2. The young large-mouthed bass remain together in a compact school very much smaller than that of the small-mouthed, and the fry usually move all in the same direction. This makes it easy to seine the large-mouthed fry when wanted.

Culture of Black Bass.

Ponds and Stock Fish.—After some experimenting all our ponds, both for stock fish and fry, are built on the model of a natural pond. There is a central deeper portion or kettle about six feet deep, and around the shore a shallow area where the water is about two feet deep. The bottom is the natural sand, and water plants are allowed to grow up in the ponds. All ponds are supplied with brook water, and silt from this furnishes a rich soil for the aquatic plants. The water of these ponds contains *Daphnia, Bosmina, Corix,* and other small aquatic forms in great numbers. These furnish food for the bass fry. The ponds run in size from 120 feet by 190 feet to 100 feet by 100 feet.

At first we were unable to feed the stock fish on liver, but after a time we found that by cutting the liver into strips about the size and shape of a large angleworm and by throwing the strips into the water with the motion that one uses in skipping stones, they wriggle like a worm in sinking and are then readily taken. The liver must be fresh. If bass are fed on liver alone, they do not come out of winter quarters in good condition. Of eleven nests made by bass thus fed, only three produced fry. Although eggs were laid in all, they seemed to lack vitality, owing to the poor condition of the parent fish, and in eight of the nests the eggs died.

In order to bring the fish through the winter in good condition, it is necessary to begin feeding minnows in September and to continue this until the fish go into winter quarters. The bass eat minnows until they go into winter quarters, after which they take no food until spring. The minnows are left in the ponds over winter, so that the bass, when they come out of winter quarters, find a plentiful supply, which lasts them until the spawning season. At this time the minnows are seined from the pond, as their presence interferes with the spawning. Before this, however, some of the minnows have spawned, and their fry later serve the young bass as food. Bass fed in this way come out of winter quarters in fine condition, and their eggs are found to be hardy.

Artificial Fertilization.—During the first two or three seasons of our work numerous attempts were made at artificial fertilization, but only twice with success. On one occasion the female was seined from the nest after she had begun to spawn. She could then be readily stripped. The male was cut open and the eggs were fer-

*Read at the thirty-first annual meeting of the American Fisheries Society.

tilized with the crushed testes. About 75 per cent. of the eggs hatched on a wire tray in running water, the eggs being fanned clean every day with a feather.

In the second case the fish were seined while spawning, and it was found that in the case of one female, pressure on the abdomen caused a reddish papilla to protrude from the vent. This had the appearance of a membrane closing the vent. It was pinched off, and the female was then stripped readily and the eggs fertilized and hatched.

Pond Culture.—Having abandoned artificial fertilization, our attention was turned to pond culture, and this we have carried on for about six years. Our earlier ponds not furnishing natural spawning grounds, we constructed alongside each of the large ponds six smaller ponds for use as spawning ponds, each about sixteen by twenty-four feet, sixteen inches deep, with gravel bottom, and connected to the central pond by a four-foot channel.

The fish entered these and spawned. In one case we had eight nests in a single pond of this sort. Where so many nests were made, usually but one or two of them came to any good, the others being destroyed by the fighting of the males. Ordinarily but one or two nests were built in each spawning pond. The male first to enter and begin the construction of a nest generally regarded the whole pond as his property, and held it against those

FRY RETAINER, TO BE PLACED AROUND BED JUST BEFORE THE FRY RISE.

BASS BED, TO BE PLACED ON POND IN EARLY SPRING AND FILLED WITH GRAVEL.

BLACK BASS POND, SHOWING FRY RETAINERS IN USE—BED FRAMES REMOVED.

that tried to enter after him. On one occasion the male thus holding the pond was attacked by ten or twenty other males at one time, and after a long struggle was killed and his nest destroyed.

The attempt to use small spawning ponds was then abandoned, and all the ponds were made of good size and with a central kettle and shallow shore area, as already described. The problem now was to prevent the fighting of the male fish and the consequent destruction of nest and eggs. I finally hit upon remedies for what seemed to be the two chief causes of this fighting. I had noticed that in the natural water the nests of the small-mouthed bass were frequently built against a stone or log, so as to be shielded on one side. When so built the nests might be quite close together, as near as four feet, and the fish did not fight, because they did not see one another when on the nest. On the other hand, if a bass nest was built where it was not shielded, the bass on that nest would prevent any other bass from building within twenty-five or thirty feet of him. It occurred to me to try to construct artificial nests, and shield them so that the fish on the nests could not see one another, placing the nests so near together as to fully utilize the pond area.

In the spring, before the spawning season opened, the ponds were drawn down so as to expose the shallow terrace along the shore. The terrace was then cleaned to a depth of about two inches of sediment and vegetation which had accumulated since the previous summer. Rectangular nest frames of inch board were made two feet square and without bottoms. On two adjacent sides these frames were four inches high, while on the other sides they were sixteen inches high. They were set where there would be about two feet of water when the pond was filled, and so placed that the corner formed by the junction of the two lower sides pointed to the center of the pond, while the opposite corner, formed by the higher sides, pointed toward shore. The frames were set directly on the bottom, not in excavations, and each was filled with gravel containing sand suitable for nest-building. A board was laid diagonally across the two higher sides and a heavy stone laid on this to keep the frame in place. The two higher sides form a shield on two sides of the nest, while the board across the top affords shade. The frames were set in two rows about the pond, parallel to the shore line.

The rows were about six feet apart, and the nests in each row about twenty -five feet apart, alternating with those in the other row. There was thus about one nest to each 100 square feet of suitable bottom, or in each area of ten by ten feet. When the bass were on the nests no one was able to see any other and the fighting from this cause was practically eliminated. The number of rows of nests may be increased to three or four, or more where the area of shallow water is wide enough.

The bass selected these nests in preference to any other spawning ground. They cleaned up the gravel and behaved in the nests in every particular as they would on natural spawning grounds. The first time we tried these shielded nests not a single bass made a nest outside of them, though there was plenty of good gravel bottom available for this purpose.

As to the second cause of fighting: In 1900, when these nests were first tried, from 475 stock fish we obtained 315,000 fry and 750 fingerlings. In the season of 1891 the output was very much less, and there was considerable fighting among the fish. This remained unexplained till the ponds were drawn down after the spawning season, when it appeared that although the fish had been sorted, the number of male fish was considerably in excess of the number of females, and these excess males, banding together, went about breaking up the nests of their more fortunate brothers. It is now the practice when setting the nests to seine out the stock fish and sort them, putting about forty males to sixty females, thus removing the second source of fighting.

During the present season from 493 adult fish we had produced 430,000 fry up to May 26, and we believe that we can do as well every year.

Up to the present year there have been two sources of loss incident to the water supply. The supply is a spring-fed brook, which runs over an open country before it reaches us. The water in this brook becomes quite warm on a hot, sunny day and cools off at night. The temperature thus falls at night sometimes as much as 13 degrees F. and becomes as low as 46 degrees F. This is disastrous, since when the temperature gets below 50 degrees F. the adult fish desert the nests and the eggs or young fry are killed by the sediment. By watching the temperature of the water and, when it approaches 50 degrees F., shutting off the supply until the water warms up, this difficulty is obviated. Since the ponds are well stocked with water plants the fish do not suffer from lack of oxygen when the water is shut off. Indeed, if the water did not leak out of the ponds, I doubt if it would be necessary to introduce any running water into them during the breeding season.

The second difficulty with the water supply is from sediment brought down by the brook after heavy rains. This sometimes accumulates over the nests so thick as to smother the eggs and drive away the parent fish. By shutting off the water supply whenever the water is much roiled this trouble is avoided.

The water supply, however, must be kept fairly constant. If the level lowers more than about six inches, the fish leave their nests and the eggs die. For the purpose of maintaining a constant water level it would probably be best to have the ponds made with clay bottoms. The difficulties arising from roily water of variable temperature are, however, local, and would probably not be usually encountered.

Handling the Fry After They Rise from the Nest.—The small-mouthed fry have the habit of scattering into a large swarm when they leave the nest, and it is consequently difficult to seine them when wanted. It is therefore desirable, just before the fry rise from the bottom, to set over each nest a cylindrical screen of cheese-cloth supported on a frame of band iron, first removing the wooden nest frame. The screen keeps the fry together. They thrive and grow within it and may be left there until one desires to ship them. The old fish stays outside and watches the screen. When this supply is gone, other crustacea may be taken from the pond with a tow net and placed inside the screen. The fry are removed from these screens directly to the shipping cans, as wanted.

Raising the Fingerlings.—The water in one of the ponds is lowered, the old fish seined out of the kettle and transferred to another pond; the pond is then refilled, and the fry, now about one-half to three-fourths of an inche long, are put in. The water in the pond is thick with *Daphnia* and other crustacea, and these do not get out when the water is drawn off. The fry feed on them and the supply is usually sufficient; but if it gives out a fresh supply may be gathered from another pond and placed in the nursery pond. As the young bass grow they eat not only the *Daphnia* but young *Corixa,* and doubtless other aquatic animals.

In 1901, fry one-half to three-fourths inch long were introduced into the nursery pond on July 12; on August 5 they were seined out and shipped, and were then two or three inches long. They had had none but the natural food. In three months these fish, under the same conditions, are four to six inches long.

I have spoken so far of the small-mouthed bass, and it remains to say something of the large-mouthed, with which my experience is more limited. It is less necessary to resort to pond culture with them since, owing to the habit of the fry of keeping in a close swarm, they may be readily seined from their natural waters shortly after they have left the nests. In cultivating them in ponds I use the shielded nests already described, but make the bottom of some fiber, preferably Spanish moss bedded in cement, as has been suggested by Mr. Stranahan. This imitates the natural nest bottom and gives better results in our locality than the gravel nest. I do not place screens about the nests, since the young fry are so small that it is difficult to hold them with a screen, and since they may be readily taken with a seine when wanted. I allow the large-mouthed fry to leave the nests with the parent fish and seine them when wanted.

Finally, I will sum up what seem to me to be important points in pond culture of small-mouthed black bass, the ponds being constructed, as is usual, on the model of a natural pond with a central kettle and shallow shore region, well grown up with water plants, and supplied with lake or brook water:

1. Fish should be so fed (with minnows) as to be in good condition in the spring.
2. They should be sorted into the ponds in the spring in about the proportion of four males to six females.
3. Shielded nests should be used, arranged as already described—about one to each 100 square feet of shallow water.
4. The gravel in the nests should be carefully selected; it should contain sand and plenty of small stones.
5. Water on the nesting grounds should be kept constantly at a level between 18 inches and 2 feet.
6. The water temperature should be kept constantly between 66 and 75 degrees F. (in our locality).
7. Roily water should be, as far as possible, kept out of the ponds during the spawning season.
8. Fish should not be disturbed until the eggs are hatched.
9. The nests of the small-mouthed bass should be screened just before the fry rise from the bottom.
10. The water should contain an abundance of natural food for the fry.

The processes described are perhaps susceptible of improvements, viz:

1. Special nursery ponds might be provided for rearing fingerlings.
2. It is perhaps desirable to have the nest frames shielded on three sides instead of two sides, and made with a bottom; then when the fry rise from the nest, close the fourth side of the nest frame by sliding a screen into it. In this way it would not be necessary to remove the nest frame and put a screen over it, but the frame could be left in place and the open side closed with a screen.
3. If the ponds were made with clay bottoms, the water supply could be entirely shut off during the breeding season, if necessary.

CHICAGO AND THE WEST.

Home Manufacture.

It is rather a dangerous microbe, this of the home manufacture of one's sporting gear. As a business proposition it is pretty safe to say that a man who makes a business of rod building can put up a better rod than the amateur who perhaps makes a couple of dozen rods in his life. This fact, however, does not in the least deter the amateur rod maker. I have seen some very beautiful specimens of rod making done by my friends. As to buying a rod built by a professional, the genuine red hot amateur would die first.

Again in the matter of tying flies. The fly-tying bacillus caught me a year or so ago, and I am still in its grip.

My stock of feathers, of colored silks, of tinsels, crewels, wools, furs and the like is continually increasing. There is a certain drawer in a certain table of mine which looks like a nightmare, so inextricably confused therein are the different materials for fabricating artificial flies. For a long time I thought I should never learn to tie an artificial fly, but this morning I put up a silver-doctor which, if I do say it myself, is a peach. I am much encouraged, and if all goes well I may, during the season, perhaps be able to turn out a few dozen more flies.

I number in my acquaintance several gentlemen who tie nearly all their own flies. It is getting now to a question of rivalry between some of us as to which can put up the best specimen. Two or three of these friends are as well equipped in material for fly-tying as the average factory which turns out these goods. It runs into a pretty penny, too, what with golden pheasants at $12, Japanese jays, Indian crows, blue chatterers, red macaw, and Providence alone knows how many other high priced luxuries of the sort. When it comes to giving six bits for one inch of a feather and laying down a $5 bill for a bird skin not longer than your forefinger, it may be seen that it takes some nerve to go into the business of artificial fly making. Yet a man who is content with a modest beginning can steal enough duck feathers in the market places to give him quite a start. The silks and tinsels do not amount to very much. It is the Jock-Scots and silver-doctors that prove the undoing of the man who manufactures his flies at home.

A Home-Made Fly-Book.

Speaking of this sort of thing reminds me that to-day my friend, Mr. John D. McLeod, of Milwaukee, dropped into the office. He brought with him, on purpose to show to me, a brand new fly-book of his own manufacture. This is the best thing of the sort I have ever seen, and the dealer who can get the patent will be in luck. The fly-book itself is made of good calf leather, and has leaves to hold about sixteen dozen flies. The leaves of the book are altogether different from any I have ever seen. They are made of celluloid bound with leather. An ingenious arrangement of rubber bands serves to hold firm the ends of the shells. A little metal clip of Mr. McLeod's own devising holds the hook flat and firm to the leaves of the book. Most peculiar of all in this home-made fly-book is the arrangement of metal clips at the back. At will Mr. McLeod can take out all the leaves of his fly-book and spread them out in a long string on the table if he so desires, leaving the leather cover of the book, with its pockets for leaders, etc., separate and distinct from the leaves holding the flies. Folded up, the celluloid leaves can be put back firmly in place in an instant. The whole affair makes the best fly-book I have yet seen. All the work on it was done by Mr. McLeod, whom I class as the most inventive and most effective amateur workman in angling gear I have ever known. When he wants a new sort of pliers to cut off a hook, or a new rod spear, or a new reel seat, or anything of that kind, he simply sits down and makes it. He can wind his own rods, mend his own broken ferrules and all that sort of thing like a professional, though, strange to say, he has never yet learned to tie his own artificial flies. Mr. Graham H. Harris and myself take pity on Mr. McLeod and will this spring finish stocking up all the leaves of his home-made fly-book with our own home-made flies. It is agreed between us that as quick as the trout get their tails thawed out this spring we are to go up and meet Mr. McLeod and Mr. Miller and try some of these new-fangled things on the Pine.

Spring in the Country.

Spring in the city may be diagnosed in any one of several different ways. One sign of approaching spring is the removal of the cleats of the railway platforms. Another is the appearance of the small boy playing marbles in the streets. Yet another, and perhaps the most certain of all signs, is the appearance of the old woman who sells bunches of sassafras. There are different ways of telling when spring comes in the city.

Spring in the country is a different thing. Presently the snow will have melted away from the blacker surfaces of the plowed fields, and will lie only in the drifts in the fence corners or under the hedge rows. There will be a subtle change in the feeling of the air. Now and again thunder will be heard, and presently rains will dissolve all the little snow remaining and set the empty ditches trickling along the roadways. The farmer hails the advent of spring with more joy than the city dweller, for to him winter has been something of a long imprisonment. Now he goes out and stretches his arms and turns his face up to the sky. He feels this subtle change in the moving airs. As he looks out over his field, he sees the soft green robe of the winter wheat rolling away in easy curves. Down in the uncut cornfields the cattle which have "roughed it through" the winter crackle around in the broken stalks, finding here and there a blade of dried maize still clinging. The cattle are rough of coat and thin of flank, but they, too, feel the coming of the spring. One might almost think that the faces of the dumb beasts show the touch of a greater hope.

The farmer moves about his barnyards and pasture lots and cornfields. He calls up the horses to the bars of the lane fence. "Cope! Cope! Cope!" he calls; and the horses, young and old, understand him and come up, expecting a bit of feed, perhaps a pinch of salt, or something else delectable in the horse menu.

The farmer calls out to the cattle, "Co-boss! Co-boss! Co-boss!" This is the language correct for cattle, and is alone understood by them. The ragged yearlings and the gaunt "threes" and "fours" struggle out from the broken stalks to see what good fortune may have in store for them, now that spring has come.

The farmer calls to the sheep in the pasture, "Co-Nan! Co-Nan! Co-Nannie!" This is the language of the sheep, not meet for any other animal. The sheep understand it. Here and there appears a weak and wabbling little lamb, tumbling along on ungainly legs, among the woolly flock which crowd up to the gates, bleating in hopes of something special on this morning of approaching spring.

The farmer wanders toward the barnyard. "Poo-ee! Poo-ee! Poo-ee! Pig-pig-pig!" he calls; and with grunting and squealing response, the swine come filing out from under the barn and from their warm nests around the foot of the straw stack. Even the pigs, big and little, expect some greater kindness of fortune, now that spring has come.

The farmer may not be much of a poet, yet never was a farmer who did not feel a change of heart upon this advent of the springtime. He hears, even though he does not realize it, the song of the bluebird and the throaty, choking melody of the robin. Now and again he casts an eye toward the upper blue as he hears coming down the honk of the north-bound wild geese. He notes the mallards sweeping around gracefully over the center of his cornfield, looking for a stray kernel of shattered corn as feed in this season not yet grown fruitful. The farmer will note presently, even though unconsciously, the swelling of the little green buds along the willows and maples and the cottonwoods. He will note the oak and the elm beginning to grow green again; will see the soft leaves of the alders along the streams putting out long films of green. Presently, too, even though he himself may not be a fisherman, he will note the splashes here and there along the fringe of bushes at the creek side. His son, if he be observant, as all farmers' boys should be, will know that when the young leaves of the oak tree are as big as a squirrel's ear it is time to go fishing for black bass.

It is time to go fishing, or will be now very soon. The farmer's wife also comes to the door, her hands under her apron; and she, too, looks about and feels the change in the air, and notices the green things, and hears the singing things. She will not be sorry, the farmer's wife, when the time for fishing shall have come. To her it means the arrival from that far-off and mysterious City of two or three, four or five, or more, of her regular spring visitors—men strangely moved to come hundreds of miles for the pursuit of small and insignificant fishes. Why they come, the farmer's wife can never understand. Why they take such interest in the doings of yellow-legged chickens she cannot understand. Why butter and milk and eggs and trout should seem so much matters of desire is entirely outside her comprehension. She only knows that her gentlemen will come again this spring, because they have written her to that effect. When the wagon goes over to the railway for them, the farmer's wife will go to the window fifty times in the afternoon, waiting to see it return with its new passengers upon the seats, passengers who are more eager than herself, who wave hands and hats to her as they drive up into the yard.

To city dwellers and country dwellers the coming of spring is a great and joyous thing, the sweetest of all the year. Presently spring will be here for this current year. I wish it may be a very pleasant one for all, whether dwellers of city or of country.

Why?

I remember once seeing in a New York magazine, purporting to cater to the interests of sportsmen, a statement which caused me to blush with shame for my fellow man. The article in question was written by a sportsman of the unmistakable city type. He was making a trip out into the country, perhaps an infrequent thing for him to do. In the course of his travels he saw a farmer in the field. Most Americans would be content to call a farmer a farmer. This young man thought best to refer to the farmer as a "yokel." He had no doubt seen the word thus descriptively applied to some members of the lower classes in England. Perhaps he saw the word in the dictionary. Perhaps he felt himself a bit of an aristocrat in using this particular appellation. It was many years ago that I saw this, but to this day I do not forget it. There was such an air of superiority about the article that I felt myself blush even to-day when I bring the thing to mind. When an American gets too good for America, and when a city man gets too good for the American people, I blush for him, and it is not altogether so much a blush of pity as it is of anger.

Just why a man who lives in the city ought to think himself in any wise superior to one who lives in the country, is something I could never understand. Yet I know there are certain persons who live in the city and who call themselves sportsmen, who rather feel that they are conferring a favor upon a rural community when they honor it with their presence. I am very sure that, were the country dwellers of this land to go into the city and take the liberties with the private property of a city dweller, which certain objectionable members of the latter class time and again take with the property of farmers, there would be immediate resentment shown, and not without cause. As a matter of fact, when we city shooters or fishers go out into the country and begin to wander across the fields and along the streams, we are simply taking for granted the courtesy and tolerance of the men who own the land over which we pass. The farmer of America is, for the most, by instinct, a gentleman. He has the American sentiment in his soul which makes for freedom and equality. He does not want to be stingy or selfish. He does not want to shut any man, city man or country man, out of the enjoyment of such pleasures as his place can offer. At the same time all these privileges are his own by right. It is tolerance on his part, and not necessity, which moves him to permit the crossing of his fields and the trampling of his meadows. The city man has no right of his own on the lands of this "yokel," as the caddish correspondent above quoted had it in his story. Just why a man who owns broad acres and who is independent and sure of a living should not be just as good as some little sprig from the city, who, perhaps, makes $10 or $20 a week, and fails to make both ends meet at the end of the year, is something which I myself could never understand. This unconscious arrogation of superiority on the part of the city man is something wrong. It is not that feeling of fellowship which ought to exist between man and man. It feebly attempts to set up those class distinctions which ought not to exist in this country or any other. Moreover, it makes toward the destruction of sport. The city man who is a man at heart, who can carry his own end of the log anywhere in life, is pretty sure to meet a good reception wherever he goes in the country. In any case, he is apt to get more than his just deserts. Not as a method of getting sport, but simply for the right of the thing and simply for the perpetual rebuke of any such persons as may write of "yokels" in America, I bespeak the meeting of city man and country man upon the simple plane of manhood, as man to man, with the dwelling place left out. We all have to work here in this world, and our time is short enough at best. It was a great saying, that of Bertie the Lamb, who described his fellow men at the club. "Every fellow at the club," said Bertie, "thinks he is a devil of a fellow." But he isn't." Indeed, none of us is a devil of a fellow. We are all just folks.

E. Hough.

Hartford Building, Chicago, Ill.

Foreign Fish and Fishery Notes.

Russian Fish Poison.

The St. Petersburg Academy of Sciences has offered three prizes, the first of five thousand, the second of fifteen hundred, and the third of one thousand rubles for the most meritorious essays upon the so-called Russian fish poison, resulting from badly cured or ill kept fish. With the mass of the Russian people cured fish is a food staple and much sickness, oftentimes mortal, results from indiscriminate indulgence. Contestants may submit their essays in Russian, Latin, French, English or German to the Minister of Agriculture, St. Petersburg, Russia, until October 1, 1903.

Fish Transportation.

A company has been formed in Luzerne, Switzerland, for the long distance transportation of living fish in patented oxygenated receptacles. At the recent International Fishery Exhibition at Vienna, a consignment of living trout leaving Salzburg September 2 arrived in 13½ hours, the entire lot being delivered in excellent condition, thereby securing the company the award of a medal. Invoices of living fish are now regularly shipped from the Swiss lakes to various German cities, and similar shipments of salt water fish are safely and expeditiously effected from Venice. The receptacles are described as being formed of wood and tin and in shape like a milk can. Within the outer package is a steel cylinder, supplied with an automatic contrivance that furnishes the vitalizing oxygen in due quantity. After filling the outer partition with water, the fish are placed therein, the oxygen cylinder opened, the receptacle closed and sealed, whereupon it is ready for shipment. The company charges twenty-four dollars a year for the use of the receptacles, in addition to a fee for refilling the cylinder with gas. A late Luzerne paper, after commenting upon the vexation, annoyance and loss that has hitherto attended the efforts of Swiss hotel keepers to supply their guests with fish in perfect condition, expresses its anticipation that the invention will revolutionize the fish trade, but such possibility, in American eyes, will appear very remote.

Fish Preserving.

A Berlin, Germany, process for keeping fish is thus described: The fish, when caught, is opened, its interior strewn with sugar, and then laid aside for several days, so that the sugar may fully permeate the tissues. It is alleged that fish so treated may be kept a considerable time, and that if subjected to such process before being smoked or salted, the flavor is materially improved. This expedient may possibly commend itself to some of our summer anglers, for on a blazing hot day a resort to the saccharine treatment might enable them to deposit their catch in the larder with a reasonable assurance of its sweetness.

An Idea for Fishermen.

Dutch fishermen have made some remarkable catches by means of a very simple expedient. They put a number of live worms and insects into a bottle partly filled with water, which is then securely corked. The bottle is dropped into the water, and the fisherman sinks his line alongside. It appears that the wriggling contents of the bottle so tempt the fish that they fall easy victims to the baited hooks.—Exchange.

Take inventory of the good things in this issue of Forest and Stream. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

Canine Elegies and Epitaphs.

XXXV.—Souter Johnny's Death.

From the Jacksonport, Mo., "Cash Book," May, 1882.

At his home in Jackson, on Saturday, May 13, 1882, of poison, deal by some unknown person, died Souter John, a dog. In his death, a young Rodman Irish setter of the finest blood and fairest promise has been taken off. It would have been hard to find anywhere a dog to match Souter John before the gun. His sight, his nose and his hearing were perfection; his action superb, and his endurance wonderful. For these qualities, together with his obedience and sagacity, his beauty of form and graceful movement, his master, Mr. Thomas McFarland, prized him as a jewel, and besides, he was admired and caressed by every sportsman who knew him. Souter John was whelped at Edgar, Neb., May 22, 1880, and was brought to Jackson when seven months old. He leaves behind him his brother, Tam O'Shanter, and his aged father, Shidy, to mourn his untimely death.

Come doggies all, baith old an' nimble,
Wha hunt the paitrick in the bramble,
Or cottontail,
An' ilka puppy quit his gambol,
To weep an' wail.

Let ilka tail now drag the ground,
An' ilka doggie stand around
Where Johnny's dead,
An' howl an' howl wi' mournful sound
Aboon his head.

All ye wha like the fields to scour
Wi' gun an' dog for mony an hour
In chill October,
When frosts hae nipp'd the weed an' flower,
Come an' look sober.

For John, the prince of every setter,
Lies stiff an' cold down in the gutter,
To hunt na mair;
Than him na kennel kept a better
Onywhere.

Ah, Tam, your brother Souter John,
Maybe you think's a-hunting gone
Just for to-day;
But, Tam, the trail puir Johnny's on
Leads far away.

Vile wretch wha dealt the poison! Surely
He canna go to hell too early;
For him sae mean
Old Hornie's fires are blazing clearly,
An' pretty keen.

Ye Fates wha fill the hazy breezes
Wi' foul contagion an' diseases
To pester man,
An' ilka ake an' cramp that squeezes,
Do all ye can,

To mix all your ills in hellish jumble,
An' mak' a curse an' let it tumble
Upon his pate.
Lord, hear this prayer, sincere an' humble,
An' grant it straight.

ROBIN.

Donald.

MR. GEORGE BATTEN'S orange and white setter, Donald, died at Duncannon, Barnwell, S. C., February 23. He was nearly ten years old, and for nine years had been his master's constant companion. He died on one of these annual visits to South Carolina.

He was a knightly gentleman among his kind, with all the inherited virtues of the blue blood that coursed through his veins, and not a mongrel meanness had darkened any moment of his life. Brave, yet gentle, honest and true as sunshine, faithful and unselfish, nursing no rancor and unforgetting every kindness of word or caress, one might imagine that some human soul had been given him, that by the penance of such service as he could give some sin—some wrong of cruel measure—might be bleached and expiated.

To the master he was better far than chattel—a friend in more than the word implies in human uses. He could, it seemed, read the varying moods that vexed or pleased the busy brain of his captain of industry, and his silent sympathy or glad rejoicing manifested a love that knew no weakening, but that grew with greater swiftness than his years heaped up its evidences. To the little ones of the master's family he was a guardian above and beyond any temptation of bribery, with never a whisper of fear nor a thought of cowardice, and a teacher, too, of perfect self-sacrifice and patient and loving service; and childish eyes were dim and wet with tears when they were told that Donald would never again walk or play with them. It was his destiny to have a home close to the heart of a throbbing, busy metropolis, but how gladly when the autumn days brought the time of his annual outing would he speed from the cramped quarters of city to the broad fields of the sunny South, and give free play to his wondrous knowledge of the craft of bird life. No "phantom" covey ever eluded the almost supernatural instinct which guided him aright; whether it was beneath some deserted cabin, as once he proved the reality of the wily birds to the chagrin of his baffled comrades, or among the brown leaves of some friendly tree. There was a very riot of happiness in his heart and soft brown eyes when the master, following him afield, had brought to earth the swift-flying quail, and refreshed his quivering nostrils with a whiff of its fresh fragrance.

And death was very good to come to him there amidst the scenes of his happy hunting days, in his ripe old age. On the sward at "Duncannon," in the comfort and warmth of the noonday sunshine, with the whistle of the quail echoing from the far-off fields, he passed into the dreamless sleep. And as the night shades fell he was laid to rest upon a bed of rustling leaves; boughs of evergreen strewn above, and the kindly soil heaped upon the worn out faithful friend.

There, at the base of a mighty holly tree, brave with its coronal of scarlet berries and unfading leaves, Donald rests in his long Christmas slumber. And not soon will that touching scene be forgotten by the mourners there: the master, who shall never again hear him "Bay deep-mouth'd welcome" home; the fair and gracious mistress of "Duncannon;" the sable sextons, or the writer. And thither shall the writer make many pilgrimages with Byron, the grandson of that peerless grandsire; the one to pay honor to the memory of a loving friend; the other (let us hope) to draw such inspiration from the scene as will make him, at home and afield a worthy scion of the grand "old man."

P. M. BUCKINGHAM.

BARNWELL, S. C.

The Dog and the Law.

A BRIEF review of how the dog has been regarded by the law in the State of Massachusetts may perhaps be of interest with the reader, as well as contain suggestions of profit with him. And the first distinction under the statutes of this State worthy of note is that drawn between the owner and the keeper of a dog. It has been decided on more occasions than one that the keeper, and not the owner, of a dog is liable for neglect to keep him properly collared, licensed and restrained, provided the keeper and owner are not one and the same person.

The justice and fairness of such a ruling is apparent at the first glance. How shall the owner of a dog which he has entrusted to the charge of another, know that he is being properly cared for? The law excuses him from this responsibility, as well as assists him in holding one commissioned with the care of his animal responsible for this attention.

As to the license itself, some interesting decisions have been handed down by the court. One is to the effect that if one purchases an unlicensed dog after the 30th of April in any year, the limit of the time allowed for taking out a license, he is not liable to any penalty for neglecting to have him licensed and numbered until the same day and month in the following year. Doubtless the same would hold good as to puppies born after the required date of licensing.

Another decision worthy of note is as to the nature of the license. The court on this occasion said that "A license to keep a yellow and white dog named Dime will not authorize the keeping of a black Newfoundland dog named Nigg," the difficulty being that the description is an essential part of the license, so that it would become void in case one dog dies and another is purchased in its place, the license being not to keep a dog, but a certain dog, numbered and described.

When a dog may be regarded as "being at large," and not under the control of its owner, is a question which has received much attention in our courts. One ruling is to the effect that he is still at large if he be loose and following the person who has charge of him, through the streets of a town, at such a distance that he cannot exercise control over him which will prevent his doing mischief. A dog at play with its owner's son, upon the owner's land, has been held to be not at large, and a constable or other person who pursues him while on the land and shoots him is liable for the damage he thus causes.

As a general thing the owner of a dog is liable for the injury which he may inflict to one's person or property, but not if he venture wilfully within his reach, knowing him to be savage, or madden or tease him. Grown people are supposed to exercise more caution in these matters than children. The court has said, "The owner of a dog which has inflicted an injury on a child cannot exempt himself from the liability imposed by statute because it appears that the child did not act with the discretion and judgment of a person of mature years, but he is liable if the child was bitten while using such care as is usual with children of its age."

In order to recover damages from the owner of a dog it is not necessary to prove that he was aware of the vicious character of the animal, or that the dog was accustomed to bite, or had been known to bite on former occasions.

One of the cases decided bearing upon the liability of the owner of a dog for injuries done to property must surely prove of interest with every owner of a dog. It is, in substance, that when two or more dogs together, belonging to different persons, inflict injury upon the property of another, each owner can be held responsible only for the wrong done by his own dog, and cannot be held accountable for that of any of the others.

This case dates back to the year 1838. Some dogs had been worrying and killing sheep, and the owner of them brought suit against the owner of one of the dogs for the full amount of the damage. But the court held that it was only justice that "he should be held liable for the damage done by his dog alone, and not by the dog of another."

In still another case it was decided that if a dog owned in this State strays into another State, and there bites a person, its keeper cannot be held liable for the injury. This seems almost without just reason at first thought, but with further consideration the line of reasoning becomes evident. The plaintiff brought suit, relying on the law of Massachusetts for his justification, but the law of the place where a wrong is committed determines its penalty, and as the accident happened in New Hampshire, and no evidence was offered as to what the law of this State was as to injuries inflicted by stray dogs, the action could not be maintained.

A case of much more recent decision contains a warning which every owner of a dog should take well to heart. It affirms that if a statute exists requiring dogs to be equipped with a collar, even though licensed, a dog cannot be allowed to roam about without a collar, and an officer who finds one thus is justified in shooting it, even though he knows at the time that it is licensed. This, perhaps, may seem harsh at first, but it is simply fulfilling the requirement of law.

Many have made the mistake of imagining that they have a perfect right to appropriate as their own a dog that is not licensed and that is found at large, but such is not the case, and its actual owner can recover it, or its market value, if it cannot be produced, in an action at law.

In a general way it may be said that as a whole the dog license laws are beneficial to the owners of these animals, since they recognize and protect their rights in them.—A. K. C. Gazette.

Yachting.

The Cruise of Tainui.

BY L. E. MARSH, TORONTO.

Winner of First Prize in "Forest and Stream" Cruising Competition.

Another day's drift! At noon we passed Thirty Mile Point Light, and at 5.30 we were two miles off Oak Orchard. At dark we made the piers and tied up. Oak Orchard piers, like Olcott piers, extend straight out into the lake from a creek. There is good shelter from everything except a blow from the north.

We found the place as flat as dishwater, and after a couple of hours' strolling and stumbling about in the darkness—the village boasts of two hotels, three houses and a candy shop, where you can buy shoelaces and fishing tackle—we serenaded the sad sea waves with a few popular songs, and the combined music of a clarionet, a mouth organ, a dinner bell and a fish horn, and then turned in.

In the morning—Wednesday, July 30—half the crew spent an hour trying to locate bread and eggs and were soundly rated by the Skipper when they got back because in their absence a breeze had sprung up which he was not able to take advantage of. After a hasty breakfast we started. But a mile out the breeze hauled dead ahead and dropped light. After bucking about for an hour we quit the game and headed back for the harbor. With the wind aft we jogged along at a neat clip. The breeze freshened just as we reached the piers and we headed down shore again.

Again we doddled along all day, with the wind light, off shore, and so far ahead that the crew had to lie to leeward, and an instant's inattention at the helm set all her duds a-shaking. At noon Canadian, of Hamilton, a 35-footer; Naomi, of the same port, a 30-foot yawl; Vesta, of Toronto, a 25-footer, and Merrythought and Vreda, two of the first-class cutters of the Toronto fleet, passed us running free.

At 4.30 P. M. the entire crew deserted the ship. She was two miles off shore and only 18 miles from Oak Orchard. We rowed to terra firma and spent a couple of hours roaming around. A collection of raspberry bushes, a cherry tree and an old yacht occupied us, and a few impromptu races straightened our cramped limbs.

Away in the offing lay our little craft as silent and immovable as "a painted ship upon a painted ocean." In the gathering dusk she looked as big as a coal schooner. When we returned to the craft, for lack of something else to do, we turned to and scrubbed her down from water-line to cabin top.

Another night's drift! At midnight we had passed Braddock's Point Light, which was only six miles away at dusk. At 3 o'clock the Skipper roused me out. He pointed out a light over the bows.

"That's the Genesee Light," he said. I steered for that light. I sang and whistled and held her bow for the twinkling point. A little squall came down, and the light which had been dodging me assiduously the last hour, seemed to tower above the mast head, and the black shore streak appeared on both sides of the craft. I rubbed my eyes but there was the light and there was the shore.

"Hey, Bill," I roared, "what in thunder is this?"

Skipper Bill bumped his head hard a couple of times before he reached the cabin hatch. He poked his head over the cabin top, gazed a second, and then fell all over himself, and me too, in an eager dive for the stick.

"Ease those sheets," he shouted, and he yanked the tiller hard up, and we hustled for the open sea again. When well off shore we sighted Charlotte lights, still six miles ahead.

The light I had been steering for was an arc light on a summer resort hotel piazza, and I would have landed the craft and her sleeping crew up against the hotel register had the Skipper not tumbled up when he did.

The Genesee lights disappeared in the gray light of the dawn and still we drifted. At ten o'clock we were in Charlotte harbor. After a lively afternoon and evening in Charlotte a very tired crew sought their bunks in a rainstorm.

In the morning—Friday, Aug. 1—we paid a visit to the new clubhouse of the Rochester Yacht Club, and at eleven o'clock, in spite of a theatening sky, we stood out on a compass course, due north, for Presque Isle Bay, across the lake. Just outside the harbor a neat little rain squall came down to bid us bon voyage. Just to be sociable we tied in a couple of tucks, but the wind shifted from abeam to a point or two aft and soon the Skipper was shouting for more canvas. He got it, and soon the shore line disappeared. Out in midlake we passed drifting logs and limbs—evidences of a storm on the Canadian shore—and during the afternoon the wind gradually hauled ahead. First it came from the northwest. There was no sleeping below to-day. We hung out upon the weather rail while the little hooker chased along, her lee covering board awash, and a big white bone in her teeth. I tell you we enjoyed that day's work, following, as it did, a week of miserable drifting. In early evening we were plunging along in a good lump of a sea and the wind shifted a bit more north. For awhile we laid a course a couple of points east of north. Then the wind came out of the northeast, and we went about and laid our true course again. It looked dirty, but we lugged all our canvas. One by one the lights along the Prince Edward shore appeared—Scotch Bonnet, Weller's Bay—and Presque Isle cluster right ahead. At ten o'clock the wind shifted off shore and commenced to "fan out." We

took a stretch to the west, but as the wind kept heading us off the Skipper held on that stretch and at 3.30 A. M. we made Cobourg.

At eight o'clock the next day—Saturday, Aug. 2—we set out on another drift, and there was much profanity. At nine o'clock the wind came off the lake and over the quarter. It freshened rapidly and at noon, after three hours' excellent sailing, we were off Presque Isle and had dowsed the foresail so that we might take the narrow tortuous channel in comfort. We went down the channel as if we were tied to a runaway engine, gybed around the light in the center of the bay and headed down the Murray canal.

Running with only the mainsail and jib the rocky banks of the canal raced by us at a merry clip. It was a glorious sail. We simply sat and grinned at each other and enjoyed the fun. The man at the first bridge saw us coming, and gave us a clear passage in ample time. At the next bridge we had to round up in the narrow channel, about 50 feet in width, and pay tolls. Fifty yards away the Skipper sent a man forward with a line. Another man was stationed on the jib sheets, while a third took the main sheet. A slip or a hitch, at the critical moment, meant the loss of a spar or a damaged bow. When the schooner's horn almost touched the bridge pier in the center of the channel, down went the helm. The main sheet was roused in smartly, and the jib was started. Around she came, in a little better than her own length, and laid up against the booms on the canal bank as if men on shore had handled her with bow and stern lines. The Skipper hustled ashore to pay up, for we were holding the watch upon the trip through the canal. Three minutes later we were away again, and had the foresail on her. Wing and wing we swept along. Below the next bridge a big paddle wheel steamer hove in view. A two foot wall of water kept pace with her up the canal. The captain of the steamer never offered to slacken speed. On she came, churning up the water in the narrow channel. To pass her was a ticklish proposition. She altered her helm a trifle and we swept by, our foreboom gazing the stones on the bank to starboard, and our mainboom just clearing the steamer's guard rail.

Bang! and we plunged into the first roll. The masts whipped threateningly and the crew hustled for the jumper stays. Down they came before the craft had time to ram more than a couple of the short rollers. She fairly leaped the broken water. As she rose on the big ones, the half gale behind peaked her booms up and fairly lifted her across the intervening hollow, and smashed her into the next one. We had a couple of minutes of this lively work and then we struck our even gait again.

The Bay of Quinte!

We made the trip through the canal, 6½ miles, in 45 minutes, including the three-minute delay at the tool office. That's going some. At least it was a fast stunt for a pot-bellied little 25-footer loaded with dunnage.

Out into the bay we shot, gybed over our mainsail, and set her on her course for Trenton, three miles away. The Bay of Quinte is noted for its squalls—short and sharp. We were introduced to the Bay of Quinte brand right on the threshold. Just as we gybed over a squall hit us and the sheets as they shot across the deck caught Culham around the neck. They tightened up with a mighty jerk and sawed Charlie's throat. His lamentations were quite audible above the whistling wind and clashing waters. The squalls kept us hyking out, all the way in, and the Skipper was about to order in the foresail, when he sighted a dozen boats and a dock crowded with people. The Trenton fleet—a nondescript collection of deep draughts, scows, catboats, skiffs and other craft—was hard at it out in the bay, cracking on every stitch and hustling for the finishing buoy just off the dock end.

"Hump! We can't shorten down with that bunch out there carrying everything," said the Skipper, and we left the foresail on her. We were running a bit freer than they were and reached the buoy first. We rounded up just for luck, and then bore away, and hustled into the dock, like a projectile from a gun. We came in so fast that those on the end of the dock crowded in alarm, but the Skipper jammed the helm down at the proper instant, and we rounded up without accident. She threatened to head reach too far, but Clark swinging a loop like a westerner lassoed a post and snubbed her up. It was just 3.30. An hour later almost to a minute we were away again with a snug meal tucked under our waist bands. We were bound for Belleville, 12 miles down the bay. The bay is narrow. In some places it is two or three miles broad, while in others it narrows down to a quarter or half a mile. Sometimes you are sailing down a narrow reach between two high banks, and again the wind comes at you from over a flat country. In the Bay of Quinte keep your weather eye a-lifting, and your sheets ready to let go on the instant, for the squalls are quick and hard, and they come over the hills without warning. One minute you are doddling along with slack sheets, and the next instant your sheets are taut as bowstrings, and a couple of tucks looks about the proper thing. But to come back to the Belleville trip. We chased down the bay at an eight-knot clip and at six o'clock were sounding our horns for the Belleville swing bridge. Inside the bridge the channel buoys made a long detour into the harbor docks. The Skipper was in a hurry. We cut the buoys.

C-r-r-r—swish! The centerboard rose up and smote the cabin roof, and the booms, still well off, suddenly peaked up into the air as we checked against a gravel shoal.

The Skipper gybed all his canvas and stood out from the shoal. No damage was done so we hoisted all the board and held away on the short course again.

"We'll see if we can find another shoal," cried the Skipper as we bowled along. We did not locate any more shoals, and I, for one, was not sorry, for it was a mystery to me what kept her sticks in when we struck. We hit hard enough to have cleared her at the decks.

We tied up alongside of a beautiful water front park, made snug the ship, and toddled uptown to find a barber. The knight of the razor and comb rubbed his eyes when the sunburned, tousle-headed, bristly-faced collection of mariners stormed his shop.

At Belleville we saw the first of a new brand of sailing craft which is popular with the Bay of Quinte amateur sailors.

They are little skiffs or punts, square-sided and flat-bottomed. They had a sheer on them which made them look like a combination of rocking chair and English punt. They were sloop rigged. The great peculiarity about these mosquitoes was the steering gear. A seven foot oar, with a curved stock, was pivoted in a rowlock on the counter. When the steersman wanted to put about, he reached over to leeward with his blade and threw his weight upon the handle. The boat came about without any more ado. In light airs the steering oar is decidedly handy. A pull puts the boat about no matter what her headway. There was no such thing as getting in irons with such a steering gear. We left Belleville in the gray dawn of Sunday morning—Aug. 3. It was four o'clock when the shrill creaking of halyard blocks woke drowsy Clark. At 5.30 we were at Massassauga Park, four miles east. Just as we pulled into the dock Clark, who had been trolling, yanked out a black bass, the first fish caught on the trip. Immediately all was excitement.

"A fish fry! A fish fry!" shouted Clark, and in spite of a drizzling rain we improvised fishing rods, and with grasshoppers for bait fished for bass. Inside of half an hour we had a dozen or fifteen and Chef Culham soon had an appetizing panful awaiting us. Even a downpour failed to spoil our breakfast on the unprotected deck. We donned our oilskins and fed as well as if we had our knees under a millionaire's mahogany.

After the rain the wind.

It came down hard. Just off the park we passed Vedette of Toronto bound west. The trip to Deseronto was a delightful one. The sun came out and the wind blew fresh over the quarter. Half way down a big sloop challenged us, but after half an hour's sailing the hooker showed her heels to the stranger and we gave him our war cry, "Tainui, Tainui, T-a-i-n-u-i! Rah! Rah!" and proceeded.

Outside Deseronto we swung into Forester's Island and found plenty of water close to the shore. After a trip over this pretty little island and an inspection of the wigwam of Oronhyatekha, the Indian head of this big order, we set sail for the great lumber town of Deseronto. It blew a gale down Picton Reach, and we were glad to hustle for shelter with a dowsed foresail.

Lumber, lumber, everywhere, describes Deseronto. The entire water front is a 20-foot rampart of lumber and the piles extend a quarter of a mile inland. Deseronto, a few years ago, was swept by a conflagration, which originated in the lumber district, and now extraordiary precautions are taken against fire. Smoking is not allowed in the lumber district at all. Clark and Culham discovered this fact early. Arm in arm they stepped on the dock, each with a lighted pipe.

"No smoking here, young fellow," growled a burly chap on the dock.

"Why?"

The gruff individual vouchsafed no reply, but swung his hand towards the lumber pile. Clark and Culham finished their smoke upon the boat.

It blew dirty all day and rain squalls added variety to the weather. The bay was covered with whitecaps and it was blowing decidedly fresh when a skiff capsized. The Skipper put off to the rescue in our dinghy, and after a heavy pull, and a race with a tug, reached the overturned craft and rescued the crew. Rescued and rescuer came back on the tug. A cleated main sheet caused the upset. The rain came on and the skiff's crew made the main sheet fast and huddled under an umbrella. The wind came up suddenly and she turned turtle before the mainsheet could be started. That's the tale of a ducking.

Deseronto was our eastern turning point. It proved a dull town, but a fresh wind dead ahead which sprang up after the rain kept us tied up there all day.

At midnight it still blew ahead, and we were in a quandary, until we discovered that a tug would depart at 2 A. M. for Trenton with a tow of timber. Now Bay of Quinte timber tows are a quarter of a mile long. Cautious inquiry soon located the tow for us, and after bidding the tug's crew, with whom we had been fraternizing, an ostentatious good-bye we set sail. But we weren't going to buck up the Bay of Quinte in the darkness. Not much. The second stretch took us beyond the prying eyes of the tug's crew and put the Tainui, nose on, to the tail-piece of that timber tow. We made no bones about the matter, but set our anchor flukes into the binding chain of the last pair of timbers, lowered our canvas, dowsed our lights, and waited for the starting of the tug. A shift in the wind drifted the tow out into the bay into the path of the tug en route to take up her position at the head of the tow and threatened to betray our intention. We pulled the end of the tow back with the dinghy and to prevent a recurrence of the episode, made fast to the dock with a line in such a manner that we could cast off from the boat the instant the tug started.

The best laid schemes "aft gang agley." We all fell asleep and when the tug started she snapped our stern line. Before we had gone far the gurgle of the water woke Commeford, and he broke the good news that we were off for Trenton.

We shook hands, laughed gleefully at the success of our trick and snuggled down into our blankets.

At daybreak when Culham crawled out on deck he found that we had only gone a few miles. An accident had delayed the tug. In the dawn the tug captain discovered that he was towing more than he bargained for.

He surveyed the Tainui a moment in the hazy morning light and then apparently undecided summoned the mate. Still we hung on. About seven o'clock the tug captain lost his temper at our persistency and suddenly ran his tow into a bank, uncoupled, and came down at us under a full head of steam.

"Here he comes," shouted Culham and we tumbled on deck in our night gowns and hustled to get the duds on Tainui. We cast adrift in a moment and the canvas went aloft so fast that the Skipper's hair fairly stood on end, in apprehension of the safety of the gaffs. The wind was blowing fresh over the quarter, and we were off up the channel before the tug was half way down the tow. Fortunately the tow was between the tug and the schooner. The tug rounded the end of the tow and gave chase. For a few moments we were on Anxious street. The tug was coming fast, but our little craft, with a bone in her teeth, was footing some, too. The tug failed to gain a foot and after a quarter mile chase abandoned the pursuit and turned tail. We dipped our ensign in mock salute, roared our war cry and then sang, "We don't care if you never come back."

We were back in our berth beside the park in Belleville at nine o'clock that morning.

Fishing in the Moira River and a band concert in the park kept us occupied all day and during the evening.

In the morning—Aug. 5—the bay was as smooth as a mill pond, so Clark and I had another round out of the bass in the Moira while Culham and Commeford woed Morpheus. At nine o'clock a breeze sprang up and we set sail. We bucked across the bay to the bridge. We almost lost our foremast owing to the failure of the bridge man to open the bridge promptly.

Outside the bridge the wind hauled a point and we were able to make up the channel by close pinching. The wind kept freshening and we were glad enough to drop our hooks behind Niger Island, three miles from Trenton.

We found the island in possession of a regiment of cranes.

Clark and I still had the fishing fever. We could not find any bait so we attached a piece of Clark's red hat to our hooks and tackled the bass again. All things looked alike to the bass, and we hauled out three-quarter pound "rockers" as fast as we could throw out our hooks. The Skipper and Culham tried the fishing game, but the denizens of the deep had become wary at the depletion of their numbers, and these enthusiastic anglers wisely kept the measure of their success a secret.

The Skipper got even with us in Trenton that evening, however, for he landed a four-pounder off the piers there. Clark and I got up early in the morning to break the Skipper's record, but couldn't catch anything heavier than a pound and a half.

At 10 o'clock on Wednesday—Aug. 6—we left for the Murray canal. The wind was down the channel and we tied up at Twelve O'clock Point, a little summer resort. We remained there all day and found the place brim full of life. In the evening the cottagers gave a concert and dance for us and afforded us generally such a good time that our visit to Twelve O'clock Point will always hold a prominent position in our memory.

Next morning—Thursday, August 7—the wind was still ahead, but we started. We bucked her up the channel for two miles but we arrived at the conclusion that we were working harder shifting canvas than we would be towing her up the canal. We got out a 60-foot line, and with a piece of rail as a yoke, Culham, Clark and I played tow mules at first. We galloped up the path with the hooker and had the Skipper timing our progress between the snubbing posts which were a couple of hundred yards apart. At each succeeding post we tried to break the record for the last one. A mile or so of this took the gimp out of us slaves on the rope and we settled down to a dogged plod. The wind had increased to a gale and the hooker towed as heavy as a coal schooner. We were dead tired, when Clark's fertile brain evolved a scheme of relief. He shouted for a line. The Skipper passed one ashore and he deftly lassoed a Mooley cow grazing on the bank and hitched her to the tow. She was inclined to balk a bit, but a generous application of rope's end set her off on a slow trot. Twice she tried to break away from the path and threatened to haul the craft out on the bank, but the trio on shore wouldn't stand for any such dereliction of duty and kept the bovine strictly to her task. The Mooley, under a good deal of persuasion, towed us to the canal mouth and we set out to buck up to Brighton, three miles away.

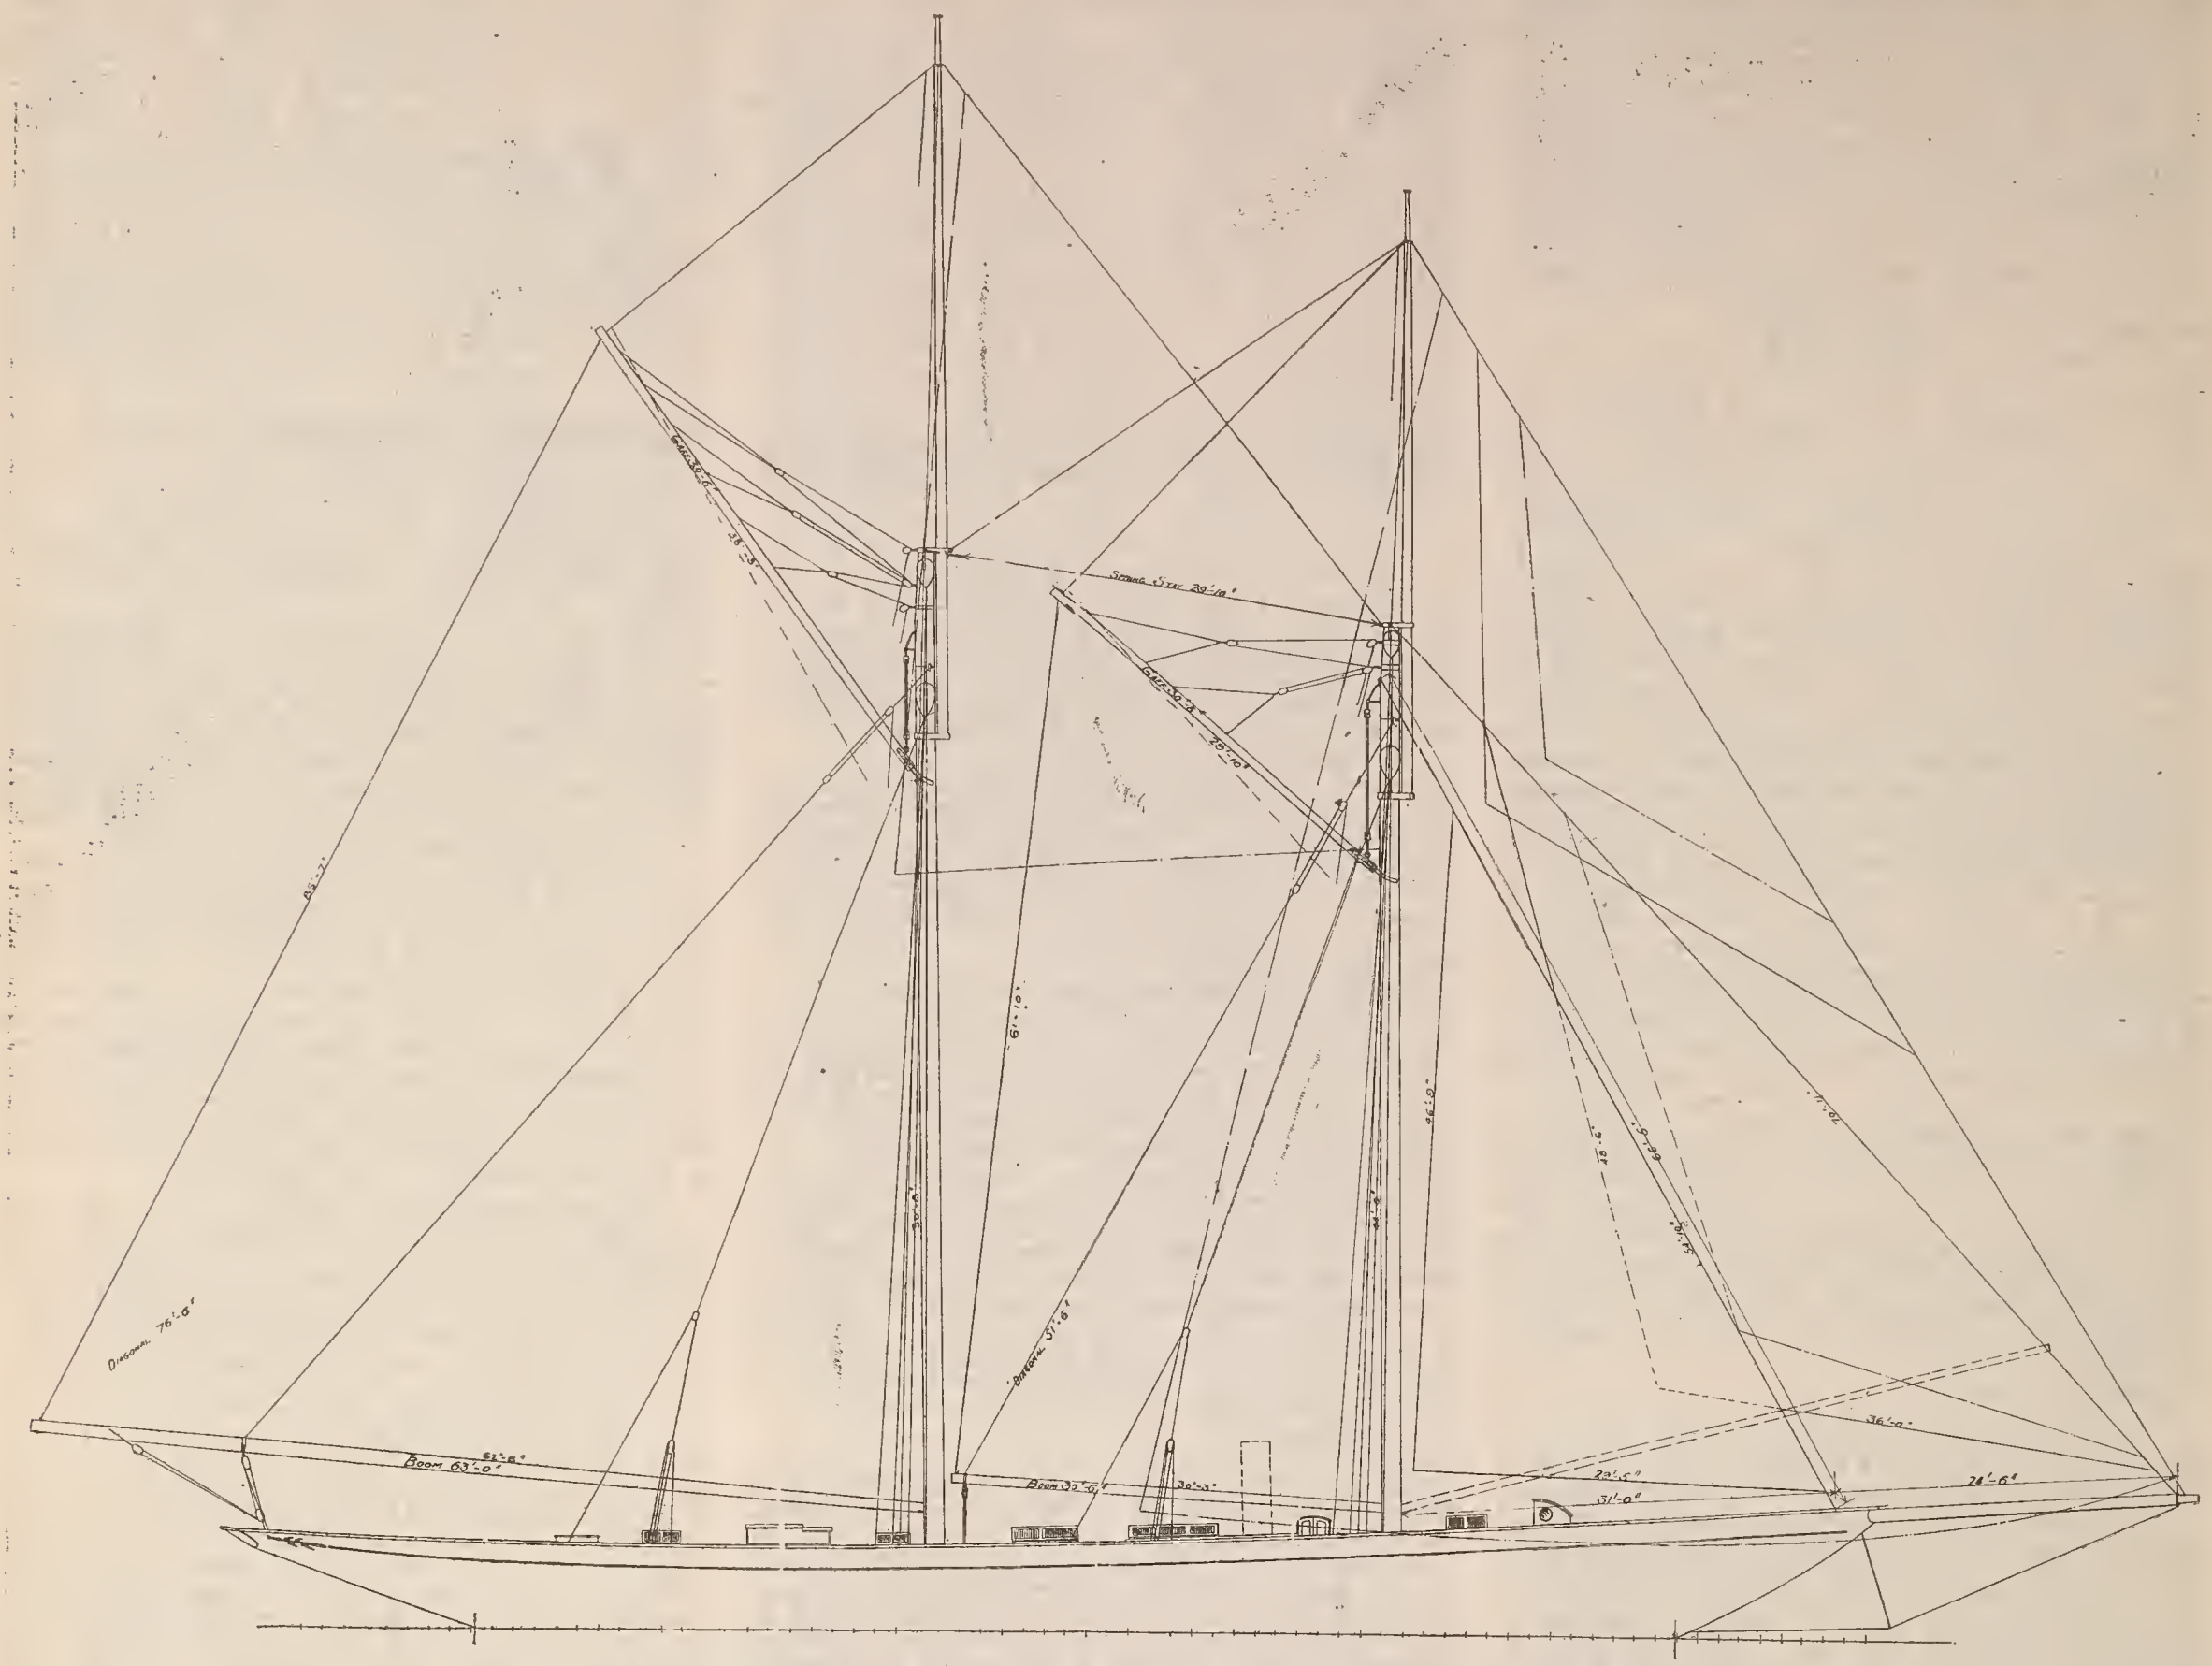
We reefed down and started. In the first stretch, while trying to pinch by the pier end our dinghy fouled the abutments and the painter snapped. We had to chase the little boat down the canal and had a pretty time beating out again. The channel outside in Presque Isle Bay was almost as narrow as the canal and accidents came thick and fast. The second leg out we carried away the first block on the mainboom and had to anchor and lash it on again. On the very next leg the second block went adrift. Again we anchored and made repairs. When we got under way again we ran into a mud bank and had to start our sheets to get off. Then the stops on the foot of the mainsail started to give. One by one they went, and when we ran into Brighton piers our mainsail was a first-class imitation of an English lose-footed sail.

It blew hard all day and we stayed at the dock until evening. When we ran across the bay to Brighton Beach, a sleepy little summer resort near Presque Isle Light, we ran into a tiny bit of a bay near an old wreck. The water was deep close to shore and we tied up with our horn overhanging the sand.

The next day—Friday, Aug. 8—we started out bright and early and with a head wind bucked up the lake 20 miles. The wind had been increasing all morning and shortly past noon, after reefing down for heavy weather, we discovered that we were making no progress in the heavy sea and ran into Lakeport, which was just under our lee. We were anxious to get home and remained awake all night awaiting a shift in the wind. The shift never came.

In the morning—August 9—there was a light wind off shore, and a heavy roll from the southwest on the lake. We started, but our progress was tantilizingly slow. We did not reach Cobourg, 10 miles away, until three o'clock. We picked up our mail and drifted to Port Hope, six miles away, arriving there at eight o'clock.

With the wind out of the northeast and moderate, we bade good-bye to Port Hope at midnight. Twelve miles up shore the wind shifted to the southeast, blew hard and a heavy sea picked up quickly. We were looking for Darlington Harbor, 25 miles west of Port Hope. Four miles east of Newcastle Harbor the wind increased to 30 miles an hour, and we took in her foresail and mainsail and with the jib behind the mast hustled for the shelter of Newcastle. We made Newcastle at 3.30 A. M. Inside we found a couple of big trade schooners whose skippers had also discovered that a sheltering pier was more to their taste than the gale-swept lake. On Sunday morning at nine o'clock we put the tucks in all our canvas and ran down to Darlington, five miles away, with the wind over the port beam. It was raining. It blew



AUXILIARY SCHOONER IDLER—SAIL PLAN—DESIGNED BY TAMS, LEMOINE & CRANE, 1901.

fresh all day, but despite the threatening aspect of the westerly sky, we left for Whitby at six o'clock in the evening. Whitby was fourteen miles west, and we covered the distance in two hours. At Whitby we almost inscribed "Finis" on Tainui's log book.

When the sun went down the night darkened rapidly. At eight o'clock when we squared away to enter the harbor it was as dark as pitch. We had the light ahead however and so drove in in front of the wind and sea. Soon the light hovered over us. Opposite the lighthouse we took in our foresail. We passed the beacon and ran down the west side of the lighthouse pier at a merry clip. The roar of breakers ahead and the outline of a breakwater at right angles to our course warned the Skipper that something was wrong. Just as Commeford jammed down the helm the centerboard struck in the sand and in a flash all dawned upon him. The rest of us were as innocent as babes. We had never been in Whitby Harbor before. Whitby light is the only lighthouse on the Canadian shore which is situated on the west pier. In the excitement, during the storm, that vital fact had slipped the Skipper's memory, and as usual, he had tried to make the harbor leaving the light to starboard.

But to get back to the ship. We were on a lee shore with a heavy sea and it looked as if Tainui was doomed to destruction. Commeford's first impulse was to drive her on with a full sheet, but in an instant his nerve came back and he decided not to give up the ship without a struggle. We closed down our main sheet and beat out for the open. Tainui rolled in the backwash and broken water and time after time seemed to be right on shore for good. Then we started to gain. Inch by inch we pinched off and finally we struggled back to the pier end and made the harbor. It was a thankful crew which turned in that night on the little schooner.

We got but little sleep. The westerly storm broke and kicked up such a nasty chop in the harbor that we had to climb out, tow her off a lee pier and anchor her out.

The storm continued all day Monday—Aug. 11—and we hugged the harbor. At four o'clock it showed signs of dropping and, close reefed, we tackled the game again. With the wind ahead, we threshed her upshore until we were off Frenchman's Bay, where our troubles commenced afresh. At dusk while pounding into the seas the main peak halyard block carried away. We lowered the mainsail but could not make any progress to weather under the canvas forward.

We tried to hoist away the reefed mainsail, using the throat halyard tackle for the peak, but in the excitement and heavy roll the halyard was lost overboard. We dowsed all canvas, while the Skipper took a new rope, shinned the mast and after considerable difficulty rove it through the jumper stay eye. This was made fast to the main gaff and the sail was hoisted. Being reefed, the sail set in fair style and we bucked into Frenchman's Bay. We remained in the Bay all night, and in the morning after tinkering up our running gear set sail for Toronto. The wind was baffling, but at one o'clock that afternoon the little schooner was bobbing up and down at her home mooring again.

Idler—Auxiliary Schooner.

THE auxiliary schooner Idler was designed by Messrs. Tams, Lemoine & Crane for Mr. Henry T. Sloane, and built by the George Lawley & Son Corp., South Boston, in 1901.

She is a fine vessel of composite construction, and has proven to be an admirable cruising yacht. Her owner has used her steadily for the past two summers and she has given satisfaction in every particular. From Idler's outward appearance it would never be known that she has auxiliary power, and the designers were careful to turn out a boat that would handle well and be moderately fast when under sail alone.

Her dimensions follow:

Length—		
Over all	117ft.	
L. W. L.	85ft.	
Overhang—		
Forward	14ft.	2in.
Aft	17ft.	10in.
Breadth—		
Extreme	22ft.	6in.
L. W. L.	21ft.	4in.
Draft—		
Extreme	13ft.	6in.
Freeboard—to top of rail—		
Forward	9ft.	8in.
Least	6ft.	
Aft	7ft.	

Below the main saloon really divides the accommodations of the yacht into two parts. The part forward of the saloon being given over to the machinery, galley, pantry, officers' and crew's quarters, while aft of the main cabin are the cabins for the owner and his guests. A transverse bulkhead separate the two parts, and in consequence the after part of the vessel is free from all noise and odor.

The companionway leads to the chart room, which is 5ft. 9in. long and fitted with a lounge, table and drawers for charts and lockers for instruments, etc. A passage leads forward from the chart room to the main cabin. On the port side of the passage is a bath room 6ft. 6in. long and fitted with a tub, washstand and patent closet. On the starboard side of the passage is the linen locker and a door to the owner's stateroom, which is 8ft. 6in. long. In front, on the wide berth, is a transom, which can also be made into a berth. At the foot of the berth is a hanging closet. There is also a bureau and a set basin in this room.

A passage runs aft from the chart room to the after cabin. On the port side is a small stateroom 6ft. long, while on the starboard side is a large stateroom 8ft. 6in. long. Both these rooms have wide berths, transoms, bureaus, wardrobes and washstands. The large stateroom aft or ladies' cabin, runs the full width of the boat and is 8ft. 3in. long. There is a wide berth on each side with a transom in front. On the port side aft is a wardrobe, and corresponding on the starboard side is a chiffonier and locker. A bureau is placed against the forward bulkhead. In the after bulkhead there is a door which leads to a toilet room, where there is a set wash basin and patent closet.

The main saloon, which is amidships, extends the full width of the yacht, and is 12ft. 6in. long. A wide sofa runs along either side, and behind there are book cases and lockers for china and silver. Two tables, a buffet and fireplace, complete the furniture in the saloon. All the cabins and bathrooms as well as the main saloon have port holes which give light and ventilation in addition to that afforded by the skylights overhead.

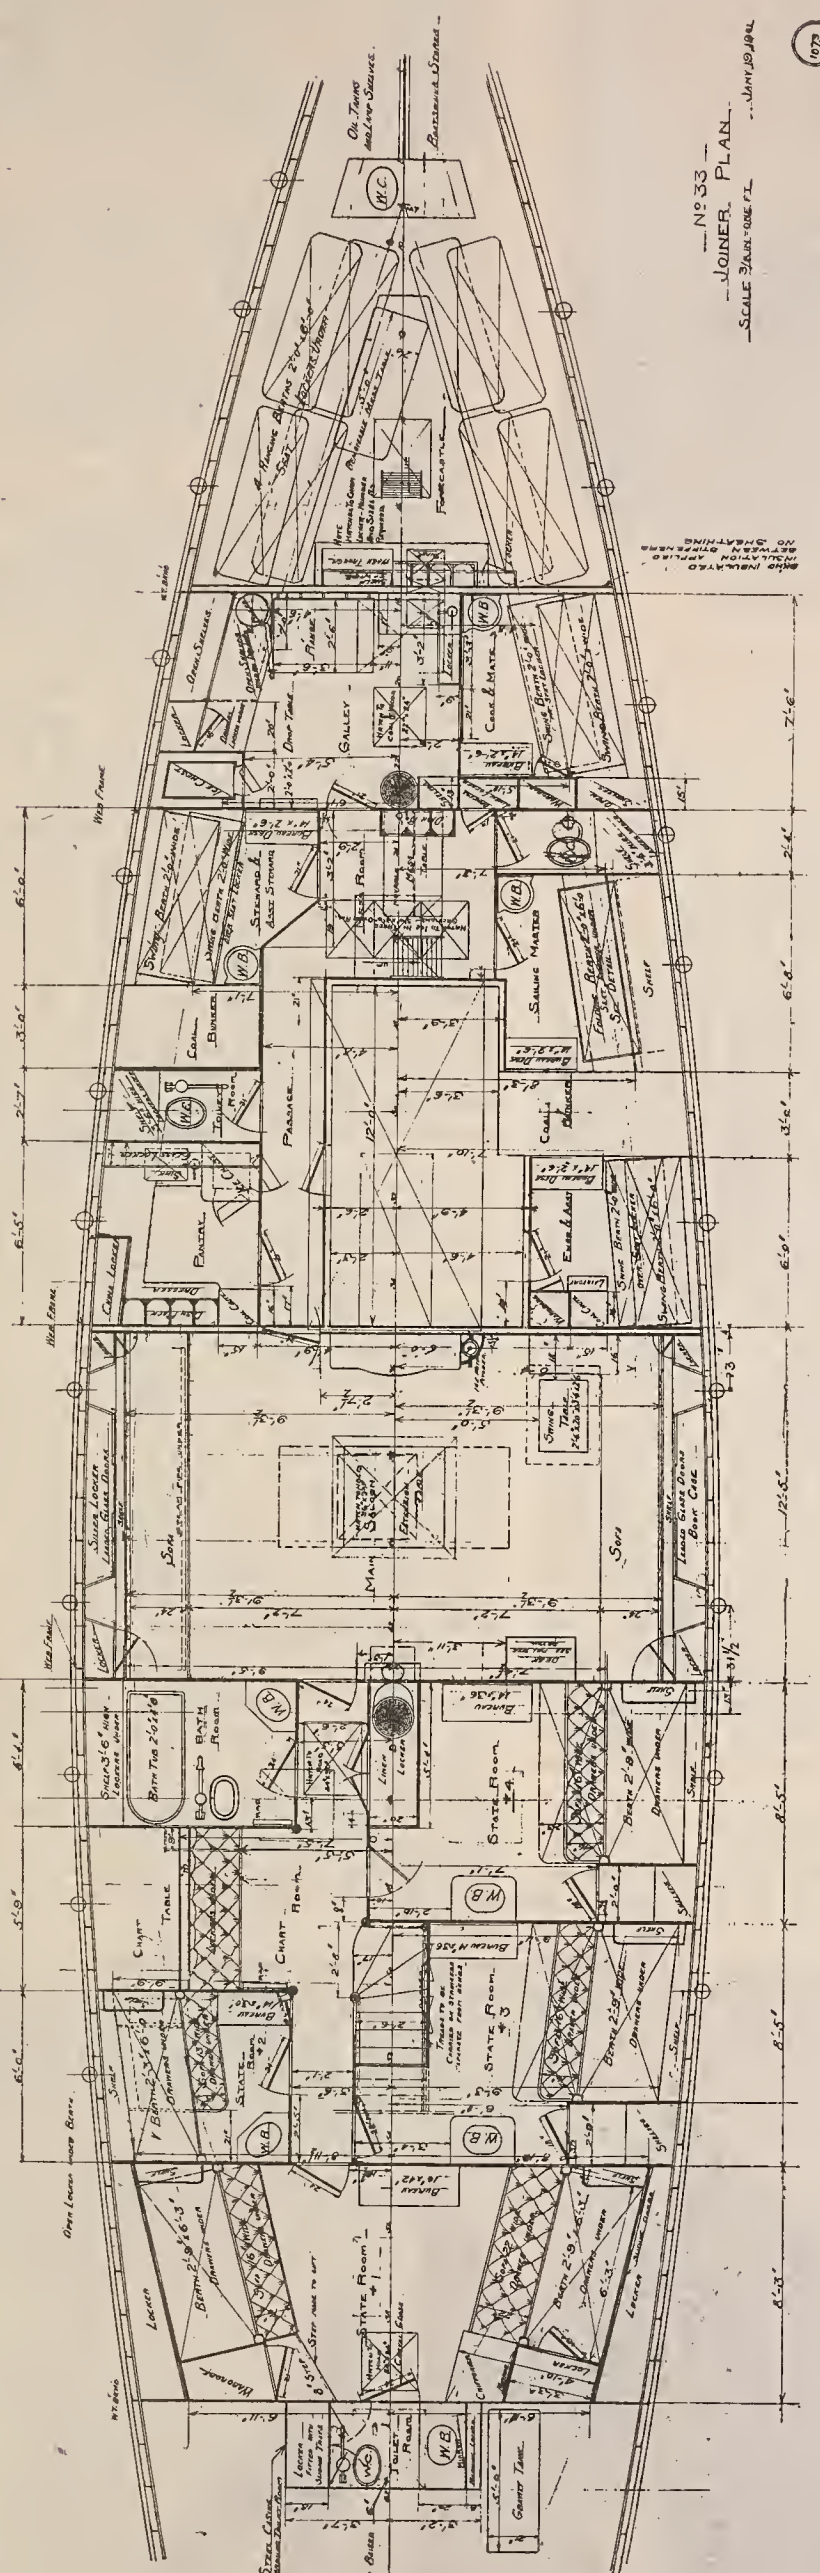
Just forward of the main cabin is the machinery space, 12ft. long and 7ft. wide. The machinery weighs eight tons, which is about five per cent. of the yacht's displacement. There is a 2-cylinder engine 6½in. and 13in.-10in. and an Almy water tube boiler. Her speed under power alone is about eight knots. Idler is lighted throughout by electricity. On the starboard side of the machinery space is a stateroom for the engineer and his assistant. Just forward of this stateroom is a coal bunker. On the port side of the machinery space is a passageway. At the after end of this is the pantry 6ft. 5in. long. Next forward is a toilet room. Then comes another coal bunker. The passage opens at the forward end into the officers' mess room, on the port side of which is a stateroom for the steward and his assistant. On the starboard side of the mess room are the sailing master's cabin and the officers' toilet room.

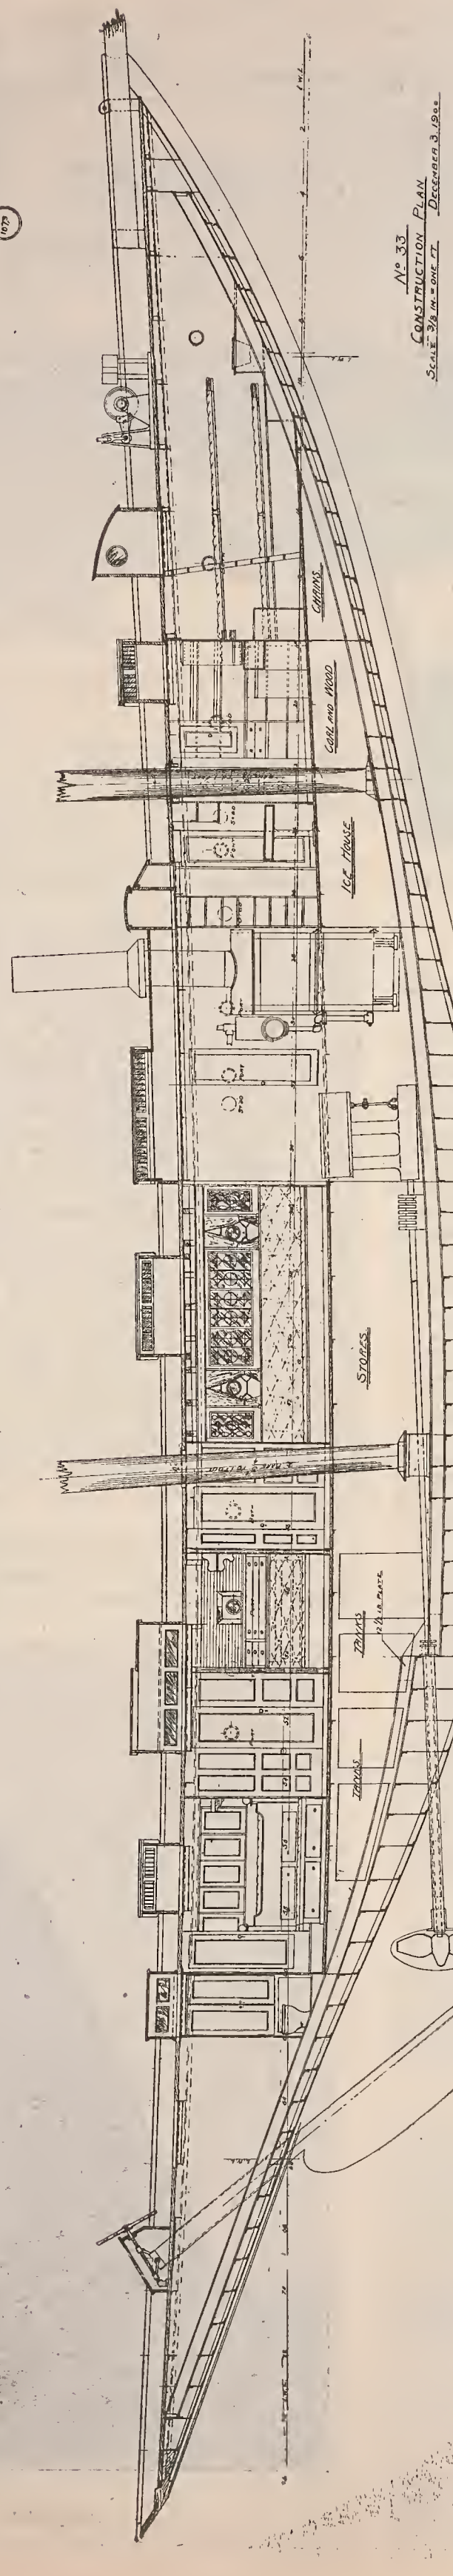
The galley, which is 7ft. 6in. long, is forward of the mess room, and on the starboard side of the galley is a stateroom for the cook and the mate. A transverse bulkhead separates the galley from the forecastle, where there is accommodation for eight men.

The rail waterways, skylights and companionways are of teak.

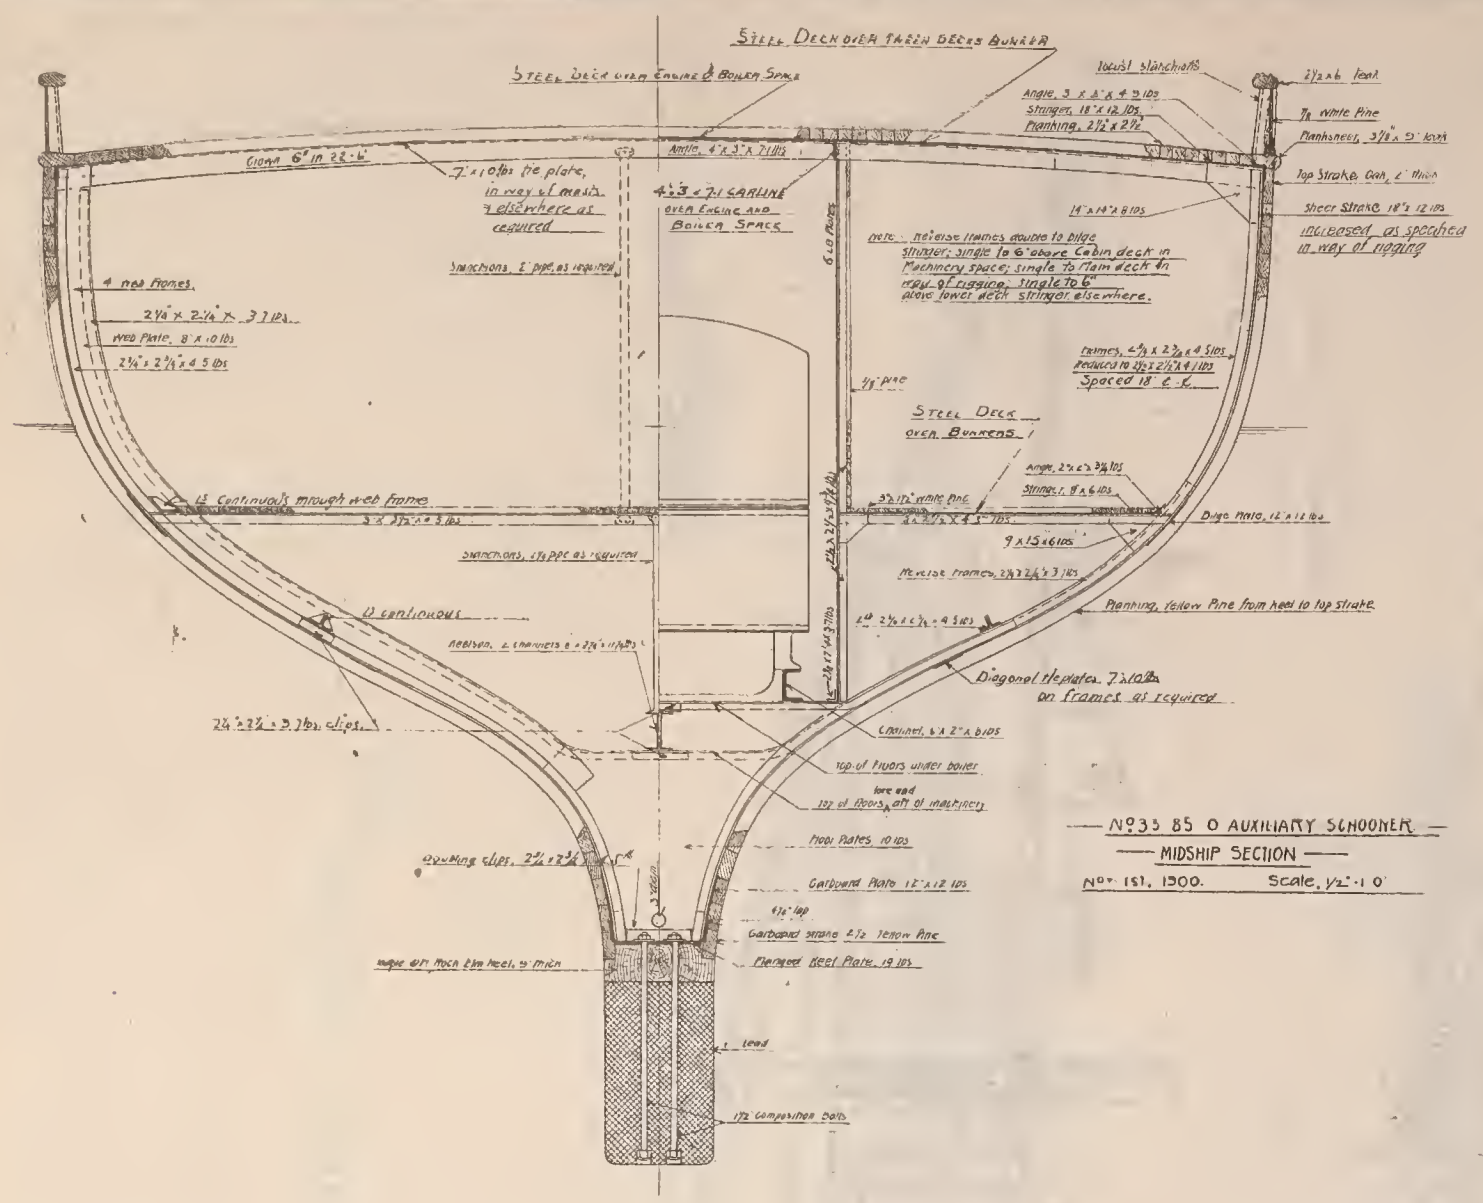
Four boats are carried on davits: a launch, a dinghy, a gig and a cutter.

The Atlantic Y. C. has withdrawn from the Y. R. A. of Gravesend Bay. There has been no disagreement, but the members of the Atlantic Y. C. felt they were losing their identity by belonging to the association, and that it would be better to withdraw. The Brooklyn Y. C., the Marine and Field C., and the New York C. C. now constitute tthe Y. R. A. of G. B., and their racing dates will be arranged so as not to conflict with those of the Atlantic Y. C.





AUXILIARY SCHOONER IDLER—INBOARD PROFILE AND CABIN PLAN—DESIGNED BY TAMS, LEMOINE & CRANE, 1901.



AUXILIARY SCHOONER IDLER—MIDSHIP SECTION—DESIGNED BY TAMS, LEMOINE & CRANE, 1901.

Boston Letter.

BOSTON, March 23.—A special meeting of the Boston Y. C. was held at the Exchange Club last Tuesday evening, at which the constitution and by-laws and racing rules prepared by the committee specially appointed were accepted with very few changes. It was necessary to draw up a new constitution which would be consistent with the demand of the increased membership of the club and the acquiring of more property, and also to comply with the terms of amalgamation. One of the most important measures adopted by the club was a new set of colors. Under the terms of amalgamation it was agreed that the colors of the club should be the colors of the Hull-Massachusetts Y. C. On account of the design of the old Hull flag being so complicated, the majority of the members of the Boston Y. C. were not particularly anxious to keep these colors, and it may also be said that many members who had been members of the Hull-Massachusetts Y. C. were not overfond of the design. Purely as a matter of sentiment, however, it was understood prior to the meeting that there were many of the members of the Hull Club who thought that the colors should be accepted as agreed. The committee on constitution, in arranging its report, also took into consideration the subject of colors, and had a design prepared. When the committee reported and the flag was shown, all opposition had vanished, and the colors were accepted with enthusiasm. While there might have been a certain amount of moral obligation to accept the old colors under the terms of agreement, it can certainly be said that the new colors show the best yacht club pennant that has been designed for many years. The design is very simple, and at the same time it is different entirely from the staid order of club flags. It is of the usual pennant shape and the distinguishing cross follows the design of the New York Y. C. flag, but the arrangement of colors is quite different. There is a white field, the horizontal bar of the cross being blue and the vertical bar red. The red bar goes across the blue one, and, in its center, is the five-pointed star. It is a very ingenious and simple arrangement of the national colors and a flag has been produced that can probably be distinguished at a greater distance than any other yacht club flag in the country. The following officers and committees were elected: Com., B. P. Cheney; Vice-Com., E. P. Boynton; Rear-Com., Walter Burgess; Sec'y-Treas., William Avery Carey; Executice Committee for two years, E. P. Boggs, C. A. French, Charles Hayden and W. H. Bangs; Executive Committee for one year, D. E. Smith, H. W. Wesson, J. W. Dutton and E. F. Smith; Membership Committee for two years, W. C. Lewis, A. C. Fernald, C. H. Cross, 2d, and A. P. Hawes; Membership Committee for one year, G. E. Lauriat, Jr.; Hollis Burgess and F. H. Jeffrey; Regatta Committee for two years, Louis M. Clark, C. G. Browne, Sumner H. Foster and Foster Hooper; Regatta Committee for one year, C. C. Clapp, C. W. Cole and B. D. Amsden.

At the annual meeting of the Yacht Racing Association of Massachusetts, held at the town house of the Boston Y. C. last Thursday evening, it was voted that after September 12 all classifications and measurement rules shall be void and of no effect. This means that next year there will be a new rating rule to apply to any or all of the present classes, with the possible exception of those classes that are governed by rules of their own associations. It is the classes that come under the head of cabin yachts that are aimed at in this measure, although there is no doubt that something could be done with the classes that at present have no other restriction than waterline length, that would make them more popular than they have been for some time. Extremes that were resorted to in the 21ft. class last year and the extremes noted in yachts now building for the restricted 25ft. class are responsible for the action. With practically no limit on the over all lengths of the boats, there is not going to be any strong tendency for yachtsmen to build, when in another year their boats would not have any show against much larger boats on the same waterline. A temporary class has been formed for the purpose of overcoming some of the evils of the 21ft. class for the coming year, so that the owners of 21-footers of somewhere near normal dimensions may race together. This new class is to be known as Class R. It conforms to the limitations of Class S, with the further limitation that the square root of the sail area shall not exceed 145 per cent. of the cube root of the displacement. The new 25-footers, with their extreme over all lengths, will be given a chance to prove whether or not they come up to the interpretation of a safe, seaworthy boat. If the yachts should prove all that is desired, it may be voted at the fall meeting to re-establish the class. There does not seem to be any confidence among the owners of boats that have been built this winter, however, that this will be done. The new 22ft. class was adopted unanimously, the motion to adopt being made by Mr. Louis M. Clark, who strongly opposed the adoption of this class at the fall meeting last year. There are eight of these boats now building and their owners expect plenty of sport during the coming season. It was voted that no entry of a yacht shall be accepted until she has been officially measured and a certificate of measurement filed with the Secretary. It has also been decided in the case of an appeal being made from the decision of any board of judges to the executive committee of the Association, the appeal shall be accompanied by the sum of $5, to be returned to the appellant should he prevail, and otherwise to be turned into the Association's treasury.

Mr. Hollis Burgess has sold the crack Y. R. A. 25-footer, owned by Mr. Lawrence F. Percival, to Dr. Augsburg, of Riga, Russia. It is expected that she will be entered in the Kiel regattas. She will be shipped on the deck of one of the Scandinavian-American line steamers. Sally VI. is easily the handsomest 25-footer that was ever turned out in Massachusetts Bay. She was designed by Mr. Fred D. Lawley, and built by the Lawley corporation last season. She is 43ft. 1in. over all, 24ft. 8in. waterline, 10ft. 9in. beam and 6ft. 11in. draft. She has the essential features of the centerboard type in her hull and also has the extreme draft of the keel boat. She is double planked, the outer planking being of Spanish cedar. This is finished bright above the waterline and bronze below. Her cabin trunk, which is well crowned, is formed of three-ply strips, covered with canvas. She is a very fast craft in all-round weather conditions, and should give a very good account of herself on the other side. Mr. Lawley has been working on the lines of a 25-footer, and it is not improbable that she will be built for Mr. Percival to take the place of Sally VI.

Mr. Frank N. Tandy has sold the naphtha cabin yacht Sinner, owned by Mr. Thomas H. Webb, of Peoria, Ill., to Mr. Johnson. Sinner is 42ft. over all and is a fast, comfortable cruising launch. Mr. Webb is coming to Boston about April 10 to look up a hunting launch. He is a member of the Columbia Y. C., of Chicago, and of the Corinthian Y. C. of Marblehead. It was he who introduced the Y. R. A. of M. 21ft. class to Chicago, and he has donated a handsome challenge cup for the boats of the class to race for.

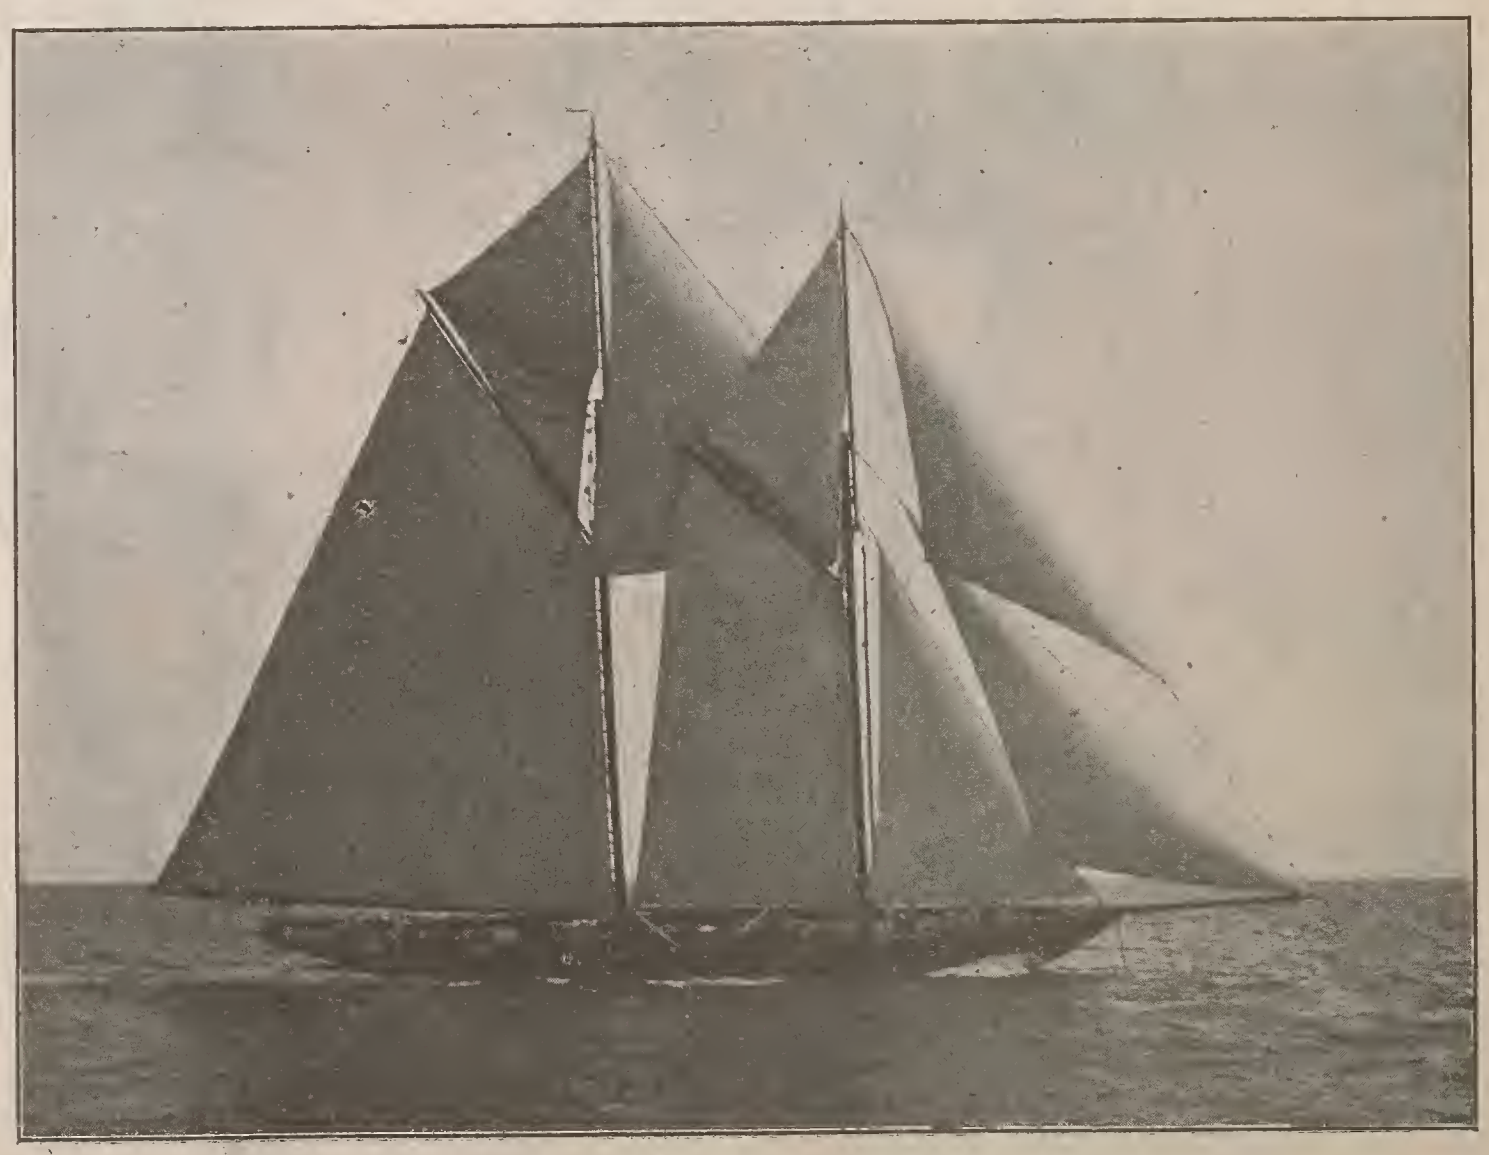
Messrs. Burgess and Packard have received an order for another Scawanhaka challenger. The new boat is for Mr. Frederick Tudor, of Boston. They are now at work on the lines. The first challenger for the Higginson-Boardman Syndicate has been finished, but the lines of the second boat for the same syndicate have not yet been completed.

White, of Manchester, has finished the Malcolmson 18-footer, designed by Mr. E. A. Boardman. The 18-footer for Mr. Reginald Boardman and the 21-footer for Mr. T. S. Watson, by the same designer, have been laid down. The cruising 22-footer designed by Mr. Boardman for Mr. C. W. Whittier, will be built by Lawley.

The schooner Felstedquin, designed by Mr. Arthur Binney for Major L. S. Bent, of the Annisquam Y. C., was launched at Lawley's last Friday. In her place a 75ft. steam yacht, designed by Mr. Binney, will be built. In Lawley's east shop the 21-footer for Mr. L. H. Spalding and the 25-footer for Mr. J. Swift, Jr., both designed by Mr. Fred Lawley, have been finished. The 40-rater designed by Messrs. Burgess and Packard for Col. R. H. Morgan, and the 43-rater designed by Mr. B. B. Crowninshield for Mr. Trenor L. Park, have been planked. The keel of the 64-rating schooner for Mr. John M. Richmond has been set up. In the west shop the boiler and engine are being installed in the steam yacht designed by Mr. A. S. Cheseborough for Mr. Charles Fletcher, and the deck of the steam yacht by the same designer for Mr. C. G. Emery is about half laid. The 45ft. launch designed by Mr. Fred Lawley for Mr. F. F. Dreer is planked and the deck laid. The new launch for the Boston Y. C. has been finished and run out of the shop.

Mr. B. B. Crowninshield has sold the 35-footer Kiowa, owned by Mr. G. S. Payson, of Chicago, to Mr. C. L. Eaton, of Boston; the 25-footer Kalista for Messrs. Reade Bros., of Fall River, to Dr. F. H. Davenport, and the Y. R. A. 25-footer Chewink II., owned by Mr. F. G. Macomber, Jr., to Mr. Chubb, of New York.

The steam yacht Pantooset, owned by Ex-Commodore A. S. Bigelow, of the Eastern Y. C., will leave Boston for a European cruise on or about May 1. Her first objective point will be Southampton, by way of Fayal. She will put into Fayal for coal and, after reaching Southampton, she will continue fitting out. She will then proceed to Cuxhaven, Germany, where Mr. Bigelow and party will join her. From there she will proceed through the Kiel Canal, up the coast of Norway, to North Cape, in The Land of the Midnight Sun. Returning from this point they will go up the Baltic as far as St. Petersburg. The Pantooset will then return to Cuxhaven, where Mr. Bigelow and his party will leave her. The yacht will then proceed to Boston. The Pantooset will be commanded by



AUXILIARY SCHOONER IDLER.
Designed by Tams, Lemoine & Crane. Photo by N. L. Stebbins, Boston.

Capt. A. C. Corkum, her sailing master, under whose direction she was built.

The meeting of the Yacht Racing Association of Massachusetts will be held at the town house of the Boston Y. C., Rowes Wharf, Thursday evening. Several amendments to the constitution and by-laws have been proposed, most of which were announced in last week's letter. In addition to those spoken of it will be proposed that the number of yachts enrolled in a club that will make it eligible for membership will be twenty instead of ten, and that the said yachts shall be more than 15ft. waterline instead of 12ft. In regard to representation it will be proposed that each club may have one delegate for each 300 members or fraction thereof. It is proposed also to raise the entry fee of the Association for the season's races from $1 to $2.

At Lawley's the 50ft. schooner designed by Binney for Major L. H. Bent, the 21-footer designed by Fred Lawley for Mr. L. H. Spalding, and the 25-footer by the same designer for Mr. John Swift, are practically finished. The 40-rater designed by Messrs. Burgess and Packard for Col. R. H. Morgan, and the 43-rater designed by Mr. B. B. Crowninshield for Mr. Trenor L. Park, are partly planked. The 36-rater designed by Mr. B. B. Crowninshield for Mr. W. B. Rogers has been hauled out of the shop. In the west shop the joiner work is well along on the steam yacht designed by Mr. A. S. Chesborough for Mr. Charles Fletcher, and the deck plating is being put on the steam yacht by the same designer for Mr. C. G. Emery. The 45ft. launch designed by Mr. F. D. Lawley for Mr. W. F. Dreer is planked and the deck laid. The wooden keel for the 64-rater schooner designed by Mr. F. D. Lawley for Mr. John Richmond is being turned out.

At the Hanley Construction Company the 27ft. yawl designed by Mr. Dodge for Mr. Bird, of New York, is about finished. Work has been started on the 28ft. yawl designed by Mr. Isaac B. Mills for Mr. B. D. Amsden and on the 18-footer designed by Messrs. Burgess and Packard for Mr. R. J. Randolph, Jr. A number of yachts are fitting out in the basin.

The defender of the Lipton cup, last year won by La Rita, the lines of which have been turned out by Messrs. Small Bros., will probably be built in the east under the direction of the designers. She is quite a powerful craft of the centerboard type, and will carry 947ft. of sail. A 28ft. yawl by these designers for a Boston yachtsman, will be built by Meek, of North Weymouth, and the cruising yawl designed for Mr. W. Mosely Swaim, of Philadelphia, will be built at Philadelphia.

Stuart, of Wollaston, has under construction two launches for members of the Boston Y. C. One of these will be 50ft. and the other 45ft.

The fourteenth annual dinner of the Dorchester Y. C. will be held at Hendrie Hall, Dorchester, Saturday evening, April 11. Congressman W. S. McNary, Hon. Fred S. Gore, Representative Callender, Commodore F. L. Codman and Mr. Lewis M. Clark will speak.

MacConnell & Co. have sold the 36ft. yawl Virginia, owned by Messrs. R. L. and H. I. Sewall, to Mr. C. H. Sherburne, of Boston. They have also sold the 25ft. yawl Hermes and the 30-footer Nokomis to eastern yachtsmen.

MacConnell Bros. have sold the 25ft. knockabout Ninita, owned by Mr. Samuel Ferguson, to Mr. E. R. Hastings, of Boston. They have also sold the 36ft. speed launch Mercury to Mr. Charles Laidlaw, Jr., of Long Branch, and the cabin knockabout Raduga to Mr. Richard H. Swartwout, of New York.

JOHN B. KILLEEN.

English Letter.

THE announcement that the new Shamrock will be launched on the 17th (St. Patrick's Day), has amply fulfilled the expectation that every opportunity will be taken for tuning the vessel up prior to her departure for the States. Of course, sundry reports have been current in the press as to her design, but not a single authentic item of news has transpired. If any deduction can be taken from the various reports current, it would seem that the new vessel will have an easier bilge than the first Shamrock, and may therefore heel a little more easily to a light air. Some journals predict that the yacht will show some very startling innovations below water, but that will not be known until the launch. Similar statements are current as to the new defender. These cup racers have certainly grown very large in the matter of sail, but it appears to me surprising that they are not very much larger. Of course the difficulty of keeping the huge sail spread properly set is very great, but it is not insuperable where money is no object. The yachts hardly yet represent what would be the ultimate outcome of a pure waterline measurement, and that appears to me to be the craft that is wanted.

Our coming racing season does not promise very well. There will be no regular large class, and though a new 65-footer is building at Fairlie, that class can hardly be of much interest, as her only competitor will be Tully, not built for this rule. The name of the new 65-footer's owner has not even yet been divulged. The 52-footer, Magdalen, has been sold by Baron de Forest to Italy. She did not race last year, although put in commission. The only new boat for this class is one designed by Alfred Mylne for Mr. W. Leuchars. It will be interesting to note how she sails with last year's Fife crack. No 36-footers are building, and few boats for the smaller classes.

The new "South Coast" one-design class has undergone yet another change. It was originally intended that the boats should be about the 36-footer size, and should cost from £600 to £800. Now it has been decided to make them larger, and they will cost £1,200. They are 38ft. on L.W.L., 11ft. beam, 57ft. over all, and will be about 42-rating. Eight are said to be ordered, and it is stated that there is an intention to limit the class to that number. If that is so, one must be glad, because it will interfere the less with open racing, but it may be found that clubs will not be over ready to supply prizes for a self-organized and exclusive class of this nature. There was for a time some prejudice against the Clyde 20-ton one-design class because it was self-organized, but it has always been open to everyone who cared to build for it. The Solent Classes Y. R. A. has decided not to admit this new class into its list of classes, and it is therefore dependent on the spontaneous generosity of individual clubs.

The handicap owners have failed, after all, to induce the Y. R. A. to countenance handicap racing, even to the extent of appointing official handicappers. At the general meeting of the Association their scheme was rejected by 33 votes to 23, and the Council's own alternative was entirely unsupported. The truth is that no matter how well such regulations might work at the Thames and south coast regattas, they would break down at the Clyde and Irish meetings, which must take such boats as may come along, and classify them to suit each occasion.

There is a brilliant opportunity now open to your power yachtsmen to teach Europe a lesson. We have been reading marvelous reports of the performances of some of your newest steam and motor boats, and the opportunity of seeing them would be hailed with delight. I will not conceal from you that in this country there is an unworthy suspicion that the miles grow short towards the setting sun, and that some of your fliers might fail to maintain their highest records in a race over here. Well, there is an easy way of settling this little doubt, for Mr. Alfred Harmsworth has presented an International launch cup to the Automobile Club, and the first races will be held in Cork harbor about the middle of July. The class will be for launches of 40ft. over all, and there is no restriction as to power or dimensions. The cup will become a hotly contested trophy, and many visitors are expected from the Continent to compete for it. The Automobile Club will hold the races under the rules of the Marine Motor Association, which will present three souvenirs to the three best boats. You can send steam, petroleum or electric launches, but you will have to send fast boats, for, short as the time is, I hear of quite a fleet being built. Each country may send three representatives, but these must be entirely constructed in the country that they represent. Needless to say they are *not* required to come to this country on their own bottoms. It will be very interesting to note the types produced for these races. England holds the Gordon Bennett car cup, and will make a bold bid to defend the Harmsworth trophy, too. I know that the donor and the Automobile Club will be deeply gratified if some boats from the States are sent over.

E. H. HAMILTON.

AZTEC

Designed by Gardner & Cox and owned by A. C. Burrage. Photo by N. L. Stebbins, Boston.

The Steam Yacht Aztec.

AZTEC was designed by Messrs. Gardner & Cox for Mr. Henry C. Pierce, and built by Mr. Lewis Nixon at Elizabethport, N. J. Before the vessel was completed she was purchased by Mr. A. C. Burrage, of Boston. Aztec is 263ft. over all, 216ft. waterline, 31ft. breadth and 14ft. draft.

SIR THOMAS LIPTON'S new challenger for the America's Cup, Shamrock III., was launched on St. Patrick's Day, March 17, at Denny Brothers' yards, Dumbarton, Scotland.

The weather was anything but pleasant in the early morning, but as the day wore on it brightened up, stopped raining and the wind went down. Shortly after one o'clock Sir Thomas Lipton and his guests appeared on the platform that was erected under the bows of the new boat. The Countess of Shaftesbury named the yacht. As she broke a bottle of wine over the yacht's bows the boat began to move slowly down the ways, and the Countess said: "I christen you Shamrock III. May God bless you and may you bring back the Cup."

Shamrock III. slipped easily into the water, and the launching was entirely successful, being accomplished without a hitch. Owing to the shallowness of the water off the yard, it was necessary to launch the yacht in pontoons, and canvas was hung over the sides forward and aft which, to an extent, concealed the overhangs. As the yacht took the water the band played "The Dear Little Shamrock," and the Countess of Shaftesbury and Sir Thomas Lipton were heartily cheered.

After the launching the yacht was towed to Greenock.

While the actual dimensions of Shamrock III. are not forthcoming, all the reports agree that the new vessel is a finely turned boat, more of a yacht and less of a machine than was expected. She is said to be about 140ft. long over all and nearly 90ft. on the waterline. Her breadth is just over 22ft., while her draft is practically 19ft. It was expected that the designer, Mr. William Fife, would take more over all length in the new boat, but the reduction of breadth some 18 or 20in. over Shamrock II., came as a surprise. The freeboard is higher than was expected, and the sheer quite straight.

Shamrock III. should be a wonderfully good light weather boat, as her fine lines and easy form ought to be easily driven by a moderate sail plan. The wetted surface and lateral plan have been greatly cut away, and the boat ought to be quick in stays, and unless very well balanced may prove wild on her helm in a sea way. Fife boats are, however, invariably well balanced, and we may rest assured that the designer has given special attention to this feature in the new Shamrock.

The boat's lighter construction enables her to carry more ballast in proportion to displacement than did either Shamrock I. or II. She is framed and plated with nickel steel. The deck is of aluminum, covered with a material which gives a good foothold. The metal deck fittings are of steel galvanized, while the cleats are of wood. As was stated in these columns some months ago, the boat will be steered with a wheel.

The mast, which was stepped the second day after the launching, is of steel, about 170ft. in length. The mast and topmast are all in one, and the spar is of less diameter than the one Shamrock II. carried. The same can be said of the boom (which is 102ft. long) and the gaff. These spars are also of steel. The bowsprit is of pine and solid.

Her sail area will not be much greater than was Columbia's, and she will have only a moderate amount of canvas in the lower sails, but will swing a large club topsail. By so doing she can get a very advantageous measurement. This distribution of sail has several things to recommend it. In light weather she has a big sail well up in the air, and yet she can be put under very comfortable sail spread for bad weather by taking in the topsail.

The workmanship on the boat is of the very highest order throughout, and the hull is exceptionally smooth. The entire hull is painted white, and this is relieved by a green stripe at the waterline and the rail.

It is conceded by everyone who has seen the boat that she is by far the handsomest and most carefully designed boat ever turned out to challenge for the Cup, and whether she wins or loses she is a remarkably fine vessel and reflects great credit on her designer.

THE new boat building at Bristol for the defense of the America's Cup, is to be named Reliance. The name is an improvement over any of the others suggested, and has the proper ring to it. There is something about the name that conveys great confidence to all those interested in the success of the American boat in her coming races against the new Shamrock.

Good progress is being made on Reliance, and the hull is almost entirely plated, although there is still a good deal of riveting yet to be done. The work of covering the lead keel with bronze plates has been left till the last, but it is expected that these will be in place in a few days. The steel boom is nearly finished, and the workmen have started to bend the plates for the steel gaff. Reliance will be put overboard about the middle of April.

YACHT CLUB NOTES.

The Williamsburgh Y. C. has arranged the following fixtures for the coming season: May 3, opening day; May 30, annual spring regatta; July 3-6, annual cruise; July 19, at Plum Beach; Aug. 16, ladies' day; Sept. 7, Labor Day cruise; Sept. 27, open fall regatta; Oct. 25, club goes out of commission.

* * *

Seventeen clubs were represented at the meeting of the American Power Boat Association, held at the Columbia Y. C., foot of West Eighty-sixth Street, New York City. The racing rules submitted by Mr. Henry J. Gielow were discussed and adopted after making several changes. The formula for rating electric motors was changed from 950 watts to 750 watts to equal one horse-power. In rating gasoline explosive engines, the constant divisor for two cycle engines, was changed from 600 to 900. The election of officers was postponed until the next meeting, which will be held on April 29.

* * *

The second general meeting of the New York Y. C. will be held at the club house on Thursday, March 26.

* * *

Com. Tilford, of the Indian Harbor Y. C., has appointed Mr. L. D. Armstrong Fleet Captain, Dr. Leander P. Jones Fleet Surgeon, and the Rev. M. Geo. Thompson Fleet Chaplain.

Com. Arthur Curtiss James, of the Seawanhaka-Corinthian Y. C., has appointed Robert W. Gibson Signal Officer.

The board of trustees of the Atlantic Y. C. has appointed the house committee, which is as follows: Louis F. Jackson, Chairman; William A. Barstow and T. S. Negus.

The Royal Canadian Y. C. has prepared the following racing schedule for 1903:

May 25—16ft. skiff class and 12ft. dinghy class.
May 30—25ft. class and 14ft. dinghy class.
June 6—First class, Murray Cup, and 20ft. class.
June 13—30ft. class and 12ft. dinghy class.
June 20—16ft. skiff class.
June 27—25ft. class and 14ft. dinghy class.
June 30—L. S. S. A. Regatta and cake walk cup race at Oakville.
July 1—Queen's cup race at Toronto, over 40ft. class, and L. S. S. A. regatta at Oakville.
July 4—30ft. class and 12ft. dinghy class.
July 11.—First class. Lorne cup and 20ft. class.
July 18—16ft. skiff class L. Y. R. A.
July 25—14ft. dinghy class L. Y. R. A.
Aug. 1—20ft. class.
Aug. 8—Canada's Cup race and following days.
Aug. 15—30ft. class, and 12ft. dinghy class.
Aug. 22—25ft. class and 14ft. dinghy class.
Aug. 29—20ft. class and 16ft. skiff class.
Sept. 5.—First class cruising race.
Sept. 12—Prince of Wales Cup race.

Additional races for 16-footers will be held on the first and third Wednesdays of each month, from June 3 to Sept. 2, inclusive, starting at 5:15 P. M. There will be a limit of one hour for these races.

The club cups and challenge flag will be awarded to the yachts making the best average during the season, as follows: R. C. Y. C. challenge flag, to first class; Lansdowne Cup, to 30ft. class; Cosgrove Cup, to 25ft. class; McGaw Cup, to 20ft. class; Gooderham Cup, to 16ft. class; Harman Cup, to 14ft. dinghy class; Barber Cup, to 12ft. dinghy class.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

On Saturday afternoon, March 21, the schooner Crusader II. was launched from Mr. Robert Jacob's yard, City Island. She was built from designs made by Mr. Henry C. Wintcringham for Mr. Seymour L. Husted. Crusader II. is built of wood and will be used primarily for cruising. She is 97ft. over all, 68ft. waterline, 20ft. breadth and 9ft. draft.

The steam yacht Niagara IV., that was built at Morris Heights for Mr. Howard Gould, was launched on March 19. She is 111ft. over all, 104ft. waterline, 12ft. breadth and 4ft. 2in. draft. Her contract calls for a speed of 23 miles.

Alice, the steam yacht built by the Marine Construction and Dry Dock Company, of Mariner's Harbor, S. I., for Mr. F. D. Underwood, was launched on March 21. She is 116ft. over all, 96ft. waterline and 17ft. breadth.

The launch building at Samuel Ayer's yard, Nyack, from designs by Messrs. Gardner & Cox, for Mr. John Hanan, is 114ft. over all, 103ft. 8in. waterline, 15ft. 9in. breadth and 5ft. draft.

Mr. William E. Cox has had a steam yacht built from designs by Messrs. Cox & King. She is to be known as Wakiva. The following description is from the Yachting World:

On Monday afternoon, March 2, Ramage & Ferguson, Limited, launched from their yard at Leith a finely modeled steam yacht, which has been built to the order of an American gentleman from the designs of Cox & King, Suffolk Street, Pall Mall, London. The yacht is about 455 tons Y. M., the principal dimensions being 165ft. b. p. by 25ft. 6in. molded depth, and is fitted with triple expansion engines having cylinders 15in., 24in. and 39in. diameter by 24in. stroke, steam being supplied from a large boiler working at 180 pounds pressure.

The yacht is very handsomely fitted, having dining-room and drawing-room on main deck, with a long shade deck above, on which are boats, charthouses, etc., while on the lower deck fore and aft of the machinery space are a number of state rooms and a social hall. The vessel is fitted with steam windlass, steam steering gear, electric light installation, hot water heating and all the most modern appliances usual on high-class yachts. On leaving the ways the yacht was named Wakiva.

The famous old yacht Boadicea, which for years was the largest sailing yacht, being no less than 378 tons, has come to an untimely end, and her master is in jail, convicted of casting her away. Known as the Ariadne, the Boadicea was lost off the coast of New Zealand.

The English Court of Appeal upheld a judge's order directing evidence on commission to be taken in New Zealand with the object of throwing fresh light, if possible, on the loss of the schooner. It turns out that she was bought for 2,000 guineas and insured for £20,000. The captain, Mumford, confessed to having received £400 to cast her away, but on a trial this statement was asserted to be an invention, and T. C. Kerry, the owner of the Ariadne, was acquitted. On his own confession, however, Mumford was sent to prison. Mr. Kerry is now suing the underwriters for the insurance money.—Mail and Express.

Mr. Edmund Randolph has sold his steam yacht Scud to Mr. Samuel Untermyer.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O.—At the regular meeting of this Association on March 15 the following scores were shot. Conditions, 200yds., offhand, Standard target. Wind, tricky:

Nestler	90 84 82 82 81		Roberts	82 77 77 77 74	
Gindele	89 88 88 87 81		Jonscher	81 79 77 74 73	
Payne	89 86 85 85 80		Trounstine	78 77 72 70 68	
Hofer	84 82 80 76 74		Freitag	78 73 73 71 69	
Hoffman	83 80 78 75 68		Bruns	76 73 73 73 72	
Lux	82 78 75 73 71				

Honor target: Nestler 20, Gindele 29, Payne 25, Hofer 26, Hoffman 25, Lux 21, Roberts 22, Jonscher 20, Trounstine 16, Freitag 18.

Trapshooting.

Fixtures.

If you want your shoot to be announced here send a notice like the following:

March 23-26.—Brenham, Texas.—Twenty-sixth annual State shoot, under auspices of the Texas Sportsmen's Association.
April 1-3.—Grand Island, Neb.—Consolidated tournament of the Buffalo Bill Gun Club, of North Platte, and the Grand Island Gun Club; two days targets, one day live birds. Managers, Geo. L. Carter, North Platte, and Gus Sievers, Grand Island.
April 2-3.—Des Moines, Ia.—Hopkins-Sears Company's tournament.
April 2-3.—Indianapolies, Ind.—Two days' tournament of the Limited Gun Club.
April 7-11.—St. Joseph, Mo.—Missouri State Game and Fish Protective Association's twenty-sixth annual tournament and convention, under auspices of Metropolitan Gun Club. F. B. Cunningham, Secretary-Manager.
*April 8.—Allegheny, Pa.—North Side Gun Club. L. B. Fleming, Sec'y.
April 10.—North Hudson Driving Park, N. J.—Second annual individual Eastern championship at live birds; 20 birds, $10, birds included.
April 10.—New Haven, Conn., Gun Club's all-day tournament. John E. Bassett, Sec'y.
Aug. 12-15.—Toronto, Can.—Annual tournament of the Dominion Trapshooting and Game Protective Association. A. W. Throop, Sec-y-Treas.
April 14-17.—Kansas City, Mo.—The Interstate Association's fourth Grand American Handicap at targets, at Blue River Shooting Park. One thousand dollars added to the purses. Elmer E. Shaner, Secretary-Manager, 111 Fourth avenue, Pittsburg, Pa.
May 16.—East Walpole, Mass.—All-day shoot of the Neponset Gun Club. Edgar Bills, Sec'y.
April 18.—Glen Rock, Pa.—Open shoot for live-bird championship of York county, Pa., and all-day shoot of Glen Rock Gun Club. Allen M. Seitz, Sec'y.
April 20.—Springfield, Mass.—Spring tournament of the Springfield Gun Club. C. L. Kites, Sec'y.
April 20.—Patriots' Day shoot of the Haverhill, Mass., Gun Club. S. G. Miller, Sec'y.
April 21-22.—Olean, N. Y., Gun Club's fourth annual tournament. B. D. Nobles, Sec'y.
April 21-23.—Concordia, Kans.—Kansas State Sportsman's Association's State shoot, under auspices of Concordia Blue Ribbon Gun Club; $300 added. F. W. Olney, Sec'y.
*April 22-23.—Pittsburg, Pa.—Herron Hill Gun Club. Harry Vandergrift, Sec'y.
April 28-May 1.—Lincoln, Neb.—Nebraska State Sportsmen's Association's twenty-seventh annual tournament, under the auspices of the Lincoln Gun Club. F. E. Mockett, Sec'y.
April 29.—Wellington, Mass.—Boston Gun Club's annual team shoot. H. C. Kirkwood, Sec'y, 23 Elm street, Boston.
May 4-6.—Tournament of the Mississippi Valley Trapshooters' and Game Protective Association, under auspices of Vicksburg, Miss., Gun Club.
*May 5-6.—Irwin, Pa., Gun Club's tournament. John Withers, Sec'y.
May 6-7.—Union City, Ind.—Parent Gun Club's tournament.
May 6-7.—Lafayette, Ind.—Lafayette Gun Club's tournament.
May 6-7.—Titusville, Pa., Gun Club's annual tournament. T. L. Andrews, Sec'y.
May 7-8.—Wilmington, Del.—Wawasett Gun Club's target tournament.
May 9-10.—Chicago, Ill.—Spring tournament of the Grand Crescent Gun Club.
May 13-14.—Crawfordsville, Ind., Gun Club's tournament.
May 13-14.—Dubois, Pa.—The Interstate Association's tournament, under the auspices of the Dubois Rod and Gun Club. U. S. N. Crouse, Sec'y.
May 19-22.—Wissinoming, Philadelphia.—Thirteenth annual tournament of the Pennsylvania State Sportsmen's Association, under auspices of the Florists' Gun Club of Philadelphia. V. V. Dorp, Sec'y.
May 21-22.—Kenton, O.—Shoot of the Kenton Gun Club. A. G. Merriman, Sec'y-Treas.
May 24-26.—San Francisco, Cal., Trapshooting Association's three days' bluerock handicap tournament. Open to all; $1,500 added. C. C. Nauman, manager.
May 26-27.—Dubuque, Ia., Gun Club's fourth annual amateur target tournament. A. F. Heeb, Sec'y.
*May 26-27.—Brownsville, Pa.—Brownsville Gun Club tournament. W. T. Doherty, Sec'y.
May 27-28.—Williamsport, Pa.—The Interstate Association's tournament, under the auspices of the West Branch Rod and Gun Club. H. A. Dimick, Sec'y.
May 27-29.—Fort Wayne, Ind.—Two-day bluerock tournament of the Corner Rod and Gun Club; $100 added. John V. Linker, Sec'y.
May 29-30.—Union City, Ind.—Spring tournament of the Parent Grove Gun Club.
May 30.—Altoona, Pa., Rod and Gun Club's tournament. G. G. Zeth, Sec'y.
May 30.—Tournament of the East Harrisburg, Pa., Shooting Association.
May 30.—Newport, R. I.—Second annual tournament of the Aquidneck Gun Club. J. S. Coggeshall, Sec'y.
May 30.—Detroit, Mich.—Winchester Gun Club's Decoration Day third annual tournament; all day. Rose system and average prizes. Sliding handicap, 16, 18 and 20yds. D. A. Hitchcock, Sec'y-Treas.
June 2-5.—Baltimore, Md.—Third annual Baltimore County shoot; three days targets; one day live birds; $500 in purses and prizes. Hawkins and Malone, Managers.
June 3-4.—Boston, Mass.—The Interstate Association's tournament, under the auspices of the Boston Shooting Association. O. R. Dickey, Sec'y.
June 3-5.—Parkersburg, W. Va.—Sixth annual tournament of the West Virginia Sportsmen's Association, under auspices of Ohio Valley Shooting Association.
June 4-5.—Greenville, O.—Spring tournament of the Greenville Gun Club.
**June, second week.—Memphis, Tenn., Gun Club's tournament.
June 7-8.—Ligonier, Pa., Gun Club's tournament.
June 8-12.—Ossining, N. Y.—New York State shoot, under the auspices of the Ossining Gun Club.
June 9-11.—Sioux City, Ia.—Ninth annual amateur tournament of the Soo Gun Club. B. F. Duncan, Sec'y.
June 9-11.—Cincinnati, O.—Seventeenth annual target tournament of the Ohio Trapshooters' League. Chas. T. Dreihs, Sec'y.
*June 10-11.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.
June 16-19.—Warm Springs, Ga.—The Interstate Association's tournament, under the auspices of the Meriwether Gun Club. Chas. L. Davis, Sec'y.
June 16-18.—New London, Ia.—Seventh annual midsummer target tournament of the New London Gun Club.
*June 24-25.—New Castle, Pa., Gun Club's tournament. James Atkinson, Sec'y.
*July 7-8.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.
July 8-9.—Huntsville, Ala.—The Interstate Association's tournament, under the auspices of the Huntsville Gun Club. E. R. Matthews, Sec'y.
**July, second week.—Shreveport, La.—Cadds Gun Club's tournament.
*July 21-22.—Beaver Falls, Pa., Gun Club's tournament. W. R. Keefer, Sec'y.
July 30-Aug. 1.—Viroqua, Wis.—The Interstate Association's tournament, under the auspices of the Viroqua Rod and Gun Club. Dr. R. W. Baldwin, Sec'y.
Aug. 19-20.—Ottawa, Ill.—The Interstate Association's tournament, under the auspices of the Rainmakers' Gun Club. Paul A. Selember, Sec'y.
*Aug. 19-20.—Millvale, Pa., Gun Club's tournament. Wm. Bussler, Sec'y.
*Sept. 1-2.—Irwin, Pa., Gun Club's tournament. John Withero, Sec'y.
Sept. 2-3.—Akron, O.—The Interstate Association's tournament, under the auspices of the Akron Gun Club. G. E. Wagoner, Sec'y.
*Sept. 23-24.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.
Oct. 6-7.—Allegheny, Pa.—North Side Gun Club's tournament. L. B. Fleming, Sec'y.
Oct. 20-21.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.
**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J0 Bradfield, Sec'y, Vicksburg, Miss.

DRIVERS AND TWISTERS.

Keen interest was manifested in the contest between teams of the Crescent Athletic Club and Boston Athletic Association, at Bay Ridge, L. I., last Saturday. There was a large number of visitors present to witness the match. At the commencement of it the visitors quickly took a strong lead, but the Crescent team soon thereafter made a stead gain to the end, and won by the large margin of 645 to 599. Each team had eight men and each man shot at 100 targets. The return match will be shot on April 4 at Boston, on B. A. A. grounds.

Mr. F. B. Cunningham, secretary-manager, writes us that the twenty-sixth annual tournament of the Missouri State Game and Fish Protective Association, to be held at St. Joseph, Mo., April 7 to 11, inclusive, will offer a rare week of sport, as well as a splendid opportunity for practice to the shooters who contemplate attending the Grand American Handicap at Kansas City the following week. There will be three days at targets and two days at live birds, under the same rules and conditions as will hold at Kansas City.

In Passaic, N. J., the Union Gun Club was formed on March 19, with officers as follows: President, Colin R. Wise, of Passaic; Vice-President, F. V. Carlough; Secretary, C. B. Axford, of Rutherford; Treasurer, Louis Lane. A Committee on By-Laws was appointed. The new club will shoot on the Boiling Springs Gun Club grounds, Rutherford, on the first and third Saturdays of each month. Targets for members, 1 cent; for others, 2 cents.

The second annual individual Eastern live-bird championship will be shot at the North Hudson Driving Park, N. J., on April 10. The conditions are 10 live birds, $10 entrance, birds included; handicaps 25 to 33yds.; class shooting, four moneys; a cup to the winner; two sets of traps. This event last year was held at Interstate Park, and was won by Mr. H. H. Stevens, of New Brunswick, N. J.

Mr. W. Fred Quimby has resigned his position with the Western Cartridge Company and accepted his old position as general sales agent of the American E. C. and Schultze Gunpowder Co., with Mr. Carl Von Lengerke as his assistant. Mr. Von Lengerke last week was confined to his home, due to illness, but was convalescing nicely, according to last reports.

At Palm Beach, Fla., on Thursday, of last week, at the shoot of the Florida Gun Club, Mrs. Albert W. Goodrich, of Chicago, won the cup presented by Mrs. Frederick Edey, of New York, with 16 out of 25 targets. Miss Andrews, of Lakewood, was second. Miss Grace Ellis, of New York, was third.

In the contest for the Intercounty cup between teams of the Ossining and Poughkeepsie gun clubs, at Ossining, March 21, Ossining won by the somewhat italic score of 150 to 131. Mr. G. Hubbell won the handicap cup, his third win, and the final for absolute ownership.

Mr. Louis Williams, Jr., of Nashville, Tenn., was a visitor in New York last week, and the fore part of this week. He incidentally journeyed to New Haven on a visit to the Winchester Repeating Arms Co., which he represents in Alabama.

Mr. Bert B. Adams writes us as follows: "The Limited Gun Club, of Indianapolis, Ind., will hold a two days' tournament at targets on April 2 and 3. The programmes are now in the hands of the printers, and will be mailed when completed."

Mr. Elmer E. Shaner, secretary-manager, informs us that the Interstate Association has made arrangements to give a tournament at Dubois, Pa., on May 13 and 14, under the auspices of the Dubois Rod and Gun Club.

Mr. O. R. Dickey, of Boston, was a visitor in New York on Saturday of last week. He was identified with the members of the Boston Athletic Association, which shot so valiantly with the Crescent Athletic Club.

Friday, April 10, the New Haven Gun Club will hold an all-day tournament; targets 1½ cents each; $30 added. Luncheon served to shooters gratis. Mr. John E. Bassett is the secretary.

Mr. A. G. Wing won the Story championship medal at Ames, Iowa, March 18, with a score of 24 out of a possible 25. There were nine other contestants for it.

The renowned trapshooter, Mr. J. A. R. Elliott, arrived in New York last week. He contemplates a visit of about ten days' duration in this effete hamlet.

The annual meeting of the Missouri State Game and Fish Protective Association for 1903 will be held at St. Joseph, Mo., Tuesday evening, April 7.

Early last week Mr. Frank E. Butler left New York bound for Ohio to attend the funeral of his brother, a sad mission indeed.

There will be an all-day shoot on the grounds of the Neponset Gun Club, East Walpole, Mass., May 16.

The next shoot of the Fulton Gun Club, of Brooklyn, L. I., will be held on April 5.

The next shoot of the Hudson Gun Club, of Jersey City, will be held on April 5.

Mr. John E. Avery, of Atlanta, Ga., was a visitor in New York last week.

BERNARD WATERS.

ON LONG ISLAND.

New York County Gun Club.

Rockaway Park, L. I., March 10.—The shoot of the New York County Gun Club was favored with delightful weather. There was a variable wind, northeast to southeast. Mr. Bissing won the special prize in the 25-target race. Quite a number of visitors, several of whom were ladies, witnessed the competition. Mr. Staples was high average with .832. Schortemeier was second with .830. Mr. Scott third with .730 per cent.

MANHATTA.

Crescent—Boston.

Bay Ridge, L. I., March 21.—The event of dominant interest on the grounds of the Crescent Athletic Club to-day was the team shoot between the home club and the Boston Athletic Association. Indeed, the event far exceeded the confines of club interest, for in New York and vicinity the members of the other clubs, the shooters in general, were keenly interested in the result of it.

It was purely an amateur match. From start to finish it was conducted with the most punctilious courtesy by hosts and guests. Even little incidental matters, which so delicately intimate friendly good will, and which are so many times overlooked, were carefully observed by the Crescent committee. The flag of the Boston club flew over the flag of the Crescents, over the house. On the green, between the firing points and the traps at No. 1 set, was the legend in mammoth letters "Welcome B. A. A." A parlor car, specially engaged, conveyed the visitors from the Bridge to the grounds.

The contest was skillfully managed. It was expeditious and smooth in its action. The targets were above average as to the difficulty of shooting them. The light was very bad in the first part of the race, owing to a heavily clouded sky, and some rainfall. The weather conditions were much better in the latter part of the race.

The conditions were eight men on a team, 100 targets per man, for a $100 cup, for which each club pays one-half.

The Werleman prize was won by Mr. E. H. Lott. The prize, a silver loving cup, offered by the Crescent Athletic Club for high gun of the visitors was won by Dr. S. A. Ellis. The scores:

Team shoot, 100 targets:

JAMES HUGHES, Sec'y.

Emerald Gun Club.

The Emerald Gun Club, of New York, held its initial shoot for 1903 at Smith Brothers' grounds, at Newark, on the most appropriate day, March 17. Our most popular new president, Mr. Patrick May, with a bit of the genuine trefoil in his hat, superintended the arrangements, and Mr. Patrick Lovett was official scorer.

Our oldest charter member, Dr. G. V. Hudson, being now but a high private in the rear rank at his own request, broke out a few times, but was promptly sat on by one of the officers. He has been so long in harness as an officer of the club that he is well nigh irrepressible, and it requires stern discipline to bring him down to his proper present level; but, seriously, he is the club's most energetic member, and the Emerald Gun Club is his creed.

The birds to-day were fast, as is usual on these grounds, as the wind, which was from the east for the past few days, changed

COL. A. G. COURTNEY.

to a fairly strong westerly wind about the time the shooting began. Henry Koegel made a straight score, cutting down some good ones.

Our treasurer, John Moore, came out with his white yachting hat, ornamented beautifully with green ribbons in honor of the day; but after missing the first and second birds, turned the hat inside out and scored six of the next eight, all one-barrel kills; he probably was shooting baking powder in the second.

Hudson, 28	12220*1211— 8	J Fischer, 28	2112210022— 8

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., March 21.—I. Budd, of Pemberton, killed all the birds he shot at, 25 straight. Geikler was a close competitor, killing 24 out of the 25.

Budd's 15 was the top score in the officers' trophy event, with Geikler second with 14. The scores:

Club handicap, 10 birds, handicap rise: Budd 10, Geikler 10, Harrison 10, Darby 9, Landis 9, Fitzgerald 7.

Officers' trophy, 15 birds, handicap rise: Budd 15, Geikler 14, Darby 13, Fitzgerald 12, Harrison 10.

Rockland Military Academy.

NYACK, N. Y., March 21.—In the preliminary matches at the Rockland Military Academy traps to-day the winners were as follows:

First match, 10 targets: Won by French, 10 straight.

Second match, 10 targets: Lander broke 9.

Third match, 10 targets: Creighton and Moeller 9 each.

The 25-bird handicap match resulted as follows: Creighton 22, Chapman 18, Lander 19, Lydecker 19, Moeller 20, French 22, Gilson 25, Potter 22.

The next shoot will be held on the home grounds, April 4 at 3 P. M.

Col. A. G. Courtney.

AFTER a long illness, Col. A. G. Courtney died at his home in Syracuse, N. Y., on March 17. His death was caused by Bright's disease, which later became complicated with dropsy.

For many years he had traveled in the United States and Canada as a gun salesman and demonstrator. In that capacity he was eminently efficient. He was for many years, from 1884 to about 1899, with the Lefever Arms Co. Severing his business relations with that company, he accepted a position with the Remington Arms Co. He was phenomenally successful as a salesman.

He was of powerful physique, though of late years the burden of flesh which he carried impaired his figure as to any suggestion of athletic power. He possessed much native wit, and was famous for his readiness at repartee. There were no quips or quirks, however suddenly sprung, to which he could not respond promptly and keenly.

He was born in London, England, on Jan. 22, 1840, and therefore was in his sixty-fourth year. While English by birth, he was an American by education, for while he was but little more than an infant in age, his father, who was a locksmith and gun-maker, settled in Syracuse, whence in 1849 he went to California to seek gold, amassed sufficient for the needs of a lifetime, and was lost with all hands when the ill-fated Mayflower foundered in 1855.

According to the best information obtainable, Col. Courtney's serious business life began when, at ten years of age, he engaged as a grocery clerk, and his success may be inferred from the offer tendered to him by his employer in 1861; that is, a half interest in the store, and the securing of an army substitute for him at a high figure, $1,000. The spirit of the soldier was upon him, however, for he declined, enlisted, and went to the war, and he was where the fights were thickest and oftenest. He was in seventeen battles; South Mountain, Antietam, Chancellorsville, first and second Fredericksburg, Gettysburg, Bull Run, etc., passing through the numerous hardships and perils unscathed. He was advanced to the rank of Major. He came to New York in 1863, where he remained about three years, thence went to Rouseville, Pa., in the oil region, where he ran a hotel and livery stable, and amassed a large fortune. Next he ran a hotel and opera house in Waverly, New York, about three years, till 1872 Next, after a brief stay in Virginia City, Nev., he went to San Francisco, where he engaged in mining stock deals, and after a stay of six years had amassed another fortune. Next, after a short stay in Syracuse, he engaged in business in Montreal and lost a great deal of money.

In 1879 he opened an elegantly fitted café in Syracuse. He was identified with shooting from his childhood. In the early stages of glass ball shooting he won many prizes. His best score was 98 out of 100. He won the diamond medal of the Onondaga Club five times, tieing for it with a then famous shot, Geo. C. Luther. The tie was shot off on 10 birds, and it required 80 birds to settle the tie, Col. Courtney winning by 4 birds in the last 10. At the G. A. H., Interstate Park, L. I., 1900, he killed all his birds in the events of the first two days, and was one of the contestants who killed 25 in the G. A. H. and shot in the final for the cup; he lost his fifth bird dead out. Years ago he was famous as an unconquered amateur boxer, a powerful athlete and a courage which no danger would daunt. He was a thirty-second degree Mason.

WESTERN TRAP.

CHICAGO.—The Darrow bill, House, No. 617, prohibiting the shooting of live pigeons at the trap or the owning of pigeons for such purposes, has gone to the Committee on Fish and Game. Mr. Castle, the same gentleman who was so efficient in the work on House Bill 604, states that he is opposed to the Darrow bill, and will make all efforts within his power to prevent its passage.

E. HOUGH.

Nonpareil Gun Club.

CHICAGO, Ill., March 21.—Regular club shoot, 50 targets each at Watson's Park: Roll 40, Willard 39, Barto 31, Amberg 36.

J. WATSON.

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., March 19.—Because of our match with Ossining for the Intercounty cup being scheduled for Saturday, March 21, Capt. Traver called the boys out to-day for regular weekly practice. There was such a general feeling among those present that Thursday should be the day for regular weekly shoots, instead of Saturday, that it is probable that that day will be given preference. By holding these mid-week shoots it is hoped to have the effect of bringing out more shooters, as many of our members are business men, who find it almost impossible to attend the Saturday shoots. Several members, too, who are members of the Golf Club, would no doubt attend the shoots on Thursday, but who could not attend conveniently on Saturday, and as these gentlemen rank among our best shots their attendance is of no little importance to the club. Capt. Traver is going on a six weeks' trip through the West, and will attend the Consolidated tournament of the Buffalo Bill and Grand Island gun clubs, at Grand Island, Neb., April 3. To-day's scores follow:

Events:	1	2	3	4	5	6	7	Shot at.	Broke.
Targets:	25	25	25	25	25	25	15

M. S. G. and F. P. A.

The programme of the Missouri State Game and Fish Protective Association's twenty-sixth annual tournament, to be given under the auspices of the Metropolitan Gun Club, St. Joseph, Mo., April 7-11, can be obtained of the secretary, Mr. F. B. Cunningham, to whom, care Brown Transfer and Storage Co., guns and ammunition, express prepaid, may be forwarded. Targets 2 cents. Live birds 25 cents. Mr. Fred Whitney will have charge of the cashier's office. Handicaps, 16 to 22yds. Two sets of traps, Sergeant system. Handicaps, live birds, 26 to 32yds. Handicap committee: Messrs. C. W. Budd, H. M. Davis, Alex. D. Mermod, J. W. Bramhall and Chris. Gottlieb. Money divisions, 35, 30, 20 and 15 per cent. There are twelve similar events for each of the days, April 7, 8 and 9; 15 and 20 targets, entrance $1.50 and $2; added money $10 and $12. On the fourth day there are three events: Event A, State Association team medal, 15 birds per man, 60 to team; entrance $20, birds extra. Event B, State amateur wing shot championship, 25 birds, entrance $12.50; 30yds. rise. Event C, Interstate championship cup, open to the world, 25 birds, entrance $12.50. Fifth day, Event D, 25 birds, entrance $20, handicaps 27 to 33yds.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Ossining Gun Club.

OSSINING, N. Y., March 21.—Victory again perched on the banner of the Ossining Gun Club to-day when the Poughkeepsie Gun Club sent down its valiant team of seven to try and win back the Intercounty cup, which they had, it seemed to us at the time, over long. The out-of-town boys were up against a stiff game, for it is hard work to beat this club on its own grounds. True, they won down here before, but then Buckley made 23 out of 25, and this time only made 11; but a straight by him this time would not have changed the result. This makes two wins for Ossining and one for Poughkeepsia. The up-river boys are entitled to try again at any time they may elect.

The handicap cup was shot for to-day. G. Hubbell and A. Rohr each had two wins for it, needing but one more to win it for good. Hubbell did the trick, breaking 21 out of 25, with a handicap of 6 misses as breaks. J. M. Terwilliger did the scoring, and he was O. K. at the game. Over 1,500 targets were thrown in two and one-half hours.

Figures after the names denote misses as breaks, which apply in event No. 6 only. * denotes shot along. Tallman got high average, .92 per cent; Blandford, 91 per cent.

C. G. B.

Ames Tournament.

AMES, Ia., March 18.—The one-day tournament of the Ames Gun Club was well attended. The programme had eight 15 and four 20 target events. No money was added, but four high average prizes were given to high men. W. B. Linell, of Eldera, won first. He averaged .935. C. B. Adams, of Rockwell, won second; John Frees third, and H. Watson fourth.

The shooting was from one set of traps, Sergeant system; targets thrown about 50yds.

There were ten entries for the Stony County Championship medal. A. G. Wing broke 24 out of a possible 25 and won the medal without a tie. Dr. Proctor, the holder, got 22.

Henry Steege, of Waterloo, and W. B. Linell, of Eldera, then shot a 25-target match for a purse of $10, Linell winning with 25 straight.

HAWKEYE.

Monte Carlo Incident.

THE following excerpt, a part of a review of the trapshooting situation as it concerns cruelty and honesty, is taken from the Country Gentleman, London, England, of March 7, and is presented for what it may be worth in respect to foreign trapshooting:

"Possibly the betting element is not so pronounced in America in connection with pigeon shooting as it is in our gun clubs; but such actions as that decided only on Saturday last by Mr. Justice Channell in the King's Bench Division throw a strong side-light on the amount of money wagered by pigeon shooters at Monte Carlo, as well as adding one more story—true or false, we need not here inquire—to the many tales that have been told concerning the tricks resorted to by dishonest gamblers. In that case Mr. R. S. Siever, of Toddington Park, Bedfordshire, the well-known race horse owner, was sued by M. G. Besnard, a Paris bookmaker, for £2,000, said to have been won by him from Mr. Siever in an hour. Mr. Siever declined to pay, on the ground that he believed he had been swindled, stating that he had ascertained that the shooter, a well-known competitor, whom he had been induced to bet on killing his bird, had had charges of powder in his cartridges, but no shot. Whether this statement be true or false, such tricks are not unknown in pigeon shooting, there being so many opportunities of practicing them in one form or another upon unwary sportsmen. It is not long since a bankruptcy examination elicited the fact that a young shooter had been cheated out of thousands by his cartridges having been fraudulently filled up with sand instead of shot, with the result of course that when money in large amounts was wagered he always missed his bird. Mr. Siever won his case, having declined to pay because he was smart enough to have observed, or believed he observed, that the shooter he was putting his money on fired three yards under the pigeon, and that the second barrel fired at the bird (which must have been somewhat of an 'owl'), when it had settled a few yards from the firing point, showed no mark upon the mat below where it rested. It seems strange that the shooter, if he knew there was no shot whatever in his gun should have thought it necessary to aim three yards below his bird in order to avoid killing it by so doing. He must surely have been making assurance doubly sure. Be that as it may, there seems little question that much money is sometimes won by fraudulent means in pigeon shooting contests."

In the same journal, a correspondent, Verax, touches upon the subject as follows:

"The evidence given by Mr. Siever in the action heard before Mr. Justice Channell on Saturday last is a striking commentary on the practices apparently prevalent in pigeon shooting at the traps. If his statement can be corroborated by independent evidence there can be no doubt that an ingenious attempt was made to swindle him out of some thousands of pounds at the Monte Carlo Gun Club a year ago. The attempt did not succeed, it would appear, because Mr. Siever, as it happened was smart enough to detect the trickery, though he may probably have been enabled to do so only by the accident that the pigeon fire at was a tame one, and alighted close to the shooter, who in the ordinary course of things could not have failed to kill it with his second barrel. The circumstances showed that the trapping at all events at Monte Carlo was honest, for it would have been very easy for dishonest trappers to have sent out a fast-flying, strong, wild bird that would have been very difficult to hit even by good shooting, and very easy to miss by the reverse, without attracting attention or remark. But if Mr. Siever's view be correct as to what really happened, not only the shooter, but also his loader, must have been in the secret in conjunction with the bookmaker, who plunged on what would have been a certainty for him if he had only been paid the amount of his bet.

"The case certainly shows the many opportunities afforded shady sharpies for picking up considerable sums of money dishonestly behind the live-pigeon traps, and the publication of Mr. Siever's evidence, so long as it stands uncontradicted on oath, must go far to throw greater discredit than ever upon the so-called sport. It has always been assumed that the proceedings at Monte Carlo were beyond suspicion of chicanery; and if such practices as have just been referred to are possible there, can we believe that they are unheard of at other competitions, where the rules are not quite so strictly observed, and where therefore there are greater openings for fraudulent trickery by which sharpers profit and honest men lose their money?

Kansas and Missouri Traps.

THE growth of interest in trapshooting heretofore mentioned in this correspondence, as pertaining to the Mississippi and Missouri valleys, is becoming steadily more apparent as the season advances. One evidence of this is the fact that estimates of attendance at the Grand American Handicap are rising steadily as the date approaches. It is pretty well assured that the States of Kansas and Nebraska alone will furnish over fifty entries.

At Kansas City on the 15th inst., B. F. Cunningham won the Missouri State championship from Harry Tipton in a match at 25 live birds. The contest was a nice one, being a tie from the fourth to the thirty-fifth round in the miss-and-out.

Walter Howe won the Troisdorf target championship at Kansas City on a score of 44 out of 50.

On the 17th the Carthage-Joplin, Mo., Gun Club defeated the Weir-Scammon, Kans., Gun Club in an intercity ten-man team contest. It was the second win for the Missourians, but by so close a margin that nothing was left to spare and it is understood that the series is to be continued.

In a short sweepstake programme on the same date, H. Pierce was high gun without a tie. Dave Elliott and Holmes tied for second. The tournament was held on the grounds of the Weir City club, whose members nicely entertained the visitors. The scores:

Missouri State Championship:

Cunningham	2220202222221222222*2222221222222222—33
Tipton	11*2101212221222222*2222111121122222*—32

Troisdorf medal, 50 targets: Coe 32, Norton 38, Cockrill 34, Hickman 39, Scott 30, Cunningham 37, Rickmers 36, Greninger 38, Kirby 41, Homc 44, Campbell 38, Elliott 35.

The following was shot at Weir City, Kans., March 17:

M. V. T. S. and G. P. A.

A CORRESPONDENT sent us the following clipping, which will be of special interest to Southern shooters:

Secretary J. J. Bradfield, of the Mississippi Valley Trapshooters' and Game Protective Association, states that an additional prize is to be competed for during the 1903 tournaments.

The prize, Mr. Bradfield states, is an $80 gun, winner to have choice of any gun on the market. It is donated by the Peters Cartridge Company, of Cincinnati, O., through their able and popular representative, Mr. Maurice Kaufman. The first chance to compete for this handsome prize, together with the numerous other trophies now in competition, will be at the tenth tournament of the Association, to be held at Vicksburg, Miss., by the Vicksburg Gun Club during May, which promises to be particularly interesting.

Any further information will be cheerfully furnished by the secretary of the Association, Mr. J. J. Bradfield, Vicksburg, Miss.

Nothing has done the shooters so much good of late as to see the face and figure of their accomplished and hard-working secretary out among them again, and all are hoping that Brad will get a look in for that $80 gun.

The members of the Vicksburg Gun Club are going to have their shooting grounds in fine shape this spring, and expect the usual number of crack shots, professional and amateur, at the target during the May tournament.

Raleigh Gun Club.

RALEIGH, N. C., March 17.—Although our regular shooting season does not begin until the middle of April, we will have an occasional shoot between now and that time. We had the pleasure of entertaining Mr. J. A. R. Elliott to-day, and were well paid by the good shooting he gave us, as well as the large attendance given us by representative business men and ladies of our city. Mr. Elliott's manner and shooting endeared him to our members, and we will always be glad to have him visit us when convenient to do so. His longest run was 81 straight. Mr J. I. Johnson, president of our club, and a good shot for an amateur, was a close second with 92 out of a possible 100. Mr. Arthur, another member, shot well, breaking 48 out of the last 50.

Our magautrap was in perfect working order. Out of 800 targets I don't think there was over a dozen bad ones thrown out. This is a great help to the shooter.

The weather was an ideal spring day, not too warm, with no wind stirring; in fact, there was no excuse a shooter could attribute his missing a target to. We appreciate the visits from all gun and powder houses and hope to have quite a number with us ere the season closes. The following scores were made, shooting at 100 targets: Eliott 97, Johnson 92, Tennessee 86, Arthur 85.

Shooting at 50: Parker 41, Ellington 41, Gowan 40, Gray 30, Walters 20.

Shooting at 25: Riggan 13.

R. T. GOWAN, Sec'y.

Schenectady Gun Club.

SCHENECTADY, N. Y.—The following scores were made on the home grounds of the Schenectady Gun Club this afternoon, and as the weather conditions were anything but pleasant, the scores are remarkably high. A strong wind from the southwest was prevalent during most of the afternoon, with rain squalls that made it hard to see the targets, especially the low ones, when not against the sky background. Borden, H. E. Greene, Levengston and Warnick were high guns, averaging 96, 95, 93 and 92 per cent. respectively, Borden missing only 4 out of 100, and ending with a brilliant run of 53 straight. Mr. Levengston also made a run of 50 straight during the afternoon. Messrs. Greene, Levengston and Warnick stood at 18yds., and Borden at 16yds.

The occasion was the spring tournament of the members of the Schenectady Gun Club, with rather novel conditions of shooting at 100 targets in four 25-target events, the highest four scores of 25 each to count on four different Saturdays out of the seven Saturdays from March 14 to April 25, inclusive, for prizes.

The following is the full score of the afternoon's shoot:

Events:	1	2	3	4	5

Settler, New York.—1. What are the prospects of procuring a grant of land in the State of California under the Homestead Laws? 2. The counties in which the grants are available? 3. Where intending settlers should make application? 4. Is land dear in California? Ans. 1. Any citizen of the United States may take up public land to the amount of 160 acres under the Homestead Act. 2. Counties in which there is still unoccupied public land. 3. The nearest local land office. 4. Improved land is dear. Unimproved land on which water cannot be brought is worthless. We suggest your writing to the General Land Office, at Washington, D. C.

PUBLISHERS' DEPARTMENT.

Three-Day Tour to Washington.

UNDER THE PERSONALLY-CONDUCTED SYSTEM OF THE PENNSYLVANIA RAILROAD.

THE next Pennsylvania Railroad Personally-Conducted Tour to Washington leaves Monday, April 6. Rate, covering railroad transportation for the round trip, hotel accommodations, and transfer of passenger and baggage, station to hotel in Washington, $14.50 from New York, $13 from Trenton, $11.50 from Philadelphia, and proportionate rates from other points. These rates cover accommodations for two days at the Arlington, Normandie, Riggs, Ebbitt, Shoreham, Cochran, Gordon, Barton, or Hamilton hotels. For accommodations at Regent, Metropolitan, National, or Colonial hotels, $2.50 less. Special side trip to Mount Vernon.

All tickets good for ten days, with special hotel rates after expiration of hotel coupons.

For itineraries and full information apply to ticket agents; Tourist Agent, 263 Fifth avenue, New York; 4 Court street, Brooklyn; 789 Broad street, Newark, N. J.; or address Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—*Adv.*

How many tears have been shed, and how much unprintable language used over shooting and fishing footwear, can never be known. What is known is this, that nothing contributes so much to the comfort of angler or hunter as good, easy, durable shoes or boots. Messrs. Witchell Sons & Co., of Detroit, Mich., manufacturers of high class sporting footwear, confine their efforts to this one line, and may be presumed to have succeeded, as specialists usually succeed. Elk skin waterproof boots are one of their specialties. Their goods are adapted for men and women alike. Dealers have their product, or if not, the manufacturers themselves may be consulted by letter.

The Labrador Company, who control the great Mingan Seigniory and advertise the salmon rivers within its borders, have just issued an attractive and fully illustrated pamphlet, describing a large number of these rivers, and generally the attractions of the region. These north shore streams for the most part can be reached only by steamers making trips twice a month from Quebec. The country is almost untouched, and affords excellent opportunities for fishing and shooting. A map of the region is found in the pamphlet, which will be sent free to all applicants.

Pretty much everything to be desired by the fresh or salt water angler is to be found in the catalogue issued by Charles Plath & Sons, of 62 Fulton street, New York city. Not only does this firm supply to the consumer rods, reels, hooks, flies, leaders, camping goods, rubber clothing and other necessary articles, but it furnishes to the manufacturer supplies for making rods and tying flies. Anglers who desire to renew their stock should supply themselves with the Messrs. Plath's catalogue.

The J. Stevens Arms and Tool Co., of Chicopee Falls, Mass., having acquired the telescope business of the Cataract Tool and Optical Co., of Buffalo, N. Y., are now prepared to fit telescopes to rifles. These telescopes are adapted not only to arms of their own manufacture, but also to many other rifles made by advertisers in the FOREST AND STREAM. Persons who have shot telescope rifles understand how great an addition to the shooter's comfort the telescope is.

The Toquet Launch and Motor Co., of Saugatuck, Conn., manufacture launches and motors, the last designed and built to meet the growing demands for a high grade motor, with every feature that experience has shown to be desirable. How well the company succeeds in this is shown by the few testimonials printed at the end of their attractive booklet, which will be sent on application.

WILLIAM N. BYERS.

IT was a singularly well rounded life which was brought to a close when William N. Byers passed away, at his home in Denver, on Wednesday of last week, March 25. His age was seventy-two years. Mr. Byers was one of the conspicuous figures in the history of Colorado, a chief actor in the development of the State. He was a type of the western pioneer whose daring enterprise, foresight and indomitable courage subdued the wilderness and established States. Born in Ohio in 1831, of Scotch descent, he went in 1851 to Iowa and began surveying in the service of the Government. In the prosecution of this work he went as far west as Oregon and Washington and to California; and when the territories of Nebraska and Kansas were opened for settlement, he went to Omaha and ran the section and township lines of eastern Nebraska. In 1859, when the motto "Pike's Peak or Bust" was the watchword of so many adventurous spirits, Mr. Byers set out for the Rockies with a printing press and newspaper outfit, which were carried by pack mules; and on April 17, 1859, reached Kettle Creek, the site of Denver, and on April 27 issued the first number of the Rocky Mountain News, the pioneer paper of the proposed State of Jefferson, afterward Colorado. Although in after years Mr. Byers held many offices of honor and trust, it is believed that in nothing else did he take so much pride as the record he made for the News and for himself in its conduct, and in the recognition popularly accorded him as the founder of Colorado journalism. Thus active and influential in the early days of Denver, Mr. Byers was all through his life until its closing years a man of large affairs, and was identified with many of the important financial enterprises which have made the crude Kettle Creek of 1859 the Denver of to-day, with its 170,000 inhabitants.

Mr. Byers was from the first publication of FOREST AND STREAM a contributor to its columns, and older readers will recall the delightful descriptions that came from his pen of fishing excursions and camps in the Rockies. He was an authority on the West, and his writings had peculiar charm because of the intimate knowledge they showed of the scenes and the subjects concerning which he wrote. His angling papers were surcharged with the freshness of the mountains; they reflected the breadth of spirit which characterized the man. Always appreciative of the value of the fish and the game, and recognizing the duty of securing their conservation, Mr. Byers was one of the earliest advocates in the Rocky Mountains of game and fish protection, and the subject was one in which his interest was never lost. One of the last things which he wrote for the FOREST AND STREAM was a plea for the rescue of the Lost Park herd of buffalo, Colorado's relic of that fated game of which in his youth the surveyor of the territories had seen the herds of tens of thousands.

A SIGN IN THE HEAVENS.

TO THE dwellers in great cities, most of the charming transitional stages between the going of the winter and the coming of the springtime are unknown happenings. To them the shy and slow budding of the dainty leaflets; the gradual changes of earth from shades of dull brown to the refreshing shades of vivid green; the swarming of restless, musical bird-life where a short time since there was only silent void, are to city dwellers perforce the phenomena of things unseen and therefore practically unknown. They miss the glories so lavishly in evidence to the country dweller—the magic of the mellow sunshine, which coaxes forth bud and blossom, and life and color where before were only the sere and the dormant; sights to please the eye and gladden the heart.

To the city dweller winter seems to end in an abrupt sort of way, and spring seems to come with equal abruptness. Bricks and mortar walls do not show the season's changes as do fields and forests. To them all seasons are nearly alike.

But betimes some isolated natural happening may herald to the one in city streets the arrival of spring and revivification. On Monday of this week several flocks of geese passed over New York city, high up in space toward the sky, steadily winging their way northward to commence the season's domestic labors. And, while they could be distinctly seen, but few people in New York saw them, for there the pedestrian must needs look up quite perpendicularly to behold much sky, and when seen it is sky broken and irregular in every direction accordingly as the lofty and numerous sky-scrapers interfere with the sight. The northward migration of the geese denotes that spring's impulses are upon them, but their lessening numbers tell also that the season is here when the shooting of wildfowl should be prohibited by law and frowned upon by public opinion. The entire stock of wildfowl is insufficient to reproduce to a degree equal to their destruction.

Even if unmolested in the springtime, stringent restrictions on shooting wildfowl would still need to be enforced in the fall; for the agencies of destruction have multiplied so generally everywhere that, if unrestricted in their exercise, the utter extermination of the wildfowl would be quickly compassed. Indeed, the thinly scattered flocks of geese flying warily northward are now in meagre contrast with the numerous flocks of years ago. For this great decrease in the numbers of the wildfowl the pernicious practice of spring shooting far exceeds all other kinds of destructiveness.

The springtime, in the animal and vegetable world, is nature's chosen time for reproduction, not for destruction. Let the birds pass unmolested to their breeding grounds. In the fall there will be more and better birds to test the sportsman's skill and craft, and there will be more birds in future years for the sportsmen and their posterity.

WHEN DO THE WILD DUCKS MATE?

THE question as to the time of mating of the migrating wildfowl that are with us in winter is one that has been hotly debated by the advocates and the opponents of spring shooting. Almost every man has an opinion on the subject based on what he has seen of the actions of the birds, but these opinions are drawn from inference and not from absolute evidence. Definite knowledge on the matter is wanting.

On one hand we know—or think we know—that wild geese mate for life and are strictly monogamous. This conclusion is drawn from birds kept in captivity, for it is a fact that a mated male has no interest in any female except his mate, and indeed will severely beat and drive away any female which approaches his mate when she is nesting. Nothing of this kind is known about the ducks, but it is seen that in late winter and all through the spring ducks frequently travel in pairs, male and female. If one of these birds is killed by the gunner the other is likely to make a long round and to come back to the place where its companion fell. As against this another group of gunners declare that birds sometimes do this in the fall. That might very well be if the wild ducks mate for life as the wild geese do. Many gunners on the southern broad waters, where so many of our wildfowl pass the winter, aver that the wild ducks mate in February. Abe Kleinman, a veteran market gunner of Illinois and Indiana, declares that the blucbills, or broadbills, are mated in March.

Dr. T. S. Palmer, of the U. S. Biological Survey, who is interested in the question of when the birds mate, wrote us recently as to the Chesapeake Bay region, saying: "I saw personally (March 26) several pairs of blackheads which had undoubtedly mated, and Mr. Walter Jackson, a man of more than ordinary intelligence, who has been shipping ducks from Havre de Grace for years, tells me that there is no doubt that many of the ducks are paired off before they go north. He assured me that he had found partially developed eggs in ducks killed in spring on the Susquehanna flat."

While positive evidence as to when the ducks mate can be had with but great difficulty, there certainly must be a very distinct preponderance of opinion among gunners on one side or the other of this question, and it would be interesting to receive from men of experience statements of their beliefs concerning it, and their reasons for them.

It is but a few years since it was denied with great positiveness that wild ducks bred in New York State, but when the question was asked in the columns of FOREST AND STREAM whether they did or did not breed, there was positive and prompt response from a number of men who showed that beyond question they did breed in that State. Later the results which followed the prohibition of spring shooting in Jefferson county have shown that if unmolested in spring, the ducks will remain and breed in New York in very considerable numbers. In all the Northern States they would do the same thing were they protected.

There is a lot of rubbish and "rot" published about President Roosevelt as a sportsman. Something near the limit has been reached by the Philadelphia Record, which prints a column dispatch from a Salt Lake City lunatic descriptive of a herd of 10,000 moose in Jackson's Hole, "which the President may charge on horseback and kill them with pistol or knife as he desires." There are also in the perfervid imagination of this writer 20,000 elk in the Hole, and all this game "belongs to the most dangerous generation of elks and moose that ever roamed the western country." The President will be in the West in April, which is popularly regarded by sportsmen as close time, but such a small matter as the game law does not stand in the way of this yellow journal programme. The plan, we are told, is "to give President Roosevelt a chance at the scrappiest herds of elks and moose in the world. The scheme is to take him into the Jackson Hole country when he leaves the train at Laramie to ride overland by horseback to Cheyenne. It is proposed to have the game laws waived in Roosevelt's honor and hunt these moose and elks for three days." When this sort of truck is ladled out by the column, one stands in amaze at the character of the readers who are assumed to be such idiots as to pay for the privilege of having the stuff served up to them as "special to the Record."

At this season of the year in the North the robin is welcomed as one of the harbingers of spring, on its return to take up housekeeping in the orchard or the dooryard; and as one of the familiar birds of the Northern home it is cherished and protected by sentiment and by law. In these latitudes the robin is not a game bird. In the South, where no such sentiment prevails, the bird is esteemed chiefly as a table delicacy. This is illustrated anew in the act of incorporation of the North Carolina Audubon Society. This is a body organized to protect bird life; the act nevertheless expressly excepts the robin, and provides that the robin and the meadow lark "shall be considered game birds." The bobolink, another bird which in the North is regarded and protected, is in North Carolina, under the name of rice bird, classed as vermin, along with hawks and crows and blackbirds, which may be killed without limit. Thus in matters small as well as large the sentiments which govern our likes and dislikes are largely influenced by latitude and longitude.

Governor Odell has declared himself unalterably opposed to any appropriation by the Legislature for the purchase of Adirondack lands until it shall have been determined definitely what amount will be required ultimately for a comprehensive and final scheme of a forest preserve. It is highly desirable that such a definite plan should be adopted in order that its attainment may be provided for. But under existing conditions a policy which stands in the way of any land acquisition whatever is unwise. To defer purchases until the adoption of the plans would mean under existing conditions putting it off till doomsday. This is the reverse of economical, for the reason that the value of Adirondack lands is steadily appreciating, and purchases in the future cannot be made so cheaply as they could be made now. Moreover, tracts of forest land are undergoing denudation which should be acquired by the State and preserved in their natural condition. The people of New York approve the Adirondack forest preserve principle; and Governor Odell would give a more substantial proof of his statesmanship in the matter if, instead of making this demand for a definite preserve plan his excuse for preventing action on the matter, he should—if still insisting on the necessity of the plan—take some action toward securing it. Let a commission be appointed in time for report to the next session, and for action then on the report.

The Sportsman Tourist.

Rastus' Boom.

ON the east bank of the Columbia River, twenty-eight miles north of Wenatchee, Washington, is a cluster of three buildings, two of which are occupied. This is the town of Orando. The stages which run between Wenatchee, Bridgeport and Waterville, meet there at noon, and after dinner continue on their way. From the windows of these houses all one sees is a broad expanse of sand dunes, sage brush and cactus; the sage brush grows on mounds, the wind having eaten away the sand until the roots are exposed.

After a long, hot ride from Waterville, the last two miles of which the horses were compelled to walk on account of the deep sand, the road house was reached and we prepared for dinner. A pile of sand several feet high was banked against one end of the building, and all that marked the wagon road was the track of the vehicle that had just passed.

I had occasion to remain in this God-forsaken place nearly a week, during which sand storms were of almost daily occurrence, and when at their height one could not see a quarter of a mile in any direction. All doors and windows were closed and pieces of carpet were placed against the sills and jams to prevent sand from drifting into the building. After the storm had subsided, Rastus, the proprietor of the road house, swept off the porch and shoveled a path from the steps to the road.

One day I ventured to ask my landlady—who was postmistress also, and a jolly little woman, who made her house and stage passengers as comfortable as circumstances would permit—why she had left the East to live in a country so forlorn?

She looked out of the window, and waving her hand over the waste of sand and sage brush with a sarcastic laugh, exclaimed, "Boom! boom! Real estate! Real estate! You see, 'Ras—that's my husband—got it into his head that fortunes could be made out here in real estate, so he and another fellow scraped up enough money to come out. He had been gone several weeks, when one day I got a telegram by the way of Wenatchee, saying, "Sell everything and come on at once." While I was getting things ready a letter arrived which related his prospects in the most glowing terms. He and his partner had taken up a couple of sections of land, which in a short time would realize a fortune for them both. The Orando Valley was one of the most fertile spots on the Columbia River; it could be irrigated at little expense from a stream draining the highlands from the east, and when water was once secured fertile crops could be raised. As soon as the boom was started, the railroad would be built from Wenatchee into the 'Okonogan country,' and then the line at Coulee City would be continued west to the Columbia River, making Orando the junction of the two roads. Our fortunes would then be made, and we would return East and take life easy for the remainder of our days. 'Sell everything at once and leave on the next train,' the letter continued; 'as soon as you know what train you are coming on, wire me, and I will meet you at Wenatchee with my hack. Orando is only thirty miles from the station. It is a great country; it is a great country! I am sure you will like it as soon as you have become accustomed to it. Of course, it will seem a little strange at first, but you will soon get used to it. Fruits grow without any attention, and the largest crops I ever saw.'

"My heart bounded with joy. There was no doubt that we would soon be rich. 'Ras always was a good business man, and I had no doubt of his putting this scheme through successfully. Why, just think! He had only been out there a few weeks, and had saved enough money to buy a hack. I could not but wonder what he was going to do with a hack. Probably he intended to run it between the station and hotels when the boom began, and was trying to make it do for general use until then.

"I had it put in the town paper that 'Ras had struck it rich in the Orando Valley, and that on a certain day his wife would sell the household belongings, including a cow, and then leave for the West, where they would make their home. The things were auctioned off, and I couldn't help crying when I saw pa's mahogany chair knocked down to Jane Ostrander for one dollar thirty-five, and then she kicked because one of the rockers was a little loose.

"I sold everything but a few carpets and the bedding, which I sent West by freight.

"The day before I left, Jane Ostrander came over. She had been West, and said she had come to bid me good-by and tell me what kind of a country I was going to. The remarks she made about the chair still rang in my ears, and I told her she needn't have bothered herself, for I would soon find out for myself; then I shut the door in her face just as she laughed and said, 'That's no josh, neither.' And I have found that she was right.

"Well, finally I got started, and wired 'Ras that I was on the way. I made the acquaintance of several women who were going West too. I read 'Ras' letter to them daily, and told them of our plans. They were very much interested, and congratulated me on our great luck. They were anxious to see 'Ras; so I promised to bring him up and introduce him as soon as we reached Wenatchee. At last the long looked-for hour arrived, and as we neared the station, I gathered up my duds and gazed out of the window. Our coach passed a lean, lank form, with a broad-brimmed hat lopped over his eyes, faded blue overalls, no coat and a brown flannel shirt, with sleeves so long they had to be turned up several inches. It was 'Ras! I knew him at once, though he hadn't shaved in weeks. After all I had told my friends, I hadn't the face to bring him up and introduce him in those duds. So I jumped off the car, and dodging behind the station, peeped around the corner. I saw my traveling companions standing on the car steps waiting for me to appear with my better half; he in the meantime was walking up and down the platform looking into the car windows. I looked for the hack to put my things in, but did not see it. 'Gracious!' thought I, 'is the hack broken, or was there so much business that 'Ras could not spare it?'

"When the train moved out, I did likewise, and to say that 'Ras was surprised would not express it. As we walked around the station, I asked him why he had come to meet me in such old clothes? He said he was working on the building up to the time he hitched up and didn't have time to change them. He took my things and began loading them in a platform spring wagon, when I ventured to ask him what had become of the hack.

"'Hack! Hack! Why, this is what they call a hack out here!'

"'What! that old thing with rattling spokes, lop-sided and wired together! Is that what you call a hack? Is that the thing you intend to drive me thirty miles in? Why, 'Ras, it will fall apart before we get started if you don't hurry up.'

"And the horses! I wish you could have seen them; they were not much larger than jack-rabbits, and when we got out of town the sand was so deep they could not go off a walk.

"It was well along in the afternoon, and 'Ras said we would come to a nice camping place about eight miles out, and there pass the night. He wanted to know if I had anything eatable; said he had been too busy to put up any lunch. Fortunately, I had the remains of a large basket of lunch I had put up nearly a week before. 'Ras pitched into it as though he hadn't had a thing to eat in a month. The sun was scorching hot, and the soot and dirt of my long journey, and dust the horses kicked up, made me long to reach the 'good camping' place, where I could lie in the shade and drink a cool draught of Washington spring water.

"We chatted for about four hours; 'Ras was wrapped up in the real estate scheme, and could talk of nothing but the boom and the time we would be rich. At last he halted the horses at a dirty old mud hole and began to unhitch. There was not a tree as large as a broom stick in sight, and the sand was so hot you could scarcely hold your hand on it. I asked him what he was going to do? 'Camp for the night,' he replied. A lump rose in my throat, and I thought of the dear old home I had almost given away.

