that the names of the breeders of the horses had been forged, and instituted the proceedings which led Her Majesty's Government to ask for the extradition of Mr. Raeside. That gentleman denies making such misrepresentations to Mr. Riddell's secretary, as that gentleman claims. Raeside asserts that the secretary signed the forged names without his knowledge or consent.

The Clydesdale stallion, Nonesuch, brought over in the steamship Oranmore, Capt. Jones, was on Nov. 29th forwarded to his owner, Mr. Alcott, at Ursina, Pa. This stallion weighs 2,240 pounds, and is of mammoth proportions. Capt. Jones had a watch kept over Nonesuch night and day, and during the whole fifteen days' passage he was not allowed to lie down. He was so large that he could not be accommodated between decks, and a stall was erected for him on the main deck.

Mr. Wm. Hendrie, of Hamilton, Ont., has a very promising colt, coming two years old, by Bill Bruce, out of Wild Briar, by imp. Australian, one of the mares recently purchased by Mr. Pierre Lorillard. Wild Bruce is the youngster's name. As he is the only living son of his ill-fated sire, great expectations have been formed regarding him. Mr. Hendrie recently refused an offer of \$2,000 for the colt, saying that, barring accident, he would win much more than that amount.

Bonnie Australian, by Regent out of Christine, is reported as having given away in the off fore leg. This horse was one of those that took part in the Texas Circuit.

From a Nashville paper we learn that Major Jas. D. Hill, ("Climax"), of Nashville, returned last Saturday from Sumner County, where he has been the guest for a week past of Capt. James Franklin. He visited several of the fine stock farms, among the rest Fairview, the property of Mr. Charles Reed, who is at present travelling in Europe. He says the race stock is in fine condition. Mr. Hill learned while there that Mr. A. C. Franklin would send his string of racers to New Orleans this winter.

The sire of the Australian Cup winner, Malua, the English stallion, St. Albans, heads the list of winning sires for the current Australian racing year, while the principal winning owner is the Hon. James White. This gentleman is credited with nearly £10,000, mostly won by the great colt Martini-Henry, by Mnsket.

All attempts to acclimate racing at Peterhoff, Russia, the residence of the Czar Alexander, are said to be up-hill business, because racing at Peterhoff does not seem to take the public fancy. Because they are military races the officers are dressed in white coats, so none can make out who is who. The officers are not good riders, and are about useless over fences and ditches. The horses have no speed, and the course is so bad that no one having a good horse will allow him to run over it. Pretty good reasons—bad riders, bad going and bad horses. It is also intimated that the grand stand is a delusion and a snare.

The Baltimore Sun says that Major J. D. Ferguson, Secretary of the Maryland Jockey Club, remains firm in his determination to resign his position before the annual meeting of the Club next Spring, and will notify the members of his determination to-day. A friend, speaking for him, yesterday said that as the Major felt it inconsistent with his self-respect to retain the position previous to the meeting last Tuesday, he certainly could have no reason to change his opinion now after the many complaints made against him there. Continuing Major Ferguson's friend said that with the expressed antipathy of the President and some of the Executive Committee towards him, it would be impossible for him to arrange the many difficult matters devolving on the Secretary before the annual meeting of the Club. While the Major feels very grateful for the support given him at the late meeting, he cannot consent to withdraw his resignation. Owing to this state of affairs, another meeting of the Club will be necessary to elect a successor to Major Ferguson, or perhaps the President will appoint some one to serve in his stead until next Spring. Certain it is that some one will have to act as Secretary, as matters connected with the Spring and Fall meetings next year will require active work in that position.

Later intelligence is that at a special meeting of the Maryland Jockey Club on Tuesday last, both the resignations of Secretary Ferguson and Treasurer McLane were accepted. The action of the latter gentleman however had no connection whatever with the other troubles of the club.

On January 1st next many very valuable stakes of Eastern racing associations close. The BREEDER AND SPORTSMAN'S advertising columns are evidence that the Coney Island Jockey Club and Latonia Jockey Club look on your State as capable of producing heavy nominations to their lists, and let the owners and trainers of racehorses on the Pacific Coast consult the rich fixtures and send in their entries early.

NEW YORK, Dec. 9, 1884.

Some years ago Mrs. E. G. Mayberry, the wife of Colonel Mayberry of Los Angeles, wrote the following admirable lines to her favorite dog Flora, a tribute which the faithful animal richly deserved. For some years past the talented lady has been a confirmed invalid from chronic rheumatism, and the broad fields of artemisia and nodding heather along the alepey lagoon, over which she loved to ramble with her favorite Flora, are no longer hers to enjoy. The description is true to life of all hunting dogs of merit, and for its truthfulness and vivid word-painting, we are sure will be read with pleasure by every true sportsman:

O, Flora, of the speaking eye  
And silken coat—Queen of the Field:  
Our household pet, whose true, fond heart  
And faithfulness a harvest yield

Of gratitude and guileless joy,  
Our little ones glad run to greet,  
Caress thine ears, bang round thy neck,  
And wonder at thy silk-fringed feet.

I see thee starting for the field,  
Thy silken ears tossed on the wind,  
And glancing gaily back the while,  
With laughing mouth to those behind.

Our fleet-foot filly, "Nell," might all  
As vainly try to speed the wind,  
But one wave of the well-known hand,  
Thou trottest quietly behind.

The field is gained, the jacket donned—  
The belts are buckled—guns uncased—  
The old familiar shout, "Heigh on!"  
Inspires the all-absorbing race.

As quartering here, and ranging there,  
Through bush and brake, by tree and thorn,  
Till suddenly thy step is stayed,  
With uplift foot and trembling form;

Immovable, with outstretched tail,  
Waiting the signal of command—  
With glowing, quick, astringent eye,  
A model worthy Thorwald's hand.

An eager voice rings out, "Put up!"—  
A sudden spring—a whirring sound  
Of feathery wings—a sharp report—  
A speckled breast sinks quickly down;

Down crouched, crouched low thy supple form,  
With eye fixed on the master's face;  
The gun recharged—the welcome sound:  
"Dead bird, go fetch," quick from thy place.

With blazing eye and bounding form,  
Through tangled gulch, up hillside steep,  
With lowered nose and quick, short breath,  
Thou circlest round with flying feet;

Till, seizing on the feathered prey,  
Quick by the master's side you stand;  
Well paid if on thy glossy head,  
Thou feel'st the loved, caressing hand.

Away again at quick command,  
Through the deep canyon's rugged mouth,  
Untired, thy only thought to please  
The best beloved one on earth.

Conchant, with pleading eyes thou sit'st  
Close by the deer's hill-creeked side,  
Then quick, with noiseless step, thou com'st  
And lay'st thy silken head beside.

The stricken one—a mute caress,  
All eloquent of thy fond heart;  
O, voiceless love! how much more worth  
Than the glib tongue and seeming part.

They say in yon blue, smiling Heaven,  
There is an immortality  
For every selfish human soul,  
Yet still deny a place for thee.

Let bigots quarrel o'er their creeds,  
Say what they will, think as they may;  
In Flora's eyes there beams a soul  
I'd not exchange for theirs to-day.

The question of "bore" in guns is one of great importance to the hunter, and at the present time is occupying much attention on both sides of the ocean. Evidently a change of sentiment, the result of experience, has brought the controversy about. Small bores, or, in other words, light guns, are again being preferred. In fact this is going back to the old love of forty years ago, nothing more nor less. Take a first-class English Joe Manton gun of forty years ago, with its double set of barrels, one for partridge, one for duck, and compare it with a gun of modern make in England or America, and it will be found very much the lighter, yet equal, if not superior, in execution. Except for special work heavy guns of the modern style, in our opinion, are a mistake and a great drawback to a man's pleasure while hunting. Taking a rational view of both sides of the argument we are not surprised it should exist, and we feel quite sure if the lighter gun is again adopted our sportsman would do just as good work with infinitely less labor and fatigue. There is no sense in making a toil of pleasure. The Forest and Stream recently published a very sensible article on this subject, which we have pleasure in circulating for the benefit of our readers. It says:

"Guns of small bore are coming into favor. A circumstance was brought to our notice the other day, which may be taken as showing that the demand for small bore guns of a certain character exceeds the supply. A country dealer wanted six twenty-gauge guns of moderate price. He could not find them in New York city.

The change of fashion—so far as it is a change—is not set by the dealers themselves. Given a price the maker would prefer to furnish for it a large bore gun. The raw material for the two guns, one large bore and the other small bore, costs practically the same. To make the smaller requires more skill and care; it is a more difficult task than to make

a gun of the larger bore. As a rule, the grades being equal to make the smaller gun costs the more.

There is much to be said in favor of small-bore guns, and the tendency of the day is toward them. They are lighter, and the weight is an important consideration, especially in the last part of the day's tramp. Once let the man who has been used to lugging around nine or ten pounds of gun find out that he can do just as good work with a weapon weighing from five to seven pounds, and the chances are that his common sense and skill as a shot being rightly proportioned, he will choose the smaller bore and the lighter weight. Add to this the satisfaction which comes with the use of finer tools. The shooter who brings down his game with a small bore gun is in very nearly the same position as the angler who catches his fish with delicate tackle. A small bore will not scatter so broadly as a large gun; more skill is required to hold on; but its penetration is practically the same, and the two will kill at equal distances.

There is a growing sentiment among expert shots that he is a little more of a sportsman who uses a small bore gun than his companion who is armed with the larger gauge. Some men, indeed, have made the mistake of going to the extreme of small bores. For ordinary work the gauges from sixteen to twenty, and weighing from five to seven pounds, will prove satisfactory.

The different clubs having preserves had good sport last week, the record generally being large, the teal, as usual heading the list. The Cordelia Club had three gentlemen out, Messrs. Bent, Sticking and Btler, who bagged 100 birds on Saturday and Sunday, 40 of which were canvasbacks. On Thursday previous, Messrs. Kellogg, Bradford, Tubbs, and Lincoln on that day killed 241, of which 66 were canvasbacks. The Tule Belle, with Messrs. Bogart, Wilson, and some others whose names we did not learn, brought down 100 birds for two days' work. The Alameda Club at Mallard was well represented and did good work. The season so far at Mallard has been excellent. Mr. C. L. Larkin recently got 70 ducks, over half of which were canvasbacks. During the season over 700 English snipe have been killed at Mallard. Dr. Toland and Mr. Brooks, at a new preserve in Snisnu marshes last week bagged 150 canvasbacks, the best "kill" we have heard of the season. A new club has been formed, called the Byron, and the name shows the locality. The members are Messrs. Edson, Adams, Chisbom, Haskell, Pollak, Platt, Norton, Ganyon, Mayheix and Painter. We did learn who of these gentlemen were out last week. Messrs. Norton, Batchelder and Dr. Knowles have leased a large range of marsh at Alvarado, which gives good shooting when not too much rain. Last week they had fine shooting with duck and snipe. Among the trophies were two large honkers which were killed by Mr. Norton. He got two with the first discharge. The third took a circuit and came back to look after his companions, and only saved his life by the shell sticking fast in Mr. Norton's gun. It is not often such a trophy graces a day's shooting.

The members of the Gilroy Club are having fine shooting at their preserve, Soap Lake, or in other words, the head waters of Pajaro river. On Sunday last Mr. John Eustice bagged 60. This always was one of the best duck ranges in the State. A number of these gentlemen were camping out for a hunt at Mr. Sargeant's place below Gilroy last week, when quite a mishap befell them. The tent took fire causing the total destruction of Messrs. Herold's and Loupe's guns. Mr. Dunham boldly rushed into the flames and saved his only slightly injured. No end of cartridges exploded. Stranga to say a box of loaded shells went through the fire without exploding, though the box was badly burned and the shells badly scorched. The loss was between \$300 and \$400.

We heard this week of canvasbacks being again sold very cheap—at 50 and 60 cents a pair. Four good canvasbacks will weigh from 10 to 13 lbs., make good wholesome food; and at this rate are cheaper than mutton and beef. Poor families and families in moderate means need not wait a Christmas dinner while such things exist among us. Hares, in different parts of the country are selling at times at 50 cents a dozen. Where else but in California, this land of plenty, are such things known?

A Good Thing at Oakland.

The sporting fraternity of our sister city is just now having a good laugh over the adventure of a quintet of young bloods of Oakland, who took a hunt on the Benicia marshes just a fortnight ago, when the great norther prevailed. Perhaps, much of the funny business, so well told by the editor of the Daily Evening Tribune, originated in the brain of that wag, but it is well told anyhow. The hunters were Charles Alexander, Edward Dean, William Lawlor, Buck Baker and James Baker. We cannot follow the party through all the mishaps which the fertile brain of the editor brings down upon them, but as a caution to others not familiar with the science of hunting duck we select the best points. All five were faultlessly dressed in Pierce & Co.'s best hunting suits, and thoroughly equipped down to the regulation gum-boots and field-glasses. Mr. Dean is a young gentleman not at all versed in hunting or in the various tricks of the wild duck family, or in fact wild ducks or any kind, and so the fun was piled on him hot and fast. For the rest, and as a caution to others during the season, we let the Tribune man tell his own tale:

Dean had scarcely arrived on the marsh when he began to blaze away, bringing down a bird at every shot.

Presently he met Alexander meandering along the margin of a slough, his gun in rest, and a meditative light in his calm blue eye.

"What luck?" inquired Dean as they approached.

"Not a feather," replied Charlie in the vernacular of the field. "How is it with you?"

"Bully," answered Dean. "Bagged seven fine ones." And he drew them from his capacious pockets. "Two mallards, three teal, one fat canvasback and one superb widgeon."

Alexander gazed at the game a moment in blank amazement. Then with a cheerful sneer on his ruby lips, he exclaimed: "Ed, thosa ain't ducks."

"What are they?" asked Dean, looking dubiously at the birds.

"They are called by ornithologists *Fulica Americana*; some of them belong to the family *Rallus crepitans*—they are mud-hens!"

"And what is a mud-hen?" innocently inquired Dean.

"A mud hen, my dear boy," answered Alexander, "is a bird that looks like a duck, but is not a duck; a mean, cou-

temptible, rank, indigestible brute that dives for a living, and lives in the mud. Throw 'em away." And Dean forthwith cast them into the slough. But all day long Buck Baker continued to retrieve mud hens, and bringing them to Dean, dropped them at the feet of the mighty hunter. And the wind blew fearful. Jim Baker was also on the war path, and presently he saw a duck in the tule grass. Dean also saw the duck and each insisted upon having the first shot, Baker claiming the shot because he had discovered the duck, and Dean on the grounds that they ought to make sure of the bird. After a long dispute it was agreed that both should fire together. Taking a good aim they hazed away, but the duck never huddled. They emptied the other barrels of their guns without even causing the duck to rise.

"He must be sick," said Jim. "Or dead," remarked Dean. "Let's give him another rally," said Baker. "All right," said Dean, and they proceeded to reload. Just as they were about to fire, Jim Barry hove in sight with the remark:

"What are you fellows trying to do?" "Killing this confounded duck," they both exclaimed. "You can't kill that kind of a duck—it's a wooden duck and is called a decoy—you are only wasting your ammunition," and the hunters turned sadly away from each other. But the wind blew fearful. In the meantime the norther had carried away Alexander's helmet hat, puggaree and all, but he was unaware of the fact, and hunted along in his Siberian night cap, all unconscious of his loss. For the wind blew fearful. At night the hunters rendezvoused at the Benicia hotel, and counted their game as follows: Ten ducks killed by Jim Barry. The party then returned to Oakland, and having filled their pockets and game bags from the poultry stalls of the markets, distributed their game among their friends with the remark that "The hunting was splendid on the Benicia marshes." And still the wind blew fearful.

### THE RIFLE.

#### State Rifle Association—Distribution of Prizes.

We accepted an official invitation to attend the distribution of prizes at Eintracht Hall, on Post street, on Wednesday evening of last week, at which time, however, it was too late to insert the proceedings in our last issue. Every effort was made to render the affair worthy the State, and in the earlier part of the evening the attendance was large and fashionable, the ladies being well represented, as is always the case when the military are in the ascendancy. The committees of management were as follows: Invitation Committee, Lieut. G. H. Strong, Sergt. Chas. Nash, Corp. L. R. Townsend; Reception Committee, Lieut. H. T. Sime, Lieut. G. H. Strong, Sergt. Chas. Nash, Corp. L. R. Townsend; Floor Committee, Lieut. Col. P. Boland, Major A. F. Klose, Capt. Geo. Teller, Corp. L. R. Townsend. The selections made of officers to present the trophies were good, and some of the trophies themselves really elegant. The Police teams were fully represented to receive the prizes they had nobly won in the Fall meeting, and of which they may feel justly proud for many of their competitors rank high among our sharpshooters. We regret the absence of several names that at such State gatherings we should like to see on the roll of competitors, and trust in future they will be present. After the distributions came the traditional dance, which at all our entertainments is to the Californian what the dinner is to the Englishman. The floor was by no means crowded as many of both sexes had got tired of waiting and gone home. It is only the veterans, who must have their dance—who saw the end, and these when we left towards midnight, were dancing as if they had never danced before and never expected to dance again. Well, there is high authority for doing well whatever we do, and dancing without spirit does not amount to much. Altogether the evening was an enjoyable one. The scores of the meeting were published in the BREEDER AND SPORTSMAN on the 22d of November last, in full and correct form and as the cash prizes were given are small and unimportant, forming no feature in the programme either to the donor or recipient, it is not worth while to mention them in this account.

#### LIST OF AWARDS.

The Dimond Team Trophy, given by General W. H. Dimond, was won by the Police Team, consisting of Officers A. T. Fields, N. T. Fields, P. D. Linville, D. Peckinph, D. Geary and C. Nash. The prize, a costly parian marble pedestal, surmounted by two bronze statuettes, representing "Summer," was presented by Colonel Robert Tobin in a witty and mirth-inspiring speech. The Siehe Team Trophy, a fine oil painting given by Captain Ludwig Siebe, was won by Company C of the First Regiment, N. G. C. Ten dollars in individual prizes were also awarded. The Centennial Team Trophy, a massive silver and gold punch-bowl, given by the city of San Francisco, was won the eighth and final time by the First Infantry Regiment, N. G. C. His Honor Mayor Bartlett made the presentation speech in a few well-chosen words. The California Rifle Association Trophy, 600 yards match, won by the Police Team, No. 1, Officers A. T. Fields, N. T. Fields, C. Nash, D. Geary and D. Peckinph, was presented by Capt. Ed. Sprowl, the prize being two very handsome bronze statuettes. The Dunphy Team Trophy, given by William Dunphy, consisting of a \$100 bronze clock and two large vases of the same material, was won by the Police Team, Officers C. Nash, N. T. Fields, J. P. McCarthy, A. T. Fields, D. Peckinph and P. D. Linville. The presentation was made by Major-General Walter Turnbull. The Townsend Consolation Trophy, a gent's elegant traveling toilet case, given by Corporal L. R. Townsend, was won by Sergeant H. A. Brede, U. S. A.; presented by Captain Ed. Sprowl. The Governor's medal, an elegant gold badge, given by Governor. George C. Perkins, was won by Lieutenant Fred. Kuhnle, for the final time, score 50 out of a possible 50; presentation by General Samuel W. Backus. The Short-range cash prize of \$15 was won by Lieut. Fred Kuhnle, other prizes, aggregating \$25, being also awarded. The California Powder Works Medal was won by Sergeant Charles Nash, of the Police Team, with the excellent score of 68 out of a possible 70, the presentation being made by Lieut. R. P. Hammond, Jr. This match also included cash prizes of \$10. The gold medal for the champion marksman was presented to Officer A. T. Field for the highest percentage in five matches, 91.42 per cent. Battery B of the Second Regiment was presented with two handsome bronze statuettes, won at the Spring meeting of 1884.

### Shell Mound.

Sunday was calm and pleasant and we paid our usual visit to the butts. On reaching Shell Mound we found only some half a dozen present, and the shooting for a time was desultory and of no importance. Towards noon the number increased rapidly and soon the targets were called into service, Col. Ranlett and Lieut. Kellogg occupying the 600 target, at which, though the atmosphere was somewhat hazy, and the platform off which they shot badly constructed, they nevertheless made very creditable scores. The shooting of an official character in the morning was that of Wolfe Tone Guard, N. G. C., which held its quarterly medal match, and in which the members contesting took much interest. The distance was 200, but the scores made were down below their usual average. William J. Burke won the first-class and John B. Gough the second-class medal.

In the afternoon the shooting was better and more interesting, as it brought members of the First Infantry, N. G. C., into action, to settle the tie between them for the final possession of the Company's annual medal for the first class. This lay between Perkins and Klein and the former proved victor, though the 200 yard scores was not up to their reputation by any means. For the medal neither made the score necessary for a sharpshooter. The score:

Perkins.....	200 yds.—4	5	4	4	4	4	5	4	5—43
	500 yds.—0	4	5	5	4	5	4	4	3—40
Total.....									83
Klein.....	200 yds.—4	4	3	4	4	4	4	4	39
	500 yds.—5	3	4	5	4	5	5	5	43
Total.....									82

Afterwards in another trial Klein did a little better and made the following score:

Klein.....	200 yds.—4	4	4	5	5	4	5	4	44
	500 yds.—5	5	4	5	3	4	3	4	5—43
Total.....									87

It is sometimes held that any excuse is better than none, and so for this poor shooting, it is alleged that Klein's rifle leaded badly and afterwards Perkins' did the same. Generally our riflemen do not accept this excuse because four and even five were made by each party, and that is somewhat difficult and unusual to do with badly leaded guns. Better to have acknowledged the "corn," and confessed they were off at the time. Both shoot so well on the general average that neither could have suffered in reputation from one poor day's work. By the same company there were also contests for the second, third and fourth-class medals. The second-class medal was captured by W. Summers. The third class medal was won by the following score:

A. J. Ruddick.....	200 yds.—5	3	5	3	4	4	4	4	4—40
Deirs.....	200 yards	4	4	4	5	4	4	4	4—41

These medals all become private property now. After the medal matches were concluded, Sergeant Hovey and Smith Carr had a 50-shot match, 200 yards. Sergeant Hovey, of the Fifth Battalion, has risen rapidly of late into a first-class position as a rifeman, and Smith Carr is brother of Howard Carr, the champion, who with his other brother Charles has developed into a rifeman of high promise. The match was close, but the little Sergeant was again victor. As a practice shoot 227 out of a possible 250 is no mean work.

Hovey.....	5	5	5	4	5	5	4	4	5	5—47
	5	5	5	4	4	4	4	5	4—44	
	5	4	3	4	5	4	5	5	4—46	
	4	5	4	5	4	5	5	4—45		
	4	5	4	4	4	4	5	4—45		
Total.....									227	
Carr.....	4	4	5	4	4	5	5	5	5—46	
	5	5	4	4	4	4	4	5—44		
	5	4	4	4	4	4	4	5—43		
	4	5	4	5	5	4	4	4—44		
	5	5	4	4	4	5	5	4—45		
Total.....									222	

Although not in the match P. E. Robertson shot over the same range with the same number of shots, and he followed up Smith Carr very closely all through. His score:

P. E. Robertson.....	4	4	5	4	4	4	4	5	5—43
	4	5	5	4	4	4	4	4—43	
	4	5	4	5	4	4	4	5—45	
	5	5	4	5	4	4	4	4—44	
	4	4	4	5	5	4	5	4—44	
Total.....									219

R. C. Moore, Company A, of the Fifth Battalion, was also out practicing, and well sustained the reputation of his corps. Moore did some fine shooting. His score was 225 out of a possible 250, with five strings of ten shots each. There is much likelihood of Moore being chosen first Lieutenant, of Company A, at the next election, and as the Fifth is the shooting battalion of the militia, Moore is emphatically the man for the place. His score was:

P. C. Moore.....	45	43	45	45	47	—225
------------------	----	----	----	----	----	------

It is not pleasant to notice in the general want of attention to rifle practice among the leading officers and general body of the militia—for out of 2,000 or more all told, there are not over 100 good shooters or attendants at the butts for practice—that that good that Company C of the Third Regiment have come to the front and promise to gain renown. Captain Leary has determined to make his company take a foremost place and too much praise cannot be given him for such action. Fuss and feathers are all very well on 4th of July, and like occasions, but in time of need and trouble it is the soldier who can shoot that we have to rely upon. On Sunday, one of the company, Mr. Maginnis, made 85 out of a possible 100, and others of the company did nearly as well. Mr. Macalpine has taken charge of the company shooting, and will immediately perfect his arrangements for weekly practice and medal contests. It is somewhat singular that Company C, in the First, Second and Third Regiments and the Fifth Battalion of Infantry should contain the crack shots of the militia. This shows it is good officers, hard working men, who influence their subordinates by example, that make good soldiers. This is worthy of consideration.

The Fifth Battalion, led by Col. Ranlett and Lieutenant Kellogg, have undertaken the difficulties of the 600 yards so that in future the police team may not have a walk-over in contests at that distance. This is also a move in the right direction. On Sunday we saw these gentlemen make some good scores although from the badly constructed platform from which they shot, and the hazy atmosphere, they shot under disadvantages. Their scores were:

Kellogg.....	200 yds.	500 yds.	600 yds.	Total
	47	47	42	136
Ranlett.....	40	46	41	127

At the three ranges, out of a possible 150 at each, these are good scores.

In conclusion we beg to acknowledge the hospitality and attentions of Capt. Siebe, proprietor of Shell Mound. The Captain never forgets his old friends and certainly possesses the happy knack of making things very pleasant for them.

### POULTRY.

#### Unfertile Eggs.

There is nothing more annoying to the poultry breeder than to find the eggs which he has carefully gathered, and committed to hens or an incubator, unfertile. It may be that on them depends the success of his whole season, as in many cases, unless he can get early chickens it will be of little use his expecting any profit. This is a matter which presents itself during the Spring, but it is too late to remedy it then, and in order to prevent so serious an interference with the poultry keeper's plans, it is necessary to deal with the matter a long time before. Counting chickens before they are hatched is perhaps the height of foolishness, but while we do not wish to indulge in so profitless a pursuit, it is better to secure as much certainty as possible by careful attention to the necessary details, inattention to which is often the cause of that mis-called "bad luck."

The statement has often been made by those who ought not to have spoken without more accurate knowledge, that an egg cannot be laid without containing a germ of life; in fact, that impregnation is the primary cause of the egg being laid. I should not have noticed so ridiculous a statement, only that it was recently repeated, and it may be that it will once more be brought forward as an item of truth. That it is nonsense, can be proved in a very simple fashion. A young pullet if kept with companions of her own sex, and never allowed to be near a male bird, will commence laying in due season, just the same as if she had been mated up, and will continue laying, if this seclusion is maintained. Many poultry keepers in this country who only keep fowls for the sake of eggs, never have a male bird at all, and they find that the hens are quite as prolific as though a gentleman was maintained in the run. Doubtless the egg was designed to serve as a vehicle for, and defense to, the germ, and the elements of which it is composed assist in the formation of the chick, but the conditions are altogether different to the generation and birth of mammals, for in their case the process of formation takes place previous to expulsion from the body whereas in the case of eggs it is only after the egg has been laid that this process can be actually begun. All birds are not alike in their nature, for although in ordinary fowls the impregnation must take place for every separate germ, in some others, chiefly wild ones, a single impregnation is sufficient to fertilize a whole nest of eggs. But generally where this is found, there are only one or two nests of eggs laid in a year. Poultry, probably, when in a state of nature, did not lay more than one or two nests, and to domestication is due the increased laying powers.

From what I have here stated it is very evident that where early chickens are desired, either to produce layers or table fowls, it is most important to secure the impregnation of the eggs when first the hens begin to lay. There are two things which must be noted in connection with poultry, the first of which is that hens begin to lay later and later every year, and the second that the cocks do not impregnate the eggs so early in the season each year as they get older. This is only the result of one of nature's laws. As animals or birds get older they lose part of their natural vigor, they require more heat to sustain the natural waste of their bodies, and as eggs are formed from the surplus food, and require the surplus heat to assist in their production, it will easily be seen that old birds are not to be relied on, either for early eggs, or, even if those be obtained, can they be expected fertile? That is, of course, if the cock and hens be equally old. The question comes, therefore, in what way can fertile eggs be secured sufficiently early in the year—because this really decides the success or failure in many instances. Late hatched birds do not commence to lay before the Winter sets in, and consequently they are unprofitable at the most profitable time. Late hatched table birds get to the market when there is a glut, with the result is that they have to be sold for very much less than what they would have brought earlier in the season. Layers should be hatched during February, March and April, but it may be well to mention that I have found it unnecessary to have out such early maturing breeds as Leghorns and Minorcas, before the two months last named. Taking time by the forelock in this way, secure a succession of layers, all of which will get fairly to work before the advent of Winter, and will be productive when eggs are dearest. When table fowls are to be produced it is necessary to get them hatched in January and February, if not in December, and when this is done they can be put upon the market at a time when prices are highest. In this way double will be obtained for them than could be got for those hatched a month or two later.

All this leads up to the question involved in the title given to this letter, namely, that of unfertile eggs.

We have already seen that the older a hen is, the later she commences to lay after her annual moult. Pullets, if hatched early enough, may lay all through their first and second winters, but it is seldom that they do so after that. Two-year-old birds rarely resume laying until the end of February, if an open season, or March if a severe one, and as at first the eggs are not so numerous, it will be seen that the poultry keeper who trusts to birds of that age, or those still older, is certain to be behind in the race. Two-year-old birds may be used, and I like to do so, for the purpose of producing breeding stock, but they are useless if the object be to obtain early layers, or chickens for the table. Therefore, for this purpose, it is needful to use either pullets or over-year hens.

Much importance must also be attached to the choice of the cock, and it is imperative that, when hens are mated, they should have with them a young and vigorous cock. A two-year-old male bird, if of the hardier and livelier breeds, will begin to fill the eggs about February, but a three-year-old one will probably not do so until the following month. If a very early hatched cockerel is obtained (we mean one bred about the previous February or March), which has grown well, and is largely developed, he may be expected to do this even in December. This, then, is the secret of the whole matter, and the many thousands of eggs annually put under hens, but which are wasted because they are unfertile, would be saved if only attention was paid to this question. I am strongly impressed with the matter, and while I do not wish to advocate breeding from half or three-fourths grown birds, yet as it is so essential to have vigorous male birds, and active hens, I am convinced that for the production of early layers and table fowls, no birds should be mated up when over two years old. My own preference is for two-year-old hens, themselves early hatched ones, and a February cockerel. These, if mated in December, taking care not to have too many hens, should give strong fertile eggs before the year is out, and the progeny will be very early. Some there are who prefer a two-year-old cock with early hatched pullets, a system I have sometimes adopted, and one which is perhaps most suitable for producing Spring chickens for the table, but I do not think that the eggs are so fertile. A cockerel and two-year-old hens are mated together. Gentleman.

## Dame Winnie Colt and Sallie Benton.

Elsewhere will be found a description of the trotting by the Palo Alto colts on the Bay District Course last Saturday. All through the performances were good; Sallie Benton and the Dame Winnie colt gaining the highest place in the classes to which they belong. We expect to hear the usual outcry that the season was so far advanced that they were practically a year older than the rules show, and while this is true it must also be remembered that this lateness is held to be detrimental to speed. The days are at the shortest and the sun when unobscured has little warmth in comparison with Summer and early Autumn. Saturday morning was one of the coldest we have ever felt in California, and during the middle of the day it was still so chilly that notwithstanding the protection of overcoats the judges' stand was quickly forsaken when there was an opportunity between the trials to get the benefit of a shelter from the cutting air. The track was in fair condition, not so fast, in our opinion, as it would have been had the loose dirt been scraped off. A light coating even of soil, through which the wheels cut to the depth of the felloes, adds greatly to the draft, and though it may encourage the colts to a greater length of stride, it does not fully compensate for the extra drag. But without offering excuses for the day and track; conceding that both were favorable and there is enough to be proud of. California has regained her place in the trotting-colt records and there is not a break in all the stages of colthood.

Beside the triumphant performances of Sallie Benton and the Dame Winnie colt there were other grand showings under the circumstances. Hinda Rose had not been given a fast mile for three months. She made the first turn slow 36 $\frac{3}{4}$  seconds. Trotting very fast along the hackstretch so that she reached the half in 1:10 $\frac{1}{4}$ , she cast a hind shoe and then she was at the three-quarter pole in 1:45, 1:08 $\frac{1}{4}$  for the middle half, and the mile in 2:20 $\frac{1}{4}$ . John A. McKerron offered a fine track harness for any four-year-old to lower the record of Elvira, and as the belle of the Blue Grass country had marked 2:18 $\frac{1}{2}$ , it was not easily to accomplish. Mr. Lathrop, on the part of Governor Stanford, accepted the offer and hence if successful it established "a record." There was a general belief that Hinda could do it if accorded another trial, but it was some time before a blacksmith could be got and a search for the shoe was fruitless. In the meantime the others were "warmed up" and the work went on, Helen, by General Benton, her dam Alameda Maid, by Whipple's Hambletonian, was the next to essay the task, but good a filly as she is no one anticipated that she could win the harness and few expected that she would show as well as she did. Thirty-seven and a quarter seconds to the quarter, 1:12 to the half did not foreshadow better than 2:25, but keeping up her long, sweeping gait, and accelerating the stroke, she finished the mile in 2:22 $\frac{3}{4}$ .

Those who had watched Sallie Benton in her exercise

felt a good deal of confidence that she could lower the record when the day was such as to be the most favorable for speed. She had shown half-miles in time that was augury of getting well down in the teens, and there was good ground for the belief that her endurance would second the speed in an effectual manner. She went off more rapidly than the others, was at the quarter in 35 $\frac{3}{4}$  seconds, the half in 1:09 $\frac{1}{4}$ , three-quarters in 1:43, the mile in 2:17 $\frac{3}{4}$ . The break when within less than one hundred yards of the score, unquestionably added a half second or more to the time. Had it occurred further from home it might have been overcome, as the momentary relief from the immense strain of the very fast trot would have enabled her to make up the loss. This was shown by the rapid flight as she went under the wire, trotting faster than at any other part of the journey. An analysis of the time will also prove that the break entailed a loss. First quarter, 35 $\frac{3}{4}$  seconds; second, 33 $\frac{1}{2}$ ; third, around the further turn, 33 $\frac{3}{4}$ ; making the "middle half" in 1:07 $\frac{1}{4}$ , and 34 $\frac{3}{4}$  seconds for the last quarter.

In this connection it may be as well to notice the claims that have been made that the California tracks were "short." This has been a favorite charge with the captious who are always ready to make statements which they know are untrue. The Bay District Course has been measured time and time again, and competent engineers testified under oath that it was over a mile. Apart from that nearly every animal that has been taken from here has shown faster time in the East. St. Julien, Santa Claus, Director, Belle Echo, Bonita, Hinda Rose, Overman, etc., have reduced their records on eastern tracks, and this is proof that even the captious cannot ignore.

Among all the great performances of the day, we consider that of the Dame Winnie colt entitled to the highest place. That it was an extremely gratifying exhibit to us "goes without saying." Had he failed to come up to expectations, there would have been an outcry all over the land at the "pernicious influence" of the thoroughbred. Writers who can scarcely tell the difference between a horse and a mule, have sought to instruct Governor Stanford in the breeding of trotters, and though thousands of miles away, have declared that the system of breeding at Palo Alto, which recognized the advantage of thoroughbred blood in trotters, was all wrong, a complete failure "without a glimmer of success." Ignoring the benefits which had followed the mixture of "blood," resulting in the greatest of all of the modern trotters, by denials which were so palpably untrue as to fail in the object; driven to the wall by the inexorable logic of past events, they were fain to suppress, to misrepresent, to deny the plainest truths, to accept cock-and-bull stories in preference to evidence which every fair-minded man acknowledged to be good testimony. They were yet determined to keep up the senseless howl in place of a manly, straightforward acquiescence in what was too apparent for controversy. Then again they were ready to claim that when thoroughbred appeared it was not that of the "fashionable strains." The thirty-second part of unknown blood in Venture was held to be the cause of his trotting fast, and these hypocritical scribblers ready to pick flaws in the genealogy of every thoroughbred that figured in a trotting pedigree. In this case there is not a chance for the usual tactics, and in order that our readers can see just what the breeding of the Dame Winnie colt is we give the pedigree in the form it appears in the studbooks:

Bay colt, bred by Leland Stanford, Palo Alto Stock Farm, Santa Clara county, California; foaled February 15th, 1882.