"So far I had seen nothing but sand, cactus and sage brush, and once in a while a lizard or jack rabbit which scampered away as we came along. I sat down on the blanket and thought. 'Ras unhitched the horses and turned them loose. I asked him if they would not run away, but he said no, they were used to hunting their living, and he could find them any time. When night came he spread the blankets on the sand and we turned in. I tried to sleep, but only thrashed about till morning. As soon as it was daylight 'Ras got up and started after the horses. He told me to put the things into the wagon, and by that time he would be back. After I had finished I lay on a blanket and fell asleep, when suddenly I was awakened, and there on the blanket was a nasty old lizard. I screamed and climbed into the wagon. About 10 o'clock a freighter came along and said he had passed my husband, who wanted him to say to me that the horses had started for home. That was encouraging. Surely there must be something better in store for me, or the horses would never be so anxious to reach there. He advised me to spread a blanket under 'the hack' out of the sun and make myself as comfortable as I could until 'Ras returned.

"'Be you the woman that sold out in the East to come here to live?' he inquired.

"'I am the woman,' I replied.

"He looked at me a minute, grinned and shook his head, then backed his horses that they might get a better start, and as he cracked his whip and went on he turned his head and shouted back, 'If I had a summer resort in hell I wouldn't trade for the whole Orando Valley!' Up jumped lump number two into my throat.

"About noon 'Ras came back, and after harnessing up we started on. All afternoon we plodded along, and about 9 in the evening drove up to a small frame building.

"'Here we are,' says 'Ras.

"'But where is Orando?' says I.

"'You'll see in the morning.'

"He shouted a couple of times, a light appeared in the house and his partner came out. I knew Fred Billings well, and right glad I was to see some one from home again. The horses turned loose, 'Ras came in and began on the railroad, irrigation and other boom schemes; but I noticed that Fred didn't have much to say. I believe he had begun to see that the thing was a fizzle. Spreading our blankets on the floor up stairs we went to sleep.

"The next morning I was up bright and early and looking out of the window saw nothing but sand and sage brush. There wasn't a spear of grass in sight, not even a green weed. Down the valley a couple of miles I saw two more ranches, but no other buildings.

"'Ras, get up,' says I. 'We must be off. I am anxious to see our new home.'

"'See your new home?' says he. 'Why, this is it!'

"'But where is the town? Where is Orando?'

"'Why, darn it, I tell you this is it! You're right in it!"

"'What! these three buildings and those sand banks are what we are going to get rich off?'

"'Yes.'

"That was the 'straw that broke the camel's back.' I broke down and cried.

"'Now, look here,' says 'Ras, 'there ain't no use in blubbering and making a fool of yourself; you're here now, and you've got to stay here. You'll be all right in a few days. You're new in the country and don't understand it. Why, you just wait till the railroad comes through, and we get water on the land and you'll see a different place than this'

"We have been here six years, and the place hasn't changed a bit. The stream, which was to furnish the water to irrigate, dries up at the time it is most wanted, and there is never more than enough for the two ranches below, that came in first and hold the water right. We have to carry our drinking water from the river. The railroad company has the nightmare occasionally and talks of extending the road west of Coulee City. Fruit does grow in abundance—where water is had in sufficient quantities to irrigate—but we are so far from the railroad that it wouldn't pay to haul it to Wenatchee and then freight it to the coast, which is the nearest market.

"So here we sit waiting for the boom, and living on what few vegetables we are able to raise, and what little money the post office, stage drivers and passengers leave us. This is all we have, and if we wanted to leave to-morrow we haven't enough money to pay car fare to Spokane Falls. The only thing we are rich in is land and experience," and she chuckled.

'Ras appeared just then. "I say we are rich in land and experiences, isn't that so, 'Ras?" and she chuckled again. 'Ras glared at her a second, then grabbed the broom and started out to wrestle with the sand again.

"'Ras doesn't like to have me mention our wealth," she said.

J. ALDEN LORING.

"The Law West of the Pecos."

Editor Forest and Stream:

Capt. Flynn, in the current number, March 28, thinks that I may have met Judge Bean in my time. I knew him well, having first met him years before we had any Southern Pacific Railroad. The only mode of travel then in all that country was by stage or ox-team over the California Overland, or Eagle Pass road, as that part of it between San Antonio and El Paso was generally called.

This part of Texas then had not been divided into counties yet; it was all young territory, a territory large enough in extent to form a State; we have States that are no larger.

The Judge at the time of his death must have been all of eighty years of age. When I last saw him, nineteen years ago this spring, he looked to be over sixty.

The Captain's estimate of the Judge's legal knowledge comes pretty near being correct. What His Honor did not know about the law would fill quite a large book; but he did know the class of men he had to deal with, administered the law as he understood it, and kept some kind of order there, when another man who might have forgotten more law in a day than the Judge ever knew would have made a failure of it and sooner or later would have lost his life. I have attended more than one of his trials, but always as a spectator. I took good care not to offer him any advice. Had another justice been trying these cases I would have wanted to appear as the prisoner's counsel, but not before Judge Bean; if I had he would have fined me for contempt in less than ten minutes, or about the time I would object to one of his peculiar rulings.

The Judge's knowledge of old Mexico was about on a par with his knowledge of the law. I don't believe he was ever further south in it than across the tree zone, a strip of fifty miles just south of the line. I questioned him at one time about Sonora. I had not seen it then, but got a full description of it from him. Afterward, when I did get a chance to travel through a part of it I found out that he knew about as much about it as I know about the moon.

The United States and Mexico came near going to war, in 1867, I think it was. The trouble was about a salt deposit that citizens of both countries claimed, though the salt was on our side of the line. He settled that affair, or at least claimed to have done it.

Our troop was in camp for a few days one summer on the Pecos River, near Vanderbeer's Springs, and I was sent down to the railroad with the mail. A train stood in front of the station as I came in sight of it, but the train was going west, and I did not try to get down in time to meet it; I did not want that train. It started to pull out just as I rode down to the track, and as it did so a young man rushed out of the store and climbed into a chair car. Going into the store, I found the Judge all alone for a wonder, and he was mad clear through. Had I seen that fellow that ran out of this just now? Yes, I had, and asked who he was. He was a drummer from New York or somewhere up there, and had put in the ten minutes that the train had been held here in trying to sell the Judge a bill of goods and had failed.

"What do you suppose that fellow told me?" the Judge asked.

"He probably told you that this country here was not fit for a white man to die in, much less live in; but you must remember that those people from the States only see this country from a car window, and don't know that we have plenty of a better country north of this."

"No, that was not what he told me. He said that I knew no more about the law than a dog knows about his father."

He never came nearer to the truth in his life, if he is a drummer, I thought, but took good care not to tell the judge what I thought.

"A plain case of contempt, your Honor. You fined him, of course?" I thought I saw some free beer now.

"No, he did not give me time; he was out of that door and into the car before I had time to turn around."

"He knew enough of the law to get out of your jurisdiction in a hurry, did he not? I wish I had got here a few minutes sooner, then that remark would have cost him half a dozen beers. Watch for him when he returns."

"He won't come this way; he will go home from 'Frisco."

"He had better if he knows your Honor as well as we do." The beer came out now, and it was on the Judge.

I have heard any number of stories about the Judge. One of them that is as likely to be true as not was his trial of a cowboy for murder. Two cowboys had fought a duel on horseback, and one had been shot, but not killed. The Judge got hold of the shooter and proceeded to try him, then sentenced him to be hung.

"But the man is not dead yet," the cowboy told him.

"Well, he will be by the time we get ready to hang you," the Judge returned.

Someone called the Judge's attention to the fact that

he did not have jurisdiction in capital cases. The Judge knew very well that he did not, but that could be easily remedied. He proceeded to try the man again, this time for assault and battery, and fined him five dollars. The Judge may have used his office to line his pockets; no doubt he did; but he was not the only one who has done so.

CABIA BLANCO.

A Maine Woods Walk in Sixty-One

BY MANLY HARDY.

In Three Parts—Part III.

The next morning proved bright and fair, as had every one for a week past, and we all started to go to the home camp at the inlet of Allegash. Instead of retracing our steps we went across country, an estimated distance of fifteen miles. Although my ankle was painful, I enjoyed the first part of the way, as it was through grand old woods, mostly of hardwood, among which were many giant white birches covered with shaggy bark. We lighted many of these as we passed and the flames would go roaring and crackling to the ends of the farthest limbs, the rolls of flaming bark falling hissing down, to be quenched on the snow.

We had gone perhaps five or six miles, and were going lengthwise of a valley by the side of a ridge of hardwood, when our dogs suddenly threw up their noses and started off at right angles, going across the ridge and down the other side. It proved afterwards that with the air perfectly calm these dogs had smelled a moose which was on the other side of the ridge more than a quarter of a mile away.

We soon came to the end of the ridge where another valley joined the one we were following, and we could hear the dogs barking up this valley. As all parties had agreed not to kill another moose for the spring, Philbrook and I wished to keep on our way, but Farrar and Billings wanted to go up and see the moose. They promised not to kill him, but wished to see how large an one the dogs had got.

Philbrook and I sat down on a pack one of them had been carrying and waited. After a while we heard two pistol shots. We waited a long time, and as the barking still continued, we were a good deal puzzled, as, if the moose were dead, the dogs would stop barking, and, if he were not dead, why did they not fire again. Getting tired of waiting, we went up to see what the trouble was. We found an immense bull, one of the largest I ever saw, standing close by the side of a large spruce. Quite a space around him was trodden solidly. On coming up I raised my rifle, when Farrar asked what I was going to do.

"Shoot the moose," said I.

"You wouldn't shoot a dead moose, would you?" asked he.

On my replying that he did not look very dead, Farrar replied that he had two bullets right in the life nearly half an hour before.

Farrar then proposed that if I would cover him with my rifle, he would creep up behind the spruce near which the moose stood and knock him down with his ax. Farrar missed his blow, and the moose plunged almost on top of him. I placed a bullet behind his ear, when, quick as a cat, he wheeled after me. Billings, on the other side, shot behind the other ear, and he left me and turned on Billings.

We then retreated to a respectful distance to reload, as the moose would go no further than the snow was trodden.

These maneuvers were repeated four times in the course of which he received from me four bullets behind the ear in a space not bigger than one's thumb, two from Billings behind the ear and one in the neck. After each charge he would return to his old standing place behind the spruce, where he would grunt and slap his lip at us, throwing the blood which ran from the wounds behind his ears down upon his bell all over the snow. But he showed no sign of being troubled by our shooting.

Finally I was detailed to go in front of him and shoot him in the curl of the hair. This was a difficult performance, as the snow was well trodden in front of him and he was sure to plunge at me when the rifle cracked. Beside this, he kept his head continually moving, and one had to hit the size of a dime for the shot to prove fatal. I approached as near as I dared and fired twice, each time having to sprint to get out of his way, as I was within about twenty feet. At last Farrar crept up behind the tree and succeeded in knocking him down. It was then found that one of my bullets struck exactly on a level with the curl of the hair about one inch from it, the other about an inch above the first. Into one of the bullet holes I could, and did, put my little finger its length; the other merely broke through the skull, and I took it out welded together with pieces of bone. This moose had received eleven bullets in all—two directly back of the shoulder, one through the neck, four behind one ear, two behind the other and two in the forehead. The bullets were small, being about sixty of round ball to the pound, but mine were fired with heavy charges of powder.

In this battle with the moose I do not think that anyone engaged was in the least excited; in fact, had anyone been, firing as we were obliged to and running about on snowshoes as we did, we should have been in great danger, both from the moose and each other. The snow was four feet deep or more, and all in the vicinity of the moose had been wallowed and plowed into pit-holes two or three feet deep with sharp, hard ridges between, making the footing very uncertain. Yet not a man stumbled or tripped in the whole fight. All that was said was in low tones, and no one showed the least excitement either during or after the encounter. In fact, if all had not been perfectly cool, we should have been in more danger from each other's bullets than from the moose, although we all knew that if anyone fell his chances of coming out alive were small. The dogs, it may said, took no part in the fight; one, which was gun-shy, not coming back till after the moose was skinned.

This moose was not at all startled when found by the dogs, and made no attempt to escape. He had trodden a yard of at least half an acre, so that it was very dangerous for the dogs to approach him in front, and he seemed willing to fight the whole world. Commonly there is no danger in shooting moose in the snow, as, whether hunted with or without dogs, they almost invariably try to escape, and as soon as they are out of the yard, if they can be overtaken at all, they can be shot at short range without risk. While a savage old bull like this might be shot with safety from a distance, to knock one down with a hatchet is a different proposition.

This moose showed unusual tenacity of life, but out of a number of instances I will give one which I have known of similar fighting endurance. A. P. Willard and Henry Clapp, of Brownville, while running a sable line under the side of Big Spencer Mountain, close to Moosehead, came upon an old bull which showed fight. Having with them a double-barreled smoothbore they fired all the bullets they had, some five or six, which ran twelve to the pound, at short range. As they used a muzzleloader it was some time before the last was fired. They had with them several charges of shot and also an iron tobacco box, and when their bullets were gone they built a fire, poured the shot in the tobacco box and holding the cover in a split stick melted it down. Then they made a notch in a hardwood tree which they had felled for the purpose, and ran the lead into a long mass; this they cut in two and pounded into slugs fit to be fired. Both these they fired into the moose, going close to him. After a while, as the moose lay down, Willard lashed his sheath knife to a pole with his handkerchief and, creeping up at the back of the moose, crouched and tried to spear him, steadying the pole over a cradle-knoll. The knife struck a rib and broke, and the moose sprang up so quickly as almost to come on to Willard. As each had a hatchet, they next tried to kill him by felling trees upon him, but when a tree was about to fall he would avoid it by stepping out of range. Finally they had him entirely fenced in. Then they tried to kill him by throwng their hatchets. One ax struck his nose, cutting it half off, but the battle ended by his getting possession of both axes and having apparently as much life and fight in him as when they began. As they had no other weapons and it was near night, they withdrew to the camp. On going out next morning with a fresh supply of ammunition, they found him dead. As both these men knew where to hit a moose and could place bullets just as they chose, they were so near, any one of these shots, under ordinary circumstances, ought to have killed the moose in a few minutes; but I believe that an enraged moose will bear a half dozen to a dozen wounds, any one of which would have killed him immediately if he had been still-hunted.

We had intended to get through to camp before dinner and had nothing cooked with us. As it was near noon when we had finished skinning the moose, we concluded to dine where we were. So we built a fire on skids to prevent it sinking into the snow, making it close by the flayed carcass of the moose. We placed our snowshoes between the moose and the fire, in order to have something to stand on, and, hauling the skin up over the moose, had seats equal to a spring sofa. Each one cut a piece of meat to suit himself, and roasted it on a stick, and each one also roasted one of the marrow bones. The eight marrow bones of a moose, as I know by actual experiment, will yield three pints of marrow, which, when salted, is fully equal to butter. It used to be said that old John Benwit, of the Penobscot tribe, could eat the contents of all eight marrow bones at a sitting. If so he must have had a stronger stomach than all four of us, as we found it difficult to finish one apiece. But we made a good meal, although we had not even salt to go with the meat, and had nothing to drink.

I had had all the moose-killing I cared for, and though it is over forty years I have never tried to kill a moose since. While I believe it is fully as honorable for a man who needs money to kill a moose for the hide as it is for one who does not need money to go into the woods and kill one only for the head and horns, still I think it is mean business for any man to waste the carcass of so large an animal merely to say that he has killed a moose. I have always made it a point of honor never to kill anything merely for the sake of killing, and would never kill a deer when I should be able to use but a single quarter, even though I was in need of meat.

After dinner we folded the hide so that it could be dragged by one of the party and continued our journey. In a short time we struck the Allegash stream and followed it on the ice to the home camp, a distance of nearly eight miles, taking a mink out of a trap on the way.

It was now April, and spring was coming on with a rush. In places where projecting points increased the flow of the current, the stream had already begun to open.

We reached the home camp and as the next day was Sunday and we intended to rest we laid in a good supply of wood. Sunday we did some extra cooking, for here we had a baker and could have soft bread. Also it fell to my lot to cook some moose noses, of which we had a good supply. The moose nose and the beaver's tail are considered the two great delicacies of the woods. As few now know how to prepare them, it may not be amiss to record the way the hunters did it. No amount of scalding will remove the hair from a moose nose, and the Indian method was to singe them on the coals and then to scrape them. But this always gives them a burnt taste, so I have always preferred to skin them. This is most easily done by splitting the nose through the septum and pinning one half firmly down with a fork, so that it will not slip about while working on it. Afterward the nose is boiled several hours till it becomes tender. Beaver's tails are usually roasted on a stick before skinning, or sometimes made into a soup with rice.

Philbrook and Billings had begun their hunt in September, spending the first five or six weeks in building camps, spotting lines and making traps. In the time they had been out they had taken about one hundred sable, twenty lynx, nine otter and about as many fisher, and quite a large number of mink and beaver, and had shot about forty moose. In 1859 I had hunted with Philbrook, having our home camp at the head of Caucomgomoc and our lines of traps extending over six different townships. One line which started from about six miles out on Baker Lake Carry and went northwest ended within less than half a mile of where we found Philbrook encamped. On this hunt before the last of November we took four bears, four fisher, three lynx, two otter, seven beaver, fifty sable, thirty-five mink and seventy-five muskrats. Although moose were so plenty, we saw the tracks of only four and only one live one, a bull which came to the sound of chopping and kept Philbrook prisoner in his camp for more than an hour, walking back and forth in front of the fire like a sentinel and grunting.

Philbrook and Billings told me of two curious experiences they had had with otter that winter. They showed me the skin of one shot fairly through the body back of the shoulders. He was shot by Billings at a hundred and twenty-five paces (twenty-three rods) he said, and after being shot dived into his hole and went under the ice. Philbrook and Billings cut ice and worked fishing for him with hooks on long poles nearly half a day, and after having given up one of them said he would make a last hook for luck. This time he was fortunate enough to fasten to the otter. On another occasion Philbrook, when out exploring, was snowshoeing up the bed of a stream. On turning a point he saw an otter lying on the ice directly facing him. As it was useless to try to get nearer, he fired at him with his ten-inch pistol from where he stood. The otter did not move, and he supposed he had shot him dead. On going up and seeing his eyes look lively, he struck the otter on the head with his belt hatchet. When he skinned it he failed to find a trace of any wound.

Monday morning we were up bright and early, Philbrook to go back to his camp, Farrar to go across Chamberlain to Eagle and Haymock (the lumberman's corruption of Pongocquahamock), which lies on the right hand branch of Smith Brook, emptying into Eagle Lake, while Billings and myself started for the foot of Caucomgomoc Lake, where he was going to get supplies from a lumber camp.

On the way down Billings showed me where he had shot a doe caribou a short time before. This, as far as I can learn, was the third caribou killed in Maine after they began to return, and although a cow she had horns nearly two feet long. To show the tenacity of life of a caribou, after being shot through fairly behind the shoulder, she wheeled and ran the other way. Billings then gave her a second bullet behind the other shoulder. When he was quite near to her she jumped up and started to run, and he finished her with a shot through the neck from his pistol.

Near to the place where we left the lake was an eagle's nest on a large pine and two adult eagles, one standing on the nest and the other close by it. This is the earliest I have ever known eagles to be so far inland.

Going out we took a different route from the one I had come in by in order to strike the foot of Caucomgomoc, which we reached after a walk of about eighteen miles. As Billings was an extra good man on snowshoes, it was quite painful for me to keep up with him with my swollen ankle.

The crew of the lumber camp were hauling spruce almost entirely. Two years before not a spruce tree had been cut anywhere on Caucomgomoc waters, the lumbering being confined entirely to pine. In 1857 I did not see a single spruce cut around Caribou or any of its tributaries, but in '61 most of the camps were largely cutting spruce. If the pine was almost exhausted before '61, one can judge how long the spruce will last with so much greater demands upon it.

After dinner I parted company with Billings to take my lonely journey to the head of Chesuncook, some twelve miles distant, which I must reach before dark or lie out. I had to follow the road. The April sun had in many places almost turned the road up edgewise, the side toward the sun being more than a foot the lower. On snowshoes one could not travel and without them it was very fatiguing, as one slumped half way to the knees at every step. I was carrying my snowshoes slung on my rifle, when, on turning a bend in the road, I saw a large lynx standing with his hind feet in the sled track and his fore feet up on the snow. Although I worked very carefully to remove the snowshoes from my rifle, he heard them rattle a little and sprang into the woods before I could fire.

When I came out on Caucomgomoc Bog the road was so soft that it was almost impossible to travel in it, so I put on snowshoes and started across the bog—to me an unknown country—for the West Branch, but I made a good strike and came out a little below the piers in the Chesuncook flowage, which all who have been down the West Branch will remember. Crossing the West Branch I made a straight strike through the dead timber killed by flowage for Pete Walker's (now the Chesuncook House), and arrived there a little after sunset, having traveled thirty miles in bad walking with an ankle swollen out of all shape.

When I was coming in rumors of expected trouble with the South had reached the woods, and at every shanty was the chief topic of discussion, a great many saying that they were going to enlist if there was any fighting. When I reached Chesuncook I found the excitement was still greater, and the usual talk about lumber and horses had given place to talk about the expected war. At Chesuncook I met my old friend, Charles Locke, head man of the great farm situated on Chamberlain Lake, fourteen miles distant. He reported that the Fairbanks brothers, Frank and George, had killed eighty-two moose north of Katahdin, between Telos and the Sowadnehunk Mountains. I may say here that both the Fairbanks brothers enlisted in the Seventh Maine within a week of getting out of the woods. Joe McClaren and Frank Capino both went to war and neither returned. Farrar also enlisted. Billings enlisted and rose to be first lieutenant, was badly wounded at Fair Oaks, and, I believe, went back again after his recovery. Philbrook could not be accepted on account of a disabled foot. I know no class of men who furnished a larger proportion of their number than our hunters.

The year of '61 has been called the year of the greatest slaughter of moose ever known, and has often been held up as an instance of wholesale butchery. I took great pains to ascertain the number of moose killed that year, and had good facilities for doing so, and by my estimate the number was under rather than over four hundred, though about half of this number were killed by four sets of partners. This present year of 1902, according to the report of the Game Commissioners, sportsmen have killed (including 109 killed illegally), a total of 461. I feel very certain that less of the meat was saved this year than in 1861. So we see that the number killed by sportsmen merely for heads and horns is greater this year than that killed by the hide hunters in the year of what is called the greatest killing ever known. In all my trip in '61 I did not see or hear of a single moose having been killed by any lumberman. I will also add that in

fifty years of mingling with Maine lumbermen I have but twice eaten of venison in a lumber camp, and never had any reason to believe the stories so often told in the papers of the slaughter of game by them. While no doubt they do kill some in legal season, this they have as much right to do as the visiting sportsmen.

As all the teams were reported to have passed out, I had no choice but to continue my journey from Chesuncook on foot. While bathing my ankle in cold water in the stable, Mr. Walker came in and saw it and said he would rather board me for a week for nothing than have me walk on such a foot. But I had only Hobson's choice, so I started at about seven in the morning, and about noon reached Joe Morris's, eleven miles distant.

At Joe Morris's I saw an individual dressed in white overalls and three red shirts so ragged that his skin showed through them, who announced that he was old Oliver Graffum of Oldtown, and nobody else and that he was going to drive for Hen Soper; he had got five dollars to get drunk on and he was going to do it. He had been trying to ride a yearling in the door-yard, and having been thrown, his tangled mass of hair was full of chips and sticks. On being told when he applied for another drink that he had had enough and could have no more, he held on to the counter and began to recite:

"We read in the fable,
The mouse he was able
By gnawing continual
The lion to free.
So at the first trial
We'll take no denial—
So Nahum give us another drink."

On being again refused, he steadied himself with a chair on each side and in a soft musical voice repeated: "Wisdom's ways are ways of pleasantness, and all her paths are peace. Because I have called and ye have not harkened, and stretched forth my hand and no man regarded, therefore I will laugh at your calamity and mock when your fear cometh." He had got thus far when, fetching a sudden lurch, he and his two chairs landed in one corner of the room, bringing his scripture recitation to a close.

It was getting to be two in the afternoon, and as no tote team had arrived, I resumed my painful journey for the Grant Farm, ten miles away, having first exchanged my moose shanks for the boots which I had left at Morris's on the way up. On trying to put them on I found my ankle so swollen that it was with great difficulty that it could be done. When I tried to walk I had mostly to put my left foot forward and draw the other up to it. I soon began to realize just how a bear must feel when traveling with a trap on his foot and drawing a clog after him.

It was near sunset and I had got but about five miles, having made only about a mile an hour, when I was agreeably surprised by being overtaken by one of the last, if not actually the last, team of the season. This was a load of spreads and cooking tools belonging to Spalding and Oaks of Oldtown. The driver, a young man about seventeen years old, was Charlie Walker, son of the proprietor of a hotel at Greenville. He very willingly took me on, and we were not long in reaching the Grant Farm. Here all was changed from what it was when I was going in. In the short time since I passed all the scores of teams and hundreds of men in the vicinity had gone out of the woods, and the only guest besides ourselves was a sick man who had been left behind and whom we took with us on the team in the morning.

The next moning the sloshy roads had frozen, a hard crust had formed, and we started early. As there was no possibility of getting out by the way of Katahdin Iron Works, where my overcoat was, I accepted Mr. Walker's offer to take me out to Greenville by way of Lily Bay.

While at this season in the vicinity of Bangor partridges were drumming, here, as the snow covered all the logs, the old males were amusing themselves by strutting around with spread tails, dragging their wings and admiring themselves. In the early part of the forenoon we saw two in different places thus employed, and I cut the heads off from both with my rifle without leaving the sled. The neck-ruffs of both had bright green meallic lustre different from the dead color at other seasons. To show the scarcity of small game in Maine, I will say that, with the exception of some Canada jays and crossbills, I saw nothing but five ruffed grouse and one Canada grouse on the whole trip, and I did not see the track of a deer nor hear of one having been seen by anybody. I heard no case of a caribou having been seen but that shot by Billings. At that date there were positively no deer north of Katahdin. The deer have come into that country of late years.

It was a lovely April morning, and as we had a light load we made good progress till it began to thaw. At Lily Bay we stopped for a few minutes at the Lily Bay shanty kept by Deacon Ford. Here we were told that getting on the ice at that time of the day would be rather risky. We soon came to a cove where the road led directly across a landing of logs which were now floating in about two feet of water. Over these the horses had to struggle and flounder, the logs rolling up under them at every step; but finally we got out on solid ice.

We had not gone far before I saw black mud on the ice ahead and told Walker that we would better turn to one side, as I thought a team had been through the ice there. Seeing that he was determined to keep the road, I jumped off, taking my rifle and belongings, and the sick man followed my example. We were hardly off before both horses went through, followed by the sled, only the hinder end of which remained upon the ice. There was a skid lying close by, which had doubtless been used by the team which had been in before us. Seizing this, I ran it through the hind starts of the sled, thus preventing it going in entirely. Walker, with the help of the sick man, who proved to be a good man with horses, unbuckled the harness, thus freeing the horses from the sled, which, being released, stood almost perpendicular; when drawn out the end of the pole was covered with black mud. A rein was put around the neck of one horse and he was choked, to float him out. The same was successfully tried with his mate. Having noticed a tackle and fall on the landing of logs we had passed over, I went back and got it, and, reaving it through the hind starts of the sled and attaching the horses, the sled was soon pulled out on the ice, with streams of water running from the spreads and cooking tools. As the sled had side-boards and the load was covered with canvas lashed on there was nothing lost.

Proceeding on our way we soon came to the narrow passage between Sugar Island and a point of the main land. Here was quite a space of open water on each side of the road, approaching the road in the shape of a V until the two points were not over forty yards apart. All the possibility of passing depended upon the bridge of snow which had been building up all winter as a roadbed being solid enough to hold. I went out only a few steps on each side and trying the ice with an ax found it was all porous, and I could easily cut through it with a few clips. In the morning when frozen this would be safe enough, but at this time of day it was risky. We all got off the sled, and, by walking the team, managed to cross without accident. It was now the ninth of April. Out on the lake the ice was still solid and would probably be safe for ten or fifteen days longer.

We reached Greenville at about two o'clock. Only two days before I had passed through country where the snow was five feet deep. Here at Greenville there was only eight to ten inches of sloshy snow. I stopped at the hotel over night, and took an open stage next day for Newport. The driver, William Blethen, was kind enough to provide me with an overcoat. I will say that only a few months afterwards Mr. Blethen was driving stage for Ben Halliday on the Overland. The snow which gradually lessened soon failed entirely, and we hauled into Dexter on bare ground, where we shifted to wheels to get to Newport. Reaching Bangor by rail I found boys playing ball in the streets and the steamer from Boston just arriving on her first trip.

"Yellowstone" Kelly.

VERY many of our readers will remember Capt. Luther Sage Kelly, known to the older generation of western men as Yellowstone Kelly, trapper, hunter and scout, for a dozen years or thereabouts, during the later wars on the northern plains. In campaigns under Gen. Miles and other military commanders, Capt. Kelly took a prominent part in the fighting with the Sioux and Cheyennes in Montana, and he has contributed to FOREST AND STREAM many stirring tales of adventure in the wars between 1870 and 1880.

Capt. Kelly enlisted in the Spanish war, and became a captain in one of the volunteer regiments. When this was mustered out, a commission was given him in another regiment, and he went with his command to the Philippine Islands. After a term of service there his regiment was again mustered out, but Capt. Kelly's administration of the district of which he had been in charge had been so successful that he was shortly afterward appointed Provincial Treasurer of the town of Surigao in the island of Mindanao.

In the papers of March 25, last, appeared dispatches telling of the capture of this town by bandits, and explaining what happened there. The extracts which we give from these dispatches show that Capt. Kelly is still a fighter, and possesses the determination which of old made him so well known and so highly thought of on the western plains.

A Washington dispatch to the New York Sun, under date of March 24, reports: A cable dispatch was received at the War Department this afternoon from Gov. Taft announcing that Surigao, the capital of Surigao Province in the island of Mindanao, which was captured by ladrones on Sunday, has been relieved. The following is Gov. Taft's dispatch:

"Affair at Surigao turns out to be escape of ten prisoners, sentenced to long terms for ladronism, who, with sixty or eighty of their fellows, returned to Surigao and succeeded in surprising and rushing the constabulary barracks, obtaining constabulary arms and ammunition, killing Constabulary Inspector Clark, and thus taking command of the town. Nine Americans, including two women, retreated to the Provincial building, where, under the direction of Luther S. Kelly, Provincial Treasurer, formerly Captain of Volunteers, and still earlier an Indian scout known as 'Yellowstone Kelly,' they barricaded the building against the attacking party.

"The Americans were armed with only a few shotguns and were short of ammunition, but maintained their defense against the ladrones, refusing to yield to an ultimatum, demanding the guns, the reply of Kelly being that they would not give up a single gun and would kill on sight any ladrone within range. Assistant Chief Taylor arrived at Surigao with a constabulary force about eighteen hours after the attack. On his approach the ladrones disappeared and columns are now following them.

"Surigao is in extreme northeast Mindanao; is so far removed that I have concluded to call upon George W. Davis to put the military in command with the hope that by a large force the ladrones and their guns may be captured and they may be prosecuted for murder and ladronism.

"So far as advised Capt. Clark is the only American killed. The cable from Surigao landed near the Provincial building in which the Americans took refuge and they were thus able to communicate with the military commander at Iligan and with constabulary headquarters at Cebu. Two constabulary inspectors were absent from Surigao in Cebu, where they were passing their examinations for promotion. Surigao had been regarded as a quiet province since the capture and sentence of the ladrones, but their escape led to the difficulty."

Moon Signs for Anglers.

SPOKANE, Washington, March 19.—*Editor Forest and Stream:* Would you please inform a reader as to sign—or signs—of the moon supposed to be or regarded by successful fishermen as being the best or most favorable time to go fishing. Some amateurs, like myself, say when the sign is in the knee, or Capricornus; others say in the head, or Aries. Others again say the sign of the neck, or Taurus. From my own experience I do not regard this latter sign as favorable. M. E. D.

Natural History.

How to Get Skunks.

THE short essay printed below is an extract from a private letter received by our Philadelphia correspondent, "Ocean," from a very successful amateur trapper in Vermont. The writer is evidently a man of good nerve. He says:

You want to know how I kill skunks without getting scented. I put on an old suit, so if I do get a little dose it won't hurt anything. I have an old duck coat with big pockets on the inside which I have used for a trapping coat for a number of years.

The skunk seldom goes out in the daytime, but as soon as it gets dark he begins to prowl. They live mostly on crickets and grasshoppers, and in the fall they are very fat. Often I have found it an inch thick on the back in skinning them. If pains are taken in skinning not to touch it with the hands, this oil, when tried out like lard, is the best thing for a cold or croup I know of—used externally, of course.

As the skunk lives in woodchuck holes in the meadows and pastures, I can always tell where to find them, for they make little holes in the dirt with the nose which look very much as if someone had poked the ground with a cane. Wherever the skunk makes one of these holes, he gets a cricket, which in the fall, as the ground gets cold, burrow under the grass roots. The fox digs for crickets, too, but as he digs with his paws the hole is somewhat different in shape.

A moonlight night with the wind in the south I have found the best to hunt them. I generally carry a lantern, so that I can skin them at once and save lugging them around. I cut a stick from a sapling about the size of a broomhandle and about six feet long. Armed with this I take the warpath through the fields, keeping a sharp lookout for any black spots that seem to move.

The skunk is generally busy looking for grub, and as soon as I spy him, I run right at him. You have to be quick, not because the skunk will run, for they can't run very fast, but the sudden approach scares them so they will face you with hair bristling on end, just as a hen will when you try to catch one of her young. This is the time to strike, and one good blow on the head generally does for them, but woe to the hunter who foozles this first blow, as the golfer says.

When I first tried trapping, I used to set my traps in woodchuck holes, and as a skunk will explore every one of these holes, I used to get quite a lot. Since then I have found a better way. When I find a likely place to set, I dig a hole at the foot of a stump or stone, about as big as your hand, back under the roots about six inches. I stick a piece of any kind of meat or a rotten egg—anything that smells rank—into the hole; then set the trap and stake it, covering it with a sprinkling of fresh dirt. The first skunk that comes along will walk into the trap, and he will scent the place so that no more bait is needed to draw them. In this way I have got six or seven in one place.

In killing a skunk in a trap you must not run up to them as you do hunting them. Go up to him carefully, and as long as you do not make any quick motion you are all right. Raise the club carefully and slowly and then strike as quick as you can.

Well, I have told all I know about the skunk industry. Some time I will tell you how we trap for foxes—ground trapping. Almost anyone can learn to catch them in water, but it takes a smart chap to catch them in the ground.

The Wood Rat.

IN the natural history coming under my observation I have not seen anything concerning the wood rat. It may be that the rodent is too common to attract special attention, but I am inclined to believe that, if he is widely distributed, he is rarely observed.

In Northern California, both in the foothills and higher up in the mountains, those who observe closely may often see the residences of the wood rat, though the animal itself is not often conspicuous.

The nests I have seen have usually been in thickets of chaparrel or greasewood where the bushes were dead and dry. In such places the wood rat obtains plenty of material for the construction of its nest. It gathers twigs from a foot to three in length and from the size of a pencil in diameter, to an inch or more. These, together with small pieces of bark and a few leaves will be found heaped from the ground up well into the branches of some thick clump of bushes. If there is a log convenient the rat will often make use of it for one side of his house. The twigs are often heaped to the height of three or four feet from the ground, usually resembling a pile of driftwood with the exception that the pile is seldom found near overflowed ground.

About two years ago I became interested in a pair of wood rats that seized upon and possessed themselves of my wood house for a habitation. The house is thirty feet long and one end of it used for a work bench, repair shop and tool house. The other end is used mainly for storing dry kindling wood and small stove wood. The rats moved in when I was away for a period, and the pair found a good supply of dry pine sticks a foot to sixteen inches in length split from inch boards. These were of various widths from one to five inches, and there were a number of heavy sticks of scantling in a corner. With notable industry the rats had piled the small sticks into a fairly regular pyramid, using the heavy pieces they could not move for foundation and frame, adapting their architecture to the conditions of the location with remarkable ingenuity.

Their architecture fitted in with the landscape in the woodhouse so well that it was some time before I noticed that the kindling wood was methodically placed. As wet weather came and the kindling was needed, I frequently took an armful into the house, without realizing that I was taking gargoyles and cornices from a private residence.

In removing the sticks I often pulled down a quantity of the pile in selecting. After doing this for some days I

began to notice that each morning the pyramid was reformed, the scattered sticks collected and placed methodically. As the wood was used the pyramid grew smaller and smaller, but each morning all the scattered sticks, except some that became wedged and fastened in the larger and heavier wood, would be found replaced upon the apex of the diminishing pile. When the wood had been about half removed I began to get occasional glimpses of the rats. When I removed sticks they dodged in and out of the pile, as though they would defend their castle to the extent of their power.

The wood was never entirely removed, and that which remained was kept in a fairly shaped pyramid until it was not more than three feet in diameter. The rats, of which I had never seen more than two, became so tame that they would remain in sight on the sills near their house within an arm's length of me at times. Later in the season the mistress of the pyramid appeared upon one of the sills in a very domestic predicament. She was sprawled at full length while progeny to the number of two were intently engaged in the instinctive business of infantile acquisition. After this I frequently fed her upon bits of bread and grain.

I now began to miss some of my portable property. Files, small chisels, nails, measuring sticks, patterns, pieces of leather and such articles would disappear from my work-bench. These from time to time I would find mixed in with the sticks in the building material used by the rats. Since, I am informed, this is one of the traits of the animal. They are so excessively industrious that they annex almost anything they can carry or drag away, with very indifferent ideas of property rights or ownership. They are partial to bright and glittering things, such as bits of glass, tin and metal. They would doubtless acquire and hoard money with almost trust-like perspicuity and acumen if they were not so much addicted to twigs and kindling wood.

That they would soon practice civilized propensities there is little doubt, if they lived in more centralized communities. A neighbor, who resided in this region for about forty years, was handicapped in his endeavors to get along by a peculiar inability to keep his family supplied with small articles, such as tableware, thimbles, scissors, corkscrews, jackknives, hairpins, collar buttons, and small coins.

After a quarter of a century he had occasion to take up a ground floor in his house. Under it he found the nest of wood rats, and that nest was a wonder. If the collection of trinkets it contained had not been so tarnished with corrosion and rust he might have set up in business with a variety store of no mean proportions. Thousands of the small articles of every day use, for which he had paid his money, searched and worried for and about when they had disappeared, he found hoarded up by the wood rats, many of the things having lain between the ground and the floor under his feet for two or three decades. The articles were evidently considered more ornamental than serviceable by the rats, for they were used mainly for the decoration of the pyramid of sticks and bones, their domicile.

RANSACKER.

Shasta Mountains, Cal., March.

Some Queer Pets.

An obscure naturalist is C. F. Miller, of Main street, East Orange. His interest runs to the class reptilia, and within eighteen months he has taken up photography as an adjunct to his studies, and has made some extraordinary successes in getting portraits of his restless pets indoors and out. Mr. Miller is a newsdealer, whose business gives him little time afield, but he his not so chained to business that he is unable to make his escape to the Watchung mountains back of Orange at intervals, and he makes good use of his infrequent opportunities. Nothing seems to escape his eyes nor too insignificant to engross his attention. The opening of a bud, the emergence of a dragon fly from the larva, the fight between a wasp and a spider, and a thousand other incidents of the life of lower creatures are objects of study for him; but his favorite theme seems to be collecting queer pets and studying them at home. Mr. Miller is an enthusiast upon the subject of snakes, and invariably has at least a dozen of the harmless kinds comfortably quartered in cages in one room of his house, beside keeping up a fine fresh water aquarium and little domiciles for toads, frogs and turtles. He has

COMMON TREE TOAD.
(Hyla versicolor.)

photographed all of his peculiar pets, and it is easy for the amateur photographer to understand what an amount of patience and impatience enters into the task of catching two toads talking or gazing lovingly into each other's eyes. Just as the exposure is made one of the toads blinks and the other starts a game of leap frog. Then a plate is spoiled and another must be made ready. There is no use of cuss words, for the toads do not understand rough language any better than they do soft words. Mr. Miller has had his troubles between the shutter and the background when trying to reduce a plump toad to the flat surface of a sensitized plate, and the difficulty was duplicated when he essayed to picture the two toads. Another of his pets the common tree toad (*Hyla versicolor*), was a better sitter, and never batted an eye when the exposure was made. His pose was just natural, though the approach of a fly might have made a lightning change in it. His tree toad has been in captivity for a little more than a year, and has the freedom of the room, with a little tank to retire into when dry. It is interesting to see him spring from the window sill and stick to the glass pane as he nails a fly with his glutinous tongue. When his

THE LOVERS.

owner's hand is extended, he will release his hold and drop upon it, or will jump from the table or shelf upon Mr. Miller's shoulder or hand when called.

Another pet less tractable is a young snapping turtle four inches long, which is suspicious of all efforts toward

PINE SNAKE.
(Pityophis melanoleucus.)
Ocean County, N. J. Length 62 inches.

domestication. Kindness is wasted upon this creature, but he has made a fairly good subject for the camera. The snapping turtle has but one friend in Mr. Miller's collection, and this one is a watersnake thirty inches in length, which is as tame as a kitten, and seems fond of being caressed by Mr. Miller or his children. The latest addition to the collection is a pine snake (*Pityophis melanoleucus*) five feet two inches in length, and fresh from the pine lands of Ocean county. This reptile is one

COMMON WATER SNAKE.
(Tropidonotus sipedon.)

of the most docile of our harmless serpents, and easily adapts itself to domestic life. Mr. Miller's specimen is a beauty, and it is so tame that his eighteen-months'-old baby "Bubs" plays with it whenever he can and cries for it when it is refused him. Mr. Miller has made several most successful photographs of this snake in conjunction with the baby, and in the hands of his eight-year-old daughter, Fanny. One of his best pictures of this reptile is shown here. It was taken indoors with an exposure of slightly over one second, and the result is remarkable, because the snake was almost constantly gliding over the branch, and was caught in a lucky interval. The picture was taken upon the fourth day after the pine snake was captured, and it was then so tame that it had no fear of man, and seemed pleased to be handled.

HARRIMAC.

"This, I suppose," said the visitor, "is the gun your great-grandfather carried through the Revolution."

"Most assuredly not," haughtily replied Cadleigh Rich. "That was his gun, but his man carried it for him, of course."—Philadelphia Press.

Birds' Nests.

The pleasures of the country boy may lack the excitement of those of the city boy, but they are none the less real, and indeed, in the long run, have a decided advantage, for they enrich and enlarge the mind in a way the other pleasures never do. This comes from being in contact with nature, which, after all, is the great teacher.

Among the pleasures of the country boy that of bird-nesting is certainly one of the greatest. I shall not stop to inquire whether his conduct while engaged in this pursuit is always strictly humane or ethical; but I may say this much, that it will contrast favorably with the conduct of certain persons who have reached years of discretion. Let a healthy boy loose among the fields and woods on a fine day in May or June, and what a picture of activity and happiness he presents! How he rushes hither and thither with sparkling eyes and glowing cheeks—now chasing a butterfly and again stalking a bee—now rolling down a hillside and again basking in the sun; now, like Narcissus, gazing in the brook, and again, like Echo, making the woods and dells resound. But for the most part he is bent upon one thing, and that is the quest of that object of irresistible fascination to the boyish mind—the bird's nest.

It is wonderful to think of the risks a boy will run and the discomfort and pain he will patiently endure for the pleasure of even gazing upon a little arrangement of moss or fibres and hair or feathers. What trees he will climb—what rugged heights he will scale—what dense thorny thickets he will penetrate—what treacherous marshes he will wade through! But he never comes to grief, or hardly ever. And when he grows up he looks back on those early adventures with a peculiar fondness, and the bird's nest, though divested of its fascination, still remains for him an object of interest. To the hosts of such boys, both young and old, a book which has lately been published will be especially welcome. It is entitled, "Birds' Nests" (Fred. A. Stokes & Co., New York). The author, Mr. Chas. Dixon, is an English ornithologist and a very learned one it may be said. The arrangement of his work is taxonomic or classified. First we have a chapter on "Nestless Birds and Annexers;" then one on the "Crudest Nest Forms;" then one on "Open Nests;" then one on "Domed or Roofed Nests," and finally one on "Pendulous Nests."

Does a bird build merely for utilitarian purposes, or, in other words, merely to provide a safe procreant cradle, without any regard to beauty? Our author says yes. But this is, at least, open to question.

Now, there is no doubt that the æsthetic sense is highly developed among birds, as witness their songs and plumage (which latter, of course, is but an expression of the inward sense). There is equally no doubt that the desire for the safety of their young would overcome this if necessary. But is it quite necessary? Is it not possible for a bird to build a nest which shall be safe as far as possible and at the same time more or less beautiful? Certainly the care with which many birds' nests are made would seem to warrant an affirmative answer to this question.

In regard to whether birds act purely from instinct or reason in building their nests, Mr. Dixon is most interesting. He flouts the instinct theory, and I believe quite justly. To maintain his position he cites the case of two chaffinches, a male and female, which, while quite young, were carried to New Zealand and there enlarged. Now the chaffinch (*Fringilla cœlebs*) builds one of the most careful and beautiful nests of those known to the ornithologist. Did the birds enlarged in New Zealand emulate the family art? Not a bit of it. What they built was a monstrosity, more like the cradle of a hang-nest than the beautiful little lichen-covered cup peculiar to the British Isles. Birds are educated just like other living things—educated to hunt for food—educated to sing, and educated to build after a certain manner. Of course the mental bias of species is there, but that is a very different thing from pure instinct, as popularly understood.

Perhaps there is no question so interesting to the ornithologist as that regarding the parasitic habit of certain birds. Why does the cuckoo in England or the cowbird in America lay its eggs in another bird's nest? The habit is certainly very old, so it cannot be said that the modern fashionable disinclination to be burdened with the care of a family has anything to do with it. And yet this may be the very reason, and the cuckoo and cowbird may have set the fashion for society. However, for a full discussion of the matter, I must refer the reader to Mr. Dixon's pages.

After disposing of these introductory matters, our author sets about to describe in detail some thousands of nests. I am sure that the descriptions of as many buildings, even the most ornate or singular, would not be half so interesting, nor, indeed, one-twentieth part. It is all very well to have a building before one to gaze on, but, as a general rule, architectural descriptions are a bore. How different with the simple little bird's nest! For hours we read of how a few twigs, or a handful of dried roots and grasses, or a bunch of moss, with some hair or feathers or wool are variously arranged, and do not tire. Why is this? Perhaps it is because what is simple and natural has an abiding charm for the human mind. Mr. Dixon makes it clear, of course, that the dominant idea in the construction of a nest is generally concealment and always protection to the future nestlings. In harmony with this idea, one bird will lay its eggs among the pebbles on a beach (from which they can hardly be distinguished); another will bore a hole in the sand; another will drill its way into a tree; another (like the chaffinch, before mentioned), will build a nest in a tree which, to the casual eye, looks no more than an excrescence on the bark; another will take up its abode in the neighborhood of a wasp's nest, so that in case of a visit from its enemies the hornets may be stirred up, doubtless with good effect; another will suspend its nest from a slim branch overhanging a stream, where no snake or monkey will dare venture; another will actually build a floating nest, and so on. It is noted by Mr. Dixon in this connection that no species or variety is slavishly wedded to one unvarying type of nest, but modifies it to suit circumstances or environment. And this fact goes to sustain the theory of reason as against that of instinct.

As examples of curious nests the following may be cited: The spectacled petrel (a species that breeds in the Kerguelen Islands), burrows into a hillside eight or ten feet, always under a cascade; the Nicobar moundbird builds a nest of dry leaves, sticks, etc., from three to eight feet high and from twelve to sixty feet in circumference; the little bittern (*Botaurus minutus*) moors its nest to reeds growing in the water and the nest may be said to float; the flamingoes breed on vast mud flats where the waters rise and fall, and the nests constructed are admirably adapted to this environment, being conical pillars of mud with a shallow cavity at the top for the eggs; the nest of the giant coot, found in Chile, is composed of materials enough to fill a horse cart. As the other extreme of this, there is the nest of the ruby-throat hummingbird, which is not more than one-half the size of an ordinary walnut shell. The Indian tailorbird sews a large leaf together in the shape of a funnel, then knots its thread (which it has woven itself) to keep it from slipping out and builds its nest in the funnel; the hammerhead (*Scopus umbretta*), indigenous to Africa, although but the size of a raven, builds a nest six feet in diameter, which is dome shaped and roofed over; the red ovenbird (*Funarius rufus*), as its name indicates, builds a nest like an oven divided into two chambers, and begins building months before the nest is required for incubation, in order, doubtless, that all may be properly seasoned. Finally, as a sort of climax, I may mention the nest of the Indian weaverbird, which weaves a rope of considerable length and suspends therefrom a globular chamber to which is attached a woven tube to serve as an entrance. Wonderful, truly, is the art of the bird!

It is to be regretted, perhaps, that Mr. Dixon has not invested his descriptions with a little more of the sentiment inseparable from nest-building, as thereby they would be more likely to make a lasting impression on the mind; but his object, as he modestly states, was merely to write an introduction to the science of caliology. However, his work is well more than that. It is, in fact, for all who are not professed ornithologists a sufficiently comprehensive treatise on a fascinating subject, replete with learning and common sense.

FRANCIS MOONAN.

Shrikes East and West.

OAKLAND, Cal., March 20.—*Editor Forest and Stream:* In your issue of March 14, I was much interested in Edward A Samuels' article on the great northern shrike, or butcher bird. It is by far the best thing about the merciless little tyrant that I have ever read, and I consider it a valuable addition to our store of bird lore. There was one thing, however, that puzzled me exceedingly, and made me think that perhaps I had been all these years mistaken in the identity of the bird, and that is where he speaks of it as having a hooked bill.

When I was a boy in New England, I used to see them —or at least a bird that was called the butcher bird—every winter; not many, but now and then one, and I never lost an opportunity to destroy them. In habits and appearance Mr. Samuels has described the bird exactly as I knew him there except the bill, which, as nearly as I can remember, was very nearly straight, the upper mandible, perhaps, slightly turned or rounded over and about the same length as that of a catbird or robin. I never remember seeing the bird there except during the winter season, but I see them here around San Francisco Bay at all seasons, looking just the same and with the same habits, but nowhere very plenty and almost always alone.

And now, Mr. Editor, what I would be pleased to know is whether the bird I refer to is really the great shrike, or have I confounded it with some to me unknown bird with a hooked bill. FORKED DEER.

[Our correspondent's butcher bird was no doubt the great northern shrike. His difficulty lies in the definition of the word hooked. The bill of the shrike is, as he says, straight or nearly so—not bent down and rounded over like that of an owl or a parrot—but at the end it is strongly bent down to a hook, behind which, in the cutting edge of the bill on each side, is a little tooth-like projection, which reminds us somewhat of the tooth in the bill of the true falcons. The bird seen by Forked Deer on the west coast is not the same as the New England species, but is somewhat like it.]

The Birds of Wyoming.

BULLETIN No. 55 of the University of Wyoming Agricultural Department consists of an interesting list of the birds of the State, by Wilbur C. Knight. In this first list of birds for the State in general ever published, Mr. Knight has given a most excellent annotated record, covering 288 species. The paper is excellently illustrated, and ought to be n the hands of every man who is interested in western birds.

Although making frequent reference to earlier local lists, this one is based chiefly on a collection of skins made with the assistance of Chas. W. Gilmore, and the observations of the author. Mr. Knight, although a geologist, has devoted some time to the study of birds, but was led to make this list chiefly by the constant inquiries made at the University of Wyoming for literature on the birds of the State. In getting together his interesting material he had the assistance of a number of local observers, as well as of Mr. Robert Ridgway, Dr. C. Hart Merriam, and Dr. A. K. Fisher, all of Washington. Mr. Frank Bond, of Cheyenne, furnished a large number of pleasing illustrations for the work.

After a brief note on the study of birds, Mr. Knight quotes the article on "Birds in Their Relation to Agriculture," by Prof. Laurence Bruner, of the University of Nebraska, and then passes on to enumerate the species, on many of which he gives very full notes. An addendum of three species omitted from their proper places, a hypothetical list of about a dozen, and the Wyoming law for the protection of birds passed at the session of 1901, complete the paper.

An interesting note on the magpie deserves mention, for while there is a general impression that magpies may learn to talk, very little that is definite is known on the subject. Magpies' nests are easily found, and it is a common practice to capture young birds and rear them in cages, where they at once become very tame and readily learn to talk. Mr. Knight says:

"They usually learn to repeat all of their words and phrases by the time they are a year old. I have not found anyone who has paid special attention to teaching them to talk; but believe that one could, by spending a reasonable amount of time, teach them many times as much as they generally know. In three instances I have collected data as to what the magpies say, with the following results:

"No. I.—Owner, Mrs. J. Rhone; bird's name, Mike; words or phrases repeated: Sic-em; hello; good-by; here, Major; hello, Major; hello, Mag; get out of these; come in; what do you say? stick of wood, Eliza. This bird also laughs.

"No. II. Owner, Mrs. Dr. Coburn; bird's name, Topsy; words or phrases repeated: Topsy; hello; good-by; quit; Topsy-opsy; pshaw; pshawie; Oh, Topsy! Pretty Topsy; Ah, there! This bird chatters, but the words are not distinguishable. It whistles, laughs and coughs. When quite young there was a lady neighbor of Mrs. Coburn's who had a very bad consumptive's cough. The magpie soon learned to imitate the cough, and practiced it ever since. Age of birds, 12 years.

"No. III.—Owner of bird, Mrs. Hertzog; name, Jack; age of bird, 15 years; words or phrases repeated: Hello; good morning; good-by; Pretty Polly; what's the matter with the bird—he's a dreadful nice bird; rats! what's the matter with the bird—precious bird; Maggie; good-by, love; get there; come in; Oh, Clara! Nettie; what. This bird laughs, sneezes and coughs."

Mr. Knight has given us a useful volume on Wyoming birds, creditable alike to himself, the university and State.

"Thereby Hangs a Tale."

I HAVE never seen a squirrel migration. That, of course, emphasizes my youngness. The nearest to it was the sudden apeparance in my boyhood—let me see, I was perhaps ten, which would make it 1870—of a marvelous number of reds and chipmunks which set all the older gun-bearing lads wild that fall. Squirrel-eating was out of fashion then in Oxford county, Maine, but that did not affect their value in target practice; and I counted thirty-two chipmunks astraddle of a three-cornered rail one afternoon, result of said practice. Next year there were hardly any. "Practice" accounted for some. Malpractice we'd account it now. But to our story.

Last fall my nimrod friend Frank and I were on one of our holiday trips a-canoe up the Charles. It was a twenty-five mile paddle, by the way, that day, up and back. So he said, with map before him. I sized it up as fifty. But to resume.

As we jogged silently along, suddenly some small animal leaped out of the low bush several rods ahead and began to swim across the little river. "A gray squirrel!" I judged by the floating wave of the following tail that streamed astern in the air like an ostrich feather as he jumped. The splash awoke us both. "Hit 'er up, Frank!" I said, and Frank "hit." When he gets excited, he's worth three of me at the paddle, and the way we surged up river was a caution. True, we hadn't lost any squirrels, nor did we have any practical use for any. It was just the old hunting instinct to chase the retreating. From the bow I got a good look of the swimmer, who made good time, submerged to the ears. But his tail *simply floated along astern, purely for ornament.* We both reached the shallows about together, and as the little fellow drew out of the water and cantered slowly along the winding road of a muskrat trail through the sedges to higher ground, we noted that he did not appear to have a drop of water about him. He seemed to have left it behind him like a duck. Whereat we concluded that navigation was one of his strong points.

There was no compulsion about the matter. He merely had business on the other side of the river and went about it. A more or less perilous passage, it is true. A hawk overhead might have made things interesting. A big pickerel below, or a turtle—and we canoed over one swimming below us that looked as big as a washtub!—would have given him no warning of submerged fate. But that is all in the woodland day's work. Besides, he was young, as his size betokened. So, perhaps, "he didn't know it was loaded." I've heard of such in my time, seems if. J. P. T.

Snowshoeing a Horse.

MORGANTOWN, W. Va.—*Editor Forest and Stream:* The rather novel feat of "snowshoeing" a horse in to one of the mines on Cow Creek in Carbon county, Wyoming, was accomplished recently. A piece of machinery had been taken to the mine, which required a horse to operate. There had been no road kept open to the mine during the winter, and it was fully a mile from the mine to the nearest point to which a horse could be taken, so they decided to move the horse on planks. Two platforms three feet in width and somewhat longer than the horse were built, and the horse was led from one to the other, the back one being moved up in front as soon as the horse had walked on to the next one, and so on until he was landed at the mine. The horse was gentle and the work was accomplished without much difficulty.

EMERSON CARNEY.

The Ducks and the Tornado.

WATER LILY, N. C.—*Editor Forest and Stream:* I see by your issue of March 21 my tornado duck tragedy has found one "Thomas." I am sorry I had to slander his western tornado, as he seems "touchy" on that point. But this wind came from the west, and perhaps the only reason it did not kill all the ducks in Currituck Sound was that it only touched the extreme north end; and while it seems to have killed almost everything in its path, fortunately it was a narrow one. These ducks were killed due east from Mundens Point, Virginia, said village being almost totally destroyed; and the destruction of all those ducks as described was the truth pure and simple. I did not see nor eat the ducks, as our western friend has guessed, but as to the truthfulness of the article I refer Mr. McCandless to Capt. William O'Neal, Life Saving Station No. 5; Capt. Otto Halstead, station No. 4; Capt. McCorbell, station No. 6. These are all men of unquestioned veracity, and not old hunters like the writer. How the ducks were killed will always be a mystery. Few men would believe it possible for the waves of the ocean to drown swan, as stated by the editor of FOREST AND STREAM, but his statements were absolutely true and can be verified by Capt. Walter Parker, Station No. 8, Corrolla, N. C., or E. L. Smith, Water Lily, N. C., who saw three get drowned, or so badly used up that he caught two of them. The editor's description of how it occurred is a good one, and cannot be improved on by me.

We would like some legislation preventing these "western tornadoes" from crossing the Blue Ridge Mountains, but our representative was a modest man, raised in the East, and did not feel that he had the ability.

I hope this letter will convince Mr. McCandless that there is at least a semblance of truth in the account of the duck tragedy; I assure him that our ducks can swim, and fly, too, and if he doubts that also let him come to Currituck and spend a week with me and I'll prove it to him. MORE ANON.

Early Swallows.

MILFORD, Conn., March 24.—*Editor Forest and Stream:* On Monday, March 23, I was somewhat astonished to see a little whisp of white-bellied swallows (*Tachycineta bicolor*) in the air flying north, and at first thought that I must have been mistaken in the species, for usually these birds do not make their appearance here much before the middle of April—say from the 10th to the 15th. However, a little later I saw several other small groups passing over, and identified them beyond a peradventure.

According to my experience, this date of arrival is unexampled for southern Connecticut, and, on looking the matter up, I am confirmed in this conclusion by other observers. Dr. C. Hart Merriam, in his admirable "Birds of Connecticut," p. 30, gives the date of earliest observation of the arrival of this species as April 7, and mentioned April 13 as a more usual date. Thus, so far as I am able to learn, the white-bellied swallows—always the earliest of the swallows to arrive—have this year made their appearance about fifteen days in advance of the early records of previous years.

Spring is surprisingly early with us in other respects; and unless something unlooked for happens, all the operations of nature will be in advance of their usual time.

MORTON GRINNELL.

Egging in the Yorkshire Cliffs.

A RECENT issue—Part I.—of the Transactions of the Scientific and Field Naturalists' Club of Hull, England, contains an interesting account of egging in the Yorkshire Cliffs, by Mr. E. W. Wade.

From time immemorial these cliffs have been resorted to by sea fowl to lay their eggs and rear their young, but of late years the birds were so constantly pursued by gunners as to be almost exterminated. They have now begun to increase in numbers since the Birds' Protection Act gives them an opportunity to breed. Of the species found there, the greater number are guillemots, but there are some auks and kittiwakes, though now these last exist only by hundreds where formerly they were found by thousands.

All this cliff climbing in Yorkshire is effected by means of ropes, and the author speaks of it as a most delightful and exhilarating form of gymnastics. The eggs collected amount to from 300 to 400 per day, and about 130,000 are taken during the season. The eggs are sold for about a shilling a dozen, and specimens with unusual markings bring much higher prices, running up to $1.75 or more.

It is said that notwithstanding this enormous drain on them, the birds show some annual increase.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Shooting in China.

SHANGHAI, China, February, 1903.—*Editor Forest and Stream:* The recollections of a pioneer, when well told, are always interesting and generally instructive. Some time ago I found one of the early settlers from the West with his mind in a communicative and sportive mood, and as I had just returned from a shooting trip I was entertained by what he said about shooting in China. If I could put into this paper the information he gave me, with the same spirit and feeling, the readers of the FOREST AND STREAM would be also entertained; but you are welcome to do as you please with what I do write, interspersed with some reflections of my own.

When Shanghai was first made an open port, the ground on which the commercial metropolis of Asia has been built, was partly covered with water, and the remainder was a mud flat utilized mostly by native fishermen.

Standing at a favorable point and looking down the Whangpoo River my friend informed me that he had seen at one look as many as a hundred American skippers anchored, all in line and each floating the American flag from its masthead, and loading with tea and other Chinese products for American ports. This was before the coming of the steamships, which have practically driven from the sea the white-winged messengers, whose canvas seemed to rejoice with the sunlit clouds, and abolished that school in which was trained the skillful seaman who manned the ship in the days of our early naval triumphs.

With the steamships also came the breechloading guns, and soon after the smokeless powder, and with such rapid means of conveyance and such destructive agents, many of the pleasures of the sea and the field have disappeared, The Skipper has sailed to her final anchorage, and the Joe Manton muzzleloading gun has been placed carefully in its case, to be taken out only when one wishes to see the perfection of the gunmaker's skill.

There was an abundance of game about Shanghai in those days, and one need not have gone outside of a

radius of five miles of the city to enjoy the keenest sport and return with a bag well filled in quantity and variety. That finest of all game birds, the pheasant, were plentiful, and the ponds were full of geese and ducks; and the bamboo partridge, the quail and snipe were incidental shooting. The deer was within range of the average shot, and when I listened, as the successful hunting expeditions were recounted and the "big bag" made, it was easy to account for the present scarcity of game where it was a few years ago so abundant. I could not appreciate the emphatic assertion that "there were true sportsmen in those days," for, to me, the killing of a hundred or two hundred pheasants a day by one shooter simply because pheasants were plentiful, was not true sportsmanship.

But since the advent of Western civilization into China an unending warfare has been waged against the animals and fowls of the empire, and now one has to travel far into the interior before making a respectable bag, even after several days' shooting. The game which formerly was abundant around the open ports has been shot or frightened away by the almost ceaseless fusillade to be heard during the shooting season.

And the same agencies are busily exterminating the game of the forests and plains of happier America; and it is to be hoped that President Roosevelt will succeed in exciting a public sentiment to the enactment of proper laws to protect game against the expeditions of shooters who shoot for money only; even in China the necessity for prohibitory measures has been recognized to the extent of prohibiting the further exportation of pheasant skins to Paris and other centers of fashion, although at the risk of incurring the dissatisfaction of the fair ones.

To reach the interior of China, the shooter boards a houseboat and is towed near the shooting grounds. There are regular lines of steam launches running from Shanghai to many of the chief commercial towns of the interior, and with these towns as the objective points, there is no difficulty in reaching any desirable point further inland, as the country is so intersected with creeks and canals that travel by light draft or flat bottom boats is greatly convenienced and expedited.

The houseboat is indispensable for comfortable recreation in inland China. The dimensions and fittings are according to the taste of the owner. Generally the boat is about fifty feet long, with an extreme breadth of about eleven feet and a half, and measuring over seven feet from top of house to under side keel plank, thus giving the occupant full room to stand erect. There are two or more sleeping bunks, according to the space desired, with cook house, bath and toilet room; main cabin, dog kennel and other necessary rooms. The boat is also fitted with mast and sail, and usually has a crew of six. The captain is known as the Loadah, who remains in charge of the houseboat during the year at a salary of about twelve Mexican dollars per month, while the working crew are coolies hired when needed at about thirty Mexican cents per day. Unless the wind is fair for sailing the houseboat is propelled, when separated from the launch, by means of sculling oar, by the Chinese called Yulohing.

With such a boat as above generally indicated, the shooter can spend ten or fifteen days in comfort at any point he may be able to reach in the interior of China, and during the shooting season there is no danger of malaria, though it is a safe precaution to take at least one dose of quinine a day.

On arriving at the place selected for shooting, the houseboat is made fast to some tree on the banks of the canal or creek, and, if an old sportsman who knows the country, there need be no delay in the start; but, for a sportsman who is unacquainted with his surroundings, it is prudent to take his latitude and fix well in his mind the location of his boat before making a start. It sometimes happens that the inexperienced, in his excitement and resentment, caused by a cock pheasant which has, with the most apparent unconcern, escaped the contents of both barrels of the gun, forgets every point of the compass and finds it difficult to retrace his steps before overtaken by night. And one is frequently led far astray by the sport to find a suitable crossing place over the creeks and wide ditches which often confront him in every direction.

But the natives are not unfriendly. There is little if any danger from them. When one preserves his temper and keeps himself well in hand it is seldom that he is wantonly insulted by the natives. I have frequently spent more than a week in the interior of China, more than a hundred miles from any open port, and never experienced any evidence of an unfriendly intention. In fact, the farther I have been from an open port the more friendly have I found the natives, and the more happy and contented in the cultivation of their little farms; and so much happiness and contentment naturally presents the question, why disturb it with new theories and new inventions? The Chinese are not altogether and always responsible for that feeling of resentment which has manifested itself with the torch and rifle as exponents. Some of the aggressions against them would have stirred the Saxon race to every known resource of warfare.

Nearly every Shanghai sportsman has his dog, and it is an open question as to "what is the best kind of dog for general shooting purposes in China?" Each sportsman has his preference, and each is partial to the qualities of his own dog; and on this subject the opinion of my friend is worth stating in his own words.

"What seemed to be required for shooting throughout the season is a strong, well broken, but, perhaps, not too highly bred pointer; one that will take the water, face the thick covers, and possibly retrieve; and there are such dogs in Shanghai. The coats of some setters lie very flat, and they are the next best dogs to pointers; but the long-haired varieties, though good and useful in their way, had better not be taken up country until they can work the cover with impunity to themselves. A sentimental objection to pointers is that they are not so companionable as the other breeds, which is true to a certain extent; but it must be remembered that when a pointer is on business he means business, and that is exactly what he is wanted for. In choosing a pointer, always try to get one with sloping shoulders, long, airy neck, a deep but not broad chest, and a loin arched, very wide, strong and muscular. Some useful pointers occasionally arrive at Shanghai from Germany. For the most part they are well educated and good at retrieving, but they run big and heavy, and are too much given to 'pottering.' A last word may be said in favor of the pointer: he can be worked from the beginning to the end of the shooting season; whereas it is little less than cruelty to take a spaniel or a setter out before December." It would seem from the foregoing opinion of an old and experienced shooter in China that the pointer is the best dog for shooting purposes in this part of the world.

Since the invention of the breechloader and smokeless powder nearly every sportsman here is equipped with such a weapon and such ammunition. Most of the double-barrel breechloaders are of English or American make. At the shooting clubs—there are two at Shanghai—I see the Parker and the Remington, and the Winchester guns, and I have heard no complaint of the shooting qualities of either. The only objection against the American-made guns is that they are too heavy and wanting somewhat in symmetry, an objection that could easily be removed by the gunmaker. But the guns I have seen of the American make are generally of the fifty dollar grade, and these naturally do not "show up well" by the side of an English gun costing thirty or forty pounds at the factory. There are two or three Parker guns of high grade which have given great satisfaction to the owners, and I have heard no complaint as to the shooting quality of any gun of American make, and would suggest that more attention be given to the building of a lighter twelve-bore gun and of more symmetry. All the sporting guns, as a rule, are of the twelve-bore gauge and of the standard length. My own gun is a twelve-bore, with barrels thirty-two inches long, and made for me several years ago by W. W. Greener, of Birmingham, England. It is built of the Greener's wrought steel, and weighs only six pounds and a half, and, like all of the Greener guns, is of beautiful symmetry, long range and accurate.

But the native sportsman has no such a gun as I have referred to, though his bag, after a day's shooting, is often as full as that of his Western competitor who uses the most improved breechloader. His gun is the ordinary matchlock or gingae, except in rare instances, when he has been able to buy an old-fashioned flint lock musket which has been changed into a percussion musket. The barrel is of iron and about five feet long, with a bore of about one-third of an inch; the iron is thickest at the breech and tapers gradually towards the muzzle. The bore at the breech is about the size of a half dollar coin, while at the muzzle it is about that of a five cent piece, and thus it seems that this narrowing of the bore, to give a greater velocity to the charge, anticipated more than a thousand years the choke bore gun which is the pride of modern gunmakers.

The ammunition which the native sportsman takes into the field is as primitive as his gun. Where modern chemicals are not used the powder has undergone no material improvement since it was first known in China long before known in Europe; and the claim to have first discovered gunpowder is made by the Chinese with much positive evidence in its favor. Within the last decade there have been several powder mills built in China, and both black and smokeless powder are manufactured, but the grade is not the best. The native sportsmen I have met in the field mostly use a very inferior grade of black powder and iron shot, many of the shot are very irregular in every respect, and are the result of choppings from wire and nails, with no regard to regularity of size or shape. But the Chinaman pours his powder into his gun, rams it down with an iron rod until packed at the bottom, and then pours in the iron shot without any wad on the powder and with a thin wad of leaf or paper over the shot, and it is astonishing how successful the native sportsman is with such a gun thus loaded.

The only American brand of smokeless powder I have seen in use here was manufactured by Laflin & Rand. Recently an American gave me a few cartridges loaded with the Laflin & Rand Infallible powder, which I found satisfactory. The opinion of sportsmen is rather favorable to Schultze powder for this climate, though Ballistite, E. C. and other brands are in general use. So far my preference is for the E. C. brand, which I have always found to give complete satisfaction; but one of the gun clubs is now using Ballistite and the other Schultze. The smokeless powder manufactured from chemical compounds, the least susceptible to climatic influence, will ultimately be the preferred powder in China. For the large bore fowling gun Schultze is being used in preference to black powder.

China is still the "happy hunting ground," but when the railroads now in contemplation are completed, the sportsmen will have easier and quicker access to the far interior, and then here, as in some other parts of the world, one will have to be content with shooting half-tamed fowls and animals.

T. R. Jernigan.

Those "Reminiscences."

Orient Point, Long Island, N. Y.—*Editor Forest and Stream:* "Old Angler" has given me much pleasure while reading his reminiscences, for which I wish to thank him. In speaking of retrievers he mentions a cross between a Scotch collie bitch and an Irish water spaniel as the best retriever he ever saw. The best retriever I ever saw was a full blooded Scotch collie. He took sick two months ago and died with his head lying on my arm, the dear, loving fellow. At low tide I used to wade in and anchor the decoys, but I never had to wade in to bring them out again. I never had occasion to use a boat at all when shooting from the land so long as Tony was around. He loved my gun almost as well as I, and would carry it in the case half a mile for me. He would carry the ducks and put them in the wagon quicker than any boy. I could leave my gloves and pocketbook at the Sound where I had been lying for ducks, one-half mile away, and he would go back and never fail to bring them. He had a nose like a fox, yet he was no good for quail. This seemed beyond him. I would be glad to know if others have had such an experience with full blooded collies. Tony did not love the water by any means, but simply went into it because he was told to do so, whether it was for ducks made of wood or those which had been killed. He picked up a half bushel of potatoes one day and gave them to his master who was seated on a sulky hay rake. If some dogs do not have reason, I think I know of human beings who are really beneath them—having neither reason nor instinct.

"Old Angler" speaks of "shooting from the hip" (by faith, as it were), and not by sighting along the barrel. I think if the law required all the field shooting to be done from the hip the birds would have all the protection they needed. I think I might possibly hit a flock of barns shooting from the hip, but not a single quail.

Now, a few words about game protection. At present there is no limit in this State as to how many ducks or quail may be killed by a person in one day. In this vicinity it is and has been for years an uncommon thing for one person to kill more than 10 ducks a day. I have been shooting over fifty years, and during the time I have never killed more than ten ducks in one day, and never more than 96 in any one season, which was in 1901. I do not think there is any good reason why any man should be allowed to kill more than twenty ducks in one day or more than ten quail. Nearly all the ducks near Orient Point are what we may call trash ducks—such as coots, old squaws and mergansers, with a few black ducks. I have never killed a mallard, canvasback or redhead; not because I was sorry for them, but because I never had the opportunity. I am very certain of one thing, which is that not more than one out of ten ducks which visit this section in fall and spring gets killed. Of course, the more they are hunted the less likely they are to stay with us, and the more likely they are to visit when there is less noise.

Uncle Dan.

A Lucky Day.

We had started down the wood road from our home camp on Black Brook about the middle of the afternoon, and in an hour or two had settled upon a smooth space in a birch grove, dropped our blankets, swamped out the undergrowth and roots, made a bed of boughs on each side of the fire-place, and cut some birch poles and a couple of green logs for night wood. Our camp was handy to the calling place on the pond, and far enough back to let us have a fire; in fact it met with all the requirements. The afternoon was windy and the tree tops were reeling about in a drunken revel. It had rained every day for a week; but only a shower, so that the marshy barrens beyond camp were comparatively dry. "Travel" is the word that Old Tom always used for this kind of hunting. It is heart-breaking work to tramp over these mossy barrens. One hardly gets out of a mud hole before tripping on a stout root or a wiry vine. But we coasted safely along the edge of the "plain," as Tom called it, stooped behind the bushes and little fir trees whenever a new vista opened before us. There was a maze of little parks and barrens, each in its own setting of dark trees that stood about like a frame. Sometimes it was a single line of spruces; again it was a forest of miniature evergreens or even a ridge covered with hardwoods, with the game trails as connecting links. It was quite a little pull down to the pond, a shallow mud-bottomed basin much frequented by ducks and caribou. It would have been better judgment for us to have retired to our beds till morning, for one cannot call up a moose in a wind storm, or in fact in any wind at all. But do we not all remember that sometimes we have made a wonderful catch of trout of a hot summer afternoon when all the signs were unfavorable? So we sat quietly under a bush on the boggy outlet and tooted away in a vain endeavor to tickle the ear and fancy of some lovelorn moose. Old Tom was an artist on this long pipe of silver and gold. He gave his call in a series of three close together, then after an interval of fifteen minutes, three more. With ears cocked for the slightest sounds I watched the clouds and the tree tops and the waves on our muddy little ocean, wondering how soon the rain would begin, and shivering at the damp prospect. Such waiting is cold work, and the fear of a coming storm terrible so far from shelter. When it comes it is nothing, but the first drops are worse than a flood. So we sat and waited. If one has that charming habit of whittling, there are few times that it cannot be turned to advantage. My knife was open, and I was soon at work on a miniature paddle, then a salmon spear, and finally a rifle, but for a Lilliputian, and so the day drew near its close. The sun opened up a great golden window in the gray clouds and we forgot our possible moose in gazing at the contrast of flaming heavens and sombre pines. Above a glowing undulating sky, glorious in color, below a pond that might well picture desolation and solitude, with long-fingered tamaracks and spruces that would make a fine grewsome setting for a murder scene. But the corpse continued to remain absent; so finally, with the returning gray pall of cloud, we turned our backs on Lake Despair and made for our blankets and the sheltering birches we called home. We had some little difficulty in finding the camp and our spring, but the eye of Old Tom was not long at fault. A few rods through the dark woods on the dimmest of trails and we were there. A match changed the aspect of affairs; our fire was soon going, and where all had been but a varied kind of blackness, it was now bright and cheerful. A fire is like a family for company. It is usually bright and cheerful, although, like the other, it has its moods. Our little kettle was soon boiling, our broth made, our bread toasting on a stick, our steak broiling over the clean hardwood logs, and ourselves beaming with the comfort of warmth and food. This birch grove was not all white-barked trees; there were rough-coated yellow birches and a few giant spruces and hemlocks that somehow had escaped the devastation of the lumberman. As the night shut in its dark walls about us close enough to make our home cosy, the stars came out overhead and shone down through the trees, and for a little time the wind ceased. It was delightful to lie on the balsam boughs close to that good brown mother earth. The heat of the fire and the hiss and glow of the coals and the neighborhood of the great trees and the odor of the balsam all contrived to bring their spell over me, and the next thing I knew was that there were only a few coals where that big fire had been and the wind was just roaring overhead in the branches. Here and there through the roof of green one could see that the stars were blotted out by the clouds. For some time I lay and wished for more fire, and finally got out of my sleeping bag and put the wood on myself. After a minute or two it roared fiercely enough and I drowsed and went to sleep again. There was a decided change next time I woke. Everything was a soft gray, wet and chilly. Through the branches a fine rain was falling, one of the kind that be-

gins a storm and filtered through the leaves upon what was left of our fire. Already we were late for our appointment, so I woke Tom and we made a kettle of beef tea with a few capsules I had in my pocket. Then we were off in the mist. What a mist for the complexion! Just the thing for Miss Moose, but one could not see to shoot five rods. Finally we worked down to the pond and tooted away, but nothing answered us. One must not get discouraged, though, and so back we went into the woods to cross over a little chain of barrens and try for caribou. Mind you, I'd not had a chance to try this new rifle of mine, a 7mm. Mauser, on anything, and I'd thought I had worked hard enough to get a good chance. Over a hard sandy ridge we worked under the princess pines where the ground was level as a floor and you could see to shoot 20 rods. Then down on the other side into the marshes. There were plenty of tracks there, and paths running from one opening to another, and along these we traveled. Suddenly, framed in the trees, I saw a white and gray animal intently watching us. He had a meek large eyed expression, but it didn't fool me for all that. I grabbed Tom and pointed out the watcher. We dropped to our knees and I crept up to the line of trees through the water and mud of the marsh. Rising I found an opening for the rifle barrel, and there, in the middle of the little barren, were three caribou. I saw one had horns; it was lying down, and, aiming at the shoulder, I fired. There was a little spasmodic movement of the feet and that was all. "You've missed him," said Tom, in great excitement. "Shoot quick when he runs," and he pulled me by the sleeve over to an opening through which he was watching the barren. "No," said I, "I got him. Let me go." "You missed him," said he. "You must shoot quick," and as he spoke a caribou rose from where he was lying on the ground and sort of shook himself. Number three stood stupidly watching us. I fired and missed clean. Then fired again as quickly as I could repeat and down he went with a little bullet in his shoulder. As we walked out the little one that has been nearest us ran away, as if for the woods, and then circling around returned and lay down beside where the other two were dying, and when we got within fifty feet got up and ran off. There the two lay quite near together—too near for any such error as I had made—but number one had never struggled at all, and so it really seemed as if I might have some reasonable doubt. Such is luck in the woods. For ten days I had "traveled" through the timber and over bogs and had seen only one gray covered back glide through the shadows far ahead of me on an old logging road, while here it seemed the game was only too anxious to be killed. It was really too much of a good thing, but the lust for blood was so strong that on our way back to camp I murdered in cold blood an ancient hedge hog that looked for all the world like a small bear. I climbed the logs where he lay and looked the shattered thing over, and my moralizing was hardly flattering to myself. However, one should not moralize too much on a hunting trip. I did not altogether approve of the tendency, and so, after a day to pack and salt down our hides, we left our comfortable cabin on Black Brook and returned to the lands of high collars and beefsteak.

GEO. F. DOMINICK, JR.

Game Parks Again.

Editor Forest and Stream:

IT was my intention not to add another word to what I've said, but as my kind supporter, Mr. Spears, has given me a sly dig under the fifth rib, I feel as if bound to fire another shot, even at the risk of wasting powder.

I have already made it clear that I am not likely to be placed in the ranks of "boot lickers" to the rich, though I am ready to admit with Mr. Avis that millionaires are of service to the country in many ways; but Mr. Avis must consider that I make no war upon their virtues, but upon their vices and shortcomings.

Among their other failings must I repeat the charge that during the terrible past winter—on the "widow's mite" principle—they did absolutely nothing. Mr. Spears has attended to the rest.

Now, Mr. Spears, I don't know whether your closing hint about "religion" was intended for my especial benefit or not, but if it was I must defend myself by saying that I was only attacking the inconsistency and hypocrisy of pretenders. I consider them fair game, and if they are they come within the pale of legitimate FOREST AND STREAM material. The Great Reformer did not hesitate to open his batteries on the rich who failed in their duties, on every fair occasion, and I think it safe, and the duty, of everyone to follow in his lead whenever good can come of it.

With thanks to Mr. Spears for his ingenious and kind assistance, I am his humble servant,

DIDYMUS.

ST AUGUSTINE, March 15.

Editor Forest and Stream:

IF a hog could reason objectively, and could talk from his own point of view, what a sizzling outpouring of grievances he could direct continuously at all mankind, now and during many generations to come.

First of all, man has assumed an inconsistent attitude toward the hog, for, copying hog nature and appropriating it as his own, man scoffs at it as the extreme of gross selfishness.

Man points the finger of scorn at the hog in all altruistic problems wherein a cheap example is needed.

He has used the hog in this unkind and unjust manner from time immemorial. How thoughtless! how unjust! Instead of scorn, man owes the hog a double debt of gratitude. First, for copying hog nature without giving in return any credit, and second, for the attempt to cast a stigma on the hog when man himself far outhogs the hog in selfishness.

Now, reduced to its simple elements, hog nature is largely a matter of getting something for nothing. Let a hog invade an apple orchard or potato field, and he proceeds to enjoy himself as sole proprietor. Let him further have possession for a while unmolested, and he considers that he has a common law right of which he cannot be justly divested by any power on earth. Is not that human in its idea?

In associating with other hogs, the hog shoulders and crowds and roots and squeals to a degree almost human in its persistency, though less refined in its action.

These thoughts came to me as I read the masterful arguments of Messrs. Didymus and Sears, who denounce the millionaire for his hoggish nature in rooting in a pasture which they maintain should be free for all to root in, with the difference, however, that the millionaire pays full value for rooting as an individual, while the big herd holds that it should root free. Once get the right line of reasoning concerning the hog, and it will make clear many things which now seem hopelessly inconsistent and inexplicable. The real differences are in degree only; that is to say, there are big hogs and little hogs, and often the little hog grows into a big hog, whereupon he is just as big a hog as any other big hog.

CHAS. DAY.

CHICAGO AND THE WEST.

Plenty of Ducks.

CHICAGO, Ill., March 26.—The high waters still continue in the Middle West, and the flight of ducks is greater this spring than has been known for many years. It is thought that most of the north-bound migration will come up the Mississippi Valley this spring. Naturally much of this flight divides at the fork of the Mississippi and Illinois rivers, and it subdivides at the fork of the Desplaines and Kankakee, which empties into the Illinois. Within the past week the bulk of the shooting has been along the Kankakee River. This ancient waterway is naturally the path to the southern end of Lake Michigan. Hence the Kankakee flight has to some extent gotten into Lake Michigan, which means good shooting in the Tolleston and other marshes close to the big water. One might say that Tolleston has had as good sport as any club in the vicinity; although, of course, one cannot fully measure the possibility of that sport, since the members shoot under the Indiana law, which has a limit of 24 birds to the day.

In spite of the good success which has attended the shooters along the Kankakee River, more especially at English Lake, where the sport has been exceptionally good, it is believed that the best big bag of the week was made at New Boston by a Chicago shooter by the name of Miller, and his party. These shooters sent in during the week a bag of 97 ducks, of which 70 odd were mallards, with a few pintails and bluebills. It would seem that they must have caught the flight right at New Boston, and when that is the case there is no better shooting in any portion of the Middle West. This is the best news I have heard from New Boston, which was last week offered as a good tip.

At Fox Lake the sport has been more patchy and unreliable. Mr. W. L. Wells, who went up the first of the week, got only four bluebills. He met the big snowstorm which came on Monday, and says that his was the only bag reported in the entire Fox Lake country. Since then I have heard of one bag of 27 ducks made there, but this may possibly have been done on Tuesday, after the storm.

It is almost certain that the heavy storm of last Monday set the flight back to the southward. Now it is pleasant again, and the birds ought to be in on Tolleston, Swan Lake, Hennepin, also on English Lake, and other Kankakee clubs, and on Fox Lake. The likelihood is that the heavy storm drove the birds away from the open water into the smaller sheltered lakes, of which lower Wisconsin is so full.

The Different Flights of Ducks.

Our old friend Abe Kleinman, who knows more about ducks in a minute than most of us will forget in a year, says that it is now nearly time for the last flight of the bluebills. Abe says that the first flight of bluebills on their progress north-bound, is made up largely of the paired ducks, those which are going north to get on to the breeding grounds as soon as possible. "If you look at the ducks which come in now," he said, "you will find that two-thirds or four-fifths of them are males. They go in bunches and flocks and not in pairs. These are either the old bachelors, those which have not succeeded in getting mates, or those which have lost their mates in the southern shooting, at points below here. These last migrators are in no hurry to get on north and will furnish the later shooting in this part of the country. You watch the bags made from now on and see if there is not a very large per cent. of male birds. You will see the same thing if you take a glass and examine the flocks out in Lake Michigan, off the city. Nearly all of them are males."

I know of no reason to doubt the observation of this well-posted and much-experienced duck shooter.

Snipe are In.

The first jacksnipe, of which I have knowledge, this spring were reported four days ago along the Calumet country. The cold snap of this week will stop the north-bound movement of these birds in all likelihood, but will not send them very far to the south. Abe Kleinman tells me that when the jacksnipe has once gotten up into the north he is very much disinclined to go back south again, his locomotive apparatus seeming to be not so powerful as that of the ducks and geese. In case of a sudden freeze-up, such as we had here a few days ago, the jacksnipe does not take a spin of a thousand miles or so to the south, but makes the best out of his surroundings as he finds them. According to Abe, the jacks, in such conditions, hunt out some running ditch, or creek, or slough, along the banks, of which the ground remains unfrozen and where they poke along and make some sort of a living until the arrival of better days. Abe says that he has known six or eight jacksnipe to be killed at a single shot along such a ditch, where they were located by the chance hunter.

We will hardly have very good sport at jacksnipe this spring, owing to the extreme abundance of water all over the country. There will be more than enough feeding grounds for the numbers of snipe which are apt to pass this way. The devoted hunters who go to the Fox Lake country, are expecting now to meet some snipe along the bogs almost any day.

The ducks continue to come in, and the main flight has now probably reached this latitude. At Tolleston day before yesterday, Mr. J. V. Clarke easily made his limit of 24 ducks, and Mr. Hempstead Washburn, who also shot at Tolleston, killed 18 birds. Most of these were mallards, with a few pintails and an occasional bluebill.

Mr. Lou Clarke, of this city, is recently back from Thomasville, Ga., where he had pleasant weather and all the shooting he cared for at doves and quail.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Legislation at Albany.

The Senate passed on March 30 Mr. Armstrong's bill forbidding the sale of grouse and woodcock. The measure was amended so that possession of this game shall not be presumptive evidence of violation by any person who has given a bond to the Game Commissioner of the State.

ALBANY, March 28.—Governor Odell has signed the following bills amending the fish and game laws:

Assemblyman Bridgeman's, to allow the spearing of fish in the creeks of Otsego and Orleans counties.

Assembly Doughty's, providing that there shall be no open season for Mongolian ring-necked or English pheasants, except in Suffolk county, prior to 1905, and that they shall not be taken or possessed in Suffolk county from Jan. 1 to Oct. 31, both inclusive.

Assemblyman McNair's, making the close season for squirrel from Dec. 1 to Sept. 15, both inclusive.

Assemblyman Fowler's, providing for the protection of fish in Chautauqua Lake.

The Senate has passed Senator Armstrong's bill, making the close season for grouse in the counties of Ulster, Sullivan and Greene from Dec. 1 to Sept. 30, both inclusive, and in Orange county from Dec. 1 to Oct. 15, both inclusive.

The Senate Committee on Fisheries and Game has reported the following bills:

Senator Malby's, relative to fishing in Black Lake, St. Lawrence county.

Assemblyman Cowan's, prohibiting the taking of trout and game in the counties of Delaware, Ulster and Schoharie for the purpose of selling the same.

Senator Warneck's, providing that there shall be no open season for grouse and woodcock in the counties of Schoharie, Montgomery and Otsego, prior to 1906.

Senator Raines', relative to the taking of fish through the ice in Canandaigua Lake.

Assemblyman C. W. Smith's, relative to wild birds.

Assemblyman Bedell's, relative to the close season for trout in Orange county. This bill was afterward advanced to third reading.

The Assembly Committee on Fisheries and Game has reported the following bills:

Assemblyman C. W. Smith's, relating to penalties.

Assemblyman Burnett's, relative to taking fish through the ice in Canandaigua Lake.

Senator Armstrong's, relative to the destruction of illegal devices.

The Assembly has recommitted the bill of Senator Townsend's, on second reading, for the protection of wild black bear, together with a number of amendments proposed to it, exempting from its operations a number of counties.

The Assembly has advanced to third reading the following bills:

Assemblyman Cowan's, making the close season for muskrat, skunk and foxes in Delaware county from May 1 to Oct. 31, both inclusive.

Assemblyman Stevens', relative to the laying out of private parks.

Senator Bailey's, relative to the powers of supervisors in the counties of Queens, Nassau and Suffolk.

The Assembly has passed the following bills:

Assemblyman Hubbs', relative to the transportation of fish.

Assemblyman Robinson's relative to fishing in Hemlock Lake.

Assemblyman Reynolds', making the close season for grouse, woodcock and quail in Rensselaer county from Dec. 1 to Sept. 30, both inclusive.

Sea and River Fishing.

Salmon Culture in America.

Editor Forest and Stream:

In your issue of 21st inst., Mr. Babcock, Fisheries Commissioner, has supplied what Mr. Livingston Stone, in his letter to R. B. Marston, of the London Fishing Gazette, perhaps inadvertently omitted, viz.: some statistics on which alone a sound opinion can be formed. From these, it would appear that, so far as the Sacramento River in California is concerned, Artificial Culture has been fairly successful.

In a river where the present conditions are such as Mr. Babcock describes, artificial culture may, for a long time, prevent the species from dying out entirely; but with a full knowledge of what Salmon Culture, pursued on a large scale and at enormous expense for 30 years, has done in Canada and the Eastern States, I cannot but entertain strong doubts that, in rivers where "the establishment of manufactories, the diversion of waters for irrigation, extensive mining and agricultural methods during the past ten years have almost entirely destroyed the natural spawning grounds of the Salmon," artificial culture can keep alive a profitable business. Even if it could do this, I doubt the wisdom of devoting taxes wrung from the people to stimulate artificially a business from which only a few wealthy proprietors derive any immediate profit.

As to the Columbia and other rivers further North, Mr. Babcock, following my old friend Livingstone Stone, is very chary about statistics; but, like him, deals liberally in *opinions* and assertions unwarranted by figures. The ample quotations made from Mr. Stone; from that careful observer of Pacific Salmon, Mr. Charles Hallock; from the Report of the Commission sitting in British Columbia in 1892, and from letters received during the present year, given in your last issue, will enable Mr. Marston to judge how much good Artificial Culture can do in rivers where the fish are now so numerous that they destroy themselves by overcrowding.

The writer is strongly of opinion that if those who are making fortunes by their canneries and freezers really believe they derive any practical benefit from Artificial Salmon Culture, they should support the hatcheries themselves, and that the State Governments of California, Oregon and Washington, and the Government of Canada should no longer tax the people for the special benefit of a few wealthy companies who derive all the direct profit.

Should this and my last letter meet the eyes of the scientific gentlemen in England who are opposing Mr. Marston's well-meant but ignorant efforts to increase the Salmon catch in England, Scotland and Ireland by grants of public money for Artificial Culture, they will not fail to see, in Mr. Babcock's confidently expressed opinions, additional grounds for their belief that so far Salmon Culture in Europe and America has produced oodles of ova and figures of fry, but very few adult Salmon.

THE OLD ANGLER.

Canoe and Camp Life Along the Delaware River.

Snaps With a Pocket Camera, and Fly Casts with Tamarack Poles.

I.—The Poles are Cut and "Cured."—The Swamp.

The aged fisherman leaves his reel,
And his rods of split-bamboo,
To enter a swamp, and cut and peel
A tamarack pole, so he may feel
The thrill of memory's joy,
When barefoot and freckled, with much ado,
He searched that swamp all through and through,
A wild, free fisher boy;
And with an old jackknife cut the pole,
By the winding path that leads
To the pond, and the haunted "waste-weir hole"
Where he caught the "punkin seeds!"

"That's the first fishhook I ever owned. Didn't catch but one fish with it—a sucker over a foot long! Then it was honorably retired and cherished! Almost sixty years ago, and I'm fishin' yet! But those boy days were the best! I had more fun ketchin' that sucker than I had getting that twenty-pound salmon you gaffed for me last summer at Southwest Brook!" (In Newfoundland.)

My old comrade had taken the tiny hook from an envelope in a little compartment of his "tackle trunk"—a dulled, rusty, "Limerick" hook, size ten; and all that long vista of threescore years only made his recollection the more vivid.

"Lost the *very* first hook on a snag in Jacobs Creek, out in Michigan," he added. "Even before that I had fished with bent pins in the 'deep hole' where we 'went in swimmin'.' That hole was about ten feet long, where the brook curved below a bank at least six feet high; in those days I thought it a tremendous proof of courage to slide down its blue clay—made wet and slippery—and splash right into the center of the muddy pool—about eighteen inches deep. Oh, how dirty and happy we boys would get there! I loved that creek quite as well as I afterwards did the Delaware River and its herring—for, as you know, there were no black bass in the Delaware until in October, 1870, when a lot of small ones were put in it at Easton, just below Lehigh Dam."

He stroked his long, white beard with his left hand, and with his right reached for a bulldog briarwood pipe.

He smoked the strongest Perique tobacco; as its fumes filled the "fishing den" I opened a window facing Prospect Park, in Brooklyn, where troops of scarlet leaves were scurrying and tossing in the wind-gusts of an Indian summer afternoon.

"I know a larch-swamp in the hill back from Hancock up there on the Delaware, where the tamaracks grow just right for fishpoles."

I waited for his foreseen suggestion of a trip.

"I've been thinkin' I'd go up there, cut and peel an' dry some poles, and, next summer, take a run down the Delaware, and fish jest the same way as when I was a boy. You're a decent sort of a fly-fisher—know how to sit in a boat, and not talk. How'd you like to join me—go up there and help cut 'em, and fish with 'em a spell next summer? An' I'm goin' to take my pocket camera an' catch a lot of pictures, too."

The prospect was tempting. Memories of my own joys as an urchin, happy on Bean Creek with a tamarack pole and a can of earth-worms, crowded upon me. There was a long silence.

"Agreed!"

"All right: next Saturday by the Erie morning train for Hancock, to cut, trim and skin our poles! Bring an old jack-knife not worth over a quarter, and dull. No use tryin' to be a boy again unless we use the same old knives. Wish we could go to-morrow, for I seem to smell the tamarack gum now. Remember how we used to use the points of our knife-blades to pick the balsam off the bark, and the hardened pink gum from around the knots?"

A week later two gray-headed men were plunging through the tangle of a larch-swamp between two ranges of high hills a few miles from Deposit, New York, while a liveryman, who acted as driver, waited by a highway fence and wondered "whether the two old lunatics would git lost in there, an' have to be hunted up?"

The best times are those which come unexpectedly. That hunt for fishpoles was royal!

"See that mire-hole?" snorted my friend. "That's the place where I et my first wild turnip. Whew! How my mouth did blaze about two minutes after I bit into it! There are lots of groundnuts here, as we called them in those days, but their tops are dead, and we could not find them. Remember that small, white, divided flower on their little tops in the spring, and by which we 'told' them, and the bulbous roots, about half as big as a marble, and how we would gather a pocketful and give them to the little girls up at the log schoolhouse?"

"Yes. And back there is a knoll where I used to come and eat my dinner with you; and the rocks with the very same patches of mosses. Wonder how they stay so fresh and green? Right beside this tree I found an orchid in 1858—used to call 'em 'lady slippers' then. And yonder is the shard in the woods where we gathered wild lilies for the school-teacher."

A long, critical search! The slim, straight tamaracks, thin, like canes in a brake, were there by thousands, ten and fifteen feet high. Bitter-sweet, ivy, coleswort, loose-strife, harebell and ferns, mint, wintergreen and cresses, alder, laurel, rhododendron, hawkweed and life-everlasting were also there by the acre—abundant, peaceful, feeling the first stroke of the frost, but wild, sturdy, audacious, lush, untamable—a hundred forest odors from them mingling with the balsam smell from the larches! Mouldering logs, upturned and fire-scarred roots, shadows, and the wind-borne leaves from the maples on the far hillsides finding us even where the pools of water were thick with dun "cattails," whose "fuzz" was carried away on every gust—all in a tangle of dreamy Indian summer fragrance!

Six "poles" were cut, the jack-knives being used with the blade downward on their bases as we bent them over, so they would cut easy. A long, hard pull with them through the swamp and its obstructions, the highway not being reached until we had seen a couple of partridges "get up" and leave our company!

Then, each with a big "cud" of tamarack gum and three poles, back we went to Deposit, the green tops of the poles trailing behind our wagon, and an evening's work in the livery barn—a dozen idlers and boys standing about and watching us round the butts, trim away the branches and peel off the bark, leaving the poles white, slippery, straight and heavy.

"Goin' ter cast flies fur fish with them sawlogs?" queries a native.

"Yes—with lines tied fast to their tips, and two feet longer than the poles, so as to allow for the wind. The current will take the flies to the full length of pole and

INDIAN SUMMER ON THE DELAWARE.

line. We'll lose over half the bass we hook, but we shall have more than we can use, and will return some to the water."

The green poles were placed on cross-boards nailed to the rafters in a peak of the barn, whose owner vouched for their safety while they seasoned and grew dry, light and springy.

"Blamed ef it jest don't make me feel young again!" drawled our host. "Say, can't ye take a feller with ye a while when ye come up next summer? Jest one afternoon? I know where there's a good campin' place by a spring about two mile below." And he pointed to a hill far down the noble Delaware, whose rapids were talking to the forest that comes close to the shore on the other side—the whole, seen in the afterglow of sunset, forming an exquisite picture!

He wrote to us six weeks later at Christmas-time:

"Am sendin' ye a box of holly by express. Had the six tamarack poles down from the barn-peak yestiddy. Every one straight an' light, and supple's whalebone! I kep turnin' 'em while they was dryin', so they'd be straight. Remember, I want ter go with yer the fust day! That spring below town is right by ther mouth uv a trout brook, an' I'll have my wife go down an' have supper all ready fur us when we kum in from bass fishin'!"

L. F. Brown.

Jottings of a Fly-Fisher.—III.

I had one great day in June, 1901, and the sport was especially welcome, coming after a disappointment. Starting after midday, I reached the stream I was about to fish late in the afternoon with rain falling in torrents. I put on my waders during a lull, and found the water not only very high, but so much discolored that fishing was out of the question, at least with any prospect of success. There was no train to return that evening, or I would certainly have gone home. The rain ceased early in the evening, but I went disconsolately to bed and dropped off to sleep with the roar of the swollen stream sounding in my ears. The next day was Saturday, and when I went to breakfast, I was told that the water had cleared considerably. I soon found this to be the case; it was clear enough for fly, though still very high. The sky was overcast and it remained cloudy all day, constantly threatening rain; in fact, I believe that a few drops did fall from time to time.

Under these circumstances I was not long in getting under way. For some time I could do nothing. I could not reach the casts I knew, so as to fish them properly. At last I was encouraged by capturing a small trout of about a quarter of a pound. Proceeding downward I came to a place where the stream was greatly expanded over a wide rocky bed. Far out in the middle, near several large stones under water, was a kind of pool of fairly deep water, yet with a heavy current through it, while directly below was a large and dangerous rapid. We knew the place above the rapid of old as the haunt of large trout. With great difficulty I succeeded in wading out far enough to fish this place properly, by casting a long line, although the water was within an inch or so of the tops of my stockings. I was fishing with only one fly, a kind of nondescript, tied by myself, with a light yellow body of wool on a No. 10 hook. At about the third cast, when the line was well extended and the fly over the lower end of the hole or depression, and just where the water probably began to shallow a trifle, I detected a very modest rise. I struck, and instantly an immense fish leaped from the water. The leap was diagonally across, not directly away from me, and really the trout appeared a perfect monster in this position, the curve of its broad back and wide spotted side, with the splendid propeller, a tail that to my excited eyes appeared as big as a palm-leaf fan, the fish cleared the water by many inches, and a desperate rush for liberty followed. I thought just then that I could not move (I changed my mind afterward), and had only thirty yards of line on my reel. Before I could curb this charge, only three or four turns were left me on the spool (you must remember that I had hooked the fish at the end of a long cast); in fact, I don't think that I really stopped the trout at all; he turned of his own will when he struck shallow water. I put on all the pull I dared, under which the fish gradually dropped back into the deepest part of the pool. I had recovered many yards of line when suddenly the trout rose toward the surface, a great swirl appeared, and then my reel screamed again. Before I could say Jack Robinson or even John, the fish had rushed down the stream and was in the heavy swift water at the head of the rapid. Nothing could stop him then; any attempt to butt him would have torn out the small hook, or caused a break in my fine cast. The line was quickly exhausted and I followed in water which for some yards was up to my waist. No thought of getting my wading stockings full then. The coarse rocks were cruel and the footing exceedingly bad, but I stumbled on, my legs like towers of lead. I was about winded, when the fish took it into his head to stop in the rapid, probably behind some stone, but it appeared to be right in the middle of the rushing current. The check was but momentary, but it enabled me to get opposite the fish, and as he checked his wild career once more before reaching the shallows at the bottom, I managed better and felt that I had my good fellow in hand. I think that we were both pretty well played out by this time, and after many short rushes I stranded the fish where there was so little water that he fell over on his side. On getting him in hand I was greatly disappointed to find that instead of a five-pounder, he was two pounds less.

Had this fish been lost, say in running the rapid, he would have been remembered as that four or five pound trout that got away. Nevertheless he was a noble trout and made a great fight.

The water was cold and the fish very active that day. It is not the rule for brown trout to leap, but many of those caught did so more than once. I took a two pound trout that did not, but most of the fish were of large size. The basket consisted of twenty-four trout; twenty of these I carried home next day, and they nearly filled the big creel, capable of containing twenty pounds of fish. This was a wonderful day's sport; in some respects the best of my life.

The large stream, high cold water, unusual average size and activity of the fish, combined with the depression and disappointment of the day before, all seemed to enhance the sport and make of this a record day indeed. In a petty brook such fishing is not possible, as even if you take a large fish he has not room to show his powers and is apt to sulk. The heavy water and peculiar place in which the largest fish was hooked made the sport rather like salmon fishing in miniature.

We forget most of the disagreeable or unpleasant incidents attending our sport, but we never forget the big fish we have lost. When a boy of thirteen years I saved all my pocket money for a considerable period to purchase a fly rod; it was too good a rod for a boy without experience and was soon broken. I remember the sad affair very well, as a large fish played an important part in the event.

At the end of a thicket on Bonny Brook (this, by the way, was a favorite breeding place for a single pair of woodcock), was quite a deep pool, with hollow grassy banks, forming a fine retreat for trout. A common snake fence divided the thicket from a meadow, and by standing on one of the lower rails I could cast my worm in the pool. I did so on this occasion and the swift current carried the bait under the hollow bank; I was not conscious of a bite, but on trying to withdraw the line found it was held fast. Forgetting my delicate tackle, a vigorous pull was given, the rod bent double and a large trout was drawn to the surface. Becoming wildly excited, I endeavored to haul the fish out on the narrow margin between the fence and the pool, the trout was actually drawn half out of the water, when the rod broke in two places, the trout disappeared and before I could gain control of the line, freed himself from the hook. I could have lifted up my voice and wept; my feelings can hardly be realized. My legs were weak, and a sensation of utter goneness and woe possessed me. To break my beautiful new rod was a frightful misfortune, but to lose that trout was calamity indeed. I had never seen such a trout; it was at least twelve inches long and may have weighed three-quarters of a pound. The big friend who accompanied me soon came up; he was older than I, and for some years I could not forgive him his efforts to make a

joke of my loss, and to tease me about it. In my excited grief I had foolishly appealed to him for sympathy. The woes of childhood and youth are not always short-lived.

Trout were numerous in all cold brooks in those days, but even in the large streams a pound specimen was a large fish. I remember seeing but one two-pound trout during my boyhood; this seems rather remarkable, as I was familiar with some of the big limestone streams in Pennsylvania. They were deep and rich in food for trout; a peculiar moss which was common in them was filled with larvæ, snails, shrimps, etc. Many flies appeared on the water and the evening rise of trout was something to be remembered. Very little fishing was done after the early part of the season, which began then on "All Fool's Day."

According to my recollection the trout were in good condition, and on one opening day I made a basket of 38 good fish during a snow storm; the temperature could not have been low, as the snow melted as fast as it fell.

Glancing over a book called "Sixty-three Years' Angling" recently, reminded me of a fine old salmon fisher, now gone to his rest, as the views of the author and my friend agreed and in some respects were uncommon. They believed that the salmon takes the fly in anger, because he is tantalized and annoyed by it. The author of the work goes so far as to say that the pattern of fly used for salmon is not of the slightest consequence. "Why the salmon takes the fly" has been the subject of much discussion and argument for many years, and all that we can do is to form our own opinions from such reliable evidence as we have before us. After learning from books how to tie trout flies, I became ambitious and devoted much of my leisure to the more complicated insects, or rather lures, used for salmon.

It is very difficult to obtain the requisite materials in this country, but those necessary to tie a few of the standard patterns were imported, and after working for three hours on a single Jock-Scot, I succeeded in turning out quite a pretty fly. In an account of the fishing season in the river Eden, in North Britain, a new fly was mentioned as having proved very killing that year, one salmon of 49½ pounds and another of 43 pounds having been taken with it. The formula of the fly was given and I copied it. It proved to be a very harmonious creation of blue and silver, orange and black, golden pheasant toppings, etc., and I gave one or two to each of my salmon-fishing friends. One of these gentlemen was on the Restigouche in June of that year fishing the club waters on the invitation of a friend.

On a bright, hot day many rods were at work, but the fish were not inclined to rise, and none were taken until one of the guides, an Indian, I think, in looking over my friend's stock of flies, noticed the Eden fly I had given him. He attached it to the leader and casting over the same water five large salmon were risen and hooked. The best fish weighed thirty-eight pounds. Were those salmon made angry by the Eden fly and not by the Jock-Scots, silver-doctors, Durham-rangers, black-doses and other flies presented to them? My friend was the only one among many who had any sport on that day. By the way, the form of the Pennell hook, a plain tapered shank with gut loop (not an eyed hook), was disliked by all the guides at that time. The hook was rather slender, and Mr. Pennell has since brought out a much heavier hook, with a returned eye for salmon flies.

Later in the season another friend, of no experience whatever, was given a few days on private water some distance up the same river. He had very little tackle and scarcely any flies, except a few I had given him. These flies had been tied before my materials arrived, and could hardly be called salmon flies at all.

Among them was a thing on a No. 1½ Pennell hook resembling a coachman trout fly, if anything. It was tied with two stiff white wings, made of whole feathers, upright on the hook, peacock herl body, yellow butt, golden pheasant tail, silver tag, and a very full long brown hackle. After two days without sport the Indian guide put this strange salmon fly in action in the evening. It was cast straight out, and, as my friend said, sat on the river like a sail boat, with its wings cocked up. As it floated down, a salmon of 14½ pounds rose quietly and tried to absorb it. The big wings and general stiffness of the fly were against him, however, and it was only after three separate and distinct efforts that he got it. My friend, never having fished with a fly in his life, became wildly excited, struck very hard and broke his, or rather the owner's rod, for it was borrowed. In spite of this the fish was landed with the assistance of the guide in two hours and a half. With the same fly two more salmon were taken. This I consider a very interesting case, as it is one of the few recorded instances where a salmon has risen at and taken a dry fly floating on the water; and the natural inference is that it was taken as a fly or moth, certainly not in anger.

It is unfortunate that so few fishermen keep a record of their sport, with the attending circumstances, as much interesting and often valuable information is lost forever. Experience is the great teacher, and if that of many could be brought together, we would know far more than we do of many things bearing upon our art. The man who keeps everything he learns locked up in his own breast will know far less than he who compares notes with his fellows. My reason for writing these random notes and recollections is that they may remind other men of their interesting experiences, and perhaps induce them to write also.

There are a great many amateur fly tyers in this country, but they have no medium of communication. In the course of years one learns of many wrinkles—in addition to those printed on his face—new materials are discovered, and if he is a fair observer he picks up a little practical information about entomology.

I am surprised that more ladies do not take an interest in fly-fishing. It is well within their powers, and those accustomed to exercise soon become enthusiastic. Eight years ago a young lady was my fishing companion quite frequently, and although we had to tramp four or five miles to reach the best part of the river, she never became too tired to enjoy the sport. She wore a Tam O'Shanter, sweater, short jacket and skirts, with stout shoes and leggings and waded, as I did, without waterproofs, which are only a nuisance in warm weather. The constant exercise prevents one from taking cold, care being taken not to lie about long enough at lunch time to become chilled, though there is little chance of that when the summer sun is high in the heavens.

This girl soon learned to cast a fly quite well, in spite of the fact that her rod was a poor one (a split bamboo nine feet in length and weighing four and a half ounces is just the thing for a lady). She saw portions of a most beautiful trout stream never before visited by a woman, and had many interesting experiences. An involuntary bath was the only misfortune she experienced, and she did not suffer from that. No one man or woman who has once taken an interest in fly-fishing ever becomes indifferent to it. A fresh source of pleasure in life has been gained and one that will continue to afford enjoyment until the end of the longest life.

The inhabitants of New York and vicinity are greatly favored in their opportunities for sport. Good salt water fishing is near at hand and owing to the excellent facilities for travel a man can leave the city by the Newspaper train at four o'clock on any spring morning, spend a long day on good water a hundred miles away, and return in time for a late supper the same night. Of course, it is better and more agreeable to spend a night in the country, but it is not really necessary.

Business is so absorbing that many ardent fishermen can only steal a day now and then, in the early part of the season, while fishing is at its best. The clubs on Long Island are largely patronized, but are beyond the means of the majority. Also a desire is felt to visit wild unpreserved waters, to get among the mountains and the evergreens. The angling fever is a very real disease, and can only be cured by the application of cold water and fresh untainted air. I know a man eighty years of age who used to visit the Restigouche every year as soon as the ice was out. He often descended from his car at Metapedia to find himself in a snow bank, but his ardor was never chilled. On one trip he traveled many hundred miles, spent one day in a wet boat, caught one 25-pound salmon and a bad attack of influenza and was shipped home in spite of himself. He was quite as eager the next spring.

I am one of those who believe that all the vagaries of trout that seem so incomprehensible are capable of a rational explanation. For one thing, the eyesight of round-eyed creatures is not as good as that of almond-eyed human beings in some respects, although better in others. They are deficient in the sense of form, keen to detect motion and shades of color. A deer will not notice you if you are absolutely still, but the slightest motion sends him off at once. Trout are the same, only more so, if anything. A shadow alarms them greatly, and the position of the sun has much to do with our success, or the lack of it. If the rays of light are reflected from the water in a certain way, you can stand within easy casting distance of a school of shy trout in even the shallowest water; they cannot see you, nor can you see them. Prove this the next time you have an opportunity.

Trout take a fly when it is all chewed up sometimes. It does not look like anything to us, but to them it may be the exact color of a fly that is or has been hatching out, and they take it as larvæ or nymph just emerging from its case. I have, when not able to make a really good imitation of a fly upon which the trout were feeding, contented myself with a body of the right color and a few turns of almost any feathers of the right shade. This will kill better than a well formed fly of the wrong color, though greater accuracy is desirable.

Theodore Gordon.

Chickamauga Fishing Club.

Twenty-six Chattanooga citizens are the exclusive owners of fishing privileges in the lake which runs for two and a half miles from Crawfish Springs to West Chickamauga Creek.

The club has existed for a number of years, but it is now probably at its best, having a larger membership and better facilities than ever before for enjoying the sport. The membership list is full, and there is quite a waiting list anxious to take up any vacancy that may occur, but it is not likely that the number of active members will be materially increased soon.

The immense volume of water pouring out of Crawfish Spring makes a small river, furnishing about one-third of the water in South Chickamauga Creek. At the mouth of the spring stream is a strong dam, which creates a lake two miles and a half long, as picturesque as any water course in the South. The clear, blue depths are fairly alive with game fish. There is scarcely any current in the lake, and if one were floating down, without the aid of wind or paddle, it would require twelve hours to make the distance. This is an advantage, of course, making the rowing in any direction easy and delightful.

Each season during the past few years the Government fish car has left game minnows in this lake, and it is stocked now with a number of varieties which afford all kinds of sport for the members of the club. Among the best varieties are the black bass, the rainbow trout, the crappie and the bream. These respond readily to live bait, trolling spoon and fly. In addition there are sun perch, white perch and even the despised blue and yellow catfish, but the "cats" are seldom caught, although it is said that they are about as fine dish as any coming from the pure waters of the spring lake. Already this season the Government has put into the lake one thousand black bass and 700 crappies.

It is estimated that the members of the club catch one fish to eight which are put into the lake. This can be easily figured out, as each fisherman, at the close of his day's sport, makes a report of the number and kind of fish he caught. These reports are turned over to the secretary, who incorporates the aggregate figures for each member in his annual report.

The largest fish last year weighed about six and one-half pounds. It was a black bass. The largest so far this year was four and one-fourth pounds, also of the black bass variety.

The club has just completed a new club house at a cost of $600, and will build a boathouse at once. The club house is near the old Crawfish Springs hotel, and is a convenient, neat cottage, capable of accommodating any number of the members. There are lockers for each member, a spacious club room, kitchen and dining room, and sleeping apartments provided with cots for those who wish to spend the night there. It is understood that quite a number of the members contemplate spending their vacations this summer in that way, sleeping in the club house and fishing early in the morning and late in the evening, which will not interfere with their daily work in the city.

The lake, club house, minnows, boats, etc., are all looked after by R. N. Phipps, the game keeper, who is employed by the club at a salary. Mr. Phipps not only knows the places where the fish can be found, but he knows how to entice and land the big fellows as well as any member of the club, this fact no doubt proving a great convenience to many an unlucky fisherman in time of need. "Admiral" Phipps keeps thousands of minnows all the time, ready for the members of the club whenever they want them, the club paying for the minnows from one cent to one and a half cents each, according to the size, which must be from three and a half to six inches in length. Many of the minnows are brought considerable distance, usually by express.

The ultra-exclusiveness of the Chickamauga Fishing Club is seen from the fact that no permits are issued to anyone to fish on the preserves of the club, which include all the running streams on the Lee estate. Each member of the club is entitled to invite ten visitors in twelve months, and the expenses incurred by the visit must be charged to the member who invited him.

This gives promise of becoming a formidable rival to the best fishing grounds in the South, and the present club, having a lease of the fishing privileges until 1910, can afford to anticipate a long period of enjoyment in the pastime. Being so near Chattanooga, and on the line of the Central of Georgia railroad, the grounds are already proving a veritable health resort and a sure cure for "that tired feeling" that takes possession of all men at some time. Members of the club have fished all the winter with success, and they find that the weather makes no difference, as far as the fish are concerned.

There is some talk of adding the hunting feature to the province of the club, in which event the hunting privileges will be secured on a large tract of adjacent land, which will be stocked and preserved.—Chattanooga News.

Foreign Fishing Notes.

The Rhine Salmon.

According to a late report the salmon caught in the river Rhine numbered 27,477 in 1900, 31,811 in 1901, and 37,303 in 1902; the improvement not being remarkable in view of the fact that the average catch between 1871 and 1900 was 54,630. The report recommends, in order to insure a continuance of the improvement, that the following of disregarded recommendations be adopted and stringently enforced. First, the fishery to be absolutely prohibited from September 1 to January 1. Second, to maintain a weekly close time from Saturday to Sunday evening. Third, a daily suspension of six hours from 9 P. M. to 3 A. M., to be enforced in all portions of the river beyond its tidal flow. Fourth, no salmon spawn or fry to be disturbed or taken save by authorized fish culturists. Fifth, more liberal stocking of the stream with fry. Sixth, strict regulations against fouling waters to be rigidly enforced. Much of the decline is attributed to improvements in river navigation and to the multiplication of industrial establishments upon its banks. The stream is doubtless of far greater value as an artery of trade than as a fish nursery, and inasmuch as its development in the one direction is seemingly incompatible with that in the other, the salmon will probably have to go. It is doubtful, in view of American experience, whether a more liberal stocking of the river with fry would accomplish the result hoped for.

Norway's Fish Industry.

Norway's export of fish in 1901 was $13,100,000, or nearly six dollars per head of the total population. Almost one-third of the country's entire export was of fish and fish products, and this, her leading industry, has become such largely by reason of its furtherance by Government aid exerted with the most praiseworthy intelligence and discretion. Among the more notable exports are fish meal, fish tongues and fish stomachs. Of fish roe there was exported 96,000 pounds and 656,000 pounds of fish glue.

Norway now makes a very fine table oil from herrings, and employs it in her fish canning industry as an acceptable substitute for the more expensive Italian olive oil. Among new fish preparations offered are boneless warm smoked herrings, cold smoked turbots, fish sausages, and codfish ingeniously dried without heat in three or four days, whereby, it is asserted, that the fishy taste of the product is abated and the color, general appearance and taste of the fresh fish closely approximated. Toward this particular line of experiment the Government contributed ove five hundred dollars. Much progress has also been accomplished in the economical production and refining of the coarser fish oils. An ingenious apparatus has been devised by which it is claimed the proportion of oil in a specimen of fish can be ascertained with ease and certainty in a few minutes, and thus the proper and most economical disposition of a catch of herring, or other fish, can be readily determined.

Japanese Fishery Schools.

Among the many wonderful events of the last century there was none more startling than the entry of Japan, almost fully armed and panoplied, into the circle of civilized nations. With an equipment in most respects equal, and in some superior to her sister peoples, she will soon occupy the competitive arena thoroughly prepared to struggle for her share of the world's markets. Her foresight, energy and industry have, in no line of effort, been so marked as in the development of her fisheries. As early as 1882 the fisheries of the empire underwent associated direction, and it became the concern of the leading men of the then infant industry to further its expansion by a system of enlightened instruction. In 1888 the Minister of Agriculture established the first school at Tokio, and to-day there are in the empire the following: One school of instruction in marine and freshwater products, sustained without Government aid; twenty-five experiment stations under State subvention; three fishery

schools also assisted by the State; twenty-one subsidized schools for the fullest instruction in all that appertains to the preparation or to the gathering of the varied harvests of the waters. In the principal of these institutions the students undergo a three years' course of instruction; the first year in fishculture, sea and river fishing, ichthyology, botany, chemistry, physics, drawing, foreign languages, etc. The second year they study the mechanical arts, boat building, navigation, tin working, fishery jurisprudence; the third year being largely practical instruction, the Government furnishing a number of fishing vessels, each comfortably accommodating twenty-four students, beside the crew, the fishermen and the teaching staff. Among the facilities of instruction are colored representations, in the highest style of art, of ninety-six fishes, in most instances life-size, also a text-book for fishermen, fully and clearly illustrated. Norway, Germany and Holland have likewise schools of fishery instruction, but not upon Japan's impressive scale.

The steadily increasing development of Japan's fisherics challenges our interest, for her enterprise extends to foreign waters. In 1901 she had 1,700 vessels and 8,000 men upon the Korean coast, and 125 vessels and 4,400 men upon the Sayhalien and Siberian coasts. Ere debarred by restrictive legislation, Japanese fishing boats operated largely upon the Skeena and Fraser rivers in western Canada, and also in Australian waters, the alert, quick-witted, knowledge-seeking little Oriental apparently finding everywhere a field of profitable activity.

In 1899 Japan had 400,000 fishing craft in service that directly or indirectly gave employment to 3,338,000 persons, or about a twelfth of the population. The total value of the product was 70,761,846 yen, against but 44,527,645 yen in 1895. Until very recently Japanesc exports to Europe and America were substantially limited to fish oil and pearl shells; but to-day her salt and smoked fish have found a lodgment in European markets with an assurance of a future extensive sale. At the great Russian International Fishery Exposition of last year Japan's exhibit excited exceptional interest; her display, among various other marine products, including sea weeds furnishing glazing or stiffening materials for textile and other fabrics, specimens of pearl shells, worked and unworked, salted salmon roc, canned oysters and mussels, eels in oil, also sardines, fish puddings, codliver oil of exceptionally fine quality, etc.

Japan is no longer like a girl at her first ball, waiting anxiously to be noticed; the throng thiekens about her, and she is to be reckoned with. A. H. GOURAUD.

Fish and Fishing.

Death of L. Z. Joncas.

ONE by one they are slipping away—the friends and companions of our early outing and fishing days, and while it is probably true that the mortality among those whose names are household words to the readers of FOREST AND STREAM, has not increased in recent years, it does seem to me that the obituary notices of prominent anglers have been growing unusually frequent of late, and the intervals which separate them briefer than ever before. The news that Louis Zephirin Joncas, of Quebec, is dead, will doubtless come as somewhat of a shock to many of the readers of this journal, though his more intimate friends have long been aware of the fact that his health was most precarious, and that he was liable at any moment to be carried off by one of the attacks of partial heart failure, to which he had long been subject. Two or three times within the last few years I have been with him away from home when some of these attacks were so severe that his physicians would not answer for his recovery, and it was thought wise to send for a priest to administer the last rites of his church. One of these incidents occured in New York, during the progress of the first Sportsmen's Show in Madison Square Garden, at which he represented the Provincial Government of Quebec. His recovery upon that occasion was undoubtedly due to the unremitting care and attention to his case given by our mutual friend and brother sportsman, Dr. Lewis Rutherfurd Morris. Upon another occasion poor Joncas successfully fought off death in a camp on a salmon river, whence his friend, Jos. X. Lavoie, and the writer sent two Indians down the rapids of the river at midnight to bring up a doctor from the village at its mouth.

For some years past Mr. Joncas occupied the position of Superintendent of Fish and Game under the Government of Quebec, and nobody was better qualified for the office, or could have discharged its duties with a larger measure of intelligence or with greater zeal, devotion and assiduity. Prior to his appointment to that office, he sat for many years in the Dominion Parliament as M. P. for his native county of Gaspé, where his family had long been interested in the fishery industry. It was because of his intimate acquaintance with this industry that he was selected by the Canadian Government in 1883, one of the commissioners to represent the Dominion at the International Fisheries Exhibition held in London, England, and in this capacity he won golden opinions, both from the British and Canadian press. Among his most valued treasures were a pair of beautiful autograph photographs of King Edward VII. and Queen Alexandra, which the then Prince of Wales gave him on the occasion of the exhibition. His paper on "The Fisheries of Canada" was declared by the London Daily Telegraph to have been the most valuable of those read at the congress in connection with the exhibition. It will be remembered that at the Chicago World's Fair, Mr. Joncas was appointed chairman of the jury upon awards in connection with the department of fishery exhibits.

L. Z. Joncas was one of the most efficient anglers with whom it has been my good luck to fish. Tall in stature and of fine athletic build, it was a sight to delight the eye to see him engaged in a fight with a salmon. He was not the man to prolong the battle. He had killed so many salmon in his time, having fished upon almost every Canadian salmon stream, that it mattered little to him whether or not he killed his fish. If he did so, it was because it was well hooked and his tackle in good order. The latter, he used of finest quality, but knew its strength to a nicety, and put it to the fullest test. When he killed a fish he did it in less time than almost anybody else would have done, and if it was lightly hooked it had every opportunity of escape.

An authority upon everything connected with the sports of forest and stream, Mr. Joncas was good enough to join me in the joint authorship of "The Sportsman's Companion in the Province of Quebec," and hundreds of American hunters and fishermen who come here for their favorite sport will gladly testify to the many civilities received at his hands. He had much to do with the establishment of the North American Fish and Game Protective Association, and was its secretary-treasurer until ill-health compelled him to resign the office.

Loyal to his government, loyal to the minister at the head of his department, loyal to his duties and loyal to his friends, L. Z. Joncas will be sincerely mourned by those who knew him best.

E. T. D. CHAMBERS.

San Francisco Striped Bass Club.

SAN FRANCISCO, March 19.—*Editor Forest and Stream:* Inclosed is the score of casting contest held by the San Francisco Striped Bass Club on the 15th. The long distance casting conditions were:

Sinker, 2½ ounces, distance only to count, best cast of five.

For accuracy: 1½-ounce sinker, dropped 3 feet from point of rod, five casts at each buoy placed 50, 75, 100, 125 and 150 feet, in lane 30 feet wide, sinker striking within one foot of buoy to count 100 per cent., each foot away to count 1 per cent. from this.

Distance and accuracy contest (1½ ounce) in a lane 30 feet wide, five casts totaled together.

Long distance, 2½-ounce sinker, first prize a medal. Accuracy and light sinker (1½ ounces) added together; second prize, a trophy.

The judges were Dr. Geo. Gunn, W. A. L. Miller, J. S. Turner, W. S. Turner.

	Long Distance, Feet.	Accuracy, Per Cent.	Distance, Feet.	Total. Per Cent.
F. E. Daverkosen	169	87.84	120.4	104.12
J. Lynch	206	82.2	114.6	98.4
P. W. Shattuck	168	88.84	50.2	69.52
C. H. Kewell	125	50.4	69.6	60
N. E. Mead	125	62.72	47	54.86
Geo. Walters	100	71.4	35	53.2
S. A. Wells	174	66.64	37	51.82

J. Lynch takes prize for long distance, 2½-ounce sinker, with 206 feet.

F. E. Daverkosen takes prize for accuracy and distance, light sinker (1½-ounce), with 104.12 per cent.

C. H. KEWELL.

New Hampshire Early Fishing.

NEWFOUND LAKE, Bristol, N. H., March 30.—The fishing season for landlocked salmon and lake trout will open ten days earlier this year, as the ice will undoubtedly be out of the lake by April 5. It is anticipated the fishing will be the best known for some time, as the 30,000 young fingerlings put in these waters four years ago will be heard from, and the restrictions put on ice fishing have greatly benefited the spring fishing.

Fish and Game Commissioners Nathaniel B. Wentworth and Chas. B. Clark, of Concord, a few days ago arrested one Henry G. Gove, of Orange, for the illegal killing of two deer in that town, which is closed to deer hunting at all times. Gove was arraigned before Chas. W. Fling, of Bristol, a fine of $100 and three months in jail were imposed for each deer, making $200 and six months in jail, which ought to act as a deterrent to those who hanker for venison out of season. Our Legislature has been amending the laws; we note one which again prohibits the selling of lake trout; that will have the tendency to restrict the operations of the market fisherman, who had again been in active evidence the past two years.

S. H.

Close Call for Fishers.

FRANZ MANGOLT and his wife went fishing yesterday afternoon, opposite Locust Point, off City Island, and almost lost their lives. After fishing some hours from a skiff, they started to pull in the anchor, upset the boat, and were tumbled into the water. Both were heavily clothed, and neither could swim, but they had presence of mind to grasp the sides of the skiff. They shouted for help, but as the wind blew from the main land and they were nearly a mile from shore, they were not heard. After being in the water nearly forty-five minutes, Mangolt managed to fire a revolver, which he had in a waterproof case, and the noise of the shots attracted the attention of Capt. Nathan C. Bell, of City Island, who was getting oysters about a half mile away. He rowed to them and arrived just in the nick of time, as Mrs. Mangolt, numbed by the cold water, was losing her hold on the boat.—New York Evening Post, March 27.

"Dogs, Their Ailments and How to Treat Them," by Polk Miller, is the title of a 50-page book on dog diseases which will be sent to applicants by the Polk Miller Drug Company, Richmond, Va. Three cents in stamps, to cover postage, should accompany application. A pedigree blank is inclosed with each book.

Yachting.

Cruise of the Rambler.

Winner of Second Prize in "Forest and Stream" Cruising Competition.

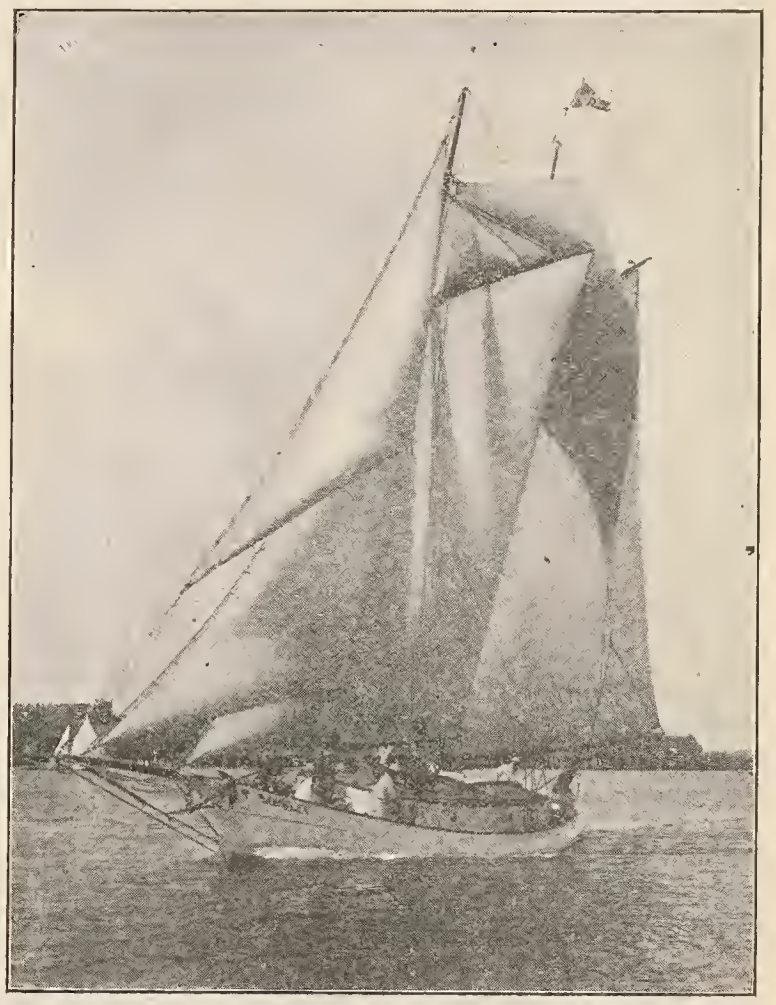
BY WILLARD B. COOK, DENVER, COL.

IN the far northwestern corner of the United States is situated a body of water comparatively unknown to the yachtsmen of the country at large, and yet not only is it without a peer, but it is not even approached in natural advantages by any other body of water with which I am familiar, either by experience or observation. In this connection I speak not only of Puget Sound proper, but include the adjacent waters of the Straits of Juan de Fuca, the San Juan Archipelago and the Gulf of Georgia.

It has been my good fortune and pleasure to spend four summers cruising almost continually in those waters, with which, I think, I can claim a fairly close acquaintance.

If the editor of the FOREST AND STREAM would allow me to string into one narrative all the exciting events that have occurred during these four summers, I could promise you a more interesting yarn; but as one of the conditions imposed is that the cruises of 1902 only are eligible, I must jettison all old cargo and overhaul and put into ship shape only such stores (of experiences) as we have taken aboard during the past summer.

First. The Ship. The Rambler is a keel cruising schooner of 15 tons register, 43ft. on deck, 38ft. on the waterline, 14ft. 6in. beam, and 5ft. 3in. draft. She was built a good many years ago in San Francisco before scantling restrictions were a known quantity, and when it was fashionable to put as much material and strength into a boat as would now be considered sufficient for two. I think her designer decided what cabin accom-



RAMBLER.

modations he required, and then inclosed this cabin in the smallest hull possible. She has a main cabin that will seat about ten comfortably, with a berth on each side back of the transoms. Two good-sized state-rooms with a double berth in each, a toilet room, a galley, and a forecastle with two folding pipe berths for the crew. So much for the internal economy. Now we will take a look aloft. She has pole masts with all her canvas in the lower sails except a small jib topsail and a maintopmast staysail. Her boats consist of a very light 8ft. skiff carried in davits, and a 16ft. Lozier motor yacht tender towed astern.

Second. The Ship's Company. This consisted of the owner (who is trying to write this log), his wife (better known as the Mate), the Lawyer and his Artist wife as guests, and the crew, consisting of Chris., A. B. and Jim, the boy of all work.

We started from Eagle Harbor (8 miles from Seattle) on the 17th of July, bound for Victoria, and a cruise through the San Juan Islands.

What is called the true wind in these waters is the ocean wind, which blows into the Strait of Juan de Fuca and then dividing, follows the channel of Puget Sound to the south, and Haro and Rosaria Straits to the north. Winds from other directions are more or less fluky and not to be depended on. The violent storms (which are almost unknown in the summer time) are southeasters. The northwestern coast is entirely free from the thunderstorms and sudden squalls so common and destructive on the Atlantic coast.

Skirting a rocky ledge projecting straight out from shore on the north side of the Eagle Harbor entrance, we passed through a bed of kelp. As this form of marine vegetable life is of great importance to the inland navigator in those waters, I cannot do better than quote the Century Dictioneary definition: "Large seaweeds of the Pacific coast of North and South America. Its tough, slender stems are said to grow sometimes more than 600 feet long. Ascending from submarine rocks, it reveals their presence to sailors and it forms an extensive tangled mass which serves

on exposed coasts as a natural breakwater." The British Columbia Pilot deseribes it as one of the greatest aids to the safe navigation of their waters, as it almost invariably marks the presence of all submerged rocks. Practically, the only dangers menacing the sailor in those waters are submerged roeks or rocky patches, as sand shoals are unknown, and the water generally of great depth, averaging from 50 to 150 fathoms in most places. This great depth of water is frequently a serious diffieulty in finding a satisfaetory anehorage. One instance was related to me of a large yawl that attempted to anchor in a small bay on the east shore of Vaneouver Island. Not taking the preeaution of sounding, they let go their heavy anchor with 50 fathoms of ehain. It ran out to the bitter end and "no bottom." But as this is supposed to be the cruise of the Rambler and not a technical treatise on the flora and topography of Puget Sound, we will hie back to the yacht, which was just clearing the harbor entrance.

For the benefit of the Lawyer and the Artist, Chris laid hold of some of the big floating bulbous kelp heads and finally sueceeded in hauling aboard one entire plant, its roots firmly interlaced around a rock about the size of a cobble stone. The long stem anehoring the floating bulb to the rock is usually from ¼in. to ½in. in diameter in the lower portion, and able to bear a weight of perhaps 100 pounds without breaking. Sometimes small boats make fast to a buneh of kelp at night instead of dropping anchor.

After getting a eouple of miles on our course, we found a soft spot in the breeze, and lay utterly beealmed for about an hour. Feeling drowsy, all hands but Chris at the wheel, took a nap, while the yaeht drifted aimlessly with the tide. There was a gentle breeze on all sides of us, but none where we were. A big three-masted schooner with an immense deckload of lumber, gradually approaehed, her lofty sails getting the benefit of a breeze that we could not. She was on the starboard tack and headed straight for us. The man at the wheel aft could not see us forward of his mizzen mast on account of the deck load of lumber. Lookout forward was apparently asleep. We were pointing in a direction whieh would have been our port tack if we had been able to derive any benefit from the breeze, which was sending them along. We were absolutely without even steerage way. It was neeessary to act quiekly. I hailed, "Sehooner ahoy! Keep off or you will run us down. We haven't steerage way." The "old man" came stumbling forward over the deekload of lumber, fairly black with rage, and shouted baek, "I have the right of way, you are on the port taek. You will get into trouble if you don't learn the rules of the road." "We know you have the right of way, but we are helpless, without steerage way." Slowly the big sehooner fell off a couple of points, and passed under our stern with a volley of impreeations. Soon after we eaught a little air and drew away with gradually inereasing speed. To our inexpressible joy the lumber sehooner was soon beealmed in the very same plaee from whieh we had just escaped, and remained there for fully two hours, by which time we were five miles to windward. Probably by that time her eaptain was able to appreeiate our former predieament.

As night approaehed, the question arose whether we should run into Apple Tree Cove and anehor for the night or sail all night. "O, let's go into the eove. That's the kind of an oyster I am!" said the Lawyer. We did and lost nothing by it, for the wind went down with the sun before we reaehed the eove, and it was necessary to order forward the tender and tow the last half mile to a suitable anchorage. It is on such occasions that the power tender proves itself almost indispensable, and thanks to its timely assistance, we have spent many a comfortable night at anehor, when, otherwise, we should have been compelled to sail or drift all night in a flat calm.

RAMBLER AND POWER TENDER IN EAGLE HARBOR.

INSERT PICTURE Rambler and Powertender.

Coming on deck the next morning, our first view was of our friend, the lumber schooner, just off the mouth of the cove. She had been sailing all night, and in the calm had made almost no progress, while, thanks to a short tow from our launch, we had spent a snug night at anehor. We hoisted sail and got under way at once, but the wind was very light. The western and northern portions of the cove consist of tide flats, which go bare at low tide. Standing in too close on the north shore we lost our breeze and grounded gently. We immediately ran an anehor out astern and manned the windlass; but all in vain. The tide was falling fast, and we were aground almost the length of the keel. Realizing that we were bound to stay there until next tide, I ordered the sails lowered, furled the mainsail and hauled the main boom broad off on the port side. Taking up the anchor astern, the lower block of the main throat halyard was unhooked from the gaff, made fast to the inboard end of the hawser, and the anchor run out on the starboard beam. We then swayed on the throat halyard until the Rambler sat upright on an even keel. In the course of an hour the water had fallen a couple of feet, and the weight of the boom to port had apparently dragged the anchor a few feet, and given the yacht a slight list to port. The throat halyard was block-a-block, so that no more slack could be taken in on the hawser. Thinking to relieve the strain on the hawser, I ordered the forward guy on the main boom slacked a bit to allow the boom to swing aft. Alas, the guy was slacked too much. The weight and tension of 30 fathoms of hawser on the starboard side pulled her over, and with a rush she keeled over on her starboard bilge in two feet of water.

RAMBLER AGROUND.

The tide was nearly ebb by this time, so we all went crabbing. Chris waded in his rubber boots, while the Artist, the Mate and I took the dinghy. The gymnastics permissible in an 8ft. flat-bottomed boat overloaded with three people, are decidedly limited, and I cannot consistently recommend such a craft for crabbing; but we managed to get a good supply without getting more than moderately wet ourselves.

By 11 A. M. the Rambler was afloat again, and we stood out of the cove, picking up a true north wind outside, which made our cruise a dead beat to Port Townsend against a strong flood tide.

The lumber schooner had worked the ebb tide for all it was worth, and was now 10 miles to windward. We passed her about 4 P. M., although we had lost 15 hours at anchor and aground in Apple Tree Cove. Truly the old hooker was as slow as her skipper's comprehension.

We had a strong wind and a smooth sea all the afternoon, and at 9 P. M. reached our favorite anchorage, near the Government dock—in the lee of Point Wilson. In my opinion this is the best small-boat anchorage near Port Townsend. It is protected by a high bluff from the prevailing winds (here westerly), and is a good point of departure when bound out into the straits. Alongside the eastern side of this Government dock is the best place that I know for beaching a yacht for a coat of copper paint. A hard, clean sand bottom of just the right slope, convenient piles for making fast and about 12ft. range of tide.

The next morning (Saturday) we laid the Rambler alongside the dock, and leaving Chris and Jim to give her bottom a coat of yacht-green copper paint, and the Artist to do some water color sketching under the cockpit awning, I took the Mate and the Lawyer in the launch to the town of Port Townsend, two miles away, to get the mail, stores and ice. Back again at noon, we found the crew had just finished their job ahead of the tide, and the Artist had achieved a fine picture of the Point Wilson Lighthouse, also a splitting headache, due to the blinding light on the water. We had buoyed our mooring in the morning before towing in alongisde the dock, and as soon as the yacht floated we towed out and picked it up again.

That night it blew so hard about 9 o'clock that we let go the spare anchor to prevent any possibility of dragging.

We wished to make Victoria next day, so I turned out with the crew at 3:30 A. M. to take advantage of the ebb tide past Point Wilson. Right here I wish to say that with a flood tide and a westerly wind any sailing craft will make just as much progress at anchor in Port Townsend Bay as in bucking the tide with a head wind. The tide runs here as much as six knots an hour at times, and frequently causes dangerous tide rips outside of Point Wilson. The lighthouse keeper told me he had seen these tide rips make a clean breach over the forward deck of one of the Japanese liners, which had a freeboard forward of fully 25ft. These tide rips, although in deep water, very frequently have much the appearance of seas breaking on a bar at the mouth of a harbor, except that they are shorter, steeper and seem to break in all directions. When running strong they will swamp any small open craft instantly. They are extremely erratic in their movements and appearance, sometimes entirely absent in calm weather and sometimes heavy. Usually they

seem the worst with wind and tide in opposite directions, although I have seen them entirely absent under these very conditions. Sometimes a tide rip half a mile or a mile wide and two or three times as long, will form off Point Wilson and then travel rapidly off toward Smith Island at the rate of 10 or 15 miles an hour, perhaps overtaking some craft in its path, tossing it wildly in its grasp for awhile, then relinquishing it and soon leaving it far behind. Sometimes these rips will present the appearance of a maelstrom with gigantic eddies and whirlpools in which all sorts of debris and even large boats will spin around and around at a speed that will make one dizzy. At such times the sea is seldom breaking, and even a small open craft would be safe if carefully handled. The Government Tide Tables state that the tides of the North Pacific coast are the most complex in the world. It is this uncertainty of the tide rips which has given the passage from Port Townsend to Victoria a dangerous reputation among the local yachtsmen. Personally, I have crossed the straits more than a dozen times in all kinds of weather, and I never saw the rips dangerous but twice, and one of these occasions was on this very Sunday morning.

By the time we made sail, the wind had almost died away, so all hands had breakfast before leaving Port Townsend Bay. We passed Point Wilson about 6 A. M., practically drifting with the tide. We could see a big tide rip breaking badly a mile or so out, and right in the middle of it a halibut fishing schooner of twice our size pitching and rolling, with her sails slatting and booms banging back and forth. We made preparations accordingly, taking the dinghy from the davits and lashing it inverted on the forward part of the cabin house. Ports were closed and hatches made snug. We already had the tender rigged with a painter 200ft. long, and led forward with several turns around the windlass. The Artist was not feeling well that morning, and had remained in bed in her stateroom.

The long Pacific swell was now much in evidence, and in 15 minutes more we drifted into the first rip. There was enough wind to make perhaps a mile an hour if the water had been smooth, but in that seething and tumbling expanse of breakers the Rambler plunged and jumped so that every particle of wind was shaken out of the slatting sails, and steerage way could not be kept even with a course that would bring the wind abeam. One instant her bowsprit would apparently be pointing well toward the zenith and half a minute later it would be buried in some huge wave that would break as far as the mast, and then come swirling aft bulwark-high on both sides of the house, only to pour out over the rail aft as her bow would rise to another.

The tender required almost constant attention. Having no headway, we could not keep away from her by even the length of a short painter, and she was continually trying to ram us on the side or nestle under the counter, where she would unquestionably have been badly smashed if not swamped entirely. It required the constant attention of Jim with the awning pole to keep her clear.

All the sails were slatting furiously, and as the booms swung from side to side about five times a minute, the banging of the lower sheet blocks on the travelers was incessant and nerve-racking.

Presently a weak knocking was heard on the inside of the closed companion doors, which being opened, disclosed the agonized features of the Artist in an advanced stage of mal-de-mer. Imagine what she had endured trying to dress in her stateroom with the yacht plunging like a bucking horse. The Rambler carries very little ballast, and most of that above the keel and well winged out, so her motion is entirely free from sudden jerks, and as easy as anything could be in a sea-way. Her very buoyancy, however, makes her very active and on top of every sea instead of driving through it.

Not to prolong the reader's agony, it may be stated briefly that we passed in succession through three or four of these tide rips with comparatively smooth areas between them, and by 7 A. M. were through the last. The breeze strengthened steadily, and we soon had all we needed with all sail set. It was the true ocean breeze following the same direction as the Strait of Juan de Fuca, which enabled us, after one leg on the starboard tack, to lay our course for Victoria harbor on the port tack. We tore along at racing speed, every sail bulging with the force of the wind and the sheets like bars of iron. The tender towing astern was now fairly tearing through the water, and throwing a bow wave, which would occasionally rise higher than her gunwale, and then the top of it would be caught up by the wind and blown away to leeward, a shower of sparkling spray in the brilliant sunshine. But for the paraffine duck cover stretched over a ridge pole and laced under the gunwale, the tender would have filled a dozen times. The cover was sometimes almost hidden by the wash of the seas over it, but no water was taken inside. By 11 o'clock quite a sea was running, but the wind was steady, and we carried on until the lee deck was full of water, level with the bulwark and the staysail wet ten feet up the stay. Then we started the main sheet and jib topsail sheet a trifle, and went by Brotchy Ledge, at the mouth of Victoria Outer Harbor, at almost steamer speed.

The yacht anchorage is in the inner harbor, called James Bay. It is reached through a rather narrow winding channel about a mile long, but very easily negotiated, as the prevailing wind in the narrowest portion is almost invariably abeam.

James Bay (in which we anchored about noon) is an ideal harbor. Completely landlocked, its environment is enchanting. On one side is situated the beautiful British Columbia House of Parliament. On another side is the Government building, containing the postoffice and custom house. The Victoria Y. C. has a neat club house on the shore close to the Government building, and right here I wish to say that the Victoria yachtsmen are as fine a set of sportsmen as ever gripped a tiller or "tailed on" to a main sheet, and they are most hospitable, making the visiting yachtsmen welcome in a manner that I have never seen equaled in other ports.

Victoria is a delightful spot to spend a week. It has a good park, fine drives, many beautiful houses and an air of restfulness quite in contrast with the cities on this side of the border. The British Government maintains an important naval station at Esquimault, only three or four miles distant, and several warships are always on the station, and their sailors much in evidence on the Victoria streets. Also their brother of the land service, Tommy Atkins, in all the glory of his scarlet uniform and pill-box cap. The most beautiful feature of Victoria is the gorge. This is a narrow arm of the sea which extends for five miles inland from James Bay, and the wooded banks

RAMBLER IN VICTORIA.

of which are lined with the residences of Victoria's wealth and aristocracy. A trip up the gorge in launch, row boat, or canoe is one long to be remembered. We spent five delightful days in Victoria and left with regret. A gentle breeze in James Bay proved deceptive, as a glassy calm covered the straits outside. We hugged Brotchy Ledge Buoy for about an hour. (This hugging of buoys is no sailor's delight, although, as a friend once remarked, "The nun buoys aren't so bad!") Then the tender was ordered out ahead to tow, and we were soon leaving the ledge behind at the rate of three knots an hour, while the steady puff-puff of the launch away out ahead was so conducive to somnolence that even the man at the wheel had to assume painful poses in order to keep awake. There is one advantage possessed by the power tender over auxiliary power in the same hull—perfect absence of vibration and noise. At the end of an hour Chris, in the tender, changed places with Jim at the wheel, and on we went. During the second hour of towing, and when off Trial Island, the true west wind came along and, calling in the tender, sails were trimmed, and we entered Haro Strait. The wind was light and our progress slow. Late in the afternoon it became evident that we should not be able to make our intended destination (Reid Harbor) before the turn of the tide. I therefore determined to make Roche Harbor by going through the Mosquito Passage, a narrow and tortuous passage a mile long. With a large scale chart of the harbor and passage and the assistance of the tender, I had no fear of mishap.

We carried all sail, and at the mouth of the passage the tender could hardly keep ahead, but getting further in, the wind became fitful and the tender was of great assistance, although I am inclined to think we could have made it in half an hour longer under sail alone. The only danger is Pole Islet in midstream, at the inner end of the passage, which must be left to port in entering, while a strong flood tide might draw a craft on to the reef extending from the islet to the west bank.

Once in, Roche Harbor is a perfect protection from any winds. Pearl Island lies in the mouth of the harbor, on the north, making two channels on that side. The next morning we towed out through the channel, east of Pearl Island, bound north. We found a breeze outside coming from the northeast, but a strong ebb tide running west between San Juan and Spieden Islands.

A submerged reef runs out from the northwest point of San Juan Island and terminates in a small rocky islet called Morse Island. The tide runs over this reef like a river. Almost before we knew it we were rushing down upon it in spite of the good breeze, which was enabling us to point due north. We tacked not a moment too soon, and as our new course was east, it was just in the teeth of the tidal current, and we stood almost still. The tide was stronger than the wind, but we managed to work outside of Morse Island, past which we went stern first. It was a narrow escape. If we had been drawn through the passage between Morse and San Juan islands, we should almost certainly have been wrecked on the reef. Also, if we had left Roche Harbor by the channel west of Pearl Island, our utmost efforts could not have prevented us from being drawn into this same passage. On account of having entrances on both the north and the south sides, the tide ebbs and flows through Roche Harbor, and at certain stages of the tides these entrances (all narrow) cannot be negotiated safely by sailing craft unless favored with a free wind. Reid Harbor, in Stuart Island, only three miles north of Roche Harbor, has none of these objections. It is easily entered and cleared at any stage of the tide, and failing a wind, any small yacht can be towed in or rowed in with a pair of sweeps. But more of Reid Harbor when we get to it.

[TO BE CONTINUED.]

Mr. Stanley H. Seaman has made the following sales through his agency: The pole mast sloop Athla, owned by Mr. James A. Keenan, of Washington, to Mr. J. H. Clontier, of Chicoutimi, Quebec; the auxiliary yawl Coon, owned by Mr. Wm. H. Langley, of New York, to Mr. Robert Galloway, of Memphis, Tenn.; the sloop Bonnie Bairn, owned by Mr. Herbert L. Stone, to Mr. Morton H. Smith, of New York City.

Shamrock III. was to have had a trial under sail on Saturday, March 28, but as a fierce gale prevailed throughout the day, she did not leave her moorings. Shamrock III. is now lying in Gourock Bay alongside of Shamrock I. The new boat's mast is considerably higher than that of the old boat, and it is believed her rig will be as large as that of Shamrock II. An innovation in the shape of a wire main sheet will be used on the third Shamrock. She will have quite an amount of American material in her make up. Her steering gear was turned out by an American firm. Some of her hollow wooden spars as well as her blocks were made on this side. The latest reports say the new boat's overhangs are long and well balanced, and her sheer straight. The freeboard is less than that of Shamrock I., but more than the second Shamrock's. It is said that she is 138ft. long over all, with a breadth of 22 or 23ft. at the waterline, and a draft of 19ft.

The hull of the boat has all the refinement of the second Shamrock with all the power of the first one, and it is just here that Mr. Fife's triumph in this model will lie.

The London Field gives the following description of the third Shamrock:

The design of Shamrock, as we indicated some time ago, is much nearer the present British type of racing yacht than that of any recent challenger. The lines, while not so fine and rounded as those of Shamrock II., are still beautifully curved, and there is a distinct impression of speed which was absent from the Watson boat. It is in the formation of the hull that the most marked change is seen. The boat is deeper sided, very easy at the bilge, and has a full underbody down to within 8ft. or so of the bulb, which is shorter than in either of the other two Shamrocks, carries rather more lead, and has a drop of about 2ft. to the heel, while the draft will not exceed 19ft. 6in. She is said to have been built close up to the 90ft. limit, and her over all length is about 138ft.

In the matter of entrance, Fife has greatly improved on the flat spoon bow of Shamrock II., the stem of the new challenger having a sharp edge for 6ft. or 8ft., and then flowing into a full, graceful underside, and the counter being one of the handsomest the designer has drawn. The sheer is very slight, the only noticeable rise beginning at a few feet from stem to taffrail. The beam is calculated at 22ft. 6in., and the greatest breadth is found at 25ft. or so aft of the mast. The bowsprit is an unusually large spar of solid wood, and indicates the probability of an extensive fore triangle. Main boom, pole mast (rather longer than that of Shamrock II.), and gaff are of tubular steel, and the smaller spars, with the exception of the bowsprit, of hollow wood. The sail plan has been variously stated as likely to be greater and smaller than that of the former Shamrocks, but the evidence of things is in the direction of a moderate increase. For purposes of extra strength, the bobstay has been drawn through the stem of the boat and screwed down to the keelson.

Reliance, the new boat building at Bristol, will probably be launched on April 11, the day before Easter Sunday. There is still considerable work to be done on the boat, and it is barely possible that she will not be finished in time to be put overboard on that day.

English Letter.

Shamrock III. was launched on Tuesday last, 17th inst., the event passing off without a hitch. In the morning the weather was very bad, heavy rain falling, accompanied by a high wind. However, just before the time of the launch arrived the sky cleared and the yacht passed into the water in brilliant sunshine. As usual at Dumbarton, this long-legged craft was launched on pontoons, the water being too shallow for her. It is customary on these occasions to become rapturous on the subject of a new vessel's appearance, but in Shamrock's case there is solid ground for high praise. She is of an extremely refined model, and ought to look particularly well when fully rigged. It is said that her draft is lighter than usual—19ft.—but the lead is in the form of a pronounced bulb, so that its center of gravity is probably as low as in her predecessors. The yacht was launched with her bowsprit in place, and, to judge from this huge spar, her sail spread will be very considerably greater than any single-stick vessel has had. All over, the yacht is very fair and round. She has an easy bilge, and this gives her quarters and counter a much lighter appearance than that of the first Shamrock. The floor turns into the fin with an easy curve also, and the stem is not so much cut away down there as to give an abrupt ending to the lower waterlines. Her forward overhang does not appear to be at all extravagant, and, as at the stern, the sections there are fairly rounded, forming an entrance somewhat like that of Khama. For the first time in the history of cutter racing, the tiller has been discarded, and a wheel fitted. I have no doubt that this will be found a great advantage. Immediately after the vessel was floated she was towed over to Greenock and put into dock. The next day her mast was stepped, and the work of fitting out is proceeding with the utmost speed. She will probably have had her first spin before the end of this month. One thing is very certain, viz., that if she intends to part with any of her spars she will have every oportunity of doing so before she leaves the Clyde. The early spring with us is always squally, and the Clyde estuary is one of the squalliest yachting places I know. Therefore, during the next races you may rely on it that no matter what the weather may be like, our boat will not break down. The appearance of the new challenger seems to have pleased everyone who has seen her, and unless Herreshoff has made a very large stride she bids fair to prove a regular teaser. Alike from her moderate draft, her great sail-spread and her fair round body, I should say that she will show up best in weather that will just give a finish within the time limit. The condition of the water will not be of much moment to her.

There is an impression here that Sir Thomas Lipton is not taking the yacht out early enough, and that her trials in American waters are more important than

those that have been arranged over here. On the other hand, the weather likely to be met with on the passage out will be more settled in the latter part of June, and, although the American trials may be of great value to Shamrock's skipper and crew, it is just possible that they may also have some value for those of Reliance.

Talking of International races, that for the Automobile Club's Harmsworth launch cup, will be held in the second week of July. I hear that a French boat is being built to compete, and several are building here to defend it. The power of the French craft is rather greater than that of the British. The difficulty with these boats is to keep them from being top-heavy. I think there is no marine engine made that is suitable for this purpose, and that the first result of the gift of the cup will be a change in the design of engines for racing boats, so as to enable them to stow low down.

Our 52ft. class will be recruited this year with a new boat, for which an order has been placed by Mr. W. B. Paget (owner of the fine yawl Namara) with Messrs. Camper and Nicholson, of Gosport. The design will be by Mr. Charles Nicholson, who may be trusted to turn out a smart boat. He was the designer of that grand vessel Brynhilde.

E. H. HAMILTON.

Design for an 18ft. Knockabout.

THERE appear in this issue the plans of a knockabout that was designed by Mr. Fred D. Lawley to fit the 18ft. knockabout class of the Massachusetts Yacht Racing Association. The boat is being built by Mr. W. J. Edwards, at City Point, under Mr. Lawley's supervision for Mr. L. B. Goodspeed, of Boston. Mr. Goodspeed will race the boat in all the regattas held at Hull and Duxbury during the coming summer.

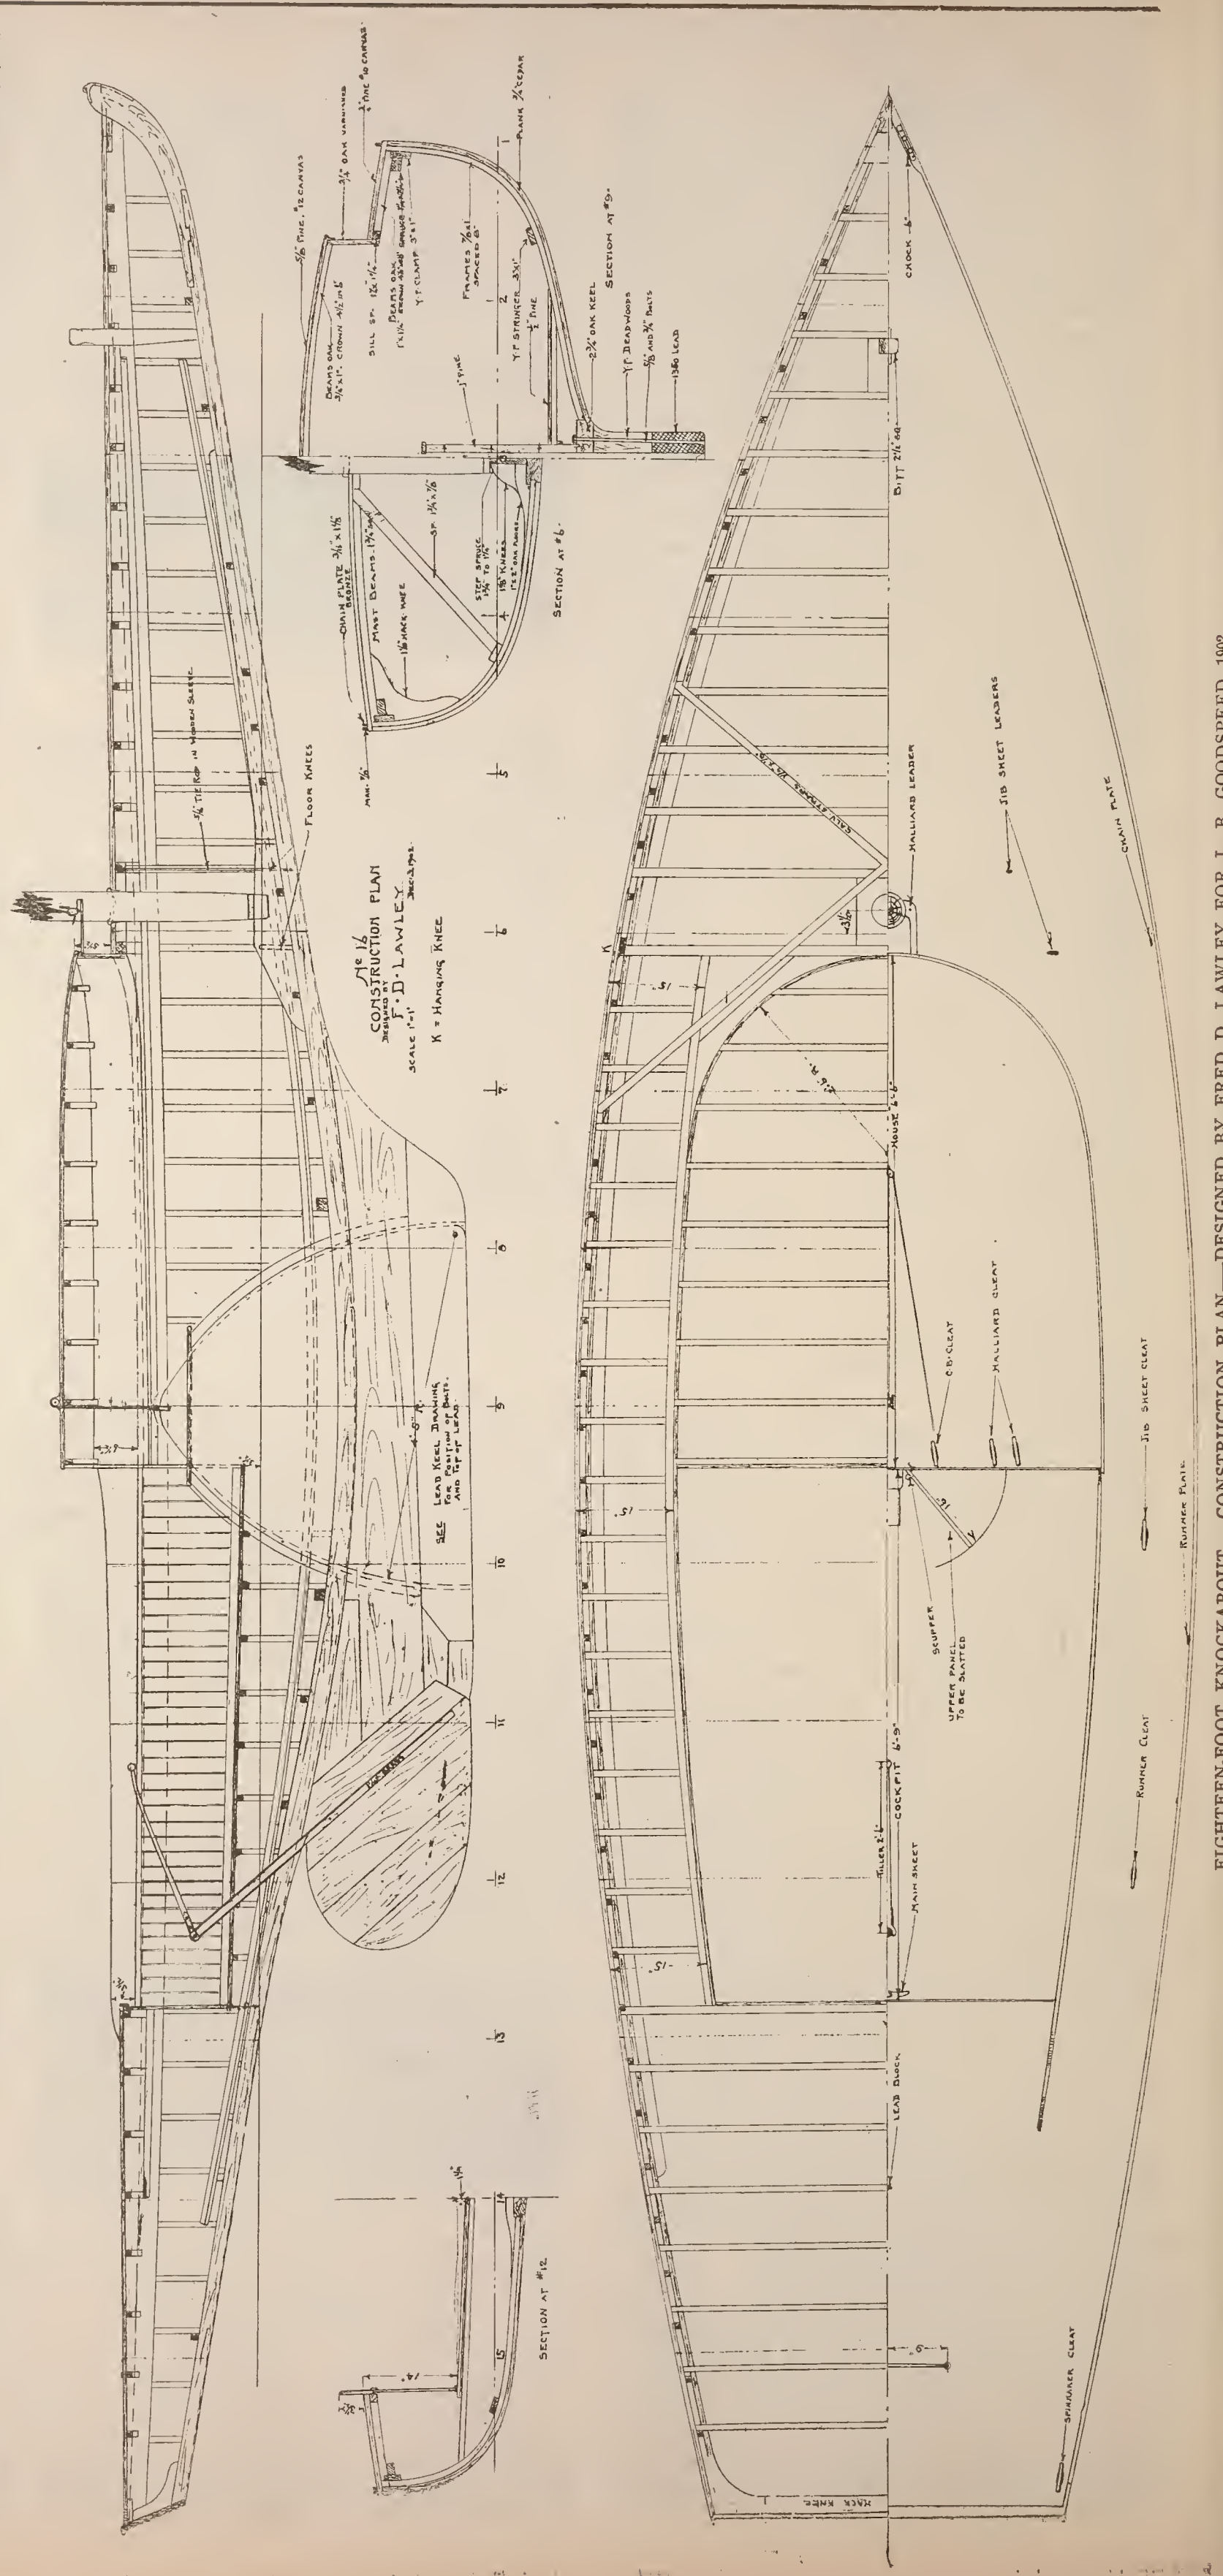
The design shows a nicely turned little boat of moderate displacement, long overhangs and low freeboard. Her bulk is well distributed, and she should prove a smart craft with a good turn of speed.

Her dimensions follow:

Length—		
Over all	30ft.	8 in.
L. W. L.	17ft.	6½in.
Overhang—		
Forward	6ft.	1½in.
Aft	7ft.	
Breadth—		
Extreme	8ft.	
L. W. L.	7ft.	5 in.
Draft—		
Extreme	2ft.	8 in.
With board	6ft.	
To rabbet	1ft.	2½in.
Freeboard—		
Forward	2ft.	¾in.
Aft	1ft.	7½in.
Least	1ft.	5¾in.
Sail area—		
Mainsail	360 sq. ft.	
Jib	90 sq. ft.	
Total	450 sq. ft.	
Displacement	4,110 lbs.	

The boat's construction is simple yet strong, and she will stand a good bit of hard racing without showing any weakness. The cabin house is 6ft. 6in. long and quite low, but still there is enough room under it to afford protection to two or three men. The cockpit is watertight and is 6ft. 9in. long.

The sail plan is well over the boat itself, as the jib sets on the stem head and the boom projects but little over the stern; in consequence she should be very easily handled.



How to Build a Launch from Plans.

"How to Build a Launch from Plans," is the title of a new book, written by Charles G. Davis for the benefit of power yachtsmen, who wish to build their own boats, or who wish to know whether or not they are being built in a proper and workmanlike manner.

The great and widespread interest now being taken in the building and running of power boats has created a demand for a really good work on the subject, and in writing his book Mr. Davis has covered the matter in a thorough and lucid way.

The book, which contains some one hundred and sixty pages, and is handsomely bound in red buckram, is divided into three parts: Part one deals with the subject of displacement; part two covers the building of the boat, and part three treats of the gas engine.

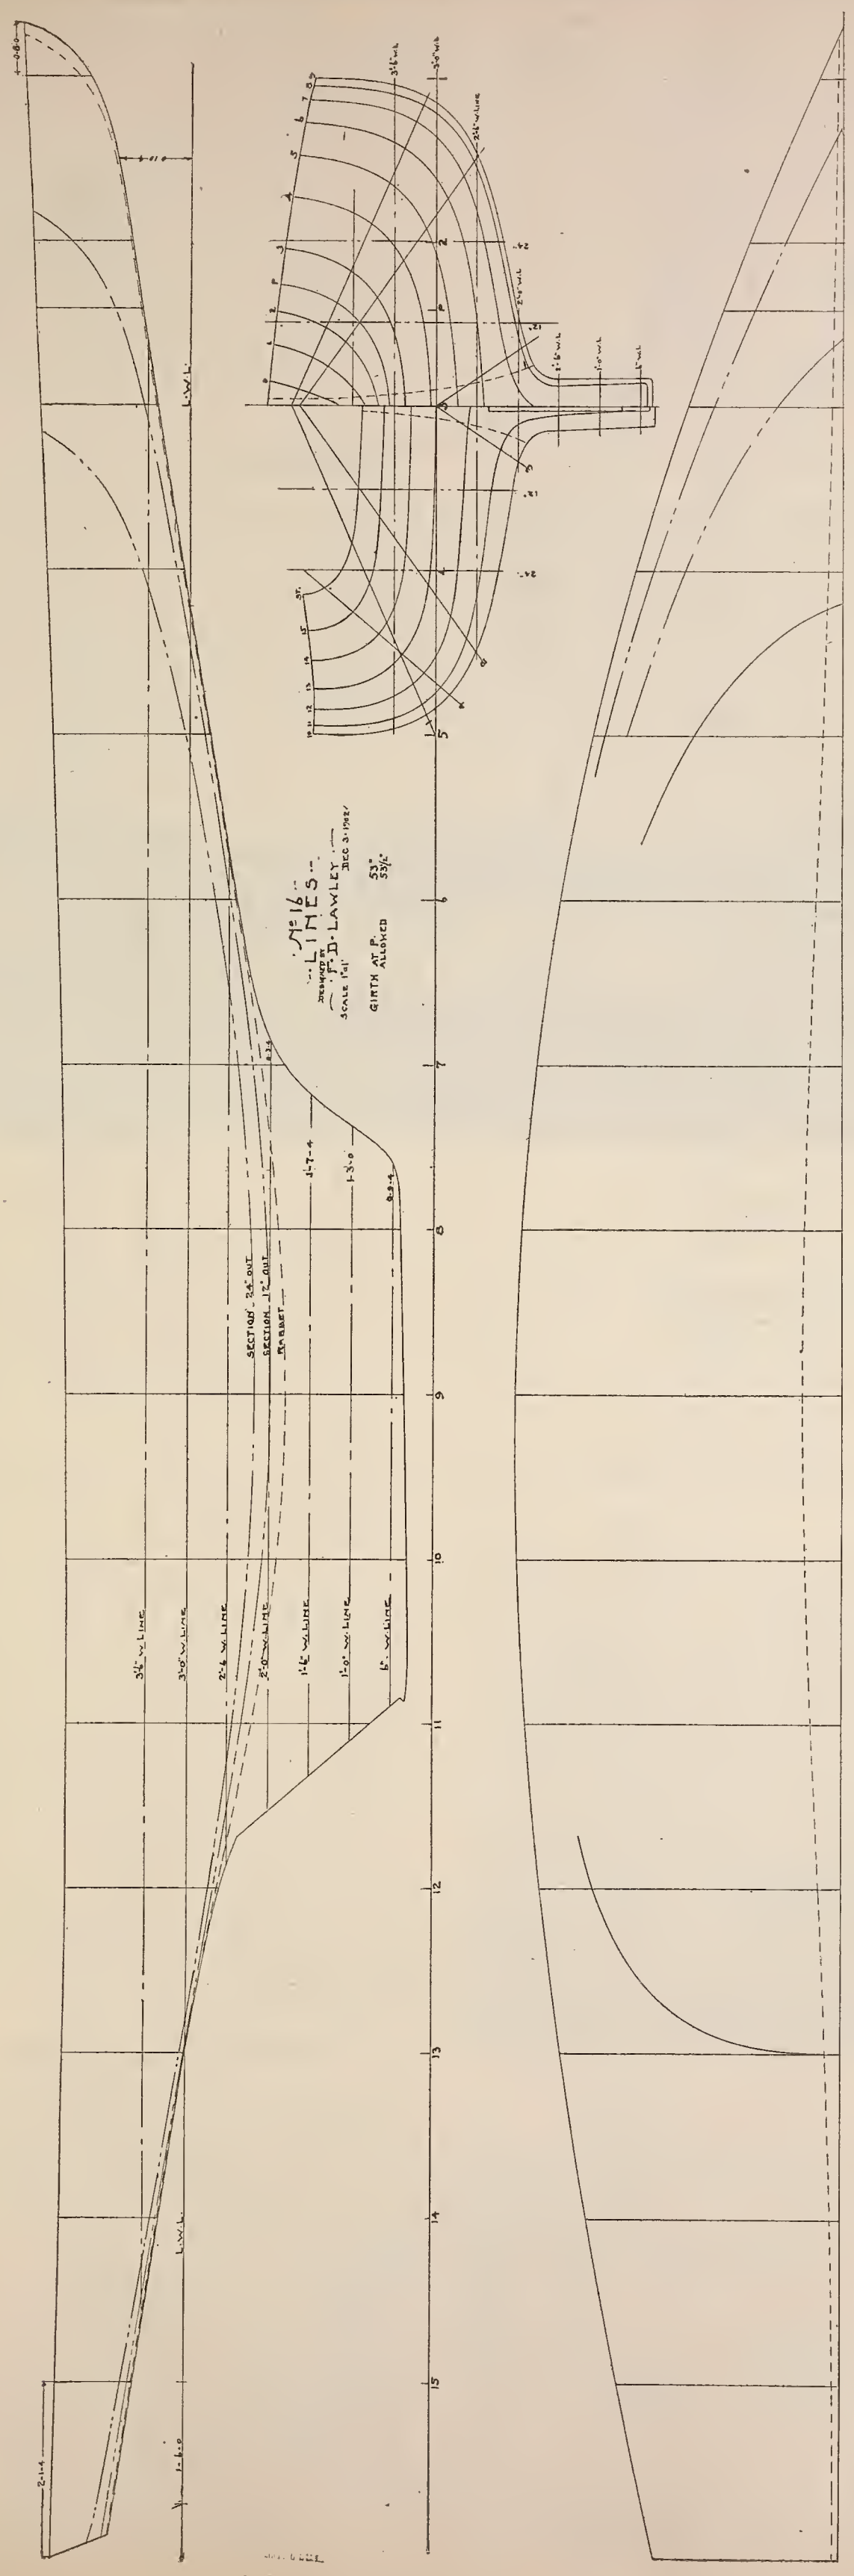
The articles in the various chapters tell what is good construction, what is faulty and why; explains the principles of stability and displacement, and hundreds of other points the amateur should know, but very seldom does.