## BY ELECTIONER.

First dam, Dame Winnie, by Planet.  
Second dam, Liz, Mardis, by imported Glencoe.  
Third dam, Fanny G., by imported Margrave.  
Fourth dam, Lancesse, by Lance.  
Fifth dam, Anora, by Aratus.  
Sixth dam, Paragon, by imported Buzzard.  
Seventh dam, Indiana, by Columbus.  
Eighth dam, Jane Hunt, by Wade Hampton's Paragon.  
Ninth dam, Moll, by Figure.  
Tenth dam, Maria Slamerkin, by imported Wildair.  
Eleventh dam, imported Cub mare, by Cub.  
Twelfth dam, by Second.  
Thirteenth dam, by Starling.  
Fourteenth dam, by Old Partner.  
Fifteenth dam, by Greyhound.  
Sixteenth dam, by Makeless.  
Seventeenth dam, by Brimmer.  
Eighteenth dam, by Place's White Turk.

After writing the above we determined to pay a visit to the track in order to obtain reliable intelligence of his size and general conformation. It is true that we had a good picture of him so far as a portrait could be obtained by a general look, but oftentimes the eye is an illusory guide and actual dependence can only be placed on measurements. He is 15 $\frac{3}{4}$  hands in height, and in length from point of shoulder to point of buttock the same. This is a good proportion in our estimation and though some prefer a greater length there is apt to be a lack of finish when a parallelogram in place of a square is the shape. He is deep through the heart measuring seventy inches around the girth and his barrel is well ribbed and strong. He is a muscular colt, measuring twenty-one inches around the arm, forty and a half inches around the stifle, and eighteen inches around the

gaskin. He is forty-one inches from point of hip to point of hock, the hip 21 inches long. He is a bright-blood bay with black points and without any white markings. The color could not be bettered and after the closest scrutiny it is difficult to find a faulty point in his whole conformation. His disposition is as perfect as his form, and taking everything into consideration he is as nearly a model as any trotting-bred colt we ever saw. Mr. Marvin assisted in taking the measurements and when the job was finished and we stood back to get a better view he remarked, "This is unquestionably a great colt, no telling where he will finally go, and yet I consider the Annette colt still better in fact, the greatest there is in the Palo Alto stables." It has been the general impression that where there was so much thoroughbred blood there was a necessity for heavier weight on the feet to overcome the tendency to "point." The Dame Winnie has a ten-ounce shoe in front and a good deal lighter behind.

In giving this much space to the colt we do not intend to derogate from the merit of the queen of the four-year-olds. Sallie Benton is also one of the hand-somest fillies to be found in any country. A beautiful dapple gray, sixteen hands high and with the finish of a racehorse. Neither will it be just to give all the credit to the two which lowered the time so emphatically as to drive six animals in the time which Marvin piloted them, every one a victory. When extraordinary things are accomplished in the way of time there is always a desire to know the relative markings of the watches. Outside timing was generally faster than that of the officials, and each of the three judges were also determined to measure the flight for themselves. Mr. Grim gave the signal to start, and with one hand on the gong the other was manipulating the watch. We took a position immediately behind him, standing on a stool so as to catch the instant the heads came under the wire. In every case Mr. Grim and we were alike. It was the same as the timers in the case of Hinda Rosa, 2:20 $\frac{1}{4}$ , and the fractions were nearly the same. We marked 2:22 $\frac{1}{4}$  for Helen, a quarter of a second faster than the official verdict. With Sallie Benton our watches showed 2:18, and the time of Bonita was made a quarter of a second faster than that marked on the blackboard. The Dame Winnie colt we measured a fraction faster and those who stood on the inside track, immediately under the wire, had it 2:23 $\frac{1}{4}$ . That the official timers were not inclined to give the colts "the best of it" was apparent and for that matter their names guarantee exactness. While it appears a very easy task to start the independent hand of the watch and stop it as the noses come to the score, again it requires practice and as well as practice a cool head that is not upset by excitement. Had the weather continued fair we have not the least doubt that there would have been a further lowering of the records. The welcome rain has probably ended even the California year.

The probability of Mr. Goldsmith making an Eastern campaign next season has faded away. As will be seen in our advertising department, Director will be kept in the stud and without Director the string will not go. Mr. Goldsmith departed eastward by the overland train last Wednesday and will spend the holidays at the homestead in Orange county, New York, returning in time to make all necessary preparation for the coming Spring and Summer.

Up to last Saturday one hundred and twenty-two days' racing had been given at Brighton Beach and still the sport went on. As the fields continued large and the attendance good it is expected that nothing short of a holiday snowstorm will wind up the season at the Beach.

## The Distance Over a Mile.

Mr. Chas. H. Haswell, the eminent engineer, furnishes the *Turf, Field and Farm* the following calculations which will be of interest to horsemen:

In the matter of the distance over a mile a horse in harness trots upon ordinary tracks, I submit as follows:

The conventional line upon which a race course or trotting track is measured is at three feet from the rail, (erroneously termed pole), which for a running or trotting horse under saddle is correct, assuming him to maintain a uniform line at that distance.

A horse in harness, however, allowing for width of enky or wagon, cannot with safety be driven in a line less than six feet from the rail; this would make the distance over the ordinary or accepted design of track, of one-quarter of a mile turns, of 18.85 feet, 18 feet 10.2 inches.

Then for a horse trotting over such a track in two minutes and thirty seconds there should be deducted from his time half a second.

A double team would require this distance of six feet to be increased fully one foot, if not more.

When the time is two minutes and eight seconds the deduction should be forty-six hundredths of a second.

When the design of a track is of irregular contour the increased distance will vary with each design.

The Washington Park Club, of Chicago, has under consideration a proposition to give a trotting meeting during the coming Summer.

The Prospect at St. Louis.

You are already familiar with the progress of the new management who will furnish us the finest equipped grounds and course on the continent. The horsemen who visit us the coming Spring will, I have no doubt, endorse our claims when they see what we have to offer them. Racing interests here have at last fallen into proper and efficient hands and the history of failures has come to an end. The new management is entirely too formidable to be disturbed by any rivalry. They will occupy the whole field and leave no room for any. Both the trotting and racing element will be catered to and encouraged on the same grounds. There will be abundant room for both and no clashing will follow. Both will be represented in the directory, which will be impartial. The St. Louis Fair has no rival in the Mississippi Valley, and the new racecourse, under the same wise and successful management, will stand out equally conspicuous and will grow and prosper with it. Stable owners throughout the country are fully aware of the substantial backing behind the new enterprise, and will not hesitate coming here. Moreover, the inducements in money, etc., are double those ever before offered. The labors involved in securing the additional grounds adjoining the fair grounds for the new track, which necessitated the blocking or closing of several streets, are unknown to the public. As the matter had to go before the City Council some of the difficulties can be anticipated, and a less influential citizen than Chas. Green, the president of the Fair Association and new race track, could not go before the council with any such proposition with much hope of success.

The benefit to the city following the establishment of the track will not be visible at first glance. The great gathering of horsemen from the West and South who will be glad to discover such a favorable opportunity for reaching here will crowd our hotels and streets twice a year, many of whom will winter here and make it their home, for nowhere else will such stabling facilities be had. We will absorb all the little tracks—or, rather, stables—in the Western and Southern circuits, and draw to the new grounds a little colony of horsemen, trainers and attendants. The climate being mild, feed and everything necessary abundant, no such inducements exist elsewhere for most of the stables. It will draw to our city the attention of horsemen and their national conventions. I may say, in this connection, that the new features and improvements on the grounds embrace the most desirable to be found at the principal tracks elsewhere, since a committee went abroad for that purpose. No expense has been spared to secure the best results. The cost of all their improvements will, in the aggregate, reach \$230,000, from which you can infer that they are of the most magnificent character. The track has been raised several feet all the way round, and in wet or unfavorable weather will dry readily.—Cor. Turf, Field and Farm.

At the Grave of Equine Greatness.

Mr. Bnsbey, of the 'Turf, Field and Farm, in describing a visit to Erdenheim, mentions one of the points of interest on the farm thus: The full-orbed moon was shining from a cloudless sky when cigars were lighted after dinner. I walked out for a breath of fresh air, and twenty yards from the tall white portico stopped and bent over a heavy granite slab and read the deeply-carved name "Leamington." In a straight line ten paces further a companion slab bore the name "Flora Temple." The stalwart pines and the low-branching wild cucumber trees cast wierd shadows upon the graves of the famous horses, and silently I lifted my hat and stood with uncovered head in the presence of slumbering greatness. I recalled how proudly Leamington walked before the critical company at Clifton Stud Farm soon after his importation by Mr. Cameron, and how he subsequently won fame as the sire of Longfellow, Iroquois and a host of performers, and then said to myself, "And this is the end. No, not the end, because he lives and will live in his descendants until the royal span of the Brooklyn bridge is broken." I thought of the sensation that Flora Temple created, she being the first trotter to cross the 2:20 line, and having established her right to a queenly reign by making a record of 2:19 3/4, October 15th, 1859, and I wondered if the echoes of the thunder which greeted the 2:09 1/2 of Maud S. disturbed her sleep. In her flood time she was cheered to the echo and her closing days were days of honor and peace. Three colts were nursed by her and her last one, by Leamington, was dropped in the Spring of 1871. In their old age when the fire was dying from the blood, the ex-queen of the trotting turf and the prince of stallions of the running turf made love to each other in a stately sort of way and the result was a filly which was appropriately christened The Queen's Daughter. Flora Temple died December 21st, 1877, and Leamington passed away a few months later, May 6th, 1878, and their conspicuously marked graves will always arouse historical interest in Erdenheim.

National Trotting Association.

According to the roll furnished by Secretary Vail, the following Pacific Coast tracks held memberships in the National Trotting Association during the current year: Agricultural District, No. 11, Greenville, Cal. Bay District Association, San Francisco. State Agricultural Society, Sacramento. Capital Turf Club, Sacramento. Contra Costa Agricultural Society, Pschecho. District No 3, Chico. District No. 6, Los Angeles. Embryo Trotting Stakes, San Francisco. Fresno Fair Grounds, Fresno. Golden Gate Fair Association, Oakland. Monterey District Association, Salinas. Oregon State Agricultural Society, Salem. San Joaquin Valley Association, Stockton. San Mateo and Santa Clara Association, San Jose. Sonoma and Marin District Association, Petaluma. Sonoma County Park Association, Santa Rosa.

No "Beecher" In It.

A short time since in claiming the name for J. P. Sargent's stallion Brown Jug, we gave his sire as "Beecher's Bndd Doble." We are advised by Mr. Sargent that there was an error made in translating the manuscript, as there should be no Beecher in it. He says there is no such horse as Beecher's Bndd Doble in his vicinity, in fact, no horse of the name other than the one in question, the sire of Brown Jug. As he was bred and is owned by Mr. Sargent, if any addition to his name is necessary to distinguish him he should be called Sargent's Budd Doble.

THE KENNEL.

Pacific Coast Field Trials.

(Continued from last week.) THE ALL AGE STAKE.

On Tuesday evening the dogs were drawn for the All Age Stake, and 8:30 Wednesday morning the first brace was put down.

BEAUTIFUL QUEEN—FANNIE.—Beautiful Queen a liver and white pointer bitch, by Ranger ex-Queen, owned by J. M. Bassford, Jr., and handled by owner, and Fannie, a black, white and tan setter bitch, by Traylor's Fred ex-Loan's Gypsey, owned by Charles V. Kaeding, and started by H. H. Briggs. It is proper to say that Fannie was entered and started merely to show the public spirit of her owner, and that her handler had never hunted her an hour, nor had she ever been broken. The brace ran wild through and over all the cover within a range of several hundred yards. They were under no control, showed no merit, but pace, until Queen made a handsome and staunch point, which Fannie refused to back. When Mr. Bassford put up and killed the bird, both bitches broke shot and Fannie retrieved nicely. They were then ordered up and the heat given to Beautiful Queen. Down one hour and twenty-five minutes.

SWEETHEART—PEARL LAVERACK.—Pearl Laverack, a black and white pure Laverack bitch, by Prince Laverack ex-Lulu Laverack, owned by J. W. Orear, and handled by Mr. Den Gilroy, and Sweetheart handled by Mr. C. N. Post, were cast off at 10:10 in nice cover. Pearl passed two birds, having their wind, which she should have pointed, and ranging on over a hill top false pointed in good style, Sweetheart, below, immediately after also false pointing. Being ordered on Sweetheart soon drew on point in some chemise, and was staunchly backed by Pearl Laverack. The bird was flushed by Gilroy and missed, Pearl standing to shot. Crossing a little Canada a bird flew before Sweetheart, who dropped to wing, but instantly broke in and chased. Pearl soon let down in pace and trailed the other bitch. Mr. Gilroy winged a wild finch on a long slope, and the bitches worked out the scent, pointing alternately and moving on, until at the bottom Pearl retrieved the bird. A hare before Pearl was too strong a temptation and the bitch chased out of sight. Sweetheart then made a staunch point which was not backed by Pearl. Mr. Post killed the bird and Sweetheart to order made a neat retrieve, when the dogs were taken up and Sweetheart given the heat. Down one hour and forty-five minutes.

BUTTE BOW—MAUDE.—At 12:15 Mr. Henry A. Bassford's liver and white flecked pointer dog Butte Bow, by Ranger Boy—Josie Bow, handled, because of the sudden illness of his owner, by Mr. Geo. W. Bassford, was put down with Mr. James Mervyn Donohue's black and tan Gordon-English setter bitch Maude, by Orear's Joe—Juno; handled by Mr. Dan Gilroy.

As soon as started Maude drew to a handsome false point and held it until ordered on. Then a pair of birds flushed wild and were neatly stopped by Mr. Bassford, greatly to his surprise, both dogs breaking shot and each retrieving a bird nicely. Moving on each dog false pointed twice, Maude made one flush and indulged in a hare chase. Butte finally established a point on a bird two or three feet from the ground in some oak brush, Maude refusing to back, but when the bird was put out and shot by Gilroy both dogs were steady, Butte retrieving.

A hare in running started a bird which Mr. Bassford killed with one barrel, without an apology, Butte breaking shot and retrieving well.

Several ladies having come to the grounds the party naturally gravitated toward them, and on a near approach put out a quail near Mrs. Post, who flushed also, both Butte and Maude standing to wing. Maude then false pointed and was staunchly backed by Butte Bow, when the dogs were sent back and the heat given to Butte Bow. Down two hours and three minutes.

LEMMIE B.—OLA.—At 3:34 J. M. Bassford, Jr.'s, white and lemon pointer dog Lemmie B., by Prince Ranger—Josie Bow, handled by Mr. Samuel Allen, and P. E. G. Anzar's black, white and tan setter bitch Ola, by Connt Warwick—Leah II., handled by Mr. Dan Gilroy, were sent into a piece of low grass cover, and succeeded in running over and flushing a bird each, Lemmie B. chasing. Lemmie showing best pace and style, but no judgment and little experience, Ola running prettily and showing strong hunting instinct, but evidently puzzled by the lack of brush, and the very light scent given by what birds were present. At 4:02 the brace was ordered up to be run to a win if an opportunity offered for either to get into the money.

QUEEN—DUKE.—At 4:05, E. H. Farmer's white and black setter bitch Queen, by Belton II.—Belle, handled by Mr. Ed. C. Wright, and Chas. V. Kaeding's red setter Duke, by Colgate's Pat—Howe's Gypsey, handled by Mr. Sam'l Allen, were started. Queen, though heavy in appearance and seeming rather soft, set the pace and sustained it well through the heat. Duke did not show to advantage. His head was low and his style bad, though his tail action justified the writings about the "merry flag" of the Irish setter.

Duke did not hunt. He ran about as though exercising and showed lack of experience. Queen exhibited good judgment in selecting her ground and worked faithfully, but at a disadvantage because of the difference in conditions present from those under which she usually works. After being down fifty minutes, Queen was given the heat.

THURSDAY.

On Thursday morning one of the judges, Mr. Platt, was out of form because of poison oak. Mr. McKenna felt compelled to meet business engagements elsewhere and the third felt that as the others were to go, he would prefer to have three new men selected and Messrs. J. T. Baker, Thomas Bennet and H. H. Briggs were chosen and judged the remainder of the trials.

LEMMIE B.—OLA.—At 9 A. M., the undecided heat of the previous day between Lemmie B. and Ola was run to a finish, the dogs being down forty minutes and Ola doing all the work and winning the heat.

DORR—GRACIE BOW.—At 10 A. M., F. A. Taft's Gordon setter, Dorr, and Geo. W. Bassford's liver and white pointer bitch, Gracie Bow, handled by Mr. Samuel Allen, were started. Mr. Taft was compelled to ride and old Dorr fully understood his safety from correction and consequently was a little rank. His pace was not equal to that shown last year, nor did his nose seem as keen as before. All of these weaknesses may be accounted for by the fact that his owner has been unable to hunt him for more than three years last past, and it is not surprising that the dog should have retrograded. Gracie Bow showed good pace, fair style and strong hunting instinct. Both dogs worked out much cover, Gracie false pointing twice, and at 11:25 were taken up for lunch, being put down at 2:35 and run to a decision, Dorr being given the

heat. Down in all one hour and forty-two minutes, Dorr was then withdrawn.

Bow, Jr., a bye.—General G. B. Cosby's white and liver pointer dog, Bow, Jr., by Ranger Boy—Josie Bow, was given a bye.

SECOND SERIES.

Bow Jr.—BEAUTIFUL QUEEN.—At 3 o'clock J. M. Bassford's Beautiful Queen and General Cosby's Bow, Jr., were cast in the first heat of the second series. Queen outpaced Bow, Jr., but the latter was her superior in range and style. In fact, Bow, Jr. in action leaves little to be desired. His head is well carried, his shoulders and quarters are under good control, and, is stern, is about a typical pointer stern, while as a whole he is the elegant, game looking pointer, so much longed for and so rarely seen. Within a few minutes Bow, Jr. drew to point in some broken state, and was staunchly backed by Beautiful Queen. Mr. Bassford put up and killed the quail, both dogs breaking shot, and Bow, Jr. retrieving badly, when they were ordered up and the heat given to Bow, Jr. Down thirty minutes.

BUTTE BOW—SWEETHEART.—At 3:40 this brace was started, Sweetheart being handled by owner, and Butte Bow, by Mr. Geo. W. Bassford. Neither showed much merit, Sweetheart making her usual great casts and leaving much ground un-hunted. Butte Bow, but little acquainted with his handler, doing some little pottering, but being under better control than Sweetheart. Sweetheart put out a bevy and then a single bird, breaking in each time and at 4:20 were taken up and the heat given to Butte Bow. Down forty minutes.

OLA—QUEEN.—At 4:30 Anzar's Ola and Farmer's Queen were cast off and worked toward the club house, neither doing much, but Ola working her ground most closely and being better in hand at five o'clock they were taken up for the day.

FRIDAY.

OLA—QUEEN.—At 7 A. M., Friday morning, the brace was again started, and after a beautiful draw and point on a hare by Ola, and some fruitless search for birds, the heat was given to Ola at 7:30. Down altogether one hour.

Bow, Jr.—BUTTE BOW.—At 7:44 these dogs were thrown off, Bow, Jr., out-pacing, out-styling and out-ranging Butte Bow very decidedly, but without finding birds, and at 8:45 Bow, Jr. was given the heat. Down one hour and one minute.

Bow, Jr.—OLA.—At 8:50 Bow, Jr., handled by General Cosby, and Ola, handled by Mr. Dan Gilroy, were put down to run for first place. Again Bow, Jr. outdid his opponent in every point on the score card. A bird was hidden by one of the judges and the handlers, neither of whom knew its location, were required to work the dogs on it. Ola ran close by it several times without recognizing its presence, but Bow, Jr. took its wind, drew up on it and retrieved it prettily, and was then given the heat and first money. Down twenty minutes.

The judges deciding that none of the dogs entitled to compete under the rules could do so with Ola and Beautiful Queen with every chance of winning, Mr. Bassford's Beautiful Queen and Mr. Anzar's Ola divided second and third monies.

SUMMARY.

Walltown Timber, Cal., December 3d, 1884—All Age Stake. Open to all setters and pointers owned on the Pacific Slope. Prizes, \$100, \$50, and \$25. Entrance \$10.00. Entries closed November 10th, 1884, with twenty nominations. Judges, Hon. Jos. McKenna, H. C. Brown, A. G. Platt, Thos. Bennet, J. F. Baker and H. H. Briggs.

- I. J. M. Bassford, Jr.'s liver and white pointer bitch Beautiful Queen, by Ranger—Queen, C. N. Post's blue belton setter bitch Sweetheart, by Count Noble—Dasling Novice, H. A. Bassford's liver and white flecked pointer dog Butte Bow, by Ranger Boy—Josie Bow, P. E. G. Anzar's black, white and tan setter bitch Ola, by Count Warwick—Leah II., E. H. Farmer's white and black setter bitch Queen, by Belton II.—Belle, F. A. Taft's black and tan setter dog Dorr, by Don—Lady, G. B. Cosby's white and liver pointer dog Bow, Jr., by Prince Ranger—Josie Bow.

II. Bow, Jr., beat Beautiful Queen. Butte Bow beat Sweetheart. Ola beat Farmer's Queen. Dorr withdrawn.

III. Bow, Jr., beat Butte Bow. Bow, Jr., beat Ola, and won first money.

IV. Beautiful Queen and Ola divided second and third monies.

X.

The Kennel Gazette states that the well-known sire of pointers, Young Bang, died Nov. 5th at the age of ten years and three months. He was the sire of Priam, Scamp, Gunner, Croxteth, Cristobel, Quail, Tramp II., Milton Bang, Milton Rita, all prominent performers at field trials, and there have been several of his produce winners on the bench. Young Bang was a capital dog in the field, a very big galloper, and his style on point was quite equal to that of his sire, Champion Bang.

The Sacramento Capital urges the holding of the next field trials in the San Joaquin Valley, but there are indications that the chosen locality will be in one of the bay counties accessible from this city, and in a neighborhood where hotel accommodations can be had.

The family of the late Charles Lincoln are reported to be in poor circumstances and it is proposed to raise a fund by subscription for their benefit.

At the late meeting of the National American Kennel Club, held at Canton, Miss., the name was changed to the National Field Trials Club.

X.

Notice to Breeders.

THE TROTTING STALLIONS, DIRECTOR AND MONROE CHIEF, will make the coming season in California, all reports to the contrary notwithstanding. Fees for 1885 will be: Director, \$150; Monroe Chief, \$75. Particulars as to location and dates, will be announced in due time. JOHN A. GOTTRELL.

## STABLE AND PADDOCK.

## Doctoring Dumb Animals.

A snnhrured farmer wearing a gray jeans suit of clothes, slouch hat, and unbleached cotton shirt, drove down Fifth street from the vicinity of Sixth-street market, at about nine o'clock last Friday morning. His wagon was mud-colored and topped by a white canvas cover stretched over bent hoop-poles. His horse limped painfully. When opposite Fox's sale stables a small boy yelled:

"Say, mister! you'd better fix his mouth shut or the wind will blow him up out of him."

Some distance below the horse auction district the farmer pulled into the curbstone, alighted and rang the bell at the side of a small glass office door which was lettered:

"VETERINARY SURGEON."

"I want you to come out and look at my horse," he said, when the doctor answered the ring.

"What seems to be the matter with him?"

"Lame; and I'll be switched if I can tell where the trouble is. I know it is somewhere in the off fore leg, but dog my cats if I know whether it is in the foot, knee or shoulder."

"Move him up a few steps," said the doctor, quietly, but upon catching sight of something unusual a couple of inches below the animal's collar, he added, "Wait a minute," and stepped across the pavement to the horse's side. The spot which had attracted his attention was a festering wound in the shoulder, perhaps an inch in diameter. He pressed his bent thumb against the skin below the spot, and gradually worked it upward until, when the mouth of the wound was reached, the rim of a silver dime showed itself. The coin had been imbedded in the wound, and had penetrated some inches below the skin.

The doctor looked inquiringly at the farmer.

"Oh, I put that in," said the latter, "but it didn't seem to do no earthly good."

"What good did you expect it to do?"

"Well, I thought possibly the nag had the swiney, from the fact that his shoulder is wasted away; so I cut a slit in the skin and stuck the dime into it. If the lameness had been caused by swiney that treatment would certainly cure it, but, as it has done no good, the trouble is something else."

"Seven out of every ten farmers in the country believe in that barbarous method of treatment for atrophy of the shoulder muscles," remarked the veterinarian to the writer. "Swiney—which is merely a falling away of the shoulders—is caused by some disease in the foot or leg, and the only way to cure it is to direct the treatment to the diseased part; but the duffers, instead of turning their attention to the cause, try to remove the effect by introducing more such foreign substance as a piece of silver under the skin of the shoulder. The irritation very often produces a temporary swelling, which the astute horseman who does this sort of a thing can not distinguish from sound muscle. The consequence is, although his horse is just as lame as ever, he imagines he has cured the swiney. This statement sounds incredible, but a canvass of any of the markets on market day will convince you that the silver dime cure for swiney is almost generally believed in. Now, the first thing with this horse here is to find where the disease is located. You might examine him for a week, but, as the animal cannot talk, you would probably never be able to discover the seat of the trouble. The first thing to do is to have him move forward."

The horse was driven forward some ten paces. He stepped short with the sound leg, dropped his head and ears when the weight of his body fell on the lame limb, which he rather dragged than lifted. When backed, the lame leg was held perfectly rigid, the toe scraping the ground for the entire distance.

"The trouble in this case," said the doctor at once, "is nothing more nor less than a sprained shoulder, which has been neglected until atrophy has set in. Complete rest and a little rubbing with diluted arnica night and morning will effect a cure in the course of a couple of months. You will find it an invariable rule that in shoulder lameness a horse, when backed, will drag the leg, with the toe trailing on the ground."

Veterinary surgeons have a difficulty to contend with of which other surgeons know nothing. Their patients cannot speak, and the ability to locate disease and pain is as much a requisite with them as the power of relieving the trouble when it is found. In addition to this, a sick horse is often violent, and the surgeon is in constant danger from his hoofs and teeth, to say nothing of the liability, when the animal is in the stable, of being crushed between horse and stall.

The doctor's buggy drove up at this point, and the writer seated himself in it, in answer to the invitation, "Climb aboard, make a few visits with me, and see for yourself some of the curious phases of a horse doctor's life."

The first patient visited was a six-year-old sorrel mare belonging to an nptown livery stable, and suffering from acute dysentery. She was led into a twenty-foot inclosure at the back of the stable, where she was secured to a short, stout post, deeply sunk into the ground. A noose made of hemp rope was then passed into her mouth over the upper jaw, and a forked stick slipped through the noose in such a way that when the stick was elevated the jaw went up with it, and the mare's mouth was thus held open, ready to imbibe the half-pint of medicine which was poured down her throat from the neck of a mineral water bottle.

While the physic was being transferred from the bottle to her gullet she lashed out viciously with her heels, pawed with her fore feet, and made every effort to close her jaws on the neck of the obnoxious bottle; but her struggles were as ineffectual as are the wry faces of the small boy under similar circumstances, and the medicine was soon placed where it would do the most good.

In administering a pill to a black gelding in the same stable the surgeon was forced to thrust his hand into the animal's mouth, almost to the root of the tongue, in order to drop the pill fairly into its throat. This maneuver, so far as danger from the creature's teeth was concerned, was but little less hazardous than pushing one's hand down the throat of a lion, as the horse would willingly have closed his powerful jaws on the adventurous wrist. He was restrained, however, by the simple fact that while the left hand carried the pill to his throat, the right had a firm hold on his tongue, which was twisted between his teeth at the aide in such a manner that if he closed his jaws he would bite his own tongue.

The private stable of a Vine street wholesale grocer was the next place on the visiting list, and a little ingenuity on the stableman's part might have saved the grocer the cost of the visit, as the trouble was merely occasioned by the restless nature of a little Shetland pony, which persisted in biting at a bandaged wound at its flank.

"I can take care of the wound," said the groom, "so far as bandaging it is concerned, but I can not keep the pony from

reaching back and tearing away the bandage as soon as I am out of sight. I might tie him up short, to be sure, but as he is in the habit of lying down and getting up again half a dozen times in the course of a day I am afraid if I did so he might hang himself, as it were, by means of the halter rope."

"Bring me half a dozen smooth sticks, perhaps a foot long each, and a piece of stout twine," said the surgeon, and when they came he proceeded to bind them lengthwise along the pony's neck in such a way as to form a species of straight-jacket, which made it impossible for the animal to bend his neck in more than a slight degree.

A big chocolate mule, which was suffering from lameness, caused by imperfect shoeing, refused to allow the lame foot to be handled, laying back his ears and kicking indiscriminately with all four feet whenever approached. He was finally strung up in a canvas swing, and while thus helpless the defective shoe was torn off and a poultice of flaxseed meal applied.

"The stories that you read in juvenile books about grateful animals who voluntarily present themselves to surgeons for treatment," remarked the doctor, "and who lie perfectly quiet under the severest operations, not moving a muscle while the surgeon is at work upon them, is all bosh. In the whole course of my experience I have never voluntarily injured an animal. I have operated upon and cured thousands of them of the most serious ailments, and without exception I have not met with a single horse that submitted to a painful operation without making an effort at biting, kicking or crushing me. Of course, the impulse is natural with them. I do not blame them for it at all, but merely mention it in order that you may correct a wide-spread impression that domestic animals are easily operated upon and take kindly to medicine."—*Cincinnati Enquirer.*

## Rubbers, Track and Training.

I think in training a horse it is necessary to have a first class man to rub him, as his feeding, watering and his entire stable care has to be done by the rubber, and as that constitutes a great part of his training, I think it just as necessary to have a first-class rubber, as it is to have a first-class trainer; rubbers are I think, like drivers, born and not made. I have seen boys five and six years old take as naturally to horses, as ducks to water. To be a good rubber, a man must be sober, honest and industrious, and have a love for the horse. It looks like an easy matter to take care of a first-class trotter, but when they are in training, a rubber will find plenty to do. He has no specified hours; he simply puts in all his time, excepting when at his meals. When his day's work is done, he has to sleep in the stall with his horse, as a protection against fire and various other causes. As a rule they are the most faithful set of men I ever saw, and no mother could look after her children closer than they after their charges. Old Charley, as most people called him, who rubbed Goldsmith Maid for Mr. Doble, thought as much of her as if she was a human being, and I am sure she appreciated it, as she always appeared very fond of him. David Colross, the boy who rubbed Rarus for me, and who also rubbed Johnston when he made his best record, was the best man in his line I ever saw. I have known him to set up all night with his horse if the least thing was the matter with him. I know of a great many others, but I only mention these two as examples. In training I would suggest to locate at a track where the climate is not cold, plenty of pure water, grass and good roads; would also be very particular to have my horses trained on a track that was kept in first-class condition. In training horses over a track that is rough and deep, you are very liable to spoil their gait and cripple the horse. I think training or trotting horses over a muddy track very injurious to them. Training over a rough track has a tendency to make horses want to break. Mr. Robert Bonner once kindly invited me to spend a day at his track with him. I saw a great many horses driven, and some of them at a high rate of speed. I drove some of them myself, and looking about me to see what I could learn, the thought suggested itself to me, that I had never seen horses, considering the number, trot as steady and making as few breaks as his did. When I asked him the reason of it, he told me that he thought the training had something to do with it, and a smooth track to a trotting horse, to drive him at a high rate of speed, was just as essential as a smooth track would be to an express train.

In regard as to whether a dirt floor or planks were the best I would lay a plank floor on an incline of about two inches in fifteen feet, connected with the sewer, then lay slats level. Plenty of clean straw makes as comfortable a bed as anything I have ever seen. My remarks on training will be chiefly confined to horses that are matured, but whose speed is not developed, as I have had no experience in the handling and training of colts, and will have to leave that branch of the business to others more conversant with it than I am. The first thing when a horse is put in training is to see that he is in good bodily health; that all of his internal organs perform their functions regularly. Where I commence to work my horses in the Spring, before I commence to warm them up, I always clip them, as I think a long coat of hair has a great tendency to weaken the horse. I think it necessary to start in the Spring with a good coat of flesh. Thereafter, in my judgment, a great many more horses trotted too thin than too fat. A horse should be walked and jogged in the Spring at least thirty days before you commence to speed him. He should be walked a mile in the morning, then jogged five miles, and another walk of a mile in the evening. That for general preparations would be plenty. A great many people believe in long walks, I myself have failed to perceive any benefit from it. The only reason I have my horses walked is that it gives him a chance to get out and take fresh air. If I had my choice, I would sooner give them a short run in the paddock every day than have them walked. In jogging a horse I like very well to take him on the road, if the roads are good, but if not, much prefer to work him on the track. Some people may object to this plan, stating that horses get tired of so much track work. I have never seen a horse yet that was worth training, that got tired of the track unless he got a great deal more work than was actually necessary for him to have to condition him, as the time approaches to increase the rate of speed. I would commence to brush the horse at the end of his jog, say one-eighth of a mile at about a 3:10 or 3:15 gait. I would increase the distance every successive mile, but not the rate of speed, until I had driven him a mile at that rate. Then I would commence by giving him about twice a week after his jog a mile in about three minutes. I would continue this training until such a time as the horse showed me from his action that I could increase the work a little. I would then give him a mile and repeat twice a week at about the same rate of speed, or to make it plainer, would say on Tuesday morning, would have him walked a mile, then jogged four miles, then would give him a mile in about three minutes, then take him to the stable and give him twenty minutes, and cool him out the same as if in a heat race. At the end of the twenty minutes would take him on the track

again, score him down a few times at a moderate pace, and then give him another mile at about the same rate of speed. Then on the Saturday of the same week would repeat the work. I would continue this work gradually, increasing the number of miles given until you get up to four or five miles. In ordinary cases would not jog the horse over two miles on the days you give him his work, on other days give him the full amount of jogging.—*John Splan.*

## Young Mares for Breeders.

The old-fashioned notion that stallions in use for breeding purposes should be kept as fat as plenty of food and no exercise can make them no longer finds favor among successful breeders. The question of just how much exercise a stallion, and especially a trotting stallion, should have is an old one, and there is yet a diversity of opinion on the subject among men of intelligence and thought who have given it attention. When there first began to be a sentiment in favor of departure from the old-time methods in the care of breeding stallions and mares there was, among a certain class, a tendency to go to the opposite extreme, and that much harm was done thereby there can be no doubt. The advocates of the new school of philosophy argued that trotting stallions should be kept in something like trotting condition all the time, and that by following this plan the speed instinct would be imparted with much greater certainty and regularity to their get than would be otherwise the case.

Once having assumed this position and cultivated an honest belief in its correctness, it was not a long step to the notion that if speed was a desirable quality in sires it was also the foundation of all excellence in dams, and in pursuance of this policy Mr. H. N. Smith, who was the owner of the trotting stallion, Jay Gould, and the trotting mares, Goldsmith Maid and Lucy, started a breeding establishment on a large scale. It cannot be denied that if the theory on which Mr. Smith proceeded had merit his action should have met with success, as Jay Gould was a trotter who never knew defeat, and nearly every mare on the farm had a fast record. That Jay Gould has been a fairly good sire cannot be denied, but that Goldsmith Maid, Lucy, Lady Thorne, or the other fast mares on the Smith farm, have shown themselves to be worthy of high places as dams, is not yet susceptible of proof. One of Lucy's foals was a colt by General Knox, also owned by Mr. Smith, and this colt, called Inheritor, certainly showed merit as a sire, since among the very few foals he got was the stallion Montgomery, that was so successful in the Central Circuit this season, and that on more than one occasion clearly showed his ability to beat 2:20 whenever called upon to do so. But General Knox was never a turf horse of prominence, and had demonstrated his ability to get trotters long before he became the property of Mr. Smith, so that Montgomery does not stand as an evidence that his dam was a good broodmare any more, at least, than as an evidence of the prepotency of his sire.

Goldsmith Maid has foaled several times since her retirement from the turf, but it remains to be proven that she will become a broodmare of marked excellence, and the same is true of Lady Thorne. These mares were all campaigned for many years, and the conviction is irresistible that a long course of training, continued until its subject has passed the meridian of life, cannot but seriously impair the vitality of any animal so used, and that the result will be apparent in their foals. On the McFerran farm near Louisville are two old-time trotting mares, Adelaide and Ella Madden, and their colts by Nutwood are small and not particularly strange. On other breeding farms the experience is the same, the almost universal testimony being that the strongest, healthiest and largest foals are from mares that have never been subjected to the strain and drain of hard campaigns on the turf or hard drives for many years on the road. That stallions will perpetuate their own good qualities after doing service on the track or road, seems to have been settled in the affirmative, but that mares used for breeding purposes should be young and strong seems equally clear.—*Breeders' Gazette.*

Many a horse, on account of lameness, is unable to throw his natural power or weight into the collar. He is tender-footed, lame in the shoulder, hip-joint or hock-joint. He may have been bought, just for these or similar reasons, at a nominal figure, and he is worked on the brutal and abominable principle that he may be "whipped sound," and so, apparently, he is. At first he sadly halts; but urged by the torture of the lash, he acquires a peculiar habit of going. The faulty limb appears to keep pace with the others, but no stress or labor is thrown upon it, and he gradually contrives to make the sound limbs perform, among them, all the duties of the unsound one. Thus he is barbarously "whipped sound," and cruelty is undeservedly rewarded. After all, however, what has been done? Three legs are made to do that which was almost too hard a task for four. Then they must be most injuriously strained and soon worn out, the general power of the animal is rapidly exhausted, and death soon releases him from his merciless persecutors.

Every farmer should raise his own horses, provided he has the requisite taste and qualities of a genuine horseman. Every stable ought to be provided with one or two young colts growing into future usefulness, or to replace the old team when worn out in the service of the farm.

When a neighborhood of enterprising farmers gets a reputation for raising good horses, it will not be necessary to go abroad to look for customers. The most valuable horse will always be a roadster, and next a good work or carriage horse. The proud and lofty gait always denotes high breeding and will always bring more for any use. In fact there are hundreds of farm horses worth for actual service as much as the best fancy horse ever foaled, but will not always bring as much as a horse of fine style and action, and the latter should always be the qualities aimed at by the breeder.

To a hard-working horse, repose is almost as much a necessity as good food, but tired though he may be, he is often very shy to lie down, even when a clean bed is provided for him. Unless a horse lies down regularly, his rest is never complete, and his joints and sinews stiffen; and while it is true that some horses that sleep in a staiding position continue to work for many years, it is equally true that they would wear much longer, and perform their work much better, if they rested naturally. Young, nervous horses not unfrequently refuse to lie down when first made to occupy a stall, and when introduced into a town stable, the habit may become confirmed, unless inducements are offered to overcome the disinclination.

## Catarrh Cured.

A clergyman, after suffering a number of years from that loathsome disease, Catarrh, after trying every known remedy without success, at last found a prescription which completely cured and saved him from death. Any sufferer from this dreadful disease sending a self-addressed stamped envelope to Dr. J. A. Lawrence, 139 Dean St., Brooklyn, New York, will receive the recipe free of charge.

## HERD AND SWINE.

## Suggestions to Beginners in Live Stock Farming.

[Breeder's Gazette.]

I have so many letters of inquiry from farmers and parties of other vocations who contemplate embarking in the business of breeding blooded stock that I have concluded, in an informal way, to give them the benefit of some general suggestions on the subject through the *Gazette*.

And first, I wish to direct attention to what I deem an erroneous opinion very generally entertained, especially by young men, in regard to this most interesting branch of rural industry, to-wit: that the breeding of blooded stock is a business that must be carried on by itself, and cannot be successfully prosecuted in connection with general farming. The young enthusiast reads of the enormous prices made by the sheep of Edwin Hammond, the Shorthorn cattle of Abram Renick, Walcott and Campbell and others, by the Holsteins, Jerseys, Herefords, etc., of late importations, and concludes that the breeding of stock that can be sold for such prices must be the sure road to wealth and distinction, and unbesitatingly puts up his whole fortune on the venture. Some years ago a case was litigated before me where a farmer had agreed to pay no less than \$4,500 for a half interest in nine Merino ewes, had mortgaged his farm to secure its payment, and the performance of the residue of the contract, which was to keep and take proper care of these sheep, and turn over, at the end of ten years, one-half the increase to the seller, who was thus to become his equal partner in addition to receiving the \$4,500.

The number of persons embarking in breeding thoroughbred stock in this way, investing in the business all their means, who made a success of it, is not large. And if the intelligent reader will look over the history of those who have invested large sums of money, and paid extravagant prices for their stock, with the view of establishing great herds of fashionable stock, he will find that a large majority of them continued in the business only a few years.

In some cases breeders have been traders and speculators, and engaged extensively in importing and buying and selling pedigree stock; and in some instances this business has doubtless been profitable. But it requires for its successful management a large capital, and a peculiar talent for trading.

The advice, therefore, that I would give to any young man that contemplates embarking in the business of breeding fine stock would be, first of all, to secure a farm adapted to general husbandry; and to the farmer who proposes to become a breeder of such stock my suggestion would be: "By all means keep your farm, and plow and plant, and keep up your meadows and pastures, etc., as you have been doing." It will be a hazardous business to abandon your farming with a view to a complete change, so as to run the blooded-stock by itself.

As a general rule the safest method is to begin in a moderate way. If you are a farmer you may have had experience of breeding from a bull or ram of pure blood, and in this way have a proper appreciation of its value. You may now safely add two or three cows or a pen of ewes of approved blood, without materially changing your general system of farming, and therefore, without danger of serious loss, because this blooded stock, being purchased at moderate prices and not indulged in extravagantly, can not fail to pay their way if the owner has any taste for the business and ordinary skill and prudence in its management.

But the inquiries I receive are frequently from young men, and sometimes business men of the towns and cities, who are not farmers, but having a fondness for high-bred stock, write for instruction in regard to the business—what strains of blood to select, how to feed and manage stock, etc. To these parties it must be said that the fact of their having no knowledge of farming is a very serious disadvantage in the business of breeding live stock of any kind, and certainly as much so in breeding blooded stock as any other. But I have observed that many of the enterprising business men of the towns who have a fondness for high-bred domestic animals are the sons of farmers and in many cases have been brought up on the farm. This is a great advantage, for what we learn in childhood is rarely forgotten, and here, as in other departments of knowledge and art, it is readily recalled, and made available in manhood and even in old age.

My suggestions, therefore, have reference not alone to the breeding and management of live-stock farming. For I maintain that in all the history of improvement in live stock, cattle, sheep, etc., the most distinguished names to be found are those of practical farmers. As all breeders need to understand the ordinary business of farming, the farmer and the farmer's sons have great encouragement to enter upon this most interesting, and, to most people, fascinating branch of their vocation.

But it is further to be observed that not only is the business of farming essential to profitable live-stock husbandry, but the rearing of live stock is also, as a general rule, an essential branch of successful farming; and therefore every occupant of land that will probably grow grass and corn will find it to his interest to keep upon it a certain amount of cattle and other farm stock, which should always be of the best quality and received the most systematic care and attention; and furthermore, it is, I believe, the opinion of the great mass of intelligent farmers that it is on every account better to breed the stock that is kept on the farm than to make a practice of buying young animals, as many do, year after year, as they are needed. This trading system, while it is dangerous as imparting disease in many cases, is, in the long run far less profitable than the practice of breeding all the stock we handle upon our farms.

## Herefords as Milkers.

In this country the Hereford has no need to trouble itself about giving milk, so long as it can rear its calf well. The great strength, indeed, of its claim to extensive adoption, lies in the fact that it is not a milking breed; in its extraordinary merit as a beef-making breed; and this, with singleness of aim and stability of purpose, its improvers have promoted at the cost of the sacrifice of dairy properties. We refer, of course, to the Hereford in general, and are quite aware that instances of considerable yields of dairy produce from Herefords are on record. To some of these we shall refer presently. Our object just now is to take the rule, putting aside the exceptions, and look upon the Hereford as pre-eminently a beef animal, all the more desirably so because free from properties which, however valuable in themselves, would conflict with the one property which is its grand recommendation for meat-producing districts. Look at its frame. The frame is that of a butcher's not a dairyman's beast, great in the width and depth of the forequarters. Look, likewise, at

its flesh, by hereditary disposition laid thickly upon those parts where cattle of the dairy breeds are thin and wedgy.

This distinctive characteristic of the Hereford breed has been obtained, assuredly, by selection and management; by selection of animals most closely approximating to the butcher's type, and the care exercised by the original English Hereford breeders and their successors have and in England, to use always bulls bred from the most beefy dams, the bulls themselves being framed to carry beef and showing a kindly thriving nature; by management in the treatment of cow and calf, so that the former should not be encouraged or allowed to extend supply beyond the requirements of the calf, and the latter, suckled by the dam for several months, should early develop a rich superstructure of flesh, sufficiently inter-mixed with fat. The heifer thus reared, from a line of dams thus treated in calfhood and at maturity, is, of course, not so like to prove a milker as the heifer reared in lean condition, from a line of dams industriously hand-milked and kept on milk-flushing food. In fact, the necessary outcome of the one system of management is a breed adapted for the production of beef, but not largely of milk; and of the other system, a breed suited for the dairy, but not primarily to meet a demand for beef.

The Hereford, however, upon almost the smallest provocation, gives evidence of a scarcely suppressed propensity to milk. Half-bred cows by Hereford sires are often deep milkers, and, so far as our own experience goes, usually quite average dairy cattle, unless they happen to be the offspring of heavy-fleshed dams, and, inheriting the tendency from both parents, develop beef alone. Herefords which have been reared on skim-milk followed by the plainest fare up to breeding age, and are subsequently well hand milked, show a marked improvement of the dairy properties, and, if these conditions are continued through several generations, milking properties become more and more the rule. We know how, as regards milk, Short-horns differ; how some are excellent dairy cows, others scarcely keeping their own calves, and how in some herds the dairy properties are faithfully transmitted from generation to generation. The Hereford, we believe, if wanted for milk, would soon acquire in the demand upon her resources, provided that the demand was supported by sufficient inducements.

Prizes for dairy cattle have been won by Hereford cows, competing against cows of the recognized dairy breeds. If one Hereford cow can thus carry the honors, surely another like her might be produced, and if two, why not twenty, two hundred, two thousand, or any greater number? We lately observed in one of our English exchanges, the statements that a Wiltshire dairyman has stocked his farm with pure Herefords, and for many years used pedigree Hereford bulls, and that he now claims to have a herd of dairy cattle which may challenge comparison with the average of most dairy breeds. These facts may not necessarily prove that we, with our excellent special dairy breeds, would do well to go to the Herefords for milk, but they do suggest that the taunt of inability to supply the dairy should not be lightly used against the Hereford.—*Live Stock Journal*.

## Ensilage—The Experience of a Mississippian in Its Use.

For some time I have been studying and reading up on ensilage, and the present season filled two silos, erected above ground upon the cheapest possible plan. Will not open until the 1st of January and therefore can not speak of its value from personal experience. The cost of raising the ensilage, building silos, hauling, cutting and filling and weighing, however, was not near so expensive as I calculated upon. One piece of ground in orange cane yielded at the rate of thirty tons per acre. Pea vines on rich land I think would average over fifteen tons per acre. Two crops of corn can be secured in this latitude. I think I have read several hundred letters of farmers and stockmen who have been feeding ensilage, and never yet have I heard of an instance where the feed was condemned as unfit for stock by practical men. Those who find fault and criticize are generally men who have had no practical experience with ensilage.

The major portion of the good things told of ensilage is derived from practical New England farmers, who personally live upon their farms and attend strictly to the feeding of their stock. These men derive a large portion of their income from the sale of butter and milk. These, then, are the men who make the greatest claims for ensilage. It enables them not only to produce a greater quantity of milk and butter than any other one feed, but the quality is very much improved—very much the same color and taste of butter where the cows graze upon green, tender grass. These letters, published so widely through the columns of the northern agricultural press, show that the use of ensilage is by far the most economical food for producing milk and butter in winter. Many of the writers, by the use of ensilage, have been enabled to keep from three to four times more stock on the farm than ever before. It is only a matter of time when ensilage will be adopted and practiced generally throughout the country. Costly silos are no better than cheap ones, so that every precaution is taken to keep out the air, surface water, and to weigh heavily. The silos can be built above ground entirely. A good plan is to erect a rough, stout frame, with two thicknesses of plank on inside, the second course breaking joints. It would be better to use tarred paper between the two layers of plank. Considerable cost in hauling can be saved by having the ensilage crop grown as near the silos as possible. A splendid cutter, that will chop up the fodder as fast as two men can feed, can be had for \$60 (agent's discount off), and a two-horse tread power to run it for \$100. The cutter and power, after the ensilage season is over, can be moved to the barn and be used to great advantage all winter in cutting all kinds of rough, dry forage, to mix with the ensilage ration.

But few farmers and stockmen in the south have as yet experimented with ensilage. The Mississippi Agricultural and Mechanical College has been using it three years. The last three silos erected (of wood, above ground) each held about 120 tons, and are now full. The stock-manager is very much pleased with the results obtained by feeding ensilage. Nearly 200 cattle were wintered the past year on a ration of twenty pounds of ensilage per day with the addition of a very small quantity of straw and hay. The stock steadily gained in flesh. Col. T. J. Patton, of Greene Co., Ala., is feeding ensilage now for the fourth or fifth year. He is enthusiastic in its praise. His ensilage (Jersey) butter commands a high price, and both quality and quantity are largely improved by the ensilage ration. W. B. Montgomery, of Starkville, Miss., owns a herd of Jersey cattle at Blount Spring, Ala., where he operates a butter dairy, receiving 40 cents per pound for his butter the year round. Last year he fed ensilage for over two months, and his cows, upon this feed, almost double their former yield. When the ensilage gave out the butter fell off amazingly, and with no other feed was he able to check the falling off. This year he largely increased his ensilage supply.

In another year I think the prospects good for the erection of a large number of silos in this section. There are several butter dairies in this vicinity where the business is being pursued as a specialty with profit to the owners. Last Spring and early Summer about 1,000 pounds of choice Jersey butter was shipped to New Orleans, Mobile and Meridian from this place. Each year the shipments will increase in volume. A few years ago not a pound was shipped out of the county.—*Edwin Montgomery in Breeder's Gazette*.

## Treatment of Calves.

I will give the benefit of my experience in raising calves for many years, and the best evidence I can offer that my system is right, is that I have been fairly successful, having never lost but one matured calf in over thirty years. Two or three weeks previous to calving the cow is separated entirely from the herd, and given a large, airy, lying-in stall, and is here kept as nearly in perfect quiet as possible. As the time approaches for her to drop the calf, I watch her carefully so as to render any assistance that may be required. Sometimes the life of a valuable calf may be saved by a few moments of timely assistance. The calf when dropped is allowed to remain with the mother for one week, and sometimes longer, as judgment may dictate. Some calves that are a little weak may require a mother's care even longer, but ordinarily a week will answer. The cow is then taken to her accustomed stall in the dairy. I always remove the cow at night, and she seldom misses the calf more than a day.

Now for the calf. The first time I undertake to feed it, I milk about one quart from the mother, and generally succeed in getting about two-thirds down—having sucked the night before, it is not yet hungry enough to drink. At night about two quarts is milked, and perhaps two-thirds will be drunk. Generally the third time they will drink without any trouble. After one week, in which I increase a little each day, but go slow, the third week they are put on a ration of half new milk and half skimmed, and are fed three times a day, morning, noon and night. They will do much better if you have six quarts of milk to give each calf, to give them two quarts three times a day, than to give three quarts twice a day.

This brings us up to the fourth week, when we discontinue the milk entirely, and feed only skimmed, and you may now feed safely three quarts three times a day, and at noon a handful of dry wheat bran is thrown in their dish after they have finished drinking. In another week this may be done twice a day with entire safety. Calves having been thus fed will never have their digestive organs overtaxed, and at the age of ten or twelve weeks you can crowd along about as fast as you please. At that age I chop three parts oats and one part buckwheat for feed.

I have never found it necessary to use any of the highly stimulating feeds to make fine calves, believing I can have a healthier animal, and one of stronger constitution at one year of age, although they may not make as great a growth the first few weeks. I never allow calves to be exposed to storm, and keep them in a warm, dry place in cold weather, and their quarters are kept clean and neat; also, I never allow calves to drink cold milk until they are three months old, and lest, but not by any means least, I do not trust to boys or hired men to feed them, always preferring to do it myself.—*Country Gentleman*.

## How To Feed Pigs.

The Ontario Agricultural College has, in Prof. Wm. Brown, an untiring worker in the course of progress in agriculture. He has year after year given the world the results of practical scientific experiments in feeding, breeding and dairying that have been of great value. After testing the question with a large number of animals and in a variety of ways, he declares that "raw peas are 50 per cent cheaper than cooked peas, and cheaper than Indian corn in any form." Of course the latter point would depend upon the price of the two commodities. As to the best manner of feeding, a farmer neighbor of mine, who raises one or two very fat hogs every year, finds that upon the one-meal-a-day plan he never fails to secure (1) a large frame, (2) extreme fatness finally, and (3) freedom from sickness, all of which he humorously attributes to (4) "keeping them happy and contented."

His neighbors' pigs fed three or four times a day, are, so he says, "squealing all the time they ain't eatin'." While his own "get up and eat their one square meal, and then lie down and sleep most of the time." One season, raising three pigs, he made, (i. e., exclusive of weight of the animals when he bought them), 1260 pounds of pork in 180 days, an average of seven pounds each a day. The last two months the trio consumed, on an average, ten quarts of raw corn meal a day. The dry meal was turned on top of fresh water, (a pailful of two) in the trough. Thus only were they watered and fed. When killed, though not fully up to the Strasburg geese, which are fed for fat livers, (for the famous pates de foie gras so beloved by gourmets), and which are so correctly diagnosed by the expert attendant, that only those are killed to-day that would die an unnatural death from "liver complaint" to-morrow, still the fat disease was fully up to, in fact, above the average.

The old and renowned 10th Duchess of Airdrie is dead. She was only a cow, but her reputation was probably greater than that of many duchesses or dukes of the human species. Her progeny stands to-day among the highest priced Shorthorn cattle in the world, and are valued at more than a quarter of a million dollars. To her former owner, Hon. H. M. Cochrane, she and her produce brought \$190,000, but she herself was sold to Major Ward, of this county, two years ago last Spring, for \$1,350. In Major Ward's hands she dropped a dead calf last year, and on the 2d of July last produced a roan bull calf, by Oxford Vinewood 3d, 33,427, which is still in the herd, and will be recorded as Duke of Walnut Grove.—*Kansas City Indicator*.

The chaffing or cutting of hay, straw, corn stalks, or other fodder, and sprinkling with corn meal, bran or other ground feed, has been found profitable in so many cases that it seems strange that all who keep cows for their milk, particularly in towns, do not adopt that plan. If in addition to cutting the fodder, it can be steamed until soft, the yield of milk will nearly equal, in quantity and quality, that obtained when the stock is upon pasture.

Brigham Young imported from Europe the first Shorthorn bull that ever crossed the plains. He was a vicious brute as well as high bred, and valuable also, and one day he gored one of the Apostles, when the Mormons slew him, (the bull we mesu), and hurled his flesh, and for many years he haunted a curse in the Tabernacle for all Shorthorns.

**Skim Cheese.**

We are asked whether skim cheese should be made the same as whole milk cheese, and if not, what difference there should be in their manufacture? If we should assume that the interrogator was well informed as to the best mode of making whole milk cheese, and that there was no other difference between a sample of whole milk and another of skim-milk, than a difference in the quantity of cream they respectively contained, it would be a sufficient answer to say that the only difference in manufacture should consist in an early checking of the separation of whey from the curd, from skim-milk, than from the curd of whole milk, so that an equal amount of moisture in proportion to cheesy matter might be retained in each, but in view of the scanty knowledge common among cheese makers, of the philosophy of cheese making, and of the very large amount of skim cheese made in the country and a very common error in its manufacture, a more extended answer seems appropriate.

The manufacture of cheese is largely a question of moisture. Milk is eighty-seven per cent. water, and its conversion into cheese consists chiefly in separating so much of its water in the form of whey that there shall be left in the curd a weight of water equal to the weight of cheesy matter. If a hundred pounds of milk has three and a half pounds of coagulable casein the curd should contain three and a half pounds of water, let the fat and sugar in the curd be what they may. Experience has settled the fact that this relation between cheesy matter and water is best for the welfare of the resulting cheese, and it is as true for skim cheese as for whole milk cheese. A common error in the manufacture of whole milk cheese is leaving too much water in the curd—more water than casein—and a still more frequent error in making skim cheese is leaving too little water in the curd—less water than casein.

This difference in the separation of moisture is chiefly due to the fact that when rennet is employed for cheese making it acts strongly upon the casein in the milk, hardening it and causing it to separate from the watery part or whey, while its action on the milk fats is very feeble. When cream, which is about half water, is retained in the curd, it holds on to a large share of its moisture, because the rennet has little or no tendency to separate it, and makes the curd too moist, unless care is taken to reduce it by a continued elevation of the temperature of the curd.

Skim-milk, to the extent that cream is taken from it, is relieved from this retention of moisture. It is left with only the casein from which the whey separates so readily and completely as to become too much exhausted, if the operator is not fully aware of the situation. If the same quantity of rennet is applied to the same quantity of whole milk, and skim-milk, both at the same temperature, and the respective curds treated just alike, all the way through the process of manufacture, the curd from the skim-milk will part with much the greater per cent. of moisture. If, in such a case, a curd from the whole milk is just right, the other will be altogether too dry to cure well, and this difference is the rock on which the great majority of skim cheese makers split. They separate so much moisture, from the above reason and because of the commonly greater age of the milk, as to make the curd so dry as not only to cure well, but to dry out so quickly as to become dried curd instead of cured cheese, and so hard as to approximate "white oak" instead of the plastic and calvy cheese it should be.

There are other ways in which the separation of whey from curd is made more or less complete. An increase of rennet used, increases the liberation of whey, all other conditions being the same, and less rennet diminishes it. The same result follows an increase and lowering of temperature at which the curds are manipulated, fine and coarse cutting of the curds, an increase and decrease of salt used, more or less acidity, and giving the milk much or little age before curdling it, all of which are as effective in skim cheese making as in whole milk cheese, and a variation in any one of these particulars is usually enough to make all the variation in moisture desired in any case. If all of them were used in one direction or the opposite, they would make a cheese as hard and dry as a brick, or as soft as padding, out of any milk which any one would think of using for cheese. It is important, therefore, that the operator should guard against extremes.

The most successful skim cheese makers pursue the same course with skim-milk as with whole milk, with the exception of one mode of preventing too much dryness. They will use, for example, the same strength of rennet, and omit the curd and scald, and salt the same as for whole milk cheese, but cut short the time of keeping the curd warm, by cooling it suddenly with cold air or cold water, to stop the liberation of whey. Others do the same as with whole milk all the way through, keeping the curd warm the same length of time, but work it all through at a lower degree, and produce the same effect as by sudden cooling.

Others employ some other one, or two, of the different agencies for producing the same effect and make a fairly good cheese out of milk from which a large share of the cream has been taken. There is no one particular mode which one must follow to be successful. He may work in different ways, but whatever mode he employs he must see to it that his cheese, when it has stood in the curing twenty-four hours, or long enough to assume the temperature of the room, has the soft and pliable consistency a whole milk cheese should have at the same temperature, and if it is properly cured he will have as good a result as the quality of his milk will produce, but no one should ever run away with the impression that he can make a whole milk cheese out of skim-milk—the loss of the cream will tell on the flavor and richness of the product—yet by following the course as above indicated, a fairly palatable and useful article of food may be made out of any skim-milk which is sweet and clean.—*Live Stock Journal.*

**Feeding Pigs for Fattening.**

An error quite prevalent among farmers and others in feeding and fattening pigs, which often leads to disappointing results, is the notion that the pig thrives best and fattens fastest upon the most concentrated food, and does not require bulk in its food to promote health. All are aware that corn or corn meal alone, with water, is not a wholesome ration for the ox or horse, but think that the pig is so differently constituted that bulk in food is not essential. A greater error could hardly be conceived. In the natural, wild state the pig, as well as the horse and ox, is accustomed to hilly, less concentrated food, which seems to have been forgotten, and he is plied with concentrated food from weaning age till slaughtered, except in perhaps certain cases where economy or parsimony is studied. From these exceptional cases lessons ought to have been learned that there is a better way of feeding than giving only the most concentrated food. I have seen pigs fed, some on only meal with water, and others

with meal mixed with other and bulky food, and have invariably found the latter the most healthy and always ready to eat when their food was offered, and no waste occurred. Where the pigs were fed with meal alone and drink, the pigs after awhile seemed to become cloyed and ate less heartily, often wasting much of their feed.

Theory indicates, to my mind, the meal fed alone goes into the stomach in the state of dough, so that the gastric juice cannot penetrate the mass to perform its office properly, while the more bulky substance mixed with the meal acts as a divider, permitting the gastric juice to pass through and digest it rapidly. Clear meal being so slowly digested, lying so long in the stomach, creates disturbance and fever in the system, while the pigs fed with more bulky food are always healthy, lively and ready for their food. Pigs fed on meal alone are less evenly thrifty, as they, after eating well for a time, will stop and fast awhile. They apparently recover, and then eat again, but never with the seeming relish of those fed with the more bulky food. This easily accounts for the fact that corn and cob meal are said by some to equal corn meal alone for feeding and fattening purpose.

When we consult the chemist he tells us what analysis decides; but when we compare actual results we find that there is something that chemistry fails to reveal. We find it thus in many of our farm operations. Science, while throwing much light on our every day occupations, must have the aid of experience to demonstrate perfectly. The two never clash, but assist each other. Actual experience demonstrates that corn and cob meal is superior in feeding value to whole corn; nor that the same weight of each contains the same nutriment, but that there is some factor which lies below the surface, and that factor I think is explained in the foregoing.—*Country Gentleman.*

**Heredity in Milk Cows.**

We have had in our family for over twenty years several lots of cattle descended from three or four odd cows picked up by my father. Judging from their record, hereditary transmission of quality and quantity, especially quality, is very marked. For convenience, I will designate the families as Nos. 1, 2, 3 and 4. Nos. 1 and 2 are Shorthorn grades, and 3 and 4 pure Shorthorns. The originals of Nos. 1 and 2 were common Canadian cattle. All have been bred to the same hills, the best Shorthorns. The original No. 1 was a small nervous cow, giving a good quantity of milk of the highest quality. We have taken particular care of all the heifers descended from this cow, and in every case they have kept the quality of their ancestor's milk, but in one or two cases lost in quantity. Two crosses of Shorthorn blood destroyed all traces of nervousness, and they are now noted for docility and heartiness.

No. 2 was a large, showy cow, giving a large quantity of milk of poor quality. Her descendants to-day are as near her counterpart as possible, though it is noticeable that in a few cases the quality improves slightly on the quantity. These cattle are all good feeders, with extra mellow hides.

No. 3 was not particularly noticeable for either quantity or quality. Having always let them suckle their calves, milk from this family was very rarely set. The calf would generally take all from the first week. For rapid growth and for lying on fat, however, these cows' calves cannot be beat. This family is very prolific and forms the largest share of our herd.

No. 4 is, however, the best of the lot. Large, shapely and of the very best heaving quality, as the celebrated steer Dominion Champion proves, he being a calf from one of the original cows—there were two heads to this strain, two heifers, sisters, being purchased at the same time. Both these cows calved at two years, and are heeding yet, sixteen and seventeen years old. One is carrying her seventeenth calf, she having had twins three times. Both are very large milkers of very rich milk. The cream after rising is very thick and highly colored, and we are often able to lift it off with a knife entire from the pan. Of the descendants of these cows every heifer that has yet bred from the one, follows her dam in both quantity and quality, being all extra milkers.

I might here note that a bull calf from this cow was bred to two grade cows, the result being two heifers, which have just come in. These heifers carry udders similar to their granddam, and are excellent milkers, thus showing that milking qualities are transmitted by sire as well as dam. This, however, is the only case ever brought to notice directly with me. The general rule in our herd has been that if we wished a good milker, we would elect a calf from one of the milking strains on the dam's side regardless of the sire. In this way we have rarely been disappointed. However, I believe if pairs were taken to use a bull from a good milking family on cows also as good, a large improvement could be made. Of the other cow, only two heifers have yet bred; one is a medium good milker, though not as good as her dam; the other has never yet given more than her calf will take, and apparently will never be a heavy milker. She is a show cow.—*Country Gentleman.*

**The Trotting Stallion**

**ANTEVOLO,**

(THREE-YEAR-OLD RECORD, 2:29 3-4.)

**By Electioneer.**

- First dam, Columbine, by A. W. Richmond.
- Second dam, Columbia, by imp. Bonnie Scotland.
- Third dam, Young Fashion, by imp. Monarch.
- Fourth dam, Fashion, by imp. Trustee.
- Fifth dam, Bonnets o'Blue, by Sir Charles.
- Sixth dam, Reality, by Sir Archy.
- Seventh dam, by imp. Medley.
- Eighth dam, by imp. Centinel.
- Ninth dam, by Mark Anthony.
- Tenth dam, by imp. Janus.
- Eleventh dam, by imp. Monkey.
- Twelfth dam, by imp. Silvereye.
- Thirteenth dam, by Spanker. See Bruce's American Stud Book, vol. I, p. 307, and vol. 3, p. 79.

Will make the coming season, commencing Feb. 15th, and ending June 15th, 1886, at the Oakland Trotting Park.

**TERMS:**

\$100 the season. Mares kept in any manner their owners desire, and at reasonable rates, but no responsibility for escapes or accidents.

**JOS. CAIRN SIMPSON,**  
Oakland, or 508 Montgomery St., San Francisco.

**THE STANFORD STAKES 1886**

**A SWEEPSTAKES FOR TROTTING COLTS AND FILLIES OF 1883, \$175 each, \$25 payable on the 1st of January, 1885, at which time the stakes will close, \$50 on the 1st of January, 1886, and \$100 thirty days before the day fixed for trotting, whatever amount up to be considered forfeit, and the neglect to pay at the stipulated time incurring forfeiture of the previous payments. The race to be heats of a mile, best three in five, to harness. First to receive six-ninths of the whole sum, the second two-ninths, the third one-ninth. In addition to the stakes and all other sources of emolument will constitute the gross amount to be divided in the foregoing proportions. Five or more subscribers to fill. The race to be trotted in 1888, not sooner than the latter part of August. The exact date to be fixed and announced on the 1st of January, 1886, or sooner.**

Race to be governed by the Rules of the National Trotting Association. Nominations to be made to N. T. SMITH, Treasurer, S. P. Railroad office, Fourth and Townsend streets, or JOS. CAIRN SIMPSON, Secretary, BREEBER AND SPORTSMAN office, on or before the 1st day of January 1885. The colts must be named, the name and pedigree, so far as known, given.

Under the new trotting rules letters legibly postmarked January 1st will be eligible.

**N. T. SMITH, Treasurer.**  
**JOS. CAIRN SIMPSON, Secretary.**

**STANFORD STAKES FOR 1887.**

**A SWEEPSTAKES FOR TROTTING COLTS AND FILLIES OF 1884, \$175 each, \$25 payable on the 1st of January, 1885, at which time the stake will close, \$25 on the 1st of January, 1886, and \$100 thirty days before the day fixed for trotting, whatever amount up to be considered forfeit, and the neglect to pay at the stipulated time incurring forfeiture of the previous payments. The race to be heats of a mile, best three in five, to harness. First to receive six-ninths of the whole sum, second two-ninths, third one-ninth. In addition to the stakes and forfeits, the proportion of the gate money, profit on pool sales and all other sources of emolument will constitute the gross amount to be divided in the foregoing proportion. Five or more subscribers to fill. The race to be trotted in 1887, not sooner than the latter part of August. The exact date to be fixed and announced on the 1st day of January, 1887, or sooner.**

Race to be governed by the Rules of the National Trotting Association. Nominations to be made to N. T. SMITH, Treasurer, S. P. Railroad office, Fourth and Townsend streets, or JOS. CAIRN SIMPSON, Secretary, BREEBER AND SPORTSMAN office, on or before the first day of January, 1885. The colts must be named, the name and pedigree, so far as known, given.

**1885. RANCHO DEL RIO. 1885.**

The Thoroughbred Stallion

**JOE HOOKER, BY MONDAY.**

- First dam, Mayflower, by imp. Eclipse.
- Second dam, Bennie Farrow, by imp. Shamrock.
- Third dam, Ida, by imp. Belshazzar.
- Fourth dam, Ganna's dam, by Sir Richard.
- Fifth dam, by imp. Eagle.
- Sixth dam, Bet Bosley, by Wilkes' Wonder.
- Seventh dam, by Chanticleer.
- Eighth dam, by imp. Stirling.
- Ninth dam, by Clodius.
- Tenth dam, by imp. Silver Eye.
- Eleventh dam, by imp. Jolly Rogers.
- Twelfth dam, by Partner.
- Thirteenth dam, by imp. Monkey.
- Fourteenth dam, imp. mare from the stud of Harrison of Brandon.

Terms, \$50 the season to a few Mares of approved breeding.

This young stallion has proved to be one of the most successful racing sires, and every one of his colts that has been trained can run fast. Among them are Fred Collier, Jim Renwick, Bonanza, La Scala and Tebi Ban. For history of Joe Hooker, see BREEBER AND SPORTSMAN, January 20th, 1883.

The Thoroughbred Stallion

**THREE CHEERS, By Imported Hurrah,**

SON OF NEWMINSTER.

- First dam, Young Fashion, by imp. Monarch.
- Second dam, Fashion, by imp. Trustee.
- Third dam, Bonnets o'Blue, by Sir Charles.
- Fourth dam, Reality, by Sir Archy.
- Fifth dam, by imp. Medley.
- Sixth dam, by imp. Centinel.
- Seventh dam, by Mark Anthony.
- Eighth dam, by imp. Janus.
- Ninth dam, by imp. Silvereye.
- Tenth dam, by Spanker.

Terms, \$50 the season for mares of approved breeding. Good pasturage for mares from a distance of 24 per month. Care will be taken to avoid accidents and escapes, but the owner must take the risks.

Rancho del Rio, where these stallions will make the coming season, is five miles from Sacramento, on the Freeport road.

**THEO. WINTERS, Sacramento, Cal.**

FISH.

Report of the Fish Commission.

Through the courtesy of Hon. A. B. Dibble, Secretary and Treasurer of the Commission of Fisheries of California, we have been placed in possession of the salient points to be presented to Governor Stoneman and the Legislature in the forthcoming biennial report of the Commission. During the two years since the present Commission was appointed very much time has been given by its members to investigation of problems connected with the more prominent food fishes naturally found in the waters of the State. Such investigation shows that the salmon interest is already imperilled by scarcity of the fish. This scarcity is due to several causes, all of them removable. First is the illegal interference with spawning fish on their way to the upper waters of the rivers. This illicit fishing can be prevented by the Commission, if it is given proper facilities. A steam launch is essential in order to effectively patrol the rivers and bays, and the request of the Commission for an appropriation with which to buy and sustain one should be granted. The scarcity of salmon may, secondly, be in a degree remedied by placing in the mountain waters young fish which have been artificially propagated. To this end a suitable hatchery is needed, and the Legislature should set aside such funds as are necessary to enable the Commission to secure the proper site and erect the proper buildings, and purchase the most approved appliances. The sum of ten thousand dollars asked for by the Commission is a mere nothing, when the results of its expenditure are taken into account.

The Commission asks for a law requiring fishermen to pay a license tax on each boat employed, the money collected to be used in furtherance of the ends for which the Commission was created. This suggestion is a valuable one. Such a tax would not be burdensome, and the enforcement of the law would better enable the Commission to trace and watch the operations of the fishermen than can now be done. The tax, too, would be a material help in meeting necessary outlays. In one thing we venture to differ with the Commission. That is as to the sum asked to meet the usual expenses. We learn that for the two coming years it is contemplated to ask a general appropriation of but thirteen thousand dollars. When the duties laid by law upon the Commission are considered it will appear that this sum is inadequate. The law obliges the Commission to inspect from time to time every fish way and dam in the State. It obliges the Commissioners to remove obstructions, to erect fish ladders, to police all waters, and in addition to stock suitable streams. The amount of money asked for is not large enough to meet properly all these demands, and it should be increased. In this connection we might add that the Commission has had lithographed for general distribution a plan of the fish ladder which experience has determined to be the best. The plan is simple, easily understood and effective, and there will no longer be any excuse for obstructing the passage of trout and salmon by milldams, because, by writing to either of the Commissioners, one of these plans may be had, and then any carpenter can erect the structure. It is pleasing to note the interest and activity shown by the Commission. It augurs well for the future, and the Commission should be met generously in its reasonable and proper requests.