Beginning with an explanation of the plans, the making of the molds, setting up the keel, framing and planking are described; and so on, step by step, to the end, where many useful hints are given for the care and running of gas engines.

Beside the nine folding drawings, there are eight full-page plates and some forty other smaller diagrams, all of these being specially made for the book by the author. These drawings clearly show the various ways in which the work is accomplished. A photograph of the completed boat forms the frontispiece.

Mr. Davis is a competent authority in this field, and the book will be found a complete and reliable manual for amateur or experienced builder. Prevailing characteristics are lucidity of statement and explicitness of instruction. Forest and Stream Publishing Co. Price, $1.50.

The speed launch designed by Mr. Charles D. Mower for his own use, is being built by the Milton Point Shipyard, Rye, N. Y. The boat will be equipped with a Buffalo gasolene motor. She will be named Express. The name was selected, as it contains seven letters and ends in double s.



EIGHTEEN-FOOT KNOCKABOUT—DESIGNED BY FRED D. LAWLEY FOR L. B. GOODSPEED, 1902.

Boston Letter.

BOSTON, March 30.—One of the pleasing features of the New York Y. C.'s annual cruise this season, to Eastern yachtsmen, at least, will be the presence of the Eastern Y. C. fleet. The presence of the New York Y. C. fleet at Marblehead last season, as the guest of the Eastern Y. C., was one of the features of the season; in fact, it was the feature of many seasons. The members of the Eastern Y. C. would undoubtedly have desired that the New York fleet should again visit Marblehead this season on its annual cruise. On account of the great amount of racing between the 90-footers, however, it was realized by both clubs that this would be next to impossible. So, when the New York Y. C. returned the compliment by inviting the Eastern Y. C. fleet to join the cruise at New London, the invitation was promptly accepted. Arrangements have been made by the Regatta Committee of the Eastern Y. C., so that until the two fleets meet at New London, they will each be cruising in the opposite direction. The Eastern Y. C. fleet will leave Marblehead Wednesday, July 15, and, making racing squadron runs from port to port, will arrive at New London Saturday or Sunday. The two fleets will then proceed in company during the remainder of the New York Y. C. cruise. July 25, the day following the disbandment of the cruising fleet, the Eastern Y. C. will give a race off Newport, open to yachts of the New York and Eastern Y. Cs.

The first few warm days of spring have made the yachtsmen uneasy, and yesterday there were numbers of them about the different yards. Covers were taken off, and, if nothing more was done, they were given a thorough airing in preparation of the heavier work of fitting out. Although the racing season will not actually commence in Massachusetts Bay before the usual time, Memorial Day, it is expected that the yachts will be in the water much earlier than usual. Preparations for early races of the 90-footers have undoubtedly aroused more interest among the owners of the smaller craft. Many of the yachts will be ready by April 19, Patriot's Day, and a number of impromptu scraps will be held at different places. Down in Duxbury Bay, there will be a race on that day between some of the 18-footers that have been built during the winter and a few of last season's boats. More 18-footers have been built for Massachusetts yachtsmen during the past winter than any other type of sailing yachts. It is almost impossible to tell the exact number of new ones at present, as they have been built all along the coast. There will be more of these boats ready on April 19, however, than in any other class, and it is more than likely that scraps between them will be seen in other places besides Duxbury Bay.

The Boston Y. C. has already commenced preparations for a busy season. At the South Boston and Dorchester stations, the floats have been put out and everything is ready for those who launch their boats early. The three delegates of the club to the Yacht Racing Association of Massachusetts, are Mr. Louis M. Clark, Rear Com. Walter Burgess and Mr. Foster Hooper. Mr. Louis M. Clark has been appointed chairman of the Regatta Committee, and Mr. Foster Hooper, secretary.

The House Committee of the South Boston Y. C. has arranged the following list of entertainments for the early part of the coming season: Thursday, April 2, smoker, music and athletic events; Tuesday evening, April 14, fancy dress masquerade; April 19, Patriot's Day, open house, refreshments in the Dutch room; Thursday evening, May 7, hop; Thursday evening, May 28, Beach Comber's party; Memorial Day, May 30, opening of the racing season, refreshments in the Dutch room, open house; Wednesday, June 17, open house.

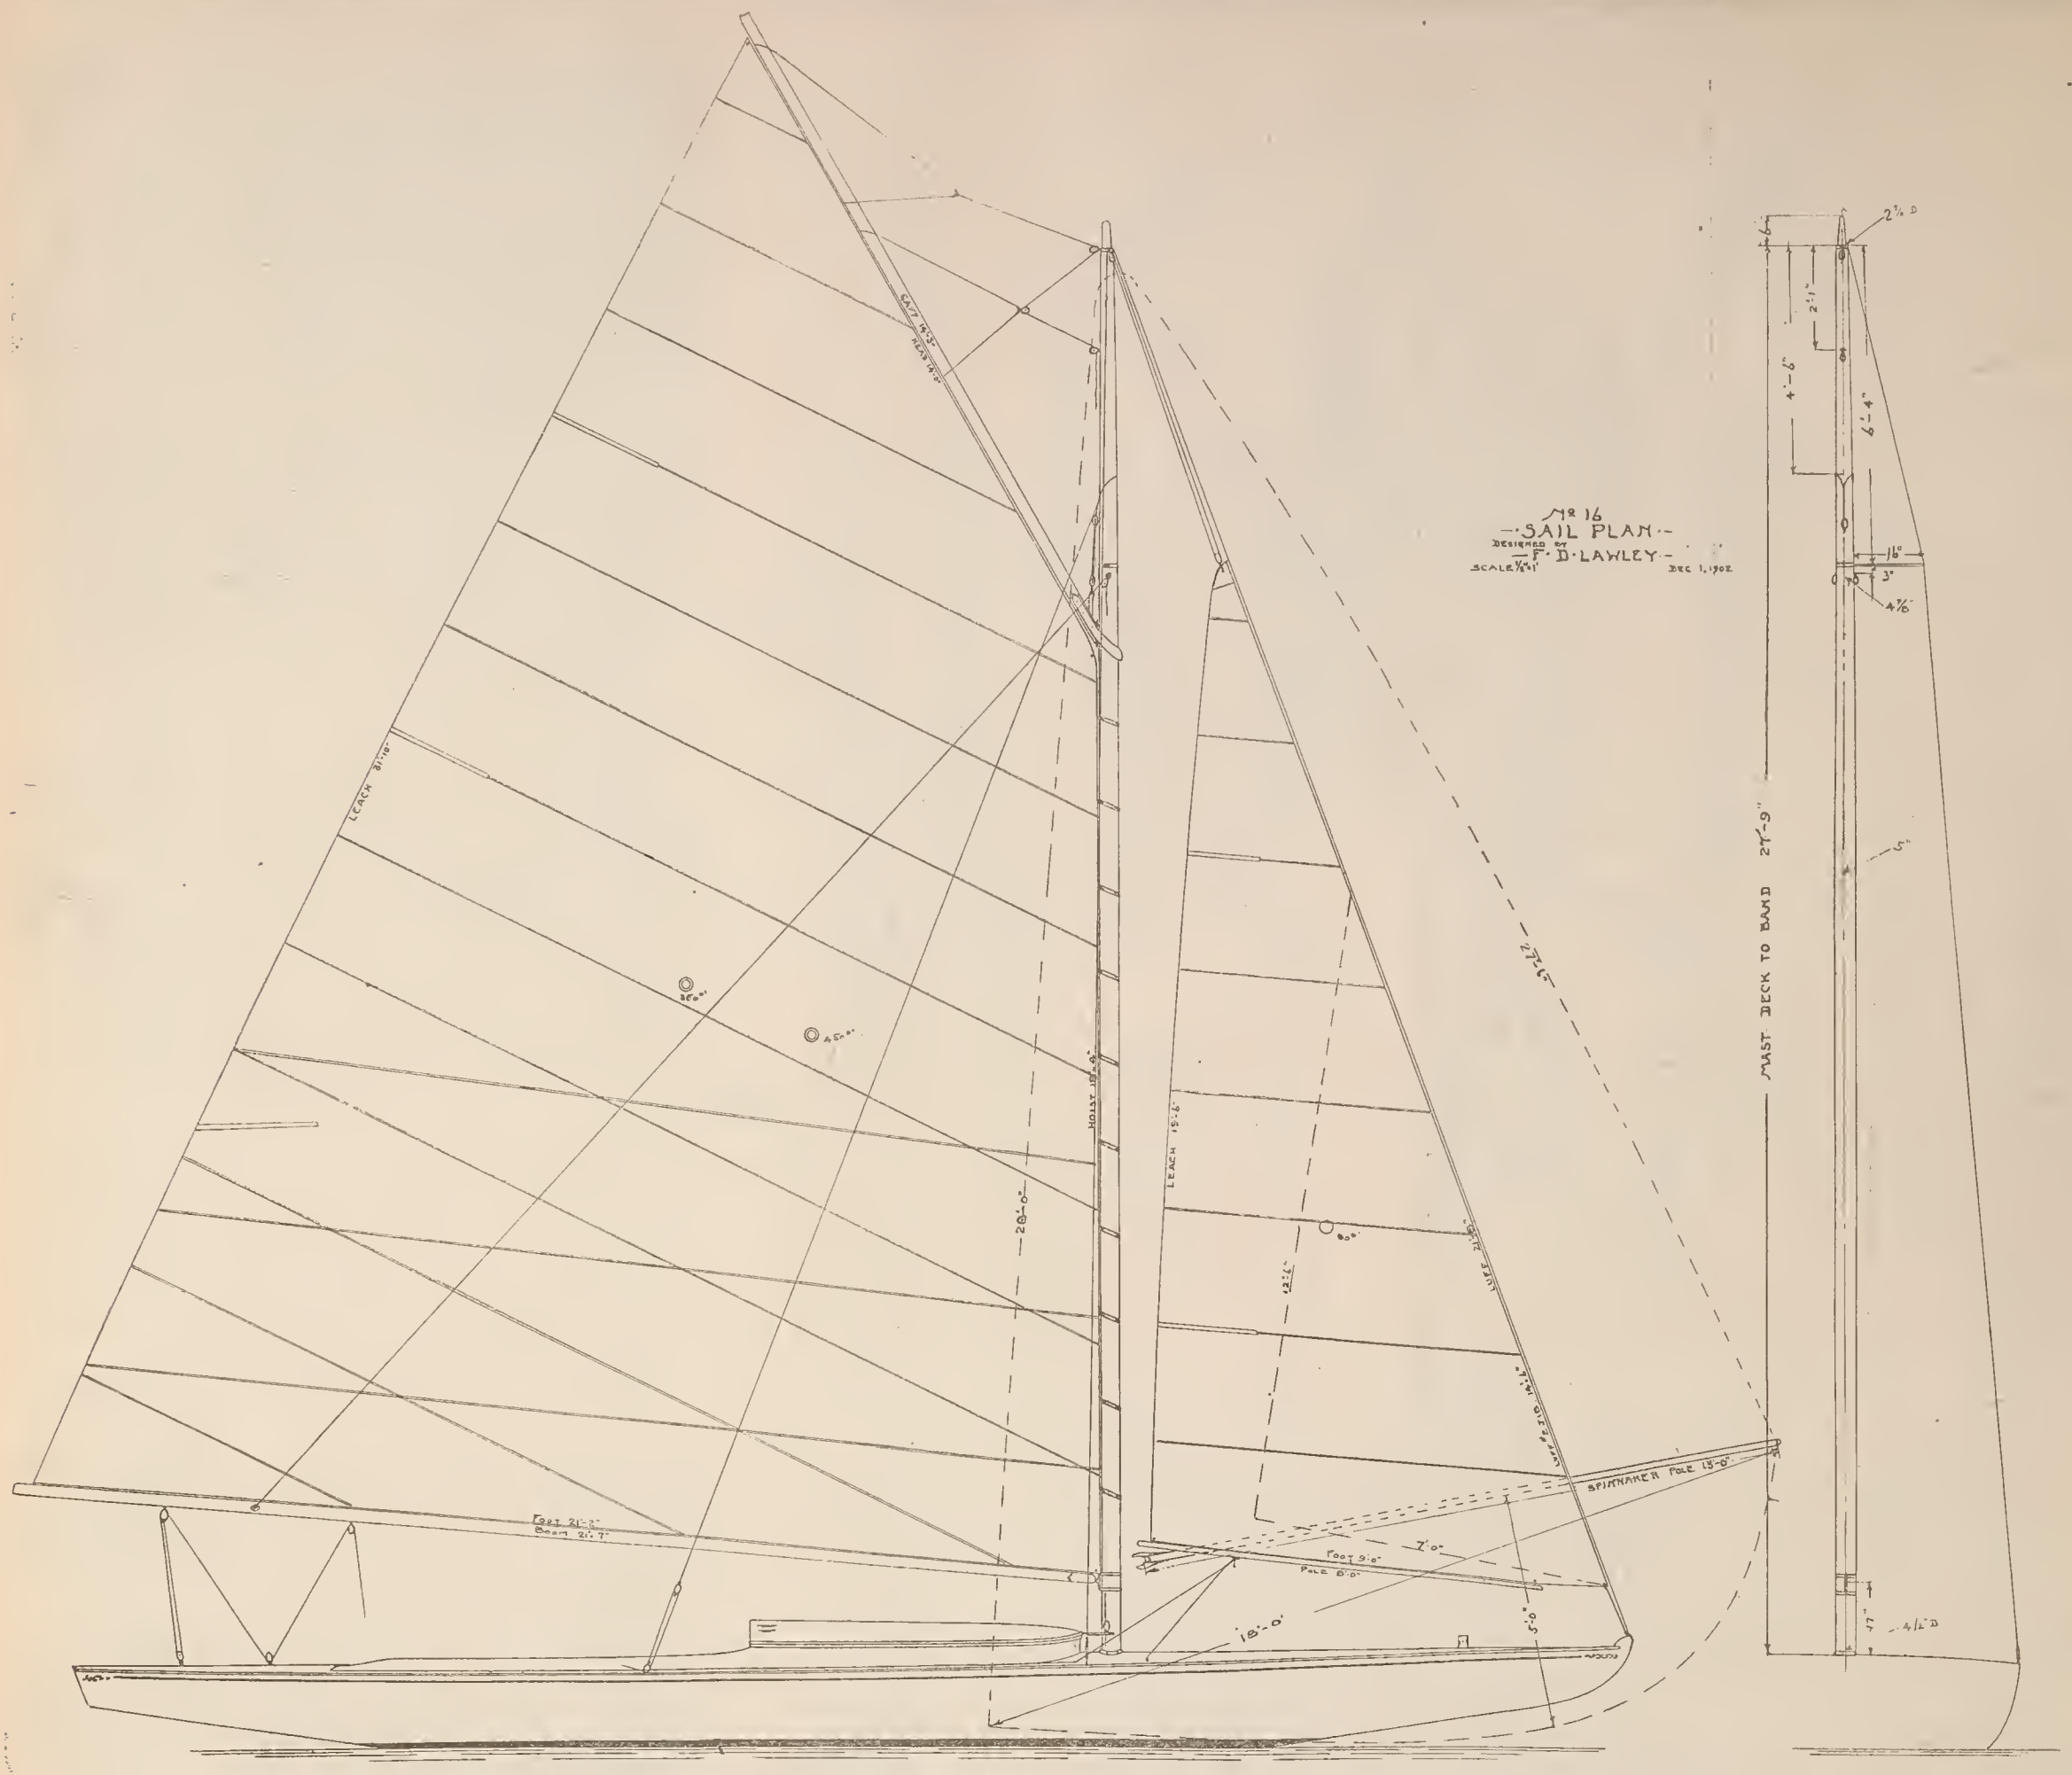
Sally VI., the crack 25-footer, owned last season by Mr. Lawrence F. Percival, having been sold to Dr. Augsburg, a Russian yachtsman, Mr. Percival has ordered from Mr. Fred D. Lawley another 25-footer, Sally VII., to take her place. The new boat will be of the keel type, and will be the only one of this type so far in sight. It is understood, however, that Mr. B. S. Smith, who owned Seboomook last season, will have a keel 25-footer designed and built by Mr. Archie Fenton, of Gloucester. It is said that there was some sort of an agreement between Mr. Percival and Mr. Smith by which one would build a new 25-footer, providing the other should build.

Preparations for a busy season are being made at the Dorchester Y. C. The clubhouse is being thoroughly renovated, and is expected to be ready for occupancy by May 1. The formal opening will be held shortly after that time. All arrangements have been completed for the annual dinner, to be held April 11.

Mr. Charles E. Lauriat, Jr., and Mr. Foster Hooper, of the Boston Y. C., have purchased the 18-footer Gertrude, formerly owned by Mr. H. E. Lynch. She is to be painted black, and her name will be changed to the Crow.

Many of the big yachts have started to fit out in Lawley's basin, and it is expected that nearly all of them will get away early. There is a bunch of three fine cruisers now being rigged at the wharf. One of these is the 60ft. auxiliary schooner designed by Mr. Arthur Binney for Mr. C. H. H. Clark, of Philadelphia; another is the 50ft. auxiliary schooner by the same designer, for Major L. S. Bent, of the Annisquam Y. C., and the third is the 50ft. auxiliary yawl, designed by Mr. F. D. Lawley, for Mrs. Gibson, of New York and Bar Harbor. In the east shop the 57ft. twin screw naphtha yacht, designed by Mr. Arthur Binney, is in frame. The 50ft. schooner for Mr. John M. Richmond, is partly planked. The decks are being laid on the 40-rater for Col. R. H. Morgan, and the 43-rater for Mr. Trenor L. Park. In the west shop the boiler and engine have been installed in the steam yacht for Mr. Charles Fletcher, and the boiler is being put together for the steam yacht for Mr. C. G. Emery. Mr. Fred D. Lawley is designing a 22-footer for Mr. H. H. Walker.

The 45ft. naphtha launch Beth, owned by Mr. H. F.



EIGHTEEN-FOOT KNOCKABOUT—SAIL PLAN—DESIGNED BY FRED D. LAWLEY FOR L. B. GOODSPEED, 1902.

Wilson, of Ballardvale, Mass., has been sold to Mr. Henry T. Smith, of Providence.

The racing cat Kolea, owned by Mr. Joshua Crane, Jr., has been sold to Mr. George Hewlett, of New York.

Shawsheen, a 21ft. knockabout, owned by Rear Com. Walter Burgess, of the Boston Y. C., has been sold to Mr. D. A. Sargent, athletic director at Harvard University.

JOHN B. KILLEEN.

Columbia Y. C., Chicago.

THINGS nautical are looking up out this way. There is a disposition to gather with other yachtsmen and talk about doing things. While the clubhouse is not yet formally opened or the restaurant really in service, there are meetings of the boys Saturday evenings and Sundays, and little dinners served by special arrangements with the steward.

The second monthly dinner, on the evening of March 21, was attended by nearly twice as many as the first one, and the attendance at the first was a surprise to all but the most sanguine of the dinner promoters. The menu was excellent, and the spirit of good comradeship and hearty welcome to new members was thoroughly delightful.

On March 28 occurred an informal smoker, which still further emphasized the fact that this is going to be a banner season for the Columbia Club. From every direction came reports of progress on new boats building, and there are half a dozen sheds in various parts of the city which shelter partially completed hulls. Their amateur owners and builders are hustling now so that they may be in the water and tuned up for the Decoration Day races.

The 21ft. cabin class is the special pet and pride of the club, and competition for the trophy offered by Sir Thomas J. Lipton in this class and held by the club as a perpetual challenge cup, is to be fierce. Bids have been accepted by the club members for two boats in this class. One to be built in the last under direction of Messrs. Small Bros., of Boston, to be called Little Shamrock, is a syndicate boat. The other, the Tantalizer, will be built at Fort Wayne, Ind., by the Keogh Boat & Motor Co., on the order of Com. J. F. McGuire. She will be of the same design and for the express purpose of pitting the Western builders against the Eastern, to see which will turn out the better boat. There is also a deal on foot for a 21-footer to participate in this year's Lipton races, from a design by Mr. C. D. Mower.

Milwaukee will send down two contestants for the Cup—the Pilot, a Massachusetts Bay 21-footer, recently purchased by Mr. R. B. Brown, and a new boat now building by Mr. Otto F. Schamell. Mr. Schamell's boat will be a beauty and an ideal 21-footer. She will be 35ft. 11in. over all, 7ft. 5in. in forward overhang and 7ft. 6in. in aft. L. W. L. beam 9ft. 10in. Will carry 1,540 pounds of lead ballast on fin. She will have hollow spars, and her sail area will be 898 sq. ft. Her cedar planking will be finished natural wood, varnished and highly polished. La Rita will hold the Cup another year if the expectations of her owner, Mr. George R. Peare, are realized. He is having a new hollow spar made by H. Pigeon & Sons, of Boston, and has ordered a new suit of racing canvas from Wilson & Silsby. This will measure 844 sq. ft.—somewhat larger than last year.

The success of the 21ft. class has inspired members of the club to project two other special classes—one of 18-footers for knockabout sailing in home waters, and the other of 25-footers as a cruising class, that will afford comfortable quarters for four or five people, but that will not be costly to construct or maintain. Although nothing definite has been planned as to the restrictions, the idea that seems to meet favor is the adoption of the best features of the 25ft. class of the Y. R. U. Probably the other clubs on Lake Michigan will be asked to participate in the adoption of the rules so as to insure the interclub interest that is always a winning factor in such work. Already there is promise of a suitable perpetual challenge cup, and a championship cup for each season's winner will also be provided.

By action of the club at the March business meeting, the membership dues will hereafter be sixteen dollars instead of twelve dollars per year. No change was made in the initiation fee of ten dollars. One of the members, recently returned from the South, reported a place in the collection of the Southern Y. C. for a Columbia burgee, and an exchange was immediately voted.

One of the needs of the club that the members are discussing is that of a club launch or fleet tender. So much time is lost in calling in a dinghy and rowing back and forth with guests, that the yacht owners would gladly contribute toward keeping in commission a roomy launch for this purpose, and it is hoped that before the season really opens such an arrangement can be made.

E. T. D.

MARCH 30.

Monaloa.

MONALOA was designed by Mr. Arthur Binney and built by the George Lawley & Son, Corp., in 1901. She is built of wood and is 85ft. over all, 81ft. waterline, 11ft. breadth and 4ft. 4in. draft. Monaloa is owned by Mr. Chauncy B. Borland, of Boston.

Pantooset.

THE steam yacht Pantooset was built at the Bath Iron Works, Bath, Me., in 1902, from designs made by Mr. W. J. J. Young. She is built of steel and is 211ft. over all, 175ft. waterline, 27ft. 3in. breadth and 13ft. draft. Pantooset is owned by Mr. A. S. Bigelow, Commodore of the Eastern Y. C.

YACHT CLUB NOTES.

The second general meeting of the New York Y. C. was held at the club house, West Forty-fourth street, New York City, on Thursday evening, March 26. The amendments that were proposed at the February meeting were passed. Among the amendments was the one giving the commodore power to appoint the measurer and fleet captain. Mr. Charles D. Mower will be appointed measurer and Dr. J. M. Woodbury fleet surgeon.

The Regatta Committee announced that the steamer Richmond had been chartered for the use of members and their guests for May 21 and 22, on which occasions the Reliance, Constitution and Columbia will meet over the Glen Cove course; the Cepheus, for the annual regatta, June 11; the Gay Head, for the Astor cups, Newport, July 23, and the Monmouth, for the America's Cup races.

The club directed the committee to place the facilities of the Gay Head and the Monmouth at the disposal of the members of the Eastern Y. C. upon the same terms as for its own members.

The Eastern Y. C. accepted the invitation of the New York Y. C. to join the fleet on the annual cruise.

The German Emperor sent Com. Bourne a cable-

gram, in which he expressed his satisfaction at being elected an honorary member of the club. The following were elected members: Lieut. E. T. Fitzgerald, U. S. N.; Samuel Heilner, Benjamin F. Keith, David H. Lyon, Charles A. Towne, Bexley Hocombe, George K. Kirkham, Dr. Henry F. Owsley, L. G. Schroeder, William D. Hoxie, Ensign Charles E. Courtney, U. S. N.; Dr. Edmund Le Roy Dow, Joseph J. O. Donohue, F. Gilbert Hindsdale, Ensign W. S. Case, U. S. N.; Midshipman Caspar Goodrich, U. S. N.; William R. Wilcox, Robert Olyphant, William B. Simonds, Stephen Baker, Jr., William R. Coe, Dr. Ambrose L. Ranney, Edward Field Goltra, C. H. Simonds, Henry P. Hall, Walter Hauxhurst, William W. Montgomery, Henry Richmond Taylor, Moses Taylor, George W. Elbeins, Lewis Cass Ledyard, Jr., Elliott Johnson, Harold P. Brown, Henry R. Sutphen, John Mulligan, Edward E. Roberts and J. Donald Cameron.

The initiation fee of the Brooklyn Y. C. has been suspended until June 1. The trustees have appointed the following committees: House Committee, John E. Demund, J. A. Voorhees and William A. Maxwell; Reception Committee, Sydney Grant, Edward Salt and E. H. Avery; Finance Committee, Cornelius Fergueson, C. H. Humphreys and John E. Haviland.

The board of governors received bids for an extension of the present quarters at Bensonhurst to be 35 by 70ft. This is to be used for dining and entertainment purposes. It is proposed to give entertainments every two weeks during the season of 1903.

The Regatta Committee of the Larchmont Y. C. is composed of Charles P. Tower, Chairman; Frank Hardy and H. C. Perrin. Com. Adams has appointed Gen. Thomas L. Watson Fleet Captain and Dr. William E. Bullard Fleet Surgeon.

The certificate of incorporation of the Bensonhurst Y. C. has been approved of. The incorporators of the new club are: George Ashton Kay, William R. Sainsbury, George D. Eggert, George Waters, James C. Nicholson, Clarence H. Clayton, Arthur R. Wells, Charles H. Parsons, Arthur C. Bellows and Richard W. Rummell.

The quarters of the Bensonhurst Y. C. will be at the new basin, in process of construction, just below Ulmer Park.

The pennant of the club has alternate red and white vertical stripes, beginning at the hoist and ending with a red triangle at the outer point of the pennant. In all there are four red and three white stripes.

The club's membership will be restricted to 150.

The Bergen Point (N. J.) Y. C. was incorporated a few days ago. The trustees are: Alfred W. Booth, Newton H. Day, Lucius F. Donohue, William R. Wilde, Thomas J. Parker, Middleton S. Borland, Henry A. Wheeler, William W. Gerrett and James D. Boyd.

The club will have a station on Newark Bay, and they will build a clubhouse there.

The Larchmont Y. C. has laid out the following schedule for the coming season:

Saturday, June 13.—Spring Regatta.
Wednesday, June 17.—Races for Reliance, Constitution and Columbia.
Saturday, July 4.—Annual Regatta.
Saturday, July 4, to Saturday, July 11.—Race week.
Monday, Sept. 7.—Fall Regatta.
Saturday, Sept. 19.—Schooner Cup race.

The Gravesend Bay Y. R. A. is now made up of four clubs, Brooklyn Y. C., New York C. C., Marine and Field C. and the Bensonhurst Y. C. The boats will race under the rules of the Y. R. A. of Long Island Sound, and the clubs have laid out the following racing schedule: June 6, Marine and Field Club; June 20, Brooklyn Y. C.; June 27, New York C. C.; July 11, Bensonhurst Y. C.; July 25, Marine and F. C.; Aug. 1, Brooklyn Y. C.; Sept. 5, New York C. C.; Sept. 19, Bensonhurst Y. C.

A general meeting of the Y. R. A., of Long Island Sound, was held at the Arena, West Thirty-first Street, New York City, on March 30.

The officers for the coming year were elected:
President, Thomas H. Macdonald, Bridgeport Y. C.
Secretary, Charles P. Tower, Riverside Y. C.
Treasurer, Edward M. MacLellan, Manhasset Bay Y. C.

Executive Committee—Charles T. Pierce, Riverside Y. C.; Frank Bowne Jones, Indian Harbor Y. C.; Clinton H. Crane, Seawanhaka Y. C., and Robert C. Mitchell, Sachem's Head Y. C.

A number of amendments to the racing rules were considered and discussed. The amendment to adopt the rule of measurement of the New York Y. C. was lost, as was the amendment to change the association's present measurement rule.

The motion "To amend the first paragraph of Section 3, Rule II., by substituting the following in place of the amendment adopted at the November meeting, was passed:

"In pole-masted yachts which carry the upper halyard block on a pennant, the upper point of measurement shall be the point at which the pennant is fastened to the mast."

The following additions were made to Rule XV:

4.—The signal to indicate the end of the starting line on board the race committee's boat shall be a white burgee.

5.—The race committee's flag shall be rectangular, of blue, with a foul anchor and the letters "R. C." in white.

The following racing schedule was adopted:

May 23, New Rochelle Y. C. special.
May 30, Harlem Y. C. annual, Indian Harbor Y. C. special, Bridgeport Y. C. special.
June 6, Knickerbocker Y. C. annual.
June 20, New Rochelle Y. C. annual.
June 25, 26 and 27, Seawanhaka-Corinthian Y. C. specials and annual.
June 29, 30 and July 1 and 2, Manhasset Bay Cup races.
July 3, American Y. C. annual.
July 4, Hartford Y. C. annual.
July 11, Norwalk Y. C. special.
July 18, Riverside Y. C. annual; Corinthian Y. C., of Stamford, special.
July 25, Hartford Y. C. special, Hempstead Harbor Y. C. annual, Bridgeport Y. C. annual.
Aug. 1, Manhasset Bay Y. C. special.
Aug. 6, 7, and 8, Indian Harbor Y. C. specials and annual.
Aug. 8, Shelter Island Y. C. annual.
Aug. 15, Horse Shoe Harbor Y. C. annual, Huntington Y. C. annual, Hartford Y. C. special.
Aug. 29, Huguenot Y. C. annual.
Sept. 5, Indian Harbor Y. C. fall regatta.
Sept. 7, Norwalk Y. C. annual, Sachem's Head Y. C. annual.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

The steam yacht Niagara, owned by Mr. Howard Gould, arrived in New York on March 24, after a fourteen weeks' cruise in the Mediterranean.

Messrs. R. Wallins' Sons, of Bensonhurst, are building an 18ft. catboat from designs by Mr. William H. Hand, Jr., for Mr. George Reiners, of Brooklyn. The boat will be raced on Gravesend Bay.

Eugenia, steam yacht, has been sold by Mr. John B. Herreshoff, of Bristol, R. I., to Mr. T. W. Wheeler, of New York City.

The Metropolitan Boat and Launch Co., Astoria, L. I., has built nine boats for the Red Bank Y. C. one design class. They are owned by the following members of that club: Thomas Byrnes, Andrew Freedman, Jacob Siegel, John G. Gillig, Andrew B. Murray, Whitney Kernochan, Otto Wagner, Adolph Hupfel and Conrad Stein.

Mr. Harrison B. Moore has chartered his steam yacht Zara, through the agency of Messrs Gardner & Cox, to Mr. Henry S. Shipley.

At Byles' yard, City Island, there is building a cruising auxiliary yawl from designs by Mr. Charles D. Mower for Mr. William P. Trench. The boat will be named Yabwoc. She is 32ft. over all, 24ft. waterline, 9ft. 6in. breadth and 3ft. 3in. draft. She will carry 640 sq. ft. of sail, and will have 2,400 pounds of ballast on the keel. The power will be furnished by a 5 horse-power Lozier motor.

The Marine Construction and Dry Dock Company, Mariner's Harbor, S. I., are building a 56ft. auxiliary for Mr. A. A. Blow, of London. The yacht will be fitted with a 20 horse-power gasolene engine. She will be used by her owner on Chesapeake Bay.

Rifle Range and Gallery.

The Palma International Rifle Match.

Under date of March 18 the State Department has received from the British Embassy, Washington, copy of a circular invitation from the secretary of the National Rifle Association, embodying the conditions under which the forthcoming competition for the Palma international rifle trophy will be held at Bisley on July 11, 1903.

The general conditions for the match are:

1. Teams.—Each team shall consist of eight men. Members of the various teams participating must be native born citizens and residents of the countries they respectively represent, except in the case of teams representing a provincial territory of a government, in which case a residence in the province will be sufficient, provided the member is a native born subject of the parent country.

2. Rifles.—The national military arm of the country the team represents.

3.—Distances.—Eight hundred, nine hundred and one thousand yards.

4. Size of Target.—Rectangular, 12 by 6 feet. Dimensions: Bullseye, circular, 36in. diameter; inner, circular, 54in. diameter; magpie, square, 72in.; outer, remainder of target.

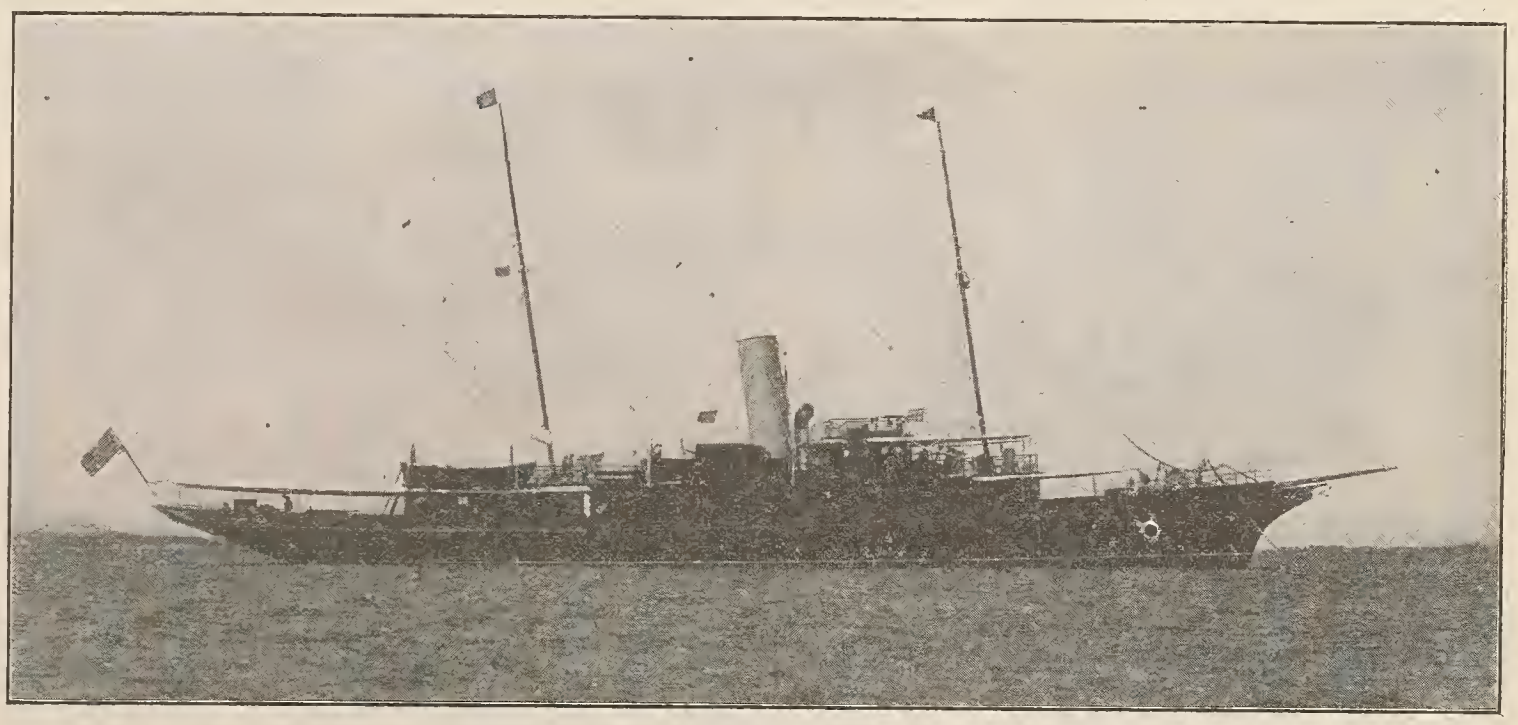
5. Number of Shots.—Fifteen at each distance by each competitor.

6. Position.—Any, without artificial rest.

7. Entrance Fee.—Per team, £3 5s. ($15.81).

The circular adds:

"The council of the National Rifle Association hope that as many nationalities as possible will take part in the match, and they cordially invite the United States to send a team. Long-range accommodation at Bisley will be placed at the disposal of the competing teams before the match for practice, and all arrangements for their convenience and comfort will be forwarded. The secretary of the National Rifle Association (Bisley Camp, Brookwood, Surrey) will be glad to answer any inquiries and to give any further information in his power."



PANTOOSET.
Designed by W. J. J. Young. Owned by A. S. Bigelow. Photo by N. L. Stebbins, Boston.

The $2,500 appropriated by Congress for the purchase of a trophy and other prizes, will be placed by the Secretary of War in the hands of a committee to be composed of two Army officers and nineteen officers of the National Guard of several States. Col. Hall will be chairman of the committee.

The Iroquois Rifle Club, of Pittsburg, will hold a tournament on April 21-23.

Scores of a Beginner.

RIFLE scores by Howard Anderson at Stewartstown, Pa., since Feb. 21, are as follows, shot in all kinds of weather, winds and lights, and were shot with the team on the day set for shooting; ¾in. German ring target, shot from muzzle rest; 200yds. This includes all targets shot since Feb. 21, 30 shots at a heat each day:

				Feb. 21.					
24	24	25	24	23	23	24	24	23	23—237
22	23	23	23	23	23	25	24	25	25—236
21	24	24	25	24	24	22	23	24	23—234
				Feb. 26.					
25	23	24	22	24	23	23	24	25	25—238
24	25	24	23	23	23	23	21	25	23—234
23	24	22	22	21	22	22	23	23	23—225
				March 3.					
23	24	23	25	24	25	23	23	22	25—237
24	21	23	25	22	25	23	24	23	24—234

23	23	23	22	24	24	24	22	24	24—233
24	24	25	23	23	25	24	24	23	24—239
				March 14.					
23	23	24	24	23	23	23	24	21	24—232
24	24	25	23	23	24	24	23	24	24—238
24	24	20	21	24	23	25	23	23	24—231

These scores are not hard to beat by an old rifleman, but I think them good for a beginner. J. W. ANDERSON.

A competition at Sea Girt, N. J., during the first week in September, to be participated in by the Army, Navy, Marine Corps and National Guard is contemplated. It is said that thirty States will be represented. The subject of sending a team to England to participate in a match there will also be considered.

Trapshooting.

Fixtures.

If you want your shoot to be announced here send a notice like the following:

April 1-3.—Grand Island, Neb.—Consolidated tournament of the Buffalo Bill Gun Club, of North Platte, and the Grand Island Gun Club; two days targets, one day live birds. Managers, Geo. L. Carter, North Platte, and Gus Sievers, Grand Island.
April 2-3.—Des Moines, Ia.—Hopkins-Sears Company's tournament.
April 2-3.—Indianapolies, Ind.—Two days' tournament of the Limited Gun Club.
April 7-8.—Peru, Ind., Gun Club's seventh annual tournament. Frank Dunbar, Sec'y.
April 7-11.—St. Joseph, Mo.—Missouri State Game and Fish Protective Association's twenty-sixth annual tournament and convention, under auspices of Metropolitan Gun Club. F. B. Cunningham, Secretary-Manager.
*April 8.—Allegheny, Pa.—North Side Gun Club. L. B. Fleming, Sec'y.
April 10.—North Hudson Driving Park, N. J.—Second annual individual Eastern championship at live birds; 20 birds, $10, birds included.
April 10.—New Haven, Conn., Gun Club's all-day tournament. John E. Bassett, Sec'y.
Aug. 12-15.—Toronto, Can.—Annual tournament of the Dominion Trapshooting and Game Protective Association. A. W. Throop, Sec-y-Treas.
April 14-17.—Kansas City, Mo.—The Interstate Association's fourth Grand American Handicap at targets, at Blue River Shooting Park. One thousand dollars added to the purses. Elmer E. Shaner, Secretary-Manager, 111 Fourth avenue, Pittsburg, Pa.
April 16.—Kent, O.—Portage County Gun Club's tri-county shoot. W. L. Lyman, Sec'y.
April 18.—Glen Rock, Pa.—Open shoot for live-bird championship of York county, Pa., and all-day shoot of Glen Rock Gun Club. Allen M. Seitz, Sec'y.
April 20.—Springfield, Mass.—Spring tournament of the Springfield Gun Club. C. L. Kites, Sec'y.
April 20.—Patriots' Day shoot of the Haverhill, Mass., Gun Club. S. G. Miller, Sec'y.
April 21-22.—Olean, N. Y., Gun Club's fourth annual tournament. B. D. Nobles, Sec'y.
April 21-22.—Attica, Ind., Gun Club's tournament. C. B. Lamme, Sec'y.
April 21-23.—Concordia, Kans.—Kansas State Sportsman's Association's State shoot, under auspices of Concordia Blue Ribbon Gun Club; $300 added. F. W. Olney, Sec'y.
April 22.—Rushylvania, O., Gun Club's shoot.
April 22-23.—Troy, O., Gun Club's tournament.
*April 22-23.—Pittsburg, Pa.—Herron Hill Gun Club. Harry Vandergrift, Sec'y.
April 28-30.—Paducah, Ky., Gun Club's tournament.
April 28-May 1.—Lincoln, Neb.—Nebraska State Sportsmen's Association's twenty-seventh annual tournament, under the auspices of the Lincoln Gun Club. F. E. Mockett, Sec'y.
April 29.—Wellington, Mass.—Boston Gun Club's annual team shoot. H. C. Kirkwood, Sec'y, 23 Elm street, Boston.
May 1-2.—Annual spring shoot of the Glen Rock, Pa., Gun Club. Allen M. Seitz, Sec'y.
May 4-6.—Tournament of the Mississippi Valley Trapshooters' and Game Protective Association, under auspices of Vicksburg, Miss., Gun Club.
*May 5-6.—Irwin, Pa., Gun Club's tournament. John Withers, Sec'y.
May 6-7.—Union City, Ind.—Parent Gun Club's tournament.
May 6-7.—Lafayette, Ind.—Lafayette Gun Club's tournament.
May 6-7.—Titusville, Pa., Gun Club's annual tournament. T. L. Andrews, Sec'y.
May 7-8.—Wilmington, Del.—Wawasett Gun Club's target tournament.
May 9-10.—Chicago, Ill.—Spring tournament of the Grand Crescent Gun Club.
May 12-15.—Pekin, Ill.—Illinois State Sportsmen's Association tournament.
May 13-14.—Crawfordsville, Ind., Gun Club's tournament.
May 13-14.—Dubois, Pa.—The Interstate Association's tournament, under the auspices of the Dubois Rod and Gun Club. U. S. N. Crouse, Sec'y.
May 14-16.—El Reno, Okl.—Oklahoma Territory Sportsmen's Association's fourth annual tournament.
May 16.—East Walpole, Mass.—All-day shoot of the Neponset Gun Club. Edgar Bills, Sec'y.
May 18.—Marion, Ind., Gun Club's tournament.
May 19-21.—Osceola, Ia.—Iowa State Sportsmen's Association's twenty-sixth annual tournament.
May 19-22.—Wissinoming, Philadelphia.—Thirteenth annual tournament of the Pennsylvania State Sportsmen's Association, under auspices of the Florists' Gun Club of Philadelphia. V. V. Dorp, Sec'y.
May 21-22.—New Paris, O., Gun Club's tournament.
May 21-22.—Kenton, O., Gun Club's tournament.
May 21-22.—Kenton, O.—Shoot of the Kenton Gun Club. A. G. Merriman, Sec'y-Treas.
May 24-26.—San Francisco, Cal., Trapshooting Association's three days' bluerock handicap tournament. Open to all; $1,500 added. C. C. Nauman, manager.
May 26-27.—Dubuque, Ia., Gun Club's fourth annual amateur target tournament. A. F. Heeb, Sec'y.
*May 26-27.—Brownsville, Pa.—Brownsville Gun Club tournament. W. T. Doherty, Sec'y.
May 27-28.—Williamsport, Pa.—The Interstate Association's tournament, under the auspices of the West Branch Rod and Gun Club. H. A. Dinnick, Sec'y.
May 27-29.—Fort Wayne, Ind.—Two-day bluerock tournament of the Corner Rod and Gun Club; $100 added. John V. Linker, Sec'y.
May 29-30.—Union City, Ind.—Spring tournament of the Parent Grove Gun Club.
May 30.—Altoona, Pa., Rod and Gun Club's tournament. G. G. Zeth, Sec'y.
May 30.—Tournament of the East Harrisburg, Pa., Shooting Association.
May 30.—Newport, R. I.—Second annual tournament of the Aquidneck Gun Club. J. S. Coggeshall, Sec'y.
May 30.—Detroit, Mich.—Winchester Gun Club's Decoration Day third annual tournament; all day. Rose system and average prizes. Sliding handicap, 16, 18 and 20yds. D. A. Hitchcock, Sec'y-Treas.
June 2-5.—Baltimore, Md.—Third annual Baltimore County shoot; three days targets; one day live birds; $500 in purses and prizes. Hawkins and Malone, Managers.
June 3-4.—Boston, Mass.—The Interstate Association's tournament, under the auspices of the Boston Shooting Association. O. R. Dickey, Sec'y.
June 3-5.—Parkersburg, W. Va.—Sixth annual tournament of the West Virginia Sportsmen's Association, under auspices of Ohio Valley Shooting Association.
June 4-5.—Greenville, O.—Spring tournament of the Greenville Gun Club.
**June, second week.—Memphis, Tenn., Gun Club's tournament.
June 7-8.—Ligonier, Pa., Gun Club's tournament.
June 8-12.—Ossining, N. Y.—New York State shoot, under the auspices of the Ossining Gun Club.
June 9-10.—Lafayette, Ind.—Indiana State shoot, under auspices of Lafayette Gun Club.
June 9-11.—Sioux City, Ia.—Ninth annual amateur tournament of the Soo Gun Club. B. F. Duncan, Sec'y.
June 9-11.—Cincinnati, O.—Seventeenth annual target tournament of the Ohio Trapshooters' League. Chas. T. Dreihs, Sec'y.
*June 10-11.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.
June 16-19.—Warm Springs, Ga.—The Interstate Association's tournament, under the auspices of the Meriwether Gun Club. Chas. L. Davis, Sec'y.
June 16-18.—New London, Ia.—Seventh annual midsummer target tournament of the New London Gun Club.
June 24-25.—Rutherford, N. J.—Interstate Association tournament under the auspices of the Union Gun Club.
*June 24-25.—New Castle, Pa., Gun Club's tournament. James Atkinson, Sec'y.
*July 7-8.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.
July 8-9.—Huntsville, Ala.—The Interstate Association's tournament, under the auspices of the Huntsville Gun Club. E. R. Matthews, Sec'y.
**July, second week.—Shreveport, La.—Cadds Gun Club's tournament.
*July 21-22.—Beaver Falls, Pa., Gun Club's tournament. W. R. Keefer, Sec'y.
July 30-Aug. 1.—Viroqua, Wis.—The Interstate Association's tournament, under the auspices of the Viroqua Rod and Gun Club. Dr. R. W. Baldwin, Sec'y.
Aug. 19-20.—Ottawa, Ill.—The Interstate Association's tournament, under the auspices of the Rainmakers' Gun Club. Paul A. Selember, Sec'y.
*Aug. 19-20.—Millvale, Pa., Gun Club's tournament. Wm. Bussler, Sec'y.
*Sept. 1-2.—Irwin, Pa., Gun Club's tournament. John Withero, Sec'y.
Sept. 2-3.—Akron, O.—The Interstate Association's tournament, under the auspices of the Akron Gun Club. G. E. Wagoner, Sec'y.
*Sept. 23-24.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.
Oct. 6-7.—Allegheny, Pa.—North Side Gun Club's tournament. L. B. Fleming, Sec'y.
Oct. 20-21.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.
**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J0 Bradfield, Sec'y, Vicksburg, Miss.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

The programme of the Olean, N. Y., Gun Club's fourth annual tournament, April 21 and 22, is now ready for distribution, and can be obtained on application to the secretary, Mr. B. D. Nobles, to whom guns and shells may be shipped. The competition is open to all. A distance handicap will be enforced. Targets will be thrown from a magautrap. There are twelve events each day, at 10, 15, 20 and 25 targets, entrance respectively $1, $1.50, $2 and $3. High averages, $10, $7, and $3 to lower average. Rose system will govern division of moneys. Shooting commences at 9:30. Handicap committee: Messrs. F. D. Kelsey, L. V. Byer and B. D. Nobles.

Much dissatisfaction was expressed last year by many of the G. A. H. trapshooters who patronized the Midland Hotel at Kansas City, over the exorbitant rates charged. In some instances they were over double the regular rates for rooms. Mr. A. J. Dean, the manager, writes us on this subject as follows: "While it is not our purpose to criticise what may have happened last year, we wish to assure you and all others who attend the handicap this year that they receive the most courteous treatment and the best accommodations that it is possible for us to afford." The Midland changed its management Sept. 5, 1902.

The programme of the Peru, Ind., Gun Club's seventh annual tournament, promoted and managed by Messrs. J. L. Head and Frank Dunbar, fixed to be held on April 7 and 8, has $25 average money and twelve events each day. Each event is at 15 targets, $1.50 entrance. Shooting commences at 9:30. Ship shells, etc., to Mr. Frank Dunbar. Targets 2 cents. To two high guns and three low guns $5 each. Purses divided 35, 30, 20 and 15 per cent. Every shooter handicaps himself after the event of the first day.

At Central City, Ia., on March 26, Mr. W. B. Linell won high average at the Wapsie Valley Gun Club's tournament with 88 per cent., shooting through the programme, a total of 200 targets. He also won the Wapsie Valley Gun Club's gold medal, competition for which was open to the State of Iowa, scoring 25 targets straight. The Linn county cup, open only to residents of Linn county, was won by F. Brookman, with a score of 21 targets out of 25.

Mr. Gus Greiff, 318 Broadway, New York, informs us that a strong interest is manifested in the individual Eastern live-bird championship, to be held on April 10, at the North Hudson Driving Park, New Jersey. The conditions are 10 live birds, $10 entrance, birds included. A preliminary event, to commence at 11:30 o'clock, has been added, the conditions of which are 10 birds, $5 entrance, one money; ties to be shot off miss-and-out.

The Glen Rock, Pa., Gun Club, will hold its annual spring shoot on May 1 and 2. Competition is open to all. Shooting commences at 9:30 each day. There are totals of 200 targets each day, with a total entrance of $16 on the first day, $15 on the second day. All events handicaps, 14 to 22yds. Each day $5 respectively to high and low guns. Mr. Allen M. Seitz is the secretary, to whom guns and shells may be shipped.

Mr. E. D. Fulford, elsewhere in our trap columns, presents some sound views on the trapshooting situation as it refers to live birds, the harmful significance given by the public to target shooting under live bird names, and the best manner of caring for live birds in confinement, trapping them for competition and marketing them, all of which is worthy of hearty approval and general adoption.

Mr. J. S. S. Remsen, president of the Brooklyn Gun Club, also a member of the Carteret Gun Club and the Crescent Athletic Club, returned recently from his Southern sojourn, part of which was in Florida. It is possible that he may be one of the Crescent team members which joins issue with a team of the Boston Athletic Association this week.

At the tournament of the Jewell, Ia., Gun Club, held last week, Dr. De La, the holder, and Dr. C. M. Proctor, challenger, contested for the Hamilton and Stony county medal. Dr. De La retained possession of the medal by a score of 42 to 40 out of a possible 50 targets. Mr. H. Watson won high average. He broke 925 per cent.

At the shoot of the Poughkeepsie, N. Y., Gun Club, on Saturday of last week, Mr. Frank I. Fenn scored the first win on Marshall cup, in the first competition for it, breaking 22 out of 25. which, with 3 allowance, made a straight score. The cup must be won six times before becoming personal property.

The shoot at Smith Brothers' grounds, Newark, N. J., April 16, starts 10 o'clock A. M. sharp. The main event is a handicap at 20 birds, $10 entrance, birds included, two moneys for each ten entries, high guns. About twenty-five shooters have already signified their intention to participate in this contest.

Officers elected recently by the Fitchburg, Mass., Rifle and Gun Club are as follows: President, James B. Austin; Vice-President, Dr. Russell Bingham; Secretary E. B. Gilson; Treasurer, C. F. Lamb. Directors: I. O. Converse, M. A. Cutler, E. A. Kirkpatrick, H. A. Estabrook and S. W. Putnam.

Teams of the Princeton Gun Club and the De Lancy School of Philadelphia, five men on a side, contested on the grounds south of the Princeton campus, March 25. Each contestant shot at 30 targets. There was a tie on 108, which was shot off at 5 targets, De Lancy winning by a score of 22 to 18.

Latest advices in New York concerning the condition of Mr. Harold Money, who has been suffering from a severe attack of typhoid pleuro-pneumonia, were that his convalescence is slow. The high fever persists stubbornly, and does not yield to treatment; yet he is improving on the whole.

The Bristol Shooting Club and the General Wayne Gun Club shot a match at Bristol, Pa., on March 25, ten men to a team, 10 live birds per man. General Wayne Club scored 76 to 64. Each club has scored a win, and the third match will be shot April 15 on the Wayne club grounds.

Mr. J. A. R. Elliott, the famous trapshooting champion, made arrangements to leave New York for Kansas City on Thursday or Friday of this week. He will participate in the competition of the Grand American Handicap at targets.

Mr. C. G. Blandford, of the Ossining, N. Y., Gun Club, writes encouragingly of the forthcoming New York State shoot. He maintains that some valuable prizes have already been received and many more are pledged.

Secretary-manager Elmer E. Shaner writes us that "the Interstate Association has made arrangements to give a tournament at Rutherford, N. J., on June 24 and 25 under the auspices of the Union Gun Club."

The Crescent Athletic Club's last shoot of the spring season took place on Saturday of last week. The team match with the Boston, Mass., Athletic Association Gun Club was fixed to take place on April 4.

Mr. Arthur Gambell, superintendent of the Cincinnati, O., Gun Club, has met with an unfortunate accident. He recently wrenched his knee severely by a fall, and will be laid up a couple of weeks in consequence.

Mr. Elmer E. Shaner, the secretary-manager of the Interstate Association, informs us that after April 1 his address will be 219 Coltart Square, Pittsburg, Pa.

Mr. Frank Lawrence, eminent as a salesman of ammunition, was a visitor in New York this week.

BERNARD WATERS.

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., March 28.—The weather conditions today were anything but favorable to trapshooting. A strong north wind, bordering on a gale, blowing directly into the trap house, had the effect of raising the targets so high that at times it would have been difficult to reach them with a high power Government cannon, much less a shotgun.

The principal event to-day was event No. 3, for the Marshall cup, which was put up for competition for the first time to-day. This is a handsome trophy, and must be won six times before ownership is established. It is to be shot for weekly, and is a handicap event. Our system of handicapping is as follows: 80 per cent. or better, scratch; for every 5 per cent. lower than 80, one miss is allowed as a break. Average is taken from each man's last two performances, and handicap given accordingly.

In future teams to represent the club will be made up of those having the best general average. Captain Traver was the only scratch man to-day. Mr. Frank I. Fenn carried off the cup by breaking 22, which with his 3 misses allowed as breaks, gave him a clean score of 25. Mr. Fenn's shooting to-day was excellent, considering the weather conditions. Scores below:

Events:	1	2	3	4	5	6	7
Targets:	25	15	25	25	10	10	10
A L Traver	18	..	16	..	6	6	8
H W Marshall, 2	6	5	18	13	5	7	5
H E Winans, 1	15	..	14	..	6	6	5
M S Pickenpack	7	..	..	13	..	..	..
*W D Briggs, 1	15	..	10	..	..	..	..
F I Fenn, 3	18	..	25	..	..	..	..
M F Hoctor, 6	12	..	20	..	3	8	6

*Briggs shot but 20 rounds in event No. 1.
The figures after the names are the handicaps in No. 3.

SNANIWEH.

General Wayne—Bristol.

BRISTOL, Pa., March 25.—The second shoot of a series arranged between the General Wayne Gun Club, of Torresdale, Pa., and the Bristol Shooting Club was pulled off here to-day. The visitors were winners by the score of 76 to 64. A large and enthusiastic crowd of friends were on hand, and every good kill and stop won rounds of applause from both sides.

Betson, for Wayne, and Nevergold, for Bristol, killed straight, Closely followed by Schwartz, of Wayne, and Van Artsdalen, with 9 each.

As each club has won one match of the two shot, the deciding one, by reason of toss, will be shot on Wayne's club grounds on April 15, and it is expected a large turnout of friends of both clubs will be on hand. The grounds can be directly reached by trolley from Holmesburg Junction, or by change of cars at Frankford to those of the Torresdale line.

Schwartz	2222212021— 9	Hall	1121012220— 8

R. SNYDER, Official Scorer.

Wingohocking Gun Club.

PHILADELPHIA, March 26.—The monthy shoot of the Wingohocking Gun Club took place to-day on the club grounds. Perfect weather conditions prevailed, and the birds were the best and strongest in the history of the club. The attendance was small, owing to the shoot between the club and North Wales last week.

The five men who faced the traps were well repaid for their presence, as it was a question of getting your bird right at the traps. Campbell was high gun, dropping but 1 of his 14 birds, using his second barrel but four times. Scores:

Greenwood	0212220221 — 8	Foster	0011001012 — 5
Campbell	12110211121211—13	Hothersall	1100210221011— 9
Bradhurst	0001121000 — 4		

WM. DEDAR, Sec'y.

Advice to Live Bird Trapshooters.

UTICA, N. Y.—Probably no one in this country suffered more (financially or otherwise) than the writer on account of the law passed prohibiting live birds to be used as targets. There were several things that brought this about, not connected directly with pigeon shooting. In the first place, we were made to suffer for the acts of careless riflemen. The opposition showed where a turkey had been hit over fifteen times, and was still being shot at as it stood on its feet. To score it must be killed or shot down. They also showed where pigeons were released with strings tied on them; and if they were missed they were pulled back and shot at again, and so on until they were killed.

The bluerock shooting has been interpreted by the public generally to mean pigeon shooting. Here in Utica I cannot find sixty men who shoot in the trap and field together. We will say sixty for argument sake. A city of sixty thousand inhabitants—one shooter in every thousand. This is a fair average all over the United States.

As a New York paper put it, a mother left her home in Long Island to visit her sick daughter, with a little basket of pigeons to be released according to the daughter's condition. On her arrival, the mother bird is released with a loving note for home. It stops at Interstate Park to pick up a few kernels of corn, and is brutally slaughtered by so-called sportsmen, not only killing the mother bird, but killing her young, beside stopping the loving message, etc. Now, nine hundred and ninety-nine people believe that this is a fact, while the one knows it is a falsehood.

"Thousands of bluerocks slaughtered by the heartless sportsman." How many brother sportsmen have seen that in the daily press and laughed at its foolishness? Still, nine hundred and ninety-nine out of every thousand people that read this believe it where the one man who knows that it is false.

We should settle on a name that leaves no doubt, even in a child's mind. To my mind the name of clay bird is the proper name; and if for trade's sake the manufacturer wants his trade name, let him call it bluerock clay bird, or the blackbird clay bird, or the flying target clay bird, or the dickey clay bird, or the coast pigeon clay bird, or the redbird clay bird; and if club secretaries would use the name clay bird there would be no more misunderstanding.

It is an absolute fact that the slaughtering of the dickey birds, the slaughtering of the bluerocks and the slaughtering of the poor blackbirds had a great deal to do with defeating pigeon shooting in New York.

For the benefit of those who shoot pigeons in States where it is legal, the following directions should be followed, if you wish to continue pigeon shooting:

The pigeons should be kept in coops as large as possible, with large flyways. Absolute cleanliness is the important point. Have plenty of fresh water, gravel, pounded clam shells mixed with rock salt; corn, cracked wheat, barley, buckwheat, rye, mixed, all they can clean up twice a day.

Catch them the night before the shoot and put them in clean, roomy coops, with chaff or cut straw to keep them clean. Catching them in daylight destroys many a good bird by wrenching their wings in the struggle to get away. Put them in the traps clean, warm and dry.

The birds should be gathered instanly; grounds should be picketed and wounded birds killed. The dead out of bounds should never be reported, as it shows bad shooting and a lingering death.

Pigeons must never have food or water in their crops to fly well, When killed, they should be put in a barrel of ice water, then picked, iced, tied in bunches of six and markcted. The above bleaches them and makes them look plump and fat, and command a good price.

From a humane standpoint, trap and retrieve from pit where possible with boys or dogs, keeping the wounded birds out of sight in their death struggles; and if there is any neck wringing or dogs biting wounded birds, keep it where spectators and shooters cannot see it.

You might say my hind sight is better than my foresight; but I foresaw this years ago, as my retrieving pits and traps will prove; and if the management of Interstate Park had adopted my plan of putting three retrieving pits near boundary it would have taken a big club out of the opposition's hands.

E. D. FULFORD.

Houston Tournament.

HOUSTON, Texas.—The tournament of the Houston Gun Club was held March 17 to 19. On each of the first two days there were ten 20-target events, $2 entrance, $20 added. On the third day there were five 20-target events, $2 entrance, $20 added; one at 50 targets, $5 entrance, for a loving cup, and one at 25 targets, $2.50 entrance, for Schmelzer cup.

Mr. Bert Everts was squad hustler. Mr. P. H. Rider was cashier. Mr. Maurice Kaufmann was manager.

On the first day Messrs. R. O. Heikes, of Dayton, O., and Mr. J. E. Russell, of Dallas, respectively professional and amateur, tied on 92 per cent., 184 targets out of a possible 200. Mr. Frank Faurote was professional high gun for the three days. Mr. R. O. Heikes was second.

Mr. Bryan Heard, of Houston, won the gold medal donated by the Peters Cartridge Company for amateur high average for the three days, and he also won the Houston Gun Club $100 silver loving cup with a score of 49 out of 50.

The Schmelzer silver trophy was won by Mr. J. A. Jackson, of Austin. He tied on 24 targets out of 25, with Mr. Otto Sens, of Houston, and in the shoot-off the scores were 24 to 23.

Mr. Bryan Heard took out a party of shooters on his yacht Stella. The totals follow:

	First Day. Shot at.	Broke.	Second Day. Shot at.	Broke.	Third Day. Shot at.	Broke.	Total Shot at.	Total Broke.

S. J. SMITH, Sec'y.

Keystone Shooting League.

HOLMESBURG JUNCTION, March 28.—Mr. I. Budd was again the star performer at the shoot of the Keystone Shooting League to-day. He killed 24 out of 25 in the two events, 10 and 15 birds respectively.

In the club handicap at 10 birds, Budd, Geikler and Felix ran straight. Fitzgerald, Harrison, Harvey and Powers scored 9 each.

Budd, Fitzgerald, Harrison and Morris were high with 14 out of 15 in the officers' trophy event. Scores:

Club handicap, 10 birds: Budd 10, Geikler 10, Felix 10, Fitzgerald 9, Harrison 9, Powers 9, Harvey 9, Morris, Sr., 8, Morris, Jr., 6, Francis 5.

Officers' trophy, 15 birds: Budd 14, Fitzgerald 14, Harrison 14, Morris 14, Geikler 12, Powers 12, Harvey 10.

ON LONG ISLAND.

Crescent Athletic Club.

Bay Ridge, L. I., March 28.—The final shoot of the Crescent Athletic Club season was held here on the club grounds to-day and was well attended. Mr. A. R. Fish scored a win on the March cup. The scores:

March cup, 50 targets, handicap allowances added:

	Hdcp.	Brk.	Tot'l.	Hdcp.	Brk.	Tot'l.	Total.
A R Fish	2	23	25	2	21	23	48

IN NEW JERSEY.

Hell Gate Gun Club.

Carlstadt, N. J., March 24.—The Hell Gate Gun Club held its March shoot to-day on Outwater's grounds. The birds were fast for the first squad of nine men, after which they were fair. The wind was strong east to southeast, which made the birds strong drivers, slightly quartering to the left. Messrs. Schlicht, Trostel, Kreeb and Deady used excellent judgment on good birds. The visitors were Moore and Cody, of the Emeralds; Matzen, of Boiling Springs, and Packard, of the Jeannettes. Mr. L. C. Schortemeier acted as schuetzenmeister and stopped approximately 50 birds after they had been missed, and were far out of bounds, and added them to the meat pile for division among the contestants. Mr. Outwater's dogs worked well. The conditions were 10 birds, point and rise handicaps. The scores:

F Trostel, 28.....1012112111— 9
A Belden, 28.....1000201222— 6
Dr Davis, 28.....0*01202100— 4

MANHATTA.

Jackson Park Gun Club.

Paterson, N. J., March 28.—To-day the Jackson Park Gun Club held a shoot at live birds on their grounds, and what should have been a well attended shoot had to be content with the counter attraction at Bunn's, and which had been advertised for to-day. Mr. G. A. Hopper, our secretary, being tied down to business, which is at its height just now, could not find time to mail cards of our shoot, and only five men put in an appearance, and as we had two visitors, Koegle, from Newark, and Mr. H. S. Sidway, of Pittsfield, Mass., we started in for a good afternoon's sport; but we hadn't got going very far before there were signs of a storm coming down on us, and everybody began to move about. Those who drove up from the city were soon off, and there were some fine trotting scenes on the road for a few minutes. Before long there were signs of the storm disappearing in another direction, and things after a few minutes' delay were started going again under much more favorable conditions.

The birds were a corking good lot after the storm, and many fine shots were made. Morgan shot in good form, and scored 29 out of 32. Powers, the popular boy coming to the front very lively, was centering his birds in good shape and holding his own.

Mr. Sidway appeared to have a bad streak after starting the 12-bird event, losing 3 in succession, one just over the wire; but otherwise shooting in good form.

Koegle shot only in one event, misjudged his second bird, and it got away without the loss of a feather. He went away when the storm came up. It transpired that the storm was the means of bringing the shoot to a halt, as all the shells were gone to Paterson at least. Mr. G. W. Hopper in mistake put those belonging to Morgan and Powers in his carriage and took them back to town, thinking there were plenty at the club. We were back earlier than usual. The club has a fine lot of birds on band for to-day's shoot, and owing to the non-appearance of the shooters and the counter attractions we will hold another shoot next Saturday, April 4, when we expect a large crowd. There will be a fine deer's head shot for on that occasion.

No. 1 was at 5 birds; No. 2, 12 birds; No. 3, 10 birds, $4; No. 4, 10 birds, $4. The scores:

	No. 1.	No. 2.	No. 3.
Powers, 28	122*2—4	222222210122—11	2222202112— 9

WM. DUTCHER.

Jewell Tournament.

JEWELL, Ia., March 25.—The annual spring tournament of the Jewell Gun Club had a fair attendance. The programme had fourteen events. No money was added, but $12 was given for averages, divided in four equal moneys.

The shooting was from one set of traps, Sergeant system. In the afternoon a special match for the Hamilton and Stony county championship medal was shot between Dr. De La, holder, and Dr. C. M. Proctor, challenger. Dr. De La retains the medal by a score of 42 to Dr. Proctor's 40.

Harry Watson won high average; W. B. Linell second; John Peterson third, and Dr. De La fourth.

The weather was warm and pleasant, with but little wind. Fred C. Whitney run the office, and C. W. Budd did the scoring:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

HAWKEYE.

Wapsie Valley Gun Club.

CENTRAL CITY, Ia., March 26.—The Wapsie Valley Gun Club tournament had a light attendance to-day, owing to so many tournaments of late. The programme called for 200 targtes, beside two special events for a medal and cup. F. Brookman won the county medal. W. B. Linell won high average and the championship gold medal open to the State. His average was 88 per cent in the twelve events, and he made a straight score for the medal:

Events:	1	2	3	4	5	6	7	8	9	10	11	12		
Targets:	15	15	20	15	15	20	15	15	20	15	15	20	Broke.	Av.

HAWKEYE.

Ossining Gun Club.

OSSINING, N. Y., March 28.—The main event at the regular Saturday afternoon shoot of the Ossining Gun Club to-day was for the scratch cup, at 25 birds, which has been shot for at different Saturday matinees since the first of the year. At the line-up to-day Blandford had two wins to his credit, Washburn one and Ball one. Blandford managed to break 24 out of 25 with a borrowed gun and took the cup home.

Handicap events are more popular, as there are generally a few who by consistent practice are in trim to capture all the prizes that are offered for scratch competition.

P. B. brought up another box of "Perfectos," which soon disappeared, as good cigars generally do.

The first thunder shower of the season sent the shooters back under cover at the 22yd. line in events 7 and 8. Some valuable prizes have already been received for the State shoot here in June, and many more pledged. Success for our enterprise is plainly written:

Events:	1	2	3	4	5	6	7	8
Targets:	10	10	10	10	10	25	10	10

C. G. B.

Cincinnati Gun Club.

CINCINNATI, March 21.—The eighteenth contest for the Troisdorf medals had scores as appended: Coleman (19) 43, *Medico (16) 43, *Randall (16) 43, R. Trimble (21) 42, Miller (16) 42, Falk (18) 40, Capt. (18) 40, Block (18) 38, Maynard (19) 38, Ackley (14) 37, Faran (18) 36, Barker (18) 35, McB. (16) 35, Herman (14) 35, Nye (16) 35, Jack (14) 34, Rike (21) 34, Corry (16) 33, Colonel (14) 20.

*Handicaps 18 and 20, but shot at 16yds.

The distance proved too much for Ed Rike, who comes down to shoot with us every Saturday. Ed broke 49 out of 50 at 16yds. immediately after the medal race.

Gambell is laid up in bed again, having severely wrenched his injured knee by another fall, but will be out in a couple of weeks again.

Highland Gun Club.

GORGAS STATION, Pa., March 28.—The Highland Gun Club's regular monthly club shoot had seventeen entries in the first event and twelve in the second. Davis was the high gun in the medal shoot, Myers in the trophy event. The scores follow:

Club medal event: Davis 20, Dunlevy 18, Hamil 18, Hinkson 18, Gee 17, McMichael 17, Harper 16, Wentz 15, Crooks 15, Cantrell 15, Myers 14, Dedier 13, Heite 13, Brewster 13, Denham 12, Snyder 11, Courtney 10.

Club trophy event: Myers 19, Dedier 18, McMichael 15, Courtney 15, Dunlevy 15, Aimen 15, Wentz 15, Cantrell 15, Hamil 14, Harper 12, Denham 12, Crooks 9.

Head—Witz.

AT Peru, Ind., on March 17, Mr. J. L. Head and Mr. Max Witz shot a match for the Indiana live bird championship trophy at 50 birds and $100. The weather was pleasant. A large attendance of visitors showed that there was keen interest in the race. The scores:

J L Head.....2222222222222202200202222222*2202222*200222222*2222—40
M Witz.....21*21201*2212022*2222222122*2222*00122011*02012211—37

Under date of March 28, the Brooklyn Eagle publishes the following: "Kansas City, Mo.—American wing shots are showing much interest in the Grand American Handicap at flying targets, to be held there April 14-17, under the auspices of the Interstate Association. Expert marksmen from nearly every State are arranging to attend, and it is expected there will be from 500 to 800 entries to contest in the main event, to which the Association has added $1,000 and several valuable trophies. As pigeon shooting has been abolished in several States, and the New York target and pigeon handicaps have been canceled, the Grand American Handicap here will be the one national event of the year." There seems to be much exaggerated hopefulness concerning the great number of entries to the G. A. H. Probably 200 or less will be nearer the number than is the foregoing.

Texas State Sportsmen's Association.

BRENHAM, Texas, March 27.—The twenty-ninth annual tournament of the Texas State Sportsmen's Association, March 23 to 27, inclusive, closed in a rain Thursday evening, the first three and a half days being very pretty weather, barring the high wind that ruined the scores at live birds on the first day.

The shoot was under the management of Mr. Alf. Gardiner, proprietor of the Sunny South Shooting Park, with Mr. Fred Martin as office man, and was successfully pulled off without a kick.

Two sets of expert traps were used, and in addition to the programme which consisted of 25 live birds, the first day and 666 targets for the other three days, divided as follows: Second day, 240; third day, 226, and fourth day, 201.

Only fourteen men shot the entire programme, but a large number shot most of the events, and quite a number dropped in for a few events, making in all about thirty-five shooters that shot part of the programme.

Following are the scores for each day, with a summing up of the number killed by those who shot the programme for high average:

Monday, First Day, March 23.

Five live birds, $3 entrance, four moneys, high guns:

Jackson	22010—3	Atchison	22022—4
Wilcox	20221—4	Tucker	222*2—4
Heard	2201*—3	Chaudet	21221—5
Cleveland	2*110—3	Graber	11120—4
Heikes	2212*—4	Roberts	212*2—4
Hensler	**22*—2	McCormick	22222—5
Du Bray	222*2—4	Texas Field	2220*—4
Gardiner	2*22*—3	Faurote	222*2—4
Moore	22202—4	Kaufmann	*0202—2
Spicer	22222—5	Wade	22222—5

The second event was at 25 live birds, $15 entrance, for the individual championship of Texas and the $450 diamond medal formerly held by M. E. Atchison, of Giddings:

Jackson	2222*0*2201022022221—14
Wilcox	0120*202220010120210—11
Heard	22122222222220*211222—18
Cleveland	02*21221022120022012—14
Heikes	22222222022**2222*12—17
Hensler	2211*202211**20*1110—13
Du Bray	2002022222202*02*200—11
Gardiner	2220222*2022*2222222—16
Moore	20220202002200202000— 9
Spicer	2220*2202222*2222022—15
Atchison	22200222222002022*22—14
Tucker	0222222222*2**21*222—15
Chaudet	00102120000221111110—12
Graber	2022222221**01202200—13
Roberts	*2022212122221112000—15
McCormick	202002222022*2221*22—14
Texas Field	1*02222111222221221*—17
Faurote	22*22222222*0020*0*2—12
Kaufmann	21211201122022122222—18
Wade	22212021122222222020—17

Tuesday, Second Day, March 24.

The second day consisted of twelve events, aggregating 240 targets, the eighth event being at 50 targets for the Schmelzer trophy:

	Hdcp.	Shot at.	Broke.		Hdcp.	Shot at.	Broke.
Heikes	19	240	209	Wilcox	18	240	215
Faurote	19	240	215	Huesler	17	240	200
Wade	19	240	160	W S Wyrick	16	240	196
Heard	18	240	203	J B Wyrick	16	240	198
Kaufmann	18	240	199	Moore	16	240	192
Texas Field	17	240	182	Chaudet	16	240	194
Atchison	17	240	214	Stevens	16	240	190
Gardiner	17	240	174	Graber	14	240	186
Moeser		190	160	Tucker	14	240	193
McCormick	16	240	166	Cleveland	14	240	201
Jackson	18	240	197				

The event of the day was the Schmelzer trophy event, at 50 blue-rocks. Editor Geo. Tucker was the winner on a score of 49. Mr. F. M. Faurote, of Dallas, was a close second with 48, Com. Bryan Heard, of Houston, third, with 47; R. O. Heikes, of Dayton, O., fourth, with 45.

It was unexpected for an amateur to win, especially Tucker, as he had been shooting in poor form, and the crowd went wild when they saw that he had won, and on a good score. The crowd threw him on the roof of the club house and called for a speech, and "let's all take something," was the response.

Col. O. C. Guessaz was called home by wire Wednesday, much to the regret of the shooters.

In the diamond event of 50 birds, shot Wednesday, F. M. Faurote, of Dallas, and J. A. Jackson, of Austin, tied on 47. In the shoot-off at 25 birds, Jackson lost his ninth bird, running 24 out of 25.

Faurote killed 25 straight, winning the State championship diamond medal, which he already held.

Wilcox and Wade won first money, Graber and Kennard won second, and Heard and Moeser won third.

Wednesday, Third Day, March 25.

There was a meeting of the State Sportsmen's Association, held at the parlor of the Central Hotel, Wednesday evening. In the absence of the president, Secretary Geo. Tucker called the meeting to order and asked Mr. J. B. Kennard to preside.

Com. Bryan Heard, of Houston, was nominated and unanimously elected President; Mr. Camille Pilot, of Houston, Vice-President; Geo. Tucker, of Brenham, was re-elected Secretary.

A resolution was adopted that the Association hold its next annual tournament at Houston, time to be selected by the officers and a month's notice be given.

There was a resolution adopted that the Association extend to the North Texas League and the West Texas League a cordial invitation to meet us next year, and participate in the shoot. Indian Territory and Oklahoma was added to this invitation.

A committee of three was authorized by resolution unanimously adopted to draft a constitution and by-laws and present them for approval at the next annual meeting of the Association. The president, Com. Bryan Heard, who had already assumed the chair, appointed on that committee Geo. Tucker, of Brenham; W. S. Cleveland, of Houston, and V. C. Dargan, of Dallas.

A resolution offered by Mr. F. M. Faurote was adopted, that the secretary have control of all the printing for the Association, including circulars, programme, etc.

There being no further business the Association adjourned.

	Shot at.	Broke.		Shot at.	Broke.
Heikes	275	238	Huesler	275	233
Faurote	275	244	W S Wyrick	275	240
Wilcox	275	240	J B Wyrick	275	221
Heard	275	231	Moore	275	237
Kaufmann	275	219	Chaudet	275	238
Wade	275	238	Stevens	275	217
Atchison	275	222	Campbell	225	157
Gardiner	275	187	Graber	275	212
Moeser	275	235	Tucker	275	205
McCormick	275	200	Cleveland	275	220
Jackson	275	246	Spicer	275	240
Kyser	275	236			

Thursday, Fourth Day, March 26.

The programme for Thursday consisted of twelve events, aggregating 190 birds, beside the medal event, which did not count for high average as in other medal events. Mr. F. M. Faurote and V. C. Dargan were the holder of the medal from last year, but Mr. Dargan not being present Mr. Faurote could not compete for it this year, as there was no other member of his gun club present. The scores, each contestant shooting at 190 targets, follow: Heikes 176, Faurote 161, Wilcox 167, Heard 157, Kaufmann 159, Wade 164, Atchison 165, Gardiner 134, Moeser 161, Hensler 172, Jackson 158, Kyser 159, W. S. Wyrick 167, J. B. Wyrick 163, Moore 162, Chaudet 164, Stevens 147, Campbell 163, Cleveland and McCormick withdrew.

In the team medal championship event, Heard and Moeser, of Houston, and the Wyrick brothers of McKinney, tied on a score of 42, and in the shoot-off Heard and Moeser won. Gardiner and Tucker, of Brenham, were third.

The Hunter Arms Company's gold badge was won by Mr. R. O. Heikes, of Dayton, O., on high average.

To those who shot through the entire programme there were five high average moneys to compete for—$30, $25, $20, $15, and $10.

Mr. R. O. Heikes, of Dayton, O., won first high average with a score of 664 out of 691. Mr. F. M. Faurote won second high average with a score of 637. Mr. Albert Wilcox, of San Angelo, won third high average with a score of 636. Mr. M. E. Hensler, of Battle Creek, Mich., won fourth high average with a score of 620. Mr. M. E. Atchison, of Giddings, won fifth high average with a score of 619. Jackson 618, Heard 612, Chaudet 611, Moore 599, Kaufmann 597, McCormick 548, Wade 584 and Gardiner 519.

Mr. R. O. Heikes left to-day for San Antonio, and from there will go to St. Joseph, Mo., as will Mr. Hensler. Mr. Heikes has been a frequent visitor here, and adds to his number of friends at each visit, and deservedly so, for he is a "good fellow" in the strongest interpretation of that popular term with the shooters.

Mr. Chas. B. Spicer was here and added to his already large list of friends in this section of the State.

Mr. F. M. Faurote, who successfully defended the State medal, breaking 25 straight in the shoot-off with Jackson, was shooting well, and away ahead for high average until the last day, when he had a bad hour, and dropped in third place.

Com. Bryan Heard, of Houston, the new president of the Association, is very popular with the shooters and is fast developing into a crack, as evidenced by the trophies won at Houston last week and here this week. With him at the head of the management, the next State shoot promises to be the biggest and best ever held.

Messrs. Cleveland and Moeser, two other members of the Houston Gun Club, are fine shots and true sportsmen, and popular with the shooters.

Col. O. C. Guessaz, editor of the Texas Field, was here the first two days of the shoot, but was called to his home in San Antonio by wire. He is one of the liveliest attendants at a shoot in this section, and very popular with the shooters, and universal regret was expressed at his having to be called home.

Mr. L. F. Chaudet, of New Orleans, was a new man to most of the Texas shooters, but was heartily welcomed, and all will be glad to see him with us again.

Mr. Maurice Kaufmann, of New Orleans, is one of the jollicst and most agreeable attendants at a shoot. He was changing guns in every event, standing on one foot a portion of the time, and monkeying around generally, but he killed 597 out of the programme, and tied the medal winners in the live-bird event, though not eligible to win, as he is not a resident of the State.

Capt. A. W. Du Bray, of Cincinnati, O., with a 12-gauge hammer and a 20-gauge hammerless, mixed up his shooting so that his scores did not pan out well, but everybody admired his pair of guns.

Manager Alf. Gardiner was generously complimented on the way the shoot was conducted, but especially on the "busy" pigeons he selected for the first day, it being the universal opinion that no harder birds could be obtained. There was a strong north wind blowing across the traps, hence the low scores. Mr. Gardiner was so busy with the management that he did not make as good a showing as he would otherwise, but would have won the team medal if his partner had not "laid down" on him. He was changing guns occasionally, but is having a new Remington built, and will make it warm for some of the shooters when it arrives.

Mr. J. M. McCormick, of San Antonio, shot through the programme, but was in bad form. He is very fond of the game, and is a stayer, whether he hits the money or not, and is one of the most popular of the Association.

Mr. M. E. Atchison, of Giddings, former holder of the State medal, shot a good gait through the programme, only four men beating him. And he is always to be counted on coming close to the top.

The writer, Geo. Tucker, who is always a liberal contributor, won the Schmelzer trophy on a score of 49 out of 50, Mr. F. M. Faurote having 48. He was in the last squad and the whole gang pulling for him, however, and a city policeman behind him to keep any one from taking the cup away from him or anybody bothering him. He missed his forty-fifth bird, and being an amateur the crowd thought he was gone, but he scratched out with 49, and the crowd got him away from the policeman, put him on the roof of the club house, where he was called on for a speech, which we will give in full. It was, "Let's all take something."

Messrs. W. S. and J. B. Wyrick and Mr. Stevens, of McKinney, attended and shot most of the programme, making a good showing.

The next shoot here will be the Sunny South handicap in January next, and Manager Gardiner is trying hard to make this the sporting event of the South.

GEO. TUCKER.

Boston Gun Club.

BOSTON, Mass., March 25.—The usual Wednesday shoot of the Boston Gun Club was held on their grounds at Wellington to-day, and a large number of enthusiasts were present to do honor to the occasion. With such a crowd of trap devotees present it seemed as though every one was there, but after another look there were quite a few absent faces, most notable being Leroy's, but being under the weather, he has made a wise decision not to shoot until he regains his old health, which we all sincerely hope will not be far off.

The prize match had a new leader this week, Bill, of Harvard doing the honors, though one target to rear were Rule and Spencer with 24, the former now waiting the chance to eclipse his former record on these grounds of 45. We think it will be hard work, but then Rule says it has been done, so we cannot dispute it. Other scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11

March 18.—The ninth serial prize shoot of the Boston Gun Club was held at Wellington to-day, and weather conditions could not have been much better for the shoot, barring a slight head wind, which made the targets rise a great deal more than what the majority calculated for. However, little things like that do not worry a Boston Gun Club gathering, and it turned out to be one of the most enjoyable shoots of the series. The prize match, of course, was the real thing, and each contestant kept his best efforts for that. Some succeeded very well, Griffiths with his pump gun breaking 27, but not alone, as Dupont, of Harvard, duplicated his score in similar fashion. Hollis had the honor of second place, shooting a new gun with a single trigger; and it says pretty well for both himself and gun, to hold that position. Third position was taken care of by Train and Bell, the former's first visit to the grounds this season, and judging from appearances, it will not be the last, as he certainly shot well in the regular events. Other scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	
Targets:	10	5p	15	10	15	15	10	5p	15	15	Av.

North Side Rod and Gun Club.

Paterson, N. J., March 28.—The shooting at to-day's competition of the North Side Rod and Gun Club was from the 16yd. mark, unknown traps. The scores:

First event: B. Terhune 17, W. Banks 8, H. Becker 14, C. Tiddes 15, M. Breen 24, C. Lewis 17, N. Boogertman 8, J. Hulmes 10, E. Breen 10, W. Greer 2.

Second event: D. Gibson 14, W. Trers 17, N. Graham 5, Mathews 21, C. Strait 8, W. Swift 13, J. Doty 21.

Answers to Correspondents.

No notice taken of anonymous communications.

J. B. H., St. Louis.—The muscalonge (*Esox nobilior*), the pike (*Esox lucius*), and the pickerel (*Esox reticulatus*) all belong to the *Esocidæ* or pike family. The muscalonge is the largest and may be readily distinguished from the pike by these two characteristics: The lower half of the cheek of the muscalonge is scaleless, and the anterior half of its lower jaw is toothless. In the pike the cheek is entirely covered with scales, and the lower jaw is filled with teeth. The three fishes are colored as follows: Muscalonge, greenish or brownish gray, with circular brown spots darker than the body color. Pike, dark green or gray, with oblong light spots, sometimes white. Pickerel, green or brown, covered with a network of dark lines.

PUBLISHERS' DEPARTMENT.

Reduced Rates to New Orleans.

VIA PENNSYLVANIA RAILROAD, ACCOUNT MEETING NATIONAL MANUFACTURERS' ASSOCIATION.

ON account of the meeting of the National Manufacturers' Association at New Orleans, April 15 to 17, the Pennsylvania Railroad Company will sell excursion tickets to New Orleans and return, April 11, 12 and 13, good going on date of sale, and good returning to reach original starting point not later than April 19, from all points on its lines at reduced rates. By depositing ticket with Joint Agent at New Orleans between April 12 and 19, and payment of fee of fifty cents, an extension of return limit may be obtained to reach starting point not later than April 30.

Messrs. Dame, Stoddard & Co., of 374 Washington street, Boston, Mass., send us their catalogue of fishing tackle and sporting goods. The 290 pages contain illustrated listings of every article of the fisherman's equipment, all the necessities and some luxuries; and the portion of the catalogue devoted to pocket knives contains a number of extremely entertaining personal sketches of certain Texas worthies, after whom the several knives are named. As Bowie achieved enduring fame by giving his name to the Bowie knife, a like remembrance, let us hope, may be that of Tom Padgitt, General Tom Green, Sam Jones and others, after whom Thos. H. Chubb has named some of the very attractive knives here shown. The catalogue will be sent on receipt of 15 cents, which will be credited on the first purchase of a dollar or more.

In their large and handsome catalogue of nearly 100 pages, Messrs. J. B. Hunter & Co., of 60 Summer street, Boston, Mass., offer a great variety of attractive articles for the equipment of the sportsman or outdoor man. Beginning with rods, reels, hooks, lines, flies, and fishing tackle generally, they run through the gamut of goods contributing to the success or comfort of those who take their pleasure out of doors. Among these are clothing, arms, ammunition, cutlery, cameras, and their supplies, golf utensils, and a variety of other things. The catalogue will be sent free on application.

Edward Smith & Co., the well-known manufacturers of fine spar varnish, have issued a valuable little pamphlet called the "Yachtsman's Vest Pocket Manual." The little book contains a great fund of valuable information. In addition to the collection of club burgees, which are printed in color, there is also a list of American sail and steam yachts of over 50 feet in length. The book will be sent free on application to the Edward Smith Co., 45 Broadway, New York city, or 59 Market street, Chicago.

Messrs. Harrington & Richardson, of Worcester, Mass., have long been known as manufacturers of firearms, with revolvers as a specialty. Their new catalogue, No. 6, beside being beautifully illustrated in most artistic fashion, gives a deal of information about their arms, and thus is worth reading for itself alone. The Harrington revolver is adapted for the uses of people in all sorts of situations. Their descriptive catalogue will be sent free to applicants.

To anglers in and about New York, as well as to many others scattered over a wider territory, J. F. Marsters, of Brooklyn, N. Y., is a familiar name. His business has been long established, and a great many anglers have come to depend on him for their fishing tackle of all sorts. Mr. Marsters offers a list of all the fishing tackle to a man who will send him stamps.

The Dixie minnow, manufactured by E. T. Dukes, of Quitman, Ga., is said to be the only artificial minnow now in existence which represents the real fish swimming upright. As such, it should prove an attractive lure, and since indestructible, it can be used indefinitely It is for sale by all dealers.

At the Houston, Texas tournament, March 17-19, Mr. Frank Faurote, of Dallas, shooting Winchester factory loaded shells and a Winchester repeating shotgun, broke 530 out of 575 targets, and thereby won high average.

Mr. J. L. Head, of Peru, Ind., won the Indiana live-bird championship with a score of 44 out of 50. He used U. M. C. Arrow shells. Mr. S. D. Boris scored 43 out of 50.

At the Texas State shoot, held at Brenham, March 23 to 26, Mr. R. O. Heikes won high average. He shot U. M. C. factory loaded shells and a Remington gun.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, APRIL 11, 1903.

VOL. LX.—No. 15. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

You can never afford to forget for one moment what is the object of our forest policy. That object is not to preserve the forests because they are beautiful, though that is good in itself; nor because they are refuges for the wild creatures of the wilderness, though, that, too, is good in itself; but the primary object of our forest policy, as of the land policy of the United States, is the making of prosperous homes. It is part of the traditional policy of home making of our country. Every other consideration comes as secondary. The whole effort of the Government in dealing with the forests must be directed to this end, keeping in view the fact that it is not only necessary to start the homes as prosperous, but to keep them so. That is why the forests have got to be kept. You can start a prosperous home by destroying the forests, but you cannot keep it prosperous that way.—President Roosevelt.

TIME TO GO.

AS THE fancy of the young man is supposed in springtime lightly to turn to thoughts of love, so does the mind of the enthusiastic angler delight at this season to dwell upon prospective fishing trips and anticipated sport with the denizens of river, lake and brook. These are the days when one angler meeting another is pretty sure to propound the query: "Well, are you ready to go a-fishing?" or "Have you looked over your fishing tackle?" Or perhaps he will simply make the sententious remark: "The fish ought to bite pretty well to-day." The reply is sure to be cheery and, if time permits, a protracted exchange of angling experiences in the past is likely to follow. Unquestionably there is a strong band of sympathy existing between true anglers, a fact which may be primarily due to the understanding that both are enthusiasts in the same field, but which is nevertheless greatly strengthened and emphasized by an accompanying feeling of good fellowship.

Americans have always manifested a strong inclination for fishing, and even the aborigines were successful fishermen. It is said that when the Pilgrims went to King James for their charter they told him that they desired to go to the new world to worship God and catch fish. In view of these facts it is not to be wondered at, perhaps, that the amusement is a very popular one at the present day and that it seems to be gaining in favor from year to year. The assertion has been made that the secret of the infatuation of this amusement to most or many anglers is to be found in the close and quiet communion and sympathy with nature which is essential to the pursuit of the spoil of the water, and no doubt this is true. The tourist views only the outside of the country through which he hurriedly passes, but the angler is brought very close to the flower, bird and insect life of the fields and woods, and unconsciously becomes familiar with many of the secrets of nature which remain hidden from the average man. That a person is benefited by such close contact with nature cannot be disputed; for, as Washington Irving says: "There is certainly something in angling that tends to produce a gentleness of spirit and a pure sincerety of mind."

It matters little whether the angler be an enthusiast on brook trout or one who prefers to entice the gamy black bass, the savage pickerel or the lordly muskallonge, the advent of spring and the thought that the fishing season is near at hand are sure to enliven him and cause the blood to course more rapidly through his veins.

Among expert fishermen angling is commonly spoken of as an art, and those who have had the most experience in handling the rod are the most firm in the belief that it deserves thus to be designated. Certainly it requires fully as much time, attention and patience to become thoroughly proficient in angling as it does to acquire a fair knowledge of almost any one of the fine arts. Furthermore, when a man does become an expert angler he has the pleasing consciousness that he is possessed of richly earned knowledge, which it is not given to everyone to possess, and the ability to catch fish where others would fail, and in this respect, at least, he is as truly an artist as he who applies colors to canvas or evokes music from a stringed instrument. Izaak Walton says: "Doubt not, therefore, sir, but that angling is an art, and an art worth your learning. The question is rather, whether you be capable of learning it, for angling is somewhat like poetry, men are born so; I mean with the inclination to it, though both may be heightened by discourse and practice, but he that hopes to be a good angler must not only bring an inquiring, searching, observing wit, but he must bring a large measure of hope and patience, and a love and propensity to the art itself; but having once got and practiced it, then doubt not but angling will prove to be so pleasant that it will prove to be, like virtue, a reward to itself."

COLONEL GEO. S. ANDERSON.

THOSE who are interested in the Yellowstone National Park will remember that for seven years Capt. Geo. S. Anderson, of the Sixth Cavalry, was the Superintendent of that reservation. During this long term of service he did work there far better than had ever been done before, bringing up the management of the Park to a very high state of efficiency. For the first few years of his service he was heavily handicapped by the inefficiency of Congress, which neglected to pass any law governing the Park, but when this omission had been remedied, he made his name a terror to the evildoers who had long swarmed about the reservation and striven at every opportunity to prey upon it.

After Capt. Anderson's long superintendency of the Park, which extended over about twice the term of any previous Superintendent's career there, the Spanish war broke out, and he was ordered into the field, and served in Cuba. Later, as Colonel of a regiment of volunteers, he served in the Philippine Islands for a term of years, and with his regiment performed extraordinary services in pacifying the district which he commanded. It is related that his regiment, recruited largely from the mountaineers of Kentucky, Tennessee and Missouri, was a body of giants—men so large that the ordinary clothing issued by the War Department to its troops could not be worn by them without various cuttings and slashings to give room within the clothing for their huge frames. It is said that their energy, strength and endurance were as great as their size, so that they chased the Filipinos over the mountains at such a rate that the natives actually became tired out and surrendered, and that if it ever came to a battle the small natives who were not killed in the fight afterward died of fright on recognizing the size of the men to whom they had been opposed. All these, however, may be travelers' tales told to us merely to excite the wonder of stay-at-home bodies. At all events, Colonel Anderson and the regiment he commanded did their work and did it well.

It is but a few months since Col. Anderson's regiment was mustered out and returned to the United States. He is now stationed in Washington at the new War College.

The soldierly qualities—his gallantry, his good judgment and his superb capacity for handling men—which enabled Col. Anderson to perform such splendid service in his profession have been recognized by the War Department and have earned him deserved promotion. Captain about the time of the breaking out of the Spanish war, he has won in a few years the ranks of Major and Lieutenant-Colonel, and has now received his promotion as Colonel in the Regular Army.

THE death of Major General William H. Jackson, of Belle Meade, Tenn., deprives the Boone and Crockett Club of one of its most valued members, and the United States of a soldier who once performed an act which, beyond question, is unique. General Jackson is believed to have been the only man, who, single-handed, ever attacked and killed a grizzly bear with a sabre.

The occurrence, as we have heard him relate it, was as follows: About fifty years ago General Jackson, then a young lieutenant attached to a regiment of Dragoons, was traveling with a detachment of his regiment on the plains. A grizzly bear was startled and began to run away. Lieut. Jackson at once applied to his commanding officer for permission to attack the beast, and after some hesitation his request was granted. The young officer was riding a Kentucky thoroughbred of great speed and courage, which was blind of its right eye. The horse readily overtook the animal, and riding close to it on his horse's blind side, Lieut. Jackson leaned over and struck its neck a terrible blow with his sabre, and then rode on. Turning, he again charged the bear, which was now as eager to get hold of him as before it had been to get away. The rider again rode to the left of the bear, and as it rose to meet him struck it on the head with such force that the sabre cut so deep into the bone that it could not be released. The bear struck and cut the horse, but did not hold him, and Lieut. Jackson, making a circle, saw the bear fall dead before it had gone many steps from the spot. Such strength, courage and readiness had these men of earlier days.

Gen. Jackson was a typical soldier and Southern gentleman of a type that is now fast passing away.

IN the death of Mr. Joseph Park last week, New York has lost one of its most eminent and worthy citizens, and one who perhaps had a larger acquaintance among old New Yorkers than almost any one who can be named. Mr. Park had lived in New York for more than seventy years, and for nearly sixty years had conducted the successful business, the name of which is so familiar to all New Yorkers. He was prominent in many large business affairs, was an extensive landowner at his home in Rye, N. Y., where he conducted a model farm, in which he took the greatest interest, was prominent in charitable matters, and was in all respects a good man and a citizen of the best type. To the poor Mr. Park gave freely, not money alone, but that ready sympathy and advice which so often is far more helpful than money. His kindly presence will be sadly missed by them.

PROF. L. D. SHARP, of the Boston University, preaching in the First Methodist Church of that city, the other Sunday, declared that no woman who wears a sea gull or a song bird in her hat can ever get to Heaven. Rev. John Brown, of the Wesleyan Methodist Church, in Wabash, Ind., preached the same doctrine, warning his woman hearers that "no woman who wears plumes on her hat can ever hope to enter the Kingdom of Heaven." Whereupon four women of the congregation, right then and there, took the feathers from their hats and threw them into the stove. The bird protection committee of the Audubon Society would do well to enlist the services of Mr. Brown as a spellbinder for the cause.

WORD comes from Goshen, N. Y., of the death of Harrison W. Nanny, whose pen name of Wawayanda twenty years ago was familiar to readers of FOREST AND STREAM. Mr. Nanny was a well-known lawyer; for several terms he was the president of Goshen, and in the beautiful parks which the village owes to him he has left an enduring memorial of his public services. His age was fifty-eight. Mr. Nanny was all his life an enthusiastic angler and student of nature. It was his fortune to live in that charming region of Orange County which was made famous by Frank Forester; and lured by its attractions, he spent many happy days in camp. He knew the Warwick Woodlands better than Herbert had known them, and wrote of them, some of us used to think, with much more sympathy and appealing sentiment. He was a man of wide reading, a student of local history; his were scholarly tastes and a cultured mind. It is to such a one that angling has most to give, and to him the camp by the lake and the river means plain living and high thinking.

Maine has adopted the long talked of non-resident license system. The fee is $15; and the licensee has the privilege of exporting on coupon one moose and two deer. The proceeds are to go to protecting game, paying damages done to crops by deer, and raising the salaries of the commissioners. We print elsewhere from a special correspondent the full text of the law, and a statement of the reasons which have prompted its enactment.

Massachusetts has extended as a permanent law the statute forbidding the sale of ruffed grouse and quail. Never was the wisdom of the non-sale system more convincingly demonstrated than it has been in Massachusetts, and no other course for the future was to be looked for

The Sportsman Tourist.

A Perilous Ride.—I.

A Story of Indian Days.

IT was the 12th day of February, 1877—a cold raw day. The snow was almost all gone from the valley, except in spots and drifts. It was the most cheerless season of the year, and what little business there was in Bozeman was at a standstill. We were over 500 miles from a railroad; the mail was carried in coaches and by pack animals; the principal business came from the Indian trade, and furnishing supplies by the United States Government to the various tribes then in Montana. Indians, with the white hunters and trappers and gold prospectors, who were roaming over the country in every direction, were the only inhabitants of eastern Montana at this time. The war with the Sioux and other Indian tribes was at its height.

Fort Ellis, three miles from Bozeman, was garrisoned with both cavalry and infantry. At the mouth of Tongue River, General Miles, with a large force, was in camp at what was called the Tongue River Cantonment. Communications between Gen. Brisbin at Fort Ellis and Gen. Miles were carried by scouts, both white and red, as the Crow Indians were sometimes employed. At this particular time the Indians were so bad and numerous between Brisbin and Miles, a distance of nearly 400 miles, that it was difficult to find anyone to carry dispatches, $300 being offered for the long and perilous trip.

I found myself this cold, raw, cheerless day in Bozeman, possessed of mule, a saddle pony, a fine 13-pound old reliable Sharps rifle, a fine gold watch, and a pack outfit. Except for these articles I was completely "busted." I had never been to Tongue River, or down the Yellowstone for more than 150 miles, but had a good idea of the country, having traded with the Crow Indians several years before at the Crow Indian Agency, eight miles beyond where the town of Livingston now stands. My wife had died about a year before. I had lost my business and sent my little daughter, four years old, back to the States to my parents, and was ready for anything out of the ordinary.

I was born and raised in the mountains of Kentucky, and was, as the saying goes, a born mountaineer. Two of my aunts had married grandsons of old Daniel Boone of Kentucky. I got the western fever when quite young, after meeting Kit Carson and Col. A. G. Boone in Washington city in 1866 with a delegation of Indians, and would have gone back with them but for my father, who was at that time a member of Congress from Kentucky, and would not consent to my doing so. I returned to Kentucky, married, and the following year found me on the road to the headwaters of the Yellowstone, which place I reached in September, 1869, as trader for the Crow Indians, which position I held for quite a time, leaving my wife and baby in Bozeman, at that time a small frontier town.

Under present circumstances I was ripe and ready for anything in the Indian and hunting line, and volunteered to carry the dispatch from Brisbin to Miles.

I pawned my watch for $100, as I did not care to take it on the trip, and with the money got a fine Winchester rifle, with plenty of ammunition for both my guns, all the clothing and bedding I needed, had my animals sharp shod, taking an extra set of shoes and a shoeing outfit with me; secured a fine field glass at Ft. Ellis from Capt. Ball, placed my dispatch in a money belt wrapped in oil cloth, my tobacco, pipe and matches in my canteenas, and was ready for the "Cantonment."

I left Bozeman about 8 o'clock on the morning of the 14th of February, passed through Rocky Canyon and over the divide to Trail Creek, arriving, late in the evening, at the lower end of Trail Creek on the Yellowstone Bottom at the cabin of an old hunter, a friend of mine, by the name of Trout. You may rest assured that I was more than welcome, and after my pony and mule were cared for, I was soon at a veritable feast of cold boiled elk, a hot corn dodger, a large raw onion, and a good quart cup of No. 1 coffee that can only be made from the fine soft waters of the Rocky Mountain streams. What more could a Kentucky mountain man wish for? I enjoyed the meal only as a hungry man can, and after listening to the hunting and trapping adventures of my friend until quite late, we rolled up in our blankets and were soon in the land of dreams.

Early next morning, after a fine breakfast of broiled antelope and some mountain flap-jacks and good coffee, I was in the saddle again, reaching the Yellowstone about noon. I traveled until near sundown, when I unexpectedly came to a dugout in the bank of the river, where Dave Roberts was trapping and poisoning wolves. Here I remained all night, and received the same hearty welcome of the night before. I cut a few small cottonwood trees for feed for my mule and pony; the bark of the young cottonwood being equal, if not superior, to hay and oats. I did not leave my friend until about 4 o'clock in the evening of the next day, as I had quite a long stretch of country to pass over with no timber or snow and wished to make that ride during the night. I was now in the Indian country, and had to keep a good lookout, and as much as possible shun patches of snow—to hide my trail— and sleep during the day, as the Indians seldom move at night. Of course I was in some danger of running on a camp of sleeping Indians, unless my mule should give the alarm. I depended on this, for if thereever was an animal that hated and feared an Indian it was that mule. She could smell one, with the wind, a good mile, and half that distance against the wind; so I had very little fear of being surprised.

I traveled about 25 or 30 miles before daylight, made camp deep in the timber near the bank of the river. I tied my mule and pony in a thick patch of willows; with my butcher-knife shaved some young cottonwood trees for them, ate a cold snack of elk and bread, rolled up in my blankets and was soon asleep, depending entirely on my mule for warning of any danger that might come. I awoke late in the afternoon, feeling much refreshed and wanting a cup of coffee very much, but I was afraid to make a fire in daylight, as the smoke could be seen so far. At last I remembered having seen a piece of candle in my canteenas. I fished it out and then, for the first time in my life, began to make a cup of coffee over the flame of a candle. It was a long, tedious job, but in time I was rewarded by seeing the water hot, and pretty soon I had as nice a cup of coffee as one could wish under the circumstances.

About 7 o'clock in the evening my mule began to give unmistakable signs of Indians. She kept her ears pricked, looking down the river. I saw that the animals were securely tied, and crept slowly down the river bank to the lower end of the timber. By this time it was quite dark, but I could see quite a distance on the prairie. I distinctly heard Indians singing and coming nearer—straight toward me. I waited a moment to be sure they were coming my way, and heard them strike the ice of the river about 200 yards below the point where I was lying. I crept down the river bank a little further and in the twilight could see them crossing on the ice—about twenty Indians and 150 or more horses. I soon made up my mind what was up. It was a small war party of Sioux on a horse-stealing expedition against the Crows. I waited until all had crossed and passed out of hearing; and knowing that the Crows would be after them at daylight, I concluded to put as much distance between us as possible before that time. The Crows were on friendly terms with the whites, but I did not care to run across them so far away from the settlements.

I traveled all night and having made thirty or more miles before daylight, I camped in the thick timber, again shaving more cottonwood bark for the animals and fasting myself. I slept until noon, and being very hungry I determined to make a quick fire, get everything ready, make coffee and bread, fry some meat and move along, as there was plenty of timber on both sides of the river.

I got ready plenty of shavings and some nice dry wood, mixed a little flour in the small sack I had—salt and yeast powders having been mixed before starting—secured a dry cottonwood stick, got it good and hot, rolled my dough into a long snake-like piece, wrapped it around the hot stick and set it up before the fire, which I now started, with my meat and coffee all on at the same time. It burned nicely, and there was scarcely any smoke, as the twigs were so dry. I soon had a fine meal, which I found afterward could be had on meat alone when the appetite is there. It was now about two o'clock, with every sign of a storm coming on—cold and raw, with stray flakes of snow beginning to fall.

I made another start, following the river bank as much as I could. By 6 o'clock it was snowing fast and everything promised a good fall. About thirty miles further would take me to where two men named Moore—"Old Pike" as he was generally called—and Zed Daniels, who, I had heard, were trapping beaver, had a dugout about ten feet from the river. By keeping close to the river I could not miss it, and I determined to make the camp before sleeping again, as the now fast falling snow would cover my trail almost as fast as made. Just at dark I made camp at the mouth of a dry coulee that ran into the river, thickly surrounded by cottonwood and willows, the willows on the banks above meeting and forming a complete roof, preventing the snow from entering at all. It was dry as a powder house and sheltered from the wind. In fact, after my mule and pony were securely tied in the upper end of the coulee, about twenty feet from the mouth, and the saddles and pack outfit taken off, it was as comfortable a camp as anyone could wish, and would have been a regular paradise for one of my temperament in times of peace. I really felt as if I could remain in this beautiful, quiet place for a whole month. Anyone might be within six feet of me and never discover my hiding place.

I took my little hunting hatchet and cut the ice near the mouth of the coulee, and after long chopping was rewarded by getting through the ice and seeing the water creeping up in my spring. It was a treat. I watered my mule and pony, cut them plenty of bark, made a good fire, which could not be seen any more than if it had been in a house, and cooked and ate until I could eat no more. I felt so comfortable after eating as I sat there smoking and thinking of the loved ones down in old Kentucky, that, before I knew it, I was almost asleep. I jumped to my feet, re-filled my pipe, saddled my mule and pony, and with many regrets mounted and rode out of my cozy quarters to face the storm that was now raging in earnest. I must make the camp before daylight and leave no trail behind me. As good luck would have it, I could follow an old game trail near the river that answered every purpose of a road. I kept up a steady trot until I thought I must surely be in the neighborhood of the camp I was looking for, and began to go a little more slowly for fear I might pass it, for it was quite dark. I had the rope around the horn of my saddle leading my mule, when, for some reason she suddenly stopped and would not move an inch. I loosened my gun and began to look around as well as possible in the darkness. The next instant the most unearthly sound I ever heard in all my life broke the awful stillness. I fell from my saddle as if struck by lightning, and it was a good moment before I could realize what had happened. My mule had simply stopped and brayed like a jackass. It seemed to me as if it could be heard for five miles. She had scented the horses belonging to Moore and Daniels, and knowing they were not Indians, had given vent to her joy with that awful sound.

After looking around a few minutes I discovered sparks of fire seemingly coming out of the ground, and knew it was the dugout. I gave a long, low whistle and was soon answered. "Old Pike" Moore, a famous beaver trapper of the Yellowstone, came out and called: "Who's there?" I answered, "Coon Tail."

"By the jumping Moses, Billy, come in; ain't you near froze? How do you do? What are you doing down here? All alone? Well, by jiminy, you can just thank this storm for your being here in place of your hair being at some Indian war dance, for before this snow they were getting thicker than mosquitos, and that is all that saved you. They are lying in camp such weather as this. Got any cartridges? Yes; what kind?"

"Sharps .45-90's and Winchester."

"Bully," says Pike. "We were running low."

"Well, I've got about a thousand," I said, and Pike was happy.

By this time the mule and pony were unsaddled and tied in a sheltered spot covered by willows, and with plenty of cottonwood to eat. Never in my life did a dugout look so good and feel so comfortable and safe. It was only one log high, but they were immense cottonwoods, at least three feet in diameter, with as large a one in center on top, the room being dug out like a cellar, with port holes all around between the ground and the log. Three men were here—Moore, Daniels, and a man named Lowery. The four of us, well armed and provisioned in this dugout, could have stood off the whole Sioux tribe—at least that is the way we felt, and the way you feel is the way you are. I was tired, hungry and sleepy, and after a good warm breakfast and a good smoke, I turned in for a good day's sleep. I did not wake until late in the evening, feeling entirely rested, but the storm still raging and the snow quite deep. I had left no tracks behind, consequently felt quite safe and concluded to stop here until the storm was over, keeping a good look out that no one passed me with another dispatch. As long as I was in the lead, I was all right, and the boys had plenty of grub. I spent the time helping the boys skin beaver, which they were catching fast. The storm over, the sun came out warm and the snow was fast disappearing. I would soon be on the move again.

One evening, after I had been in camp about a week, I concluded to take a little stroll alone. The timber belt at this place was quite large, on the north side of the river being over a mile wide and several miles long, with a good game trail about the middle. I took the trail, carrying my Winchester and three belts of cartridges, one over each shoulder and one around the waist. With my glasses, hunting knife and pipe I was rigged to perfection. I must have gone about two miles from camp when I emerged from the upper end of the timber belt, and was just in the act of stepping out of the brush when I discovered eight Indians coming straight for the point where I was standing, and only about 100 yards off, all on the dead run. I knew they had not seen me as yet, and quicker than telling it, I was off, back down the trail I had come, as fast as my legs could carry me. I had not gone very far when, stopping a moment, I heard them coming. As there were only eight and they had not seen me, I did not feel so badly scared, but had very little time to think.

There was a large cottonwood tree standing near the trail and another fallen one that had lodged just in front of it and was thickly surrounded by willows. In a moment I was under one and behind the other, and had no sooner got there than swish, swish, swish, I could hear their leggins rubbing against the willows until eight had passed. I could not tell whether they were Sioux or Crows, as they passed so quickly and I was so completely hidden that I could not see. After they had passed, I got out and followed as fast as possible. I had not gone far when I concluded I had better fire my gun three times in quick succession, being the signal that Indians were coming. I was then about a mile from camp, and the boys, hearing my shots, would be on the lookout and would give me some signal pretty soon. I waited for a time and hearing nothing left the trail and made for the river, which I reached in a few minutes and, under the banks made my way toward camp. When I heard a shrill whistle I answered, and Daniels shouted that all was right. When I reached camp there were the eight Indians; they were Crows and all old friends of mine; were on a horse-stealing trip against the Sioux. They remained two or three days making medicine.

The snow now being nearly all gone, I concluded to move on. Lowery had made up his mind to go on to the Cantonment, so I would now have company the remainder of the way.

We were now in the most dangerous portion of the Indian country. On Pryor Creek, about twenty miles further down the river, were two men trapping, or supposed to be, but just where on the creek we did not know, but we hoped to strike them.

We bade Moore and Daniels good-by, and with some bread, a little salt, coffee and tobacco, started for the Cantonment on the sixth day of March. As we had plenty of timber, we concluded to travel during the day for the present, and at night when we got out of timber. In the afternoon it clouded up, got colder and had the appearance of another storm, and pretty soon the snow began to fall and by seven o'clock, when we reached the mouth of Pryor Creek, the snow was falling fast and already about two inches deep. We went up the creek probably a mile and not seeing any signs of Hubble and Cox, we concluded to camp.

We had just got our horses snugly cached in the head of a quaking asp hollow, when we were startled by a whole volley of rifle shots, at least fifty having been fired, and apparently about half a mile above us. Pretty soon bang, bang, went two rifles. In a few minutes another roll of rifles, followed by the bang, bang of the two rifles again. It told the tale as plainly as if we could see it, the Indians had attacked the camp of Cox and Hubble. We must get there and yet there quick. Almost before we could move came another roll of rifles followed by the bang of one lone gun. There! one of the boys is killed. A few minutes more, and while we were on our way to the rescue, came another roll of rifles, followed by no response. We stopped, heard the Indians yelling, and we knew the battle was over. We retraced our steps, as it was now getting quite dark and snowing so fast you could only see a few feet. We concluded to wait until morning and then go up the creek and find the camp and bodies of the two men, who we were satisfied were killed. We left the horses and took our bedding near the bank of the creek, making our bed on the snow. The bank was quite steep down to ice, and would make a fine place to fight from, in case we had to. In the most lonely place one could well imagine among some rose brier bushes, we made our bed and crawled in, with our clothes on and cartridge belts and rifles by our sides and with a wagon sheet over us. We were soon covered by a white quilt of snow, and to find us one would have been obliged to walk right on top of us. It was some time before I went to sleep. As I lay there I was thinking of an old, old man named Jackson, whom I had known in Kentucky when a boy only six or seven years old, and how I enjoyed to hear him tell, as I sat upon his knee, tales of the early settling of Kentucky, and give accounts of Indians and hunting which I then supposed was way back in old times and gone never to be again; and here I was, twenty-five years afterward, in more of an Indian country and among worse Indians and better armed than either he

or his father had ever seen, and at this very moment was hiding and liable to be attacked at daylight. With such thoughts I went to sleep, and did not awake until near daylight. As soon as it began to get light I peeped from under the cover of snow. Looking across the creek I saw a fresh trail of some kind, not more than ten feet from the bank on the other side from where we lay. We got up, crossed over, and there we saw the unmistakable trail of old Lew Hubble, easily recognized by the long strides he was famous for making when traveling. Another tale was told: Cox was killed, the camp destroyed, horses stolen and Hubble escaped on foot—for he never would have left his companion alive. There was now no use for us to visit the battle ground. Undoubtedly the Indians were still lurking around, would discover Hubble's trail and following it, would find ours. Hubble was probably miles away, and the sooner we left the better; so, with all haste we saddled up and in less time than it takes to tell it we were off down the river, without any breakfast. It was still cloudy but not snowing. We traveled all forenoon without seeing anything except buffalo.

In the afternoon the snow began to fall again in fine feathery flakes. My neck was very tired from turning and looking in so many different directions. My mule was pulling back, the rope being tied around the horn of my saddle under my gun sling, and in reaching back to pull her along I looked back and about half a mile away saw about forty or more Indian ponies coming on the dead run. I could see no Indians, but I well knew that each pony carried one. As my lead rope had got wet from the snow, I could not untie it. I jerked out my hunting knife, hallooed "Indians!" cut the rope, let the mule go, and struck out with all speed to cross the river on the ice at the head of a long canyon about one-fourth of a mile ahead. We had now left the timber on the side of the river we were on, and must cross in a hurry. As soon as we commenced our run, the Indians knew they were discovered, so straightened up on their ponies and began their wolf-like yelling, which scared the mule almost to death. She ran so fast she got in the lead, and was bouncing around like a jack rabbit. We were now almost at the crossing, when, to my horror, I saw on the other side about the same number of Indians on the run, and making for the same crossing, and every one of them yelling with all his might. What should we do? There was no time to think. Should we kill our horses and fight from behind them? Nothing else to do. The timber was behind and Indians between it and us, and Indians in front. We were now at the crossing, the mule in the lead, and hearing the Indians in front as well as behind she started straight down the canyon on the ice, and almost before we knew what we were doing, we were right behind the mule, sharp shod and going like the wind. The ice was as clear as glass and hard as flint. We turned in our saddles, saw the Indians all on the ice and slipping in every direction. They couldn't make the riffle!

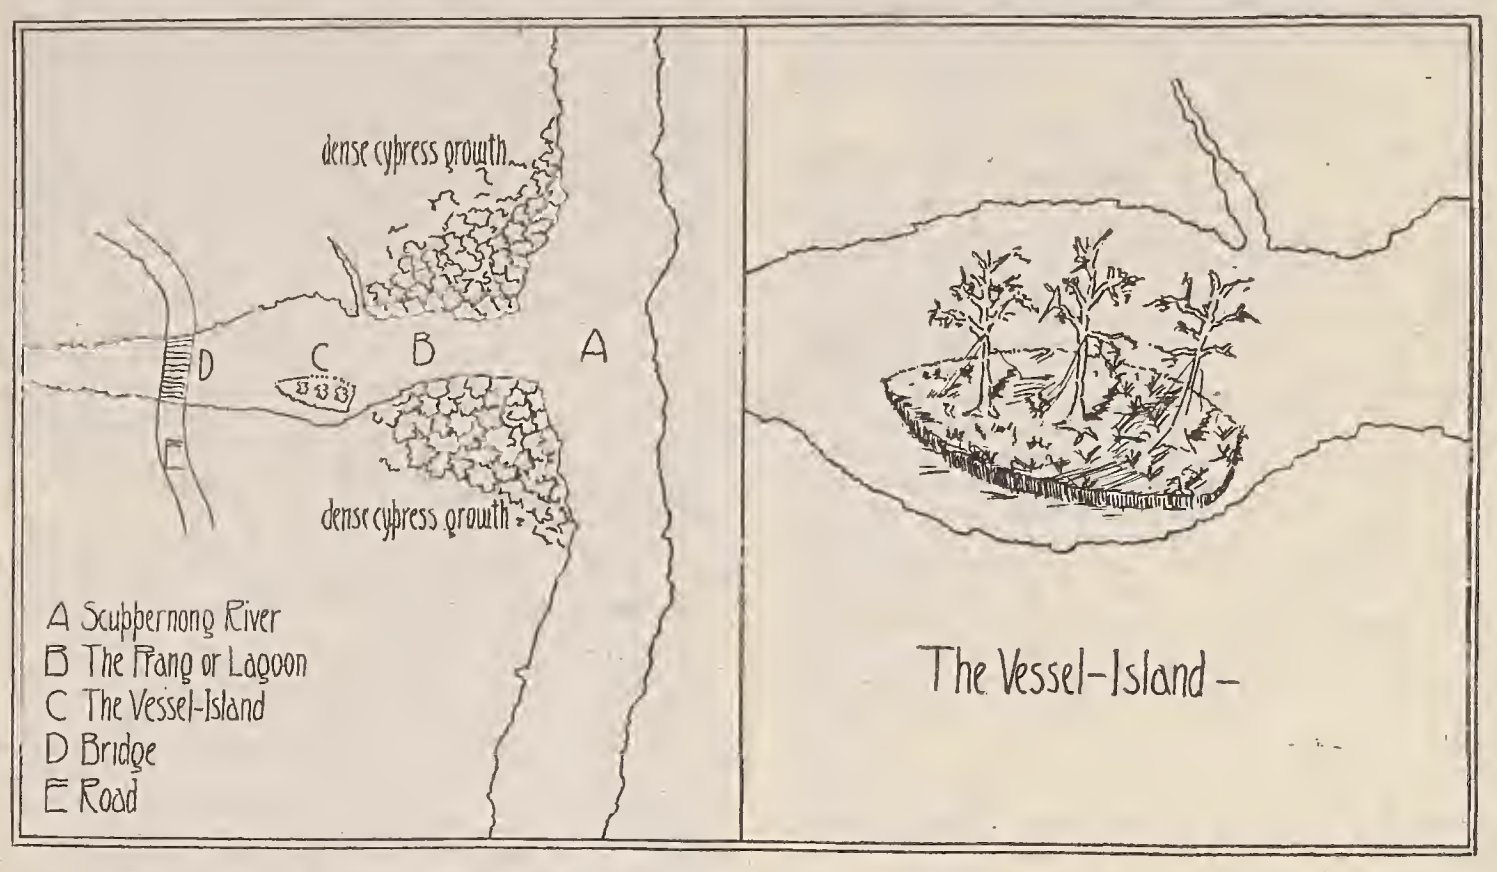
We gave them a few shots and turned a crook in the canyon—which, by the way, was several hundred feet high and several miles to go around—and were out of sight and out of present danger, and safe. Thanks to the mule, I felt as if I could kiss her, bless her! About three-fourths of a mile down the canyon, immediately at the lower end, was the island just above old Fort Pease. The island was about one mile long and perhaps half a mile wide at the widest place and well timbered, with plenty of grass in beautiful meadow-like spots, surrounded by a heavy growth of cottonwood. When we reached the island we felt, for the time, perfectly safe, knowing full well that no Indian was going to approach an island where white men were known to be in hiding. However, we made a cold camp, and after getting plenty of bark for our horses went to sleep. Coon Tail.

Vessel Island.

Raleigh, N. C.—There are many strange things in North Carolina, but surely one of the strangest of them all is a vessel which in forty years has changed from a three-masted schooner to an island of exquisite loveliness, its masts being trees and its rigging vines. During the Civil War there lived in Tyrrell county S. S. Simmons, a rich planter, well known by memory to the present old inhabitants of the quaint town of Columbia, the county seat. Tyrrell is half land and half water at any time, but when the wind is from the northeast and the water is blown in upon it from the great sounds which form its boundary, but little land is left uncovered. It is threaded by streams, most of them currentless. During the middle period of the Civil War Federal sailors were continually scouting in these waters. Practically the only means of travel and transportation was then, and is now, by boat. The old planter had numbers of boats and vessels of various descriptions. A short arm or prong of the Scuppernong River was the only place of safety for his craft, and up this he drew them. The point is what is known as the head of navigation, and beyond it the boats, which only drew one and a half to two feet of water, were taken to safety and could be gotten off again. One three-masted schooner, the Wylie Burgess, which he used in the lumber trade and which was occasionally on filibustering expeditions, was chased by a party of Federal sailors up the Scuppernong River. Dusk came on, and the schooner turned into the arm or prong referred to, which is narrow, and the opening to which is almost concealed by dense cypress swamps on either side, with a tangle of vines of all kinds and other vegetation, this being aided by the immense quantity of tillandsia or gray-beard moss which draped every tree and made a veritable portiere to the entrance to this quiet lagoon.

The wind was strong astern and the fleeing schooner, when some distance up this haven of safety, went hard and fast aground, but was also effectually hidden from the enemy. But the vessel was immovable and could not be dug out, and so was stripped and left there, merely the hull, the masts and the rigging being left. Lee's surrender and the end of the war came, and when quiet reigned the planter was called upon to remove this obstruction, but he could do nothing. His money, his slaves, his food, all were gone, and nothing was left but broad acres of land and water.

The records show to-day that legal proceedings were instituted against Mr. Simmons to force him to remove the obstructing vessel, but even an order of court could not make him do the impossible. So to this day, forty years since she grounded there, the old schooner still rests in the quiet lagoon. It is now a true island, retaining its boat shape, its gunwales broadly outlined by bands of greenest moss and grass, its masts trees growing vigorously, and laced together by cabled vines of grape and bamboo, which make it a mass of greenery summer and winter alike. The whole outline is distinct, and standing on the bridge which now spans the lagoon or prong, quite near the island-vessel, it requires no effort of the imagination to see that nature has here wrought a miracle indeed. The sketches which accompany this article, and which were made on the spot by Mr. L. T. Yarborough, lately a member of the State survey party engaged in the survey of the swamp lands, show this strange



freak very clearly, both from a distance and near at hand. Inquiries were made by the engineers which developed the facts given in the story above.

State Senator Spruill, from the district embracing Tyrrell county, verifies the story in all particulars, and says he has seen the vessel-island a thousand times. It is shown as the county's greatest curiosity. Mr. Yarborough and Senator Spruill have been on the island. The cypress-stained water of the lagoon looks nearly as black as ink, and this deepens the effect. The hatches look like large sunken graves. Fred A. Olds.

A Tramp through Primeval Vermont

Open a map of Vermont and glance at the strip of country lying between the Passumpsic and the Connecticut rivers and extending northward to the Canadian line. It is a district quite flat, according to the map, and checked off into townships with here and there, at intervals timidly wide, the name of a pond or stream. No network of black lines representing roads vexes the eye, while names with such a far away sound as "Cow Mountain" and "Moose River" add to your conviction that here, extending into the midst of civilization, is a veritable arm of the wilderness. It is a land of untamed forest, health-giving air, pure water, absolute silence, of every quality, in fine, that gives to one the sense of living close to nature. The grosser attractions, too, of fish and game will prove sufficient to satisfy the saner taste which is beginning slowly but surely to penetrate our ideals of sport.

The easiest way to enter this miniature wilderness is to go by rail to some point on its eastern margin along the upper Connecticut and then follow one of the mountain streams which pour their cold waters into the river. The country becomes more and more elevated as one goes westward until it rises at last into a line of high hills and mountains whose western slopes fall steeply toward the Passumpsic. These heights at once confront you if you enter from the west and the trails are far more difficult; but the distance to the heart of the wilderness is less and the transition from civilization is more abrupt. We chose the western route.

Half an hour's walk from the little village of East Haven took us fairly into the woods. The first few miles of the trail had been almost totally obliterated by that untidiest of earth's children, the lumberman, who had piled upon it all the debris of his misnamed clearings. But we struggled on by the aid of the compass, crossed the divide separating the valleys of the Passumpsic and the Connecticut, and toward evening entered a little clearing, where stood our first hostelry in the wilderness, a bark lean-to.

Everywhere in this region we found these forest inns, well located with a view to the best hunting and fishing, and, in lieu of rent, kept in some sort of repair by the few guests that visit them each year. They are built of birch and hemlock bark and accommodate comfortably four or five sleepers. The one before us fronted on a brook whose water seemed as brown as coffee. In the rear rose the unbroken forest of spruce, fir and hemlock, interspersed with deciduous trees, most numerous among which were the white and yellow birch and the sugar maples.

The first hours in camp are busy ones. The packs are laid aside. The lean-to, which looks a bit pervious to rain, is patched by those of the party who rank as "skilled labor," while the others hew birch logs enough to last out the night and gather hemlock twigs for the bed. These and numerous other tasks must be performed before the camp is habitable. And yet there is always time for someone to test the brook, as if to assure us that the trout are really there.

But it is when the first woodland meal has been eaten and the primitive dinner service put away that the time comes which one loves best in camp. With your pipe lighted you sit or recline at full length upon the blanket above the springy boughs, watch the crackling birch logs and the oily blaze of the bark, and feel perfectly content. It is a sensation as old as humanity. You get a taste of it by your own fireside at home, but to feel its full power you must reproduce the conditions of primitive man, shape a rude shelter in the lonely forest, hew the wood and build the fire with your own hands. Then and then only shall you know it to the full. Nor is that after time without its peculiar pleasure when, having rolled yourself in your blanket, feet to the fire in Indian fashion, and having slept off your first weariness, you awake to find the fire burning low and casting ruddy gleams over your sleeping comrades, while outside in the forest all is silent save for the purl of the brook and the ghostly cry of some night bird. Then suddenly there comes over you the overpowering mystery of the woods; the steepling trees, the moonlit clouds, the flowing air of night—everything about you seems overfull of a meaning you cannot fathom. You only know that it is good to live.

The brown brook, brown only because of its bed, for the water when dipped into a glass was of colorless purity, was to be our almost constant companion until we reached the Connecticut. It is well to be sure of your traveling companions, and so it was decided that two of us who were strangers to the brook should spend the first day in forming a more intimate acquaintance, while the other two followed the trail to inspect our next camp.

A day's ramble along an unfamiliar trout stream in the virgin forest! Can anything appeal more deeply to the heart of the forest lover who has been shut away from such things for a year? The dewy bushes still breathe forth the coolness of the night, the brook flashes past, leading you on through sunlight and shadow to surprises ever new—now a series of foaming cascades, where you clamber with care down the face of boulders slippery from the spray, now beneath the branches of some ancient cedar whose gnarled majesty you must pause for a moment to survey. And constantly you are lured onward by the angler's instinct that bids you test the contents of just one more pool; and that is why fishermen are always late home. We were still on the upper waters of the stream and the trout did not in any case exceed a half pound in weight, but they were numerous and hungry, and as we climbed back through the ravine to camp we were quite satisfied. Some philosopher has remarked that "It is not all of fishing to fish," but if you are a true disciple of old Izaak, it is no less true that there is no real fishing without some fish. The presence of so many trout in that ravine added just the little touch that rendered our day perfect.

Unknown Pond! How the very name suggests the wilderness undefiled! To this little mountain tarn, one of many which lie at different points along the stream, separated from it by a few miles of forest, we moved on the third day. But trials were in store for us first. If you have ever experienced a series of violent thunderstorms in the woods you will be able to appreciate our lot for the next thirty-six hours. About two o'clock in the morning we were aroused by the roll of thunder, and soon came the heavy downpour of rain. The lean-to was tight, however, and we remained dry, but it was a cold and cheerless breakfast that we snatched between the showers. The brook became in a few hours a raging torrent, sweeping away two of our precious cakes of soap, which were two feet above the water when we left them on the preceding evening. All day and far into the night a succession of storms swept over that forest. Some passed around us and some did not, but never for more than a few minutes at a time was the sound of thunder absent from our ears. By good luck the trail to the pond was comparatively free from brush, which in rainy weather is wetter than a shower bath, and the distance was but six miles, so that by dodging between the showers we arrived in fairly dry condition.

Our activity at Unknown Pond was restricted to the interior of the lean-to. Fortunately for us this was a marvel of good workmanship and shed the heavy rain perfectly, but outside everything was afloat. The whole landscape was blurred with rain. But he is no true lover of nature who cannot bear with her when she frowns, and as I think of that snug lean-to, the steaming campfire, and the songs with which we enlivened the night, I would not have had it otherwise.

Of all our camps, the last and the best was that at "the forks." In a cozy clearing, between the two main branches of the stream, stood a little wooden shanty about eight feet by ten, containing a small stove. After

an open lean-to this seemed luxurious. It had been erected by hunters who visit that region in the fall for deer, and its walls were decorated with legends in charcoal certifying to their success. The only tenant when we arrived was a lively red squirrel, whom we interrupted as he was feasting upon a bit of salt pork left by a recent fishing party. He objected noisily to our occupancy and scuttled back and forth across the roof and up and down the sides of the cabin at all hours, once or twice ruffling the hair of one of our party who happened to be obstructing his favorite pathway, the door post.

At the forks we occupied a strategic position. Below us ran the main stream, wide, free from overhanging branches, an ideal place to cast a fly. Above we had a choice of the two large branches by following either of which we could reach still other tributaries smaller, but all swarming with trout. There were miles of alternating rapid and pool, and all of these localities were within easy tramping distance of the camp, which could always be reached by following the stream. Even the inexperienced camper can scarcely lose his way when running water is his guide. Thus, whether we wished a day's trip or a few hours of casting, our tastes were alike gratified.

I may not dwell on all the details of those happy days, but no account of our pilgrimage would be complete without some mention of the birds, whose presence and song contributed so much to our enjoyment. How much one misses in the woods from lack of a little knowledge of ornithology! Our party included no expert, and so we saw and heard many birds which we were unable to identify. With the commoner birds, however, we were well acquainted. The woodpeckers, especially the flicker, were frequently seen; the junco flitted about our camps; we saw many cedar birds, and the thin, clear note of the white-throated sparrow was ever in the air. One day we came upon a saw-whet owl blinking beside the trail in a leafless bush. He had evidently staid out too late (or too early) and mistaken his roost. But the bird that gave us most delight, the bird whose song seems to me to embody the very essence of those northern woods, is the hermit thrush. At any hour of the day this inimitable songster could be heard, but it was while the silent twilight was settling upon the woods that he made his supreme effort, a veritable vesper hymn. I shall never forget on one particular evening, as we were hurrying campward after a hard day in a tangled swamp, how every coppice seemed to give forth a melody. Nature herself seemed speaking to us.

Of four-footed inhabitants of the woods, we saw but few—squirrels, of course, a mink, a rabbit or two, and one of the party was vouchsafed one of the privileges of nature, the sight of a deer in the wilderness. Indeed, it is surprising that others were not seen, for the sand bars along the stream were close trodden with delicate hoof-marks, and the angler makes little noise as he practices the gentle art. Bears came not near us, although on previous expeditions to this region one of our party had several times been within hearing of them.

How much the hungry pilgrim to the woods will eat is a question that will probably never be answered for lack of materials. We, at least, could not answer it. At the start our packs seemed composed of little else than provisions, but four days of hard tramping and harder eating had made fearful inroads. We were unscientific enough to carry bread, and all the good loaves which had been literally the staff of life to us were gone. The coffee and tea had followed suit and the rest of our stock was exceedingly low. Trout we had always with us, but even trout, when ungarnished, pall upon the palate. An expedition sent out to the farms along the Connecticut failed to postpone long the inevitable. Bread was the chief object of this expedition, but we were told that "the men were a-hayin' and the bread was all et up." Two good housewives were, however, persuaded to bake for us some five dozen biscuit. We secured, in addition, some trifles, such as eggs, potatoes, ginger bread, maple sugar and some "drawin's" of tea, but in three days starvation once more stared us in the face. And so, perforce, we bade good-by to the forks. An easy tramp of eight miles over a good trail brought us out into a lofty pasture, from which we gained a splendid view of the narrow river valley and the mountains of New Hampshire. Noon found us lunching bountifully at a farm house, and by mid-afternoon we were bowling along the Maine Central toward the humdrum haunts of civilization, far from that Mecca of the tired brainworker, the wilderness.

A. W.

"Bad Men."

Editor Forest and Stream:

The sketches published recently in FOREST AND STREAM, having some of the southwestern gun and knife fighters as subjects, were specially interesting. I regretfully note, however, that on the part of the writers there is a tendency to treat those tough fighters from a heroic point of view. In FOREST AND STREAM of March 28, Capt. Flynn introduces King Fisher to your readers, and, as per the card adverted to in the article, one would fancy that King Fisher was an honorable officer of the law who took rather a defiant method of discovering himself to Judge Bean, the law west of the Pecos, and that such was a mere incident of his law-abiding career.

As a matter of fact, King Fisher was one of the greatest criminals with which the State of Texas ever had to deal. He also was the leader of a gang of the worst criminals that ever preyed upon society. Its members were numerous, and were desperadoes of the most desperate type. Murder to them was a pastime. Like most of the criminals of that time and place, Fisher lived a nomadic life in the wilderness, though having places of refuge when hard pressed, which were selected because of their natural properties as a fortress, or the friendliness of the surrounding settlers, or both.

I never saw King Fisher myself, but I have listened to descriptions of him by men who had seen him, and they described him as a short, stockily-built man, with a face so hard of expression that a city suit of clothes could not soften, and manners so assured that no judge west of the Pecos or anywhere else in that region, would mistake him for a tenderfoot.

If I remember correctly, King Fisher and his band were so formidable that the available power of the State of Texas was unsuccessful in coping with them. In the immense region of forest and desert within the boundaries of Texas, there were innumerable natural hiding places for men who were thoroughly schooled in the lore of the woodsman and the plainsman.

There were other bands here and there throughout the State, equally desperate but of lesser fame. Some of the good citizens who followed regular vocations, and who were dignified by having permanent places of domicile, had none too great a reverence for the law or the rights of others, so he was not without spies and sympathizers.

But there was a gradually progressive movement toward law and order; lawless gangs were captured, dispersed or exterminated. King Fisher saw that the beginning of the end had come, so he bargained with the Texan authorities for immunity from the legal punishment which he had many hundred times earned, in return aiding the authorities to bring his fellow ruffians to justice. He fulfilled his part of the compact faithfully, and, there being a constant use for a man of his peculiar talents in rogue catching, he was advanced to the office of deputy sheriff, or some such law officer.

That he should be mistaken for a tenderfoot by any citizen of Texas is preposterous. That he should invite all the loungers to drink the Judge's whisky and then lay down a dollar on the bar is equally preposterous. In those days a dollar would buy only one or two drinks in that section, and in any event King Fisher was not the kind of man who cared much to settle the damages caused by his lawless shooting.

But King Fisher was not specially notable as an exceptional instance. He was one of hundreds, and only came more conspicuously to the surface because of his talent for leadership, fighting ability and great criminal record. There were hundreds of others.

Another desperado was Ben Thompson, who could assume the character of a tenderfoot to perfection. He had a penchant for neat gloves and natty dress. I happened to be in Houston, Texas, soon after he and King Fisher were killed together in San Antonio, and talked of him with a number of people who knew him well. That he was a nervy desperado there is no doubt. He was cunning to a degree, for in his wanton encounters, of which he had many, he so manipulated circumstances that he could make a good legal plea of self-defense. He would let the opposition reach for his or their guns first; then, being very quick on the trigger, and being able to shoot accurately with a gun in each hand, he had his man or men dead in a few moments. He rather sought encounters, and seemed to crave killing for the sake of killing. He carried his pistols in a specially prepared vest. They were large 44's, and the handles were within easy grasp on his chest. From that position he could whip them out much more quickly than a man could take one from his hip pocket.

I was told that, once upon a time, he entered the bar of one of Houston's best hotels. He was arrayed in fine city clothes, not forgetting kid gloves. There were three or four men present to whom the advent of a tenderfoot was like unto a wave of happiness. They tempestuously invited the tenderfoot to drink; he coyly declined. He was looking for trouble. Then came the conventional ultimatum of the lawless hosts, the big revolver pointed tenderfoot-ward which was supposed to persuade any tenderfoot to drink, be he ever so reluctant. Immediately then Thompson pulled out his big revolvers, fired rapidly with each hand, and had the whole company dead before one could say scat.

It was said of him that he would take journeys betimes near the Rio Grande, and when he returned he would have his bridle reins decorated from end to end with "greasers'" ears, tacked on evenly and artistically.

No doubt bad whisky was the inspiring cause of many of the evil deeds of these men.

The two worthies, Ben Thompson and King Fisher, while on a spree in the early 80's conceived the plan of going to San Antonio and settling some old grievances with the proprietor of a "theatre" in that city. They must have been much below their average in degree of cunning, for to their enemy they telegraphed their coming and its purpose. It was a case then of forewarned forearmed.

The two worthies arrived according to schedule, and at the first display of hostility they were shot down by men stationed in advantageous places within the theatre for that particular purpose. Even then Ben Thompson shot one of the assistants in the thigh as he knocked down Thompson's pistol, and the wound caused death a few days afterward. The two desperadoes were both dead soon after they were shot. Thus passed away two of the greatest Texan "bad men" of modern times.

Strange to relate there were many law-abiding, peaceful citizens who admired the two desperadoes, and they had many good friends where, in the proper order of things, they should have had only enemies. Some few good deeds accredited to them seem to have been of sufficient weight, in the opinion of a few admirers, to more than counterbalance their infinite deeds of evil. And yet their good deeds, if there were any, if performed by a man who had no setting of crime wherewith to make violent contrast, would have passed unnoticed because they were commonplace or devoid of the spectacular.

The general feeling, however, was one of relief, and that, if two Texans must have gone into the eternal darkness, no two could have been better spared.

Those were the days when the reign of the "bad man" was drawing to a close. The reputation was once much desired by a certain class of men, but there came a time when a man with a bad reputation was watched and marked by the better class of men. He was considered a common enemy and on the first overt act he found the hand of every honest man against him, which meant death. Those were lawless times, even from a Texan standpoint, but it must not be overlooked that the personal code of settling difficulties is much more liberally interpreted even to-day in that State than it is in the Northern States.

In my opinion it is a mistake to glorify the "bad man." The few acts of desperate courage or chivalry are no true index to the real characters of those men. They were predatory rather than productive. In a way, they had nothing worth living for, unless we admit that the life of the wolf is worth the living. As a class, they were densely ignorant, lawless, dissipated, and in money matters of the robber and murderer class. Of course, there are exceptions, but these remarks apply to the general run of the class of bad men.

Probably none of the lot are more famous than is Jim Bowie. He had personal encounters innumerable, went through them all victorious though not always unharmed, and died bravely in the Alamo. Yet withal his apparently patriotic death, he was as great a ruffian as ever escaped the gallows. He craved brawling and blood for its own sake. As a citizen of Louisiana, he was an habitual loafer and ne'er-do-well, was in constant brawls and feuds, and, being cunning and wonderfully expert in the use of the knife—one of a well-known pattern which he devised bears his name—he was marvelously successful. It is said of him that he was ambidextrous; that he could shift his knife from one hand to the other with lightning dexterity, which, combined with superior physical suppleness and agility, made him a most alarming and dangerous foeman. When he left Louisiana for Texas there was a feeling there that he left his country for his country's good, and that Texas was welcome to his person and his talents. That he never got hanged or imprisoned for life was one of the peculiar happenings in the formative stages of a country's development of which the West and Southwest a few years ago furnished many illustrious examples. But in any event, I think it unfair to parade the bad man as a hero unless it is mentioned also that he was a criminal, if such he was, and there is no doubt whatever that the men under special consideration were criminals of the deepest dye.

CHAS. DAY.

Experiences of Amateur Sportsmen.

An Interesting Tale Spiced with Sarcasm—How Two Wives Knew More than Two Husbands who were Short on Knowledge.

THE New York Observer and the FOREST AND STREAM usually come to us by the same mail, and in the evening my husband and I become forgetful of each other and the world, as he reads the paper last named and I drink in the religious and secular news of the Observer. My husband will not read the Observer, giving as his (flimsy) excuse that it carries many fake financial advertisements; but some allowance has to be made for him, for in his religious sentiments he is of the Golden-Rule-Brother-of-Man kind. I did not read the FOREST AND STREAM for a long time, for I believed it to be a sporting paper, and I hate the word "sporting." But when one evening a few months ago my husband explained to me the difference between "sporting" and "sportsman," and said his paper came under the last denomination, my prejudice passed away, and since then I have found much pleasure and very wholesome information in reading it; and I further confess it has inspired within me considerable desire to become a sportsman myself. I am specially fond of its cleanliness.

It was early last spring when my husband said, one evening after a long reading of his paper, that he was inclined to take a vacation in the Adirondacks and see what it was like. He being a hard-working man and in need of rest, I supported the proposition, and the more we discussed the subject the more his inclination was strengthened, until finally he resolved to go late in April. It was now early in March, and as days wore away, he became enthusiastic, especially as his close friend, Donald, had promised to accompany him, He never had studied his catechism so thoroughly as he read the FOREST AND STREAM even to the advertisements these days, and he also read several circulating library books on "Camp Life," "The First Principles of Angling," "Woodcraft" and others. He read chapter after chapter to me after I had fallen asleep in my cosy rocking chair surfeited with what he had previously read.

My husband spent much time and more money in gathering an outfit for that, his first trip as a sportsman, and I also took keen interest in the work, which was quite new to him and especially so to me. I saw things I had never seen before, and asked many questions in relation to them, all of which Jack was kind enough to answer as well as his own information would permit.

Every day for three weeks previous to the date of the projected trip, at least one article of some kind would come to the house, and on some days a dozen or more things would be delivered. Two or three days after, every evening when Jack had studied the FOREST AND STREAM advertisements more faithfully than usual, a lot of things would come by express from New York. Very soon his den became well filled with his purchases, when he meekly asked my permission to use the adjoining sewing room, and of course, consent was readily given, and it too was soon so well filled that when packing time came, the work had to be done in the hall.

Incidentally, one day while this gathering of an outfit was in progress I was made somewhat unhappy by the half-hidden appearance of several black quart bottles, against which my suspicions were aroused. Yet I could not really distrust Jack, for he could not have found in his paper, by which he swore, not profanely, any suggestion that spirit-disturbing influence should constitute any part of his outfit. But I was entirely relieved of my vague suspicions, and chided myself for them, when my husband came home at night, and in reply to my early and earnest inquiry, told me that the bottles contained tar oil, to be used in protecting himself from annoyance by flies. I could have hugged him for thus relieving my mind, but did not, for to have done so would have been to expose my weakness in the entertainment of my suspicion.

When completed, Jack's collection must have been most complete. It not only comprised 167 articles, but they ranged all along the sportsman's line, from the very handsome and very expensive meerschaum pipe which I bought for him in Europe while on our honeymoon, to an iron boat anchor weighing a hundred pounds or more.

His friend Donald, who had spent hours and hours with Jack in discussing preparations for the trip, had a similar outfit.

When packing time came I watched the process with great interest, and I confess, with a strong desire that I might, with Henrietta, Donald's wife, accompany the twain. But, though Jack had always been one of the most indulgent of husbands, he met my diffidently expressed wish with the remark that after he reached camp if he found it to be comfortable and congenial for women, we might be invited to have our wishes for wild experiences in the wilderness gratified. But this meant but little to me, and my wishes vanished. I continued to lend him a helping hand, however, just as if my hopes had not been crushed most mercilessly.

Among the many, many articles of his equipment was a hundred or more varieties of flies, for the "finny tribe" and "speckled beauties," he said; his "trusty, unerring" rifle of .22 caliber, a 12-ounce lancewood fly-rod, which would "cast a fly like a feather," he assured me, and a heavy, strong bait-rod, both supplied with half a dozen extra tips. His tents were carefully wound over the tent poles, after repeated trials, to suit his fastidious taste. Then his rubber suit, cap-a-pie, stiff and contrary and stuffed with numerous articles until it stood out in full form, perplexed him in the handling of it, and was finally disposed of by undoing one of the tents and wrapping it therein. Blankets, pillows, material for a mattress, two suits of under and outer clothing, ulster and rain coats, a leather sack coat, a bath robe, a pair of long and a pair of short rubber boots, three pairs of shoes, one pair hobnailed, a pair of slippers and a sleeping bag made of a buffalo skin, were among the articles for personal comfort and convenience, of which the list omitted was many times longer than the list enumerated.

Then there was a list of cooking conveniences, longer than an inventory of the articles in my kitchen, all the way from a nutmeg grater to a fifteen-quart kettle; also some camp comforts, such as an oil stove, kerosene lamp and shade, large mirror, earthen washbowl and pitcher, and perfumed soap, rose blankets for outer covering, tableware, etc., etc.

A Rushton boat, a canvas boat and one in two parts, to be used for "porterages," he said, and a lot of "jack" lanterns, electric lamps and carpenter's tools made up one lot.

The supplies for the table did not come to the house, but were sent direct from the grocery.

It did not seem to me that he had overlooked a single thing in his list of 167 pieces, yet when he returned he said he had 148 things he didn't need and was short of some simple ones which he really did need.

Evening after evening was spent in getting the duffle into transportable shape, and we were both glad when the end came and the great rolls of tents and their contents, and the big boxes were ready for the trip, all neatly marked "Liberty Camp, Heron Lake, Adirondacks."

Bright and early on one Monday morning late in April, Henrietta and I accompanied our respective husbands to the station to "see them off." All was haste and excitement for a few minutes, for the baggage master absolutely refused to permit the transportation of the camp equipment as ordinary baggage, and not until a goodly "tip" had been accepted for "excess baggage" was the controversy settled. This accomplished, our two husbands proudly tread the station platform in their $115 sportsmen's suits, with daggers and revolvers in their belts, and with us at their elbows, while sweet adieus were said, until the train rolled into the station. In a moment they were gone! And as Henrietta and I walked along toward our respective homes the awful thought came over us that whereas we were now only grass widows, what if some awful accident should befall them by which we would be made sod widows! The horrible thought did not forsake me during the entire day, and disturbed my sleep at night.

It was some ten days before a letter came from either Jack or Donald, and then both Henrietta and I were made happy and forgot the talks we had had about being "neglected"; that while they were having a good time they were also unmindful of us, etc., etc. We were in each other's company almost constantly during this absence of our husbands, and if there was anything omitted as a topic for conversation it was done through forgetfulness or want of information. We did no gossiping, however, strange as it might seem. We talked about our friends and neighbors and people in general whom we did not know personally, to be sure, and did some criticising, but no gossiping. I hate gossipers! Each told the other many society secrets, some of them very surprising, some of which it would do no harm to repeat, for they were "too good to keep."

Jack's letter was long, endearing, and readable. I take some extracts from it:

"We reached our camp late Monday night, after a beastly ride in a farm wagon a distance of eleven miles from the railroad. We couldn't bring all of our supplies, so the greater part was left to come in the next day, but it didn't come until Wednesday night, two days late. While I had made arrangements previously, as I had supposed, by letter for two guides, leaving the exact date when wanted to be fixed by telegraph, we found, to our great surprise, five guides on hand. This came from a blunder of the telegraph operator, who substituted 'ten' for 'two' in my telegram. 'Two guides must be at camp Monday not later than noon.' A consultation among the guides at the place where the message was received ended in the conclusion that not more than five guides could be advantageously employed by two men, and so that number came. We doubted the expediency of keeping so many in service, but they explained to us that we each needed a guide while fishing or hunting, that there should be a cook, a wood cutter, and one held in reserve to take the place of one who might become incapacitated. This seemed reasonable, and we retained all of them.

"We haven't done much hunting or fishing yet because the flies are so thick. I have used up most of my tar oil, and wish you would call at Trouter's, and tell him to duplicate my previous order and send it by express and buckboard at once to 'Liberty Camp, Heron Lake, Adirondacks.'

"I fished one evening, using a primrose fly. My line tangled a good deal at first, and later I lost what the guide said was the biggest fish he ever saw. In my haste I cast again, hooked the guide in the ear and had to go ashore and get it out—the hook, I mean. The guide said the weather wasn't favorable for fishing.

"There was some snow on the ground, which I thought was good for still-hunting, according to the FOREST AND STREAM, so I got out my rifle one morning and went off on a hunt, moving most cautiously. I saw no deer. When I returned one of the guides had the impudence to tell me that in April deer were so poor that they could not stand alone; hence I could not see one; also that if I had killed one I would be subject to a fine of $250. I should have thought the guide was under the influence of liquor if there had been any within five miles of camp.

"Now, about the coming here of you and Henrietta. Nothing could be more comfortable than our accommodations, and we live high. We are told by the guides that they never saw a more unique camp; that it is built and conducted according to the ideas of a true sportsman. I was not sure whether he was complimenting me or some other sportsman. You would find it an awful hard trip coming in here, and would suffer from the great swarms of punkies, wasps, bees and deer flies; but perhaps you could get on with them. We both wish you and Henrietta were here, yet we are agreed that we cannot urge you to come; indeed, to be entirely frank with you we should advise you not to come, as much as we want to see you, if you were to ask our 'opinion.'"

After reading my letter my mind was filled with queries, and the more I considered it the more my curiosity was aroused. I called immediately on Henrietta and found that she had received a letter from Donald, and on comparing the two letters they were so much alike that it was perfectly apparent that our husbands had agreed upon the stories they would tell; and it was also too apparent that they could get on without us. The more we discussed these letters the more determined were we to unravel the mysteries, and it was not without some of the spirit of a woman who cannot abide deception by her husband that we very soon resolved that we would pay a visit to Liberty Camp, Heron Lake, Adirondacks, and we concluded to start at once on the morrow, and spent the remainder of the day and evening in putting our golf suits in order for the trip.

With only hand bags for baggage, off we went, and without special incident during the trip to relate. When within half a mile of the camp, an hour or more before sundown, we halted the horses and walked the remainder of the way that we might stealthily surprise the settlement, which we did. We found not a line of tents, which we expected to see, but a bark shanty, seedy from age, with the earthen floor covered with last year's balsam boughs. The surroundings were no less forbidding. There was not a sign of the camp comforts or cooking utensils which our husbands had transported from home; in fact, there was nothing to relieve the utter desolation of the place.

The five guides, who were comfortably seated at a card game when we came upon them, were scarcely civil to us; but one of them did take the trouble to explain that our husbands were "off somewhere fishin'," and probably would soon return: so we had nothing to do but wait for their coming and discuss the situation. When they came there was a warm greeting about equally mixed with surprise.

Shortly after this we proposed a stroll, mainly for an opportunity to "talk it over" with our husbands and ascertain why they were pursuing such an utterly barbarian life. We found that they were the victims of five lazy, shiftless guides without knowing it; that they, the guides, had conspired together and under various reasons and sundry statements plausible to a tenderfoot, had really convinced our husbands that the life they were leading was that of genuine sportsmen—the other extreme of their ideas of the subject at home. There was not one single comfort to be had, for it would have cost the guides extra work, and very little work and full pay was their main object in life. None but the plainest food had been miserably provided, though the supplies embraced much which was luxurious; but this was explained later, when it was found that the guides had made free use of the luxuries in the absence of Jack and Donald. I had never before really believed in hypnotism, but now I did, as I surveyed the situation.

Henrietta and I spent the night as best we could, and in the morning were up bright and early, and firmly resolved to establish a condition of affairs which was endurable. To that end we ordered the guides to bring the tents and other things stored under a tree, to a pretty opening in the timber on the shore of the lake near a beautiful spring. There was a short consultation and some disguised appearance of rebellion among them; but soon they took up their work seemingly with a full understanding of what was expected of them, and long before the sun set we had a camp well pitched and supplied with the comforts and some of the luxuries of life, together with a thousand and one things we did not need, of course, but as they were present all possible use was made of everything. The ideals of the men when at home were quite fully realized.

Here we remained for two weeks, and found the very bliss of enjoyment; but this transformation never would have come about only that two women intuitively saw that laziness and falsity on the part of the guides was the reason for such imposition upon two men having their first experience in Adirondack camp life.

Since these experiences—which, in the main, I hope to have repeated year by year—I have been told by old and reliable sportsmen that, while there is a class of most shiftless, inexperienced men in the Adirondacks who call themselves guides and prey upon uninitiated visitors to that exhibition of nature in primeval grandeur in the Adirondacks, the great body of guides are men of character and trustworthiness, faithful to their employers under all circumstances.

None can know what rest, general physical benefit and happiness is to be found in the right kind of camp life in the Adirondacks until he shall have spent a month or more in such experiences. I do not mean such "camps" as cost large sums of money and are surrounded by the vast acreages which great fortunes can secure as against the humble, and poor, but honest, citizen. Rather choose, whatever your means may be, a new and clean bark protection from the weather, pleasantly situated in some secluded place near a lake and spring, where nature will give plentifully of her great bounty for the renewal of health and strength.

JACK'S WIFE.

Natural History.

Spring in the Adirondacks.

THE first sign of spring in the Adirondacks is seen when the snow is five or six feet deep and the thermometer registers below the freezing point. It is the following of one fox by another. One will find the tracks leading along over the snow, sometimes with the track of the second fox placed squarely in the first, so that you could not tell that two had passed by. It marks the beginning of the mating season of a great number of birds and animals. Probably the next sign is the coming of the crow, about the first of March. He does not winter here as he does in most parts of the State, but comes along about the time the first bare ground shows on top of hills and knolls of the sandy farms which are to be found close to the edge of the "big woods." The dickcissel—sometimes called the little meadowlark—a bird whose call may be mistaken for the common meadowlark—follows soon after the crow. The meadowlark does not come until late in March.

The skunk is not a good timepiece by which to tell the coming of spring, for he comes out at most any time in the winter during a good thaw. But if one will stroll around a little about the first of March, when the thermometer is above 32 Fahrenheit, he will see its tracks leading aimlessly about over the granular snow, and perchance he will see the animal itself, for now he goes about in broad daylight, even when the sun is brightly shining.

The rains of early spring make a sight in the woods well worth standing out in the wet to see. As the warm damp air comes in contact with the cool snow a fog is formed which the wind carries through the trees, giving almost a true picture of a forest fire. The fog will first drive swiftly close to the ground, and then shoot up into the air to the tree tops, whirl around, then fall to the ground again and go eddying in and out among the trees. It will go swooping up the side of a ridge or mountain side sending the smoke high into the air to mix with the clouds above. To make it seem more real the wind continually breaks twigs whose crackling sounds as it does when they are burning.

Soon after the crow we see the first tracks of the woodchuck. In 1902 they came out on the 7th of March, eight of them, and in the morning at that. Some of them dug out through the snow. One came up through three feet. Each took a short run of from three to ten rods and then back to its burrow. This year one came out the 21st of February. The sun was shining a little warm, but the wind was from the northwest and cold. There was no bare ground or anything in the landscape to remind one of spring. It was a good winter day. He came up through a couple of feet of snow and just pushed his head out. The next day he came out a little further, but made no track upon the snow. After that he ventured far out and was out nearly every day thereafter.

The chipmunk appears a little before the woodchuck, usually. Last year he was seen on February 24. When the backwoodsman heard of it he remarked that the back of the winter was broken.

The robin, bluebird and red wing blackbird and crow blackbird arrive next after the dickcissel and after the woodchuck appears—that is, about March 15. It is then that we think spring has really commenced. Close on to the robin follows the song sparrow. First you hear one, even as with the other birds, and as the days pass by you hear and see more and more of them. By this time there is plenty of bare ground in the open fields, and if you will go along the southerly side of some hill you might see a snake basking in the sun; and perhaps a lizard, a tolerably lively little fellow, reddish on the back, blackish on the sides and gray on the belly. Very likely, too, you will see a butterfly flitting about as lively as ever you saw one.

The pussies of the willows and poplars show themselves during the first good thaw, and by the latter part of March the flowering and leaf buds of maples, birches, etc., growing in the clearings have swollen considerably, but the first green thing to grow is the swail grass in wet ground on the south side of a hill. Soon after that the skunk cabbage can be found coming up near the swail grass. Along about this time the kingfisher makes himself known by his usual call as he flies up the already opened streams. The killdeer makes his appearance about the same time around the coves and marshes. But he does not stay with us. He passes on to the north. A warm rain in the first part of April hurries the spring along. The buds of the balsam tree become quite large and conspicuous, while the adder tongue in the cleared pastures and the leeks in the patches of woods on the low lands spring from the ground.

About the middle of April, the snow banks having all melted in the clearing, the first of all flowers, the bluet, can be found by looking sharply on the low sandy pasture lands, and to one side in the marshy bogs the cowslips, with little leaves, are budded.

Now at sundown the many robins fill the air with their

songs or anxious-like calls as they fly from tree to tree. Later in the evening the frogs, a couple of weeks since the first one was heard, fairly make the air ring. To stand close to a pool and listen to them is almost deafening. Yet frogs of different pitch of tone can be distinguished. In three pools observed there was a single frog in each whose voice was an alto, and was varied at times from the regular chant of the others to a song quite different and truly pretty.

And here, close to the 15th of April, the phoebe, the field sparrow, the tree swallows and the yellowhammer come north on their migration. The first leaf of a tree or shrub to show is that of the fetid currant, a wild shrub growing on high ground. In the line of flowers spring beauties, blood roots, violets, addertongues, and a few hepaticas are seen.

A trip to the main woods now is a surprise. The snow is about off in the patches of woods at the edge of the big woods, but if you go back in the ground, on the northern slopes of hills and ridges or in swamps where it has been protected from the sun and warm air by the evergreens, is found covered with snow two or three feet deep. Big chunks of ice, dripping with water, hanging down from ledges of roeks, are seen. And these in shaded ravines, in some cases, last well along into the summer. Deer traeks lead off over the snow, sinking in only an inch of so, but occasionally way in, and now and then a bear track is noticed, with the edges thawed around so much that you would think that you had struck a grizzly's. The air is cool, especially on the snow, for there it is usually shaded, but on the southerly sides of ridges there is a warmth in the sun which is agreeable to most animals, including man.

But nothing green is found, or no birds seen or heard save the chickadee, bluejay, pine grosbeaks, nuthatches and goldfinches—all of them winter birds. Even the buds of the underbrush are but slightly swollen in the most favorable places. While out in the clearings fifteen or twenty miles away, the robins, the song sparrows and the flowers remind you that warm weather for good is not far distant, here it seems as though you were way back in March instead of close to the fair month of May. The ice in the lakes is not all gone. Some coves are entirely covered.

About the 20th of April the first egg is laid. The butcherbirds have the distinction of having the first nest. In April the first deer is generally seen out in semi-civilization. The March rains makes the crust so hard that they can easily travel on trop, and they at once do so in search of food that might have been hard to get in the winter. As the spring advanees and the leaves begin to come out, more and more of the animals are seen.

The first part of May or last of April brings the white-throated sparrows, a bird whose song is as sweet as any bird's in the whole region. Each of these birds has a tone or pitch of its own, and one never sings its little song like that of another. They are a bird truly of the backwoods. They do not often nest near a house, but make their homes in wild clearings, old burnings, beaver meadows, edges of lakes, and one seldom fails to hear one about an old abandoned lumber camp. In the first part of May the clearings and burnings at the edge of the main woods are filled with the music of this bird. They stay with us a couple of weeks or so and then most of them leave, a few remaining throughout the nesting season. I imagine that they, as well as other birds, remain outside the woods till spring has further advanced within.

With the white-throated sparrow come the white-crowned sparrow, the bird of the far north; the great crested flycatcher, a bird whose song might sound sad to some people. Later, about the middle of May, the catbird, the ruby-throated hummingbird, and the Baltimore oriole, a tolerably rare bird here, make their appearance. About this time the partridge has her nest. In the latter part of the month the cedarbirds come. They are in small flocks of four or five, and are among the last arrivals, though some less conspicuous birds come in June.

The flowers to blossom about the first of May, when the white-throated sparrow arrives, are the trilliums, red and white; the white violets, which are about two weeks later than the yellow, and violet; and the soft maples whose blossoms give the trees a color of fiery red. The leaves of the hard maples, poplars and cherries have protruded a little way from their winter covering and make a beautiful greenish background for the dashing red of the soft maple flowers. About the middle of the month the woodsy shrub which the deer hunter hates, the witch hopple, blossoms. This flower spreads its petals of a dark green color, when in a few days they fade to a pure white, and then later drop off.

Though small patches of snow can be found in the most shaded places in the mountains, leaves of the trees are now taking shape on the sunny slopes. They are about two weeks behind those at the edge of the forest. It is curious how they leave out. The lower limbs develop their leaves first. Here the shape has formed, while, as you look up along the tree, the leaves are smaller and smaller till at the very top you cannot see that the buds have swollen at all. It is due to the fact that the cool wind strikes the upper buds while on the lower ones the buds are more sheltered from the breeze, yet getting full benefit of the warm rays of the sun. This feature is more noticeable in the hard maple and birch. Now to pass to the shaded side of the ridges is like going into another climate. The buds here are merely swollen and you can see why, for the air is cool and damp. The dandelions and cherry flowers in the fields and grown up burnings are very beautiful, and a great many birds have their nests in them. The last year's leaves and the twigs are very dry, so that now a match will set a fast-spreading fire. Some lazy backwoodsmen clear their potato patches just in this way, and consequently destructive fires are started.

At the last of May we almost cease to fear frosts. We get them, however, quite heavily sometimes in this month, and even real snow storms. Throughout the spring the prevailing winds are from the southeast, and whenever they turn to the northwest the thermometer lowers.

One observing the first birds and the first flowers of spring will hardly fail to notice that certain birds will come with certain growths of vegetation. Thus: the kingfisher about the time of the skunk cabbage; the bluet with the yellowhammer; the white-throated sparrow with the trilliums, etc.

But then you cannot nail nature to any strict rules. No spring is like another, nor does the bird *always* come in the same part of month. He is just likely to do so.

ELDRIDGE SPEARS.

The Story of a Bird Lover.

UNDER this title the Outlook Company has recently published in a handsome volume of nearly 375 pages an autobiography of Mr. W. E. D. Scott, well known as Curator of the Department of Ornithology in Princeton University, and the author of a great number of papers on birds.

The volume has an especial interest for all nature lovers, because ever since his childhood days Mr. Scott has been an enthusiastic lover and student of birds, and his investigations have carried him over a very considerable part of northern North America. Mr. Scott is now, and for years has been, studying wild birds in captivity, having in his house at Princeton a laboratory of six rooms where are confined about 500 live birds, native and foreign. Some of his observations and conclusions have been published within the last year or two in Science, and about five years ago he published a volume of "Bird Studies" giving an account of the land birds of eastern North America.

The present volume begins with the author's first childish recollections of nearly fifty years ago. The boy from childhood was interested in living things, and during his student days at Harvard fell in with Henry Henshall, William Brewster, Ruthven Dean, H. A. Purdie and others, who afterward formed the Nuttall Ornithological Club. He studied with Agassiz, Wilder, Morse, and others at Penikese Island, and not long after that started west, to set on foot natural history collections for a normal school in Missouri. This accomplished, he returned to New York and took up the work of skinning birds for John Wallace, the taxidermist, in North William street, well remembered by many of our older readers. A little later he was engaged to arrange the collections at Princeton, where he has been ever since.

Mr. Scott's volume takes us, as we have said, over much of the country. The Atlantic Coast as far south as Florida, Missouri, Kansas, Colorado, Arizona, and the island of Jamaica are all visited, and concerning each section through which he went Mr. Scott gives us full and most attractive detail. Where all is so good it is hard to say what in the book is most interesting, yet we are inclined to prize most what he tells of Florida and Jamaica.

There is perhaps no one who has done so much to present to the public the terrible destruction of Florida birds as Mr. Scott. At the time of his first visits to Florida in the early '70's, the business of plume hunting had hardly begun. At the time of his later visits most of the plume birds had been destroyed, their rookeries, or nesting places, had been broken up, and Florida, from the greatest of our resorts for tropical birds, had become almost barren of birds.

From the very interesting pages of Mr. Scott's book we may quote an interesting experience of his which shows how readily—what is already well known—wild creatures learn where they are protected and take advantage of this protection.

In February, 1887, Mr. Scott took from a nest in a rookery not far from Tarpon Springs three young Ward's herons for the purpose of watching their growth and the development of their feathers—for when secured they were in the downy stage of plumage. They readily became tame, and when they had attained their full growth—the purpose for which the author had reared them having been accomplished—they were put in a coop, driven to a cypress swamp some three miles from town, turned loose in the dusk of the evening, and that was supposed to be the end of them.

"Imagine my surprise," Mr. Scott says, "the next morning on coming out of the house to see the three herons perched in a row on the fence, announcing with loud voices and gaping mouths that it was high time for some one to go to the fish market. Needless to say, I went at once. Nor was this the end. I found I could not get rid of them. Like Sinbad the sailor, I had taken up a load and could not lay it down; the Old Man of the Sea would not relinquish the advantage he had gained. After various experiments and expedients, an arrangement was contrived that seemed fair to all parties. There was a boathouse on the bayou that had a grated water door through which the tide rose and fell, and inside was a spacious pool for the accommodation of various craft. Now, this was not in use, and here, for a time, two or three weeks, the birds were confined. They were supplied daily with food, and were able to catch many small fry that swam about in the inclosure, eking out a good living. After a time the water gate was left open, when they all waded out and flew to various points in the bayou. From that time on for months the herons were daily seen walking about, and at any time when I had a fish I could call them and they would come and get it. With the arrival of sportsmen from the North, one by one these birds were sacrificed to satisfy the killing instinct that seemed to be rampant in the breast of every man who invaded Tarpon. The last one disappeared about fourteen or fifteen months after liberation.

"Fortunately, these occurrences answered a good purpose. The town authorities, of course, had noticed these birds, and I had frequently warned people not to kill them; but this lesson was better than all preaching. Now a law was made that, within a certain distance of the town, and on the adjacent waters, no one should be allowed to fire a gun. As a consequence, during many ensuing winters many kinds of birds frequented these waters; wild ducks swam about in the bayou which reached away into the town, and became so tame as to approach within a few feet and pick up pieces of bread thrown to them, much as swans and ducks do on the ponds in Central Park. They soon found out that here they would be unmolested.

"Nor was this the only place where similar results followed protective steps. There is a hotel on Tampa Bay located at the end of a long railway wharf which extends several miles out from the shore. Here passengers embarking and arriving on the steamer for Key West are entertained. The dining room windows did not simply look out upon the water, but were over it, the walls of the house rising on piles straight from the bay. While taking breakfast one morning in March, the windows all open, I was surprised to see countless wild ducks, chiefly the lesser seaup, swimming about close to the building, much at home. On throwing out a bit of bread, they scrambled for it and tussled with one another much as tame ducks do. Then, as soon as other ducks at a little distanec perceived that feeding was going on, they joined the group, and before long several hundred wild ducks were under the windows of this hotel, affording an unusual sight.

"The waiter, noticing my interest, informed me that this result had been brought about because, in order to prevent accidents to guests, one of the rules of the establishment was that no firearms should be discharged in the vicinity, from any point on the wharf, or on the adjacent waters. Not the least curious part of this incident is that the same kinds of ducks, only a little distance away in the bay, say a mile, were so extremely wild that it was difficult to approach them. I believe that probably some of the individuals observed as so wary were the very birds that, when in the vicinity of the building, lost all sense of fear. I am inclined to believe that they discriminated that danger ensued from the approach of men in the boats, and that in the vicinity of the inn nothing was to be feared."

North Siberian Mammals.

THE Jesup North Pacific Expedition, sent out by the American Museum of Natural History in New York, has been heard of by all ethnologists, and at the Congress of Americanists, held in New York last autumn, some of the discoveries made by this expedition were announced in the papers there read by its members, though, of course, the general results of the expedition have not yet been published.

It is not generally so known that Mr. N. G. Buxton, a collector in zoology, went to the northeast coast of Asia with the Siberian division of the Jesup Expedition, where he made extensive collections. A report on the mammals, with his itinerary and field notes, has just been published by Dr. J. A. Allen in Volume XIX. of the Bulletin of the Ameriean Museum of Natural History.

The present paper includes, beside the mammals collected by Mr. Buxton, those obtained by other members of the expedition. The chief localities represented are thus the west coast of Okhotsk Sea, the middle Anadyr River, the lower Amoor, the mouth of the Anadyr River, Indian Point on the extreme northeast coast of Siberia, and the middle Kolyma River. The collection numbers about 500 specimens representing 35 species, which include 12 new forms.

Mr. Buxton reached Vladivostok about the middle of May, 1900, and Gichiga August 13. This is a great place for salmon, which aseend the rivers of the gulf in immense numbers during July and August and are caught and dried and constitute the people's chief supply of food. They obtain also a few reindeer from the Tungus and Coryaks, some wildfowl, and exchange labor and furs with the traders for bireh tea and sugar.

In that latitude snow begins to fall in October and a little later the rivers and lakes freeze over. From this time until spring all travel is by dog sledge, and the abundance of fish enables each man to keep from ten to sixty dogs. From ten to sixteen animals constitute a team, the animals being hitched in pairs to a long line attached to the sledge and being driven by the word. Mr. Buxton's travels in this far northern country lasted for about a year, and he returned by the Transsiberian railway to Europe and thence to New York, which he reached the end of November, 1902.

Among the collection are reindeer both wild and domesticated, including two races of the domesticated reindeer, which are very different in size. The Chukchecs, who inhabit the extreme northwestern corner of Siberia, possess the largest herd of any of the Siberian natives, some of them containing as many as 20,000. The Koryaks, Tungus and Lamuts are also owners of reindeer. These last possess the largest breed, while those of the Tungus of the interior are larger than those owned by the other two tribes. The animals wander at large, but a herd of four or five thousand visited by Mr. Buxton was accompanied by twelve men and their families, who looked after the deer and moved along with them, frequently changing them to fresh pasturage. One or two men are with them constantly day and night, summer and winter. Many of the reindeer are broken to ride and drive. The animals are tame and are easily caught with long sealskin lariats, which the men handle dextrously. In color the animals range from pure white to dark seal brown. It is interesting to note that in Siberia reindeer usually give birth to young when they are two years old, and it is unusual for them to have young when one year old. On the other hand, in Alaska the reindeer descendants of these Siberian animals calve at one year old, and it is the exception for them to wait until they are two years old.

Wild reindeer are still quite common in the country about Marcova. They are smaller than the domesticated ones.

The elk—by which is meant the elk of Europe, corresponding to our moose—seems to have disappeared from the region immediately about the Okhotsk Sea, but is still found further inland. One member of the expedition reported them as abundant in the valley of the Kolyma River.

The single specimen of the muskdeer (*Moschus moschiferus* Linn.) is found in this collection. It was taken in the Verkhoyansk Mountains in Yakutsk, Siberia.

The bighorn (*Ovis nivicol* Esch.) is more or less abundant in northeastern Siberia, though just how common cannot be said. It is far more nearly allied to the American forms of bighorn than to those of western Asia.

Bears are very abundant in the country around the head of Okhotsk Sea as well as in northeastern Siberia generally along the coast, but Mr. Buxton's notes tell us little about their habits.

Five specimens of the wolf (*Canis lupus*) are found in the collection.

A red fox very similar to the Alaskan form, the Arctic fox, wolverine and other weasels are noted, and it is interesting to observe the number of forms which seem to be closely related to those of northwestern America. Mr. Allen, discussing the American affinities of certain Siberian mammals, considers it probable that most of the more northern types of mammal life on the two continents are the slightly modified descendants of types which formerly had a continuous circumaretic distribution, which have become slowly differentiated, probably mainly since the disruption of the former land connection of Bering Strait. There is evidence that eastern Siberia has derived some of its present mammalian life from northern America, and no doubt within a comparatively recent time.

About Beavers.

IN his habits the beaver resembles the muskrat; he likes to live along the bank of a stream, not too swift. He is decidedly herbivorous in his tastes, using for food green cornstalks, grass, weeds, and the bark of trees, such as the quaking asp, willow, cottonwood, etc.

The only entrance to his nest is from the bottom of the stream; it is often to be found under a clump of overhanging willows, the roots of which help to keep the dirt from caving in. He digs upward, plastering his hole with mud, and bracing it with sticks till he gets high enough above water level to make his nest. These animals are wonderful workers. I have known them to stop up a 2-inch pipe with grass, mud and moss. It had been laid to the center of their pond, in perhaps four feet of water. The pipe at the end had a strainer placed over it. The pump house was about 100 yards away. How they discovered the water was escaping from the bottom of the pond, I do not know; but every morning, and sometimes in the night, the workmen had to go to the pond, wade out and clean off the end of the pipe.

Besides being the most patient of all animals, the beaver is a model housekeeper. "As neat as a beaver" should be considered by all housewives as a high compliment. Every stick is carried out of the nest after the bark has been peeled off for food, and thrown into the stream.

He sometimes builds a "house," but he prefers a stream, deep enough to allow him to lay down his food for the winter in its bed, for if shallow it is quite likely to freeze up and cut him off from his winter's supply. He lays down his fresh-cut poles close to the bank, with the butt ends up stream to prevent their floating down and away from his hole.

Almost helpless on land, he is perfectly at home in the water, his broad, paddle-shaped tail and his large webbed hindfeet making excellent "oars." His front feet, strange to say, are laid close to his belly in swimming. Like men (with the exception of some Oriental races, who use their toes about their daily work quite as cleverly as their hands), the beaver uses his "hands" in doing his work. The old story about his using his tail for a trowel is not reliable to any extent.

These animals usually herd together in small families, go upstream during the spring freshets and remain there. If their dams are cut out, a dog can be sent into the hole and the occupants driven out. They are then easily caught and killed, as they are so clumsy on land and see but little. They have a wonderful scent, which makes it impossible to trap them on land. To trap them even in water requires more or less practice on the part of the trapper. He has a cunning creature to deal with, and he must proceed carefully.

If the creek is not frozen over the surest way to catch him is to use a No. 4 trap, set back far enough to catch his hind foot as he climbs out upon the bank, the water being somewhat shallow. It is best to catch the hindfoot rather than the frontfoot, which he readily twists or gnaws off. A No. 2 trap is too small for the hindfoot, for he can cover it, and not get fast in it. If the trap is set under the ice, and he is caught by either front or hind foot, he will drown, as he begins to struggle and soon smothers; he gets excited and does not try to gnaw himself loose, which he might otherwise do.

Like the muskrat, the beaver can swim a long distance under the ice by breathing upward and inhaling again as he swims across. This breath is seen to collect in bubbles under the ice. An occasional "air-hole" also serves him, so that I have known him to cross under ice a lake a mile and a half wide.

I had my first experience in beaver trapping when a boy of fourteen. This was at Beaver Lake, five miles from the Des Moines River. The remains of an old beaver dam is still to be seen there. Since then, I have not trapped for thirty years till last winter, when I caught enough to make two sets of furs. My wife is so stuck on hers that she wears them about her work in the kitchen. I have a nice lot of beaver tails on hand yet, so if any of your subscribers should want one for a fancy bag, I hope they will not all speak at once.

J. R. MOOREHEAD.

"Where do the Ducks Mate?"

Editor Forest and Stream:

I notice in FOREST AND STREAM of April 4 your editorial on where the wild ducks mate. Having hunted on Lake Champlain and the Little and Big Otter creeks for the past twenty-five years, I have had a very good chance to observe the ways of our ducks and other game.

As soon as we have open water and up to about April 15, our ducks are found in flocks and are mostly the black duck. From April 15, or about this time, they are seldom found in anything but pairs and seem nearly always to be alone. That is, in going along the edge of the marshes you will flush two; then in a few rods two more, and so on. Judging from this I am of the opinion our ducks pair off about the middle of April. I saw a nice flock within a stone's throw of Sam Lovell's old camping ground a few days ago.

Our State made no appropriation a year ago for the protection of fish and game and already the result is plain. Pheasants were hunted all winter; partridge snaring was the principal occupation of some last fall; and at present the hoop and gill net, assisted by the set lines, are working destruction to our fish.

Where are the active members of the Vermont Fish and Game League. I hear the reply, "Trying to figure out who will be Governor in 1904." H. B. CHASE.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Spring Duck Shooting.

DUCKS are getting scarcer every year, and if something is not done about it soon there will be none left. What is needed is a gun sealing law—every man's gun sealed by the Government on the first of January and not taken off until fall. How sad it is to remember that the prairie sloughs across the river from St. Louis were well covered with thousands of wildfowl, whereas now there are none short of away up on the Illinois River.

Having indulged in these pious reflections, as is my wont each spring, I packed my Parker and a few shells and telegraphed the man at the club to meet me at the train last Friday. The roads were dry and we made good time, but the man showed me where he and several of my wicked clubmates who had been there the week before had stuck in the mud. Mrs. McKever had a good dinner waiting for me and after I had partaken thereof I got into my corduroys and rubber boots. While the new man was placing twenty-five decoys in the boat I said: "Do you want a duck caller?" handing him my pet one. "No, I reckon not. I was raised on the river and used to make my living shooting ducks," and he screwed his fist in his mouth and gave the most realistic call I ever heard. It would fool a sprigtail! The bottom was waist-high with the flood, and as he rowed up toward the head of the prairie over a submerged cornfield, I sniffed the gathering breeze and exclaimed: "I do believe I am going to run into a little weather for once in my life. Generally when I go after ducks I get nothing but blue skies and sunshine." And, sure enough, the sky began to overcloud and the wind to blow from the north. There was a blind in a line of trees skirting a fence, or the remains of one, about a mile from the club house, and as the man rowed he kept twisting his head around toward it, watching the ducks. He had been enthusiastically inclined to an old straw stack at the edge of the overflow on the way up, but finally settled upon the old blind. By the time we reached it the wind was blowing a half gale, and he had to keep at the oars while I threw out the decoys thirty yards to windward. Then we ran the boat into the blind, which had been partly washed away, and the fun began!

A blackjack hove in sight to the south, and the man gave that marvelous imitation of his and it headed for the decoys. When he swooped down to them I rose up—and so did he—and I missed him with both barrels. A moment later three more came and I missed again. "Gee!" said the man, "I wish you'd let me fetched my gun." The truth is, I hardly ever go spring shooting until I am worn to a frazzle, and I am sure to have a big string of misses until I begin to feel braced up a little. "Never mind," said I, "I know a man that will give me a certificate of my ability to hit a few of them." But I could see he felt badly. To make the humiliating confession at once and have it over with, I shot away 50 shells that evening, all I brought with me, and only killed 13 ducks. Some of the shells, however, were used on cripples. But it was two hours of fine fun. Owing to the wind, we had to get out in a hurry after each duck that fell, whether dead or crippled, and we were on the go all the time. We were back at the house by five o'clock where, after eating three square meals, the duck shooter's ration, at eight o'clock I went to bed and slept sound.

The next morning the man put his gun in the boat. He wanted to kill my cripples, he said, but I had my own ideas as to that. We were hardly in the blind until a flock of bluebills came hurtling along toward us. A call and they circled around us once and swooped down into the decoys. "Now!" and as they sprang straight up into the air we each made a double. When we had gathered them the same thing was once more gone through with, except that I noticed the man shot his first duck on the water, bred in the bone market hunter that he was. Then a single bird came in sideways, passing him first, and just as I was about to let go at it he killed it under my very nose. I thereupon read him a lecture, to the effect that he was not hired to kill my ducks; that I was getting too many as it was, as my limit was twenty-five. If he could get anything after I got through missing all right. He was good natured about it, grinned and declared all he wanted was to see me have fun; but he afterward made a beautiful kill of a bird I had only winged and which in that wind might well have lit so far off as to escape. He did not do much of the shooting thereafter, and for a curious reason. I noticed that when he called ducks to the decoys and just as they were over them, he made a slightly premature and too quick motion for his gun, whereat the ducks invariably whirled and "climbed" out on my side, giving me the finest kind of 40-miles-an-hour shots. I said nothing about it to him until we were through that night, when I explained why I got all the shots and jeered at him. Market hunters don't know everything.

That morning's bag was sixteen, when I said: "We will now go in to dinner." "Why, it isn't ten o'clock yet." "No matter, my limit is too nearly exhausted. We must save some for this evening." And he reluctantly rowed me in, where I ate three dinners and came out again at about three o'clock. We killed eleven more, making even forty, all blackjacks and bluebills. A great many sprigs came in, but I did not want them, and also some mallards and one flock of canvasbacks, but our blind was too poorly constructed for them. The man said I only missed two ducks at the morning shoot, and that he would like to take me for a side partner and shoot some other two fellows a duck shoot. Whereat I looked modest and said the choke was nearly all out of my gun; but I enjoyed his blarney, all the same. The last thing that happened that night was three blackjacks that he did the scare act to and I killed two of them dead in the air and they were flying so fast they landed 100 yards away.

Now that it is over, I hope the law will son be changed to prohibit spring shooting. GEORGE KENNEDY.

The Maine License Law.

BANGOR, Maine, March 30.—*Editor Forest and Stream:* At last the first and regular session of the seventy-first Legislature of Maine has come to an end, the adjournment having taken place early Sunday morning, after one of the longest and most exciting sessions of recent years in this State, with the first of September next as the date for again coming together, in extra session. While fish and game legislation is possible at that session, it is not probable, as the majority of the legislators are guided in their ideas on these matters by what the State Commission of Inland Fisheries and Game tells them, and that Commission usually is represented by Chairman Carleton, who seems to have a most convincing way in telling them why they should do what he wants them to do. As he has not announced any more changes in the laws as amended by this session, it is improbable that the solons will be asked to do more than complete certain unfinished business, which could not be settled at this time.

But, at least in the eyes of a great many non-resident hunters, as well as guides and camp owners of this State, it is entirely unnecessary for the legislators to do any more now for some years—unless it is to repeal some of the objectionable enactments of the present session.

Not for years, not, in fact, since the days when the first radical legislation of the newly aroused "protective" spirit stirred into active enmity and extraordinary cunning those deer and moose slayers who killed for hides and a market, and whose contention was that the deer and moose belonged to them and they would defy any man or men to take away their living, has such a radical departure marked a legislative session in this State.

With what success they combated the onward march of humanity, sportsmanship and protection by means known only to them and, to one unacquainted with their vengeful natures, beyond belief, is well known to the veterans in this branch of sportsmanship who have followed the vicissitudes of Maine's game resources. To educate that class into the careful, thoroughly reliable, desirable class of citizens who are to-day guides for other hunters, has cost time, money, argument without end, persuasion and even lives.

But it was worth all it cost, in the great increase of game enjoyed by this State in the last several years of this persistent policy on the part of Maine, so that the entire nation has looked to Maine as the model recreation State, and her game laws have been selected all over this broad land as models of effective legislation. To be sure, protection has not always protected, any more than a law enforced against burglary always prevents housebreaking, or a law against selling liquor prevents some bolder than others conniving with corrupt officials and defying the law; but, on the whole, Maine's game has been so well protected that in spite of occasional violations it has continued to increase and that, too, at a most astonishing rate, so that the supply of deer in Maine is to-day something wonderful, and the question of protecting his growing crops from their ravages comes into the problems which every farmer in border towns has to consider.

The principal departure in game legislation made by the law-makers, has been the adoption of the policy of some other States, in the way of a license fee to be paid by non-resident hunters for the privilege of killing and transporting the large game of the State, a policy which has in past years been suggested, but has heretofore met with defeat before reaching the Legislature. This year those in favor of this movement exerted every influence to create a sentiment against non-resident hunters and in favor of making those non-residents pay for the expense of maintaining the game supply of Maine, and with such success that the sentiment of the legislators was overwhelmingly in favor of the passage of a license law before the question was even argued—yes, before they left their homes for the capital of the State to consider their duties as lawmakers. As in most States where the agricultural element is of the major importance and influence, so in the Maine Legislature the farmers and those representing farming communities are in the majority, and the long existing jealousy of State moneys appropriated for the enrichment of the few, while no funds were appriated or created for the reimbursement of those border farmers whose crops were actuallly damaged by deer, furnished rich soil for the sowing of those seeds of discontent that the promoters of the license plan knew so well how to scatter.

Months before the Legislature was elected, it was boldly announced throughout the State that the powerful Grange was to move, as a unit, against all fish and game appropriation, and steps were at once taken to pacify that order, so that there might still be money forthcoming from the Government cow to sustain the inland fish interests, which have been growing in needs as fast, if not faster, than the game interests have developed. Accordingly they were promised that if they would support the license plan the money so raised would be used to pay them for their damaged crops, and their opposition faded away. This is, in the light of developments, more than hinted at as the compromise which secured to the advocates of this measure the cordial support which it received from the agricultural element, so that the first output from the "game protective fund" to be raised by taxing the non-resident's rifle is to reimburse the farmers. And the necessity for traveling about over the State to investigate such complaints, the time, expenses, etc., of commissioners, with the additional compensation to be allowed "as the Governor and council may deem just and fair" will have a decided influence in reducing the amount applicable to the real protection of the game of the great North Woods.

It may be, too, that the services of "proper" wardens will not be longer obtainable at two dollars per day and

expenses, as one of those who spoke in favor of license at Augusta told the writer he had worked his last day for $2 and expenses, his difficult duties being worth far more, in his estimation. If this rule holds with all those now holding commissions, there will be still less "net proceeds" to be applied to seeing that the game of Maine is protected, and the game laws are not violated.

The license law, in full, as passed by the recent Legislature, is as follows, being known as Chapter 99 of the Public Laws of 1903:

"An act providing for a license for non-residents to hunt moose and deer."

Non-Resident License.—Chap. 99, Public Laws 1903.—Sec. 1. It shall be unlawful for any person not a bona fide resident of the State, and actually domiciled therein, to hunt, pursue, take or kill any bull moose or deer at any time without having first procured a license therefor as hereinafter provided. Such licenses shall be issued by the Commissioners of Inland Fisheries and Game, upon application in writing and the payment of fifteen dollars, and under such rules and regulations to be established by them, and approved by the Governor and Council, as may be required to carry out the true intent of this act, and not inconsistent therewith. All money received for such licenses shall be forthwith paid to the State Treasurer, and then expended by the Commissioners in the protection of moose and deer, under the direction of the Governor and Council. Provided, however, That the Commissioners of Inland Fisheries and Game shall have authority to adjust and pay, out of the funds received for such licenses, for actual damage done growing crops by deer. Provided further, That the Governor and Council shall have authority to allow the Commissioners of Inland Fisheries and Game, out of the funds received for licenses and fines, such compensation as they may deem just and fair for the additional work required of them in carrying out the provisions of this act. Provided also, That the Governor's Council shall, as often as they see fit, examine the books, accounts and vouchers of the Commissioners of all moneys received by them for all licenses or other fees, and make a report thereon to the Governor.

Export.—Sec. 2. Each license shall be provided with three coupons, one of which shall permit the transportation of the carcass of one bull moose, or part thereof, and shall be divided into two sections, lettered "A" and "B" respectively, and shall be called the "moose" coupon; the two other coupons shall permit the transportation of the carcass of one deer, or part thereof, each, and shall be divided into two sections each, lettered "C," "D" and "E" and "F" respectively, and shall be called the "deer" coupons. The holder of a non-resident hunting license shall be entitled to offer for transportation and have transported, within or without this State, by any railroad company, express company, boat or other transportation company, the carcass of one bull moose, or part of the carcass of one bull moose that he himself has lawfully killed, on the "moose" coupon attached to said license; also the carcass of one deer, or part of the carcass of one deer, that he himself has lawfully killed, on each of the "deer" coupons attached to his said license, by presenting to the agent of any transportation company, his license with the coupons attached to the license at the time when he shall offer the moose or deer for shipment. The agent receiving the carcass or part of a carcass, for shipment, shall, if it is a moose, detach section "A" from the "moose" coupon of the license, cancel the same by writing or stamping thereon the date and place of shipment and his initials, and shall forward the same forthwith to the Commissioners of Inland Fisheries and Game, at Augusta, Maine; section "B" of said coupon shall be likewise cancelled and shall be attached to the carcass, or part of the carcass, of the bull moose offered for shipment, and shall remain attached to the same while it is being transported in this State. In case of deer received for shipment the license must be presented to the agent with the coupons attached as aforesaid, and, if but one deer is offered for shipment, the agent shall detach section "C" from the first "deer" coupon and shall cancel it and forward the same to the Commissioners of Inland Fisheries and Game as aforesaid; and section "D" of said coupon shall be likewise cancelled and attached to the carcass of the deer or part thereof, offered for shipment, and shall remain attached to the same while it is being transported in this State. In case two deer are offered for shipment, the agent receiving the same for shipment shall detach sections "C" and "E" from the "deer" coupons, and after cancelling the same, shall forward them to the Commissioners as aforesaid, and sections "D" and "F" shall be likewise cancelled and attached to the carcasses of the deer, or parts thereof, offered for transportation and shall remain attached to the same while it is being transported in this State. It shall be unlawful to transport any bull moose or deer, or parts thereof, within this State for any non-resident, otherwise than as provided herein. Any agent, servant or employe of any transportation company, railroad company, express company, boat or common carrier, who shall receive for shipment or transport, or have in his possession with intent to ship or transport, any carcass of a bull moose, except as herein provided, or who shall refuse or neglect to detach the sections of the coupons as herein provided, or who shall fail to forward to the Commissioners of Inland Fisheries and Game, at Augusta, Maine, as herein provided, the sections of coupons by him detached, shall be punished by a fine of not less than twenty-five dollars nor more than one hundred dollars and costs for each offense. Sec. 3. Whoever is found guilty of violating any of the provisions of this chapter, or who shall furnish to another person, or permit another person to have or use any license or coupon issued to him, or shall change or alter the same in any manner, or shall have or use any license or coupon issued to another person, or any registered guide who shall knowingly guide any non-resident in hunting who has not a license to hunt as herein provided, shall be punished by a fine of not less than twenty-five dollars, nor more than one hundred dollars and costs for each offense. Sec. 4. All acts and parts of acts inconsistent with this act, are hereby repealed. Sec. 5. This act shall take effect July 1st, 1903.

While of course this is the central pivot on which the whole fish and game legislation has turned during the winter, it is not the end of the restrictions added to the sportsman's future outings in the Maine recreation region. So fearful have the residents of certain sections of the coast become that the shore birds would be entirely exterminated and their favorite sport discontinued, and so persistently have they applied to the commissioners for protection that they could not get, that a new law was drafted to protect those sections, known legally as Chapter 236. This chapter forbids any persons not bona fide residents of this State to "hunt, pursue, chase or kill within the limits of Knox, Lincoln, Waldo, and Sagadahoc counties, and the towns of Brunswick, Harpswell and Freeport, in the county of Cumberland, any teal, ducks, sea or shore birds without having first procured a license therefore, as hereinafter provided." Cost of license, five dollars, and all such moneys received to be devoted to the protection of the shore birds in the territory named in the act.

In addition to what has been outlined above, there is still further restriction of the gunner's privileges, if he be an outsider, in the addition of the wood duck, teal and gray duck to the list of birds one may not take out of the State, except on special license tags which, for fifty cents, permit one to send one pair of birds to one's home, or to take them with one to his home outside of the State. In previous years this prohibition was applied to woodcock and ruffed grouse only, but now includes all the above named birds and water fowl, which may be killed in this State for consumption in this State only to the number of 15 in one day, but may not be taken or shipped to an out of the State point except on special tag. A step in advance can truly be said to have been taken in forbidding the sale of any of the above birds or water fowl in this State, where formerly it only applied to the woodcock and grouse, while the shooting of quail is forbidden at any time.

There have been numerous corrections and amendments of existing laws, among the most noticeable of which is the change in the compulsory guide law. One of the chief evils attending the influx of visitors during the hunting season, has been the large parties of hunters who have come from outside, brought their own outfits and provisions, hired one guide to clear the law, and thus, spending as little as they possibly could and get into and out of the State, complied with the law in appearance while it was suspected that they were violating it in spirit and reality. In some cases they even kept the one guide drunk about all the time of their stay, so that he knew nothing of what was going on among the hunters, and was forced to make up any kind of a report when his "cinch" was finally ended. This condition and this class, largely elaborated, perhaps, and boomed in the press of the State for effect, was one of the strongest arguments the advocates for a license used, and those who opposed the "revenue" plan believed the evil could be combated in the limiting of the number any one guide might be employed by at one time. This was adopted, but in addition to the license scheme, so that as amended the guide law only permits one guide to be employed by "not more than five non-residents in hunting."

As your correspondent has pointed out some of the objectionable features of the session's legislation, it is but fair that the other side should have a show, and the following are some of the reasons advanced why the scheme for licensing non-resident hunters is both right and necessary in Maine under existing conditions:

It is plainly evident that the Legislature will grant no more moneys for the protection of the big game, since other interests called for and secured, at the recent session of the Legislature, upward of $500,000 more than the probable income of the State for the two years of 1903-4.

If the big game is to be protected, furnishing a revenue to a limited section of the State only, and sport to men who come here from outside of Maine to participate in same, there must be a source of revenue to enable the commissioners to keep efficient wardens in the field (or woods) to see that the laws are not violated.

The payment of fifteen dollars ought to be no hardship when it is remembered that this carries with it all the possible privileges granted in former years under different statutes. For instance, when a man has shot his moose or deer this year he need not break up his outing by a premature departure for home, rather than pay the fee for unaccompanied transportation, since he has but to let the agent of the transportation company tear off the coupon furnished him "free of charge," as one legislator is pleased to consider it, and there is no further bother or anxiety for him until he reaches home, no matter where his home is, or such point as his game is billed to. Thus there is no disagreeable delay in awaiting the convenience of the warden at Bangor, no identification annoyances, nothing to interfere with or mar the comfort of the homeward journey. The tag privilege for all this immunity would cost $9, making the actual cost of the license to hunt, take, catch, kill and destroy in a lawful manner one bull moose and two deer, for a man who lives outside of Maine, just six dollars. This is, of course, providing he gets his full quota of game, and with the expected increase in game under this new law, of course he will.

There is one bright ray of light which I had almost forgotten, and which may help in materially reducing the expenses of those who feel the added fifteen dollars a burden: One of the new laws establishes a bounty of 25 cents on porcupines, and when the hunter can't kill big game he can use up his ammunition in practicing on these destructive animals, for whose annihilation the timber land owners have secured a bounty. What more can one ask of any State than such a grand opportunity to help yourself?

HERBERT W. ROWE.

A Day With the Broadbills.

THE other day I got to the point where I could not endure city life another moment. It was necessary that I escape from the noise of cars, contact of men, and the interesting gaseous exhalations of the subway. I straightway took my gun and a Long Island ferryboat. At the railway station I was joined by another man in search of oxygen, quiet and fried pork. Presently we were aboard a sloop engaged in working our way out of this tangle of boats in Sayville Inlet toward the broad reaches of Great South Bay. Our guardian spirits were the Captain, six feet six inches in height and so thin as scarcely to cast a shadow, and the Ancient Mariner, short and stout, with skin tanned by many storms to the color of his oilskins. Now and again the Ancient Mariner squirted tobacco juice vigorously and cast his weather eye far to leeward. We sat silent and took long drinks of the clear, pure air. A lively thrash to windward and then a little cove offered inviting shelter for the night. We anchored and made things snug. The Ancient Mariner seized the frypan and over the red hot stove in the cabin did strange and wonderful stunts. It was a long time since the other man and I had been blessed with a real appetite. We had one—or rather we had two—one for each of us. Oysters, freshly gathered from the bottom of the Bay, fried in sizzling pork fat, fried potatoes, bread toasted in the frypan, coffee strong enough to float the spoon—all this and more we put where it was needed.

At four o'clock next morning the sky was overcast, with rain as a probability. After a good breakfast we got under way for the ducking grounds. Off a point of land and in shoal water we put out the double battery. This consisted of two coffin-shaped boxes with a platform of boards about them and so weighted as to sink level with the surface of the water. Numerous decoys anchored with bricks jumped about on the waves and looked lifelike enough to quack. Into the battery the other man and I crawled, kept as much out of sight as possible, then peeked over the edge of the boxes and waited patiently for a shot. Suddenly from out of nowhere appeared a cloud of ducks. There were ducks to the right of us, ducks to the left of us, ducks over us, in fact everywhere but under us. It seemed wicked to shoot, we would make so long a list of dead. But shoot we did right into the bunch, and not a duck was harmed. The other man and I looked at each other, but said not a word. Our thoughts were too deep. Way off somewhere in the far beyond we heard a hoarse cackle; it was either the Ancient Mariner or a duck giving us the laugh. We again lay low and made new resolves to pick our bird. Next there appeared a dim speck over to the seaward side; in a little time it separated into four dim specks, and then, as swift as lightning, as many broadbills made straight for our decoys. Over the outer ones they hesitated, swerved and—but four barrels again cracked and three fell dead, the fourth alone escaped.

A half hour passed and then the other man hissed: "There's one—just to the south'ard; he's coming—no, he isnt, he's turning!" Fortwith he pointed his right leg straight up and waved it back and forth. "Keep down, I will call them in!" he said, at the same time making strange noises like all else but a duck. I kept down and even drew in my breath to keep down lower. And then a strange thing happened. The duck turned toward us and came along just above the water. He was about to join his fellows who were bobbing about so briskly. He quacked a welcome and thought it strange there was no answer. As he drew nearer there seemed something odd about it all. True, there were many ducks upon the water, but they moved as though governed only by the motion of the waves and—but all at once his eyes lighted on two motionless men, prone upon their backs, in the very midst of his queer acting kindred. He jumped, but just too late. One of the men sat quickly up, his gun came to his shoulder, the nitro powder gave a vicious little snap and down came the duck.

So it went through the day, now a miss or kill, varied by waits of different length. It was pleasant, however, during the waits. The rain clouds had disappeared and the sun shone warmly; tiny waves splashed upon the canvas wings which protected the head and sides of the battery; now and again a gull wheeled gracefully through the air, while over toward Fire Island the sails of numerous oyster dredges and fishing craft were sharp and distinct against the skyline.

Toward night the Ancient Mariner poked his skiff alongside and gathered in two stiff and hungry shooters. It was beginning to get cold and to blow. In the technical words of the old bayman, "a breeze of wind" found the thin spots. In the little cabin of the sloop, however, all was light and warmth and good cheer. The Captain poked coals into the stove until it fairly glowed. The Ancient Mariner cooked many and savory dishes, and as a proper prelude thereto, the other man blended certain liquids in due and harmonious proportion. Soon peace and contentment reigned, and much tobacco smoke curled upward. The Captain and the Ancient Mariner told of marvelous happenings on land and sea, and the other man went them one better. Nine o'clock came and we were too sleepy to stay awake another minute. Thick, warm blankets were unrolled, divers cushions were arranged, and in less time than it takes to tell it we were making doubles in the "Land of Nod."

The next day broke with a heavy wind sweeping down the Bay. A battery could not live. All day we waited and all day it blew, and at nightfall we hoisted sail and, under three reefs, ran home before the wind.

For those who like figures I append:

Services of two men, sloop and battery 2½ days	$25.00
Supplies	10.00
Carfare	5.00
Total	$35.00
Ducks killed	11
Average cost per duck	$3.18

All of which is respectfully submitted.

WALTER K. BARTON.

Massachusetts Fish and Game.

BOSTON, April 4.—*Editor Forest and Stream:* On March 31 a hearing was held by the Committee on Fish and Game upon a bill introduced by Representative Davis, of Amesbury, which, if passed, would make the month of August open time for ducks of all kinds. Mr. Davis explained that he had introduced the measure at the request of some gunners in his section, but declared himself a friend of proper protection. Messrs. H. S. Fay and George H. Mackay opposed the bill on the ground that ducks at that season are young, inexperienced birds and therefore at the mercy of the gunner, and that the friends of protection were in favor of shortening the season for shooting them rather than lengthening it. After the remonstrants had been heard, Mr. Davis, while not formally withdrawing his bill, gave the committee to understand that he was not at all strenuous in his support of it. I understand the committee have voted leave to withdraw. Another bill heard the same day is one to protect heron and bittern. Mr. Ralph Hoffman spoke in favor of the bill, emphasizing the value of these birds from an educational point of view, being objects of great interest to young persons. He was followed in a similar strain by the eminent ornithologist, Prof. C. J. Maynard, to whom the committee listened with great interest. Mr. George H. Mackay emphasized the value of the birds as scavengers. A favorable report is expected on this bill.

The Buzzard's Bay Bill.

This was substantially the same as that of last year, ably advocated by the late Attorney-General Hosea M. Knowlton, and which, although reported by the committee, failed of passage in the House. Representative Sullivan, of Worcester, explained that he had introduced the bill at the request of a traveling salesman, and that he had no special interest in it. Hon. Charles S. Hamlin, Louis S. Dabney, Esq., and Girard C. Tobey, Esq., spoke briefly in opposition to the bill. They assured the committee that public sentiment in the towns bordering on the bay was practically unanimous in opposition, as was shown at the hearings of last winter. "Leave to withdraw" is the verdict of the committee.

The anti-sale bill of the central committee, after taking its several readings in the House, has passed the engrossment stage in the Senate without change, and only

awaits the signature of Governor Bates to make it a permanent statute, and the FOREST AND STREAM Plank will keep partridge and woodcock out of the markets in Massachusetts perhaps for all time. At any rate, to secure its repeal the burden of proof will be on those who wish an open market.

It has proved of great benefit not only to the partridge and woodcock, but incidentally to quail as well. To say that no partridges have been sold in the State since the law was enacted three years ago would be claiming too much. But such sales have been clandestine and not, we believe, very large in number.

No dealer would take the risk of open violation of the law with the efficient warden service now at the command of the State Commission. The number of paid deputies might be increased without entailing upon the State an unreasonable expenditure of money.

From what has already been accomplished during the present session of the Legislature, your readers have no doubt formed a favorable opinion of the Committee on Fish and Game. Its members have not only given patient hearings to all who have come before them, but have shown a high appreciation of the aims and purposes of sportsmen who favor proper protection. Of this I may say more in another letter.

A Farmers' Bill.

On April 2 a hearing was given on House bill No. 1,184, presented by Representative Warren C. Jewett, of Worcester, entitled "Relative to the Preservation of Deer." The first section extends the period of protection till November 1, 1908, and the second provides for compensation for damages done by deer.

In speaking for the bill, Mr. Jewett expressed a desire to continue the protection and at the same time take care of farmers whose crops are injured by the deer, which, he said, were already becoming numerous in the northern and western parts of the State. The second section, he said, was drawn on lines similar to the Massachusetts dog law. I inclose a copy of the bill. Mr. George S. Ladd, of Sturbridge, Master of the State Grange, Representative G. H. Doty, of Waltham, and Mr. A. B. F. Kinney, of Worcester, also spoke in favor of the bill, and there were no remonstrants. A favorable report is anticipated.

A New Departure.

The town of Cohasset, at a recent meeting, voted to appropriate the sum of $300 for the purchase of game birds, to be liberated in the town. You, Mr. Editor, or some of your readers, may know a parallel to this, but the writer does not. This was brought about in part, at least, by a member of the Massachusetts Fish and Game Protective Association, Mr. W. O. Souther, Jr., a resident of the town, and a deputy warden. Several other members of the Association are summer residents of the town, and have been doing missionary work there for a long time; Ex-President Benjamin C. Clark, for instance, and there are others. The committee appointed to secure and put out birds is desirous of buying quail, but so far have found some difficulty in purchasing them. It is very desirable that, so far as can be done legitimately, the barriers now existing in the way of securing live quail for purpose of stocking should be removed.

From Maine come reports that several salmon have already been taken from the Bangor Pool by local anglers, and that both salmon and trout have been caught at Eagle Lake by Bar Harbor fishermen. The ice in Moosehead is reported very thin and dark, which is thought to indicate an early fishing season.

From New Hampshire comes intelligence that a non-resident license law has been passed, and that the open season for killing deer has been shortened by taking off the fifteen days in December, making it the months of October and November only. Next week I may be able to send good reports from some of our Boston anglers who are trying their skill on streams in our own State.

CENTRAL.

CHICAGO AND THE WEST.

The President at the Yellowstone Park.

CHICAGO, Ill., April 4.—President Roosevelt is now working his way westward on his extended trip throughout the Western States. He will arrive at the Yellowstone Park on April 8. His guide there will be, of course, Billy Hofer. Billy is in Chicago to-day and leaves for the Park to-morrow morning. He had little to say regarding the proposed trip at the Park, of course, but I gather that President Roosevelt's stay will be about ten days in duration. By the time of his arrival the snow will have pretty much disappeared in the lower districts of the Park, that is to say, around Mammoth Hot Springs, parts of the East Fork country and some of the country between the Mammoth Hot Springs and Yancey's. It is thought that a comfortable trip by amubulance and sled can be made to Yancey's, where a cabin has been especially prepared for President Roosevelt's comfort. From this point the big winter herds of elk can be easily located, and it is thought that President Roosevelt will take delight in seeing the big game animals in such numbers. It will be necessary in getting about in the mountains to resort to ski. Billy tells me that he will give to President Roosevelt for use on the trip his own pair of ski, the same which he wore during his trip through the Park in the winter of 1895. The intention is to allow the President a short time to get familiar with tricky footwear, and then to let him have all the rough work he likes in actual snowshoeing. It is possible that there may be some mountain lions killed in the Park by the agents of the superintendent this spring, as the latter have made trouble with the sheep and deer. It is not, however, in the least likely that President Roosevelt will do any shooting. Attempts are making to get him a lion or bear hunt near the Park, and possibly this may be done. The main delights of the visit to the President will be the keen sport of snowshoeing and the pleasure of seeing the big game animals. There is talk that Buffalo Jones will do his best to get President Roosevelt to come over deep into the Park, where the buffalo are. Twenty-one buffalo, that is to say twenty-one wild ones, and not including the semi-domesticated ones held in the inclosures, were lately counted in the Park. President Roosevelt planned a still earlier visit to the Park, but the late adjournment of Congress rendered this impossible. As it is, there will still be winter enough to appeal to him, though not enough to make outdoor work too severe.

Allard Herd of Buffalo Dispersing.

Howard Eaton, who recently got an option on the entire buffalo herd of the late Charles Allard, in the Flathead country, is now in the East disposing of these buffalo. He has sold seventeen head to the Government, and is negotiating for the sale of other specimens to private individuals.

Duck Shooting Fair.

Duck shooting in this part of the world is for the present fair. We had a heavy snowstorm day before yesterday, and this has set the flight back for a few days. Meantime the water is falling along the Mississippi Valley, making the sport better than has previously been the case in some of the tracts where the best feeding grounds had been flooded.

Mr. Henry Clarke, of this city, is back from Hennepin Club with twenty-two nice birds. He says the best of the sport is yet to come at Hennepin, as the feeding grounds are just getting good. Mr. W. W. McFarland is also just back from Hennepin and reports good shooting and good prospects.

Mr. Fred M. Hild, the urbane head of the Chicago Public Library, received to-day a present of four nice mallards from his friend, Mr. Sellers, who is shooting at Swan Lake Club and who reports good luck.

Mr. J. V. Clarke and his brother Mr. Lou Clarke are to-day absent at Tolleston Club, where good shooting has obtained pretty much all the week. They should have success.

Mr. Hempstead Washburne and his son, Clark Washburne, are to-day at Goose Lake Club, on the Kankakee River, where they may be expected to have fair shooting, as the Kankakee has held a good number of birds all through the flight thus far.

Mr. Eddie Pope, Mr. W. L. Wells and Mr. Hollis Field start to-morrow for Fox Lake, Illinois, where they expect to get at least four ducks between them. The shooting is good at Fox Lake, when the ice drives the cripples into the grass, and granted proper weather conditions, these redoubtable sportsmen may come back with quite a bunch of birds.

From California.

By the way, Eddie Pope just got in this morning from his winter in California, where he has, of course had a very delightful time. At Santa Barbara he found some mountain climbing not too far away, and was surprised to learn that grizzly bears and mountain lions are not yet extinct in that corner of the world. A hunter came down from the mountain where Mr. Pope had been rambling around unarmed, and brought the skin of a fine mountain lion which Eddie might just as well have killed with a stick if he had happened to run across it. Of fishing for yellowtail and the like, he had his fill, and also as much shooting as he cared for.

New Sporting Region.

Mr. John M. Bulkley, of Detroit, dropped in this morning and chatted for a time about his interest in the new sporting region opening up along the Algoma Central Railroad north of Sault Ste. Marie. Mr. Bulkley says that that region is undoubtedly destined to be of the greatest interest to sportsmen of the East and Middle West, being so easily accessible. He says of his personal knowledge he can take one to moose within ten miles of the railroad, and can also find bass and trout fishing good enough to suit the most fastidious. He mentions "gray trout," which he says is found in some of the smaller landlocked lakes. This is the same fish that is sometimes called landlocked salmon in one or two Wisconsin lakes, and is, of course, only the lake trout of the Great Lakes in a more restricted environment. Mr. Bulkley says this fish gives a very good sport, as he has found it in Ontario. It is much worth while keeping an eye on this immense new region, which lies between the Sault and Hudson's Bay, and which will presently be opened by the railroads.

New Alaskan Railroads.

A friend in Chicago brings me the prospectus of a new Alaskan railroad, which expects to build from the Kenai peninsula northward across Alaska to the Tanana Hills and the Yukon River beyond. It is thought that work may begin on this railroad during the present summer. Should it become a success it will, without doubt, open up the greatest sporting country now left on the American continent. It is something of a contract which these railroad men are undertaking, but railroad builders have always done the impossible.

Hot and Cold Water in Camp.

I am shown the prospectus of a Rocky Mountain guide, and having personally known him to be a very good one, I shall not mention his name. What interests me is his description of the comforts of his camp. To say nothing of "special" hams and bacon, of camp chairs and a very high grade of sleeping bag, a "campfire" every night, etc., I observe one paragraph which reads:

"Hot and cold water is also served at each tent each morning, or at any other time it is wanted."

I surely think the Rocky Mountains are getting to be a pretty degenerate sort of country. When I have to have a man bring me hot water at my tent door in the wilderness every morning, I want to quit calling myself a hunter and go into a hospital, where they bring you hot soup as well. What was the matter with the sort of water our good friend Col. Anderson, of the Yellowstone Park, used to have of a morning when he was in camp? Col. Anderson used to break the ice in Henry Lake every morning and go in for a bath, and he could have had a whole geyser full of hot water any time he wanted. No hot water for the real campaigner. As they say in France, Ah! bah! the hot water. I never did think this sort of thing would ever really come in the Rockies, but it shows well enough the sort of sportsmanship which pertains to modern days. As for me, gimme the tin washpan of our daddies, or gimme death.

The Habits of Raccoons.

In reply to the 'coon hunting comments in a late issue of the FOREST AND STREAM, Mr. W. A. Powel, a mighty 'coon hunter in the land, has the following to say regarding the habits of the ring-tailed gentleman as he finds him in lower Illinois:

"I noticed the New York gentleman's remarks about 'coons last week, and he is all right, but a 'coon is about the wisest ever, and takes pretty good care of himself. At Mr. Spears' place, in Mississippi, we had a 'coon hunt one night, and started our first one about 7 P. M., and from then on we just kept on treeing them, with intermissions of chopping 4-foot gum trees (by proxy), treeing the last 'coon about 5 A. M., as they seem to run all night in Mississippi. Once near Bald Knob, Ark., I shot one in a tree at about noon. Here, a year or two ago, Harner and I were duck hunting, had quite a little pile of ducks, and Harner was sitting down leaning against a tree, when he heard a noise, and looking around, saw a large 'coon within a couple of feet of our ducks. This was about 10 A. M.

"A 'coon is a much better weather prophet than any goose bone, and I think the weather and moonlight and lots of other things, have considerable to do with the time of his rambles. I know that last fall when quail shooting, we saw lots of 'coon tracks, and went there several evenings without the dogs striking a single trail; so Harner and I got up at 3 A. M., went to the same place, and had a coon treed in a half hour or so. My dogs have treed 'coons at 9 or 10 o'clock A. M., also early in the evening, but of late years, near here, under most conditions of the weather, they seem to run late rather than early.

"The gentleman is all right about the advantages of having a friend named Spears, in Byhalia. I never expressed a desire for anything to be found in that country, but what it was presented to me as soon thereafter as possible. If every one in this country was like our friend Spears, this would surely be a glorious place to live.

"I suppose it is about settled by now that the squirrels do migrate. My father says that when he was a boy and lived at Parkersburg, W. Va., a squirrel migration took place, and they swam the Ohio River, landing at the town, and he, with other boys, caught a great many of them.

The wolves are getting numerous here again, and some one comes in about every day wanting me to come out and chase them. They seem to be catching lots of pigs and poultry, and soon as the young ones get a little older I will have to take a hunt or two for them. I think I could hardly kill even a rattlesnake while it had little babies depending on it.

"The weather is fine here now. The babies are well and everything lovely. Come down and we will go fishing."

The squirrel migration was settled when Col. R. E. Bobo described what he had seen. As to those wolves, it is interesting to know that they are in a closely farmed district, which has been settled for 60 or 70 years.

From the Blackfoot Country.

March 27.—A letter from Jack Monroe, of the Blackfoot Reservation, just at hand, says that in the neighborhood immediately about Blackfoot and for 50 miles east the winter has been very mild and the loss to stock very slight. In the Milk River Valley the weather was much more severe, and along the foot of the mountains it was also hard upon cattle. Jack says that he thinks that up in the mountains it has been a hard winter also on the game animals.

Jack has put out a line of baits for a bear hunt with Dr. Henry, of Philadelphia. He says that Collins Anderson and Malcom Clark last spring killed four bears in one day, and rather thinks this was the bunch of four bears which we saw when I was out there, but states that there was no grizzly, whereas we were sure that we saw one grizzly in the bunch which we followed for so long.

Anyone wanting a good elk might do well to address Jack Monroe, as he advises me personally that he has a spot located which he thinks will produce the goods without much difficulty and within a ten days' trip from Blackfoot, out and back. Our other friend, Joe Kipp, of the Blackfoot Reservation, is building a big hotel over at Browning, and will start a general store at Blackfoot. Joe is about the hustlingest all round proposition there is west of Havre, and may be counted upon to turn up with something new any minute.

From Lake Superior.

A few months ago I mentioned the invitation of Mr. P. F. Stone, of Munising, Mich, to go up there and have a little fall fishing after lake trout. Some brief description of this syle of sport was made at the time. This morning Mr. Stone himself dawned at my office with photographs and other corroborative material. He showed me one picture of five trout which weighed 90 pounds. These fish were taken by himself and his brother Louis in two hours' fishing. Another picture showed 15 trout weighing 122 pounds, which were taken by C. H. Worcester and E. H. Everard. All this fishing was done in Munising Bay. Mr. Stone tells me that the biggest trout he ever took there was 35 pounds, and adds that in October the numbers of trout taken off that point are very large. Frequently a fishing boat will bring in 1,000 pounds as a catch, and do this day after day. These nets are set on the spawning grounds, the fish coming in to spawn in the month of October. Of course all the rod and reel angling is also done on these same spawning grounds. The depth of water in which the fish are taken is from 20 to 30 feet, and in good weather a fish is easily discernible at this depth in the beautiful clear waters of Lake Superior.

Mr. Stone tells me that he believes the habits of the trout during the spawning season are quite similar to those of the black bass. They don't take the spoon

when feeding, but in anger. Hence the best lure is a pair of very large spoons, say No. 13, the gang removed from one of them and the two being used as a tandem. This is too heavy for casting. A pair of No. 8 spoons can be cast tandem, and this offers the best sport. Frequently the trout would be seen to rise from the bottom in 30 feet of water and strike the spoon just below the surface. In play these fish are a bit dull and loggy. They follow in to the boat readily enough, but when they strike the surface near the boat are apt to make a splash and a stiff run. It is necessary to gaff the fish. Mr. Stone says that angling after them is about as good fishing as fishing for muscallunge, although he does not call them a very game fish.

According to my informant, there are in Munising Bay the two varieties of lake trout, those having white flesh and those having red flesh. The catches of these fish are enormous in the total, much of the catch being bought by A. Booth & Co., of this city. The 5 and 6-pound trout are marketed in the cities, but the large ones, more especially those having pink flesh, are sent to the Sault or to another factory on the lake and made into "salmon." The innocent purchaser thinks that most of his Columbia River canned salmon comes from the Columbia River. This is not necessarily the case. I don't know the names of the companies canning "salmon" on the Great Lakes, but that it is done admits of no question. Mr. Stone says that the fish is very good to eat as taken fresh in Munising Bay.

Of large experience in operating in hardwood and other timbers, Mr. Stone has been engaged for three years as director of large lumbering interests at Munising. He says that region is full of deer and is abundant in fur-bearing animals. His men do a little trapping on the side, and there are some regular trappers near by. These take a good many otter. Last week a live fisher was brought into camp. Every year a few beaver are caught. These are taken alive when possible, the Cleveland Cliffs Iron Co. having a permit from the State warden to trap beaver alive for their preserve on Grand Island, on the north shore of Lake Superior. Mr. Stone states that two or three beaver have been killed for every one taken alive, but that some of them have been taken over to Grand Island, and are believed to be there now. The company's game preserve includes moose, elk and other large game animals. The moose is supposed to be extinct in Michigan and Wisconsin, but this is not really the case. In Schoolcraft and Alger counties there have without doubt been two or three moose within the last few years; in fact, one bull moose was killed there not long ago. Last fall some of Mr. Stone's workmen saw a cow moose and called for Mr. Stone, who, however, got there only in time to see the tracks of the animal. I mentioned some years ago the report of a Wisconsin trapper in regard to seeing a cow or small bull moose in one of the northern counties of Wisconsin. It is generally supposed that these animals swam the river near Sault Ste. Marie, but this may perhaps not be the case.

All this upper Michigan country is now under 5 or 6 feet of snow. Mr. Stone looks hard as nails and fit to run for his life. He says he is good for 20 miles or so daily on the snowshoes, and never felt better in his life. He uses the web shoes when the snow is soft, but when it crusts resorts to the skis, and tells me that he has become quite proficient with the latter One envies him his life of regular exercise in the keen northern air. He invites all his Chicago friends to come to Munising in the summer time, and declares that a better summer place was never seen.

No Caribou in Nova Scotia.

I should add a word of correction, which is prompted by a personal letter just at hand from Mr. Frederic W. Jenkins, of Binghamton, N. Y. He says: "You are a little twisted in your story of March 14. We did not kill any caribou in Nova Scotia last fall, and though I hunted in Nova Scotia a number of years, I have never seen one there, although it is said there are a few there. I never killed or saw one in that province. We got our caribou in New Brunswick and Newfoundland. The fall I killed the big moose in New Brunswick Mr. Hotchkiss killed two caribou there. In Nova Scotia Mr. Hotchkiss killed two moose, Mr. Phelps one, and I killed the one about which you wrote. Mr. Phelps has hunted a great many years, but has, until last fall, had hard luck on the moose proposition." E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

California Duck Shooting.

SAN FRANCISCO, March 30.—*Editor Forest and Stream:* The past season's duck shooting which closed February 15, has been one of the best in many years. The fresh water birds—mallard, teal, sprig, widgeon and spoonbills—were unusually plentiful early in the season, but the preserves, with their baited ponds, had almost a monopoly of these birds in the neighborhood of San Francisco. The canvasbacks and bluebills furnished excellent shooting during the remainder of the winter. Owing to the fact that they are open-water ducks the preserves did not succeed in killing all of them.

Conditions are changing in California, as elsewhere; birds are becoming scarcer and most of the open marsh land in the vicinity of San Francisco Bay is being absorbed by preserves, so that the outlook for the unattached sportsman is not particularly cheerful. The floating brush blind, moored in the open water, concealing the hunter's boat and surrounded by a large stool of decoys, is a recent innovation on our bay, and has been wonderfully successful during the past season. Bags of from 20 to 40 "cans" and bluebills have been taken regularly throughout the season, within an hour's travel of San Francisco, from these blinds; so the "outsider" still has a chance to have a little sport without being compelled to buy it at a price which is prohibitive to the man in ordinary circumstances.

Public sentiment in favor of game protection is yearly becoming stronger in California, and many wise laws protecting game and fish have recently been added to our statutes, and there is yet hope that we may stop the indiscriminate slaughter of our game and fish before it is entirely exterminated. F. E. B.

Game Legislation at Albany.

ALBANY, N. Y., April 4.—But few game bills received consideration by the Legislature during the past week. The status of those acted upon as follows:

The Senate passed these bills:

Senator Malby's P. No. 183, relative to fishing in Black Lake, St. Lawrence county.

Senator Warnick's, P. No. 717, relative to the close season for grouse and woodcock in the counties of Schoharie, Montgomery and Otsego.

Senator Bailey's, P. No. 621, relating to the powers of supervisors in Queens, Nassau and Suffolk counties.

Assemblyman C. W. Smith's, P. No. 1386, relating to wild birds.

Assemblyman Cowan's, P. No. 724, prohibiting the taking of trout and game in Delaware, Ulster and Sullivan counties for the purpose of selling same.

Senator Armstrong's, P. No. 871, in relation to the sale of grouse and woodcock.

The following bills were advanced to third reading in the Senate:

Senator Fancher's, P. No. 785, in relation to pickerel and pike and nets in Lake Erie.

Senator Raines', P. No. 920, in relation to taking fish through the ice in Canandaigua Lake.

The Assembly passed the following bills:

Assemblyman Palmer's, P. No. 612, relative to the close season for quail in Schoharie county.

Assemblyman Nichols', P. No. 813, relating to the taking of woodcock.

Assemblyman C. W. Smith's, P. No. 711, relating to penalties.

The Assembly Committee on Fisheries and Game reported the following bill:

Assemblyman Nichols', P. No. 1722, in relation to spearing fish in certain towns of Greene county.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Ar Looking for Game or Fish.

90

BRANT ROCK, Mass., April 4.—Last fall, while gunning at North River, Franklin Bryant lost a handsome finger ring. He searched for it, but was unable to secure any trace of it. A few days ago Fred Keene, a young gunner of Marshfield, was shooting ducks on the marshes and secured a number of the spring visitors. In the crop of one of the birds was Mr. Bryant's ring, looking as bright and clean as when it was lost. It was returned to the owner.—New York Times.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Canoe and Camp Life Along the Delaware River.

II.—The Black Bass Fishing of its Upper Waters.

"All these, and many more of His creation,
That made the heavens, the angler oft doth see;
And takes therein no little delectation,
To thinke how straynge and wonderfull they be:
Framing thereof an inward contemplation
That sets his thoughts on higher fancies free;
And whiles he lookes on these with joyfull eie,
His mind is wrapt above the starry skie."

—Davors.

NEARLY all anglers are obliged to fish during mere vacations—periods of escape from the cares and worries of business. Often they desire to have their families with or near them, and so they cannot visit distant angling waters. Scant time and a limited supply of spare cash may be obstacles. Instead of visiting remote lakes and streams in British Columbia, Maine, Nova Scotia, New Brunswick, Newfoundland, Quebec, or Colorado, Minnesota, Wisconsin or Michigan, they are obliged to fish in waters that can be reached in a few hours by rail, say from the cities of the Atlantic Coast, or of the central Mississippi Valley. And this is no deprivation, for excellent fishing and exquisite natural beauty dwell around hundreds of inland lakes and along the rivers and trout streams of the East. New York, Pennsylvania and New Jersey have sylvan scenery quite as fair as that of the rock-guarded, black waters of Kootenai, Lake Crescent or the Saguenay.

More, a few hours of travel by rail can take the resident of New York, Brooklyn, Philadelphia or Buffalo to fair waters where any fisherman of average skill can not only hook and land enough fish to satisfy any true sportsman, but where he can also use his camera, which is becoming an almost indispensable part of a fishing outfit. And he can camp in thousands of places that are wild and beautiful, and as seemingly remote as those to be reached only after days of plodding, portaging with canoes, or heart-breaking effort through forests with pack-horses.

On October 26, 1870, a few mature black bass were placed in the Delaware River at Easton, Penna. The result is well known to eastern anglers. That royal fish abounds in the Delaware from source to mouth, and has given royal sport to a generation of anglers, amid scenes of rare beauty. The black bass is always a tremendous fighter; all anglers thoroughly respect him. He becomes a burly water athlete when he lives in a swift river, and is obliged to breast currents, mount rapids, dart through eddies and struggle with water that changes from a seething mass of air bubbles of less than half the average density of water under normal conditions, to the plunge and power of its downpour and onrush among boulders and around their points and crags. Such a fish, taken amid such environment, is a foe worthy of any rod. The foliage, birds, flowers, rocks and mountains, the sweet, perpetual change of light, the shores and vistas also changing as the canoe glides down the stream in storm, sunshine, or under moon or stars, furnish an almost infinite variety of natural beauty—a condition upon which anglers are insisting more and more. They know they can buy fish in a dark corner of some noisome fish market. Work, perhaps hardship, sound of clear, cool waters, sough of wind through pines and hemlocks, pungent smoke from a camp-fire, the novelty and unexpectedness as the current grows swift, and warning roars come from rapids below that yet are felt to be full of good-fellowship—these are what the angler longs for through many a weary week of waiting in town, and that satisfy him when possessed! There he finds happiness, sleep, appetite, all too short days! What becomes of the hours that passed with such leaden pace in the office? By what magic do they now run so swiftly? He looks at his cheap watch, procured for use during this outing, wonders how it can possibly be two o'clock, and longs to put a prop under the sun. He wakes at daylight, goes to bed with the birds, eats for two, and sleeps like a child while health broods over his pillow, and waits to accompany him on the morrow as he casts the feathered lures over rapids, eddies, and on those deep, still pauses where he feels the real giants lurk. And he revels, yes, glories, in old clothes, uncombed hair, beard a week old. dirt, hunger and happiness; even going barefoot, drinking from a spring as he lies prone on the earth, wet from his deliberate, seal-like roll from the boat into the water out of very love for it!

And this is why two graybeards made that canoe trip down the Delaware from Deposit to the Gap. How slow-

ONE MILE FROM OUR STARTING POINT.

ly time had passed—Thanksgiving snows growing deeper! Christmas with its kindliness and good-cheer; spring with the robins, crows, bluebirds and flowers; finally summer! And two men in shocking bad clothes stand beside canoes on the upper Delaware. We have already fished it from Walton to Deposit, finding excellent sport with the trout in its tributaries, and with the bass in the river that averaged about a pound and one-half, and so plentiful that there was not a day on which we did not release a dozen.

That was done with the regulation modern tackle—lithe rods, oiled silk lines, shining reels and landing-nets. But now my comrade smiles as the tamarack poles are taken from the peak of the barn, and a line two feet longer than the pole is tied to its tip, with two flies, a Parmacheene-belle and a Montreal, fastened by snells to a six-foot leader. What a mongrel combination! I test his purpose:

"Here are the lancewoods and bamboos. We can rig them up in a few minutes and cast sixty feet. We can-

WHERE WE CAMPED THE FIRST NIGHT.

not cast at all with these tamarack sticks unless the wind favors us, as well as the current. And then the limit will be about thirty-five feet, instead of seventy-five."

But he is sincere. "What do you suppose I came up here for last fall, and cut these poles, if I did not use them now? If we are to 'be boys again' we should do far more, and bait with earthworms, minnows and frogs. However, the feather lures, even on these awkward sticks, will bring us more fish than we can use. Besides, I want to do the most of my fishing with a camera. Here goes!"

Kindly hands shove our canoe from shore, and into the grip of the current, with two extra tamarack poles extending far over the stern, and two anchors ready for use at any "likely" fishing place.

He paddles to the center of the stream. It is a glorious morning! An occasional lazy use of the paddles, the current always carrying us onward! Mists low on mountains that seem like visible dreams through the evanescent night-caps that slowly rise, leaving earth, air, sky and water perfect in beauty!

Five, ten, twenty minutes go by, and we grow less awkward with our nondescript rods. Then, a small jerk, and my comrade whispers, "Hist!" He is "getting a bite!"

Then the unexpected happens. He pulls in a *ten-inch catfish!*

"Misery! I wonder if he knows I paid twenty cents for that Montreal fly—imported it from Edinburgh! Now that is what I call assurance!"

He cuts the wriggling, slippery mud-lover from the hook, and eyes the fly regretfully; and, in desperation, I tell him that a cat may look at a king, and to try on the other side of the boat.

Each of us soon lands a lively, angry bass, slightly under two pounds. Then we stop and take the picture herewith, one mile below Deposit.

Onward, always onward, and the real fishing begins! The bass are long, slender, like race-horses. Soon a half-dozen lie in the canoe. That is enough, and we string and trail them in the water, using them as a brake and helm to keep the canoe pointed down stream. More catches with the camera as we admire the noble views of river, forest, mountain, cloud and shore!

Luncheon—fried bass, bacon, coffee, cheese, brown bread. The sky for a ceiling and clouds for frescoes, each of their changing aspects seeming to be more exquisite than the one just vanishing; the hills for the dado of our dining room, the birds for our orchestra, ourselves for waiters; spring water, and the music of the river, ruffled by a breeze that makes each leaf flutter and tug at its anchorage, each twig full of trouble, and the boughs all bend to spring back again with happy life!

And then a long, long run through vanishing hours, past little towns, under bridges, close to boats holding fellow fishermen; and the inevitable question, "What luck?" and again we drift between lovely hills, the still pauses showing as much in the water as above them.

"Sweet views, that in our world above
Can never well be seen,
Were imaged by the water's love
Of that fair forest green."

The whole upper Delaware is singularly wild and sylvan. Yet railroads and highways make it accessible over nearly every mile of its length, with hotels and farm houses where mountain hospitality dwells, so real that we often had to urge the receipt of the small charges for accommodations and supplies.

It is a region of cloud-views that seem to be unique in magnificence. Sky-ranges full of caught and held sunshine, white mist-wraiths along hills, dreamy and far vistas opening as we approach them; life-lusty, smiling-earnest water flowing and talking to itself, noble salience and re-entrance of banks! Hundreds of tiny dells and nooks invited us to stop; springs purled with offered water; robins called their *"Cheer up! cherries are ripe, up! up! cheer up!"* A pair of bald eagles sailed over the hills below Hancock. Red squirrels, warblers, buntings, larks and blackbirds scolded in surprise or voiced their happiness. This was our experience that evening as the canoe was brought to shore, just above Southport, and we established our first camp.

"No wonder the Delaware Indians made this river the 'center of their possessions,'" I remark. "What a perfect place this must have been hundreds of years ago for a young Delaware to talk nonsense in 'Injun' to his best girl!"

Then my comrade's rhyming skill appeared. I believe he had studied all day on that stanza, getting it ready:

"Here came, long ago, the Indian maid,
Awed by the Great Spirit's power;
And as she knelt by the spring and prayed,
Each rhododendron flower
Bent toward her, to kiss the forest belle,
Whose dusky and blushing face,
As she worshipped here in this little dell,
Was the light of the sylvan place!"

This river was the favorite stream of the Delaware branch of the Algonquin Indians. Along its lower flow they called it Pautaxet. Deeds from them to William Penn in 1682 call the stream Mackeriskickon and Zunikoway. Some of the sub-tribes called it Pohoqualin, or river between two mountains—manifestly referring to its passage between Mounts Minsi and Tammany at the Gap. Up here on its higher waters the stream was known as Lamasepose, or Fish River. But it was best known as the Lenape-Wihittuck, the name given to it by the Confederated Tribes of the Lenape.

I close this second article of a series by asking careful study of the two pictures furnished. Note the grace, finish and companionship of the shore plants in the foreground of one of them. Remember that white is the most brilliant color that even the painter can use, and that the blue of the sky is really blue fire—throbbing with faint shadows always, and far more brilliant than the whitest paper—and realize how pitifully slight and meager at best must be the small picture that the reader can entirely cover with either hand—a picture that is merely black ink on white paper. Yet observe the sharpness of the hills on the sky-line, the mystery in the banks and masses of foliage on the far shore; and what must have been the brightness of the sunset glow in the other picture; and the tenderness and delicacy of the gloom as it gathered in the forests of those hills. Besides, in the picture are no colors—golden green of sunset on foliage, dazzling radiance on rapid water, purples and mauves and browns and yellows blending. No bird-notes, no sough of wind, no harp of foliage that it stirred and caressed, no glancing motion, purl and water-oboe harmonies!

There are no mosquitoes. We did not discover a dozen in all that voyage.

And so, to all fellow anglers and sportsmen, good-night.

L. F. BROWN.

Shad and Striped Bass on the Pacific Coast.

As a result of the introduction of shad and striped bass on the Pacific Coast by the U. S. Fish Commission the yearly catch of each of these species amounts to one and a half million pounds, which net the fishermen about one hundred thousand dollars. One of the first plants of shad made by the Commission was carried in an ordinary baggage car by Mr. Frank N. Clark and Dr. Tarleton H. Bean. This was in 1876, when nearly one hundred thousand lively fry were planted in the Sacramento River. These had been collected at South Hadley Falls, Massachusetts, from the Connecticut River. Earlier plants of shad fry had been made in the Sacramento for the California Commission by Mr. Seth Green and Livingston Stone. In 1885, and for several succeeding years, shad fry were introduced into more northern waters, including Puget Sound. The species is now found from the Sacramento to the Sound, but the striped bass as yet is confined to the streams of California.

BON.

The Sea Trout Question.

Editor Forest and Stream:

As stated in a previous letter, had I not verified my belief in the identity of the so-called Sea Trout of North America with the widely distributed and universally known *Salmo fontinalis* by a study which precluded all reasonable probability of error, I should scarcely have ventured to combat the opinion of Mr. Charles Hallock. This gentleman's writings have been in the hands of several generations of sportsmen, and he is acknowledged by those competent to judge to be the best living authority on all subjects to which he has devoted his careful attention and on which he has exercised his acute powers of observation. In his several instructive and fascinating books which have done so much to create and foster a love of genuine sport in the United States and Canada, he leaves the impression on the minds of his readers that he considered the Sea Trout a species of *Salmo* entirely distinct from *fontinalis* in the same sense that it is distinct from *Salmo salar.*

In his letter on the subject in your last issue, he explains that this was hardly his meaning; that he considers it a distinct *variety of fontinalis,* though in no way differing from this species in its anatomical structure. With this opinion I have no fault to find, though I do not, in all points, agree with his conclusions about the difference in their habits and habitat. He thinks their home is the sea, and that, like the Salmon, they resort to fresh water only to propagate their kind. My belief is that they are true Brook trout; that their home and proper habitat is the fresh water of our rivers, lakes and streams; that they go out to the mouths and estuaries of rivers for the greater abundance and variety of food to be had there, but that they never go far to sea, seldom leave the estuaries of their native rivers, and always spend the summer and autumn in their proper home—fresh water. There is little to argue about in our differing opinions, and as neither of them is susceptible of absolute demonstration, I will devote this letter to some general observations on the "Sea Trout," and on the different varieties of undoubted *fontinalis* which are found in most all of our rivers, lakes and streams.

So far as the writer has been able to discover, without having opportunity to refer to the great libraries of the United States or England, the only writers who speak *ex-cathedra* of the Sea Trout are Hamilton Smith, who named it *Salmo canadensis,* but gave little information as to its habitat or habits and still less to the specific characteristics of its physiology. Sir Wm. Jardine mentions it as a species distinct from *fontinalis,* but gives no satisfactory reasons for his opinion. In describing the habits of the fish he says: "In approaching the entrance of rivers, or in seeking out, as it were, some one they preferred, shoals of these fish may be seen coasting the bays and harbors, leaping and sporting in great numbers, from about one pound to three or four pounds in weight, and in some of the smaller bays the shoal could be traced several times circling round it and apparently feeding." Following these, Thaddeus Norris, in his Angler's Book, gives a detailed description of the Sea Trout, and in his later book, "American Fish Culture," says: "From all my researches the only scientific account given of this fish is by myself. It is decidedly distinct from the varieties of *S. fontinalis* which migrate to and from salt water and acquire a larger size and darker tinted flesh by feeding upon crustacea found there; nor has it but slight affinity to the Sea Trout of Scotland and Ireland. These fish come in large schools into Canadian and New Brunswick streams. On their arrival they are beautifully bright and of surpassingly delicious flavor; but, like the Salmon, which they precede a month or so, they lose their brilliancy and flesh up to the time of spawning, which is in October. As far as I have examined them, their stomachs are empty after entering fresh water, while an occasional Brook Trout taken in the same pool has a well-filled paunch. They are, therefore, purely anadromous, and, like the Salmon, attain all their growth and flavor at sea."

From further and more exact investigation, Mr. Norris found he was incorrect in every statement made above. He found, in the writer's company, that these Sea Trout never had an empty stomach, but were always ravenous in fresh water and their stomachs always full of undigested food of all sorts, from flies to young field-mice. The writer pointed out to him that he was not the first nor the only *savant* who had fallen into the same error from hasty and inaccurate observation. He showed him that, in 1849, H. Robinson Storer, of the single specimen of Sea Trout which he saw at Red Bay in the Straits of Belleisle, gave the following luminous scientific description:

"Length of head about one-sixth length of body; depth of head two-thirds of its length; greatest depth of body directly in front of dorsal fin, equal to length of head. Upper jaw the longer. Jaws with numerous sharp incurved teeth. Eyes laterally elongated; their diameter one-third the distance between them. Opercules rounded posteriorly; lower portion of operculum naked, marked with concentric striæ; lateral line commences back of superior angle of opercle, and assuming the curve of the body is lost at the commencement of the caudal rays. The dorsal fin commences just anterior to meridian line; is nearly quadrangular. Adipose fin situated at a distance back of the first dorsal little less than one-half the length of the fish. Pectorals just beneath the angle of operculum; their length three-fifths of the head. Ventrals just beneath posterior portion of first dorsal; the plates of their base very large. The anal is situated at a distance back of the ventrals just equal to the length of head, and terminates directly beneath the adipose fin; caudal fin deeply forked; its length equal to greater depth of body. Dorsal fin, 9 rays; pectoral, 13; ventrals, 9; anal, 11; caudal, 30 rays."

Principally on this learned trifling has a new species been formed. Savant Storer gave tongue as above, followed by Savants Jardine and Hamilton Smith, and all the lesser lights yelped in full cry, until to express a doubt of this unique Sea Trout is rank heresy in the eyes of the Savants, whom I defy to show any substantial difference between it and *fontinalis* when the same professional patter is applied to the latter. With trout in Nepissiguit and Tabusintac and Storer's luminous description before us, we failed to find any substantial difference; certainly not so much as the most casual observer can see at a glance between the *Salmo salar* of Restigouche, Nepissiguit and Miramichi. Even the Millionaires of the Restigouche Club can distinguish between the Salmon of Matapedia and those of Upsalquitch, Patapedia and Quatawamkedgwick. Mr. Norris frankly admitted this on comparing his own description of the Sea Trout with the undoubted *fontinalis* we caught on his second visit to the North Shore and Tabusintac. I have always considered Mr. Norris's death a great loss to piscatory science. As he was largely responsible for the widespread delusion of the Sea Trout myth among American and Canadian anglers, it is much to be regretted that he died before his more mature convictions were made public.

When Savants tediously describe the colors of fish, which they all do *ad nauseum* under the head "Coloration," they are simply leading themselves and their readers astray and exhibiting to observant fishermen and intelligent anglers their practical ignorance. The Old Angler never saw two Salmon or two trouts precisely alike in color; but he has seen trouts taken from the same lake so entirely different in their "coloration" that they might well be thought of different species. In Kingston, Kings county, are two lakes not far apart; one has a bright, white-bellied, brilliantly spotted trout that often attains three pounds weight. The other lake, not a mile distant, has trout not larger than four to eight ounces, which are yellow-bellied and dirty colored on sides and back, the vermillion spots barely perceptible, but sprinkled thickly from back to belly with minute jet black specks, as numerous as if a pepper-box had been shaken over them from head to tail, the specks not larger than finely ground coffee. The speckled fish from the low, swampy lake, if placed in the clear water of the higher lake, soon lose these minute black spots; the vermillion spots become brighter, the belly whiter and the back vermiculated. Another instance of the same kind is seen in Tracey and Henry lakes in St. John county. In the former the fish are clean and bright; in the latter, dirty and dim, covered thickly with the minute jet-black specks above described. Every observant angler knows how various are the colors of trout in different waters, but he never has a doubt that all are of the same species. These remarks apply to perch, chub, suckers and pickerel in fresh water, whose colors are as various as the waters they inhabit. Even among salt-water fishes like Cod, Pollack and Haddock, the colors vary with the individual. I have seen vastly more difference between trout taken from the same lake than I could ever find between a so-called Sea Trout and an undoubted *fontinalis* of the same size.

In your issue of January 17, Mr. R. T. Morris writes about the difference in appearance and habits of Sea Trout in northern and southern streams. Every fisherman with his eyes open must have observed considerable difference between the appearance and habits of Salmon and trout in different waters, and indeed in different parts of the same water. Any Salmon fisherman on the north shore of New Brunswick, after a few seasons' experience, can tell Miramichi Salmon and trout from those caught in the Nepissiguit. A Miramichi angler can readily distinguish between the Salmon of the northwest and those of the southwest branch. A Restigouche angler, if he is at all observant of small differences, will have no difficulty in distinguishing an Upsalquitch from a Patapedia Salmon, and detect among them all a Matapedia fish or one from Kedgwick. The man must be "color blind" who can see no difference between the Salmon in Port Medway River in Nova Scotia and those from Gold River; between those from Indian River and those from the Margaree, and yet no one doubts that all are of the same species. Mr. Morris tells us: "The sea-run brook trout likes to remain near cover or under it when in the stream; while the sea trout lies in the middle of the most open pools, * * * and cares very little about the presence of the fisherman in full sight, and will rise freely to the most clumsy cast. * * * *The sea trout often rises near the surface and makes a wake like a muskrat before getting to the fly. The sea-run brook trout runs for cover when hooked; the sea trout keeps in the open when hooked and splashes about near the surface."* (The italics are mine.)

Then comes Mr. J. W. B., in your issue of February 7, and tells an entirely different story of his own experience in the Escuminac at the extreme head of Chaleur Bay, in which and in the Nouvelle the Old Angler and the late John Mowat, for twenty years Fishing Overseer of the district, have had the finest angling in all the lower pools and never found it necessary to go higher for fish. J. W. B.'s experience is the "exact opposite" to that of Mr. Morris, for he writes: "* * * The pools and reaches of the lower five or six miles of the river never contain any large trout, * * * but countless thousands of fingerling trout." Unlike the Sea Trout of Mr. Morris, which keep in the open and splash about near the surface, those of J. W. B. *"seek the shelter of the banks and the overhanging bushes, and then, to get your fly where the concealed fish can see it, requires skill, patience and profanity.* But they are there, great spotted beauties, as plenty as the angler can wish. *When you fasten to a four-pound fish after digging him out from under the alders, he is very liable to exhibit a frantic desire to return to cover."* Let the reader compare these two descriptions, especially the passages I have italicized, and he may well doubt whether these observant gentlemen are writing about the same fish; and yet both give their opinion that these Sea Trout, with such opposite habits, are a distinct species from *fontinalis,* with a different habitat. Thus sciolism rushes blithely in where knowledge creeps with cautious steps, and a few hours' fishing of a single stream is put against the laborious study of forty years on all the principal rivers, lakes and streams of Nova Scotia, New Brunswick and P. E. Island. Mr. Morris is quite right when he says: "I suspect the matter is well understood, and that differences in opinion are simply differences in information on the part of correspondents."

Your issue of January 10 contains some very sensible remarks from Mr. W. B. Mershon, who seems to know the Cascapedia well and has had great facilities for studying its trout. He says: "My observations on the Cascapedia River, extending through a good many years, lead

me to believe that there is no difference between brook trout and sea trout."

In issue of January 24, Mr. E. A. Samuels, author of that charming book, "With Rod and Camera," which every angler ought to have and read often, gives a great deal of useful and interesting information about Sea Trout. His remarks show that he is a careful and accurate observer. Peculiarities of habit in different waters and mere "coloration" have little weight with him, because he knows that all these vary with the rivers in which they are found, and indeed with different parts of the same river. His experience seems to have been large and various, his observation careful and exact, and his conclusion irrefutable. Only in one respect does he differ from my own conclusion, carefully and laboriously formed after 40 years' study, viz.—that the home of these trout is the open sea, and that their visits to fresh water are only episodes in their life. My conclusion, based on most carefully ascertained facts, is that their home is in fresh water, and that their visits to salt water are only two episodes in their history—the first in spring to feed on smelts, the second in the fall to recuperate after spawning. During these two visits to salt water from their home in fresh water, I have the strongest reasons to doubt that they ever go far to sea, or indeed far from the estuaries of their native rivers. Some of these reasons were given at length in FOREST AND STREAM of December 20 last, and until the facts therein set forth are either disproved or rationally explained, I must continue to hold my present belief that the so-called Sea Trout is simply the universally known *Salmo fontinalis,* and that it goes from its home in fresh water to brackish and salt water in the mouths and estuaries of its native rivers for the better feed found there; but that it returns to its home in the upper waters after a longer or shorter stay lower down, dependent on the state of the river and the supply of food. If anyone—Scientist, Savant, Angler or Fisherman, who all agree that this trout follows the smelt *up* rivers—can prove to me that after the smelt have spawned and left the rivers, this trout follows them down to sea again, I may be inclined to reconsider a question I have held as settled for the last thirty-five years of my investigations.

VENNING.

Since the above was written, I have read with much pleasure, in your issue of March 28, the letter of a brother Octogenarian, Mr. Von W., who says: "The weight of evidence is against Mr. Venning." If so, it must be against himself as well. An attentive reading of what I have said in combatting the widespread belief that the so-called sea trout is a species of *Salmo* distinct from *fontinalis,* will show him that I have expressed throughout precisely the same belief that he himself holds about these trout spending the winter in salt water. He will perceive, also, that I incline to the opinion he expresses that *Salmo salar* was originally a fresh water fish, as the *Ouananiche* now is.

Since reading Mr. Cook's letter in your issue of March 14, the disappearance of wild pigeons from the Eastern States and these Provinces is no longer a mystery to

THE OLD ANGLER.

BOSTON, Mass., March 30.—*Editor Forest and Stream:* Will you allow me space for a few words in regard to the so-called sea trout. I notice that my old friends, Charles Hallock and W. H. Venning ("The Old Angler"), differ as to their being a distinct variety of the salmon. Allow me to say that after thirty summers spent in the pursuit of my favorite sport of salmon fishing on the Restigouche and tributaries, the York and St. John at Gaspé, and for the past twenty seasons on the St. Marguerite, a tributary of the Saguenay, all of which rivers abounding in sea trout (so-called) during all these years, I have been a careful observer of their habits, structure, etc., and have yet to find a single point of difference between them and the brook trout (*Salvelinus fontinalis*), excepting that they have acquired the habit of spending a part of each year in the salt water, but always in the vicinity of the streams in which they are bred. They spawn in the upper reaches of the streams under the same conditions and at the same time as other trout

As the question of food supply determines the habitat of all animal life, it is easy to account for their yearly migrations to the sea, for there they find a much larger supply of the most nutritious food, and as a consequence they soon become the most perfect brook trout to be found on this continent. Their bodies are almost round, their meat a deep salmon color. They are nearly as silvery as the salmon. Their red and yellow spots disappear, as does also the brilliant color of their fins. In fact, they are transformed into what seems to be a higher order of the *Salvelinus fontinalis.* All of this change is in consequence of a much more favorable environment. Can you blame him for making the change? But the instinct of reproduction forces him back to his original habitat, where he once more assumes his old garb of bright colors; but loses very soon his perfect condition. I have angled for them; I have dissected them; I have eaten them; I have painted their portraits in every detail; hence I say that not a doubt exists in my mind as regarding their being brook trout and nothing else.

In answer to Mr. Hallock's question, "When is a 'sea trout' a 'brook trout?'" I will say, *ever* and *always,* whether in fresh or salt water he is the much-loved *fontinalis* pure and simple.

WALTER M. BRACKETT.

OUR readers will doubtless be grateful to President Jordan for consenting to arbitrate and settle finally the thirty years' discussion of the sea trout question which of late has been traversed in all its breadth by Messrs. Venning and Hallock, who of all men are perhaps the best qualified to treat it intelligently. In Mr. Jordan's letter, which we append, he takes the same position which Mr. Hallock has always held, namely, that the brook trout and sea trout are the same species, but differing so widely in traits and habits that they require distinctive vernacular name to designate them.

STANFORD UNIVERSITY, Cal., March 26, 1903.—Mr. Chas. Hallock, Washington, D. C., Dear Sir:—The sea trout of Canada is scientifically the same species as the ordinary brook trout, *Salvelinus fontinalis.* It is, however, brought up in the sea, better fed, and developed under other conditions which makes it larger, fatter, more rangy, and without the peculiar colors which characterize the brook form. Presumably the young of any brook trout hatched out in the sea and fed in the sea would be the same, just as the son of a peasant becomes an aristocrat if brought up with plenty of money and under favoring conditions as to growth.

Speaking scientifically, they should bear the same name, as all men are *Homo sapiens,* but in popular language, the difference in habits, appearance and conditions certainly justifies the use of the name "Canada sea trout," or of any other name one may like to use. The red spotted trout of Alaska spreads out in the same way in the sea, and often weighs eleven or twelve pounds, turning gray at the same time. The same is true of the Dolly Varden trout about Puget Sound, and in the upper Sacramento it never reaches the sea, and the large gray unspotted ones are therefore unknown in California.

DAVID STARR JORDAN.

CHICAGO AND THE WEST.

About Trout.

CHICAGO, Illinois, April 4.—Mr. Horace Park, superintendent of the Ohio State fish hatchery at Sandusky, is good enough to send me a little bunch of flies of his own tying, and he writes in addition:

"Your article of the 28th inst. has so much good sense and forceful truth to it I thought I would write you, as I do some fly-tying myself. I am a veteran fly-fisher, having had over forty years' experience. I have used all makes and qualities of flies, from American specimens at fifty cents each to Scotch flies at thirty cents a dozen. I have never found anything equal to flies of my own tying. The inclosed samples of Rocky Mountain buck tails I have found the very best killing flies for bass or trout. No. 8 for trout would be best. I use No. 4 for bass."

These buck tail flies have the hackles black, the bodies yellow orange, and the wing of brown buck tail hairs. There is a little red tag of worsted or crewel. The buck tail has, in the experience of many Chicago anglers, been found good for bass. I have not known many to use it for trout, but I have sometimes killed trout on the Prairie River with squirrel-tail hackle flies of my own rude manufacture. I should not be surprised if Mr. Park has given us a tip worth following, and myself and friends will try to imitate some of his very excellent amateur workmanship.

I asked an intellectual friend of mine the other day whether he thought trout struck at the silver-doctor fly on account of the blended colors of the wing or on account of the shining tinsel body. He answers:

"I know a little of the psychology of humans, but ichthyological psychology is beyond me. A fish goes along the line of least resistance; but why a salmon unwilling to feed and unable to digest will seize an artificial fly is beyond me. Were it not for this I should be inclined to think that the silver body of the silver-doctor was the attraction and that the feathers had little to do with it, and that perhaps the body suggests to the trout that it is a minnow; it is possible that the feathers render the outlines less sharp and aid the simulation. I shall try a silver-doctor stripped of its wings and see how it works."

The one unsolvable problem of all the ages is this same spotted little enigma. I am inclined to think this is what the Sphinx had on its mind all the while.

HARTFORD BUILDING, Chicago, Ill.

Some Mistaken Adages.

ALL adages are not true. Little by little one learns of new discoveries in natural science to upset many ideas once believed to be the truths of natural history. For the young student the best plan is first to make sure that all which he thinks he knows about the habits of animals are facts. If they are not, he should correct his mistaken ideas as fast as he can to make ready to learn better next time. Legendary stories of the best sort are beautiful, poetical, instructive always—if one accepts them as stories, not histories. But to learn history truly, to know the character of any people, one must, of course, know what they believed, thought and felt in their lives. Many a funny old adage, however, ought to be put in its place and not be confounded with fact. Let us try to follow that plan with some of the most familiar sayings about animals.

As Cold-Blooded as a Fish.

Of a person who has very little regard for the feelings of others, it is said generally that he "is as cold-blooded as a fish." For years it was not understood that fishes are not invariably cold-blooded. Taken as an order, reptiles and fishes are colder animals than mammals and birds. But the bodies of all the so-called "cold-blooded" animals vary in temperature according to their surroundings. To our sense of touch a fish in water is of the temperature of the water. But the warmth of the blood depends on the amount of blood in the body. All fishes are not cold-blooded by any means. The adage is only imperfectly true. There is a tunny, a sort of giant mackerel, which has a three-chambered heart, which breathes only the air it gets dissolved in water, but which, nevertheless, has blood as warm as that of a pig, and a pig is supposed to be a very warm-blooded animal indeed. If the brook trout cannot live in water which is at all warm, the catfish, on the contrary, can live and thrive in water which is disagreeably warm to the human hand. The great Humboldt is himself the authority for the statement that he has seen fishes thrown up alive and unhurt from volcanoes when the water which spouted them forth lacked two degrees of the boiling point. That, perhaps, is not so difficult to believe when one also knows that fishes are to be found in hot springs where the temperature of the water is 120 degrees Fahr.

To Drink Like a Fish.

Does the fish drink at all? That is the question. How ridiculous it is to say of a human being that he drinks like a fish! It is exactly what no human being can do. The reason is interesting. A fish takes water into its mouth, because that is the way it breathes the air. Where water is stagnant no fish can live, it being necessary for it to have the air which passes through water. When you see fishes opening and closing their mouths regularly, as they do in water, they are not drinking; they are breathing. The act of breathing is as follows:

The fish opens its mouth to let the water flow in; then closes it and contracts the gill cavity to force the water out. The water, you understand, is not swallowed by this process. What the fish does not swallow it cannot be said he drinks. If, by any chance, a fish is dragged backward through the water it will be drowned, just as a human being is drowned for want of air. By the creature being dragged backward the gills become clogged. They close completely, making it impossible for the air in the water to be properly breathed. If, on the contrary, the fish is obliged to keep its mouth open for any length of time while in the water, it must also drown, because the water is then not forced past the gills. How, then, does a fish drink—if he drinks at all? Perhaps you may find the answer. One fact is certain, that the more a human being drinks, the less true it is to accuse him of drinking like a fish.—Our Animal Friends.

Salmon Culture in America.

Editor Forest and Stream:

If I could see where the laugh comes in, I would readily join my old friend Livingston Stone in his merriment against myself. I said nothing in my rejoinder to Mr. S. to convey the impression that I thought his letter to Mr. Marston was a reply to mine. On the contrary, I stated explicitly that it was his letter to Mr. M. I considered disingenuous, and I now regret to see the same disingenuousness in his allusions to me printed in your issue of March 28.

Mr. S. says his letter to the editor of London Fishing Gazette was a friendly and private one, not intended for publication, hence he did not feel called on to furnish statistics. But all the same, Mr. S. did publish his letter, and still he gave no statistics nor any proofs of the confident assertions he made to the public. I have the greatest respect for Mr. Stone, but I cannot take even his opinion as final in a matter of such great financial and economic importance as the efforts now being made on the Pacific Coast by the United States Fish Commission and the Canadian Government to enable a few wealthy canning companies "to eat their cake and have it, too."

Had Mr. Stone been candid with his friend, or had he wished to give him data on which to base a sound opinion as to the utility of Salmon Culture on the Pacific Coast (it being, according to Mr. S.'s own showing, utterly useless on the Atlantic Coast), he should have mentioned the overcrowded state of all the Pacific Salmon rivers north of Sacramento, as described by every writer who has dealt with the subject, and even by Mr. Stone himself.

Mr. S. seems to think that the Sacramento facts and figures given by Mr. Babcock in your issue of March 21 are applicable to all the rivers north of it. As a matter of fact, Mr. Babcock confined his *statistics* to the Sacramento River. What he says about the Columbia and its branches consists entirely of *opinions* and *assertions*; but he does not deny that "the 1,200 miles of drift nets, the destructive wheels and the other murderous appliances" mentioned by Mr. Stone, are still in full activity on a river where the commissioners are striving to keep up the supply by hatching houses operated at the public expense.

Though residing in Victoria, B. C., it is significant that Commissioner Babcock has not a word to say about Salmon hatching on the Fraser and Skeena rivers; nor does he drop a hint as to the overcrowded state of these rivers; nor does he express an opinion about the wisdom of taxing the whole people for the benefit of a score or two of rich canning concerns who also are trying to achieve the feat of "eating and having their cake." Would Mr. Babcock tell an interested public what he thinks about these things?

THE OLD ANGLER.

New York Angling.

UTICA, N. Y., April 4.—Under the game laws of New York Steate the taking of brook trout will be permitted on and after April 16, a date which is now not far away, and fishermen who are accustomed to go in quest of the speckled beauties, are preparing for an early start. Ordinarily, there is apt to be more or less ice and snow remaining when the season opens, and the trout do not bite well in central New York streams for some time thereafter, but this spring the weather conditions have been so exceptionally favorable, there is every reason to believe the fish will be ready to rise as soon as the angler is allowed to cast his lure. In the Adirondacks, too, the indications point to a remarkably early fishing season, as the last vestiges of winter are rapidly vanishing. The prediction is made with considerable confidence by many anglers that there will be excellent trout fishing this summer in the larger streams up north. Last year the streams were so high all through the season, owing to the continuous rains, that but very few trout were taken from these waters, hence it is anticipated that there will be rare sport this year, providing, of course, that the conditions for fishing are favorable. For more than a dozen years past the Black River Fish and Game Protective Association has annually placed in the waters of Oneida County thousands of small trout, and the beneficent effects of this work have become very apparent. Excellent fishing is now to be had in a number of streams, which, had it not been for the restocking, would have long since been depleted. It is gratifying to note that similar organizations are being formed in different parts of central New York to assist in replenishing the trout streams, and that public sentiment in favor of this work is constantly growing. The season when pike, pickerel and lake trout can be legally taken opens May 1, and black bass fishing begins June 10 on the St. Lawrence River, and June 16 in other waters of the State. The muskallonge season opens May 31.

W. E. WOLCOTT.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Not a Fish Story.

WASHINGTON, April 2.—*Editor Forest and Stream:* Though the ancient files of the Government are not rich in fish and game lore, yet occasionally there is found a faded paper relating tales of heroism, adventure and endurance that "would stir a fever in the blood of age"—tales of the makers of the Republic that appeal to all good and patriotic men, such as read and write for FOREST AND STREAM, for doubtless good fishermen may be thus designated. Now and then a gruesome story is suggested by a scrap yellowed with age.

What scenes of vigil, stealthy pursuit, midnight foray and surprise are called up by the following:

"Received September 12, 1780, of John Weitzel, three hundred and twenty dollars in part of my proportion of the subscription that was raised in Sunbury and Northumberland for the scalps that were brought in by myself. I. Cramer, Wm. Campbell and Michael ————."

The price of scalps must have been pretty steep or there were a lot of them.

Doubtless after the Wyoming massacre the sense of insecurity was so great and the people so incensed by the horrible butcheries there perpetrated that heroic measures were adopted by offering rewards for the red man's hirsute adornment.

Many of your readers have hunted and fished along the route of that wonderful march of Arnold and his men through the Maine wilderness in the fall of 1775, and can appreciate the difficulties troops would there encounter even at this day, but the imagination can hardly picture what that heroic band endured one hundred and twenty-eight years ago.

I give below a copy of a letter from an officer of that expedition, written in old age to a comrade and friend, recalling some of the incidents of the campaign—written in the friendship born of perils shared by men of heroic mold. The writer was a prominent officer after the war, serving until his death, and men of his name and blood have ever since served the country in honorable and responsible stations. The letter is given *verbatim et literatim et "spellatim,"* and is as follows:

WASHINGTON CITY, March 15, 1816.—Sir:—I intended to write you a long letter to bring to recollection a number of incidents on our assending the River Kennebec.

We left the army lying before Boston on the 9th of September, 1775; after marching to Newburyport we embarked on board 19 schooners for the mouth of Kennebec River.

We assended that river to Fort Western; there we embarked part of our little army with provisions for the expedition against Quebec. When we arrived at the head of the river one hundred and eighty of our Battoes were lost or had become useless; we carried three or four over the Alleghanee mountain to the head of the Chaudiere River; our march from that time was by land through a trackless wilderness, one Boat only dessended the Chaudiere to the first French settlement, where we arrived without a mouthful of provisions. The French inhabitants having been apprized of our approach received us in the most friendly manner; they had provided for us fine Potatoes and Butter. We fed luxuriously on these and continued our march 75 miles to Point Levi opposite to Quebec. All the water craft had been destroyed or taken away by the Brittish to prevent our crossing the St. Lawrence River. We, with some delay, procured Boats of the Indians made of Birch Bark. With these we crossed the St. Lawrence in the night between 2 ships of war which had been placed to intercept our passing. We landed at Walefes (?) cove and assended the heights and formed our men on the plains of Abraham on the 13th of November, having been 75 days on our march. The incidents from that time to the 31st of December I will pass over.

On the 31st at night, say 11 o'clock P. M., we marched to the assault of the Town. We succeeded in storming a Battery and made prisoners of about 70 men, commanded by a Captain belonging to the regular troops in the City. Here you recollect we were surrounded by three or four times our number, General Montgomery having been killed. The whole garrison was turned against our column. After holding the Battery we had taken several hours we were made prisoners, except a few; you and I were in the column commanded by Arnold. You recollect that in the attack we had six small mortars in the subberbs of St. Roe, six shells were frequently in the air at the same time from our little Battery under the walls of the City. The Brittish were at the same time throwing shells from the City and their 32-pounders were playing on us at the same time. Their shot and shells flew harmless over our heads, but they killed and wounded about 90 of our men with their musquetry as we approached the Battery mentioned, and notwithstanding our loss of men the march of our column was not stoped a moment till we reached the Battery and took possession of it. Such an attack and defence exhibited a night scene of exquisite splendor and the senses of sight and hearing were saluted if not gratified. It is now forty years since that interesting event happened; time has silvered our heads. This daily reminds me that I am now an old man, I am 75 years old—15 years probably older than you. I hope we can both look back and forward and console ourselves that we have done our duty to our country and that we will never shrink in prosecution of that duty while life shall remain.

Most of our companions are gone before us. A kind providence has protected us—this ought to awaken in our hearts the finest sensibility.

With esteem and respect,

Your Ob't servant,

(Signed) ————————

Major.

P. S.—I recollect all the names of the Cadets who voluntarily attached themselves to our little army in that expedition.

Besides yourself, there were Matthias Ogden, Peter Grubb, Eleazer Oswald, Matthew Duncan and Aaron Burr, of which two only are now living—yourself and Aaron Burr.

(Signed) ————————

The men composing that band were a strenuous lot, many of them living on the remote frontiers battling with the wilderness and wild beasts and wilder savages. Some of them dwellers by the ocean, where they wrested a scanty subsistence from a tempestuous sea and a reluctant soil. Who shall say that if Montgomery had not fallen or if the fire ship had accomplished its purpose, the stars and stripes instead of the cross of St. George would not to-day float over the citadel of Quebec.

"Their bones are dust, their good swords rust,
Their souls are with the saints, we trust."

Their spelling may not conform to modern orthography, but they wrote with their swords in unmistakable and imperishable characters the words Independence and *E Pluribus Unum* for our beloved and God-forever-blessed country. P. ENTION.

The Kennel.

Fixtures.

April 8-11.—Atlantic City, N. J.—Show of Atlantic City Kennel Club.
April 8-11.—Seattle, Wash., Kennel Club's show.
April 14-17.—Sharon, Pa., Kennel Club's show.
May 19-21.—Montreal, Can., Canine Association's show.

Oct. 6-9.—Danbury, Conn., Agricultural Society's show.
Nov. 3-6.—New York.—Annual show of Ladies' Kennel Association of America.

The Strenuous Life.

THAT life in general in Chicago is strenuous, is passively accepted by the outside world; that life there in the kennel world in particular is particularly strenuous, the following, published in the American Field of last week, in reference to the recent Chicago Kennel Club's bench show, affords ample proof:

"For expert handling of placing benching this performance beats the record, and we had intended to illustrate what could be done by a 'before and after' picture, for Mr. Oldham had stated that he expected the benching on Tuesday afternoon; but the light was too poor, and the photographer said he could not get a good negative.

"In connection with this a most regrettable circumstance occurred. The general manager of the American Field, in the pursuance of his vocation, while in the show building Wednesday afternoon, was assaulted by a member of the bench show committee without any provocation whatever. Whatever suspicions may have been entertained as to our manager's motives, they were entirely without foundation, for, as is well and universally known, both the American Field and its management have always demonstrated by their acts, tangible donations and through the columns of the American Field that they stand only for the right, the ennobling and elevation of sportsmanship.

"As a consequence of the unwarranted assault suit has been commenced in the Circuit Court of Cook county for $25,000 damages in the case of George W. Strell, plaintiff, vs. Frank Brown, Samuel Summerfield, Harry J. Cassady, Philip Henrici, Jr., C. A. White, Caleb B. Whiteford and the Chicago Kennel Club, a corporation, defendants, which proceeding the American Field, with the knowledge it possesses of the circumstances, heartily approves. We trust our friends will share this sympathy with us; it is imaterial to us whether our enemies do or not."

The Tell-Tale Tail.

A WRITER, in tracing the ancestry of the dog to wolf and jackal notices typical differences in the cast of their eyes, their body colors and markings, the habit of turning around before lying down, and other interesting peculiarities; but he does not mention the most striking and infallible way of distingushing them, namely, by the fashion in which they carry their tails!

Wolves and coyotes have a sneaking way of carrying their tails low, almost dragging on the ground, while dogs carry their tails up; and the further removed they are from the feral type the higher they carry them. Shepherds and collies, which retain many of their racial characteristics, carry their tails lowest of all; setters and pointers a degree or two higher, stiffening out straight when drawing on game; terriers and hounds elevate their tails to the spinal line; St. Bernards and Newfoundlands affect a curve over the back, while pugs actually come to a full twist. An old plainsman could tell a wolf or coyote as far as he could see him; and in buffalo days this was a most useful indication of buffalo herds being not far away. These predatory creatures always followed a moving herd. CHAS. HALLOCK.

Yachting.

THE result of the early trials between Shamrock I. and Sir Thomas Lipton's new boat demonstrate that Mr. Fife's latest production is much faster in every particular than the old boat, and we may now look forward to some very close and interesting racing next summer between the American defender and the third Shamrock.

The boats had their first trial on March 31 in a light breeze. In windward work the new boat sailed much faster and pointed higher. The boats were out five hours, and sailed some forty or fifty miles, the experts who followed them were more than pleased with the new boat, as was Mr. Fife and Sir Thomas. Shamrock III. was fast in stays, and left the water very clean and made little fuss under the bows when moving through the water at a good rate of speed.

The two Shamrocks had their second trial on the afternoon of the first of April. Both boats were tried with club topsails, and there was a fresh breeze blowing. It was rather unusual to set a club topsail on the new boat on her second trial, but as all her standing rigging was thoroughly tested and stretched on Shamrock II., by having a season's use, there was little fear of a breakdown. The result of the second trial was very satisfactory, Shamrock III. showing her heels to the older boat in the fresh breeze. A squall came up about four o'clock, and the boats doused their topsails and ran back to the harbor.

On April 2 the two boats had their third trial. The boats again carried club topsails, and at first the breeze drew out of the lochs rather fresh. In the windward work the new boat again proved herself better than Shamrock I., but in the running and reaching there seemed to be little difference between them, and Shamrock III. did not get away from the old boat very fast.

Shamrock is far too new to be in perfect tune, but she has got to show greater speed than she has already done before she will be a very dangerous competitor for Constitution, not to mention our new boat Reliance.

Cruise of the Rambler.

Winner of Second Prize in "Forest and Stream" Cruising Competition.

BY WILLARD B. COOK, DENVER, COL.

After clearing Morse Island the breeze flattened out and was succeeded by an oily calm. The tide was extremely strong, and for four hours we drifted steadily back toward Victoria; as the reader will notice by consulting the chart. Our senses were sharpened and on the alert to discover the least trace of a breeze, and presently the writer imagined that he could detect a disagreeable odor in the air. Appealing to the Lawyer for confirmation, the latter replied, "Smell something dead? No wonder. Dead calm!"

Along in the afternoon a slight breeze came up from the south, and we laid our course for Reid Harbor. On the way we regaled our guests with tales of the delicious spring chicken to be had at Reid Harbor. These tales fell on willing ears. The Lawyer became enthusiastic over the prospect, and thought it would be a good plan to stock up with live ones on our departure, remarking, "We ought to have no difficulty in keeping chickens alive in the hatchway." As we approached the harbor the breeze failed, and we towed the last mile. A large salmon trap occupies the west side of the entrance, but there is plenty of room left to beat in or out.

Reid Harbor is about one mile long by one-quarter of a mile wide. It is completely landlocked and surrounded by heavily timbered hills. It has a soft, sticky bottom, with a uniform depth of 4 to 6 fathoms, and deep water right up to the banks. Fruit of all kinds, eggs, milk, and chickens can be purchased here reasonably. On the north side of the island and separated from Reid Harbor by a narrow strip of land, is Prevost Harbor. This is somewhat shallower and has sandy beaches. The scenery is even more beautiful than Reid Harbor, but I do not consider the anchorage as desirable.

The next day we climbed to the top of a hill 640 feet high in the middle of the island and were well repaid for our trouble by the magnificent view to be had in all directions for a radius of 30 or 40 miles. Words cannot do justice to the beautiful panorama presented by this lovely inland sea dotted with hundreds of wooded islands ranging in size from a few feet across to as many miles. We descended the hill on the opposite side as it looked easier, and as we were very thirsty approached a farmhouse and asked for a drink of water. The woman who answered the knock asked excitedly, "Did you see anything of the bull?" We replied in the negative. "Well, you better look out for him. He killed a horse yesterday." This inspiring information banished all fatigue and materially accelerated our return, besides permitting the writer to again perpetuate his favorite saw, to-wit: "One is never safe except on the water."

When we got back to the Rambler the barometer had fallen and late in the afternoon a strong wind came up from the south. Quite a heavy swell came in the harbor as far as where we were anchored, and as the motion was disagreeable we got up anchor and towed in under the shelter of a point where we were well protected. Then we took the launch and hugging the lee of the shore until nearly to the mouth of the harbor, we ran out into the force of the wind and squaring away raced with the big swells coming in from outside. The motion in a small boat with such a following sea was exhilarating to a degree. When on the crest of a swell its momentum added to our own speed, made the launch appear to fairly leap forward as though shot from a gun. I have often read of the Kanakas riding the breakers on surf-boards and imagine the sensation must be somewhat similar. Try it sometimes if you have an opportunity.

The next morning (Sunday) we weighed anchor and started with a strong wind from the southwest. Mindful of the sailing directions of the British Columbia Pilot we essayed first to negotiate the channel north of Spieden Island, as we had to buck the tide, which is very strong between Spieden and San Juan Islands. As soon as we brought Spieden Island abeam it shut off all our wind and left us becalmed. Then the tide took a hand and backed us out until the wind got another try at us. After see-sawing in this way for half an hour we gave it up and tried the south channel with better success. As soon as we cleared the north point of San Juan Island we found the wind to come from the southeast, which made our course to Friday Harbor a beat to windward. However, as the ebb tide split on this same cape we had the tide with us the rest of the way.

I have almost always found the wind strong and squally in this San Juan channel. The tide made a short choppy sea in which we plunged a good deal. The squalls came in puffs every minute or two which required the man at the wheel to keep a watchful eye to windward and luff into them promptly. We soon took in the jib-topsail and could have comfortably carried a reef in the mainsail, but we were in a hurry and carried on until she laid over to about her limit. Starting the main sheet just a trifle is frequently as good as a reef if the wind is only blowing hard in puffs, but with a steady hard wind there is nothing like a reef or two for comfort and safety, and yet during ten weeks of almost continuous

cruising in the summer of 1902, we never once sailed the Rambler with a reef in any sail. We had the foresail down altogether several times to ease her when we didn't have time to reef; but here I go moralizing again instead of driving the Rambler into a stiff gale and head sea to Friday Harbor. We got there about noon and repaired to the hotel for dinner, the mate remarking that the culinary department of the Rambler would require a Sunday off. Thus a mutiny was quelled and every one made happy, including the hotel proprietor.

Friday Harbor is an excellent one, albeit a little deep for raising a heavy anchor. It is well protected from all winds, easy of ingress and egress, and is the best place among the islands for purchasing any kind of supplies. On a previous visit only a few weeks before we had

AMONG THE SAN JUAN ISLANDS.

anchored in company with the U. S. Revenue Cutter Grant, and exchanged visits with her officers. The principal article smuggled in these waters is Chinamen at $50 per.

On board again at 2 P. M. we immediately got under way for East Sound. Once outside the harbor we found that the wind had increased rather than decreased, but as our course soon brought it abeam and then aft we started sheets and proceeded to get as much speed out of the Rambler as she was ever guilty of. The tender towing astern made one continuous roar that almost drowned conversation in the cock-pit. The painter was tight enough for one to walk out on it, but although every one conceded the fact there were no offers. We carried the wind aft clear up to the end of East Sound. This is a good place for yachtsmen to stay away from. We walked several miles and worked all the farm-houses for milk and bread, but didn't get a rise. Query—what does the local creamery make butter of? The anchorage here is very exposed with a south wind, and it is apt to be a tedious beat in or out. We found it a beat out the next morning. The Artist had become so engrossed in a sketch composed of a broken-down wharf and the back end of a grocery store that we delayed our departure with the anchor hove short until the "color-scheme" could be evolved.

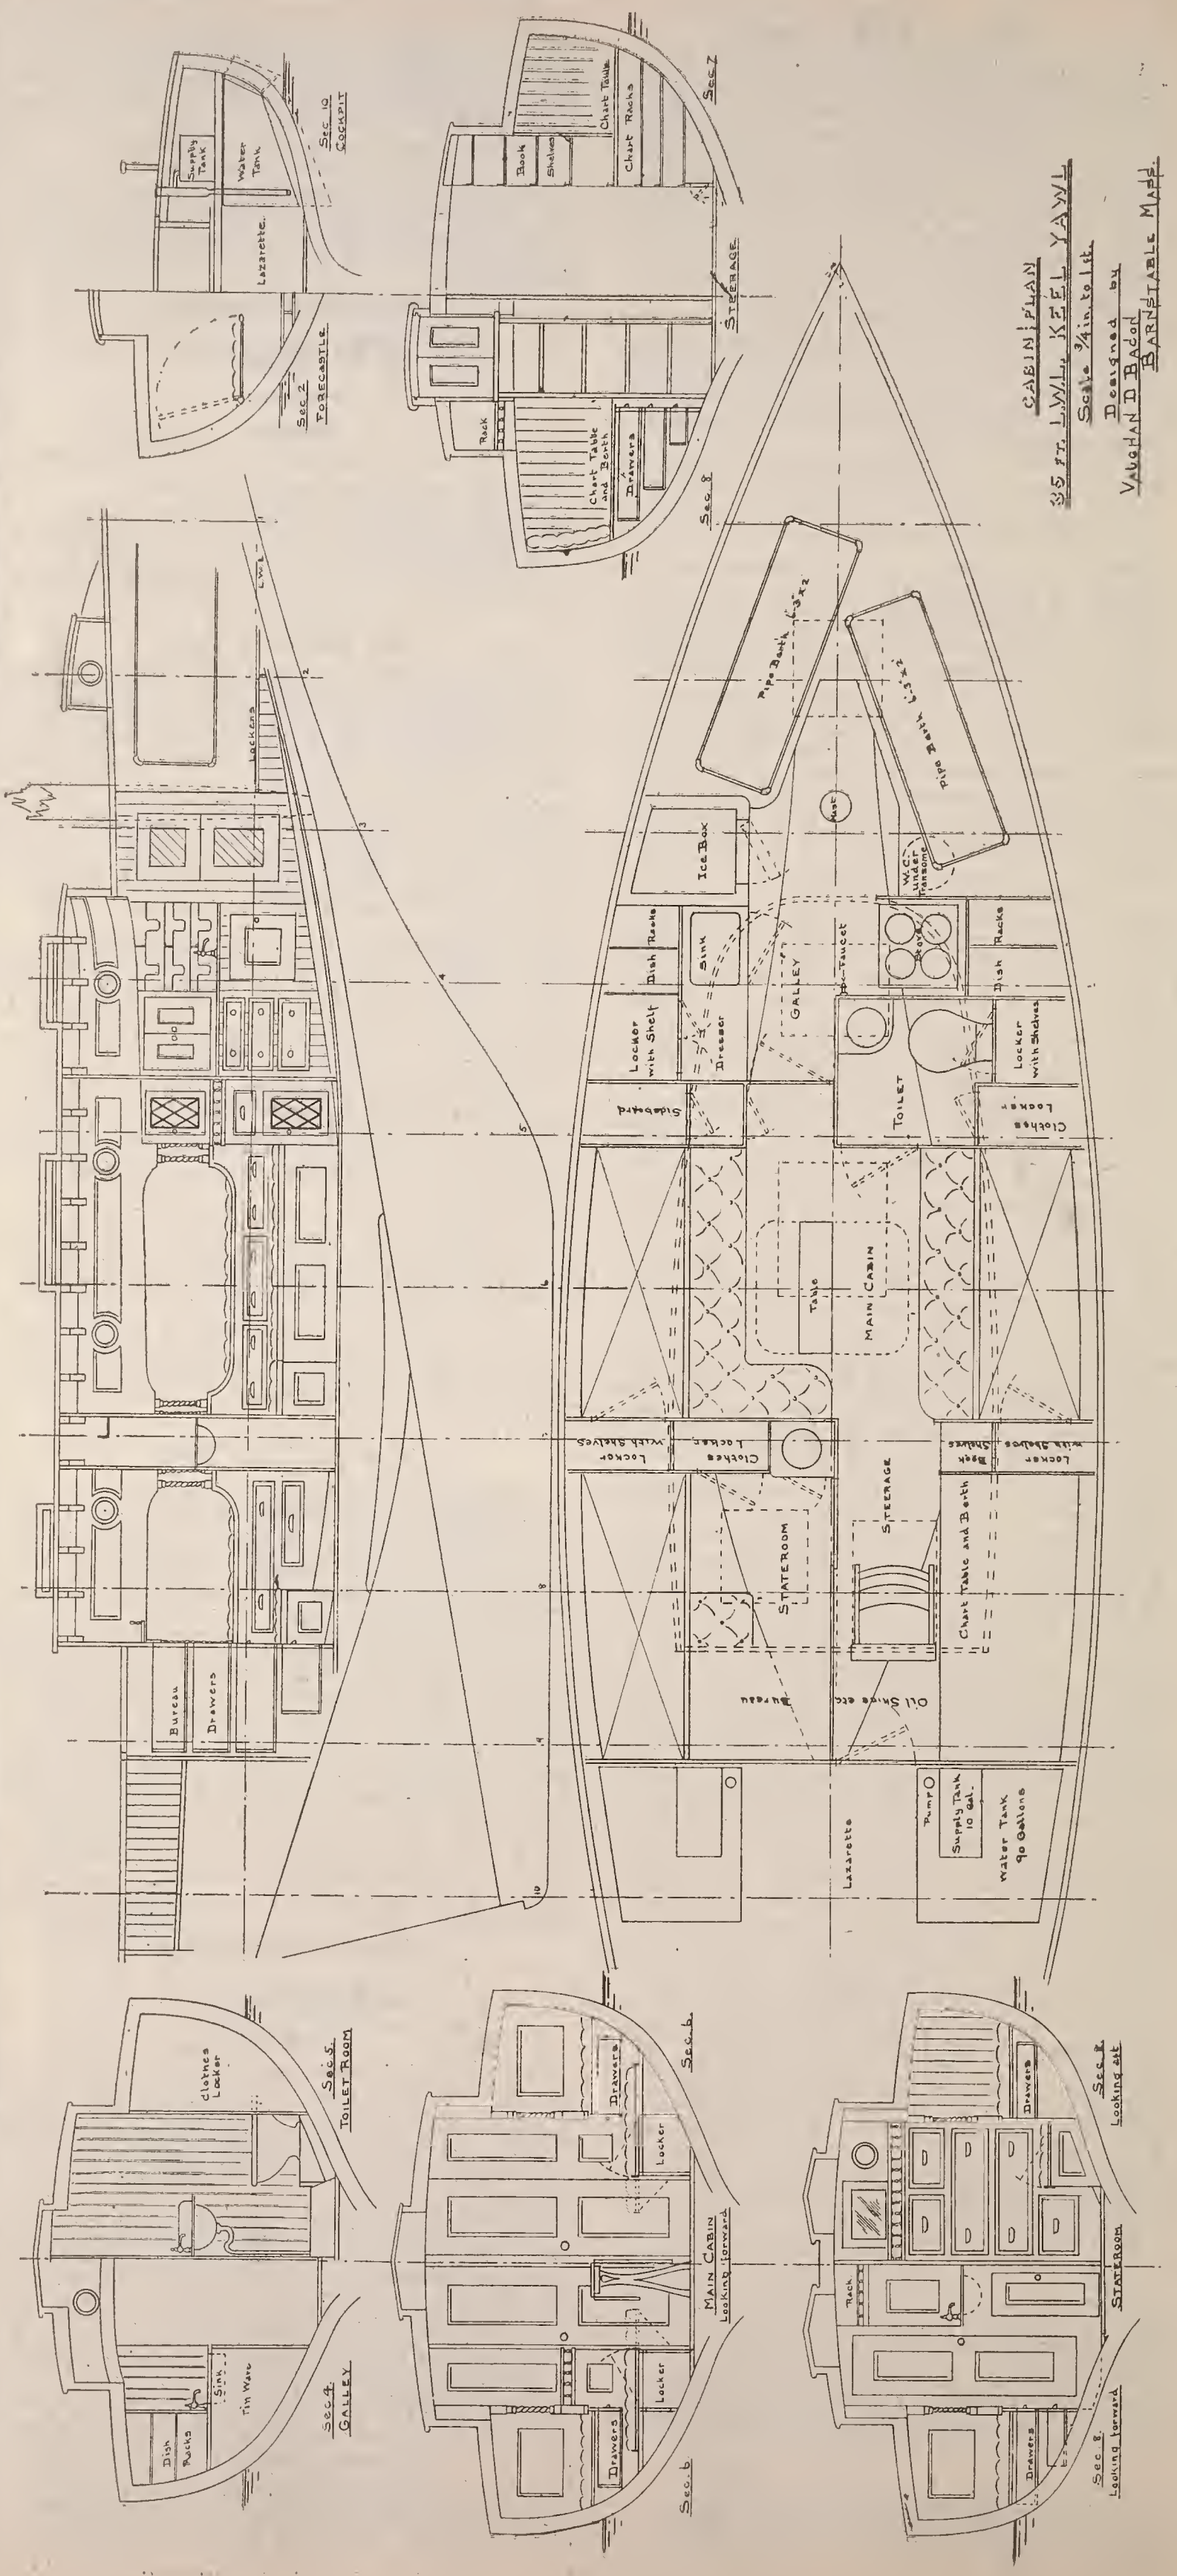
Now, if the reader will refer to the chart he will observe a small island almost blocking the passage between Blakely and Orcas Islands. This is appropriately called Obstruction Island, and the passages north and south of it the Obstruction Passages. We took the north passage this time because it is wider (although longer). We will know better next time. I have been through both and the narrower and shorter passage is best, as the wind can draw straight through. We got becalmed when almost through the north passage, and for about half an hour had a rather anxious time drifting back and forth within 100 yards of a fine breeze that we could see on the water at the mouth of the passage just ahead. It is so much trouble to take the cover off the tender and put it on again tight that we thought we would try to get through without it, but we couldn't. We finally got Chris out in the tender and five minutes' tow was enough. Whew! How that wind did blow up Rosario Strait. The

"A STRONG WIND AND A SMOOTH SEA."

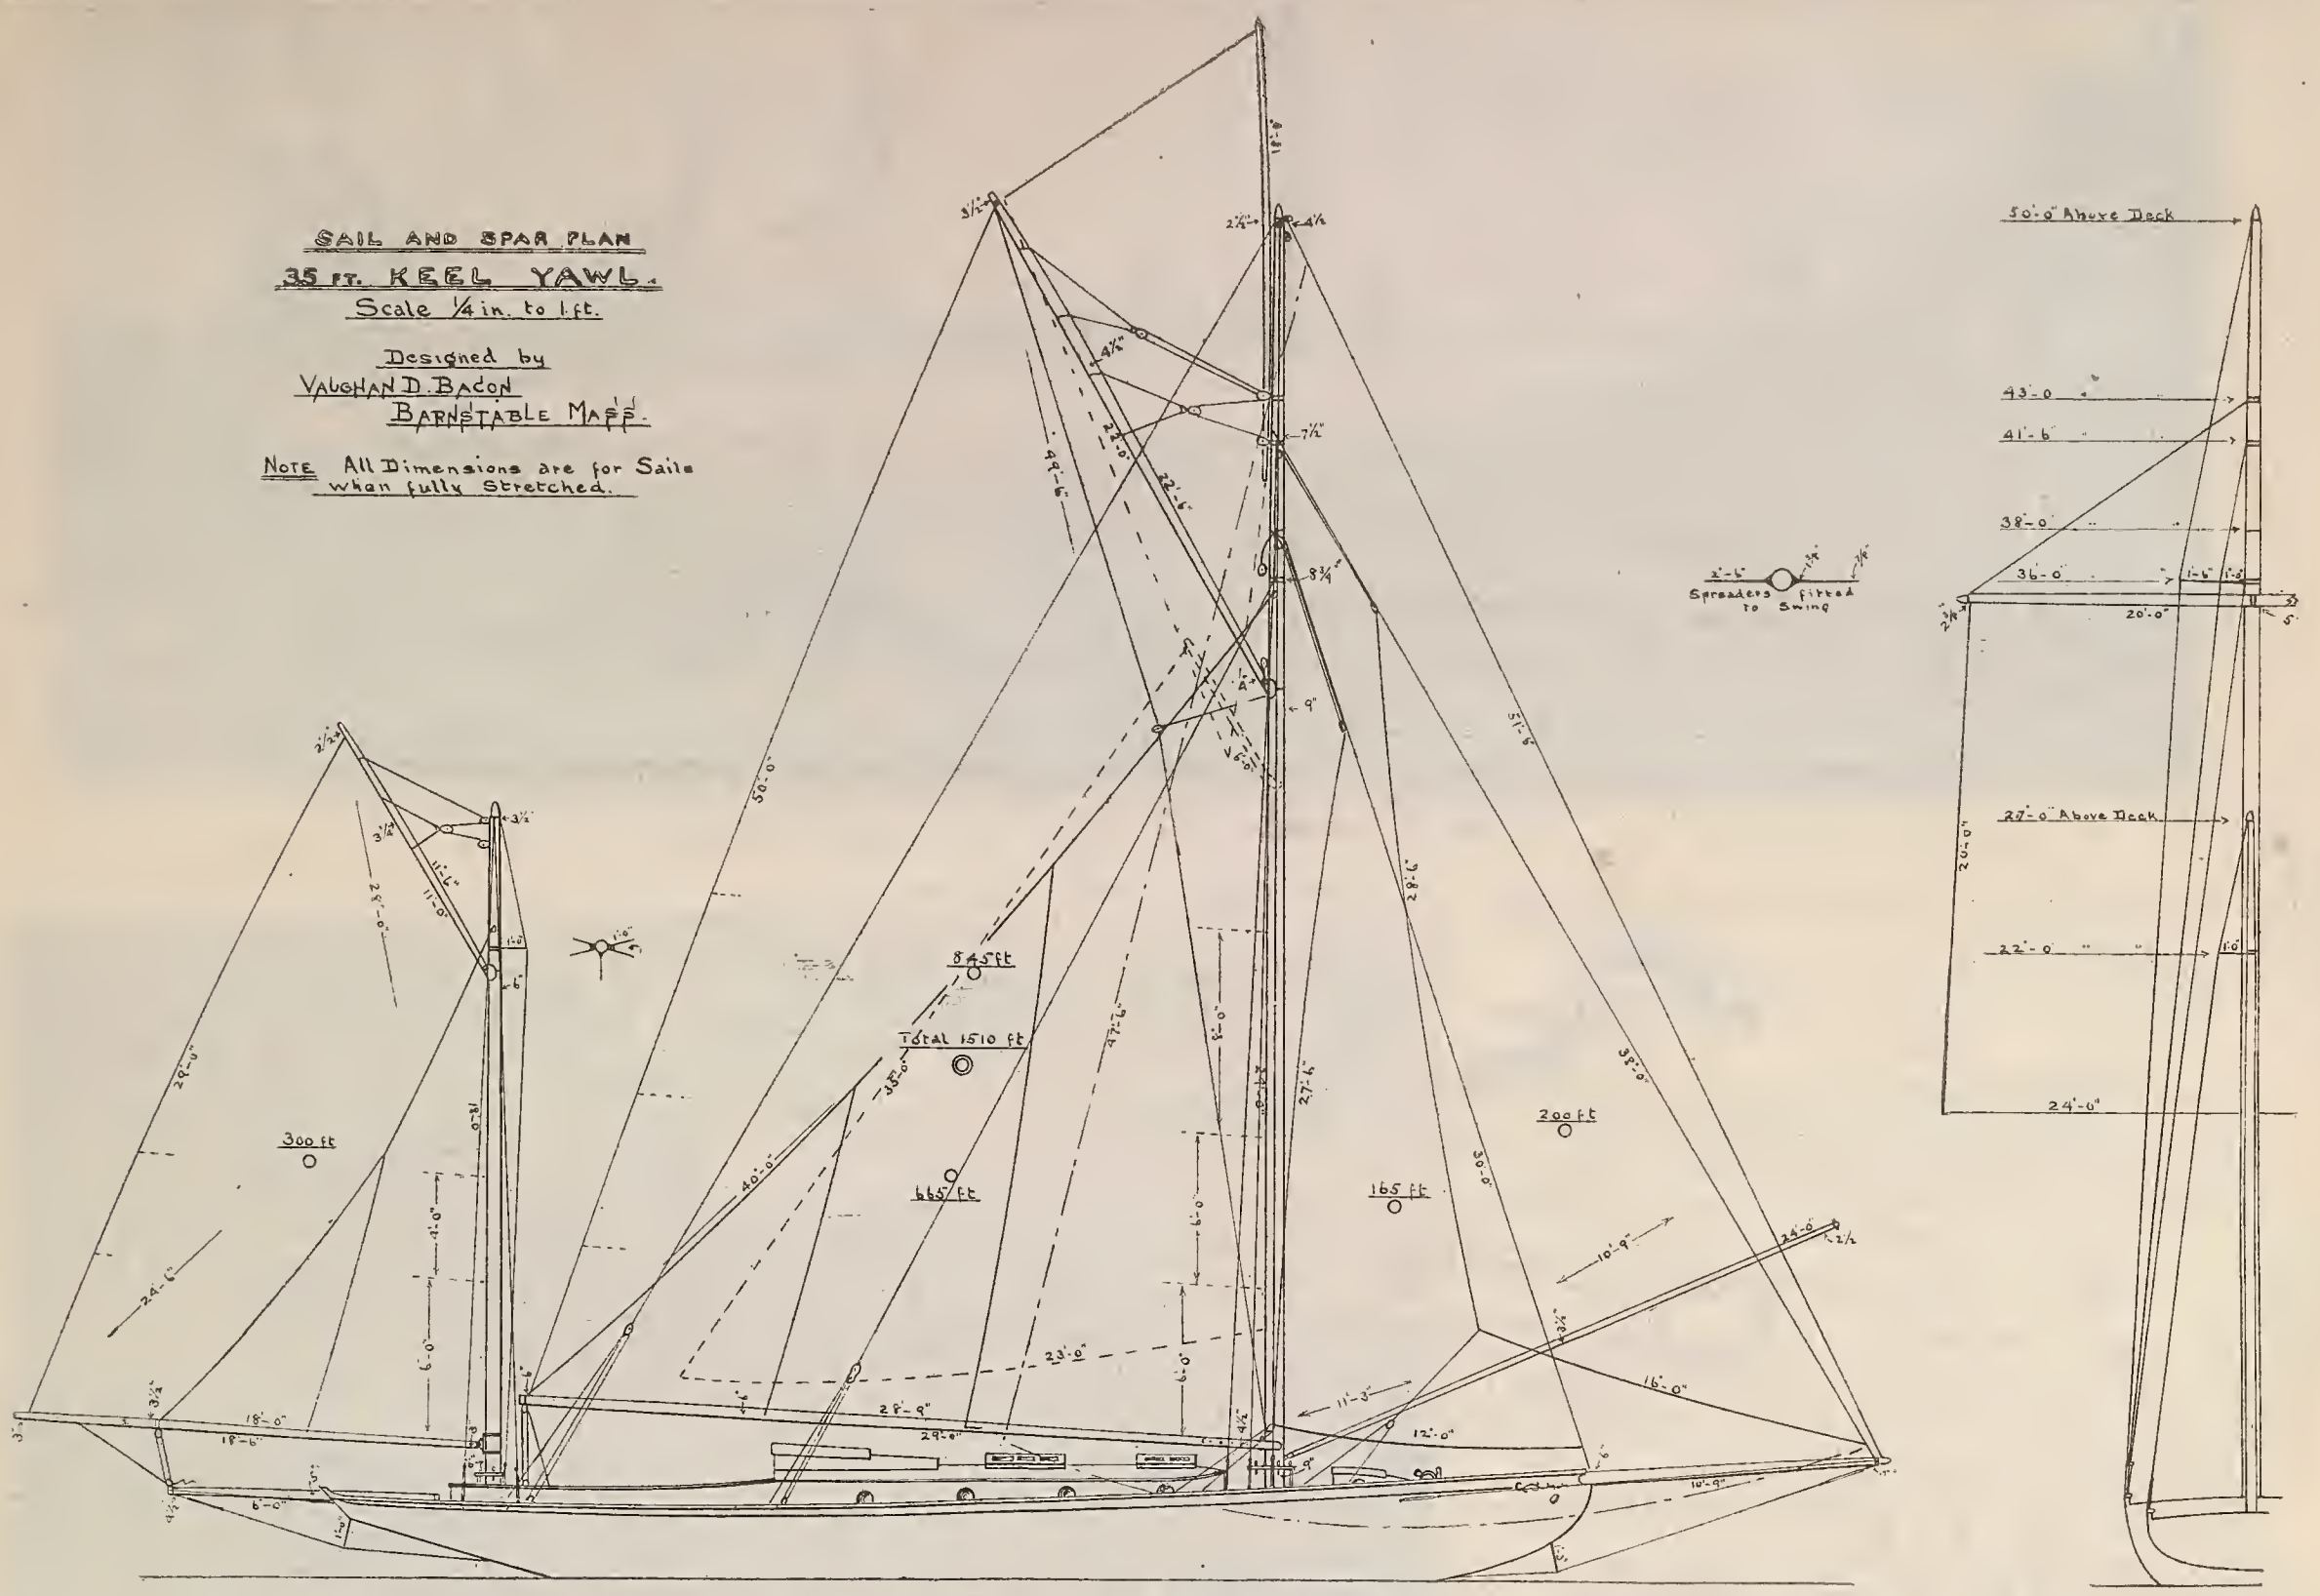
tender dropped the tow line and then tried in vain to catch up. We had to heave to and wait for it. Then easing main and head sheets we jogged along under foresail only until the cover could be made fast on the tender. With a quartering wind we romped across Rosario Strait, rounded the southern point of Lummi Island and opened up the city of Whatcom, off which we dropped anchor about 6 P. M.

We spent two days in Whatcom and said good-bye to the Lawyer and the Artist, who left by train for Vancouver, B. C. We left Whatcom about noon and anchored that night in Watmouth Bight, a very secure and sheltered harbor in the southeast side of Lopez Island. This is a good port of departure for the run across the straits. A salmon trap is situated here and the trap men kindly presented us with a king salmon that would weigh at least 25 pounds.

For our passage across the straits we had very little



CRUISING YAWL—CABIN PLAN—DESIGNED BY V. D. BACON FOR T. W. HOBRON, COMMODORE HAWAIIAN Y. C., 1903.



CRUISING YAWL—SAIL PLAN—DESIGNED BY V. D. BACON FOR T. W. HOBRON, COMMODORE HAWAIIAN Y. C., 1903.

wind and evening found us becalmed off Smith Island. There is anchorage off the north shore in about four fathoms, protected to some extent from prevailing westerly winds by a bed of kelp nearly a mile in extent. No vessel should lie here, however, with any appearance of bad weather. The next morning we were under way at 4 A. M., but with a very light breeze which failed altogether about 7 o'clock with us not more than three miles on our way. We started towing and kept at it steadily the whole morning, Chris, Jim and the writer each taking one hour shifts and relieving each other. The water was just like oil. Not a single catspaw visible in any direction. The sun was like a ball of copper through the haze, caused by smoke from forest fires. We took the circuitous course shown by the chart in order to avail ourselves of the ebb tide on which we left Smith Island, and later the flood tide, on which we wished to be sure and make Port Townsend, and not be again carried back up Rosario Strait. Everything worked to a charm. We towed through the very spot where the tide rips had been so fierce less than two weeks before, and passed inside of Point Wilson about noon. Inside the bay there was a nice land breeze, so we trimmed the sails which had been flapping idly all the morning and stood in until off the town where anchor was dropped only long enough to get the mail and some fresh provisions. Then anxious to get back to Seattle, we were again on our way with a nice free wind which held until evening, when we anchored about five miles north of Apple Tree Cove.

Nearly another whole day of light airs was necessary to make the last 25 miles, but it was accomplished at last and about 4 P. M. we picked up a mooring at the Seattle Yacht Club anchorage and the cruise of the Rambler was finished.

Design for a Cruising Yawl.

IN 1899 Mr. T. W. Hobron, commodore of the Hawaiian Y. C., had a 25ft. waterline cruising knockabout built in San Francisco from designs made by Mr. Vaughan D. Bacon, of Barnstable, Mass. The boat, which was named Gladys, was shipped out to Honolulu on the deck of a steamer. For the last four years Mr. Hobron has used Gladys constantly for racing and offshore cruising in the Pacific. She proved to be such a very satisfactory craft that when the time came when he wanted a larger boat he commissioned Mr. Bacon to get up the plans.

We publish in this issue the plans of Mr. Hobron's new boat. She is 10ft. longer on the waterline than Gladys, and is to be rigged as a yawl. The new boat will be built in San Francisco and will make the long trip out to Honolulu on her own bottom.

The dimensions of the boat are as follows:

Length—	
Over all	50ft.
L. W. L.	35ft.
Overhang—	
Forward	.6ft.
Aft	9ft.
Freeboard to plankshеer—	
Bow	3ft. 11in.
Least	2ft. 6in.
Stern	3ft. 3in.
Breadth—	
Extreme	12ft. 8in.
L. W. L.	12ft.
Draft—	
Extreme	7ft.
Displacement	19 tons
Ballast	7.5 tons
Sail area—	
Jib	200 sq. ft.
Staysail	165 sq. ft.
Mainsail	845 sq. ft.
Mizzen	300 sq. ft.
Total	1,510 sq. ft.

The displacement is generous, and the construction ample for a boat of 40 to 46ft. waterline, as she is intended for offshore cruising. The deadwood is arranged so that an auxiliary can be installed at any time, the engine being placed under half deck between cabin and cockpit. The companionway is on the starboard side of the center and leads into a steerage containing chart table (which can be used for extra berth, if desired), drawers, chart and book shelves, and locker for oilskins. Opposite, on the port side, is the owner's stateroom, with bureau, clothes locker, set wash bowl, drawers under berth, etc. The main cabin has two regular berths with transoms to extend, making two extra berths, with lockers and drawers under berths, floor space between transoms, 4ft. sideboard and small lockers and extension table. Forward of the main cabin is the toilet room to starboard, with patent closet, set wash bowl and linen and clothes lockers. The headroom, in cabin under carlins, is 6ft. 2in. The galley is large and roomy, with dresser, sink, ice chests, food and dish lockers. Forecastle has patent closet for crew, lockers and two pipe berths. The water tanks, under the cockpit at each side, have a capacity of 200 gallons, and are piped to stateroom, galley and toilet. The sail plan is small and snug, and includes topsail, balloon jib topsail, storm topsail and square sail for running in heavy weather.

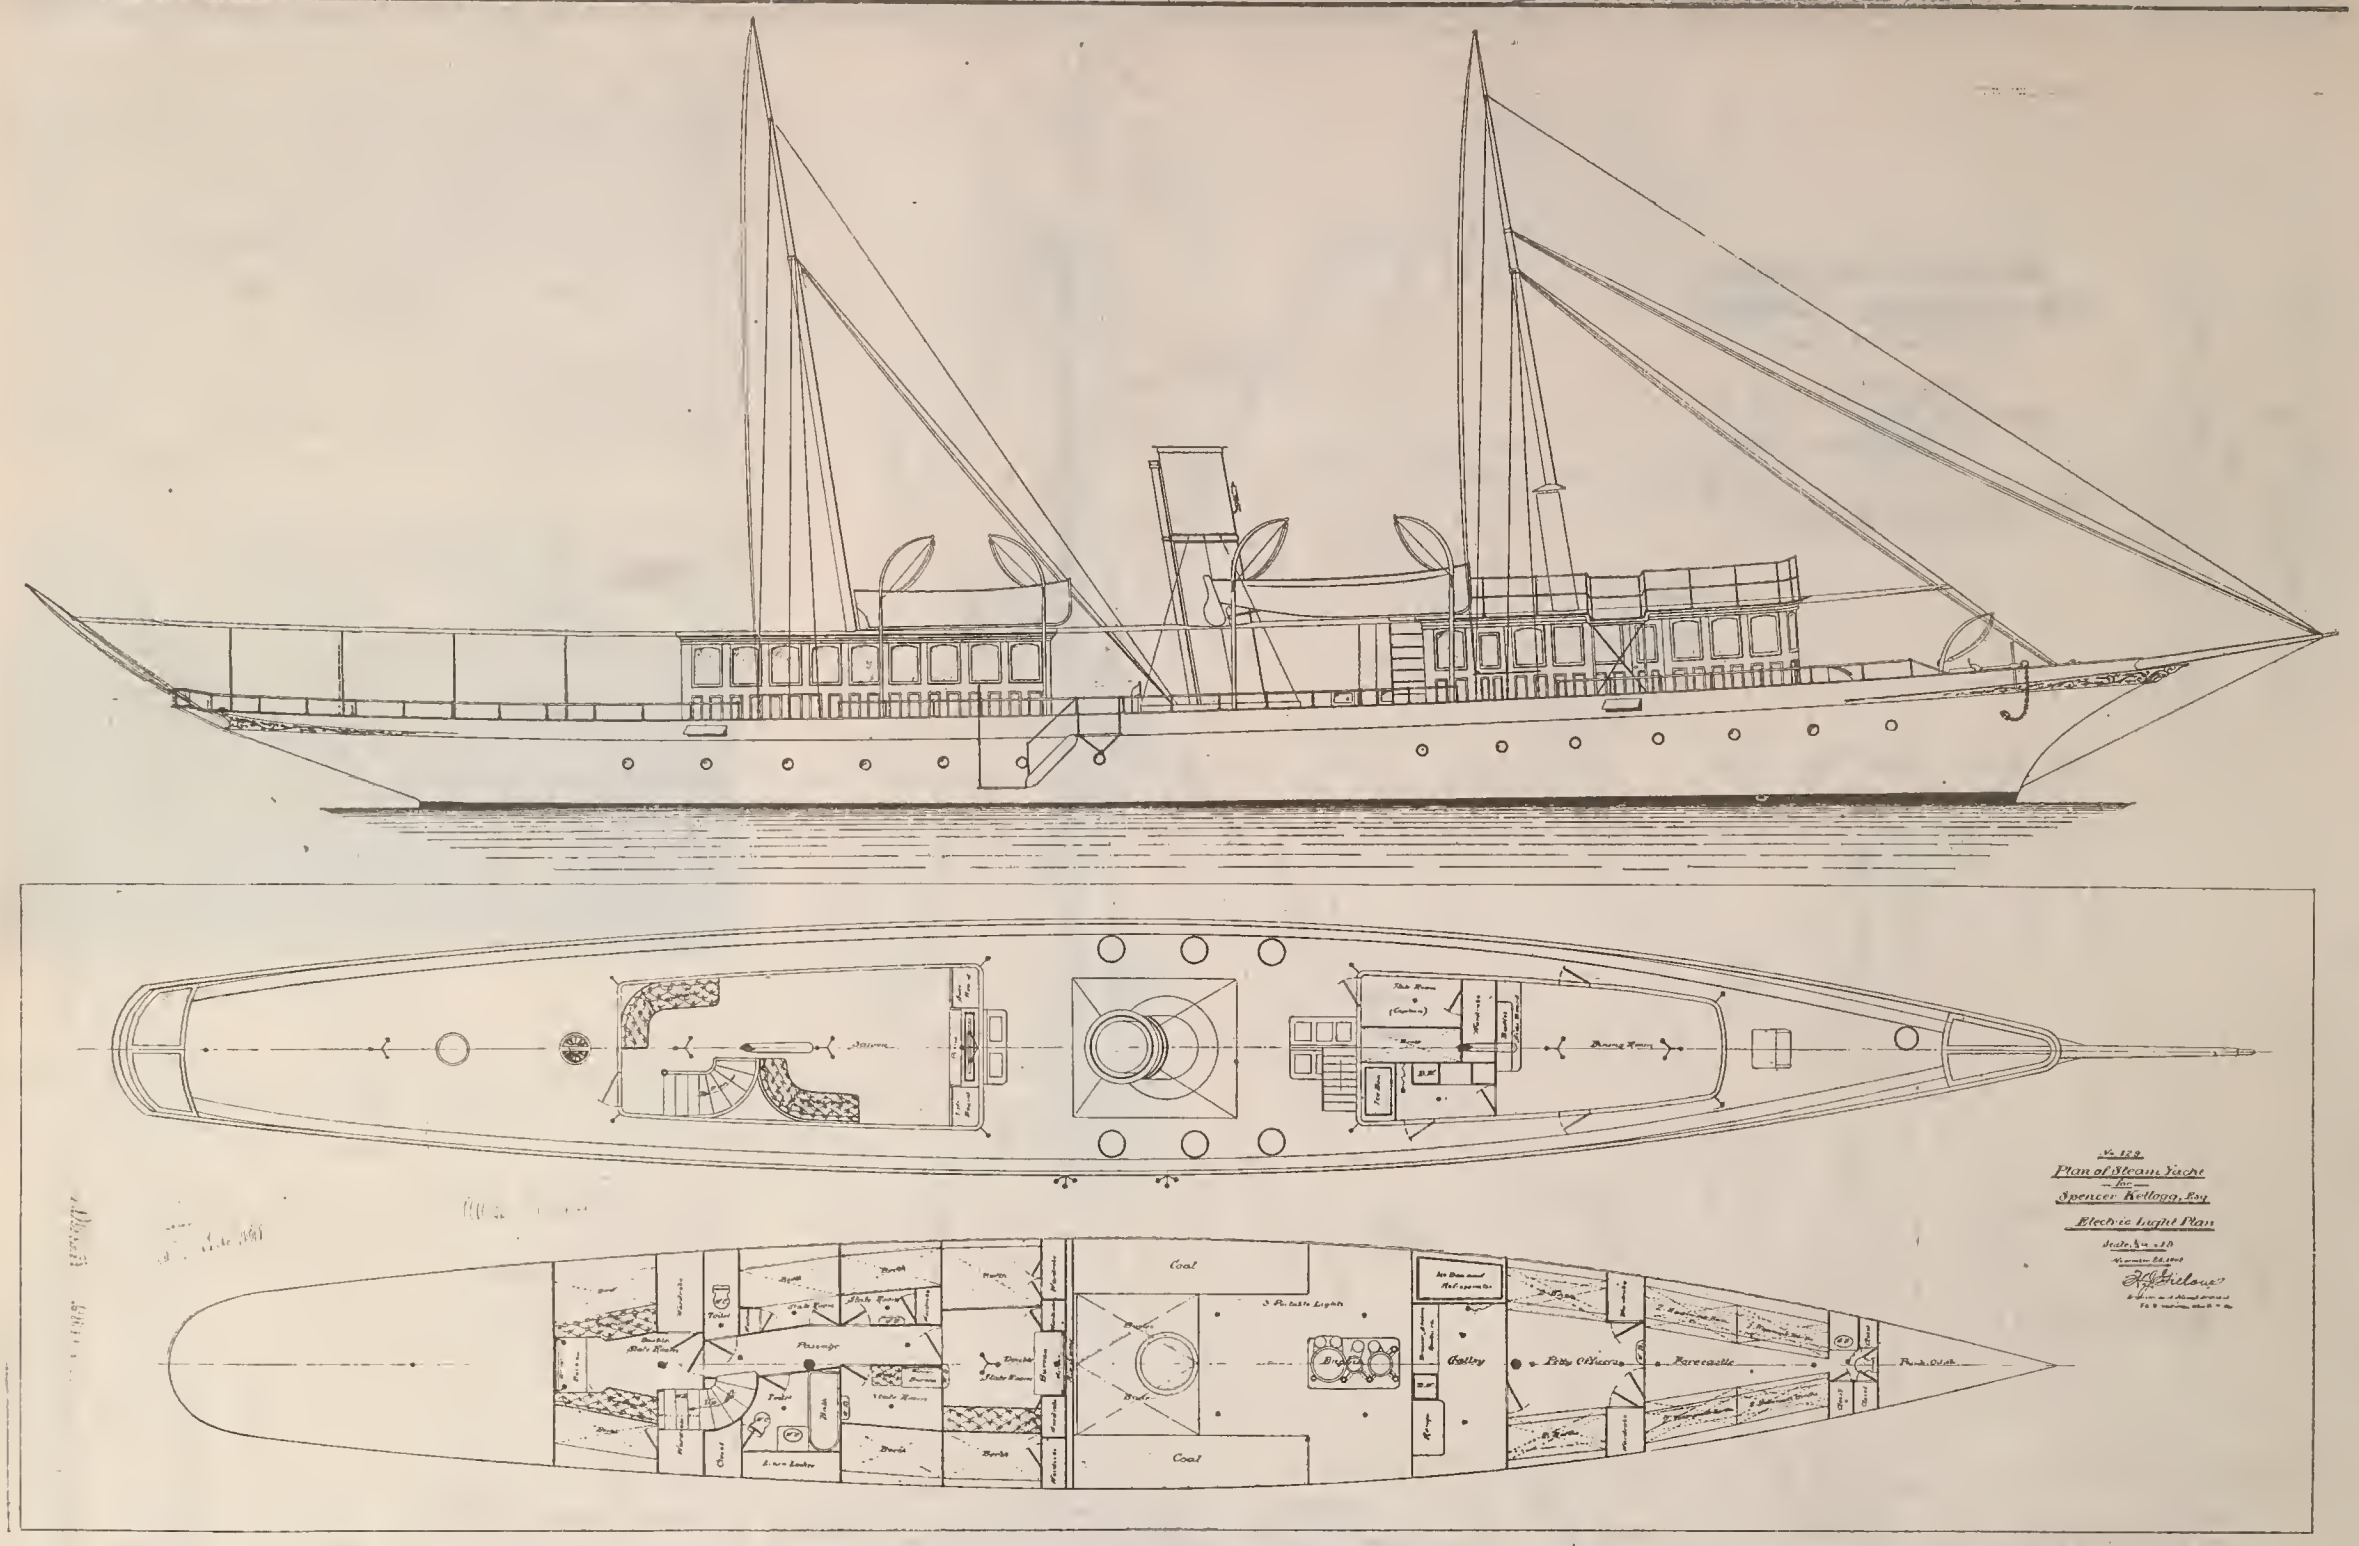
Yale Corinthian Y. C's. New House

IT is hoped that the new Yale Corinthian Y. C. house at Morris Cove, will be ready by the middle of this month. The house is 31ft. wide, 40ft. long, with a piazza 12ft. wide running across the entire front. From this piazza two large double glass doors lead into the main room of the building, which is 30 by 20ft., with a great fireplace at the rear end. The woodwork of this room, when finished, will be stained a dark color and the hangings will be red. To the left and rear of the main room, looking from the front, will be a large kitchen, while to the right and rear will be the locker room, completely fitted up. On the second floor three large rooms are being fitted up for the servants of the club. C. F. Greishaber, of Norcross Brothers, who is superintending the work on the Bicentennial buildings, is the architect of the new house. The officers of the present year are as follows: Com., D. R. McKee, '03; Vice-Com., W. A. Clark, '03S.; Rear Com., David Boies, '04; Treas., R. H. Thomas, '05; Sec., W. L. Mitchell, '04.

The Yale Corinthian Y. C. from a very small beginning in 1881, has grown to a membership of nearly 400, with a large field of boats. In 1881 the club was known as "The Yale Y. C.," and its membership was about thirty. The officers were: Com., John J. Phelps, '83; Vice-Com., William H. Parsons, Jr., '82; Sec. and Treasurer, John B. Woodward, '83. The fleet consisted of nine yachts, varying from a 21ft. catboat, La Cigale, owned by J. E. Wayland, '83, to a 45ft. schooner Edith, owned by H. L. Whittlesey, '84. This unpretentious fleet had its anchorage at Morris Cove, where the clubhouse was situated. From this humble beginning the club grew very rapidly, tripling its membership the following year, and enlarging its fleet In 1885 the interest in yachting began to decline and shortly after that the club went out of existence. It was not until 1892 that sufficient interest was shown in yachting to warrant reorganizing the club. The following year the yacht club was reorganized under the name of the Yale Corinthian Y. C. The officers at this time were: Com., Guy B. Miller, '94; Vice-Com., Henry B. Harris, '95; Rear Com., William A. Delano, '95; Sec. and Treas., Harold W. Buck, '94S. The members numbered about 200. The fleet also was greatly increased, amounting to about thirty yachts. The clubhouse and anchorage as before were situated at Morris Cove.

From this time on the club advanced rapidly. In the summer of 1894 a regatta was sailed with Harvard, on June 27, the day before the Yale-Harvard boat race at New London. There were five classes entered, ranging from sloops and cutters of 30 to 40ft. waterline, to catboats of below 20ft. waterline. Schooners were entered in the race, rating 84 per cent. of their waterline. The challenge cup offered for this regatta was won by Yale with a total of 21 points to Harvard's 16. In 1895 the club had a regatta open to all yacht clubs having stations on Long Island Sound. The yachts entered in this regatta were restricted to a racing length of 60ft. In the spring of 1897 the club decided to build a new 15ft. racing class of half-raters. These boats were designed and built by W. H. Hand, of New Bedford. Their dimensions were 15ft. on the waterline, 21ft. 9in. over all, 6ft. 3in. beam and 3ft. 6in. draft, with the centerboard down. There was a sail area of 350 sq. ft. in their jib and mainsail rig.

Although the one-design class of 1897 proved a failure in point of design, the idea of a one-design class was followed out in 1901 in the Swampscott dories. These boats were built by Gerry E. Emmons, of Swampscott, Mass. Their dimensions are: Length of the waterline, 17ft.; over all, 21ft.; beam, 5ft.; draft, 6in., with centerboard down 3ft. The rig is a leg of mutton mainsail and a small jib, with a total sail area of 190 sq. ft. The fleet of dories now numbers 28, and for this class two races are given every week for cups offered by the club and by graduates. The scoring for a series is one point for finishing and one point for every boat astern. Besides the one-design class now in the Yale Corin-



STEAM YACHT ELGRUDOR—OUTBOARD PROFILE, CABIN AND DECK PLANS—DESIGNED BY HENRY J. GIELOW FOR SPENCER KELLOGG, 1902.

than N. C., there are 22 other yachts in the fleet, ranging from a 85ft. yawl to a 20ft. catboat.—Yale Alumni Weekly.

The Steam Yacht Elgrudor.

WE publish herewith the outboard profile, cabin and deck plans of the steam yacht Elgrudor, that is now under construction at Mr. Robert Jacob's yard at City Island. She was designed by Mr. Henry J. Gielow, and is being built under his supervision for Mr. Spencer Kellogg, of Buffalo.

Her dimensions follow:

Length—		
Over all	127ft.	6in.
L. W. L.	101ft.	
Overhang—		
Forward	11ft.	
Aft	15ft.	6in.
Breadth—		
Extreme	16ft.	4in.
Freeboard—		
Forward	9ft.	
Least	5ft	6in.
Aft	6ft.	6in.

Elgrudor is a handsome vessel of steel construction, and will undoubtedly prove fast. She is schooner rigged, and has one funnel. Four boats will be carried on the davits.

There are two deck houses each 23ft. in length. In the forward house is the dining saloon 14ft. 6in. long. In the after end of the deck house, on the port side, is the captain's stateroom, and opposite, on the starboard side, is the pantry, which is connected with the galley on the deck below by a dumbwaiter. The deck house aft will be used as a general lounging room.

The forecastle is 12ft. long, and has accommodation for eight men. In the forward end is a wash basin and patent closet for the men, as well as ample locker room for their clothes. Aft of the forecastle is a room for the petty officers, which is 9ft. long, and has berths for four men. On either side is a large wardrobe for their belongings. Next aft comes the galley, which is 6ft. long and runs the full width of the boat. This room is equipped with all modern fittings that will aid the cook in his work. Aft of the galley is the engine and boiler space, 22ft. long.

The owner's quarters are aft of the engine space, and are reached by a staircase from the after deck house. The owner's stateroom is 8ft. long and extends the full width of the vessel. This room is separated from the engine room by two steel bulkheads with an air space between. Along the forward end of the stateroom are hanging lockers, drawers and the bureau. On either side of the room there is a berth. A passageway runs aft from the owner's room that gives access to the other staterooms. On the port side of the passage are two staterooms, each 6ft. 6in. long and a toilet room 2ft. 6in. long. On the starboard side of the passageway is a stateroom 6ft. 6in. long, and a bath room 6ft. 6in. long. A door at the after end of the passage opens into the after stateroom or ladies' cabin, which is 8ft. 6in. long. All the staterooms are roomy and will be very attractively fitted up. The rooms below are well ventilated by either port holes or skylights. The yacht is lighted throughout by electricity. Elgrudor is fast nearing completion, and will be launched early in the season.

Conditions Governing Match for Manhasset Bay Challenge Cup.

Conditions agreed upon between the Manhasset Bay Y. C. and the Indian Harbor Y. C., to govern a match to be sailed for the Manhasset Bay Challenge Cup under the auspices of the Manhasset Bay Y. C., during season of 1903:

Management of Match.—The match shall be managed by a committee of three judges; one to be selected by the Manhasset Bay Y. C., one by the Indian Harbor Y. C. (neither of whom shall be a member of the respective clubs), and the third to be chosen by the two thus selected. Each club shall nominate its representative and notify the other club of his acceptance of the nomination, not later than May 1, 1903.

This committee shall have all the powers of a race committee, and shall elect its chairman from their own number.

Subject to the Declaration of Trust governing the cup and these conditions, the committee shall have the entire direction of the match.

Date of Races.—The races of the match shall be sailed on Monday, June 29; Tuesday, June 30, and Wednesday, July 1.

In the event of failure to race on any of the dates scheduled, for any reason deemed sufficient by the committee, or in the event of a tie, as a result of the first three races, the series shall be continued daily thereafter, Sunday excepted, until the match is won.

Crews.—Each club competing shall file with the committee on the completion of each day's race a crew certificate on the standard form of the Yacht Racing Association of Long Island Sound, which, in addition to the details called for, must state the club to which each amateur member of the crew of its representative yacht belongs.

Time Limit.—For a race of the match to count as such one of the yachts competing must cross the finish line within five hours after the starting signal is given for such race.

Courses.—It is hereby agreed and understood that the distance to be sailed over windward and leeward courses shall approximate 16 nautical miles, and over triangular courses, 18 nautical miles.

The races of the match shall be sailed in the following order: Monday, June 29, to windward and leeward; Tuesday, June 30, over triangular course; Wednesday, July 1, to windward and leeward.

Should any additional races be necessary to decide the winner of the match they shall be sailed alternately over the above courses.

Starts and Signals.—The starts shall be made from the black and red buoy to the northward and eastward of Execution Light, except where a windward and leeward course cannot be laid from this point, in which event the committee shall establish a starting point as near as possible to said buoy.

The windward and leeward course shall be laid to a mark down the Sound, four nautical miles to windward or leeward of the starting point, and shall be sailed twice over, the marks to be rounded on the starboard hand. The compass bearings shall be announced before the hoisting of the preparatory signal.

The triangular course shall be from the same starting point to the red spar buoy off Scotch Caps, thence to a mark off Red Springs point in Hempstead Bay, thence to the starting point, the course to be sailed over twice. All marks to be rounded on the starboard hand, unless it be deemed desirable by the committee that the course be sailed in the reverse direction, when they shall be left on the port hand.

The starting signals shall be as follows:

Preparatory—Hoisting of the blue peter on the committee boat.
Warning—Five minutes later, hoisting of a red ball.
Start—Five minutes later, dropping of the red ball.

Attention shall be called to each signal by the firing of a gun or blowing of a whistle aboard the committee boat.

Signed, sealed and delivered on the 3d day of April, 1903.

MAMHASSET BAY Y. C.,
Per Secretary.
INDIAN HARBOR Y. C.,

YACHT CLUB NOTES.

At a recent meeting of the Ocean Y. C., Stapleton, Staten Island, the following officers were elected: Com., Otto E. Schroeder; Vice-Com., William Olsen; Rear Com., William Anderson; Fleet Captain, William Lindsay; Fleet Surgeon, Arthur T. Welch; Sec., Henry Harder; Treas., Frank Rieff.

The Yacht Masters' and Engineers' Association have elected the following officers: Pres., George E. Nutter; Vice-Pres., Jefferson S. Briggs; Treas., Elbert F. Bishop; Sec., Henry T. Smith; Trustees, T. I. Miller, Henry Lang, Harry Betts, D. W. Pratt and D. C. Packard; Quartermaster, C. W. Wood and C. J. Peterson. The association's headquarters are at the foot of Twenty-third Street, South Brooklyn.

* * *

The Regatta Committee of the New York Y. C. has given out the racing schedule for the coming season, which is as follows:

May 21, Thursday, Glen Cove course, 90-footers; 23, Saturday, Glen Cove course, 90-footers; 26, Tuesday, Glen Cove course, 90-footers; 28, Thursday, Glen Cove course, 90-footers; 30, Saturday, Glen Cove course, 90-footers; June 8, Monday, off Sandy Hook, 90-footers; 11, Thursday, Annual Regatta, New York Bay; 12, Friday, off Sandy Hook, 90-footers; 15, Monday, Glen Cove cups; 27, Saturday, Newport, R. I., 90-footers; 30, Tuesday, Newport, R. I., 90-footers; July 2, Thursday, Newport, R. I., 90-footers; 4, Saturday, Newport, R. I., 90-footers; 6, Monday, Newport, R. I., 90-footers; 8, Wednesday, Newport, R. I., 90-footers.

Annual Cruise.—July 16, Thursday, Glen Cove; 17, Friday, Morris Cove; 18, Saturday, New London; 19, Sunday, New London; 20, Monday, Newport, R. I.; 21, Tuesday, Vineyard Haven; 22, Wednesday, Newport, R. I.; 23, Thursday, Astor Cups, Newport, R. I.; 24, Friday, disband, Newport, R. I.

Newport Series.—July 27, Monday, Newport, R. I.; 28, Tuesday, Newport, R. I.; 29, Wednesday, Newport, R. I.

Trial Races.—July 30, Thursday, Newport, R. I.; Aug. 1, Saturday, Newport, R. I.; 4, Tuesday, Newport, R. I.; 6, Thursday, Newport, R. I.; 8, Saturday, Newport, R. I.

America's Cup Races.—Aug. 20, Thursday, Sandy Hook lightship; 22, Saturday, Sandy Hook lightship; 25, Tuesday, Sandy Hook lightship; 27, Thursday, Sandy Hook lightship; 29, Saturday, Sandy Hook lightship.

Autumn Race.—Sept. 17, Thursday, Glen Cove course.

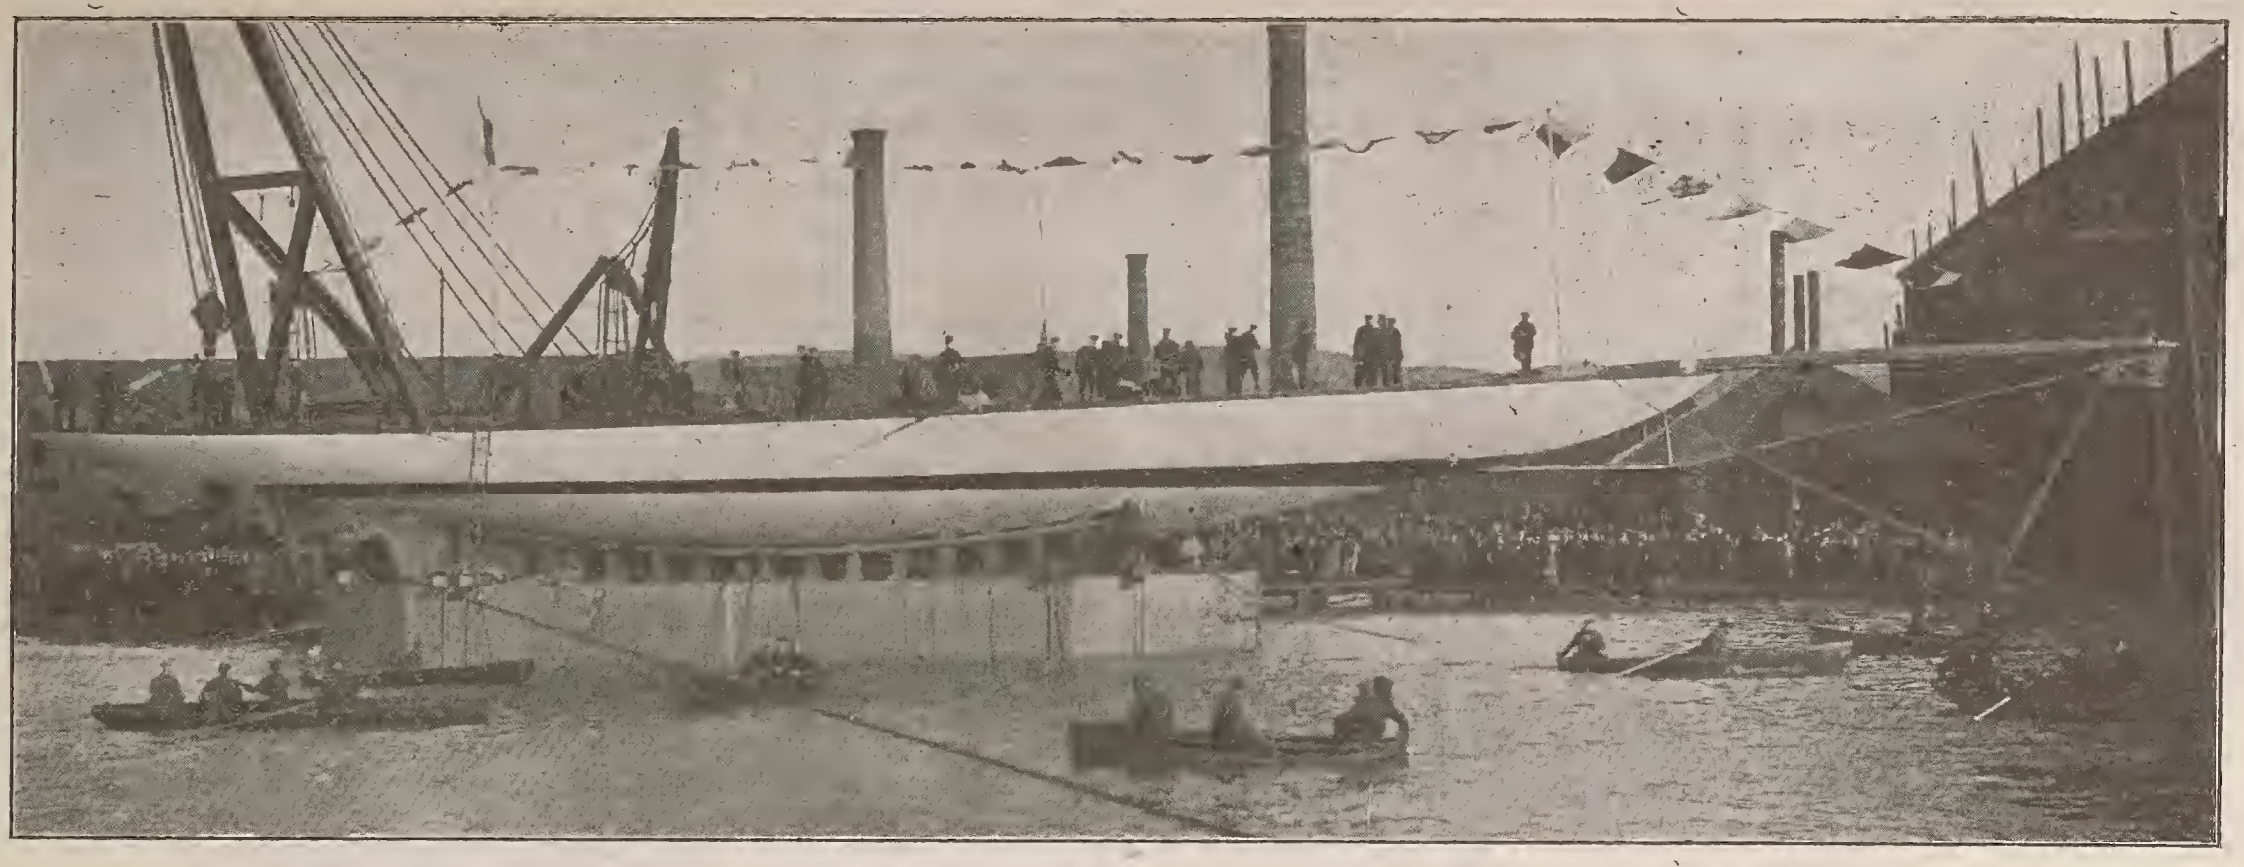
* * *

The complete racing schedule of the New York C. C. for this season is as follows:

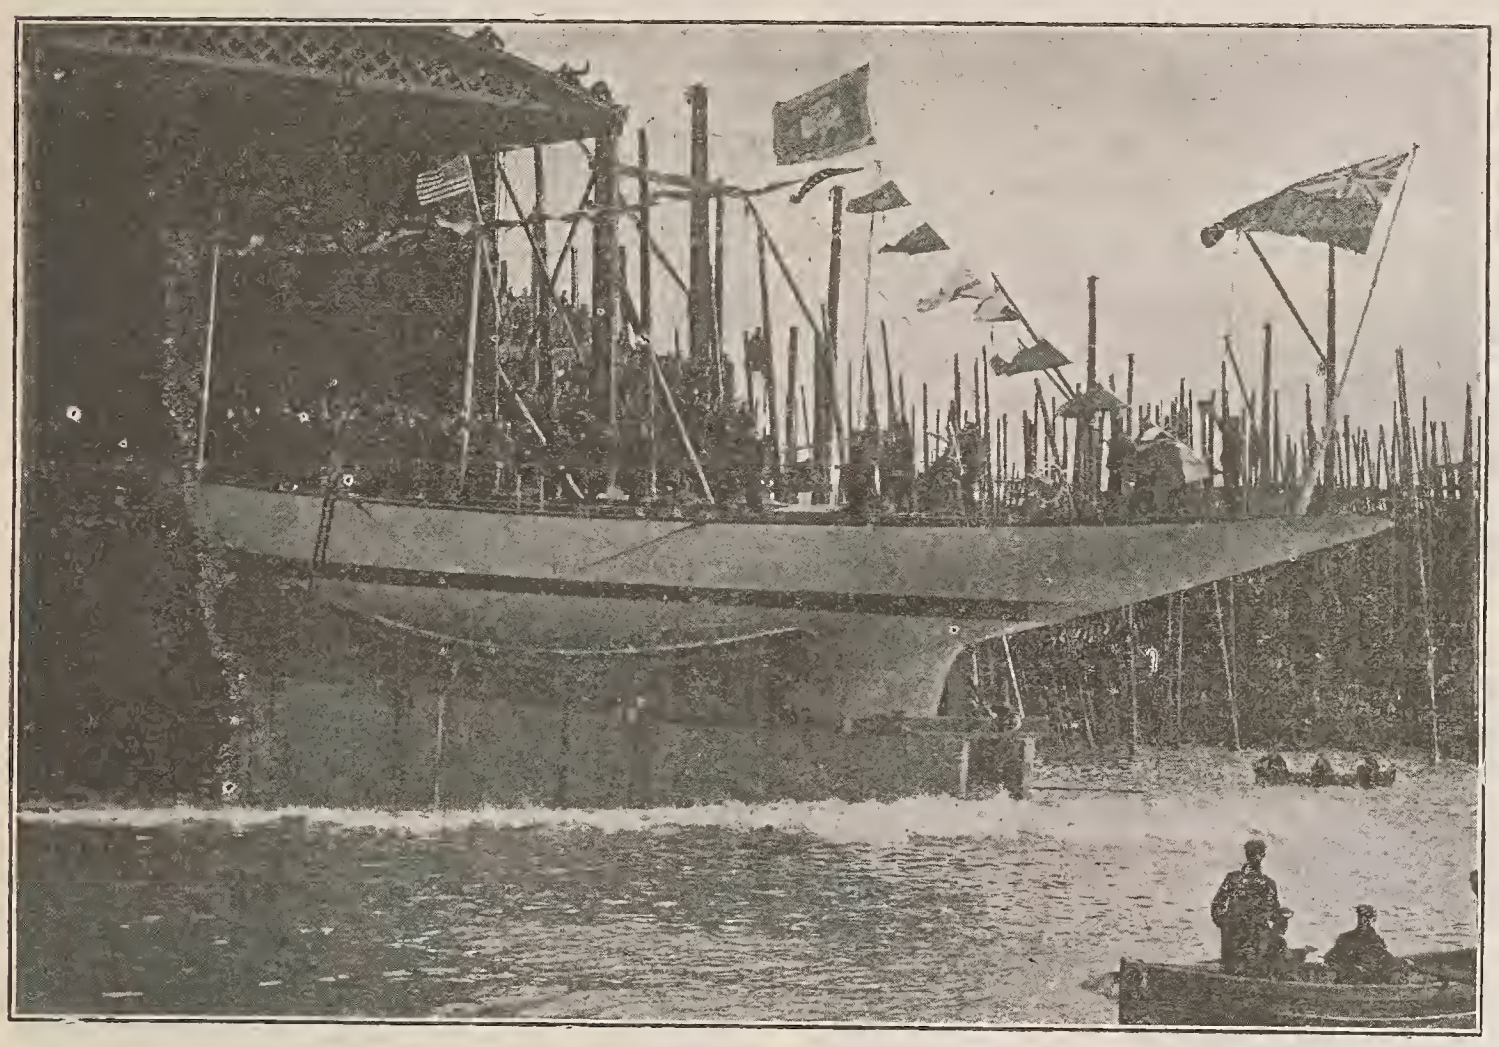
June 13—Spring regatta.
June 20—Yacht Racing Association of Gravesend Bay, Brooklyn Y. C.
June 27—Yacht Racing Association of Gravesend Bay.
July 11—Record sailing for open and decked canoes. Yacht Racing Association of Gravesend Bay, Bensonhurst Y. C.
July 18—Record sailing.
July 25—Yacht Racing Association of Gravesend Bay, Marine and Field Club.
Aug. 1—Record sailing. Yacht Racing Association of Gravesend Bay, Brooklyn Y. C.
Sept. 5—Yacht Racing Association of Gravesend Bay.
Sept. 12—Fall regatta.
Sept. 19—Yacht Racing Association of Gravesend Bay, Bensonhurst Y. C.

* * *

At the annual meeting of the Portland Y. C., held in March, the following were elected officers for the coming year: Com., Dr. Charles W. Bray; Vice-Com.,



THE LAUNCHING OF SHAMROCK III.—BROADSIDE VIEW.



THE LAUNCHING OF SHAMROCK III.—STERN VIEWS.

Fritz H. Jordan; Sec., Charles W. Small; Treas., Carl F. A. Weber.

The following were appointed by the Commodore: Fleet Captain, Philip I. Jones; Fleet Surgeon, Dr. William H. Bradford.

* * *

The annual meeting and election of officers of the Southern Y. C. took place at New Orleans, La., April 2, the following officers being elected: Com., Albert Baldwin; ViceCom., A. M. Cooke; Rear Com., J. A. Rawlins; Treas., J. J. Hooper; Sec., L. D. Sampsell.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Czarina, the steam yacht built at the Crescent Shipyard, Elizabethport, N. J., for Mr. Charles S. Bryan, was successfully launched on Saturday afternoon, April 4. She is built throughout of steel and the hull is sub-divided into six watertight compartments. There is a double bottom which runs the entire length of the vessel. She is 166ft. 3in. over all, 140ft. waterline, 22ft. breadth and 8ft. 6in. draft. Her engines are of 1,800 indicated horse-power, and her builders guarantee a speed of 15 knots. Her coal bunkers have a large capacity, and she will have a steaming radius of 3,000 miles at a 9-knot speed.

In the forward deck house are the music room, owner's room and bath, dining room and pantry. Below deck the owner's quarters are forward of the engine space, while the officers' and crew's quarters are aft.

Four boats are carried on the davits, a launch, a gig, a cutter and a dinghy. The yacht is lighted throughout by electricity.

Canoeing.

Prizes for Canoeists.

IN order to encourage canoeists and small boat sailors, who do their knocking about on inland waters, to keep a record of their trips and experiences, the publishers of FOREST AND STREAM offer cash prizes for the best accounts of cruises taken during the season of 1903. As few restrictions as possible will be imposed, and those given are made only with the view of securing some uniformity among the competitors' stories, so that the judges will be able to make a fair award.

The prizes will be as follows:

First, $50.00.

Second, $25.00.

Third, $15.00.

Fourth and Fifth, $10.00 each.

Sixth to Eighth, $5.00 each.

I. The cruise must be actually taken between May 1 and November 1, 1903.

II. The cruise must be made on the (fresh water) inland streams and lakes of the United States or Canada.

III. The canoe or boat in which the cruise is made must not be more than 18ft. long over all.

IV. An accurate log of the trip must be kept, and all incidents and information that would be of value to other canoeists covering the same route should be carefully recorded.

V. A description of the boat in which the cruise is made should preface the story, and a list of outfit and supplies.

VI. Photographs of the boat and of the country passed through, not smaller than 4x5, should, if possible, accompany each story, and they will be considered in making the awards.

VII. Stories should contain not less than five thousand words, written on one side of the paper only.

VIII. An outline chart of the trip drawn on white paper in black ink (no coloring pigment to be used) should also be sent in.

IX. Competitors should avoid the use of slang or incorrect nautical expressions in their stories, as it will count against them in awarding the prizes.

Each manuscript to which a prize is awarded shall become the property of the Forest and Stream Publishing Company. All manuscript should reach the office of the Forest and Stream Publishing Company, 346 Broadway, New York, N. Y., on or before December 1, 1903.

A. C. A. Life Members.

Editor Forest and Stream:

I beg to inform you that in accordance with the amendments to the constitution and by-laws of the American

Canoe Association, the following have been constituted life members. The names are entered in the order of their receipt by the Board of Governors from Edward Muller, purser, Atlantic Division A. C. A.:

Robert J. Wilkin, Brooklyn, N. Y.; H. Lansing Quick, Yonkers, N. Y.; Frank C. Moore, Bensonhurst, N. Y.

ROBERT J. WILKIN,
President Bd. of Gov. A. C. A.

APRIL 4.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O.—At the regular meeting of this Association on March 29 the following scores were shot. A strong, changeable wind prevailed all day, which made high scores scarce.

Our semi-annual 100-shot match took place at this shoot.

Gindele and Nestler shot well, considering the weather. Conditions, 200yds., offhand, Standard target:

Nestler	90	88	83	82	82	81	80	80	79	77—822

Saturdays.—Chicago.—Garfield Gun Club; grounds W Fifty-second avenue and Monroe street. Dr. J. W. Meek, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.

**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J0 Bradfield, Sec'y, Vicksburg, Miss.

Limited Gun Club.

INDIANAPOLIS, Ind.—The tournament of the Limited Gun Club was held on April 2 and 3.

There were thirty-six shooters on the first day. Kit Shephardson was high gun with 188 out of 200. The scores:

DRIVERS AND TWISTERS.

The tournament of the Pennsylvania State Sportsmen's Association, to be held at Wissinoming, Pa., May 18-21, under the auspices of the Florists' Gun Club, has an attractive and elaborate programme. There will be $1,000 in prizes. The special events are as follows: First day, Tuesday, May 19.—State event No. 1, sweepstake, 20 targets, $2.50 entrance, $100 guaranteed, surplus added, divided 25, 20, 18, 15, 12 and 10 per cent.; State event No. 2, Milt Lindsley trophy, two-man teams. 25 singles and 5 pairs, $4 entrance, $10 added, divided 50, 30, and 20 per cent.; State event No. 3, Florists' handicap, 25 targets, $1 entrance, optional sweep, $1.50, Rose system, 8, 5, 3, 2, 1 points, Speed handicap. Second day, Wednesday, May 20.—State event No. 4, Wolstencroft trophy, 50 targets, $1 entrance, optional sweep $2, $10 added, divided 30, 25, 20, 15 and 10 per cent.; State event No. 5, Sportsmen's merchandise handicap, 25 targets, $2.50 entrance, speed handicap; State event No. 6, Harrisburg trophy, three-man teams, 25 targets, $6 entrance, $10 added, divided 50, 30 and 20 per cent. Third day, Thursday, May 21.—State event No. 7, Sweepstake, 20 targets, $2.50 entrance, $100 guaranteed, surplus added, divided 25, 20, 18, 15, 12 and 10 per cent.; State event No. 8, Reading trophy, four-man teams, 25 targets, $8 entrance, $10 added, divided 50, 30 and 20 per cent.; State event No. 9, consolation handicap, 25 targets, $1.50 entrance, optional sweep $1, Rose system, 8, 5, 3, 2, 1 points, speed handicap. On May 19, 20 and 21 respectively there are six amateur events, four at 15 and two at 20 targets, entrance $1.50 and $2; $8 added to each event. Fourth day, Friday, May 22.—On Keystone Shooting League grounds, at Holmesburg Junction, under the auspices of the Keystone Shooting League.—Event No. 1, open to all, 12 live birds, $10 entrance, birds included, handicap rise 26 to 33yds., divided, class shooting, 50, 30 and 20 per cent.; event No. 2, State event, L. C. Smith trophy, three-man teams, 15 live birds per man, entrance per team $25, divided 40, 35, and 25 per cent.; event No. 3, State event, Denny-Wilson trophy, 15 live birds, $10 entrance, birds extra, cup and 40 per cent. to winner, the next three highest scores to receive 50, 30 and 20 per cent. respectively. Event No. 4, open to all, 10 live birds, $7.50 entrance, birds included, handicap rise 26 to 33yds., divided three high guns, for every five entries over twenty an extra money will be made. Fifth day, Saturday, May 23.—Event No. 5, open to all, 10 live birds, $7.50 entrance, birds included, handicap rise 26 to 33yds., divided three high guns; for every five entries over twenty an extra money will be made; event No. 6, State event, Williamsport trophy, 15 live birds, $10 entrance, birds extra, divided 40, 30, 20 and 10 per cent., class shooting; event No. 7, open to all, 15 live birds, $10 entrance, birds included, handicap rise 26 to 33yds., divided, three moneys, Rose system, 8, 5, 3 points.

In open amateur sweeps daily average will be given Pennsylvania State Association members only, as follows: Ten dollars to the four high guns and $5 to the two low guns, $2.50 each. In open amateur sweeps general average will be given State Association members only, as follows: Ten dollars to first; $7 to second, $5 to third, $3 to fourth; class shooting. In open amateur sweeps lowest general average will be given State Association members only, as follows: Five dollars to lowest, $3 to the second lowest, $2 to the third lowest; class shooting; general average means total for three days, or 300 shots. A trophy will be given State Association member making highest average in State events Nos. 1, 3, 4, 5, 7 and 9, a total of 165 shots; also a trophy to lowest average. A tax of 50 cents a day will be required of all shooters in open amateur sweeps. This purse will be divided among all amateurs, State or outside, who shoot through the three days' events and fail to win back their entrance. Divided on percentage of loss, the greatest losers will receive the largest amount. The events at flying targets on May 19, 20 and 21 have been arranged and are under the auspices of the Florists' Gun Club. The events at live birds on May 22 and 23 have been arranged and are under the auspices of the Keystone Shooting League. Annual meeting will be held at Florists' club rooms, Horticultural Hall, Broad street, below Locust, Philadelphia, Wednesday evening, May 20, at 8 P. M. Shooting will commence each day on arrival of 8:25 A. M. train from Broad street, Philadelphia, Pennsylvania Railroad. Interstate Association rules will govern. Four magautraps with electric motor will throw bluerock targets. All ties in sweeps to be divided. Ties in merchandise handicaps will be shot off unless otherwise agreed upon. Traps ready for practice and open sweeps on Monday, May 18. No practice shooting will be allowed before events on May 19, 20 and 21. To reach grounds, take Pennsylvania Railroad from Broad street to Wissinoming, Pa. Trains leave 8:25, 9:58, 12:02, 1:10, 1:50, 2:33. Leave Wissinoming 3:20, 4:35, 5:04, 6, 6:51. Trolleys on Third or Fifth street marked "Frankford," or on Third street marked "Bridesburg," change at Bridge street for Wissinoming.