During his recent visit to San Francisco Judge Dibble, of the Fish Commission, paid our office a visit. The Judge informs us the Commissioners have for some time been at work on a specimen fish ladder, with a view to make it as perfect and economical as possible, and, still better, practicable as much as can be for all streams where a ladder is required. We hope soon to have a sample copy of one of the improved ladders to show when needed. In the meantime the Commissioners, on application, will be pleased to furnish all information on the subject that may be required, as well as sample copies of the ladder in question.

It is reported that pompano, one of the most delicious of our native fish, have been caught in number recently in our bay along the open shore. Formerly they have been caught chiefly at Monterey and vicinity. We hope the report will prove true, for if so, it will stock our local market with a most delicious fish.

Young salmon are said to be biting freely in the bay, and large numbers lately caught, ranging from two to eight pounds each. At this size salmon give neither food nor pleasure sufficient to compensate for the number destroyed and which in a few months would make good food. It is difficult to see how the thing can be stopped, if the fish choose to bite, but the destruction of future food entailed thereby is nevertheless very great at times.

We are told that the general run of our bay fish all along the wharves and off the seawall bit more freely during the late gale than they did for some time previously. It may be the gale interfered with their usual food supply and made them hungry. The fact is worth noting when the next norther comes blasting along.

Mr. Troutner, a printer of this city, and two friends, fishing off Lime Point, made the best catch we have heard reported for some time. They caught over 100 pounds of fine perch, flounders, rock and tom-cod, with three large black eels one of which was upwards of four feet long.

Flounders of good size are again biting freely at the drawbridge, Saucelito.

Salmon trout have been scarce of late.

Our list of lady expert hunters is rapidly increasing. Mrs. Lowner, the wife of Colonel Lowner, of Fort Felton, is said to be the best shot in Dakota. She is also credited with killing 414 prairie chickens this Fall, and the first deer brought down from Moose river. Mrs. Jennie Heming, of Sly Park, Butte county, California, is next credited with shooting a seven prong buck that showed fight and wanted to kill her. She is said to have dragged the deer, weighing 180 pounds, home afterwards. Fortunately, we are not informed how far her home was away, so plain fact does not interfere with imagination, and we can be as gallant as we please. Then we hear of Miss Gussie Harris, of Vina, in company with her aunt, Mrs. E. C. Miebels, doing wonderful things on Deer Creek. Killing five quail at one shot is all right for Miss Gussie, but when it comes to spearing four salmon two over four feet, one five, and one three and a half feet long, we want somebody to give us a rest. Dragging a deer 180 pounds, and handling salmon four and five feet long with a spear is a pretty tough job for a pretty strong man. But when women once make up their minds to do a thing, we know, they are going to do it or die. So we suppose all this was done, because the death of the ladies in question is not reported.

At San Luis, Colorado, the jack-rabbits are unlititudinous, and so a choice lot of men, fond of fun, go out every year to slaughter them. The kill each year amounts to 1,200 in number. This year the average lot were shot down, but the first day's game was left lying around loose and the coyotes got it all. There were no end of large demijohns with the party, which, it is said, were not taken for show. This, perhaps, accounts for the coyotes having such a grand feed.

A new rowing machine recently placed in a gymnasium at Cornell has no springs, weights or cylinders used in its construction. The principal is simply that of friction. An iron rod bent in the shape of an arc of a circle is attached to the end of the lever, and fit into grooves in a couple of blocks at the end of the arm. When the oar is turned as when pulling against the water the rod is pressed against the sides of the blocks, giving friction enough to make the stroke about as hard as when rowing in water, but when the oar is turned as in feathering, the bar slides freely in the grooves of the blocks. The block is hung on pivots so as to give the proper vertical component of the motion.

C. T. Studd, Captain of the Cambridge University Eleven in 1883, and who played for M. C. C. against the Gentlemen of Philadelphia and made 106 and obtained 6 wickets, has gone to China, with H. B. Smith, on a missionary expedition.

J. D. Walker, Captain of the Middlesex County Eleven, has arrived safely at Melbourne, with Spofforth, the "Demon" bowler.

Auction Sale

PURE BRED  
CLYDESDALE  
STALLIONS,

Imported into San Francisco by Thos. Brookless, from Melbourne, Australia.

BAY DISTRICT TRACK, at 11 A. M., on  
TUESDAY, January 6th. 1885.

ON THE ABOVE DATE BY ORDER OF MR. BROOKLESS we will sell eight head of pure bred Clydesdale stallions. They are all choice young horses, bred with great care from the best strains of blood, of fine color and form, the sires and dams being all prize winners. They constitute the most superior lot of eight animals ever brought to California.

The attention of stockmen generally is especially called to these horses. They will be upon exhibition at the Bay District Track until day of sale. The sale will be absolute, without reserve. The owners desiring to close out and return to Australia.

Catalogues giving full pedigrees and all necessary information can be obtained of the undersigned.  
KILLIP & CO., Auctioneers.  
116 Montgomery Street,  
SAN FRANCISCO.

LATONIA JOCKEY CLUB,  
COVINGTON, KY.

Additional Stakes for 1885 and Fixed Events for 1886 are now Open; to close January 1st, 1885.

SPRING MEETING, 1885.

CLIPSETTA STAKES

For two-year-old fillies, foals of 1883, of \$50 each, half forfeit, or only \$10 if declared on or before the 1st day of May, with \$750 added, of which \$150 to the second and the third to save her stake. Five furlongs.

HAROLD STAKES

For two-year-olds, foals of 1883, of \$50 each, half forfeit, or only \$10 if declared on or before the 1st day of May, with \$750 added, of which \$150 to the second and the third to save entrance. Five furlongs.

SENSATION STAKES

For two-year-olds, foals of 1883, of \$100 each, half forfeit, and only \$10 if declared on or before the 1st day of April, or \$25 if declared on or before the 1st day of May, with \$1,000 added, of which \$200 to the second and the third to save entrance; winner of the Clipsetta or Harold Stakes to carry 3 lbs.; of both 5 lbs. extra. Six furlongs.

RIPPLE STAKES

For three-year-olds, foals of 1882 that have not won prior to the closing of this stake, of \$50 each, half forfeit, and only \$10 if declared on or before the 1st day of May, with \$1,000 added, of which \$200 to the second and \$100 to the third. Winners after date of closing to carry 5 lbs. extra. One mile and a quarter.

MERCHANTS STAKES

For all ages, of \$25 each, play or pay, with \$800 presented by the merchants of Cincinnati, of which \$200 to the second and \$100 to the third. Maidens at the closing of this stake allowed 5 lbs. with 3 lbs. additional if maidens at the time of starting. One mile and a furlong.

CINCINNATI HOTEL STAKES.

Handicap for all ages, of \$50 each, half forfeit, and only \$10 if declared on or before the 1st day of April, with \$1,000 presented by the Gibson House, Burnett House, Grand and St. Nicholas Hotels of Cincinnati, of which \$200 to the second and \$100 to the third. Weights published March 15th. Winners of \$1,000. after that date to carry 5 lbs. extra. One mile and a quarter.

BREWERS' CUP

For all ages, of \$50 each, half forfeit, and only \$10 if declared on or before the 1st day of May, with \$1,000 added by Cincinnati brewers, of which \$200 to the second and \$100 to the third. CONEY ISLAND  
JOCKEY CLUB.

AUTUMN MEETING, 1885.

STAKES TO CLOSE JANUARY 1, 1885.

THE AUTUMN STAKES—\$1,500.

A sweepstake for two year old, foals of 1883, of \$100 each, \$25 f., with \$1,500 added. The second to receive \$300 out of the stakes. The winner of any two-year-old stake, the entries for which were made as yearlings, to carry 110 lbs. of two, 5 lbs. extra; of three or more such stakes, 7 lbs. extra. Other winners allowed 5 lbs. Maidens allowed 10 lbs. Three-quarters of a mile.

THE SEPTEMBER STAKES—\$1,500.

A sweepstake for three years old, foals of 1882, of \$100 each; \$25 f., with \$1,500 added. The second to receive \$300 out of the stakes. The winner for any three-year-old stake, for which the entries were made as yearlings, to carry 118 lbs., of two, 3 lbs. extra; of three or more such stakes, 7 lbs. extra. Other winners allowed 5 lbs. Maidens allowed 15 lbs. One mile and three-quarters.

THE GREAT LONG ISLAND STAKES.  
\$2,500.

A sweepstake for all ages, of \$250 each for starters, with \$2,500 added; \$2,000 to the first, \$500 to the second, to which is added the Woodlawn Vase (presented by the Messrs. Dwyer, of Brooklyn,) to become the property of the subscriber winning the above race for two years in succession. Horses entered by January 1st, 1884, by September 1st, when the entries shall be closed, b. f., five years old and aged, to carry 114 lbs.; four, 108 lbs.; three, 95 lbs. Two mile heats.

THE BRIDGE HANDICAP—\$2,500.

For three years old, foals of 1882; a handicap. Winner of a certain sum means winner of a single race of that value. For the above stakes it shall not be necessary to claim allowances at the time of entry.

ENTRIES TO BE ADDRESSED TO

J. G. K. LAWRENCE,

Secretary Coney Island Jockey Club.

LEONARD W. JEROME,

President

N. E. cor. Fifth Avenue and Twenty-second St., New York.

forfeit, or only \$10 if declared on or before the 1st of September, with \$750 added, of which \$150 to the second and the third to save her stake; winner of stake, handicaps excepted, to carry 3 lbs., of two 5 lbs. extra; maidens allowed 5 lbs. Six furlong.

HARBETT STAKES

For two-year-olds, foals of 1883, of \$50 each, half forfeit, or only \$10 if declared on or before the 1st of September, with \$1,000 added, of which \$200 to the second and the third to save entrance; winner of a stake, handicaps excepted, of the value of \$1,000 to carry 5 lbs., of two 8 lbs. extra; maidens allowed 5 lbs. One mile.

SPRING MEETING, 1886.

HINDOO STAKES

For three-year-olds, foals of 1883, of \$100 each, half forfeit, and only \$10 if declared on or before the 1st day of August, 1885, or \$20 if declared on or before the 1st day of January, 1886, or \$30 if declared on or before the 1st day of May, 1886, with \$2,000 added, of which \$400 to the second, and the third to save entrance. One mile and a half.

GIDDELLA STAKES

For three-year-old fillies, foals of 1883, of \$100 each, half forfeit, and only \$10 if declared on or before the 1st day of August, 1885, or \$20 if declared on or before the 1st day of January, 1886, or \$30 if declared on or before the 1st day of May, 1886, with \$1,250 added, of which \$250 to the second, and the third to save her stake. One mile and a quarter.

HIMYAR STAKES

For three-year-olds, foals of 1883, of \$100 each, half forfeit, and only \$10 if declared on or before the 1st day of August, 1885, or \$20 if declared on or before the 1st day of January, 1886, or \$30 if declared on or before the 1st day of May, 1886, with \$1,500 added, of which \$300 to the second, and the third to save entrance; winner of the Hindoo Stakes to carry a penalty of 5 lbs.; maidens allowed 5 lbs. One mile and three furlongs.

FALL MEETING, 1886.

Edwin F. Smith, Secretary.

## FOR SALE,

THE GAME

HAMBLETONIAN

TROTTING STALLION

## "HA HA!"

Four-year-old record 2:31, (can trot much faster), is offered for sale during this month at a bargain. Cause for selling, closing out business.

"HA HA" is brown, 16 hands, weighs 1100 lbs., and is stylish, sound and kind. For pedigree see Wallace's Standard Stud Book, No. 1219.

"HA HA'S" colts took first premium at the Stockton Fair for the best trotting suckling. He trotted three races this season as a four-year-old, one at Sacramento where he won second money, and twice at Stockton where he won both races.

FRED ARNOLD,  
Stockton, Cal.

# Corrin's Great Horse Liniment.

Sure Cure for Swinney, WEAKNESS OF THE SPINE.

SPRAINS, STRAINS, ETC.

It neither blisters nor causes the hair to fall off, and does not incapacitate the horse from work during treatment.

Though there have been many drugs on the market which are claimed good, the observer will readily see their deficiency, from the number of lame horses which he everywhere meets, and that are mostly suffering from that scourge, Swinney; which not only causes the shoulder to gradually shrink away, but also the body to emaciate. Now where is the horseman so blind to his own interest, as to refuse this new remedy a fair trial.

Mrs. A. C. JOSEPH, Prop., San Francisco.

All Rights Secured in U. S. Patent Office.

PRICE, \$1.00 PER BOTTLE.

JNO. A. MCKERRON, Agent,  
232 Ellis Street.

# IMPROVED HORSE CLOTHING. TROTTER STUD

ASHLAND PARK  
NEAR LEXINGTON, KY.  
B. J. TREACY, PROPRIETOR.

Secured by Letters Patent ISSUED MAY 27, 1879 REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J in combination with the elastic connecting-strip I, substantially as described and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose singingles is avoided, substantially as herein described.

Manufactured and for sale by  
L. D. STONE & CO.,  
422 and 424 Battery St., SAN FRANCISCO, CAL.

Lock Box 392. WM. T. WITHERS, Lexington, Ky.

## GUNPOWDER.

The California Powder Works,

MANUFACTURERS OF

Cannon, Sporting, Mining and Hercules Powder,

Jno. F. Lohse, Secretary. 230 California St., San Francisco.

THIS IS STRICTLY A BREEDING FARM, FOR though training is done, it is only for the stock belonging to the place, or those purchased from the proprietor. The proprietor of Ashland Park has no pet trotting family; his aim is to secure and have at all times for sale choice representatives of each of the leading families, these being the Hambletonians, Mambrino Chiefs, Clays, Pilots, Black Hawks. At Ashland Park may now be seen splendid specimens of the get of such stallions as George Wilkes, Almont, Mambrino Patchen, Clark Chief, Edwin Forrest, Blackwood, Sentinel, American Clay, Administrator, North Star Mambrino, Bourbon Chief, Regular, Ball-sora, Howard's Mambrino and Homer. The steady aim is to possess nothing that does not trace through the best class of speed-producing trotting crosses, along all the blood lines, right to the thoroughbred. For catalogues or further particulars address 2 17y1 B. J. TREACY, Lexington, Ky.

### Remnant or Wolf Teeth—What Are They? —And Are They Injurious?

As the word "wolf" is another name for that which is hurtful or destructive, and as these as well as supernumerary teeth, with which, however, they should never be confounded, sometimes do injury, the generic name wolf teeth is an appropriate one. But since these particular teeth are hereditary, and being beyond doubt the remains of what were once functionally developed teeth, they require a specific name, hence the name remnant teeth has been adopted by the best authorities to distinguish them from the supernumeraries and the unshed temporary pre-molars, which are sometimes called wolf teeth. That they are actually remnants of what once was a functionally developed molar tooth has been proven by the researches of Prof. O. C. Marsh of Yale College. He finds that at one period of the equine existence "The Pliocene-tertiary" Hipparian had twenty-eight, instead of twenty-four molar teeth. The number of teeth remained the same until the "Pliocene," when the front lower pre-molar was lost, and subsequently the corresponding upper tooth ceased to be functionally developed, but occasionally now appears in the form of the so-called "wolf tooth," a small tooth which appears in front of the grinder, oftenest in the upper jaw. That they are injurious is an often proven fact. Surgeon Chas. Parnell, in a letter to the editor of the *Veterinarian*, (1867, p. 287), says: "I can safely say that I have extracted a great many wolf teeth, not merely because they existed, but because there was weeping from one or both eyes, the cause of which was attributed to wolf teeth, and generally in course of a few weeks the weeping has ceased. But what convinces me that they do affect the eye is that in several cases where there was weeping of one eye only, I found a wolf tooth on the affected side only, and the recovery of the eye invariably followed the extraction of the tooth. The mucous membranes and lachrymal glands appear to be the parts affected, undoubtedly from some connection through the nerves. If these teeth are allowed to remain in the mouth the sight will become more or less impaired." There are those who do not believe this theory, but when we have such abundant proof from such authority as the above, also from Prof. C. D. Housh, the best possible authority in relation to horses' teeth, and acknowledged while living to be the best veterinary dentist in this country. He not only claimed that they sometimes injure the eye, but in some cases they encroach upon the maxillary branch of the fifth pair of nerves, causing the horse to act as if insane. He also speaks of finding the germs of these teeth in the cells of the colt's jaws at birth, proving them to have been natural teeth. Our opinion in the matter is that in not one case in twenty a wolf tooth affects the eye, were it not from the fact that we place a bit in the horse's mouth, which, when it comes in contact with one of these teeth, keeps it irritated, causing the eye to weep, also making the animal fretful and disagreeable to drive, lugging at the bit, pulling on one rein, shying, etc. The wolf tooth is not always the cause of these bad habits, as horses may be just as disagreeable to drive and have no wolf teeth, but they are liable to produce these bad effects. Consequently, if your animal has any bad habits while driving, have his teeth examined by a competent person, and in nine cases out of ten he will find the difficulty right there and be able to relieve it. It is important to have some experience in the business to be able to diagnose correctly, as to the careless observer there may be no apparent cause. As in case of a mare owned in Oakland about eighteen months ago, who had been thrown down and examined by two different surgeons, who could find nothing wrong with her mouth in any way and pronounced her insane, but the owner did not think so as she was perfectly gentle and quiet until the bit was placed in her mouth, when she would act as if insane, rearing and throwing herself violently to the ground if the reins were touched. By advice of friends he sent for us, and after carefully examining her mouth found the cause of the trouble to be what is termed a hind wolf tooth, which we removed by means of the knife and forceps. After the mouth had healed the animal became a perfect driver. This is one of many cases we could give from our experience in removing wolf teeth from bad driving horses. And in closing permit us to caution horse owners against allowing a blacksmith or any one else to punch out a wolf tooth, as in nine cases out of ten they will only break it off, leaving the injurious root to do mischief, and the punch is liable to slip and lacerate the gums and perhaps fracture the jawbone, also frightening the colt so that you cannot approach his head without a great deal of coaxing. Always insist upon the use of forceps in their removal, and always have them removed when they are present.

W. H. W.

### Inflammation of the Bowels.

Enteritis, or inflammation of the bowels, may safely be stated to be the most rapidly fatal inflammatory disease to which the horse is liable, destroying life in the course of a few hours. Indeed it is very doubtful whether the disease recognized as enteritis by practitioners is a true inflammation at all, as its course and progress, rapid termination, and post mortem appearances tend to confirm the opinion that it partakes more of the nature of apoplexy than of inflammation. It is true that impaction, constipation, and intromsception, the presence of calculi, or the action of irritant poisons, may cause great congestion and inflammation of the intestinal membranes, but the disease originates *sui generis*, and very often without the occurrence of an immediate and recognizable cause of direct irritation. This fact has led some veterinarians of very great experience, to arrive at the conclusion that enteritis never originates in colic, spasmodic or flatulent. Many writers assert that enteritis is situated in the small intestines, more particularly in the ileum and jejunum. Williams says that it is more commonly situated in the caecum and colon than in any other part of the intestinal canal, but no portion of the tube is exempt. The only recognizable causes are, over fatigue, cold from exposure, or from washing with very cold water while the animal is heated and thereafter inadequately clothed.

It has been frequently stated that the inflammation is situated in the muscular coat. This is evidently a mistake, as the congestion is of the greatest severity in the mucous membrane, the redness of which is of a very deep venous color, approaching to blackness in patches of various extent, and associated in many cases with extravasation of blood into the canal. Of course when such extreme congestion of the mucous membrane exists, all the coats are more or less implicated, but the primary and gravest condition is limited to the mucous membrane. The submucous tissue is generally much thickened; there is loss of cohesion, the mucous membrane being easily stripped from its attachments; some effusion of serum into the intestinal canal causing purging in cattle and dogs; but in the horse purging seldom or never occurs, though the contents of the bowels may be found fluid after death. This seeming constipation results from paralysis or loss of function, and is marked by complete retention of the fecal matters. In rare instances enteritis may terminate favorably in the horse, but in a majority of cases mortification results, or the animal dies from the debilitating effects of hemorrhage into the intestinal canal or from prostration of the nervous system induced by pain. Gangrene may result in eight or ten hours, the animal rapidly succumbing. In some instances, however, death may not result for several days. In one instance a horse lived for a period of five days, the bowels being found sphacelated, the process of ulceration having commenced at the edges of the gangrenous patch. It is very rarely that ulceration occurs in the horse, but it may be witnessed both in cattle and dogs.

The first noticeable signs of enteritis are those of abdominal pain. Generally, however, they are preceded by some degree of constitutional disturbances, rigors, accelerated breathing, repeated evacuations of small quantities of feces and general depression; the mucus membranes soon become deeply congested, the mouth dry, the tongue contracted and now and then of a brownish color, the appetite of course being lost, the pulse is hard, wiry, and quick, the belly is tender upon pressure, the abdominal muscles more or less contracted, and if tympanitis be absent the belly may seem tucked up and smaller than natural. Subsequently the symptoms of dullness and depression give place to those of excitement and pain, the horse stamps the ground with the feet, strikes at the belly, lies down, but much more carefully than in spasmodic colic, or makes feints to do so; it may roll upon its back, turn its eyes anxiously towards the flanks, pants, hews and sweats with pain. There are no sharp paroxysms of pain with intervals of ease as in colic, but the pain is constant, distressful and agonizing; in some cases so much so that the sufferer seems afraid to show it, except by a most anxious expression, which is a characteristic and diagnostic symptom. Now and then the animal will stand persistently with the head in the corner and paw the ground for hours together with one or both fore feet alternately. The pulse is hard, wiry and quick, often ranging from 80 to 120 beats per minute; and as the disease advances it becomes thready and imperceptible; the animal sighs or even groans with pain, the perspiration runs off the body, the skin is never dry, at one time hot, at another time cold; the countenance becomes haggard, the eyes expressive of delirium, and pupils dilated. The horse may throw itself about in a dangerous manner, or walk around its stall incessantly; then it will stand, balance itself, its legs give away, when it may fall and die after a few convulsive struggles, or suddenly all symptoms

of pain may subside. It will then stand quiet and even drink, or endeavor to feed; its breathing becomes more or less tranquilized, but the haggard expression of the face still remains; the pulse continues thready and imperceptible; cold sweats are observed all over the body, the belly becomes tympanitic, gangrene has set in, the horse trembles incessantly, the legs and ears are deathly cold, the mouth cold, the breath cold and even fetid, the lips drop pendulous, the eyes become more amaurotic, and after a varying interval death closes the scene, the bowels remaining inactive to the last. If, however, in three or four hours from the commencement of the attack there be some abatement of the symptoms; if the surface of the body becomes dry, if there be a passage of flatus or feces, the pulse becoming fuller and softer, and the characteristic anxiety leave the expression, a favorable termination may be anticipated. This, however, is rarely the case.

In the treatment of the disease powerful cathartics are generally administered. It has, however, been shown quite conclusively that it is always dangerous to propel fecal matters through an infirmed portion of the bowel, and that in most cases the effort is useless. Purgatives, however, stimulate and excite the muscular and excretory action of the healthy intestines anterior to the inflamed part, the result being that the inflamed part becomes more and more distended, inflammation is increased, the blood vessel becomes ruptured, it becomes softened, and its vitality is ultimately destroyed. The two great principles recognized in the treatment of enteritis are: first, to relieve pain, and, second, to arrest as far as possible all movement of the intestines, and for these purposes opium is to be administered in large doses. For the horse, one, two, or even four drachms of the powder may be administered, succeeded by smaller quantities at short intervals, or by the subcutaneous injection of morphia, or an ounce of the extract of belladonna may be given to be followed, if necessary, in six hours by smaller two drachm doses. In addition, hot fomentations to the abdomen are useful, and they should be applied for at least an hour at a time. Enemas of warm water may also be gently administered; they are not, however, to be repeated too often, and if at any time they increase the pain they should be discontinued. If after the abatement of the active symptoms the bowels remain torpid, as they generally do, there should be no attempt made to remove this torpidity by the administration of cathartics or aperients of any kind, for if the animal is to recover it must be dependent upon the restoration of function and tone to the inflamed bowel, and it is well known that toward this end perfect quietude of the inflamed part must be maintained. The advisability of sedative medicine should depend entirely upon the condition of the animal. If there is an absence of depression a sedative commensurate with the strength of the vital powers of the animal will be followed generally by abatement of the symptoms, and if administered early will be beneficial. Should the appetite return, great care must be taken that the food be of the simplest and most easily digestible kind, such as scalded bran and boiled linseed, given in moderate quantities, the eating of dry food being prevented by a muzzle. The question of administering stimulants during the acute stage will also greatly depend upon the condition of the animal. They usually do more harm than good, but if tympanitis be present one or two doses may be tried. If they give relief they may be continued, but if, on the contrary, they aggravate the pain or seem to have no effect, they should be discontinued.

It seems to be a lamentable fact that good carriage horses are very scarce both in this country and Europe. Buyers take no risk in procuring horses that will answer every description of a carriage horse, no matter if they pay what would be considered fabulous prices, for in almost every city there are men who are anxious to secure such animals regardless of cost. One of the strong points in handling this class of horses is that those who want them are generally a class of men who are well able to pay for what they want, and when they find what suits them they generally buy it, regardless of cost. The breeder who wants to raise a kind of horses that are always in the market, and which will pay well for their raising can do no better at present than raise good carriage horses.

There is a constant change going on in the horses on nearly every farm in the country. The old stock is dying or being disposed of in various ways, and their places are being taken by younger animals. If every farmer should realize the benefits derived from the improvement of their horses, and give this matter of replacing the old with new the attention they should, it would take but few years to work a radical change in the horses of the country.

Breeding Race Horses.

[London Sportsman.]

There are far too many breeders of the race horses who are not horsemen, in the proper sense of that term. These can spin out long rignaroles in reference to various strains of blood, the crossing of this and the "micking" of that, but they are mere dummies in judgment as to make and shape, and so far from being able to point out hereditary or other disorders of the limbs in stallions or brood mares they do not know one disease from another, or where in the frame to look for them. Another defect in their judgment is in regard to the management of their studs, some of which are made up of the sweepings from other establishments, and carried on by cheap servants who have but little experience in the care or feeding of brood stock. Blood of the finest is of no advantage in cases of this kind, nor is it of any value when it runs through an unshod or misshapen body. To propagate the race horse in his superior form we must lay aside all crotchets and absurd theories in respect to blood, and follow success, for it is a true saying that nothing succeeds like it. But any strain of running blood, no matter how successful it may have been in the veins of sound animals, should be avoided when all there is left of the mare or stallion who inherits it is a diseased body. Indeed it should be avoided as if it were poison, it tainted with hereditary unsoundness. We must follow the laws of nature, which correspond with the dictates of common sense, and bred from stock of the first class, not only as regards family heritage, but with fine tempers symmetrical frames, and constitutional stamina and soundness. There may be solitary exceptions where good racing stock is produced from common-looking and even unsound parents, but continuous work on the training grounds will probably develop the weakness inherited from one or both parents, and in the long run the standard law of nature expressed in the old saying that "like begets like" will assert itself in the production of commoners.

I have said that thorough freedom from hereditary diseases is a *sine qua non* in broodmares and stallions selected to produce racing stock of the highest class, and the novice in horse flesh who essays the task of breeding for the turf should never, on any account, purchase a stallion or broodmare without a veterinary examination. The cost of keep and attention in their boxes and in their boxes and on the pasture is as much for the worthless animal as one of the best. Among the several diseases to be avoided, and which are the most common among not only thoroughbreds, but all kinds of horses, I may first name roaring, which, I regret to say, is very much on the increase in racing stables in this country, albeit it is said to be unknown in Australia. This goes far to prove that climatic influence has a direct bearing on the disease, for it will be universally admitted that England is one of the most changeable climates of any nation in the world. Indeed it very frequently happens that the movement of race horses from their training grounds to the meetings where they have to run develops a cough which, of course, seriously jeopardizes their chances to win the engagement for which they have been trained and travelled over long journeys.

There are few horsemen or veterinary surgeons of experience who have not known roaring proceed from temporary causes, such as a sore throat in its early stages. The commencement of the air passage in that region—particularly the larynx—has its membrane inflamed or swollen, as well as its muscles temporarily paralyzed from soreness. It often occurs that when a horse is examined in this state he is supposed to be an inveterate roarer. But when the attack of sore throat, or influenza, has passed through its different stages, a discharge of matter having taken place, either through the nostrils or externally, from an abscess formed in the throat or beneath the under jaw, it is found, to the astonishment of those who heard the animal roaring when galloped at the commencement of the disease, that his wind has become perfectly clear again. Indeed, the first stage of this throat disease is often so very obscure that it is not observed by some veterinary surgeons in a cursory examination and the nature of the roaring subsequently discovered in it is not recognized.

On the other hand, there are scores of cases in which sore throat, culminating in its worst stage of influenza, leaves its victim a confirmed roarer. Horses when ridden at exercise will sometimes set themselves so determinedly against the bridle that they make a noise very much resembling the hated sound of roaring. They gape with their mouths and "yaw" their heads from side to side to oppose the restraint of the reins, so that the air passages of the throat become distorted in such a manner that the air in passing through them from the nostrils to the lungs makes a noise resembling roaring from disease. In cases of this kind even the most astute horse waterer may be deceived as the animal gallops past when he is standing on the training grounds, but when the horse is pulled up the noise is no longer heard.

There are many disorders of the legs and feet that are hereditary or if they do not come strictly under that designation should be avoided when they exist in the frames of blood stock for racing purposes. Pinned and contracted feet are common among thoroughbreds in training stables and invariably attended with positive lameness. They, however, sometimes lead to canker.

Side bones are not so often found on the limbs of thoroughbreds as in draught horses. These are ossifications, or a turning into bone of the elastic cartilages situate at the back part of the coronet, above the quarters of the foot. When these cartilages are ossified elasticity is impossible, and lameness or inequality of action is established; in fact the affection is incurable, for when once the cartiliginous tissue is turned into a bony structure it never again resumes its former pliability. There is no affection of the legs and feet more hereditary in its tendency than side bones, and it is not so easily detected by a novice in horseflesh as ringbone. The latter forms round the front part of the coronet, and occasionally round the joint formed between the large and small pastern bones. Both ringbone and sidebone should be shunned by breeders as decidedly hereditary, and although firing and blistering mitigates the effect of the disorders, they are incurable, and destructive to the speed and wear of race horses and all kinds of equine stock. Bone spavin is a disease capable of being transmitted by brood stock to their progeny. This disordered is so common that I need not describe it here. Suffice it to say that on no account ought animals so afflicted to be sent to the stud. Bog spavin and thoroughpin are not by some people considered to be unsoundness in the eye of the law, but, on the other hand, I have known veterinary surgeons of long experience reject horses afflicted with these diseases as being unsound, and, for my part, I would not breed from stallions or mares so disordered. Laminitis, more commonly known as "fever in the feet," is a chronic disease, incurable in practice and decidedly hereditary.

Crib-biting and wind-sucking are by many people considered as not being diseases, and they are not so in the ordinary sense of that term. They are, however, habits that

culminate in the impairment of the digestive organs. They also interfere with the digestive powers of the animal and are easily contracted by imitation. In fact it has many times been decided by the best authorities that crib-biting and wind-sucking are both unsoundness. At any rate, from the certainty that the disorders are invariably imitated and confirmed by other stock not deranged by the habit, horses and mares so afflicted are not desirable properties on a stud farm. I have known a horse to contract the crib-biting in twenty-four hours by being put into a stall next to one occupied by a "cribber" with only a swing bar between them.

Curb is one of the most common disorders existing in racing stables. It is not only unsoundness—even when there is no sign of lameness—but it is a disorder in which there is a much greater probability of a horse becoming lame than in cases of bone spavin after firing and blistering for the latter. The lameness from curb is very easy of removal, and even the enlargement is frequently reduced to a perfectly plain surface. Rest will accomplish the former, and blistering remove the swelling from the ligament that passes around the back part of the joint, but it frequently returns from the exciting cause—namely, over-extension of the sinews at the back of the hock. The application of "Ossidine" to both hocks of Paradox, now first favorite for the Derby is, however, considered by John Porter, his trainer, as being thoroughly efficacious for the symptoms of curb which appeared on his joints, and as this is a new remedy I have no reason for doubting the opinion of so long experienced and practical a trainer. I have known curb to be effectually treated by a snillimate, very carefully applied with the cork of the bottle that contains it, but there is a tremendous strain on the weak part when the horse is fully extended in action, and there is always danger to be apprehended when horses with curb are put into strong work.

It must, however, be admitted that the appearance of curb is in some cases a congenital affection, born with the animal, the formation of the hock being what is termed "curly." In some instances congenital curb is only observable on one hock, which may be otherwise so well formed, and the enlargement so small, that the chances are greatly in favor of its never being the seat of lameness. This formation of the hocks is often hereditary, and should be avoided by breeders of raising stock, for the reason that it is not only unsightly, but suspicious, and even the best judges are shy at bidding for the grandest looking yearlings with such eyesores. Yet I have known horses with this peculiarity in their hocks wear on for very long periods on the turf, and Grand Flanier was an instance of this kind.

Directions for Killing Domestic Animals.

[American Cultivator.]

To kill a horse two methods are suggested: 1. By blows. Blindfold, and with a heavy axe or hammer strike just below the foretop. One vigorous blow will fell the horse and will make death sure. 2. By the bullet. Place the muzzle of the rifle or pistol within a few inches of the head, and shoot him at the dot. Aim towards centre of the head. A charge of buckshot fired from a shot gun will be equally effective. Be careful not to strike or shoot too low. It is absolutely unsafe to administer chloroform to a horse that has the use of its legs. For a small dog or cat a quarter of a teaspoonful of pure cyanide of potassium, placed on the tongue (they will not take it in food), as near the throat as possible, is sufficient; or they may be chloroformed, by saturating a sponge or folded flannel with the liquid (an ounce is sufficient), and placing it with the animal in an ordinary wash boiler or other air-tight vessel. For a large dog, use half a teaspoonful of pure cyanide of potassium, placed on the tongue, as near the throat as possible. But it is much better to shoot, placing the muzzle of the gun or pistol so as to aim a little one side of the center of the top of the head, so that the bullet shall go down through the brain into or toward the neck. Be careful never to shoot too low or directly in the middle, on account of thick bones. More humane methods have been introduced into all our leading slaughter houses in killing animals used for food. The animal to be slaughtered should be conducted to the spot as quietly as possible, without the use of goad or club, and everything calculated to alarm should be removed. All slaughtering premises should be kept thoroughly cleanse from blood and offal, and no carcasses should be allowed to hang in view. No animal should be permitted to witness the death of another. Trifling as these measures may appear, they are in reality of vast importance, not only in view of avoiding useless cruelty, but as affecting the wholesomeness of meat for food, and the market value of the animal slaughtered, there being no question as to the effect of torture, cruelty and fear upon the secretions and upon the flesh. The most humane and effectual way of killing cattle is to shoot them. One ordinary-sized bullet given at the forehead will generally prove sufficient. Calves should be stunned with a blow upon the head by a broad mallet or hammer, aimed at a spot relatively the same as in the full grown animal. This is to be followed by immediate bleeding, by severing the throat at a point corresponding to the upper portion of the windpipe, using a sharp knife and doing the work thoroughly and at once, so as to open all the arteries and veins of the neck. The old time method of bleeding calves several days before they are killed is not only inhuman, but the process injures the meat, in some cases poisoning it. All suffering just before death injures the meat and sometimes poisons it. It has been found that even fish are much better when killed as soon as caught, by striking the back of the head sharply with a stick or stone. Some of our fishermen now carry little clubs or batons for that purpose. All wounded birds and other creatures should be killed as speedily as possible, to prevent injury to the meat. These facts are well established by scientific authority. Sheep and lambs should be rendered insensible by a blow on the head, to be followed by severing the throat, as just advised in the case of calves, or by plunging a sharp-pointed knife through the blood vessels at either side of the neck between the bones and the wind pipe. The place to be selected for a blow is the center of a line drawn across the head about two inches above the eyes, the brain in the sheep occupying a situation posterior to what at first sight would appear to be the natural one.

It is not unfrequently the case that more brains are found in the horse than in the driver. This conclusion is more easily reached when we see giddy young men who think that the beauty in a horse consists in it carrying its head in the unnatural position that over-check reins give, when carried to extremes, and that the value of a horse depends upon his being able to go as fast and as long as they want them to go. Although such ideas are not confined to young men entirely, we too frequently see them indulged in by the class of youngsters who are just coming to that period in a young man's life when he thinks his judgment in such matters is worth more than the experience of older men.