The programme of the Mississippi Trapshooters' tenth amateur target tournament, May 4 to 6, under the auspices of the Vicksburg, Miss., Gun Club, can be obtained of the secretary, J. J. Bradfield, Vicksburg. Valuable prizes and $300 in cash are added. Targets, 2 cents. No handicaps. Moneys divided Rose system. Sweepstakes open to all amateurs. One and one-third fare on all railroads for the round trip, certificate plan, has been secured. On the first day, there are seven programme events, at 15, 20 and 25 targets. On the second day there are ten events at 15, 20 and 25 targets, $15 added to each event. Events 9 and 10 are for the Febacher individual championship trophy, to which only League members are eligible. On the third day there are ten events, 15, 20 and 25 targets, of which event 7, at 25 bluerocks, is for the Peters Cartridge Company team championship trophy, and event 9, 25 bluerocks, is for the Schneider trophy, open to all amateurs. In event 1, the Peters Cartridge Company offer an $80 gun as a prize. In each event $15 is added. Entrance based on 10 cents per target.

The prospectus of the seventeenth annual tournament of the Ohio Trapshooters' League, at targets, under the auspices of the Cincinnati Gun Club, June 9-11, is now ready for distribution. On the first day there are seven events at 15, one at 25 and one at 30 targets; the Press-Post trophy, and State Journal cup is shot for on this day. On the second day there are seven events at 15, one at 50 and one at 25 targets; the Smith trophy and Sportsman Review trophy are shot for on this day. Third day, five events at 15, one at 100, and one special event at 25 targtes, and the five-man team race for Shooting and Fishing cup on this day. To the five high guns, $50; to the ten low guns, $50. To the gun making the longest run, $25. To the gun making the greatest number of straight scores, $20. Manufacturers' agents barred. Every one can shoot for moneys, but only members of the League can win the trophies. The official programme will be issued May 1.

The programme of the Western Pennsylvania Trapshooters' League tournament, Allegheny, Pa., April 8-9, provides ten like events each day, alternately 15 and 20 targets, entrance $1 50 and $2. Targets 2 cents, included in entrance. From each target trapped, one-half cent will be deducted and added to the purses in each event. Money divided Rose system. No contestant other than a paid representative will be permitted to shoot for targets only. Events 5 to 7, inclusive, a total of 50 targets, will be the four-man team contest for the Western Pennsylvania Trapshooter's League trophy. Events 2, 3, 4 5 and 6 will have merchandise prizes.

On Monday evening of last week Gen. William H. Jackson died of Bright's disease at Belle Meade, near Nashville, Tenn. He was a splendid type of the Southern gentleman, and the Southern mansion at Belle Meade was of more than national fame for its generous hospitality. Gen. Jackson was best known, in the world of sport, as a breeder of thoroughbreds, many horses of his breeding proving to be of the best. He was also well known in sports of dog and gun. In 1878 the Tennessee State Sportsmen's Association held its fifth annual trials at Belle Meade, Gen. Jackson acting as one of the judges. A few years ago, a trapshooting tournament of national scope was held at Belle Meade.

Gen. Jackson was born at Paris, Tenn., Oct. 1, 1835. He graduated from West Point in 1858. In the war between the States, he espoused the Confederate cause, and was conspicuous for chivalry and bravery. He rose to high place, and near the close of the war was in command of Forrest's division and a Texas brigade. On the death of Gen. W. H. Harding, whose daughter he married, Belle Meade came under his control. A list of the famous horses bred at Belle Meade would be a long one. About a year ago, owing to financial reverses the horses and mares at Belle Meade were sold at auction, and the worry entailed by his troubles were no small cause in hastening his end. The universal esteem and affection which he won by his courteous and upright life is the greatest testimonial to his sterling worth.

Victory again perched on the banner of the Crescent Athletic Club, of New York, in its contest with the Boston Athletic Association on April 4. This was a return match, and was shot on the B. A. A. grounds at Riverside. The first match was shot on the Crescent Athletic Club grounds, at Bay Ridge, L. I., March 21, and was won by a score of 599 to 645. The second by a score of 701 to 633, a total of 107 targets in favor of the Crescent for the two contests. The $100 cup thus becomes the property of the Crescent Athletic Club. In each contest there were eight men to a team and each man shot at 100 targets.

A correspondent writes us that Mr. James M. Spencer, president of the Poughkeepsie Gun Club, recently returned from North Carolina, where he has been sojourning for several weeks in search of health and recreation. While there Mr. Spencer experienced the novelty of hunting quail on horseback, and pronounces that method a success. As this gentleman is an expert horseman, as well as wing shot, this method of hunting must have indeed been very fascinating to him.

At the shoot of the Limited Gun Club, Indianapolis, April 2 and 3, Mr. C. O. Le Compte, of Eminence, Ky., won the Grand Hotel cup, with 47 out of a possible 50.

The daily press recounts that at Shenandoah, Pa., on March 30 a pigeon-sweepstake was shot at 5 birds. There were eight entries. Earl Frost killed straight and won $25. John Galvin, Joe Farnell and P. Grant killed three and divided $15. In itself the performance was not remarkable, but as an El Dorado for a good New York shooter, it has its fascinations. "If you win you lose, and if you lose you're ruined" is a colloquialism which does not apply to that section.

Mr. F. J. Waddell, of Cincinnati, writes us that "the Cincinnati party will leave Cincinnati for the Grand American Handicap, on Sunday, 12th inst., at 8:30 A. M., going via the C., H. & D. and Alton lines, arriving at Kansas City at 8:45 A. M. Monday, April 13. We are anticipating a very pleasant trip, and trust that all our sportsmen friends who are contemplating attending the Grand American will join us at Cincinnati."

Mr. Geo. W. Mains, secretary of the Enterprise Gun Club, McKeesport, Pa., writes us that his club's old grounds at Wildwood Place have been abandoned and new ones secured at the point of the Monongahela and Youghiogheny rivers, that city, and have built everything new. The dates of the club's tournament for this year are June 17-18 and Sept. 9-10, ten events each day, Rose system.

At a meeting of the Enterprise Gun Club, held March 28, officers were elected as follows: Chas. H. Baird, President; Robert Knight, Vice-President; Geo. W. Mains, Secretary; J. F. Calhoun, Treasurer; Phil Rotzsch, Captain. Executive Board: Chas. H. Baird, Geo. W. Mains, Phil Rotzsch, L. W. Cannon, H. V. Bradshaw.

Mr. Charles G. Grubb, secretary of the Western Pennsylvania Trapshooters' League, Pittsburg, informs us that dates have been claimed for the clubs herein mentioned, as follows: Brownsville Rod and Gun Club, Aug. 5 and 6; Enterprise Gun Club, of McKeesport, June 17 and 18, and Sept. 9 and 10. These tournaments are under the auspices of the League.

At the Hopkins-Sears tournament, Des Moines, Ia., April 2 and 3, Mr. Fred Gilbert was high average for the two days with 88 per cent. Mr. C. B. Adams was high amateur on the first day with 88 per cent. Mr. W. B. Linell was high on the second day with 90 per cent.

Dr. J. W. Meek, secretary-treasurer of the Garfield Gun Club, of Chicago, informs us that his club will open its trapshooting season on April 25, and will shoot regularly thereafter every Saturday till Nov. 1. He further states that the members anticipate an active and interesting season of trapshooting.

Mr. A. J. Miller defeated Mr. A. Felix, in a match at 100 live birds, on the grounds of the Keystone Shooting League, on Saturday of last week. The scores were 68 to 66. The weather conditions were unfavorable, a gale of wind blowing across the traps.

The Grand American Handicap at target entries number 151, a list of which is presented in our trap columns elsewhere. With post entries, there will probably be about 175, which is something less than the wild estimates of 500 to 1,000.

The secretary, Mr. C. B. Axford, informs us that on April 18, at Rutherford, N. J., the Union Gun Club will shoot against the Boiling Springs Gun Club, for the Shooting and Fishing cup, and that all shooters are cordially invited.

F. H. Bushnell, a popular and skillful sportsman, of San Francisco, died March 22, in the forty-second year of his age. He was a member of the Field and Tule Gun Club, the Quo Vadis Fishing Club, and the Anglers' Club.

The next shoot of the Fulton Gun Club, of Brooklyn, will take place on April 26, a change made so as not to conflict with the date of the Hudson Gun Club, of Jersey City. Mr. Geo. R. Schneider, Sec'y, 302 Broadway.

At the consolidated tournament of the Buffalo Bill and Grand Island, Neb., gun clubs, April 1 to 3, Mr. W. R. Crosby won high average. Mr. Townsend won the Schmelzer trophy with a score of 24 out of 25.

In the report of the Grand Island, Neb., tournament, Killmore presents the unpleasant information that the Nebraska Legislature at its present session may by statute make pigeon shooting at the traps illegal.

The Riverside Shooting Club, Topsham, Me., has fixed upon July 4 as the date for an all-day tournament. Mr. Fred W. Atkinson is the secretary.

The regular shoots of the Union Gun Club are fixed to take place on the first and third Saturdays of each month, at Rutherford, N. J.

The Scranton Rod and Gun Club commenced club competition for this season on April 4.

The Hudson Gun Club, of Jersey City, will hold its next shoot on April 19.

BERNARD WATERS.

Cincinnati Gun Club.

CINCINNATI, O., March 28.—There were a cloudy sky and a stiff wind blowing from the traps toward the firing points. Mr. Ed Rike, at the 16yd. mark scored 94 out of 100. His score fell off in the medal shoot, the extra 2yds being more difficult to solve. Gambell was able to be about again, and managed matters notwithstanding his recent injury in the way of a strained leg.

The indications are that Cincinnati will be well represented at the G. A. H. at Kansas City.

Mr. J. B. Mosby predicts not less than two hundred and fifty shooters to Ohio State shoot, and Superintendent Gambell says, "Bring 'em on; the more the merrier." The scores: Randall (16) 43, Medico (18) 41, Coleman (17) 40, R. Trimble (22) 40, Ahlers (19) 39, Rike (18) 39, Steinman (18) 38, J. B. (15) 38, Barker (18) 37, Dreihs (17) 36, Faran (17) 35, Nye (16) 35, Maynard (19) 35, E. Trimble (18) 35, Parker (17) 35, Falk (17) 34, Mc.B. (16) 34, Herman (16) 32, Block (18) 32, Roanoke (16) 31, Linn (16) 31, Capt. (16) 29, Willie (16) 29, Ackley (17) 29, Corry (18) 28, Jack (16) 27, Underwood (16) 27, Colonel (15) 20.

Randall's handicap was 19yds., but he stood at 16.

New England Kennel Club.

BRAINTREE, Mass., April 4.—At the weekly shoot of the New England Kennel Club to-day the club cup was won by G. Perry. In the contest for the Brookdale cup, to win which a member must have the best score at three different times, there was a tie between Mr. Perry and R. O. Harding. The scores follow:

Club cup, 25 targets: G. Perry (5) 21, R. O. Harding (7) 19, W. F. Beal (1) 17, E. Brooks (9) 16, C. S. French (0) 14, A. Blanchard (0) 5.

Brookdale Cup, 25 targets: G. Perry (5) 25, R. O. Harding (7) 25, E. Brooks (9) 22, A. Blanchard (0) 21, E. F. Beal (1) 21, R. H. Morgan (0) 18, C. S. French (0) 17.

Irwin Gun Club.

IRWIN, Pa., April 1.—The Irwin Gun Club held a shoot to-day and was favored with pleasant weather. The scores were commendably good, as follows, each man shooting at 100 targets: Brown 89, Withrow 88, Ross 84, Dr. Taylor 84, Wolf 82, Morris 82, Low 80, Wampler 76, F. Hockensmith 75, W. Hockensmith 71, Plank 70.

Grand Island Tournament.

GRAND ISLAND, Neb.—The spring shooting circuit in the West was introduced under favorable conditions April 1, 2 and 3, at Grand Island, in a tournament given under the management of Seivers and Carter, representing the North Platte and Buffalo Bill gun clubs. The shoot was well managed and favored with a good local attendance—and we all know that it is the local support which contributes most to the success of such events nowadays. Weather was quite favorable the first day, and some fine scores were made on the targets, thrown from expert traps. Crosby won first; Reed, second, and Linderman, Starkey, Cox and Harney third honors. The Dickey bird cup was also shot for on the first day, and was won by Townsend.

On the second day the weather had made a comple somersault, and blew fearfully, with such a cold breath that it was not comfortable on the grounds except inside the tents provided by the management. The attendance was even better than the first day, but scores averaged much lower. Crosby won high honors for the shoot, while Heer, Reed, Bray, Townsend and Carter won the other points. The scores:

April 1, First Day.

Schroeder, 30	2120*0w	McAllister, 28	2*0212120w
Shattuck, 28	11012111*1— 8		

Friday was devoted to live birds, two ten-bird events being shot. In the principal one of these Heer and Bacon made the only money straights, and in the second Dan Bray got high money alone. Crosby and Riehl, who as the only trade representatives in attendance, shot for birds and targets only, also killed all their birds. The pigeons were fresh from the surrounding country, and a very fast lot. This was probably the last live bird match of importance in Nebraska, as it is anticipated that the Legislature will put a ban upon the sport in the present session.

KILLMORE.

IN NEW JERSEY.

North River Gun Club.

Edgewater, N. J., March 28.—Scores made at the shoot of the North River Gun Club are appended:

JAS. R. MERRILL.

Hudson Gun Club.

Jersey City, N. J., April 5.—Following are the scores of the regular shoot of the Hudson Gun Club. The club had to use a temporary set of traps, as the box for the trappers is sunk in the ground and leaked so badly that it could not be used. The members hope to have it fixed and the traps working better for the next shoot, which is on the 19th inst. Scores:

C. B. AXFORD.

Montclair Gun Club.

Montclair, N. J., April 4.—On its grounds to-day the Montclair Gun Club held a handicap shoot. The weather conditions were bad, stormy and a high wind. Shooting at 50 targets, the first prize was won by Mr. Tichenor, with a handicap of 5 points; the second was won by Mr. Cook, scratch, and the third was won by Dr. Case, with a handicap of 15 points. The scores: Soverel, Jr., 27, Tichenor 34, Case 22, Winslow 20, Crane 25, Cook 38, Cockefair 32, Doremus 22, Howard 18, Holloway 24, Howe 17, Wheeler 33, Babcock 35, Connett 32, Soverel 34.

ON LONG ISLAND.

Fulton Gun Club.

Brooklyn, L. I., April 5.—Mr. A. Woods won the club medal with a handicap of 5 targets at the shoot of the Fulton Gun Club. There was a good attendance of contestants. The scores follow, the first event being the medal shoot:

Events:	1	2	3	4	5	6	7	8	9

GEO. R. SCHNEIDER, Sec'y.

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., April 4.—The weekly shoot of this club was held to-day under very unfavorable weather conditions. The wind was worse than awful; it was with difficulty that the men could stand on the platform and retain their balance long enough to level their guns and shoot. The principal event, No. 5, was for the Marshall cup. This is a handicap event, and was won to-day by Mr. M. S. Pickenpack, who, with an allowance of 8 misses as breaks, scored 22. As this was but the third time that Mr. Pickenpack ever shot over a trap, the boys were all pleased to see him the winner, and heartily congratulated him upon his success. A committee was appointed this week to select and purchase a club cup, to be shot for monthly, under the handicap system. The cup will cost not less than $50. A gold medal will be put up for the member making highest average for the year. We are also about to install two expert traps on a special site, for those wishing to practice for field shooting. This is a good idea, and will tend to improve the boys in "the real thing"—wing shooting, while with some of them regular trap work has had the reverse effect.

SNANIWEH.

G. A. H. Entries.

WE are indebted to Secretary-Manager Elmer E. Shafer for the appended list of entries of the fourth Grand American Handicap at targets, as follows:

Adams, C. B., Rockwell City, Ia.
Allen, Billy, Hutchinson, Kas.
Ambrose, R. L., Pine Bluff, Ark.
Arnold, E. W., Larned, Kas.
Arnhold, Fred, St. Joseph, Mo.
Atkinson, J. T., New Castle, Pa.
Avery, John E., Atlanta, Ga.
Burmister, John, Spirit Lake, Ia.
Bonebrake, H. E., Weatherford, Okla.
Bates, H. D., Detroit, Mich.
Baker, W. A., Griffin, Ga.
Batcheller, Jr., Jo., Kansas City, Mo.
Bramhall, J. W., Kansas City, Mo.
Bennett, Mrs. A. L., Denver, Colo.
Beasley, O. L., Pleasant Hill, Mo.
Budd, C. W., Des Moines, Ia.
Bottger, O. C., Ollie, Ia.
Burrows, Nettie King, St. Louis, Mo.
Brookman, John H., Central City, Ia.
Cunningham, F. B., St. Joseph, Mo.
Crosby, W. R., O'Fallon, Ill.
Crowder, W. B., Roff, I. T.
Connor, A. C., Pekin, Ill.
Clayton, Wm., Kansas City, Mo.
Cornett, John J., Kansas City, Mo.
Cockrill, F. N., Kansas City, Mo.
Campbell, J. E., Kansas City, Mo.
Cook, Dr. C. E., New London, Ia.
Cumberland, L. W., St. Louis, Mo.
Chingren, E. J., Sioux City, Ia.
Crosby, Geo. E., O'Fallon, Ill.
Decker, Ernest, Pleasanton, Kas.
Dove, R. L., Centerville, Ia.
Daudt, D. S., South Bethlehem, Pa.
Dixon, Harvey, Oronogo, Mo.
Diefenderfer, M., Wood River, Neb.
Dreihs, Chas. F., Cincinnati, O.
Davis, H. M., Richmond, Mo.
Daw, R. C., Lakefield, Minn.
Eick, Ben, Sterling, Ill.
Elliott, J. A. R., Kansas City, Mo.
Elliott, Dave, Kansas City, Mo.
Essig, George, Plattsburg, Mo.
Fisher, A. G., Colorado Springs, Colo.
Faurote, F. M., Dallas, Texas.
Frank, A. H., Memphis, Tenn.
Foust, Ed, Warren, Ind.
Fulford, E. D., Utica, N. Y.
Ford, O. N., Central City, Ia.
Fort, E. C., Fostoria, O.
Franke, Paul, Kansas City, Ia.
Foley, L., Nichols, Ia.
Garrett, John W., Colorado Springs, Colo.
Guy, R. B., Mechanicsburg, O.
Gilbert, Fred, Spirit Lake, Ia.
Gibson, Fred, Kirkwood, Ill.
Gambell, Arthur, Cincinnati, O.
Gottlieb, Chris, Kansas City, Mo.
Gossett, Claud, Kansas City, Mo.
Gilson, Al., Fonda, Ia.
Grueninger, John J., Kansas City, Mo.
Gravett, E. M., Gravett, Ark.
Heer, W. H., Concordia, Kas.
Head, J. L., Peru, Ind.
Hardy, Dr. J. W., Sumner, Mo.
Haughawout, Dr. J. W., Fort Dodge, Ia.
Hensler, M. E., Battle Creek, Mich.
Heikes, Rolla O., Dayton, O.
Hughes, J. M., Palmyra, Wis.
Hirschy, H. C., Minneapolis, Minn.
Hickman, Ed. A., Kansas City, Mo.
Howe, W. M., Kansas City, Mo.
Hodges, Frank, Olathe, Kans.
Hellman, F. X., Hanover, Kas.
Holmes, Robt. G., Scammon, Kas.
Hutchings, Jr., J. H., Galveston, Tex.
Irwin, W. T., St. Louis, Mo.
Jackson, J. A., Austin, Texas.
Jenkins, Dr. G. L., Osage City, Kas.
Jenkins, Geo. W., Wamego, Kas.
Kalash, Frank, Lakefield, Minn.
Kirby, H. N., Greensburg, Kas.
Kleinhans, Chas. H., Grantville, Kas.
Linderman, C. D., Lincoln, Neb.
Leggett, J. P., Carthage, Mo.
Lord, F. H., La Grange, Ill.
Le Compte, Eminence, Ky.
Linell, W. B., Eldora, Ia.
Lawrence, Arthur, Lincoln, Ill.
Lytle, W. G., Atchison, Kas.
Merrill, Richard, Milwaukee, Wis.
Miller, G. H., Chanute, Kas.
Money, Capt. A. W., Oakland, N. J.
Morrison, Harry F., Lakefield, Minn.
Mermod, Alex. D., St. Louis, Mo.
Morrison, J. L. D., St. Paul, Minn.
Miller, F., Berwyn, Neb.
Moinc, Louis, St. Joseph, Mo.
Mackie, Geo. K., Scammon, Kas.
Moody, Lee, Bessemer, Ala.
Matteson, W. A., Abilene, Kas.
Marshall, John M., Richmond, Mo.
Marshall, Tom A., Keithsburg, Ill.
McKelvey, J. A., Hedrick, Ia.
McCrea, A. M., Lamar, Mo.
McBride, C. O., Muscatine, Ia.
McDaniel, H. T., Gravett, Ark.
Nash, W. T., Indianapolis, Ind.
Norton, T. F., Kansas City, Mo.
O'Brien, Ed., Florence, Kas.
Park, Will K., Philadelphia, Pa.
Patch, F. R., Hartley, Ia.
Patrick, E. W., Mechanicsburg, O.
Phellis, C. W., Mechanicsburg, O.
Pendleton, A. B., St. Louis, Mo.
Powers, Chauncey M., Decatur, Ill.
Quick, Dr. A., El Dorado Springs, Mo.
Rike, E. D., Dayton, O.
Rogers, Fred E., Bucklin, Mo.
Roll, Geo. J., Blue Island, Ill.
Rickmers, A. F., Kansas City, Mo.

Wilson, Alva, Kansas City, Mo.
Wickey, F., Kansas City, Mo.
Williams, W. C., Wichita, Kas.
Wetzig, E. L., Junction City, Kas.
Ward, P. C., Walnut Log, Tenn.

We are indebted to Mr. Will K. Park, of Sporting Life, Philadelphia, for a copy of "Trapshooting Review of 1902," a work of thirty-two pages, treating of important doings at the traps, best individual work, standing of eminent experts and amateurs, State champions, high average winners, long runs at targets, portraits of famous trapshooters, etc., the whole representing an infinity of labor and comprehensive record.

Des Moines Tournament.

DES MOINES, Ia., April 3.—Hopkins Sea's two-day amateur tournament had thirty-six entries the first day and twenty-five the second. The programme had 200 targets for each day with $2.50 added to the 15 and $3 to the 20-target events.

The shooting was very hard, owing to a high wind blowing across the traps. C. B. Adams was high amateur the first day with 176. W. B. Linell was high the second day with 180. Fred Gilbert was high for the two days with 88 per cent.

Some twelve or fifteen of the sportsmen will go to St. Joseph Sunday morning to attend the tournament April 7 to 11, and from there to Kansas City for the Grand American Handicap. Herman Hirschy, Fred Lord, Fred Gilbert, F. C. Whitney and C. W. Budd were the trade representatives in attendance. Tom A. Marshall came over from Keithsburg, and was one of the star performers. Hopkins Sea's Co. will hold a tournament each year and offer attractive programme in way of cash and special prizes.

April 2, First Day.

HAWKEYE.

Ossining Gun Club.

OSSINING, N. Y., April 3.—A few of the boys came out for a little practice to-day. A. Bedell, Bruin, J. Hyland, A. Smith and C. Blandford started the ball rolling at 2 P. M. The weather conditions were such that the scores made would not look well in print. Bruin got 8 out of 10 in one event, which was the best string made during the afternoon. J. Hyland did good work with a strange gun.

Later, Col. Fiske and Gayl Hubbell came up and tried their luck. Their scores have not as yet been received.

During the coming week, work will be started on the addition to the club house. Forty more lockers will be put in and a cashier's office will be built.

The writer has received a communication from Mr. E. D. Fulford, calling attention to the fact that this coming shoot in June will be the forty-fifth annual tournament of the New York State Association for the Protection of Fish and Game, and suggested that it be advertised as such. He also mentioned that it is the oldest shooting event held in the United States annually.

C. G. BLANDFORD,
Sec'y Ex. Tournament Com. Ossining G. C.

Scranton Rod and Gun Club.

SCRANTON, Pa., April 4.—The Scranton Rod and Gun Club held their opening shoot of the season to-day. The grounds are situated on top of a hill at Dunmore, and on account of the severe cold weather and the wind blowing a gale from the northwest, made shooting difficult.

Because of the weather conditions, only a few shooters attended. Following are the scores made:

Events:	1	2	3	4	5	6		
Targets:	10	15	10	15	10	10	Broke.	Av.
Spencer	9	9	..	..	..	..	18	72
Raine	3	10	8	7	6	..	34	56 2-3
Shoemaker	8	12	9	9	7	3	48	68 4-7
Jackson	3	2	5	2	2	..	14	23 1-3
Griffin	4	10	8	8	9	4	43	60 3-7
Bittenbender	5	10	8	10	5	7	45	64 2-7
Mason	8	9	6	11	5	6	45	64 2-7
Cullen	..	..	..	12	8	7	27	77 1-7

J. D. MASON, Sec'y.

Crescent—Boston.

BOSTON, April 4.—The eight-man team of the Crescent Athletic Club, of Brooklyn, again defeated the gun team of the Boston Athletic Association at Riverside, on the grounds of the latter, to-day. The scores were 701 to 633. The weather conditions were stormy and bad. This was the second victory of the Crescents, and established a property right to the $100 trophy. The scores:

Crescent A. C.—Bedford 88, Keyes 89, B. Stephenson 85, Remsen 93, G. Stephenson 90, Fish 89, Lott 79, Brigham 88; total 701.

B. A. A. Gun Club.—Daggett 79, Edwards 65, Clarke 80, Hallett 84, Howell 81, Ellis 79, Dennison 83, Weld 82; total 633.

Keystone Shooting League.

HOLMESBURG JUNCTION, Philadelphia, April 4.—Shooting was specially difficult owing to a gale of wind blowing across the traps steadily during the shoot. Mr. Davis and Dr. Darby killed straight in the club event. Harrison was high with 14 out of 15 in the officers' event. The scores:

Club handicap, 10 birds: Davis 10, Darby 10, Budd 9, Geikler 9, Miller 8, Harrison 8, Morris 8, Jenkins 4.

Officers' trophy, 15 birds, handicap rise: Harrison 14, Budd 13, Fitzgerald 13, Morris 13, Darby 11, Geikler 11.

Arkansas State Shoot.

MUSKOGEE, I. T., April 1.—The Arkansas State Sportsmen's Association has selected July 8, 9, and 10 as the dates for holding its thirteenth annual meeting and tournament at Jonesboro, Ark., under the auspices of the Jonesboro Gun Club. The tournament will be conducted on much the same lines as characterized all the previous tournaments of the Association. There will be $330 cash added money, and the Rose system of divisions will prevail. Targets only will be used, and these will be thrown from expert traps arranged on the Sergeant system. The Jonesboro Gun Club is a young organization, though active and very enthusiastic, and is putting forth every effort to make this the most successful tournament in the history of the Association. New grounds have been secured, and these will be put in first-class shape for the occasion, so that the visisting sportsmen will be well provided for and assured a good time.

Mr. Gordon Matthews, one of Jonesboro's sterling young business men, is the chief executive of the Arkansas State Sportsmen's Association, and also secretary-treasurer of the Jonesboro Gun Club; he will take pleasure in answering all letters of inquiry and supply programmes when the same are issued.

PAUL R. LITZKE.

Riverside Shooting Club.

TOPSHAM, March 28.—The Riverside Shooting Club held their annual meeting to-day and elected officers, and did such other business as came before the meeting. The result of the election was as follows: President, A. E. Hall; Vice-President, Dr. H. O. Curtis; Secretary and Treasurer, Fred W. Atkinson.. Executive Committee: A. E. Hall, Dr. H. O. Curtis, Fred W. Atkinson, Claude Strout and George Rogers.

FRED W. ATKINSON, Sec'y.

Garfield Gun Club.

CHICAGO, April 2.—The annual meeting of the Garfield Gun Club was held last night. The election of officers resulted as follows: President, Thos. W. Eaton; Vice-President, A. H. Hellman; Secretary-Treasurer, Dr. J. W. Meek; Captain, J. D. Pollard.

The secretary-treasurer's report showed the club membership full to the limit and nine applicants on the waiting list, a very few delinquents on dues, no debts, and about $100 cash in the treasury.

DR. J. W. MEEK, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications.

A., Prince's Bay, N. Y.—There are two English starlings that roost under the eaves of my barn every night. Would it be a charitable act to destroy them and give other birds a show, or will they become a useful bird like our robins, bluebirds, etc.? They seem to live in harmony with the English sparrows. Ans. Starlings are not reported to do any harm or to be quarrelsome with other birds. On the other hand, they are very destructive of injurious insects. The starlings are firmly established about New York, and are attractive birds. We should not advise their destruction unless they develop bad traits.

PUBLISHERS' DEPARTMENT.

Mr. Irving Snyder, for thirty-five years of the firm of Peck & Snyder, about three years ago bought out the tackle departments of Peck & Snyder and A. G. Spalding & Co. and since then has been located at 130 Nassau street, this city. He publishes "The Fisherman's Friend," a handy booklet, giving salt-water and fresh-water fishing points about New York, tide tables for 1903, and much other useful information for anglers. It will be sent to any address on receipt of price of 10 cents.

Having acquired the telescope business of the Cataract Tool and Optical Co., of Buffalo, the J. Stevens Arms and Tool Company, Chicopee Falls, Mass., are prepared to furnish telescopes, or rifles and pistols mounted with telescopes, of which they have a long line, magnifying from two to twenty diameters. They have published a catalogue, illustrative of the telescopes, mountings, rifles, with a price list, and much valuable information concerning telescopes in their relation to rifles, which will be sent to those who apply for it.

The calendar for 1903 issued by Parker Brothers, Meriden, Conn., bears portraits of famous shooters who have used Parker guns in keen and successful competition, and a summary of their greatest achievements. Fred Gilbert holds a place in the center, and grouped around him are many portraits new to the Parker calendars. A high-grade Parker gun is portrayed on the top of the calendar, with a mention of Grand American Handicap winnings.

Parker Brothers, Meriden, Conn., have issued a circular illustrative and descriptive of their new Parker automatic ejector. Sectional views are shown, with full explanations of the mechanisms, in the text. For the present the ejector will be put on guns only of special orders, and will not be furnished on any guns now in finished condition. The circular will be sent to those who apply for it.

Messrs. Von Lengerke & Detmold, though best known as dealers in guns and ammunition, by no means neglect the angling side of sport. The new artificial bait which they call "Silver Soldier," and for which they are sole agents, is so made that its course when drawn through the water is zigzag, in imitation of a living, moving fish. It is privately reported to be a most killing bait, and as the sellers say, "No fishing outfit is complete without one."

Mr. J. H. Rushton, of Canton, N. Y., began to make canoes and boats a long time ago, and he is still doing it, and making boats that are constantly better. His canvas-covered white cedar canoe, known as "Indian Girl," would seem to be very near perfection. Beside these special canoes, he manufactures all sorts of wood boats, canoes, oars, paddles, etc., and furnishes free a catalogue of his goods.

The Whitestone Hollow Spar & Boat Co., formerly the Spalding St. Lawrence Boat Co., of Ogdensburg, N. Y., has recently moved to Whitestone Landing, Long Island, N. Y. The company manufactures the Fraser hollow spars, and builds high grade davit boats, paddling canoes, St. Lawrence River skiffs, launches, etc. Catalogues mailed on receipt of application.

Messrs. Berner & Co., of 752 Lexington avenue, Brooklyn, N. Y., beside the automatic fish hook which they advertise, carry a full line of fishing tackle, including split-bamboo rods, multiplying reels, silk lines, collapsible landing nets, fishing baskets, etc., and these they give a premium to agents. Their premium list is furnished on application.

Of the making of trolling and casting spoons and imitation minnows there seems to be no end. Of these, one of the most perfect and effective is that called the "North Channel," manufactured by the Detroit Bait Mfg. Co., of Detroit, Mich. Its spinning qualities would seem to be perfect, and it should be a most successful lure.

The opening of New Spruce Cabin Inn, the celebrated headquarters in the spring for trout fishermen, which has been set for Wednesday, April 15, promises to be marked with the advent of a large number of old guests, and all the indications point to a prosperous season.

B. D. Nobles, of Olean, N. Y., shooting a Winchester repeating shotgun and Winchester factory loaded shells, won high average at the Jamestown, N. Y., tournament, held April 2, breaking 126 out of 130 targets.

At Trenton, N. J., April 1, Jas. T. Skelly, of the Laflin & Rand Powder Company, made two runs of 52 and high average for the day of 96.2 in 180 targets. Mr. Skelly shot 25 grains of "Infallible."

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, APRIL 18, 1903.

VOL. LX.—No. 16. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

THE COMIC OPERA SPORTSMAN.

Have we not seen a comic opera king—complacent, strutting, posing, loquacious? Was he not comic, indeed? And yet the character, with all its exaggerations of costume, color and action, had a subbasis of fact in real life. It contained fact and fancy, for all the comic opera of life is not on the stage. Real life, serious life, has it in abundance.

Since lordly man, tilting his haughty nose toward the empyrean first set his arch foot on this beautiful dollar world of ours, he has been a hunter or an imitation of a hunter, a creature of fact or fancy, for man is a being of both earth and air. His advent as king of creation, with feet on earth and nose turned perky skyward, is typical of the double life he leads from the neccessities of his being; that is to say, leading a life both real and imaginary. Gravity holds man's body in contact with the earth, but his imagination is not bound by any laws or forces. Thus, while his feet rest on matter, his head most of the time is in the clouds.

In the actual struggle for existence, each man reasons and acts more or less logically according to his cerebral make-up and the circumstances of his environment. Then he may be said to think soundly by virtue of his feet resting perforce flatly on the earth's surface. But when he smartly turns nose skyward and thinks, his ego, freed of bodily restraints, does glorious transformation feats in the pathless clouds, brilliantly ennobling by their valor, their genius, their sterling worth, their pure perfection. The clouds become a stage then in imagination. On it the disembodied ego does capers of marvelous excellence in the individual comic opera, the earthly man for an audience, the paradoxical situation of the ego being the actor and the egotist the audience. When the egotist draws the curtain, ego and egotist depart together, both vested with all the vanities of the ego. And yet it may have been all a day dream. It is unwise to dream through one's nose if one's mind is not well disciplined, or if one's natural mentality is not quite strong.

Sportsmanship has more than its share of the comic opera of life, funny and sad, for there is no comic opera so funny that it is free from pathos. And of all the comic opera of sportsmanship, none is more comical than the claim to sportsmanship by virtue of contemplation, or how to be a sportsman without any of the qualities of true sportsmanship. How does it so happen? Because the ego gets into the clouds, returns, and the egotist imagines that his dreams were true.

Thus there is the man with the camera who sallies forth into the wilderness, photographs trees, water, flowers, and perhaps some deer, moose or rabbits. He returns and declares that the men with dog and gun on killing bent are cruel, barbarous, unsportsmanlike; that he himself is your true sportsman because he indulges in the only true sport. He mistakes an idea, of which he himself is the king, for the only true domain and definition of sport. Now, it is sport if it pleases him, but it is distinct, differentiated from true sportsmanship more than a balloonist is from a coal miner. Let him enjoy it at its face value. La! la! That would be asking too much. It is something to be a sportsman, and how can the prestige of the ages and the praise due individual prowess be more quickly secured than by photographing a deer and by force of insistence becoming a sportsman?

Then there is the man who takes himself to the wilderness a few miles from town, seats himself on a moss-grown rock in propinquity to some trees, a few wild flowers, a sheen of water, a deep, deep blue sky over all, rests his hand upon his chin and thinks about the lovely things he beholds. He tries to think differently about them, else his thoughts will have no currency; for, mind you, he is not thinking solely for himself—the public must know of it. He returns heavy with the perfection of his form of sportsmanship. He has gazed on rabbits which have hopped by, squirrels which have run and sat and peered and quivered; observed flowers bloom and the mellow winds wave the green grass. He writes of it, talks of it. He has discovered the true sportsmanship. All other is savage and cruel. And yet, while he contemplated the beautiful he probably had a round steak in his stomach, or chicken, or other animal food, according to the law of his being. He mistook the workings of his mind for a universal law governing this terrestrial vale of tears. The ego broke through the boundaries and by mere force of thought a star thinker within the confines of his subject became a comic opera king in the domain of true sport. Say not alas! to this. It is the nature of man to have his toes on earth and his nose in the clouds. Blame him not for his nature. He did not make it.

Real man has been always a hunter. His passion for the chase has ever been enthralling. His aversion to being chased as an object of sport, or as a food possibility, has been stronger yet. All the obtainable evidence, past and present, on this subject, enormous in scope, is in support of this allegation. The traditions of mankind from time immemorial are largely devoted to the deeds of mighty hunters, to a glorification of the hunters, and to the laudation of them as examplars for the generations to emulate. Then there is testimony which goes so much further into the past that it makes all history and tradition things of yesterday. The geological strata tells of man's doings on earth tens of thousands of years ago. Flint knives, flint axes, arrows and lance heads, human bones, together with the bones of wild animals found together deeply buried, bear silent witness of man's manner of life on earth æons ago, probably contemporaneously with the cave bear, the extinct rhinoceros, the mammoth. Why man is by nature a hunter no one knows. The question why? involves the problem of life itself. His nature is as it is, a part of his being. No man with a camera, or his chin resting in his hand in deep meditation, can change it. To question it is to rebuke the creator, and all the generations of mankind who were hunters. If it were essential to know the why as well as the what, man would probably have been taught it all long since.

Yet the prestige of a hunter is desirable. It presupposes good qualities of mind and body, fortitude, vigilance, patience, courage and valor, the enduring of fatigues and hardships without murmur or yielding.

Imagine the man with a camera or the man seated on a log at the dawn of creation going forth to subdue the earth, and to take dominion over the animals.

Hurrah for the comic opera sportsman!

GAME LEGISLATION IN SECRET.

IF Connecticut is called the land of wooden nutmegs and shoe-peg oats, this is a humorous tribute to the astuteness, progressiveness and go-ahead-qualities of its citizens. But even as Homer is said sometimes to nod, so the citizens of Connecticut occasionally go to sleep, or if they do not go to sleep, they become so drowsy that they permit themselves to be buncoed by their representatives in the Legislature in a fashion which is more or less humiliating.

At the present time, when the sentiment of sportsmen throughout the country strongly advocates the abolition of the spring shooting of wildfowl, when a considerable number of the Northern States have already abolished such shooting, and when a hard fight is being made in New York to pass such a bill, the State of Connecticut takes a long step backward and extends the shooting for wildfowl one month later in the spring. A bill was recently introduced making the close season for web-footed wildfowl from May 1 to August 31, both inclusive, instead of from April 1 to August 31, and the Committee on Fisheries and Game reported through Mr. Arnott, of Manchester, chairman of the Committee, on the part of the House, that the bill ought to pass. The bill has passed both Houses, and Governor Chamberlain has said that it will become law.

The act is absolutely opposed to the sentiment of the majority of gunners in Connecticut, and its passage is due to the fact that it was secretly introduced, and that nothing was said about it in the public prints of the State, so that the announcement that the bill had passed both Houses was an absolute and bewildering surprise to most Connecticut gunners. It is understood that two members of the Legislature, one from Hartford and one from Bridgeport, engineered the passage of the act, doing it with absolute secrecy, and taking measures to keep the whole matter from the public until the bill was passed. It is alleged that no hearings were given before the committee, that the sportsmen of the State had no opportunity to advance arguments against the bill, and that every effort was made to preserve the utmost secrecy, and to rush the bill through with what is termed indecent haste.

Many Connecticut gunners are highly indignant about the matter, and feel especially mortified for the State; less at the action of the Legislature, perhaps, than at that of the Committee on Fisheries and Game. They feel and say that if this committee can be manipulated in such a fashion, proper game and fish protection is impossible unless counsel shall be hired to reside in Hartford during the whole session of the Legislature to watch every movement of the Fisheries and Game Committee, and make public each act of that committee which is opposed to the general welfare.

Incidentally the second section of this bill does away with the prohibition against battery shooting which existed in the old law.

The good sportsmen of Connecticut—and there are very many of them—are likely to express their views in no uncertain terms over this action of the Legislature. Public opinion in the State is greatly aroused over what is regarded as an outrage, and we shall be surprised if it does not find expression strong enough to force an immediate reconsideration of this Act by the present Legislature.

Assemblyman Finigan, of Rockland county, has introduced in the New York Legislature a bill which is an excellent illustration of the spite-fence spirit prompting much of the anti-non-resident shooting and fishing legislation of the time. Rockland county adjoins New Jersey. New Jersey compels Rockland county and other non-resident sportsmen to pay a license fee of $10 before shooting in the State; and now Rockland county sportsmen are bent on retaliation. They would out-Jersey New Jersey by exacting from non-residents a license fee not only for shooting but for fishing in any county of the State which borders upon New Jersey. The supervisors of the several counties may fix the amount of the fee, but in no case may it be less than the $10 exacted by New Jersey. Such a law would affect the fishing in Greenwood Lake, which lies in both States, and it would have direct and unwelcome application to many of the citizens of New Jersey who have been accustomed to repair to Rockland and Orange counties for shooting and fishing. Mr. Finigan and the constituents he represents may not be censured for this move. It is human to give tit for tat. "If the Jerseymen make us Yorkers pay them," they reason, "we will make them pay us." As retaliation these non-resident tax measures are excellent and noble, and their promoters are worthy of all applause. But they are not game and fish laws. Fish protection is one thing; building spite fences is another.

Mr. Justus Von Lengerke recorded in our columns two years ago the discovery of a colony of beavers in the wilds of New Jersey, a region from which the animal was supposed to have been exterminated long ago. The precise location of the colony Mr. Von Lengerke judiciously withheld, for he was apprehensive that the beaver would prove a temptation to the trappers. But now the animals have revealed their whereabouts and forced themselves into public notice by reason of their beaver nature and the activity and enterprise which it has prompted. They have built dams and overflowed the adjacent farm lands, and the land owners have at last become tired of destroying their work, and are now seeking some measure of relief. At Mr. Von Lengerke's suggestion, the New Jersey Legislature passed a bill for the protection of beaver; and the aggrieved farmers are thereby restrained. Taken altogether, this is a very curious conflict between wild life and agriculture within two hours of New York city.

The Sportsman Tourist.

A Perilous Ride.—II.

A Story of Indian Days.

(Concluded from page 283.)

THE next morning proved beautiful. The storm was over, the sun came out warm, with a slight south breeze, and the snow began to disappear rapidly. We made no fire, and had a scant breakfast. About 10 o'clock we saw the Indians about a mile to the south making their way down the river, but taking good care to keep out of gun shot of our long range rifles. They went below the island about three-quarters of a mile, turned toward the river, crossed on the ice, saw no signs of our leaving and returned. About noon we built a small quick fire and made coffee, the last we had. Our flour and bread was gone, but we had about half a pound of salt and about two or three pipefuls of tobacco. We were getting short. Nevertheless we would be compelled to remain a few days longer on account of snow, for the making of a fresh trail which from the surrounding hills could be seen so far would surely bring the Indians on us.

We passed the time in shaving bark for the horses and lamenting our shortage of tobacco. The next day, after the Indians had made their third trip to see if we had left the island, we made up our minds that on the following morning we would make a break for the lower country. After supper, which meal consisted of buffalo straight, except a little salt, I took a stroll down the north river bank, keeping just within the timber. After going about half a mile, I was amazed to see a small column of smoke on the island toward the lower end. I got out my glasses and took a long and careful survey in all directions, but could see nothing but the smoke. Somebody must have made it, but who, was the question. I waited until it got quite dark, got under the bank of the river on the ice, but hugging the bank as close as possible, and made my way slowly and carefully toward the smoke. When I had reached a good point to look over the bank, and not a great way from where the smoke appeared to be coming from, I crept to the top and cautiously peeped over and discovered a small, brightly burning camp fire not over thirty steps from where I stood; but not a soul could be seen.

I kept my position, not moving an inch for at least five minutes, and still no signs of life; when all of a sudden there came from near the fire one of the loudest sneezes I ever heard—it was easily heard by my partner up the river, who, mistaking it for a call, immediately started in the direction from which it came. I could not help laughing—but not very loud—when I heard a voice saying: "That d——d nose of yours will be the death of you yet. You'd jess as well fire a cannin'." I could stand it no longer, and hallooed out: "Hello, there, supper ready?" "Bet your life," came the answer. "Got any salt?" "Yes; have you got any tobacco?" "Bet yer life we have." "It's a swap, then," says I, going forward and shaking hands with two of the roughest-looking men I ever saw. They were both dressed in buckskin, old and greasy, and had bands of antelope skin about five inches wide for hats, buffalo leggins and moccasins. They had some tobacco and any amount of meat, the finest I ever saw, but that was all. In a few minutes my partner had got near enough to hear us talking and came to camp. Having the salt with him, we divided, and lighted our pipes, which was worth all the grub in Ameriea just then. We began to smoke, talk and roast buffalo.

These two men had come from the Black Hills, somewhere near Deadwood—Bill Tripp and a man by the name of Hammond. Tripp was a desperate man, and about a year afterward, single-handed, robbed the Virginia City bank in broad daylight, escaped with several thousand dollars, and was never captured. They treated us well, however. They had been on the island for some time trapping beaver, and had a fine lot of skins. We all stayed together this night, as they had plenty of buffalo skins for bedding.

About 10 o'clock the next morning, seeing no Indians, we all crossed the river, going down to the abandoned Fort Pease and for some distance below. The snow was about all gone, and a warm wind blew from the south. On returning to the old fort we were startled by the most dismal sound one ever heard. What on earth could it be? Not Indians; it sounded to me as if the whole earth was going to pieces. Tripp spoke up and said: "Run for the island, the river is breaking up." As I ran I looked, and such a sight I never saw before. The whole bed of ice the full width of the river seemed to rise up and then fall to pieces with the most terrific noise one could imagine. On it came, and we must get on the island if possible. When about one hundred yards from the lower end, I saw our horses on the ice and very badly frightened. The mule was not there. When the ice suddenly left the island, away went my pony and Lowery's horse on a cake of ice. A moment later here came the mule with the picket rope on, and, plunging into the water, she followed the other horses. Now we were in a fix—200 miles from the Cantonment and a-foot. On went the horses, still on the ice, and the mule close behind in the water. We followed on down the bank of the river, keeping opposite the horses. Below the old fort the river makes a bend, and the ice began to jam, and the cake of ice that the horses were on stopped almost in the center of the stream. As quick as thought Tripp ran on to floating ice, gave the two horses a slap, and the ice being jammed so tight, they came to land safe and sound, but the poor mule could not be seen from the shore. Tripp, however, saw the end of her nose between two cakes of ice; he caught her by the nostrils, shut her wind off and she came to the top. He at once seized the rope and started for shore, when we all four of us got hold and pulled her over. She was badly cut by the ice in places, but was all right otherwise. We did not give three cheers, but we felt like it. Not over five minutes later the jam went out, and on went the ice. We took the animals into one of the old fort rooms and we occupied another and remained all night without bed or supper.

Early next morning, the river being much lower and free from ice, we took the horses and went to the point nearest to the island and swam them over, three of us going with them; Tripp swam back with two of the horses and brought Hammond over. Now we were safe. We built a good fire and [illegible] to roast meat, and pretty soon were quite comfortable.

I was now quite anxious to get on; so next morning we packed our mule, saddled our horses, bade our two friends good-by, and were off for Tongue River. The breaking up of the river was very much in our favor, not but the Indians could and would cross, but they could not do it so quickly. We made a good day's ride, saw no Indians, but plenty of fresh signs. We kept as much in the timber as possible. When night came on we camped just before reaching a deep, wide, dry coulee. The next morning it was brim full of water and mush snow which had been washed down from the mountains during the night. We traveled up the stream for about a mile to a place where it looked as if we might cross. Lowery took the lead, as he had the largest horse. The stream was spread out so that it looked like a great river, but seemed not over knee deep, and continued about that depth until within a few feet of the opposite side, when out of sight went old man Lowery, horse and all. The next instant he was up, and within a few feet of the bank, which he easily reached. Not wanting any of that, I turned back, went down to the river, unpacked and unsaddled, took the mule and horse back to where Lowery had crossed, started them in, and away they went. They got a good ducking, but crossed all right. I got three small logs down at the river, lashed them together with my picket ropes, put my saddles and other things on the raft, and away I went, intending to raft across the mouth of the water-filled ravine. I was getting along finely until I got pretty close to the mouth of the incoming stream, when I discovered that it was coming with such force as to almost cut the river, and looked to me to be at least three feet higher than the river. I tried to stop my raft and get off, but I kept getting further from shore. When I saw I was in for it, I threw my steering pole away, laid down flat on the raft and let her slide. I struck the incoming stream and began to whirl round and round until I was almost at the opposite side of the river, where I came within an ace of being knocked off by an old root of a tree that projected out from the bank. I kept spinning round and round, landing back on the side of the river I had entered, and exactly where I wanted to be. As soon as I got near enough I got my rope in one hand and rifle in the other and jumped ashore, on what seemed to be a beautiful black sand bank, which I had no sooner touched with my feet than down, down, down I went, not touching solid bottom until the sand was up under my arms, and then I was held as tight as in a vise, and it was getting tighter. I gave a yell for my partner, who soon came and looked over the high bank. He threw me a rope, and finally I worked out, and with much labor and difficulty got my things ashore. I was in a terrible fix, wet and muddy, sore and hungry and disgusted with the whole country, and wished myself back in old Kentucky. We made camp, which consisted of a fire and a good smoke, but we had nothing to eat that night. Still I slept well.

Next morning we were off early. About 9 o'clock we found a dead buffalo that someone had killed for amusement some time before. For all we knew, it might have lain there half the winter. It was frozen. We hacked out a chunk with our hatchet and ate it raw as we rode along. Don't laugh when I say it was good. It *was* good, and I enjoyed it very much; and to this day nothing so disgusts me as to hear some one say, when they are surrounded by almost everything in the way of grub, "Oh, dear, what shall I get to eat? This is a time of year when there is nothing." Such talk as that always makes me sick, since my trip to Tongue River Cantonment, when bread would have been a luxury.

About noontime we were at the mouth of Froze-to-Death Creek, which had broken up, and the ice from the river had jammed up in its mouth and stopped the ice from going out of the creek. I crossed over on the ice on foot. It seemed solid, I hacked a little trail over with my hatchet, and we started to cross with our horses, Lowery in the lead; when about half way across, his horse stepped on a large flat piece of ice, when it began to tip; I being behind, gave him a slap, the ice tipped more and the horse slipped down into the hole. It was something strange; the ice was piled up several feet deep, but in this one spot there was no ice under the top piece. It looked just like a well. Lowery held on to the bridle, or the horse would have gone below. We tied a rope around his neck and to a tree on the bank, and went to work to cut a trail through the ice to the bank, which was a tedious job with hatchets. On either side of the stream the bluffs were quite high, and being now in the very worst part of the country for Indians, we were in danger of having them get right on top of us before we knew it. Every few minutes we would have to stop work and go to the top of the bluff and take a look. I concluded to tie my mule up on the bluff, behind a thick patch of pines, and then watch the mule and save running so often. On account of the thick pines, the mule could not be seen by anyone except us. We went to work now in earnest, but in a few moments I looked up at the mule and there she stood, with ears straight forward as if she might be looking at the devil. We dropped our hatchets, grabbed our guns and made for the top of the bluff, where not a single thing was to be seen. We soon went back to work, and a few moments afterward had to go through the same performance, and with the same results. So we dropped our attention from the mule. About 6 o'clock we had our trail ready to get our poor tired horse out of the hole, where he had been hanging by the neck all evening. He got out all right and was walking up the bank when he stopped to shake himself, like a dog coming out of the water, and immediately after doing so, dropped dead. We took the saddle off, neither of us saying a word. I took the mule and pony across, got down under the bank and sat down and smoked.

While smoking we heard someone talking. We could hardly believe our ears. I was so hungry and weak that I thought I must be dreaming. Lowery had also heard the talking, and on looking over the bank, we saw two men rolling something on the ground.

"What the devil are they doing?" said Lowery.

"It looks like a barrel to me," said I.

We went down toward them in full view, and had come to within thirty feet of them before they saw us. When they did so, both made for the timber, but stopped as soon as they knew we were white men. Sure enough, what they were rolling was a barrel of beer that had been lost with a boat late the fall before and had lodged on the sandbar and was frozen. They rolled it down to their dugout, where they were trapping beaver, and soon had the staves off and a solid barrel of ice, except about a gallon or two in the center which was what they were after, and soon had it. I would not touch it until I had had something to eat, which was very quick. I then took a sup of the beer. It was strong as alcohol, but did me lots of good; at least I thought so. The two men were soon as drunk as drunk could be, and ready to fight all the Indians in Montana. They were all right next morning, but wanted no more beer.

We remained in the dugout all next day, resting and eating. I thought I never would get filled up. On the following morning we made another start and were told we could make the Cantonment in two days if we had no trouble. As Lowery had lost his horse, we were now compelled to abandon our pack saddle and most of our bedding and considerable other stuff, so that he could ride my mule. We cached our things in a safe place in the timber, each taking an extra blanket under the saddle, and what we could tie on behind, taking care not to overload our animals.

We took some bread and cold boiled buffalo, and at daylight were off, keeping in the timber, which made the traveling much slower. It was cooler and cloudy, and what should it do in the afternoon but begin to snow again. Snow was what we wanted now more than ever. It would check the Indians from moving around, and beside would cover our trail, which could now plainly be seen in the soft ground whenever we went outside of the timber, which we were compelled to do every little while in crossing open spots. It continued to snow fast until after we had made our night camp in a patch of cottonwood timber, when the timber belt on our side of the river gave out, leaving a space of three or four miles to the next belt. We made camp about the middle of the timber, when we discovered we were on a sort of an island, the timber being almost surrounded by a slough, which was still frozen over and quite wide, connecting with the river below, leaving a narrow space at the upper end of solid ground, where we had entered the timber. We shaved bark for the horses, ate a cold snack and made our bed on the snow, which was now about six inches deep, but had ceased to fall.

Next morning we were up early, intending to sleep at the Cantonment that night. I went out to shave a little bark, when I thought I heard a horse snort. So did Lowery, who came to where I was to see if I had heard it. We slowly and carefully walked through the heavy timber. The small undergrowth was heavily laden with snow, making it difficult to see any great distance and the timber getting thicker with willows as we got nearer the lower end. Suddenly we ran on to fresh shod horse tracks and a moccasin track of a white man—the big toe turning back instead of in. We followed the trail a few yards, when we heard two men talking. After listening a few minutes, I recognized the voice of one of them as being the notorious "Yankee Jim," who is at this time the sage of the Yellowstone Canyon a few miles north of the Yellowstone Park. I was well acquainted with him, and had assisted him to some extent in making his toll road through "Yankee Jim" Canyon toward what is now the National Park. We boldly went forward, making noise enough so as not to surprise them. You may rest assured that we were gladly received. The other man was Muggins Taylor, who had been one of Custer's main scouts, and was with Reno, at the Custer battle.

He and "Yankee Jim" had been at this point all winter trapping beaver and drying elk and buffalo meat, of which they had several thousand pounds. They had a lodge made of poles about six inches in diameter and about twenty or twenty-five feet long, placed in a large circle, standing on end and meeting in a small circle at the top. It was covered with raw elk skins, hair side down, and heaped up from the ground to a height of five feet, was from 2½ to 3 feet deep of earth, with port holes in every direction. The remainder of the covering was of skins alone. After talking until quite late, we all went to sleep on a big bed of tanned buffalo robes. The next morning my eyes were paining me dreadfully, feeling as if sand had got in them, and I soon found I was snow blind. Pretty soon I could not open them at all, and as far as Indians were concerned, if I had to depend on myself, I was completely at their mercy should they find us. "Yankee Jim" went to work doctoring me. He took a large boulder which he had brought from the river bank, heated it almost red hot, then bringing me a bucket of cold water told me to sit on the ground with the hot stone in front of me. He covered me over with a large buffalo robe, and directed me to hold my head over the stone and sprinkle cold water on it, and let the steam go in my eyes. This I did and in a very few moments got much better, and by night was very nearly cured.

The next day was beautiful and warm, and as we had lost the day with my eyes, we concluded to make the ride to the Cantonment at night, as we were told the Indians were watching the actions of Gen. Miles from every direction, and a night ride would be much safer, and, in fact, the only way we could get there. We bade our friends good-by and started about 8 o'clock at night, and instead of keeping the river and timber, we took to the bluffs about a mile from the river, keeping under the bluffs as much as possible, and made good headway. When daylight appeared we found we were about one mile above the Cantonment, which was on the opposite side of the river from us. We rode down to the river, near the mouth of Tongue River and close to the camp of Gen. Miles, when we were halted and asked who we were. I told the guard I had dispatches from General Brisbin at Fort Ellis to General Miles, which being reported to General Miles, a boat was sent over after us, and a few minutes more I was in the presence of General Miles, and delivered my dispatch, forty-one days old, but none had been ahead of me from that direction. That route had been abandoned for some time as not possible to be traveled at this season of the year, and all news from Fort Ellis or the East had come by way of the Missouri River and Fort Buford.

What always was a mystery to me was this: I was shown a copy of the New York Sun—I believe it was—giving an account of my running on the ice down the Yellowstone Canyon, and being killed and scalped by

the Indians. How that run was ever found out so soon, sent East, and published and back before I had finished the journey, who reported it and to whom, I never could imagine.

I remained at the Cantonment until in the fall, or late summer, trading with the Indians and soldiers, and looking after the mail from Tongue River to Fort Buford, when I again took the trail toward the headwaters of the Yellowstone on a hunting and trapping expedition.

Coon Tail.

Letters to a Chum.—I.

Chicago, September 22.—Dear Clark: Here we are home again after one of the most delightful hunts I ever experienced, but it is good to get home again. After all, the best part of going away is the coming back.

Well, old pard, I feel almost guilty of something in going away for a good time without you. I felt one-sided all the time I was gone—my right-hand man was absent. I felt mighty queer about it, too; didn't seem right, somehow. I needed my old partner every day. I hope I will have him again next time. Here is how it happened:

Last fall when you and I returned from our Utah hunt I told my wife about our good time, and the wonderful things we had seen. She was greatly interested in my stories, and I sure had some good ones to tell, as you know. We did have a good time and no mistake. I got carried away with enthusiasm in the telling, but didn't romance so very much—didn't have to, you know. She listened with wide eyes when I told of our adventure on Old Ben Mountain, and when I'd finished my yarn, she says: "Why don't you take me with you on some of your trips?" I said: "I'd like to, if I thought you could stand it, but we rough it too much for a lady. We make long journeys over rough country, sleep outdoors, eat anything we happen to have, get our clothes pretty dirty, get dog tired, and have an all around good time for men; but it don't seem just the thing for a lady. You would get sick of it the first day and want to go home."

"No," she says, "I wouldn't do any such thing. I could stand it as well as you can. You know that I could walk as far as you can. I would keep my clothes cleaner than you do yours, and I can excel you in frying trout, broiling venison or making hot bread. I can shoot and I can catch fish."

Now, this was all true, and of course I had to admit it. Still, I was not convinced; but it was a long time till next time—a year—and I thought she would probably forget all about it before that time or change her mind. So I says, "All right, you get ready and I'll take you along on my next year's hunt."

Rash words! And spoken without consideration, but the edict had gone forth, and she held me to my promise. I don't believe there was a day of that year that she didn't say something about our trip. Such planning and such getting ready I never saw. She had her trunk packed four months before it was time to go, and then she thought of a lot of things that she didn't have which necessitated sundry trips down town. Then we had to have another trunk.

She enjoyed the thing so much in anticipation, and I enjoyed seeing her enjoy it, that I don't know when I've had so much pleasure in getting ready for a hunt.

We couldn't decide on a location for a long time. We studied the map of the United States together, and finally concluded that Colorado would about suit us. But what point in that State would we select? That was the rub.

We wrote letters to the postmasters of about every out-of-the-way place we could pick out on the map, with addressed and stamped envelopes for a reply. Soon the answers began to come in and then we were more puzzled than ever. There seemed so many good places to select from. Each one had some advantage that the others didn't have. We could only go to one of them, and wanted the best—didn't want to make any mistake, you know.

Well, we finally sifted the places down to five, and I guess we never would have made a selection if it hadn't been that one of our correspondents said in his letter that he was a guide of many years' experience (so were the other four). He had a complete outfit—horses, wagon, saddle horses, tents, cooking outfit, etc. (The other four had the same). But this man said that he had a good bear and lion dog. That settled it. None of the others said a word about their dog—forgot it, I guess.

Lem Crandall was his name, and he lived in De Beque, Colorado. I want to say right here that we made no mistake in our guide. A better fellow never straddled a "hoss." Tall, straight, and powerful, he seemed to know things by instinct. Eager and untiring in the hunt, modest and retiring in camp. But give him a pipe and good tobacco over the camp-fire, after the labors of the day were o'er, draw him on carefully, and he could tell a story of adventure that would raise the hair on a dead man, and he didn't have to "make them up," either. He had had experience in his thirty years of roughing it.

Well, the time finally came to start, though it was mighty hard waiting for it toward the last. In fact, we couldn't wait for the appointed time, but pulled out four days ahead of time and spent them sight-seeing at the show places in Colorado.

On the morning of August 13 we alighted from the train (D. & R. G.) at Rifle, and found Lem awaiting us at the station, with everything all packed and loaded for an immediate start in to the hills, and it was not long till we were in the wagon on our way north.

But, oh, what a day! The dust enveloped us like a fog, while the sun beat down on us unmercifully. Lem said there hadn't been a drop of rain in that valley for two months, but that we would soon get out of the dust as we left the valley. This was encouraging, and I heard no word of complaint. For about two hours we stifled and cooked. Then we reached the foothills and entered a canyon where the trail followed the windings of a noisy, roaring little brook. As we advanced green trees filled the canyon and covered us with a grateful shade. A cooling breeze sifted down from some cool mountain top, the quaking aspen whispered to us overhead, while the brook sang us a lullaby at our feet. Birds sang in the tree tops, and mountain trout sported in the stream.

What shall I say of such a place? I cannot tell its beauties. I leave it to your imagination. There was only one drawback—the road was all uphill. We had a splendid team of horses, and would not have got to the head of that creek.

Dismounting from the wagon, we walked ahead, leaving the team and driver to follow as fast as they could. Getting out of the dust and hearing of the wagon, we seated ourselves on a handy log and drank in the surrounding beauties. Never had nature made a more beautiful spot, nor a more pleasant. It is beyond me to describe it. I will take you there some day and show it to you.

On we went, and up we went, forgetting to feel tired or weary in that wonderful place. Long before we were ready for it darkness came upon us, and we pulled into a little valley across the creek, where there was a good place to camp, with plenty of grass for the horses. Then we were all busy. Wood to get, fire to build, tent to set up. Then supper. Oh, how good it tasted! No time that night to try for trout, the dark caught us before we were aware of it. But the next morning I was out at the peep of day, determined to have fish for breakfast.

A white frost lay on everything, and our water pail had a scum of ice over it. What a change from yesterday in the valley! Hastily putting a rod together, and selecting a light colored fly, I started down stream. It seemed a joke to fish in such a little stream. It was about six feet wide by two deep. There were fish in there, though; I saw them, and they saw me, too, I guess, for I had no luck. Two fingerlings looked lonesome in my basket when warned by the sun peeping over the hill that it was time to go to breakfast.

Walking up the trail that we had come over the night before, I saw a fresh deer track crossing the road, with one hoof mark in our wheel track. I was feeling cold, hungry and desolate, but when I saw that track my pulse went up, and my heart rejoiced again, as I eagerly scanned the hills for a sight of him, but he was not visible.

Reaching camp I found breakfast ready, and a big bright fire that warmed my shins and dried my wet garments. The bay horse was at camp eating his oats, but the gray had not come in with him, so I went out to look for him.

Going out in the direction the other had come from, I gave a call to him, and heard an answering whicker up among the trees, and presently Old Gray came hobbling out into sight 200 yards away. But what a sight! He could not walk. His leg was broken or his shoulder out of joint. I couldn't tell what was the matter with him. When he saw me he whickered again so pitifully that I could not bear to look at him. My heart went away down into my boots. Good, honest, faithful Old Gray suffering like that! How will we get on without you? One horse can never pull us up those hills, and the saddle horses are forty miles away, up at our permanent camp.

I hardly had the courage to go up and look at him. I hesitated and turned back to get Lem. Then, getting my wits again, I went on and Old Gray hobbled on to meet me. Poor old fellow! He talked to me in horse language, trying to tell me about it, and a sob came into my throat as I went up to him. Then I stopped and stared. Then I laughed and shouted as I hadn't done for many a day. Old Gray had his front feet tied together with a rope.

Clark, did you ever think you were falling off a precipice—down, down to sure death, and just as you struck bottom, wake up to find yourself in a nice warm bed and everything all right? That's how I felt.

Bundling our camp into the wagon we joyously went on our way, up and up, hill after hill, always following the crooks of the creek. Lem said that this forenoon would be our hardest pull, that we would all have to walk for about ten miles, then we would be on top of the mesa and could all ride as much as we liked.

So we trudged on cheerfully, my wife and I in the lead; now through a box canyon with bare old rocks rearing their height a hundred feet above our heads, almost coming together at the top, now through a wooded dell, every tree set by a plumb-line so straight were they. Everywhere a deep dark green, only where Jack Frost had set his mark. Animal life everywhere. Strange birds that I had never seen before. A kind of bluejay and magpie, then a covey of mountain grouse trot out of the road and stand looking at us wonderingly. Luckily I had my .22 short Winchester repeater in my hand with the magazine full of cartridges. There stands a grouse at forty feet in plain view! Taking a quick aim at his head I unhitch, and the grouse don't move. Then again, and again, with the same result. My wife titters behind me and I am becoming exasperated. Confound that bird! I'll make him move, and aiming at his body I knock him over. Then turning on another I lay him out, but he dies hard and flutters around, making such a racket that the others are alarmed, and some fly while others run off into the bushes.

Gathering our birds as we go, we pick our way carefully through the bushes, looking for another, but they are hard to see. Pretty soon my wife whispers, "There's one." "Where?" "There on that log." But I can't get my eye on him, so I hand the gun to her and she aims at him. Then I see him very plainly about a hundred feet away, the most conspicuous object in view. I hadn't looked high enough. Rose tries her best to hold the gun still, but the excitement has got into her veins and she wabbles. "Steady now." And she nerves herself, holds the gun steadily an instant and touches the trigger. Over goes the bird and I congratulate her on the shot, but we fail to gather him—must have been crippled and ran away, which makes Rose feel very badly. "Poor thing," she says. "I wish now I hadn't shot at him at all." I finally convince her that if it was a mortal wound he is dead by this time, but if it is a flesh wound he will be well in a few days, and her face clears.

Lem and the team have pulled up opposite us and stopped. "What did you get?" he says. I hold up the two grouse. "How many was there?" he asks. "Oh, about a dozen or fifteen," I says. "Well," he says, "you ought to've got mor'n two of 'em. What was the matter—couldn't you hit 'em?"

Now, I thought we had done pretty well. We had enough meat for dinner; but after I had seen Lem operate on a covey of nine grouse for about nine seconds with that same gun, then go and pick up all of the nine, each shot through the head, I began to understand what could be done with a .22.

On we went, up and up, the breath coming fast and loud, but we had no time to think of being tired. We were in fairyland, with thoughts only for the surroundings. At each turn a new view bursts upon us. Here a mighty monarch of the forest of magnificent proportions had fallen across the trail and some former traveler had cut out a section of the bowl, making a passage for the wagon. What a splendid tree it must have been! At least one hundred feet, perhaps more, and straight as an arrow.

Further on we find a spring of clear, cold water gushing out of the rocks, making a streamlet across the trail down into the creek. We get out our pocket drinking cups and sample it. How good it tastes!

Look there! Just at the junction of the two streams in the mud, what tracks are those? Good Lord! they almost make my hair raise. I had never seen a bear track, but I had heard of them, and there they were, life-size, looking as if they had been made but a moment before. We glanced quickly around, half expecting to see him coming for us, and only a .22 to meet him with.

"What's that?" my wife says in a hoarse whisper, holding up her hands in a listening attitude. I hear a rattle down the creek, then a cheery "Go on there, Barney," and Lem comes into view with his puffing horses.

Lem got down and examined the tracks. "Yes," he says, "that was a pretty sizable silver-tip. Must have gone along early this morning. No telling where he is now; up on the Macy, mebbe."

"D'you notice that feller in the wagin we passed 'bout an 'our ago, with his arm in a sling and his head tied up? That was ol' man Harris. Lives back there a piece whar you see them hay stacks in the little bottom at the forks. Well, 'bout two weeks ago he was up here sum'ers lookin' after his cattle, an' he run across a little cub. Thought he'd take 'im home, as the cub looked lonesome. No old bear around as he could see. So Harris got off his hoss and caught the little cuss after a right smart run and started back to his hoss. Didn't get fur, though, till he run right smack into the wust kind of trouble. The old bar was on him 'fore he know'd it. Well, this is the fust day he's been out. He tole me just now that the ole bar's hide was nailed up on the stable. Done it with his knife alone. He was a blamed ole fool, though, to tackle a cub at this time o' year 'thout shootin' the ole bar fust."

Clark, it makes a tenderfoot feel funny to see in front of him a bear track about the size of a dishpan, and about two minutes old, and no gun handy. He feels like making a fool of himself right then and there by climbing a tree till things get settled. I went to the wagon and got out my .30-30 Savage and filled the magazine with soft-nose bullets. Then I felt better, but we walked along the wagon for awhile.

All long roads come to an end if you follow them far enough, and about 1 P. M. we reached the topmost hill. And what a view opened to the vision!

Lem stopped the horses and said we could get in the wagon if we wished. You bet we were dead willing. My wife had walked with a quick and springy step all of that long steep climb, and never once complained of feeling tired. I don't believe I was ever more "beat out" than I was right then, but I kept it on the quiet. I guess we had both determined not to peep first.

"Thar," says Lem, pointing to the southward, "is Man's Cap, seventy-five mile away, and here," pointing to northeast, "is Sleepy Cap, sixty mile away."

Neither of the peaks looked to be over five or ten miles away, and both stood out clearly and plainly above all the other lesser mountains.

Lem said that we would drive about a mile further, where we would find a good spring of water, and would camp there for dinner.

Up at the spring we found a large camp, with several men lolling around in the warm sunshine. One of them came forward and asked if we had a permit to camp on Government land. Lem answered in the negative. So the man said that if we would walk over to his camp he would write us out one.

This was something new, but the man said it was necessary; that he was a game warden with instructions to arrest anyone found camping without a permit. Luckily it only cost fifty cents, so we got the permit and went into camp about a quarter of a mile away in a grove of trees.

Soon our coffee pot was boiling, but we didn't have any fried grouse that day. Lem had hidden them somewhere, and whispered to me that the open season for grouse and deer did not begin till twelve o'clock that night (August 15).

We had an abundance of tinned stuff, and it never tasted better. While we were eating our dinner a cowboy rode up on his pinto, and told us that a bear, a big silver-tip, had killed one of his steers the night before about a mile and a half from there, and that he had just seen him near the carcass.

I was now full of courage, so I told Lem to hurry and unharness the horses so that we could ride out and get Mr. Bruin. But now occurred the first disagreement my wife and I had on the trip. She wanted to know what I was going to do. "Shoot the bear," I says. "Yes, and get all chewed up like the man we met in the wagon," she says. "Oh," I says, "there's no danger on a horse; besides, I'll kill him dead the first shot." "Like you did the grouse," she says. "You are not used to hunting bears and you shan't go; besides the horses are tired now, and we've a long way to go yet to-day."

Well, after some more argument, and after I'd promised to only go over and look at him, I gained a reluctant consent. Meanwhile, Lem had been pottering around, making no headway at all. He seemed very reluctant to start out for some reason, which surprised me mightily. He now beckoned me around behind the wagon and said: "See here, Mr. Paddock, if you say so we'll go and kill that bear, but I'm not in favor of it. My gun is up at the camp for one thing. I wanted to go as light as possible, so left everything there when I came away that I did not absolutely need. But my main reason is that the bear's

hide will be absolutely worthless if killed at this time of the year. Two months from now it will be worth $100, and that's a good deal of money to me."

That kind of argument was unanswerable; besides, I had shown up my courage bravely. So I said, "All right, then, we'll let him go."

So we hitched up the horses and went our way. About five miles of comparatively level road was before us. Across the mesa green grass, green trees and thousands of wild flowers everywhere. The man that gave us the camping permit had told us that about two inches of snow had fallen on August 10, which seemed mighty queer to me. It hadn't done any damage that I could see. The air was keen but the sun was warm.

After crossing the mesa we began to descend. Down, down, down, nearly all the afternoon, through a rather unattractive country. About all of our attention was absorbed in hanging on. We made good time, and before sundown we pulled into the camping place selected by Lem for the night, on the bank of a raging torrent that Lem said was full of trout. So hastily getting things in shape for the girls to get supper, Lem and I got out our rubber boots and fishing outfit, and were soon in the water. Only about twenty minutes of daylight remained. I did my best, but did not get a bite. Lem landed three beauties, and we soon had them in the pan.

That night we had a concert of wolves. It was a clear, frosty night, perfectly calm, with millions of stars blazing down on us, and later a big moon came up. Sound carried well and for some time we lay enjoying the music, snugly tucked away in our sleeping bags. The next thing I knew the sun was shining brightly through the canvas, and a hundred blackbirds were twittering on the ground outside where we had fed the horses their oats.

Hurrah! the open season is here. We'll kill a deer today or bust. Everybody was hungry and happy. A little stiff in the joints at first, may be, but that soon wore off.

More fish have to be caught while the coffee pot is doing business. "Where's Lem?" "Get up, you lazy fellow, it's almost noon." (Lem slept in the wagon.) No answer. Going up to the wagon I find his nest empty and his fish pole gone. Soon he came out of the willows with four speckled beauties, one of them weighing 2¾ pounds. Oh, why did I sleep so long!

Lem said that our permanent camp was only about twenty miles away now. With a fair road and with good luck we ought to be there soon after noon.

If you had one of our appetites, you would enjoy reading about that breakfast—fried trout, hot biscuit, bacon and coffee. Ye gods, what a feast! But time flies. I must hasten on.

[TO BE CONTINUED.]

Natural History.

The Intelligence of the Wild Things.

False Natural History.

BY HERMIT.

I HAVE before me the Atlantic Monthly for March, containing Mr. John Burroughs' attack on Ernest Thompson Seton and the Rev. William J. Long.

I do not care to express an opinion on either side at present, but do desire to call attention to some of Mr. Burroughs' false natural history. Mr. Burroughs is a naturalist who is widely quoted by other writers, and should not, to use his own language, "Disseminate false notions of nature."

Keen observers are springing up throughout the world, and their studies of nature are deeper, and far more logical and far beyond the knowledge of Mr. Burroughs' studies if one must judge by his writings. Mr. Burroughs is positive in his statements. Too positive, for he is careless enough to contradict his statements in many cases. I will quote one of his positive statements: "There is nothing in the dealings of animals with their young that in the remotest way suggests human instruction and discipline."

This is a broad statement, but Mr. Burroughs contradicts it in the same paper. He contradicts it when he tells how the crows teach their young to forage; when he tells how birds induce their young to leave the nest, and when he relates how doves push their young from the dovecot to make them use their wings. If Mr. Burroughs will visit the Central Park menagerie and the Zoological Park, up in The Bronx, in his own State, he will see animals chastise their young. Two ways of chastisement are decidedly human. By spanking and by a box on the ear.

"The New Babies at The Bronx" is the title of a paper in FOREST AND STREAM, March 28. The writer, when referring to Susie, the baboon mother, states in relation to her baby:

"When he got a bit obstreperous she gave him a dainty box on the ear, and then smoothed his head anxiously to make sure she hadn't hurt it. The baby squeaked, but he was good after that."

Reads like human discipline, don't it? I will quote further:

"It appears that chastisement is an important part of animal bringing up, as seen at the Zoo. All the animals have different ways of chastisement for their young, but all the children get it, and some of them get it hard."

Last spring I saw an old crow discipline her baby. I was watching the nest from a bluff, which was nearly on a level with the nest. The three young crows were calling for food in dead earnest. A crow came and fed one of the youngsters. Another came and fed number two. This crow discovered me, and instantly called to the babies to stop their cries. Two stopped, but the third, the hungry one, cried louder than ever. The old crow circled above me, then flew to the tree and knocked the baby crow into the bottom of the nest. This rough usage stopped its cries, but it was discipline just the same. The crows bring their young to my cabin door yard when I am absent. On my return the old crows fly away calling the young to follow. It often happens that the latter remain without fear of my approach. The old crows return and beat the youngsters until they are glad to obey. If these young crows were left to themselves, I would soon have them tame enough to eat from my hand, like the chickadees. But the old crows give them lessons in wildness until they become as wild as their parents. It is instruction beyond a doubt.

A pair of towhee buntings come to my cabin for food. The male bunting takes charge of the first brood, while his mate rears a second brood. When the second family appears, the male bunting takes his charge to a bird resort. It sometimes happens that a young bird finds its way back. The old bunting pounces on the little one; gives it a severe whipping and takes it to the resort again. Truly, the young bird gets a lesson that is very much like human discipline.

I could fill a volume with proof that animals chastise their young, but it is unnecessary, for any one can visit a Zoo and find proof for himself. So much for one of Mr. Burroughs' positive statements; here is another:

"No bird teaches its young to fly."

This is positive enough, but as usual, Mr. Burroughs contradicts it. He writes: "I have often thought that the parent birds sometimes withheld food for the purpose of inducing the young to leave the nest." Then he adds: "The common dove will undoubtedly push its fully fledged young off the dovecot to make them use their wings."

In the name of common sense, why did Mr. Burroughs, with this knowledge, positively assert that "No bird teaches its young to fly." That assertion will stand and be quoted by scores of writers. Thousands of persons have seen the swallows teach their young to fly. The parent swallows take their young, perhaps two broods, to the fences or telegraph wires, and at short intervals teach them to fly. Soon the birds will gather, in what might be called companies. They mount and wheel and drill until the young are hard of muscle, and can touch elbows, and are fitted for the long, dangerous journey South. In the face of these facts Mr. Burroughs asserts: "No bird teaches its young to fly." Here is another assertion:

"The young of all the wild creatures do instinctively what their parents do and did."

If this be true, why don't a tame crow fly to the clam flats; or to the beach when the tide is out; or to the carcasses of horses in the woods, as its parents do and did? Mr. Burroughs may claim that the change is due to tameness, but the argument will not hold. When farming in Maine, if I caught a young crow in the cornfield, in a foot trap, and tamed him, I found he would pull up corn the following spring. All through a long cold winter he had remembered the lesson taught him by his mother. Young crows taken from the nest would not pull up corn, although their parents before them did. They had been fed on sprouted corn, but without a lesson in the cornfield did not connect the food they craved with the rows of green blades.

Wild fowl, bred on our northern lakes, will not go south without old birds to lead the way. I have hatched black duck's eggs under a hen, but the young did not go south, as their parents did before them, although their flight feathers were perfect. Farmers around me had flocks of wild black ducks, hatched under hens. I never heard a flock that went south. One flock foraged on a trout brook until cold weather. Their life was nearly that of the wild ducks, and I thought they might go south, but instead, they trooped to the farm buildings for food and shelter. They did not go south, as their parents before them did, because they had no old bird to lead the way.

"The bird sings at the proper age," asserts Mr. Burroughs, and then adds: "Without a hint from its parents."

A song sparrow in my dooryard has failed to comprehend this law of nature laid down by Mr. Burroughs. He is teaching his year-old boy to sing. I stop my writing to listen. The old bird sings the mating song, note for note, but in a much lower key than usual. The young bird imitates the singer in an imperfect song, he sings one song after another rapidly, while the old bird sings at short periods, just often enough to give the beginner a lesson. The old song sparrow has visited my dooryard for fourteen years. He would desert the fields for a life in the woods, if his wife would consent. As it is, he puts in many days, spring and fall, at the log cabin. He is usually alone, but sometimes he brings one of his children with him. If it is a female he does not teach it how to sing, but does teach the young males. When the old bird is alone he does not sing the mating song, but instead sings a low twitter by the house.

I often take my visitors to a wood thrush's singing school. The old male sings the loud clear song, then the young males begin. Some sing one note, some two. Some notes are hoarse, others are shrill. As the birds forget their lesson, they drop out one by one, and when all are silent the old male sings again, and so it goes on for hours.

It appears that Mr. Burroughs tried to discourage an amateur naturalist, who had discovered a fact in her observations. I quote from his paper:

"The other day a lady told me she thought she had heard a robin in the summer teaching its young to sing. But I said the young do not sing till the following year, and then only the males. If they are taught why don't the females sing?"

The lady was right, robins do teach their young to sing, and teach them all the call notes besides. I hear the old males sing, for the purpose of teaching the young, every season. The singing is not in the loud notes of the mating time, but is confined to a minor key. One cannot go blundering through the woods and hear the robin teach its young. It takes hours of patient observation to overcome the fear of man, before the robins will go on with their domestic affairs. When Mr. Burroughs flippantly asked: "If they are taught why don't the females sing?" the lady could have asked in return, why don't the females sing, anyway, like the males, if they are not taught?

The little girl plays at housekeeping and imitates her mother. Through observation and teaching she will in time become proficient in domestic affairs. The boy whistles and whittles and imitates the man. It is just the same in bird life. The young females learn nest building and how to rear a family, and the young males learn to sing. These young birds learn by observation and by teaching.

Mr. Burroughs asserts: "A young bird takes its appropriate food without a hint from its parents."

Again Mr. Burroughs contradicts himself. Here is what he writes:

"You may see the old ones (crows) with their young foraging about the fields, the young often being fed by their parents. It may be permissible to say that the old are teaching the young how to forage."

Yes, and all the birds teach their young how to forage, from warblers to crows. It would be a poor observer that could not understand that the old birds are teaching the young how to procure food. Robins, catbirds, buntings and oven birds bring their young to my dooryard and feed them on bread. When the young birds are old enough their parents give them a hint to feed themselves. An old bird will drop bread before the baby, with some sort of a clucking note, which may mean "help yourself." The young bird takes the hint when right down hungry and picks up the food.

According to Mr. Burroughs, the old roosters do not teach the young to crow, and the cock grouse does not teach the young male to drum. Writers on natural history, for many years, have called attention to the drumming of the grouse in the fall, heard mostly in the night time. Some have claimed that the old males were teaching the young, and my experience leads me to believe that this is the true solution to fall drumming. For eighteen years it has been my practice to sleep in the open air from April to December. I hear all the wild sounds that abound in the woods, and some of these sounds are very interesting. Not far from my cabin there is a boulder where the grouse drum. In the early fall, before the birds are scattered by hunters, I hear the old grouse teaching the young to drum. The old bird sends up the roll with as much force as in the mating season. The young birds, at first, make a poor imitation of the roll, but keep trying every evening, until they meet with fair success. Hearing I believe, and no assertions by Mr. Burroughs can make me discredit my sense of hearing. Mr. Burroughs asks: "Does the rooster teach its young to crow?"

Certainly it does. I am surprised that Mr. Burroughs should express a doubt on the subject. I have understood that he was reared on a farm, and I supposed that all farmers knew the proverb: "The old cock crows and the young one learns." The old roosters confine their crowing mostly to the morning hours, until the young roosters are old enough to learn to crow. Then they crow throughout the day, at short intervals, to show the young the proper thing. The young birds slowly acquire the true notes, but the old ones patiently continue the lessons. Young birds removed out of hearing, will not learn to crow. A grasshopper year, when I was farming, threatened the destruction of a large field of cabbage. I put up a chicken house in the center of the field and stocked it with over a hundred chickens. There was a large number of males in the flock, but not one attempted to crow, although they remained in the field until cold weather. Their mates left at the poultry house had become fair crowers, under the teaching of several old roosters. As soon as the young roosters returned to the poultry yards they began to learn to crow. Every now and then, poultry papers bring out the fact that young roosters will not crow without a teacher. Mr. Burroughs and the cat:

"The cat brings her kitten a mouse, but does she teach him how to deal with the mouse? Does he need to be taught?"

That a naturalist should ask such questions is beyond my comprehension. I thought every one knew that cats teach their kittens all the ways of cat life. It was my first lesson in natural history. In my boyhood days a fall confined me to the house. At the foot of my trundle-bed a litter of kittens in a basket afforded me amusement. I noticed the thin voice that gradually developed into the strong mew of the old cat, and I knew the mother was continually giving a lesson in cat language. When the kittens were old enough to leave the basket I was surprised to see the old cat playing with them. Pussy, as we called her, was a staid old cat, and I did not know that she had any play in her. I soon noticed that she played with each kitten. She had no favorites. After a while it dawned on me that Pussy was teaching her kittens how to fight. The arched back and spiteful spitting was soon acquired by the kittens, and they practiced together. The mother gradually dropped out of the game when the young ones took it up. Pussy's family was reduced to one kitten. As this kitten had no mates to practice with, the old cat gave it lessons again in self-defense and aggression. She taught the kitten how to deal with a mouse. She would drop a live mouse near the kitten and then stalk it when it attempted to escape. The kitten looked on several days and then tried to imitate the old cat. The mouse nearly escaped. Pussy caught it, just in time, and let the kitten try again. This time the kitten succeeded in catching the mouse. The old cat often brought in a mouse, but was a long time before she would allow the kitten to deal with it alone. When the kitten's education was completed, Pussy gave it to understand that it must strike out for itself. When the kitten persisted in following its mother, crying for its natural food, the old cat would turn and box its ears soundly. Very like a human mother when she boxes the ears of the child for over-teasing.

Mr. Burroughs would have us believe that animals are born with a knowledge of the calls common to their parents. Messrs. Long and Seton never promulgated such an unnatural theory as this. As well claim that the human baby is born with a knowledge of the language common to its parents. Mr. Burroughs says:

"Young chickens and young turkeys understand the various calls and signals of their mothers the first time

they hear or see them. At the mother's alarm note they squat, at her call to food they come, on the first day as on the tenth."

From my own observation I know that this statement is founded on error. When farming I handled thousands of chickens, hatched in the old way, under hens. Mr. Burroughs claims that chicks understand calls the first day as on the tenth. The first day of a chicken's life is a blank. It is hovered by its mother nearly all the time. It knows nothing of calls the first day. It gradually learns the calls of the mother. The call to food first, the call to hover next and the danger call last. Chickens hatched under turkeys soon learn the strange calls of the turkey mother. Ducks hatched under hens soon learn the meaning of the calls of the mother hen. Certainly Mr. Burroughs cannot claim that chickens and ducks understand the calls of their foster mothers when first hatched. This would be too ridiculous for a thinking mind. Now, if a chicken can learn calls in a strange language by observation and association, why not learn its mother's calls in the same way? The mystery would not be half so great as it would be to claim that a miraculous power implanted in the chicken a knowledge of its mother's calls, before it was born.

Without a mother's care, guidance and teaching wild life would be blotted from the face of the earth. A grouse hatched thirteen chicks within sight of my cabin. When the young were ten days old the mother was killed by a stoat. I looked after the orphans for several days, but they perished one by one. Without a mother's care and teaching their fate was inevitable. I leave the subject here as I do not care to occupy more valuable space.

Red Squirrels.

I WAS greatly interested in "Hermit's" article on Red Squirrels, and can attest the accuracy of his observations, as most of what he describes I have seen squirrels do. As he has the advantage of living among them in the open country where English sparrows and rats are common, he has seen some things which cannot be seen in the deep woods. His account of a battle between a squirrel and a rat was something entirely new to me. I had not supposed that a squirrel was able to defend himself against a rat.

I think the reason why people know so little of the habits of squirrels is that they are so common that everybody thinks he knows all about them, and so takes no pains to observe them. Thirty or forty years ago I thought I knew all there was to be known about red squirrels, and so rarely spent much time watching them. I had always seen them eating pine and spruce cones, but I had no idea they ever cut and stored those cones or that they ever followed any particular method in eating them. It surprised me to find that they had a regular time to cut them, as a farmer has to gather any crop, and that they gathered them for the seed only, and always handled them in the same way when getting the seed.

As most people know, cones are covered with soft pitch when green. As the season advances the pitch dries up into separate particles and later the scales bend back and the winged seeds fly out on their mission to reforest the surrounding region. After the seed is gone the cone is of no more use to the squirrel than a corn-cob would be to the farmer. Knowing this, the squirrel cuts his cones just at the time when the seed is ripe, but before it is detached from the cone. He works for hours at a time and for days in succession doing this until he has all he cares for. These cones he stores up in some dry place to furnish him with food during the following winter. In most cases he places them in piles among low bushes, or on rocks or in holes under stumps. I have sometimes seen as many as two hundred pine cones stored in one place. When he wishes to use one for food, he sits upright and places the cone small end down; then he cuts off the upper scale at the butt, exposing the seed beneath. In a pine cone the seed is about the size of an apple seed. In a spruce it is the size of a turnip seed. He cuts off a scale to get at each seed, and as the scales are arranged in spiral rows he keeps turning the cone as his work progresses. When enough of the central pith has been stripped so that it interferes with his nose, he cuts it off and gets it out of his way. Many people think that he eats this central pith, but the seed is the only portion eaten. Knowing that the seeds near the small end of the cone are undeveloped and worthless, he rejects the tip of the cone.

Squirrels in late fall and winter are more local than most people suppose. They do not wander a great way from their stores and will bore down through several feet of snow to find them. Many think that they can find a cone under the snow by scent, but I feel quite sure that it is by remembering the spot where they stored them. I have noticed that when a very hard crust has been formed by an ice storm, so that they cannot get their cones, they will live for days entirely on the mast of the white birch. They can, and sometimes do, live for weeks at a time on the buds of the elm. A few years ago a squirrel took up his residence for the winter under the outbuilding of a neighbor. Within a few feet of where he lived was an elm tree, the only tree that he could reach without going some distance. He used to climb this tree nearly every pleasant day from December till into March and eat the elm buds. We watched him with a field-glass and could see the buds as he ate them. He certainly got no other food for some three months. When it was stormy sometimes he did not appear for several days at a time. In all my traveling in the woods I never saw a squirrel eat an elm bud, but this one lived all winter entirely on elm buds.

Most people know that squirrels tap maple trees for the sap, and when writing of it speak of the squirrels sucking the sap. I have seen squirrels getting sap for some sixty years, and always thought that they sucked, till this winter I had a chance to learn better. Though living in a city, a pair of squirrels took up their abode in my attic last fall and stored a great quantity of horse chestnuts for their winter supply. Early in the winter a cat caught one of them, but the survivor has remained till the present date, March 27. As the weather of late has been unusually warm, he tapped some limbs in warm days in January, but in March he began regularly. A maple grows so close to a chamber window that one can reach its branches with the hand. As I have been for weeks confined to my chamber by illness, I have had such an opportunity to watch him as one seldom gets in the woods. I was very much surprised to find that he did not *suck* the sap. He lapped it with his tongue. There could be no mistake, as often he was within six or eight feet of me, and I could see his tongue plainly. I watched him day after day, and while in some cases he would hang back down under a horizontal limb and let the sap drop into his mouth, in all other cases, whether lying head up or head down, or holding on crosswise, he always lapped it with his tongue. He did as I have often seen others do, keep busily getting sap for a while and then stop and wait quite a spell before resuming work. I think they do this to let the sap thicken by exposure to the air. While this may not be the true reason, I have been able to give no other for their action, as there is always plenty of sap flowing if they wished to keep busy. I notice that the squirrel sometimes varies his sap diet by going to an elm close by and getting a few buds, but he seldom eats many at a time.

While many years ago I thought I knew all about red squirrels, I now think that there is a good deal yet to be learned about them.

MANLY HARDY.

A Remarkable Rat's Nest.

THE remarks on the wood rat's nest recently published from the always entertaining pen of our California friend, Ransacker, recalled to us an account of a mountain rat's nest published nearly thirty years ago in FOREST AND STREAM under the title given above. We reprint it here:

Mr. A. W. Chase in a recent letter to one of the editors of the American Journal of Science, gives the following account of the habits of the California wood rat—*Neotoma*, no doubt:

"While on the northern coast, I noticed a fact in natural history, to me quite curious, regarding the habits of the so-called wood rat. I am not sufficiently versed in such matters to give you the name of this interesting creature. It is a little larger than an ordinary Norway rat, dark brown in color, with large, lustrous eyes, and a tail covered with thin hairs. This creature builds its nest in the woods, sometimes on the ground; more frequently on the lower branches of trees. They accumulate a surprising quantity of dried twigs, which they interlace to form a dome-shaped structure, often ten or twelve feet high and six or eight feet in diameter. Openings in the mass lead to the center, where is found the nest, consisting of the finely divided inner bark of trees, dried grass, etc. But it is to the peculiar thievish propensity of this little creature that I wish to call your attention. To make my story intelligible, I would first state that I am partial owner of some property on the Oregon Coast, on which a sawmill had been placed, but which, owing to various causes, has never been in operation. On this property was a dwelling house for the hands, in which, on work being discontinued, was stored a quantity of stuff—tools, packing for the engine, and six or seven kegs of large spikes; in the closet, knives, forks, spoons, etc. A large cooking stove was left in one of the rooms.

"This house was left uninhabited for two years, and, being at some distance from the little settlement, it was frequently broken into by tramps, who sought a shelter for the night. When I entered this house, I was astonished to see an immense rat's nest on the empty stove. On examining this nest, which was about five feet in height, and occupied the whole top of the stove (a large range), I found the outside to be composed entirely of spikes, all laid with symmetry, so as to present the points of the nails outward. In the center of this mass was the nest, composed of finely divided fibres of the hemp packing. Interlaced with the spikes we found the following: About three dozen knives, forks and spoons, all the butcher knives, three in number, a large carving knife, fork and steel, several large plugs of tobacco; the outer casing of a silver watch was disposed in one part of the pile, the glass of the same watch in another, and the works in still another; an old purse containing some silver, matches and tobacco; nearly all the small tools from the tool chest, among them several large augers. Altogether, it was a very curious mixture of different articles, all of which must have been transported some distance, as they were originally stored in different parts of the house.

"The ingenuity and skill displayed in the construction of this nest, and the curious taste for articles of iron, many of them heavy, for component parts, struck me with surprise. The articles of value were, I think, stolen from the men who had broken into the house for temporary lodging. I have preserved a sketch of this iron-clad nest, which I think unique in natural history.

"Many curious facts have since been related to me concerning the habits of this little creature. A miner told me the following: He once, during the mining excitement in Siskiyou county, became, in California parlance, 'dead broke,' and applied for and obtained employment in a mining camp, where the owner's hands and all slept in the same cabin. Shortly after his arrival, some articles commenced to disappear; if a whole plug of tobacco were left on the table it would be gone in the morning. Finally a bag, containing one hundred dollars or more in gold dust, was taken from a small table at the head of a bunk, in which one of the proprietors of the claim slept. Suspicion fell on the newcomer, and he would perhaps have fared badly, for with those rough miners punishment is short and sharp; but just in time a large rat's nest was discovered in the garret of the cabin, and in it was found the missing money, as well as the tobacco and other articles supposed to have been stolen."

The same wood rats are among the greatest pests of our western country to those who live in log cabins. They establish themselves in the roof beneath the sod, and once in possession they seem to be constantly on the watch to see what they can carry off. We have long been familiar with their purloining proclivities, and have even suffered by them, but the above narration far exceeds any experience of our own. Can any of our readers match it?

Massachusetts Bird Arrivals.

EAST WAREHAM, Mass., April 9.—*Editor Forest and Stream:* I notice in your issue for April 4, that Morton Grinnell remarks on the early arrival of the white-bellied swallows at Milford, Conn. My record for the last five years gives the following dates for this locality, which is 125 miles east northeast from Milford: 1899, April 4; 1900, April 4; 1901, March 26; 1902, March 22; 1903, March 18.

I have a box that these birds use to nest in every year, and have observed that the first birds to arrive are males. It is singular that although there are two separate compartments in their box, they have never used but one. Each year they raise one brood, and still, while several pairs come around to examine it every spring, only one pair use it. On several occasions I have had to oust the English sparrows that took possession before the swallows were ready. At first I watched their proceedings and destroyed their nest before any eggs were deposited. This did not discourage the sparrows, and when my vigilance slacked they got to work and had five eggs laid before I was aware of it. I may say that this box is placed on the inside of one of the gable ends to my barn, and two holes are bored through for the birds to enter. This situation was chosen so that cats could not disturb the occupants, and at the same time the box could be examined and undesirable tenants ejected. I cleared out the sparrows nest, eggs and all; still they would not give up, and drove the swallows off whenever they came around. I finally shot the female sparrow and for two years no sparrow has ever peeped into it.

We have a post near by on purpose for the male swallow to sit upon while the female is on her nest.

Other arrivals have been noted as follows: Redwinged blackbirds reported on February 25; I saw them on March 5; bluebirds on the 4th; wild geese on the 7th; song sparrows on the 8th, pine creeping warbler April 6, and field sparrows singing on same day. We have had no snowflakes, no crossbills, and I have not seen a pine grosbeak in the last five years.

Game birds wintered well, and twelve quail of our home flock survived. Pheasants are in sight every day; mine were turned loose early in March, and one of them comes to the barn about every day to be fed; she comes right in without fear and eats corn at my feet.

WALTER B. SAVARY.

A Misleading Tail.

Editor Forest and Stream:

I am very sorry to have to disagree with Mr. Charles Hallock in a statement which I understand him to make on page 293 of FOREST AND STREAM of April 11. He says: "Wolves and coyotes have a sneaking way of carrying their tails low, almost dragging on the ground, while dogs carry their tails up: and the further removed they are from the feral type the higher they carry them. Shepherds and collies, which retain many of their racial characteristics, carry their tails lowest of all; setters and pointers, a degree or two higher, stiffening out straight when drawing on game. Terriers and hounds elevate their tails to the spinal line; St. Bernards and Newfoundlands affect a curve over the back, while pugs actually come to a full twist."

My observation is that American wolves often carry the tail high, just as dogs do. The same is true of foxes, especially of the little kit fox (*Vulpes velox*), which is so familiar an animal of the plains.

We are accustomed to think that wolves carry their tails low and in a "sneaking" fashion, chiefly because we always see wolves frightened and running away from us, at which time the wolf lowers his tail, precisely as a frightened dog lowers his. In the same way, a wolf that is greatly terrified put its tail between his legs just as a dog does. In support of these statements, let me quote at some length from my article entitled "Wolves and Wolf Nature," published in 1897 in one of the books of the Boone and Crockett Club:

"I have often seen wolves, young and old, at play when they were ignorant of my presence, and have been impressed by the similarity of their actions to those of the dog under like circumstances. When not alarmed they often hold the tail high up. I have seen them hold it nearly straight up, and also curved up at various angles, as a dog may hold his. To show affection or friendliness toward their fellows they wag their tails just as a dog does: and some young wolves seen a year or two ago in the zoological park at Washington on the approach of the keeper showed the evidence of affection and delight that a dog would at the approach of a friend; laying back their ears, grinning, wagging their tails and wriggling their bodies in an absurd transport of joy. When the wolf is frightenend, it tucks its tail between its legs and forward under its belly precisely as does a frightened dog."

This is of the gray wolf, the so-called timber wolf, buffalo wolf or lobo of the plains; but I have seen precisely the same thing in the prairie wolf, and I am not alone in this, since in the same article I quoted from Mr. Lew Wilmot, an old timer in the western country, who, speaking of the coyote, said:

"On another occasion I was coming down from a neighbor's, when near the bottom on the Columbia I noticed a couple of coyotes hunting through the grass and low bushes; they had their tails up like dogs and seemed to be as busy.

"Soon they were joined by two more, and all had their tails up, and as they had not discovered me, I waited to see what they were after. I never saw dogs hunt through a flat more diligently than they did, and it was very amusing to see them with their tails up. I think they were hunting chipmunks. Not having anything to shoot with, I started on, and when they saw me they started off up the gulch, but lowered their tails coyote-like."

The coyote has often been seen to point game, and when doing so holds his tail straight out behind him, just as a stylish setter or pointer holds his.

"As he is usually seen, the coyote gives the impression of a down-trodden, much-bullied animal, that desires nothing so much as to get away. It sneaks along with downcast mien and lowered tail and casts fearful glances

backward over its shoulder, as if it expected every moment to have a stone thrown at it. But if you happen to be without a gun when you meet it, there is no animal on the prairie more unconcerned and impudent. They will bark at you from a nearby hilltop, or trot a few paces from the trail you are following, and lie down and yawn as you ride by with an assumption of being bored that would be aggravating if it were not so comical."

In the old days on the plains country when one would no more have thought of shooting at a kit fox than at a buffalo bird, these little animals were extremely tame. It was a very common thing to come upon them lying at the mouths of their burrows or indeed anywhere on the prairie, and to see them get up and walk about for a moment or two with the tail held absolutely vertical. After a brief inspection they would commonly retreat to their holes, or trot off to a distance; then carrying the tail straight out behind them.

I do not venture to say why some dogs carry their tails in one way and some in another.

In the same volume, "Trail and Camp-Fire," from which these quotations are made, President Roosevelt has an interesting paper which treats of wolves at some length. G. B. G.

The Squirrel's Bite.

Editor Forest and Stream:

It seems somewhat amusing—at least to me—that your correspondents on the subject of squirrel migration should be led from the point at issue into a discussion of a subject on which there is no grounds for contention.

As I understand it, the criticism on the original story was not as to squirrel migration, but in reference to rowing along in a boat, picking the squirrels up by the tail and dropping them into a bag, or bags. Now, if it had been reported that the party picking the squirrel up by the tail had at the same time rapped it on the head, there would probably have been no criticism offered, though some doubting Thomas might have wondered if the said rap fractured the skull.

The fact of the matter is, while a squirrel lives its propensity is to bite, as anyone will find to his sorrow if he picks an untamed one up even by the tail. Imagine a sack partly filled with live squirrels, held open for the reception of another that is being lifted from the water by the tail! Even if they were nearly exhausted, it don't take a squirrel long to get his wind, and he could get out of an open sack quicker than you could say scat.

G. W. CUNNINGHAM.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Ducks Among the Sand Hills.

OMAHA, Neb., April 8.—I have just returned from my annual wildfowl shoot among the western sandhills—probably the greatest ducking grounds in the world to-day. With my boy Gerard, I was at Stillwell's ranch in the central southern region of Cherry county. Stillwell runs a hunters' hostelry—a commodious sod structure—and entertains large numbers of sportsmen during the wildfowl season, spring and fall, as well as in the black bass season, from May till October. George A. Hoagland, Omaha's millionaire lumberman, and one of the oldest and best known sportsmen in the West; Rev. Edwin Jenks, a shooting minister, and a cracking good one, Chester Jenks, Wilber Fawcett, Fred Goodrich, Tom Foley and Walt Miesner, of this city, as well as Major Doolittle, of Lexington; the Hon, R. J. Green, Judge Holmes, George Holmes, Douglas Frye, De Forest Moore and Billy McClay, of Lincoln, were also guests of Stillwell's at the same time I was.

But the spring ducking has not been what was anticipated, and yet good enough for any rational gunner. While the northern flight, which is still on, by the way, was one of the biggest and most picturesque seen in Nebraska for many years, there was too much water, too much latitude for the birds. Since the first rain and thaw early in March, the whole State—and think of it, once designated on our geographical maps as the Great American Desert—has been almost entirely under water. The Platte, the Elkhorn, Loup, Rawhide, Snake, and Blue rivers have been rushing and roaring, brim full for more than a month, while the overflow and back water cover large expanses of the prairie, and the lakes have been changed into sprawling marshes almost immeasurable in extent. Thus a haven was furnished for the birds, and the most ingenious hunters were set at defiance. It requires plenty of water to make good wildfowl shooting, but this spring, out this way, we have had too much of it, and yet many good kills have been and are still being made, and the sport promises to extend on through the month of April.

The Omaha party at Stillwell's this spring, however, was a full ten days too previous. We arrived there on March 18 and it was not until the 27th that the lakes began to open. Everything, even to the deepest and coldest creeks, was frozen tight, and what birds were in—and there were thousands of pintails and geese, with a spattering of canvasbacks and redheads—put in their time sitting idly on the ice or on the highest slopes of the distant plain.

For the ten days' freeze-in we barely managed to kill enough for the table, but what we did kill were in fine condition, and enjoyed beyond measure. In the crops of the geese we killed, and the two or three mallards that fell to our guns, Mrs. Stillwell and "the girl" took out several pints of undigested corn, showing conclusively that these birds had traveled something like ninety miles from their feeding time to the moment they were killed—the nearest grain fields being fully that distant. In the crops of the pintails and canvasbacks and bluebills was found a mixture of green grasses, wild parsnip tops, gravel, dried rosebuds and the desiccated polyps of the slough umbellaria and smart weed, the grasses predominating. I examined the crops of most of the birds that were prepared for the table, and found all of them tolerably well filled with the exception of the pintails, many of which were empty.

On March 27, when the ice in the lakes began to crack and boom, and to recede from the northern shores, the real flight from the overflowed valleys of the Platte and the Loup, a hundred miles to the south, began to manifest itself, and I must say I never saw such flocks of canvasbacks and redheads since my days at Koshkonong, twenty-five years ago. There were plenty of bluebills, too, and pintails and geese all the time, but precious few mallards and widgeon. Sheldrakes, the lesser and the greater, were more profuse than I have ever known them, and the sight of flocks of swan were of daily occurrence. We saw also, off on the low lands north of Hay Lake, a bunch of ten or a dozen big whooping cranes, rare, indeed, even out here nowadays. The sandhills just began to show themselves the day we left.

But before going further I desire to impart a bit of information to the readers of the FOREST AND STREAM, and, as incredible as the statement, mayhap, may sound to your eastern readers, it is nevertheless incontinently true, and that is that as fine canvasback grounds as are to be found in the length and breadth of the United States are situated right here in the desolate heart of Nebraska's great sandhills country.

Years ago, and many do yet, for that matter, eastern sportsmen and authorities on game birds held that the Chesapeake canvasback was really the only canvasback, save from the standpoint of the naturalist, to be found in this or any other country—that the Illinois, Texas and California canvasback could no more be compared in gastronomic merit to the bird that frequents that legendary Maryland waterway and its myriad of tributaries, than a mud hen can be likened to an acorn-fed mallard. But this ridiculous opinion has gone for naught these many years with us sportsmen who have enjoyed the facilities for teaching them better.

I have shot canvasback on the Chesapeake and at Currituck as well, and I know the bird taken there is season is a beauty, a good thing and a joy forever; but I have also shot canvasback at Koshkonong, Wis., English Lake, Ind., and above Liverpool on the Illinois River, as well as right here, over the waters of the Missouri and Platte, and out on the sandhill marshes, and I assert with the most uncompromising emphasis that the latter bird has no superior in the world, and if anything he is bigger, fatter, more luscious and succulent than the bird that makes his vernal and autumnal habitat amid the estuaries and friths of the Atlantic seaboard. More than this, I believe that the evidence could not be produced, even by culinary art or science, that would make the Nebraska ducker confess that there is a bird in the world that can hold a candle to the tawny-headed, ashen-winged beauty he brings to bag every March and October along the Loup, Platte and Elkhorn, and on the marshes at Stillwater, Waubuncey, or out in the dear old lonely sandhills.

The Chesapeake and its companion waters are assuredly the oldest canvasback grounds in the country. It was here that the birds were evidently first found in their greatest numbers, and for a long time it was honestly believed that they could be found nowhere else. Why, at one time the Eastern savants (and I was one of them) went so far as to claim that the bird shipped in to the Eastern market from the West was only an ally of the true canvasback, *Aythya vallisneria.*

The aristocratic shots and gourmets were extremely jealous and refused to be convinced that this feathered morceau, so long distinctly their own, could be knocked over by hundreds by even an ordinary shot along the rivers and streams of the plebian and vulgar West.

But such was, and is yet, incontrovertibly the case, for if anything these royal birds are appearing here, especially in the springtime, more numerously than ever, and of the countless millions of wildfowl that make a transitory halt here at this season, none seem to be more plentiful than this king of them all, and their favorite resorts seem to be the lake country within the yucca-covered sandhills of the western sections of this State.

If this region, then, is the chosen home of these royal birds, it is but natural that sportsmen will want to know something specific about it, and, impelled by the obligation which rests upon every follower of the gun to give his fellows in the craft the fruits of his own experience and knowledge, I will tell them something of this wonderful country.

The sandhills territory extends somewhere from the middle of the State, both north and south, a couple of hundred miles west until a high plateau bordering Wyoming is reached, when the character of the country materially changes. What I denominate as the "sandhills wilderness," however, begins with central Cherry county and stretches west into Cheyenne and Dawes county, Deuel county being its thoracic center. There is range after range of sandhills in this country, undoubtedly left thus by the receding of prehistoric oceanic waters, and presenting in the main such a homogeneousness of scene that actually, at times, it becomes bewildering to the senses. Still, there is exceeding beauty in all this monotony, and a wagon ride through the seemingly limitless waste is full of interest to all those who love nature in any of her many and varied forms. The sandhills present the rounded dome-like summits of all sandhills, though at times, notwithstanding there is nothing of the hypersthene in their formation, they are cloven into jagged, whitish, chalk-like peaks, which in height sometimes touch many hundred feet. In the summer time they are clothed with matchless verdure, with myriads of flowers, including the yucca, with its fragrant golden blossoms, and the cactus in many forms. Lying within the basin of the hills from the Dakota line clear south through Deuel county to the South Platte River, is a remarkable chain of lakes and insignificant streams, filled with pure, cold water, save through the alkalescent belts, which frequently cut through the country, but in almost every instance devoid of piscatorial life, excepting the pure waters that have been stocked by the State. In this sea of sterile hills there is no stone, no timber or ore of any kind, but instead it is one vast pasture of hay land, as extensive, probably, and as luxuriant as any in the known world. When I use the word "wilderness" in connection with this region it must not be taken in its literal sense, for all the valleys east of the plateau are capable of supplying most all of the agricultural products indigenous to the State, even corn, rye and buckwheat and peas, beans, turnips, horseradish, cabbage and potatoes. The soil, however, is especially adapted to grazing and haying, and a cereal patch is an oasis, indeed. Among the hills there is absolutely, almost, no arable land.

I will not attempt to enlarge upon the weird grandeur and picturesqueness of this strange region, as that is something that must be seen to be appreciated. Settlements throughout the hills of any considerable size there are none. Here and there, under the protection of a choppy chain, are occasional clusters of rough adobe habitations, and along the lakes and streams are the sod palaces of the ranchmen, cattle dealers and hunters and trappers. Muskrat trapping in the hills is quite an extensive industry. The tent of the sportsman alone, in addition, dots the boundless sweep of grass and sand. All of the wild animals of the western country were here in swarming plentitude up to within a very few years, the elk, black and white-tailed deer, antelope, wolf, both the big gray and prairie, badger, otter, swift, mink, weasel, skunk and muskrat. The elk has entirely disappeared and the deer and antelope are following fast. Still not a season passes but what a number of these are slain within these melancholy wastes, which were once their favored haunts. Of the feathered family, there is an abundance of life, from the huge golden eagle, hawks of all species, owls, loons, swans, cranes, geese and ducks, chickens and grouse, down to the swamp sparrow, meadow lark, blackbirds and finches. A robin is but seldom encountered, and while the magpie abounds, bluejays and members of the woodpecker genus are rare occurrences. And this is the region where the canvasback and redhead duck to-day is to be most plentifully found.

A few days before we left the sandhills this spring, the birds came in by thousands and the sport was fine. On Monday morning last Gerard and I, from a hole on the shelving shore of Dewey Lake, bagged thirty-two canvasback and twelve redheads, the biggest kill made by any of the hunters there, although Mr. Hoagland and Rev. Jenks, on the whole, killed more than all the shooters combined. SANDY GRISWOLD.

Deer in Colorado Wilds.

Editor Forest and Stream:

We are, as a whole, a plenty selfish people, and yet would it not be better if we were in some respects more selfish. For instance, when relating a successful hunting trip in your columns, would it not be better for the game and for posterity if we withhold the exact location of our successful hunt. I know that when contemplating a hunting trip I usually go over my files of FOREST AND STREAM to find the location of some other hunter's "patch." This would be all well enough if every reader of your journal was a true sportsman and not a game hog, or market hunter. But there are too many hunters who go to the woods to kill, and kill only. So, before we give the exact location of our game pockets, let us know who is listening.

Last fall I was "unchained" for a month, and went to Colorado for an outing, and was successful so far as the killing of game goes. I would be pleased to give anyone the exact location if they will furnish FOREST AND STREAM credentials. No Chicago parties need apply unless they come recommended by Mr. Hough. Our party of four was made up of Prof., Jim, G. and the writer, and a royal time we had, camping, loafing, fishing and hunting "deer with horns," grouse, sage hens and jack rabbits. Our success with the deer was all we could wish; in fact, all the law allowed us. We killed our two bucks each, with just the proper amount of hunting to make it enjoyable, and I am glad to state that no one of our party fired a shot at a doe or fawn, although we saw from one to twenty-five every day we hunted.

We could not bring any meat out with us, but we wasted none, and knew the residents of that section will welcome us another year.

Not so as to some parties camped near us. One Chicago outfit, camped about a half mile below us, was shooting at does to our knowledge, and our teamster told us that they had been there the year before shooting does, and when remonstrated with, simply said they shot the does for practice. The idea of slaughtering does and fawn simply for practice!

Another Chicago party, camped near us, consisting of two young men and their guides, were the production of the yellow novel, as they dressed like bad men with revolvers and full cartridge belts on them at all times. When they moved on they left a half of a deer, a doe, I think, rotting in the roadway. Then a party from Georgia camped near us for four days; when they left we found, on the site of their camp, a full carcass of a deer untouched and ten whisky bottles much touched.

The only gentleman sportsman that camped near us during our stay was a Mr. Miller, of Chicago; he with his guides camped across the creek from us for four or five days, killed his two bucks and was greatly pleased and satisfied. To such as him you may give the exact location of your "game pockets"; but not to such as the others mentioned above. I have mentioned three bad parties that we met; there were perhaps 300 in a radius of 100 miles in that part of Colorado just as bad. Is it any wonder that our game is about gone?

On this trip happened the most touching incident of my hunting experience. I was going up a gulch alone one day when I heard a peculiar throbbing sound, and upon looking around I discovered a little spotted fawn lying near a pile of rocks, getting its breath in gasps. I kneeled by it and lifted its head in my hands; as I did so it rolled its innocent eyes toward me, gave a few feeble gasps and died. It may be that I am a little too tender-hearted, but I admit that I wept for that poor innocent, as for a dear friend. What caused its death I could not tell. Its tongue was swollen until it forced the mouth open.

One day three of us were climbing a steep mountain and had stopped to rest on a log that lay in the trail, when we heard a noise, and looking around saw two small fawns coming toward us on the run down the trail. They ran up to within five or six feet of us be-

re they discovered us, and it was laughable to see he surprised look they gave us. They then made a ew jumps to the side and went on down the trail.

The guns we used were a .30-30, a .38-55, .38-56 and 45-70.

On this trip I used what I consider the best all round game gun, a three-barrel, one cylinder 12 gauge shot barrel, one choked 12 gauge shot barrel and a 38-55 rifle. In the cylinder barrel I used a solid ball, and it is very accurate up to 50 or 75 yards. The penetration of this ball with three and a half drams of good powder is good. We tried this on this trip, as compared with a .30-30 and a .45-70; the 12 gauge ball penetrated about two inches more wood than the others.

The Prof. killed a deer with one of these, and the hole it made in that deer's neck was "great." One day G. and I went after grouse, he taking a shotgun and I my three-barrel. We had killed seven grouse, and were coming back to camp, when we saw two bucks cross the valley and start up the opposite mountain side; G. said he saw where the large buck went into a scrub oak patch, and as he did not see him come out, he proposed to cross over and see if he could not drive him out so that I could get a shot, as he had only a shotgun. I sat on a log and waited. G. had walked to within about twenty yards of the scrub oak patch, when out jumped the buck, taking two or three jumps along the side of the mountain, and then turned up toward the top. After he turned I pulled between his horns and held high. At the crack of the rifle he fell over backward, shot through the neck. I confess I was about as badly surprised as the buck. So much for the three-barrel. If I had been hunting with a shotgun with no rifle attachment, that beautiful buck's head would not now adorn my wall. I mounted it myself, and I believe I can tell any reasonably "handy" man how to mount his own game heads equal to most taxidermists.

I met my first mountain grouse on this trip, and I think them very choice as an article of diet when well cooked; but as a game target, you cannot tell what to expect. Perhaps he will sit on a log until you can get close enough to knock him over with a club; and again he is up and off at the first sign of danger; and when flying through a quaking asp thicket, they are not easy marks.

We also had some sage hen shooting, which is, I think, similar to prairie chicken shooting. The young ones, if drawn as soon as shot and properly cooked, taste about the same as grouse. The old ones we did not try, but would think they would taste about like underdone sage brush.

Colorado needs more and better game wardens. We only met one on our thirty days' trip, and of him our teamster said, "He is afraid to call me down for anything, for I caught him killing a cow elk last winter." And he also said, "Anyone with $10 can fix him." This is the sort of protectors that protect the "game hog" and the "sooner," but not the game.

But I believe the law protecting does is generally observed by the residents, as the hills seemed alive with them, and many were quite tame.

EN AMI.

Massachusetts Fish and Game.

BOSTON, April 11.—*Editor Forest and Stream:* The Massachusetts Legislature has another good deed to its credit. This relates to marsh and beach birds.

Section 5 of Chapter 92 of the Revised Laws, has been amended by striking out the word "May" in the third line and substituting the word "March." By this action March and April are included in the close season for "plover, snipe, sandpiper, rail and the so-called shore, marsh or beach birds." The remainder of the section is left as before, and is susceptible of further improvement as regards the "herring gull' and the "black-backed gull." There was never any good reason for making an exception of those birds.

A former chairman of the Fish and Game Committee was instrumental in making this exception on the flimsy plea that some of his constiuents about Martha's Vineyard were accustomed to kill them for food, and the other members yielded to his wishes—an illustration of the fact that much of the legislation in these days is secured by compromises and concessions, if not by downright bargaining. As regards the two bills presented by the Central Committee, viz: the anti-sale law on partridge and woodcock, and the deer law, there is no longer any fear—the former having (it is thought) secured the Governor's signature, and the latter having met no serious opposition in its amended form providing recompense to farmers for actual damage done by deer to crops.

On the recommendation of the commissioners several bills have been reported favorably, and we shall soon know their fate. One of these is for better protection of song and insectivorous birds.

Another relates to "possession of bodies or feathers of certain birds." One authorizing the "Commissioners to re-stock certain great ponds with food fish," and another "To prohibit the use of trawls in certain ponds," in which "the use of more than ten hooks by one person shall be deemed a trawl." Still, another prohibiting the "use of dynamite or other explosive in fishing waters." If all these salutary measures run the gauntlet the present session of the Legislature will surely be a record-breaker, so far as the cause of protection is concerned.

On Thursday there was a very hot debate in the house over Representative McCartney's bill to allow Sunday fishing in salt water. The reference of this bill was to the Committee on Probate and Chancery—just why it was so referred the writer has no knowledge, as it would naturally go to the Committee on Fish and Game. It was favored by the socialist member from Haverhill, Mr. Carey, by Representative Dean, of Wakefield, one of the strong men in the house, and by Mr. O'Rourke, of Worcester, while the speakers in opposition were Representatives Quinn and Ham, of Boston; Everett, of Wareham, and others. The bill was up for the third reading, and was defeated by a large vote.

Two years ago a bill presented by Ward N. Boylston, which was drawn to repeal the law against Sunday fishing, was lost by one vote.

Trout Fishing.

A few anglers of Boston and vicinity have tried their luck, but owing to the cold weather of the first few days this month they have not been very successful.

At Wakeley President Reed, who never misses fishing April 1, and Prof. Myron Whitney, took a few trout. Several others who have visited the Cape waters have not yet returned to the Hub.

From Worcester come reports from a score or more of fishermen, several of whom took a good number, but most of them report that they found unmistakable evidence of illegal fishing during the warm days at the end of March in well-worn and numerous tracks along the banks.

This suggests the need of more extended warden service to patrol the brooks just before the opening of the fishing season. A larger reserve force for special emergencies is greatly needed, and probably in due time will be provided.

I have interesting information from New Hampshire, but must defer it to another time, only mentioning what I presume many of your readers have heard, the license fee voted by the last Legislature for non-residents hunting large game is $10.

CENTRAL.

CHICAGO AND THE WEST.

Big Jacksnipe Flight.

CHICAGO, Ill., April 1.—What will doubtless prove to be the best flight of jacksnipe this spring is now all over this country, and those who get afield inside of the current week will no doubt have the best sport of the season. There were warm rains for three or four days back, and for the last twenty-four hours the earth in all this neighborhood has been simply covered with angleworms. This shows that the feeding is good for the jacksnipe, and the latter seem not slow to appreciate the fact, since they have appeared in good numbers in all the better known grounds in this vicinity.

Mr. J. G. Kendall and one companion in Indiana last week bagged forty-six jacksnipe, shooting on the Kankakee bottom.

Mr. Oswald Von Lengerke on last Monday bagged thirty-three jacksnipe, and sixteen on one shoot a few days precious. On last Thursday he and some friends went out over the same ground near Morris, Ill., and only got a dozen birds between them. He thinks that now the flight will be better, and intends to try them again today.

Billy Cutler, a very ardent snipe shooter, got back from Momence, on the Kankakee, the other day with a fine bag of jacks and other snipe. He reported very pleasant sport, indeed.

At Fox Lake, along Squaw Creek and other bogs, the snipe shooting has been excellent within the past few days, according to scattered reports which are now coming down.

Along the Skokie marsh north of Chicago and in the region of Crystal Lake in this State, jacksnipe have been about as numerous as they usually are within the past four or five days. I hear of some very decent shooting in these neighborhoods.

Along the Calumet country, which was formerly famous snipe ground, although it is now almost within the limits of Chicago, the longbills have been present in good numbers. Henry Kleinman killed fourteen in one day this week, and other shooters have been heard hammering the birds pretty hard in that neighborhood, so that there would seem to have been quite a little flight in on these once much frequented marshes.

As to a tip for this present flight, I would suggest the Little Calumet marsh near the B. & O. bridge, at the points which are commonly used by the members of the Calumet Heights Club.

The Tolleston members also ought to get a few snipe around their preserve this week. There may be a few birds along the western prairie sloughs adjoining this city. Sometimes a few jacks can be picked up among the fields near Arlington Heights, a suburb in the northwest corner of this city. I have no reports from the Illinois River or Mississippi bottoms, but presume they are having their share of jacks from this general flight, which now seems to be working north.

Ducks Gone.

The ducks seem now to have pretty much all gone. I hear of a last flight of bluebills now far up in Wisconsin on Fox Lake, and suppose that the shooting is over for this season in this part of the world.

No Spring Law Needed.

I was talking this morning with a friend who sometimes kills a good many jacksnipe and a few ducks in the spring. I asked him why he was not out duck shooting, and he said that he had not in very many years shot ducks so late in the season as this. He admitted that he had killed eight ducks this spring, and that sometimes earlier in the season he did a little spring shooting on ducks. In this he is joined by a good many others who also, I fear, sometimes take down their guns in spite of their consciences. I recall having made recent mention of the rules which Mr. J. B. Castle, the member of the House of Representatives who has in charge our present game law bill, always laid down for his personal conduct. These rules do not frame themselves according to the game laws. It is Mr. Castle's theory that you do not need a game law to stop yourself from spring shooting, if that is the way your convictions lie. He feels the same way about large bags and a great many other unwise things in sportsmanship.

When you come to think about it, Mr. Castle and gentlemen like him are quite in the right of it. No one compels you to go shooting ducks in the spring if you don't want to. If you are really a thinking sportsman, the kind that you and I write about, you don't wait for the Legislature to tell you what to do. You are not obliged to kill 100 ducks in a day's shooting if you don't want to. If you do this I would suggest that, as a matter of personal consistency, you don't say anything whatever about the desirability of having spring shooting stopped. Of course you probably will, for such is human nature. I simply say that it is not obligatory upon you.

In my own case, I gave up the spring shooting idea with considerable reluctance. Like nearly all other sportsmen, I am very fond of a little exercise, especially in the spring. It is such a joy and comfort to get out of doors and become good and tired, and incidentally to shoot a few things beside. I stopped duck shooting largely because the FOREST AND STREAM said it was not the right thing to do, and I did not think it was quite consistent not to practice one's own preaching. The first season I found it a little hard to stay in the house on the first few days when the passing of winter made it desirable to get out of doors. The second season I though little of it, and of late years the giving up of spring duck shooting has been perfectly painless with me. I admit that I shot jacksnipe two or three years after I quit duck shooting. Then I saw that the principle was the same, and I stopped that also. I don't think that to-day I really suffer very much from it. Under the laws of this State this has not been obligatory upon me any more than it has been upon anyone else, but I have proved to my own satisfaction that you don't have to have a law to prevent your doing things which you say you do not think are right.

Now suppose instead of spring shooting one would take to spring fishing. Early spring fishing is wrong in the case of those fishes which spawn during the spring time. I used to catch bass on the spring run under the mill dams, and many and many a bass I have taken which was loaded with spawn. A few years ago I figured out that this was hardly consistent or proper. I don't fish for bass now until along in June. Under the laws I can if I care to. This statement on my part I certainly hope will not be taken as any expression of self-righteousness, for I have never found it necessary to be self-righteous. It is just an unbiased statement as to a possible personal attitude in regard to good personal game laws.

Now, in the case of brook trout, they are fall spawners. There are more trout now in Wisconsin and Michigan than there were ten years ago. You will see that nature has offered you a certain compensation for your self-abnegation in renouncing spring shooting and early spring bass fishing. After the 15th of April—that is to say, by the time the leaves have begun to come out and the grass has begun to shoot—you are at liberty to legally and sportsmanly to go after a form of sport in its natural and proper season. Is there not sufficient in the possibilities of trout fishing to reimburse one for the unseasonable forms of sport against which many of us declare openly, but which so few of us are personally so willing to renounce? It is certainly a question which every fellow can solve for himself, and solve it without any claim of special virtue one way or the other.

Geese Around Chicago.

Within the past week there have been very large numbers of Canada geese in the neighborhood of Crystal Lake and on some parts of the Skokie marsh, though they are more usually to be found on the corn fields adjacent to these regions. These geese seem for the most part to roost out on Lake Michigan and come inland to feed. One farmer who lives near Crystal Lake came in to town for some No. 5 buckshot to-day. He says that day before yesterday he made a sneak up to a bunch of geese in his corn field and fired into them with No. 2 shot, killing seven geese. He thought if he had buckshot he could have done better execution here, or on some other chances on which he had still longer range. I have from time to time mentioned this flight of wild geese along the lake shore north of Chicago. Mr. Townsend Smith is one of those northern suburbanites who sometimes do a turn at the passing flocks of geese which come over the bluffs along the lake shore.

Good for Texas.

The most startling news in the world, if it can as yet safely be called news, comes in the form of a report of the proposed sportsmen's bill in the Texas State Legislature. My friend Guessaz, of San Antonio, writes: "Our game bill has passed both Houses and we are expecting the signature of the Governor every day. It is a corker. It absolutely prohibits the sale or barter of any game bird, or any bird of brilliant plumage—even of any song bird. It limits the bag to twenty-five birds of any kind, shortens the open season fifty per cent., limits deer killing to bucks, and allows only six bucks per man each year. We admit that it is weak in that it has no provision for wardens, but that will come in time. It is certainly a fine measure."

It is certainly a fine measure, and one most startling as coming from this hitherto careless State of Texas. If this law shall really stop the market shooting along the Gulf Coast—including the unscrupulous and unlimited market hunting of Banker Moody at Galveston—then certainly the millennium will seem to have arrived in the Lone Star State. We may be crowing before we are out of the woods, but it is much to be hoped that the Governor will put his signature to this bill, and that, indeed, he has done so before this writing. Two years ago this advance along the lines of game protection would have been considered impossible for the State of Texas. One year ago, or six months ago, it would have been almost chimerical to expect that the State of Illinois would stop the sale of ducks. Yet it is hoped and believed that the Illinois game bill, which has hitherto been outlined, will pass and be signed, just as it is hoped and believed that this Texas measure has by this time become a law. The sportsmen of the West need by no means be discouraged. The splendid progress in game legislation within the last few years seems to indicate that at last the people of the West are beginning to value their game and to take measures for preserving it. While I was in Texas I heard a great deal of talk about this proposed sportsmen's game bill, but must confess that I thought nothing would come of it, as hitherto the Moody idea and allied influences have been too strong in the Legislature of Texas to allow sportsmen to get a decent bill upon the statute books.

The limited bag idea also seems to be growing in the

West. As I have earlier stated, it would seem an excellent substitution for spring shooting prohibition where nothing better can be done. This idea and the non-resident license seem to be the growing features of Western ideas on protective lines to-day. I do not doubt that eventually Texas will put a non-resident license law upon her statute books.

Singing Mouse No. 26.

TIFFIN, O., April 2.—J. H. Davidson, who conducts a grocery store on Market street, recently captured a curiosity—a whistling mouse. For several weeks past noises like the whistling of a canary bird were heard in his store, coming from boxes, barrels, etc. Mr. Davidson had no idea what was the cause of the noise, but determined to set a trap, and the result was the capture of a mouse, which whistled and sang like an ordinary canary bird. The little animal was on exhibition at the Central fire station till last night, when it died.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Deer and Quail in Washington.

KELLER, Wash., April 5.—*Editor Forest and Stream:* I returned to camp a few days ago from a trip down on the Colorado River, where I had a pleasant trip, this being the first time I ever wintered in a warm climate.

The boys in camp tell me that deer have been much more plentiful this winter than they have been since the opening of the reservation to miners. I tell them that it is easily accounted for; the snow has been much deeper in the mountains the past winter than it has been for several years, and the deer had to come down from their old winter quarters, and the whites as well as the Indians killed all they could.

One of the miners killed a fine cougar; it is a fine specimen. Several years ago I claimed in your paper that the cougar and the panther, or puma, were two distinct animals, and I have had no reason to change that opinion, for this skin is about as near like the skin of a puma as is the skin of a fox like that of a big wolf. But then I am going to allow anyone to think as they please, for I certainly ask that privilege.

Grouse have evidently done well. notwithstanding that the snow has been so very deep, for they have made their appearance in large numbers.

As I came home I asked about the bevy of quail that was seen on the river last fall; there were several gentlemen present, but no one had seen the birds. If they survived the winter some of them should soon be heard, for eight out of the eleven were Bob Whites. I do hope they survived.

I have not heard any ruffed grouse drumming; there were several on the creek near my cabin when I left. I fear they have been killed.

The pictures of Kettle Falls and that of the Old Church remind me that I am getting along toward the divide. I was there forty-one years ago, and think I will be there again before long. LEW WILMOT.

Narrows Island Club Election.

THE annual meeting of the Narrows Island Club was held at the Hoffman House, New York City, on Monday, April 13, at 8:30 P. M. There was an unusually large attendance of members; the president, Mr. Lawrence, occupied the chair. After the reading of the usual reports, the following officers were elected for the ensuing year: President, John Burling Lawrence, Jr.; Vice-President, Henry Sampson; Secretary and Treasurer, Wm. Trotter; Executive Committee, the officers and R. H. Robertson, T. S. Young, Jr., and George Bird Grinnell. The House Committee for the year, as appointed by the President, consists of Mr. Jones, Dr. Markoe and Mr. Austin.

Sea and River Fishing.

Adirondack Notes.—I.

WE were camped in a private car festooned with balsam boughs where the blue waters of an Adirondack lake showed through the trees, and after breakfast of trout and pancakes we all started across the lake and up river, Old Skiff, the guide, and Jack in one boat, Old Hi and the Colonel, Old Bill and the Doctor, and finally Hank and I. Let me stop to say that Old Skiff, usually called by the Colonel Old Skiff, after a well-known financier of that name, was the father of Old Bill, the Doctor's guide, and as villainous an old blasphemer as one could find. His contemporary in age and comrade in villany and in obscene and lurid language, Old Hi, was originally the village blacksmith, a man of a lost generation, who thought railroads were ruining the country. To prove it he told us amid flashes of cuss words how as a blacksmith he had once conducted a nice trade in plowshares and harrows, but the advent of the railroad had ruined the trade. Now, the Colonel knew considerable about railroads, and thought otherwise than old Hi, but as he could not swear in competition with him decided any discussion of the matter would be unprofitable. Going up the river that beautiful May morning, Old Skiff and Old Hi lingered within speaking distance of each other, so that one could cheer the other's drooping spirits with witty references that deteriorated into the most grewsome of dirty stories, and which they seemed to think reduced the beauty of the scene to a state of lowliness more easily comprehended by the "sports." Hi's "sport," as I've tried to show, was hardly appreciative of his efforts, but when night came and we were once more sitting around our good table, the Colonel would say: "Well, Hi's killed more than a million deer on the river, and he's told me about most of them to-day," or "Hi says he's caught most 1,000 pounds of trout in the hole about the dam, but come to find out this extends over a period of fifty years when he and his 'woman' camped on the inlet. If the fish were like the ones we got to-day, I suppose it would take 10,000 to make up that 1,000 pounds." Then Jack would tell us about Old Skiff's war record. Old Skiff must have been a bit sensitive on that point, and fearful that some enemy would get a first chance at said record, for he always started off to say he was "Tender hearted and never took no plunder, no, not any; and when the general told me to take a file of men and go burn down Sinders' Mills down to Savannah, what did I say to the general, says I, 'You old pirate, you go to hell and burn them mills yourself; I'm too tender hearted.'" Now it was May, but Old Skiff had his rifle along, and I suspect the rifle made no bones about being tender hearted when Skiff found a deer in the water. Up the river was a long stretch of dead timber and flood woods caused by the Government dam at the outlet, which, we were told, was put in to help the pulp people out with their logs. That the Government had incidentally destroyed the standing timber, to say nothing of the scenery, was of no account. This is the manner of governments. But to return to the fishing.

I began with worms on my flies and was trolling deep and had landed three or four fish, when we caught up to Jack and found that he had landed about the same number with bait pure and simple. We continued to work back and forth where the holes were deepest under the bank, and managed to get as many more, one of three-fourths of a pound, which was high hook so far. Then we carried around a quarter mile of rapids and shallows, and launched the boat above the dam. Where the water ran through the broken down sluice it had worn a deep hole, a fine looking place where the shadows lay thick in the amber-colored water. "You won't get nothin' there," said Hank. "Them other fellers has scared what they ain't caught," but Hank was good natured, and I wanted to try, so try we did. Two or three little rascals popped out, and as we put them carefully back Hank informed me we were not likely to see anything larger up in that part of the brook. These fish were only about the limit, and it is not great sport to pull them out of their quiet homes; however, we worked down to where the rocks broke the stream into smother, and I cast over a smooth little roll just above where the water broke. Over the rocks went the dancing flies, and slap, a big fellow hit the stretcher, the line straightened, and I was leading him over the swift water to the surprised and delighted Hank. There was another equally pretty place fifty yards below, where the water had hollowed out a black hole under a big balsam. I could not quite reach it, but by great care of my back cast managed to get the flies in the swift water at the head of the pool and let the current carry them down. This time Hank scored, for the little fellows that came up were hardly of a size to take in my No. 8 flies. Down lower a quarter pound fish rose nicely to the black gnat from under a great log, but I missed him twice, and no self-respecting fish will come more than twice.

We went back to the dam, and found the Doctor and Jack hard at work among the infant class, while Old Bill and Old Skiff gloated over each baby that came into the boat. Those old reprobates would stretch out a four inch trout to seven inches if you showed any sign of "puttin' of 'em back." My man Hank was of different breed, and when I told him to put back the first little fellow he approved strongly, nor did I have to remind him again. We now went along up the brook and found the Colonel with some twenty-five nice fish, but no large ones, waiting for the rest of us to join him at lunch. After lunch the Doctor and I tinkered my rod, which I had carelessly broken on a fingerling, and then, after dividing up the brook so that we could all fish, we started off in the hot, bright afternoon to try our luck. it was no use. I didn't want to catch those little fellows, and then the bright light was an awful handicap on the open brook, so Hank and I started down, fishing as we went. The small fish were jumping everywhere. I believe you could have caught a barrel full up that brook, but the fair sized ones were few and far between. Down below the dam, at the head of the stillwater, I got a half dozen very nice fish, bright in color and firm in flesh, and good little fighters, too, so that when evening came my fifteen fish outweighed and outclassed anyone else's, though the Doctor had sixty odd. Coming down the river I missed several good strikes, one fish coming out from under a log that Hank pointed out on the way up as a good place and which we approached with great care. He was better than half a pound, possibly a pound, and so I hated to make a flubdub and miss him. Altogether I missed too many. Hank said I was throwing too long a line. Something was wrong, but the string I had was altogether beautiful, the day had been one of pleasant changes, my guide was a clean-mouthed and enterprising backwoodsman of optimistic temperament, and so we were happy. He told me there was plenty of good work in his part of the world for any man who would work, and no one needed to starve. His only complaint was against the pork trust, which he afterward acknowledged might not be so much the cause of the advance in "fried meat" as was the price of corn, but anyhow he thought he was agin the trusts. The day had been a great success. My friends had, however, one reason for lament. Hi and Old Skiff drank the last of their supply of so-called whisky, which looked like pure spirits, early in the morning, and by 10 A. M. their flagging zeal needed bracing up. There was no bracer forthcoming, and they consequently had pains in various places and aches in other spots all the rest of the day. Hi would call out to Old Skiff to know how he was "feelin'," and recommend a little whisky as a cure "fer the ——— misery in his head," and how it happened their supply of medicine got "upsot and they ain't had no drink since early morning." This discussion gave rise to the breaking upon my narrow horizon of a sovereign remedy named "Five Drops," so named because you took that amount on a lump of sugar. It was great for "rheumatiz," said Hank. He knew "A woman who weighed 300 pounds who was took so bad with rheumatiz that you couldn't move her, and she took Five Drops and in some two months she was well and spry as ever. So I bought it, one hundred doses for a dollar, and cheaper than most any doctor, and do you know, sir, it done me a heap of good. I give it to one of my sick sheep and doubled the dose, seeing it was a tough old he, and do you know, sir, he got right up and chased me outer the barn. Did you ever take it? Five Drops. You get it down to New York."

That afternoon there was an aged citizen working along the railroad burning dead timber, "clearin' up," he said, and I stopped on the way to the car to pass the time o' day and warm my hands by his roaring fire. It was a marvel to me that anyone should want to farm or live in such a hard climate as this, and I so expressed myself to the old man. "Yes, sir," said he, "it be pretty freezin', come winter, and the season is short. Can't raise no corn of any account. I had a fine farm way back yonder," and he pointed with a huge poker over his shoulder to the south, "and I says to my son, 'Son, I'll give ye the farm, and two sheep and a steer and three cows and the team (and one of them horses was as fine a horse as you'd care to see and worth near $100), yes, and seventeen hens and two roosters and a sow pig, I'll give you all this,' (an', sir, the farm had thirty acres cleared), 'I'll give you all this if you stay here and settle down and live here.' But he wouldn't stay, sir, and so we sold out and drove over here, and now he wishes he hadn't come to so freezin' a place." Come to find out this rural scene was only some ten or twelve miles away in the mountains, and not, as I had first supposed, where the seasons were long and the corn could grow. So I stood there and we talked about the trees and the snows of last winter, and the trout, until Frank called me to dinner, and then I hated to leave the old man for fear he'd fall into his fire.

The next day I wanted to try Mountain Pond. They all said it wouldn't pay to fish it, but we ought to walk up and see it. There's nothing in walking up to see a pond where you understand it's no good for fishing, but the more I heard about it the more I wanted to fish it. Few went there, it was too much of a climb, a nasty place to lug a boat to, etc. So Hank and I started this windy afternoon and waded up the dryest part of the brook. The first tramp to such a place is always the longest, and my efforts to keep reasonably dry added to the trip. However, finally we came out on the pond, half a mile long, nearly as broad, and with lilypads all over it, except right at the outlet. It was a perfect place to float for deer, and many the white-tail, Hank said, had there taken his fatal look at a bright light. The sun was bright, the hour was about 2 P. M., and the water shallow, but not too clear. I tried a cast of black-gnat, brown-hackle and Parmachenee-belle around the outlet. Nothing doing. Then on the other side of the boat toward the pads. Nothing. Then toward the shore, and slap, a quarter pounder came up. I snaked him into the boat and got another, a trifle larger, and that was all. We fooled along and I suggested a spoon, for the Doctor said that once he'd seen a man who said there were some big trout in that little pond. It was a casting spoon, and we put a common garden hackle on it, but the wind blew us where it listed, and the paddle was not able to keep us straight. My, that was a whale! Where he turned in the water the swirl was as big as the head of a barrel, but I missed him and he wouldn't come again. That, however, was enough. They were there, so we backed off into the pads and let things quiet down. I rigged up with the same flies, only smaller, No. 10 hooks, except the tail fly and wormed them (shame on it). The wind blew stronger and there was quite a little sea on. Soon a fish rose, a half pounder, I cast over him with the baited fly, making no perceptible splash in the wind, and I had him. Again I did it. another about the same size, and the most brilliant fish I have ever seen. Soon they were really jumping all around us. There was no time to bait up; a big one came up and I missed him, and then I got caught on a pad and had to paddle over and loosen the cast. While doing so with the hackle two feet out of water, a ten-inch trout jumped out from among the pads within his own length of the boat, for that fly. He went up straight in the air higher than I ever saw such a fish go, but fell short of the fly. This showed the anxiety I liked.

Back we went into the pads; up and down the line went the flies, and they took first one and then another. I tried a Montreal, instead of the hackle and they took it as well. Slap, a whale. This time the hook went in and he gave us quite a tussle, 1⅛ pounds, and a beauty. Bang, another big one, and a good battle again, 1⅜ pounds, and several running between half and three-fourths pounds; but then a beauty, say half a pound, and all sunset color and bronze that I was holding in both hands, admiring his rainbow hues preparatory to knocking him on the head, jumped overboard with a little twitch of his tail, and must have told his brothers all about it. The wind began to drop, and with it the fish ceased to rise. We had one or two more medium sized ones, but the fun was over. We stayed, however, till the shadows lengthened across the water, long enough to see three deer come into the head of the pond. It was like old times, when the sight of a deer would drive me nearly crazy with excitement, and I paddled up as close as possible, till they threw up their white flags and ran. Then we crept quietly out of our boat and started down to the car, frightening a hedgehog into a small balsam and stopping to watch his slow motions, so much like a rickety old man. My catch counted up only fifteen. There should have been five or ten more, but they were the most beautiful fish I have ever seen, and gave me as much sport as any I ever caught.

The next morning the pirates appeared with four fine lakers; they said they had found "the old man" set out by some wicked person from down river and pulled it in the night. I had my suspicions, but have noticed such things are usually done by "a feller who lives down river," and so, no doubt, they were in the main correct. The Doctor told me the pirates were old friends of his, representative citizens, who had done just right to "pull the old man," and he, for one, was in favor of this kind of local protection by public sentiment; that those fellows from down river should lose their set lines and their fish, too, for fish illegally taken didn't belong to them, and he, for one, thought they would never put in a claim. He was right, they didn't, and so he kept them. That day we tried Mountain Pond again, but only took some seven or eight fish. We had a pleasant afternoon, however, over a smudge, the Colonel, Jack and I talking over quiet outdoor things and former good times under the balsams and laying up a store of ozone, which, I am sorry to say, was altogether too little for poor Jack, who within the year has joined the great majority. Evening found us in the car again, and next morning we pulled into the Grand Central Station with a better color and some very pleasant recollections.

GEO. F. DOMINICK, JR.

Canoe and Camp Life Along the Delaware River.

Snaps With a Pocket Camera, and Fly Casts With Tamarack Poles.

III.—A Day and Night in Camp. Poetry of the Weeds.

"Hundreds of people can talk for one who can think;
But thousands can think for one who can see."
—Ruskin.

"Days that never dim or darkle.
Nights that spangle; nights that sparkle.
Dawns that flame with burnished splendor,
Eves that melt in raptures tender.
Noons that glow with sapphire burning,
Singing waters seaward yearning.
Shouting rapid, lilting shallow,
Green of forest, vistas mellow!"

Trout fishermen seldom fish the brook "slow" enough, and walk over and past hundreds of those kings of the jeweled coat. Bass fishermen here on the Delaware glide by pools, rapids and eddies, where hundreds of the quarry lurk and dart, and, oh, the pity of it! are all but blind to the loveliness of these changing panoramas of hill, forest and stream. How few of us even pause to reflect that it is a vital part of the Great Plan that the land has been elevated to give motion to this blue-green water of the hills, talking and singing toward the sea?

And so we beach the canoe, and camp, and try to behold! We want leisure to watch the gray squirrel as he barks and scolds at us from his perch of safety, or scurries up and down a tree from sheer exuberance of sturdy life, and intense curiosity at these interlopers who have pitched a cloth tent in his domain. And we must become acquainted with our vigorous comrades, the crows, that fill the morning air with their raucous cries. What a knowing bird! Hued black until he glistens, curious, watchful, he yet impresses us as being cheerful. He is so vigorous and alert! Handicapped with such an unmusical voice, he yet tells us with it of power and enjoyment. He is so happy with his quiet mate, sitting on that roughest of nests, made of a jumbled lot of sticks and coarse twigs in the inmost fastnesses of the tree selected for its unobtrusiveness! He is an accentuated clergyman in somberest black; yet he is also a humorous thief. The crows lend cheer and novelty to the Delaware canoeist, and would be sadly missed.

Readers are forewarned that what now follows may be deemed rhapsody, mawkish sentiment and feeble audacity, instead of knowledge.

From the hundreds of photographs in my album, I cut two for reproduction here. One is a wild camp and garden scene below Long Eddy; and the second, a view of the mystery of woods, and of the onrush and millions of simultaneous dimples all over the wide face of rapidly flowing water, life-lusty, smiling-earnest, busy with its mission and duty between banks where happy plants have come to dwell and drink. Note them by the score in the foreground of the picture, growing in nature's wild garden—their joyous life to be seen and felt, and their profusion, all full of that "felicitous fulfillment of function" which Ruskin calls "vital beauty."

And in the other picture, what a good time that angler is having! Pipe aglow, canoe safe but ready, tent, tackle-box, camp hatchet, cooking utensils, even the last touch given by the planting of a little star spangled banner! He is in care-free communion with what is fairest, purest and most divine, close to the bosom of Mother Earth!

Yet that wild garden is what we call "the weeds," so feared and fought by the farmer, so harried and exterminated by the plow, scythe, spade and hoe. Yet that angler, if he is a botanist, is drawing heavily on his wild garden for much of his food. The "crinkle-root" is there, more delicious than celery when eaten with salt; the dwarf, or ground-nut, grows thick in the moist land of the adjacent "bottom." There are the red berries of the wintergreen, lush water-cresses; and the leaves of the swamp marigold, cowslips and trillium make fine "greens" when boiled in his tiny camp kettle and "dashed" with salt and vinegar. The dells are thick with several kinds of ferns, waving in their green and mystery of refreshing plumes and spires; and their white roots are delicious eating. Of course there are the aromatic twigs of the birch and sassafras to browse upon. The brier-patches often grow to the water's edge, yielding several kinds of berries ready to be picked and eaten fresh, with sugar. The black-red and purple of the wild cherry is often seen. Wild grapes gleam from amid the green of their vines, like painted glass. And the wild crab-apple is quite as fully a globe of sunshine as the orange or the peach. The best tea I ever tasted was made with wild chicory. Thoreau liked the tea made by steeping hemlock leaves. An outing with one who knows the gastronomic possibility of the wild plants, is a revelation.

And there is more of loveliness in the "weeds" around that bass-fisherman in the picture than he could discover by studying and searching for it all his life.

The master artists loved and painted such "weeds." Titian, in his "Bacchus and Ariadne," decorated his foregrounds with the blue iris and columbine, and said there was more of intricacy of form, light and shadow in a single tuft of grass, than any painter could depict in a lifetime. Raphael expended months of alert, careful work in painting the sinuous leaves and blossom clusters of the common colewort and ox-eyed daisy. See the engravings of his "Charge to Peter" and "The Miraculous Draught of Fishes."

Hear Maeterlink about the "weeds":

"They live on, audacious, immortal, untameable! They have remained similar to what they were a hundred thousand years ago. They have not added a fold to their petals, re-ordered a pistil, altered a shade, invented a perfume. They keep the secret of a mysterious mission. They are the indelible primitives. The soul is theirs since its origin. They represent, in short, an essential smile, an invariable thought, an obstinate desire, of the earth.

"That is why it is well to study them. They have evidently something to tell us. Let us not forget that they were the first, with the sunrises and sunsets, with the springs and autumns, with the songs of birds, * * * to teach our fathers that there are beautiful things in this world of ours."

Thus, our greatest living writer about nature. And that greater (alas! now silent) beholder, Ruskin, says of these same "weeds":

"The leaves of the herbage at our feet take all kinds of strange shapes, as if to invite us to examine them. Star-shaped, heart-shaped, arrow-shaped, fretted, fringed, cleft, furrowed, serrated, sinuated; in whorls, in spires, in tufts, in wreaths endlessly expressive, deceptive, fantastic, never the same from footstalk to blossom, they seem perpetually to tempt our watchfulness, and take delight in outstripping our wonder."

So, too, the poets love and describe them:

"Cuckoo gossips, never quiet,
Blossoms revel, blossoms riot.
Every breeze abrim with fragrance
From the hill and valley vagrants.
Roses in the tangled coppice;
Privet, pimpernel and poppies;
Harebell, thyme, in purple stretches,
Vervain, violets and vetches;
And through all, above and under,
Something moving like a wonder,
Something vigorous and vernal,
Evanescent, yet eternal."

So we learn that God is in these still, small voices, and strive for humility and insight as we realize what nature is to the far-piercing, worshipping, beholding eyes of the really great artist or poet—that, as Melanchthon said: "The humble ones are the giants of the battle." The best modern analyst of poetry, W. J. Courthope, stated in his lectures at Oxford, that Homer was the greatest poet, because he best saw that the humblest things have a divine life of their own. No wonder that the Greek name for the earth was Beauty. No wonder that as we see this fair stream at Long Eddy, with its cloud-ranges massed in scarlet and pearl, its hills so stately and far-reaching, we become dazed, and the eye can look no more for gladness.

HARMONIES.

HAPPINESS.

Our camp comrade yet uses the tamarack poles, and has caught three bass, and dressed them. There is an odor of boiling coffee in the air. Twilight is settling on the scene as supper is eaten. Cigars are a comfort after a day of such scrutiny of the small things right about us. No extravagant fish stories are told, and there is no whisky drank, no liquid "fish-bait" or "snake-bite" tolerated. It is the crying duty of all true anglers to rebuke drunkenness in camps, so often used against them as a reproach, and so often deserved. To emphasize this, attention is asked to the most tremendously important and vital fishing story that has occurred, or that possible can occur, in the annals of mankind.

Read, carefully, the last chapter of the Four Gospels, that essence of Scripture. It is not mere history, no Epic Poem. It is fact, never more imperatively demanding attention than now—the last earthly life of the already crucified and risen God Man, and His parting plea to us as He partook of the fish that were His last food on earth.

Seven disciples—rude, roughly attired fishermen—had cast their nets all night in the Sea of Tiberias. Dawn had lighted the solemn, encircling hills; but the nets had gathered no fish. Then, just before leaving the earth, He appeared on the shore and called to them, directing that the nets be cast on the other side of the ship. Even before the nets were hauled, Simon knew His voice, girded his rough fisher's coat about his loins, cast himself, naked, into the water, and swam a hundred yards to shore. There he found his Master, and a coal fire, where fish were cooking even while the nets were yielding one hundred and fifty-three large fish.

Think of that open-air scene in Palestine—of the fish, of our Lord's question: "Simon, lovest thou me?" and of his command: "Feed my sheep"; and then marvel in humiliation that after almost two thousand years of human progress and boasted civilization, with church spires pointing heavenward, and faith-incense burning on myriads of family altars throughout Christendom—yes, with His love and pleading now even more fresh and vital, and with the marvelous beauty of the golden summer brooding over all our angling waters—think that as the stars of heaven shine and beckon, so many men who call themselves anglers, should, by some strange travesty on the pursuit of happiness, delight in being false and drunken! It is a miracle of miracles—infinitely sad and tragic!

He said: "Bring ye the fish that ye have caught." Brother anglers, if we will not do that, at least we should not crucify Him anew. The comfort is great that sport becomes, yearly, more and more a life of love and insight, and less and less one of orgies and untruth.

But my sleepy chum is scolding over the attempt of his sinner tent-mate to sermonize, and we "turn in" to continue our good time in the morning.

L. F. Brown.

The Blooming Grove Dinner.

ONE must reckon back to a very respectable age to recall how many annuals have been enjoyed by some of our game and fish preserve associations. The recurrence of such reunions is peculiarly gratifying because they indicate that the organization is fulfilling its purpose; long life and a large membership mean that there are game to hunt and fish to take. These conditions are characteristic of the Blooming Grove Park Association, whose extensive preserve in Pike county, Penn., is one of the pioneer institutions of the character in this country. The membership is made up for the most part of business and professional men of New York city, and the annual dinner held here gives occasion for a reunion which the members are wont to regard as one of the pleasantest social gatherings of the year.

The banquet of 1903 was held at Delmonico's on Tuesday evening of last week. On the right of President Nathaniel S. Smith sat Mr. Charles R. Miller, editor of the New York Times and vice-president of the Blooming Grove Association; Chief Justice Wm. S. Gummere, of New Jersey, and Adjutant-General R. Heber Brientnall, of New Jersey. On the left of President Smith were Messrs. A. A. Anderson, Superintendent of the Government Teton Forest Reserve; Robt. B. Lawrence, formerly secretary of the Association; and T. Elmer Batten, of FOREST AND STREAM. The members present were:

H. Powell Ramsdell,	R. Heber Brientnall,
Frank L. Froment,	Charles R. Miller,
Thomas G. Barry,	James Wills,
Charles Edison,	William W. Cook,
Dr. William R. Pryor,	Henry E. Passavant,
Milton G. Starrett,	Dwight C. Dorflinger,
D. D. Allerton,	Louis J. Dorflinger,
H. A. Caesar,	Dr. Spencer M. Nash,
Edwin A. Richard,	Edwin A. Cruikshank,
Henry F. De Puy,	Pell W. Foster,
Eugene McK. Froment,	E. M. Youmans,
L. Victor Froment,	James S. Taylor,
Frank M. Lockwood.	George R. Rehmann,
Charles R. Hedden,	William H. White, Jr.,
William M. Copp,	James M. Seymour, Jr.,
Fred Engle,	Hosea Webster,
Lawrence E. Sexton,	Bette E. J. Eils,
James L. Livingston,	James D. Foot,
Frederick K. Gaston,	Robert C. Post,
Luther Loomis,	William C. Post.

After the elaborate menu had been discussed, and the banqueters had come to that stage where the mind is in its most receptive mood for the appreciation of flashing wit and good counsel, President Smith read his annual report and in a felicitous address congratulated the Association upon the happy condition of its varied interests, and the promise of the future.

Mr. Charles R. Miller found his text in that portion of Exodus xx. 17, which enjoins, "Thou shalt not covet thy neighbor's ox." The application was to the conflicts the Blooming Grove Association has had from time to time with the people of the neighborhood who have failed to recognize the Association's rights in the fish and game of its preserve.

Chief Justice Gummere told an entertaining story in humorous vein, and Mr. Robert B. Lawrence, in reminiscent mood, recalled an occasion when he had been guilty of what had afterward been credited to the Association as one of the sins for which it was guilty, when eighteen years ago he mistook a highholder for a woodcock and killed it. This fortunately occurred before heavy fines were instituted for bad memories and nearsightedness. Mr. Anderson gave a most interesting review of the changed feeling prevailing throughout the United States toward the protection of game and fish and the enforcement of the laws; especially in the remote West, they not only make arrests for offenses against these laws, but secure convictions where a few years ago arrest would have been dangerous and conviction impossible. Other speakers were Mr. Passavant, of Philadelphia; Dr. Pryor, Mr. James T. Foot, and Mr. T. Elmer Batten.

The incident of the evening was a presentation to Otto, the head gamekeeper, whose service has been continuous for a term of twenty-five years. To his faithful study and care the club is largely indebted for the splendid conditions that prevail, as betokened by the whirr of the partridge, whistle of woodcock and leap of trout. The Blooming Grove members are in a high degree appreciative of Otto's worth, and in their behalf President Smith presented to him a check for $250. Otto's response was sincere and heartfelt and given in original style; and all those who heard it could recognize in it the whole heart of a whole man. "This is the supreme moment of my life," he declared; and it was.

CHICAGO AND THE WEST.

Trout in Wisconsin.

CHICAGO, April 11.—I would suggest the beautiful little Prairie River as the best open stream for the Chicago man who wishes to go out April 15. This is the earliest river I know. After that I believe the Ontanogan would be a good one to have in mind. I hear the Paint and the Fence mentioned, but have had no recent reports from these streams.

Mr. B. K. Miller, of Milwaukee, will open the season on his preserved stream, the Pine, with several friends on the 17th.

The first of May will be early enough for the average Wisconsin river, the first two weeks in May affording the best fly-fishing of the year in any usual condition of weather. I should regard the first week in May as safer even on the Prairie than the first legal week in April.

The Pere Marquette River and other streams near Baldwin, Mich., should hardly be visited before the 10th of May, in the opinion of some Chicago anglers who frequent that locality.

The Saginaw anglers are getting ready for one or two good trips this spring and summer, but they have not yet determined upon their streams. Wherever these gentlemen land is apt to be pretty near delectable.

Chicago Fly-Casting Club.

Mr. I. H. Bellows, Secretary of the Chicago Fly-Casting Club, issues the table of handicaps as below, with the following advice:

The handicap committees have been working overtime, and the result of their labors is enclosed. When handicap is not given, the committee had not sufficient information to base their figures, and handicap will be based on the first half of the season's work. Prizes this year will consist of medals, rods, or reels, as winners elect. A new casting weight and target have been adopted and higher scores in bait are certain. Members in arrears for dues on day of last contest are not eligible for prizes. All rules governing contests of last year, not in conflict with above, are in force this year. It is hoped that members will bear in mind our event days in arranging their fishing trips. Come out to the park as often as you can. A full company looks better than a corporal's guard. Club tackle always on the ground.

Pickerel in Wisconsin.

The biggest pickerel, or rather pike, of which I have heard this spring was taken by Bill Leidtke in Fox Lake, Wis., last Wednesday. The fish weighed twenty-eight pounds and was a fine specimen.

By the way, it seems to be mighty fishy around Fox Lake this spring. A dog belonging to Frank Griffin saw a pickerel in the water near the boat dock on last Sunday, made a plunge and succeeded in retrieving the fish, which weighed about a pound. The temperance and moderation shown by the narrator in establishing the weight of the fish robs this story of all possible features of doubtfulness.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Ouananiche of Grand Lake Stream.

GRAND LAKE STREAM, Me., April 6.—*Editor Forest and Stream:* With your permission I would like to notify the readers of FOREST AND STREAM about the "ouananiche" (land-locked salmon) fishing in Grand Lake Stream, Washington county, Maine; also of the special law governing it. In past years people have been allowed to fish in the river here from the first of May until the 15th of September with any device except with nets and spear. Under the new law the open season is from June 1 to October 1, from one hundred yards above the dam at the outlet of Grand Lake to Big Lake—about 2½ miles. This river is open to fly-fishing only, and since the bait-fishing has been prohibited the fly-fishing has not only doubled in number taken, but anyone can catch ouananiche at any time up to October 1. A great many people think you cannot catch ouananiche during July, August and September with the fly; but such as have that notion are mistaken, for here catches of from ten to twenty-five are common during August and September.

Last season there were more than 12,000 ouananiche taken in Grand Lake and the river below; and the year before there were 8,209 taken during May and June. This is the home of the ouananiche, and we have the best fishing in the world for them; the nearest approach to us is Lake St. John in Canada. Our fish are about a quarter pound larger on an average, and you can catch more in the same length of time. Usually the land-locked salmon are dry when broiled, but these salmon caught in the lake and river are very juicy, and have a beautiful flavor which cannot be excelled. Anyone wishing to try their luck at ouananiche fishing would do well to visit Grand Lake Stream. The salmon come down from the lake and go on the run during May and June and do not return; and as any fish that lives in quick water will take bait at any time, and as the law used to allow bait-fishing, they were nearly all caught before the last of July, and, as everyone knows, where there are no fish you cannot catch any. But since we have put a stop to all fishing except with the fly, there are plenty of fish at any time during the summer.

J. T. MERRILL.

A New Jersey Devil Fish.

IT is not generally known that a large specimen of the devil fish (*Manta manatia*) was taken last fall in New Jersey at Stone Harbor, about a mile from the shore. It was harpooned in a pound net by some fishermen, and was then towed to the beach behind a boat. When in the net it was quiet until it was harpooned. Then it became very violent, but was unable to escape. When brought to the beach it soon died. The only portions of the great ray preserved were one of the eyes and a small piece of the skin. The eye, which at present is at the Academy of Sciences of Philadelphia, measures about 2⅛ inches in diameter. Mr. Henry W. Fowler, who records this interesting capture, calls attention to the fact that the scientific name in current use—*Manta birostris*—should be changed to the name given above.

Sportsmen who visit Florida, and generally the south Atlantic coast, are more or less familiar with the appearance of this species, and with the excitement which sometimes attends its capture. These captures have often been described, notably in Elliott's "Sports of the Carolinas," and in various articles in FOREST AND STREAM, one of them printed only a few weeks ago. The species belongs in tropical or subtropical waters, and is extremely rare, if not unexampled as far north as the locality where this one was taken, although reported as far back as 1824 by Mitchell "off Capes May and Henlopen during the warm season."

The Sea Trout Again.

Editor Forest and Stream:

Referring to the dispute over the "question" whether a sea trout is merely a brook trout who lives in salt water: Is not this "question" immaterial to the sportsman? Is there not often a rather amusing eagerness, even among naturalists, for Latin names and hair-splitting? Of what practical moment is it to anglers whether wiseacres brand either or both of these beautiful fishes *Salmo* or *Salvelinus?* We already know that one is a trout that lives in a brook, that the other lives very largely in salt water, and that both are splendid fish, and have much in common.

Many old anglers are disposed to demur that these kings of the jeweled coat are not more appreciated for themselves alone. Some cataloguers seem to joy in them principally because they furnish places for pedantic Latin labels that will sound learned in books. Both fish are well known, and can be adequately named and perpetuated in English; and their relationship or ancestry is of very little practical use to "science," and none to sport. In other words, in this matter, nearly all anglers care nothing whether "sciolism rushes blindly in," or "knowledge creeps with cautious steps."

L. F. BROWN.

Brilliant Trout.

Two 9-10 inch trout, astonishingly brilliant in their color, have been shown us by Mr. Robert B. Lawrence as taken near Flushing, L. I., within a few days. The fins, lower sides and tail are brilliant carmine, while a narrow strip, varying from ½ to ¼ inch in width, running from chin to vent in the median line of the belly is pure white. The line of demarcation between the red and the white is sharp, and there is no shading of one color into the other, but in one case the white is bordered by a very narrow thread of dusky.

These fish come from a pond owned by Mr. A. L. Thorne, situated on the edge of the salt meadows near Flushing. The pond was made about five years ago, and is only about seventy feet in diameter. It has no inlet, but it is fed from beneath by a strong spring of fresh water, and also by a small iron-colored spring. The fish were put in as fingerlings four years ago, and have not greatly increased in size. Where the fish came from is not known. Anglers who have seen them call them *Salvelinus marstoni.*

Florida Black Bass.

WASHINGTON, D. C., April 11.—Willard Nye, Jr., of New Bedford, Mass., has set his heart on catching a twenty-pound large-mouthed black bass, so that each year, along in February, our genial Nye is to be found somewhere in Florida looking for *Micropterus salmoides.* This season he stopped in long enough to say that he had succeeded in catching a bass of 11½ pounds' weight; a beauty; female, 26½ inches long, 21 inches around the girth.

Nye says the fish of medium size were plentiful. Twenty-six were taken one day. A bass of sixteen pounds' weight was once taken in the neighborhood fished by him.

Nye says the fish are excellent eating; the big ones especially, simply boiled without seasoning, served with potatoes and seasoned to taste when on one's plate. The phantom minnow was a successful lure.

BON.

Legislation at Albany.

ALBANY, April 11.—Now that the end of the legislative session is drawing so close at hand, game bills are being rushed forward with all possible dispatch. Two have lately been signed by Gov. Odell, as follows:

Senator Bailey's, P. No. (Ass. Print.) 1485, providing that the board of supervisors of the counties of Queens, Nassau and Suffolk may respectively pass laws regulating and controlling the taking of fish and shell fish in arms of the sea, and fish bait from public lands of such counties, and may also prescribe what violations thereof shall be punishable as misdemeanors, and may impose penalties, the same to be enforced under the provisions of Article X. of this act.

Senator Fancher's, P. No. 785, providing that pickerel and wall-eyed and yellow pike shall not be taken or possessed from March 1 to April 30, both inclusive, in Lake Erie, and allowing the taking of sturgeon, mullet, suckers and carp with nets in parts of Lake Erie.

The Senate has amended Senator Townsend's wild deer bill, P. No. 780, so as to make the close season from Nov. 10 to Aug. 31, both inclusive.

The following bills have passed the Senate:

Assemblyman Bedell's, P. No. 453, relative to the close season for trout in Orange county.

Assemblyman Whitney's, P. No. 1243, relative to fishing in Saratoga Lake and Lake Lonely.

Senator Armstrong's, P. No. 697, relating to the sale of venison in certain parts of the State.

The Senate Committee on Fisheries and Game has reported the following bills:

Assemblyman Palmer's, P. No. 612, fixing the close season for quail in Schoharie county.

Senator Gates', P. No. 1068, relative to information concerning leases and franchises for the cultivation of shell fish. The bill was restored to its place on third reading.

Assemblyman Reynolds', P. No. 1060, relative to the close season for grouse, woodcock and quail in Rensselaer county.

Assemblyman J. T. Smith's, P. No. 443, relative to the taking of fish from the waters of Waley's Pond, Dutchess county.

Assemblyman Nichols', P. No. 813, relative to the taking of woodcock.

Senator Townsend's, P. No. 776, relative to privileges of witnesses.

Senator W. L. Brown's, P. No. 935, relative to fire wardens.

Assemblyman Burnett's, P. No. 1696, relative to taking fish in Canandaigua Lake.

The Assembly has advanced to third reading these bills:

Assemblyman Allston's, P. No. 1721, relative to fire wardens.

Assemblyman Moran's, P. No. 1324, relative to fishing for non-game fish in Cayuga Lake and its tributary streams.

Senator Townsend's, P. No. 392 (S. Print.) for the protection of wild black bear.

Assemblyman C. W. Smith's, P. No. 1873, giving the chief game protector an annual salary of $2,000, with $1,000 a year for expenses.

The Assembly has passed the following bills:

Assemblyman McCormack's, P. No. 1715, relative to game in Richmond county.

Senator Malby's, P. No. 183, relative to fishing in Black Lake, St. Lawrence county.

Senator Armstrong's, P. No. 805, relative to the close season for grouse in the counties of Ulster, Sullivan, Greene and Orange.

Assemblyman Simpson's, P. No. 1100, to prohibit hunting and fishing on Sunday in the county of Sullivan.

Assemblyman Nichols', P. 1722, relative to spearing fish in Greene county.

Assemblyman Cowan's, P. No. 1727, relative to the close season for mink, skunk, muskrat and foxes in Delaware county.

Yachting.

Reliance, the new yacht built for the defense of the America's Cup, was successfully launched from the Herreshoff's yard on Saturday afternoon, April 11.

Bad weather had been predicted, but the day broke fine and clear and was ideal for the event. Mr. N. G. Herreshoff was on hand early in the morning, as was Captain Charlie Barr. Both had their men attending to the many things that turn up at the eleventh hour. Shortly after eight o'clock Sunbeam, Reliance's tender, dressed ship, and as the bunting went aloft it added a bit of life to the scene. Sunbeam was lying at the end of the south pier. Lying in the offing was Constitution, the boat built by the Herreshoffs two years ago. Constitution was launched on May 6, almost a month later than the day fixed for launching Reliance this year.

Shortly before noon Mr. W. B. Leeds' new steam yacht Noma, flying Commodore Frederick G. Bourne's private signal, appeared on the scene. She came to anchor off the shops, and Commodore Bourne and his guests went over to the tender Sunbeam to call on Mr. Iselin, and then came ashore to see the new boat. With Commodore Bourne were ex-Commodore E. M. Brown, Mr. W. B. Leeds, Secretary George A. Cormack, Fleet Captain C. L. F. Robinson, Mr. Edward H. Wales, Mr. J. Frederic Tams, Mr. Whitney Warren and Mr. Arthur Kemp. Noma left New York on Friday afternoon, where Commodore Bourne and his guests joined her, and they had a delightful run through the Sound and up Narragansett Bay to Bristol.

Early in the afternoon a special train brought a number of people from Providence, who were guests of Mr. C. Oliver Iselin, the managing owner of the new boat, and they went directly aboard the tender Sunbeam. As the day wore on trolley cars, carriages and automobiles brought many people to the town, and quiet Bristol presented a very busy appearance. Constitution's tender, Satellite, was in the harbor with Mr. August Belmont and a large number of guests on board. A gun was fired from Constitution just before half-past three, and she went formally into commission. She dressed ship, and Mr. Belmont's colors went to the mast head. The torpedo boat Winslow, with a party of naval officers on board, came over from the Newport station during the afternoon.

The launching was scheduled for half-past five. A limited number of tickets had been issued, and those holding them were admitted to the south shop, where Reliance was built. Many people were allowed on the piers, which extended into the water on the north and south sides of the shop, and were thus afforded a good opportunity to see the launching.

Reliance rested in a cradle, which was built on a low car. The marine railway on which the car ran was specially strengthened and tested in order that there would be no accident. A wire cable was attached to the forward end of the car, which led to a windlass. In this way the yacht's speed could be regulated as she moved down the incline.

The yacht's bottom had been burnished to a high degree of perfection, and the white topsides did not show the lines of the plating or the rivet heads. Festoons of laurel leaves and bunches of carnations decorated the bow of the yacht, and streamers of red and black, Mr. Iselin's colors, were in evidence.

A gong sounded in the shop at 5:28, and Miss Nora Iselin broke the bottle of American champagne over the bows and named the yacht Reliance. The boat was only allowed to move slowly down the ways, and it was some twelve minutes before she was water borne. As Reliance moved out of the shop, the American yacht ensign was hoisted over the taffrail, the New York Y. C. flag was hoisted at the bow, and Mr. Iselin's private signal appeared on a staff amidships.

As the boat took the water, there was quite a demonstration, the crowd present being very enthusiastic, and while the attendant fleet of boats was small, it made up in enthusiasm what it lacked in numbers. Captain Barr and a number of his men were on board, as was Mr. "Nat" Herreshoff, when Reliance took the water. After the launching Reliance was warped over to the north pier under the big shears, so that her mast and other spars can be put in place without delay.

Reliance is essentially a big craft, big even for a 90-footer, was the information gained by everybody who saw her launched on Saturday last. Her great breadth and remarkable over all length conveyed the idea of large proportions, for the boat quite filled the big shop where she was built.

For some time it had been said she would be something of the scow type, and would combine some of the features of Independence. To some extent this rumor has been borne out by the facts; not that we would hint that Mr. Herreshoff had copied or adopted a single feature of Mr. Crowninshield's boat. That Mr. Herreshoff is a creator and not an imitator is a well-known fact, and there is no question that the design of Reliance would have been just exactly what it is now had Independence never been built. Reliance only shows the natural development and expected improvement over Constitution as did this latter boat show these same points over Columbia, even though in the actual racing the progress was not demonstrated. But we think it but fair and just that we give Mr. Crowninshield the credit of having been two years in advance of the Bristol designer, and had it not been that Independence was his very first experiment in designing big yachts, we believe she would have beaten Columbia had she been handled by as capable a skipper as Captain Barr.

Reliance is not so pretty a craft as was Columbia; in fact, she reminds one more of the 70-footers, particularly in the forward part of the boat. Her forward overhang is much longer in proportion, and her bow sections are a little fuller. In Reliance it is very evident the designers have endeavored to turn out a boat that will combine, so far as it is possible to do so, all the speed elements of the scow, such as gaining length quickly when heeled and having great sail carrying capacity, and yet reducing to the minimum the disadvantages of this type of craft. Scows are not fast in light air, and their full bow is a great handicap when there is any sea on, and particularly when the wind is light. Reliance has a much flatter floor than Constitution, but yet has more deadrise than Independence; her bilge is also a bit harder than that of Constitution. Reliance is 25ft. 8in. wide, and although her over all length is not known exactly, it is said to be 140ft. The draft is put at 18ft. 9in., somewhat less than Constitution's, but she is longer on the keel than the latter boat, and the lines of the lead are finer and drawn out more. There are practically one hundred tons of lead on the keel, a gain of something over seven tons in Constitution. This increase was made by a material reduction in the freeboard and a saving of weight in the construction, and will therefore give greatly increased sail-carrying power over the older boats. As Reliance heels she will gain power fast because of her form, and this fact, together with the advantage of the increased quantity of lead on the keel, should make her a wonderful sail carrier. She will swing, probably, in the neighborhood of 15,000 square feet of sail, although we would not be surprised if it were even more than this. The rigging on the 70-footers stood the rack of hard racing without parting a single rope yarn, so that if the material put into the new boat is made proportionally as strong there will be little danger of breakdown or accident.