Sprain of the Shoulder.

Sometimes the difficulty of ascertaining the real seat of lameness when situated in the foot, has been in occasion to refer the complaint to the shoulder; and the poor animal has, in consequence, been doomed to undergo the painful operations of blistering and rowelling. It is of considerable importance, therefore, to be able to distinguish sprains of the shoulder from other injuries. Mistakes will seldom occur if attention be paid to the following symptoms: The horse drags his toe along the ground from inability of the muscles in the shoulder to lift his foot; if he lifts his foot high, the shoulder cannot be much affected; motion gives extreme pain and the animal is unable to sustain any weight on the affected limb, he therefore rests on the toe alone; but if urged to walk, and especially down-hill, he catches up the limb with considerable quickness. On taking up the foot and bending the leg that it may be brought considerably forward the animal evinces great pain, which he will not do if the foot is the seat of the lameness. In severe sprains there will be heat and tenderness of the muscles, most frequently those below or immediately behind the point of the shoulder joint, close to the chest. The administration of laxative medicine, hot fermentations assiduously applied, with absolute rest and quietude, generally effect a cure. In severe and protracted cases the treatment may be succeeded by occasional blistering.

For all heavy city drayage, etc., size is indispensable, as well as for many other purposes, and heavy animals, I know, are much sought after, and bring good prices. I have no doubt that the breeder of heavy horses makes more money, all things considered, than the breeder of the smaller sort. But when it comes to the farm, or the road, the ponderous horse is out of his place entirely, being completely discounted by his smaller companion. It is especially against the present idea of breeding large animals for quick work that I object in toto. Every pound over 1,100 is a decided point against the true roadster, and for my own use, being guided by a long life on the road, I would prefer 950 to 1,000 pounds as the best-sized animal for long endurance and a life-time wear and tear. Two of the best roadsters I ever owned, among a great number, were 940 and a little less than 900. They would outdo any sized animal with an ordinary buggy and two persons, or on ordinary road level, or up and down. They eat much less, require less shoeing, have less disease, and are more convenient to get around.

The *Cultivator* thinks a cow kept by herself will give better results than the same cow in a herd with others. The single cow will be better fed, and a more important point, so far as buttermaking is concerned, will be the fact that nearly all the butter will be got from the cream, which is never the case when the milk and cream from a herd of cows are mixed before churning. Owing to difference in size of the butter globules the milk from cows varies largely in the time required to bring the butter.

A writer in the *Philadelphia Press* says that long experience in England has proved that brown-colored horses, and especially those of tanned muzzle, prove the hardiest.

Mares that have suckled colts during the past summer, and are still thin in flesh from the effects of having done so, should have extra attention.

TURF AND TRACK.

The Season of 1884—Chester Valley—Algerine—Erdenheim.

[N. Y. World.]

Among other stables, the colors of which were conspicuous during the season of 1884, were the three Pennsylvania stables, viz: the Chester Valley, owned by Mr. Kelson; the Erdenheim, owned by Mr. N. W. Kittson, and the Algerine, owned by Mr. W. L. Scott. All three gentlemen may be said to be newcomers, and as they are also breeders, they are certainly welcome additions to the turf, and as they are wealthy it cannot be said that they race for a living. Were it so, it is doubtful if their earnings would cover expenses. Of the three that of Mr. Kelson heads the list with a total of \$32,197, made up as follows—the entrance money to purses and stakes amounting to \$6,430:

HORSES.	Times started.			Gross amount won.
	Times started.	Times second.	Times first.	
Brookwood, 2, by Billet.....	12	1	2	\$8,615
Water Lily, 3, by King Alfonso.....	12	4	2	8,634
Heel and Toe, 4, by Glenelg.....	28	1	3	7,458
Rica, 5, by Kingsfeber.....	23	6	2	4,650
Valley Forge, 3, by Bullion.....	11	0	1	900
Equipoise, 3, by Enquirer.....	8	1	1	690
Mystic, 2, by James A.....	8	1	1	503
Kinsman, 2, by Monarchist.....	4	1	2	500
Eclat, 3, by Enquirer.....	8	2	—	260
Saltpetre, 2, by Glenelg.....	11	1	2	100
Longview, 2, by Longfellow.....	7	—	—	—
Relay, 2, by Virgil.....	5	—	—	—
Woodlark, 3, by King Alfonso.....	2	—	—	—
Billetdoux, 3, by Billet.....	5	—	—	—
Westwind, 3, by King Alfonso.....	1	—	—	—
Warder, 2, by Wanderer.....	1	—	—	—
Totals.....	138	23	19	\$32,197

By contrast with some of the other stables Mr. Kelson's season was anything but a success, his horses only winning 23 races out of the 122 for which he sent no less than 135 starters to the post, and as 45 of the 122 races were fixed stakes, including some of the handicaps, with an entrance ranging upward from \$25 to \$250 each, the large total of entrance money paid is not surprising. Nor is the non-success of the stable any surprise in view of the fact that Mr. Kelson ran one or more horses in nearly all of the great two-year-old stakes, in which they met the "cracks" of the Rancoos and other stables. As it was, Brookwood did very well, he winning the July and Sapling Stakes at Monmouth Park and was second for the August Stakes at the same place, while of the other two-year-olds they failed to even secure place honors in the stakes for which they ran. Of the three-year-olds Water Lily did fairly well, running second to Tolu for the Chesapeake at Baltimore, the same to Duchess for the Monmouth Oaks, and the same to the Mimt colt for the Palisade Stakes, while she was in turn third to Freda for the Elizabeth and to Duchess for the West End Hotel Stakes. In September, however, when in receipt of 18 pounds from Lonisset she won the Bridge Handicap at Sheepshead Bay and with Bill's Head and Thackeray as the only other competitors, she had no trouble in winning the Jerome Stakes at

Jerome Park. The stand-bye of the stable were Heel and Toe and Rica. Both did good work, and although they were often beaten and when the crowd thought they ought to have won, no proof was ever adduced but that they ran for all they were worth, both as far as their trainer and riders were concerned. Of the two, Heel and Toe was the more successful, winning the Fordham Handicap at the Spring meeting and the Manhattan Handicap at the Autumn meeting at the American Jockey Club. She also won the Congress Stakes at the Autumn meeting at Washington. Rica also won several good races, but in races of importance like the Rancocas, Suburban, Midsummer, Harvest and other handicaps, she was either outclassed or asked to concede too much weight. Valley Forge also won two purses; one at the beginning of the year at Baltimore, the other with the finish at Jerome Park. The other winners, Equipose, Mystic and Kinsman, each secured a race after several efforts.

Of those that wore the "tricolor," the stable's regular riders did nearly all the work, Meaton riding in 77 races, of which he won 13, while Feakes in turn won 9 out of his 46 mounts. Of the other races Hayward rode 6 without a win, W. Donohue and Conklin each 2, Leach, Bushnell, Lewis, Davis and Green 1 each, of which Green's was the only win.

THE ALGERINE STABLE.

Mr. W. L. Scott's "cherry and blue halves" are of all colors the most difficult to recognize in a large field of horses. For the season just ended they were first seen at Washington, and subsequently at Baltimore, Sheepshead Bay, Monmouth, Saratoga and back to Sheepshead Bay and Baltimore. The stable's greatest success was during the first half of the season, although it fairly held its own at Sheepshead Bay in September. The total for the year is as follows:

Horses.	Placed third.	Placed second.	Placed first.	Gross amount won.
Greystone, 3, by King Alfonso.....	14	3	6	\$9,615
Florio, 2, by Virgil.....	12	5	1	9,400
Blue Grass Belle, 4, by War Dance.....	9	3	2	3,430
Referee, 4, by Horrah.....	17	2	3	3,025
Krishna, 2, by Algerine.....	11	1	1	2,225
All Hands Around, 4, by War Dance.....	9	2	2	2,110
Simon, 3, by Algerine.....	11	1	1	467.50
Edna, 2, by Algerine.....	2	1	1	400
Volla, 3, by Billet.....	3	—	—	—
Wellington, 3, by Billet.....	1	—	—	—
Tunis, 3, by Algerine.....	1	—	—	—
Nirvana, 3, by King Alfonso.....	1	—	—	—
<b>Totals.....</b>	<b>85</b>	<b>17</b>	<b>17</b>	<b>\$30,972.50</b>

Of the above, \$4,240 was paid as entrance money for purses and stakes. Of the horses named above, Florio led off the season in good style by winning the Youthful and Brentwood stakes at Washington, and as she followed up those successes by winning the Foam Stakes at Sheepshead Bay she was among the earliest of the two-year olds to be hailed as one of the "cracks" of the year, especially as she beat the Rancocas representative Wanda, which rumor made out to be one of the best horses ever bred by Mr. Lorillard. Florio's next effort was for the Surf Stakes when, with a penalty of seven pounds, she failed to get a place, Wanda winning by half a length. A week later, they again met for the Great Post Stakes when at even weights (112 pounds) Florio won easily by two lengths and the good opinions advanced early in the meeting were to all appearances amply confirmed. But Florio subsequently lost form and she was in turn beaten for the Flash and Spinaway Stakes at Saratoga, for the Autumn and Flatbush Stakes and Great Eastern Handicap at Sheepshead Bay, and for the Central Stakes at Baltimore. Of the other two-year-olds Krishna did well. He was second for the Clabangh Memorial, third to Florio for the Foam, and after several subsequent defeats won the great two-year-old Selling Stakes at Sheepshead Bay, for which he was entered to be sold for \$1,000 and was bought by Mr. Pierre Lorillard for \$2,000, of which \$500 came back to the master of Rancocas, he running second with Cricket. Krishna has not run since, although he was nominated for some of the Autumn Stakes by his new owner. Of the three-year-olds Greystone is the only one that paid his way. He led off by winning the Coney Island Derby over a very heavy track, gaining a reputation of being one of the best mud horses of the year. The reputation was not well sustained, for Chanticleer, to whom he was asked to concede 12 pounds, beat him in the mud at Monmouth on the second day of the meeting, which took so much out of him that on the third day of the meeting he was unable to beat Ecuador for the rich Lorillard Stakes at even weights. Nor can it be said that he was ever really himself again. He was unplaced for the Travers, and after some in and out running at Saratoga he succeeded in landing the Fall Selling Stakes at Sheepshead Bay when carrying only 87 pounds. He was entered to besold for \$2,000, and it cost the stable \$1,150 to buy him in, a trifle less than half the value of the stakes.

The four-year-olds belonging to the stable each in turn did fairly well. Blue Grass Belle, after running second for the Washington Cup, won the Baltimore Cup. She next won two handicap sweepstakes at Sheepshead Bay, where she was also second to Gen. Monroe for the Coney Island Cup, and in turn failed for several other races at a distance, including the Autumn Cup. Referee also failed for several handicaps, but won one at a mile and three furlongs at Sheepshead Bay, and subsequently the Summer Handicap at Saratoga. All Hands Around did very nearly the same, she winning two handicaps, both at Sheepshead Bay, one in June and the other in September, the distance of both being a mile and a furlong. Of those that rode for the stable, the colored boy, Lewis, carried off the honors by winning seventeen out of eighty-five mounts, Higgs winning six out of thirty mounts; the remaining three mounts were blanks, one each for Murphy, Blackburn and Billy Donohue.

THE ERDENHEIM STABLE.

The third of the Pennsylvania trio is that owned by Mr. N. W. Kittson of Minnesota, who it will be remembered took the whole of the Chestnut Hill establishment from Mr. Aristides Welch. Mr. Kittson is personally more attached to trotting and pacing, and as such is famous from one end of the country to the other. He had the good sense, however, to place his running interests, both breeding and racing, in Major J. R. Hubbard's hands, who, as "Albion" of *The Spirit of the Times*, is one of the most read contributors of all the sporting matters of the day outside of those regularly employed. Mr. Kittson could scarcely have found a better manager and what, between winning races and selling to an advantage, there is no doubt that the balance-sheet for the Erdenheim estate shows a fair profit on the money invested. The gross winnings of the horses in training are as follows, of which \$2,245 was paid out in entrance money:

Horses.	Placed third.	Placed second.	Placed first.	Gross amount won.
Rataplan, 3, by Alarm or Reform.....	9	4	1	\$17,407.3
Panique, 3, by Alarm.....	1	1	1	3,360
Elizabeth, 2, by Strachino.....	9	2	1	2,420
Pardee, 2, by Alarm.....	7	1	1	2,201.7
St. Paul, 3, by Alarm.....	1	1	1	500
Albia, 3, by Alarm.....	10	1	1	275
Ma Chere, 2, by James A.....	1	1	1	195.4
Preciani, 2, by Alarm.....	3	—	—	—
St. Louis, 2, by Alarm.....	2	—	—	—
<b>Totals.....</b>	<b>44</b>	<b>10</b>	<b>8</b>	<b>\$23,360.1</b>

\*Including \$909 in plate.

Of the above the two wins contributed by Panique and St. Paul were at Jerome Park, on the first day of the Spring meeting. Certainly a more brilliant beginning could not have been had, but St. Paul broke down a day or two after, and Panique was sold after the Withers to the Dwyer Brothers, for whom he a day or two after won the Belmont, which ended his success for the year. Soon after the sale of Panique well-sustained rumors were afloat that Major Hubbard had still the best string to his bow, and that he would win the Emporium at Sheepshead Bay to a certainty. The conditions of the Emporium are such that a skillful manager can take advantage of in the matter of allowances. This Major Hubbard did so well that he was able to start Rataplan at the lowest weight, and as Jimmy Lee had the colt trained to the hour, the stable was not only able to win the stake easily, but the odds were such that 6 to 1 was freely offered, with the horses at the post, Rataplan was subsequently able to win both the Travers and Inquois Stakes at Saratoga, without any great opposition, but his subsequent career was anything but an easy one. For the Omnibus Stakes at Monmouth he was penalized seven pounds, and could only get third. He declined all engagements at Sheepshead Bay and of three races at Jerome Park in October he only won one, while he was in turn beaten for the Autumnal Handicap and Potomac Stakes at Washington.

Of the two-year-olds in the stable both Elizabeth and Pardee showed fair form. The last named was especially unfortunate in being left at the post. One of the occasions being for the Champion Stallion Stakes at Monmouth Park, which, Major Hubbard seriously thought, lost him the race. Pardee subsequently ran third for the Great Eastern Handicap and won a purse race at Jerome Park. Elizabeth was also somewhat unfortunate in starting, but she showed her metal in winning a handicap at a mile at Sheepshead Bay in 1:43, and the Capital Stakes at the same distance at Washington. Albia's single win was at Saratoga, while Ma Chere and Preciani, although non-winners under the Kitsuon "gold and blue stripes," have since done well for W. C. Daly. The riding for the stable in the matter of winning mounts was divided up by Fitzpatrick, Sheridan and McCarthy, "Fitz" winning 4 out of 14 mounts; Sheridan, 3 out of 20; McCarthy 3 out of 6. Of the others Charleston failed twice, Green and Quirk once each.

Famous American Trotters—Ripton.

A horse that obtained a great deal of celebrity in the early days of American trotting was Ripton, and although most of the races in which he took part occurred in New York and New England, he was nevertheless well known, by reputation at least, throughout the entire country, and was especially noted for the ease with which, being a horse barely over fifteen hands high, he could both pull weight well and go a distance. That he was also a horse of immense constitutional power is shown by the fact that he was on the turf for seventeen consecutive years, making his first appearance in 1835, at which time he was able to trot a mile in about 2:45, and his last one in 1852, he being then so old and decrepit as to be distanced in the first heat of the race by horses whom a few years previously he could easily have vanquished.

In appearance Ripton was a striking horse, being a bright bay in color, with four white legs and a blaze face, and his style of going was so bold and showy as to at once attract attention to him. In addition to this he was a very resolute little fellow, taking hold of the bit strongly when engaged in a brush on the track or road with other horses. As stated above, he was first heard of as a trotter in 1835, being brought to New York city by a man who showed him to Peter Barker, the owner of the trotter Dutchman, the arrangement being that Barker was to purchase Ripton if he proved himself to be a horse of considerable speed. This he did by trotting a mile in 2:46, and doing the work in such a chipper manner as to show that with age he would improve, he being then five years old. The result of this trot was his sale, and for the next dozen years the bay pony was a well-known and conspicuous figure on the New York tracks and roads, his chief celebrity being obtained during the time that he was in the hands of that master reinsman, Hiram Woodruff. He had several drivers and won some good races before Woodruff took him in charge, and shortly after this took place he was matched to go two-mile heats against The Don, and after he had won the first heat in 5:19 quit so badly in the second that he was easily defeated by the other horse. After Ripton had won this first heat odds of 100 to 5 were freely laid on him by the betting men, and it is a curious fact that some years later, when trotting against Americans, similar odds were laid on Ripton's opponent, and that horse was also defeated.

The result of this race, which was one of the first in which Woodruff rode Ripton, convinced that driver that the horse needed a great amount of work to prepare him for a hard contest, and a couple of seasons later, not much having been done with him in the meantime, he was brought out early in the Spring of 1842 to trot against Lady Suffolk and Confidence, winning easily in 5:10, 5:12, and as this was about as fast as two miles had been trotted up to that time the performance greatly increased the little horse's reputation. This feeling resulted in a match being made for the following week between Lady Suffolk and Ripton, two-mile heats, over the Centerville Course. The mare beat him in 5:10, 5:15, but the backers of Ripton were not at all ready to accept the result as conclusive evidence of Lady Suffolk's superiority, and a couple of months later they came together at Philadelphia. Ripton won the first heat in the then unequalled time of 3:07. A break in the second heat came near causing him to be distanced, and in the third the little bay horse and the old gray mare had as hard a fight as is often seen on the race track, Woodruff winning it with Ripton in last stride by rousing his horse with the bit, while Bryan, the owner and driver of Lady Suffolk, was whacking away at her ribs with the whip. Writing of this race Woodruff has said: "Lady Suffolk tried her utmost and hung on to the last stride like

a dog to a root. It is not certain to my mind but that she might have won it if Bryan had left his whip alone and had helped her out with the bit. I am of the persuasion that, unless a horse is a real slug, the whip does more harm than good in a head-to-head struggle. Natural emulation then incites the horse to do all he knows in such circumstances, and the business of the rider or driver is to aid his efforts and assist him, not to keep leathering away at him with the whip; it is no aid at all, and is more likely to make him swerve, or give up in disgust. In a tight squeeze, with a generous horse, a bit is the thing to win with."

Another good race in which Ripton took part was at two mile heats, under saddle, against Bradywine and Don Juan, and although he did not win it, Ripton created a good deal of excitement by trotting a half mile in 1:11, which was at that time thought to be a wonderful performance. In the early part of 1842 he beat Lady Suffolk another two-mile race, and soon after this started in a race of two-mile heats to wagon against Confidence, and to those who are accustomed to the light wagons of the present day, it will be a matter of interest to know that in this race the vehicles pulled by these horses weighed 181 lbs. This was a terrible load for a horse like Ripton, but in spite of it he managed to win the first heat in 5:15, although Confidence took the others. Not long after this he started in a three-mile race against Confidence and Lady Suffolk, beating them both in 7:56, 7:59, and then came a two-mile heat race to wagon against Americus, the last named horse winning, and as the time in one heat, 5:14, was the best on record at that day, it was esteemed a remarkable performance, and a match at three miles between the same horses was soon made. By virtue of his victory over Ripton at the shorter distance, Americus was made a strong favorite in the three-mile race by the betting men, and as Ripton struck his ankle in the first heat and came near being distanced thereby, the odds on Americus were \$100 to \$5 before the start for the second heat. Woodruff succeeded in winning it with him, however, and this race closed his performances, for 1842. To show what a remarkable little horse he was, it may be stated that he trotted fourteen two-mile-heat races that season, and of these he won thirteen. This record certainly shows Ripton to be a wonderful horse in point of capacity to go a distance and pull a heavy weight, and Hiram Woodruff always attributed it to the fact that he was not forced when very young, as when five years old he could not beat 2:45, and yet seven years later was able to do all that has been detailed above. After winning the races to which allusion has been made, Ripton was placed in the hands of George Youngs to be prepared for his three matches with Americus, they being mile, two-mile and three-mile heats in harness. They were all trotted the following Spring and Ripton won the trio of events in the easiest possible style, doing the three miles in 7:53, and the mile race in 2:38. This, however, was trotted in mud, and in spite of his being a horse of considerable knee action, Ripton was especially good in heavy going, and on the snow it was a matter of record that nothing was found in the East at that time able to beat him. Hiram Woodruff was never tired of dilating upon Ripton's wonderful ability to pull a sleigh at fast rate for four or five miles. "Our principal sleighing place," he says "was over the pavement to Harlem Bridge, along the road; and many a time I have driven Ripton along at wonderful speed. Great fun, sleigh-riding, when the air is keen and frosty, the sky clear, the snow bright and crisp, and you can dash along at a rate down in the thirties with confidence that your trotter will hold out to the end! Ripton was one of those—the best of them—the king of the sleighers! What a peal his bells would ring as he dashed down Yorkville Hill, ponding away with those white legs of his as if he would strike down to the ground, no matter how well-packed and deep the snow might lay. Here would be a group at this house, and another at that, taking their hot toddy to keep the cold out; and as they heard the swift shaking of the bells and the fast stroke of Ripton's feet like a charge beat upon the drum, they would run to the doors and windows, and crowd the stoop, and cry: 'Hello! here comes Hiram and the white-legged pony.'"

And so the little horse went on for years, beating a good many more than beat him; and seeming to come out every Spring with renewed speed and courage. But live oak will rot at last, and the numerous hard fights at two and three-mile heats were beginning to tell. He trotted on until old age had dimmed his sight and crippled his limbs, and then, when twenty-two years old, he was distanced in a first heat—the only time the flag had fallen in his face during a turf career of seventeen years—and retired for good.—*Breeders' Gazette*.

A Country Race Course.

At Oakdale, the other day, the people amused themselves with a little race-meeting for local horses, and Editor Bothly, of the *Heat Grover*, thus describes what he saw:

Californians have more fun than all the world. Oakdale has constantly some amusement on hand; altho' the people are by no means idlers, but hard-working and enterprising, nearly every one of them. Saturday last hundreds of stalwart rancheros assembled along the race course in the north part of town to witness the trotting and running matches. Ladies came in fine carriages, gentlemen in broad-cloth; business men, officials, plough boys, artisans came; tramps halted and took as much interest as anyone; sporting men vociferously sold pools to crowds of men who more than fifty times bet two to one on the favorites, and hundreds, we think thousands, of dollars were staked on the trotting and running races. Fortune wheels were on the grounds at which many a one tried his luck. There was good humor and good order and an abundance of amusement and much to be learned on every hand. Dogs came to the races—all kinds of spaniels, hells, terriers and greyhounds, and they were much interested, the mounted marshals being kept busy lashing them off the course where they insisted on running with and disconcerting not a little the race horses. The men we talked with about the course, were from every quarter of the globe. Australians, Welch, Canadians, French, Germans, Irish and South Americans—men who had raced horses in Kentucky, Canada, and who had joined in the cheers at the great Derby course in England. It was noticeable that most of them had an accent or an intonation, either natural or unconsciously acquired by contact with foreigners. Aggressive enterprise is characteristic of these people; for proof of it, look at their noses and hear their quick positive tones. Four out of five of the men carry a Lord Wellington beak. It was their noses that brought them to this Coast. Snub noses stop in New York or Old England, Grechans get no farther than Illinois or Kansas, the Romans lead their owners to the "loud-resounding" Pacific. Fact. At last they got away—the horse—and amid cheers and much excitement they bounded like deer. Altogether, there was a big time and everybody enjoyed it pleasantly. Men lost and won money with a fair air, and, so far as we could see, nothing of an unusual nature occurred, and the races were a complete success.

## A Birdseye View of Kentucky.

"Speaking of the great horse interests in Kentucky," said a veteran turfman, "the name of Dr. Herr should take precedence among the breeders. It was he who, nearly thirty years ago, bred and sold a trotter for \$1,500, which was considered at that time a fabulous sum to give for a horse. Since then the price of horseflesh has increased materially. There have been many horses sold from two, three and five thousand, and all the way up to forty thousand. Dr. Herr has a magnificent place, about a mile from Lexington which he calls 'Forest Park.' The land is peculiarly adapted to stock raising purposes while the arrangements for the care and the development of the stock could not be better. During his career as a breeder the doctor has raised a number of horses that have become famous. He bred, owned and developed Mambrino Pilot, the sire of Hannis, 2:17 $\frac{3}{4}$ ; Mambrino Gift, 2:20, and other fast horses. He bred Lady Thorne, the fastest trotter of her day, also Lady Stout, who started the world by trotting as a three-year-old in 2:29, also Bonner Boy, 2:26, and Mambrino Kate, 2:24. He developed the noted daughter of Blackwood, Proteine, record, 2:20. He drove the celebrated stallion Director, now owned by a California gentleman, in the stallion's earlier days. At present 'Forest Park' contains a considerable quantity of high-priced horseflesh. At the head of the stud is Mambrino Patchen, full brother of Lady Thorne. Then there is Mambrino King, conceded to be the handsomest horse in the world.

"In the same county as Dr. Herr, Fayette, is 'Fairlawn,' the property of General William T. Withers. The establishment, which was started soon after the war, is now one of the most valuable breeding places in the country. For many years the noted stallion Almost stood at the head of Fairlawn. The General suffered a great loss by the death of the stallion last Spring, Happy Medium, a great sire of trotters; Aberden, another son of Rysdyk's Hambletonian, and Woodward's Ehan Allen, Jr., are the choice stallions now at Fairlawn.

"Another well-known breeder in Kentucky is B. J. Treacy, proprietor of Ashland Park, a farm of two hundred acres, and which joins the old homestead of Henry Clay. Mr. Treacy not only breeds trotters, but he trains and develops them as well. He is credited with having brought out Allie West, the sire of Jewett, the present noted pacer; Glendale, 2:20 $\frac{1}{2}$ , and many other horses that have acquired distinction upon the turf.

"Col. Richard West, of Georgetown, is one of the best known breeders in the State, but he is not so extensively interested as formerly. For many years 'Edgewood' was one of the most noted breeding farms in the country. At the head of the stud was the noted sire Dictator, full brother of Dexter and sire of Jay-Eye-See, 2:10; Phallas, 2:13 $\frac{3}{4}$ ; and Director, 2:17. Col. West has bred and raised quite a number of trotters that have performed with credit upon the turf. Blackwood, who has proven himself a great sire, is now the principal stallion at Col. West's place, near Lexington.

"Four miles from Lexington is situated W. L. Simmons' Ashland Stud Farm. This is a great stock breeding establishment, and for many years the world renowned sire George Wilkes reigned supreme. At various times Mr. Simmons and his brother Phil, who now owns a well-appointed farm called Norwood, have owned such famous track performers as Jim Irving, 2:23; May Bird, 2:21; Prospect Maid, 2:26, and the old stager, Kansas Chief, 2:21 $\frac{1}{2}$ .

"Bryan Hurst, of the Bethel Church Farm, a few miles from Lexington, is not as extensive a breeder as some of those already named, but he has owned and developed quite a number of noted trotters, prominent among them being the brown mare Sallie Chorister that met an untimely death in 1876. Among the foals produced by this well-known mare were Belle Brassfield, by Cripple, record 2:20; Proteine, by Blackwood, record, 2:18; Homer, by Mambrino Patchen, and the brown filly Admiration, by Administrator.

"Visitors to the breeding farms in Kentucky rarely fail to call on Ike Smith, proprietor of the Henderson farm, six miles from Lexington. Mr. Smith is a breeder and trainer of twenty-five years' experience. Among the noted horses that he has bred and handled were Maggie Briggs, record 2:27, by American Clay, which he got \$6,000 for; John E., by Clark Chief, record 2:23 $\frac{3}{4}$ , which he sold for \$4,000. He sold Humboldt, by Stocking Chief, record 2:20, to W. H. Wilson for \$2,000, and within thirty days after the sale Charles Green, the noted handler, paid Mr. Wilson a bonus of \$8,000 for the animal.

"Abdallah Park, near Cynthiana, Ky., is the property of W. H. Wilson. This is one of the most beautiful and complete farms in the United States. It was he that brought the famous stallions George Wilkes and Smuggler to Kentucky. Indianapolis, 16 years old, by Tattler, dam Indiana, by Mambrino Chief, is at the head of the stud at Abdallah Park.

"Col. R. S. Strader, of the Lexington fair grounds, was formerly an extensive breeder, but of late years he has devoted considerable of his time to the handling of trotters. Col. Strader was the first to put upon the turf the mare Purity, by Blue Bull, that subsequently got a record of 2:30. He also drove Crittenden, who trotted as a three-year-old in 2:30; Memento, a yearling colt by Administrator, that trotted in 2:56 $\frac{1}{2}$ ; and Alcantara, by George Wilkes, who gained a record of 2:23 when but four years old.

"Two miles from Lexington lives a gentleman named A. S. McCann, who has devoted almost a life-time to farming. Of late, however, he has turned his attention to breeding horses in which he has become quite prominent. He owns at present the promising young sire Red Wilkes, by George Wilkes, dam Queen Dido, by Mambrino Chief. Red Wilkes is the sire of the noted Phil Thompson, who trotted as a three-year-old in 2:21, and this year, when but six years old, gained a record of 2:16 $\frac{1}{2}$ .

"Woodlake, a large tract of farm near Frankfort, is the property of Major H. C. McDowell. The gentleman is quite an extensive breeder and in his stud is Triton, a full brother to Trinket; King Rene, a promising stallion by Belmont and Dictator, who is partly owned by David Bonner and Major McDowell. Among the noted horses developed by Major McDowell, were Trinket with a four-year-old record of 2:19 $\frac{3}{4}$ ; Magenta 2:24; Ronana 2:29 $\frac{1}{2}$  as a four-year-old, and others.

"Near Paris is the Hambletonian Stock Farm of Col. R. G. Stoner. The farm is finely located, and the buildings and other arrangements will compare with any place of the same character in Kentucky. At the head of the Hambletonian Farm is Strathmore, now 18 years old, by Rysdyk's Hambletonian, dam Lady Waltemire, by North America. Strathmore was foaled at the farm of Aristides Welch, at Chestnut Hill, Philadelphia. Among the most prominent of his get are chestnut Hill, record 2:22 $\frac{1}{2}$ ; Monitor, 2:29 $\frac{1}{2}$ ; Santa Claus, 2:17 $\frac{1}{2}$ ; and Steinway, 2:25 $\frac{1}{2}$ . Col. Stoner has also the six-year-old stallion Mambrino Russell, by Woodford Mambrino, dam Miss Russell, the dam of Maud S., by Pilot, Jr.

"Three miles from Paris is 'Sunnyside,' the property of James Miller. It was here that Jim Monroe, by Alexander's

Abdallah, and the sire of the trotting stallion Monroe Chief, record 2:18 $\frac{1}{2}$ , was bred. At present there are a number of well-known horses upon the farm, prominent among them being the young stallion Westwood and several brood mares. Mr. Miller was the owner of the stallion Joe Downing, that died at Sunnyside in 1880.

"Near Frankfort, is R. P. Pepper's South Elkhorn Stock Farm. Mr. Pepper is one of the largest breeders in the blue grass region and he has always from a hundred to a hundred and fifty horses on hand. It was Mr. Pepper who brought out Woodford Chief by Clark Chief, that obtained a record of 2:22 $\frac{1}{2}$ , Catchfly, that trotted this season in 2:18, and Blanche Amory, who has record of 2:26.

"One of the largest and handsomest stock farms in the State is Glenview, the property of J. C. McFerran & Son, situated six miles from Louisville. There are about eight hundred acres at Glenview and the land is kept in the best possible condition. At the head of the farm stands Cnyler, 16 years old, by Rysdyk's Hambletonian, dam Grey Rose, by Hambletonian. Cnyler is the sire of the phenomenal trotter Elvira, who, in 1884, made the fastest time, 2:18 $\frac{3}{4}$ , ever recorded by a four-year-old. Lucy Cnyler, one of the fastest horses in Mr. Bonner's stable, is one of his get. She trotted a trial to wagon in 2:17 $\frac{1}{4}$ . Among others of his get are Day Dream, record 2:21 $\frac{1}{2}$  at four years old, Algate, record 2:23 at four years old; Orient record 2:30 at four years old.

The McFerran's also own Nutwood, record 2:18 $\frac{3}{4}$ , by Belmont, dam Miss Russell, the dam of Maud S., by Pilot, Jr. Nutwood is the sire of Manon, record 2:22 $\frac{1}{2}$ ; Felix, 2:19 $\frac{1}{2}$ ; and Nuthreaker, who made a yearling record last Fall of 2:42 $\frac{1}{2}$ . At Glenview can be seen Pancoast, record 2:25 $\frac{3}{4}$ , a rising young sire by Woodford Mambrino; Orange Girl, the famous trotter, record 2:20, and some fifty other brood mares and youngsters.

"A few miles from Louisville is the Indian Hill Stud farm of R. S. Veech. The farm consists of about five hundred acres of rich, rolling land—even for Kentucky—representative blue grass land. At the head of the stud is Princes, 14 years old, by Woodford Mambrino, dam Primrose, by Alexander's Abdallah. Princes was the sire of the noted trotter Trinket, record 2:14. The dam of Trinket, Onida, by Rysdyk's Hambletonian, died at Indian Hill four years ago. Mr. Veech has some one hundred head of brood mares and young stock at Indian Hill.

"Woodburn, the property of A. J. Alexander, is probably the largest and most celebrated breeding farm in the United States. It is situated near Spring Station, in Woodford County. There have been more famous trotters bred at Woodburn than at any other farm in the world. It was here that Maud S., 2:09 $\frac{1}{2}$ , was foaled. Nutwood, 2:18 $\frac{3}{4}$ , was also raised here; also Wedgewood, 2:19; Voltaire, 2:20 $\frac{1}{2}$ ; Indianapolis, 2:21; Robert Bonner's great mare, Manetta; Princes, sire of Trinket; Mambrino Gift, record 2:20, and numerous others. There is now at Woodburn the most expensive collection of trotting stock in the country. Heading the list is Belmont, by Alexander's Abdallah, now 24 years old. Belmont is the sire of Nutwood, Wedgewood, Dick Moore and Nil Desperandum. Harold, now 20 years old, is the sire of Maud S., Noontide, 2:24; McCurdy's Hambletonian 2:20 $\frac{1}{2}$ ; and others. Among the broodmares upon the farm are Belle, the dam of Belmont; McCurdy's Hambletonian, and others; Blandina, the dam of Abdallah Pilot, King Rene, Swigert and others; Hermosa, Hortense, Indiana, Malmaison, Miss Russell, Primrose, Sue Dudley and other celebrated mares.

## FISH.

## Notes From The Fish Report.

From the report of the Fish Commission we collate the following outline notes: The salmon supply for 1883 showed a marked decrease, while in 1884 it was still more marked. Various causes are given for this, among which are the illicit fishing done during the closed season; the loss of salmon in the tules; the consumption of seals and sea lions; dams and other obstructions. Through the efforts of the Commissioners and Deputy Jones many violators have been brought to justice. From January 21st to October 23d, 1884, \$2,000 had been collected for fines. The number of violators convicted during that time was 93. It is the opinion of the Commissioners that unless stringent measures are adopted the streams and bays will soon be without a needful supply of salmon. In 1884 the Spring run of salmon was very light. The June run, which in ordinary years has been the heaviest, resulted in a small showing, while the Fall run was the lightest ever known in the memory of the oldest fisherman. In former years perch were very plentiful, but have become scarce of late. In the opinion of the Board a law should be passed to protect them from seine fishing for at least two years. Chub and pike are becoming plentiful, while the dace are nearly extinct. Carp have increased in large numbers and have proven a success. In a few years it is expected there will be any quantity of them. Sturgeon are on the decrease, owing to the mode of fishing adopted by the Chinese. It is suggested that a law be passed protecting sturgeon less than 24 inches in length. The catfish have thrived wonderfully and have become a popular food fish. Shad have done very well since planted in our rivers, and the whole Pacific Coast is now well stocked. The increase of this fish has been marvelous. This is the only State in the Union where shad can be marketed the year round. Striped bass are not plentiful. The Commissioners are of the opinion that the catch of all kinds of fish will decrease if the Chinese are allowed to use bag nets. Eels have also been a success. It is thought black bass would thrive well. Fish laws are violated on the upper rivers by persons who have established fisheries from Fremont to Redding. The increase since 1879 in the number of outfits for the taking of salmon, and especially in this and last year, has been treble; nets and boats increasing from 220 to 1,500. The cost of running the canneries will average about \$50,000 each per year. About \$200 is the average price of a net, and owing to the wear and tear they have to be renewed annually. Fishing boats in this vicinity average \$200 each, while on the upper Sacramento river a skiff is used, costing about \$40. The Commissioners make an appeal to the Legislature to make appropriations for two hatcheries, one in Santa Cruz or vicinity for the hatching of trout, and the other on the upper Sacramento for the breeding of salmon. The Commissioners can no longer look for salmon supplies from the United States Commissioners, as the demand now exceeds the supply largely.