The construction used throughout Reliance is practically the same as that put into Constitution. Deep belt or web frames of nickel steel are spaced 6ft. 8in. apart, these being located at every fourth station. The hull is plated with Tobin bronze, with the exception of the top strake, which is of nickel steel. There are seven strakes of plating which are laid with flush joints. A series of T irons and bulb angles make up the longitudinal frames. The T irons are placed over the seams in the plating, the plating being riveted through them. The bulb angles serve mainly to stiffen the boat longitudinally. Web frames are strengthened by braces extending from the bilge up to the deck. The deck is covered with aluminum and under this are diagonal straps which will add to the general stiffness.

Races took place between Shamrock III. and Shamrock I. almost every day last week off Weymouth. The new boat is sailing well and from the reports is getting into better shape daily. On Saturday last the two boats sailed a race over a thirty-four mile course, and Shamrock I. received ten minutes' time allowance from the new boat. The wind was light during the race, and the water was smooth. Shamrock III. beat the old boat six and one-half minutes, but lost the race on time allowance. Shamrock I. was favored by better wind, and had it not been for this it is believed that the new boat would have saved her time and won the race.

Columbia Y. C., Chicago.

Captain Fred Pabst, of Milwaukee, shows his fondness for the water still, although many years retired from active service thereon, by annually (through his company) offering yachtsmen of Lake Michigan valuable trophies for competition. In 1900 he presented the Columbia Y. C. with a magnificent silver water cooler, for competition in Class 2A. This trophy was won by Mr. F. W. Morgan's Prairie of the Columbia Y. C. In 1901 he presented the Columbia Y. C. with a sterling silver loving cup for Class 3B sloops and cutters. This cup was contested for on August 17 of that year, and was won in a heavy weather contest by Commodore J. F. McGime's Eleanor II., she handily defeating such cracks as Vixen, Wizard and Martha III., to the surprise of all the wise ones. This year Capt. Pabst has, through his company, presented the Columbia Y. C. a most exquisite and beautifully etched sterling silver loving cup for competition in Class 1A sloops and cutters on July 4.

The following Lake Michigan yachts are eligible to start for the Pabst cup the morning of July 4, next:

Vencedor, the crack mahogany fin keel, owned by ex-Commodore Fred A. Price. Vencedor was built in 1896 as the first yacht from the United States to defend the Canada cup. She was designed by Pokel and built at Racine for the Messrs. Berriman Brothers, Mr. E. C. Berriman at that time being commodore of the old Lincoln Park Y. C. The first races for the Canada cup were sailed on Lake Erie off Toledo. The Canadian Y. C. won three straight races. Vencedor was unquestionably the best yacht, but was under construction before rules for races were adopted, and the Canadians proposed rules to sail under that defeated Vencedor, and refused to sail under any other conditions.

Vencedor won several races from Siren in fall of 1896, and won from Vanenna at Cleveland in 1896. Vanenna was given a race at Milwaukee July 4, 1896, on account of buoys drifting away. In spring of 1897 Vencedor was sold to Commodore Gillig, of the Larchmont Y. C., of New York. She made a very creditable showing there. When Commodore Gillig retired from yachting in 1901 Mr. Fred. A. Price purchased her and brought her back home. Last year she was the flag ship of the Columbia Y. C., and won several big races, among them the Michigan City Cruising Race, July 4 open regatta, cruising races to Waukegan, Holland, and South Haven, and one of the three match races with Vanenna. In match with Vanena more overconfidence was indulged in, the match being arranged as a flat event, no time allowance, and Vanenna, being much the larger, had a great advantage. However, this match resulted in bringing about two of the best yacht races ever seen on the Great Lakes, Vencedor winning the first race of the series by a few seconds. Vanenna won the second race, sailing the course alone, Vencedor breaking down immediately after the start, and Vanenna won the third race quite easily, on the last leg of course, her lofty rig catching the high air and driving her in ahead with a couple of minutes to spare.

Siren and Vanenna were from designs of Joseph Meyer, and were also built at Racine in 1896. They were built by Columbia Y. C. members to compete in trial races with Vencedor of the Lincoln Park Y. C., to see which should represent the United States in match with Canadians, but as Lincoln Park Y. C. decided to send Vencedor without holding trial races, they did not have a chance at that time to show what they could do, and to date the three have never been in a race together, although they have raced two at a time on several occasions since that time. Siren has demonstrated time and again that she is as good, if not better, than the others in light weather, but has never shown any great liking for heavy going.

Vanenna claims the championship of the Great Lakes on series sailed last September with Vencedor. Vanenna was originally built for W. R. Crawford, then of the Columbia Y. C., and was sold last season to Wm. Cameron, of the Chicago Y. C.

Siren was originally built for a syndicate composed of Ildo Ramsdell, Judge Loren Collins, Robert Hayes, and Mr. Dyrenforth, all of the Columbia Y. C.; was afterward sold to Geo. R. Peare, of the Columbia Y. C., and by him to her present owner, Mr. Frank J. Canty, of the Columbia Y. C.

Neva is a Lake Erie product, and was undisputed champion there, but has never duplicated her performances here, although she has been a strong factor in all races in smooth water, but the most of the time her spinnaker and spinnaker boom and big club topsail have been left ashore and over half the races she has been in have been sailed with small cruising mainsail instead of her big racing mainsail, her owners and crew being particularly fond of comfort. Such cries as "Ease her sheets, so can cook," and captain yelling at crew to "Jibe over as wind has shifted," and crew telling captain to "Wait awhile until card or crap game we are playing is over," being frequent occurrence during races. Just try to imagine a winner under such circumstances. This year she will be placed in pink of condition and raced hard. She is now owned by Messrs. C. T. Bailey and F. Palmer, of the Columbia Y. C., who claim her to be the most comfortable ever as a cruiser. If the weather on the morning of July 4 next happens to be light, these four yachts should make a magnificent struggle for this elegant trophy, and it is nearly a toss up as to which would win. If there is heavy weather, race should be between Vencedor and Vanenna, with yacht with best crew given preference. Ex-Commodore Price announces that he has engaged the services of one of the crack eastern skippers for the season, and that he intends doing all he possibly can to capture the time prizes for A Classes and prizes for Class A1.

Vencedor, with new hollow mast, boom and gaff and new racing mainsail, will undoubtedly be in front at the finish on most occasions, Commodore Price being particularly anxious to regain championship of Lake Michigan—in fact of the Great Lakes—the coming season.

It is hoped by all yachtsmen that these four are brought together in the Columbia Y. C.'s eleventh annual Michigan City race, to be held June 13 next. Such a race would indeed be a rare treat for the spectators.

It is hardly probable that any Lake Erie or Lake Ontario yachts of this class will be here to compete on this date, as it is too early in the season to entice them this far from home.

These are the giant sloops and cutters of the Great Lakes, being the largest fresh water craft of this style or rig in the world, and embracing some of the finest yachts of the world in the class, all four being champions of the class in different years. Neva of Lake Erie; Vencedor of the Great Lakes in 1896 and 1901; Siren in 1898 and 1899, and Vanenna in 1897 and 1902, the three latter having defeated one another on several occasions. This lends enchantment to the coming season's contests.

Vencedor is being fitted with complete sets of hollow spars and new suit racing canvas.

Siren, not to be outdone, will have new racing suit and entire rebuild, and be placed in best possible condition. Owners are already selecting crew, and expect to have her in her old time form for season's contests.

E. T. B.

Endurance Races for Motor Launches.

Arrangements are being made by the Narragansett Bay Y. R. A. to hold endurance races for power boats. The idea is a good one, and should prove a real and valuable test of the motors and the boats themselves. The plan has much to recommend it.

"There are so many possibilities of mishap to motors in the sailing of launches that a straight race is of little value in determining the relative merits of the various boats and their engines. Even a fairly well behaved boat is apt to become stalled in the midst of a race by a minute or two of crankiness on the part of the motor, and notoriously uncertain motors have been known to work to a charm in a most unexpected way and win out without trouble.

Under the arrangements planned for the proposed endurance race, all these uneven conditions will be taken into account, and the running qualities of the engines will be scored as well as the speed attained and the time made in reaching the finish. Each launch will have a scorer aboard to keep tally on the amount of attention required by the motor and a limit of three minutes will be allowed as the total time that an engine may be stopped during the race.

The start will be made some distance above the starting line to give opportunity to warm up the engines. As the launches come to this point a gun will be fired and all engines will be stopped. The starting gun will be fired a minute or so later and the scoring will then begin.

The run will be of about an hour's duration, and any boat whose engine is stopped for more than three minutes during that time will be disqualified. This will count the same, whether the time lost is in one stop or in two or three, the total time of which amounts to more than three minutes. A one minute stop will count one point against the boat; two minutes, two points, and three minutes, three points.

The boats will be classified according to size and power, and everything being equal, the first boat in will win. There will be a time limit on the race, however, so arranged that the motors will have to be pushed to a fair speed, and no wily skipper can loaf along in order to coax an uncertain engine into a semblance of good behavior, and thus dodge the possibility of scoring the losing points on account of time stopped."

A CHARITY CRUISE.

Winner of Third Prize in "Forest and Stream" Cruising Competition.

BY WILLIAM LAMBERT BARNARD, BOSTON, MASS.

I am, alas, a "charity sailor"—not having a boat of mine own I am dependent upon friends for my cruises. Some times I am able to do something for them. Thus it was in the present case.

The Armorel's owner wished to have her at Portland, Maine, when his vacation began, but could not find the time to take her down from Marblehead himself. So I charitably agreed to sail her down for him and he in turn charitably said that if I would have her there on time I could use her for a little cruise beforehand. Our final arrangements provided that he and a friend would sail her from Marblehead to Gloucester one Saturday afternoon, that I should join them early Sunday morning and then they would sail with me as far as we could get that day, when they would return to Boston and strenuous life while I continued on my way with the Armorel and Albert, the boy. This arrangement was carried out to the letter.

The Armorel is a 21ft. knockabout and was designed by Mr. Arthur Binney, and built by the Lawley & Son Corporation in 1895. She was originally known as the Sally. She has rather more freeboard than is customary with boats of her length, but owing to the fact that her waterline is painted quite high she appears to have only the usual height of side. Her ends, which are moderate for these days, are sharp and so well balanced that she is very easy and dry in a seaway.

She is 31ft. over all, 21ft. on the waterline, 7ft. 11in. extreme beam, and draws 5ft. when in cruising trim. She has about 4ft. 9in. headroom under a low cabin trunk with a very flat roof. There is a hatch in the deck forward of the mast.

ARMOREL.

The cockpit which is self bailing is roomy and comfortable. From it you enter the cabin. On either side of the companionway is a hanging locker. The floor is 2ft. 6in. wide between the transoms which are nearly 2ft. wide and have very comfortable cushions. The transom tops are hinged to lift and beneath each is a large stowage space for bottled and tinned goods.

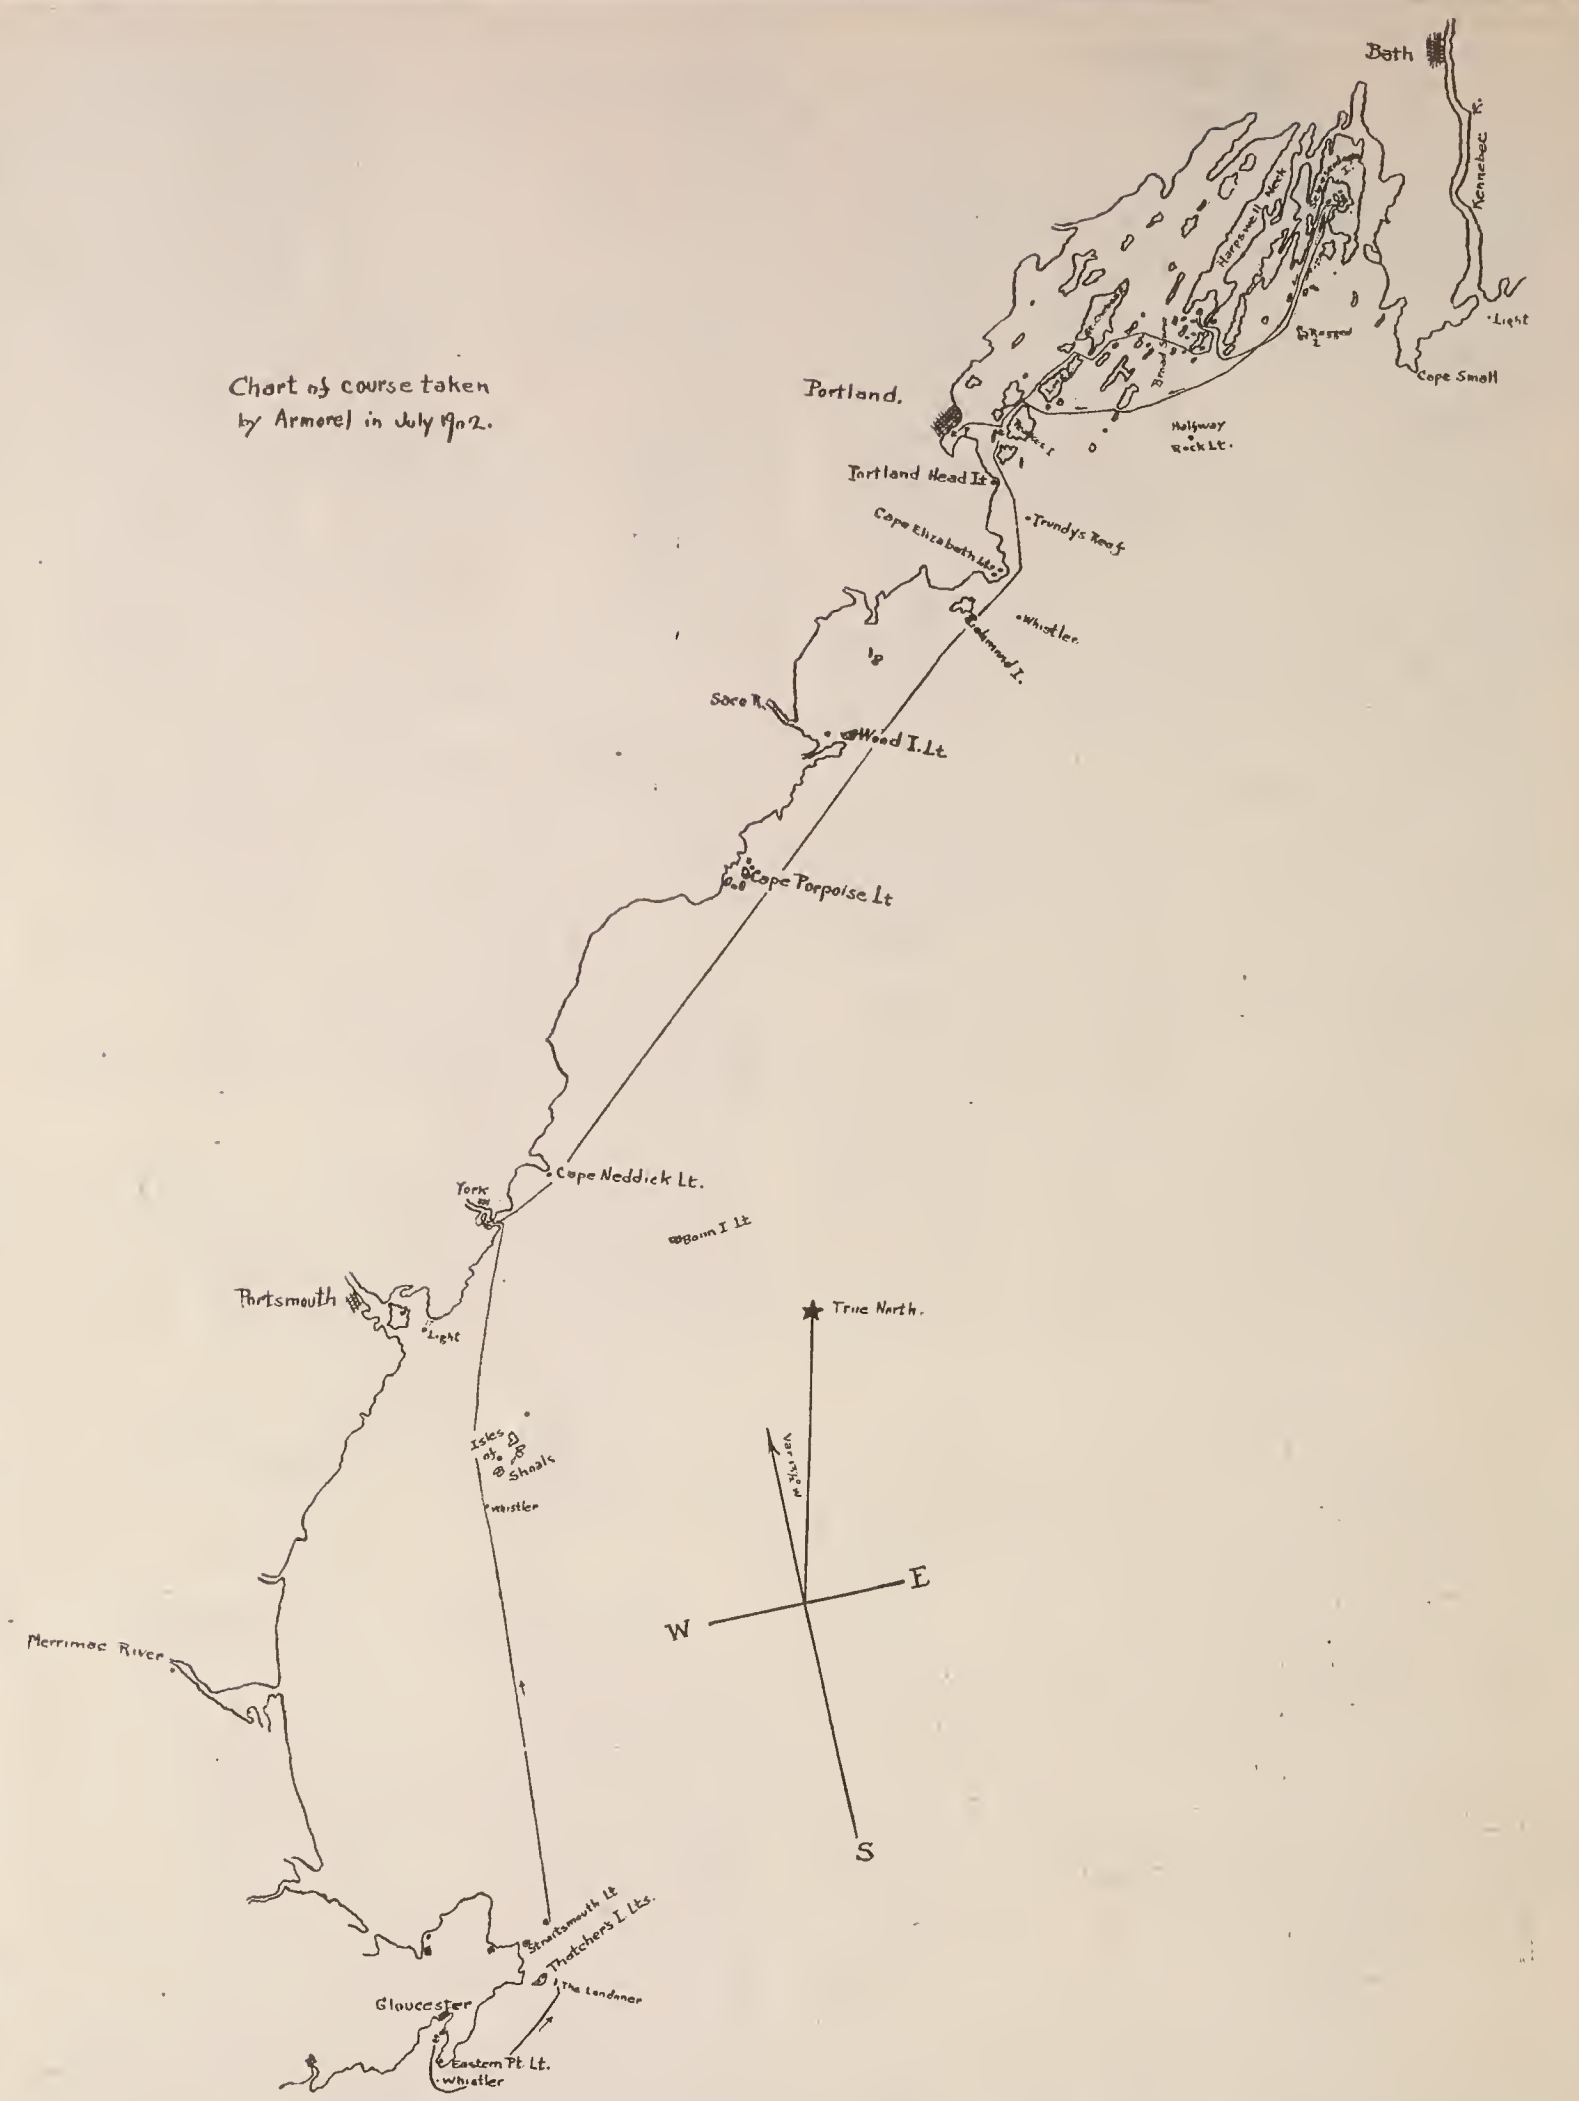
At the forward end of each transom is a buffet with a locker behind and drawers beneath it. These drawers have a novel feature, an idea of the owner—a tin box with hinged lid was made to fit inside each drawer so that everything stowed therein might be kept dry. It is extremely "comfy" to have one's linen, socks, towels, and bread always free from dampness.

On the port buffet a large lamp and an ash tray are securely fastened. Over the lamp, in the cabin top, is a brass ventilator which when opened carries off the heat from the lamp. It can be closed and made water tight by simply turning the flat brass top. Above the starboard buffet are the ship's clock, aneroid barometer, and thermometer. Back of each transom is a net for clothing, toilet articles, etc., etc.

Access is had to a large lazerette beneath the cockpit by removing the companionway ladder. In this lazerette are kept the three spare anchors and rodes, spare rope, oilers, rubber boots, etc.

The blankets, which have been converted into sleeping bags by folding them and sewing them across the foot and two-thirds of the way up the side, when not in use are folded and rolled up in a waterproof cloth so that they keep remarkably dry.

Forward of the starboard buffet is the stove space which is a sort of cuddy of galvanized sheet iron. In it are two brass Primus stoves. There is a brass plate in the deck above them which can be removed and a ventilator screwed in to carry off the surplus heat. This stove cuddy has doors which can be shut—then anything hung in front of them can be well dried out. This furnishes a convenient method of drying socks, underwear, dish towels, etc., after sundown or during wet weather.



Forward of the stoves is a narrow bunk (with an air cushion) just far enough below the deck to admit of one's turning over when lying thereon. Opposite the stove space is an ice-chest with a capacity of 150 lbs. This amount of ice, when wrapped in a cloth, will last three or four days. The drip from the ice drains into a small tank which can be removed and emptied—a daily task. Or better still, the drip can be used when washing dishes and silver, thus reducing the demand on the supply of drinking water. Forward of the ice-chest is a locker for such things as coffee, sugar, salt, pepper, cereals, plates and tableware. Still further forward are hooks and lanterns, dust pan and brush, etc., and here are stowed the jibs and spinnaker, each in its separate canvas bag.

Fresh water is carried in a wooden breaker which is stowed beneath one of the seats in the cockpit. It has a faucet so that the water is easily drawn off and it holds enough to answer all the cooking, drinking and washing needs of two men for three days. A box for vegetables, stops, light gear and tackle, and a pail stow away under the other seat. At the aft end of the cockpit are small doors on either side of the rudderpost—these doors give access to small lockers where are kept kerosene, metal polish, paint, varnish and tar.

She has 580 square feet of sail in mainsail and jib. Sunday, July 27, 1902.—Got underway at 8:15 A.M. with a light south south-west wind. Beat slowly down Gloucester harbor to the buoy off Eastern Point, overtaking and passing a small yawl with a clipper bow—the Keren, if I remember aright—and then squared away for "the Londoner" off Thatcher's Island. The wind was rather soft but we got along fairly well and pulled steadily away from the yawl. Armorel's spinnaker boom does not have jaws—they have such a heavy clumsy look. Instead a becket is made by the passing of a light line through a hole in the heel of the spar splicing it back onto itself. As the old one had disappeared I occupied myself for a few minutes by splicing in a new becket.

We had the two lights on Thatcher's abeam at 10:10 A.M. and a few minutes later set the spinnaker. This bit of "muslin" is of no mean size, having a hoist of some 25ft. with a 24ft. spinnaker pole. After the sail was hoisted we snapped its clew to the tip of the spinnaker pole, ran that out to port and passing the becket around the mast, thrust the heel of the boom through the becket. We also stuffed a bit of canvas between the mast and boom to prevent chafing. When the spinnaker was sheeted home and its tack taken down to the bitts it added a good bit to our speed. All this takes time in the telling but was a short task and had been easily accomplished some minutes before we had Straitsmouth Light, (Rockport) abeam at 10:20 A.M.

Our course was now N. ¾E., to take us just inside the Isles of Shoals, and the wind was a couple of points off our port quarter. We wallowed along through the long, easy roll at a good, steady gait, constantly drawing away from the yawl and slowly overhauling a craft ahead, which was steering about the same course as we were. The day was warm, but not hot—the sun only showed occasionally—inside of us up Newburyport way the weather looked rainy. On this run the owner brought out a jar of prunes and insisted upon our eating some of them. It did not take much urging to persuade us to fall in with his wishes, and I mention the fact merely because we found the prunes of value medicinally—they are a slight laxative and offset the effects of amateur cookery and the salt air.

The craft ahead of us was caught up with as we passed the whistling buoy south of "the shoals"—she proved to be the Reynard. I suppose her crew attributed our superior speed to our large spinnaker—they had their jib poled out, but, of course, it was not as effective as our "merrie muslin." The Reynard now held more to the westward and was evidently running for Portsmouth.

We had the Isles of Shoals abeam, to starboard, just before two o'clock. The wind had pricked on a bit and we had taken on quite a turn of speed. The yawl was hull down and hard to see. The light air hardly suited her rig and large displacement.

As we ran on for York River the breeze took on more and more, reaching a quite respectable velocity and backing until we were running a bit by the wind. We held on, however, not wishing to take in the spinnaker until we reached York and being too lazy to shift it over to starboard. But it finally had to come down at 3:30 P.M., just as we were passing inshore of Stone's Rock Spindle. The shore thereabouts is not high, but is steep and rocky with almost no land-

ing place—save at Brave Boat harbor. The country is fairly flat while in the distance Agamenticus Mountain rises sheer out of the plain. It resembles a large sugar loaf and is quite a prominent land mark. Soon after passing Stone's Rock we reached York River and ran up it on the last of the flood. We anchored at the first turn in the river, well in toward the apex of the angle and out of the current which sweeps with great force around the bend. All the other boats that we saw at York Harbor swung to the tide, but the Armorel kept her nose to the wind throughout our stay.

The owner and his friend left us soon after the mainsail was furled—giving us final directions as to the rendezvous at Portland.

July 28.—Up at six o'clock and had breakfast half an hour later. The morning was beautifully clear and crisp with a strong S.S.W. wind. We dallied over grub and the subsequent cleaning up so that it was 7:40 when we got our anchor. We had taken down a single reef in the mainsail as the wind came off the shore in fierce gusts. When reefing I always roll up the slack of the sail instead of merely knotting the points around the bunt. This gives a neater look to the reef and makes the sail set better over it. I also take pains to pass a gasket through the reef cringle and around the boom, tying it tight so that if the pennant stretches the last reef points will not tear the sail. The reef was a needless precaution and under reduced canvas we were rather slow about getting out of the river. I soon ached to shake it out and did so the minute that we were well out of the ebb from the river, and then, after getting the mainsail well swayed up, made the course N.E. ¼ E. for Cape Porpoise.

The wind offshore was rather light and as our course was so nearly dead to leeward we felt almost becalmed. Should have set the spinnaker at once, but the breeze looked as though it might shift any minute so I waited until it should give indications of steadiness.

We passed Cape Neddick Light at 8:43. The lighthouse is on a small "nubble" just off the mainland. The wind had backed by this time a full point and had hardened a bit so I dove below and got the spinnaker out of its bag. I sent the "fairy fabric" aloft in stops, swung the boom out to port, ran aft with the sheet and made it fast, and then broke her out by hauling down on the tack. I found this the easiest and quickest way to set such a large spinnaker when doing it alone. It drew nicely for half an hour, but then the wind dropped and became so variable that the spinnaker had to be dowsed.

The breeze continued very light and shifty for some time, amounting to little more than a series of catspaws, which varied in direction all the way from S. by W. to N.W. We did not lose steerage way, but were engaged in a series of ladylike jibes for the best part of an hour. Finally at 10:30 we caught a nice W.N.W. air.

At eleven o'clock we met a tug with a barge in tow bound to the westward. The next incident occurred a half hour later when we set the Kay taffrail long. This was a pretty toy and a valuable one as well. (The day before we had towed it for several hours during which time it overran a fourth of one knot—or an error of less than one per cent.) Soon after setting the log we met the schooner yacht Redskin III. beating to the westward. She is about as homely a sled as ever I saw. Her owners came out this summer in an open letter to a Boston paper and resentfully bewailed the fact that she is commonly considered a freak. As they strenuously objected to her being called by such a name I won't call her anything, but I know a chap who had the misfortune to be anchored near her one night and he could not sleep a wink, she made so much noice pounding the small sea with her long flat bow.

We came up with Goat Island Light (Cape Porpoise) just before noon. There the wind came straight offshore with some weight so that Armorel took a comfortable list and did some pretty sailing. But as we drew away from the shore the breeze lightened again. However, when we looked at the log it had registered 5½ miles for an hour's run.

As we drew up to Wood Island there seemed to be less and less air so that we felt that the lighthouse would never be abeam. In fact the prospects of having wind enough to carry us to Portland, seventeen miles away, before late that night, seemed so remote that we debated whether or not we should run in behind Wood Island and anchor. But as it was then only 1:37 P.M. we decided to keep on and trust to luck for more wind.

The run across to Richmond Island in the hot sun was very tedious. We had again set the spinnaker to port and made better time than we realized for we had the Red Whistler, south of Cape Elizabeth, abeam at 3:26. We passed halfway inside of Taylor's Reef can buoy and took in the spinnaker as we brought the Cape Elizabeth lights abeam. The day boat down from Boston passed us at this point.

The wind now came off the land in wholesail quantities so that the Armorel put her lee rail awash and walked up the harbor right cleverly. We cut the can on Trundy's Reef and passed in by Portland head and the new fortifications at 4:31. Then reaching between Cushing and House Islands we arrived at the Peakes Island anchorage (Portland Harbor) at 4:55, took a look around for a good berth and anchored ten minutes later.

We took our breaker ashore to be refilled and found a place where any quantity of ice water could be had for the drawing—talk about luxury.

Peakes Island is a popular but rather cheap summer resort. I'll say this for it though—we would get the best of everything at the shops for very moderate prices. For supper we indulged in fresh raspberries and thick cream.

During the night I heard a hail and turning out in my pajamas found that the tide had turned and that as we swung to it we were in altogether too close proximity to the bowsprit of the famous old 40ft. (L.W.L.) cutter Gorilla. The weight of her chain had kept her from swinging far from her anchor, but the tide took us pretty well out to the end of our manila warp. Then too it was pretty near low water, so that we had an extra two fathoms of rode to deal with. I shortened up as much as I cared to, but soon saw that that would not get us out of the impending pickle, so roused in the warp smartly and, as the anchor broke out easily, got way enough on her to forge ahead and sheer enough to starboard to get a better berth.

Tuesday, July 29.—The morning was as "hot as the hinges" without a breath of air to temper the sun's rays. The thermometer registered 84° in the cabin at 10:30 and on deck the temperature was, of course, much higher. I was, however, grateful for the heat as the summer had been stupidly cold, rainy and disagreeable. Sent the boy ashore for some provisions and while he was gone nearly broke my backbone trying to go below without opening the companionway slide. Just as I was crouching on the companionway ladder preparatory to ducking under the slide a steamer went by and by her swell gave Armorel such a lurch that I was thrown off my feet. In my fall I struck my spine, at the base of my neck, against the slide, which felled me like a log. Well, it taught me not to be too lazy to push the slide back.

Just before half after eleven o'clock a light E. by S. breeze sprang up. We were soon underway and stood out between Peakes and the Diamond islands. The channel is narrow, on a slight curve and we had a head tide. Could not lay our course through but made it in two long starboard tacks and one little port hitch across the channel.

Ahead of us was the knockabout Thistle, a boat of our class, but newer and more of a racer. We determined to trim her if we could, so worked our sheets for all we were worth. We managed to keep the jib full and drawing well and still gave it considerable sheet so that it had quite a lift to it. I find this takes a boat up the wind faster than does flattening the sheets and trying to point too high. Albert could not be persuaded to see it in the true light, so I had to take the jib sheet into my own hand. We soon began to pull the Thistle back.

As we crossed Hussey's Sound the wind came more S.E. so that we were able to ease our sheets a good bit. As we drew up on the Thistle she held well to weather of her course and inside of black buoy number eleven, north of Long Island. I suppose the idea was to drive us off and make us attempt to force a lee passage, but it was no go. We forged up on her weather quarter, hung there a moment and then by rousing in our mainsheet jumped into her wind and walked ahead. After that we drew steadily away from her.

Our course was about N.E. by E. along the northerly or inner side of Long Island for two miles, leaving the buoys on the Channel Rocks to port. This brought us to Chandler's Cove, a pretty bight formed by Little and Great Chebeag and Long islands. There are ten fathoms in the cove and as it is nearly landlocked it makes a fine young harbor—three quarters of a mile in diameter. Entering the cove we pinned in our sheets and fetched through on the starboard tack, leaving Deer Point buoy just to port. Then eased away again and ran along E.N.E. up between the Great Chebeag and Hope Island. This passage is less than three-eighths of a mile wide. We had a slight head tide and the wind was extremely dainty, but by hugging the Hope Island side we got over the bottom at a decent gait. We invariably found more air close to the lee shore of those islands than there was two hundred yards out.

Just beyond Hope was a smaller island which we knew from its look must be Sandy Island before we even looked up its name. It is rather an oddity for that region as it has no trees or rocks upon it. To N.E. of this island is a black spar buoy which we left to starboard and hauling to E. ½ N. left Little Bang's I. to port and ran for the spar off Stave I. ledge. This reads like a chronicle of islands—well so must any record of a trip in Casco Bay. They are so thick that you find it hard not to butt into one while dodging another.

Stave I. ledge runs off N.E. from the island of that name and typifies the striking geologic formation of the region—the islands are all comparatively long and narrow and extend in a N.E. and S.W. direction as regularly as if laid off with parallel rulers. When up with the spar buoy we hauled our wind a bit and reached across Broad Sound for the end of Haskell Island—two and one-quarter miles away, S.E. by E. This reach was rather slow work, the breeze being in very delicate health. On our way over we passed inside of Eagle I., which is small, high, rocky and thickly wooded and is owned by the Arctic enthusiast, Lieut. Peary, U. S. N.

On reaching Haskell Island we found quite a gut between it and Haddock Rock on the southwest and Little Mark I. on the southeast. The latter is treeless and is made prominent by a white-washed stone monument about thirty feet high. The gut was well buoyed, but we had to fight to get through against the current. After rounding the end of Haskell we started to cross the mouth of Merriconeag Sound, but the wind failed utterly, leaving us to slat gently on a very quiet sea. This was all very well for a while, but as it threatened to become monotonous I jumped into the dinghy at 2.15 and started a white ash breeze. Once I got the Armorel started she towed nicely for half a mile when we picked up a light air, which made off of Haskell's so ran up the sound to the easterly entrance to Pott's Harbor. This entrance is very crooked and is more or less of a tide race, but with a fair current and light breeze we worked through it nicely and anchored off the steamer landing, in four fathoms, at 3.20 P. M. Soon after we had laced the cover on the mainsail the breeze quit work for the day—we could see the Thistle becalmed out in Broad Sound all the rest of the afternoon.

Pott's Harbor lies between Potts and Basin points which extend like arms from the shoulders of Harpswell Neck. It is protected from the open sea by Haskell I., several ledges, the Thrumb Cap, Upper Flag, Little Birch, and Horse islands.

Went ashore with Albert to the Merriconeag House for dinner and found some southern acquaintances there, so took them aboard in the evening and showed them the ship.

Wednesday, July 30.—A beautifully clear, cool day. Had a fine plunge before breakfast—the water was icy. After giving our friends a spin in the early forenoon we cleared at 10.30 with a rattling east wind. It came along with some wicked puffs so that wholesail was perhaps a bit too much, but she lugged it, so we did not reef. She steered easily, even in the worst puffs, with just enough weather helm to make her handle well. We beat out the east way, with fair tide, in several short hitches—were thankful she was so quick in stays and so speedy in gathering way—in fact she never seemed to slow down, but shot around from one tack to the other as if eager to show her ability.

ARMOREL.

Reached down Merriconeag Sound to the red spar on Turnip I. ledge and then flattening in gave her a good full for the climb to windward. Here the Armorel showed us what a grand sea boat she is. The wind across the current had kicked up a nasty, short, criss-cross sea; and as we had, as I have said, a bit too much sail she had her lee rail under. But she bucketed her way up the wind in fine shape, keeping her feet well, and going over the seas handsomely. Now and then she threw some spray aft to the cock-pit—not much—just enough to make it exhilarating.

While we were working along I went forward to see that the anchor lashings were secure. We carried the hook always with stock in place and flat on deck, one arm erect and the other down over the bow—it fitted the curve of the stem quite well. A strop around the crown and stemhead held the anchor securely in place and the rode was led direct from the ring to the bitts and belayed with two half hitches. Armorel was jumping considerable, so that while making sure that the strop was properly knotted I crouched on all fours, of course she could not resist the temptation to stick her nose through one green sea and wet me down. She did it and gave me "fisherman's luck," but I was used to that.

After a hitch out to sea we stood in towards Jaquish I. and then turned to weather in short hitches in to the Pond I. ledges, over to Saddleback, in to the Middle Ground, which was just awash, then over to Ragged Island. We were working across the chart diagonally and somehow or other the islands were hard to place—it seemed as if we must be further to the S.E. than we really were—but by taking cross bearings we located ourselves aright. When Ragged I. bore east, distant one-quarter of a mile, we taeked to port and starting our sheets laid her head N.E. by N. to run up between Cedar Ledge and Blacksnake Ledge. The name of the latter is particularly appropriate. Two Bush Ledge (really an island) and the Elm islands were left to starboard—this was the only proper course.

We were now entering Quohog Bay—a sort of fjord, four and a half miles long and less than a half mile wide. Its head opens out into a most beautiful sheet of water with several little gems of islands and innumerable enchanting little coves. Midway, and for about half its length, the bay is split into two passages by Pole Island and the north and south ledges. This island is narrow, thickly wooded, with very steep sides and is about sixty feet high. The passages on either side of it have an average breadth each of less than 250 yards. As the sides of the bay, like those of Pole I., are high the wind generally abandons its true direction and draws up or down the bay; it did so this time and we had to beat in. We went up the east channel and got a glimpse back of Yarmouth Island into Ridley's Cove, which furnishes another entrance to the bay from the sea.

After passing the north (Pole I.) ledge we left Centre and Snow's islands to port (turning sharp to starboard) and slowly worked up into a bight among some half dozen tiny islands, finally anchoring at 1.38 P. M. at a spot where the chart shows thirteen feet at mean low water.

I had long heard the beauties of this place sung by my friends, but scarcely credited their poetic accounts of it. I had been a doubting Thomas until I saw the reality when I could only sit and gape wonderstruck at the land-

scape. There we were with land within a hundred yards in every direction, no sign of a definite way in or out, the water like a mill pond and as clear as crystal, and apparently surrounded by the forest primeval. Through a vista between two diminutive isles we could see a small clearing with a neat, old-fashioned white farm house—the only building in sight save for a weather beaten fishing shanty on a near-by point. Not a beach in view, the rocks rose straight out of the water six or eight feet and the trees grew on their very edges. The only landing was a sloping rock with a path leading away among the pines. Now and then we heard the whirring of a mowing machine at some distant field, but could see no signs of a farm in the direction whence the sound came. The whole effect was supremely restful and dreamy.

When I had had my fill of gazing I took the tender to do a bit of exploring. I would row up a cove and when I thought I had exhausted its beauties a bend would open out a new bit of enchanted land. All the while I could hear no sound but those of the forest and the drops from my oars and see nothing but water, rocks, trees and sky. At what I had supposed to be the head of one cove I found a small steep rapid leading into still another. I shot down through the rapid and then landed on some shelving rocks. Near at hand was a stretch of black mud—by hopping from rock to rock over this area I traversed it and on my return picked up half a bucketful of clams which lay on the surface in surprising profusion.

On getting back to the dinghy I set out to return to the Armorel. I had much difficulty in rowing up the rapid, but by putting my back to the work finally got through. This rapid is rather peculiar so I will describe it. It is about twenty feet wide and only forty long, in which distance the water dropped more than a foot. It is caused by the fact that when the flood tide sets up the outer cove the level of the water rises faster there than in the inner cove because the latter is supplied only through this narrow sort of gut. The result is that the water simply falls in. At high tide the level of the water in both coves becomes the same. Then when the tide ebbs the outer cove empties quicker than the inner one, so that the water tumbles over itself to get out. It is a reversible rapid, good either side out and warranted not to wear, tear or fade.

Once back to the Armorel I rinsed the clams in a bucket of salt water and then went in for a swim myself. The water proved to be delightfully warm, so that I stayed in for some time. Then I climbed out and lay full length on the deck and had a jolly good sun bath.

Having dressed I went ashore in the dinghy to make repairs. When rowing up one of the coves I had been so occupied in admiring the scenery that I failed to observe where I was going, so ran plump into a rock, smashing a hole in her bow just above the water line. She was a fine little boat, light, easy to row or tow, and of considerable carryig capacity, but altogether too flimsy for a Maine trip, being built, canoe fashion, of very thin cedar planking covered with canvas painted white. Reaching shore I pulled her out on the rocks, melted some tar in a big spoon and ran it into the hole. Then I took two thicknesses of linen soaked in varnish and fastened them on with some liquid fish glue. The patch was a bit unsightly but made her perfectly tight. Incidentally the accident emphasized the advantage of carrying a small stock of tar, white lead, glue, etc.

That night we had a grand feast on clam bouillon, steamed clams with melted butter, etc. We two fellows devoured the half bucketful of clams and sighed for more. Put the mosquito netting over the main companionway and fore hatch for the night, but did not hear a mosquito.

I must mention an experience which Albert had with one of the Primus stoves while I was ashore repairing the tender. When the alcohol burnt out and he started to pump, he forgot to close the air-valve and so was soon pumping kerosene, instead of gas, out of the jet. It all blazed up and completely rattled him. There was no danger since the stove sits inside of a galvanized iron cuddy, but he valiantly grasped it and rushing on deck thrust the whole business overboard. He put out the fire but I had to take the whole stove to pieces and clean it before I could make it work once more.

Before turning in for the night we took a row looking in to Brickyard and Rich's coves and landing on one of the islands—it was about eighty feet long by forty feet wide, and like all the others, was thickly wooded. The only signs of life we saw during our row were a few dories moored in the cove south of Rich's and a few shanties on the shore where there was a small clearing in which a cow grazed contentedly. No one was about. Finally we saw a man sculling down the bay—this strange sight made us feel like Robinson Crusoes discovering Friday's footprints. We did not get within hailing distance of the apparition.

Thursday, July 31.—The morning dawned bright and still. After a delicious breakfast of plums, grape-nuts with cream, scrambled eggs and toast, we got under way at 7.57 A. M. There was almost no wind, so that we had to tow out the bight. When south of Snow's I. we picked up a light air which blew straight up the bay. We decided to go out by the west passage so as to have seen the whole bay. Stood past Centre I. and ran right up to the shore before tacking ship. Like all the shore in the vicinity it was very bold—all the way down the channel we stood right up to within a few feet of the rocks before coming about.

I have not mentioned the fact that Quohog Bay extends up into the heart of Sabascodegan Island. The latter which has a total length and breadth of six by three miles is so indented by coves, etc., that it has a coastline of some fifty-four miles.

To resume my narrative, beating out the west passage we saw more signs of the human race and actually beheld a man and woman. We waved them a hearty good morning which, after some hesitation, they returned in most reluctant manner. This channel, like the one east of Pole I., is narrow but deep, the soundings running from eleven and a half to six and a half fathoms.

Opposite the foot of Pole I., and to the west, there is a broad cove. Its entrance, between a ledge and the shore, is very narrow, but once inside it is a fine anchorage having four fathoms in the middle and from ten to twelve feet close up to the shore. It ought to be a good

SHOAL DRAFT AUXILIARY SCHOONER—CABIN PLAN—DESIGNED BY B. B. CROWNINSHIELD FOR LAWRENCE JONES, 1903.

place to be overnight when intending to make an early morning start.

As we went out we left the south (Pole I.) ledge to port. There is a break in the middle of this reef giving a chance to cut through from the west to the east channel if occasion arises—the gap is narrow but carries fifteen feet of water.

When down between Long Point and the Yarmouth I. ledges, and out from the steep shores of the bay, the wind veered a little, allowing us to make a long and short hitch out to Yellow Rock, where we passed a native fisherman in a lobster boat with a loose-footed spritsail and exchanged greetings with him. The breeze was light but took us out by Blacksnake ledge and Ragged I. at 10:20, when we made our course W.S.W. ½ W., which we could just lie with sheets slightly eased. The sea was smooth, but was breaking rather heavily on Round Rock and the Middle Ground.

Passing Jaquish Island at 10.55, we held on out to sea, going between Mark I. ledge buoy and the spindle on Drunker's ledge. The lighthouse on Halfway Rock—two and a half miles outside of our course—was in plain sight. There was a strong current setting out of Broad Sound causing a steep little sea. The edges of this current were very plainly marked, as the volume of water running out did not seem to mingle with the rest of the sea—it was perhaps five hundred yards across the broken water. It set us to windward very handily so that before reaching Inner Green Island we were able to start our sheets.

Ten minues before noon we passed between Jewell's and Inner Green islands. The sea was still very smooth, but the wind (S. to E.) had taken on strength. We had a beam reach, with sheets checked, across the mouth of Luckse's Sound. It was a delightful bit of sailing—the sun warm and the atmosphere very clear. My favorite seat when steering is to leeward, so that I can look ahead under the mainboom and keep an eye on the jib to be sure it is drawing well. This seat also, by bringing me nearer the water, adds to the charm. We had a small strip of sheet brass which we tucked in between the rudder post cap and the tiller arms, and by this means held the tiller at any desired vertical angle. This took the weight of the tiller off of one's arm and yet allowed of shifting it readily to any comfortable height. (A bight of the mainsheet would answer in place of the brass strip.) We romped along over to Overset Island, covering the three and a half miles in thirty-three minutes.

We bucked the tide up Hussey's Sound to the Pumpkin Nob, which we rounded at 12.31 P. M., and then could just fetch the Government wharf on Little Diamond Island on our way between the Diamond and Peakes islands. The wind was very fresh from the S.S.W. and came tearing through the islands in wicked puffs. We could just fetch along the weather side of the channel and had our hands full, for we could not luff to the puffs owing to the shoal water close to windward; on the other hand we did not wish to work off to leeward, as that would mean stemming the full strength of the head tide. So we "gave it to her," only letting the sheets run in the worst puffs, regular "williwaws," to quote Capt. Slocum of the world renowed Spray.

When up with the Government wharf we made a few short hitches and then stood in to the Peakes I. anchorage where we dropped our hook, in four fathoms, at 12.55 P. M. We were careful to pick out a berth outside and to weather of the fleet. We wanted to keep out of the ruck. It was a wise decision—during the afternoon we witnessed series of mishaps among the boats inshore of us. Several new comers fouled boats already anchored—one fifty-foot sloop in trying to cut across the bow of a small knockabout caught the outhaul block of her main reefing gear on the latter's jib stay and walked away with her bodily, ground tackle and all. Several other laughable mishaps occurred before nightfall, and I for one "allow" that many a man envied my secluded berth outside the bunch.

During the afternoon Albert went up to Portland, via the steamboat, to get our mail. I put in the time going over the deck with some cold tar which I paid into the seams wherever it was needed.

Friday, August 4.—It blew very fresh during the night and in the morning we got sail on her about ten o'clock and tore up to the city, picking up the cutter Sirroco's mooring, in eight feet of water, opposite the Portland Yacht Club, at 10.20. The rest of the day was spent in a general overhauling and airing, washing the deck, the top of the cabin trunk, and the cock-pit, polishing the brass work and picking up the cabin. By turning the ventilator over the stoves to windward we forced a fine draught of air through the cabin.

I want to add that we received every kind of hospitable aid at the Portland Yacht Club. They are always courteous to visiting yachtsmen and will receive and hold their mail.

I had to leave the boat before the owner arrived, and as I trained up to Boston I could not help feeling that charity is the noblest work of man, especially if it takes the form of giving a chap a charity cruise. Vale! Vale!

A double launching took place at Morris Heights on Saturday, April 11. The two boats that were launched were the high speed steam yachts Velthra and Levanter. The former was built for Mr. S. Parker Bremer, of Boston. She is 110ft. over. all, 104ft. waterline, 14ft. breadth and 4ft. draft. Velthra is of wood construction, and is double planked and is similar in design to Niagara IV., Mr. Howard Gould's new steam yacht. Her engines are of large horsepower, and it is expected that she will do better than twenty-three miles an hour. She is lighted throughout by electricity, and will carry a crew of six men. The owner's quarters are commodious and all the fittings are of mahogany.

Levanter was built for Mr. Alfred Marshall, of New York City. She is also of wood construction and double planked. Levanter is 90ft. over all, 84ft. waterline, 10ft. 6in. breadth and 3ft. 8in. draft. Levanter will be fitted and equipped in very much the same manner as Velthra, only on a slightly smaller scale. She will have a guaranteed speed of twenty miles.

All communications intended for Forest and Stream should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

A Shoal Draft Auxiliary Schooner.

IN 1899 Mr. B. B. Crowninshield received an order for a 70ft. waterline cruising schooner. The prospective owner was to use the boat in southern waters, and in consequence it was essential that she should not draw over 3ft. of water with the centerboard hoisted. To turn out a boat of 70ft. waterline length with only 3ft. draft that would be safe and able at sea, was considerable of an undertaking. Mr. Crowninshield dealt with the problem in a very intelligent manner, and he designed a boat that not only met all the owner's requirements, but proved to be an excellent all around boat in every particular. She was named Attaquin, and as she has done a good lot of cruising she is a familiar craft to yachtsmen on the east coast of the States.

Attaquin was such a success that she brought her designer another order for a boat of the same type, although a little smaller in size.

The plans for the new boat appear in this issue. She was designed for Mr. Lawrence Jones, who will use her for cruising on the coast and inland waters of Florida.

Her dimensions follow:

Length—		
Over all	81ft.	11in.
L. W. L.	55ft.	
Overhang—		
Forward	12ft.	5in.
Aft	14ft.	6in.
Breadth—		
Extreme	20ft.	
L. W. L.	19ft.	4in.
Draft—		
To rabbet	2ft.	7in.
Extreme	2ft.	9in.
Board down	10ft.	1in.
Sail area—		
Mainsail	1,483 sq. ft.	
Foresail	685 sq. ft.	
Forestaysail	313 sq. ft.	
Jib	332 sq. ft.	
Area lower sails	2,813 sq. ft.	
Jib topsail	223 sq. ft.	
Foretopsail	187 sq. ft.	
Main topsail	270 sq. ft.	
Total sail area	3,493 sq. ft.	

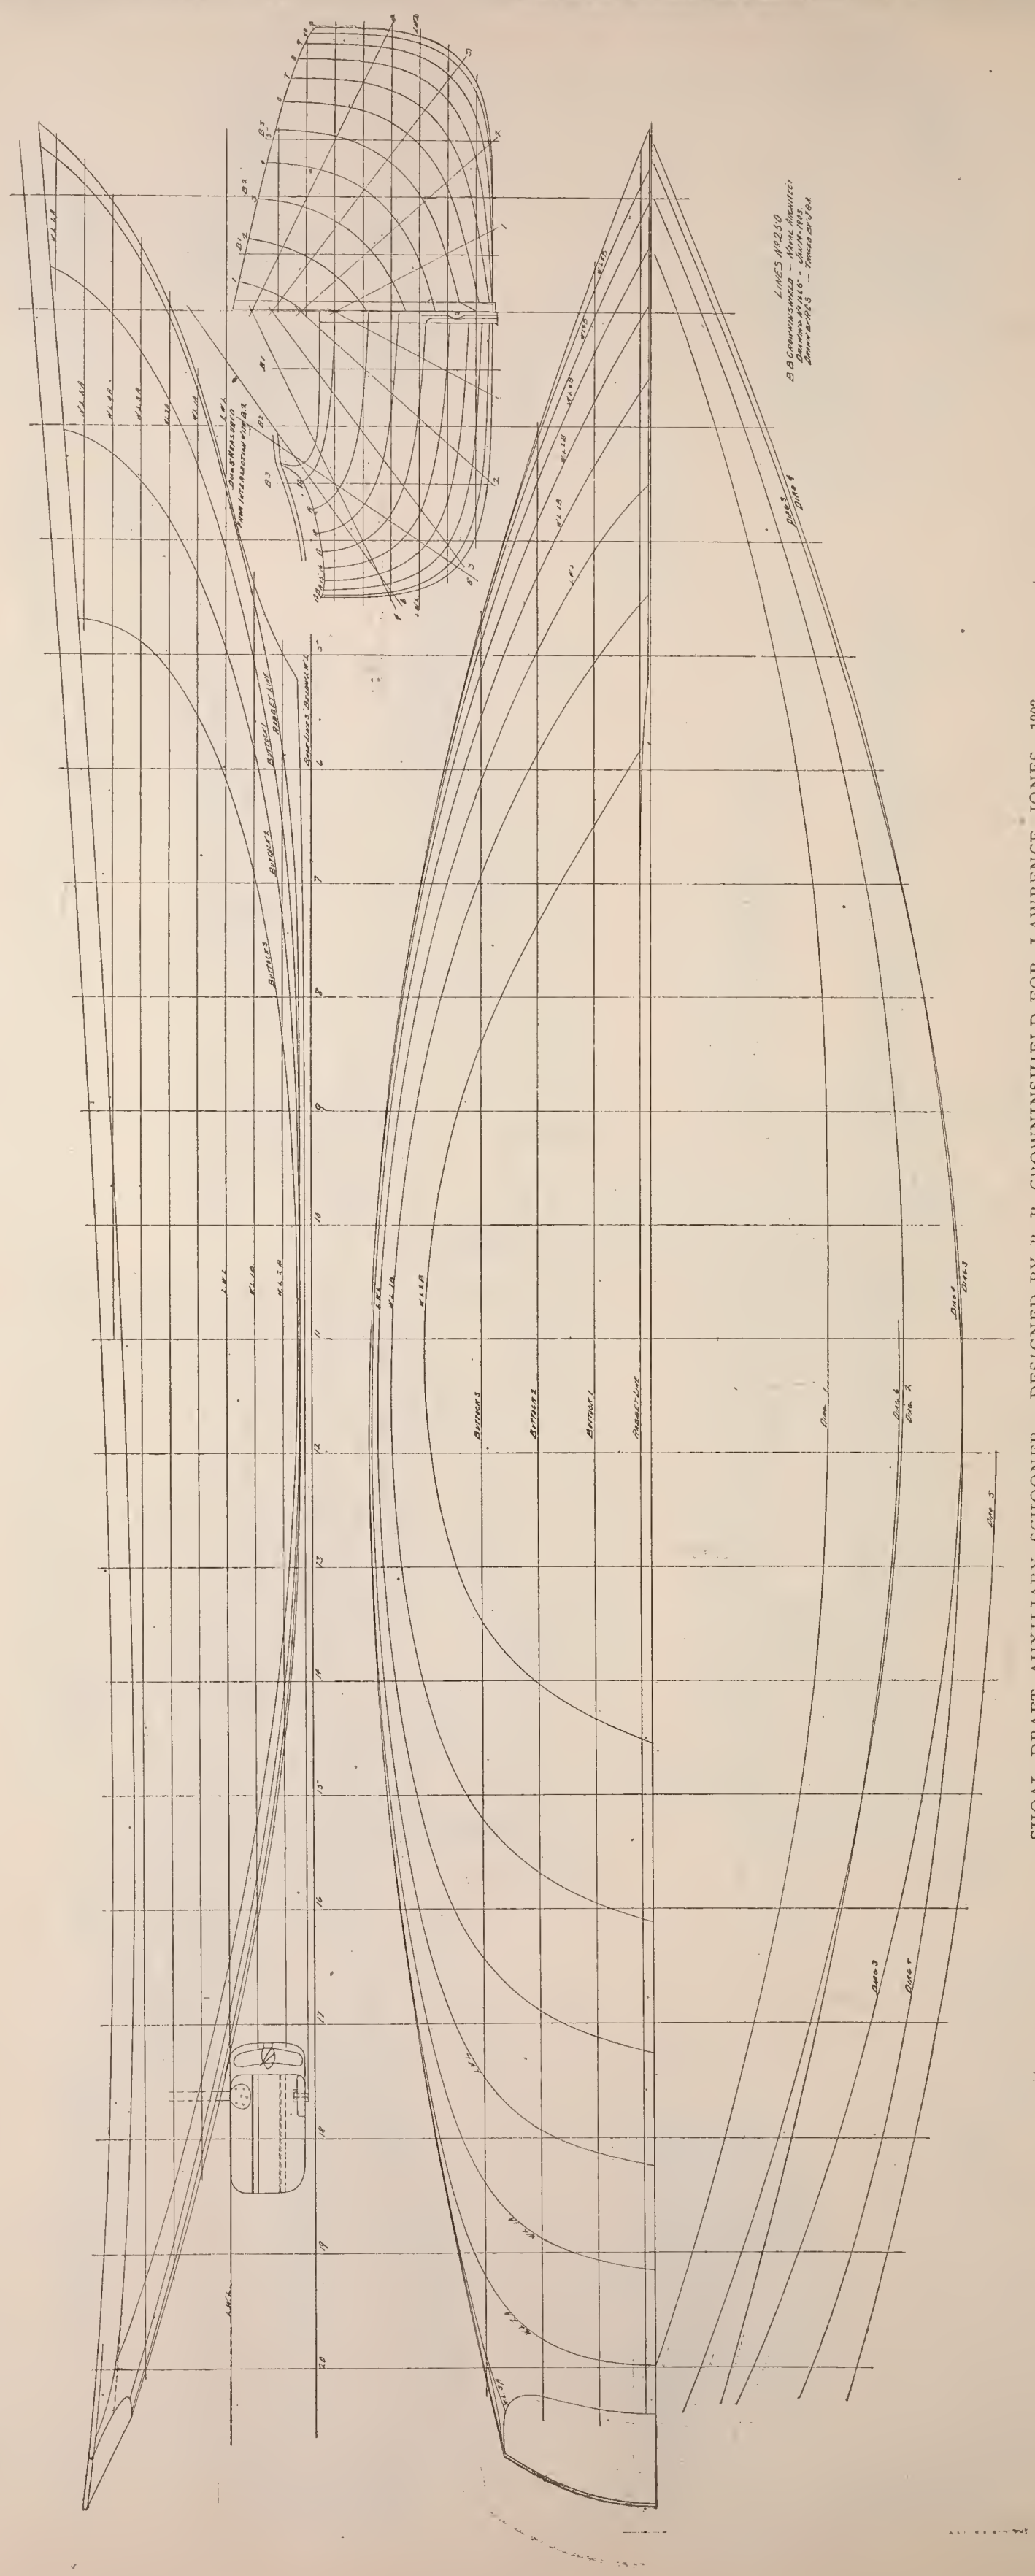
There is considerable room below, and the accommodations are laid out to good advantage. There are quarter rooms on either side of the companionway, the one on the port side being used as a stateroom, while the one on the starboard side is used as a bathroom. The saloon is 12ft. long and extends the full width of the boat. On either side is a very wide berth. The sideboard and wine locker are on the port side, while the linen and china closets are on the starboard side. A large skylight directly over the cabin table will give ample light and ventilation. Port holes in the cabin trunk open into all the cabins, and will materially help to ventilate them and make them cooler.

Forward of the main saloon, on the starboard side, is the owner's cabin, 9ft. in length. In addition to the wide berth is a large hanging closet. Just forward of and connecting with the owner's room is a lavatory 2ft. 6in. wide, fitted with a folding wash basin and patent closet. There is a skylight over the owner's room.

Running forward from the saloon on the port side, is a passage which leads to the galley. Just forward of the saloon and reached from the passage is another stateroom 9ft. long, fitted up very much the same as the owner's room. The galley is large, roomy and well arranged. The forecastle has berths for five men. There is a closet for the crew on the port side of the forecastle. Aft of the forecastle, on the starboard side, is the captain's room.

The centerboard trunk, which is 14ft. long, is placed a little on the starboard side of the center; this was done so that the propeller shaft might run along the center line of the boat. The motor is placed just aft of the foremast. It takes up but little room and still is quite accessible.

There is 6ft. 3in. headroom in the clear under the cabin house, which is 35ft. long. The cockpit is 11ft. long and is watertight. There is a waterway 3ft. 6in. wide all around the cabin house and cockpit.



SHOAL DRAFT AUXILIARY SCHOONER—DESIGNED BY B. B. CROWNINSHIELD FOR LAWRENCE JONES, 1903.

Boston Letter.

BOSTON, April 13.—This season there will again be harmony between the clubs which are enrolled in the Yacht Racing Association of Massachusetts and those clubs that are not members of the Association. Last year there was a conference between the three largest clubs in the bay and the Yacht Racing Association, with the result that there was more harmony in the selection of dates than there has ever been before. In fact, there were only two instances where there was actual conflict. The result of such action has gone a long way toward creating a precedent, and this year another conference was held. Some of the clubs not in the Association gave way, and like concessions were made on the part of clubs of the Association. The result was the following list of fixtures:

May 30, Saturday—South Boston, Y. R. A. open, City Point.

June 17, Wednesday—Boston Y. R. A. open, off Point Allerton.

June 17, Wednesday—Dorchester, small classes, open, Dorchester.

June 19, Friday—Eastern, special open, Marblehead.

July 3, Friday—Eastern, special open, Marblehead.

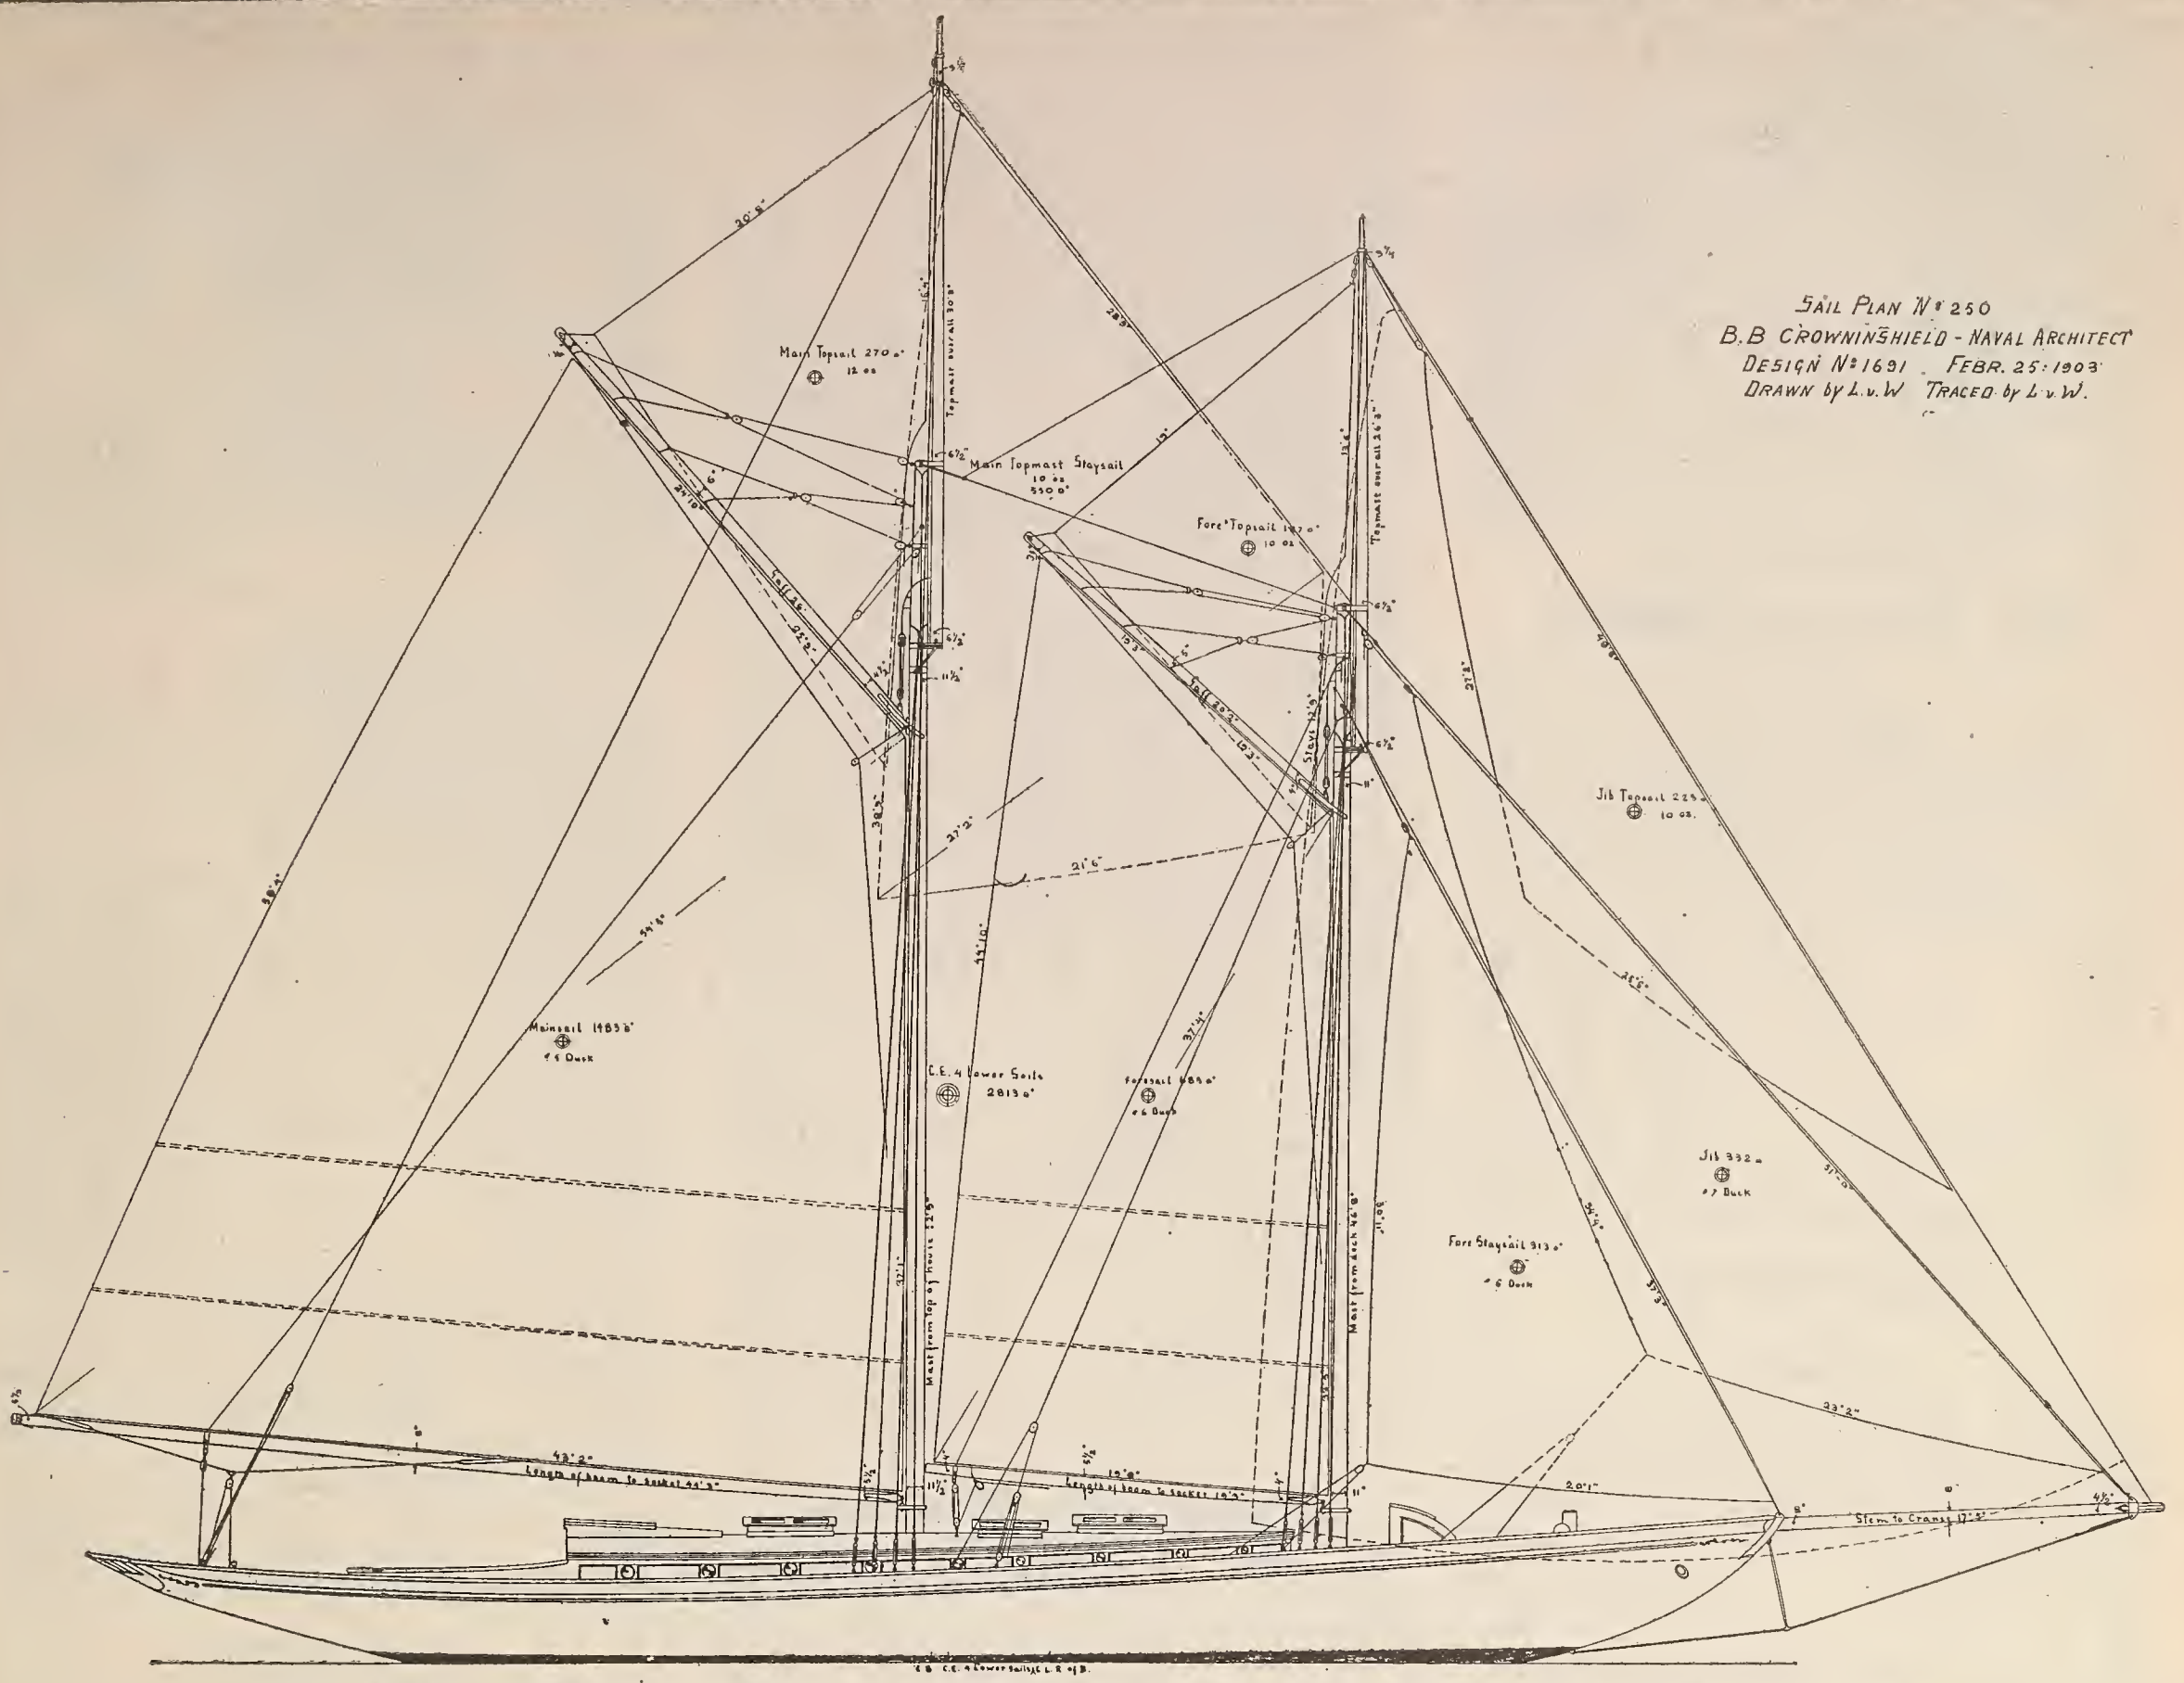
July 4, Saturday—Corinthian, special open, Marblehead (morning); Eastern, special open, Marblehead (afternoon).

July 18, Saturday—Winthrop, Y. R. A. open, Winthrop.

July 28, Tuesday—Squantum, Y. R. A. open, Quincy Bay.

July 29, Wednesday—Quincy, Y. R. A. open, Quincy.

July 30, Thursday—Boston, midsummer series, invitation, Y. R. A., Hull.



SAIL PLAN No. 250
B. B. CROWNINSHIELD - NAVAL ARCHITECT
DESIGN No. 1691 FEBR. 25: 1903
DRAWN by L. v. W. TRACED by L. v. W.

SHOAL DRAFT AUXILIARY SCHOONER—SAIL PLAN—DESIGNED BY B. B. CROWNINSHIELD FOR LAWRENCE JONES, 1903.

July 31, Friday—Boston, midsummer series, invitation, Y. R. A., Hull.
Aug. 1, Saturday—Boston, midsummer series, invitation, Y. R. A., Hull.
Aug. 3, Monday—Eastern, special open, Marblehead.
Aug. 4, Tuesday—Boston, Y. R. A. open, Marblehead.
Aug. 5, Wednesday—Corinthian, midsummer series, invitation, Marblehead.
Aug. 6, Thursday—Corinthian, midsummer series, invitation, Marblehead.
Aug. 7, Friday—Corinthian, midsummer series, invitation, Marblehead.
Aug. 8, Saturday—Corinthian, annual open, Marblehead.
Aug. 10, Monday—Manchester, Crowhurst cup, open, West Manchester.
Aug. 11, Tuesday—Manchester, Y. R. A. open, West Manchester.
Aug. 12, Wednesday—Misery Island, Y. R. A. open, Salem Bay.
Aug. 13, Thursday—East Gloucester, Y. R. A. open, Gloucester.
Aug. 14, Friday—Annisquam, Y. R. A. open, Annisquam.
Aug. 15, Saturday—Annisquam, Y. R. A. open, Annisquam.
Aug. 17, Monday—American, Y. R. A. open, Newburyport.
Aug. 20, Thursday—Duxbury, Y. R. A. open, Duxbury.
Aug. 21, Friday—Duxbury, Y. R. A. open, Duxbury.
Aug 22, Saturday—Duxbury, Y. R. A. open, Duxbury.
Aug. 24, Monday—Wellfleet, Y. R. A. open, Wellfleet.
Aug. 25, Tuesday—Wellfleet, Y. R. A. open, Wellfleet.
Aug. 27, Thursday—Cape Cod, Y. R. A. open, Provincetown.
Aug. 28, Friday—Cape Cod, Y. R. A. open, Provincetown.
Aug. 29, Saturday—Cape Cod, Y. R. A. open, Provincetown.
Sept. 5, Saturday—Eastern, special open, Marblehead.
Sept. 7, Labor Day—Lynn, Y. R. A. open, off Nahant.
Sept. 12, Saturday—Bay State, Y. R. A. open, Lynn Bay.

Only the Y. R. A. open races will count for Association percentage.

There are still some clubs to be heard from in the matter of Y. R. A. open races, and there are good dates remaining which may be taken. By this early arrangement the clubs that have not yet laid out their club races may select the dates and for the classes which will insure the best attendances.

The yachts are already commencing to appear in Dorchester Bay, as many as half a dozen being seen this morning. The yards where the smaller boats are stored, were the scenes of great activity all day yesterday. Every one turned out for the general overhauling festival, before fitting out. In a few weeks they will be as thick as bees all over the bay.

The first races of the season will be sailed on April 20, Patriot's Day. There will be a race given by the Savin Hill Y. C. for one-design sailing tenders, and there will be a scrub race down in Duxbury Bay between some of the 18-footers that have been built during the winter and some of the older boats. The Savin Hill Y. C. has prepared the following list of fixtures for the season:

April 20, Monday—One-design tenders.
July 18, Saturday—Club race.
Aug. 15, Saturday.—Club race.
Aug. 29, Saturday—Club race.

On account of the arrangements made by the larger clubs and the Yacht Racing Association, the Corinthian Y. C., of Marblehead, has prepared a new list of fixtures, which are as follows:

June 20, Saturday—First championship.
July 4, Saturday—Invitation. A. M.
July 11, Saturday—Second championship.
July 18, Saturday—Third championship.
Aug. 5, 6, 7 and 8, Wednesday, Thursday, Friday and Saturday—Midsummer series of invitation races.
Aug. 15, Saturday—Fourth championship.
Aug. 22, Saturday—Fifth championship.
Aug. 29, Saturday—Sixth championship.

Three new courses have been added to the number already laid out by the Regatta Committee. This makes 14 courses in all, which will cover every condition of wind and weather.

It is expected that the new steam yacht building at Lawley's, from designs of Mr. A. S. Cheseborough, for Mr. Charles Fletcher, will be launched about the first of May. The steam yacht, by the same designer, for Mr. C. G. Emery, will be launched about three weeks later. Deck beams are being placed on the 64-rating schooner for Mr. John M. Richmond. The interior work is being finished on the 43-rater, designed by Mr. B. B. Crowninshield, for Mr. Trenor L. Park. The keel for Sally VII., designed by Mr. F. D. Lawley for Mr. L. F. Percival, has been turned out. Mrs. H. D. Gobson's 50ft. auxiliary yawl has left the basin for New York.

Messrs. Small Bros. have placed the order for building the Lipton cup defender, Little Shamrock, with a Swampscott builder. She will be tried out here before being sent West. Another boat on the same lines has been ordered, which will be built in the West. The 85ft. auxiliary schooner, designed by Messrs. Small Bros. for Mr. W. Amory Gardner, is being built at East Boothbay, Me., and is now planked.

JOHN B. KILLEEN.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Mr. G. P. Granbery, of New York city, has sold his 30ft. racing sloop Zaza to Mr. A. C. Fairchild, and has bought the knockabout Firefly through agency of MacConnell Bros.

* * *

Mr. Morgan Barney is now associated with Mr. Frank Bowne Jones. Since Mr. Barney was graduated from the Massachusetts Institute of Technology he has been with Mr. Henry C. Winteringham and the George Lawley & Son Corporation.

* * *

The schooner Ramona has been sold by the Marine Construction and Dry Dock Company, Mariners Harbor, S. I., to Mr. Stephen Peabody. The sale was made through the agency of Messrs. Gardner & Cox.

YACHT CLUB NOTES.

The second meeting of the newly formed Bensonhurst Y. C. was held in the Johnson Building, Brooklyn, on the evening of April 3. The following officers were unanimously elected: Com., A. C. Bellows, sloop Carrie; Vice-Com., Arthur T. Wells, auxiliary yawl Cygnet; Rear Com., Charles E. Allen, catboat Pleione; Treas., Clarence H. Clayton; Sec'y, Charles H. Parsons; Meas., Richard Rummell. Auditing Committee: W. J. O'Neil, chairman; Allan Semple, James E. Nicholson. Regatta Committee: Alfred Mackay, chairman; George B. Waters, G. D. Eggert, W. V. Collins, P. L. Wells. Delegates to Yacht Racing Asshociation of Gravesend Bay: Alfred Mackay, George B. Waters. Delegate to Special Y. R. A. of G. B. Committee for Revision of Racing Rules, etc.: Alfred Mackay. Building Committee: John R. Brophy, chairman; Richard Rummell, G. Ashton Kay. House Committee: T. A. Hamilton, D. F. Lacy, W. R. Sainsbury.

Nineteen new members were elected. Beginning March 1 the dues of the club will be $15 a year. The club's quarters are now located in the construction building of the new yacht basin, near Ulmer Park. There will be no bar on the premises. The governing rules of the Indian Harbor Y. C. were taken as a model. A committee was appointed to confer with the Y. R. A. of G. B. in regard to the adoption of racing rules.

* * *

The eighth annual dinner of the Hartford Y. C. was held on the evening of April 3 at the Allyn House, Hartford, Conn. The guests of honor were: Governor Chamberlain, Baron Speck von Sternburg, the German envoy to the United States, Rev. Dr. John Coleman Adams, of this city, and Commodore Woodward and Rear Commodore Ladd, of the Springfield Y. C. One

hundred and twenty members and their guests were present. Commodore Louis F. Heublein presided.

The annual regatta of the Gloucester (N. J.) Y. C. will be held on the Delaware River June 21.

The officers and committees of the Penataquit Corinthian Y. C., of Bay Shore, L. I., are as follows: Com., J. Adolph Mollenhauer; Vice-Com., Willard L. Candee; Rear-Com., Charles A. O'Donohue; Treas., Richard A. Bachia; Sec'y, Joseph E. Owens. Board of Governors—Rawson Underhill, Allan Pinkerton, William A. Tucker, Edward C. Blum, William A. Hulse, M. D.; J. Campbell Smith and George W. Burchell. Regatta Committee—Josiah Robbins, Robert W. Haff, A. W. Seaman and R. Tucker. House Committee—William A. Tucker, C. O. Grimm, Edward C. Blum, Richard A. Bachia and C. A. O'Donohue. Membership Committee—Joseph E. Owens, Richard A. Bachia and Chester B. Lawrence.

Rifle Range and Gallery.

Iroquois Rifle Club.

THE Iroquois Rifle Club, of Pittsburg, Pa., will hold its spring tournament on April 21-23. It will be opened with the Memorial trophy handicap match, open to members only. Each contestant will shoot 50 shots on five targets of 10 shots each. The member having the highest total score with handicap added, will receive a valuable silver trophy presented to the club in honor of its late member, A. C. L. Hofmeister. The cup was given the club by Hofmeister to be shot for annually. The last two days will be devoted to a continuous prize shoot, open to all:

The scores for last week's shooting are:

Medal match:

Eli Reed	244	244	243
A J Huebner	245	244	244
R Rahm	239	235	234
J O Smith	239	239	239
H Sperling	233	236	238
K W Zoeller	228	230	230
C C Hofmeister	243	239	239
R G Vogeley	226	226	228

Secret handicap:

Saturdays.—Chicago.—Garfield Gun Club; grounds W Fifty-second avenue and Monroe street. Dr. J. W. Meek, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.
**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J. Bradfield, Sec'y, Vicksburg, Miss.

DRIVERS AND TWISTERS.

The programme of the Interstate Association's trapshooting tournament given for the Dubois, Pa., Rod and Gun Club, May 13 to 14, is now ready for distribution. There are ten programme events each day, 15, 20 and 25 targets, entrance $1.50, $2 and $2.50. Lunch served on the grounds each day. Targets 2 cents. Grounds open for practice on May 12. The Rose system will govern. Send guns and ammunition prepaid to Mr. Frank Guinzburg, Dubois. The club will add $37.50 each day, to be divided equitably to those shooting through the programme who fail to get their entrance back.

The hosts of friends of Mr. Harold Money will rejoice to learn that he was sufficiently recovered to journey from Kansas City to his home at Oakland, N. J., where he was due on Monday of this week. He came in charge of his mother, Mrs. A. W. Money, who nursed him through his illness in Kansas City. Our best wishes go forth to him for a speedy recovery.

The Birch Brook Gun Club, of Lynn, Mass., held a meeting on April 6, and elected officers as follows: President, Frank Hilliard; Vice-President, J. W. Hay; Secretary, Henry Rood; Treasurer, H. A. Emery. The club will hold a shoot May 30. The weekly shoots will commence on June 6, and will continue through the summer.

Mr. D. W. Hallam, secretary, writes us as follows: "In accordance with their usual custom, the Dover, N. H., Sportsmen's Association will open the season of 1903 at their grounds on Fast Day, a day of April not yet appointed. Our friends of the surrounding towns and elsewhere are cordially invited."

The Audubon Gun Club, of Buffalo, N. Y., has arranged to hold a shoot on Decoration Day, the main features of which will be a team shoot in the forenoon, and a club handicap prize shoot in the afternoon.

The daily press dispatches recount that Peter Dennis and Martin Winters have agreed to shoot a match at 19 birds, April 18, for a $400 purse. It sounds a little odd in some of its details.

Mr. Chas. E. Humer, of Carlisle, Pa., won the gold medal at the shoot of the Carlisle Gun Club on April 7 with a score of 19 out of 25.

The next shoot of the Richmond Gun Club will be held on April 25, commencing at 2:30 P. M., on the club grounds, Staten Island.

BERNARD WATERS.

New Haven Gun Club.

NEW HAVEN, Conn., April 10.—The day was pleasant and favorable for good enjoyment. There was a good attendance, several of the visitors being New Yorkers. The shoot was a success. The scores follow:

JOHN E. BASSETT, Sec'y.

IN NEW JERSEY.

Erie Gun Club.

Carlstadt, N. J., April 8.—A heavy rain and small attendance were the main features. The birds were very good, considering the weather. The club now shoots at 14 birds instead of 7, on account of not shooting in June, July and August. The conditions were governed by club rules and handicap.

Schofeldt	00100000112002—5	Meader	01201210022222—10

Heflich—Piercy.

East Rutherford, N. J.—The match between Mr. H. Heflich and G. Piercy, on Heflich's grounds last week, was at 25 live birds, $25 a side, 30yds. rise, and birds. A strong 7 to 8 o'clock wind was blowing. The birds were good. Piercy had by far the hardest of the draw. They tied on 23. In the shoot-off Heflich won. The scores:

H Heflich	222201112212*222222121222—23
G Piercy	12122121112120102222122211—23

Shoot-off:

Heflich	22212—5	Piercy	22120—4

Eastern Championship.

April 10.—At the North Hudson Driving Park, the Eastern championship at live birds was shot to-day. Mr. Geo. H. Piercy, of Jersey City, was the winner, he being the only one to kill straight. On No. 1 set of traps there was a 10 o'clock wind; on No. 2 set a 5 o'clock wind. The birds in the first half were an excellent lot; in the second half of the race they were about average. The conditions were 20 birds, $10 entrance, birds included, handicaps 25 to 33yds. The scores:

H C Koegel, 31	02201221202121111122—17
S M Van Allen, 30	22222222222202222222*—18

Franklin Gun Club.

Franklin Furnace, N. J., April 11.—The following scores were made at the shoot of the Franklin Gun Club to-day:

Event 1, open to all: F. Sutharn 4, A. Wright 5, J. Williams 5, F. Kishpaugh 3, P. Glynn 2, W. J. Pope 7, H. Pope 2, H. Corner 5, J. Hawkin 2, J. Madden 10, A. Wright 2, W. Stephens 6.

Event 2, 20 targets: J. Williams 14, F. Kishpaugh 12, A. Wright 7, W. J. Pope 10, H. Corner 13, J. Hawkin 6, J. Sweeney 6, J. Madden 15, Alfred Wright 11.

North River Gun Club.

Edgewater, N. J., April 11.—The weather was delightfully pleasant, though cool. A stiff breeze made erratic flights, and the targets were not of the easiest in regard to speed. Mr. S. Glover was easily the star performer of the shoot. The scores follow:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	15	25	15	15	15	15	5p

Bridgford	7	10	9	9	9	10	9	13	76

Missouri State Shoot.

St. Joseph, Mo.—Mr. Frank B. Cunningham, manager and chief hustler of the Metropolitan Gun Club, of St. Joseph, with his fellow officers, conducted during the past week the twenty-sixth annual meeting and tournament of the Missouri State Game and Fish Protective Association, and they made it a record occasion. The staid old target and live-bird shooters of the East who feel as if they have ever experienced about everything possible in the game at the traps, would have found something new under the sun had they been here, and a perusal of the scores will convince any one that there was something doing all the while. The dates were April 7 to 10.

The first three days were devoted to targets. These were thrown from a new rapid expert trap, and at such a rate and speed that they presented a new condition, and heretofore unthought of problems in the manner of target shooting. The birds were simply so hard to score that none of the contestants from any handicap made any record scores, and the total averages are so far below what they ought to be ordinarily as to seem absolutely ridiculous. However, all went along smoothly, and visitors were nicely provided for. Owing to the general desire to work into form for the G. A. H., a great many of the trade representatives gathered here to line things up for the coming event. When the last shot was fired it was found that Fred Gilbert had won another general average, the other places going to Hirschy, Hughes and Garrett. Scores and totals follow:

First Day, April 7.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Broke.
Gilbert, 22	15	15	18	12	14	18	13	14	17	14	14	16	180

Live Bird Events.

The management wisely decided not to mingle the target and live-bird events, and the last two days were given to the latter exclusively. These included a sweep at 25, open to all and handicap rise; the annual four-man club team event; the State and Interstate championship events, and the final contest between former winners of the State amateur trophy, at 50 birds. The live birds also were a fine fast lot, with the weather favoring them, and the average scores were again low.

The next State meet was voted to St. Louis during the world's fair, and that city was given the offices. H. B. Speneer is President; Joe O'Neil, Secretary, and Dr. Burnett, Treasurer. J. H. Felt, of St. Joe, was re-elected Vice-President.

Four-man team contest:

KILLMORE.

North Side Gun Club.

Allegheny, Pa.—The first shoot of the Western Pennsylvania Trapshooters' League was held under the auspices of the North Side Gun Club here on April 8 and 9. The weather was bad, and caused a late start, competition not beginning until about 2 o'clock in the afternoon. Nevertheless, the attendance was pleasingly large, about forty shooters taking part in the different events, many of whom were of the two classes, amateurs and professionals. High average for the day was made by Messrs. Kelsey and Lutz, who tied on 112 out of a possible 120. They were closely pressed by Messrs. Schley, Raven and Squier with 111. Denieker broke 110.

On the second day there was a high wind, which interfered materially with high scores. There was a good attendance, larger than on the first day.

The League's team championship contest was won by the North Side Gun Club, of Allegheny. The Milvale Gun Club team was second; Irwin team third. In the contest for the Hunter Arms Company gold medal Irwin and Hickey tied on 45 out of 50. In a toss-up Hickey won. The scores follow:

First Day, April 8.

Events:	1	2	3	4	5	6	7	
Targets:	15	20	15	20	15	20	15	Broke.
Hickey	13	19	14	19	13	17	13	108
Pontefract	11	11

Trap Around Reading.

READING, Pa., April 2.—A large crowd of sportsmen witnessed the live-bird match between J. George Kuersten, of this city, and James Wertz, of Friedensburg, which took place at the Spring Valley grounds. Friends of both contestants were out in full force, and played their favorite heavily in the betting ring, Wertz being the favorite. Kuersten won by killing 43 birds to Wertz's 37. The match was for $50 a side and the 50 birds. Interstate rules governed the contest, and both men shot at 28yds. The birds were a selected lot and were exceptionally strong. Wertz had a bad start, and not until it was too late did he recover and shoot in form. The scores follow:

Kuersten .....2201112122122101212200222222220222221022202221121—43
Wertz .....1000220200212212120221222222002222220220122100222 2—37

Pottsville, Pa., March 31.—Over 1,000 sportsmen witnessed a live-pigeon shooting match to-day between William McMutrie, of Pottsville, and William Fox, of Morea, for $100 a side. The match was to have been at 13 birds, but after the ninth bird had been released from the trap, Fox being ahead, he having killed 6 to McMutrie's 5, his opponent put two "drivers" into the trap and raised a heavy smoke by burning black gun powder at the trap, so that he could not see the birds. R. E. Coogan, of Pottsville, the referee, declared the match no contest and called off the bets.

Milton, Pa., March 28.—The Milton Rod and Gun Club of this city, held a target shoot to-day. The high winds made shooting very difficult. In the team shoot, best two out of three matches, between the Regulars and the Crescents, the former team, captained by Godcharles, won by a total score of 56 to 54. The scores follow:

Team shoot; teams of two men, 10 targets per man; best two out of three events:

	1st match.	2d match.	3d match.	Total.
Crescents (Rangler and De Haas)	19	18	17	54
Regulars (Godcharles and Roth)	18	19	19	56

Sweepstake events:

Events:	1	2	3	Events:	1	2	3
Targets:	10	10	10	Targets:	10	10	10
Godcharles	9	7	7	Dehaas	4	8	6
Roth	5	7	7	H Strine	2	4	4
Strine	7	6	9	Rangler	9	4	9

Tower City, Pa., March 28.—The live-bird shooting match between Charles Shugar, of Pinegrove, and Joseph Hand, of this place, held here to-day attracted a large crowd of sportsmen. Hand won, killing 9 out of 10, while Shugar killed 6. The match was the first of a series of three, for a purse of $100 each match.

Milton, Pa., March 28.—High winds prevented good scores being made at the regular weekly target shoot of the Social Gun Club, of this place, held to-day on the Island grounds. The scores follow:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	5	10	10	10	Targets:	5	10	10	10
Sears	3	8	7	5	Whitmeyer	..	..	9	6

Robesonia, Pa., April 4.—The team shoot at live birds held at Robesonia House to-day resulted in the following scores: Link 5, German 6, Bricker 7; total 18. Gundy 8, Brossman 7, Sherman 8; total 23.

The conditions of the match were 10 live birds per man, 28yds. rise, Interstate rules, for a purse of $50.

Temple, Pa., April 4.—In a live-bird shooting match here to-day for a purse of $10, William Becker killed 7 out of 10 birds from the 30yd. mark, winning the event. The conditions of the event were 10 live birds, handicap rise, 27 to 30yds., Interstate rules, high gun. The scores follow: Becker, 30yds., 7; Ziegler, 27yds., 6; Jas. Keller, 28yds., 5; Albert Miller, 28yds., 5; Frank Miller, 27yds., 4; John Keller, 29yds., 6.

Reading, Pa., April 4.—A shooting match at 25 targets was held on the lot in the rear of the Reading ball grounds to-day by well-known marksmen, when these scores were made:

Graul .....1111101111110111111111111—23

DUSTER.

Boston Gun Club.

BOSTON, Mass., April 1.—The Boston Gun Club's regular Wednesday shoot took place to-day on their Wellington grounds, and a more enjoyable occasion could not be asked for. Twenty shooters furnished the enjoyment, Secretary Hallam, and Wentworth coming all the way from Dover to be there. Griffiths and Cake, from Providence, Tozier from Haverhill, and all the regulars you could think of, not forgetting the new faces of Nowelles and one or two friends who seemed to keep in the fast company without much trouble. Bell again was out for keeps, averaging second high for the afternoon, sharing first honors in the prize match and securing the only 15 straight of the afternoon. Harvard can well thank herself that she has such good material for future interests, as we are told that Yale is not far behind, and waiting the call in May.

One of the welcome changes noted during the afternoon was Frank's recovered form, and now we all think it will be a different story from now out. Let us hope so anyway, as Frank's shooting lately has not been what we expected from him, and we have been trying to figure out what was the matter. We did not do it, however, but he apparently has attended to that himself, and once again is on easy street. Other scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

April 8.—The regular weekly shoot of the Boston Gun Club was held here to-day, and the inclement weather prevented a large attendance, just nine shooters braving the elements, and are now on the fence as to whether they should have been there or not.

Just one clean score marred the afternoon's sport, Frank making that mistake, and also securing high average for the afternoon; not really a Heikes or Gilbert average, but very creditable for our grounds. Woodruff, too, was much in evidence, securing first position in the prize match, and running second to Frank for high average. Other scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	
Targets:	10	10	15	10	15	15	10	15	10	15	10	Av.

April 11.—The Boston Gun Club's annual team shoot takes place on their grounds at Wellington, April 29, and we wish to extend an invitation to any shooter in the United States happening to be in this vicinity at that time, and we assure him he would be more than welcome.

This is the fourth annual contest of this kind that the club has held, each one going the former one just a little better, and this year's promises to be a repeated success, some ten teams of five men each having been entered, and a few more to hear from. The club itself has not been idle in preparing for this shoot, an extra set of traps having been installed with electric pulls, which with the regular magautrap, constitutes the trapping facilities and puts the club in position to take care of any number of shooters. There is also a long-felt want in Boston and vicinity to see the crackerjacks shoot, and while we only put up prizes for the amateurs on this occasion, there would be no place that the expert would be more welcome than on our grounds. In fact, it is some years since any of the Western cracks graced our platform, and if there were a possible chance, we would like them to tread our festive boards once again, and see how they have grown.

But, then, we realize that Boston is just a trifle out of the regular route, still this does not prevent us from wanting them to come, and nothing would stimulate trapshooting circles in this vicinity more than a visit by these expert exponents of firearms, powder and shells.

H. C. KIRKWOOD, Sec'y.

Colt Hammerless Gun Club.

HARTFORD, Conn.—The scores of the Colt Hammerless Gun Club, Hartford, Conn., April 10, are appended. There was a high wind, heavy rain and hard shooting.

Ossining Gun Club.

OSSINING, N. Y., April 11.—The members of the Ossining Gun Club, at their regular Saturday shoot to-day were glad to have as guests two of the best exponents of the fine art of shooting in and around New York, Dr. Martin and Bob Schneider.

The competition was keen, for the Ossining boys, though not out in great force, were intent on getting high average on their own grounds. One of the members of the prize committee came up during the shoot with the medal this club is to donate to the shoot in June. The medal cost $100, and is most appropriately designed, the main pendant is a clay bird, on which is the arms of the State of New York and proper wording. In the space between this and the bar is a 1-karat diamond on a small pendant. This medal is for the amateur championship of the New York State Association at 60 singles and 20 pairs:

ALLEN M. SEITZ.

Omaha Items.

OMAHA, Neb., April 8.—The recent trap tournament at Grand Island under the auspices of the Grand Island and North Platte gun clubs, was one of the best attended, most spirited and best regulated tournaments held in the State this year. There was three days' shooting, with a daily entry list of over forty, among whom was champion Bill Crosby, of O'Fallon, Ill. In the two days he shot he dropped but two targets out of 250 shot at, but being a professional, was barred from getting in on the money. Billy Townsend, the popular sporting goods man, of this city, captured the Dickey Bird cup, emblematic of the State's championship, with 47 out of 50, against thirty-nine competitors. W. H. Kerr, of Concordia, Kas., won the high average.

The Grand American Handicap at targets opens up at Kansas City next Tuesday, and Billy Townsend will chaperone a delegation of Nebraska shooters to the scene of action, leaving via the St. J. & K. C. R. R. next Monday night. In Townsend's bunch will be Sandy McDonald, Dave Morrell, Frank Dvorak, Joe Dreisbach, and Frank Togg, of Omaha; Frank Beard, of Herman; A. Reed, of Ohiowa; W. H. Illian, of Albion; G. A. Schroeder and Dan Bray, of Columbus; F. R. Patch, of Hartley, Ia.; Dick Linderman, of Lincoln, and Deputy State Game Warden George Carter, of North Platte. The week following the same delegation goes to Concordia, Kas., for the State shoot, thence back to Lincoln, the succeeding week for the Nebraska State Sportsmen's annual meet.

SANDY GRISWOLD.

Peru Tournament.

PERU, Ind.—The seventh annual tournament of the Peru Gun Club was held on April 7 and 8. The weather was good, and the management was perfect.

On Monday the match between Mr. J. L. Head, the State champion, and Mr. Hugh Clark, of Wabash, Ind., took place, the scores of which were as follows:

Head .....2*2211222222212*1*22222201222211121*212122120122—44
Clark .....2**22*22*22222222*2*22222*20222*2222222222222222—41

The conditions were 50 birds, $50 a side, for the live-bird championship of Indiana. Mr. Fred H. Lord, of Chicago, was referee. Mr. Max Witz, of Ft. Wayne, challenged Mr. Head for the championship, and the match may take place on April 24.

First Day, April 7.

Pittsfield Gun Club.

PITTSFIELD, Mass., April 11.—The scores made at the shoot of the Pittsfield Gun Club to-day are appended. Neaf Apgar made the extraordinary total of 117 out of 120 targets. The weather was comfortably pleasant:

Events:	1	2	3	4	5	6	7	8	9	Shot	
Targets:	10	10	10	10	10	10	10	25	25	at.	Broke.

PUBLISHERS' DEPARTMENT.

Reduced Rates to St. Louis.

VIA PENNSYLVANIA RAILROAD, ACCOUNT DEDICATION LOUISIANA PURCHASE EXPOSITION.

For the benefit of those desiring to attend the Dedication ceremonies of the Louisiana Purchase Exposition, at St. Louis, Mo., April 30 to May 2, and the National and International Good Roads Convention, April 27 to May 2, the Pennsylvania Railroad Company will sell excursion tickets to St. Louis and return from all stations on its lines, April 26, 27, 28 and 29, good going only on date of sale and good returning to leave St. Louis not later than May 4. Tickets must be executed by Joint Agent for return passage, for which service no fee will be charged.—*Adv.*

The Laflin & Rand Powder Co., informs us that Mrs. Nellie Bennett, widow of the late A. L. Bennett, of Colorado, has joined the company's forces as a traveling representative, and that she is the only woman representative on the staff of a smokeless powder company in the United States. Her favorite load at the traps is 24 grains of L. & R. "Infallible" and 1⅛ ounces of chilled shot. She will take part in the Grand American Handicap at targets at Kansas City, this month, and any other shoots that take place along her line of travel.

"The Trapshooters' Guide" is an artistic booklet issued by the Winchester Repeating Arms Co., New Haven, Conn. It contains the Interstate Association's Trapshooting rules, the standard systems for dividing purses, a list of loads for traps and field shooting, some bright shooting apothegms. It will be sent complimentary to applicants.

Capt. George E. Bartlett was recently a guest of the Douglas Gun Club, of Bristol, Ariz., one of his feats being specially marvelous. After throwing a tomato can in the air, he with a repeating shotgun hit it six times before it reached the ground. He uses Peters ammunition and a Marlin pump gun.

The Crown Land Department of Fishery Leases, Province of New Brunswick, will sell at public auction on April 23, some ten salmon streams. Further information can be had of D. G. Smith, Chatham, N. B., Canada.

L. W. Ferdinand & Co. have recently sold the Herreshoff Mfg. Company a quantity of Jeffrey's patent liquid quick-drying marine glue, "C" quality, for use in laying the canvas on the decks of Reliance.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, APRIL 25, 1903.

VOL. LX.—No. 17. No. 346 BROADWAY, NEW YORK

THE PLANK IN NEW YORK.

THE New York Assembly on Monday last passed the Armstrong Bill, which had already gone through the Senate, to prohibit the sale of woodcock and grouse killed in the State.

This is not all that it should be, but it is a tremendous step in the right direction.

It will mean an end of lawful killing for market in New York. It will mean that the most destructive element in the reduction of the game supply will have been eliminated. The action of the Legislature is a great victory for the cause of game protection and for the sportsmen. That is to say, for the citizens of the State of New York. For the sportsmen are the citizens. That blatant objection to the anti-sale restriction which is put forward under pretense that to stop the sale of game would be to deprive the masses in favor of a privileged class, has not the slightest foundation in reason. The sportsmen are the masses. The market shooters are the class. There are scores of sportsmen to one market shooter. The anti-sale law gives the scores a chance to get some game on their holidays, that is to say, their shooting days. It deprives the market shooter of pursuing game on his work days, that is to say, his shooting and snaring days. It insures the permanence of the outdoor sport of shooting. It stops the outdoor business of market hunting. It secures the greatest good to the greatest number. What has been done this year in Massachusetts, Texas, New York and elsewhere by the adoption of the FOREST AND STREAM Platform Plank —"The sale of game should be forbidden at all seasons," may be done and soon will be done for the entire country by the enactment everywhere of the same beneficent law.

LIMIT THE BAG.

THE game protective idea is growing more and more rapidly as time passes, and a large class of people whose pursuits give them little interest in it and who are without practical knowledge of its working, are unconsciously acquiring proper ideas on the subject. Even the average legislator now considers game bills with a certain amount of respect.

One form which this game protective idea has taken is the acquiring of large tracts of land by individuals or groups of sportsmen, and the stocking—or at least the stringent protection—of this private property. All along the lakes of the West, and at many points throughout the central region, as well as at many localities on the Atlantic seaboard, from Maine to Florida, are the grounds of shooting clubs, associations and individuals from which the general public is rigidly excluded. Such grounds the birds are invited by various attractions to visit or to remain on. They are protected from molestation by all except the owners of the land, often some spots are set aside as actual game refuges, where even the owners do not shoot. Frequently the birds are liberally fed, in case their natural food seems to be growing scarce.

In exchange for the time and money expended to induce the birds to resort to such protected grounds, the owners take from them such toll as they can during the season, and when the shooting is good they kill as many birds as practicable. This certainly is natural enough, and is very likely what we all of us would do, even though we may preach a different doctrine.

Among the restrictions placed on shooting by the statutes of various States, there is one often advocated by FOREST AND STREAM, and which in time is likely to be generally adopted. This is a bag limit. It is coming to be recognized that if the greatest good of the greatest number is to be considered, no man should be allowed to kill in a day or a season more than a certain number of birds—his share. The game belongs to the State, and the State presumably desires the greatest good of all its citizens, and wishes its game to go as far as possible and to furnish as much pleasure as possible to all its citizens; it is certainly within its powers to limit the quantity of game to be taken precisely as it limits the period during which game may be taken. We may say, that to be absolutely fair, the State should divide up the game within its borders—which can be killed without injury to the game supply—and should allow to each gunner or each person wishing any of the game his relative proportion of that game. In other words, the State should issue a ration of game to its inhabitants.

There are many States which have not yet reached the point of legislating for a bag limit. But since such legislation is likely to come and probably within a few years, we are inclined to think that it would be a fitting and a graceful thing were the owners of these private preserves voluntarily to establish for themselves without legislation, a limit for the birds to be killed each season. It would be fitting, too, for such clubs and associations by their by-laws to abolish—as, indeed, many such clubs already have abolished—the shooting of wild fowl in the spring. The members of such associations being commonly well-to-do, and presumably persons of intelligence and education, may be assumed to know perfectly well that wildfowl ought not to be shot in the spring, and that the number of birds to be killed in any season ought to be limited.

It is easy to recognize how very strong is the temptation to take advantage of the rare days when birds are flying well, when at last there comes the opportunity to make up for all the dull days that have gone before. Here is a man, let us say, who has an opportunity to go shooting once a year and for a single week. Perhaps for five days of that week, he sits in his boat or blind, and sees the clouds of wildfowl flying, or resting in great beds on the water and never moving or coming near his decoys. On the sixth day comes gunnning weather, and the birds pile into his stools so fast that his gun gets hot, and he has to wait for it to cool off. The stress of such circumstances might tax one's resolution; but even under such conditions it would be easier to stop shooting when one could say he had reached the prescribed limit, than it would be to lay down one's gun without any such gratifying consciousness.

In view of game conditions, the gunner ought to put a limit on his shooting, and just as we advocated that a part of their season should be cut off in spring from the Long Island gunners, so we firmly believe that the members of clubs and associations controlling private preserves, the well-to-do men who spend their time and their money to protect the birds—though for their own uses—ought to be limited in their shooting, both as to bag and as to time.

THE TARGET SHOOTING OUTLOOK.

THERE are those who predict the decline of target shooting as a consequence of the prohibition of live bird shooting in a number of States, and of a certain degree of public sentiment against it. The signs of the times do not sustain the calamity prediction. The large number of target tournaments already held and to be held throughout the United States this year, show an increase instead of a decrease in the sport.

The recent Interstate Association Grand American Handicap at Targets, held at Kansas City, is in itself an object lesson of the stability and breadth of the trapshooting interests in the United States. It did not have half the number of entries of the live bird handicaps, held in Kansas City, last year, yet those who deduce a decrease in trapshooting from this difference of entries, have given the matter only a superficial analysis. The two events do not admit of comparison as an index of the trapshooting situation. There were special reasons why the G. A. H. at live birds, held at Kansas City last year, should have a large entry. It was a new event in that region; it was held in a section of country containing excellent field shots; it was held in a city centrally situated; it had the prestige of years of history, and the money rewards to the contestants were incomparably greater. Let us now consider the Grand American target tournament. It has not the money attractions that the corresponding live bird event had; target shooting in the West was an old, old institution, and, therefore, was not a novelty; and it could not draw on the field shooters as could the live bird shooting. Probably the true reason for the greater entry in the live bird event was the large sums of money to be won in it. Let the inducement be sufficient in the way of a reward and men will journey long distances on a possibility of winning. However, with nearly 200 contestants in an event, no one can therefrom deduce a decline in interest and support of trapshooting. With gun, gunpowder and ammunition factories running to their utmost capacity, there must be a corresponding consumption of their output, all of which denote activity in the wholesome sport of trapshooting. A glance at our column of fixtures will also be proof that there is no cessation in the target interests.

STEPS FORWARD.

IF the cause of game protection receives a setback now and then, as was the case recently in Connecticut, its advocates have yet abundant reason to congratulate themselves on the continued progress which it is making.

Last week the New York Assembly passed Senator Brown's bill to prohibit the shooting of ducks in the spring, and it has now gone to the Governor for signature. It will undoubtedly be signed, for the Assembly passed it in response to an urgency message from the Governor. As finally passed, it excepts from its operation the brant, which birds, as is well known, make their appearance in Great South Bay in shootable numbers only in the spring. The advocates and opponents of the bill have thus each won something of a victory, and may fairly feel satisfied.

In our news columns reference has recently been made to the excellent game law just passed in Texas. While we have not received the text of this it is understood to prohibit the sale of game, to protect many insectivorous birds, to establish a bag limit, and absolutely to forbid the taking of mountain sheep, of which there are a few left in Texas.

Wyoming is reported to have put a ten-year close season on moose, and a five-year close season on antelope. The Wyoming winter in the Rocky Mountains has been one of great severity, and unquestionably a vast amount of game, chiefly elk, has perished by starvation. FOREST AND STREAM has more than once called attention to the fact that the settling up of the country south of Jackson Hole has cut the elk off from their winter range, and the letters received by Mr. A. A. Anderson, Special Superintendent of the Yellowstone Forest Reserve, and printed in another column, show the terrible straits to which these animals are reduced.

It is understood that Mr. Anderson has contributed out of his own means a large amount of money to be used in purchasing hay to feed these starving elk, an act of humanity which entitles him to the greatest credit. Mr. Anderson suggests that the recurrence of a period of starvation like that of the past winter may be avoided in future by making provision for feeding the elk, and this should be done, if it is impossible to open a way to these animals to their old time feeding grounds in the Colorado Desert. These feeding grounds are very likely useless now, even if the elk could get to them, because they are being more and more run over by the domestic sheep and turned into barren wastes where no vegetation grows.

George W. Van Siclen, of this city, who died last Monday, April 20, at the age of 62, was one of the well-known anglers of New York. He was for many years a member of the Willewemoc Club, whose club house was on the shore of Willewemoc Lake in Sullivan county. Mr. Van Siclen was of the class of scholarly anglers, and in 1875, desiring to add to his angling library a copy of Dame Juliana Berners' "Treatyse of Fysshynge," and finding that it would cost in the original edition of 1496 from $2,500 to $3,000, he brought out an American reprint, based on the text of the English reprint of 1827.

Mr. Joseph B. Thompson's consideration of the bearing of the recent Supreme Court lottery case decision upon the constitutionality of the Lacey Act, will be read with deserved attention by all who are interested in the operation of the Federal law. Mr. Thompson is a member of the New York bar, who has devoted much study to the subject of game legislation and the principles underlying it; and by his published writings he has done much to advance a popular understanding of the theory of game protective system.

The Sportsman Tourist.

A Cruise in the Ojibway Paradise.

In Two Parts—Part One.

THE attractions of the Ojibway Paradise, or the Temagami Lake region, had become irresistible, and after many conferences with Mr. Salsbury, passenger agent of the C. P. R. R., who was most patient and obliging, and did everything in his power to procure information for us, we left Pittsburg on the evening of August 26, 1902. Leaving Toronto at one o'clock we reached North Bay about half past ten on the 27th and spent the rest of the night at the hotel. We dressed in our cruising suits the next morning and soon after six o'clock were rushing eastward to Mattawa on the C. P. express.

Mattawa is quite a pretty town with several hotels, a number of large brick business buildings and many pretty homes. There is a magnificent stone cathedral here, but we did not have time to visit it.

From Mattawa we took the branch road which connects Mattawa with Kippewa. The train on this road runs only three times a week—Tuesdays, Thursdays and Saturdays, leaving Mattawa about ten in the morning and returning about five in the evening, thus making connections with the steamer on Lake Temiscaming. We had but a short wait at Mattawa and did not try to see the town until our return.

The branch road follows the windings of the Ottawa River, which, with its high bluffs and numerous rapids, is very picturesque. We arrived at Temiscaming before one o'clock and went to the Bellevue Hotel for dinner. We were already dressed in our cruising suits, so arranged to have our trunk left in the wareroom, after taking out our duffle and putting in our suit case, traveling hats and coats. We should have taken our trunk through to Haileybury, changed our clothes at the hotel there and had the trunk sent back to the hotel at Temiscaming.

About three o'clock we began our journey up Lake Temiscaming. The day was warm, the air pure and clear and the scenery charming. The steamer is small, but we were fortunate enough to get a stateroom, and the meals were good. About dark we passed the mouth of the Montreal River, and an hour later tied up to the dock at Ville Marie for the night. In the morning the steamer left Ville Marie before I had commenced to think about getting up, so I did not see the town. As we came from the dining room, after an excellent breakfast, the whistle blew for Haileybury, and we rushed down to see after our baggage.

There are but few docks and the water is so shallow the steamer has to anchor out in the lake. A pointer, which they tow, is brought alongside the steamer and baggage and passengers taken ashore in that. A surveying party was going ashore at Haileybury to do some work up the Montreal River, and we had to wait for the pointer to make the second trip. There will be no trouble of that kind at Haileybury in the future, for they were building a dock when we were there.

Tourists can outfit at Mattawa and start on the canoe trip at the mouth of the Montreal, and then into the Matabitchouan River; but this is going up stream, and a shallow one at that, with a heavy load of provisions. The Matabitchouan is full of shallow rapids that can be run coming down stream with light loads, but must be carried around going up. Then there are two portages over a mile long on this river, and both of them are hard, so it is well to have the loads as light as possible when you reach them. These are the only long, hard portages on the trip.

We had written to Mr. Paul A. Cobbold, at Haileybury, to engage two good guides and, when we finally got ashore, he and the two guides were waiting for us. The guides picked up our baggage and we all went to Mr. Cobbold's store for provisions.

Our guides were Samuel Stata and Robert Morrison, professional guides and thoroughly reliable and trustworthy. They know all this region well, are first-class woodsmen and old hunters, and as an outdoor cook Sam has but few equals. These men spared no pains to make us comfortable, and took us on side trips for extra good fishing, to show us game and for good duck shooting. For carrying they used the tump line, a leather strap not less than twenty feet long. This is made by taking a piece of leather from two to three inches wide and about two feet long, then sewing to each end a strap about ten feet long and tapering from an inch wide at one end to less than one-half inch at the other. For carrying the narrow straps are tied, one around each end of a box or large pack, in such a way that when the broad strap is placed around the forehead the pack rests on the hips. Other packs are then piled on this till a man has all he can carry. The last pack rests on the back of his neck and head, thus leaving both hands free. Our guides could carry two hundred pounds over a short portage without stopping to rest.

In outfitting we used the provision list we had last summer, adding two pounds of dried peaches, two pounds of raisins and two cans of evaporated cream. At Mr. Cobbold's suggestion we changed our list to three pounds coffee, two pounds tea, ten pounds flour, ten pounds corn meal and twenty-two pounds bread. The bread was baked especially for carrying, in a brick oven, and, while not hard, was well baked. Each loaf was baked in a separate pan and well browned all over. We had no trouble keeping it, for while it did not get hard, neither did it mould, and we ate the last of it the twelfth day out. We got all our provisions from Mr. Cobbold, and found the bacon and everything first-class, with prices about the same as at home. We had with us a cooking outfit, one tent, two gum blankets, duffle bags, small sacks for provisions, a small ax and two pair of six-pound woolen blankets. Mr. Cobbold said we would not be warm enough and, at his suggestion, we hired a rabbit skin blanket. These are made by the Indians. They cure the skins and cut them round and round till they have a long string like a carpet rag, which is then twisted, fur side out, and knit into a blanket. We would have suffered with the cold without our rabbit skin blanket. We also hired one tent and two pair of blankets for the guides, one tarpaulin for covering provisions at night, two tump lines, one additional bucket for cooking, a shotgun and a large ax, for Sam said we would need good fires to keep us warm. Everything needed for either hunting or fishing trip, except guns and fishing tackle, can be hired from Mr. Cobbold at very reasonable rates. Indeed, when we had bought our provisions and paid our bill we felt that we had never been more fairly treated when outfitting.

Mr. Cobbold has for hire birchbark, basswood and cedar canoes at from twenty-five to fifty cents per day. As we had never cruised in an Indian canoe we hired one large birchbark.

The guides packed everything in the sacks and went to engage the team to haul us over the six-mile portage to Sharp Lake, and we went to the hotel for dinner. There is a good hotel here, and we got an excellent dinner for twenty-five cents. The guides had got their dinner at their own homes, and when we came back to the store had everything on the wagon and were ready to start. The first part of the road is good, and has been enchanting before the pine forest, through which it runs, was burned. We passed several clearings with comfortable log houses on them and stopped at the last one for a drink. An old gentleman was sitting by the door reading a book that he had gotten out of the library at Haileybury. I have forgotten the title, but remember it was a story of the far North.

The road was getting very rough and we had given up our seats on the wagon soon after leaving the burnt country. We found a coat and small satchel on the road. The satchel contained a rosary, a prayer book, and a deck of cards. The owner was evidently gettings things badly mixed. A wagon, carrying provisions for the surveying party, was ahead of us making the trip overland to Partage Bay, and these things had fallen off the load. We enjoyed the walk through the woods very much, but decided that, by the time the driver got his team back to Haileybury he would earn his $5, for the road is horribly rough in places.

The guides had our canoe loaded and we were about ready to start across Sharp Lake when the rest of the surveying party arrived and the coat and satchel, which the guides had put in the shelter house that stands here, found owners. We crossed Sharp Lake, made a short portage to and crossed Mud Lake, camping for the night on the end of the portage from Mud Lake to the Montreal River. By seven o'clock the next morning we had crossed the portage and were ready to start up the river.

We were traveling in one large birchbark canoe, 16 feet long, with a 37-inch beam. It had never been used and weighed about 65 pounds when we started and 100 pounds at the end of the trip. One guide would carry the canoe over the portage and the other one, making two trips, all the baggage, which weighed 350 pounds.

The shores of the Montreal for some distance were high bluffs, and one especially high point on our left is called Huckleberry Hill. All along this part of the river were beds of the most exquisitely colored moss. The dark maroon, which was a rich wine color in the sunlight, blended into the faintest, most delicate of yellows and greens. Nature, when furnishing her kingdom, had, with lavish hand, spread a carpet for her feet that exceeded, in texture and color, the far-famed weaves of the Orient.

We had paddled through two or three short rapids and gone some distance up the river when we came to the first portage, which is quite short. Above these falls are beaver meadows, where the shores were full of moose tracks. On the second portage there is a good camp ground and we stopped here for dinner. After dinner the guides ran a hot skillet handle over the pitch on the seams of the canoe, for it was leaking in a dozen places. Our canoe was just new, but I believe that is not a recommendation for a birch bark.

Birch bark suitable for making canoes has become very scarce in this region. Mr. Cobbold told us that the Indian who made his canoes had only succeeded in getting enough for four the past season. As we were about ready to push off, the surveying party we had left on Sharp Lake the afternoon before crossed the portage and began preparations for dinner. The chief engineer was very courteous, offering to render any assistance, and giving us some valuable information regarding the country north of this.

We were now in a part of the river known as Bay Lake, which is very pretty, and when we came to Partage Bay we could look over great stretches of open water to the blue hills away off in the distance. Just before we reached Pork Rapids we crossed a bay to visit an Indian named Joe Watta, who was camped in a red pine grove. He had two or three tents but no house. There were three rabbit skin blankets hanging out. One of them was new and the fur, which is whiter than on our rabbits, makes a very handsome gray fur blanket that is soft, light and very warm. The blankets sell for $15. A tanned moose hide, with two bullet holes in it, had been hung up to dry. It was a lovely shade of yellow and very soft and pliable. The moose meat was hanging on the drying rack over a smouldering fire, but the flies had been there before us, so we did not buy any. In the garden were cucumbers, pumpkins, potatoes, beans, onions, corn and rutabagas. Vegetables grow well here, for, while the season is short, it is warm and the soil is very fertile.

We made a short portage around Pork Rapids, and when we launched our canoe again were in the forest reserve. For some distance the river is broad with low shores fringed with reeds and covered with hemlock, maple, poplar and an occasional cedar, while the hills in the distance are covered with pine. The frost had painted the poplars yellow and touched the maples with red, adding much to the beauty of the river. About five o'clock we landed on Red Pine Point at the head of a bay just below the narrows, where the river makes a sharp bend. We camped in a grove of red pine trees, magnificent specimens, many of them a hundred feet high, growing tall and straight, with no limbs except a clump at the top. We were sheltered by a hill back of our camp and had a pretty view across the bay and down the river.

Taking our rods and fly book, we went to the narrows to try our luck while the guides put the tents in shape for the night and cooked supper. The fish were not hungry, but we were, and gladly went to supper when the guides called. Some time in the night we were wakened by the cry of an owl. I thought it was a pack of wolves, for I had never heard an owl make a noise like that before. There was a first cry that sounded quite near, followed by a peculiar hooting that sounded some distance away.

The next morning was very cloudy, and as it was Sunday we did not move camp. The Doctor and Sam went out and caught a fish for breakfast, and Sam baked some corn cakes that were not hard to eat, but I never cared to count the number that disappeared off my plate.

After applying hot skillet handles to the bottom of the canoe, we took our storm coats, camera, two tin cups and the gun and went up the river. Above the narrows the river widens until, near the mouth of the Mattawapika River, it is almost a lake and contains great beds of rushes and wild rice. We had expected to get a duck here, but they were so wild we could not get close enough for a shot. Jamie Mowett, a Scotchman that used to be in the employ of the Hudson Bay Company, is married to an Indian woman and lives at the head of this bay. He has a comfortable log house, but his garden was not as good as the Indian's we had seen the day before. It was still early, so we bought a loaf of bread, a jar of huckleberry jam and a quart of milk and continued on our way up the river in the hope of getting a duck. We paddled through marshes and beds of wild rice, but did not get a shot at a duck, and about one o'clock went ashore for dinner. Sam had a small hunting knife and we cut the bread with it, but the blade was too narrow to be of much use getting jam out of a jar. Bob cut two notches, one above the other, in a small poplar, split off the piece between and made two nice little paddles that brought out the jam. We ate all the jam, nearly all the bread and drank all the milk. There were high bush cranberries growing around us and we gathered about a quart and Sam found some black currants and put with them. We were at least six miles from camp, with a stiff head wind and an occasional shower, so we gave up the ducks and returned.

We cooked our cranberries in lots of water, strained them through a piece of clean muslin, sweetened the juice, put it on the fire again, and in a few minutes had our jar full of jelly, which proved to be delicious; the handful of currants had greatly improved the flavor.

The wind had been increasing all evening, and as we sat by the fire I kept watching the tops of the big pine trees swaying back and forth till one of the guides, thinking I was afraid, said there was no danger as long as the wind contined in that direction. It commenced to rain, and the guides covered the provisions over carefully with the tarpaulin and we went to bed. About eleven o'clock Sam called us and said he did not like the conditions of the weather; he was afraid we were going to have a storm. The wind had changed and was very high, and the clouds had a stormy look. The guides thought we had better move across the bay to a clearing where an Indian, Petin Albany, lived. We soon had our shoes on and I gathered up my hairpins out of the crown of my hat, tied them in my handkerchief, and we were ready to start. The canoe was launched, and taking our pine bed, blankets and tent we paddled across the bay. It was a good deal of a disappointment to be blown out of such a warm, comfortable bed into the cold at twelve o'clock at night. The night was dark, the sky very stormy looking and the wind high enough to make things more than interesting. I thought we would surely be blown on the rocks before we could find the Indian's landing, but after paddling along the shore a couple of times we found a tiny dock.

The canoe was lifted ashore and we went up to the Indian's house but he was away and the door fastened on the outside with a padlock. Our tent was soon up and the bed made, then the guides, wrapping up in their blankets, crept under the canoe and we heard Bob say: "I wonder what we did with the jelly?"

The wind had been increasing and was now blowing very hard, but we were safe and slept well. We had a 7x7 "A" tent, and it was almost impossible to put it up so the wind could not blow under. The best tent for such a trip is a 7x8 with an 18-inch wall, and when put up there should be 6 inches on the ground, leaving a 12-inch wall. The six inches on the ground is drawn in under the tent and the bed is made on this, thus shutting out the cold wind.

The blow was over in the morning, and the pine trees were all standing. The guides were inclined to apologize, but we concluded that guides who would go to that much trouble for the sake of protecting tourists were worth having. After an early breakfast we loaded the canoe and were soon at the Mattawapika Falls, which are very wild and picturesque. The water falls over in three divisions, or falls, which are separated by well wooded islands. We were just on the edge of the Laurentian formation and the ragged cliffs were of a slaty rock while the river bed was full of boulders, many of them weighing hundreds of tons. For some distance above the falls the high bluffs are very rugged. There is a copper mine on the right shore, but it is too far from the railroad to be profitable.

Coming through a narrows into a wide bay full of rushes and wild rice, we saw a number of muskrat houses and a big flock of ducks. Landing on a cranberry swamp we gathered low bush cranberries, or the berry of commerce. On the sandy beach where we landed we saw fresh tracks of a wolf following a deer. The side trips on which the guides took us for berries, ducks, or fish, or up some little hidden creek, or to see a pretty fall, or to the top of a hill where we could get a wonderful view, were quite a rest, and added much to the interest of our cruise. When we reached Mattawapika Lake we landed on an island, made tea and ate a lunch. Near the foot of the lake we went ashore on a sandy beach to explore what seemed a lake lying some distance back from the bay, but proved to be an arm of the bay that could be reached through a narrow outlet some distance further down. On the beach we found moccasin and moose tracks. Early in the afternoon we passed through the Obisaga Narrows, and were in Lady Evelyn Lake, with its cold, sparkling blue water and its beautifully wooded islands. The day was perfect. the sky a clear, bright blue with here and there an island of fleecy white clouds. The water was rough from the wind the night before, which added to the exhilaration and made the canoe seem a thing of life as it bounded over the waves.

On our right, in the distance, was the house where one of the fire marshals lived; in front was water and islands and pine trees; on our left was water and islands and pine trees, and beyond them rose the Maple Mountains, a broken line of deep, intense blue against a blue sky.

It was a magnificent view, and if once seen would never be forgotten.

Lady Evelyn Lake is almost a thousand feet above sea-level, and the Maple Mountains are over two thousand

Keeping to the left across Lady Evelyn we passed near an island on which there is a fine camp ground, table, benches and everything convenient. We were on an arm of the lake stretching toward the west and intended to camp for the night on the portage around the Sucker Gut Falls. About half way down this arm we passed the home of a Pagan Indian who had died the year before, but his family still lived here, and on a little island near his house there were not less than a dozen bear skulls hanging on the trees. The old Indian had, no doubt, recited the harangue, or apology, to the spirit of the bear when he killed it and then hung the head where no animal could desecrate it, for the lower jaw-bone was securely tied to the upper jaw with cedar bark. The cedar bark was in a fair state of preservation, though the skulls had evidently been hanging there for years, as the bones were old and moss-grown.

We were traveling almost due west and directly toward the Maple Mountains that rose up grand and beautiful far beyond the wide expanse of water we were traversing. This arm of the lake ends in a pocket inclosed by high bluffs with a break on the left where the Sucker Gut River comes tumbling down over the falls. We camped on the upper end of the portage, and after supper the guides took us two or three miles up the river, where there are good feeding grounds for moose. We saw plenty of ducks, but no moose, although they had been tramping all along the shore.

We had heard of the wonderful trout fishing in McPherson Lake, and, like many other tourists, were under the impression that we could make the trip to McPherson Lake, catch all the trout we wanted, and return to the Sucker Gut Falls in one day. On learning that this could not be done, we left the arrangements for the trip entirely to the guides. Bob had taken two parties over this route, and one of the parties had gone through to Florence and Smoothwater lakes, then down the East Branch to the Montreal River, which they followed to Mud Lake, and so back to Haileybury. We took with us enough provisions for three days, one tent, all the blankets and the cooking outfit. The other tent was left standing and everything we did not take along we cached in it until our return. I wanted a light to get some things in our tent that we were to take along, and Bob made me a candlestick. He took a round stick an inch in diameter and two feet long; one end of this he sharpened and split the other end down about two inches; then, taking a piece of birch bark, made a kind of pocket in which he set the candle. The loose ends of the birch bark were then drawn through the split in the end of the stick till the candle was held firmly in place. By shoving the sharp end of the stick in the ground the light could be placed where it was needed.

A. W. C.

[TO BE CONCLUDED.]

Bad Men of the West.

The recent articles on the "bad men" of the West were quite interesting. They call to mind many dark incidents of border history. I quite agree with Mr. Day in his contention that these frontier terrors should not be paraded as heroes. Yet I think that some of these bad men were not as bad as they have been pictured. There were two distinct classes of bad men. One class consisted of men whose quick aim and intrepid bravery made them a terror to evildoers. The other was of those who killed for the mere love of blood and for the sake of notoriety. James Hickok, or "Wild Bill," as he is better known, was an example of the first class, while King Fisher, Alf Shade, Bill Longley and the Daltons were examples of the second class.

Wild Bill rose to fame as a man killer in the celebrated Rock Creek fight, in which he whipped ten desperadoes in a fierce hand-to-hand encounter. From that time on he was a target for the bullets of the aspiring bad men and was thus forced into many a deadly encounter which otherwise he might have avoided. As marshal of Abilene and Hays City, he succeeded in clearing that locality of most of its desperadoes, but in no instance was he the aggressor. That his heart was not in the work is shown by his many acts of kindness to the widows and children of his victims. He always paid the funeral expenses of the man he killed, and always appeared as chief mourner. Were it not for such men the West would never have been tamed. They had a mission of their own to fulfill, and knives and revolvers were the only life insurance policies they could carry.

With King Fisher and the Daltons the case was different. These men performed their bloody deeds for the notoriety it gave them. That King Fisher thirsted for notoriety is evident; he was a law-breaker instead of a law-enforcer. It is said that he once placed a signboard at the forks of the road that ran by his home, bearing the inscription:

TAKE THE RIGHT-HAND ROAD.

THE OTHER IS KING FISHER'S ROAD.

So great was the fear of him that both desperadoes and law officers dared not travel on the forbidden highway.

Bob Dalton was another candidate for the title of "man killer," else why did he say, just before his raid on Coffeyville, Kansas: "I will beat Jesse James and go him one more."

Most of these bad men met death "with their boots on." Wild Bill, Bob Dalton, Grat Dalton, Jesse James and numerous others met death at the hands of an assassin; Alf Slade was hanged by the Montana vigilants, and so the list might be extended.

There is a tendency among writers to idealize these desperadoes. Never was this more evident than in the recent case of Harry Tracy. On every hand, even among people of education and influence, could be heard words of sympathy for the outlaw and ridicule for the officers of the law. Story papers, novels and even history teems with the words of praise for these border villains. The example is bad for the rising generation. If we must be hero worshippers let us choose more worthy examples on whom to lavish our praise.

Clarence Vandiveer.

Letters to a Chum.—II.

About 1:30 P. M. we were pushing down a steep bank to the water's edge. Lem stuck a pole through the wagon wheels so they could not turn, and it was well he did. The horses set the brakes on their legs and we all slid down about one hundred feet to the bottom.

Here was an acre of level ground, a natural park. Big trees, green grass and the river pouring along as clear as crystal. Here was our camp, all made ready for us, and a beauty it was. Camp stove, table, awning, seats, spring, shade, everything within twenty feet of the water's edge. How pleasant and home-like it seemed. And we were to stay there two weeks, or longer if we wished.

What shall we do first? Dinner, of course. All right, I'll catch the fish while you build the fire. No, let's just have a lunch with some hot tea, then all go and get a big mess of trout for supper. That seemed good advice, and we were soon seated round our new table.

Then rubber boots, rods, reels, lines, book of flies, basket—a grand assembly of our entire fishing outfit. Some of it is hard to find, and my best reel and line can't be found at all. I try to hold my temper as I rummage through everything. I had it last night at the ford, and I'm sure I put the blasted thing back in my tackle-box; but it isn't there, and it isn't anywhere. Confound such luck! I'd rather stay in camp than to try to use that old one; still, it might be better than nothing. "You all go ahead; don't wait for me; it'll take me a half an hour to get that old thing in running order."

And so I hurry and sweat. Finally I get my outfit into some kind of shape, after some unmentionable language, and pick up my boots and ram a foot into one of them. Down in the toe is something sharp and hard. More cuss words. Over goes the boot and out drops my lost reel. Well, did you ever! If I'd had sense enough to put on my boots first I would have been fishing an hour ago.

There were plenty of fish in that stream. I could see them, twenty at a time sometimes, watching me blunder. Throw a fly over them and they would dart away. I soon found it was no use trying to catch them that way. There they were, a continuous line of them, all with their heads up stream. All standing perfectly still without apparently any movement of the fins, while the water rushed past them at breakneck speed. "Tell me how they do it."

For an hour I did not get a bite. Then I caught a small grayling. Then moved down stream a mile or so to where there was dead water. Here I got a two-pound trout; then another larger one that made things lively for a few minutes. Getting down on a mud bank under the overhanging willows in the deep shade, the water looked dark and deep, with scarcely any current at all. The sun had gone behind the mountain. The air seemed cooler immediately. Making a good cast down stream, close to the willows, there was a lunge and a splash that almost gave me palpitation of the heart, and the reel began to sing. I had 150 feet of new silk on and I let him go till he got enough of it. Then brought him in a ways till he got ready to go again. Then buz-z-z-z-z goes the reel till only a few yards of line is left on it. Then I snub him at the peril of my rod, and he throws himself high into the air away off there mid a cascade of sparkling water. Slowly and sulkily he comes back, and I feel safer as I get more line on the reel. Then a short spurt and another gain for me. Then he changes his course and darts up stream, almost faster than I can reel in, but he finds it harder pulling up stream, and I gain on him till he comes in sight near the shore—tail first, and I can't get him turned around. Giving him an extra hard yank to get him headed right, I rouse his ire again and away he goes, and nothing short of a log chain would stop him. All my line is out again, and the fish is more lively than ever. I begin to get warm under the collar. I don't want to spend all the afternoon on one fish. I want a lot of them. So I begin winding up whether he likes it or not. Then he takes another spurt, but I put my thumb on the reel, and crack goes the rod, and two or three feet of the tip hangs slack on the line. This will never do. If I want that fish—and I bet I do—I've got to keep my nerve and handle him like a fisherman. Careful is the word. Back and forward he goes; now almost near enough for the net, and now my line is all out again. I'm sorry, Mr. Fish, that I can't accommodate you with more line, you seem to want it, but when you get so far you've got to stop if it busts the firm. Slowly and carefully I work him in. God! how my arms ache. And my beautiful new rod is a complete wreck. Still the line holds, and still the fish is on. If I only had a little more room I'd snake him up on the bank, but there is a solid hedge of willows behind me. I must fight it out right here.

I get him up close again, but can't see him, the willows make such a shade; but I know he is there, and make a dive for him with the net, but it is no go. He's off again, throwing the water all over me, and I have my work to do over again. When I get him back to the sticking place again he seems low spirited and sulky. He shows signs of giving up, and I say, "Now I've got you," and yank him out on the bank. But something happened. Something gave way—but it wasn't the fish. I suddenly sat down in the mud while my fish went off somewhere to rest.

Well, we both needed a rest. So I sat still. I didn't cry, but I felt foolishly like it. "Dick, my boy, that fish outgeneraled you. It was a fair fight and you lost. Take your medicine like a man and try him again."

I wiped the perspiration out of my eyes and looked around me. Holy smoke! it's pitch dark and about a million stars laughing at me. I wonder where camp is? What makes it so still all at once? Now, let me think a minute. Which way did I come from? Why, down stream, of course. All I've got to do is to follow up the stream to camp. Hi, ho! I wish I had a boat. Well, no use sitting here in the water any longer. I'll go to camp.

Easier said than done. Solid walls of brush confronted me at every turn. My line and basket caught on them, so I left the things and went through somehow. Good Lord, what a place, and how dark it is! It pains me yet to think of that trip, but I got through to an open place, more turned around than ever.

I looked for the North star and found five of him. Standing still trying to decide which star to tackle, I heard a faint halo-o-o-o away off to my right. Then six shots in rapid succession. I gave an answering whoop and started on, letting a yell every few steps, till I found Lem coming to meet me, with my Savage and his big yellow mastiff, Bull, the bear and lion dog.

Lem had a lantern, and, what was better still, he knew the way to camp, though I still maintain that I would have got in all right. I'll not harrow your feelings with the scolding I got when we got to camp; but honestly it sounded good, for I was eating my supper at the same time. It was good to hear Lem's big laugh when I told them about my fish. "Thar's rainbow trout in thar," he says, "that'll weigh fifteen pound. You mustuv hooked on to a big feller."

We had planned to go out after deer early the next morning, so I asked Lem what time we were to turn out in the morning. "Oh, the earlier the better," he says. "The moon's up now and deer feed the rest of the night and lay down before sun up. Our best show is to start early." They then told me that they had seen three deer while coming in before dark, a doe and two fawns.

Well, to make it short, we were on our horses, Lem and I, at dawn, with a substantial lunch, and everything we thought we should need, I with my .30-30 and Lem had my .22 for grouse. Straight up the mountain side we went, through thick clumps of aspen, where we had to look sharp to our legs. I caught some sharp scratches before I learned the knack of putting my hands against the trees and pushing the horse away from it.

Once we were within ten feet of a deer when he jumped and ran, but the leaves were so thick that we never saw him at all, or her rather, for Lem said it was a doe, but how he knew is beyond me.

Higher up it was more open, with lots of deer tracks. Once we saw some buckshot on the ground that Lem said was elk sign.

Half way up the mountain Lem, who was in the lead, stopped his horse and quietly got off. I stopped to see what he was going to do. Taking the .22 out of the holster he stepped around his horse and pointed the gun at the ground under a tree. Then I saw a grouse. .22 smokeless don't make much noise, but the grouse lay over with hardly a struggle. Then for a few seconds Lem worked the slide and shot. Chuck-caslump, chuck-caslump, caslump, chuck-caslump. Then he walked in there and brought out nine young grouse—all there was in the covey. Sounds like a fish story, don't it? But it isn't, and I can prove it, for I've got the .22 here now that he did it with.

The sun was high by this time, and deer tracks were thick wherever there was a soft spot for them to show. We had the big dog along, but Lem kept him at the horses' heels.

Up on the next bench we found a big patch of down timber. Been a cyclone through there, I guess many years ago. The timber must have been heavy in there some time, for big logs were thick on the ground. Our horses knew how to get over them, though. All we had to do was to let them take their own course. We went all right till Lem's horse tried to go over a little log that lay across two big ones, and couldn't make it. The horse wanted to turn back, but Lem urged him on, and over he went, bottom-side up, with Lem under him.

Gosh, but I was scared! But it wasn't necessary. Before I could get there to help them, they were both on their feet, none the worse for their tumble. I thought Lem was going to lick the horse for falling, but he didn't. "You poor ole cuss," he says, "if you had a rider that knew as much as you do, it wouldn't have happened."

Lem said it wasn't safe to ride any further; so we would leave the horses there and go on foot. It was pretty bad walking for a while, but later we found smoother going. Lem said that it was a good place to find a big buck lying in there sunning and hardening his horns, which were yet in the velvet.

Pretty soon Lem says: "Give me that air field glass o' yourn an' I'll set down here on a log and scan that air hillside over thar; mebbe I can see one, while you go on round that ridge and I'll meet you over yonder."

So I went on along the top of a little ridge till I got to the end of it.

Before going down off the ridge I took a look around in all directions. Back where I had come from, about 500 yards away, I could see Lem and Bull sitting side by side. Lem had his arm around the dog and held my glasses in the other hand.

While looking at them, I saw something moving in a line beyond them. Another look and I saw it was a big buck, or an elk, coming straight toward me on the jump. I got behind a handy stump and waited, my heart going pitty-pat. The buck, for such he proved to be, and a big one, too, was going to get to Lem before he did to me. Would he change his course?

He was soon up to Lem, but did not seem to see him till he went past about twenty feet away. Then Lem heard him and looked around. "Here he goes! Here he goes!" yelled Lem. "Shoot, shoot! Sick 'm, Bull, sick 'im! Shoot, shoot!"

Well, if I'd shot then I would have been pretty sure to get Lem or the dog, they were all about in line. I was aiming at the buck's head, but he was coming nearer all the time, and I know how to wait for a mallard when he comes that way.

Bull started after the deer like a yellow streak, but he couldn't keep up. The buck had changed his course and wasn't coming so good now. Still, I was sure of a shot. All this time I had been aiming at his head, and Lem had been yelling, "Shoot, shoot!" As the deer came nearer his head looked to be about all horns, and not a very substantial target, so I lowered down to his neck and cracked away. Nothing dropped.

I worked the lever as fast as I could, but by the time I was ready to shoot again the buck was opposite me, going like the wind eighty-five yards away. I swallowed my heart and tried to draw a bead on his. Bang! Nothing dropped.

I worked the lever again, and was trying to hold myself together for another shot, when the buck stubbed his toe on a log and stood right up on his head for a moment, then fell over and lay still.

Lem yelled till he was hoarse, and Bull pounced on to

the deer and began to chew his neck. I raced down the hill too fast, caught my foot in something and took a header. Soon we were shaking hands over the buck.

I want to tell you he was a magnificent specimen of a blacktail. I'll show you his head when you come to see me.

We found that my first shot had cut off his jugular vein and windpipe. The bullet had mushroomed and made a hole an inch and a half across on the far side. The other shot had hit his heart, a little too low for center, but that organ was simply pulverized and shattered.

Lem congratulated me on my shooting. Then I wanted to get back to camp just as fast as possible to show my game and tell how I did it. No general ever marched in prouder than I did that day. My wife's eyes sparkled and the roses were in her cheeks.

"Oh," said she, "how I would like to have been with you." "It was a pretty stiff climb," I says, "but by going around a little, and taking it easy, I think you could make it. So, if you think you can stand it, I will have a horse ready for you on our next hunt, and you will be one of the party."

After that she was always by my side in about all our expeditions, and I want to say that I never had a more enthusiastic, patient and pleasant hunting companion.

Now, old friend, that sounds as if I had gone back on you, but don't you think it. There wasn't a day that I did not wish you were with us, and I sincerely hope that I may have the pleasure of your good and ever welcome company, as well as the benefit of your true sportsman's inbred sagacity and instinct that has ever been so pleasant and welcome to me on many, many trips, in the future.

And now, old chum, I must hold up on this and take a lay off. I have sat here all night long, living over again as I wrote them the many pleasant incidents of this glorious trip, till daylight is peeping in at me through my open window. If you enjoy the reading of this as much as I have enjoyed the writing of it, my time has indeed been well spent.

But I cannot now complete my story of how we hunted the mountain lion and found the underground cave with its many wonders, its underground lake and its animal inhabitants. Nor how I killed my next buck. All that I leave for my next installment.

So with best wishes for your health and happiness, I wish you a very good morning.

RICHARD A. PADDOCK.

Natural History.

Amiable Bears.

Most Sociable of all the Bronx Park Prisoners.

"ONE half the world does not know how the other half lives" does not apply to human beings alone. If the saying were transposed and made to state that but a small portion of humanity—a very small part—realize how the members of the brute creation survive, by what means they do so, and what interesting material is to be gained by even a casual study of their species, it would be perhaps nearer the mark.

But few of the visitors to the New York Zoological Park, commonly called the Bronx, as they pass the four-footed occupants, consider what strange animals there are in the collection, and what unexpected traits of intelligence they possess.

Animal keepers declare that every creature in their charge has the same individual characteristics and idiosyncrasies as persons. Mr. W. T. Hornaday, Director of the Park, says emphatically that wild animals have much more sense than they are generally credited with. Whether it is simply instinct or is an understanding gained by experience is a question. They learn enough to be able to gain sustenance and save their lives in time of peril.

"It has been often said that a bear and a wolf know the range of a rifle," said Mr. Hornaday. "I saw two coyotes out west that knew I had no gun—but that is another story," he added, reflectively.

"Of all the living creatures in the New York Zoological Park, some 2,000 in number, the most grateful and comforting are the bears," continued Mr. Hornaday. "They make less trouble, better repay care, cause less anxiety, and yield more satisfaction per capita than the members of any other collection. Since the starting of the bear collection in June, 1899, only one bear has been ill. One was executed by another and one was killed by a kind-hearted visitor with four peaches, fed on the sly. It is a pleasure to keep animals which repay our care with good health, good temper and fine development.

"Beyond question comfortable captivity, or what I call freedom in confinement, reveals many phases of animal nature which cannot be developed or observed in a state of entire freedom. The wisest animals are the most appreciative and the most philosophical. They study how to be happy though corraled; leave all fretting to be done by professional fretters, and mind their keepers. All this is when under proper conditions, remember. Of a bear roaming free in a big, sunny yard, climbing, swimming, skylarking and romping with several jolly companions, and never teased with food, much may be expected. But of a bear in an 8x10 cage, a solitary prisoner in a miserable, sloppy, stinking cell—cribbed and confined in perpetual violence to every sense and desire save appetite—what can you ask? Such an animal is but one remove from a well mountd skin in a museum. In fact, a dead animal finely mounted is better than a live one badly kept; for the latter is a sin against nature.

"In nineteen cases out of every twenty, a bear that is taken young, properly denned and intelligently cared for, promptly becomes a thing of beauty and a joy as long as he lives. No man who knows anything about bears prefers to capture them when full grown, and keep them alive in his zoological garden. The most terrible incarnation of fury which I ever saw was a newly caught, full grown grizzly. The worst black leopard ever caged was a lamb in comparison to him. The longer he remained in captivity the angrier he got; and at last he died of an overdose of misery and a broken heart.

"When bears are caught young and reared in captivity, under proper conditions, everything good in them is developed and stimulated and the bad traits are correspondingly dwarfed. Take the grizzly. As the wild animal to be hunted and killed on his native mountains, his reputation is very bad. Everywhere, save in the Yellowstone Park, he is an Ishmaelite, his hooked fist against every man, and every gunner against him. No time has he to show his real nature. He can only eat, run and fight. But in the reservation mentioned, a wonderful fact has been developed. Even in a wild state a grizzly is not dangerous when he is let alone. He haunts the hotels and tourists' camps and steals food whenever he can, but thus far, despite a thousand opportunities, he has harmed no one!"

So, indeed, by far the most amusing part of the great zoological show is the bear department. Happier and more playful creatures than these bears it would be difficult to imagine. They are much more interesting than those in Central Park, because they have more room; they display greater variety and are in greater numbers. Nowadays the majority of them are feeling just right.

In fact, so continuously are they playing tricks and pranks on one another and going through all sorts of antics, that the public suspicion is often aroused to the point of asking whether they haven't been trained to do these things. Not one of them has been trained; it is all pure animal spirits. The grizzlies in the center attract the most attention. They are big, clean-furred, hard-muscled fellows and their growth has been as rapid and satisfactory in every way as if they had been in their own native wilds. They will come shambling to the front at a call and sit there blinking with solemn good nature, or poke their big noses between the bars as a suggestion that if you have anything good to eat in your pockets they would be glad to pass judgment upon it.

Prohibitive signs all over the place warn persons against feeding the animals or throwing anything whatsoever into the cages, but the crowd around the bears the other day made an exception in favor of peanuts. So did the bears. All of them lined up in front of the pit and wagged their noses so suggestively that many a peanut, originally designed for the delectation of the buyer, found its way to the big fellows, to be promptly and appreciatively crunched up and swallowed, shell and all. One small boy of six years or thereabouts became so interested in contributing that before he knew it his paper bag was empty and he was led away bawling.

The deftness with which a bear will pick up in his clumsy paw and transfer to his mouth so small an object as a peanut is extraordinary. Some of the spectators tried the experiment of shelling the nuts and tossing in only the edible kernel. In this case the nearest bear would run out a big red tongue, lick up the dainty and poke out his nose for more. The only member of the bruin family that fared poorly the other day was the little yearling. Every time a peanut was thrown toward him one of the big bears who stood next to him would growl out: "That's not good for a small bear," or words to that effect, and would gobble it himself. Finally a peanut was thrown almost under him, and he promptly sat down on it by way of concealment until a favorable opportunity of snatching it up should occur. In vain. The predatory neighbor came over and growled. In reply the little fellow ventured to growl a bit himself. The next instant he went whirling head over heels from the force of a whack on the side of the head. The bigger bear ate the peanut, while the little fellow whimpered in a corner.

In the center of their pit is a deep pool, in which floats a large knotted log. Two of the bears are at that log nearly all the time, playing water polo with it. One will hit it a bat with a huge paw, sending it rolling across the pool, where it will be met with a swing from the other bear that rolls it back again. Suddenly both bears will make a dive for it; and the next instant the air will be full of waving paws and water will be splashed for yards around until after the "mix-up," when two great shaggy faces will reappear above the surface and one could almost swear that the faces wore a grin.

Meantime two of the other grizzlies are having a wrestling match. They are about of a size, and to see them run at each other open-mouthed with their white teeth gleaming one would suppose that when the matter was settled the Zoological Society would be out one specimen of *Ursus horribilis*. Nothing of the sort. The savage teeth close on the thick fur of the neck, the two contestants rise on their hind legs and grapple, and presently over they roll, panting and grunting and snorting with glee, while the others look on approvingly, and perhaps lay a side bet on the contest. After a fall they nose around and shake themselves and rub against the side of the pit until they happen to meet nose to nose, when they grapple again. They never lose their tempers, and when one of them gets tired of the play a little growl apprises the other, who promptly stops and lies down to rest.

The writer was present the other day when Keeper Mulvehill went into their cage to sweep it out. Naturally the crowd of onlookers was much interested when he came to unlock the door, and looked to see him provide himself with a club or iron rod or some other means of protection should the beasts attack him. The only thing he carried in with him, however, was his broom. All of the bears were lined up at the front bars, but when he entered they politely waddled away, leaving the coast clear; all except the little bear, who came around and rubbed against him and wanted to be friendly. The keeper paid not the slightest attention to any of the animals, not even taking the precaution of keeping his eye on them, nor did they seem much if any more interested in him. They accepted him as a matter of course. Once when he went over to dip his broom in the water one of the two medium sized grizzlies, who are the liveliest and most playful of the lot, ambled toward him. The man flirted a shower of drops from the wet broom into bruin's face and that animal promptly made a mild pass at the instrument, then sat down and washed his face with his paws.

The polar bears in the next pit spend nearly all their time in the pool, which they nearly fill with their huge bulk. They have a wooden ball to play with, and the chief object of the game seems to be to keep it submerged. Whenever it pops up they both whack at it at once; then, as likely as not, they forget the ball, clinch and both disappear beneath the surface. Presently one of them comes up and occupies himself with pawing down the other until it seems as if the under bear must be on the verge of drowning. All that one sees of him is an occasional pinkish paw waving signals of distress, and the curve of his back through a swirl of water. Then up comes the white head and one is amazed to see that he isn't even gasping for breath. There was one period of a trifle over a minute that one of the polars was submerged while the writer was watching, and all that time he was struggling at a rate to breathe any creature, but he was apparently perfectly comfortable when he came up, and promptly proceeded to put his companion down. They are beautifully white and clean looking fellows, and seem to be in as fine condition as the grizzlies.

On the further side of the grizzly cage are the black bears and Japanese bears. The latter are quiet fellows and don't pay much attention to their fellow citizens. Both of the black bears were brought up in captivity and fed on sweets and ice cream, which is very bad for little bears, and in consequence their growth has been stunted, and it is doubtful whether they will ever be more than anything but dwarfs. But they are as lively as crickets, and one of them is possessed of an abiding curiosity. He loves to climb up the side of his cage that adjoins the grizzly cage and look down on the grizzlies. Maybe he would climb right over there if there weren't ingrowing spikes at the top to prohibit such visits, and then there wouldn't be any more black bear. The grizzlies always come over and rear up to meet him, and he clings like a fly to the wire side of the pit above their heads and makes faces at them. When he isn't doing that, he is showing off his paces around the pit, for he has a great conception of his ability as a runner.

When the cinnamon bear and the Kadiak bear get to wrestling, as they do nearly every day, there is no end of fun. The other day they wrestled right on the edge of the water pool in their cage, and the Kadiak rolled his huge friend head over heels into the water. Then he stood on the edge and seemed to jeer. The cinnamon struggled and sputtered, and one seemed to hear the profanity that he let loose. To add insult to injury the Kadiak refused to wrestle any more with his chum until he dried off; so Brownie chased him all around the pen trying to corner him, while the grizzlies looked on with evident amusement.

This Kadiak is one of those rare bears who have their home on the long string of islands running out westward from Alaska, and until a few years ago it was considered one of the great tasks of the naturalists to get a live specimen of this splendid brute. The management of Bronx Park are very proud of their specimen, which was born near Cook's Inlet, Alaska, in 1899.

In the middle cage there is never any end to the frolic. The brown bear is the prize buffoon, and his particular friends are the two cubs, black and brown. He plays the star in the daily variety show, and they support him. He lies down and they roll all over him. pull his ears, make tats of his long hair, chew his throat, and maul him generally.

The other day the small brown cub was manifestly homesick. He went pacing restlessly up and down his cage, refused to eat, simply could not bring himself to play. His big friend tried every way to coax him into some game, but all to no avail. He moped and moped, and was as sad as any little brown bear could be who longed for home so that he thought his heart would break. Even the mournful old bear from Borneo, who thinks this is a beastly cold country, tried to cheer him up, telling him, in all probability, that he himself was about 5,000 miles from home and never expected to see Borneo again. Of course this did not make the baby bear any more happy. At last the small black bear just about his own size, succeeded in doing just what all the other bears could not do. He had respectfully stayed in the background while his elders were trying to fix things, but when they failed he came out and coaxed his lonesome chum into a game of chase around the pen and up the dead tree. The old bears sat around and approved, though the big brown bear was evidently jealous. After that the little exile was all right again.

There is no animal of them all, not even excepting the monkey, whose antics and games recall more vividly to the stroller's mind the characteristics and weaknesses of the human animal than do those of the bears. For instance, they are never satisfied with the good things that they get, but they always think that the particular steak or loaf of bread which has fallen to their neighbor is a much nicer and better steak or loaf than their own. For that reason they constantly change around from portion to portion during meal time. Very seldom does bruin sit down and eat his meal without some of these shifts.

The bears' nursery at the Park is a big yard, with a tree to climb, a swimming pool, three sleeping dens and a rock cliff. It seldom contains fewer than six cubs. It is considered a test of courage and temper to turn a new bear into that roystering crowd. Usually a newcomer is badly scared his first day in the nursery and very timid during the next. But grizzlies are different. They are born full of courage, and devoid of all sense of fear.

Director Hornaday tells that when Cyclone's traveling box was opened, and he found himself free in the nursery, he stalked deliberately to the center of the stage, halted, and calmly looked about him. His air and manner said as plainly as English:

"I'm a grizzly from Alaska, and I've come to stay. If any of you fellows think there is anything coming to you from me, come and take it!"

Little Czar, a very saucy but good-natured European brown bear cub, walked up and aimed a sample blow at Cyclone's left ear. Quick as a flash out shot Cyclone's right paw, as only a grizzly can strike, and caught the would-be hazer on the side of the head. Amazed and confounded, Czar fled in wild haste. Next in order, a black bear cub, twice the size of Cyclone, made a pass at the newcomer, and he, too, received so fierce a counter charge that he ignominiously quitted the field, and scrambled to the top of the cliff.

Cyclone conscientiously met every attack, real or feigned, that was made upon him. In less than an hour it was understood by every bear in the nursery that that queer looking gray fellow with the broad

head and short nose could strike quiek and hard, and that he would fight any other bear on three seconds' notice. From that time on Cyclone's position has been assured. He is treated with the respeet that a good forearm inspires, but being really a fine spirited, dignified little grizzly, he attacks no one, and has never had a fight.

"Speaking of young bears," said Mr. Hornaday, "the average eitizen has all he wants of a pet bear cub in six months. In a year he is tired of it, and in eighteen months he is siek to death of it. When I was in the West I heard rather a good story in that connection: A gambler out in Denver, it appears, had a couple of cinnamon bears. When they were little he had lots of fun with them, but after they grew up he could not take care of them himself, and there was nothing to do but board them out. This cost him $100 a year for each bear. By and by another gambler came along, saw the bears, and thought he would like to have some like that. 'How much will you take for them?' he asked. 'Three hundred dollars,' said the owner. They dickered for a while, and it ended in the sale of the two bears for one hundred dollars. After he had pocketed the money, the Denver man said, 'Bill, you're not so bright as I thought you. If you'd held on fifteen minutes more I'd have given you a hundred to take them bears.'"

Wolf Traits.

Editor Forest and Stream:

I was much interested and edified by your intelligent correspondent's (G. B. G.) delineation in your issue of April 18 of wolves' behavior when at large in their native haunts, and not disturbed or frightened by man, or conscious of man's presenee. The information which he gives of their antics, attitudes and idiosyncrasies covers a field of observation which was not studied as now in the days when I used to follow the western trails. At that time there were no Rudyard Kiplings or Seton Thompsons: no "Jungle Books" or "Animals I Have Known." Trappers and hunters aequired a close familiarity with the habits of animals only so far as the knowledge served for their pursuit and capture. Exhibitions of wolves' doglike behavior were seldom afforded to prairie travelers. Timber wolves and coyotes both kept their distanee in the day time, excepting a few of the latter which followed the wagons and were given names, and were individually recognized. Usually when seen they were loping off over the brown swales nearly of their own color, looking askance, with tails lowered in a sneaking way, "preeisely as a frightened dog lowers his," to quote from G. B. G. Again, in another passage, he says of the eoyote (prairie wolf), "it sneaks along with downcast mien and lowered tail," etc.

So it would seem, I plead, that exception eannot fairly be taken by this observant naturalist to my original statement when differentiating the traits of dogs and wolves.

But it was when we made eamp in the evening or at dusk that we had the best opportunities to beeome acquainted with the "nature of the beast." Then they would gather in a eircle around the seething pots, and sit on their haunches, and fidget and whine just like dogs (*Canis latrans*); and later on, at supper, when an oeeasional bone was thrown at them, there was a desperate seramble and no politeness wasted. This foolishness of baiting these nuisances with tidbits was not kept up many days. The mistake soon beeame uncomfortably apparent; for at night, just as the tenderfoot was wooing sleep, the "varmints" would gather around the tent or wagon-tilt and crunch bones till we couldn't rest! So the cook was instrueted to earry the offal and remnants away out beyond the limits. This was in the fifties. Years after, when I have seorned a tent and laid out with my back to the sod and my face to the stars, I have had the starveling scamps steal the shaganappi (raw hide) from under my pillow and eat that!

Memory plays a lively part in respect to the days when I went gipseying, not only in the eountry of the Platte and Arkansas and in Dakota and Minnesota, Idaho and Montana, but in the "Prairie Provinees" of the British Northwest, where buffalo grazed galore. In those flush times when "meat was a-runnin'," the wolves didn't carry their tails down, I'm sure.

Charles Hallock.

Goodnight Buffalo and Catalo.

There have been so many eonflicting reports of the success of Mr. Goodnight's enterprise that in erossing the Staked Plains of northern Texas last September, I stopped over a train to learn something definite about his herd of buffalo, and the eatalo, as he calls the crosses between the buffalo and polled angus cattle. From the little station of Goodnight I walked a quarter of a mile back to the fine old ranch house surrounded with fruit and shade trees, an attractive spot in the big grassy plains. Mr. Goodnight said the buffalo were a couple of miles baek in the pasture, so getting into his buggy we drove out through a big corral where nine beautiful elk that had been brought in the day before to be "gentled," merely looked up as we passed them, not half as wild as the range cattle usually are.

The small pasture in whieh the herd of fifty full-blood buffalo were kept contained a few thousand aeres and was inclosed with a barbed wire fence about seven or eight feet high, of thirteen wires. As we drove through it over the prairie we could hardly see that the grass had been eaten or trampled, and when we came to the herd of buffalo lying down or grazing along a gentle slope, there was not a fence in sight and it was easy to imagine that these were wild free buffalo of the plains. It did not seem so much as if they had been feneed in, as that the hunters had been feneed out.

Mr. Goodnight said that all of the full-bloods were in this herd exeept the three largest old bulls that kept away in the corner of the pasture. The herd was a mixture of eows, calves, yearlings, two-year-olds and a few fine full grown bulls, all in perfect health and fine eondition. They were not as wild as the ordinary range cattle, and paid little attention to us. Mr. Goodnight said it was not safe to go among them on foot, but that they did not objeet to a man on horseback or in a wagon. I started up one of the best bulls and photographed him at twenty feet from the buggy, and we were often eloser to them. Unfortunately, I set my camera with too slow a speed for snap shots and spoiled all of my photographs.

In this herd there were but two of the eatalo, a three-quarters buffalo eow and her seven-eighths buffalo calf, and these kept at one side by themselves. The eow had much the build of a buffalo, but had slenderer horns, was a yellow brown eolor, and had long, straight instead of curly hair. The ealf eould not be told from a full-blood buffalo ealf. Mr. Goodnight says the buffalo and catalo will not herd together, nor will the catalo herd with the eattle. Part of the seventy catalo of various grades were out in the big pasture, so I saw only a dozen in the field near the corral. These were half and three-quarters polled angus and kept apart by themselves, not mixing with the eattle in the same field, though not different from them in general appearanee.

The half-bloods were black or with only a traee of brownish; some with little erumply horns and others without horns. The high shoulders and light hindquarters of the buffalo were noticeable in them, but not more than a fair compromise between the two parent speeies.

The three-quarter polled angus are what especially interest Mr. Goodnight at present, and he thinks promise to develop into the finest breed of cattle in the world. They are blaek without horns, have the build and heavy form of the polled angus eattle and far exeeed them in size and weight. Three yearlings standing together at one side were as large as any of the two-year-old polled angus in the herd near by, although they had been raised in the same pasture with no advantage on either side. The superiority of the grade, Mr. Goodnight says, is kept up to maturity, and full grown steers weigh eighteen hundred pounds.

By careful erossing he hopes to establish a permanent breed of very superior catalo of about the proportion of one-quarter buffalo to three-quarter polled angus, and his success seems almost assured. The grade eows are said to breed freely, but most of the bulls are eonverted into steers for the market.

Mr. Goodnight crosses his full-blood buffalo only from the bulls and keeps increasing his herd as fast as possible. As they are worth something like a thousand dollars apieee, he naturally cannot afford to experiment with full-blood buffalo eows. He has no diffieulty in making the desired erosses and both full-bloods and grades are perfeetly hardy. He has never lost any of his buffalo exeept by injury when shipping or handling them, and I see no possible danger to his herd exeept through in-breeding.

Chamberlain's Nuttall's Manual.

Several years ago we called attention to the enterprise of Messrs. Little, Brown & Co., of Boston, in issuing an edition of Nuttall's Ornithology, and to their exeellent judgment in choosing Mr. Montague Chamberlain to supervise the editorial work of the volume. At that time we said:

"Of the earlier writings on Ameriean ornithology none have a greater charm than those of Thomas Nuttall. The result of his labors were modest by eomparison with the elaborate produetions of Wilson, Audubon and Bonaparte, but in the two little volumes whieh eonstitute his work there was careful study and painstaking care. Whether as botanist or ornithologist, Nuttall was a elose observer, and he wrote with a deep feeling that appeals most strongly to all lovers of nature. He it was who first wrote a eonneeted history of our birds in sueh form that it was accessible to the general publie. Other works on the subject were expensive and to be seen only in the libraries of the wealthy, but the two plain volumes of the 'Manual' with their pleasing text and their simple yet truthful wood engravings, were within the reaeh of all. It was a popular hand-book of ornithology, and the eharm of its style, as well as of its subjeet, at onee seeured for it a large share of the popular favor, so that after a few years it passed to a second edition."

Messrs. Little, Brown & Co. have now issued a new edition of this work, the title page of whieh reads, "A Popular Hand-Book of the Birds of the United States and Canada, by Thomas Nuttall. New revised and annotated edition by Montague Chamberlain, with additions and 110 illustrations in eolor."

So far as the type matter of this edition goes it is essentially similar to the earlier one in two volumes, which bore date 1891. There are, however, some additional notes on the speeies and twenty lithographic plates of different speeies, chiefly reduetions from Audubon's plates, with a few from Wilson and others. Everything good that was said about the earlier edition thus applies to this one, and the eolored plates are particularly good in color, most of them being exceedingly truthful and life-like. The two volumes of the old edition, printed on light weight paper, are bound up in one quite thiek volume, and yet the book is not heavy to the hand, although eontaining about 900 pages. We note an apparent error or two in naming the species figured in colors, since figures 4 and 5 on plate 16 do not appear to be herring gulls; nor does figure on the same plate appear to be a Bonaparte's gull, though Audubon's figure and name are given.

On the whole, Messrs. Little, Brown & Co. have performed good service in presenting again to bird lovers so charming and useful a book as this, to which the colored plates add a very great deal. The priee of this edition is very modest, being only $3.

"The Intelligence of Wild Things."

Northwood, April 16.—*Editor Forest and Stream:* Permit me to thank Hermit for his article on "The Intelligence of the Wild Things." His straightforward statements will be approved by every observer of wild life who reads Forest and Stream.

Four-Legged Fowls.

Four-legged fowls are mentioned in the Bible—in Leviticus xi. 20! Which see.

Charles Hallock.

One Way to Cast out Devils.

Boston, Mass., April 20.—*Editor Forest and Stream:* Who was the inspired idiot who proclaimed that if you take the piazza off your bird-house the English sparrows forthwith will eease their troubling of the bluebird inmates? If you know him, present to him my eompliments; for, to quote a friend, "I am ever polite;" and tell him that it may be all right in his latitude, but in the neighborhood of Boston, where the sparrows as they choose ean make small gargoyles of themselves along the publie library eaves or take a (lamp) post graduate course at Harvard University, they are altogether too well educated. Theoretieally I thought so, for I found them nesting in a knothole in an apple tree not two inehes wide, and on the under side of a sawn off limb. Praetieally I know it, having believed too easily others knew best and removed the piazza in eonsequence.

I set up a model tenement house in my garden; lofty within, with a half-chamber above, and two rooms back to baek. In a day, two bluebird families entered into possession. In a week, a pair of sparrows began to interfere with the family on the most desirable, sunny side. So I took my saw to the piazzas and abolished them. I forgot to add, the house has a gable roof with an attic open to the breezes from end to end, and thus in summer will be espeeially eool.

Did the sparrows go? Not they! On the eontrary, the bluebirds had to, on that side. Twice I rose in my wrath and my pajamas after dark and ripped out the sparrow nest bodily. Baek they eame, with the persisteney well known as one of the attributes of devils, and built again. So, as my polite hints were thus ignored, and guns are tabooed, I set a flipflap wire mousetrap in the room after onee more elearing out the straw; and next morning found it at the bottom of the pole with a very mad sparrow in it fast by the neck. "So much for Buekingham!" And the other imp has never come baek after the first whirl of indignation. Once or twiee I have caught the bluebirds clinging to the lower sill and looking in, as though they realized that some great tragedy had happened there; but not once have I seen them enter on that side, as yet. Still I am hoping. Meanwhile, I ean commend that mousetrap for neatness and dispateh. I don't know it's name; but as it is a patented artiele your hardware man can find it doubtless. It has a flat bedplate, a wire loop bent baekward and eaught down, and a foodplate. Its value lies in its small size and flatness. It eould be slipped in most anywhere that it is wanted.

J. P. T.

P. S.—By the way, go easy on John Burroughs, boys! Remember, he is no longer young; and while, like others, he ean now be eaught napping, still he's probably learned and forgotten more than many of us young fry ever knew, and has helped greatly to spread abroad the gospel of outdoor life and observation.

Swimming Squirrels.

Editor Forest and Stream:

Early last Saturday morning, April 11, while out on the lake near this plaee in my eanoe, I heard a splash near the shore one one side of an arm of the lake, and saw some animal that I thought was a muskrat swimming and headed for the other shore, whieh was some forty or fifty yards distant. Turning the eanoe in that direetion I quietly paddled toward the animal, the head of whieh then looked very small for a muskrat's. As I got nearer it seemed more like a big watersnake than anything else, as it had quite an undulatory motion; but as it crawled ashore I found it to be a very large gray squirrel. After getting ashore it slowly crawled up the trunk of a nearby ehestnut tree and dragging its tail. Then it erawled from limb to limb and slowly jumped from one tree to another, without using its tail seemingly, until I lost sight of it. As it swam I noticed that it dragged its tail all the while under the water, and when it got ashore it eould have been caught very easily had one been there when it landed.

As I was within perhaps ten feet of it when it got ashore, I had a good opportunity to observe its movements; and sinee there has been quite a discussion of late in Forest and Stream in regard to gray squirrels erossing bodies of water, I was greatly interested; so much so that I took particular notice of this one's every move. I noticed that it swam as easily as a muskrat, and as the water was very eold—since there was a heavy frost the night before—I came to the conelusion that that branch of the squirrel family is accustomed to swimming in cold weather, and as I saw nothing that eompelled it to swim across, it showed conclusively that gray squirrels can take to the water and handle themselves easily in it when they choose to do so, or when neeessary.

About gray squirrels migrating, I have never seen them do it, but last year my brother up in Connecticut told me that onee some three years since when he was in the woods he saw scores of them, all big ones, going through the woods all in the same direction, and as he was in the midst of them, they would turn a little away from him on each side and continue on their way, showing but little fear. He said it surprised him greatly to see so many of them at the same time all going the one way.

Asbury Park, N. J.

One Buffalo the Less.

America's deeimating colony of buffalo has lost another chief. "Ben Tillman," the prize bull in the herd in Pawnee Bill's Indian show, yesterday bit the dust, dying with honor in a fatal battle with a rival of his own fierce breed. The fight took place in Pawnee Bill's winter quarters in Carnegie. "Ben" weighed 2,100 pounds, and was valued at $5,000.—Pittsburg (Pa.) Gazette, April 14.

Misser—"Is there anything I ought to do while waiting for the bird to rise?"

Farmer—"Yep; you might as well hand me $10 in advanee fur shootin' the dog."—Washington Evening Star.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

My First Hunting Trip.

WHO would believe it? Two years ago I fired a shotgun for the first time. I handed it back with disgust, swearing never to touch such a cursed thing again, for not only did I miss the bird, but, as if for punishment, I had my shoulder kicked green and blue. The consolation which I got from my companion was a laugh and the advice to hold the gun to the shoulder next time, not half a mile from it.

It took quite a while to get over my disgust with shotguns, though I could not withstand the temptation to accept an invitation to a pigeon shoot. Once there I overcame the distrust and brought up the gun as advised. I soon found that I could do as good work as the rest, if not better; in fact, after a while I could understand how a man can be in love with his gun. Christmas brought a most welcome gift, a fine rifle—a Savage little affair which promised me lots of fun. Too late in the season, I had to wait for my occasion the coming October. I found a companion who shared my inclinations, and by the middle of October we were off to the nearest hunting grounds which promised to give us the much looked for sport.

As I cannot absent myself too long from my professional work, we decided to go to Maine, and on inquiry we selected Mesardis as our starting point. The trip was uneventful, although for me—and I have traveled much—full of interesting sights. An amusing incident occurred on board the train while nearing Bangor. It was a traveling rum shop. A lot of robust looking lumbermen came into the smoker led by a decrepit looking fellow, who had his hip pockets stuffed with quart bottles of gin or applejack. Every now and then he would march up to a fellow and address him with: "Come, I have one with you now." He then produced a dirty looking tumbler and filled it to the other's heart's content with fire-water. After the tumbler was returned, he took his horn with a smile. A few words of conversation followed and out came a little book, the ledger, and the victim was charged with so much; and these tactics he kept up, returning to the same man three and four times, and never forgetting his book. When we were near to the station our Boniface made his final trip, asking each one to pay or to sign his name to the amount he was indebted. But alas! it was easier to give the drinks than to collect the pay. Bangor made an end to the squabble and we all felt relieved.