Last week 2,500 trout, of the Lake Tahoe and McClelland river varieties, were brought down from the Shebley hatchery and taken to Folsom, being consigned to General John McComb, Warden of the State Prison, who has accommodations for them. They average about 1 $\frac{1}{2}$  inches in length, and were strong and healthy.

People will tell yarns about fishing, and we notice the following only in the hope it may induce some of them to issue their tales with some probability of truth. This beats catfish in the Sacramento Slough by the railroad shops gobbling down young half-grown ducks:

"One warm afternoon a stroller, coming to the borders of a small pond, threw himself down beside a little tree that leaned over the water so that its lowest branches were but a few feet above the surface. While reclining in the shade and idly watching the leaves that fell upon the water and sailed away, the stroller suddenly heard a chirping overhead, and looking up saw on a long limb two small sparrows. Near them, fluttering in the air, rising, falling, and now and now alighting beside them, was the mother-bird. She was evidently engaged in giving the fledglings their first lesson in flying. But the young birds could not be induced to leave their support; they merely raised their little wings and followed their mother out from the tree by edging along side by side on the limb. As she renewed her efforts, the faster they went, until finally they were out on the very tip of the branch overhanging the water which reflected their every movement.

For some time these motions of the mother and young were kept up, and perhaps our observer sank into a doze, for he suddenly became aware that one of the birds had disappeared, that a great splash had occurred under the limb, and that the mother-bird had changed her cries to those of alarm. But it was evident from the mother-bird's actions that the little bird had not flown away. The stroller concluded that it had fallen into the water, and he rose to see if he could recover it, when there shot up from the water a long, slender fish that quickly darted through the air and snatched the remaining bird from the limb, falling back into the pond with a splash and a whisk of its tail. This startling leap astonished the observer, but it also fully explained to him the disappearance of the other young bird.

The pike was evidently out hunting, and spying the birds upon the limb, it had carefully measured the distance, and by two vigorous jumps had captured them both. The mother-bird was both grieved and dazed by the sudden calamity that had befallen the fledglings, and perhaps fearing a similar fate for herself, and soon flew away.

If the idea of the writer should be realized, it would certainly be a grand thing for the amateur fishermen. There is no doubt of the rapid increase of this fine fish in our public waters, from the extreme south to the extreme north, for they abound, we are told, as far as Puget Sound. Fly-fishing for shad would indeed be grand sport. The question, however, of their taking the fly on principle, if we may use the term, is by no means a settled one. During the week we have been examining the authorities on this point, but so far can find no satisfactory evidence that such is a habit of the fish. Still it may be with the shad as well as the black bass, and the latter, in company with Mr. Chas. Keating, we have trolled successfully for in Lake Temescal. Can any one give us the absolute fact of fly-fishing for shad in the Connecticut and Savannah rivers, and the extent to which it is practiced? The matter is of great future interest to California anglers, and we shall be thankful for any authentic information we can be supplied with.

A Washington dispatch says: "Senator Dolph was anxious to have a carload of fish sent by the Fish Commissioners to Oregon, but there was no fund to pay for transportation, so he secured free transportation for the Commissioners' car and its attendants over the Northern Pacific Railroad, and it will start in a few days loaded with lake fish. The Fish Commissioners proffered to supply the waters of Oregon and Washington Territory with shad, brook trout, lobsters, and clams, provided transportation could be obtained. For these also, Senator Dolph has succeeded in getting a free passage."

This, no doubt, will be good news for our brothers in the North. In reference, however, to the "clam," it seems to us a work of supererogation to send that animal to Washington Territory, for if there is one place in the world where it exists already by the million and of the largest size, it is in the mud-flats of Washington Territory.

That twenty-foot Lake Tahoe fish has again been seen, this time by Captain Pomin, late of the steamer *Tod Goodwin*, and Mr. Robinson, of the Lake Shore House, at Glenbrook, both of whom agree with the descriptions heretofore given by the fishermen—that the monster is fully twenty feet long, with a massive and prominent dorsal fin, resembling that of a shark. The owners of a schooner and several fishing boats are going to try to capture him.—*Reno Gazette, Dec. 5th.*

We wish the monster could be caught, or something definite of it ascertained. For nearly twenty years, like the sea-serpent in the ocean, it has been a legend of the lake. All our best newspapermen, Dan Quille, Sam Davis, and men like them, have exhausted their ingenuity upon it, yet still it remains a myth.

In consequence of the late storm our lovers of fishing have not been able to make their usual attacks on their favorite points, and so for the week we have no special reports. We have, however, a few notes we desire to dispose of.

A fourteen-year-old boy killed a ten-foot shark near Santa Barbara recently, after an exciting struggle with the fish. It strikes us the rash boy was fortunate in coming out victor in the struggle.

Two ugly-looking fish which seem to be a cross between the squid and cuttle fish, were taken in San Diego Bay lately.

## ATHLETICS.

## Definition of an Amateur.

"An Amateur is any person who has never competed in an open competition, or for a stake, or for public money, or for gate money, or under a false name, or with a professional for a prize, or where gate money is charged; nor has ever, at any period of his life, taught or pursued athletic exercises as a means of livelihood."

## Kittleman Retires.

The King of Sprinters has been a long time quiescent, but this week we received a copy of the *Romeo, Mich., Hydrant*, containing the following notice:

MARRIED.—At the home of the bride in Romeo, Mich., on Wednesday afternoon, Dec. 10, 1884, by the Rev. J. A. Young, Mr. M. K. Kittleman, of Harper, Kansas, and Miss Ida Buzzell, of this place. No cards.

Mr. K. has previously intimated that this interesting event was one of the probabilities of the Winter, and its consummation would mark his retirement from the track. The young lady who has united her fortunes with his is represented to be beautiful, accomplished and wealthy withal, a happy com-

bination of the elements of happiness as the world goes. We congratulate him on this last and most creditable win. His genial disposition augurs well for perpetual joy in his domestic environment and his suave ways and native energy can hardly fail to succeed in legitimate business to which he proposes to turn his attention. The bridal pair visited the East on a wedding tour and while in New York received the following "doing up" in the World:

Sporting men generally and those particularly who are interested in foot racing will be surprised at the announcement that M. K. Kittleman, America's speediest runner, has been married and will retire from the track. Probably no man in this country has a more interesting history than "Hurricane Kit." To recount his exploits would take up columns of space and the story would seem more like fiction than truth. A few years ago "Kit" was a raw country man. He first put on running shoes at Muscatine, Ia., and could not run 100 yards faster than eleven seconds, but later at Denver he astonished old foot racers by showing an even time performance. The lady "Kit" married was Miss Ida Buzzell, the reigning belle of Romeo, Mich., whose father is one of the wealthiest lumber dealers of the Northwest. There are three sisters, and the fame of their hearty and accomplishments is widespread. One of the sisters is now the wife of Charles McIvor, of Montreal, who startled the pedestrian world three years ago by winning a sprint handicap at Sheffield, England, and gaining for his backers, Homer Pennock and Bob Floyd, a large amount of money. Then he surprised his friends in his run with Charles Biggar, of Toronto. It was McIvor's boast that he was the finest former man that ever pulled off a shirt on a Sheffield path. The remaining Miss Buzzell is still in Romeo, Mich., and migratory sprint runners with any claims to hearty will wend their way thither and woo the belle of the Wolverine State.

Mr. Kittleman and his wife were in this city yesterday, stopping at the Gilsey House, but left last night for Boston. They were married at Romeo on Wednesday, and will go to San Francisco, expecting to arrive there in February.

Kittleman's experiences are remarkable. His daring exploits in his profession have cast those of such well-known sprinters as Ed Moulton, Pete Duffy, Bill Armstrong, "Hank" Crandall, "Justy" Landaker in the shade, and it has often been wondered at that he has not met a violent death. Probably the most hairbreadth escape that "Kit" is the hero of was at Leadville three years ago. He was matched to run Cambell at that place, and had agreed to let the native win. His intention was to give the miners a "cross" and win the \$20,000 dependent on the result. When "Kit" arrived in Leadville he had bolts under his arms and was in no condition to run a race. He also held Cambell cheap, and allowed him to get the best of the start. To the surprise of all in the job, Cambell won by a yard. Those who had backed "Kit" immediately knocked the judges and referee, John W. Cozad, down, and prevented a verdict being given. "Guns" were drawn and the excited spectators prepared to kill Kittleman and all his friends. Cozad, however, prevented bloodshed by saying he would reserve his decision until 8 o'clock at night, when he would meet them at a well-known resort. At that hour an excited mob took possession of the street in front of the saloon and Cozad appeared at the window and said: "Gentlemen, my decision is that Kittleman wins this race." Then he fell to the floor to avoid being riddled with bullets. But the Cambellites were bent on obtaining revenge. They approached a woman named Jennie Craig, who was intimate with Cozad, and the next morning the referee was found dead in his bed. An analysis made at Denver showed that sufficient arsenic to kill fifteen men had been administered him. Kittleman had previously got out of town with a whole hide. Then he went to Trinidad, Col., to "turn" "Bat" Masterson and Luke Short, two men who "run" that paradise. There is no law in Trinidad, but the first to "get the drop" is "boss." Masterson and Short have bloody records, and "what they say goes." "Kit," cool and suave, undertook to get their money by losing a race to Ed Moulton, but the wily gamblers saw through the scheme and drove the pair out of town at the pistol-point. "Kit" was not to be deprived of the money, however, and on his return to Denver met a number of foot-racers at the Windsor Hotel barroom, where they threw dice to see who should go back to Trinidad and "get the party and turn them." The lot fell to Bill Bowman, who was told that he took his life in his hand in going there. He considered \$15,000 on the hush worth the risk and went. He made the terrors believe him a "world heater," and soon ran and lost the race, by which Masterson and Short lost all the money they had made at Spanish monte and stud-horse poker during the year. This and numerous other like affairs have made Kittleman comparatively wealthy. He has a large farm near Romeo and intends to settle down and leave the dangerous but remunerative profession of foot-racing. His wife is said to be worth \$100,000 in her own right.

#### George vs. Mathews.

The above wrestling match took place last Friday evening at Platt's Hall in the presence of about 200 people. "Greek" George was required to throw Mathews four times in the hour, twice Græco-Roman and twice catch-as-catch-can. George gained two falls in quick order, but in throwing Mathews the second time, he fell over him and struck his head with great force against some hard substance on the stage, which completely dazed him. Both men came to time, however, for the third bout, but after about twenty minutes of uninteresting wrestling (Mathews acting on the defensive very skillfully), George gave up the contest, explaining that he was unable to wrestle in his present condition. George is a man of great strength, but his knowledge of wrestling tactics is very meagre. Mathews displayed a great amount of pluck throughout the contest.

#### Myers Lowers a Record.

The principal feature of the joint meeting of the Athletic Association, of the Ninth Regiment, and the College, of the City of New York, was the grand running of L. E. Myers. He made two attempts to heat the 50-yard record of 5<sup>1</sup>/<sub>2</sub> seconds, held by Malcolm Ford. In the first trial the watches showed 5<sup>1</sup>/<sub>2</sub> s., and in the second trial Myers made the distance in 5<sup>1</sup>/<sub>2</sub> s. The watches all showed the same time. The official time keepers were J. McMasters, G. A. Avery and P. J. Donohue. Myers was in grand form, and our Eastern exchanges to hand claim that he did not beat the pistol.

There is a possibility of Schunmaker and Mathews coming together in a Græco-Roman wrestling match, as the former is determined to train down to 150 pounds. Should Schunmaker get down to the required weight of 150 pounds, Mathews must wrestle, (or take water), inasmuch as he has publicly announced his willingness to meet Schunmaker at 150 pounds.

Charles O. Breed, the well-known amateur heavy weight lifter, gave an exhibition of his lifting powers in the presence of a dozen gentlemen at his gymnasium, Lyun, Mass., Dec. 13. Mr. Breed lifted with one hand a barrel of flour and fixtures, weighing 219<sup>1</sup>/<sub>2</sub> pounds, 240 times in one minute, the aggregate weight amounting to 26 tons 650 pounds. He raised the barrel on an average of four times a second. The feat is one which Mr. Breed has attempted before, his best previous record being 204 tons in one minute. Among those who witnessed the performance were C. D. Chadwell, Justice of the peace, who certifies to the record made, and representatives of the local newspapers. George N. Nichols was timer and Frank H. Cann, superintendent of the Y. M. C. A. gymnasium, J. W. Kimble and Walter E. Slade counters.

Nov. 29th, at Westminster Aquarium, London, track 9 laps to the mile, A. W. Sinclair undertook to beat the amateur record at running 100 miles. He gave up at 91 miles, but surpassed all previous amateur performances from 82 miles to 91 miles, the new records being: 82 miles, 12h. 49m. 50s.; 83 miles, 13h. 3m.; 84 miles, 13h. 13m. 20s.; 85 miles, 13h. 45m. 20s.; 86 miles, 14h.; 87 miles, 14h. 15m.; 88 miles, 15h. 29m.; 89 miles, 14h. 44m.; 90 miles, 15h.; 91 miles, 15h. 7m. 20s.

It is painful duty this week to have to record the death of Mr. Horace Hawes, which took place at his residence in Redwood. Mr. Hawes will be remembered in connection with his active participation in all the games of the Olympic club a few years since. His last appearance on the cinder path was at the Recreation grounds in January of '83.

## BICYCLING.

### Tournament of the Bay City Wheelmen.

The approaching tournament of the Bay City Wheelmen is creating an interest in bicycling hitherto unknown in this State. Over a score of riders will participate in racing for the first time, while there will be but few absentees from among our speedy wheelmen. The entries are filling up beyond the most sanguine expectations. It is to be hoped that the fast riders in the interior towns will enter one or more of the events. At any rate we expect to find among the competitors R. R. Flint, of Sacramento, Bert Moore, of Stockton, E. C. Aoraham, of Santa Cruz, and E. Blood, of Haywards. The following is the complete programme, in the regular order, with the list of prizes: 1st, Exhibition by the drill corps of the Bay City Wheelmen; 2d, Seventy-five yards slow race, a bicycle lamp; 3d, Half-mile scratch bicycle race, 1st, Butcher's cyclometer, 2d, Duryea's saddle; 3d, One mile handicap bicycle race (for boys under sixteen), 1st, gold medal, 2d, a bicycle bell; 4th, Two-mile scratch bicycle race, 1st, gold medal, 2d, bicycle lamp; 5th, One-mile handicap walk, 1st, gold medal, 2d, silver medal; 6th, Fancy riding by E. Rideout and C. J. Schuster; 7th, Five-mile scratch bicycle race, 1st, gold medal, 2d, racing suit; 8th, one-mile time race, 1st, Thompson's cyclometer, 2d, cyclist's wallet; 9th, Ten-mile handicap bicycle race, 1st, gold medal, 2d, silver medal; 10th, One-mile maiden race, 1st, hagle, 2d, M. I. P. hag; 11th, Two-mile race, grasshopper machines, 1st, Underhill's cyclometer. Intending competitors are once again reminded that entries will be received by E. Mohrig, 252 Market street, up till Saturday, Jan. 3d, 1885.

The Indianapolis Bicycle Club has joined the L. A. W.—The proprietor of *Wheeling* (Eng.) proposes publishing a New York edition.—The Citizens' Club of N. Y. has a membership of '84.—"If I had the villain here I'd make him eat his bicycle, wheel and all," says Pauline Clark's father in speaking of the elopement of Harry Tufts (professional trick rider), with the fair Pauline.—The six-day race talked of between Woodside and Brooks and Morgan and Armaindo is off, the latter party having paid forfeit.—Prince and Woodside are matched for a fifteen-mile race for \$100 a side. The race will shortly take place at Chicago.—The ten-mile race at the tournament on January 11th will be a desperate one.—Memphis is to be inflicted with six-days' race, eight hours a day. Another one of Tom Eck's schemes.—One of Eck's "Ghost" Stories: A story is going the rounds that Louise Armaindo and W. J. Morgan rode against horses in a small town in Missouri. The "ouly Tom Eck," who was with them, arranged a scheme to fill the general purse. Arriving in town, the machines were conveyed quickly to a hotel and locked up away from the gaze of curious sight-seers. To the hotel proprietor, a fat, good-natured but very curious fellow, they "only" vouchsafed the information, as a great secret, that the machines were geared, so that one revolution of the pedal caused two of the wheels, and by that means the horses would easily be defeated. Ten minutes later the proprietor, boiling over with importance, imparted the valuable information to a friend, who told another friend, and so on, in the old-fashioned way, until every one in town knew all about it. Great anxiety to hack the bicycles was shown on the track next day, and Eck "scooped" in what little was to be had, while Armaindo and Morgan were getting left the length of a street.

### "Ten Thousand Miles on a Bicycle."

The *Wheel*, a weekly cycling journal of New York, in its issues of Nov. 21st, 28th and Dec. 5th, printed several columns concerning the 757 mile tour made through California last Summer, by H. C. Finkler, of the San Francisco Bicycle Club, who sent the report to Karl Krou, in order that the latter might use an abstract of the roads described for his "Ten Thousand Mile on a Bicycle." This book, which will probably appear in March, will contain reports of roads from every State in the Union, (the author himself has wheeled in twenty-four different states and provinces), and also the names of three thousand subscribers, names representing all the important towns of those States, and arranged both alphabetically and geographically. The number of subscribers enrolled on the 15th of December was 2,182; and though the book will be sent for \$1 to each person who pledges in advance to remit that amount on receipt of it, the price to purchasers after the publication day will be \$1.50. The edition will be five thousand copies. Full descriptive circulars may be obtained on addressing Karl Krou, University Building, Washington Square, New York.

### Prince Successful.

By telegraph we learn that the 15 mile bicycle race between John S. Prince and W. M. Woodside resulted in a victory for the former by 6 feet, after a hard race. The time, 53m. 9<sup>1</sup>/<sub>2</sub> s., is a very slow for champion bicyclists, even on a seven lap track. The race took place at the meet of the Illemites Bicycle Club at Chicago on Christmas Day. Woodside, it will be remembered, made the 15 miles in his fifty-mile race on a 3<sup>1</sup>/<sub>2</sub> lap track in 45m. 41a.

### A Wonderful Invention.

We had the pleasure of inspecting this week a new and wonderful invention in the shape of a steam bicycle. A reciprocating engine is attached to the "Star" bicycle on the bar, which connects the handle with the small wheel in front. Benzine is used for heating purposes and steam can be got up in a few moments. At the present time the supply of the fuel and water has to be replenished every hour, but with anticipated improvements supplies enough for several hours will be provided for. Ninety pounds of steam can be carried, but the machine can be run with twenty pounds. The machine averages about five minutes a mile over any ordinary road. The pedals can be used in conjunction with the steam power whenever necessary and the speed will be increased accordingly. When the steam power is only used the pedals are brought into requisition for foot rests. By the nutscrewing of two bolts the entire machine can be taken off and there remains the ordinary "Star" bicycle in its entirety. Possibly the reader has pictured a machine which is both awkward and cumbersome, so he will be all the more surprised when he learns that everything connected with the steam part of the bicycle, the boiler, water-tank, engine, benzine tank and all the appliances weigh only eighteen pounds. The engine is furnished with quarter horse power. The machine has reached the present state of perfection, only after four years of continuous study and experimenting by the inventor, Mr. L. D. Copeland of Phoenix, Arizona. At the request of several wheelmen, Mr. Copeland gave an exhibition with the machine at the Mechanics' Pavilion last Sunday. The few gentlemen who were fortunate enough to be present, were unanimous in the praise of the invention. The ingenuity of the contrivance is a matter of astonishment to those of a mechanical turn of mind. Mr. Copeland has patented the invention, and is negotiating with the large bicycle firms in the East, for the purpose of entering into some engagement for the manufacture of the steam bicycle. As a great many people are desirous of examining the machine, Mr. Copeland will no doubt engage a hall where all interested will have an opportunity to see the machine at work.

R. R. Sacramento writes: 1st—I notice F. R. Cook credited by a daily paper with riding a quarter of a mile in 36<sup>1</sup>/<sub>2</sub> s.; please give particulars. 2d—What is your opinion of the John S. Prince theory of riding a mile on a bicycle to equal the trotting record of 2m. 9<sup>1</sup>/<sub>2</sub> s. of Maud's. Answer—1st.—F. R. Cook was timed a quarter of a mile at the Bay District Race Track in 36<sup>1</sup>/<sub>2</sub> s., but it was not a standing start, besides which there was a very strong wind at his back the whole way. On the same day E. Mohrig also made the distance in 37 s. The arrangements for timing were such that accuracy could not be arrived at. 2d.—The veriest hosh imaginable and entirely without any claims for consideration. It is another one of the many schemes resorted to by Prince in order to work the unsuspecting press so as to keep his name prominently before the public. Some people bite at anything.

"The Springfield Wheelman's Gazette" seems to have John S. Prince on the brain. Little else but items about him can be found in its columns of late.—*Mirror of American Sports*. The worst case of the pot calling the kettle black that has ever been our good fortune to come across.

The racing machines of some of the competitors for the approaching races, which are kept at the Pavilion, are greatly admired by the rinkers.

Los Angeles has two bicycle clubs, the Los Angeles Bicycle Club and the Centaur Bicycle Club. Neither of them, however, are very active.

The following are the officers of the Sacramento Bicycle Club: President, D. Lindley; Secretary, Robert Hawley; Captain, R. R. Flint.

The Portland Bicycle Club has a membership of fourteen.

There are eight wheelmen in Albany, Oregon.

There are only nine riders in Sacramento.

### MAMBRINO WILKES.

BLACK STALLION, SIXTEEN HANDS IN HEIGHT, BY GEORGE WILKES, son of Bredley's Hambletonian, bred by B. J. Treacy of Fayette County, Kentucky. Dam Lady Christiana, by Toddhunter's Mambrino, son of Mambrino Chief. Second dam by Pilot, Jr. Toddhunter's Mambrino, son of Mambrino Chief, his dam Ripton's dam, by Potomac.

This is the largest and one of the best colts of George Wilkes, weighing 1,200 pounds, combining the Hambletonian and Mambrino strains, and also several thoroughbred crosses. His colts demonstrate that he possesses in an eminent degree the same faculty of transmitting the family qualities to his offspring which put George Wilkes in the front ranks as a sire of trotters.

George Wilkes has 27 representatives in the 2:30 list, of which 14 have records of 2:25 or better, 5 of 2:20 or better, and 3 of 2:18 or better. There are all the get of Geo. Wilkes, and do not include Phil Thompson, William H. and other famous grandsons and granddaughters of this prepotent sire.

Will make the ensuing season, commencing February 1st, 1885, at the Drew Stables, STOCKTON, and L. M. Morse's near LODI.

### Terms.

\$40 for the season, or \$25 single service. This low rate brings the service of this horse within reach of breeders, but does not argue any inferiority to the horse of a service held at one or two hundred dollars. For further particulars address

A. L. HINES

OUR BIOGRAPHICAL SKETCHES.

Mr. Wm. Golcher, Sr.

In resuming these sketches of our prominent sportsmen, for a time incidentally interfered with, in whatever light his claims may be regarded, none are more worthy of distinctive notice in our columns than the subject of this sketch. From early boyhood he has lived a life of patient, honest industry; from early manhood he has been associated with the manufacture of firearms and the promotion of legitimate sport, in later years, though time has in a measure frosted his locks, he is still the same earnest, skillful mechanic, the same keen sportsman, the same genial companion on the field or at the trap he was when he first cast his lot among us. The great and only drawback to the pleasure of the writer in preparing this sketch for publication, is that he feels this time he cannot do justice to his subject. It is no easy matter to embrace in a short newspaper article the salient points of a long, ambitious and successful life, largely associated as it has been with pioneer events and the progress of State civilization, and, at the same time, do full justice to the individual most concerned. No one knows the difficulties we labor under in this case better than Mr. Golcher himself, and so without further preface, we hope his friends in this country—and they are legion—will, like himself, judge as fairly and be satisfied with the sincerity of our effort.

Mr. Golcher, Sr., was born in Birmingham, England, in 1834, so that he is still in the prime of life, with a constitution that promises a healthy, vigorous old age. At this time his father had established and owned a large factory for making gun locks, and stood at the head of that branch of the business in England, his grandfather being the inventor of the percussion cap, though under some difference to the modern cap and called at the time the "pill cap." In 1840, when only six years old, his father was seized with the desire to emigrate to America, and putting his plans into execution, a few months after was located in Philadelphia. The first business of his father, in his new home, was to take a contract from the Government to make what were called Northwest Flint Locks to supply the Indian trade. At thirteen he developed the mechanical skill that has distinguished his after life, and began to help his father in the large business which the old gentleman had so soon built up. In a year and a half afterwards the percussion cap, as now known, superseded the flint-lock, and the particular business of the young man was to change the lock; so his skill in this particular branch, the modern nipple, which has so often been spoken of in this city, was the result of a practical acquaintance with the percussion lock and nipple from its earliest introduction. At seventeen, by his practical and theoretical knowledge, he worked himself into the position of foreman of his father's establishment, then employing thirty hands, and his knowledge of the percussion locks and the making of rifles became perfect. With laudable pride he still keeps and shows a muzzle-loading rifle he made himself in those days, at seventeen years, from one end to the other without assistance, and which is authenticated by members of the Schlotterbeck family who then worked in his father's factory. For exertion and beautiful workmanship this rifle was the finest of the day, and even now will bear comparison for both with many others of more pretentious make. For four years longer he remained with his father, and then at twenty-one went into business for himself, selecting St. Paul, Minnesota, as the place of settlement for life.

At this point we lose sight of Mr. Golcher as a studious and practical mechanic, fitting himself by application to business for that larger field of usefulness opening before him, and come to know him as a sportsman, a prominent trader with Indians, an influential citizen in municipal affairs, and a high State official, and in all these higher and more important relations of life, we shall find him as enterprising, faithful and intelligent as the young mechanic in his father's workshop. He soon made himself known and felt in Minnesota, where he had the whole State to himself, and where besides his regular business he quickly built up a large and lucrative trade with the Indians. In a few years he was known far and wide round St. Paul as a keen and reliable sportsman, and was always selected by the southern gentlemen visiting his section of the country in the hunting season, to head their larger and more extensive camping-out expeditions. These occasions, of course, brought him reputation and business. About this time he made two remarkable guns, one for a great Chippewa Chief, and another for a great Sioux Chief, from which, on account of their character for shooting, he secured a still greater influence and trade with the native tribes in addition to what he had enjoyed before. Seeing the necessity, in order to more generally protect the public game of the State, about this time, he started the first sportsman's club known in St. Paul, and then after a collapse, during his absence for a short time, revived it a second time. As a memento of these days he keeps in his store an excellent photo of the first pigeon match between the St. Paul and Lake City Clubs, in which he can be recognized easily in the ranks of his men. In this match fifteen birds to the man were shot at, and here at this early day he commenced that fatality of missing the one bird wanted for a clean score, which somehow has clung to him up to the present time. All know that Mr. Golcher, in our local matches, is a clean, keen, deliberate shot at the trap; that he will kill eleven out of twelve birds straight along, oftener, as we have frequently remarked, than any other one man in our State, and then, as if it must be so, miss a ridiculously easy bird and lose the chief honors of the day. In this first Minnesota match we find the same thing—his club won, but his individual score was fourteen out of fifteen birds. The St. Paul Club, under his guidance, was the largest and

best club in the Northwest, including, as members, the Governor of the State and many other high officials, with a roll of members as high as sixty.

In 1861 an event occurred in his State which in a great measure changed the course of his future life, and was the first link in the chain of forces governing every man's life, which led to his coming to California. This was the great Indian revolt, in which those people, instigated by bad advisers, massacred all the white families living outside the settlements, and destroyed an immense amount of property. When subdued, thirty-three influential Indians were hung upon the same gallows, and most of these being Mr. Golcher's best customers among the different tribes, it finally broke up his Indian trade. The other branches of his business suffered also, for the large number of visitors from the Southern and other States who made St. Paul their headquarters during the hunting season, diminished very much for several years after the revolt, and this, perhaps, was more injurious to his business than the total disruption of his Indian trade. He still, however, continued the even tenor of his way, and in 1869 patented two guns—a breach-loading rifle, and a breach-loading shotgun—for the latter of which he received a royalty for several years. In this year, 1869, he built the first large store and factory for the manufacture of rifles, guns and pistols west of Chicago, and this property in St. Paul he still owns. In 1873 he leased this property for five years and retired from business, but continued to reside in St. Paul. During this retirement, without his wishes or solicitation, he was elected to the City Council, and remained in office about four years. During his incumbency of office he was Chairman of Public Buildings and Fire Department, the latter of which he had been an active member for fifteen years. In these positions he acted faithfully to the people, and St. Paul to-day, in public buildings and sanitary measures, bears many evidences of his enterprise, sagacity and liberality. During this period of public life, the Governor of the State appointed him one of the three Fish Commissioners, at the time that the Hon. R. O. Sweeney, a man of the same type, was one of the Board, and the two did much in stocking the waters of the State with choice and valuable selections of fish. From that time up to the present Mr. Sweeney remained President of the Board, and in conjunction with Mr. Golcher built the State Hatchery, covering six acres, a property they still together own entirely. During the time Mr. Golcher labored in this connection, the annual assignment of salmon eggs from the State Hatchery in California, for distribution throughout Minnesota, was 300,000 to 600,000. The average hatch of these eggs reached 85 per cent., so it will be seen how much Minnesota is indebted for good fish food to the intelligent labors of Mr. Golcher. He attributes this large percentage of young fry for subsequent distribution to the pure water used, an element that certainly could not be boasted of at our old State Hatchery at Sau Leandro.

In 1877 he visited the old home of his family in England, and at the same time traveled over Europe, when he carefully examined the principal manufactures of firearms to note the improvements made. Shortly after he visited England a second time, and the second trip led to his final settlement in San Francisco. During this visit he met Mr. P. Claybrough, who owned a gun-store in this city, under the management of a younger brother, as well as a factory in Birmingham under his own. The meeting resulted in the copartnership of Claybrough & Golcher, as the firm now exists among us, and in 1878 Mr. Golcher assumed the management, his family following in 1879. On casting his lines in this city he soon developed his old fondness for field sports, and quickly gathered round him a large number of friends and patrons among the better and wealthier classes of our legitimate sportsmen. He started first the Pacific Gun Club, which died out during a visit East, but before making this visit the club presented him a handsome and costly gold headed cane fully and duly inscribed. On returning and finding it impossible to resuscitate the Pacific, he inaugurated the celebrated Cosmopolitan Club, which after a brilliant but short career, while Mr. Golcher was again East, also broke up from dissensions among the members. When he found on returning home no hope of re-organizing the Cosmopolitan existed, owing to Frank Maskey, one of the leading members opposing the movement, Mr. Golcher could not live without his regular shoot, which had become second nature to him, he joined the equally celebrated California Gun Club, and of this distinguished body of marksmen he remains a prominent and honored member.

Of the career of Mr. Golcher in California it is not for us to speak, for it is too well known to the legion of earnest patrons and warm personal friends he has gathered around him. As a merchant, gentleman, sportsman, citizen and mechanic he is thoroughly esteemed by all. Although at the head of a large and profitable establishment, ably assisted by his two sons in the store, chips of the old block, and skillful artisans in the workshop behind, Mr. Golcher, still attends strictly to business. If any favorite rifle or gun of his customers needs special work, it is his cunning hand that must do it for them, or they are dissatisfied. In the season when trap shooting is the order of the day, the old veteran is always to be found at San Bruno with his club, but now, as in earlier days at St. Paul, still the victim of fate in missing that one fatal bird, mostly the easiest kind of a shot too, that robs him of a clean score of twelve. If at these matches anyone wants to bet a few dollars, he can never go far wrong in hacking our old friend for eleven birds—but no more. Long may his life be spared.

The clubs did not do much last week owing to the violence of the storm. Some of them had none of the members out, some had, and those who braved the annoyances of the weather made fair bags. By a letter received by Mr. Bogart from the keeper of the Tule Belle Club, we learned the water was never seen so high on Sberman Island for many years. The ducks, however, were there in multitudes, canvashacks forming the larger proportion.

The naval army of hunters were out at the Bridges, Alviso and some did well, while others did nothing. Too many shooting for pleasant sport.

The Golcher Brothers have built a new and more comfortable house at Alviso marshes. Judge Rix, the true old sportsman is down there every week. Golcher, Sr., paid a visit to Ryan's Ark, at Bethany, in the early part of the week and had good shooting.

A number of professional market hunters were in town during the week but returned at once to their arks and stables, as they thought they could see as much there as in the wet streets of San Francisco and he a great deal more comfortable. Many of these were going to quit shooting for the market until game brings a better price. They can make nothing at the figures ruling.

Mr. Kelly, of the sportsman's Headquarters, Market street, near Fifth, with his two young boys, was out at Alviso and bagged 78 birds in two days. He could get no shooting after 4 o'clock P. M.

We have heard many complaints of late of the sensitiveness of the Winchester Arms copper-primer now generally used. It is said they are so sensitive, that the concussion of the first barrel explodes the second, without the hammer striking the plunger. Several of the true hunters have lately been knocked out of their boats by the simultaneous explosion of both barrels and in other cases badly jarred. They declare their intention of giving up the use of copper-primer if continued to be made so sensitive. The cause of this is obvious enough. When hammerless guns were first made, a gun we never did and never shall like, the hammer being short and the springs less strong than in other guns, they often missed fire, and to obviate this annoyance and defect in the gun, a more sensitive copper-primer was substituted. This now produces the opposite extreme, discharges both barrels at once and knocks the poor hunter out in one round hadly. If necessary we can give the name of men who have thus suffered.

Mr. Ladd, of the gun store, Kearny street, with his brother and a friend, were out two days at Alviso last week. The party returned with 120 ducks of mixed breeds. They could have got more the last day, but they left their main ammunition supply at the station, not thinking they would require so much. On returning home, Mr. Ladd, in the true spirit of the gentleman sportsman, gathered all his employes together and treated them to a grand duck snapper. They did not drink soda water at the snapper either. This was a thoughtful and graceful action of Mr. Ladd, just such a one as we like to commend.

The Valley Record, Gilroy, has the following about the local club:

Thirty-seven hunters from Gilroy were present, at Soap Lake last Sunday. The total number of ducks killed was 1,069; highest number by one man, 75; lowest number, 1.—Three hunters killed 55 snipe.—A man and a dog with no gun gathered in 18 ducks that had fallen beyond range.—Fruitig won his wager on his new boat—it did not leak.—The boat race between Whitney and Fruitig, for a purse of \$40 comes off on December 25th, weather permitting.—George Enstie is building a boat, and will challenge the winner to a trial of speed on New Year's day.—Did not get the report of the man that capsized his boat and lost his game, or the man who slept in his boat and had to be thawed out or catch the language of the irate individual who crawled up a quarter of a mile to fire on a hand of decoys, or what Loupe remarked when he found that Dunham had disappeared with his fine lunch.

Sculling for ducks, which became popular last season, in the sloughs and creeks of the marshes is good sport. Those gentlemen who have preserves and have keepers usually take a man to scull the duck-boat, while they sit comfortably forward and do the shooting. The less fortunate do both the sculling and the shooting. In either case many persons prefer this way of duck hunting to shooting over decoys from a blind.

"A correspondent of the Call, writing from Bethany, says that ducks and geese are very plentiful in the tules at that station. Large shipments are made semi-weekly. There is a good hotel for sportsmen at the place and also a lodging house. Old Mac, who resides there and has a boat, is an excellent guide." We heard the same from other quarters. Parties going to this station can reach Bethany, we believe, twice a week by rail, and thence go to the duck ponds by wagon. Mr. Ryan, we understand, has his ark in this neighborhood.

"O. D. Carson returned recently from a trip to Merced county, where he was one of a hunting party of which W. L. Williams, of the Grangers' Union, Arthur E. Howell and George Gray of this city, and John Grider of Lockeford, were also members. Mr. Carson tells about a man by the name of Smith, of Badger Flat, killing 140 geese at two shots from a goose-destroying gun that he had built expressly for his own use. The gun has a bore about an inch in diameter. This story is said to be capable of verification. The party that Mr. Carson was a member of killed twenty-two dozen geese and ducks with ordinary guns in two days and a half's shooting."

Our Eastern brothers were nearly driven mad by the goose stories of California last season. If yarns like the above are continued right along, we expect to have the painful duty of recording many of their deaths from this cause before next May. Yet the gun part of the story is really true. Kaeding and Riddell, Washington St., last year manufactured a "goose gun" to order for a hunter on the Merced Plains, near Merced City, which proved on trial to kill 150 geese at each discharge of both barrels, that is, when the pestilent goose was voluminous enough in spots to enable it to do that slaughter. Why cannot the people of Oregon keep their geese at home and not send them here to annoy our farmers? If they would much hearthurning and jealousy would be saved both here and on the other side of the mountains.

Very Good.

Bison, it is said, are again becoming plentiful in the Colorado national parks. This is because they are carefully protected from slaughter by the Government game-keepers. Does not this show the value of such officers? If deer, elk, or antelope are to be left in this country, it will be through the services only of country game wardens. We must either have these officers or lose our large game. The same argument holds good with trout, and in certain places, with quail. Nothing but game wardens can save the public game of America. The government, equally interested in the preservation of our public game, as the citizen, may as well recognize the necessity of these officers at once, and thus end trouble, expense and disgrace.

Good for Cleveland.

The President-elect last season was out deer shooting, and like the immortal Washington he scorns to tell a lie. Under the circumstances, if the tale be true, as told by the papers, Cleveland is the man we want for President, for he will not lie. The concluding paragraph of the tale is enough to explain the whole. It is as follows:

"Soon after the Governor got the shot a friend of mine

thought to screen him and wrote to me from Woodhull that the Governor came very near getting a shot at a deer—there was only a little point of rocks that hid the deer when he passed, and when I met the Governor I told him I heard he came very near getting a shot at a deer. His face lit up as he said: 'I did get a shot at a big buck standing not over six rods from me, and I missed him.' Now the man, and an amateur at that, who would not tell a lie under the circumstances can be believed at all times."

### THE RIFLE.

Although the weather was very unpropitious on Sunday, the Shell Mound and Schutzen Park ranges were well attended both by military and private organizations. Rifle shooting has taken deep root and lasting hold upon the sharpshooters of California, and it is now scarcely possible to estimate the excellence to which they will arrive.

#### At Shell Mound.

The San Francisco Fusileers, a well-known body were out in number, to compete for their monthly medals. This week we can only give the scores of the winners. Fred Kuhls again maintained his supremacy and carried off the first-class medal. The shooting was at 200 and 500 yards with seven shots to the string. The score of Kuhls in such weather, 33 at 200 yards, and 29 at 500, out of a possible 35, is good work indeed. The change from 10 to 7 shots to the string is a recent innovation, which appears to give satisfaction. The scores:

FIRST CLASS.	
Fred Kuhls.....	200 yards—5 5 4 5 5 5 4—33
	500 yards—5 4 4 5 3 4 4—29
SECOND CLASS.	
P. H. Will.....	200 yards—3 0 3 4 3 3 4—20
	500 yards—3 2 0 2 2 4 4—17
THIRD CLASS.	
C. Paston.....	200 yards—4 4 4 3 3 4 4—26

Some of the German Fusileers, with the spirited Captain Stettin, at their head, were out practicing with their Mauser rifles and made good average scores. We have repeatedly described the object sought by Captain Stettin and his men, and it is a most laudable one. Major A. E. Klose shot with the German Fusileers, and got ahead on the refreshment racket, as he mostly does, especially when it embraces a bottle or two of Iron, Beef and Celery.

Messrs. Haughn, Johnson and Moore made a trial at the 600 yard target. The bull's-eye was barely to be seen, while the outer and inner, or second and third, discs could not be distinguished apart. Still they managed to make good scores, though we scarcely see bow they did so. The string had ten shots. The score:

Moore.....	42
Vaughn.....	40
Johnson.....	38

In such weather, at 600 yards out of a possible 50, that is not bad work.

Sergeant Hovey and Smith Carr had another contest on Sunday; 50 shots each at 200 yards, in which neither gentleman shot up to his standard average. The score out of a possible 250 was:

Hovey.....	45 44 42 45 45—221
Carr.....	44 40 43 41 46—214

Moore also shot, but he was not in the match, as Sergeant Hovey's letter given below explains. In this first shoot his score was best of the three.

Moore.....	45 45 43 44 45—222
------------	--------------------

SAN FRANCISCO, DEC. 22d, 1884.

EDITOR BREEDER AND SPORTSMAN—Dear Sir: Noticing one or two errors in the morning papers in regard to the rifle shooting yesterday, I take the liberty to correct them. The 50 shot scores were correct, as far as points go, though the match was between Smith Carr and myself alone, as Mr. Moore did not signify his intention of shooting that number of shots until he had fired about twenty rounds. After finishing the 50 shot scores, Mr. Moore and myself each fired two scores of ten shots, which I give in full, and which he will acknowledge to be correct. They were as follows:

R. C. Moore.....	4 5 5 5 5 4 5 4 4 4—45
	4 4 4 3 4 4 4 4 4 4—40
Total.....	85
Ed. Hovey.....	5 5 5 5 5 5 4 5 4—47
	5 4 5 5 5 5 5 5 4—48
Total.....	95

Mr. Moore's score of 40 and my score of 48, which were the last ones we shot, were the only match scores between us, as we then shot for the ducks and soda water(?) for the crowd. Yours truly, EDWARD HOVEY.

#### At Schutzen Park, Alameda.

The final medal shoot for 1884 of the California Schutzen club came off on Sunday at their range at Schutzen. About 80 members of this distinguished and spirited body of riflemen were present and the usual good time was enjoyed. The shooting was good here also under the weather conditions of the day. Philo Jacoby again went to the head for the champion medal, but he was closely followed by A. Strecker who finished only four behind. We again say we think it very wrong more copious details of the contests of this distinguished body of riflemen cannot be had. It is, we believe, the most numerous, wealthy and able private association of sharpshooters in America, and its reports are disgracefully meagre. The score: champion medal, Philo Jacoby, 429 rings; first class medal, F. Freese, 385 rings; second class medal, — Krahman, 370 rings; third class medal, Geo. Helm, Jr., 400 rings; fourth class medal, O. Bremer, 342 rings.

On the 11th of next month the Fifth Battalion Infantry, will resume its class medal contests, which have done so much during the past season to improve the shooting of the Battalion Teams, until in fact they have indisputably gone to the front ranks of our State or national riflemen. From the last Battalion orders, issued by Col. Ranlett, we find the following worthy of reproduction in reference to the teams.

"IV. The Battalion Team and Reserve, at date, is as follows: 1, Corporal Ed. Pierce, Co. A.; 2, Lieutenant S. I. Kellogg, Jr., Staff; 3, Lieutenant F. Kuhnle, Staff; 4, Sergeant J. A. C. McDonald, Co. A.; 5, Private C. F. Waltham, Co. A.; 6, Sergeant N. Williams, Staff; 7, Sergeant Ed. Hovey, Staff; 8, Private H. H. Burrell, Co. A.; 9, Kientenant Geo. H. Brown, Staff; 10, Sergeant Howard Carr. Staff; 11, Lieut. Col. H. D. Ranlett, Field; 12, Sergeant W. T. Carroll, Staff; 13, Private R. C. Moore, Co. A.; Major T. J. Parsons, Field; 15, Private A. A. Smith, Co. C."

Then in reference to the Battalion Trophy matches we find the following, which is certainly worthy of circulation among our riflemen:

"V. No teams having entered to compete for the Battalion Trophy in accordance with Paragraph IV, Battalion Orders, No. 6, c. s., the trophy is again offered for competition, as follows: Matches to be shot on the following dates unless by order postponed from these Headquarters—First Match, Jan. 11, 1885; second match, Feb. 8, 1885, and if other matches are necessary to complete, they will be held every fourth week thereafter until completed; other terms of the match are the same as those published in Orders, No. 6, except that the number of shots and distances is changed to 10 scoring and 2 sighting shots each, for each man, at 200, 500 and 600 yards. Company Commanders are requested to communicate with these Headquarters, on or before Jan. 1st, prox., regarding the distribution of the Staff between the Companies. Any Military Rifle will be allowed in the matches, and the rules of the National Rifle Association to govern."

We may have a wrong or imperfect understanding of this matter but we thought the Carson Team had accepted Col. Ranlett's challenge, and that the unsettled question of location where the contestants should meet alone kept them apart. As the above order appears, is it not strange that none of our State companies or private teams dare take up the gauntlet so boldly thrown down by the Fifth Battalion?

Owing to the season we have not time, for this issue, to prepare our usual Los Angeles sketch.

#### Life and Pay of a Jockey.

"Who are these jockeys?" asked the reporter of an old turfman at Jerome Park.

"They are stable boys who show some aptitude for riding, and have good pink. Of course when they start their lines are not exactly cast in pleasant places. There can be no more disagreeable life than that of a low-class jockey, hanging around stables and begging for mounts. Such an one is everybody's scapgoat, everybody's butt. But for a steady boy in a good stable, who really rides well, obeys orders and is honest, the life is not a bad one. Such a boy as Mr. Pierre Lorillard's Olney, for instance, who is a quiet, respectful, reliable young fellow, gets to be a favorite with his employer, and is very well treated indeed. For a boy of that sort, the pecuniary rewards are considerable. A salary of \$80 or \$100 per month, supplemented by \$25 for riding, \$50 for winning a race, with occasional extra tips for pulling off a big event, easily runs up to \$3,000 or \$4,000 a year, or twice the emolument of the average lawyer, doctor or engineer; and fully up to the income of the captain of an ocean steamer, with his great weight of responsibility. Great jockeys, of course, do much better than this. They are paid like prima donnas or fashionable preachers, but many of the inferior jockeys get much less than the figures I have named. Then every employer is not as good as the Lorillards, and in some of the purely commercial stables the boys have a hard time. But, after all, an ordinary jockey earns better wages than a boy of his class and age could earn in any other avocation, and is regarded as a hero and a swell by his own set.

"But the jockey's life, of course, along with the emoluments and honors, has likewise its shadows. His nerve may fail, when his occupation is gone, for race horses are often vicious brutes and very quick to detect a lack of courage and decision on the part of their riders. Even worse, the jockey may begin to take on flesh, when he either becomes too heavy to ride or is condemned to pass a life of martyrdom in the way of sweats, diet and medicine to keep down the growing corpulency. To this forced wasting may be attributed many shortened lives and broken constitutions.

"Then, in a moral point of view, the surroundings of a racing stable are not especially delectable. There are temptations to drink and excess, destructive to nerve and brain, and there are incipient temptations to dishonesty. When the unscrupulousness of many betting men is taken into consideration, it is creditable to the jockeys that so few succumb. Lastly, there is an ever-present danger from falls and collisions. The danger is not very serious in ordinary flat-racing, and even in hurdling, for but few deaths have occurred in the last twenty years. Neither sort of racing is so dangerous as polo. But accidents do occur, and if they do not cause death, often have lasting effects in fracture and strain.

"However, there are many jockeys, both in this country and in England, who survive all the accidents and temptations of a jockey's career, and live very respectably to good old ages. A man's fitness or unfitness is soon ascertained, and the money and fame, if they come at all, come early in life, when the capacity for enjoying them is at its height." N. Y. Commercial.

Point out to your boys all the weak points as well as the good ones of your horses, and see how soon they will be hunting them up themselves. It will teach them to be observing and will have a tendency to make more thorough horsemen of them, which will be of value to them as long as they live. The lack of judgment has cost many a man a great deal of money during his life.

At the annual fair held at Winchester, Virginia, this Fall, the premium for best stallions two years old was awarded to Sam Purdy, Jr., owned by Dr. D. D. Carter, of Woodstock. The same colt was also awarded the special prize offered by Capt. Dangerfield for the best Purdy colt of any age or sex.

The next meeting of the Board of Review of the National Trotting Association will be held at Chicago, on May 12, 1885.

Commodore Kitting has \$176,000 invested in 37 head of trotting horses.

#### Horse Lore by John Splan.

I have been asked by several persons to state what sulky I think the best and about what weight, and also what harness I like the best. I prefer, and have always used the Cumberfoot harness; I always used Brown's improved High Axle Sulky; drove "Johnson" to one that weighed 49 pounds, but think he could go faster to one that only weighed 45, as he was a very easy horse to drive. Over a half mile track I think it is necessary to have one that is a little heavier than one you would use on a mile track. Some horses are harder than others on a sulky; a steady going horse that does not pull or break will not warp a sulky as much as one that pulls hard; some horses when they break, run sideways which wrenches a sulky very badly.

I have been asked by a party what I think the correct treatment for a horse between heats. There is no particular rule; it depends upon the condition of the horse, the weather and other circumstances. When I bring my horse off the track I throw a light covering over him and give him a few swallows of water. I take his boots off, take a sponge dampened in warm water, sponge his legs from his knees down, and get the dust and dirt off of them; then bathe, with liniment or liquor that has been heated to about blood heat and sponge lightly, then take off the harness and scrape the horse gently, then would sponge him very lightly with warm water heated to about blood heat; would rub him very gently with soft cloths; this is a particular part of the business that I think is very often overdone. Too much rubbing in my opinion makes a horse's skin sore, irritates him, and instead of resting between the heat helps to annoy him.

After rubbing his hair partially dry, would then bathe him thoroughly with a liquor, always being sure to have it at least at blood heat. I am strongly opposed to putting anything cold on a horse's body when he is warm; would then cover him moderately, have him walked in the air, try and keep him out of the draft as much as possible, as I think a draft is what makes horses catch cold.

When you go to hitch your horse up the second heat, be sure and have your boots, harness and everything that will come in contact with the horse, perfectly clean and dry, then you will never have your horses legs or body chafed by the harness. Some horses are very thin in skin and it will chafe and become very painful. In that case I use a strong solution of White Oak Bark and bathe the parts three or four times a day.

In our last, we had advanced until we were giving horses three or four heats twice a week in about three minutes. I would suggest to keep increasing the speed moderately and work him twice a week from three to five miles and score him up and down in front of the stand the same as you would in a race at a moderate pace.

If you have a horse that is a bad scorer take another out with him and score them every time you work them, of course remembering to always do so at a moderate pace, turn them back and forth, make them score in front or behind as you see fit and by continually doing this you will eventually learn them what you want. I tried this plan pretty effectually with "Fanny Witherspoon" and was very much surprised at the improvement it made in her.

The first man who gave me that idea, was Mr. Hickok. In California, in 1879, I saw him train St. Julien. I think he was one of the most unruly and had acting horses I ever saw at that time. He seemed determined to do just as he was a mind to and nothing right. I watched Mr. Hickok work him. He commenced with him in the morning by having his boy jog him ten to twelve miles, he would come out then and drive him himself until he made him tired, then he would bring his pacer out for company, and it would seem almost impossible to hold St. Julien beside him. He did not try to make him go faster, but simply tried to learn him to let other horses near him; he persisted in that treatment with him until he made him the surest and most reliable trotter I ever saw. I saw a great deal of him while he was on the turf, and think he never broke in my presence more than two or three times, which was something wonderful considering the kind of a horse he was. When I saw him in California I did not think I ever saw any horse who was improved as much by education at this one.

I once had a long talk with a man who was in the habit of learning animals tricks and I got some ideas from him that I think have been very beneficial to me. He said in order to learn an animal anything you must keep up the same thing over and over with him and in that way the animal would find out what you wanted and would as a rule take pleasure in doing it. He thought animals took a great deal of pride in learning and I think so too.

The trouble in learning horses what you want them to do, is that as a rule, they start off with being badly educated and then something like men, learn bad capers easier than they do good ones, so in starting in training a horse you not only have to learn him new capers, but unlearn the old ones.

I have learned that some horses are very much afraid of a noise about a track. It seems they are like people, they can not control their nerves. With those horses I would suggest, to be very careful not to scare them in any way. I have found with a great many horses, that if you will stuff their ears with cotton, so that they cannot hear the noise, they will go better. The noise seems to take their minds off their trotting and the moment they do not hear it they think there is no noise.

Bella, was a very good acting mare, but I found that she would go a great deal better and easier when I had her ears stuffed with cotton.

I drove Nobby in a race last Summer and I stuffed his ears too, and I think it did him a great deal of good. I think the first man who I ever saw try that was my old employer Mr. Mace. By the way I will say that I think he was a young man of more resources of his own than any gentleman I ever saw.

In regard to a horse breaking, a great many people say, when they break they should be whipped, and learn to run. I believe that was the old idea when I was a boy, I think it has been entirely abandoned. My idea is to be very careful and never drive a horse to a break, not even in his work. Learn him that you want him to stay in a trot at all times. There is no reason why a horse should break in his work unless he does so accidentally; as a rule if nothing hurts him and he is properly shod, a horse will like to stay on a trot himself; of course there is a great many horses who get in a temper and break on that account, I think the horse should never be whipped when he breaks nor in fact at any other time. If a horse is finishing a very desperate race I do not think he should be whipped hard enough to hurt him as I think I have seen horses so punished at the finish of a race that it has attracted their attention, and that they have been hents which they would otherwise have won.

Horseman.

THE  
**Breeder and Sportsman.**

PUBLISHED WEEKLY BY THE  
BREEDER AND SPORTSMAN PUBLISHING CO.

THE TURF AND SPORTING AUTHORITY OF THE  
PACIFIC COAST.

OFFICE, 508 MONTGOMERY STREET  
P. O. Box 2603

Five dollars a year; three dollars for six months; one dollar and a half for three months. Strictly in advance.

MAKE ALL CHECKS, MONEY ORDERS, ETC., PAYABLE TO ORDER OF BREEDER AND SPORTSMAN PUBLISHING CO.

Money should be sent by postal order, draft or by registered letter, addressed to the "Breeder and Sportsman Publishing Company, San Francisco, Cal."

Communications must be accompanied by the writer's name and address, not necessarily for publication, but as a private guarantee of good faith.

JOSEPH CAIRN SIMPSON, - - - EDITOR

NEW YORK AGENCY.

Mr. C. C. Pettus at the office of the "Sportsman," 46 Murray Street, is duly authorized special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptions and arrange advertising contracts.

ADVERTISING RATES.

Displayed, \$1.50 per inch each insertion or pro rata for less space. Reading Notices set in brier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent will be allowed on 3 months, 20 per cent on 6 months and 30 per cent on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 60 cents each insertion.

Mambrino Wilkes, A. L. Hinds, Agent, Stockton.

Close of Volume.

With this number Volume V. of the *Breeder and Sportsman* comes to a close, and the best commentary on what it has contained is a reference to the index which appears. From that it will be learned that there has been a copious and general treatment of all the subjects embraced in the scope of this paper, and that all of the departments have been duly attended to. It has been the chief aim to make the paper useful and instructive, by offering substantial information on every department of rural life, and in addition to the articles which our own capable correspondents have furnished, there has also appeared a great deal of the most valuable matter from exchanges. Our exchange list contains the very best journals of the day, including papers from all sections of the United States, Europe and Australia, and even the East Indies. This gives an opportunity for selection which has been of admitted value to our readers and which has been a feature which has met with general approbation. In the treatment of sports of all description we have aimed to exclude everything which the most exacting could consider reprehensible, and in this respect feel that we have fully met the promises made. It is emphatically a family paper, interesting young and old who have a fondness for outdoor life, and this character we shall use every endeavor to sustain.

A Merry Christmas.

That Thursday last was an enjoyable Christmas to most of the California people was apparent so far as can be told by outward show. The rain which came so opportunely did away with all fears of a dry season, and as it fell so persistently day after day there was an assurance of a good year. Though the cloudy skies and the moisture was not quite as cheery as sunshine, people were becoming somewhat alarmed at the postponement of the rain, and there were reports of feed growing scarce, and those who have hay and oats to buy were expecting still higher rates. Then there is no real discomfort in California rains. The air is generally bland when the showers have fallen a while, and all that is necessary is to be protected by gossamers and umbrellas to enjoy the salubrity of the atmosphere.

All through the first part of the week the Oakland boats were thronged with people, and those who went from the city on the afternoon trips were loaded down with bundles, which were evidently the contributions of Santa Claus. There was merriment in nearly every countenance and few sombre visages. Even those who had not the means to celebrate as they would have liked, seemed to share in the general good feeling, and make the most of circumstances. That the New Year may be as happy we sincerely hope.

A New Jockey Club.

No one will give a more hearty support to the organization of a jockey club in San Francisco than the editor of this paper. But to carry out that idea we do not think it necessary to attack any other society that aids in keeping up racing, and cannot concur in onslaughts that are as mischievous as they are uncalled for. There is a far better course to pursue than has been mapped out by a few men who never aid in building up the sports of the turf, and whose apparent delight is to find fault, to captiously criticise and to use every endeavor to harass and annoy. Now that so many wealthy men are becoming interested in breeding and racing it is an easy matter to carry such a project to a successful termination.

The first thing is to draw articles of incorporation and secure subscribers to a fund which will be sufficient for the intended purpose. That a large amount will be required is evident, as the first essential will be a properly equipped course convenient to the city, and which will compare favorably with the racing parks of the East. To purchase the land and place the improvements upon it which will be in keeping with a first-class club will entail an expenditure of about \$200,000. While that sum will not build a park on the magnificent scale of Washington Park at Chicago, that of the Coney Island Jockey Club, or Jerome Park, it will be sufficient for all practical purposes, and it certainly seems that such an amount can be raised if a few of the leading men of the State will join in the effort. While it cannot be advocated as a paying investment—that is one which will return an immediate remuneration, if the land be judiciously selected the enhancement in value will eventually repay the outlay. But we do not suppose that the intention of the parties who are the most likely to organize a jockey club is to engage in a money-making scheme, but rather for the encouragement of racing on this coast, and for the enjoyment of true royal sport.

We sincerely hope that the project will be carried out and the scheme consummated in the near future, and that without antagonizing people by abuse and nonsensical accusations.

Closing of Stakes.

There are many stakes at home and abroad which will close on Thursday next. While the various advertisements give the particulars, we especially desire to call attention to them on this page so that none of our readers can overlook what is so manifestly for their interests to give heed to. The California stakes which close on the first of January are for trotting colts. These are the Stanford stakes for foals of 1883 and 1884 to be trotted in 1886 and 1887 in San Francisco, and the Occident Cup for the same ages to be trotted at the State Fairs in Sacramento in the same year. As will be learned by the published conditions, there is not much to hazard in making the nominations and a great deal of gain in entering into the engagements.

The Eastern stakes which close on the first of January are for running colts, and offer such inducements for California colts as should not be overlooked. As we have frequently advocated the advantages to breeders in this country which will be the result of generally making entries in the Eastern stakes, and our views are now so universally shared, it is only necessary to refer to the advertisements for the particulars.

On Tuesday, January 6th next, Messrs. Killip & Co. will sell at auction at the Bay District Track an importation of Clydesdale stallions, bred in Anstralia and brought from the Colonies to this Coast. The sale will be without reserve as the stock must be closed out. The horses of the Colonies are equal to any in the world and this sale will give breeders and farmers an opportunity to secure superior sires at reasonable prices. The stallions may be seen at the track, and catalogued pedigrees and full information may be had by application to the auctioneers at 116 Montgomery St.

Enough Said.

The *scrumptious* old fellow who, at times, essays to write turf articles for the *San Francisco Chronicle*, has seen fit to attack the Pacific Coast Blood Horse Association. That association stands so well with the public that defense is superfluous. If it gratifies him to echo the wailings of a few soreheads we do not grudge him the satisfaction.

The open stakes of the Washington Park Club, of Chicago, to be run at the second meeting, beginning the last week in June, will be found in the advertising department. Nominations close January 15th, and the particulars will be found in the advertisement. Extended reference to these important events will be made next week.

The Turf Outlook for 1885.

Now that the late rains have given a reasonable assurance of good crops the coming year, the prospects for the sports of the turf are very bright. There will be more colts in training than ever known in California before, and it is generally admitted that they are of high excellence. There have been wonderful reports of what the yearlings have shown, and quarters and three-eights run in time that almost staggers belief. In all probability the Spring race meeting of the Pacific Coast Blood Horse Association will be held as early as it was this year, and that will give plenty of time for those who have engagements in the East to meet them. It is not likely that there will be such a remarkable Springtime as that at Los Angeles, which prevented anything being done with the horses for a long time. This not only stopped the Santa Anita string from running here, but also was a serious detriment to them during the Summer. On account of the long stoppage in their work before leaving home, the preparation had to be hurried to meet their engagements at Louisville, Latonia, and Chicago, and there is little question that the ill effects of it was felt all through the season. Had they been in condition to run at the Spring meeting, with plenty of seasoning work during the Winter, they would have made a better showing. That even as long a journey as from New York here can be made without detriment, is evident from the running of Lucky B., Freda, Gano and Rapido. Therefore there can be active participation in the Spring races at home with good results in the later racing. The journey there is just what is needed, whereas if it precedes conditioning it is apt to be injurious. Altogether we feel confident that the California racing of 1885 will be extraordinary and our horses gain distinction at home and abroad.

The Church and The Turf.

The *Turf, Field and Farm* publishes a letter from a clergyman, in which he says: In the issue of Nov. 21, in giving your account of how Maud S. won the Woodburn Farm Cup, you say, "And several clergymen were there to see that the rules of the church were not violated." In your previous number you stated in regard to this race against time, "Hundreds of church-going people were present, among them several divines." Mr. Bonner was gratified to see a placard conspicuously posted on the grand stand bearing the words, "No betting allowed."

From the stress laid upon the fact that some of the preachers in Lexington attended this exhibition of speed, it would seem that it is a very unusual thing for a church member or a minister to attend a trotting exhibition of speed in Kentucky. I had supposed it was a common thing. I can see no reason why they might not enjoy such innocent pastimes. In nearly every village in the country they attend the amateur baseball games. It is not uncommon for them to have an athletic son who is a good player. There is scarcely a game of ball played anywhere that *some one* does not bet on it. If there had been numerous bets made at the Lexington track on the day of the last great performance of Maud S. on the event, that fact would not have made it less innocent for the church members or divines, in my opinion. They would not have been in any way responsible. That there was no betting allowed is so much the better.

But I am not one of those who believe that a church member may not witness a trotting race even if there is money up on it. He has no participation in the betting any more than he has in the bets made on the game of ball in his own village. If he could control it altogether, there would be no betting or gambling, and he does not like it to be a subject of remark that he should innocently witness the performance, not the betting.

But if I mistake not, at many of the fairs in Kentucky where premiums for trials of speed are contended for, many of the church men contend for the purses or premiums and yet the managers carefully exclude all betting, gambling and drinking. Am I not correct? I have certainly seen the utmost decorum and good order, and noted the entire absence of the rowdy element at some Kentucky fairs: that all of them are not managed thus I admit, but at many of them the most scrupulous would fail to be able to make a suggestion.

The *Turf* comments: "An observing gentleman writes us that he can see no reason why clergymen should not enjoy with other people innocent outdoor pastimes. We agree with him; but in many places a sentiment, the growth of which was encouraged by clergymen themselves, prevails, denying to church members the privilege of looking upon fast horses in action. At regular turf meetings, where the gambling feature is prominent, clergymen are rarely seen, but they often gather around the speed ring at agricultural fairs. At Lexington, the Fair Association vetoes betting, and thousands, including ministers of the gospel, flock to the grounds to witness the agricultural horse trot. On the same grounds the Kentucky Trotting Horse Breeders' Association holds its annual meeting, and very few church-going people mingle with the hundreds present, because pools are sold on the races. The same horses generally challenge attention that proved magnets at the fair, but the gambling feature reduces the attendance to beggary proportions. We are not discussing the principles which underlie either policy. We simply recognize a striking fact. Maud S. trotted for the Woodburn Farm Cup, under the immediate control of the Kentucky Trotting-Horse Breeders' Association, but under the no-betting rule of the Lexington Fair Association. It was known in advance that Mr. Bonner would not permit pools to be sold on her, and this fact, as well as the fame of the mare, brought out the clergymen and the church-going people. The arguments of our correspondent with regard to the church-member who does not bet himself not being responsible for the bets made by worldly-minded enthusiasts are sound, but the trouble is to get people warped by prejudiced to accept them as such. Maud S. will be trained next year, and started to further reduce the record. Her owner will yield to the desire of thousands who wish to see her perform in public, but he will insist upon the no-betting rule being enforced. He will not allow her to start on tracks, the managers of which do not promise in advance to suppress all pool-selling on the struggle against time. A performance of this kind will prove acceptable to hundreds who do not now attend circuit races, and it will act as a lever to lift the trotting turf into a higher and purer atmosphere."

## Improving the Trotter.

I had a pleasant chat with Mr. C. J. Hamlin, at his office in Buffalo, N. Y., and as he is well known as one of the largest and most successful breeders of trotting horses in the country, I naturally asked him to give me few of his ideas on breeding, as I knew his views were founded on what he deemed sound experience, and not theory alone—nor, as he himself expressed it, "There is no use of a man going back experimenting over the same ground that others have explored before him, but we should rather utilize the researches that they have brought forth, and then seek to employ our energies in beginning where tested theory leaves off," and and thereto. The science in breeding that speeds begets speed is well established, and in looking over the great sires of all times, I think that those of to-day stand pre-eminent in the front rank. Why? Because no matter how successful a sire may be, some of his sons and daughters are sure to outclass the others, and not only equal but probably exceed their parents. Then, if from the pick of these sons and daughters we breed again, all other things equal, we may reasonably expect and are morally certain their offspring in turn will develop some again superior, and this gives us two improvements on the original stock, and so we proceed, always utilizing the best as a means of process and leaving the remainder to fill in the gap of more moderate success. Thus, in my opinion, while I concede the Hambletonian family to be the greatest family of trotters of earth, and would consider the breeder almost insane who rejected the great value of their blood judiciously used in producing trotters, I firmly believe the present members of the family in some individual cases to be far superior to the parent stock, not only in speed, but in their ability to transmit that speed to their offspring. In my opinion, each generation has produced an improvement on the preceding one. Hambletonian was greater than Abdallah, and Alexander's Abdallah greater than Hambletonian. Alexander's Abdallah gave us Almont, a still greater sire, and he in turn has given us wonderful sires that, I believe, will eclipse in time even the fame of their illustrious progenitor. I have a son of Almont that already leads his sire at the same age, and that I consider a greater stock horse, and one that, with the same years of allotted usefulness, will undoubtedly eclipse the record made by the head of this branch of the Abdallah family; but already, I have from his loins one that I consider as destined to be even greater than he, and that is in the light of present knowledge well nigh the acme of progression in breeding. But I except, if my life is spared, to be able in time to improve upon him, and so I think we should ever strive to progress, and not be satisfied with what has been accomplished.

"The man at the present day who believes in standing still or retrogression is an anomaly. We see it exemplified on every side. In every walk of life are utilizing the experience of the past, and adding to it the progress of the present. Should it be any less true in breeding? I think not, else is the whole system only one of chance, and the immense capital invested and energy concentrated merely resting on the turn of experiments.

"Another very important point, I think, is too often neglected in the problem of scientific breeding. How often do we see a horse clothed with speed leading all competitors, but with head and neck extended, possibly on a level with the withers, and carrying his tail like a dog who has just escaped a dangerous antagonist. Deprive such a horse of his speed and what is his value? His owner would not be seen behind him, and the chances are he would be worthless for labor. Now, if in addition to the speed, the horse had carried his head erect and his tail thrown out in the air, added to a well-formed, even handsome body, in short, a horse that would attract attention anywhere, irrespective of speed, and how much would be added to his value? More than can be computed in any calculation of mere dollars and cents. I claim, and am demonstrating, that we can and should breed both style and speed, and then we shall have nearly a perfect horse. It is no longer a theory that a horse transmits not only his speed, but his stamina, gait, and general carriage and style. Why, then, should the latter be neglected when they can be obtained without any sacrifice of the former? The possession of these qualities has entered largely into my consideration in selecting my sires. I recognize the greatness of George Wilkes, and believe him a greater sire than his progenitor, and I prophesy his entire sons will not only add to his fame, but some one or more eclipse it, and in turn serve as stepping-stones on the road of progress."

"Now that you have given me your ideas of sires, Mr. Hamlin, will you kindly tell me something about the dams you would select?"

"Certainly. I would have them with a strong dash of thoroughbred blood, for I believe that it is very beneficial in this way. We have assumed and it cannot be contradicted, that the sire transmits the trotting instincts, gait, etc., to the foal. Now, when the mare comes from a strain of blood that has also been improved upon for years, in stamina and conformation, giving us particularly the extended play of the lungs so necessary to any horse in a hard struggle at either gait, we thus unite to the qualities of the sire these qualities from the dam, and the result is pretty near an ideal trotter."

"But is not the hot thoroughbred blood apt to make your colt flighty?" I suggested. "We now have some examples on the turf of performers with a world of speed but unbalanced brain, consequently they cannot utilize their power."

"Thoroughbred blood is not necessarily botheaded. We see quiet, well-disposed runners, as well as trotters. I would not have a botheaded cross on any consideration. My main point is this: We should strive to unite the best qualities that are to be obtained on both sides, and while I do not think that thoroughbred blood has ever given us one second of additional speed to trotting, I do think the stamina and additional lung power to be obtained by using it judiciously is very beneficial to our trotting stock. In regard to the value I place upon the different great trotting families, as to speed-producing qualities, I rank the Abdallah or Hambletonians, as they are often termed, first, the Mambrino Chiefs second, the Pilots third, and Vermont Black Hawks fourth. I think these families have given us about all there is of the trotter, and the best qualities of each, combined with a little approved thoroughbred would give us an ideal horse, with not only almost unlimited speed at trotting, but stamina, soundness of wind and limb, and a faultless outline of proportion, which, with the graceful carriage, would give us what is now the exception instead of the rule—a handsome trotter."—*Straightedge*, in *N. Y. Sportsman*.

It is thought that the distinguished Australian horse Martini-Henry, who last season won the Victoria Derby and Melbourne Cup in the same week, will never start again. One of his legs is swollen greatly, said to have been caused by a boot which he was wearing.

## Early Training of Trotters.

That the breeder of horses from trotting strains must seek, by performances at any early age of the stock in which he has an interest, to bring its merits conspicuously before the public, is a fact too well established to need arguments in its favor. That the excessive training of baby trotters is, in a general way, harmful, will hardly be denied even by the most enthusiastic advocates of early development. But it is precisely this excessive training, this unnatural and long-continued strain upon the muscles and bones of these baby trotters that sensible men seek to avoid, and too much emphasis can not be placed on the warning given by our correspondent not to overtax the colt.

Ten years ago, when the practice of training trotting-bred colts at two and three years of age was first begun by a few Kentucky breeders, their methods called forth the opposition of northern men, and the controversy which at once arose as to the good and evil results of early training was carried on for some time through the columns of various journals in a most spirited manner. That it resulted in any change of programme being made can not truthfully be said. The opponents of the practice at which criticism was directed claimed that while one colt passed unscathed through the ordeal of training at two and three years of age dozens of others were ruined, and that this charge was at that time in a large measure true can not be denied. But with experience came wisdom, and in these days the men who cripple young trotters by overwork, at a time when they are not fitted by nature to endure a severe strain on their physical organizations, are few and far between. Of course there is now and then to be seen on some race track an ignorant, brutal fellow, who keeps hammering away at a colt or filly, out of whose life all the joy and ambition has gone, and that, instead of improving, retrogrades day by day, until there is not left even the natural speed with which the animal was endowed when the so-called training began.