From Bangor upward the route is rich in scenic effects; the most impressive sight is the Katahdin Mountain, a giant among giants, its summit covered with fresh fallen snow. Station after station the crowded cars became emptier, and when we reached Masardis only a few sportsmen remained who went further up into the woods.

Our host, Mr. Libby, was awaiting us with a comfortable buckboard; he bundled us up snugly in buffalo skins and soon we were on the way to Oxbow, a distance of about ten miles, which we covered, although the roads were bad, in less than two hours. Once in Oxbow we were cared for with all home comfort, almost too tenderly for sports who are out to rough it.

After a good night's rest we started early in the morning on our trip up the Aroostook River. As usual, our guides had provided for the canoes. It was our intention to travel all day to reach a certain camp in the evening. The weather was raw, rain drizzled all day, the river was very low; in short, there was no pleasure for us or guides, who had their greatest trouble to push the frail craft over the eddies up stream.

Toward evening my man, who was of the two the stronger, but not the wittier, was quite a distance in advance of my companion's canoe. We reached a carry where canoe and outfit have to be carried for about a mile; he thought it best that he would bring his canoe to the upper side, that meanwhile my friend would come up and could follow. So it came that I found myself alone on the banks of the Aroostook River in pouring rain, peeping expectantly down stream for the second canoe. Now, that canoe did not come, nor did my guide come back, but night came, and that suddenly, too. Shivering from cold, sneezing and coughing, I looked around and tried to decide what was best to do under the circumstances. The blankets were gone, the victuals were in the second canoe. All I had were the few belongings which I carried on my person, including matches, hunting knife, and on my chest a Boston Sunday paper to keep warm.

Before it became too dark I began to cut off all the branches which I could reach from the surrounding firs and pines. Soon I had a big pile and before long I had started a blaze, which illuminated the skies to such a distance that even my guide a mile away noticed that something was wrong and returned. I had my great troubles to keep the fire going, as my knife had become dull and as dry wood was not to be found. The guide felled some trees and green as they were they burned lustily.

What had become of my companion? Undoubtedly his canoe had sprung a leak while passing one of the many shallow places; the poor man was probably in the same stress some miles down the stream as I was up here.

We decided to spend the night here. Supper consisted of a drink of chocolate made in an old tin can which we found on the ground and a swallow of whisky; to keep warm, I danced around the fire all night like an Indian, steaming in front and freezing on the back.

At daybreak we decided to continue our trip to the camp and to return in the afternoon for my companion, if necessary. About 10 A. M., after crossing a lake, we reached the camp. The first man we met was our lost friend, who asked us most sympathetically where we had been so long, why we spent the night in rain while a good warm bed was awaiting us nearby. His guide had injured his hand and had to give up canoeing. They had tramped several miles over an old tote road, and had many times been in danger of breaking their necks, but nevertheless had reached the lake about 10 P. M. They built a fire to attract the attention of the camp and soon a canoe called for them, and after a hearty supper they had retired.

I was suffering from a peculiar feeling of misplaced confidence, but I got over it, and the incident ended in a laugh and a change of clothing.

We needed a rest, so we spent the day in restoration of the inner man and turned in soon, as we wanted to start early next morning.

The weather had changed; though cold the atmosphere was clear and bracing. My friend's guide had fetched the abandoned canoe the previous day, and we both embarked, I taking good care not to lose sight of the second canoe again. For a distance of about four miles we had a chance to stretch our legs in a brisk walk along the borders of the river, a most welcome exercise after being cramped and frozen in a canoe for hours. The night we spent in a camp which we reached shortly before sunset.

Seven o'clock saw us in our canoes again; a ride of three hours brought us to a tote road, and a tramp of eight miles lay before us to reach our final destination—Spider Lake.

The guides packed themselves with our luggage; small as it was, a great burden considering the distance and the poor condition of the roads.

We had not gone 500 paces when my first opportunity for action came. Stepping out of a pine cluster I saw standing before me a big buck. To say anything as to the size of horns would simply be an invitation for me to lie, for they could not have been as big as I thought and still think they were. My rifle rested leisurely against my shoulder, prepared for the long march, my eyes were fixed on this thing of beauty—my first buck. It took quite a while before it was clear in my mind that something had to be done, and when I did it the buck ran off, showing me, as a cordial adieu, his white flag. I had made a botch of it. Strong language followed all around. I saw in the eyes of the guides that they did not think much of me as a shot.

Arrived at the camp our arrangement was great. Sixty miles from Oxbow, after a three days' trip over land and water, we found anything and everything the most spoiled city chap can ask for, from a good dinner with daily changes of table linen to a library of well selected books. To think that all these luxuries had to be carried here the same route we had come made a strong impression upon us and spoke worlds for the good will of the dear people to please in every way. The camp was so inviting that I can easily understand that a man with time on hand could content himself with the pleasures he finds in and around the camp for almost any length of time. With us it was different; eight days was all the time we could spend here, and in this time our sporting tastes had to be satisfied.

Next morning after a short consultation with the few sportsmen whom we met in the camp, each guide selected a different corner of the compass and we started to test our luck. Considering the short time of eight days I must confess that we did not economize properly our time, but I suppose many others have made the same mistake. The hunting was not done with the same zeal the first few days as later on. True enough, we spent the whole day in the woods, but foolish things were done which should have been left undone. For instance, the first day I killed many partridge, and I do not know how much game I frightened away by my cannonade. On the fourth day I surely missed in this way my second opportunity; a big buck started right in back of us after I had decapitated a partridge.

From then on I kept my gun in control. I became foxy in a certain sense, for the first thing I met next day was a fox, which walked right up to me the same as if I was nobody; so near, in fact, that I could have used my rifle to give him a hypodermic injection of morphine instead of a shot. I had really no trouble to shoot him, so near did he come to my legs. The result of such a shot is plain—only head and neck of his fur were worth taking along. The same day I shot at a doe, but I think there was still some buck fever in me, for I shot low, breaking one leg. We followed her up for some time, but we lost the track of blood among fallen trees in the swamp. That animal made wonderful jumps with that broken leg; she jumped over obstacles six feet high.

The sixth day snow had fallen, the best hunting conditions were prevailing, but it was the quietest day of all. We saw absolutely nothing of game; they were to an important meeting somewhere, as my guide said. Something happened, though, which I want to relate for general benefit. We had taken our lunch on top of a hardwood ridge and worked our way downward to the swamps, when suddenly my guide, who had become nettled by this time by our poor luck, raised his rifle in the direction of a cluster of firs some 200 yards away. At the same moment a pair of arms came up in the air, and a loud voice hallooed: "Don't shoot!" A tragedy was averted by a hair's breadth.

The man came up to us. He was as white as a sheet, and I suppose we were no ruddier color, either, to judge from the agitation I felt. It took a painful minute before we could speak. He had come from another camp fifteen miles away; he had left his guide a little while before to inspect some undergrowth. He saw us, or better, saw me come down the hillside for some time. The red cap which I wore had served its intended purpose as a danger signal. I had reflections of my own in how much more danger would we have been of being shot at by him in case I had not worn that flag, he being without guide and inexperienced, as he showed himself in the course of our conversation. Therefore, rather miss a chance to shoot a thousand times than to fire at the first moving object you meet in the woods. See your game distinctly, take time to aim, and then shoot straight if you can. This is sound advice.

Guide and I were homesick after this; I do not think we spoke ten words until we reached camp.

The seventh day we started early as usual. It seems we had found the meeting place of the game my guide had spoken of. In one bunch I saw ten does not more than 200 yards away, but they were not to my taste, as my friend had shot two already. After an eight mile zigzag tramp, we saw four bucks, but it was beginning to get dark and we could not think of following them; we knew at least where they were. When I came to camp I gave my solemn promise that next day I would shoot a buck.

We started early and did not make halt until we had reached the spot where we had seen the game the day before. After a while we saw two bucks far off and in a great hurry. Shortly after another buck came up and I knew that this was my buck. He was not as big as I would have liked to see him, but pleasing otherwise. He gave me the necessary time for aiming and fell shot through the shoulders.

Now we could return to mother with a clear conscience, and after a farewell all around we started on our homeward trip the next morning.

Although satisfied with my luck of having shot one buck, I kept in mind that each man was entitled to two; and so it came that after the eight mile walk was over I sat in my canoe, rifle over my knee, ready for emergency.

The first day was uneventful, we spent the night in a camp. The next day we reached the river, which, after the plentiful rain and snow, had become well filled and rapid. We shot along at good rate; we were near Oxbow when suddenly I saw, about 300 yards off, a big buck getting into the stream trying to cross it. My canoe came so swiftly upon him that when 150 yards off I fired and the buck rolled in the water over and over. The next moment I was close up to him, and in my joy I got hold of his tail, an undertaking which might have turned out disastrously to me and the guide, but fortunately it did not, for the buck was stone dead. The swift current turned us around like a shot, the buck acting as an anchorage; the judicious use of the paddle of my guide did the rest, and we landed safely. My companion having seen the lucky shot shared the joy of my luck; he saw our abrupt landing, but did not notice how much assistance against his will the buck had given us. His and his guide's aim was to see that buck and quickly, too; they made a landing like we did, minus anchorage, and the result was an overturned canoe, a sport, guide, guns and dunnage in the icy water. Now, ice water is all right at its proper time, place and combination, but surely not on such an occasion. Everything was wet; we had to forget our buck for a time and start as quickly as possible a big fire, and from our meagre store of clothing we tried to make our poor adventurers comfortable.

Who's fault was it? That was the question. We did not want to make anybody feel bad, so we put it on the dead one—the buck did it! Then curse the buck! was all our wretched fellows could say. Now, that curse did not keep me from taking that buck home with me, and by the time I served him to a circle of interested friends even my fellow sport had forgiven him the trick he had played him when he was the innocent cause of such an untimely balk.

SEA CLIFF, L. I. H. G. W.

Lottery Cases and the Lacey Law.

Editor Forest and Stream:

The relation between game laws and interstate commerce has always been a matter of interest to sportsmen; and this is especially true since the enactment of the Lacey law by Congress. In this connection, therefore, it is of interest to notice the development of the law as announced by the Unted States Supreme Court, on the various phases of this important question. Perhaps no single question, which still remains unsettled in the highest court of the land, is more important than this of the relation of the general Government to and its power over interstate commerce.

The late cases, commonly called the Lottery Cases, have attracted widespread attention, and have been variously commented on by the newspapers and by law writers throughout the land. Many of these comments have been immature and hasty, and have displayed a very slight knowledge of the law, as well as an inaccurate reading or understanding of the decisions themselves.

The cases in question were two: The first and most important being that of Champion vs. Ames, in which Champion had been indicted in the United States District Court for Texas for conspiracy, under Section 5440 of the United States Revised Statutes, in attempting to do an act prohibited by the Act of Congress of 1895, for the suppression of lotteries, the specific act charged being sending by express from Dallas, Texas, to Fresno, California, a package of lottery tickets in the Pan-American Lottery of Paraguay. The second case was an indictment of one Francis, under the same section, for a somewhat similar offense, that of sending policy slips from Kentucky to Ohio. As the court held in the latter case that the act charged was not an offense under the statute for the suppression of lotteries, it is not necessary to further consider that case.

The contention of counsel for the prisoner in the first case was that the law was unconstitutional, that lottery tickets had no commercial value and could not therefore be articles of commerce, and that in any event the power given to Congress by the Constitution to regulate commerce among the States did not include the power to absolutely prohibit it, as was attempted to be done by the act of 1895 referred to.

The court, however, laid down the broad proposition that the act complained of constituted interstate commerce; and that the power to regulate included the power to prohibit. The court was careful to confine its decision to the precise question before it; and while it did not accept the suggestion of counsel for the prisoner that the question of whether or not an article had value was the only test of its commercial character, still held that lottery tickets were things of value. As to the suggestion made that if Congress could prohibit traffic in lottery tickets it could prohibit traffic in any and every article of commerce, the court said that such a result by no means followed; that the legislation of Congress was supplemental to that of most, if not all, the States, making lotteries illegal; saying also that "It is a kind of traffic which no one can be entitled to pursue as of right;" and that "As a State may, for the purpose of guarding the morals of its own people, forbid all sales of lottery tickets within its limits, so Congress, for the purpose of guarding the people of the United States against the 'widespread pestilence of lotteries' and to protect the commerce which concerns all the states, may prohibit the carrying of lottery tickets from one State to another."

This, therefore, is another illustration of the often disputed but well-established doctrine of the exercise by the general Government of a police power of its own in aid of the exercise of such a power by the several States; a declaration, in another form, of the enunciation of the same court in a former case, that "there is a peace of the United States."

The bearing of this decision on the question of the validity of game laws, and especially on the Lacey law, is at once apparent to anyone who understands the subject. Laying aside, for the moment the question whether, owing to the peculiar nature of the property in game, it can ever become a subject of interstate commerce, it appears that where the States, in the exercise of what is called the police power, limit or prohibit the traffic in an article, Congress may, as supplemental to the State right, further declare that there shall be no interstate commerce in such an article; and that the only practical limit to the exercise of such power is the legislative discretion. In saying this, it is not assumed by me nor was it assumed by the court, as has sometimes been suggested by careless readers of the decision, that this power extends in all cases to the exclusion of legitimate articles of commerce; nor is it to be assumed that Congress, even had it such power, would arbitrarily exercise it to the injury of the commercial interests of the nation.

In regard to game, it has been repeatedly declared that the individual citizen has no property therein, save and except such as the mass of the people, acting through their Legislatures, think fit to give him: that the right to take game is a mere boon or privilege which can be bestowed or withheld at pleasure; that a State may permit its citizens to take and dispose of game within its borders, thus making it an article of State commerce; and may at the same time prohibit its export beyond the limit of the State. If a State can do this, cannot the same State further say that game brought into the State contrary to the laws of another State shall not be possessed or dealt in? Clearly such can be done.

The constitutionality of the Lacey law, which prohibits interstate commerce in game taken in violation of the laws of a State, had not been passed upon by the Supreme Court of the United States; but it seems perfectly clear that the application of the decision in the Champion case to that law would make it invulnerable to any attack on that ground.

Furthermore, as no one has, under the law, any absolute right to or property in game at any time, and as the possession thereof is at all times subject to the will of the Legislature, it would seem that no one has or could have any "right" to make it an article of interstate commerce any more than he has a right to traffic in lottery tickets. It may also be said that the case of game is even stronger than that of these tickets; for to admit that a specific thing is an article of commerce assumes at once, it seems to me, that it has all the attributes of ordinary commercial articles, one, and perhaps the most important, of which is that it can be and is the subject of absolute ownership, an attribute which game does not possess.

It has often been suggested that the enactment of game laws comes within the exercise by the States of what is commonly called the police power; and it may be as well, for lack of a better classification, to continue to so treat this class of laws. But it is submitted that they can be sustained on a higher and different principle. Police regulations almost universally operate upon persons or property directly; that is, such property as is capable of ownership in the common acceptation of the term; and their validity is frequently disputed on the ground that they deprive persons of their property without due process of law. Indeed, this is one of the commonest grounds of attack. Even here, however, the courts have said that such laws are not invalid because they have the effect to destroy property of small value, or to indirectly deprive the owner of the use thereof. It would seem, therefore, that in legislating in regard to an article like game, the ownership of which is always in the whole people of a State, in their aggregate capacity, the question of individual right of ownership was not involved; and that, as no one had any right therein, no law could deprive him of that which he did not possess.

How far Congress can go in prohibiting interstate commerce in an article not in itself injurious to morals and not prohibited by any State law, was not, as has been already stated, decided in the Champion case; but it may well be that such a power exists in regard to game; and that Congress might go further than it has done at present, and declare that there shall be no interstate traffic in game; and this entirely regardless of any State law. This and other questions will probably be decided in due time.

Joseph B. Thompson.

New York, April 15.

Deer Hounding.

Springfield, Mass.—*Editor Forest and Stream:* I inclose herewith a clipping of a reprint of a recent article in the New York Sun regarding the subject of hunting deer with dogs. This article pretty nearly expresses my own idea on the subject, and it would please me to see it reproduced in Forest and Stream if you can find room for it.

E. M. Wilkins.

"I was among those who strongly urged the passage of the law prohibiting the hunting of deer in this State by hounding," said a well known Sullivan county sportsman, "but after seeing the effect of that law the last season in Sullivan county I am just as strongly in favor of repealing that clause.

"The chief argument against hounding deer was that it did not give the deer a fair chance; that it was cruel and tended to the annual decrease of their number in the woods. The law permits the killing of but two deer during the season by any one hunter.

"Now, two deer are two deer, the opponents of the anti-hounding clause argued, and it did not lessen the number of deer in the woods whether the two were killed before hounds or by still-hunting. To this the answer was that by still-hunting the hunter was not so likely to get the range of the game and if a first shot was not a killing one he could not follow the deer and locate it with any certainty by stalking, and with hounds on the trail he could. Hence many deer that might otherwise fall to the hunter's score would escape during the season.

"In Sullivan county last season, which was the first open season for deer in that county for six years, not less than fifty deer were shot at and wounded during the two weeks the season lasted, but managed to get away from the hunters. I have heard of the finding in the woods since the season closed of the carcasses of eighteen deer, seven in the Black Lake region alone, all with bullet or shot wounds, proving the cause of death.

"The seeing of crippled deer here and there is also reported. A buck walking on three legs came into a field near Sackett Pond the other day, and a trackman on the Erie saw a doe cross the track above Cockerton dragging one hind leg helplessly. It is reasonable to assume that these were victims of the chase and got away, their wounds not proving fatal, and there are doubtless many others.

"But there, at any rate, were eighteen deer killed by hunters who never knew it, and who, of course, kept right on hunting, eager to get a showing for their time in the woods, thus, perhaps, killing more than their quota of two. The intention of the law was certainly not served, and how did it benefit game preservation?

"With dogs to follow their trail those eighteen deer would have gone to the credit of the hunters from whom they escaped, and the chances are that the lives of as many more that were killed to make those misses good would have been spared. In other words, the still-hunter in many instances killed four, and maybe more, deer in Sullivan county last fall, where the hound hunter would have killed but two.

"It seems cruel to chase a deer with hounds that never relent on the trail, but isn't it cruel to hunt the deer, anyhow? Hounding may be cruel and not entirely fair to the deer, but I am satisfied by the result in Sullivan country that it is more merciful to the deer than still-hunting, less apt to breed infractions of the law, and, with the same number limit to the hunter as now and an open season of but two weeks, I believe it would be better for the preservation of the deer."

The Connecticut Wildfowl Law.

Editor Forest and Stream:

Why our legislators and other officeholders do things at times which they must know to be diametrically opposite to the wishes of the vast majority of their constituents, passes ordinary comprehension. We pick up a daily paper and behold, our gaze falls on a head line which stupefies our understanding. Hardly believing our sight, we rub our eyes and look again. Then we smile, laugh or swear. What we believed to be impossible has come to pass! Yesterday all was progression, apparently; to-day we find retrogression at the helm, and we are left to grope in the dark and wonder the reason why.

Who or what has caused the Committee on Fisheries and Game of Connecticut to recommend the passage of a bill extending the spring open season on wildfowl, and why was such a bill originated? Nine out of every ten sportsmen are asking this question, and nine out of every ten who think at all are emphatically opposed to the measure. In the name of reason and common sense, can anyone tell of any benefit to come out of such a measure? The great good accomplished by doing away with grouse snaring has been partly undone by this latest legislative betrayal of the public's interest.

Sportsmen who have shot ducks on Long Island Sound for years will testify that they are getting scarcer and scarcer each season. And the fowl that stop here on their spring and fall migrations are almost exclusively coots and old squaws—though there were more broadbills last fall than in a number of years. Instead of betraying the sportsmen's interests by extending the open season to exterminate the few remaining wildfowl, the Forest and Stream's platform should have been followed, and all spring shooting legislated out of existence, and our ducks given so much more chance to propagate. And it would seem that the Committee on Fisheries and Game ought to work with its whole might and power for the perpetuation of all game rather than for its extermination. Should the committee continue its blundering policy it would be a wise and economical move for the State to abolish the committee and appoint a new one.

There is abundant opportunity for the committee to use its influence for a stricter enforcement of existing game laws, rather than in encouraging retrogressive game legislation. It must be admitted that this body has a great deal to contend with in its various labors—that it cannot be expected to perform impossibilities. But there are such glaring violations of the game laws in many instances, that stupid legislation is a direct encouragement to the evildoers. Any Sunday in the ducking season, and many times out of it, fusilading can be heard and shooters seen along the Connecticut shore. While it is easy to get out of sight in thick woods, here, on the water and along the shore, violators could be easily apprehended. And this Sunday shooting is in direct violation of the game law which imposes a fine of $25 for the same, and which forbids "having in possession in the open air the implements for shooting" on that day. If the committee has not ample power to end this condition would it not be more in keeping with its usefulness and dignity to encourage legislative action to give to it the necessary authority? These lawbreaking duck exterminators should be fined and imprisoned rather than aided in their nefarious work by a retrogressive Legislature.

If a little digression is permissible, I would say that there have been many violations of the game law where justice has miscarried, and where there is abundant room for the Legislature to do a good work instead of a poor one. It seems absolutely impossible to get convictions in most glaring cases in some sections. Local justices apparently sympathize with the law-breakers, and impose very lenient fines—if any at all. There have been a number of cases where deer have been killed, but, personally, I do not know of a single instance where the penalty has been paid! Now, here is an excellent field in which the Fish and Game Committee can wield for good that influence which it seems to possess. Let it induce the Legislature to take out of the hands of local justices jurisdiction in these cases and put the same into the hands of specially appointed judges, who will not sympathize with neighbor violators of the law, and whose findings will be impartially rendered. But, first of all, for the good of the State, let the committee and the Legislature work to undo the blunder they have made. May they awake to a realization that the people created them for "building up, not for tearing down." If the blunder was thoughtless and unintentional, they should "'bout face," fall in for progresssion, and labor for the abolishment of all spring shooting, and the better enforcement of the game laws.

But should the Legislature not voluntarily reconsider, then there remains nothing for the thousands of Connecticut sportsmen to do but enter their protest. And this should be done emphatically and fearlessly. Petitions are well enough, at times, but there is a more impressive way. I would suggest an individual letter protest. Let every interested sportsman write a personal letter to his Senator, Representatives, and the Governor. Demand the reconsideration of the present obnoxious bill, and the abolishment of all spring shooting. Make their mail heavy and imposing. It will cost but a few cents, and will take but a few minutes of time. It may be the means of saving to us, fellow sportsmen, many dollars in transportation, by perpetuating wildfowl shooting near home for years to come. It may yield hours of recreation, an abundance of health, and it will surely prove a desire on our part to keep the ducks and other wildfowl with us.

William H. Avis.

Highwood, Conn., April 18.

Woodcock Reminiscences.

A paper read by Charles A. Richardson before the Hillsboro County, N. H., Association.

I have been invited to contribute some reminiscences of woodcock and woodcock shooting of fifty years ago. I fear this may seem like ancient history to most of you gentlemen present, but I trust it will not prove without interest, if I can succeed in picturing to life what must be to most of you tradition. When I reflect that I am almost the only one left in this community of those who participated in the sport of that period, I am very glad to make even a slight record of my recollections.

To judge from the present scarcity of woodcock in this region you can hardly imagine their abundance at the period of which I write. Within a radius of ten or fifteen miles of Manchester will be embraced, probably, one of the finest portions of our State as a breeding ground for these birds, and I might add one of the best for hunting them at the season of flight or migration.

Our springy hillsides, flowing trout brooks, rich swales and alder runs were once tenanted with an abundance of these choicest of game birds, and one could hardly go amiss in seeking them in any likely cover. Even within our city limits they were numerous both in breeding and at flight time, and were often seen in our gardens in quest of food. I once shot eight birds one afternoon in that portion of now Derryfield Park, just east of the "Old Pound"; also at "The Eddy," on the west side of the river, below the Amoskeag Falls; and there were other nearby localities within a mile of the city hall where they were numerous, either in summer or autumn. I have found them in all stages of development, from the downy fledgling of a few days old to their full growth. I have found them when nesting, and my dog has pointed them then as stanchly as at any other period.

I have seen them perform their peculiar gyrations during the mating or breeding season, and have heard their bleating or singing, as some have termed it, though think no one claims them as songsters. I have never seen them transporting their young to and from their feeding grounds, but that they do so is well authenticated; indeed, I have a truthful friend who has seen this performance.

It has never been my fortune to find much written about woodcock in the early part of the last century, I mean locally, and I have wondered if they were as much sought or as highly prized as for the last fifty years.

Dr. Belknap, in his history of New Hampshire one hundred years ago scarcely refers to them, although he does to ruffed grouse and gives a little surprising statement as to their being prolific. He says: "They are very common in our woods. Some of our epicurean gentry have begun to fear that its race will be too soon extinct, but there is no danger. This bird is very prolific; it is common to find twenty eggs in a nest, and it has several coveys in a season." Dr. Belknap would not be taken as authority on ornithology, yet it is amusing to read the notions prevailing in his day on that subject, but I would remind you that it is only recently that a popular interest has been manifested in ornithology, and I presume many of you have had occasion to know the ignorance concerning woodcock. I have frequently been asked, "What are you shooting?" by people in the immediate neighborhood, and have them manifest surprise that there was such a bird.

In some of his writings Dr. Belknap says: "A goose caught in the spring and kept on a farm with a flock of domestic geese, and when the time of migrating arrived flew southward, but returning in the spring came back and alighted in the same farmyard with four young ones she had produced in her absence."

Again: "The swallow was formerly supposed to migrate, but evidences of its retiring to the water or marshy ground and there remaining torpid during the winter are so many that this opinion is now generally received." Or that "the beak of the crossbill is like a pair of shears, by which it cuts off the stalks of wheat and rye and then lays its head on the ground to pick up the kernels."

Naturalists have different opinions respecting the music of the swan. Dr. Goldsmith seems to think the account of the music of the wild swan fabulous. What is deemed fabulous in Europe is often realized in America. It is certain that our swan makes a sound resembling that of a trumpet, both when in the water and on the wing. I am not sure that the trumpet swan does not make a sound like our wild geese, although I do not find any reference to the subject in any authorities I have consulted.

The doctor says: "Hunting is an employment followed by some people who prefer rambling to a life of steady industry." Steady industry was the rule with us half a century ago, and only an occasional day of sport snatched from employments demanding our almost constant attention was indulged in. I think there was no one in this city who followed hunting exclusively, either as a pleasure or employment. There was no one in this busy community with leisure to make hunting an "employment," but only as a recreation.

I have hunted woodcock in nearly all the towns adjoining Manchester, and have been familiar with all the notable covers therein. Of all, my preference was given to those west, including Goffstown and Bedford, and I think they afforded the best results for numbers, with one exception, "The Parsonage," in Auburn. Whoever was familiar with such places as the "Old Saw Mill," "McDougalls," "Shirley Hill," "Orrs," "Sprague's," "Roby Run," "The Greeley Place," "Tinker Run," "Nichols," "Plummers," "Worthleys," "Hadleys," "Witherspoons," "Voses" and "Dunlaps" will not feel his blood quicken as his memory reverts to days of pleasure and excitement unsurpassed by any others in his experience, when the days were not long enough, and fatigue unfelt until on our homeward journey.

You will remember that at the time of which I write wing shooting was an accomplishment acquired by few; it was the day of single-barreled muzzleloaders and spaniel dogs. Breechloaders and highly trained pointers and setters were almost entirely unknown in this vicinity, when the popular method of capturing ruffed grouse was the employment of any yelping cur that would tree them, or the use of the deadly snare more fatal than the gun. Then there were no laws for the protection of game birds or songsters. Previous to 1842 there were on our statute books laws only for the destruction of noxious animals and the restriction of the killing of certain fur-bearing animals. It was only as late as 1867 that a game law was passed restricting the shooting of woodcock between Feb. 1 and July 1, and grouse to Sept. 1. Previous to that time it was only an unwritten law with sportsmen that woodcock should not be shot before the 4th of July, but I fear it was not strictly observed.

My first knowledge of any person shooting woodcock in this vicinity was of Joseph Marshall, who kept a book store and bindery at the corner of Elm and Stark streets. He hunted "The Parsonage" and shot over a spaniel dog. This was between 1845 and 1850. But my first initiation, about 1848 or 1850, dates from my acquaintance with George Barnes and Samuel Brooks, who were the earliest sportsmen and most persistent hunters of that day. Samuel Brooks was my "guide, counselor and friend" for more than fifty years, and to him I owe the little knowledge of woodcraft to which I attained. He was almost my sole companion through all the years of my active sport life and my valued and sincere friend to the day of his death. "Age could not wither nor custom stale" his love of sport, and he was as eager to take "a day off" until a short time before his death as when in the prime of life. It was to him I was indebted for the introduction to the then known covers, and with him made the discovery of many others. Our success was varied, but I imagine that the total result was not equaled by any other two persons at that time. We both used muzzleloading guns and continued their use to the last. We had the use of well-bred pointers and setters, famous in their day, and I presume some of you may remember my Old Don, one of the noblest and most intelligent of noble dogs, with a Websterian head and an endurance that hardly knew fatigue.

The next person I recall was the late Col. Waterman Smith, about 1853, as strenuous as a sportsman as in other pursuits. I think he must have been about the first person here who used a breechloader and to have well-trained setter dogs. He was the first to control the exclusive use of any cover that I can remember, and it caused dissatisfaction to those who were denied the privilege they had once enjoyed. This was "The Parsonage," in Auburn, one of the most famous covers in this vicinity from time immemorial. It contains only a few acres, but it was marvelous the number of birds it yielded. I am not sure that it was a notable breeding ground, but for flight it was unsurpassed. I know that one day's shooting afforded twenty-eight birds, and large scores were frequent. I hear that it is deserted ground now "and none so poor as to do it reverence."

About 1858 our now veteran sportsman, Col. Samuel Webber, entered the field, although he was no mere tyro in other fields with the use of the gun and rod. I think his ruling passion, however, was the use of the rod; indeed, in a letter from him at Charlestown, N. H., a few days since, he informed me he had nearly entered his eightieth year, and intended to try the trout in his vicinity when the season opened. I had many pleasant days' shooting with him and enjoyed his agreeable companionship.

Between 1859 and 1864 one of our best known and successful sportsmen, George Bisco, was added to our number. Familiar with the use of the gun from boyhood, he was a good shot, a most persevering hunter, and almost always successful in making a good bag. He used muzzleloading guns at first and shot over spaniels and setters. With him was associated that splendid gentleman, William W. Colburn, a true lover of nature and a most genial and interesting companion. Together they followed shooting woodcock and grouse for several years, or until Mr. Colburn removed to Springfield, Mass. But Mr. Bisco, veteran as he is, has not yet given up the business. Later, with the advent of breechloaders, well-bred pointers and setters, an increased number of skilled wing-shooters came upon the stage.

Many of you can recall the time when shooting seemed contagious, when it was the fad to engage in trapshooting, and when the "woods seemed full" of amateur sportsmen. Of those who were active thirty or forty years ago, I recall the two Moores, Gilman and Ira; the two brothers, Goodwin, Bill and Harvey; Treat Potter, Charley Jackson, Sam James, Frank Bradbury, Dick Lynch and B. F. Clark. They frequently hunted together in numbers and were designated as "The Regiment" by other sportsmen, but they were successful in making good bags, and enjoyed the sport with a zest unequaled. Then there were the Dodge brothers, James and Ed; John Wadleigh, successful fisherman and grouse hunter; "Nick" Nichols and Hiram Young, although Young was more noted as a 'coon and squirrel hunter than for birds. He was one of the most inveterate hunters of his time.

And later, our former mayor, William C. Clarke, who, to an inherited disposition for sport and sportsmanship from his father, Col. John B. Clarke, acquired by practice the skill which made him the equal of any of his compeers. Although his exercise in the field has been restricted of late years by more important duties, he has furnished to a large circle of interested friends a weekly contribution of matters relating to sport and sportsmanship under the nom de plume of "Joe English," which has been their delight.

I could perhaps entertain you with the citation of incidents and accidents in the field, of rare shots and unaccountable failures, of quail shooting in Connecticut, prairie chicken in Iowa, or for that now somewhat rare but beautiful bird, the upland plover, but such relation would be more appropriate to some occasion when we could swap stories.

In conclusion, I have one suggestion to make, viz., that you endeavor to cultivate friendly relations with the farmer upon whose premises you desire to shoot. In all my experience I was never refused such privilege by any one when approached civilly and with the assurance that walls and fences would not be recklessly destroyed or cattle annoyed, and often afterward our presence was welcomed and we were regarded as friends rather than trespassers.

I am informed that woodcock and grouse have been more plentiful in this vicinity during the past year. Make close time on both the first of October, and then, perhaps, you may enjoy sport equally as good as that of fifty years ago.

CHICAGO AND THE WEST.

Mysterious Disappearance.

CHICAGO, Ill., April 18.—It has been a case of mysterious disappearance this week in regard to the jacksnipe. As reported last week, there was a pretty good flight of birds in all over this country about ten days ago. Then came a good moon, which so far from bringing in more birds to us, seems to have taken away the ones that we had. The most indefatigable hunters of this elusive article failed this week to secure any good bags of jacksnipe either on the grounds below this city or anywhere within fifty miles to the north of us. The Illinois River was out of its banks all through the middle part of this State, and there was really more water than was necessary. Yet there was abundance of good ground back on the edges of the bottoms, grounds just warm enough and dry enough now to offer good feeding places. On the best of these grounds no snipe could be found, and even searches in the corn fields and dry sloughs failed to bring any results. The birds simply had gone—just where nobody seems to know. This was the case around the better marshes fifty to seventy-five miles of Chicago.

To-day Otto Muerchke, of Nippersink Bay, came down to Chicago and told some of the boys that there were some snipe in and around the Fox Lake grounds, and that he wanted someone to go up and help kill them. It is not known whether any considerable flight of birds is in or not on that part of the snipe region, but to the contrary is the report of the Graham boys of Fox Lake, who are good hunters and know the best snipe bogs. These shooters came in from a hunt last Thursday, and only saw two snipe. The probabilities are, therefore, that the first flight of jacks has left us. The second flight will probably come in about the 30th of this month, a few days after the close of the season.

My friend, Mr. Von Lengerke, tells me that in his shooting a couple of weeks ago he rarely found one snipe without putting up another. Yet he says that no eggs were found in any of the birds killed at that time. If the second flight of snipe be like the second flight of bluebills, made up mostly of male and unmated birds, then the damage of shooting on the second flight will be less than that executed on the first, supposing that the first flight was made up of paired birds, which seems probably to be the case.

Plover.

The first of the plover flight will probably get here just too late to connect with the legal season. A wise bird, the golden plover, to time his journey so that he reaches Illinois after April 25. I am not sufficiently well posted on the habits of the snipe and plover to know which really does the first nesting on the northern breeding grounds. The inference would be that the jacksnipe is the earlier breeder. The plover, following along in a more leisurely fashion and striking the northern country when the feed is more advanced, nearly always reaches us here in a better condition than the jacksnipe. In a lot of jacksnipe killed early in April there may be some very lean and some in very good condition. The plover are nearly all fairly fat when they reach this latitude. I do not know whether they would naturally breed so far to the south or not, but I have earlier reported the fact that John Watson, of this city, once found a jacksnipe nest, about the first of May, on the marshes of the Kankakee River.

Radical Improvements in Game Laws.

By all means the most important Western news of the past two weeks is the advice from Texas and from Illinois on the passage of new and successful game laws. The men of Texas are especially to be congratulated, for they won their victory unexpectedly and with a rush, in spite of a very determined opposition from the market hunting element and in spite of the animosity of a strong lobby hitherto supposed to be possessor of great influence in the legislative halls. I cannot but feel like congratulating friend Guessaz, of the Texas Field, who took off his coat and went to work for the passage of this law. It is a bit of unwritten history that the latter gentleman, at the very critical hour when the Governor was hesitating about affixing his signature to the bill, secured an interview with the Governor and made so strong a talk that the latter was glad to sign. I do not know whether the husky San Antonian threatened him with sudden death or otherwise or not, but the signature was given and the measure is a law. The men of Texas now exult in what is called "The best game law in the United States," whose good features are enumerated below:

No more killing of does;
No more killing of fawns;
No more killing for hides or antlers;
No more enormous bags for the game hogs;
No more hunting for the market;
No more traffic in song and game birds;
No more killing of over six bucks each year;
No more killing of over twenty-five birds.

When you stop to look at it, these are indeed good features in any game law. It is no wonder that the market shooters of the coast cried out against the severity of this new law. Good advices state that two men near Rockport within the past year killed between them 9,000 ducks, the great majority of them redheads. All these birds were sold. The slaughter along the salt water bars and the fresh water lagoons of the coast country of Texas has been something simply enormous. My friend earlier above mentioned thinks that there are one hundred market hunters between Port La Vaca and Corpus Christi, and that in a year would perhaps average 2,500 birds to his gun. Figure on that for a while and realize that it is but a part of the great southern wintering grounds, not including the organized slaughter grounds near Galveston, and you may begin to see where some of our wildfowl are going. Texas woke up suddenly, promptly, without even taking time to wipe her eyes. She woke up just in time. More power to her arm, and may she long live to be the ground of unstinted hospitality in all reasonable ways! There will be no more big slaughters at Lake Surprise, no more Gum Hollow "records," no more, let us hope, of a great many other scenes of a similar nature which have been all too frequent in the history of this magnificent and bountiful land of the Southwest.

As for Illinois and her game law, we are in the same category with Texas, as proud as a boy with a new pair of red top boots. Full comment has been made on this measure at a previous date, and it is only necessary now to recapitulate by saying that we now have the best game law in Illinois that we ever had. Illinois and Texas can both stand flat-flooted on the FOREST AND STREAM plank and shake hands, as they voice the common cry, now becoming general throughout the West: "Stop the sale of game." For nearly fifteen years I have been hollering with the voice of one in the wilderness, and doing what little can be done in the way of personal kicking on the immoderate slaughter of game birds. I never expected to see the sentiment change so rapidly in this matter as it has in the past year. When the editor of FOREST AND STREAM first swung out the banner with the strange device of "Stop the sale of game," I doubt if he ever anticipated so early and so large a following. All this is a matter of very much comfort, indeed. We have not a tithe of the game in the West to-day which we had twelve or fifteen years ago, but we have very much better game laws and a very much better sentiment regarding their enforcement. Perhaps, after all, there is hope. At least, let us hope there is hope.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Boone and Crockett Club Dinner.

THE Boone and Crockett Club gave a dinner at the University Club on Saturday, April 18, at which there were present about sixty members and invited guests. The president, Mr. W. Austin Wadsworth, occupied the chair. Among the guests were Mr. De Windt, the Siberian traveler; Col. D. L. Brainard, the Arctic explorer; Senator Elon R. Brown, of Jefferson county, N. Y., and Mr. John J. White, Jr.

At the close of the dinner, the president called on Mr. Madison Grant, the secretary, for a brief report of what the club has done this year, since many of the members and guests present did not attend the annual dinner in Washington, and perhaps had no clear idea of the club's present purposes.

Mr. Grant gave an interesting talk, referring briefly to the club's work in the past with relation to the Yellowstone Park and the New York Zoological Park, and then spoke of the recently passed law protecting Alaska game, which is working well. Up to within a year the whole vast territory of Alaska was without protection of any kind. Its big game fauna includes two species of moose, four of caribou, two sheep, two goats, one deer and nine bear. These were being killed off in the usual wasteful American way by miners, meat hunters, skin hunters and head hunters, who were destroying great numbers of game, largely for the purpose of exporting skins and heads to be sold to so-called sportsmen who were unable to secure these things for themselves. One of the great bears of Alaska, the largest carnivore in the world, is on the verge of extinction, and a species of caribou inhabiting the Kenai Peninsula is believed to be reduced to thirty or forty individuals and must pass out of existence. The passage of the Alaska game protective bill, chiefly through the efforts of the Boone and Crockett Club, put an end to the wholesale killing, and has done great good, although one species of bear, one caribou and the walrus are probably doomed to speedy extinction.

Incidentally the interesting work in investigating the fauna of Alaska done by Mr. Andrew J. Stone for the American Museum of Natural History was referred to, and attention was called to the collection of Alaska animals now on exhibition at the museum.

The present work of the club is to strive for the carrying out of the game refuge idea and the passage of a bill on the lines of that introduced at the last session of Congress by Senator Perkins, of California. This bill authorized the President in his discretion to set aside in any forest reservation an area where no killing of game shall be permitted. In other words, to establish in one or all of the forest reserves, places like the Yellowstone National Park where game shall be free from molestation, and shall have an opportunity to live and breed undisturbed. This is something that will unquestionably come, and the sooner it is done the better. In anticipation of such action, Mr. Alden Sampson, recently the Boone and Crockett Club's secretary, has just been appointed by the Secretary of Agriculture Game Reserve Expert, and is giving his time and his money to investigating this question in the western reserves. Mr. Sampson's work will probably include, as suggested by Dr. Merriam, Chief of the Biological Survey, not only all the matters bearing on the selection of sites, but—after certain game refuges have actually been established—the preparation of rules and regulations for their management. While under the De-

partment of Agriculture, Mr. Sampson's work has the cordial support of the Department of the Interior, and of course of the President.

The condition of the game in the forest reserves bordering on the Yellowstone Park is one of great interest, and on this subject the following letters will be of much interest:

Department of the Interior, General Land Office, 80 West 40th St., New York, April 10, 1903. Mr. Madison Grant, Secretary, 11 Wall street, New York city.. Dear Mr. Grant:—I have received your communication asking for a statement regarding the "state of things" in the Yellowstone Reserve, and herewith quote you the following letters in regard to same:

"Feb. 2, 1903. Hon. A. A. Anderson, Special Superintendent Forest Reserves, New York, N. Y. Dear Sir:—We have had an awful snow storm and the entire country is snowbound—have had only one mail since the 22d of January. There is seven feet of snow at the Scott Road Ranch, and 4½ feet at the Lockwood Road Ranch, one and a half miles from Wilson P. O.

"The elk are desperate and are breaking into the yards where there is hay everywhere. I started for the railway on the 27th and drove to the Lockwood Road Ranch the first day and returned the next. It snowed eighteen inches while I was there, and no one has crossed the Teton Pass for four days.

"I will start again as soon as the road is opened.

"(Signed) Robt. E. Miller,
"Forest Supervisor.

"Elk, Wyo., March 6.—Mr. A. A. Anderson, Special Superintendent. Dear Sir:—I have started feeding the elk; to-morrow I will feed some south of Squirrel Creek; the next I will feed at Mr. Uhl's ranch, etc.

"I saw Mr. Lovell as he came from Jackson and he says the elk are dying—people drive them away. You can hear dogs barking, and guns at night. I have also seen Mr. Romey, scout from the Park, two days; he estimates a thousand elk will die. Elk go in the evening and try one hay corral after another. One drives them away from his corral and they run to some other corral, and are driven off again, and so on. He claims hay can be gotten down here, and as it is not too late to help, leaving the calf elk there to be fed and driving the old elk to the foothills to feed, but it will take about twelve to eighteen men to drive the elk away.

"People at Jackson are sleeping at their hay stacks. Snow has not gone, hardly any up to date. My hills are pretty much fed off.

"I have been trying to get elk fed for years, and it has come at last, and people all in here now say they should be fed, so I will have to help agitate the feeding question. In summer where they try to save one elk, in the winter they die wholesale by starvation, and it would be more humane to let the elk be shot in summer than to die by starvation in the winter. I shall write again in about ten days how I am getting along feeding the elk.

"(Signed) Emile Wolff,
"Ranger."

The last report from the Jackson Hole country is more encouraging, and the snow is commencing to disappear. From reports I have received I should judge that we will lose this year about twenty per cent. from starvation in this region. I hope this may never occur again, as it can be avoided by making proper provision in time for the feeding of the calves of the elk during a severe winter like the present, which is not apt to occur more than once in ten years.

I have not yet received a copy of the game laws of Wyoming, but am told that they have been amended so as to greatly help us in protecting the large game on the reserve. The open season has been shortened from three months to six weeks, commencing September 15. The killing or trapping of bear is prohibited during the closed season; the killing of moose is prohibited for ten years, and the killing of antelope for five years.

Thanking the Boone and Crockett Club for the interest they have taken in the preservation of game upon the Yellowstone Reserve, I remain,

Yours very sincerely,
A. A. Anderson,
Special Superintendent.

Mr. Anderson, it is reported, has himself advanced a very large sum of money for the purpose of purchasing hay to feed these starving elk, and other organizations, the Boone and Crockett Club and the New York Zoological Society among them, have also made contributions of money to this end. Mr. Grant referred to the presence of Senator Brown at the meeting, and paid a high tribute to the latter's devotion to the cause of game protection, as shown by his successful efforts in behalf of the New York anti-spring duck shooting bill just passed.

At the request of the president, Senator Brown spoke briefly but most interestingly concerning the game protective work that he had been engaged in at Albany. The big game, the wildfowl, the land birds and the fish are resources of the State which should be protected and increased if possible, for economic as well as for sentimental reasons. In these days we see too little of nature, and as time goes on we and our children will see less and less of it. The work done by the Boone and Crockett Club and by similar organizations is work that is well worth doing. The time should come before long when the spring shooting of wildfowl should be abolished from Maine to Maryland.

Mr. Harry De Windt gave an interesting talk illustrated by lantern slides, detailing the difficulties and hardships of his famous trip from Paris to Moscow, across Siberia, the Bering Straits, Alaska and the United States back to Paris in 248 days. In the brief time allowed for his talk he held the absorbed interest of his audience.

The meeting was one of very unusual interest, and broke up at a late hour.

Ohio Birds.

Miamisburg, O., April 11.—The duck flight has been smaller this spring than it has been for several years. Song birds are here in large numbers, however, and the outlook for a good squirrel season is promising.

Clarence Vandiveer.

A Little Hail Storm.

Wymore, Nebraska, April 13.—*Editor Forest and Stream:* I notice in a late issue of Forest and Stream that I have an invitation to shoot ducks with More Anon on Currituck Sound. I am very much gratified, and will surely avail myself of the first opportunity to try some of those ducks; I know they will be easy.

My trouble with More Anon seems all to have arisen from a misunderstanding, as such things generally do, as he now explains that the tornado only swept over the north end of the Sound, and that explains the fact that there are still ducks in the Sound. A man who has weathered as many western tornadoes as I have, naturally gets a little touchy on the subject, and when someone describes a little whirlwind, such as we see here every day in the spring, and calls it a genuine western tornado, I find it hard to keep still. I return the compliment to More Anon, and would like to have him spend a week with me some time, and I will take him a-fishing.

Speaking of fish, reminds me of a hailstorm we had here a few weeksc ago about the tenth of May; the hail fell in a narrow strip, from forty to eighty rods wide, along a little stream leading into the Big Blue River, just east of our town; and the torrent of water and hail together that rushed down that little stream was over twenty feet deep, and when it reached the river it made the water so cold that the fish rushed for the shore to find warmer water, and in a bend of the river just below where the hail entered there was a sand bar of five or six acres, where the farmers had been scouring their plows; the furrows were irregular and ran in every direction, and when the floods of cold water and hail subsided, these furrows were full of fish of all sizes, mostly catfish, some of which weighed more than twenty pounds, and they were so chilled that they remained in the furrows until the water went down and left them high and dry. George Mitchell, a respectable farmer, near the sand bar put the sideboards on his wagon and hauled a load of the fish home and distributed them among his neighbors. A week and one day after the hailstorm, my wife and I were riding along the little stream where the hail fell, and we found several places where the hail was still several feet deep, and I dipped up a bucketful of hail and took it home in the buggy, and my wife carried it around to the neighbors in saucers.

A. D. McCandless.

Snowshoes.

Godbout, Quebec.—*Editor Forest and Stream:* In answer to Mr. C. M. Stark's query in Forest and Stream, February 21, as to where he could buy prepared hide for snowshoes, I would advise him to purchase it from the Hudson Bay Company's stores or through some of their agents. The best and lightest kind of hide for that purpose is caribou, which in the trade of the Hudson Bay Company goes under the name of parchment. It is prepared in different sizes and quality; for the ends of the snowshoes the thinnest kind is used, and is usually cut very fine, about the size of coarse sewing thread. For the middle part heavy and thick skins are used and cut according to the fancy of the wearer, but the best way is to guide one's self on the thickness of the hide, cutting it so that when stretched it will be square. When the strips are cut too wide they will be flat on one side when stretched. The hides as purchased in the parchment state are not ready for use, but require to be stretched on a frame after having been well soaked in water. The drying of the hide should be in a cool place, preferably in the open air if in winter. After the strips are cut the proper way to stretch them is to wind them around two strong wooden pegs driven in a frame and then put a piece of hard wood between the strips and twist them tourniquet fashion. Snowshoes laced with this kind of filling won't sag when wet, but on the contrary will get very tight and springy. Good parchment caribou is worth about $3 a pound, and one and a half pounds is sufficient for an ordinary sized pair of snowshoes. A good pair of well made snowshoes is worth in this part of the country from $8 to $10, according to size and the fineness of the work. I would not advise Mr. Stark to make his own snowshoes unless he has had previous experience, as the probabilities would be that his first pair would not prove very satisfactory. Will supply him with any other information he may require if he will address me.

Nap. A. Comeau.

Game in the Woodpile.

C. W. Stoddard, who up to a few days ago ran a restaurant at 130 Wall street, in the old postoffice building, has been fined $75 for having wild game in his possession during the close season.

Complaints were received by the Schenectady County Fish and Game Protective Association on December 17 last that Stoddard was displaying game birds for sale. An officer of the Association found that grouse and quail was being sold by Stoddard, although it was the close season.

The law, however, provides that game on hand after the close of the season (December 16 for quail), must be disposed of during the rest of the month. Stoddard was so notified.

On January 1 of this year complaint was again lodged against Stoddard and Chief Game Protector W. H. Jackson and an assistant visited Stoddard's restaurant. Stoddard denied having any contraband game, but Protector Jackson made a search of the premises and discovered one of the help concealing game birds under a pile of wood in the cellar. Jackson took possession of the game and later turned the case over to the State Forest, Fish and Game Commission.

John D. Miller, who is the attorney for the local association, was retained by the State Commission to proceed against Stoddard to recover penalties in the sum of $160. The case was called in city court on January 31, and Stoddard confessed judgment in the sum of $75.

Stoddard was in financial difficulties, and he was granted an extension of time in which to pay the fine. When the ownership of the Wall street restaurant was placed in doubt last week, and Stoddard endeavored to sell out his business, he was called upon and compelled to pay the $75 fine.—Schenectady (N. Y.) Star.

In West Virginia.

Romney, W. Va., April 16.—*Editor Forest and Stream:* The law as to license for non-residents has been cut down to $15, and the license is good in any county. The law also changes the time for wild turkeys and puts rabbits and squirrels on the protected list, except to owners of land, where they may be destructive as to apple and other trees with reference to rabbits, and corn in reference to squirrels. We now have a new State game warden, Frank Lively, of Hinton, instead of Capt. E. F. Smith, who resigned to enter other business. Capt. Smith made a good official and all were sorry to see him resign, but his place, we think, will be ably filled by the new incumbent, and with the assistance of his deputies the law can and will be enforced.

We have a beautiful club house, costing in the neighborhood of $25,000, about four miles above this town. Five or six of the members are from New York city, but the majority of the stockholders are of Wheeling and Pittsburg. Their manager is an able one and an all round sportsman, and is running the place successfully. They open the first of June and a large crowd is expected this year.

I have heard of two flocks of wild turkeys this spring, and several nice coveys of birds being seen. A stringent enforcement of the game law in this county will bring about a large increase of all kinds of game.

The fishing will be better this season owing to a dam in the river near its mouth having been washed out, thus enabling the fish to get up the stream. A strong law was enacted by our Legislature last winter in reference to the pollution of any stream or streams. This covers the case better than ever before, and will certainly be enforced.

J. B. Brady.

The Chinese claim to have discovered a method of fish culture which is both quick and strange. They take a hen's egg, remove the contents through a small hole in the shell, and fill it with fish eggs. The shell is then sealed and put under a setting hen for a few days. The heat makes the spawn develop rapidly, and when the fish eggs are put in warm water they hatch at once. The Chinese are clever, but the chap who incubated this story was cleverer.

Sea and River Fishing.

Brilliant Trout.

The brilliant brook trout taken last week by Mr. Robert B. Lawrence and described in the last issue of Forest and Stream, were sent to the Smithsonian Institution at Washington for examination. The following letter will interest all who saw the fish:

Color, as is well known, is a most misleading character in trout, and cannot at all be depended on in the identification of species. It has been the cause of a thousand wordy battles in the past and is likely to originate as many more in the future.

Editor Forest and Stream:

The brook trout forwarded by you for determination of species is undoubtedly the common form native to the waters of the eastern United States, *Salvelinus fontinalis.* The color is the most brilliant we have ever seen on trout. The following account of trout found in northern New York, and which we think must have been very like these from Flushing, is given by Dr. De Kay in his "Zoology of New York, Part IV., Fishes," Albany, 1842, pp. 236-238. Plate 39, fig. 126.

"The Red-bellied Trout, *Salmo erythrogaster.* Creek Trout (?) of Doughty, Cabinet of Nat. Hist., Vol. I., p. 134, pl. 13, fig. 2. * * * Color: Above, dark olive green, with confluent blotches of a lighter color on each side of the back, resembling those on the common mackerel. Head, above, uniform olive green. Sides bronze brown, with numerous rounded rich salmon-colored spots, becoming larger toward the tail; these are intermixed with smaller crimson dots. The belly of a brilliant reddish orange, separated by a distinct line from the pearl color beneath. Membrane of the gill-rays and interior of the mouth with a black pigment. The first rays of all the fins, except the dorsal and caudal, opaque white, edged with black; the other rays of a brilliant flesh-red; inside of the pectorals black. Dorsal varied with dark green and opaque or horn color. Ventral with its black margin extending over two or three of its adjacent rays. Caudal broadly margined with bright red. Flesh incarnate red. Length, 15½ inches; depth, 3 inches; weight, 1½ pounds."

Dr. De Kay further states that "this beautiful species, which has probably been confounded with the preceding (*Salvelinus fontinalis*), I first noticed at Indian Lake, Hamilton county; then at the outlet of Lake Janet, one of the Eckford chain, emptying into Lake Raquette; and subsequently in most of the streams in Hamilton, St. Lawrence, Franklin and Essex counties. There is a beautiful variety of this species in Silver Lake, Pennsylvania, with head and opercles unusually dark. They sometimes attain the weight of four and even five pounds. Independent of other considerations, as will be apparent from the description, the regularity and brilliancy of their colors seem to render it proper to designate them by a distinct specific name. * * *

"Various causes have been assigned for the great variety in the color of the flesh of this and other congeneric species. One cause is said to be the difference of food; such as live upon fresh water shrimps and other small crustacea, being brightest; those which feed upon common aquatic insects being next; and those living upon aquatic vegetables being dull and darkest of all. It is very doubtful, however, whether any trout feeds on vegetables, the armature of their mouth very clearly pointing out the nature of their food. All that we know positively on the subject is that in our brook trout, those which inhabit ponds are dark colored externally; those in clear streams running over sandy bottoms are bright; and those which are found in salt or brackish streams are not only very bright externally, but their flesh has more of the salmon color. In the present species, which is only found in fresh water streams, not only the colors externally are extremely vivid, but the flesh is of a bright red approach-

ing carmine. Out of many taken at different times I should be disposed to say that the average weight is about a pound and a half. I do not remember to have seen one weighing four pounds, although I have heard of their weighing more."

De Kay usually found them in the rapids above waterfalls or in the pools below them. Artificial flies and common earth worms were successfully used, and the ventral fins of the fish itself, moved rapidly through the water, proved one of the best baits.

This fish is no longer considered specifically distinct from the common brook trout, *Salvelinus fontinalis*; Dr. Gill tells me that many years ago he examined specimens of the fish and tried to find characters of specific importance, but could find none. The examples from Flushing have very large heads for fish of their size, and when received here had the appearance of trout that had quite recently spawned and were poorly nourished. The colored figure given in De Kay's work gives one but a faint idea of the brilliancy of the fish from Flushing.

B. A. BEAN.

U. S. NATIONAL MUSEUM, Washington, D C, April 16.

Canoe and Camp Life Along the Delaware River.

Snaps With a Pocket Camera, and Fly Casts With Tamarack Poles.

IV.—Sight and Blindness.

"A primrose by the river's brim
A yellow primrose is to him;
And it is nothing more."

"Every object, however near the eye, has something about it which you cannot see, and which brings the mystery of distance even, into every part and portion of whatever we suppose ourselves to see most clearly."—Ruskin.

"R-a-t-t-t-t-t-a-t-t-t-t-o-o-o-o-o-o!"

A long-drawn morning rattle and roll, like that from a snare-drum, only much more mellow and resonant.

It is made by the beak of the golden-winged woodpecker, known also as the "flicker" and "highholder," and it comes from far up on a dry, barkless maple stub which stands near our tent.

"O-o-o-oo-oo-oo-r-rr!" he cries, as he hustles into his retreat (a hole made in the stub with that same beak); and then he faces about, sticks out his head and watches us from that high place of double safety. His mate hops up and down the barkless, dry, horny side of the stub, showing the shining plumage on her back. She is locating the noise of the worms boring in the wood.

My comrade has been on the river since daylight trying to get enough fish for breakfast, and he is irritable as he returns and tosses only one small bass ashore, which is picked up by another very early caller—the shrewd lumberman who has brought us milk for our coffee from his house, a half mile distant.

He, also, is irritable. "Say," he growls to my chum, as he holds up the one small bass, "what d'ye call this kind o' fish las' night?"

"*Micropterus dolomieu.*"

"Eh—say it agin. W-a-l-l," he drawls, "he's got a good crop, all right, an' he ain't screwpulus 'baout fillin' it most any way. But he ain't no doll-mew; and, say, don't ye know what that thar fish's name is, really? If ye don't, I'll tell ye. He's a black bass, an' all but one's too cute fur ye ter git 'em this mornin'. Oh, laugh! Any feller that don't know no mor'n ter fish with an' old tam'rack pole don't know nothin' 'baout fish."

"Oh, all right. Wait and have a bite of breakfast with us, and a cup of coffee. Smell its aroma? Kind of you to bring the milk so early."

But this olive branch is vainly extended. He continues, between gulps of coffee:

"An' say, ye sed las' night as how I couldn't see a tree. The idea! After I have lumbered nigh onter forty year, and cut more sawdust 'n'd dam this river, fur ye ter up an' tell me jes coz yer a city feller 't I don't see anythin'! Tell me" (a sniff of disdain), "I can't see that tree thar! D'ye think I'm crazy?" and he pointed to a little blue beech not ten feet away.

"Can't I see 'em leaves an' branches an'—um—seems as 'ough, neow I look sharp, 't I dew see it extry good."

My tent-mate places a leaf from it in the lumberman's hand, asking that it be looked at sharply, both sides, and then thrown away.

"Wal?"

"Now take this pencil and paper, and draw its shape—the edges and the ribs and veins of its structure as they are on its lighter underside. For there is no other leaf in all the forests of the world that is just like it."

"Can't."

"Well, draw the contours and unevenness of the bark on the trunk of the tree; or tell me, with back turned to it, about its spots of color."

"Can't."

"Very well, which is the smaller end of one of its boughs or twigs, the tip or the end where it branches from another bough? Mind, I mean the diameter of its butt, or the diameter above, where the bough next throws off its first bud or twig. Which end is the smaller?"

"Ridickerlus! Why, the part closest to whar it grows from ther bough is thickest."

He is asked to pluck any bough, and is handed a steel measure of small diameters which fits over the bough like a monkey wrench. He tests this and several more boughs, and is amazed. For the first time he listens.

"You now see that no matter how far each normal bough extends outward, it does not get smaller by one hair-breadth until it throws out a bud, twig, or another bough; and that its bulk is then diminished by exactly what it thus throws off, and no more. The tapering of many tree-trunks and larger limbs has been caused by the loss of limbs that have died and long vanished, an incident in the growth of almost every healthy tree, because the sap passed them by and sought limbs stronger and above them that were in sunlight and air."

"Wall, I d'clar! Say, lend me that little steel measure, I wanter fool my forcman up 't ther mill, fur he thinks he's so dum smart!"

By this time we have other and better listeners—two Princeton boys, our tent neighbors. My chum now talks to them:

"No man can see fully, and no deftest worker with the pencil can show on paper the exquisite delicacy and finish of the lines of the boughs and twigs, and their curvature. Very few know of the spiral growth, anticipated even in the yet unsprouted bud, that enables each bough to throw out buds and leaves where each can get farthest away from comrades, and thus secure room, air and light to the utmost. Take up any one of these boughs and observe the neighborly courtesy and companionships of the leaves and twigs—their recognition of the needs of

WADING THE SHALLOWS.

their brothers. Do you see all the leaves of that tree? Here is a photograph of its boughs only, taken last winter. You cannot even see them. It is in foliage now, full of mystery. If you study it long and keenly you will begin to see the purple shadows, and how they cross, interlace and blend. Then how hopeless of comprehension is Nature when she expands and retires from us—when the character and life of a woodland, mountain, lake or river are to be studied! The whole outward world is an organism full of mysterious life, much of which we do not observe, and which even defies our most subtle analysis. That leaf which you have crushed—do you see what makes it grow, or understand its life-principle? To even begin to know these plants, the trees, this river and these hills, we would have to study them for many months, watch their moods at all seasons of the year, all hours of day and night, in cloudy weather, storm and sunshine, and under moon and stars, and love

BOUGHS.

the ferns and forests, the rocks and their lichens, the flowers, plants, colors and perfumes. But the wind has changed, and we must get out for a few bass."

The college men plead with him to "go on."

"Very well. Here is my chum, who has fished for forty years. You also, are anglers; and I am a landscape photographer and botanist. Yet we behold as we look, only some small part of the truth of space, form, color, chiaroscuro. Nature is infinite: man is finite, with limited senses. What he sees is largely determined beforehand by very complex conditions of sense, education and faculty, causing variations in what artists call taste. We use sight over an infinity of forms, and the eye remains dulled through its use for mere purposes of ordinary safe guidance and casual impression. We do not look sharply for specific things; and so myriads of objects pass before our eyes that are actually not seen at all. Hamerton, the etcher, states that he drew oxen for twenty years before he saw them in the artistic sense. Nearly all men glare, and do not behold."

He looks out at the exquisite view of the river as the little sailboats of the early pleasure-seekers began to dot the water—the view shown in the accompanying illustration--and drinks in with carefullest sight, all that fairy-like transparence of air and water, and that under-world of reflection, seemingly as much below the water as above it—the whole one of those occasional moments when Nature seems to put on her most marvelous costumes, robe after robe in quick succession of color and effects of atmospheric transfiguration—beautiful as a capricious coquette!

"Now, watch her don the shadow-robe and adorn it with driving cloud effects along the hills, the silent, forever changing, mile-long shadows slowly creeping over them; while far down the stream the balanced white mist wraiths, 'mixed out of something and nothing,' stoop to play hide-and-seek with the patches of hemlocks and pines. Over all are subtlest hues, like the shadows of old thoughts, peace and seclusion! See how the clouds deepen and dissipate in dreamy rainfall, vanishing in a far-off pathos of silence, melting away in partial effacement, seeming to bring back from nothingness and show as visible dreams, the swellings of those great hills and promontories, their summits now changing from dun and purple when in shadow, to the 'strange, faint silence of possession by sunshine.' Note how the mists are building themselves into a range of towering crags and peaks that fill half the northern sky; and as their shadow covers us, look around and see how much more distinct all objects are in shadow than in bright sunshine. See the bit of blue sky through that cloud-rift? No sky so blue as that! Do you know why? Yet men think that they

'hold
Converse with Nature's charms, and see her stores unrolled.'

"Can you tell the reasons for the different hues of morning and evening light, or why white sunshine caught and held in clouds often turns them to deepest scarlet? Take this little opera glass and look up and down the river, noting how much more you see. That proves the universal law of obscurity under which we live. Besides, to really see, you must be sensitive to 'tone,' richness and mellowness of effect, limpidity and transparence. Even then, as any oculist will tell you, no two eyes are alike in balance and vision—so no two men see alike.

"It would be easy to carry this same truth into the world of colors—the five hundred tints, each named, as shown under the spectroscope. But I am tired of staying off the water, and I want to land that five-pound bass that I saw over there in the eddy last evening. Put back the tamaracks into the canoe. It is not all of fishing to fish, but we must fish a lot when we go a-fishing."

L. F. BROWN.

Opening of the Trout Season.

CANADENSIS, Pa., April 18.—Many trout fishermen from many sections of the country will welcome the news that Price Brothers have rebuilt the "Spruce Cabin Inn," and are again in shape to entertain their old friends and to make new ones. The popularity of this "Roost," the "Broadhead," the Luvis Branch, Goose Pond Run, and their tributaries is best attested to by the arrivals here on the evening of the 14th and each incoming train thereafter, notwithstanding the fact that a nor'easter was at, and remained at, its height throughout these most desirable nights and days.

There is but one "crank" on earth that exceeds in intentness the gun and dog crank, and that fellow is the "fly-fisherman;" his season is shorter than the season of the other sort of cranks, consequently he will concentrate his bristling energies into a given space of time, and live on its recollections the other nine months in the year.

Here are men with six rods and six dozen of flies to fish two days. He has the cook up at five A. M., and only comes in when he can't see to make another cast. He tells for the last time of his one "rise" during the day at one o'clock in the morning; he hangs out of the window at two condemning the weather, and has his roommate up at three to relieve the strain on his own feelings; at seven he again departs, "rubbered" from toe to crown, while the nor'easter roars down the swales and the torrents of rain swell the already swollen brooks, while the chilled and sluggish trout sleeps on beneath the logs and rocks contentedly, oblivious to the inexhaustible efforts of the crank with the fly.

As night comes on gloom may settle on and somewhat smother his soul, but he shows it not. He has only tried forty-nine varieties of flies, and his supply of flies only equals his store of patience, and smaller streams look more promising. His last call echoes down the hall in the night: "Wes, have the team drop us at the head of Brush Run in the morning; I'm sure we'll do business there." And to the gentle music of the old mill dam just across the road he passes into his dreams. Oh, so tired, yet—"I had two rises."

Would this crank abandon his ivory-leaved book whose pages are made gay, bright and beautiful by their variegated and venerated assortment of flies, and strap to his manly bosom the green painted and gold lettered worm box? Not if he was hungry. He isn't built that way. He has elected himself into a class of his own; he hates a worm because of its ugliness, only the more because when used by his more "prosy" brethren it will destroy that which might be induced to rise to a fly when the wind changes, when the water goes down, when the sun comes out, when the temperature is better, when the trout are ready.

It is to be regretted that this was "wormy" weather entirely. Very few trout were taken with flies; there were some fine catches made with bait, and the trout are of fine size, running from eight to fourteen inches, and are very fat, the freshets having fed them well and defeated the early fly crank. His time is near at hand, however, and fish stories will be told by a weary dynamo during the next thirty days.

Among those "first night" devotees here were to be seen and heard Messrs. E. H. Fitch, Kenneth Fowler, J. C. Faulkner, T. W. Lee, H. P. Seymour, Wm. P. Ketcham, of New York; Dr. C. P. Franklin, of Philadelphia; Dr. H. Ingram and T. S. Ingram, of Atlantic City; Chas. F. Roe and W. H. Schroder, of Elmira; L. A. Morey, of Passaic, N. J.; C. C. Tolcott, of Montclair; L. H. Long and H. H. Howe, of Wilkesbarre; M. B. Hawley, A. C. Monies and A. R. Gould, of Scranton; J. H. Farrier, Geo. A. Cooker, E. D. Stupp, J. D. Stark, C. S. Stark, of Pittston, and E. J. Smith, of Binghamton.

In the new Spruce Cabin Inn, Price Brothers have accommodations for 150 guests. Old friends of these innkeepers and guides will be glad to learn that Mr. Milton Price is fast recovering from a very serious illness.

Canadensis is reached by the D. L. & W. R. R. to Cresco, thence by stage.

T. E. BATTEN.

No More Salmon in Nepissiguit.

THE following article from a Canadian paper foreshadows the speedy destruction of all the salmon in that notable angling river of New Brunswick, the Nepissiguit, famous for half a century among devotees of the two-handed rod in Canada and the United States. And far-reaching will be the result, for it is the nursery upon which the neighboring commercial coast fisheries depend. Our readers will deplore the catastrophe when it comes. Excepting this, the only rivers remaining available to the angler, among the many which once afforded sport, are the Restigouche and the Miramichi and its branches. We reprint from the Chatham (N. B.) World of April 9:

"Are the people of Gloucester county aware that our Legislature has passed an act empowering Alfred Harmsworth the great English publisher, to expropriate lands on the Nepisiquit River, and that he has announced his intention of getting possession of the Grand Falls on that river and erecting near them an extensive pulp mill and sulphite works?

"The justification of this act is 'that the interests of trade and commerce must always take precedence of the interests of mere sport,' on the ignorant supposition that riparian owners of lands and angling pools, from Rough Waters to Grand Falls, are the only persons whose interests will be affected by the total destruction of the only salmon river now left in the county.

"When the old men of to-day were young, every river in Gloucester county—Nepisiquit, Bass River, Caraquet. Pokemouche, Big and Little Trucadie—were good salmon streams, but mills, dams and sawdust have caused their desertion. The sole river in the county that now remains a nursery for salmon is the Nepisiquit, which has escaped destruction only because, hitherto, no mills have been built along its course. On this river alone now depends the whole annual catch of salmon between Point Miscou and Bathurst harbor. The catch on this coast last season, as given in the report of the Fisheries Department just issued, was 458,900 pounds, and in this valuable fishery every farmer on the coast has a vested interest in the shape of boats, nets, ice houses, etc.

"A pulp mill at Grand Falls, with all its waste thrown into the water, will destroy every spawning bed on the river, for just in these shallow and quit reaches will the refuse find lodgment. With the destruction of these spawning grounds and of the salmon that now resort to them annually, goes the whole salmon fishery of the county of Gloucester, because there is no other river on its coast to which salmon now resort in numbers sufficient to keep up the stock.

"Some steps should be taken immediately by those interested to prevent an alien from destroying, for his own sole profit, the interests and vested rights of more than half the people of the county, to say nothing of the finest angling river in the Maritime Provinces—one of the only three now left. What are the electors of Gloucester going to do about it?" V.

CHICAGO AND THE WEST.

Trout Season Open.

CHICAGO, Ill., April 18.—The Wisconsin trout season opened three days ago, but as yet I have not heard from anyone who has been out and returned. A few of the early and ambitious ones have gone north for the Prairie, the Ontanogan, the Brule and other northern streams, not to mention a number of Oshkosh anglers who are over on the White, Wautoma and other streams in the central and lower parts of Wisconsin. The largest number of early trout fishermen will leave town early to-day and probably return about the middle of next week. There is no very encouraging report from the northern waters as yet, as we have had a peculiarly patchy sort of weather all over this part of the world this spring. I don't think the snow fall in northern Wisconsin was quite so heavy as usual, and this ought to mean that the streams will clear before the end of April. This, however, is but a theory, and everything regarding brook trout and brook trout fishing is something mighty uncertain. To-day is the first decent day in the week, but that is speaking only for Chicago and not for the trout country. Personally I should think it much safer to wait until about May 1 to May 10, the month of May and the first half of June being the best fly-fishing season of the year.

Bass.

Some bass fishermen are talking of sneaking out next week for a try after big-mouths. Most of these go south of Chicago, Cedar Lake, Ind., being the earliest water to show bass in this part of the country. I do not take much interest in these early bass fishing trips, for the middle of April is too soon for sportsmen to take bass. They are then just going on the spawning grounds and ought not to be disturbed until after the spawning operations. It is true that the best of the bait-casting season is during the time the bass are in the shallow water. We usually suppose that they are feeding on frogs around the edges of the water, but the likelihood is that they are hanging around the spawning beds and protecting the latter, after the well-known habits of this species. Of course anyone knows that a bass on the spawning bed will run at almost anything which is passed close to it. While there is no immediate cause for fear of diminution of the supply of big-mouth bass in the better known angling waters of this district, we should have still better sport if we waited until after the spawning operations are for the most part over. This does not mean until the last bass has spawned, for this may in some cases be as late as July or even August; but granted fairly warm weather, the middle of May or first of June will see the bulk of the spawning over at this latitude. Let them spawn. We talk about stopping spring shooting, though a duck may rear only eight or ten young at a sitting. Old mother Bass will hatch about 1,000 young in her sitting, and although the mortality among these little fellows is very large, the rate of increase is much larger with fish than with birds. We shall have fishing in this country long after the shooting is gone.

Tarpon Scales and Indian Trade.

MR. CHAS. HALLOCK, of Washington, D. C., always turns up with something curious and interesting. In a recent letter he says: "By the way, did you ever hear of wampum-moons? It is the peach-blow cheek of the abelone shell of the Pacific side, which used to be affected so much by aboriginal dandies up to the year 1881. The Crows were especially fond of them, wearing them around their necks as substitutes for Great Father medals. Women also wore them as *pend d'oreilles*. They were obtained through middle men in regular course of barter with the Coast Indians. Agent Kellar of the Crows in 1880-1881, Clerk Barstow and I, as the instigator of the scheme, tried very hard in those years to establish a trade with the Florida Coast for scales of the tarpum (*grande ecaille*) with which the Indians were very much impressed. They had a legend that the silver king (tarpum) once 'used' in the coves of the Rocky Mountains when the waters which in ancient days covered the earth made estuaries of the cañon mouths. Consequently they regarded the scales as 'big medicine,' especially the large ones, which would cover the palm of a man's hand. Inopportunely the extirpation of the buffalo at the time mentioned prevented the Indians from gathering robes as before, and besides they were short on dry furs, and therefore 'heap poor.' So my scheme to make the tarpum product marketable most signally failed. I have the correspondence before me, with portraits of leading Crow chiefs who were interested."

An Honored Horse.

In 1849, at the time of the outbreak of the California gold fever, Mr. Robert Miller, of Illinois, started for California on horseback. He rode a gray mare, of which he was very fond. This animal carried him out to California, not only once, but three times. In his three trips from Illinois to the Golden State Miller rode this animal more than 25,000 miles. After he got done with gold mining he came back to settle down near Sullivan. Feeling the years creeping on, not long ago he made a will, leaving his property to his wife during her life and after her death to the Masonic Grand Lodge of Illinois, with certain conditions restricting the use of the property. A year ago the Grand Lodge accepted this trust and began to look into the property. On the old farm near Sullivan they found a large and well kept mound, surrounded by a good fence. Inquiry and investigation showed that this was the grave, not of any human being, but of a horse; in point of fact, the old gray mare which had been ridden by Miller three times from Illinois to California. It is not wholly an unpleasant reflection to think that Miller thus remembered his old and faithful servant, and it is still more pleasant to be able to add that the trustees of the estate have taken means for the suitable and permanent protection and care of this grave of the old gray mare. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

A Nashua Angler.

THE Manchester (N. H.) Union prints this from its Nashua correspondent, under date of April 12:

"There is no truer or more sportsmanlike disciple of Izaak Walton in New Hampshire nor in any other State than Henry F. Mears, of this city. Mr. Mears is well known among the fraternity of anglers over this section of the State. No one better understands the skillful art of luring from the cold and turbulent brooks of April the shy and speckled trout than does Mr. Mears. His latest achievement occurred Thursday, when he returned with nine trout from a brook near Nashua, and the prizes weighed over six and a half pounds, one tipping the scale at more than a pound.

"Mr. Mears never takes small trout, not even as small as the law allows, but puts them back into the stream. He considers it no victory to take and bring back twenty-five or thirty six-inch trout as evidence of a day's sport. 'Any kid could do that,' he says, 'but to bring back a half dozen from a half pound to a pound weight each, means work.'

"He would rather catch one half-pound trout than twenty seven-inchers. He advocates raising the legal length from five to six inches.

"Mr. Mears is not simply a depleter of waters, either, and during the last three years has put 1,000,000 pike perch, or warlike pike, into the ponds in this vicinity, including Stump Pond in South Merrimack, Round Pond in Nashua, and Pennichuck Pond, between Nashua and Merrimack. He has also put into local waters 40,000 trout fry and 1,000 fingerlings.

"The nine fish Mr. Mears took Thursday were caught in six hours' angling in less than a half mile of brook. The following day he took a trout which weighed 1¾ pounds."

The Colorings of Fish.

CHARLESTOWN, N. H., April 15.—*Editor Forest and Stream:* I think I owe an apology to Mr. Venning for misunderstanding his views as to the sea trout. I certainly thought from his first letters that he believed them to remain in fresh water, only running down to meet the smelts in the spring, but from his letter in FOREST AND STREAM of April 11, I judge that he thinks that they reside in the estuaries, not going far to sea, and running up with the smelts, and also to spawn. Here we agree, but the movements of these anadromous fish are an entire mystery to me, as I believe they are to everyone else, after they reach salt water. They are never, or very seldom, taken in the sea, and I think no one has any definite idea as to how far "off shore" they go.

In the matter of coloration of fish I agree with him that no dependance can be placed on it. I long since ceased to regard it as a matter of vital consequence. I have found so many variations in color in my own experience, not only in the trout of different neighboring waters, but in different reaches of the same stream, that I have come to regard these differences as due to local and often transitory causes. I think I have mentioned in previous letters the difference in the color of the trout in the two Diamond Ponds connected by a clear open stream, those in the lower ponds very dark deep red fleshed, and seldom over eight ounces in weight; in fact, I never caught one quite up to that weight, though I have caught many. Those in the upper pond, paler and brighter, and sometimes running up to two pounds, while those in the head of the Mohawk River, six miles to the west on the Connecticut watershed, are quite white fleshed.

In one of my old favorite brooks, when I was a boy, the trout in one branch, which came mostlyy through the woods, were very dark; in the other, flowing through open pastures and meadows, quite bright; and in another brook, which in its course made a "hole" where it ran against the remains of an old glacial moraine of blue clay and gravel, I always looked for and usually caught at least one with very black back and very white belly, while the fish in the meadow below were bright and high colored. I think color is purely a local matter.

VON W.

Lake Champlain Fishing.

ST. ALBANS, April 12.—*Editor Forest and Stream:* There is no close season for black bass in Lake Champlain waters this year. It is lawful to catch them with hook and line at any season of the year.

The Vermont Legislature at its session in 1902 seem to have arrived at the conclusion that there were plenty of small-mouthed bass in these waters, and that further protection against hook and line fishing was unnecessary. So they repealed the law which made the open season commencing January 15 the legal time to commence fishing for them. There has been no close season for the various other kinds of fish which inhabit these waters against hook and line fishing for several years. There has been a close season for bass for the past twenty years. So the Legislature removed the temptation to keep the bass in its close season by repealing the law. It is easier to catch bass during the month of May than any other month of the year, the fishing being done along its shores, no anchor fishing; they readily take the fly at that time, both trolling and casting. Bass are very seldom caught in seines as they run on rocky bottoms. After this year there will be no netting fish in Lake Champlain, as per agreement with New York, Vermont and Canada; no more licenses will be granted. H. L. SAMSON.

Rapid Growth of Fish.

EXPERIMENTS recently made in England furnish interesting information regarding the rapidity of growth of fish of the salmon family during their stay in the sea. Says a writer in the Revue Scientifique (February 14):

"A sea trout weighing three pounds when captured and marked July 8, 1901, weighed six pounds when retaken in July, 1902, having thus doubled in weight in one year. A 13-pound salmon taken and marked in January, 1901, weighed 21 pounds in July, 1902, and another salmon weighing 16 pounds in August, 1901, reached the weight of 22 pounds when retaken in July, 1902. An example of still more extraordinary growth has been reported. A male salmon caught at Castle Connell on February 24 of last year, by Mr. S. C. Vansittart, weighed 19 pounds. It was marked by one of the tags used by the Department of Agriculture, bearing the number 1,502 and replaced in the water. On March 26 following the same fish was retaken at O'Brien's Bridge, five miles from Castle Connell, and it then weighed 33 pounds. Its weight had increased by 14 pounds in one month and two days. The fact may seem incredible, but it is indubitable, having been established by a naval certificate."—Translation made for The Literary Digest.

Tagged Tarpon.

TARPON, Texas, April 13.—*Editor Forest and Stream:* Inclosed find metal tag, such as is being used by Mr. W. B. Young, of New York city, for tagging all his catches. In the past few days Mr. Young has placed these tags on five tarpon, six jackfish, two jewfish, one leaping shark, and one 200-pound turtle. We shall try this season to introduce this idea of tagging fish by all the fishermen.

Mr. Young is to be congratulated on getting the blue, red and white ribbons for landing the first, second and third tarpon of the season, this being the first time such a record has been made here since tarpon fishing began. The Pass is full of tarpon now, and good fishing will be had the rest of the season. J. E. COTTER.

Game and Fish at Albany.

ALBANY, April 18.—One of the interesting events of the week to sportsmen in legislative circles was the passage by the Senate and Assembly of Senator Brown's amended spring shooting bill (Assembly printed No. 2068). It now goes to the Governor for his consideration. As finally acted upon, the bill excludes brant from the classes of game birds whose shooting in the spring is prohibited.

Governor Odell has signed the bill of Assemblyman Whitney (Int. No. 986), providing that perch shall not be taken from Saratoga Lake or Lake Lonely from March 15 to May 1, both inclusive.

The Senate has passed the following bills:

Senator W. L. Brown's, Int. No. 365, providing for the publication of the forest, fish and game laws, as amended.

Senator Gates', Int. No. 778, relative to information concerning leases and franchises for the cultivation of shell fish.

Assemblyman Nicholls', Int. No. 1281, relative to spearing fish in Greene county.

Assemblyman Burnett's, Int. No. 199, relative to taking fish in Canandaigua Lake.

The Senate has advanced the following bills to third reading:

Senator Townsend's, Int. No. 379, relative to the close season for deer.

Senator W. L. Brown's, Int. No. 702, relative to fire wardens.

Senator Townsend's, Int. No. 607, relative to privileges of witnesses, testifying in cases of game law violations.

Assemblyman Nicholls', Int. No. 694, relative to taking woodcock.

Assemblyman Palmer's, Int. No. 541, relative to the close season for quail in Schoharie county.

Assemblyman Reynolds', Int. No. 550, relative to the close season for grouse, woodcock and quail in Rensselaer county.

Assemblyman C. W. Smith's, Int. No. 631, relative to penalties for game law violations.

Assemblyman J. W. Smith's, Int. No. 418, relative to fishing in Whaley's Pond, Dutchess county.

The Assembly has passed the following bills:

Assemblyman Moran's, Int. No. 470, relative to fishing for non-game fish in Cayuga Lake and tributary streams.

Assemblyman Finegan's, Int. No. 1384, prohibiting non-residents from hunting or fishing in certain counties without a license.

Assemblyman Fowler's, Int. No. 1402, in relation to licenses for nets in Lake Erie, Chautauqua county.

Senator Raines', Int. No. 182, relative to taking fish through the ice in certain counties.

Senator Goodsell's, Int. No. 261, relative to fishing through the ice with tip-ups in Orange and Rockland counties.

Assemblyman C. W. Smith's, Int. No. 1169, fixing the salary of assistant game protectors at $1,500, with $750 annually for expenses.

Assemblyman Apgar's, Int. No. 1201, relative to taking shad from the Hudson River.

The Kennel.

Fixtures.

May 19-21.—Montreal, Can., Canine Association's show.
May 29-30.—Hempstead, L. I.—Open air show of Ladies' Kennel Association of America.
Oct. 6-9.—Danbury, Conn., Agricultural Society's show.
Nov. 3-6.—New York.—Annual show of Ladies' Kennel Association of America.

Fritz.

FOREST AND STREAM is truly the sportsman's journal in that it finds space from time to time for eulogy or epitaph or obituary notice of man's best friend.

This is a sketch of Fritz, a water spaniel of undoubted lineage, square-jawed and muscular, dignified and thoughtful.

Raised by a village priest, he led the life of a loafer—or rather he had no chance to show his talents, and when three years old possessed no marked characteristics except a willingness to fight and to fight well when called upon to make good.

At this age Fritz entered the family of a neighbor, John Reed, and straightway became another dog, for here he was appreciated. Amid the large family of boys he chose one for a master—Malcolm, a youth whose heart is always on the lakes or in the woods. There are those who say that a dog loves the master whom he fears. Those who have seen Fritz at the approach of night look earnestly over the fields for the first glimpse of his friend's return from work and run joyously to meet him, know that fear was no element in their friendship.

He was the chum of the babies, and bore their pulling and hauling with philosophical air. Of course, he was the guardian of the premises. What dog worth mentioning ever failed to assume that duty? No person of doubtful appearance ever entered premises or house without giving Fritz the countersign.

No dog ever threw down the gage of battle before him in vain, nor was a peaceful animal ever wantonly attacked. It is not necessary to prove by a long recital of battles fought and won that Fritz was a rare fighter. It is better to show the intelligence he possessed. Two small dogs started a fight one day with our friend as referee. Things were progressing merrily when a larger companion of one of the combatants tried to help his suffering friend. With a rush Fritz threw him away, plainly to insist that the little fellows be given a fair field.

He was a meat dog, as Mr. E. Hough would say. No lake was ever too rough nor water too icy cold to keep him from retrieving his master's game. Many the 'coon in stone pile or log has lost his pelt because of Fritz's sharp nose. Some of us know how well a 'coon can fight. This dog has pulled more than one by the head from the heart of a hollow log. That is proof enough of unalloyed grit. Was it all for love of conflict or love of master? Those of us who have seen the look in his eyes while his master patted his bloody head and spoke the words of praise have their opinion.

And now for the end. A duck to be retrieved, a high cliff, treacherous footing, a fall to the rocks below. These were the elements. A brave attempt with broken limbs to get the duck, a beseeching look in the faithful face, a last "Good dog, Fritz; good-by," and then a merciful shot.

Don't say to me or his master that there is no hereafter for dogs. Our preference would be, "None for dogs, none for us."

B. E. BIRGE.

Yachting.

SIR THOMAS LIPTON'S new challenger, Shamrock III., was dismantled on the morning of April 17. The accident was caused by a defective turnbuckle. The steward was swept overboard and drowned, and Sir Thomas Lipton was knocked down a hatchway and severely bruised.

The accident happened off Weymouth. The two Shamrocks were maneuvering around outside the harbor. There was a strong northeast wind blowing and occasional heavy gusts would put the boats' lee rails awash. Sir Thomas Lipton and Colonel Sharman Crawford had boarded the boat before she went outside. Shamrock III. was on the starboard tack headed toward the steam yacht Erin when an extra heavy puff laid her out, and the great strain put on the weather rigging caused the weak rigging screw to part. As soon as this gave way the mast fell over the side, carrying the entire rig with it. As the boat was heeled so far over at the time of the accident the heavy spars fell clear of the boat, otherwise the affair might have been very much more serious. The mast buckled about ten feet above the deck and lay flat on the water, but after a short time the weight of the wet sails and other spars caused it to buckle in another place and the end rested on the bottom.

The man who was drowned was named Collier, and he was a brother-in-law of Captain Wringe. Sir Thomas Lipton was standing beside a hatchway, and Collier was near him when the mishap occurred. Collier was swept overboard, and before a boat could reach him he went down. Sir Thomas was knocked down the hatchway head first, and one of the crew tumbled on top of him. Aside from being badly bruised Sir Thomas was not seriously injured, although he had a very narrow escape. Several of the crew of the boat had close calls, but none was seriously hurt.

Immediately after the occurrence boats put off from Shamrock I. and Erin, but no trace of the steward Collier could be found.

The wreckage was cleared away as soon as possible, and all the spars, sails and gear were placed on board a barge that had been sent out from Weymouth. Shamrock III. was towed into Portland Roads.

The yacht will in all probability be taken to the Clyde, where she will receive any necessary repairs and have a new mast put in place. It will take about two weeks to make a new spar. A new suit of sails was also ordered.

The delay caused by the accident will not necessitate a postponement of the cup races—although it has unquestionably hurt the boat's chances of winning the cup. It is far better that the accident should have happened early in the season rather than later.

Sir Thomas received cables from yachtsmen and friends all over the world extending sympathy.

This makes the fourth accident of this sort within a few years—Columbia, Constitution and Shamrock II. all having been through the same experience. The dismasting has been caused in every instance by too light rigging, and it is now probable that designers will allow a greater margin of safety in this regard. No lives were lost in the previous accidents, and the drowning of the steward in the last instance makes the affair doubly lamentable.

RELIANCE THE DAY AFTER LAUNCHING.
Photo copyright by James Burton, New York.

ON Monday, April 13, Reliance was warped alongside the end of the north pier at the Herreshoffs' plant and her big steel mast was put in place. The stepping of the spar was done by means of the shears that are located at the end of the north pier, and the mast was put in place without a hitch or accident. As soon as the mast was secured in the step the shrouds and headstay were fastened in place temporarily. The work

THE LAUNCHING OF RELIANCE.

THE OFFICERS AND CREW OF RELIANCE.
Photo by James Burton, New York.

of stepping the mast was done by the Boston rigger, Billman, and his men, who will also rig the boat. The weight of the mast brought Reliance down nearly to her lines forward. The bowsprit was also put in place. Reliance will have two bobstays, each tested to stand a strain of one hundred and twenty-five tons. Constitution had but one bobstay and that was tested to seventy tons. It appears that the halliards, main and jib sheets are to be handled below. All this gear which up to this time has been kept on deck, will now be out of the way below.

The work of rigging the boat was delayed last week owing to bad weather, and it is doubtful if Reliance has a test under sail before the 25th of this month. The topmast has been put on end, and the standing rigging, which is considerably heavier than was used on the other 90-footers, has been set up. A duplicate set of spars has been made, and in case of accident there will be but little delay in putting the boat in shape again. The height from deck to topmast truck is said to be just under 160ft. The boom is 114ft. long, some 14ft. longer than Shamrock III's.

Constitution is all rigged and her sails bent. She was towed from Bristol to Newport last week, and her trials under sail will soon begin.

Boston Letter.

BOSTON, April 20.—The Regatta Committee of the Boston Y. C. has been hard at work, and, as a result, has produced a fine line of fixtures for the season. While the club has not arranged so many club races as did the Hull-Massachusetts Y. C., this was only to be expected on account of the large number of open races already arranged by other clubs. The Boston Y. C., pursuing the policy of the Hull-Massachusetts Y. C., and, besides, continuing a precedent already established, has tried to arrange dates so that there wil be no conflict with other clubs. The territory covered by the club is now much greater than it has ever been before, and, on account of the interest that is attached to each particular station, the Regatta Committee probably thought that it would not be good policy to hold a great number of races in one place. The schedule arranged is as follows:

June 13, Saturday—Club race at South Boston.
June 17, Wednesday—Y. R. A. open, at Hull.
June 27, Saturday—Club race at Marblehead.
July 25, Saturday—Club race at Hull.
July 30, 31 and August 1, Thursday, Friday and Saturday—Midsummer series of open races, at Hull.
August 4, Tuesday—Y. R. A. open, at Marblehead.
August 10.—Monday—Club race, at Marblehead.

Suitable cash prizes will be offered for every race, and in addition to these prizes the officers and members of the club have contributed cups to be raced for by the different classes. The number of cups donated is unusual, and it shows the great interest that is being taken in the club's welfare by the members.

Mr. Thomas W. Lawson has offered a handsome set of cups to be raced for during the midsummer series. There will be eight of these, a first and second cup for the 25, 22, 21 and 18-foot classes. They will be awarded the yachts winning the first and second highest averages during the series.

Commodore B. P. Cheney has offered championship cups for the season's work to be awarded to the yachts in each class making the first and second highest averages. In figuring the percentages of the yachts, it will be considered that each one shall have sailed in at least six out of nine races scheduled. All of the Y. R. A. open races will be counted for percentage in the club championship as well as in the Y. R. A. tables.

A cup has also been offered by the National Sportsman, to be raced for by the yachts of different classes. This cup will be competed for over an outside course, under such handicap conditions as will place the yachts of the various classes upon an equal footing. The date of the race will be announced later by the Regatta Committee.

Mr. Alfred Douglas has offered a handsome cup to be competed for by the 18-foot class. This class will be larger than ever before. The yachts are expected to be very evenly matched, even considering those that have not been built during the past winter. There will be the

keenest kind of competition, and it is expected that the attendance at every race will be very large.

Commodore Cheney has expressed his intention of giving orders for a cruise to take place on September 5, 6 and 7. Several officers have offered to give appropriate cups in connection with each of the three days' racing runs. Mrs. B. P. Cheney has expressed a desire to offer cups for the cruise. The fleet will doubtless disband at the close of the cruise, off Calf Island, where Commodore Cheney's summer home is situated.

For some time past the open race on June 17 has been sailed over an outside course, either off Nahant or Point Allerton. The Regatta Committee has decided to hold the race this year in Hull Bay, on account of the difficulty of small boats anchoring off Point Allerton.

Mr. B. B. Crowninshield has sold the steel steam yacht Ventura, owned by Mr. C. D. Miller, of Poughkeepsie, N. Y., to Mr. David Dunlop, of Petersburg, Va. Ventura is of steel construction, and was designed and built by Mr. Miller last season. She is 98ft. over all, 75ft. waterline, 13ft. beam and 4ft. 6in. draft. He has also sold the 18-footer Vim, owned by Mr. A. T. Vigneron, of Providence, to Mr. Henry Saville, of Boston. Mr. Crowninshield has received an order to design several fishermen for the Gulf of Mexico. They will be somewhat larger than the vessels designed by him for these fisheries last year, and will be equipped with auxilliary power. He is turning out the lines for a four-masted steel schooner, which will be built abroad.

Mr. E. A. Boardman has sold the 18-footer Suzanne, sister boat to the champion Malillian, owned by Mr. Norman F. Greeley, to Mr. G. Q. Hall, of Cleveland, O. She will be sailed on Lake Erie.

The poor weather of the last week has caused the work on fitting out to cease. The amateurs are at it again, however, and one by one the boats are commencing to appear. They were at it hard to-day in all of the yards. The first race of the year was sailed to-day at Dorchester. It was given for sailing tenders of the Savin Hill Y. C. There was also some scrub racing in Duxbury Bay.

JOHN B. KILLEEN.

English Letter.

SINCE my last letter, Shamrock III. has had a considerable number of informal trials with the old boat, and the result has been in all cases satisfactory beyond expectation. It seems that in all weathers, and on every point of sailing, the new yacht shows a very marked advance, and her superiority is most pronounced when turning to windward. She is very quick on her helm, and will bear pinching. She seems to work out to windward of her apparent course. Beyond all question, if you are to keep the Cup this year, you will need a flier to defend it.

After the informal spins on the Clyde, in which the new boat always gave great satisfaction, the two yachts were brought to Weymouth last week-end. The Weymouth course offers great advantage over the Clyde at this time of year, for the weather is generally very much better in the south of England, and the hard hail squalls of the Clyde spring are absent. The course is quite open, and much more akin to the real Cup course than any to be found on the Clyde. On Monday it was intended to sail a trial, but it was blowing too hard for an attempt at this early stage. On Wednesday, however, the yachts sailed from the Erin, anchored off Weymouth, round the Shambles lightship—about seven miles out in the channel. There was a nice breeze blowing out of the bay, and Shamrock I. went off in the weather berth, the wind being aft or a little on starboard quarter. Both had jib-headers or spinnakers set. Now, with the wind blowing in this direction at Weymouth you invariably find it more abeam, and stronger, when you breast Portland breakwater (about a mile out on the course sailed). Therefore the old boat picked this wind up first, stowed her spinnaker, and was off like a hare, leading the new boat round the lee mark by 24 seconds. Shamrock III. ought to have found it hard to get past on the turn to windward back, but she did it very easily. Within ten minutes she was through the old boat's lee and out across her bows, leading her home by 1 min. 35 sec. They went round again, and the new boat ran the other by 45 seconds. Beating back she put on 2 min. 55 sec. more, beating the old boat by 5 min. 15 sec. in 28 miles. There was an interval of 15 minutes before they were started again. This time the breeze was stronger. Shamrock III. was first away by about 12 seconds, and rounded the ship one minute more to the good. On the beat back she was let go for all she was worth, and finished the round with a lead of 5 min. 8 sec.—not bad work in fourteen miles! Next day the two boats had a light weather spin down wind 15 miles and back. They both had big topsails, and the new boat ran the old one by over ten minutes. When they hauled their wind again, she simply lost the old boat, and got so far ahead that she was hung up to let the gap lessen. They sailed into the anchorage with 17 minutes between them.

Now, these were mere preparatory spins. To-morrow the first actual race for a prize will be sailed. But it is clear already that Herreshoff has caught a Tartar this time. My own opinion is that he caught one (disguised) in Shamrock I., and that he must turn out his new boat fit to give Columbia at the very least twelve minutes over the Cup course in a jackyard breeze, before he can begin to hope. I don't think there is any weather or any point of sailing in which Columbia could hold Shamrock III. She has not been tried in a seaway, but I shall be surprised if under those conditions she is not at her very best. Needless to say that hopes are high on our side, particularly among those who know the speed of the first Shamrock. Looking back on Herreshoff's work since Defender, it seems quite unlikely that he can make the necessary advance, provided he sticks to the same type. If the new boat is of the scow type, she may be very fast under given conditions, but those will hardly exist in a leeward and return race. Moreover, the scow is somewhat discredited over here. The latest American importation of that type to the Thames is a most gruesome failure, and yet her races are always sailed in smooth water.

The new Shamrock is a striking illustration of a fact that has often struck me before, viz., that the best type for any given rule of measurement is often not discovered until that rule has been abandoned. Under our old tonnage rule, which produced Clara, there is no question whatever but that designers were wrong in so unsparingly sacrificing beam to length. That was conclusively proved by the sail-area rule that followed it. Now it is clear that the new Shamrock, with her deeper garboards, is by far a faster boat than the old ones, which is a true representative of Fife's best sail-area boats. And I am perfectly certain that under our present rule nothing like the most suitable type has yet been attempted. When it is, that type will be found to be a particularly fine class of yacht, as racing yachts go.

SHAMROCK III.
Photo by Agnew & Son, Glasgow.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

A FIRE started at 4 o'clock on the morning of April 14, in a stiff gale at West End, New Orleans. The Lake Ponchartrain terminus of the New Orleans Railway Company was detroyed, as well as nearly the entire fleet of the Southern Y. C. With the wind blowing forty miles an hour, the flames spread so rapidly among the tinderbox hotels and buildings that some of the occupants barely escaped.

The fire destroyed the Capital Hotel, Oliver's restaurant, the Lake House, the old club house and the Alciatore House. It spread to the boat houses and bath houses, which were destroyed. The various boats of the Southern Y. C. were lying inside the levee, and they soon caught fire. Six boat houses, six steam or naphtha launches, one tug and twenty-six yachts were destroyed. Among the sailing boats destroyed were the Druid, Red Stern, Lilian, Zoe and Towanta and a sloop just arrived from New York. Some of the boat houses destroyed were handsomely fitted up as club houses.

The loss is estimated at $100,000.

The following racing figures have been adopted by the Regatta Committee of the New Rochelle Y. C. for the coming season:

May 20, Spring Regatta—Raceabouts, New Rochelle and Manhasset and Larchmont 21ft. one-design classes.

June 18, Raceabouts—New Rochelle and Manhasset one-design classes and 25ft. one-design class.

June 19—Second race for same classes.

June 20, Annual Regatta—Final race for the above, and for other classes to be announced later. In addition to the above schedule, special races will be given for the New Rochelle one-design classes of 18-footers and 16ft. launches.

The Regatta Committee consists of L. D. Huntington, Jr.; J. D. Sparkman, P. L. Howard, W. B. Thomas, O. H. Chellborg.

YACHT CLUB NOTES.

The Regatta Committee of the Seawanhaka-Corinthian Y. C. has laid out the following racing schedule for the coming season:

May 30 (Decoration Day).—Open race for raceabouts (Jennings cup, first race); club races for Seawanhaka knockabouts; 15-footers.

June 6, Saturday.—Club races for raceabouts (Jennings' cup, second race); Seawanhaka knockabouts; 15-footers (Center Island cup, first race).

June 13, Saturday.—Club races for raceabouts (Jennings' cup, third race); Seawanhaka knockabouts; 15-footers (Center Island cup, second race).

June 20, Saturday.—Special race for sloops, Class G (America's cup class).

June 25, Thursday.—Open races for selected classes to be announced later; raceabouts (Jennings' cup, fourth race); Seawanhaka 15-footers (special series race).
June 26, Friday.—Open races for selected classes to be announced later; raceabouts (Jennings' cup, fifth race); Seawanhaka 15-foters (special series race).
June 27, Saturday.—Thirty-third annual Corinthian race for all classes; raceabouts (Jennings' cup, sixth race); Seawanhaka 15-footers (Special series race); Corinthian prizes.
July 4, Saturday.—Club races for raceabouts; Seawanhaka knockabouts; 15-footers (Center Island cup, third race).
July 9, 10, 11.—Beverly-Seawanhaka raceabout series at Buzzard's Bay.
July 11, Saturday.—Club races for Seanwanhaka knockabouts; 15-footers (Center Island cup, fourth race).
July 18, Saturday.—Club races for Seawanhaka knockabouts; 15-footers (special races in two classes—one class for yachts sailed by ladies; the other by gentlemen).
July 25, Saturday.—Club races for Roosevelt cup, class to be announced later; Seawanhaka knockabouts; 15-footers (Center Island cup, fifth race).
Aug. 1, Saturday.—Club races for Robert Center memorial cups, classes to be announced later; 15-footers (Center Island cup, sixth race).
Aug. 8, Saturday.—Club races for Seawanhaka knockabouts; 15-footers (Center Island cup, seventh race).
Aug. 15, Saturday.—Club races for Seawanhaka knockabouts; 15-footers (challenge cup, first race).
Aug. 29, Saturday.—Special club races, Seawanhaka knockabouts; 15-footers (only if there is no race for the America's cup on this day).
Sept. 5, Saturday.—Club races for Seawanhaka knockabouts; 15-footers (challenge cup, second race).
Sept. 7 (Labor Day).—Club races for raceabouts; Seawanhaka knockabouts; 15-footers (challenge cup, third race).
Sept. 10, Thursday.—Open races for selected classes to be announced later; raceabouts; Seawanhaka 15-footers (special series prizes).
Sept. 11, Friday.—Open races for selected classes to be announced later; raceabouts and Seawanhaka 15-footers (special series prizes).
Sept. 12, Saturday.—Annual fall Corinthian races for all classes; raceabouts and Seawanhaka 15-footers (Special series prize); Corinthian prizes.
Sept. 19, Saturday.—Club races for Seawanhaka knockabouts; 15-footers (challenge cup, fourth race).
Sept. 26, Saturday.—Club races for raceabouts; Seawanhaka knockabouts; 15-footers (challenge cup, fifth race).
Oct. 3, Saturday.—Club races for raceabouts; Seawanhaka knockabouts; 15-footers (challenge cup, sixth race).

Canoeing.

Red Dragon C. C.

Editor Forest and Stream:

The Red Dragon Canoe Club, of Philadelphia, has scheduled for its eighteenth racing season the following programme:

Saturday, June 13.—Event No. 1, one man single blade paddling one-half mile; Event No. 2, one man hand paddling 100 yards; Event No. 3, one man double blade paddling one-half mile; Event No. 4, tilting tournament; Event No. 5, tail end paddling one-fourth mile; Event No. 6, tandem double blade paddling one-half mile.

Saturday, July 11.—Event No. 1, one man, overboard, single blade one-fourth mile; Event No. 2, one man double blade paddling one-fourth mile; Event No. 3, tandem single blade paddling one-half mile; Event No. 4, swimming 50 yards; Event No. 5, tub race, 50 yards; Event No. 6, one man single blade paddling one-half mile with turn.

Saturday, August 29.—Event No. 1, One man single blade paddling one-fourth mile; Event No. 2, one man standing paddling double blades one-fourth mile; No. 3, tandem double blade paddling one-half mile with turn; Event No. 4, tilting tournament; Event No. 5, one man single blade paddling one-half mile; Event No. 6, one man double blade paddling one-half mile with turn.

Saturday, September 19.—Event No. 1, one man double blade paddling one-fourth mile; Event No. 2, tail end paddling one-fourth mile; Event No. 3, one man single blade paddling one-half mile with turn; Event No. 4, club trophy paddling double blades one-half mile; Event No. 5, tilting tournament; Event No. 6, tandem single blade paddling one-half mile.

The above races are open to all amateur canoeists except Event No. 1 on June 13, Event No. 2 on July 11, and Event No. 4 on September 19.

A. C. A. racing rules will govern all races.

First prizes will be given in all half-mile paddling races and in all titlting tournaments, and second prizes in those in which four or more contestants finish. First prizes only in the other events.

Luncheon will be served in the club house after the races.

The committee reserves the right to alter the order of the events on any one day, and to omit any event for which there is not a sufficient number of entries.

The above schedule may be revised by the omission of the races on August 29, at the discretion of the committee, announcement of which will be made later.

For the Regatta Committee,

M. D. WILT,
Correspondent.

PHILADELPHIA, April 17.

For information in regard to the races inquiries should be addressed to the chairman of the Regatta Committee, J. C. Maclister, U. G. I. Building, Broad and Arch streets, Philadelphia, Pa.

The officers of the Red Dragon Canoe Club, whose house is situated at Wissinoming, on the Delaware River, about seven miles above Philadelphia, Pa., are as follows: Com., W. K. Park; Vice-Com., J. C. Maclister; Purser, H. E. Davis; Quartermaster, H. W. Fleischmann; Correspondent, M. D. Wilt; Trustees, Joseph Edw. Murray, Alvin S. Fenimore, Edward D. Hemingway; Regatta Committee—J. C. Maclister, chairman; Jos. Edw. Murray, H. W. Fleischmann, Edw. D. Hemingway, Omar Shallcross.

A. C. A. Membership.

The following have applied for membership to the A. C. A:

H. P. Cunningham, Medford, Mass.; Wm. J. Burbeck, Lowell, Mass.; Wm. A. Packard, Boston, Mass.; John W. Rice, Winchester, Mass.; Wm. E. Crosby, West Medford, Mass.; Clifford Talbot, Winchester, Mass.; A. J. Goodwin, Boston, Mass.; Chas. H. Littlefield, Jr., Lawrence, Mass.; Robert B. Parkhurst, Lawrence, Mass.; John R. Newman, Boston, Mass.; H. K. Newhall, Boston, Mass.; Arthur A. Ridgeway, Boston, Mass.; Geo. W. Thompson, Boston, Mass.

O. C. CUNNINGHAM,
Purser E. Div. A. C. A.

The following have been proposed for membership to the A. C. A. Central Division:

George S. Kellogg, Buffalo Canoe Club, proposed by Charles P. Forbush; G. Fred Merrick, Rochester Canoe Club, proposed by Al. T. Brown; Frederick C. Irving, Gouverneur, N. Y., M. H. Kennedy, New Brighton, Pa., proposed by H. T. Kreamer; S. T. Blemming, John W. Boyce, Pittsburg, Pa., proposed by H. E. McLain; Lyman B. Kirkpatrick, Frank T. Sage, Irondequoit Canoe Club, Rochester, N. Y., proposed by John S. Wright; Hiram M. Rogers, Rochester Canoe Club, proposed by John S. Wright; H. S. Sturdevant, Rome, N. Y., proposed by Jesse J. Armstrong; John Henry Coon, Buffalo Canoe Club, proposed by John S. Wright; and W. O. Amsler, Otto Benkiser, Alton Brown, W. H. Brown, G. T. Hildebrand, C. A. Robb, Gregg Rogers, J. H. Smith, H. G. Welsh, all members of the Duquesne Canoe Club, Pittsburg, Pa., proposed by A. W. Heeren and H. W. Breitenstein.

Dr. Stuart Close and George V. Strahan have been proposed for membership to the Atlantic Division of the A. C. A.

Rifle Range and Gallery.

Fixtures.

June 15-16.—Union Hill Schuetzen Corps twenty-fifth anniversary shoot. P. Stumpf, Capt.
June 18-20.—St. Louis, Mo.—Tournament under auspices of Central Shooting Bund. Horace Kephardt, Sec'y.
July 6-7.—New Haven, Conn.—South New England Schuetzen Bund annual schuetzenfest, under the auspiees of the Independent German Rifle Company. H. C. Young, Sec'y.

Cincinnati Rifle Association.

CINCINNATI, O.—At the regular meeting of this Association on April 12 the following scores were made. Conditions, 200yds., offhand, German ring target:

Gindele	222	221	220	214	212	Lux	209	208	206	203	200
Payne	220	217	213	211	211	Bruns	206	198	188	188	187
Nestler	219	218	216	213	213	Freitag	205	200	197	194	190
Roberts	218	214	208	208	207	Trounstine	205	186	181	179	174
Odell	216	216	214	208	203	Drube	204	202	194	191	186

Honor target: Gindele 71, Payne 63, Nestler 63, Roberts 64, Odell 58, Lux 61, Bruns 59, Freitag 57, Trounstine 61, Drube 52.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

April 22.—Rushylvania, O., Gun Club's shoot.
April 22-23.—Troy, O., Gun Club's tournament.
*April 22-23.—Pittsburg, Pa.—Herron Hill Gun Club. Harry Vandergrift, Sec'y.
April 26.—Brooklyn, L. I.—Fulton Gun Club's shoot. G. R. Schneider, Sec'y.
April 28-30.—Paducah, Ky., Gun Club's tournament.
April 28-May 1.—Lincoln, Neb.—Nebraska State Sportsmen's Association's twenty-seventh annual tournament, under the auspices of the Lincoln Gun Club. F. E. Mockett, Sec'y.
April 29.—Wellington, Mass.—Boston Gun Club's annual team shoot. H. C. Kirkwood, Sec'y, 23 Elm street, Boston.
May 1-2.—Annual spring shoot of the Glen Rock, Pa., Gun Club. Allen M. Seitz, Sec'y.
May 4-6.—Tournament of the Mississippi Valley Trapshooters' and Game Protective Association, under auspices of Vicksburg, Miss., Gun Club.
*May 5-6.—Irwin, Pa., Gun Club's tournament. John Withers, Sec'y.
May 6-7.—Union City, Ind.—Parent Gun Club's tournament.
May 6-7.—Lafayette, Ind.—Lafayette Gun Club's tournament.
May 6-7.—Titusville, Pa., Gun Club's annual tournament. T. L. Andrews, Sec'y.
May 7-8.—Wilmington, Del.—Wawasett Gun Club's target tournament.
May 9-10.—Chicago, Ill.—Spring tournament of the Grand Crescent Gun Club.
May 12-15.—Pekin, Ill.—Illiuois State Sportsmen's Association tournament.
May 13-14.—Crawfordsville, Ind., Gun Club's tournament.
May 13-14.—Dubois, Pa.—The Interstate Association's tournament, under the auspices of the Dubois Rod and Gun Club. U. S. N. Crouse, Sec'y.
May 14-16.—El Reno, Okl.—Oklahoma Territory Sportsmen's Association's fourth annual tournament.
May 16.—East Walpole, Mass.—All-day shoot of the Neponset Gun Club. Edgar Bills, Sec'y.
May 18.—Marion, Ind., Gun Club's tournament.
May 19-21.—Osceola, Ia.—Iowa State Sportsmen's Association's twenty-sixth annual tournament.
May 19-22.—Wissinoming, Philadelphia.—Thirteenth annual tournament of the Pennsylvania State Sportsmen's Association, under auspices of the Florists' Gun Club of Philadelphia. V. V. Dorp, Sec'y.
May 21-22.—New Paris, O., Gun Club's tournament.
May 21-22.—Kenton, O., Gun Club's tournament.
May 21-22.—Kenton, O.—Shoot of the Kenton Gun Club. A. G. Merriman, Sec'y-Treas.
May 24-26.—San Francisco, Cal., Trapshooting Association's three days' bluerock handicap tournament. Open to all; $1,500 added. C. C. Nauman, manager.
May 26-27.—Dubuque, Ia., Gun Club's fourth annual amateur target tournament. A. F. Heeb, Sec'y.
*May 26-27.—Brownsville, Pa.—Brownsville Gun Club tournament. W. T. Doherty, Sec'y.
May 27-28.—Williamsport, Pa.—The Interstate Association's tournament, under the auspices of the West Branch Rod and Gun Club. H. A. Dimick, Sec'y.

Oct. 6-7.—Allegheny, Pa.—North Side Gun Club's tournament. L. B. Fleming, Sec'y.
Oct. 20-21.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.
Saturdays.—Chicago.—Garfield Gun Club; grounds W Fifty-second avenue and Monroe street. Dr. J. W. Meek, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.
**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J. Bradfield, Sec'y, Vicksburg, Miss.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

The fourth annual team shoot of the Boston Gun Club will be held on the club grounds, Wellington, Mass., on April 29. Shooting commences on the arrival of the 9:55 train. All shooters invited. Lunch served on the grounds. Guns and cartridges forwarded to Kirkover Brothers, 23 Elm street, Boston, and not arriving later than April 27, will be delivered on the grounds free. There are thirteen events on the programme, 10 and 15 targets. Targets, 1½ cents. There are two merchandise prizes for first and second amateur averages.

The grounds of the Boiling Springs Gun Club, at Rutherford, N. J., had an activity on Saturday of last week which was a reminder of old days. There were thirty contestants in the regular sweepstakes. In the six-man team shoot for the Shooting and Fishing trophy, at 50 targets, between the Union Gun Club and the Boiling Springs Gun Club, the Union club won by a score of 231 to 212. The South Side Gun Club, of Newark, challenged the winner.

The Princeton team defeated the University of Pennsylvania on the grounds of the Clearview, Pa., Gun Club, April 19, by a score of 220 to 211. The conditions were such that Pennsylvania team was severely handicapped. Princeton had six men on its team; U. of P. five men. Each man shot at 50 targets. The scores: Princeton—Archer 41, McKaig 35, Pardoe 42, Stutesman 35, Frick 32, Gaines 35; total 220. Pennsylvania—Lowdon 48, Perkins 47, Adams 42, Farwell 34, Henderson 40; total 211.

Mr. L. W. Colquitt, from the 28yd. mark, won the 20-bird event at Smith Brothers' grounds, Newark, N. J., on April 16. There were six entries. The entrance was $20, high guns, two moneys for every ten entries.

The next shoot of the Hudson Gun Club, Jersey City, will be held on May 3.

The Americus, Ga., Gun Club's second annual interstate target tournament will take place July 14, 15 and 16.

BERNARD WATERS.

Poughkeepsie Gun Club.

April 18.—It has been our luck—ill-luck—for several weeks back to have a howling wind to shoot against. But anything that we have had heretofore was not a circumstance compared with the wind to-day. There was a regular hurricane blowing from the north—from the direction in which the targets are thrown, and which raised the targets to an immense height. Several times targets, after losing their force, given by the trap, were carried back by the wind to the shooting platform. Some of the boys were tempted to shoot at them when coming back. Event 8, for the Marshall cup, was, as usual, the principal one of the day. H. E. Winans scored another win by breaking 18, which, with his allowance of 4 misses as breaks, scored him 22. Buckley was next high with 20 to his credit.

*Shot along in cup event. In event No. 10 Buckley dropped out after fifteenth round.

SNANIWEH.

Special Meeting of the Indians.

KANSAS CITY, Mo., April 16.—A special meeting of the Indians was held at the Midland Hotel, this city, on the above date, by call of High Chief Tom A. Marshall, who presided. The meeting was called for the purpose of selecting the dates and place for the annual meeting and tournament. This business was taken up at once, and the bid of A. W. Arnold, of Arnold's Park, Lake Okoboji, was selected. The tournament will be held there on the dates of August 25, 26, 27 and 28.

It was voted to follow the usual custom of issuing a handsome souvenir programme. Names were also chosen for the six recently elected Indians, as follows: John M. Lilly, Chief Cyclone; E. D. Rike, Chief Sleepy Eye; A. W. Du Bray, Chief Gouchon; E. B. Coe, Chief Decoy; John Burmister, Chief Back to the Woods; Hood Waters, Chief Follow Trail.

The following resolutions of respect to the memory of the late lamented Col. A. G. Courtney were passed:

The fleet-footed runner from the far land of the Alleghanies is in the council wigwam of the Indians to-day bearing the heavy tidings that Col. A. G. Courtney, on the roll of Tribal Chiefs honorably known as Chief Sitting Bull, follows the trail no more, but has passed into the mysterious shades beyond which lie the Happy Hunting Grounds of rest and reward for faithful service on this earthly trail.

With these tidings before us we are reminded of the transitory nature of the chase in our present surroundings and of the great change that must ultimately come to us all; but as we turn in this hour to look back upon the record of the hunt for honors and the things that make life worth the living, as left by this lamented Chieftain, we find much of inspiration and satisfaction in the record. To have been a leader in the fight whenever it was worthy of a foeman's mettle, and to have won the plaudits and commendations of his peers, is the acme of achievement for a brave and fearless man, and such at all times was the position of him whose chair stands empty in this conclave, draped in the symbols of tribal mourning. And in acknowledgment of his faithful service be this memento inscribed upon the tablet dedicated to his memory, and his place declared vacant for the space of three moons.

In witness whereof, and in token of our deep sympathy and condolence with the wife and children of our lamented fellow Chieftain, is hereunto affixed the official signature of the Indians.

Frank C. Riehl, Chief Scribe. Tom A. Marshall, High Chief.

Ossining Gun Club.

OSSINING, N. Y., April 18.—Owing to the high wind blowing and a local ball game, there was very little shooting on the grounds of the Ossining Gun Club to-day. The scores of those who came out are herewith appended. Each event was at 10 targets:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
J C Barlow	6	5	6	5	..	C G Blandford	10	..	..	..	..
J Hyland	8	5	8	4	7	E Ball	9	3	..	..	..
Hans	10	4	7	5	..	Col Fiske	5	..	..	..	..

It is a pleasure to find how important this time-honored annual event, the shoot of the New York State Association for the Protection of Fish and Game is considered by the sporting goods trade in general. In answer to our appeal for prizes we have been most liberally dealt with. As the prizes have come rolling in to the net value of $800, not counting local prizes, we are reminded of an appeal we once made as a club, not knowing of the cast-iron agreement the dealers had entered into regarding donations to clubs. We take this opportunity to most heartily thank these generous donors.

Regarding the hotels of Ossining, they are fairly up to the standard of hotels in other towns of this size, 10,000 residents. There are six of them, the prices of which for shooters will range from $1.50 to $2.50 per day. In addition to this, there are a number of desirable boarding houses in town where many could be comfortably housed for the week. During the week of the shoot two military schools here will hold their commencement, which will fill some of the hotels, so that shooters who desire may write to the undersigned, who will take pleasure in booking accommodations ahead for them.

C. G. BLANDFORD,
Care Ossining G. C., Ossining, N. Y.

St. Hubert Gun Club.

OTTAWA, Can., April 13.—The team race and event No. 1, at the tournament of the St. Hubert Gun Club, held to-day, were shot under expert rules, five expert traps. All other events were shot Sergeant system. Entrance moneys were as follows: No. 1, $1; No. 2, $2; No. 3, $1.50; No. 4, $2.50; No. 5, $2; No. 6, $1; No. 7, $1.50; No. 8, $1.50.

The home club lost the Montreal challenge cup, which it had held during two years.

Pennsylvania Association.

THE thirteenth annual tournament of the Pennsylvania State Sportsmen's Association will be held May 18, 19, 20 and 21, at flying targets, at Wissinoming, Philadelphia, under the auspices of the Florists' Gun Club. Also May 22 and 23, at live birds, at Holmesburg Junction, Philadelphia, under the auspices of the Keystone Shooting League.

In giving the thirteenth annual tournament of the Pennsylvania State Sportsmen's Association, the Florists' Gun Club, of Philadelphia, has endeavored to present a new programme, in which many radical changes have been made.

The new plan of adding money to fifth and sixth places positively guarantees a prize to 10 and 11 targets out of 15, and 15 and 16 out of 20 targets in the open amateur sweeps. The 66 to 80 per cent. shots are sure of winning money never offered before.

The daily average money for high and low guns, and general average money for high and low guns in open amateur sweeps is for State Association members exclusively.

There will be individual prizes to winners in team matches, absolute trophy to each winning team, absolute trophy for State average winner, and guaranteed purses in State events.

A special tax purse will be divided among all amateurs and State members who shoot through the three days' open amateur sweeps and fail to win back their entrance.

Three merchandise events for sportsmen's prizes will be shot under a new system of handicapping.

All merchandise prizes, added money and guaranteed purses are offered and given by the Florists' Gun Club.

The Lady and the Dickey Birds.

WYMORE, Neb., April 13.—*Editor Forest and Stream:* I enjoyed reading Mr. Fulford's suggestions to trapshooters, in regard to live birds, and the reasons he gives for the growth of the sentiment against shooting them, and heartily approve of all he said; and while I was congratulating myself on the fact that none of this unhealthy sentiment existed in the West, two things happened.

First, in looking over a list of bills passed by our Legislature and awaiting the signature of the Governor, I discovered one prohibiting the shooting of live birds at the trap. I regret that it was not noticed sooner, as I am very certain that a fifteen minutes' talk with the committee would have put a quietus upon it, for this session at least.

Second, about two weeks ago the Wymore Gun Club opened up with a shoot at dickey birds, and a day or two afterward a lady called at my office and told me that she called to see if something could not be done to prevent the shooting of the poor little dickey birds, at the city park by the gun club. She said she knew I was a great lover of birds, and that if any one could stop it I could. I told her I had noticed reports of the shooting of these little birds in the local papers, and would investigate the matter at once; and in fact would have done so sooner on my own motion if it had not been for the fact that a traveling man had told me that these little birds, if allowed to propagate in this country, would soon be worse than the English sparrows in Philadelphia. I investigated, and a few days later wrote the lady that I was gratified to learn that the little dickey birds were made out of clay.

A. D. MCCANDLESS.

The Wymores Get the Park.

WYMORE, Neb., April 12.—*Editor Forest and Stream:* Gun Clubs, like individuals, have their ups and downs; and the Wymore Gun Club is no exception to the rule. A year ago, when the boys went up to the old Fair grounds for their first shoot of the season, they found it fenced with barbed wire, the gates closed and notices up; and they also found a man in charge who informed them that it was private property, and that no shooting would be allowed. It was a stock pasture. This was a body blow, for we had shot, played ball, and had circuses there for twenty years. But it was private property! It had once been a fair ground and driving park, but the company had gone to pieces, the property had changed hands, and we had no right there.

Well, the boys came down town and talked it over with their friends, and things soon began to sizzle. The Mayor and City Council soon concluded that they would take a hand in the game. The property was looked up, and it was discovered that there were thirteen years' back taxes due on the property. And the city authorities concluded that if it was not worth paying taxes on, it would make a good city park anyway, and the condemnation ordinance was drawn up and passed by a unanimous vote, the property appraised at $50 an acre, twenty-six acres, total $1,300. A law suit followed, in which the city was victorious, and to-day it is a city park, and on March 4, this year, the Mayor and Council passed a resolution giving the Wymore Gun Club the right to establish shooting grounds, build a building, and use the land inside of the old driving track for our purposes forever! We took possession and built a nice building, and have about the nicest gun club grounds in the State; and a prouder set of boys you never saw.

A. D. MCCANDLESS.

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, L. I., April 18.—The scores made at John Wright's matinee are appended. Brigham was the leader in the high scores:

Championship of York County.

GLEN ROCK, Pa., April 20.—The shoot for the live-bird championship trophy of York county, held on the grounds of the Glen Rock Gun Club on Saturday, April 18, was a great disappointment to the club. Out of eighteen who had promised to attend and participate, seven were present and participated, a fact reflecting very little credit on the word of at least eleven. The scores were much better than they appear, as the wind was blowing a regular gale, and many of the kills were of a sensational kind. Jackson (Elias Spangler), of York, won the trophy with 17. The scores at live birds follow:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	20	12	7	*	Targets:	20	12	7	*
Seitz, 28	12	11	6	4	Heindel, 25	..	..	3	0
Bob White, 26	15	8	6	5	Grove, 26	..	..	5	..
Deardorff, 28	16	9	6	1	P McGuigan, 26	..	..	5	0
Jackson, 28	17	9	6	..	Wilson, 26	..	..	5	..

Eyster, 26	16	9	7	4	Black Bird, 28	..	..	..	3
Miller, 28	16	..	4	..					

*Miss-and-out.

The target shoot to be held on May 1-2, open to all, by the Glen Rock Gun Club, will no doubt be attended by a larger number of target shooters. The programme will be at 200 targets each day, with average money for both high and low guns shooting through each day's programme.

A. M. SEITZ.

WESTERN TRAP.

CHICAGO, Ill., April 18.—The secretary of the Cripple Creek Gun Club, of Colorado, reports that at the meeting of April 11 the following officers were elected for the ensuing year: President, Larry E. King; Vice-President, Don. V. Forrest; Secretary-Treasurer, C. R. Hutchison; Executive Committee: L. E. King, Don. V. Forrest, C. R. Hutchison, G. C. Stoddard, Nat. Thorp and J. A. Woodruff.

E. H.

North Adams Gun Club.

NORTH ADAMS, Mass., April 14.—At the shoot of the North Adams Gun Club to-day seventeen shooters participated. Mr. Neaf Apgar was easily high average in the total of the programme events. He made an even 90 per cent. performance. Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Total Broke.
Targets:	10	10	10	10	10	10	10	10	10	10

Portage County Gun Club.

Kent Team—Mingo 45, Yarhling 46, Smith 40, Parks 39, Lyman 31; total 201.

Columbia Team—Galt 39, Pullman 41, Taylor 39, Krider 41, Smith 38; total 198.

Akron Team No. 1—Roots 32, Wagoner 43, Beck 41, Jerry 37, Hull 43; total 196.

Canton Team—Young 46, Wilson 38, Becker 30, Hawk 43, Egley 34; total 191.

Akron Team No. 2—W. W. W. 45, Joy 38, J. R. K. 37, Russel 41, Dobson 29; total 190.

Ravenna Team—Davies 36, Becker 32, Jerry 41, Fairchild 34, Raven 45; total 188.

Sparta Team—Galt 35, Brown 23, L. Becker 29, Wilson 42, Dr. Becker 39; total 168.

Winchester Gun Club.

DETROIT, Mich.—The regular shoot, April 18, was a small affair, although the day was a delightful one. Following are the scores. The handicaps were for the trophy event, No. 6, the seventh being the club event:

Events:	1	2	3	4	5	6	7
Targets:	10	15	10	10	15	25	25
Brodie, 16	10	11	9	10	12	18	15
Reid, 16	9	13	..	7	12	20	18
Guthard, 16	8	14	..	7	11	18	16
Hitchcock, 18	10	8	5	7	13	22	18
Leggett, 16	..	..	..	..	..	13	18

Dover Sportsmen's Association.

DOVER, N. H., April 11. The light was good, but there was a deal of wind. The targets were thrown fast and low. All the events were at 10 targets. Secretary Hallam is hustling for a large attendance on Fast Day, the 23d inst. The scores were as follows:

Out of 60 shot at, Beard broke 45, Fisher 36, St. Evens 30, Hallam 27, Durgin 20; Carson broke 76 out 110; Goodwin 10 out of 20; White 19 out of 40.

A team of the University of Pennsylvania will shoot a match with a team of Harvard College on May 1. On May 2 the intercollegiate contest at the traps will be held on the grounds of the Clearview, Pa., Gun Club.

Grand American Handicap.

THE fourth Grand American Handicap at targets, with its associated events, all given by the Interstate Association, was held in Blue River Park, Kansas City, Mo., on April 14, 15, 16 and 17.

On the same grounds last year the Grand American Handicap at live birds was held. It was a record-breaker in point of numbers, and it is probably the last one at live birds which will ever be given by the Interstate Association, on account of the unfriendly public agitation which live-bird shooting, at great tournaments, evokes.

The four sets of traps, installed Sergeant system, were in nearly a straight line east and west on the north side of the house. High board fences between the firing points guarded the contestants, one from another, against any possible accidents from wild pellets of shot or wild shooting. They were not needed in fact, but were a precautionary measure on the safe side. There was an extra set of traps on the south side of the grounds, which was used for practice events. That there was an enormous aggregate of shooting is evident when it is mentioned that 101,930 targets were trapped at this tournament.

President Irby Bennett, alert, debonair and dignified, as became the president of an association and also an officer high in power in a great ammunition company, was ever doing his utmost to promote the interest and comfort of all the shooters, and he won many words of deserved praise for his successful efforts. He filled all the duties of his office with the utmost ease and efficiency.

The management was perfect. The staff was so well selected and organized that every detail was skillfully managed. Indeed, every detail had been anticipated, and carefully provided for by the secretary-manager, Mr. Elmer E. Shaner, many weeks before the tournament began. The ordinary manner of managing an ordinary target tournament would not do at all as a manner of managing the Grand American Handicap with its large number of entries and limited time. The taking in of moneys and paying out of moneys for each event, the entries, the withdrawals, etc., were not possible in the scheme of the Grand American Handicap. This Mr. Shaner recognized, and as a result the following condition was imposed: "A contestant who takes part in the regular events any day (events other than the three handicaps) must make entrance for all events called for by the programme of that day. Entries will not be taken for less than the total number of regular events scheduled for the day. In case a contestant, after making entry, fails to take part in any event or events, his entrance will be forfeited for that particular event or events, and the amount so forfeited will be added to the purse the same as if he had contested." This provision kept the different squads permanent throughout the day. The squads were treated as units in so far as managing the competition is concerned. There was no patching up or changing of them. If a man or more dropped out, the squad went on in the competition with what men were left, thus preserving its unity from start to finish. Thus No. 1 squad shot at No. 1 set of traps, after which it went directly to No. 2 set, thence to No. 3, thence to No. 4. When No. 1 squad left No. 1 set of traps, No. 2 squad immediately began at No. 1 set of traps, and followed No. 1 squad down the line. Thus one squad followed another as units of the competition, and the shooting continued without a break till the programme of the day was finished. Organized in this manner, the matter of managing a big tournament was reduced to the simplest ease. Nevertheless, the manager was ever active, and was continually passing on questions submitted, most of which were fully treated in the programme. There was one dominant feature in the policy of the management, namely, to conduct the shoot up to the very letter of the governing rules. If a man neglected or forgot to enter in time, he was out for good. If he was not on deck when it was his turn to shoot, and a reasonable wait or effort failed to produce him, the competition went on just the same. All were treated fairly and alike, but the tournament was not changed in its particulars for the accommodation of the individual. As an assistant manager, Mr. Ed A. Hickman, of Kansas City, was energetic, attentive and efficient. He has had great experience in managing men, and sways them with an ease and grace beyond the compass of most men.

Mr. Fred C. Whitney, of Des Moines, Ia., acted as cashier, which is an assurance that the cash was handled expertly and efficiently. In such matters, Mr. Whitney's fame is second to none.

The compiler of scores was Mr. J. K. Starr, of Philadelphia, who has had great experience in that relation for several years past, and is esteemed for his ability in keeping the scores in a perfect manner, while maintaining the utmost urbanity when catering to the reporters and shooters who are ever applying for information or extra copies of scores. He was ably assisted by Mr. John B. Hayes, Jr., of Kansas City. Mr. J. H. Monahan was clerk to the compiler of scores.

The different crews at the traps were as follows:

No. 1 set of traps: W. V. Rieger, referee; Ed Casey, scorer; Lee Hickman, messenger; F. M. Denslow, squad rustler, all of Kansas City, Mo.

No. 2 set of traps: E. P. Frisbee, Des Moines, referee; Hugh S. Carnahan, Kansas City, scorer; John Graham, messenger; Lee George, squad rustler; Graham and George, both of Kansas City.

No. 3 set of traps: J. H. Quistgaard, referee; E. H. Glenn, scorer; Lee Hayden, messenger; W. B. Wolbren, squad rustler; all of Kansas City, Mo.

No. 4 set of traps: Ted Turner, referee; H. J. Dooley, scorer; Geo. Hammill, messenger; Frank Workman, squad rustler; all of Kansas City, Mo.

No. 5 set of traps, for practice events: Leonard Shepherd, Osborne, Mo., referee; C. J. McGee, scorer; Harry Lord, messenger; John Lantlin, squad rustler; all of Kansas City, except Shepherd. Cashier at No. 5 set of traps: J. D. Sweet, of Kansas City, Mo.

The background was a particularly unfavorable one for a continuous view of the targets. There were buildings and trees along the river to the left, the railroad embankment straight ahead and to the right, making patches dark and light. The targets flew at hard angles, some very high, at times almost straight up, and some flew very low. These flights were much aggravated by the wind, which blew from the north on the first three days of the tournament, a direction facing the contestants when at the traps.

In reference to the targets, a rather ludicrous episode occurred on the third day, though it was regrettable, too, as showing how misinformed the Humane Society officers may be in matters of which they are presumed to have an interest and accurate knowledge. This was in the form of a communication, received by the president, Mr. Irby Bennett, a copy of which is herewith presented, as follows:

"HUMANE SOCIETY.
"Kansas City, Mo., April 16, 1903.

"To Management
"Blue River,
"Shooting Tournament.

"Gentlemen: You are kindly requested on behalf of the Humane Society to have all crippled or maimed birds immediately destroyed, and oblige,

(Signed) "W. H. Gibbins, Field Officer."

When an officer, who professionally made it his affair as above set forth, had such an utter misunderstanding of the situation, how much more is the people at large to be excused for their indignation and misunderstanding when taught and incited by such leaders?

The spectators, as compared with the numbers which visited the park at the live-bird handicap last year, were not numerous. On the third, the G. A. H. day, they were present in fairly good force, but still the grounds were not at all crowded when compared with their crowded state of last year.

As a matter of course, the Grand American Handicap event was the one of greatest interest. All the programme events before it were stages of advance to it. The first day was devoted to sweepstake shooting, and a part of the forenoon on each of the following days was also devoted to that kind of shooting. All those events were at unknown angles, no handicaps, and in their competition in the sweepstakes, manufacturers' agents, paid representatives, etc., shot for targets only.

The 100-target events were a succession of surprises as to winners. The Preliminary Handicap was won by a young man, Mr. M. E. Hensler, of Battle Creek, Mich. He is said to be only nineteen years old. He tied with Mr. D. F. Timberlake, of Seneca, Kas., for first, and won out in the shoot-off on the following day, Thursday. Mr. Hensler displayed admirable nerve, being as cool and collected externally as any one could desire. It is not to be assumed, however, that because a shooter in a crisis is steady and methodical externally, he is the same in his nervous interior. There is much more creditable and credible that, having nerves, the shooters have such masterly control over them.

The Grand American Handicap at targets seemed for a time to be also an annex to Mr. Hensler's belongings. He scored 93, which was a high performance, and as contestant after contestant finished his score without tieing it or beating it, there was a general conviction that Mr. Hensler had won two great events, the Preliminary and the G. A. H. There was a keen revival of interest toward the last of the race, when Mr. E. Brady went to No. 4 set with a score of 70 out of 75, and Mr. M. Diefenderfer in the same squad with a score of 69. Brady could lose two out of his last 25 and still tie, while Diefenderfer could lose only one and tie. Brady was shooting in fine form, but was unfortunate toward the latter part and lost 5, finishing with 90, a good performance at that. Diefenderfer shot with perfect steadiness, seemingly without a flutter externally, and broke his last 25 straight, really a marvelous performance under pressure. Mr. Diefenderfer is a hardware merchant of Wood River, Neb. He had but little experience in tournament competition. When he broke his last 25 straight, and was therefore almost the winner to a certainty, there was a friendly rush for him to congratulate him, to praise him, and to do him honor. After a while, in the presence of the assembled shooters and visitors, President Irby Bennett, in a dignified and impressive short speech, presented him with a valuable gold watch, properly inscribed to commemorate the event. Mr. Diefenderfer made a modest response, and hearty cheers were given for the amateur, Mr. Diefenderfer, who had won such a long and difficult contest. His portrait, published with this report, shows him in his winning garb and as he competed. It is but fair to mention that the shooting, owing to the absence of wind, was much easier in the afternoon than in the forenoon, and therefore the later scores improved, but such is the fate of war.

Dr. A. Quick, of El Dorado Springs, Mo., in the Consolation Handicap made an excellent score, and is entitled to much praise for that performance.

It is a noteworthy fact that the East sent no shooters in any important numbers, so that it is a logical inference that the

M. DIEFENDERFER,
Winner of G. A. H., Kansas City, 1903.

G. A. H. at targets East or West will have respectively an Eastern or Western support almost exclusively. Mr. Alex D. Mermod, of St. Louis, Mo., presented strong inducements in behalf of his city to secure the next G. A. H., but no definite action can be taken till the Association meets in due time, as in the past.

Blue River Park is hardly adapted to the requirements of a great tournament, it being too limited in area, and too modestly equipped. It is particularly open to objections in case of rainy weather, on account of the mud.

The tournament was run smoothly from start to finish, and was a success, a much greater success with its numbers of entries than it would have been had there been 500 entries, or 1,000.

The winners of first in the different events used guns and ammunition as follows:

Mr. Hensler used a Smith gun, mixed powders, and U. M. C. shells.

Mr. Diefenderfer used a Lefever gun, Dupont powder and U. M. C. shells.

Mr. Quick used a Smith gun, Dupont powder and Winchester shell.

First Day, Tuesday, April 14.

There were eight events at 20 targets on this day. These had $25 added to each event, and the entrance was $2. There were thirty squads, five men to a squad, a total of 150 contestants for the day.

The weather conditions were all against good scores. A strong wind blew from the north, which was in the face of the shooters when at the firing points. The targets took erratic flights, many times high in air, curving backward instead of going forward. Still there was some good shooting done. Mr. W. R. Crosby broke 20 straight four times. Messrs. Fred Gilbert and W. H. Heer each made two straights at 20 targets. Messrs. R. Klein, F. Riehl, C. R. Wilson, C. M. Powers, H. Watson, E. C. Fort, R. Storm, Geo. Roll, A. C. Connor, J. M. Marshall, H. Sconee and C. Spencer each made a straight score of 20. Crosby broke 152 out of 160. Gilbert and Connor were next with 146. All the eight events were at unknown angles, no handicaps. Manufacturers' agents and paid representatives shot for targets only in these events. The scores:

Second Day, Wednesday, April 15.

The programme provided four events of 20 targets each, $2 entrance, $25 added. Also the preliminary handicap, open to all.

The wind still blew stiffly from the north, as on the day before, though in greatly diminished force. Straight scores were not at all numerous, considering the quality and number of the contestants. The following are the scores in the four sweepstake events, 20 targets, in which Gilbert did notably well, breaking 77 out of 80.

Events:	1	2	3	4	T'l.
W R Crosby	18	17	17	19	—71

The Preliminary Handicap.

The Preliminary Handicap was started after the forcgoing events were finished. The conditions were as follows: Open to all, 100 targets, $7 entrance, targets included; high guns; $100 added to the purse. G. A. H. handicaps, 14 to 25yds., governed in this contest. The number of moneys into which the purse was divided was the same as in the G. A. H. at targets. In addition to first money, the winner received a trophy, $50 of the net purse being reserved to purchase it. Entries had to be made at the cashier's office on the shooting grounds before 5 o'clock P. M. April 14. Penalty entries were not taken in this event. Entries were not transferable. Money could not be withdrawn after the entry was made.

The purse was $800. Deducting $50 from it for the cup, left $750 net. This was divided between those who made from 84 to 91 inclusive, as follows: M. E. Hensler and D. T. Timberlake, $71.25 each; C. M. Powers, W. H. Matteson and H. W. Davis broke 90 each and received $52.50 cach; C. B. Adams broke 89 and received $37.50; L. Moine broke 88 and received $30; W. R. Crosby, J. L. D. Morrison, L. I. Wade, C. F. Reust, C. Dixon broke 87 each and received $22.50; R. O. Heikes, E. Brady and L. Foley broke 86 each and received $22.50; G. Roll, A. C. Connor, J. A. Jackson, H. Stege, McGee and Stevens broke 85 and ceived $15. Twelve broke 84—Gilbert, Stevens, H. Waters, Thompson, Skelly, Patrick, C. R. Wilson, Ward, Rue, Avery, Bybee and McDonald—and received $7.50 each.

M. E. Hensler, of Battle Creek, Mich., and D. T. Timberlake, of Seneca, Kas., tied on 91. They shot off the tie on the following day at 25 targets, Hensler winning by a score of 23 to 21. There were 140 entries, under which circumstance there were 28 moneys, divided as follows, 10, 9, 8, 7, 6, 5, 4, 3, 3, 3, 3, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2 and 2 per cent.

Owing to cloudy weather and bad light, four or five squads were left over to compete on the following morning. The names, handicaps, scores and totals follow:

Third Day, Thursday, April 16.

As on the other days, there were four regular events on the programme, 20 targets each, $2 entrance, $25 added; but owing to the large entry, the possibility of ties, etc., only No. 1 event was shot. The wind still blew from the north, though much gentler than on the previous days, and died away almost entirely toward midday, so that the afternoon offered much better weather conditions, and the scores improved very much in that time. The scores of No. 1 event follow: W. R. Crosby 19, Gilbert 19, Garrett 19, Hughes 19, Hirschy 19, Trimble 14, Faurote 17, J. A. R. Elliott 15, Heikes 16, Atchison 18, Bates 15, Fulford 16, Heer 18, Le Compte 15, J. L. Morrison 19, O'Brien 17, Phellis 9, Spencer 13, Sconce 18, Rike 17, Squire 13, Powers 17, Roll 13, Waters 15, Stauber 17, Willard 18, Linderman 15, Fort 19, Budd 17, Wade 15, Eick 14, Snyder 11, Price 13, Frank 14, Bonebrake 19, D. Elliott 12, Skelley 17, G. Hughes 15, Mermod 19, Klein 17, T. A. Marshall 13, Arthur 20, Landerberg 15, Daudt 16, Cunningham 17, Arnold 16, Patrick 18, Guy 14, Confarr 17, Dorton 13, Gilson 15, Jackson 19, Foust 15, Anderson 16, Arnhold 15, H. Morrison 18, Reust 15, Beveridge 13, Stege 17, Gorman 17, G. Baker 18, Tolsma 18, Head 16, Riehl 18, Linell 19, Adams 19, Brookman 13, McDonald 12, Chingren 17, Foley 18, McKelvey 18, Rogers 18, Townsend 17, Norton 9, Kirby 18, Money 12, Gottlieb 17, Driehs 9, Ward 19, Wetzig 12, Hardy 18, Jenkins 14, F. Miller 18, Ryan 15, Rue 18, Darr 15, Taylor 17, Kalash 12, Storm 14, Stevens 13, Avery 15, Tucker 15, Cumberland 9, Gentry 14, B. Allen 11, G. E. Crosby 15, H. Dixon 15, Gibson 13, Guessaz 10, Brady 17, Diefenderfer 19, Matteson 15, Still 11, Ambrose 15, Tipton 17, Wickey 7, Timberlake 17, Decker 13, Thompson 18, Pearse 17, Holmes 18, McBride 15, Merrill 15, Plank 16, Atchison 17, Rohrer 16, Watson 15, C. Dixon 10, Peak 17, Brown 12, Anthony 13, Cravett 10, Connor 15, Cook 15, S. A. Smith 13, Gresham 15, McCrea 15, Smith 13, Millbank 11, Nash 12.

G. A. H. at Targets.

The interest in the competition was much greater on this day, as shown by a much larger attendance of visitors than there had been on any preceding day, and of these a goodly part were ladies. After the unfinished competition of the Preliminary Handicap and event 1 of the regular day's programme were finished, the fourth Grand American Handicap at targets was begun. There were 179 entries. Of these 28 were post entries, made by contestants as follows: Alf. Hill, R. Wilson, C. R. Wilson, J. T. Anthony, H. Pearse, H. Sconce, E. Brady, H. C. Dorton, E. F. Confarr, H. McMurchy, M. E. Atchison, R. Klein, H. O. Baker, D. T. Timberlake, J. J. Gorman, M. Thompson, A. W. Ryan, Geo. Tucker, L. E. King, C. Dixon, W. J. Graber, B. W. Eisenhour, C. R. Millbank, F. D. Ellett, R. Storms, Dr. W. H. Gentry, E. E. Logan, H. Stege.

The purse amounted to $1,837.20, and was divided as follows: M. Diefenderfer broke 94, won $184 and trophy; M. E. Hensler, 93, won $165; L. Squier and C. B. Adams, 92, won $137.50 each; J. M. Hughes, H. Sconce, C. M. Powers, A. J. Stauber, E. C. Fort, D. Elliott, S. Foley and M. Thompson broke 91 each and won $59.60 each; C. W. Budd, E. Brady and T. Irwin broke 90 each and R. O. Heikes, C. O. Le Compte, E. J. Chingren broke 89 each, and F. Gilbert, F. C. Riehl, P. C. Ward and E. Rike broke 88 each; the 90s, 89s and 88s won $36.80 each; W. H. Heer, G. Roll, H. C. Watson, I. L. Wade, H. Stege, W. D. Townsend, L. Rue and S. A. Smith broke 87 each and won $23 each; H. C. Hirschy, J. A. R. Elliott, A. S. Tolsma, H. N. Kirby, D. T. Timberlake and G. K. Mackie broke 86 and won $18.40 each; J. T. Atkinson, D. Linderman, A. Mermod, A. Frank, H. Sanderson, W. Clayton, J. P. Leggitt, S. A. Sherman and E. W. Patrick broke 85, and won $8.15 each.

The conditions were: Open to all, 100 blackbirds, unknown angles, $10 entrance, targets included, handicaps, 14 to 25yds., high guns, $200 added to the purse. The number of moneys into which the purse was divided was determined by the number of entries received. In addition to first money, the winner received a trophy presented by the Interstate Association. Regular entries were made on or before April 1, and were accompanied by $5 forfeit; penalty entries were made after April 1, up to 5 P. M. Wednesday, April 15, by paying $15 entrance, targets in-

Fourth Day, Friday, April 17.

There were four events, 20 targets each, $2 entrance, $25 added, and the Consolation Handicap. In the regular sweepstakes Fred Gilbert broke 79 out of the possible 80. This was shooting to an excellent degree. Mr. W. R. Crosby was close up with 77, only three misses out of the 80 targets. The weather was pleasant, reasonably calm, clear and favorable for the making of good scores.

The Consolation Handicap.

There were 103 entries in this event. It was open to all, 100 targets, unknown angles, $7 entrance, targets included, handicaps 14 to 25yds., high guns; $100 added to the purse. Winners of money in the Grand American Handicap at targets had one yard added to their handicaps, and non-winners of money in the Grand American Handicap at targets went back one yard. The number of moneys into which the purse was divided was determined by the number of entries received. In addition to first money the winner received a trophy, $50 of the net purse being reserved to purchase same.

Dr. A. Quick, of El Dorado Springs, Mo., was first with a score of 95. He won $73.45. Connor and Pearse broke 93 and won $56.50. Arnold broke 92 and won $45.20. Gottlieb broke 91 and won $39.55. Spencer, Millbank and McGee broke 90 and won $30.10. Fulford and Confarr broke 89, and won $24.40. Heikes, Budd and Thompson broke 88 and won $15.95. Heer, Chingren, Willard and W. A. Baker broke 87 and won $10.80. Garrett, Townsend, R. Merrill, Gilson, Jackson and Avery broke 86 and won $9.40.

The conclusion of this event concluded the tournament. The scores:

How About It?

Had the Humane Society of Kansas City been seeking good food for thought at Blue River Park, it could have found abundance of clay pigeons on the ground, and fresh goose eggs on the blackboard, all gratis.

The parents of many of the goose eggs were a north wind an a perpendicular target. There were others.

There was a chill in the atmosphere of the first two days, though tempered somewhat by hot air here and there.

Mr. Fred Gilbert made high average of the total programme, notwithstanding some setbacks.

The 23yd. mark seems to be about one yard too many for even the best shooters.

Doc A. Quick, in the Consolation Handicap, made the highest score of any made in the 100-target events, namely, 95 out of 100.

Mr. Max E. Hensler, winner of the Preliminary Handicap and second in the G. A. H., is nineteen years old, an age that some of the shooters can imagine by thinking backward.

Mr. M. Diefenderfer, winner of the G. A. H., took his honors as modestly as became a good contestant. He should cut off the last half of his name, for he is no derfer with a shotgun.

Mr. Chris. Gottlieb, an excellent shot himself, watched the scores with deep interest in the G. A. H.

Messrs. W. R. Crosby and F. Gilbert were on the 23yd. mark. Messrs. J. H. Hughes, John Garrett and H. C. Hirschy were on the 22yd. mark; easier marks were nearer.

The two ladies, Miss Nellie Bennett, of Denver, and Mrs. Nettie King Burrows, of St. Louis, shot with an accuracy superior to that of many of the other contestants, and with a grace equalled by none.

The U. M. C. Co. and the W. R. A. Co. made the evenings pleasant for those who chose to enjoy their princely hospitality. Mr. Irby Bennett was the host in behalf of the Winchester Company; Mr. A. C. Barrell in behalf of the U. M. C. Co.

There were a few trade agents at the shoot.

St. Louis would like to have the G. A. H. next year.

The press should feel deep gratitude to the manager, Mr. Elmer E. Shaner, and to the compiler of scores, Mr. J. K. Starr, for uniform courtesy and consideration at all times, and for neat, full and correct copies of the scores, etc., at the right time, the earliest possible moment.

IN NEW JERSEY.

Live Bird Handicap.

Newark, N. J., April 16.—The live-bird handicap, given by Smith Brothers, on the grounds at Newark, had for the main event a handicap at 20 live birds, $20 entrance, birds included; two moneys for every ten entries, high guns. Mr. L. W. Colquitt was the winner with a score of 18, one of his lost birds falling dead out. Five sweepstakes at 5 and 10 birds were also shot. The scores follow:

Nos. 1, 2 and 3 were at 5 birds, $3 entrance, high guns:

	No. 1.	No. 2.	No. 3.
A A Schoverling	22222—5	02222—4	22222—5

Sander—Meckels—Packard.

Carlstadt, N. J., April 18.—On Outwater's grounds to-day a match at 50 live birds, $50 a corner, was shot between Messrs. W. H. Sanders, E. A. Meckel and R. L. Packard. All stood at 28yds. Meckel won with a score of 34. The birds were remarkably good. There was a strong northwest wind. The weather was pleasant. Sweepstake shooting followed the match. The referee was Mr. J. H. Martin. The scores:

W H Sanders	22022222222*01122020220222—19

Scranton Rod and Gun Club.

SCRANTON, Pa., April 18.—The Scranton Rod and Gun Club held their regular semi-monthly shoot to-day. Nine of the members were on hand and did some shooting, but the percentage of breaks was not very high. "Cause why?" The wind was blowing a gale, as is nearly always the case at our shooting grounds. The scores were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11		
Targets:	10	10	10	10	10	10	10	10	15	10	15	Broke.	Av.
Spencer	2	5	5	6	7	9	7	8	9	..	..	58	.61
Bittenbender	4	6	5	8	5	..	9	..	11	8	14	70	.70

Wharton	..	..	..	..	..	..	..	..	11	..	..	11	.73

Our club is in quite a flourishing condition, and as soon as we get settled weather I think the attendance at shoots will increase.

We have opened club rooms in the Williams Building, corner Wash and Linden streets.

J. D. MASON, Sec'y-Treas.

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., April 11.—The weekly shoot of this club to-day was favored by fine weather. In the principal event, No. 5, several of the boys who had shot in the two last shoots under very unfavorable weather conditions, such as to make low scores and consequently low average, had such a liberal handicap to-day that it was comparatively easy work to put up a winning score for the Marshall cup. In this event Smith with 9, and Winans with 5 misses allowed as breaks, tied on 24. In the shoot-off Smith scored 21 and Winans 25, thereby winning the cup for this week. Event No. 6 was the shoot-off. Scores follow:

Events:	1	2	3	4	5	6	7	Shot	
Targets:	10	10	10	5	25	25	25	at.	Broke.
Marshall, 7	7	4	2	2	22	..	10	85	40
Briggs, 2	7	7	..	4	18	..	..	50	34
Buckley, 2	9	7	10	3	23	..	..	60	50
Winans, 5	8	6	6	..	24	25	..	80	59
Smith, 9	..	4	3	4	24	21	..	75	38
Pickenpack, 7	..	4	5	..	19	..	..	45	21
Spencer, 4	..	..	5	..	17	..	11	50	29

In event 7 Spencer shot but 15 rounds.

SNANIWEH.

PUBLISHERS' DEPARTMENT.

Found at Last.

SEVERAL years since a party of Northern farmers, mechanics and small retail dealers formed a society in Revere, Mass., to institute an investigation in regard to the climatic conditions and business opportunities down South, and after three years of personal investigation through the South, they finally decided that the best all-year climate, the most healthful section in the Union, was at Pinebluff, North Carolina, in the high sandhills of Moore county, a point on main line of the great Seaboard Air Line Railway, seventy miles south of Raleigh, the capital of the State. In the early summer of 1901 they sent two men down to spend the summer, so as to see the effect of going South during the summer months. One of the party was more than sixty years old, and had suffered with rheumatic troubles for several years. He was relieved of the trouble soon after he reached North Carolina and made favorable reports. In the winter of 1901 they sent down three families, two from Massachusetts and one from New Hampshire, to clear up lands, build temporary houses and cultivate the ground and report results. It has been shown that lands which were in the native woods March 1 were cleared of trees, stumps and trash, fenced and planted and crops gathered at a cost of about $25 an acre. The land yielded $75 to $80 an acre planted in sweet potatoes, and after paying $10 an acre for the land it left a clear profit of about $40 an acre; and from the information gathered, the settlers report that the land will after the first year produce greater yields than the first season's crops.

There are many New Englanders and Northern people going to Pinebluff, and a city charter has been granted by the State of North Carolina. Hon. J. W. Pope, formerly of Marlboro, Mass., is Mayor. Of the five City Commissioners, four are Northerners, among whom is Mr. N. Q. Stewart, son of Mr. J. P. Stewart, of the coal dealers of Charlestown, Mass.

Pinebluff, N. C., is the town in which Mr. John T. Patrick, of the Seaboard Air Line Railway, has his home, and it is just six miles south of the prosperous winter health and pleasure resort, Southern Pines.—*Adv.*

Reduced Rates to New Orleans.

VIA PENNSYLVANIA RAILROAD, ACCOUNT MEETING AMERICAN MEDICAL ASSOCIATION.

FOR the benefit of those desiring to attend the meeting of the American Medical Association at New Orleans, La., May 5 to 8, the Pennsylvania Railroad Company will sell excursion tickets from all stations on its lines to New Orleans, on May 1, 2 and 3, good going on those dates and good to return reaching original starting point not later than ten days from date of sale, at reduced rates. By depositing ticket with Joint Agent at New Orleans between May 1 and 12, and payment of 50 cents, an extension of final return limit to May 30 may be obtained.—*Adv.*

It is a great feather in the cap of any manufacturer to have won the Grand American Handicap, by far the most important shooting event of the year; and the one held this month at Kansas City, was one of the largest target shoots ever held. That this success should have come to the old reliable Lefever gun is a matter of great gratification to the manufacturers, as, of course, it is also to the many men in this country who are using these excellent arms. Mr. Martin Diefenderfer, of Wood River, Neb., as will be seen elsewhere in FOREST AND STREAM, won the great prize with his Lefever Arms Co. ejector gun. In view of this victory, it is not surprising that the Lefever Arms Co. have something to say on this subject.

Any one that has in mind ordering a gun this coming fall and has not decided on the make of gun, will do well to call on Messrs. Von Lengerke & Detmold and look at their beautiful line of Francotte guns and knockabout guns. They will take dimensions of your old gun and order you a gun in any gauge wanted, to be delivered in the fall, guaranteeing the gun to fit same as your old one and to shoot as wanted, without extra charge. Any one living out of New York City can be furnished with engravings of all the different grades, and by furnishing Messrs. V. L. & D. with dimensions of their old gun or sending their old gun to them, orders will be satisfactorily executed.

The very striking and beautiful cut on the adjacent page calls attention to the business of Messrs. Abercrombie & Fitch, who are so well known to our readers as supplying camping and other goods needed by sportsmen. From their new quarters they recently sent out an enormous quantity of material to fit out the Ziegler Arctic Expedition, and these quarters are daily thronged with sportsmen. Mr. E. S. Osgood, for many years with the U. S. Net & Twine Co., has charge of the fishing tackle department, and many of his old friends who have not known of his whereabouts will be glad to learn of his present connection.

Mr. T. H. Keller, of the Peters Cartridge Co., informs us that a new 50-shot out-door pistol record has been established at the range of the Massachusetts Rifle Association, Walnut Hill, Mass., April 4, by Thomas Anderton, of Boston, who, shooting at 50yds., scored 480 points on the Standard American target, four points higher than the previous record. Mr. Anderton used Peters .22-caliber long rifle cartridges in making this record.

At the Allegheny, Pa., tournament, April 8 and 9, we are informed that thirty-five out of forty-seven shooters used Peters factory loaded shells.

New Advertisements.

Messrs. H. & D. Folsom Arms Co., whose advertisement appears in another column, are the New York headquarters for the Rushton and Morris rowboats and canoes, two makes of boats famous among those who travel on the water. Lightness, beauty and speed are the especial qualities of the Rushtons, while strength and durability, combined with low price, make the Morris product attractive. Besides these boats, the Folsom Arms Co. carry guns, rifles, revolvers, ammunition and all the camping goods and other articles needed by sportsmen.

Lake St. John, Chicoutimi and the ouananiche and brook trout of the Lake St. John region are familiar enough names to FOREST AND STREAM readers. That an admirable hotel should stand side by side with unequalled fishing, and a hunting ground where moose and caribou are to be found, seems extraordinary. You can almost play golf with one hand and cast your fly with the other. Full information concerning this country may be had of the agents of the Quebec & Lake St. John Railway, whose advertisement, as usual at this season, appears in FOREST AND STREAM.

During last spring and summer a considerable number of anglers visited Washington county, Maine, for the admirable trout and salmon fishing to be found there. The Washington County Railroad, whose advertisement is again this year found in FOREST AND STREAM this week, offers to give information about this fishing territory, as well as about summer places where men can take their families and be comfortable at reasonable rates.

Most men—for their sins, we suppose—are obliged to shave, and we never heard of anybody who could get along without shaving soap. Williams' shaving stick, manufactured by the J. B. Williams Co., Glastonbury, Conn., whose advertisement is found elsewhere in this issue, reduces the suffering of shaving to a minimum and makes that usually painful operation comfortable, convenient and safe.

Complaint is often made by those who in summer do deep trolling for salmon, lake trout and other fish, that the heavy sinkers which it is necessary to use take away all sport from the capture. The Metal Line Mfg. Co., of New York City, have an article which does away with the need of sinkers. What this is their free leaflet will tell the inquiring angler.

Visitors to the Adirondacks, the Maine woods, Canada, and the Rocky Mountains in June and July know something of the sorrows that black fly carries on his small back, and unloads on the human being that he meets with. It is said that the preparation Presto, manufactured at Ossining, N. Y., keeps mosquitoes away and kills all insects. It is thus something that every one needs.

The Fisherman's Novelty Mfg. Co., of Dayton, O., whose advertisement is found in another column, manufacture a variety of landing nets of peculiarly interesting character, because they are adjustable to a variety of different positions. At this season, when anglers are renewing their supplies, the information given by these manufacturers is especially useful.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903 BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MAY 2, 1903.

VOL. LX.—No. 18. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1903.—No. II.

ARKANSAS.

LAWS 1903.—ACT No. 117.—Sec. 1.—That hereafter it shall be unlawful for any person, corporation or company to purchase or have in possession for barter, exchange or sale, or to expose for barter, exchange or sale, or to sell any buck doe, fawn or any part thereof or any wild turkey, or pinnated grouse, commonly called prairie chicken, or any quail, sometimes called Virginia partridge, or any other kind of game, wild fowls or birds, whatsoever within this State, except bear, rabbits and squirrels.

Sec. 2.—That it shall be unlawful for any railroad company, express company, steamboat company, or other company, or any private person to export, ship, remove or carry from this State any game of any kind whatsoever.

THE CALAVERAS SEQUOIAS.

IT is reported that the threatened destruction of the Calaveras growth of giant sequoias is imminent. The Duluth lumberman who paid $100,000 for the forested tract on which the trees stand is building a railroad preparatory to realizing upon his investment by felling the sequoias and converting them into shingles and sidings. Being human, the Duluth man is doing only what would be done by anyone else who had such an amount of capital locked up in giant trees and could not afford to let it remain idle. With him, as with any other practical lumberman, the exploitation of the California trees is a business proposition pure and simple. Sentiment is well enough in its way, but when sentiment and financial interests clash, the money considerations prevail.

And yet there is another side to the matter—the sentimental side, if one pleases—which is the actually important one, and so transcendent that it should prevail to avert the lumbering of the Calaveras grove. The destruction of these majestic sequoias would be a crime against nature, a crime against the human race. Their destruction would mean the robbing of this generation and all succeeding generations for the benefit of an individual. It would mean the demolition in a year or a day of marvels of the vegetable world which have been thousands of years in the making. It would mean a conversion to private gain of something which belongs to the people, to mankind, and which in the very nature of things cannot of right belong to an individual.

The big trees of California are unique. There is nothing else like them in the world. Their towering trunks are the slow development of centuries upon centuries, counting thousands of years. They are believed to be the oldest living things on the globe to-day. Their precise age is a subject of scientific speculation, but all are agreed that it covers thousands of years; President Jordan is quoted as assigning to them an antiquity of 7,000 years. They reach back to a period beyond that remote past when time was reckoned by the years of the reigns of the Pharaohs. Compared with the life of man, the passing of the generations of men, and the succession of races and of peoples, they are as the everlasting hills. And yet a thousand fold more marvelous than the hills, for the hills are of inert mass whose contours have been formed by the convulsions of nature, the raging of fires, the flux and convolutions of molten matter, and erosions by water and wind; they are products of the hazard and chance of the ages. The sequoia, on the contrary, is the development of life, beginning as the minute seed sending its fibres down into the ground and taking precarious hold upon the earth—a frail and tiny plant which the foot of a wild animal might crush, the summer shower sweep away, or the frosts of winter uproot—and expanding slowly and deliberately, but ever in accordance with well defined laws of vegetable growth, into the imposing and stupendous monuments we marvel at to-day. If among natural objects there be any which compel veneration, certainly the giant sequoias must be counted among them. As to such objects there can be in equity no such principle as ownership by individual man. They are heritages of the race; they belong not to one age, but to successive ages, for all time. They may not in equity be alienated. A government which in its scheme of land partition and appropriation to individual ownership fails to reserve such heirlooms from coming into private control is recreant to its trust. The United States should never have parted with its title to the California wonder trees. This having been done, the duty of the hour is to repair the error and to reclaim, rescue and restore to their rightful ownership the sequoia grove. Congress should provide at the next session for the purchase of the Calaveras trees, and give them place with the Palisades of the Hudson, the Falls of Niagara, the Yellowstone and the Yosemite as public possessions jealously to be protected and preserved for all time.

IN THE SPRINGTIME.

THE fields and woods and swamps, which so long lay gray and silent under the cold skies of winter, have at last taken on the brilliant hues of spring and are joyous with sounds of life. Green grass has pushed its way up through the brown mat of last year's herbage, and this green is varied with blotches of white where the pale bluettes are clustered close, and with half hidden flecks of purple where modest violets barely push their heads into sight. Thick along the stone walls and fences stand lines of ancient cherry trees, masses of white bloom, whose petals are already beginning to fall to earth; the peach orchards are glorious in their dress of pink, and even the apple trees are showing blossoms, pink now but a little later to be white and sweet smelling. Tiny leaves, white and purple and pale green, are thrusting forth from the tips of every twig on tree and shrub; soon the woods will be verdant.

Already robins and phœbes have built their nests, and the mothers are brooding their precious eggs. Blackbirds, beautiful and glossy, quaint in song and grotesque in action, are seen in the trees overhanging the water, or stalk over the smooth shaven grass near the house, digging actively for grub and beetle, which a little later, if undisturbed, would eat the grass roots and cause the householder to fume and fret at the unsightly appearance of his carefully tended lawn. How brilliant are the colors of the red-shouldered male, or his cousin of bronzy hue and boat-shaped tail, or even of the vagabond cowbird, in their fresh spring dress. It will be but a few weeks before the tips of the feathers are worn off, and the hues of these beautiful birds are less brilliant.

The crows have mated, and while some perhaps have already built their nests, others in small groups spend much of their time flying over the woods, calling loudly and performing various graceful evolutions. During the day, and even at night, from wood and swamp comes the muffled roar of the partridge's drum, and already from fence rail and stone wall is heard the mellow "bob-white" of our friend the quail, a sound more familiar in June than in late April.

Already the warblers are here. How many in number or in species we cannot tell, but their graceful forms are seen flitting through the swamps and about the snowy blossoms of the shadblow and the taller huckleberries, or sometimes, as in the case of the black and white creeper, starting at the top of a tall shrub and working their way downward to the ground, thence to fly to the top of another bush. The yellowrump, the redpoll, the black-throated blue and the black and white creeper are already plenty, and from now on other species will come in greater and greater numbers until a little before the middle of May the migration is at its height and trees and shrubs are crowded with these fluttering fairy forms.

The little leverets, discovered two or three weeks ago by one of the boys in their form down on the edge of the swamp, have already opened their eyes on a new and lovely world, and now, when taken from their nest to be exhibited to the admiring small children, are likely to scramble off the hand and slip away into the ground pine, where they vainly strive to hide. But when put back into their warm nest and covered over with the fur and moss and dead grass which their mother gathered for its roof, they remain quiet, waiting for her return. Before long they will desert the nest and will take to wandering in the swamp, where it may be feared too many of them will fall a prey to prowling fox or light-winged owl.

In an old woodpecker's hole in a rotten stump not far away the flying squirrel has her little brood, and if one raps sharply on the stub she pops her head out of the hole and perhaps runs up the tree a foot or two to another hole into which she darts, stopping as soon as her body is within, and leaving her soft flat tail hanging out in plain view.

The swamp is pleasant for the life it contains. Here the black-capped titmouse, the gray squirrel, the chipmunk and the downy woodpecker, all have their homes and may be watched from day to day and from hour to hour, as they go about their various tasks.

From the office window of a tall building one may look down on tiled roofs and smoking chimneys and streets full of hard working people, and remembering the joys of field and swamp and woodland, may wish that it were his lot, in this lovely spring time, to be one of these outdoor people, even if it were only to stride in the furrow behind the plow or to drop corn or potatoes.

VANISHING WILD FLOWERS.

THE coming of spring and of the spring flowers prompts another reference to the Society for the Protection of Native Plants. This New England society has been formed to arouse interest in the preservation of certain species of wild flowers which are in danger of extinction in some localities. Among such plants are the Mayflower, two of the gentians and some of the orchids. The peril of the wild plants, as in the case of the wild game, is found in the demand of the market and the destruction to meet that demand. The gathering of country wild flowers for sale in citites is the agency which threatens their extermination. The secretary of the society, Miss Mary E. Carter, of the Boston Society of Natural History, Berkley Street, Boston, will gladly furnish such information as may aid in the establishment of similar plant protective societies elsewhere. As is well know, there are several such associations in Great Britain and on the continent. There is one in Ireland to protect the Killarney fern, and another in Switzerland whose care is the edelweiss.

In some localities the taking of rare plants is prohibited by law. There is a famous scarlet orchid of the Cape of Good Hope, the *Disa grandiflora*, or flower of the gods, which is found only on Table Mountain, near Cape Town; and so persistent has been the industry of the orchid hunters, in collecting it for export to Europe, that the very existence of the unique species is threatened; and the authorities have prohibited, under severe penalties, the taking of flower or plant. Thus in all parts of the world intelligent public opinion is waking to a realization that the beautiful things of nature's garden must not be ruthlessly blotted out; that these things of exquisite beauty, which are in form and color the wondrous product of the slow evolution of the ages, must not be annihilated in a moment by the thoughtlessness of man.

Mr. Charles A. Shriner pokes fun at the New Jersey Legislature because it has created in the "sharp-skinned" hawk of the game law a new species. The Trenton legislators are by no means the first to try their hands at introducing new species into the world. In many States "ruffled grouse" owe their origin to such fiats, and in New York there long flourished the famous "gallimule," which was not a quadruped but a feathered biped which the Legislature created and kept alive for a number of years.

The Governor of Massachusetts has signed the bill making permanent prohibition of the sale of woodcock and of ruffed grouse. The Governor of New York has signed the Armstrong bill forbidding the sale of woodcock and grouse killed in the State. Arkansas has a new law forbidding the sale of any game whatever except bear, rabbit and squirrel. These three news items from widely separated States show the growth of the anti-sale system which in time will be of universal application.

There is nothing like having a pull, as the robin said, when it yanked a worm out of the lawn.

The Sportsman Tourist.

Letters to a Chum.—III.

(Continued from page 324.)

CHICAGO, Ill., Feb. 18, 1903.—*Dear Clark:* It has been such a very long time since I sent you the first installment of this letter that it is doubtful if you remember where I left off, or what it was all about.

I trust you will forgive this long delay, and I think you will when you recollect that I sat up all night long in writing that long letter, and you know how well I love to sleep.

Do you wonder that I have hesitated to take it up again?

In my former letter I gave you a history of our trip into the White River country, and told you of my adventure with the first mule deer I ever saw, and whose head now graces my den and looks benignly down on me while I write this. I also have before me various other trophies of that glorious hunt in the Rocky Mountains, of which I will tell you here.

The following day being Sunday, we decided to stay in camp and rest, and take care of our deer meat, head and hide. We found the deer to be a very fat one, indeed; there were places under the skin on his rump where the fat was nearly an inch thick.

We had made a resolution at the outset to try to kill all the game we could eat, and to eat all the game we killed. As we viewed the mammoth hams and shoulders of the noble animal we had secured, it seemed to us that we would have to wait until Christmas before we could go hunting again, unless we could find someone to share with us. Accordingly Lem saddled his horse and took a goodly portion of the carcass and distributed it among our neighbors ten miles down the valley, whom Lem said were very glad to get the meat.

To provide a cool place for the remainder of the meat, we dug a cave under the overhanging bank at the water's edge, where the sun could never reach. This cave proved to be a living spring of ice water, and made as good an ice box as one could ask. We spent the most of the day at this work, and in dressing and curing the deer head and hide. The day was a perfect one, as were all the days we were out on this trip.

That night we were disturbed by the savage barking and growling of Old Bull, the big dog. We bore with this for some time, hoping he would have done with his uproar. Then I arose and went out to investigate. Bull was out under the trees in the deep shadow where it was black dark. The only animal I could find was the dog, which was glad to see me. He leaped upon me out of the darkness, nearly knocking me off my feet, and gave me a swipe with his long wet tongue right in the face. Then he made off again into the bushes, barking as if he had treed something noble. Then he would dart away in some other direction, and make another stand and more noise. If he heard or saw anything, his senses were better than mine. I had my gun and was ready to use it, but no opportunity occurred.

I came to the conclusion that the dog was playing a joke on me, but I failed to see the point. I was getting out of patience with so much fuss and noise when I wanted to sleep. I didn't like it. So I caught the dog and boxed his ears soundly, then I led him up to the camp and told him to lie down and keep still.

Now, a more intelligent or wise dog than Bull never lived. He could do almost anything you told him. He was a regular trick dog, and learned easily. Talk to him, and he would watch your eye, trying his best to understand you, and it is my opinion that he did understand the most that was said to him. Lem would say to him, "Go and drive in the horses," after they had been gone a half day, and it would not be long till in would come the horses on the dead run, with Bull at their heels. Bull was a good dog, all but the name; he deserved a better one. So when I said to him, "Lie down and keep still," he did so, evidently against his will, and I went back to my cosy nest.

Bull laid still about three minutes, when away he went again, leaving behind him a streak of yelps and barks enough to wake the dead. Then we heard a screech and howl of another complexion, and Old Bull suddenly changed his tune also. Back he came as fast as he had gone, only now his aggressive bark had changed to "ki-yi, ki-yi" at every jump.

I grabbed for my trousers and gun again, but before I got "cleared for action" Bull bounced into the tent and stayed there.

I could find nothing outside to have caused such a commotion; all was dark and silent. Each dark spot looked like an animal, and when a twig broke under my foot, I confess to a queer feeling on the top of my head. I now understand why people speak of their hair rising when scared. I did not go far, you may be sure of that.

Soon I heard Lem coming down the path. He had pitched his tent about 200 feet away from ours, and out of sight of it, and lived there with his wife and two boys. Lem lighted the lantern, and we made an excursion out into the bush. Bull had had enough of it, and was loth to leave the tent. At his master's command he came with us, but his heart was not in the hunt. We could not persuade him to "hie on." He stayed at our heels.

Lem said: "That dog ain't afeared of anything that walks. I can't understand what he had out there in the bushes; it must have been something big. That squall sounded like a cat, don't you think so?"

I said that I had never heard anything like it, but for a genuine hair-raiser it certainly took the cake.

Lem went back to roost, but I sat and watched the spots of moonlight—and they were mighty few in that glade—for a long time, till I got so sleepy I couldn't keep awake, then I turned in, and things remained quiet till morning.

Lem was out at daybreak looking for signs of last night's disturbance, and we all joined him, though the bed never felt better. We had tramped over the ground so much that nothing could be discovered in the way of signs of the marauder. Bull had capered over the ground so long that nothing in the way of tracks could we find. Finally, down at the water's edge, some distance from camp, we found a fresh track pointing toward camp that Lem pronounced that of a mountain lion. This track was not so large as the bear's track we had seen along the trail coming up to camp, but it was big enough to suit us, and rather too near home for comfort. Lem said that after breakfast we would put the dog on the trail and see if we could find the other end of it.

The ladies did not want to hunt lions, nor did they want to stay in camp with all the natural protectors gone. So we compromised by saddling the horses for them, and telling them to ride up on the bank and wait till we found which way the trail led, then they could follow us.