But that, with proper handling, many trotters are ruined by early training is not at all clear. The first three-year-old to beat 2:30 was Lady Stout, and although she never improved much in speed the work given her in youth does not seem to have had any ill results; and the same may be said of Mambrino Bertie, that was bred and trained by Dr. Herr, who developed Lady Stout. Other trotters that have led the van in the way of fast records when young might be adduced as evidence that early development does not necessarily mean early decay. So astonished the country in 1877 by trotting in 2:31 as a two-year-old, and yet she trained on, and her record of 2:17½ was not made until she had passed her sixth year. Aldine and Maud S. drew Mr. Vanderhilt a mile in 2:15 when they had both reached years of maturity, and yet both of them were "baby trotters," Aldine beginning work by winning races as a three-year-old, while everybody knows that in her fourth year Maud S. trotted a public trial over the Lexington track in 2:17½, and that she was sold to Mr. Vanderhilt for \$21,000 solely by reason of that performance. As a six-year-old she trotted in 2:10½, and with more or less training every year of her life since she was a three-year-old, she keeps on going faster and faster all the time, and her record of 2:09½, made within the present month, is the best standing to the credit of any trotter. Jay-Eye-See, that trotted in 2:19 as a four-year-old, 2:10½ as a five-year-old, and 2:10 as a six-year-old, is certainly a poor argument for those who decry early training so loudly and with such persistence, as he is to-day as sound in wind and limb as any man's trotter. The fastest young trotter of them all at all ages is the California filly Hinda Rose. She trotted in 2:36½ as a yearling, the best record for that age, and as a three-year-old her mark was 2:19½, which still heads the list, and this year, although, by reason of death in the family of her owner, not allowed to take part in public contests, she has trotted an authenticated trial in 2:15. Here is a filly that has been in training from the time she was weaned, and when any horse goes in 2:19½ as a three-year-old and in 2:15 the following season horsemen know that the machinery that produces and carries this great speed must be in the very best of order; that there must be no flaws or weak places. But it should be remembered that all the horses mentioned were treated kindly and intelligently, and that there was no attempt on the part of those who banded them to carry on the work of training as it would have been conducted in the case of an older horse whose hony structure was complete and whose muscles had the strength and firmness of age. In other words, the training was not overdone, and it is to this point that breeders should give careful attention. Moderate training will not hurt a healthy young trotter, but all work and no play will ruin the best one ever seen.—*Breeders' Gazette*.

The famous jockey, Fred Archer, has rambled West and fell in with John Splan, upon whom Dan Mace's mantle seems to have fallen. The ready-witted John must have his little joke, of course. Archer states: "Splan told me if he didn't know I was a jockey he'd take me for a gentleman."

Major H. C. McDowell has become sole owner of Dictator, having recently purchased the interests of Messrs. David and A. A. Bonner.

McLaughlin has ridden 122 winners this season—the highest number ever achieved in America.

## THE KENNEL.

## Pacific Coast Field Trials.

EDITOR BREEDER AND SPORTSMAN: Had the Greeks never fought the Persians we should never have heard of Marathon, and had there been no Pacific Coast Field Trials, the sleepy hollow of Walltown Timber would never have been disturbed from its Rip Van Winkle slumber. It has had its brief existence and is now consigned to the "tomb of the Capulets." A worse ground for a field trial of pointers and setters could not have been found in California. It was had enough last year, but this year it had been used as a sheep ranch, and what little natural grass—of the poor man variety—that was not eaten off by sheep, was so trampled down as to leave the ground absolutely bare, and as a handler remarked, was "more like a skating rink than a ground to try dogs on." I must except greyhounds, for the number of hares exceeded the quail. Besides the dogs from Gilroy were not accustomed to hares—not seeing one in a week's hunt—and they were so delighted with the novelty that they preferred trailing them to hunting quail. The ground also had been hunted over all the season by market hunters and others, and

what few birds were left, were exceedingly wild and cut up into small pieces, and the cold north winds had dried out every particle of scent.

As Hamlet to Ophelia, "Conception is a blessing, but not as ye shall conceive." So, reporting is a blessing, but not as ye shall report. Your reporter—although no name or *nom de plume* is affixed to his report—is well known to be an excellent writer and a first-rate sportsman, who has done much to encourage field trials and bench shows in this State, and an enthusiast in everything pertaining to dogs, but enthusiasts, although useful in their vocation, have generally a little of the "crank" about them, until matured by time and experience. He is also strongly imaginative and his "poet's eye in a fine frenzy rolling," is constantly suggesting an ideal of what a dog should be—for practical he really is not—and unless it comes up to his Procrustean standard it is a "worthless brute," a "half-bred cur," and not worth powder and shot enough to shoot him. Before commencing his report proper, he indulges in much preliminary remark and erroneous criticism, and reasons without the least consideration. He imputes cause for effect, and effect for cause. He says, "The handling this year was more pointless and worse than the last." A thoughtless assertion, when last year it is well-known that some of the dogs had little or no previous training, and this year some five or six of the best dog-breakers in the State were present with dogs, upon which they had bestowed much time and labor, and were anxious to vie with each other in showing the best trained dogs. Again he says, "The dogs had their own way and as a consequence the trials were not so satisfactory as they might have been." It would have been more correct to have said that there were no birds and no cover, and dogs which had been accustomed to both were totally at a loss to know what they were brought there for, and galloped about promiscuously, looking for game—for there was nothing to obstruct their view—instead of using their scenting facilities. In fact they were turned into gaze hounds. A quail was "a *ravavis in terra*," and therefore, instead of hunting for them, they took to trailing hares, the only game there was. Two or three days hunting over such ground and such game would unbreak the best dog ever turned into a field. Many heats were run without getting a point, or even seeing a quail. Even "Dorr," the veteran and beautifully trained dog, had no chance to make a point, although he hunted energetically for nearly two hours. What few points were made, were the result of mere accident and lucky was the dog that stumbled upon one, thereby winning the heat. I have no hesitation in saying that if the dogs were run again with plenty of birds and good cover, a complete change of places would be the result.

What we term "scent" is very little understood. "We cannot tell whence it cometh nor whither it goeth." It frequently happens in a fox hunt in England, that although every thing seems favorable, the hounds are completely at fault, and the most experienced hunters can assign no reason. In the report of the All Age Setter Stakes at the Eastern Field Trials this year, Dr. Rowe says, "Throughout the day there seemed to be conditions under which the dogs could not handle the birds with satisfaction to themselves or to their handlers."

At all events dogs in good form would jump right on top of birds in the open, light, sedge grass, and in the woods it would happen too, that each of a brace would show the same tendency to make more fines than points. And this was done by dogs such as Foreman (for which \$2,000 was refused), Gladstone Boy, Paul Gladstone, Diana 2d, and others of equal note. I wonder, had your reporter been there, if he would have called them "ground hogs" with no noses. When he has had more practical experience, and has tried his hand at breaking a dog or two for a field trial, and comes to read his present remarks, he will be astonished at his own assurance. To run a field trial successfully there should be an superabundance of birds and good cover. The great test of a dog's breaking is how he will behave amongst many birds, as the excitement of much game tries his steadiness and shows the quality of his breaking. Again, birds should be killed before the dogs in various ways to test their proficiency in dropping to shot and wing. Trials might be run off much more easily if five or ten dozen birds could be trapped, and let out a dozen or two at a time on the ground to be hunted over. We should then be certain that the dogs would have an opportunity to find game, and the judges could speedily decide which was the better dog. As it is, it is as much chance and guess work as real merit that decides a dog's fate. When, during the trials, we did come across a few birds with a little grass to hide them, the work done was as good as could be desired. What could have been prettier than the difficult feat of pointing and roading a winged quail for over 150 yards by Orear's "Pearl," when all the spectators insisted that it was not the winged quail she was after, and which she finally retrieved alive. Or the termination of the heat between Bow, Jr., and Lemmie B.; nevertheless, we must live and learn. The Board of Directors no doubt intended well, but the selection of ground was unfortunate.

The arrangements for the reception of visitors does them great credit. But more than that, the kindness and consideration for their comfort after the day's work was done, cannot readily be forgotten. Nothing but friendliness and good feeling prevailed, and after the trials were over for each day, no more thought was given to the dogs, except to feed them well, and sociability and good cheer were the order of the evening. No kicking or grumbling at the judges' decisions, but all enjoyed and laughed at the bad or good luck they had met with. The meals were good and well cooked, under the supervision of a very polite gentleman of African descent, and too much praise cannot be given to the "Major" who conducted the bar. The Major is a man of much experience in that particular department, and had laid in his stock with the most liberal calculation, but alas! for the uncertainty of human happiness, he had not made a correct estimate of the extreme sociability of sportsmen at a field trial, and on the second morning of the meeting with a melancholy visage he informed the gentlemen present that the bar—like a good many banks of the present day—was closed with assets nil. A deep gloom settled upon all who heard the sad tidings, and like all had news it soon spread through the camp. A council of war was called, and an express sent to Folsom, some ten miles away, for a fresh supply, which arrived in due time, thereby turning "the Winter of our discontent into glorious Summer."

The club has obtained many accessions to its members and they hope yearly to improve in the quality and training of the dogs entered. The yearly subscription is small, only five dollars, and if the sportsmen of the State would give the Club their support, suitable grounds might be rented and the game preserved for the sole purpose of field trials. A week's respite from the cares and anxieties of business and pleasant association with brother sportsmen would be highly enjoyable, and to see the merits of different dogs compared in the field, a treat to the lover of dog and gun.

GILROY, Dec. 22d.

**ATTENTION SPORTSMEN!**

**Hammerless Guns AT REDUCED RATES.**

One AIXAI Chas Rodgers, Fine Damascus steel barrels, Horn heel plate, Pistol grip, Anson & Deely lock, Deely & Edge fore end, 30-inch 12 gauge; 8 lbs. 2 oz. List price, \$175. Price now, \$125.  
 One Harrington & Richardson; Damascus steel barrels; pistol grip; horn steel plate; 30 inch 12 gauge; 7 lbs. 10 oz. List price, \$111; now, \$80.  
 One A1 Chas. Rodgers; fine Damascus steel barrels; Deely & Edge fore end; pistol grip; horn heel plate; 30 inch 12 gauge; 8 lbs. 14 oz. List price, \$125; now, \$75.  
 One A1 Chas. Rodgers; fine Damascus steel barrels; Deely & Edge fore end; pistol grip; horn heel plate; 30 inch 10 gauge; 8 lbs. 6 oz. List price, \$125; now, \$75.  
 These guns are choke-bore, new and in perfect order. On receipt of \$5 will be sent C. O. D. for the balance of selling price.  
 E. T. ALLEN, 416 Market St.

**KILLIP & CO., LIVE STOCK AND GENERAL AUCTIONEERS,**

116 Montgomery Street, San Francisco  
 SPECIAL ATTENTION PAID TO  
 Sales of Ranches & Live Stock.

Will Sell in All Cities and Counties of the State.

**REFERENCES.**  
 J. S. CARRY, Sacramento. J. D. CARR, Salinas.  
 R. P. SARGENT, Gilroy. JOHN Boggs, Colusa.  
 P. A. FINIGAN, San Francisco.

HAVING CONDUCTED SOME OF THE MOST successful sales, notably those of Messrs. Whipple, Colgrove, Dietz, Coutts, Dougherty, Newland & Hammond, Daniel Cook and others, we feel assured our ability to give satisfaction in all business entrusted to our care. Sales will be made in all cities and counties in the State. We have in contemplation a series of combination or breeders' sales, similar to those so successfully held at the East. We will be pleased to enter into correspondence with parties desiring to participate in such sales. Private purchases and sales of improved live stock of all descriptions will be made on commission and stock shipped with utmost care. Several fine ranches at private sale. Purchases and sales made of land of every description.

**KILLIP & CO.,** 116 Montgomery street.

**Montana Horse Ranch FOR SALE.**

CONSISTING OF ABOUT 2,000 GELDINGS, Mares and Colts, 500 acres patented land controlling the water supply for many thousand acres of pasture, several thousand acres fenced and fencing material on the ground for some 15 miles more, good barns, corrals and comfortable house, Hay, Grain and supplies for one year; Farming utensils, Wagons, Harness, a few cows and everything necessary or required to carry on the business of horse or cattle raising on a large scale.  
 Will give time on part of the purchase money if desired. Apply to or address  
 M. SALISBURY, 320 Sansome street, San Francisco, Cal.

**Thoroughbred SETTER PUPPIES.**

ENGLISH SETTERS, FINE breed imported, Irish Setters, from Champion stock imported by K. W. Hill of Oregon. Pedigrees guaranteed. \$25.00 each at six weeks old.  
 Apply to  
**E. LEAVESLEY,** Gilroy.

**IMPROVED HORSE CLOTHING.**

Secured by Letters Patent ISSUED MAY 27, 1879 REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J in combination with the elastic connecting-strip I, substantially as described and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands E, fixed to it to secure it around the body, whereby the use of loose surcingles is avoided, substantially as herein described.

Manufactured and for sale by  
**L. D. STONE & CO.,**  
 422 and 424 Battery St., SAN FRANCISCO, CAL.

**FAIRLAWN, 1884.**

TENTH ANNUAL CATALOGUE  
 Now ready for distribution. Contains descriptions and pedigrees of 252 head of High-Bred Trotting Stock now at Fairlawn. Will be sent free to all applicants who enclose 3 cents in stamps to prepay postage.

**25 HIGHLY-BRED BROOD-MARES,**  
 Bred to the Fairlawn Stallions, and  
**130 HEAD OF VERY PROMISING YOUNG STOCK,**  
 Consisting of Young Stallions, Fillies and Roadsters, are offered at *Private Sale.*

**THE ONE PRICE PLAN** Is strictly adhered to at Fairlawn, and the price of every animal for sale is printed in the catalogue. Purchasers from a distance can buy on orders at exactly the same prices as if present in person. All stock sold on orders can be returned if they do not come fully up to the descriptions given.

The Stallions in use at Fairlawn are  
**ALMONT 33.**

Represented in the 2:30 list by 24 performers, with records ranging from 2:15½ to 2:30. Limited to 20 approved mares at \$300 the season.

<b>HAPPY MEDIUM 400.</b> Sire of 18 performers with records of 2:30 or better. Limited to 25 mares at \$150 the season.	<b>ABERDEEN 27.</b> Having ten of his get with records ranging from 2:15½ to 2:27½. Limited to 40 mares at \$150 the season.
<b>ALECTO 2548.</b> By Almont, out of Violet, by Rysdyk's Hambletonian. Limited to 30 mares at \$50 the season.	<b>STARMONT 1526.</b> By Almont, out of Starling, by George Wilkes. Limited to 50 mares at \$50 the season.

Ethan Allen, Jr., 473, used as a Private Stallion.

The Fairlawn Stallions in 1883 had eight new ones of their get to make records of 2:30 or better, and three new ones to enter the 2:20 list. The sons of each of these stallions are siring trotters. Almont has six different sons that have sired 2:30 trotters. Mares failing to get with foal can be returned in 1885 free of charge. For further information, and catalogues containing full particulars, address

Lock Box 392. **WM. T. WITHERS,** Lexington, Ky.

## HERD AND SWINE.

## Aberdeen-Angus.

Charles Gudgeon, Secretary of the American Aberdeen-Angus Association, sends a copy of a paper read before the association, Nov. 19th, by H. D. Adamson. We extract the following:

The headquarters of the Aberdeen-Angus are the counties of Aberdeen and Forfar, although within the past twenty years are reared extensively in Kincardine, Banff, Moray, Neirn, Inverness, and have found great favor in the northern counties of England. There is a diversity of opinion as to the origin and antiquity of the breed. I believe that they are indigenous to the northeastern counties of Scotland, and from time immemorial have been reared in those counties. The supposition has been put forward that centuries past a "spontaneous" hornless beast had been preserved and bred in with such another accidental specimen, and hence the origin of the breed; but as the hornless type when crossed with pure horned breeds predominates, I feel convinced that for centuries the Polled Aberdeen-Angus has been a "fixed" breed. Had it not been so we should not find the polled type so impressed in crosses of two and three generations, whether from the male or female. Take a well-bred Aberdeen or Angus bull, use him with any breed in existence—Shorthorn, Longhorn, Hereford, or even West Highlander—and one hundred to one you will have a polled result and black in color, which, if a heifer and re-crossed with any pure horned bull, the offspring will again be polled. Again, cross a pure-bred Aberdeen-Angus heifer with any variety of the horned breeds, and you will have a polled calf, and probably black, and that produce crossed again will also be polled. I think these facts alone argue the antiquity of the breed, and prove their fixity of type. Another of the chief distinguishing characteristics of the breed, in addition to the want of horns, is the distinctly rounded contour of form, for whereas the form of the Shorthorn, Hereford, or any other breed might be described of a square type, that of the Aberdeen or Angus is rounded. The color should be a "whole" black and unbroken, although white under is by no means objectionable, in fact, it in general points to a good milker.

Red calves will now and then appear in the best herds; they do not denote impurity in any way, but simply "cry back" to those times when "the fancy" was not so despotic and reds or brindles were not objected to. But the *bete noire* of a polled breeder is the scurr, which is a diminutive horn and quite loose. On no account should a male, however fascinating in shape, if descended from a family showing a tendency to these, be used in the herd. Scurs are never found on the head of the true type of the Aberdeen or Angus Poll, which ought to have a high poll—if flat on the crown of the head then look for scurs. It was formerly asserted that the Aberdeen-Angus did not come early to maturity—breeders and feeders were themselves to blame for their assertion—true, the breed generally has been greatly improved of late, but formerly the Scotch grazier thought it necessary to send nothing to the London market under four years of age, and at that time the national fat stock shows gave no encouragement to early maturity. Now the grazer and breeder finds the necessity of quick returns, and instead of the ponderous polled Scotts that one was accustomed to see in London Xmas markets, £44 to £48 each, and scaling 10 to 11 cwt. (1,100 to 1,300 pounds) dressed meat, there is a greater demand for 24 to 30 months old, which easily realize from £30 to £35, and even up to £40, scaling from 8 to 9 cwt. (1,000 to 1,100 pounds) dressed. It has only been within the past four years that the national fat stock shows have opened a class of young steers in the polled section, which includes Galloways, as also the Aberdeen and Angus. Not infrequently I hear those who are acquainted with the breed, say that they are small and under size, and when they have seen them alive have undervalued their dead weight at 200 pounds on a 1,000 pound carcass. They do not take into account the short legs and the "negative" color—what is more deceptive than black? Again, this breed is excelled by none for crossing purposes, whether by using the shorthorn bull and Aberdeen and Angus cow or vice versa. The usual practice in Scotland is the Shorthorn sire, although on account of the scarcity of females, the Polled sire on Shorthorn and cross cows has been resorted to with equally good results. The greater part of the cross breeds exhibited at the great fat exhibitions—and the cross bred class is the acknowledged feature of the show—is the Aberdeen-Angus cross, and I say, without fear of contradiction, the money prizes are invariably awarded to that cross. In 1880 an Aberdeen and Angus cross was the champion of the London Smithfield show, and by the Queen's command was sent to Windsor for inspection. The inherent level feeding of the Polled breed makes them invaluable as butcher animals, either as pure or crossed with any other breed. In going the round of the National English and Scotch shows the Summer, one could not help being struck with the remarkable contrast between the high-fed Shorthorn and the equally high Aberdeen-Angus—the one so fearfully patchy and overdone—the other as level, sleek and gay, yet fat and firm as could possibly be conceived.

## "Hoe the Taters."

A party were one day discussing the question of "luck," and as a rule rather complaining of the share of it which had fallen to their lot, when an old colored man, who had been an attentive listener, observed that he "always had good luck with taters *what were well hoed*." There is a world of wisdom in the observation, and as a general thing men, and especially farmers who cultivate their opportunities, seldom have cause for complaint that times do not serve them reasonably well. But opportunities must be perseveringly cultivated. There may be some money made in favorable seasons even by practicing slipshod and half-way methods of farming, but the compensation at any time is meagre, and the time will surely come to every farmer when these methods will bring the sheriff. Compelled by the stress of circumstances, perhaps, to commence in this sort of way, the farmer should neglect no opportunity to bring himself and his farm out of this rut; and just in proportion as he succeeds will he be content with the "luck" which attends his labors. He should make the production of live stock as much a feature of the farm as the circumstances of its location will permit, and make that pay to the very uttermost. And if any farmer should not know that it pays better, in more economical and productive of more profit to keep the very best stock he can get than to keep any other, that farmer, should "hoe his taters" next time he has an opportunity by subscribing to a good live stock or agricultural paper, for he will find it will bring him "luck." Times are hard and dull, everything and every kind of heininess is

depressed, and there is no one but to some degree feels these effects. But on whose shoulders do they rest with the greatest weight? The farmer whose main dependence is upon grain-raising and whose cattle and hogs are of the ordinary unimproved kinds, feels this depression almost as keenly as any other class, while those who rely mainly upon live stock production and who have given proper attention to securing cattle and hogs of improved character, feel this depression less than any other class of men in the world.

The present condition of affairs is by no means exceptional—it is history repeating itself. The whole world goes to wrestling, and every few years every business interest takes a tumble, but every time the meat-producer is found on top. There should be no farmer so dull that he cannot profit by these lessons. But joining the church will not save the sinner. There is something else more important; and any kind of live stock will not make the farmer independent and hold him abreast of the full tide of that degree of prosperity which belongs to the time and the section in which he lives, but he must have good animals, just the best which he can obtain and maintain, and then he must regard them and treat them as the best friends he has on earth. We have a world of sympathy for every honest, industrious farmer who is "hard up," but if he has been long on the farm and done nothing towards securing himself by good stock from these depressions and embarrasments which come so often, we cannot help thinking he has himself to blame for some portion of his misfortune, and that if he had been more diligent in "hoeing his taters" he would have had less occasion for complaint.—*Breeder's Gazette*

## The Hog Cholera.

We fear there is no room to doubt that the dreaded hog cholera is once more causing havoc among swine in many parts of the country. From Illinois, Indiana and Iowa, we have numerous and in several cases well authenticated rumors of its ravages.

Some veterinarians, notably one of the most distinguished gentlemen of that profession, recently in attendance at the Chicago cattle convention, bold that there is no cure for hog cholera, and the general opinion of the best informed persons regarding the various uostrums sold as hog cholera cures, is that they are bumbags. Recently, at the Iowa cattle meeting, "Hog Cholera" was the subject of wide discussion. Remedies of various kinds were recommended, the admixture of carbolic acid in the feed, to the extent of a quart of the acid to a barrel of slop-feed, seemingly receiving the most general commendation, while others pinned their faith to burnt corn, coal, etc. Some claimed immunity from the disease in virtue of having sulphur wells, the water of which was accessible to the hogs; at the same time we know of one case, where after years of immunity, attributed to the same cause, the disease finally showed itself with very fatal results.

It is quite probable that where taken in time, some of the remedies spoken of above would secure good results, but where the disease once gets a good start in a herd, the chances are that it will take its course, and a very costly course it will be. We wish to emphasize two very important points in this connection. First, if prompt application will render any remedy effectual, it is essential that the owner should speedily detect symptoms of disease; and while it is rare that a horse or cow will get ailing without attracting the attention of the owner or his man, the case is different with hogs, which are too often treated with indifference and neglect which allows disease to get its hold on the herd before any remedy or the isolation of the first animal affected, is undertaken. Secondly, the constitution of the hog is tried by over-feeding, by a steady diet of corn, close quarters, filth and improper ventilation, in a manner which any other animal would resent by dying at once, but the hog, thanks to continued crossing, is endowed with a natural disposition to take life as it comes, and puts up with neglect and ill-treatment until disease comes, to which, lacking health and stamina, it is compelled to succumb. Exercise is another potent factor in the matter of health, which is too often disregarded by the breeder of swine. Give the swine a little more attention, the advantage of hygienic laws and in a word, remember that it is with them as with cattle, to succeed well with them you must think well of them.—*Live Stock Journal*.

## Near the Limit.

Close observers of the Western cattle business are authority for the statement that very much of the range country is now stocked to its full capacity, and that much of the remainder consists of lands purchased by companies, and will be reserved for such increase as those already in the business may see fit to make. If this be true, the time is not far away when the investment of capital in the direction will reach its limit. Huge cattle companies within the past two years have taken up the bulk of the good territory available, and the organizations formed hereafter must depend largely for their success upon their ability to select judiciously among the steadily diminishing number of suitable ranch sites. The problem of location has come to be a paramount one, and one whose solution is a matter of constantly increasing difficulty. It must be remembered that it is not all of the oldtime American Desert that can, under existing circumstances, be utilized for stock-raising. There are vast areas so arid as to afford nothing like the sustenance necessary for the thrift of cattle, and so thoroughly void of water that animal life cannot flourish upon them. Necessity will perhaps drive stockmen to the reclamation of more or less of these places by irrigating processes, but it does not seem likely that a great deal will be accomplished in this line. All efforts at artificially fitting the country for occupation by live stock must result in a lavish expense which would render ranching an entirely different business from what it has heretofore been. In view of all these things, and the evident disposition among capitalists to increase their ranch investments, those who have flourishing cattle interests in secured desirable localities are to be congratulated upon that fact. They are in the possession of property which, barring the one danger of contagion, is never likely to be of less value than now, and the probabilities concerning which are that it will steadily appreciate. Nothing in connection with the signs of the times is more clearly defined than this, and it would be an adverse train of circumstances indeed which could change the probabilities.—*Pittsburg Stockman*.

There is a great difference in pigs. A very shrewd farmer when he had a litter of pigs used to cull out two or three of the poorest and dispose of them for whatever he could get. So soon as they were old enough to eat, he placed the smaller ones in a separate pen and fed them liberally, but never kept them long. If a pig is born a runt, it will on the same feed be smaller all its life, and at ten to twelve months this difference will amount to from 50 to 500 lbs. Calculate this difference on, say ten, fifteen, or twenty animals, and you can realize the importance of this advice.

## Suggestion to Beginners.

[Judge T. C. Jones in Breeder's Gazette]

The most difficult problem the beginner in fine-stock breeding has to solve is that of pedigree. A great many farmers, perhaps a majority, regard pedigree as of very little consequence, while of those who think it material perhaps a majority over estimate its importance. These latter are of two classes—one being composed of persons that have been much interested in tracing out the details of the genealogies of the most fashionable families of Shorthorn cattle, set about breeding as if the chief object were to construct fine pedigrees, rather than the breeding of cattle of profitable qualities; the other class is composed of dealers in pedigrees, who buy and sell with sole reference to the whims of fashion in this regard. But a still larger class err in the opposite direction, and insist that pedigree is of no value whatever.

The beginner, whether in the usual occupation of a farmer or as a professional breeder, must be careful to avoid this error. It has been the custom of many writers to attribute marvelous facilities, and the most wonderful achievements to men who have been distinguished in the early history of improvements in the breeding of domestic animals. It has been said, for example, that Bakewell, the well-known breeder of Long-horn cattle and Leicester sheep, was the discoverer of the foundation principle in the breeder's art, that *like begets like*. Of course a fact so obvious and self-evident as the inheritance by the offspring of the qualities of their parents must have been understood by civilized people in all nations, and, therefore, long before Bakewell's time it was the custom of the farmers of England to select such animals as they deemed the most perfect for breeding purposes. Their opinions as to what constituted excellence were, in some respects, erroneous, and, to some extent, corrected by Bakewell, the Collings and others; but whatever model the breeder approved governed his choice in selecting his breeding stock. As the profits of live-stock farming increased, greater attention was bestowed upon its management. Not only were the best animals selected for sires, but the particulars in regard to the ancestors of the breeding stock, were more carefully looked into. The Studley Bull, Hubback, Favorite, etc., were animals of high renown, and it was therefore considered desirable to secure stock tracing descent from those famous hulls. But if it was important to secure good sires, and the sons or grandsons of such sires, it was obvious that it was equally important to look into the merits of the cows and the dams of the cows. And it was thus that the system of written and finally of recorded pedigrees originated—to enable the breeder to ascertain the character, as to excellence of the ancestry of his stock. For this purpose and in this sense, the opinion advanced by Bakewell, that "everything depended upon the breed" (or pedigree) was true.

Granting all this, the new beginner will inquire, as one did in a letter received only last week: "How am I to get posted in regard to the different families of cattle? What is the difference, for example, between a Duchess and an Oxford, a Rose of Sharon and a Young Phyllisora Josephine? What strain would you advise me to buy to begin with?"

It is impossible to give categorical answers to such questions as these, though they are constantly suggested to the uninitiated by the language of writers whose habit it is to speak of these several tribes as if they possessed the characteristics of distinct breeds.

As to the Duchesses and Oxfords, as now bred, there is certainly very little difference even in blood, the two strains having been inter-bred to such an extent that there is about as much Duchess blood in the Oxfords as in the Duchesses, and as much of the Oxford in the Duchesses as in the Oxfords. And if we go back to the original sources of excellence in what is called the "improved Shorthorn," to wit: the Hubback, James Brown's Red Bull, etc., as crossed on the Lady Maynard blood, producing Favorite, Comet, North Star (438), etc., we shall find that purely-bred animals of all these strains are full of it, and therefore, as respects the mere matter of pedigree, there is much less difference is often assumed.

As to pedigree, the beginner should see that the stock he select traces in all crosses to imported animals; and if his object is to establish a herd of high rank, he should be able to trace their lineage to English herds of accredited reputation.

So much for pedigree. But the beginner is to remember that however complete and perfect this may be in form, it will be of little value unless it is furnished, and the animal purchased of a man of integrity. We have had, of late years, in breeding stock of all descriptions, very special and complicated rules in regard to making out and recording with a view to preventing frauds, all which utterly fail to protect purchasers who may deal with adroit scamps. Among breeders of established reputation, whether of horses, cattle or sheep, we believe the utmost good faith is observed, as a general rule, as well in the matter of pedigree as the health and condition of the stock they have on sale; and it is very seldom that we hear of any complaints from those who deal with them.

The *Western Rural* says: There is no safe method of determining butter qualities of a herd except by churning the milk of each cow separately. The bulk of the milk is not a sure indication. Very often the cow that gives but a moderate quantity of milk may yield the largest amount of butter. In breeding up a herd a knowledge of the characteristics of each cow will enable the dairyman to breed for the best results, as the superior cows may be used for breeding to thoroughbred bulls. It does not pay to keep the calves, unless the merits of their sires and dams are well-known.

Speaking of the Devons a recent writer says of their beef-producing qualities: The offal being light in proportion to live weight, make them a good butchers' beast; and then, as the English express it, there is more muttony and less four-penny beef. The fat, instead of being laid on the inside as tallow, is marbled with the lean, making the beef better and the loss by tallow lighter on the butcher. The beef of the Devon compares with that of the more hulky breeds as the mutton of the Southdown with that of the Cotswold, or the pork of the Essex or small-boned Berkshire, with that of a five hundred pound Poland-China.

One of our exchanges says to bed bogs liberally with straw. We are inclined to think that editor never raised swine. Hogs in herds should not be bedded with straw. Isolated hogs may have a small amount of litter. If hogs in droves have litter they will become overheated; the cold air when they enter it will chill them, and in the end a seriously diseased condition of the body will be produced. The only fit litter for swine in droves is dry earth with a slight admixture of sawdust; this will absorb all the urine and not overheat the hogs. The bed should be changed at least once a week.

**FOR SALE,**  
The High Bred  
Trotting Stallion,  
**ARTHURTON.**

Bay horse with black points, 15½ bands high, foaled 1873, bred by F. A. Foster, Irvington, New York.

**BY RYSDYK'S HAMBLETONIAN.**  
First dam Imogene, by Seeley's American Star; second dam by Abdallah; third dam by imported Balfounder; fourth dam by Royalist, son of Commannder, by imported Messenger; fifth dam by Harwood, son of imported Messenger. Arthurton is a pure gaited trotter, and although never prepared for racing has shown a mile in 2:28½. Having been almost exclusively a private stallion his opportunities in the stud have been limited, but enough to prove his quality as a sire of trotters. In his first season he was bred to five mares, and of the produce are Arch, 2:20; and Joe Arthurton, 2:25½, either of which could have beaten 2:30; although they had comparatively but little handling. Several others of his get have shown ability to beat 2:30. Arthurton was four years old when he sired Arch and Joe Arthurton, and no trotting sire living or dead can show such a record at the same age. He is a sure foal getter, and is only sold for want of use, as most of the broodmares now on the place are his daughters and must be bred to other stallions. He will be sold at a bargain. For further particulars address

### Auction Sale

## PURE BRED CLYDESDALE

## STALLIONS,

Imported into San Francisco by Thos. Brookless, from Melbourne, Australia.

BAY DISTRICT TRACK, at 11 A. M., on  
TUESDAY, January 6th, 1885.

ON THE ABOVE DATE BY ORDER OF MR. BROOKLESS we will sell eight head of pure bred Clydesdale stallions. They are all choice young horses, bred with great care from the best strains of blood, of fine color and form, the sires and dams being all prize winners. They constitute the most superior lot of draught animals ever brought to California.

The attention of stockmen generally is especially called to these horses. They will be upon exhibition at the Bay District Track until day of sale.

The sale will be absolute, without reserve. The owners desiring to close out and return to Australia.

Catalogues giving full pedigrees and all necessary information can be obtained of the undersigned.

**KILLIP & CO., Auctioneers**  
116 Montgomery Street,

## FOR SALE,

### THE GAME

### HAMBLETONIAN

### TROTTING STALLION

## "HA HA!"

Four-year-old record 2:31, (can trot much faster), is offered for sale during this month at a bargain. Cause for selling, closing out business.

"HA HA" is a brown, 16 hands, weighs 1100 lbs., and is stylish, sound and kind. For pedigree see Wallace's Standard Stud Book, No. 1219.

"HA HAN" colts took first premium at the Stockton Fair for the best trotting snickling. He trotted three races this season as a four-year-old, one at Sacramento where he won second money, and twice at Stockton where he won both races.

FRED ARNOLD,  
Stockton, Cal.

## Corrin's Great Horse Liniment.

### Sure Cure for Swinney, WEAKNESS OF THE SPINE,

### SPRAINS, STRAINS, ETC.

It neither blisters nor causes the hair to fall off, and does not incapacitate the horse from work during treatment.

Though there have been many drugs on the market which are claimed good, the observer will readily see their deficiency from the number of lame horses which he everywhere meets, and that are mostly suffering from that scourge, Swinney; which not only causes the shoulder to gradually shrink away, but also the body to emaciate. Now where is the horse-man so blind to his own interest, as to refuse this new remedy a fair trial.

Mrs. A. C. JOSEPH, Prop., San Francisco.

All Rights Secured in U. S. Patent Office.

PRICE, \$1.00 PER BOTTLE.

JNO. A. MCKERRON, Agent,

232 Ellis Street.

## ASTHMA CURE

Cures Asthma, Bronchitis, Throat and Lung affections, Coughs, Colds, Quinzy, Sore Throat, Soreness in the Chest or Lungs, Weakness in the Back, Pains in the Back, Howels, Siles, Colic, Grip, Pneumonia, Measles, Whooping Cough and Indigestion. It heals the entire system. Pleasant tasted as ice cream. For sale by all druggists. Price, 50 cents and \$1.00 per bottle. Post-office box 1870.

REDDINGTON & CO., Wholesale Agents, 529 and 531 Market Street, San Francisco.

American Steeplechases.

[New York World.]

Admirers of racing "between the flags" during the last few years have often had cause to complain of the miserable exhibitions which have been called steeplechases, witnessed from time to time at the several race meetings in this vicinity.

Since the May meetings of the clubs named, the promise of active measures to assist in the reformation of steeplechasing has taken shape, and the Rockaway Steeplechase Association has been organized under the charter laws of the State of New York, the inaugural meeting of which will be held on the 9th, 13th and 16th of May, 1885, over a new course that is being specially constructed near Far Rockaway.

1885. RANCHO DEL RIO. 1885.

The Thoroughbred Stallion

JOE HOOKER, BY MONDAY.

First dam, Mayflower, by imp. Eclipse. Second dam, Hennie Farrow, by imp. Shamrock. Third dam, Ida, by imp. Belsazar. Fourth dam, Gamma's dam, by Sir Richard.

Terms, \$50 the season to a few Mares of approved breeding.

This young stallion has proved to be one of the most successful racing sires, and every one of his colts that has been trained can run fast.

The Thoroughbred Stallion

THREE CHEERS, By Imported Hurrah,

SON OF NEWMINSTER.

First dam, Young Fashion, by imp. Monarch. Second dam, Fashion, by imp. Trustee. Third dam, Bonnets O' Mine, by Sir Charles.

Terms, \$50 the season for mares of approved breeding.

Good pasturage for mares from a distance at \$4 per month. Care will be taken to avoid accidents and escapes, but the owner must take the risks.

THEO. WINTERS, Sacramento, Cal.

Notice to Breeders.