Lem took the dog, who was now as eager and anxious as ever to hunt, and put his nose into the tracks we had found in the sand. The dog soon took the hint, and followed the trail up toward camp and into the place where the fracas had occurred. There the trail seemed to end. No matter where we took the dog, he would soon be back to that spot.

After a half hour of this work, Lem said: "It is no use trying to follow the trail out of here. It can't be done. The cat's been around here so much and crossed his trail so many times that it confuses the dog. Now, it seems to me that the natural direction for the cat to take would be south. He was south of the camp all the time; he could not go north without passing both camps, which I don't believe he would do. He could not go west without going up that bank which nothing but a bird could do, unless at our trail in the ravine, which is north of us. If he went east he must cross the river and we will find his tracks in the sand farther down. But his natural course is straight south between the bank and the river, where he would have an open course through the bushes, in just the kind of a place he likes to travel in. My advice is to strike right out south, and look for the trail in a new place. You follow along the water's edge and watch for tracks in the sand, and I'll take the dog down the center."

So calling to the girls up on the bank to go south, we struck out.

I found it very difficult to follow the stream, there was such a growth of bushes and weeds right up to an overhanging bank; at other places there was a margin of boulders between the bushes and water, where an elephant would not make a track.

I was making slow time when I heard Lem's "Halloo" away off south, so I pushed out into the open and hurried down there.

Lem was waiting for me, and as I came up he pointed to a little spot of soft earth with the cat's track in it. He said that the dog had picked up the trail some distance back in a game trail, and had gone on ahead. Further on we came up with the girls, who were waiting for us at a place where the high bank did not occur, who told us that the dog was away on ahead.

Following the direction they had seen the dog take, which was not along the river, but up into the timber toward the mountain, we hurried on.

Soon we saw the dog coming back to look for us, and it took a long time to find the trail again, then we lost it and could not locate it again, so we struck out in the general direction the animal seemed to be going, till we came to a tiny brook with muddy edges. Here we separated, some going up and some down stream, until we who had gone up stream heard Lem's "Halloo." He had struck the trail again, where the cat had crossed the brook. Here Lem took the precaution to take a hitch-strap from one of the horses and put round Bull's neck, so we could keep up with him. Lem said that Bull was half blood hound, and could follow a trail that was two days old. It is my opinion, however, that some allowance should be made in this statement for ownership, and the unusual affection that existed between the man and dog. Be this as it may, Bull had much difficulty in following the trail, and had it not been for the patience and untiring good nature of the man, who could almost "smell out" the trail himself, we should never have found the other end of it.

Finally the leaders brought us into a path, where evidently the scent was strong, for the dog tugged at his strap and made us go at a trot.

This path led us along a hillside, and then into, or along, the side of a ravine, where the horses could not go without danger of slipping off and rolling to the bottom. So the ladies dismounted. Lem slipped the bridle reins over the horses' heads and let them go where they pleased, and we all went on on foot.

The path became more rugged and narrow until it was along the middle of a veritable precipice, where we could not have gone had it not been for the bushes and shrubs growing there to hang on to.

Luckily this kind of traveling did not last long; our trail ended in a hole in the face of the cliff under a great overhanging rock that went away up half-way to the sky.

This hole looked black and forbidding. It was about three feet high by about twelve feet wide, with a smooth floor and a rough, rugged ceiling. There was a level platform in front of the opening, like the floor of a porch, level with the floor of the opening; there was a roof over it, too, for the old rock overhung the opening by thirty or forty feet.

To stand on the "porch" and look down made one's head swim. Away down there three or four hundred feet below us was a mass of red looking boulders at the bottom of the ravine.

The entrance to the cave was covered with the dust of countless ages, where a drop of rain had never fallen.

In this dust were hundreds of foot marks of the same general appearance as those we had been following; some were large and some smaller, but were great big cat tracks.

Rest assured that I had my Savage ready, and loaded to its fullest capacity.

Lem was for loosing the dog, and sending him in, but here vigorous expostulations were heard from the rear, and not without reason. For if the dog were to drive out anything, there was but one place for it to go, and we were occupying that place.

Nothing could be seen in that black hole. I strained my eyes to get a glimpse of those two balls of fire I had read about, but they were not in evidence.

We called a council of war, and decided to retrace our steps to where we could procure torches of pine knots, which were plentiful in that country, eat a lunch, then come back and fill our game bags with lions.

Soon we were back again with faggots, and built a fire on the front porch of the lion house.

When our torches were nicely lighted, Lem distributed them, one to each, with some extra unlighted ones, except that I had none.

Then Lem said: "Mr. Paddock, you and I and Bull will take the lead, and the rest follow us. I will carry my gun and a torch, but you carry your gun only, and be in readiness to shoot quickly. If you get a chance to use your gun, shoot as you shot at that buck the day before yesterday."

Now, I hadn't supposed that we were really going into that hole. One would have to get down on hands and knees to get in at all.

It seemed to me a good deal like sticking one's head into the lion's mouth. We were well satisfied that there were a lot of lions in the hole, and it seemed to me that they would have the advantage of us in that narrow place, and in the dark. I thought Lem was joking or trying to frighten the girls when he mentioned it. I looked at the girls to see how they were taking it, and could see no signs of weakineng on their part. They were pale, but never said a word against going in there. If they were scared, they did not show it very much, and I felt ashamed of myself for the scared feeling that I could not keep down. I said to Lem: "Let the dog go in first, and we will stand at one side out here and 'pot' them as they come out."

Well, sir, we couldn't get that dog even to look into that hole. He felt just as I did about it. He was scared.

"Come on," Lem said. "The dog won't go in first, but there is no danger; we will keep to one side and leave room for the animals to pass us if they want to."

I had either to go in or back out entirely, and be a laughing stock forever after.

I don't believe Lem had ever heard the word "fear." If there was any of that element in his composition it must have been mislaid where he had never found it. In any event, he walked up to the hole, got down on his hands and knees and started in. Then it was up to me.

Clark, you have been with me years enough to know whether I am a coward or not. What is your opinion?

Honestly I would almost as willingly have jumped from that ledge down 200 feet to the rocks below as to get down on my hand and knees and crawl in there, where I could not see two feet ahead of my nose, and where, from the indications, there might be twenty mountain lions.

On the other hand I had rather take the 200-foot leap than to own that I was afraid. Luckily I had sense enough, or luck enough, to keep my mouth shut as to my feelings, and nobody knows to this day how I felt at that time.

I don't know just what the girls thought about it, but I have a shrewd idea that they felt about the same as I did.

Well, it was up to me, and I went, and the rest followed; all but Bull, and he soon came on as a rear guard.

I could plainly smell the animals in there, and you may bet that I intended to sell my life dearly.

About twenty feet back from the entrance the ceiling rose, and the floor descended until we could stand upright. Further on the room grew wider and higher, until it must have been sixty feet wide by nearly as many feet high. The entire walls and ceiling seemed made of gold or diamonds; there was a sparkle everywhere. I thought we had found a treasure cave, and forgot all about my fear. Upon closer examination we found the sparkling things to be flint. There were things hanging down from the ceiling that looked like icicles. There were other icicles standing up on the floor. I believe these things are called stalactites and stalagmites, but "icicles" describes them exactly. In one place the stalactite at the ceiling had reached down and connected with the stalagmite coming up from the floor, and enlarged until it must have been twelve inches through at the smallest point (the center), and twenty feet high. It looked as if it had grown there to hold up the ceiling.

This large room extended back about three or four hundred feet, then grew smaller. There were numerous holes at the sides at the floor line, looking like a row of dog kennels. We thrust our torches into some of them as far as we could reach, but the depth could not be told. There were about twenty of these holes in the room, of just about the size to accommodate comfortably a good sized wild animal, and they went away back into the rock, no telling where.

Even Lem did not care to get down on his stomach and crawl into one of them; not that he was afraid, but it seemed a foolhardy thing to do. No one volunteered to explore any of them, and it soon became plain to us that we would never find any lions in there—there were too many hiding places for them. Strange to say, no one seemed to care very much whether we found game or not; we had found something more interesting.

Further down the cave where it was about thirty feet broad by about twenty feet high there was a drop off in the floor, straight down about fifteen feet. It was a lucky thing that we had lights or we would have broken our necks sure.

There was no way to get down there safely that we could see. At one side, hanging over the precipice, and resting against one side of the cave wall, was a rock about the size and shape of a load of hay.

Lem was snooping around this rock and found a hole at the back lower corner about the size of his body, and crawled into it.

Soon he called out to us to "Come on, we can go through here."

I left my gun and took a torch and went in.

I have more avoirdupois than Lem; I made a snug fit of it.

About eight or ten feet in I stuck fast and could get no further.

I called to Lem that I couldn't get through, and would have to go back.

Imagine my horror when I found that I could not get back an inch. My clothes would bunch up and wedge me fast until I was as solid as the rock around me.

I certainly had a bad five minutes in that hole. I've heard of people's hair turning gray in a single night, but I don't believe it, or mine would have been white after that day.

My torch was smoking my eyes out, and I couldn't breathe for smoke.

Giving the thing a toss to the front, it rolled down somewhere out of sight, and it was as dark as Egypt in a second.

I'll not harrow you with a description of my feelings at that time. I guess you can imagine about what they were.

I yelled to Lem again that I was stuck fast and could not get back, and he came back to see about it.

He was in a bad fix as well as I, for unless he could get me out of that hole, he could not get back himself.

Lem's torch soon appeared at the other end of the hole, about six feet away, and he asked me what was the matter. When I told him, he had the bad taste to laugh. That was the only mean thing I ever knew Lem to do.

He crawled into the hole, pushing his torch ahead of him, and nearly smothered the two of us. He backed right out again and came back in the dark. "Give me your hand," he said, when he had come up close. He nearly pulled the arm off me, but it was no go; I was there to stay. Then he said: "Turn over on your side a little." Presto! I slipped out of that hole as easy as anything.

May the good Lord forever deliver me from another experience like that one.

There was a kind of a slide from the far end of the hole down to the floor below, and the rock in it looked as if somebody had chipped out "toe holes" in it; at least they were there, and came in mighty handy in getting up and down.

The ladies concluded to remain where they were, and not attempt that narrow passage. They called to us to "hurry back," and Lem and I went on.

A hundred feet further on the cave made a right angle bend, and got much smaller. At one place we had to get down on our hands and knees and creep through. Then it opened up again to fair proportions and we came to another precipice. Here we found a strange thing. Leaning up from the floor below and resting against the ledge at our feet was a dugout canoe, with notches cut in the sides for steps, and it made a very good ladder.

Up to that time I had supposed that we were the first mortals to ever set foot in that cave. It was so far away from all inhabitants, and in such a very inaccessible place, that I thought that we were in a virgin place. That country is almost uninhabited, as we understand the term.

Here before us, however, was evidence that we were not the first to enter there. That old canoe had evidently been there a hundred years; there were cracks in the sides and bottom of it an inch or more wide, but the wood was sound for the most part.

We went down on this canoe ladder to the floor below. The floor all along was strewn with bones of all sizes; some old and black, others fresh with signs of flesh on them. We were evidently in somebody's dining room.

As we went forward we also went downward at about a 7 per cent. grade I should think. There was animal life all around us; we could hear the scampering of small feet, and could hear the scolding and squealing of some animals which Lem pronounced rats, but none of them came into view.

As we passed along we noticed a kind of roaring sound that had come on us so gradually that we had not noticed when we began to hear it. But now it had developed into a good sized steady roar that filled the cave full of sound; we were unable to tell where it came from—nowhere in particular, but it got louder the deeper we went, until we could hear nothing else. We knew it must be water pouring down somewhere, and we were keenly anxious to see it.

As we walked along we suddenly splashed into water, and found that the entire floor was covered with it ahead of us, but it was so clear and transparent that we could not see it in the dim light. We could see the bottom of the cave under the water just as plainly as where there was no water. The roaring in there was terrific. Talk about your thunder storms! They were not in it.

Our way was blocked; we could go no further without swimming, and from the noise ahead it would not be safe to swim very far in that direction. The floor of the cave was here covered with pebbles and sand that looked very pretty in the water where they were washed clean. We gathered some pretty stones there, and while looking for others at the water's edge, where there was sand, we noticed that the sand was full of little particles of bright stuff that looked surprisingly like gold. Indeed, the sand was one-half gold.

We tried to wash the sand out of some of it, so as to carry back only pure gold, but could not do it. We would take up a handful of the stuff and squat at the water's edge and wash away at it; when the stuff was all washed away but a teaspoonful we would find that what remained contained as much sand as it did in the start; the gold washed away just as fast as the sand.

There was enough gold there to make us all rich if it were gold, and, by George, it looked to me as if it were the pure stuff. I really thought we had struck a gold mine. I forgot everything else in gathering gold and filling my handerchief and pockets with it.

Lem said it was either gold or mica. I had seen mica in the front of stoves; this didn't look like that at all, so I knew it must be gold.

In my eagerness to gather a lot of gold, I stuck my torch up in the sand just at the edge of the water; soon it toppled over and fell with a splash into the water, and went out with a splutter.

There wasn't very much of it left, so I didn't care much, but Lem did. "Come on," he said, "we must get out of here while our torches last, or we will be likely to stay longer than we want to." My torch was drifting away with the tide, out into deep water, and I was trying to get it back, while Lem was impatiently watching my maneuvers. "Don't stop for that stick," he said. "It wouldn't burn, anyhow; come on, you have all the gold you will ever want of that kind," he added, with a grin.

I expect Lem had his own fun with me on that trip, and I never suspected the sly humor that was in him.

Well, I had about all the golden sand that I could handle, so I was ready, and we started on the back track.

It seemed a long way back, much longer than coming in, but we made good time and it was not very long till we were standing at the foot of the precipice where the girls were. Then came that dodgasted hole in the rocks to go through again. I took the precaution this time to take off my coat and vest, and to empty my trousers pockets and toss all the surplus up to where the girls were waiting for us, then I went through the hole easily.

The girls said that we had been gone a long time, and they were getting anxious about us, and cold, too. They said that the dog had stayed right beside them all the time, and would growl sometimes, which made them think a lion was coming.

I told them that we had found gold by the wagon load down in the cave and that we were all as rich as anything. Then I showed them the samples I had in my pockets. Then they were exeited, and we all hurried out to the daylight to see what it looked like.

The stuff did not seem to sparkle so much in daylight as it had by torch light, but it was there all right, and to me it had a striking appearance of gold.

I have a bottle of that stuff here in my den; I'll show it to you when next you visit me, and if you don't say it is gold I shall be disappointed.

The sun had gone behind the mountain, and it was getting chilly and dark when we started for camp. Our horses were not where we had left them, so we started toward camp on foot. Soon the moon came up and made pretty fair light. We found the horses about half way there feeding along.

RICHARD A. PADDOCK.

[TO BE CONCLUDED.]

A Cruise in the Ojibway Paradise.

In Two Parts—Part Two.

We made an early start the next morning, and were several miles above camp when Sam said: "There is a moose!" We were going toward a marsh and the moose was away at the other end, near the woods, but coming toward us. The guides drew the canoe up a long, sandy beach to the shore. The Doctor took the camera, and we all crept into the grass and crouched down. The wind was blowing down stream and the moose came on, wholly unconscious of our presence. He was some distance to our left, but turned and took a course at a right angle to the one he had been following. This brought him directly in front of us, where he stopped with his side toward us, and not more than forty feet away. When the Doctor stood up to get a picture he turned toward us, and Sam said: "Look out! That fellow is going to charge." We all jumped up ready to run, but the moose turned around and followed his own tracks back, till he was a little to our left, then he changed his mind, and, turning toward us, lowered his head and we saw the hair on his neck rise as he started toward us. The length of time it took us to reach the canoe was sufficient proof that none of us were paralyzed with fear, but I doubt if four worse scared people ever lived to tell about it. We were not only willing but anxious to quit playing in that moose's backyard. When we reached the canoe someone looked back to see what was coming, but the moose had turned his back on us in contempt, and was deliberatetly trotting off across the meadow to the woods. We were very thankful for our escape, for the moose certainly had the best of the argument, and had it been a month later I fear something would have happened. I had never seen a moose before, and thought they were the color of an old red cow, but this one was a beauty. He was so sleek and black and glossy, and had a nice pair of antlers, though they were not so very large. He was a two-year-old, and would weigh about eight or nine hundred pounds.

When the moose had disappeared in the woods, we pushed off and continued on our way up the river. Ducks were very plenty and we shot one for supper. I had never gone duck hunting before, and was much surprised at the length of time they could stay under water, and when they did come up only their heads came above water, and if the canoe was in sight, they were down again in an instant, making hardly a ripple.

The first portage is very short, but we had to step from one boulder to another, which is always hard. The next portage is quite difficult. In one place we had to climb up the face of a cliff and realized the need of empty hands. When I saw the place it was a mystery how the guides got the canoe up, but they did and instead of being cross and surly they came back to assist us lest we should fall. The water here slips over the side of the river bed, making a drop of fifty feet over nine ledges or steps, and continues on its way without changing its direction. All the way along this river the moose had destroyed the beds of water lilies; there were acres of them pulled out of root and tramped to pieces.

About twelve o'clock we reached the Morrison Falls, a regular mountain chute, the water falling fifty feet through a narrow, rocky chasm. It is a bit of nature in her wildest, most picturesque dress. This part of the river is well worth taking a day to see. Every turn of it is full of interest, and very different from anything seen on the regular tourist route. The trip to the Morrison Falls and back to Lady Evelyn Lake can easily be made in one day, and will well repay the time it takes to make the trip. We had crossed the eddy to get a view of the falls, and, on our way back to the portage landing, a game warden came round the bend, pulled up beside our canoe, and handed us his book to sign, all the time looking closely over our baggage. He had heard us shooting, and thinking we might be killing moose had followed us up the river. When we told him about the moose, we knew, by the beautifully serene expression on his face, that he did not believe us. When we were eating dinner he came back to fully satisfy himself that we had neither rifle nor moose meat.

When we came round the bend of the river and Bob pointed out the portage, I decided that we had reached the end of the trip, for it did not seem possible to carry a canoe up that rock. I had no doubt about getting down on our return, for I could see that if once started we would come down whether we wanted to or not. As a portage I did not think much of it, but felt sure it would make a beautiful toboggan slide if the landing could only be improved.

Sam took the Doctor out to try the fishing while Bob and I cooked dinner. Every one seemed to take the crossing of this portage as a matter of course, so I said nothing, but told Bob we would cook as much as we could for dinner and there would be less to carry. I found some onions in the sack, and, thinking we were doing a good turn, we peeled and cooked them every one, but learned to our dismay that Sam had put them in for some special dishes he intended to prepare.

The portage was not as hard as I had expected, for the rock was rougher and more uneven than it appeared, but a climb of fifty feet up the face of a steep rock is not exactly easy. When we reached the top of the falls a sheer wall of rock rose a hundred and fifty feet or more above us. On the top, broken and seamed, were boulders weighing hundreds of tons which were balanced, apparently ready to fall if the wind should blow or a bird or leaf light on them and disturb the equilibrium. We followed the path along the river for perhaps an eighth of a mile and again launched our canoe. Not far above this is a portage that Bob calls the Fifth avenue stone pavement, around a shallow rapids about a twelfth of a mile long. The shore on the right is paved with big round-topped boulders set as close together as they can be packed. The pavement is a twelfth of a mile long and about a dozen yards wide, while the tops of the boulders are three or four feet above the surface of the water and some distance apart. This is an extremely dangerous portage, it is so hard to keep your footing as you step from the top of one round boulder to another, and a fall with a pack or canoe would certainly result in a crushed canoe, if not worse. This pavement is evidently the result of glacial action.

Crossing another portage we were in the Lady Evelyn River where it divides, one branch flowing into Willow Island Lake and the one we had come up into the Sucker Gut. We saw an abandoned eagle's nest on a dead pine tree. The top of the tree had been broken off, but the stump still rose above the surrounding timber with the nest on top.

We had probably traveled a quarter of a mile without making a portage and were getting lonesome, or else Satan had found extra employment for us; at any rate Sam said: "I would like to shove that rock into the river."

"So would I," said the Doctor.

"All right," says Bob, "put me ashore."

The shore on our left was a smooth rock that rose with a steep slope twenty-five feet above the surface of the water and just on the top lay an oblong boulder, with nicely squared edges, weighing twenty-five or thirty tons. Bob took the ax and went ashore to shove the rock over the edge so it would slide down that smooth surface, while Sam took the canoe to the middle of the river, where we could watch the performance. Bob went up the hill and cut down a small tree to get a stick to use as a lever, and gradually working the stone over the edge, it started on its downward journey. It came grinding and sliding down the face of the rock, gaining momentum as it went, and, on reaching the water, went under with a splash, but instead of going down to the bottom with a thud, as we expected, it continued on its way, grinding and sliding down the rock until directly under our canoe, where it quietly settled down. We could follow its course by sound under the water just as well as by sight above. They all insisted that the rock was so smooth there was no danger, but I felt relieved that nothing had happened.

The river is very wild, in places quite narrow, again widening until almost a lake that is surrounded by marsh where we would see ducks and signs of moose. In many places the river bed is full of immense boulders, whose tops are just a few inches below the surface of the water, and some skillful steering is required, especially in swift water. Bob was bowman, and says he knows all the rocks now, for the ones we missed going up the river we struck coming down.

After leaving the Morrison Falls we made just one long portage before reaching McPherson Lake, but there were five or six short ones and a number of rapids where we walked along the shore, and the guides led the canoe through. In the rapids, at the foot of McPherson Lake, we hooked and landed a beautiful speckled trout weighing a quarter of a pound, but it was getting late and we did not try for any more. We camped on a point just above the narrows in McPherson Lake. This is an old camp ground, and we had a table with seats, while near the fireplace was a low table made by driving four forked sticks in the ground, then placing two straight, smooth sticks in the forks, one on each side of the table. The top of the table was made by drawing a piece of birch bark tightly over the sticks at the sides of the table and tying it firmly to them, in several places, with cedar bark. There was also a register made by cutting a piece of bark off a tree and writing the names on the white wood underneath. When these registers are sheltered they last for several years, for we saw one that had been made by a surveying party in 1898, and it was still quite legible, though written with a pencil. When Bob was back in the woods getting pine, he picked up an arrow with a heavy blunt point. They are used by the Indians to kill rabbits and grouse.

Sam skinned and fried the duck and made corn cakes for supper, which we enjoyed with a tin of good tea that we always found refreshing. We could see the trout jumping in the lake, and after supper went out to try our luck. We tried all kinds of flies and fished all kinds of ways, but did not get a trout. When we quit fishing Sam turned the canoe toward the head of the lake, and, as it grew dark, the river seemed to become narrower and the high bluffs on each side to rise higher. Moving slowly and noisely along we watched the transformation until the gorge had become an immense hallway, down which we were drifting toward the light in the western sky, that glowed through the opening at the other end, like the light from some vast aerial space. A streak of light, reflected here and there on the water, increased the length of the hallway and made the opening seem miles and miles away. We were drifting down the Corridor of Time and were in sight of the Gates of Eternity. It was a dream of childhood.

Sam turned the canoe and we went back to camp, where Bob had a good fire burning, and we sat around the fire. In the night we heard a far-off moaning cry, which would increase and then die away. We were all awake, listening intently. It grew louder and louder, until we could hear the hunting cry of a pack

of wolves; then it gradually died away in the distance and all was quiet again. Toward morning there came rain and we did not get up early to go fishing, as we had intended, but the guides were up, and asked if they might take the rods and try to get some trout for breakfast. They returned in about an hour with two small ones, which, with the one caught the evening before, made our breakfast with bacon, corn cakes and good coffee. Sam had hooked a large trout, but did not succeed in landing it.

It was still raining hard, and while Sam cooked breakfast Bob built a fire in front of our tent, by the side of a tree, which I thought was very reckless. I learned, when reading the story of Mr. Hough's hunting trip after we got home, why he built the fire beside the tree, but I did not know at the time that the tree would serve as a chimney and keep the smoke from blowing into our tent. The front of the tent was thrown open, the blankets rolled up for seats, and breakfast was served in the tent, which was nice and warm, on a big piece of bark for a table. About ten o'clock, the rain being over, we all went out to fish, and I caught a small trout and a little herring. We returned to camp for an early dinner, and then went to the falls at the head of the lake for the evening fishing.

Sam made a loaf of squaw bread for dinner and baked it in the skillet. I do not know how he made it, but it was very appetizing. It was always a mystery to me how he succeeded in baking bread in our sheet iron skillets with their shaky, adjustable handles. Through it all I never heard him swear, though Bob claims he said his prayers backwards when the big trout got away.

At the foot of the falls that afternoon we cast flies of various kinds all over the water, until I had hooked everything above water that was in reach and some things not in reach, but nothing under the water. Then I quit for fear I should lose my arm at the shoulder. The Doctor had met with less success, not having hooked as many things as I had. We gave our rods to the guides while we went to take some pictures.

On one side of the falls is a sheer wall of rock fully two hundred feet high, while the other side is comparatively low and broken. There is a small camp ground here, and on a register were names of tourists from New York, New Jersey, Connecticut, Ohio, Pennsylvania and Mattawa, while underneath the following legends were duly inscribed:

"Fine trout fishing—N O T."
"Such an easy place to get to? ?"
"The trout here weigh 2lbs.—that is, a dozen of 'em do!"
"Cheer up! There is much worse farther on."

We were wet and cold so built a fire, and soon the guides came back. Sam had two trout, one was a very dark color and weighed over a quarter of a pound, but the other one was small. It was time for us to return, so we put out our fire and went back to camp, where Sam soon had tea brewing and trout and bacon frying in the skillet. A cold wind was blowing, which increased in the night, and in the morning the rain was pouring down. I had a dreadful headache and could not have gone in the canoe, so was glad the weather and not I kept them from breaking camp. When breakfast was being eaten two whisky jacks, or Canada jays, came around and flew quite close to the tent for bits of bread that were thrown to them, and they finally tried to carry off our soap.

By ten o'clock the rain was over and my headache had about gone, so we hastily packed up and were ready for our trip down the river. We were undecided as to whether the trout fishing had been a success or not, but felt we could answer with the Indian Sam told about who, when asked if he caught any fish, replied: "A few, not very many. One big one, one little one, two small ones."

Our trout fishing was done on the 4th of September, sometimes casting and sometimes trolling the fly along the water, and while we did not get many trout, I believe there are plenty of them there and they could be caught in the fly-fishing season, for we saw them jumping the first evening we were on McPherson Lake. Bob says the trout fishing is better farther up the river, but we were not able to find out anything about the fishing in either Florence or Smoothwater lakes. Bob said the party he took through had caught so many trout that when they reached Florence Lake they never thought to try the fishing to find what kind of fish were there.

A cruise up this river would be delightful, but it is a cruise by itself and not a side trip. The start should be made from Haileybury, where guides, outfit and provisions can be procured; then follow the route we took to McPherson Lake, continuing on up the river to Florence Lake; cross the head of it and enter a small stream, which brings you to Apex Lake. Crossing this lake to the outlet brings you to Smoothwater Lake, and the outlet of this is the East Branch of the Montreal River, which you follow to its junction with the Montreal, near Fort Matachewan, a Hudson Bay post, where supplies can be procured. From this point there are two routes back to Haileybury, one down the Montreal River to Mud Lake, the other down the Blanche or White River to Lake Temiscaming. To reach the White River a three-mile portage must be made across the plateau that separates the waters of the Montreal and White rivers. To come up the Montreal and go down the Lady Evelyn River is not practicable on account of a portage around the Three Mile Rapids on the Montreal, part of which can be run going down, and the current being against one more than half of the trip.

We made our way down the river without difficulty, but I could not help thinking about that Fifth Avenue pavement, for the rain had made the rocks very slippery. The guides wore shoe packs and could get over the slippery rocks much better than we could in our stout walking shoes with rubber heels. When we stopped for dinner they made me some toast, which I enjoyed very much, with a tin of good tea. We found the Fifth Avenue pavement almost dry, and it was a relief to all when we were safely over. We had no trouble making the portage around the Morrison Falls and got down the cliff, where the river falls over the side of its bed, without any difficulty.

When we reached the more open river, a cold north wind was blowing up stream, and we had to face it for four or five miles. Long before we reached camp I was chilled through, and, when some one asked me a question which I had to answer, my voice trembled. Bob, who was sitting in front of me, looked around, and, taking his coat from under his knees, told me to put it on.

I was very glad when we rounded a bend and saw our little white tent as we had left it. Not a thing had been disturbed. The guides made a fire, and as soon as the water was hot made some good beef tea. We drank a tin of that, put on warmer clothes and were ready for any kind of weather. The tents put in good shape and supper over, a big fire was built, and when well warmed we went to bed and were soon asleep. When we awoke in the morning the sun was above the tree tops shining bright and clear, and everything was covered with a heavy white frost.

After breakfast a warm skillet handle was used on the canoe, and we were ready to move. I heard Sam say he was glad those detachable handles were good for something. The day was perfect, the sun warm and bright, and Lady Evelyn Lake perfectly calm and exceedingly beautiful. About the middle of the lake we went ashore on an island, where there is a fine camp ground commanding a splendid view of the lake and its numerous tree covered islands. Mingling with the dark green of the pine was the lighter green of the birch and the yellow of the poplar, whose foliage had already been touched by the finger of frost. On many of the islands in Lady Evelyn Lake are good camp grounds, where a small party, not caring to cruise, but wanting a camping trip, could have a delightful outing.

We cooked our dinner on an island near the end of Lady Evelyn Lake, and when tramping round, found a string of fifteen or twenty black bass that had been thrown away. They were not small ones, but would weigh from two to four pounds, and no doubt had been caught for a picture. The heathen are not all dead, neither are they all converted.

This end of the lake and the river that connects Lady Evelyn with Diamond Lake are full of boulders that are just a few inches under water, and it requires all the skill of an expert canoeman to steer clear of them. Making a quarter-mile portage around the rapids we came to picturesque falls at the mouth of Diamond Lake. Early in the afternoon we reached an island in Diamond Lake, where there is a good camp ground. We had a table and seats with backs, a luxury that was almost too much for us, but we resolved to keep away from the seats by the table, except at meal time, and, as there were seats by the fire without backs, we soon felt quite at home.

Sam boiled some beans that evening and baked them in the skillet, some way I do not know how, but they were better than any of the canned beans in the market. There was a sandy beach at the end of the island, and while Sam was getting supper we went to see what message had been left for us by the wood folks. We found the footprints of deer, wolf, crane, man in moccasin and man in civilized shoe. After supper the guides took the gun and went across the lake in the canoe to try to get some ducks, while we kept house by the camp-fire. They returned after dark, having shot one black duck. A gentleman and two ladies from New York with their guides, were camped on an island some distance farther up the lake. A. W. C.

[TO BE CONCLUDED.]

The Real and the Fanciful.

Editor Forest and Stream:

We read stories of hunting and of Indians and adventure; they might be divided into three classes: those told from actual experience, by a participant; those told as having happened within the knowledge of the writer, either direct or through tradition, and those which are the sole product of the imagination, or manufactured stories. There is only one publication pertaining to the woods life which naturally includes all the above subjects, which I have read, that, so far as I can see, excludes stories of the last class, and that is the FOREST AND STREAM. To the person who is thoroughly familiar with the subject about which he is reading, the earmarks of a manufactured story are so disgustingly evident that all interest is lost in the reading, and a corresponding interest in the publication itself. Probably such stories are all right for the novice who is naturally interested in woods lore, but who knows nothing by experience of that of which he reads; but to one who has "been there" the reading of such stories is about as satisfactory as eating meat without salt. What makes them fall so flat is the fact that so many such stories are written by persons who are not familiar with that of which they write, thus making statements which are ridiculous when read by those who know better. For instance that fine Indian story which no doubt was read with rising hair by many, but which Cabia Blanco, in January 24 number of FOREST AND STREAM so mercilessly tore to pieces. Here was the man who knew all about the location and tribes of Indians involved, and was prepared to say unhesitatingly that it was without foundation in fact. It may be a pity to spoil a good story which has been carefully written and put together, but to me it is not only amusing but gratifying to see such stories torn to pieces. It also seems a pity that so many thousands of true stories of adventure remain untold, while so many thousands of fictitious stories are thrust upon the people.

When a boy I was very fond of reading a certain very popular paper which always contained at least one story of adventure, because I supposed them to be all true, of course. As I got experience and became familiar with the habits of wild animal life, it disgusted me to read the same paper, for not only some, but all, of the stories of adventure were simply products of the imagination of someone who was paid for writing that which never occurred. Fiction is all right in its place, but there are too many good true stories pertaining to the wild woods and plains which are yet untold to bore lovers of such literature with the rank manufactured stuff. The reminiscences of Cabia Blanco which appear from time to time in FOREST AND STREAM are all treasures of history which will be preserved in my family and read by many generations to come (that is, if the future generations are inclined as I am). Many other of the "old timers" give occasional glimpses into their past lives, and thereby gladden the hearts of some of us who are younger and who wish we had been born sooner.

We often read of the hunts which were taken "behind the writing desk," where the would-be hunter "heard a noise as of some animal moving about and presently a deer walked out in sight." Anyone who has been much among deer knows that all you can hear of their movements when they are walking about undisturbed would not unduly startle the listener, or disturb the peaceful silence of the woods; in fact, I have watched very many deer as they have moved about in their natural way, when not startled, and have watched some at very close quarters, and I never yet "heard a deer walk;" in fact, I do not know that I ever heard a sound of any kind made by a deer while it was moving about in its natural way. They come as near to being noiseless in their movements as is possible for any animal of their size. A friend of mine with whom I used to hunt, always called them ghosts, for, he said, they seemed more like spirits than solid matter of flesh and blood: suddenly, unexpectedly and noiselessly appearing in plain sight, and then just as mysteriously disappearing, phantom-like, without a sound. One of the peculiarities of their manner of walking is the way in which they lift their feet; lifting them very high with that peculiar quick jerk which reminds one of a string-halt horse, but lowering them slowly and cautiously; thus, with their sharp-pointed hoofs, making it nearly impossible for the slightest noise to be made by walking: and yet the manufacturer of hunting stories will insist on their making a noise in moving about in the woods something like domestic cattle, we would imagine. When studying wild life, the effect of environment is most interesting to observe: notice the deer, for instance, in a park; owing to their surroundings there is no need for their exercising the caution and watchfulness natural to their kind, and after a time they lose, to some extent, some of the characteristics which are the most interesting in their wild state. Deer which have been born in parks, and have never known the necessity of self-preservation by watchfulness, stealthy movement, etc., could readily be detected from a wild deer by a close observer who is familiar with them in their wild state, in their manner of movement.

Man with his present environment can and does allow some of the faculties to become dormant, which, in the old pioneer of long ago, were kept active and acute, because upon them depended his safety, his support, and, in fact, his very existence. His surroundings were such that it was important that he should not relax his vigilance for the shortest time, and so trained did his faculties become through necessity that even while he slept the least suspicious sound would arouse him. So when he went to the woods in search of meat, no matter how many hours or even days he might continue the search, not one careless step was taken, and he did not for an instant relax his watchfulness, because his very existence depended upon the keenness of his eyes and ears, and the constant necessity of it made it a part of his nature, which he exercised unconsciously. In these times a man will go out to hunt and perhaps for a few hours will exercise caution in walking and vigilance in watching, but after a while he gets tired and discouraged, and the first thing he knows he is plodding along as if he was following a plow, in a meditative mood, with his mind on something entirely foreign to the object of his search. So the person of today who leaves his business for a few days in the year to go hunting might be compared with the old pioneer of Indian days, as to constant watchfulness and vigilance in the woods, about the same as park deer could be compared with a wild deer in its exercise of the senses used in self-preservation.

I have spent hours, which, if they were all added together, would probably amount to many days, watching wild game, especially deer, and I never yet saw one which seemed to be off its guard for even an instant, but every sense seems to be strung to its highest tension at all times, and they look and act at all times as if expecting danger every minute. Once while trailing a bunch of deer on snow, I saw through some thick bushes a dark object which looked something like a deer lying down in the snow, but minus the head and neck sticking up, as I naturally expected to see. Walking a few steps to one side to see past the bushes, I got a fair view of it, and saw it to be a deer lying down with its head laid back on its body. Just as I was bringing my rifle to my face to shoot, a red squirrel near by ran up a tree with that fierce chattering noise made by them when disturbed. The deer, no doubt accustomed to accepting "tips" of approaching danger from its small neighbors of the forest, instantly raised its head and looked about in a startled way, but as I already had my aim on it, the warning was too late, and at the crack of the rifle it sprang up, ran a few rods and fell dead. So it is with them at all times: not the least intimation of danger from any source is disregarded by them, even though many of them may live for years without encountering danger, yet it does not tend to make them careless. When a bunch of deer have been scattered, and especially when one of them has been killed, some of them are nearly sure to come back to the same place in a short time to hunt for the missing one, and even if none have been killed they come back that they may get together again. Knowing this fact, and being in need of another one at that time, I dressed the one I killed and, as it was then noon, I went off a few rods and sat down on a log in a thick clump of bushes to eat my lunch, all the time keeping a sharp lookout for any returning deer. Just as I was ready to begin to eat, I saw one coming back, and when it got in a spot just where I wanted it, it stopped, and without moving from my seat I reached for my rifle and killed it. As I went home I saw and shot the heads off two mountain grouse, thus getting two fine deer and two grouse with four shots and got home at two o'clock. I did not realize it at the time, but as it has proven, this was the last hunt I ever had while living in the grand old Rockies, but it was a most pleasant one with which to wind up my woods life.

EMERSON CARNEY.

MORGANTOWN, W. Va.

Natural History.

Our Batrachians and Reptiles.—I.

AMONG the many wonderful works of Dame Nature which are familiar to her true lovers, perhaps none inspire our antipathy more and excite our curiosity less than the two classes of animals known to zoologists as batrachians and reptiles. On the part of those who have not made a scientific study of natural history, little or no distinction is made between these groups, and snakes, turtles, salamanders, lizards, toads, frogs, alligators and various other forms are all regarded as reptiles. Nor does this confusion seem strange when we consider how closely the members of the two groups resemble one another in outward form and habits. Indeed, it is only within comparatively recent times that zoologists have come to recognize the enormous difference between them and have universally agreed to regard the salamanders, toads and frogs as fundamentally different from the alligators, lizards, snakes and turtles. To the first group they have given the name *Batrachia* or *Amphibia* (*Batrachia* from the Greek word meaning a frog, *Amphibia* from two Greek words signifying both and life in reference to their amphibious habits), and to the second the name *Reptilia.*

It is the aim of the author in this paper to present, in the simplest manner possible, the differences between batrachians and reptiles, and to give some idea of the kinds of animals embraced in each. In a number of later articles the classification will be followed further and an account will be given of certain typical species to illustrate the life histories and habits of these extremely interesting but much neglected forms. In the case of every species of either batrachian or reptile much is to be learned, and only those whose excursions into nature's haunts bring them into actual contact with these animals can tell the scientist that which is so important for him to know, and it is hoped that the readers of FOREST AND STREAM will be stimulated to contribute to this ever-growing stock of knowledge.

The batrachians differ from the reptiles in several important respects. The skin of the former is usually smooth and moist, sometimes raised into warts, as in the common toad, but never covered with overlapping scales or regular plates. Scales or plates, such as are seen on snakes, lizards and turtles, are almost universal among the reptiles, the only notable exception among American species being in the case of the soft-shelled turtles. The soft skin of the batrachians is usually provided with glands, which supply an abundance of mucus, giving these animals a slimy covering, but in the reptiles such glands are not developed, and, except when wet with water, their skin is smooth, firm, and dry. The common expression, "a slimy reptile," is, therefore, without zoological foundation.

The life history of the members of the two groups is also very different. The batrachians almost always lay their eggs in the water, and the young spend the early days of their existence as tadpoles. At this period breathing is carried on by means of gills and in appearance and habits they are decidedly fish-like; legs are entirely absent or represented by the merest rudiments, and they swim about by means of their broad oar-like tails. After a time, usually a few days or weeks, their anatomy undergoes certain changes by which they come to resemble more closely the air breathing animals: legs are developed, the gills become much reduced in importance, and respiration is carried on in part, if not wholly, by means of lungs, except in the case of some of our common salamanders, which, after losing their gills, fail to develop lungs and apparently must extract their supply of oxygen from air which they take into their stomachs or by absorbing it through their skin. A few batrachians retain their gills life-long, breathing both by means of these and their lungs.

Batrachians, therefore, begin their lives as water-breathing animals and must pass through a metamorphosis before they are able to live on land.

Reptiles, on the contrary, are born alive or hatch from eggs which have been laid on land, and in either case do not pass through a metamorphosis, since at the moment of their coming into existence they have the general form of the adults. Gills are never developed, and from the beginning their respiration is carried on by means of lungs, as in the birds and mammals, but is much less active.

Beside these differences, which are for the most part external and apparent to anyone, there are a number of internal differences which show conclusively that batrachians and reptiles are not only very distinct, but that the relationship of living forms, at least, is very remote. The reptiles, by almost every point in their structure, show a close relationship to the birds, while the batrachians are more closely related to the fishes, and to a certain extent seem to establish a transitional link between that group and the reptiles.

Both groups are very old, having appeared upon the earth in the latter part of the palæozoic epoch, or, more strictly speaking, during the carboniferous period. During this time and the following two or three geological periods they flourished greatly, increasing both in number of species and individuals, and soon came to occupy the most important station among the animals of those ancient times. An examination of rock beds in various parts of the world has brought to light a large quantity of the remains of batrachians which in some cases were very much like our common salamanders in size and shape. Others were long, slender and snake-like, and still others, known as the *Labyrynthodonts,* were more like mammals in form, attained a length of six feet, and were protected by a thick armor of large bony plates or shields. In company with these and in other rock beds have been found many remains of reptiles which differ exceedingly from those species which are in existence to-day. Some of them were as perfectly fitted for a life in the water as are our whales or seals; others stalked about on land, while still others had wings much like a bat's, and flew about in the air. Most of them were of moderate size, but some were enormous and far exceeded any of our living reptiles. Of the forms adapted for a life in the water, the *Ichthyosaurians,* some reached a length of forty feet. The *Dinosaurs,* which, while fitted for a life on land, were to a certain extent amphibious in habits, in some cases reached a length of over eighty feet and a bulk as great as that of a whale. Many of them were armed with great spines and bucklers of bony plate and must have been the most terrible animals of all time. The *Pterodactyls,* or flying reptiles, were in most cases small, a foot or so in length, but some had a stretch of wing of twenty-five feet, and can therefore hold the palm as the largest flying animals that have ever lived. Our modern birds have undoubtedly developed from some of these flying reptiles by exchanging a coat of scales for a coat of feathers, and becoming even more perfectly adapted for a life in the air.

Our modern reptiles and batrachians came into existence rather early in the history of their groups, but have had their qualities so overshadowed by their more glorious relatives and by more perfect classes of animals which later appeared that they have come to occupy a station of comparative insignificance.

Of living batrachians, it is estimated that there are about 1,200 species, and, of this number, probably 120 inhabit North America exclusive of Mexico. These 120 species are divided into two great groups or "orders"—the *Caudata* containing the salamanders, and the *Salientia* containing frogs and toads, and we may pass at once to the consideration of these:

1. Salamanders, order *Caudata,* including all such batrachians as retain a tail throughout life. Limbs may be altogether absent but are usually developed, and the hinder pair is never much larger or stronger than the front pair. Here belong the "mud-eels" or sirens, and the "congo snakes" of the Southern States, long, slender, eel-like batrachians with diminutive legs; the large "mud-puppies" and "water-dogs" of more northern waters, short, stout and with well developed legs; also the forms commonly known as salamanders and newts, which are intermediate in character and more variable in appearance. In fact, all American batrachians which are unlike frogs in form may be regarded as *Caudata.*

2. Frogs and toads, order *Salientia,* including such batrachians as are destitute of a tail in adult life. Two pairs of limbs are always developed and of these the hinder pair is much larger and stronger than the front pair. No one can mistake a frog or toad for anything else if a moment's attention is given.

Both orders occur in all parts of the world embraced in the tropical and temperate zones wherever fresh water is obtainable. So far as the writer is aware no species of either frog or salamander inhabits the sea or even strongly brackish water, and the common conceit of the artists in associating these animals with others which are typically marine is a mistake. In the great fountain in front of the new Congressional Library at Washington, Neptune is represented with his horses in a sea inhabited by sea-serpents, sea-turtles and *frogs!*

The reptiles of the world, although far less conspicuous than in former days, are still well in evidence when it comes to making up the roll of animals. It is estimated that there are some 5,000 species in existence, and that of these, nearly 400 inhabit North America. Leaving extinct reptiles out of consideration we find that zoologists divide all the living species into four orders. Of these, one, the *Rhynchocephalia,* is represented by only one species, a large lizard-like animal which lives about New Zealand, and need not be further mentioned. The remaining three orders which are represented in North America are:

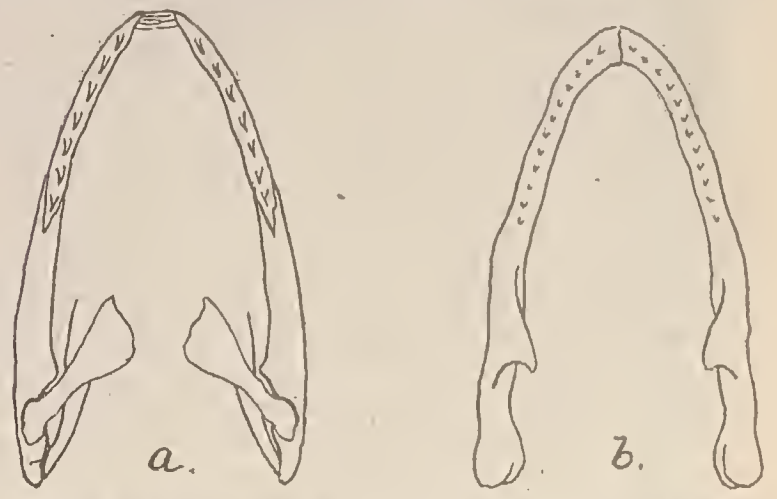
1. Order *Crocodilia,* including the crocodiles and alligators.
2. Order *Squamata,* including snakes and lizards.
3. Order *Chelonia,* including the turtles.

The order *Crocodilia* includes probably the largest living reptiles, and is confined to the tropical and semi-tropical regions of the earth. By crocodiles it is represented in both North and South America, in Asia and in Africa. Alligators occur only in North America and in eastern Asia. Another closely related animal known as the gavial occurs in southern Asia, and still another called the cayman lives only in Central and South America. All these forms are aquatic in their habits, have the teeth firmly implanted in sockets in the jaws, and the body is protected by a thick, heavy skin which along the back bears thick bony shields. The eyes have a vertical pupil and are protected both by lids and a thin membrane (nictitating membrane), which can be drawn across the eyeball from front to back. In the structure of the soft parts of their anatomy they present the highest type among living reptiles.

The order *Squamata,* in which most modern zoologists combine both lizards and snakes, is characterized by the possession of a covering composed of rather small overlapping scales instead of the large, plate-like scales of the *Crocodilia,* or the bony, box-like shell of the turtles. Lizards usually are provided with limbs by means of which they are able to move by walking or running, but there are some lizards which do not have a vestige of such appendages and move and act altogether like snakes. One may usually recognize the lizards, however, by the fact that they have eyelids, or if this character is wanting, by the fact that legs are present, or that the bones of the skull are firmly knitted together. This last character is most evident in the lower jaw, which in lizards has the two sides immovably joined in front at the "chin," but which in snakes are joined only by ligament, and can be moved independently of each other. In all our American lizards the tongue is not at all or only slightly notched in front, and does not present the slender, thread-like divisions as plainly in evidence in the snakes.

The snakes are to be regarded as very degenerate relatives of the lizards. They have entirely lost their legs, and eyelids are altogether wanting. The bones of the head, particularly those about the jaws, are to a great extent attached to one another only by ligaments, so that a much greater range of motion is possible than in any other reptile. The deeply forked tongue has been mentioned above.

Snakes and lizards are distributed very generally over the tropical and temperate zones of the entire world, being absent only from isolated islands which they have not yet been able to reach. The story of St. Patrick's famous campaign against the snakes of Ireland is well known, but it must be taken with a very liberal "grain of salt," for there is every reason to believe that Ireland lacked these animals from the beginning. The largest lizards reach a length of over six feet; the smallest is not more than two inches long. The largest snake must be carefully disentangled from the largest snake story, for, although there are numerous reports from all parts of the tropics of snakes from fifty to eighty feet long,



a, the lower jaw of a snake; *b,* the lower jaw of a lizard. Both as seen from above. In *a* are shown the quadrate bones, by means of which the snake's jaw is able to move back and forth.

the largest one which has been actually measured was less than thirty feet in length. A third of this length—or at most a half—would cover any species found within the United States.

The last order of reptiles—the *Chelonia,* or turtles—is too well known to require a definition or detailed description. Their form alone is characteristic. They are common inhabitants of forests, swamps, streams, lakes, and seas in all the warmer parts of the earth, and although they represent an order which has passed its prime, they still exist in numerous species. The largest ones are the great sea turtles, known as leather-backs, which attain a length of nearly seven feet and a weight of over half a ton. Among the land-inhabiting forms some of the species from the Galapagos Islands reach a length of about four feet. Among American species the alligator-snapper of the Southern swamps and streams is the largest, attaining a length of five feet, while the common "skill-pot" (*Kinosternon pennsylvanicum*), is the smallest, being usually less than five inches long.

With this introduction, we are now ready to look more carefully into the characteristics of some of our common species, description of which will be given in the following papers.

W. P. HAY.

Real and Sham Natural History.

Editor Forest and Stream:

That John Burroughs sees fit to disbelieve statements which other men have made in regard to nature is a matter of some moment to a good many men and women who enjoy reading about woods life and the life of the fields. To those who are just beginning to observe in themselves inclinations to turn toward nature as a study and recreation, it must come as something of a blow against the inclination to have so noted a man come forward to say that animals are moved by instinct alone, and know by instinct how to do everything of the wonders they do perform in the way of home-building and eluding enemies. There are minds that prefer mathematics, but history is far more interesting. With those who have already begun to observe birds or animals, the statement that true reason is not possessed by any of the "little brothers of the air," will quicken the perception, but to those not yet started, it must prove ardor-dampening.

Probably the last man in the nation to desire to check the growth of natural history observation would be Mr. Burroughs. His own fame rests on the fact that he has seen more in the fields than other men previous to or of his day. Other men, with his books in hand, can now go into the meadows and along the streams among the alder bushes and with quickened eyes see what Mr. Burroughs says to look for, and see other things unseen by their teacher, their eyes being clearer for the cobwebs brushed away by their precurser and trail blazer.

In "Signs and Seasons" Mr. Burroughs says: "One secret of success in observing nature is capacity to take a hint; a hair may show where a lion is hid." Still-hunters of deer know that this is true. In having a direct object in view, hunters necessarily learn more about their craft than mere dabblers, who wander afield and pick up forty facts about forty birds, flowers and insects, no two of them related. The hunter's knowledge is something more than a collection of trinkets. It is a means to an end, and embraces the "capacity to take a hint."

If one goes into the observation of nature with no object in view, it is ninety-nine chances to a hundred that he will drop out of the practice. His mind simply won't take the food offered—he must turn to collecting postage stamps, or uncut editions. But instinct will turn a man to nature—so with Mr. Burroughs. His mind needed facts about the field life—it would digest that sort of material along with the rest that it assimilated, so he became, of necessity, a great naturalist. And he observed many curious things, for his mind was built that way. Among others: "The jays, perhaps, had a tougher time during the winter than the crows, because they do not eat fish or flesh, but depend mainly upon nuts." ("Signs and Seasons," page 50.)

Now I never saw a blue jay eat a nut in my life, but only this winter I killed more than six that were eating a dead cat I had hung up on a sapling three rods from the lumber camp, where I was a watchman for two months. We call blue jays, butcher birds (shrikes), ruffed grouse, and other birds that eat meat and rob traps, "meat hawks." This is only to show that the instinct of my mind was to see blue jays eat meat, and that Mr. Burroughs was different, as might be expected.

Now here is a statement from page 56 of the same

book: "There is one thing the red squirrel knows unerringly that I do not (there are probably several other things), that is, on which side of the butternut the meat lies. He always gnaws through the shell so as to strike the kernel broadside, and thus easily extract it; while to my eyes there is no external mark or indication, in the form or appearance of the nut, as there is in the hickory nut, by which I can tell whether the edge or the side of the meat is toward me." A most interesting fact, from which one who has good ears might be led to suppose the squirrel used his ears as well as eyes on a butternut shuck.

True to his "Real and Sham Natural History," Mr. Burroughs speaks of the "provident instinct" in "Signs and Seasons," meaning the reason why squirrels and some birds gather crops of nuts. But quite contrary is the statement on the following page that "They (white-footed mice) evidently travel for adventure and to hear the news, as well as for food." Doubtless Mr. Thompson-Seton would say they had centers of news, as in the case of the dogs he told about. Perhaps he would even have drawn a picture of the grizzled old timer of white-footed mice growing reminiscent in regard to old days when white-foots were young and innocent, and were dissected in order to discover whether they really did have brains and convolutions or not.

Mr. Burroughs says of the white-feet: "When they cross an exposed place they do it hurriedly," for "they know that foxes and owls are about." Perchance, the old timer would shiver instinctively at the recollection of when the first white-footed mouse crossed such an opening and was swooped at by a hawk.

On page 60 Mr. Burroughs tells of meadow larks down in Pennsylvania one cold winter, half famished. The man fed them with grains and seeds, whereupon the birds ate heartily. Next day they came back, and again and again, "each time bringing one or more drooping and half-starved companions with them, till there was quite a flock of them." Just a case of plain instinct? Or did the birds talk to one another about the "graft" they were looking for and had found? On the last page of the essay on "Hard Fare" (61) Mr. Burroughs says of birds of various feathers flocking together in hard times, " 'I will look that way, too,' the kinglet and creeper probably said, when they saw the other birds busy, and heard their merry voices."

On page 67, speaking of orioles' nests and changes wrought in them by civilization, it says they build them long and gourd-shaped along the borders of woods in remote trees, but "in orchards and near dwellings it shortens it up in proportion as the danger lessens." An owl cannot reach young orioles in the bottom of a long nest, and near houses the danger presumably lessens from owls. To suppose the oriole had learned something about the habits of owls—had gone into the study of natural history—might be far-fetched. It might be even farther fetched to guess that birds stand around houses of men to see how much grub is carried home to the human young—just fancy a congregation of students of humanity gathering in a back orchard discussing the habits of humanity, more especially the instincts of the young egg collectors.

Mr. Burroughs says (page 69) that female birds on their nests are sometimes exposed to the merciless sun. "In such an emergency the male robin has been known to perch above the sitting female and shade her with his outstretched wings." What can one say of an action like that? What more could a man do for his sweetheart? How did the robin know his mate was suffering, and how that shade would be a relief, and how that his own body would cast a shadow? Instinct?

To go through Mr. Burroughs's books and select therefrom the incidents of which he tells and says he witnessed for the purpose of proving that birds reason and reckon, would be a pleasure, and is a pleasure to one who likes to think that birds do learn from experience, that they do reason matters out. On page 137 of "Signs and Seasons" is the story of a woodpecker that drilled a hole so as to let the cold and air into the hiding place of another woodpecker for the purpose of driving her from the neighborhood—and what more remarkable than the case of the caged canary (page 204) which tried to feed her eggs! Surely this was uneducated instinct!

To kind of ease the friction between the disputants who think and do not think animals are instinctive and reasoning, I would suggest that they meet each other half way and say they are both. And also, when some one man comes before the public with remarkable stories of bird or mammal life, that we ought to be charitable toward him. Mr. Burroughs, I am sure, would be greatly relieved to know that Mr. Thompson-Seton did really see Two Spot do remarkable stunts, as described. If Mr. Burroughs were to consider that the birds he had seen were mere frontiersmen, very poorly educated, and that Mr. Thompson-Seton had by chance been dropped in the center of ornithological and zoological culture far from Mr. Burroughs's ignorant subjects of observation, perhaps the matter could be adjusted to mutual satisfaction. Of course, anyone can readly see that where foxes are unusually bright the rabbits have to be so to live. So, too, with partridges and deer, and all things. Its like the old woman with the pig that wouldn't cross the bridge—until the cat began to eat the rat, the rat wouldn't gnaw the rope, the rope wouldn't hang the man, the man wouldn't whip the butcher, etc., etc., etc. A good hound in a fox country will liven up the foxes, the foxes will liven up the rabbits, the partridges, the skunks will liven up the mice, small birds—when the prey gets lively, the hunters have to quicken, and vice versa—first thing you know the creatures know everything that is necessary.

It stands to reason that in a country where there was a wolf like the King of Curumpaw, everything just had to get intellects or go dead. We can thank that king wolf for all the wise things Mr. Thompson-Seton has seen wild creatures do. He just happened, that wolf did, and all the rest came perforce.

RAYMOND S. SPEARS.

NORTHWOOD, N. Y.

The Italian and the Birds.

Robert O. Morris in the Springfield Republican.

ACCORDING to the census of 1900, there were residing within the State of Massachusetts 28,785 persons who were born in Italy. Of this number, 19,034 were males, most of whom are now old enough to use a gun. Since that year the Italian residents of this State have greatly increased, and during the month of February last nearly 1,700 people of this nationality arrived at Boston, exceeding in numbers that of all other races together. About 1880 the immigration of Italians to this country began, at least before that time there were an insignificant few here. At first they settled only in the cities, but now they are spreading out over the whole of the State, and in a few years will probably have so increased that they will do a great share of the manual outdoor labor. They are a frugal, industrious race, and as a rule do not belong to the criminal class, there being rarely any serious charge against them other than for assaults growing out of quarrels among themselves. The children in the schools are well behaved, bright and quick to learn. Many of the grandchildren of these immigrants will graduate from Harvard and Yale. In Massachusetts there are free to their use fine public schools, and they have an easy path to a higher education, if the ambition of any child leads him in that direction. If any of them are in destitute circumstances or fall ill in mind or body, they are tenderly taken care of, and, if necessary, when they become infirm from age, are well provided for at the public charge, and in no other State or country would they receive better treatment.

With all these things freely given them, it would seem fair that they should obey the laws of the Commonwealth. With the first money that an Italian saves, after coming here, he buys a cheap gun, and then takes to the fields and is apt to try to kill every wild bird and animal that he sees, including game in and out of season. Once I examined the contents of a bag that one of a party of three Italian gunners carried, and found nearly fifty birds, including two or three quails, which at that season were unlawfully taken, and among the song birds that constituted the greater portion of what the bag contained were several chickadees, a bird that with its feathers off is not much larger than an English walnut. From many sources I have learned that Italians are in the habit of killing and eating chickadees and all other song birds, and for this purpose will snatch the young from their nests before they can fly.

From early days in Massachusetts one of the most destructive enemies to orchards and certain kinds of shade trees has been found to be the canker or measuring worm, which feeds upon the leaves. Sometimes in June orchards will be found entirely stripped of foliage by these pests. There are two varieties of these worms, which are similar in appearance and habits, both being destructive to vegetation. One kind emerges from the ground in the spring and the other in fall. They are then in the shape of moths. The female is without wings, and she crawls up the trees and deposits her eggs, which hatch out in the shape of caterpillars, ready to consume the leaves of the trees. Nature has developed an enemy to this destructive insect, which has done much to check their ravages, and this is the chickadee. These birds are with us the whole of the year, even during the coldest weather, and are free from any faults toward man. They feed largely upon the female moth of the canker worm and their eggs. In the stomachs of four chickadees E. H. Forbush, ornithologist for the Massachusetts Board of Agriculture, found 1,028 eggs of this destructive insect, and has estimated that one chickadee in twenty-five days would destroy 138,750 of these eggs, that, if incubation was successful, would have hatched out into that number of canker worms in the caterpillar stage, ready to feed on the leaves of the trees. Now, this valuable bird never had in this State an enemy in man until the Italians arrived. The Indians knew something of the value of birds as insect destroyers, and placed gourds around their wigwams for martins to occupy, so that they would feed upon the flies that annoyed them. The first white settlers or their descendants have not killed the chickadee, but early spoke of their usefulness; neither have the representatives of the Irish, German or French races that have established their homes here.

It does seem that these little birds should be strictly protected. They have rendered as great service to the State in destroying the canker worm as did the commission which, at an expense of more than a million dollars, attempted to exterminate the gypsy moth.

ROBERT O. MORRIS.

An Owl's Flight for Life.

WHILE the whaleback steamer Forest Castle, from Liverpool, was off the Newfoundland banks, an owl as white as snow fell exhausted on the deck.

The owl made a desperate flight from an iceberg to the ship. It was "dead beat" when it floundered abroad, and without a great deal of trouble was made prisoner.

The sailors were utterly astonished at the arrival of the passenger. Some one saw the peculiar object coming laboriously through the air, making a line fly for the whaleback. Away off on the horizon line was a great iceberg, which had worked its way further south than these terrors of the northern sea are wont to do.

When the "berg" parted company with the icefield of the far north it probably carried with it the owl, which clung to its raft of crystal until flight was useless, a stretch of open sea forming a barrier over which the bird did not dare attempt flight. Like a sensible owl, it held to the refuge in sight, hoping for a better one by and by.

When the Britisher Forest Castle appeared on the horizon the bird made its one last dash for life. It was probably half starved and ill prepared for such a long chase—a stern chase, too—for the vessel, well to the south, was also plying steadily in that direction. However, the race was won by the owl.—Philadelphia Press.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

The President in the Park.

PRESIDENT ROOSEVELT concluded his exploring and camping visit to the Yellowstone National Park on April 24. His companions in the Park were Major Pitcher, the Acting Superintendent, and John Burroughs. Billy Hofer, who in years past has guided Mr. Roosevelt in the Park, was with the party, and by his familiarity with the country, the natural phenomena and its wild animal ways, added much to the President's enjoyment of the trip. On April 24 the cornerstone of the new gate was laid. We take from the New York Times this report of the President's participation in the affair:

GARDINER, Montana, April 24.—President Roosevelt this afternoon resumed his tour, going to Livingston from here. Before going, however, he participated in the laying of the cornerstone of the new gate at the northern entrance to Yellowstone Park. The ceremony was performed according to the Masonic ritual, and was in charge of the grand officers of the State of Montana. Special trains brought hundreds of people here, including a large body of Masons, and as the weather was perfect, the scene was a very pretty one.

The President rode down from the post, accompanied by Major Pitcher, and was escorted to the gaily decorated stand where he delivered an address. Troops B and C of the Third Cavalry, from Fort Yellowstone, were drawn up in front of the stand as a guard of honor. Frank Smith, Grand Master, conducted the services, assisted by Deputy Grand Master Sol Hapner, and Grand Senior Warden Lew Calloway. The President, on behalf of the Masons of the State, was presented with a Masonic charm, mounted on a nugget of Montana gold. There were placed in the cornerstone a photograph of Mr. Roosevelt, a number of coins, copies of newspapers and some Masonic emblems.

The President began his address by thanking the people and the soldiers for his enjoyable two weeks' holiday, and then spoke of the natural wonders of the Park.

"The Yellowstone Park," he said, "is something unique in this world, as far as I know. Nowhere else in any civilized country is there to be found such a tract of veritable wonderland, made accessible to all visitors, where at the same time not only the scenery of the wilderness, but the wild creatures of the Park are scrupulously preserved as they are here, the only change being that these same wild creatures have been so carefully protected as to show literally astounding tameness. The creation and preservation of such a natural playground in the midst of our people, as a whole, is a credit to the Nation, but, above all, a credit to Montana, Wyoming and Idaho. It has been preserved with wise foresight.

"The scheme of its preservation is noteworthy in its essential democracy. This Park was created and now is administered for the benefit and enjoyment of the people. The Government must continue to appropriate for it, and especially in the direction of completing and perfecting an excellent system of driveways. The only way that the people, as a whole, can secure to themselves and their children the enjoyment in perpetuity of which the Yellowstone Park has to give, is by assuming ownership in the name of the Nation and by jealously safeguarding and preserving the scenery, the forests and the creatures.

"At present, it is rather singular that a greater number of people come from Europe to see it than come from our own Eastern States to see it. The people near by seem to be awake to its beauties, and I hope that more and more of our people who dwell far off will appreciate its really marvelous character. Incidentally, I should like to point out that some time people will awake to the fact that the Park has special beauties to be seen in the winter, and any person who can go through it in that season on skis will enjoy himself as he scarcely could elsewhere. I wish especially to congratulate the people of Montana, Wyoming and Idaho, and notably you of Gardiner and Cinnabar, and the immediate outskirts of the Park, for the way in which you heartily co-operate with the Superintendent to prevent acts of vandalism and destruction.

"The preservation of the forests is, of course, the matter of prime importance in every preserve of this character. In this region of the Rocky Mountains and the great plains the problem of the water supply is the most important part of the homemaker's office. Congress has not in recent years done anything more important than passing the Irrigation Bill, and nothing is more essential to the preservation of the water supply than the preservation of the forests. Montana has in its water power a source of development which has hardly been touched. This water power will be seriously impaired if ample protection is not given the forests. Therefore, this Park, like the forest reserves generally, is of the utmost advantage to the country around from the merely utilitarian side.

"But, of course, this Park also because of its peculiar features, is to be reserved as a beautiful playground. Here all the wild creatures of the old days are being preserved, and their overflow into the surrounding country, means that the people of the surrounding country, so long as they see that the laws are observed by all, will be able to insure to themselves and to their children and to their children's children, much of the old-time pleasure of the hardy life of the wilderness and of the hunter in the wilderness. I have been literally astounded at the enormous quantities of elk and at the number of deer, antelope and mountain sheep which I have seen on their wintering ground, and the deer and sheep in particular are quite as tame as range stock.

"A few buffalo are being preserved. I wish very

much that the Government could provide somewhere for an experimental breeding station of cross breeds between buffalo and the common cattle. If these cross breeds could be successfully perpetuated we could have animals which would produce a robe quite as good as the old buffalo robe with which twenty years ago every one was familiar, and animals moreover which would be so hardy that I think they would have a distinct commercial importance. They would, for instance, be admirably suited for Alaska Territory, which I look to see develop astoundingly within the next decade or two, not only because of its furs and fisheries, but because of its agricultural and pastoral possibilities."

Nebraska Fields and Streams.

AT last the dreaded Legislature has reached the end of its tether, and the shooters and the fisher again breathe easy. I use the term dreaded because in Nebraska the people, especially sportsmen, are so accustomed to having obnoxious legislation thrust upon them that they are always happy when the lawmakers' prerogatives cease. This session, notwithstanding the voluminous quantity of idiotic bills pertaining to fish and game that were laid before this august body, nothing was done with any of them, save the passage of the one prohibiting live bird trapshooting and the one repealing the wolf and coyote scalp bounty law. The great solons were too busy boosting the cause of the monopolies and railroads to commit any blunders with other measures, especially those appertaining to such inconsequential matters as our game and fish.

This spring, above all others, for a period of a dozen years or more, has been notable for its extraordinary flight of migratory birds. More wild fowl passed over the Nebraska fly-ways—up the Missouri and the Loup and across the sandhills—than for four or five years last past combined, and jacksnipe have not been so wonderfully abundant for a time much longer back. Heavy bags of the latter incomparable bird have been the rule on all the well known adjacent grounds, and for that matter they were killed by the hundreds up to as late as April 25, both in this State and Iowa. While the open season closed in Nebraska on April 15, Iowa gives no legal protection at all to this choicest and grandest little game bird of them all. Woodcock are next to extinct out here. Thus, you see, it is an easy matter for conscienceless gunners to kill birds on this side of the river, and claim that they got them on the other. At that I think April 15 is too early to close the season in Nebraska. So far as ducks and geese are concerned, this date is eminently the thing, although, along with the jacks, the bluewing teal have barely reached this far north on their polar pilgrimage, and by the time the main issue arrives the season is closed. But there is little call for further comment. The law says we cannot shoot either ducks or snipe any more until Sept. 1 next, and the gunner might just as well lay aside his hammerless till that sweet, far-sounding, deceptive tinkling triplet "tur-wee-tle! tur-wee-tle!" of the upland plover falls from the evening sky. And that will not be long. With the punctuality of Time itself it happens out here—the favorite haunt of this splendid game bird—along about the time the fluffy plume of the golden-rod—July 10 to 15—begins to flame here, there and everywhere over pasture land and plain.

Of course, the Omaha and Dickey Bird gun clubs have mapped out a lively summer campaign, and there will be no lack of this quieter sport. Both organizations will hold their regular weekly shoots—the Omahas on Saturdays, and the Dickies on Sundays—on the former club's handsomely appointed grounds at the other end of the Big Bridge. This park is still under the management of Henry McDonald, and this is a sufficient guaranty that they will continue to be conducted on a plan to suit the greatest number.

The water in the rivers, streams and lakes is now too high and too roily to insure good fishing, and it cannot be expected until both of these conditions are considerably improved. After such a widespread overflow as we have experienced throughout this State, the best fishing will be much delayed this year.

It may be a little venturesome to mention trout when descanting on the subject of Nebraska angling, but I hardly think so, now that there is plenty of good sport to be found on these much-prized fishes in a dozen Nebraska streams, and when hundreds of Omaha fishermen make frequent trips, both up into Minnesota and to the mountains. Fifteen years ago if a man dared mention trout fishing in Nebraska he would have been laughed at, but not so to-day, when, in season, as big baskets, almost, of both speckled and rainbow, are taken from the picturesque Long Pine, the Verdi Gris, Boardman, Niobrara and Slagle, as well as from a number of more insignificant streams, as result from long journeys to the so-called natural habitats of these finny morceaux. In the course of a few more years with our fishcultural affairs properly and competently managed, we will have them in still greater quantities, and the sport will be more economical and readier of access.

Until recent years I have not been a very hopeful or energetic advocate of trout propagation in Nebraska. I always thought the fundamental principle, the most necessary element to their thrift, was largely missing, and that black bass, wall-eyed pike, pickerel, croppie and sunfish were much better adapted to our waters as well as to our wants. I am convinced now that I was wrong and that the propagation of this priceless denizen of cool, running streams and pure watered lakes, right here in our own resourceful State, is an excellent thing, and the more we have of it under favorable conditions and intelligent and honest handling the better we will be off.

Under no circumstances should persons who receive fish from the State hatcheries at South Bend be allowed to create preserves to whose waters access is denied the public. No man or set of men should have a monopoly of either stream, lake or private pond stocked by the State.

Mart Diefenderfer, of Wood River, Neb., who won the last Grand American Handicap at Kansas City on targets, is a hardware merchant, a man of family, about 38 years of age, and the pride of the thriving little city in which he resides. Diefenderfer is a modest fellow and takes up trapshooting purely as a recreation, and while he has only participated in two of the State's tournaments during the past year, the Omaha shooters have long rated him among the topnotchers. His winning handicap score of 84, he has beaten scores of times.

Frank Crabill and R. Lorenzen, of Atlantic, Ia., and Sam Richards, of Missouri Valley, were on the bottoms northeast of the latter place, Thursday, the 23d, and bagged 191 jacksnipe, Crabill, an old Nebraska shot, killing 143 himself. John Hardin and G. W. Scribner, on the same day, at Percival, Ia., killed 87 jacks and 19 bluewing teal. At Highlands Con Young bagged 57 and J. H. Dumont 39.

Tom J. Foley is one of Omaha's best shots, both with rifle and shotgun, as well as an extremely all round popular sportsman, and an expert bass caster. In a day or so he leaves with a party of Milwaukee friends for a ten days' stay at Pat Sheehan's Red Squirrel's Nest, at Lake Washington, Minn., which for years has been the mecca for Omaha fishermen. When Tom gets on the lake old *Salmoides micropterus* must be on the qui vive, indeed, for there is no more persistent, strategic and successful foeman of this royal fish than this self-same Tom J. As a fisherman and hunter he comes as near wearing the crown among local sportsmen. He not only understands thoroughly the region and the habits of its every bird, fish and animal, but is full of resources in the quest of the same. He handles the gun and rod and oar with equal skill and teaches his lore with cheerful patience. He has laid the whole western country under tribute. He has shot on every marsh, in every field and in every woods, while his fatal hook is familiar with every buoy spot in every lake, and the mouths and eddies and rapids of every stream, not only in the State but over the whole West. Recently, while out in the sandhills, Tom killed a killdeer on the wing with a Winchester rifle at a distance of nearly 150 yards, and to-day among the sandhillers he is the greatest whatever.

SANDY GRISWOLD.

OMAHA, Neb, April 24.

April 24.—The arrest of Rev. Robert E. Lee Craig, rector of Trinity Cathedral, Omaha's swell Episcopal church, out in Thomas county yesterday afternoon for shooting meadowlarks, has created a profound sensation here. About a week ago Rev. Craig, panoplied with an improved hammerless ejector and a case of shells, went out to Thedford for a ten days' vacation. Thedford is a small hamlet of some four or five hundred souls and adjacent to both good chicken and ducking grounds, but it couldn't have been that the minister was after these birds, as it is the close season on both, and just what species of game he was after was a mystery up to 4 o'clock yesterday afternoon when the intelligence of his arrest for killing meadow larks flashed over the wires, and all doubt was removed. It seems that Mr. Craig hired a guide in the village and sallied forth out on to the broad prairie to try his new hammerless. No ostriches, emus, pterodactyls, osmateriums or other lawful birds flushing, this eminent gentlemen of the cloth turned his attention to the tuneful and yellow vested meadow lark, bagging twenty-two of these beautiful birds in about two hours' shooting.

The clergyman's success with his new Parker would probably never have been divulged to the world, had not the sheriff of the county, on a subpœna-serving pilgrimage, happened his way. Hearing the fusilade off over the plain this conscientious limb of the law, knowing that the ducks had all flown north, and that the chickens were exempt from molestation, tied his Rosinante and started out to investigate. He came upon the Omaha minister just as he had made what he called a neat quartering shot on a noisy cock lark, whose choppy flight was doubtlessly slowed by his amorous interest in numerous lady larks who were twittering seductively all around him, and the shot was no great shakes after all. The sheriff strode up to him, asked his name, and forthwith, without further parley or controversy, placed him under arrest. He was taken before the justice at Thedford, and after a brief examination, which, among other things, revealed twenty-two dead meadow larks in his game bag, he was bound over to the district court. Prior to the hearing before the justice, however, Mr. Craig, so says the telegram, was jammed into the rural bastile, but was only kept there for a few brief moments when he was escorted to the halls of justice. S. G.

The New Jersey Commission.

GOVERNOR MURPHY has appointed David P. McClellan, of Morristown, to fill the vacancy in the State Board of Fish and Game Commissioners caused by the resignation of Howard P. Frothingham. Mr. McClellan is a dry goods dealer in Morristown. When a vacancy occurred in the board during the incumbency of Governor Griggs the latter decided that the law was very plain on the subject of filling vacancies, and that it could not be done excepting with the concurrence of the Senate. Governor Voorhees said this was all nonsense, and made an appointment while the Senate was not in session. Governor Murphy went Voorhees one better and made an appointment after waiting until the Senate had adjourned.

Commissioner William A. Halsey, who at the last meeting of the board was elected president, agreed to accept the office only temporarily. Mr. Halsey thinks he has done his duty by the sportsmen of the State by serving five years, and he intends to resign next month both as president and member of the Commission.

Query: Had the appointment of a dry goods dealer to the Fish and Game Commission any connection with the recent distribution of calico bass in the waters of this State?—Paterson Chronicle.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

CHICAGO AND THE WEST.

Shooting Season Over.

CHICAGO, Ill., April 24.—We may as well call the shooting season done, since it legally ends to-morrow and has sportsmanly ended before this. A review of the spring results show that the duck shooting was up to the average and fully as good as it was last year, although the high waters scattered the birds very much and likewise scattered the shooters. Mr. Harry Thomas, of this city, spent considerable time down at Water Valley on the Kankakee, and for a considerable time had no difficulty in making the limit of twenty-four birds daily. He shot mostly mallards and had a rattling good time for many days; about the best sport I heard of.

The jacksnipe season is not over in any way except legally. We will have another small flight of jacks without any doubt. Considerable numbers have been killed here and there within the past two weeks, but I cannot call the snipe season a very good one, no very great bags having been made. Thus Mr. C. C. Hess, who shoots at Goose Lake Club on the Kankakee, says that none of his friends in that club has succeeded in getting a good bag of jacks this spring, although they are near to very good grounds.

Minnesota Law.

The Minnesota Legislature appropriated $38,000 for the use of the State Fish and Game Commission during the coming year, an increase of a large figure over last year's appropriation. The open seasons are not changed to any great extent. A full copy of the law is not yet at hand, but it is thought to have been duly signed, sealed and delivered. Agent Fullerton has not yet expressed his opinion on the law under which he is to work during the coming year.

The "Forest and Stream" Family.

It is a good family, this of the FOREST AND STREAM. Thus my friend Powel, of Taylorville, who was down in Mississippi on a little business trip this week, writes as below: "I had a nice time with Mr. Speers and Fincher Bobo. I met a very pleasant young man on the train near Clarksdale, Miss., and I spoke of the pleasure I had had in reading the writings of 'Coahoma' in the FOREST AND STREAM. He told me that he was 'Tripod,' and that 'Coahoma' was his father. At once we were brothers in the FOREST AND STREAM family."

From California.

Mr. R. N. Stites returned this week from his long trip on the Pacific Coast. As mentioned in these columns, Mr. Stites stopped for a time at San Antonio, Texas, where I met him in January. He went the customary pace in California, seeing the glorious climate and not so glorious hotels, but does not speak very glowingly of the sport which he encountered. He speaks of seeing very many quail, but the season was over at the time of his arrival. Duck shooting in the lower portion of California he reports to be at times very fine. Part of his time was passed at the Santa Catalina Islands, and he did his share toward the extermination of the goats which have given that district something more than a local fame. It seems to be the customary thing to go out and kill these once harmless but now somewhat shy and wary animals. Mr. Stites says the intention is to exterminate all the goats, and that the tourists certainly do their part toward that end to the best of my ability. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The Legislature as a Creator.

LEGISLATURES have at times undertaken to do all sorts of things, but it remained for the Legislature of New Jersey at its last session to usurp the functions of the Creator by making an altogether new bird. The effect of the action of the Legislature in arrogating to itself the powers of Providence will be watched for with some interest.

The Legislature passed an act making it a penal offense to kill any kind of birds, with certain exceptions; in the list of these exceptions is to be found a bird referred to in the statute as the "sharp-skinned" hawk. Presuming that there might be some mistake about it and that the Legislature did not have the hardihood of creating a new bird, The Chronicle procured a certified copy of the law and this is at present in this office with the certificate of the Secretary of State and the big seal of the State attached to it as an attestment that the law is really a portion of the statutes of the State. There it is as plain as English letters can make it, providing that "sharp-skinned" hawks may be killed in New Jersey. Every farmer's boy knows what the sharp-shinned hawk is, and ornithologists give the bird a pretty bad name; in fact, nothing can be said in favor of the sharp-shinned hawk, and we shall probably not know what it is good for until it has been exterminated, and then we shall probably find out that it was an important factor in the economy of nature.

But a "sharp-skinned" hawk is something new alike to farmers, farmers' boys and ornithologists, but there it is, a bird of New Jersey created by legislative enactment. The courts of this State have repeatedly declared that all penal statutes must be construed literally, and consequently by no process known to law can a "sharp-skinned" hawk be turned into the sharp-shinned bird of the same family.

If it were not for the hyphen between the words "sharp" and "skinned" the matter might perhaps be explained. Of course all hawks are sharp, in the ordinary acceptation of that term, but we have never known of hawks being skinned and then flying about. No matter how pleasant such a state of undress might be on sultry summer days, it is something new in ornithology. That skinned hawks of all kinds should be legitimate prey for the gunner is perhaps correct from a standpoint of ordinary decency, and so the Legislature can hardly be blamed for placing such birds in the category of birds that may be killed at all times. We should certainly like to see a bird of that kind, and there is no doubt that every ornithological museum in the country is ready to

pay a high price for a specimen of this new product of legislation.

This is not the first time that the Legislature has dipped into the realms of science. Among the fishes which make thier summer homes in the lower Delaware there are two kinds of sturgeon and also a fish called the mammoose, which somewhat resembles a sturgeon. For many years the mammoose was popularly regarded as being the young of the long-nosed sturgeon, but scientists investigated the matter and declared that it was an altogether different kind of fish. This aroused the ire of the Legislature, and in 1891 the Legislature passed an act declaring that mammoose are young sturgeon. Since that time mammoose has been a distinct species of fish all over the world, with the exception of the State of New Jersey, where it is a young sturgeon, although it never develops into an old sturgeon. Now, if the Legislature can make a young fish of one species out of an old one of an altogether different species, there is no reason why it should not add to the numbers of birds frequenting the State a "sharp-skinned" hawk, no matter if no such bird never had an existence before.—Paterson (N. J.) Chronicle.

Connecticut Spring Shooting.

BRIDGEPORT, Conn., April 25.—*Editor Forest and Stream:* Your remarks on the action of the Connecticut Legislature in passing a bill extending for a month the time during which ducks may be shot in this State have the approval, I believe, of nine-tenths of the sportsmen of the State. It is true that we all wonder at the action of the Legislature, and at the statement by the Governor that the bill is to become a law; but what we wonder at most of all is the action of the Legislative Committee on Fish and Game, which recommended the passage of this act.

It is an open secret now that the matter was carried through simply the efforts of a few men living at points along the shore of Long Island Sound, who were cunning enough and found help enough among the members of the Committee on Fish and Game, to carry through their plans by secret methods.

Since the passage by the Legislature and the signature by the Governor of New York State, of the law prohibiting spring shooting there, the action of the Connecticut Legislature and of Gov. Chamberlain becomes more than ever absurd. As things stand now, ducks swimming in the waters of Long Island Sound on the shores of Long Island are protected, but if by chance these unlucky birds shall spread their wings and fly a few miles to the northward, then let them look out. The rapacious Connecticut gunner will be after them and kill them.

The action of the Connecticut Legislature and authorities in this matter is a direct slap in the face to the better class of sportsmen, and leaves our State in a shameful position between New York on the one side and Massachusetts on the other. The sportsmen of the State hardly feel responsible; yet they cannot deny that they have been tricked and swindled by their representatives, nor can they deny that they ought to have kept a sharper watch on these representatives and to have seen what they were doing. I venture to say that if that good sportsman and earnest game protector, A. C. Collins, were alive to-day, the stigma which now rests on the fair fame of our State would not attach to it.

I cordially agree with Mr. Avis in last week's FOREST AND STREAM when he says that the sportsmen of the State ought to make their feelings known in this matter. The Governor should be written to and told how the real gunners of the State feel. There is no doubt in my mind as to what the sentiment is, and I believe that from Stamford east along the Long Island shore the sentiment against the present change of the law is practically unanimous.

If the sportsmen of the State—of whom I claim to be one—do not show very plainly how they feel about this matter, then they deserve to rest under the burden of this bad bill and cannot escape a certain amount of responsibility for it. BRIDGEPORT.

The Plank in Arkansas.

Editor Forest and Stream:

LITTLE ROCK, Ark., April 22.—I inclose you copy of the new game law just enacted, from which you will see that Arkansas, as well as Texas, has gotten squarely on the FOREST AND STREAM platform. And none too soon, either, for the pot-hunter was getting in his work in great shape, and game was getting to be one of the things that were. The non-resident hunter has been a burning question in this Legislature, for they have been coming in by the hundreds and staying all winter, and in many instances have bought up the large lakes and kept the natives out. The last, I suppose, is inevitable under present circumstances, but the native don't like it all the same. There are a number of laws proposed on the subject, and at present I cannot tell what will be done. When it crystallizes into action I will let you know. But certainly the present Whitley law is a great advance in the way of game protection, and one that would not have been considered two years ago. In fact, two years ago we could not get our non-export law re-enacted.

Every embryo statesman was hunting trusts and combinations then and did not have time to come out of the skies and protect game. May be in two years more we can get a decent fish law. We passed a good one through the Senate but the House killed it. It is time to protect the fish, for I find that streams that a few years ago furnished good sport are now played out, and the same applies to the lakes. But the present law shows that the world do move, and may be it will move some more some day. J. M. ROSE.

[The anti-sale law is printed on our editorial page.]

"And now that you have finished college, what are you going to do?" asked a friend of the youthful candidate.

"I shall study medicine," was the grave reply of the young man.

"But isn't that profession already overcrowded?" asked the friend.

"Possibly it is," said the knowing youth, "but I propose to study medicine just the same, and those who are already in the profession will have to take their chances."—Stray Stories.

The Game Park Question.

ST. AUGUSTINE, April 18.—*Editor Forest and Stream:* I send you an item from the New York Times of April 17 for the calm consideration of your contributors who denounce me for the stand I have taken against game "preserves" of unnecessarily great extent. There is a right and a wrong side to this question, and they are free to take either without disturbing my equanimity in the least. The Times' correspondent, writing from Pittsburg under date of April 16, says: "Buckwood Park, owned by C. C. Worthington, of New York, has lost nearly fifty deer from starvation. The park is near Shawnee, this county. So rapidly have the deer increased there that early in the winter they ate up all the food they could find. Keepers have put out food in different parts of the Worthington preserves, but they are so extensive that in some parts the food was not found by the deer."

If the way to preserve an animal is to kill it, then Buckwood Park is a game preserve, but I am not able to see it in that light, and I still hold to my old-fogy notion that no one has the right to violate the laws of humanity by inclosing more of this free country than he can properly control. If a poor man starves an animal to death the humane society pounces on him, but here is a millionaire who can laugh at them, because their penalties are of no account to him. If nearly fifty deer were penned up and forced to die of starvation the number that suffered up to the verge of death must have been too great to think of calmly. If the owner of that park is rich enough to inclose a township he is rich enough to put a sufficient quantity of hay throughout his vast domains to save the animals from starvation.

In the plain language of truthful James, if Mr. C. C. W. cannot feed his deer he has no right to keep them.

DIDYMUS.

Game and Fish at Albany.

ALBANY, April 25.—An examination of the records of the Legislature, whose labors have just been completed, shows more real good accomplished in the interests of sportsmen than might reasonably have been expected, in view of the number of worthless game law amendments offered during the session. More measures designed to change the fish and game law were introduced than a year ago, and more were passed and sent to the Governor. In the latter category are some bills from which the executive should withhold approval. A majority of them are considered not undesirable, however, while several are regarded as eminently proper. It is known that the State Forest, Fish and Game Commission is rather gratified than otherwise over the results of the session, in that more good bills than bad ones managed to get to the Governor.

Thus far the following game law amendments have been signed by Governor Odell:

Assemblyman Reeve's (Int. No. 182), relating to the close season for trout on Long Island.

Assemblyman Bridgeman's (Int. No. 479), in relation to spearing fish in the creeks of Otsego and Orleans counties.

Assemblyman Doughty's (Int. No. 613), relating to the taking of pheasants.

Assemblyman McNair's (Int. No. 549), in relation to the close season for squirrels.

Assemblyman Fowler's (Int. No. 116), for the protection of fish in Chautauqua Lake.

Assemblyman Whitney's (Int. No. 986), in relation to fishing in Saratoga Lake and Lake Lonely.

Assemblyman Cowan's (Int. No. 328), prohibiting the taking of trout and game in Delaware, Ulster and Sullivan counties for the purpose of selling the same.

Senator Fancher's (Int. No. 187), in relation to pickerel, and pike, and nets in Lake Erie.

Senator Bailey's (Pr. No. Assembly, 1485), relating to the powers of supervisors in Queens, Nassau and Suffolk counties.

Senator Elon R. Brown's (Pr. No. Assembly, 2068), prohibiting spring shooting.

Senator Malby's (Int. No. 179), relative to fishing in Black Lake, St. Lawrence county.

Assemblyman Denison's (Pr. No. Senate, 728), relative to the close season for wild deer.

Senator Armstrong's (Int. No. 303), relative to the close season for quail.

Senator Armstrong's (Pr. No. 1700, Assembly), relative to the destruction of illegal devices.

In addition to the foregoing bills, which passed the Legislature and are now laws, the following also passed both branches and are before the Governor awaiting his action:

Senator Armstrong's (Int. No. 305), relative to the close season for grouse in the counties of Ulster, Sullivan, Greene and Orange.

Senator Armstrong's (Pr. No. 2080, Assembly), relative to the sale of grouse and woodcock.

Senator Armstrong's (Int. No. 309), defining the powers of game protectors in various counties of the State.

Senator W. L. Brown's (Int. No. 365), providing for the publication of the forest, fish and game laws, as amended.

Senator Gates' (Int. No. 778), relative to information concerning leases and franchises for the cultivation of shell fish.

Senator Goodsell's (Int. No. 261), relative to fishing through the ice with tip-ups in Orange and Rockland counties.

Assemblyman Bedell's (Int. No. 427), relative to the close season for certain quadrupeds and birds in Orange county.

Assemblyman Burnett's (Int. No. 199), in relation to taking fish in Canandaigua Lake.

Assemblyman Doughty's, (Int. No. 266), legalizing and confirming leases for the cultivation of shell fish, heretofore executed by the State authorities.

Assemblyman Hubbs' (Int. No. 1029), relative to the transportation of fish.

Assemblyman McCormack's (Int. No. 1274), relative to game in Richmond county.

Assemblyman Nichols' (Int. No. 694), relative to the taking of woodcock.

Assemblyman Nichols', (Int. No. 1281), in relation to spearing fish in certain towns of Greene county.

Assemblyman Palmer's (Int. No. 541), relative to the close season for quail in Schoharie county.

Assemblyman Reynolds' (Int. No. 550), relative to the close season for grouse, woodcock and quail in Rensselaer county.

Assemblyman C. W. Smith's (Int. No. 886), relative to wild birds.

Assemblyman C. W. Smith's (Int. No. 631), relative to penalties.

Assemblyman J. T. Smith's (Int. No. 418), relative to taking fish from the waters of Whaley Pond in Dutchess county.

V.—A Native's Satire.—Moods of Light.

"What we find in most writers on nature that is disagreeable and deterrent of steady reading is a certain conceit, a more or less definite and conscious claim to an esoteric relation to things that grow or lie in the open air which the people not of their set cannot hope to understand, and are contemptible because they do not understand it."—New York Times' Saturday Review.

"The gray clouds kindle with red and yellow fire that burns about their purple hearts in tints of infinite variety, while behind them and the dark blue rampart of the mountains, flames the last glory of the departing sun, fading in a tint of tender green to the pure blue."—Rowland E. Robinson.

MEN expend untold sums on frescoes and paintings for palace and cathedral, while the blue vision of eternity skyed over them is scarcely noticed, even when the star-jewels of Orion and Ursa Major embellish it. Such apathy dwells in us, with such clouded perceptions! We do not care what nature might teach. Much of this is due to the oceans of rhapsody about her with which the world has been flooded. She should be studied rather than described. How few but could paint a puny scene in words about the lessons of the

A STUDY OF FOLIAGE.

wan fading of the last sunlight on the transient mist as its rose and purple change to gray on the mountain side! "How beautiful, delicate, exquisite are those charms!" cries the mere enthusiast, who could not, by any stress of feeling, realize the divine strength and feeling in the simple words of Genesis: "And there went up a mist from the earth; and watered the whole face of the ground." "And out of the ground made the Lord God to grow every tree that is pleasant to the sight; and a river went out of Eden to water the garden."

The men who see nature best realize that all words of description of her are but a pitiful approximation. "Does a bird need to theorize about building its nest?" or a bee take heed of its "cunning instinct of proportion" as it constructs its comb of wax? Facts about

SHADOW.

landscape, light and color, and capacities for seeing and enjoying them, have been stated by one or two men when putting forth their utmost power; yet even the actual scenes can for many years only be known to natures which require to be created or cultivated.

Still less is this any vaunting of superiority. He who sees best is least of all willing to boast over one who cannot see at all. While he may pursue nature with the worship of religion, he has no criticism for those who do not see or really love her. For here, as in so many other fields, he knows that all men possess a pathetic weakness.

And he who writes of her must well nigh perform a miracle if he rids himself entirely of self-consciousness, no matter how humbly and even with tears, he may struggle to wrench himself away from that taint which will make his words as sounding brass and a tinkling cymbal. Ruskin chafed under the disposition of England to resent as offensive, his "assumption of superior knowledge," and mourned over it. Hear him after having spoken of that "long attention" necessary before nature may be known:

"It is not singular, therefore, nor in any way disgraceful, that the majority of spectators are totally incapable of appreciating the truth of nature, when fully

A DYING VETERAN.

set before them; but it is both singular and disgraceful that it is so difficult to convince them of their own incapacity." For "we constantly recognize things by their least important attributes."

And up here on the Delaware my comrade has been studying this sure resentment, as shown in our friend, the keen and satirical lumberman. This native, if he knew the words, would first call us rhapsodists, and then spasmodists. He cannot stay away from the magnet of the camp and its fire; but he sniffs and sneers his contempt and indignation for our constant admiration of earth, air, sky and water.

Last night my tent-mate named to him over fifty birds that he had seen along the river, and the flowers—cowslips, blue and yellow iris, white and yellow daisies, elecampane, arrowhead, eight kinds of ferns and six mosses, hawkweed, fuchsia, foxglove, harebell, honeysuckle, hyacinth, creepers, lichens, pansy, myrtle, pitcher-plant, moccasin-flower, marigold, loosestrife, Jack-in-the-pulpit, ivy, jasmine and four kinds of lilies.

And he picked grasses, naming them as nimblewill, porcupine, reed, sheep's fescue, bunch, vernal, and wood-grass.

Then he likened the dewy white of the flowers to frozen moonlight, to sea-foam, to pearl and opal, and their blue to azure skies; and the wet black to night. And this morning he exhibits several butterflies fastened to the canvas wall of the tent with pins—his captures during an arduous day of chases through the woods. And he calls these flies "Oreades," "Aphrodites" and "Ursulas."

This offensive pedantry has thoroughly roused the resentment of the lumberman. To use the words at the head of this article, he feels that he is thought to be "contempible because he does not understand it."

Finally, he is baited by my humorous chum with a lot of rhapsody about the beauty of flowers—ostensibly a talk to the two Princeton men, who are our tent neighbors:

"He who intently studies the colors of flowers will get rare lessons, noting hues like pale-green ice, frozen rainbows, snowy pallor, deepest crimson; iridescence of pearly corolla, black of stamen, and many shades of heliotrope, yellow, amber and purple in the wild dawn-flowers. The blooms of these wind-bells that nod and sway in the wind, are wild, often stand in the gloom and shadow of forests, and are far more precious than those from a hothouse. For they are the midsummer ground-stars of the woods—their blossomed chalices showing in hues of corn-flower, mauve, lavender, violet, lemon and indigo—with grays as of storms on hills, pearls in fogs, and intense scarlet and purple of sunrises—all peeping out from among the lances, halberds, plumes and arrows of the ferns."

This is bad enough, but worse follows. This native regards all rhyming as the work of lunatics; and his fury is fanned as he has four stanzas of a "poem" read to him about the silence in which the greatest work of the universe is done. Here is a sample verse:

"The lark is lovely as he sings up in the morning sky;
That vault above in silent love is singing to the eye.
Sublimity and wondrous power are in the thunder's crash:
Sublimer yet the silence of the dreaded lightning's flash.
Through space all noiseless ever moves our loving mother, Earth;
Still days and nights as on she rolls are given wondrous birth.
For silent sunshine comes to us from that great heaven afar,
Each distant sun in silence twinkling like a little star."

This is the last straw, and the explosion follows:

"Say!" he slowly drawls, with half-shut eyes. "I invite ye ter kum with me in yer canoe, 'baout er mile daown ther river, an' go up a crick. Bin wantin' ter show ye that place fur a week.' It's jest the purtiest wun ye ever sot yer eyes on."

Early the next morning he takes us to a stagnant, miasmatic lagoon, running back and widening into a horrible marsh between hills. Croaking frogs, green scum, steamy mist rising from foul-smelling water where snakes and tadpoles swarm! Flies and gnats torment us. Suffocating malodors and muskiness rise from miry ooze and slimy grass!

"Thar!" growls our guide in triumph. "Yew fellers see so much durned bewty in all 'Nachur' an' water an' sky, that I jes' natch'ly wanted yer 'pinion 'baout this yer! Yer purtend ter see it all so miz'ble purty round hyar jes' 'cause yer thinks it's er mitey big credit ter yer own fool selves ter let on yer see it! (A roar of laughter.) Yer talk 'bout light, an' stars, 'an dew, an' colors, an' durn 'preshus' green trees! It makes me sick! An' when ye made up some sickish stuff ye call 'potry' 'baout everythin' bein' so tarnation still an' 'sweet,' I jes thought I'd like yer jedgmint on this lot o' fever an' agur, an' yaller jandice, an' skunk's cabbidge. Jes' pint 'aout sum purty things hyar, will yer!"

He poles the boat into the reed-grass, and through a channel curving to the left, that opens into—a vision!

Solemn hemlocks stand in a wide half-circle around a silent, windless basin of shallow water, thirty rods across. It is margined by emerald reed-grass, and inside that plumy crescent smiles a great, blue border of iris flowers!

And over that whole basin the water is thickly starred with the fragrant white and yellow blooms of the pond lilies—great wax-like flowers, wet nymphæ buds just opened! Out in the hemlocks the warblers and crows are calling. A hawk screams in circling flight. The blue gleam of a kingfisher's plunge from a low tree, comes through the reed-grass, followed by his rattling cry as he rises from the water!

We thank the lumberman, and his disgust deepens.

But he cannot resist the hypnotic attraction of our camp, and shames us the next day by bringing milk for our coffee and wild berries and honey for our bread. We have sent a dozen fine bass to his house, and once have helped to eat fish at a "tea" given by his gentle-voiced and sweet-faced wife. We wonder how this burly, rough man ever succeeded in winning her, and begin to realize how full of human life and history, effort and self-sacrifice, many of these river cottages must be.

Sorrow and disaster were soon to visit him. When we make the canoe run from Hancock to Lackawaxen a month later, we find him suffering from a crushing blow and slide of a log at his mill. The doctors give him little hope. He has tried to hobble down to the river in response to our telegram. We beach the canoe and go to his house; it is but a few rods from the water. His eyes have the patient, hunted look of one whose remaining days are few.

"I am now like that tree," he tells us in weak and broken words.

Here is a picture of it. We wonder how many readers of FOREST AND STREAM would realize its desperate state, and note its scanty foliage and scarred trunk, without the aid of the caption.

We are to camp on a little wooded island two miles below Hancock; and to-night the canoe and tent go back up the river on the train, for the fishing on the run to-day has been excellent, and it has been a day of thunderstorms, sunbeams and sky-wide ranges of cloud-mountains, all now hurrying eastward before high winds.

Mindful of the criticism that we risk, we yet try to tell something of the day's variations and moods of light.

A picture is given of the sharp, sombre gray, lights falling over hills and river on a cloudy day at a point near Lackawaxen, and showing, but with woeful incompleteness, even in that favorable light, the river rushing over rocky shallows, and its waves, curvature and foam.

Statements of the laws by which light changes, would lead us very far into algebra and geometry, and involve the reader in a fog of technical terms in connection with over five hundred named colors—all of which would not be read. But we may state some of the "effects" during such a day as this.

Daily, from east to west, march many sources of light, sunshine flooding all, but with an always changing angle of incidence, and itself never alike for two moments—clouds, moisture and hues reflected back from water and forests, varying forever! Twilight, dusk, moonlight, starlight, sometimes all these sources of radiance joining!

Brilliant sunshine at dawn, flooding the Delaware Valley! Then the duskiness of gathering storm! Fear and gloom of three thunderstorms during the day, their bellows roaring and echoing among hills! Blinding flashes from the retreating clouds; then, sunshine after rain along a windless river, while rain-curtains exhaust themselves dreamily on far eastern hills! Shimmering heat; radiance caught and held in clouds of infinitely varying form and volume, letting down long shafts of light; and this all modified and adorned by reflections from hills and flowing water—emerald of forests, yellow of banks! Rose-light of titanic cloud-domes—crimson canopies interwoven with banners of waving flame that dart and sway across the vault; steam-like rags of fantastic vapor changing to lurid wreaths; white mists floating upward, rallying in surges and boiling up the unsubstantial, quivering blue! All seemingly the merest chaos of chance; yet not one line, hue or motion that is not governed by sternest law. Never one false curve, not a single light that is not complex. It is the music of infinitely changing form and color—fragility of form—toppling, uprearing, evanescent, yet always with the most exquisite grace of undulation—all wilderness, seeming accident, and with perspectives of hopeless intricacy, yet perfect in curvature, and flow and freedom of every line. And before the rising of the steady sunset gale from the west, a rainbow!

All day we have also noted the intricacy, glide and play of the shadows, often more visible than the objects which cast them. All day we have felt that the tortured or peaceful clouds were not so much clouds, as the visible form and presence of the winds that drove them. And now, at night, eye and heart are bewildered.

The pen drops, impotent, for it attempts the impossible, and the words border on the ridiculous—which every satirist hunts, and, when found, whips without mercy.

And yet very few of these satirists can see, much less feel, the grace and beauty of natural scenery; and almost none of them recognize or believe in its sublime and transfigured moments. I note this frequently in conversations overheard before famous paintings in the New York galleries. Men who cannot tell the normal number of their own teeth, or even ribs, will "analyze" the figures in a painting by Corregio, Rubens or Turner, and are even paid art-critics! Many confident picture buyers, capitalists who have rushed through half the galleries abroad, will chatter in voluble fault-finding with the "technique" of Gerome, Tintoret, or even Angelo. I have before me several amusing letters between such wealthy buyers, masterpieces of inane "criticism."

We are exhausted with work on the flooded river, the roar of its waters and the many hours of electric agitation in the sky. We board the Erie train and smoke silently, watching the changing vistas as forests bow before high winds and night deepens, and the ragged clouds are blown in a sky-dance to the east like withered leaves.

L. F. BROWN.

[One of the illustrations for the chapter of this series published last week was omitted; and that the picture may go with the text we reprint here these paragraphs.]

The college men plead with him to "go on."

"Very well. Here is my chum, who has fished for forty years. You also, are anglers; and I am a landscape pho-

tographer and botanist. Yet we behold as we look, only some small part of the truth of space, form, color, chiaroscuro. Nature is infinite: man is finite, with limited senses. What he sees is largely determined beforehand by very complex conditions of sense, education and faculty, causing variations in what artists call taste. We

POND EDDY.
"There's no place like home."

use sight over an infinity of forms, and the eye remains dulled through its use for mere purposes of ordinary safe guidance and casual impression. We do not look sharply for specific things; and so myriads of objects pass before our eyes that are actually not seen at all. Hamerton, the etcher, states that he drew oxen for twenty years before he saw them in the artistic sense. Nearly all men glare, and do not behold."

He looks out at the exquisite view of the river as the little sailboats of the early pleasure-seekers began to dot the water—the view shown in the accompanying illustration--and drinks in with carefullest sight, all that fairy-like transparence of air and water, and that under-world of reflection, seemingly as much below the water as above it—the whole one of those occasional moments when Nature seems to put on her most marvelous costumes. robe after robe in quick succession of color and effects of atmospheric transfiguration—beautiful as a capricious coquette!

Adirondack Notes.—II.

I had been at the Adirondack League Club some days as Frank's guest, and had fished with him and Sanspeur. from Little Moose over to Bisbee Lake and beyond, had traveled up to Pinchnose and sat out in the sun on that small pond with no result, and had taken a few nice fish out of the river and from Panther Lake, when I finally made up my mind one cloudy morning to go up and try Mountain Pond for a big one. The spring had been wet and cold, so that our first day between the Lodge and Bisbee was not much of a success until late in the afternoon in a small pond near our journey's end, we managed to get them jumping and for an hour we got some nice half pound fish. I think my score for the day was 16, and the others a few short of that. In every pond were "landlocks," and we found them very apt to jump for our feathers, but we got none large enough to kill. Bisbee was a beautiful sheet of water, the home of the queer *Salmo bisbee; sui generis,* we were told, and it seems likely. There was almost every variety of trout in the lake. I got a beautiful *fontinalis* there, saw some brightly marked and easily distinguishable Bisbee trout, heard about the huge brown trout they sometimes find basking in the shallow water near shore, and I also kept getting mixed up with the small "landlocks." Our first night it snowed hard and then hailed, and froze so that in the morning everything about the place was slippery, but Sanspeur wanted to try a fly, and we broke enough ice to handle the oars, and while the snowflakes were coming down thick and fast if the first cast did not bring up two silver ouananiche of about three-quarters of a pound. Naturally we put them back and went on, and finally a trout came up to look things over. But he must have found them a little cool for his taste, and once was enough for him.

Finally, after a couple of days we went back to the lodge and spent our time near by casting along the shore for "landlocks," at which we had little luck, or over in Panther and on the river. At the falls I managed to get a nice little string of fish, one of about a pound, hooked in the tail when casting a long line from the rocks right at the foot of the falls and somehow saved him. It is a curious thing that in swift water that way, if you do not let the fish get a start on you, one hooked foul gives very little trouble, while in quiet water it is wellnigh impossible to do anything with him at all. The river fishing here is very fine, and I regretted that the height of water made it impossible to wade it. Then we tried Grindstone one day, and to my great distress found the brook where we started entirely too small to whip, but as we went down stream it improved and soon we were able to get a few fish. It was hard going and the water was not just right, so we did not fare well, but found some of the prettiest places you ever saw and occasionally a fair trout. The fun of the day, however, was lunch at a nice spring of a few burned trout that were broiled on a green twig over the fire. We all felt as though we never wanted to move again, for it was very pleasant there where we could hear the splash of the water and see the green mantle just creeping and stirring over the forest. Oh, it was all very good in the sunshine. Then we tramped back through the forest, taking great delight in a gnawed and decaying horn that we found on the ground, and the shy flowers that began to peer through the brown carpet. We found where the sharp toes of the deer had cut into the black mould, and one evening Sanspeur saw on one of the carries a bunch of five of the graceful animals.

All this had gone before my day at Mountain Pond, where I went alone with my strong man, Mr. Toothacker, as Frank called him, from the unfortunate circumstance of his having a swollen face. We started reasonably early and had the pond quite to ourselves. Traveling through the woods in the spring has a charm quite its own. There is to me none of the crowded and oppressed feeling that one has after days in a great leafy forest where the sun hardly glances. Here the sun just poured down, and you knew that every little twig and root was shouting with the joy of it all. Little streams ran everywhere, and pools shone in all the hollows. The bark looked so clean and healthy on the big maples and beaches, and the limbs high overhead were so great and wide and strong. It was along a path among these giants that Mr. Toothacker and I tramped, he with his boat upon his shoulders, I with a pack basket and my rod. Then down through a little glen where was a grove of small pines and up a long ridge among the great hardwoods once more. Finally we found our pond, and realized it had been a very fair climb. The boat was put in the water, and I tried a cast of No. 8 and No. 6 flies, a gray-hackle, black-gnat and Parmachenee-belle. The latter I expect to always have on my cast, for, taking it all in all, it is the most successful fly with me. It did not work here, however, for although the water was carefully covered, I got no response at all. After the experiment had been thoroughly tried we heard a splash, and there was a great widening ring where one of the monarchs had jumped; for be it known to all who are strangers to Mountain Pond that all its denizens are brothers and sisters of just five years of age. No small trout were caught there while I was at the club and none with a fly. The feed here is remarkably good, and as a result the fish are all about of a size, which is the very respectable one of two pounds. I paddled over to where my friend had exhibited himself and tried a few casts with no result. Then another rose, I tried a cast over him, but he was too preoccupied to notice. Then I changed to a spinner and put a minnow on it. This we gave a good try, but no use.

Meanwhile the day was showing us the best of weather, first a little breeze and then a black cloud and a drizzle of rain with calm water. I finally went ashore and cut a long pole, set Mr. Toothacker to building me a fire, and brewing some tea, while I picked out a likely spot in the deep water, where the bushes near shore could be reached, sunk my pole in the mud, put on a sinker and some common worms and descended to bottom fishing. The boat seemed to do nothing but swing around, and every time there was a nibble it was a weed. So I looked in my bait box again for an inspiration, cut up a few fishes and chummed, and then tried a piece of minnow for bait. No use. So discouraged I went back to shore to satisfy the rather insistent devil that lives inside of us all, and also to think up something new. I was clearly beaten. Other fellows had gone up there and caught fish. Not many to be sure, but where they could, I should. Well, thought I, if it can't be done at all I may as well fail on flies, and so after lunch went back to the feathered cheats. Taking a very light leader I put on a small salmon fly picked up once in Wales. It was like a fairy tied on a No. 8 hook, and to hold a salmon would be a pretty big task for it, but it was just right in color. Then I anchored at my pole so as the paddle would not show in the water, and when a fish rose within reach, and only then, would I throw over him. In this way I got two strikes and missed both by being over careful, and as the afternoon wore away had to acknowledge a fair and square defeat in a good battle. One can see afterwards what one should have done, but it is doubtful if even the after thoughts would have been helpful. But a defeat, if it be a good one, is a very healthy thing. Even the long black laker I caught that evening in crossing Moose Lake, Frank's young hopeful had two mates for on the boat house dock; and so the youngest one in the club beat me that day, which I have to consider the best one of a red-letter week.

G. F. D., Jr.

New Found Lake Fishing.

For some years, soon after the ice goes out, a party of us have gone to Rogers' at the Hebron end of New Found. We all hope to catch both salmon and trout; sometimes the fish do not respond as freely as they should. There is one thing we are absolutely sure of, and that is a good time, fish or no fish.

This year many of the old crowd were on hand, also a few new men. The Granite State was well represented. The able Speaker of the recent House of Representatives was on hand and showed his ability as an angler by catching some fish and taking home more than he caught. The ever-smiling General was there (we could not do without him). It was entirely the fault of the fish if he failed to maintain his reputation as an angler. The Kingfisher from Bristol, who also answers to the name of the Early Bird, was very much in evidence. We all had to take off our hats to him. How we wore out the waters of the bay in our efforts to get fish, and how irritating to our feelings it was to see the Early Bird meander slowly about in front or behind our boats, or in fact anywhere where it was wet, and take fish after fish. We had thoughts of locking him up in the Hebron jail (only we did not know where it was), or making him fish with an unbaited hook.

There was among others in the party who helped to make the trip pleasant, Gorgeous, who is said to own or manage a certain crossroads bank in one of Boston's suburbs. The Parson came with the bank man. Now, the Parson looked to be all the name implied. Gorgeous said that at home his friends called him a cold-blooded sport.

The clerk of the weather played a continuous low down mean trick on us. It was cold enough every day to freeze our lines to both rod and reel, and windy enough to blow the fur off a hedgehog. Nevertheless we kept on so nagging those trout and salmon that some of them were forced to strike. We spent many hours in Rogers' comfortable rooms; mild games of chance were indulged in; everyone professed absolute ignorance of penny ante and auction pitch, the Parson most of all. In the interim of card playing we discussed the merits of various lures; some favored the prickly phantom, others the old-fashioned minnow. One night a couple of Hebron girls appeared. We promptly named them the Silver and the Dark Phantoms. A great rumpus they kicked up among the juvenile members of our party. My boatman was an irrepressible youth whom I took up with me, and who answers to the name of Grover Cleveland Barnard. After Grover became acquainted with the female phantoms he ceased to be useful as a boatman. The only times he would keep my boat on anything like a straight course was when we were headed for the landing near Rogers' house. The Parson was fully as idiotic as Grover. I was told that the parting between the Parson and the Silver Phantom was very much like the disentangling of the phantom from a landing net when one is in a hurry and the water is rough.

The fish caught, up to the time of my leaving, averaged smaller than on previous trips. Seven and one-half pounds was high on salmon and nine and a half on trout. On the morning of our departure the weather changed, and the Early Bird said: "There will now be some fishing." We left him to prove his statement, and prove it he did. I send the scores he made on the day we left and the one following: April 22, three trout of seven pounds each, one of six, two salmon of three pounds each. April 23, one trout of twelve pounds, one eleven, one of eight, two of seven, two of six, one of five; one salmon of seven pounds, one of six, one of five, and one of three.

Our trip to old New Found is ended for this year; we were sorry to leave. On our drive from Hebron to the train at Bristol the youthful Grover was in a whimpering condition. Even that tough old veteran, the General, could only smile in ghastly manner. May we all meet at the same place next year when the ice goes out, is. I am sure, the wish of all.

C. M. Stark.

Dunbarton, N H, April 24.

New England Waters.

Editor Forest and Stream:

In my last communication I mentioned "interesting information from New Hampshire." In answer to inquiries, Commissioner Nathaniel Wentworth writes: "The State Commission has been put on a salary basis—the chairman to have $1,000 a year and expenses, the other members $800 each and expenses." The sale of lake trout has been prohibited, and the season for taking them in Lakes Winnepesseogee and Winisquam has been shortened. I have already mentioned that the license fee for non-resident hunters seeking large game is $10. He says further: "We have got an appropriation of $7,500 to build a new hatchery at Laconia. We have got appropriations to put in eleven different screens; the amounts for these are from $75 to $1,500. * * The brook trout fishing is fine this spring in the southern part of the State." They are having great luck on salmon and lake trout.

W. H. Griffin, of Manchester, got home to-night from a two days' trip to Newfound Lake with 17 salmon and lakers.

Chairman Wentworth has labored long and faithfully, literally "casting bread upon the waters." We rejoice that the Granite State has at last recognized the value of his labors and those of his colleagues on the State Board. The citizens of New Hampshire are only just beginning to realize the benefits to be derived from judicious stocking of the lakes and streams. Reports from several of her fishing resorts indicate a good season this year.

At Newfound Lake the hotels are reported full of fishermen. Dr. J. A. Gage and Dr. James Thorpe, of Lowell, several from Manchester, Mr. C. M. Stark, of Dunbarton, and Messrs. E. E. Allen, of Watertown, Mass., and Edward W. Morse, of Brookline, have taken trout and salmon varying from 3 pounds to 6¾ pounds in weight.

Miss Mary A. Rogers, of Hebron, has taken a 7-pound salmon. W. E. Patenaude, of Dedham, has captured five trout, the largest 6 pounds, and three salmon.

From the Weirs comes the report that ice left the lake about two weeks earlier than usual, and good success has rewarded the fishermen, of whom the following are names of several from Boston: H. A. Pitman, A. P. Morse, A. J. Kohler and Dr. Brown.

It is observed that this year more salmon than trout have been taken; one salmon weighing 11 pounds being captured within sight of the Weirs. Previous to the cold spell last week sportsmen had excellent catches at Meredith Bay and Alton Bay. From the three northern counties of the State we shall expect to hear soon after May 1, when the season will be open in Carroll, Coos and Grafton counties.

Maine has been called a "sportsman's paradise," and New Hampshire is offering great attractions to anglers, and possibly deer hunters might "go farther and fare worse," thanks to the commissioners and their co-laborers among the sportsmen of the State.

The lakes of southern Maine have already attracted many devotees of rod and reel. On Sebago, by a change in the law, made last winter, the fishing opened April 1, instead of at such time as the ice left the lake, as heretofore. The largest salmon so far reported was caught by Master Edward Gilman, a 12-year-old son of Mr. George Gilman, of Cumberland Mills. Others taken vary in weight from 10 to 14 pounds. Last year the commissioners planted two large consignments of salmon fry in the lake, and a hatchery is soon to be built on the lake, so the prospects are bright for the best of salmon fishing in the near future. The accessibility of this lake has made it a favorite resort for many Boston anglers, among them Judge S. A. Bolster, of the Roxbury District Court. The ice left the Belgrade lakes on April 8, and several fishermen have captured a few trout—the largest reported weighing 4½ pounds.

Several Massachusetts sportsmen have had exceptionally good luck at Greene Lake, in Hancock county. In the party are Messrs. E. S. Farmer, N. J. Hardy, Chief of Police A. S. Harriman, of Arlington; Dr. Fred Lowe and Rev. J. C. Jaynes, of West Newton,

all of whom got salmon. One salmon captured in this lake weighed 14 pounds.

Mr. J. H. Peavey, of Bangor, has taken several, the largest weighing 7 pounds. Mr. R. Provost, of Philadelphia, met with excellent luck on Cathance Lake, and is so much pleased that he will build a handsome cottage there in the near future.

From Grand Lake the ice is reported to have gone out on the 18th, on which date there was a number of sportsmen on the ground prepared to try their luck. A great influx from all parts of New England is expected. Notwithstanding many new camps have been built the past year along the shores, it is thought they will not be adequate to house the small army of fishermen that will visit this resort. The completion of the Washington County Railroad has made the waters of this section so easy of access that they have been advancing in popularity very rapidly. I understand this lake is regarded as the original home of landlocked salmon. In this lake this fish has not been planted, and the immense hatchery on the lake has rendered it the father of all the landlocked salmon in Maine.

At the Rangeleys all is expectancy. All are anxious to see the ice move out. Mr. E. H. Davis, proprietor of the Lake Side on Lake Umbagog, received a letter from there several days ago in which the writer said: "Before this letter reaches you the ice will be gone." Many anxious ones are waiting for the word, "The ice is gone!" Their trunks are packed, tackle in order; in fact, everything in readiness to take the first train after the word comes.

There may be days, possibly weeks of waiting yet, though it is said indications favor an early fishing season at the lakes—the Rangeleys and Moosehead.

Lake Cobbosseecontee is reported to have opened early to fishing, April 6, and many trout from 2½ pounds to 5 pounds have been taken, as well as some salmon weighing over 5 pounds.

Reports of successful fishing have also come from Maranacook and Annabessacook lakes. Commissioner Carleton says: "We are planting millions of fingerlings yearly and the fishing is constantly improving."

In general, this is not unlikely, but the improvement is doubtless more noticeable in some lakes than in others.

The resolve for a hatchery at Rangeley Lakes has been signed by the Governor, but its exact location has not yet been determined. Several sporting camps in this region have changed hands, and in all improvements are being made, additions and new buildings are going up, furnishing more and better accommodations than ever before. It will be fortunate if owners and proprietors shall receive enough increased patronage from anglers to offset the losses likely to be incurred as the result of the non-resident license law during the hunting season. In these days of fast trains New Brunswick and Canada are not so far away as they used to be, and the people of those provinces are already showing genuine Yankee enterprise in making known the attractions they afford for anglers and hunters of big game from the States. It is not unlikely that many Megantic Club members will look for large game on the portion of their preserve which lies on the Canadian side of the line, where they will not be required to take out a license. But, luckily, there are no such restrictions on fishing, which affords just as good an opportunity to enjoy the ozone, the sunshine and the aroma of the pines, as hunting.

Everyone hereabouts who has ever wet a line has the fever on now, and it is near reaching a climax with the trout and salmon fishermen, who go to Maine or New Hampshire.

The Clearwater Club, under the leadership of Dr. Bishop, is to start next week; which reminds me of a verse of a poem inscribed to the Doctor on the occasion of the club dinner last winter, written by Dr. Payne:

"About this time of year we take our fishing tackle down;
A feeling strong comes over us that we must shake the town.
The lakes and streams are calling us; we've got the fever sure,
We're off to old Clearwater, that lake so deep and pure.

Chorus—

"'Tis in the springtime, 'tis in the springtime,
The fishing fever catches you and me;
So we're off again, boys, to the State of Maine, boys,
With our good friend, the Doctor Heber B."

Whether the party will go to Clearwater this year or to Grand Lake, is not yet settled, and will depend on the conditions yet to be reported from the former lake.

Several Boston sportsmen have recently shown their friends evidences of their skill. One of these is Mr. Charles F. Danforth, who brought from Dan Hole Pond, New Hampshire, three salmon weighing 6½, 4½ and 7¾ pounds. They were on exhibition last Tuesday in the window of the Charles C. Richards Company (formerly Scott & Richards), 218 Washington Street, and attracted the admiration of all who saw them. Mr. Joseph Gridley also brought home two salmon, taken at Dan Hole.

Messrs. E. W. Foote, Benjamin H. Bradlee, J. C. Paul, Gardner Jones and friends have returned from the Cape, bringing a large number of trout, the largest 2¼ pounds. Deputy Warden Thomas Stackhouse, of Marshfield, caught about a dozen in a pond near his house on the opening day, several of which were presented to one of the veteran members of the State Association, Mr. E. M. Stoddard, and one of them, through the courtesy of Mr. Nat. Le Roy, was delivered to the writer in Boston. It was a pound and a half fish and made a good meal.

Here are some clippings from Berkshire papers. From North Adams Evening Herald of April 20: "Fred Crawford took from Green River Saturday a trout weighing 2¼ pounds."

North Adams Transcript, April 22: "H. H. Heap, of Boston, took from Green River a trout 16½ inches in length. This is believed to be the largest trout ever taken in this vicinity."

North Adams Transcript, April 17: "Harry Powell and Wm. Garlick, of Braytonville, fished April 1. The former got 50, 23 of which weighed over 12 pounds. Garlick got 43, which averaged larger than Powell's."

In Cummington Deputy Nichols fished 20 minutes after dinner at the hotel and took three, averaging ½ pound. A young lady got one weighing 1 pound 3 ounces.

It is reported that 25 trout caught in Brimfield weighed 14 pounds.

These statements are interesting, from the fact that it has been declared that there are no 6-inch trout in Berkshire county; there is no legal length established in that county. It is claimed that such limitation as the law establishes for the rest of the State is not needed there.

Sportsmen from West Springfield took from Bear Hole Brook 62 trout in one day—the largest over a pound. Enough has been learned already to show that trout are more plentiful and of larger size than usual this spring, in the western counties, at any rate. In part, this may be due to the abundance of water in the streams for the past few years. In the opinion of many it is largely due to more judicious efforts on the part of the State Commission in the management of the hatcheries and the distribution of fish.

It is only within the last two or three years that the putting out of fingerlings has been done to any considerable extent. Then, again, it was only last year the plan of sending out some competent person with consignments of fry and fingerlings was adopted—a special appropriation having been secured a year ago for that purpose.

Commissioner Delano informs me that a million trout fry have been planted this month in brooks in all sections of the State; also six million shad fry and ten million pike-perch fry from the U. S. Government.

Massachusetts Legislation.

The Governor has signed the anti-sale law making it a permanent enactment on partridge and woodcock. Also the deer law, making another five-year close time—the bill prohibiting the wearing of birds, feathers, etc., for ornament, and so almost everything has gone well with the legislative work of the sportsmen's clubs. The bill to give right of search to wardens without a warrant has taken its third reading in the house after the life was taken out of it by striking out the words "without a warrant." Never mind, we have learned "to work and wait." We will all be thankful for the many good results of our labors the past winter.

The lobster law is quite sure to remain the same for another year. At a meeting to-day of the Twentieth Century Club, Secretary Chandler read a letter from Prof. W. T. Sedgwick, of the Massachusetts Ins. of Technology, in which he wrote: "Disinterested authorities from the several New England States ought to agree upon scientific and sensible steps for the conservation of the lobster industry. No doubt progress will be effected in this direction under the leadership of the excellent Fish and Game Association of the State." Dr. Field, of the institute and director of the Sharon Biological Laboratory, then delivered an address on the lobster, of which I may write in my next letter.

CENTRAL.

Salmon Culture in America.

VICTORIA, B. C., April 21.—*Editor Forest and Stream:* Your issue of April 11 contained a communication from "The Old Angler" *in re* salmon culture in America, in which he makes some comments regarding my note on salmon propagation in Pacific waters, and which he concludes as follows:

"Though residing in Victoria, B. C., it is significant that Commissioner Babcock has not a word to say about salmon hatching on the Fraser and Skeena rivers; nor does he drop a hint as to the overcrowded state of these rivers; nor does he express an opinion about the wisdom of taxing the whole people for the benefit of a score or two of rich canning concerns who also are trying to achieve the feat of 'eating and having their cake.' Would Mr. Babcock tell an interested public what he thinks of these things?"

Certainly: though so far as "an interested public" on the Pacific Coast is concerned, I do not believe that they are in doubt with regard to my views on these questions. There is, so far as I know, but one opinion on this coast as to the success and desirableness of salmon propagation; but for the benefit of the "Old Angler" I submit the following with reluctance:

I have the honor to be the Fisheries Commissioner of the Province of British Columbia, and have been since November, 1901, at which time I reseigned as the executive officer of the California Fish Commission—a position I had held for ten years—and came to this Province at the request of the Government "to become familiar with the conditions affecting the great salmon fisheries of the Province, and particularly with the conditions existing upon the spawning grounds of the Fraser River, with the view of determining, as soon as possible, upon a comprehensive system of salmon propagation and to locate, build and operate salmon hatcheries for the Provincial Government."

In a former note I made no reference to "salmon hatching on the Fraser and Skeena rivers" because (1) I do not believe that any fair deductions can yet be made of the work carried on for the Fraser, and (2) because there has been no hatchery propagation conducted on the Skeena River until the past winter. The Dominion Government has conducted a hatchery on the Fraser River since 1885, and in 1901 began the operation of an additional and somewhat more extensive hatchery on the Thompson River, the main tributary of the Fraser. From the earliest records there has been a recognized periodicity in the run of salmon in the Fraser. There are years of abundance and years of scarcity, which reach the maximum every fourth year and the minimum in the three years following. This will be better understood from the following line of figures of the salmon pack, by cases of 48 one pound cans each, on the Fraser in British Columbia, the pack for convenience being given in round numbers:

1893	457,500	1898	256,100
1894	363,900	1899	480,400
1895	395,900	1900	316,500
1896	356,900	1901	990,252
1897	860,400	1902	327,000

Since the "King George men" and the "Boston men" first came to this wonderfully beautiful country there has been much speculation as to the causes which produce this irregularity and periodicity in the runs of salmon in the Fraser River. Many theories have been advanced to account for so remarkable a feature—one that has no counterpart in any salmon river on the Pacific Coast of America—but none of them have been generally accepted as conclusive.

A part of October and November, 1901, I devoted to the investigation of a limited portion of the spawning grounds of the sockeye salmon (*O. nerka*) of the Fraser River. During the entire sockeye spawning season of 1902 I devoted as much time to the examination of the extensive spawning grounds of the Fraser and Thompson rivers as the limited season would permit, paying particular attention to the points visited the previous year. At all the points visited in 1901 spawning fish were seen in great numbers, while during the past season comparatively few were seen, and at some points none at all. Natural propagation was at its maximum in 1901 and at its minimum in 1902. This fluctuation in the abundance of fish that reach the spawning grounds has always been recognized by the whites and Indians living along these rivers. Thus from the pack and an inspection of the spawning grounds of the Fraser we find that the river is not always, if ever, "over-crowded," that the salmon do not always, if ever, "enter the river in such enormous numbers as to stop boats," or that "the weaker must succumb to the tremendous force of struggling millions, and be literally jammed to death." So far as any evidence I have been able to obtain from the people living on the river the run in the Fraser has never "stopped a boat," the fish are never "so jammed together that they cannot move at all," or that "a person could cross the stream dry shod by placing a plank upon the protruding backs of the salmon." And without "some statistics, on which alone a sound opinion can be formed," how did "Old Angler" ever believe such was the case? That the run is enormous every fourth year is proved by figures; that it is comparatively light during the following three years is also supported by figures. The conditions on the Fraser are such that it will take a considerable period to show that the run is or is not decreasing. The two hatcheries on the Fraser, and the others in course of construction, are not being operated because the run is decreasing, but for the purpose of its maintenance and with the hope that the run in the "poor years" may be increased. British Columbia is not waiting until the goose is dead, but instead, by hatching her eggs, is trying to increase the number that yearly lay a golden product directly into the hands of 19,000 of her people.

Now, to "Old Angler's" third and concluding question: "Express an opinion about the wisdom of taxing the whole people for the benefit of a score or two of rich canning concerns," or, as he put it in your issue of April 4, "devoting taxes wrung from the people to stimulate artificially a business from which only a few wealthy proprietors derive an immediate profit." Such a condition does not exist on the Pacific Coast!

For the year ending June 30, 1901, the fishermen and canners of the Province of British Columbia paid, in the form of fishing license, the sum of $52,960. For that year there was spent in the Province for the support and maintenance of the fisheries, including hatcheries, patrol, etc., the sum of $17,886. During that time there were 19,787 fishermen and cannery employes engaged in the salmon fisheries. For the year ending June 30, 1902, British Columbia fishermen and canners paid, in fishing licenses, the sum of $41,178; there was expended for fishery service $18,660, and there were 18,942 fishermen and cannery employes. Such has been the comparative condition regarding collects and disbursements since British Columbia entered the Dominion. Here, then, "the whole people have not had taxes wrung from them to stimulate an artificial business," but, on the contrary, the fishery interests have contributed in the past two years the sum of $94,138, as against $36,546, which has been expended for their benefit. And in these figures no credit has been given the fishermen and canners for the moneys they have paid in other ways, from their earnings in the fisheries, toward the support of the Government.

In the State of Washington for the two years ending April 1, 1903, there was collected from special fishery licences, sold the fishermen and canners, the sum of $93,939, and the total appropriations of the Legislature for the support of and the construction of new hatcheries and other fishery service was $116,440, or $22,501 in excess of special fishery license collections. The following figures from the State of Washington are interesting in this connection:

	1900.	1902.
Capital employed in fisheries	$4,362,470	$6,819,218
Number of persons employed	7,789	10,695
Earnings of persons employed	2,121,485	2,501,650
Value of products	4,357,753	6,731,870

The figures for 1901 are not at hand.

The figures for Oregon are not obtainable, but it has been the policy of that State to collect sufficient licenses from the fisheries to support the hatcheries.

In California the annual propagation by the State "for the support and maintenance of fish hatcheries" is $10,000, and her Fish Commission collects over $5,000 by the sale of fishing licenses, all of which is devoted to the hatcheries. The bulk of salmon caught in California waters is marketed in a fresh state, the canned product being only that portion of the total catch that is in excess of the market demand for fresh salmon. The hatcheries in California are run for the benefit of "the whole people," and not for rich canning concerns.

"Old Angler," in dealing with "assertions and opinions" regarding the true situation on the Pacific Coast, does not seem to be alive to the fact that on this coast the salmon fishery is one of the foremost interests, and that the construction and operation of the hatcheries by the State has been brought about by the fishery interests which contribute the greater part of the moneys expended to "stimulate artificially a business" in which thousands of persons find employment, in which millions are invested, and to which "the whole people" look for a cheap and highly prized food.

"Old Angler" calls attention to the fact that I gave no figures for any other section than the Sacramento River in California. That is the only section for which I personally can now speak, and it is the only section on the

coast, so far as I can show, for which figures of an absolute character can be given. The figures I have submitted from California are of so positive and convincing a character that the salmon interests of this coast are united in advocating the continuanee and increase of salmon propagation, and are paying for it.

Not only have the fishery interests of this coast urged propagation on the State and asked that they be taxed to pay for it, but some of the leading packing coneerns have established extensive hatcheries which they operate at their own expense. I do not know of a prominent packer on this coast who does not believe that salmon propagation is a success, and who does not willingly pay for it. Nor do I know what better evidence can be desired to show that salmon propagation in Pacific waters has been a success than the figures already submitted from California. Now, from what has been accomplished in California why may we not conclude that similar efforts on the Columbia and the Fraser have been a factor in contributing toward the present run in those rivers?

It certainly is not conclusive that, beeause the run is decreasing in a given river, none of the fish liberated from the hatcheries on that river have survived, or that all the fish now running in that river came from natural propagation alone. Hatcheries may not be able to maintain the run, but if they help to sustain it, help to give the people a good food, who doubts the wisdom of an expenditure to that end by the State, especially when the moneys so used are, mainly and willingly, contributed by the thousands of people primarily concerned?

Were we to conclude, as "Old Angler" maintains, that "only by the submission of some statistics alone a sound opinion can be formed," and that we would determine this question only by figures, and that deductions and even "opinions and assertions" of careful observers were excluded, it could be shown that since the establishment of the hatchery at Bon Accord, on the Fraser River, in 1885, the run of fish, as expressed by the catch, has increased to enormous proportions. For the figures show that the pack in that year was 199,244 cases, the greatest up to that period, that it was not exceeded until four years following, a period which presumably expresses the duration of the life of the sockeye salmon. In 1893 the pack was 457,797 cases. In 1901 it was 990,252 cases. And these figures of the Fraser River pack do not express it all, as 90 per cent. of the pack on Puget Sound consists of fish running to the Fraser River. The combined Fraser River, B. C., and Puget Sound pack in 1901 was 2,400,696 cases, or almost 50 per cent. of the entire pack of the world. But no propagator on this coast believes, or has ever claimed, that this is the result of propagation; the markets have been increased and there is more fishing, but there are probably no more fish, if as many, but from figures above the last statement cannot be proven. "Old Angler" must take that as an opinion and an assertion.

JOHN PEASE BABCOCK.

The Sea Trout Question.

Editor Forest and Stream:

Not a single writer of any note who has fallen into the error of supposing the so-called sea trout a different species from *fontinalis,* ever contended that it was "brought up in the sea," as does President Jordan, in your issue of April 11; and no one asserted that its fry were ever seen in the sea, but all agree that it was hatched, and passed its first years in fresh water. Mr. Hallock himself and all those who have taken part in the present discussion, with the exception of Messrs. Gregory and Manuel, in your issue of Dec. 27, have testified that the sea trout spawn in fresh water. The letter of that veteran angler and celebrated fish-painter, Walter M. Brackett, of Boston, carries more authority and is entitled to more reliance than the ipsi dixit of all the mere college professors in the United States, Great Britain and Canada, not one of whom ever saw the fish in salt water or fresh.

The Octogenarian is ever ready and thankful to receive instruction from competent teachers; but when one tells me that the sea trout of Canada "is brought up in the sea, better fed and developed under other conditions, which make it larger, fatter, more rangy (?) and without the peculiar colors which characterize the brook form," I can only smile in derision. Instead of being "brought up in the sea," this trout is hatched out and brought up in fresh water, and no other writer that I have ever read contends that the fry, fingerlings or young fish of 4 ounces weight were ever seen in the sea, nor even in the estuaries of their native rivers, to which they do not resort until they have attained some size. Instead of being larger than brook trout, I have never seen nor heard of a "sea trout" in New Brunswick, Nova Scotia or Quebec that exceeded 8 pounds, while in the Rangeley Lakes, where there is no access to the sea, brook trout frequently attain 10 and 12 pounds; while well-authenticated specimens have been taken with bait and fly which turned the scales at 14 pounds. In Nepissiguit lakes, brook trout, which have no access to the sea, run several pounds heavier than any ever known to be taken in the mouth of the river or in the bay.

Professor Jordan tells us that the sea trout is "without the peculiar colors which characterize the brook form," while every observant angler knows, as Mr. Brackett states in your issue of April 11 that the instinct of reproduction forces him back to his original habitat, where he will resume his old garb, with red and yellow spots and brilliant fins. The professor presumes that "the young of any brook trout hatched in the sea and fed in the sea would be the same." Surely the man to whom we ought, in your opinion, be grateful for consenting to arbitrate between Mr. Hallock and myself and settle finally the thirty years' discussion of the sea trout question ought, at least, to know that the ova of brook trout will not hatch at all in sea water, and that the fry, newly hatched in fresh water, will die if placed in salt water. He should also know that the fish he calls the "Canada sea trout" does not spread out in the sea, as he tells us the red spotted Alaska trout does. If Prof. Jordan ever saw a Canada sea trout that was caught "at sea," he has seen what this writer was not able to discover on the north shore of New Brunswick in twenty-two years' assiduous scareh from the head of Bay Chaleur to Prince Edward Island, with the assistance, during all that time, of the whole force of fishery overseers and wardens of that whole stretch of coast, comprising eight counties.

W. H. VENNING,
Late Inspeetor Fisheries, N. S. and N. B.

Editor Forest and Stream:

I observe that a contributor in your issue of April 18 thinks the sea-trout question is "immaterial to sportsmen," and that its satisfaetory settlement is "of very little practical use to science and none to sport," and that "nearly all anglers care nothing whether 'sciolism rushes blindly in' or 'knowledge creeps with cautious steps.' Were all anglers, since the days of Dame Berners and Father Izaak like the writer of that suggestion, neither the scientific nor the sporting world would now know much about the life history of our game fishes. To intelligent anglers much more than to college dons, are we indebted for what little we know of the several varieties of salmon and trout, and to them, much more than to so-called ichthyologists, must we look for the settlement of several very important questions which now occupy the attention of anglers of a different east of mind from that displayed by Mr. Brown. I think all naturalists, as well as all intelligent anglers, would like very much to know whether the so-called sea trout is really a species distinct from *fontinalis.*

The question which science has never answered—whether salmon and trout are annual or biennial spawners—is now engaging the careful attention of a band of studious anglers. If the question ever is settled beyond doubt, it will be by anglers, not by college dons.

THE OLD ANGLER.

Two Days on Trout Streams.

AND to think that it was necessary to spend half of the daylight hours on trains. Well, one cannot catch the speckled beauties in one's backyard. There was one comfort, not always noticeable, the trains were on time. The Erie officials were very kind in giving me such information as they possessed.

I made a try first at Pond Eddy, N. Y. Arriving at 12:28, I soon found the little hotel, had some dinner, engaged the proprietor's son as guide, and was off for Carpenter's Brook. There were two streams joining about a mile from the hotel. The best branch and the large brook below the confluence were ruined by sawdust from a mill up stream. It is a pity to allow a mill to ruin a good trout brook, especially one stocked by the State.

I fished up the smaller branch about two miles, and then took an occasional cast coming back, with a net result of one trout. When I returned to the hotel a kindly disposed citizen said: "If you had gone to Fish Cabin Brook you would have caught lots of fish. If you come back here let me know and I will take you where there are plenty of trout." How familiar such words sound!

After a hastily dispatched supper I took an early evening train up the road. The conductor gave me some good advice, which, however, I was obliged to disregard. I stopped at Callicoon, and was soon comfortably settled at the Western Hotel, with all arrangements made for an early breakfast and a team. All the people about the hotel told me the story I had heard ever since leaving New York, that the weather had been too cold for the fish to bite, and that trout would not rise to a fly.

By eight o'clock in the morning I was six miles from town, and was starting to fish back townward on the north branch of the Callicoon Creek. For an hour I stuck to the unromantic fish worm. A little trout occasionally nibbled off the tail of my bait, and occasionally got mixed up with the hook, so that he had learned a new experience; he had been involuntarily out of the water and had discovered that some worms had a peculiar sting from which it took some time to recover. Getting wearied, I tried a fly: some little chaps came up and looked at it; a few discovered that flies could sting, too. I went back to bait.

Another hour passed. I wanted to catch some fish. Well, as bait was no good, and flies no good, I resolved to fish in the pleasantest way. There were other worms. The sun was occasionally breaking through the clouds and lighting up the pools. I had noticed an occasional gray fly in the air; I was finding some beautiful deep pools (holes the people up there call them), and I thought the fish should know that fly time had come again.

I selected a couple of choice morsels (from the trouts' point of view) and began to drop them on the deep pools. I soon had a half dozen nice trout in my basket, and had thrown several back because they were too small. What is the use of killing a six-inch trout? It is too small to eat; it doesn't help much to fill a creel, and is not likely to win a prize at an exhibition.

This stream may be waded almost anywhere with hip boots; it is good for casting—by standing in the stream above or below a pool; it may be easily fished with forty feet of line out. I caught all of my fish on long casts. There are plenty of places where it may be fished from the bank, and one can walk near enough to see the likely places without trouble. There is a good road up the valley, so that an attending carriage may keep in sight. A fact of which I might have made better use.

For at one o'clock I pulled out of the stream, three miles from town. The man who drove me out in the morning said I would find plenty of teams going back to the village. I started cheerfully, and did see plenty of teams, all going the same way, but that was not my way. Well, I got back, but was slightly warm and weary. Hip boots are splendid in the stream, but I don't recommend them for walking shoes.

The nature of the country may be seen from a sign I saw along the bank. I was without pencil and paper and cannot remember the exact words (it was in German), but freely translated, it runs thus: "In these grounds there is not even a mule path."

L. W. B.

CHICAGO AND THE WEST.

Fishing Season Opens.

CHICAGO, Ill., April 24.—The weird spring season in Chicago progresses apace. We had a niee little snow storm here Tuesday morning, though since then the weather has been warm and the leaves are beginning to spring again. As the first of May approaches, the certainty of sueeess on the lakes and streams inereases, and a great many anglers are now out, more especially those in pursuit of trout fishing. I hear that some fifty rods were on the upper reaches of the Prairie River early this week, these coming from many points in Wisconsin, with some Chicago people. Mr. E. G. Taylor and wife, with one or two others, of this city, left here some days ago for the Prairie. Mr. Charles Antoine takes his wife next Monday for a trip on the Prairie. Mr. Walter Dupee, of this city, will also visit the Prairie by the middle of next week. Most of these are going either to Dudley's or above Dudley's on the stream, a point where the fishing was better last summer than it was on the lower reaches. I have not heard anything from the lower part of the Prairie this spring, nor indeed do I know what sueeess has met those who went up above Dudley's. This stream is nicely accessible from Gleason, on the C. M. & St. P. R. R., via conneetion at Tomahawk. I have always gone in at Mr. Delos Cone's place, which is about a mile from Gleason station, and directly upon the banks of the Prairie River. I met a gentleman by the name of Frost from Wisconsin this morning in one of the tackle stores, and asked him where there was good fishing in Wisconsin. He replied, very guardedly, that there were a great many good places. Later on I mentioned the Prairie, and his face lighted up. "There is no better stream in Wisconsin than the Prairie," said he.

The same informant later mentioned a point on the Wisconsin Central Railroad by the name of Coloma, as I understood it. He says the McCann River is about four miles from this point, and states that the latter mentioned stream has good rainbows in it. This is simply a chance tip, and I know nothing about its value, but perhaps some fellow may be in that neck of woods and may care to investigate.

I learn from Mr. G. A. Buckstaff, of Oshkosh, Wis., that he and a number of friends opened the season at White River, Wis. They found a good deal of company on the stream and the conditions were very favorable. No one made any big catches, twelve good fish being the record for the day, among these one very nice rainbow trout. Mr. Buckstaff says that it takes an angler to catch these big fellows on the fly in the White, but also says that patience is pretty sure to be rewarded in any average conditions along that stream.

Messrs. Miller and McLeod, who fished their preserved stream, the Pine, last week, got 110 beauties, according to advices at hand to-day. Montreal and coachman seemed to be the ruling flies on this trip. Earlier in the season silver-doctor was asked for. This is one of the most freakish streams on which I have ever fished. There was no hatch of fly on at the time of this trip.

The Michigan season is not yet open, but I expect presently to hear a dull heavy thud in the neighborhood of Saginaw, not to mention Grand Rapids. The Saginaw Crowd will make two official trout trips this summer, perhaps more. Mr. W. B. Mershon, who has spent a month or more in California, was expected back on the 23d inst., and about the first of May there should be something doing in the Saginaw vicinity. The Grand Rapids boys, John Waddell, Asa Stuart and others, will take to the Pere Marquette, as is their annual custom. They will be joined by half a dozen Chicago devotees of that beautiful river.

Bass.

The bass fishing season may be said to have begun, albeit untimely. Five days ago some anglers on Bass Lake, Ind., took twelve nice bass, and the fish are reported to be rising well in that lake.

By the way, in regard to early fishing on the spawning beds, I see that the latest scientific or semi-scientific dictum in regard to the spawning habits of bass runs to the effect that it is the male fish which makes the spawning bed and which protects the spawn upon the bed, the female not being a tenant of the bed after the spawning operations. This would seem to take the curse off spawning ground fishing, yet such is not really the case. Whether it be male or female which protects the ova on the bed, the taking of that individual would seem to deprive the nest of its proper protection. Most writers, including Henshall, have thought that it was the female bass which remained on the bed after spawning. I have often seen two bass on a bed in a Wisconsin lake as late as August. We drove these fish away several times, but whenever we would come by that particular nest we would find two fish in the same place there.

Tarpon.

The tarpon fishing in the South, in Florida and Texas, may be said to have begun so far as northern fishermen are concerned. Mr. W. P. Mussey and wife will start presently for Aransas Pass for a stay of some time. They will be joined there by Mr. John Haskell, of this city, who is a tarpon angler of experience in that locality.

Mr. E. D. Brown, of this city, is now absent in Florida on a tarpon trip of some extent.

Mr. J. R. Griffitts, general advertising agent of the C. B. & Q. R. R., tells me that he has had a good deal of fun with the tarpon in Mobile Bay, Ala. "I have seen all sorts of tarpon pictures, photographs and otherwise," said he, "but they are not realistic so far as my own experiences are concerned. These pictures always show Mr. Tarpon-fisher sitting calmly in a boat with a fish somewhere in the distance, about a quarter of a mile away. I caught some of these tarpon back from the mouth of the river, where the water was as clear as glass, and where we could see everything the fish did. As quick as I sunk the hook into one of these fellows, up he would go in the air, a most beautiful sight, which is surpassed

by nothing I know of in fishing. But, instead of the fish then heading away from the boat and getting off as far as he could, in our case nine times out of ten would show the fish starting in directly toward the boat. Once I saw a tarpon jump straight over the boat, going directly between the angler and his boatman. These boys have a hard, bony nose, with a bunch on it about like a piece of cast iron. If one of them should bunt into your boat when he came on, or should take a flying leap and land amidships of you, the results might be serious. Tarpon fishing in my own humble experience is not without a certain element of risk. I don't like 'em to come to quite such close quarters as did the ones I saw at Mobile."

The Prairie River.

Mr. John G. Mott, of Michigan City, Ind., asks about the Prairie River. I should advise Mr. Mott, if he wishes to fish the lower Prairie, to go in at Gleason, which he can reach by way of the C. M. & St. P. railway to Tomahawk, thence changing cars for a short ride to Gleason over a lumbering road. Or he can stop at Merrill and take the fifteen mile drive across country. He should stop at Gleason at Delos Cone's farm house, where he will have good care if he is able to get taken in. Failing in this he can go up stream a mile or so to Dudley's Hotel, where one can always get accommodations. This is the most fished part of the stream and perhaps the fishing five or six miles above would be still better. If Mr. Mott should care to go further up the river, he should stop at the Bates House, where numbers of our Chicago anglers are taken in and well cared for. These farm houses might possibly be full at this time of the year, but no doubt a letter in advance would secure arrangements.

E. Hough.

Hartford Building, Chicago, Ill.

Some Memories of Lake Whitney.

It's tough to be sick—even though grippe may be fashionable. As I never cared a rap for style, however, I could very conveniently dispense with grippe! But there are circumstances where sickness can be tolerated with better grace than under some other conditions. If one be so fortunately located that his vision may have free range over familiar territory and scenes, which recall pleasant memories of days gone by, then sickness is not as much a burden as it might be.

From the windows of my room I can look out upon miles and miles of familiar and diversified scenery. The west shore of Lake Whitney forms the eastern boundary of our home for a distance of 500 feet. The lake extends for nearly a mile to the north, and over a mile to the south. Its average width is perhaps 250 yards—not a very large body of water, but interesting nevertheless. But there are numerous arms and ramifications which branch out in a westerly and southerly direction from the lake proper. For half a mile, between the First and Second bridge, the eastern shore forms the western boundary of the New Haven Country Club's grounds. The lake is artificial, and is the property of the New Haven Water Company. It is fed principally by the Augerville Stream, a large brook which flows in from the north. Most of the land bordering its waters is controlled by the water company. Five public bridges span the waters of the lake, and one suspension bridge—the private property of the Country Club.

Lake Whitney supplies hundreds of New Haven homes with water and ice, and affords recreation for thousands. In winter throngs may be seen of handsome lads and lassies gliding gracefully over the smooth, black ice, some absorbing health and others grippe—but all happy! And the "tilt-ups" of ambitious fishermen then dot the ice in places, for pickerel and perch in considerable numbers live in the waters of the lake; and sometimes a bass is taken in the proper season. Then there are roach, eels, bullheads, turtles, and the abominable German carp. In the summer there are rowing and canoeing parties. Yale College has a boat house near the dam, at the extreme southern end of the lake, and there are class regattas; and the "Varsity" eight can be seen training for the great annual struggle with Harvard, at New London, when the ice is gone.

At the present time the liberty of the public is restricted to that portion of the lake extending from the dam to the second bridge. But twelve years ago there were no such restrictions, and one could row, fish, shoot and ramble at will over the land and water. But then, as now, there was an element which failed to recognize a "good thing," and this mob spoiled privileges which might have been retained indefinitely by the public. Under the circumstances no fair-minded person can blame the water company.

Twenty years ago Blakeslie's and Day's boat houses stood where they do to-day—near the dam. North of these were the New Haven Ice Company's houses. And north of the ice houses, with a small garden-patch between, stood a little, old-fashioned farm house. The peaked roof was long and low. The small front door opened to the south, and was also the side door. The windows of the dwelling were small, as were the panes. A grape arbor extended the full length of the house on the south, and stone steps, also sheltered over with the vines, led down the east end to a basement in the rear. The windows of the basement overlooked a small yard filled with flowers, and the lake. The place was unpainted and weather-worn, clap-boards and shingles being lichen-covered, which caused the dwelling to blend harmoniously with the surrounding trees and vegetation; and there was a pervading cleanliness and coolness delightful to remember.

Tom Crogan lived here with his father and mother. Never a fisherman or sportsman spent a day afield or afloat and Tom along but the outing must needs end with a good supper in the basement of this charming little house by the lake. "No" was never accepted as an answer! Supper over, these hospitable souls would insist upon cleaning game or fish, while the guest smoked and drank a glass of beer under the cool arbor. And with the departure home, fish or game always went with the departing one—all of it! And the only recompense ever exacted by these good people was a promise to "come again!"

My knowledge in fishing matters is very rudimentary. I simply know that, at any style of fishing, Tom is the best all-round freshwater fisherman I ever saw. Not with the fly, mind you, for I know absolutely nothing about that kind of fishing. But for pickerel skittering, snaking out perch and bullheads, and for enticing trout from their watery elements with natural bait, Tom is simply perfection! Twenty years ago there was not an inch of the lake he did not know, and he was the first person I ever saw use a strip from the belly of a roach for pickerel bait. This was always discarded for a strip from the belly of the first pickerel caught.

In those days it was an easy matter for two to row to the head of the lake in the morning, and take fifty pickerel or perch by noon. I can look across the lake now and see an indendation in the east shore a short distance south of the second bridge, where Tom and I have taken over fifty pickerel without moving our boat from one position. A small stream, the outlet of a spring, enters the lake here. The fish ranged from a quarter to half a pound apiece. Occasionally larger ones were taken, but never over a pound.

But the grounds at the head of the lake, where the water grass used to reach from the bottom to the surface in places, and formed deep, pellucid wells with green mossy bottoms and grassy-curtained sides in other places, were the pickerel grounds par excellence in those days. Here the yield in sport and pleasure of former days forms a delightful retrospect to look back upon.

There is a gentle wind from the west. It darkens the water with little ripples as it sweeps the surface. The sun shines brightly—perhaps too brightly for ideal pickerel fishing. Tom stands in the bow and I in the stern of the skiff, and we drift with the wind. Our rods are long, cheap bamboo affairs, and the lines exactly the length of the rods. We are making the first drift of the day.

The skiff glides with a sweeping sound through a mass of matted grass, which covers the surface in places, then drifts noiselessly over one of those deep, wondrous wells. The bait traces an erratic course through the pellucid element, when out of the depths of the grassy side of the well a pickerel flashes—straight at Tom's bait! I have just time to note the performance when a sharp tug at my line calls my attention to business. We let them have the bait a while, then strike; and we land two pickerel of six or eight ounces. When the skiff reaches the east shore, we row back across the lake, and the drift is repeated. Thus would we fish till noon.

A shady place ashore always furnished a lunch-room on such trips. Then after a pull at our pipes we would snooze for an hour or two. We would then net a mess of shiners for perch bait, now to the mouth of the Augerville Stream, haul the boat out on the shore and fish from land. Just where the waters of lake and stream met, and the current was slightest, it was about six feet deep and clear as crystal. Here the perch lived in swarms. It was fascinating to drop in a hook and lean cautiously over the grassy bank and see the perch swarm for the bait. No need to wait for the tell-tale tug on the line! When a fish took the lure, you could see just how you had him, and knew just when to haul him out.

Among the variegated vegetation of the lake, there was a great variety of animal life. Mud turtles, with shining black, yellow-speckled backs; box turtles, with their lighter colored shells of checker-board design. Or an occasional ugly-looking snapping turtle, some of great size, could be seen moving along the bottom. And big, blinking bullfrogs would gaze stupidly out of the surface grass. Newts and salamanders also lived in these waters, and under the rocks along the shore. And in those days there were many muskrats—their dome-shaped domiciles sticking above the water in all directions.

In this particular part of the lake the surface, in the shallower places, used to be smothered with beautiful white waterlilies. And when the day's fishing was ended we would gather great bunches of these fragrant flowers. And the row down the lake, between the green, wooded banks, with Mt. Carmel in the north and the Hamden Hills in the west and northwest, to form an irregular dark blue margin for the panorama of lake, hill and rural vistas, is a pleasant memory to look back upon. After such a day's outing, Tom's face and neck would be as red as his hair, and his blue eyes would twinkle with pleasure.

But there are other memories connected with this charming little sheet of water. Some are pleasant, some are comic and others are tragic. And what a mingling of the three! From where I write I can throw a stone right into the spot where two bright young men went under the surface never to come out alive. One, a professor's son, was drowned while skating. The other was drowned by falling out of a boat while fishing. Just a short distance to the south of this spot, one day two actresses went down, locked in each other's arms. Three were in the water at one time, but one was saved, through the heroic efforts of a companion, who made a most gallant attempt to save them all—and nearly succeeded. And there have been many other tragedies here. But the lake assumes its wondrous morning and evening tints; reflects sun, moon, cloud, star and tree; tempers the summer breeze; congeals into a vast mirror in winter to hold up fields of drifted snow; and smiles up at the heavens as placidly and serenely as it would were there no human tragedies connected with its existence.

The second is a picture which seems comic to me; though one, I fear, of like pictures which have caused the upper part of the lake to be shut off from the public. A large, flat-bottomed skiff loaded to the water's edge with a cosmopolitan cargo of humanity, their fishing paraphernalia, grub and a keg of beer! The men are hooting, singing and skylarking in a noisy though harmless manner. An acquaintance, who is fishing from the bank, spies them. "Hullo, thayer, Bill," he yells, "Phwat the divil ye got in th' kag? Come over 'n give us a sup!"

"Hullo, Leary! Where ye come from?—ye divil, ye!" The boat is headed for the shore, and Leary is treated to half a dozen glasses of beer. Then he must needs go along. He objects, as he considers the boat over-crowded as it is. They insist. "Yust you look here, Mr. Leary," says a ruddy-faced, wide-built German, "you yust haf to go mit us. Dis boat him hold more as twice so mooch as he got, alretty! Shoomp in, Mr. Leary, shoomp in!"

In a moment of weakness Leary yields to the majority. They seat him comfortably, and our stout German friend put his shoulder to the stern and pushes with all his strength, until he blows like a porpoise. The boat fails to budge. The rowers jab their oars in the bank and reinforce the German's efforts with their own. Suddenly the boat starts, our German leaps wildly aboard, and the craft sinks, with the gyrating grace of a clam shell!

The scramble out of the water was marked with greater precipitation than grace. And what a drowned looking mob! They take it good naturedly, however, and one of them jumps back in the lake and rescues the "kag," which is floating away, faucet up. The rest of the paraphernalia is left to shift for itself.

A heavy thunderstorm caught a number of fishing parties out on the lake one day. One crowd hauled their boat out on the shore, propped it bottom up, like a lean-to, and crawled under its protecting shelter. One of the crowd, known as "Jack," had, as usual, imbibed more than his internal capacity could assimilate to advantage. He grew pathetically sentimental. His sympathy was bestowed on a herd of cows which stood tail-to to the deluge a short distance away. "Pooree-hic-bozzy-cows," moaned Jack. "Suchy—dam—hic—mis'ble—shame t' let—hic—bozzy—cows get wet!" While it rained the hardest he took a towel under his arm, crawled out from under the boat in his shirt sleeves, wrapped one arm round the cow's neck, and stood there in the heavy downpour, using maudlin baby-talk to that bovine cud-chewer, while he sopped the streaming moisture from the animal's face with the towel.

There used to be fair snipe shooting in the fall in the marshy land at the head of the lake. Tom, a few others and myself used to take advantage of this in the proper season. Five of us were up that way one day and all carried guns but one—George Yardley, an Englishman, and one of the truest friends and noblest characters I have ever known. I dropped a snipe dead. The bird fell in the mud, and as I reached far over to pick it up, a fool in the crowd sent a charge of shot within a foot of my hand and blew the bird out of sight into the mud. Was I mad? That same chap was the greatest blowhard about his hunting abilities I ever saw. That afternoon I stood near him, when his gun went off, right alongside of my head, and he fell over in a dead faint. The hammer came down on his thumb. We threw hatfuls of water in his face and he finally revived. A fellow came along with a duck, and this chap forgot the command, "Thou shalt not covet;" he wanted that duck! The man who had the duck would rather have a quarter. The quarter was borrowed from one of the party and the lender has whistled for his money ever since. Which is all amusing enough in retrospect!

A party of us were rowing down the lake one summer evening. Will Kingsbury, of "Grau Chaco" fame, was along. It was getting quite dark. A .22 caliber rifle lay in the bottom of the boat. We were rowing along the east shore. Will suddenly picked up the rifle, slipped in a cartridge, and pointed to the opposite bank. "See that flower," said he. We could barely distinguish a single laurel blossom. Will aimed quickly and fired. The blossom disappeared with the snap of the rifle, and when we investigated we found the petals scattered on the ground. The center was gone as though done with a die. It was a plumb-center shot, and taking into consideration all the circumstances, the best shot I ever saw made. The distance was fully 150 yards; the object almost indistinguishable, and the shooting done from a moving boat. It may have been chance, but marvelous, nevertheless.

George Nichols lived for a number of years right on the east bank of the lake, just north of the first bridge, where a little, fairy-like cove makes in from the lake—the best pickerel spot at the lower end. George owned and bred a number of English setters, some of which became bench show winners. He used to mourn over the fact that he had refused $500 for a bitch which choked to death a week later. He was also a breeder of choice poultry, and liked to drive a well bred horse. At one time George had charge of the barrel making department of the old Whitney Arms Company. He was a good deal of a sportsman in his way. He also had the reputation of having recovered more drowned bodies out of the lake, up to the time of his death, than any other person. He was a good fisherman, but inclined to trout fishing rather than fishing in the lake. He was also more than an ordinary shot in the brush.

Another famous character, who still lives, and who has had the reputation for years of gaining a livelihood solely by hunting and fishing, and trapping, and bullfrogging in the vicinity of the lake, is old Bill Johnson. Tall, brown-eyed, hook-nosed, long-haired and bewhiskered, Bill is a character, indeed. He has been the most notable human fixture of the lake since I have known anything about it. It used to be almost impossible to row the length of the lake without seeing Bill fishing somewhere along the shore or from an anchored skiff. And the "b-lang" of his old muzzleloader, echoing in the woods or from the marshes, tells the death-knell many times of skunk, woodchuck, squirrel or muskrat. Bill Johnson is the living "Port" Tyler of this vicinity to-day.

William H. Avis.

Highwood, Conn., Feb. 25.

Angling and Gangs of Hooks.

New York, April 24.—*Editor Forest and Stream:* Please state just how many hooks are the legal limit in New York and New Jersey. It is asserted by one angler that no more than one treble hook or three separate hooks can legally be used on one rod for bass in New York and New Jersey, and that trolling baits with more than one treble hook attached are unlawful. Another angler asserts that there is no limit to the number of hooks that can be used on a rod, but that gangs, etc., are prohibited.

Will you kindly publish full information on this subject at an early date, as the bass season is drawing near and we don't wish to violate the law. Black Bass.

The New York law reads: "Except as permitted by this act [as to nets] fish shall not be taken by any device except angling in any of the rivers, lakes and inland waters of this State." The definition of angling is given in the law as follows: "'Angling' means taking fish by hook and line in hand or rod in hand; or if from a boat not exceeding two lines with or without rod to one per-

son." From this it appears that there is no restriction as to the number of hooks used.

In New Jersey the law, as amended in 1903, reads: "It shall be unlawful to put, place, use or maintain in any of the waters of this State inhabited by pickerel, pike, pike-perch, black bass, Oswego bass, white bass, calico bass, perch or trout, any set-line or set-lines, or to use upon a line for the taking of fish in such waters any contrivance having more than three hooks, or more than one burr or three hooks attached thereto, under a penalty of twenty dollars for each offense."

Death of Eugene McCarthy.

EUGENE MCCARTHY, a well-known writer on fishing topics, died at his home in Syracuse, N. Y., on April 26, at the age of 46. Mr. McCarthy was the author of "The Leaping Ouananiche," "Familiar Fish," and other books. Because of his writings on the ouananiche, his name was given to the fish by Dr. Jordan, the species being known as *Salmo salar ouananiche mccarthy.*

Jerry Falvey.

JERRY FALVEY, a fly-rod and fly maker of this city, died last Saturday, aged 72. Falvey had a little shop on Fulton street, and was well known to anglers.

The Kennel.

Fixtures.

May 19-21.—Montreal, Can., Canine Association's show.
May 29-30.—Hempstead, L. I.—Open air show of Ladies' Kennel Association of America.
Oct. 6-9.—Danbury, Conn., Agricultural Society's show.
Nov. 3-6.—New York.—Annual show of Ladies' Kennel Association of America.

Wissahickon Kennel Club.

CHESTNUT HILL, Pa., April 22.—We intend holding our Second Annual Show at the grounds of the Philadelphia Horse Show Association, St. Martin's Green, Wissahickon Heights, Philadelphia, on the 13th of June next for the benefit of the Bethesda Home for Orphan Children. The show will be given under A. K. C. rules, and this year we have a two-point rating. We are giving cups, medals and ribbons as prizes, which will be greatly supplemented by handsome special prizes.

The following gentlemen have been asked to judge: W. J. Green, Boston terriers; T. H. Garlic, fox terriers, wire and smooth; M. M. Palmer, collies; J. A. Caldwell, Scotch, Welsh and Manchester terriers; G. G. Massey, bull dogs; Frank Dole, bull terriers; Thomas Cadwalader, beagles; G. Muss-Arnolt, pointers and dachshunde, Yorkshire and Skye terriers, toy spaniels, Pomeranians and Dalmatians; George C. Thomas, English and Irish terriers; Thomas Sheubrooks, St. Bernards; John Lamber, deer hounds; W. T. Payne, spaniels; S. Bird Carrigan, great Danes and wolf hounds; Samuel G. Dixon, Gordon setters; James Watson, Irish terriers; James Mortimer, Airedale terriers. Messrs. Watson and Mortimer will divide the other breeds. D. BUCKLEY, Secretary.

Points and Flushes.

The A. K. C. S. B., Vol. 19 (1902), contains registrations 64,654 to 70,972, and much other valuable matter, 1,370 pages in all. It contains a list of the active and associate members, bench shows and judges, cancellations, champions of record, executive board fox hound and beagle trials, kennel names, prefixes and affixes, officers of the A. K. C., Pacific advisory board, standing committees, bench show winnings, pedigrees, etc. Address Mr. A P. Vredenburgh, 55 Liberty street, New York.

The "Official Dachshund Standard of the Dachshund Club of America," is the title of an interesting work edited by Messrs. G. Muss-Arnolt and Dr. C. Motschenbacher, translated and adopted by the Dachshund Club of America. It is instructively illustrated.

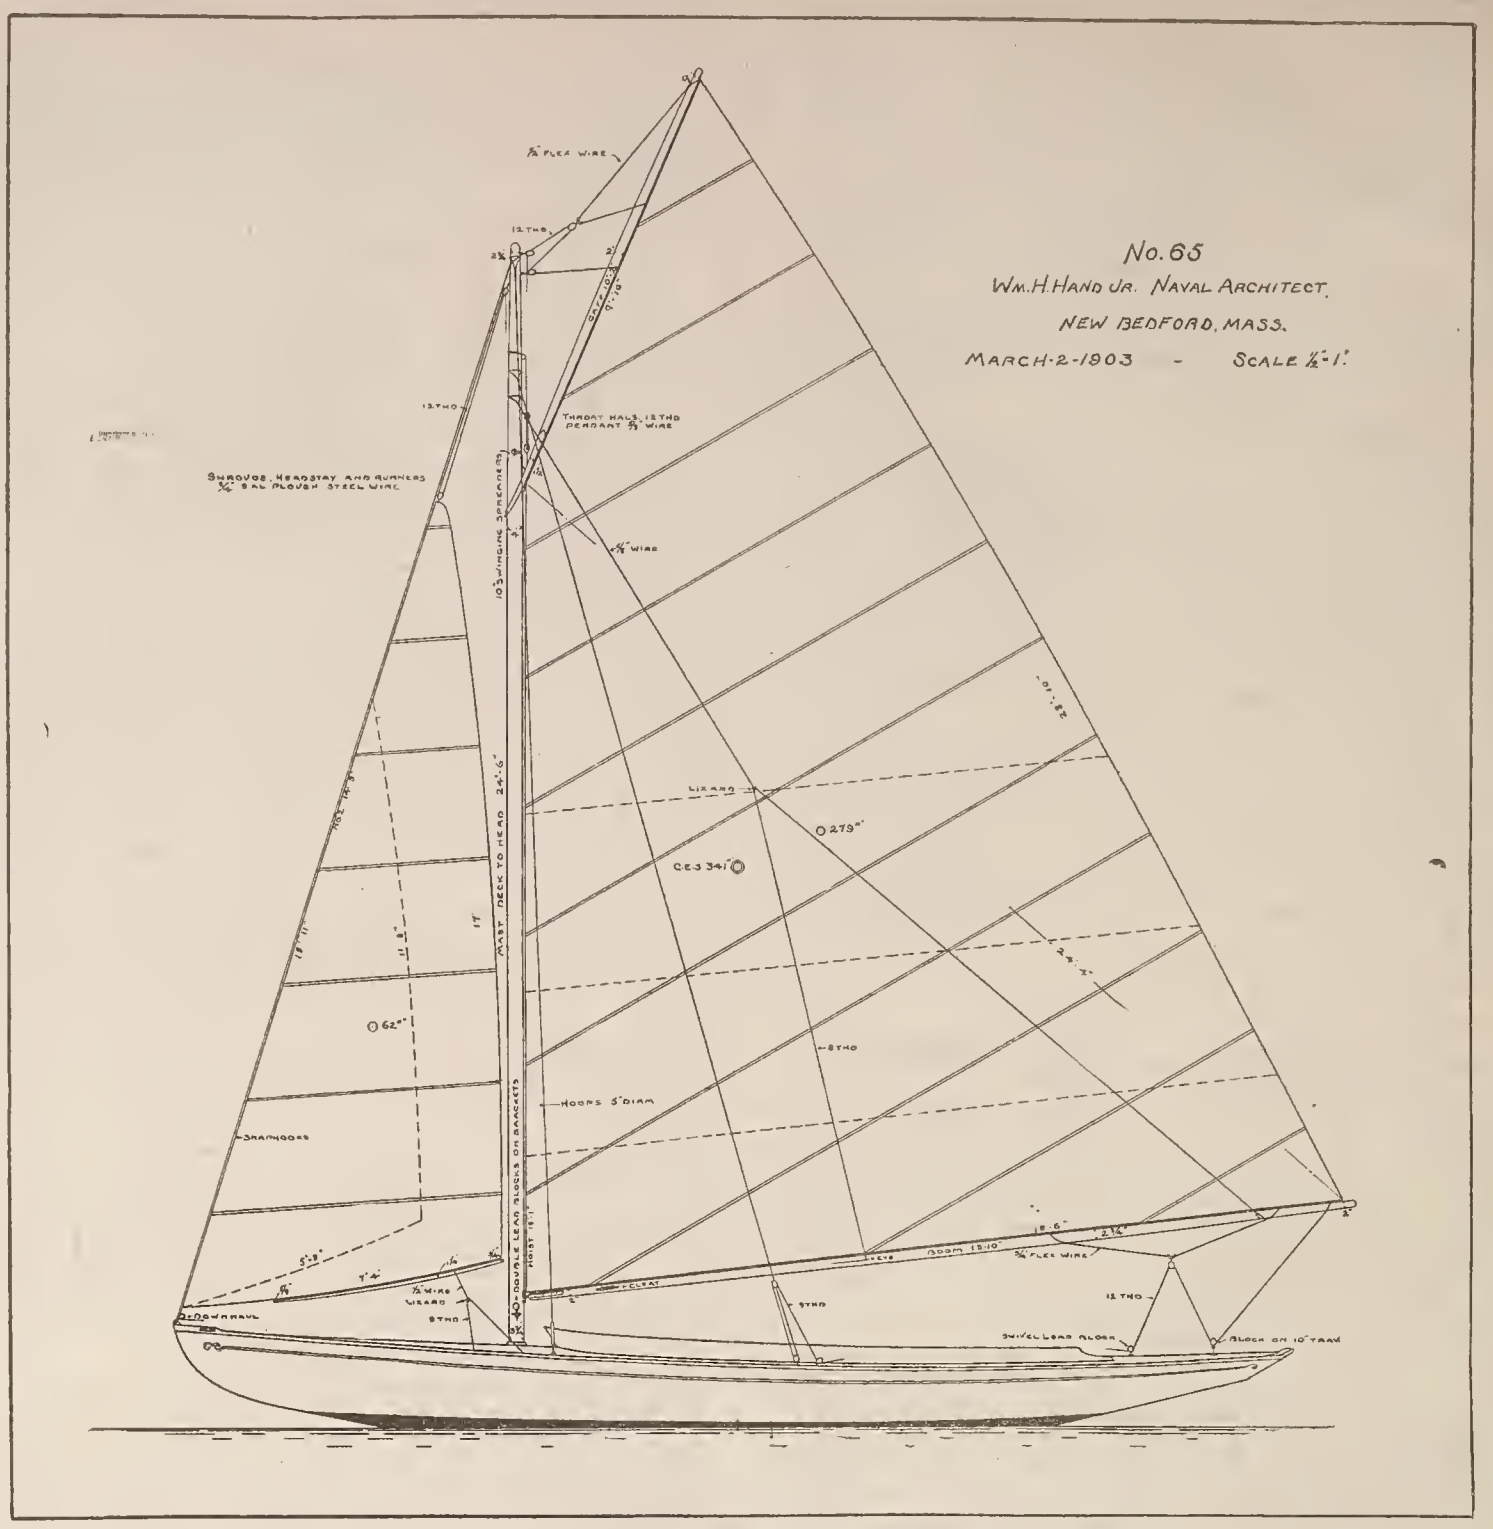
Yachting.

RELIANCE was given her first trial under sail on Saturday, April 25. The boat was tried on every point of sailing, and the spin proved to be a very successful one. The wind was very light when Reliance got up anchor, about half past nine, and she drifted slowly with the tide away from Bristol and down Narragansett Bay. After drifting about for an hour or more a little southwest breeze helped matters some, but it was still too light to heel her down. However, the breeze gained strength, and was soon blowing seven or eight knots, and in the smooth water Reliance moved along very smartly.

It was just after noon when Reliance reached Newport, and the anchor was dropped, and all hands had an opportunity to get some luncheon. Early in the afternoon Reliance was again taken out, and by this time the breeze was blowing about ten knots.

There was a little jump of a sea on, but as she beat out to Brenton's Reef lightship it did not seem to bother her in the least. She pointed high and footed very fast, although Captain Barr pinched her so that the head sails were constantly fluttering. After trying her at reaching she was put dead before it, and the spinnaker was set, which she was able to carry nearly all the way back to Bristol. Reliance made very little disturbance in moving through the water and she left it very clean.

The boat handled perfectly. The sails that were perfect at the start stretched out fast and seemed to be a bit big for the spars. The headsails were only fair and will have to be recut. Altogether the results were more than satisfactory.



CENTERBOARD 15-FOOT KNOCKABOUT—SAIL PLAN—DESIGNED BY WILLIAM H. HAND, JR., 1903.

Design for a Centerboard 15-Footer.

WE reproduce this week the lines, construction and sail plans of a centerboard 15ft. knockabout that was designed by Mr. William H. Hand, Jr., New Bedford, Mass. Phinney & Co., Monument Beach, are building two boats from the design; one is for Mr. E. F. Atkins and the other is for Mr. H. O. Underwood. These gentlemen will use the boats for racing and day sailing at Nantucket. In general appearance above the waterline these boats strongly resemble the one-design keel 15-footers now building from Mr. Hand's design for members of the New Bedford Y. C.

The dimensions are as follows:

Length—	
Over all	25ft. 1½in.
L.W.L.	15ft.
Overhang—	
Bow	4ft. 8 in.
Stern	5ft. 5½in.
Beam—	
Extreme	6ft. 11 in.
L.W.L.	6ft. 3½in.
Freeboard—	
Bow	2ft. 2¼in.
Stern	1ft. 7 in.
Least	1ft. 3 in.
Draft—	
Extreme	2ft. 2 in.
Lead keel	1,000 lbs.
Displacement	2,750 lbs.
Sail area—	
Mainsail	279 sq. ft.
Jib	62 sq. ft.
Total	341 sq. ft.

Boston Letter.

BOSTON, April 27.—The Regatta Committee of the Eastern Y. C. has prepared its list of fixtures for the coming season. The list is a very good one, and includes races for yachts of all sizes, from the 18-footer to the big 90ft. sloops and all of the larger sloops and schooners. The events are so divided that considerable interest should be shown in each. In response to an invitation of the New York Y. C., the Eastern Y. C. fleet will join in the annual cruise of the former, meeting the New York Y. C. fleet at New London. From there the cruise will be a joint one. Squadron runs will be made from Marblehead to New London, and at the close of the joint cruise, a race will be given off Newport by the Eastern Y. C., open to the yachts of both clubs, including 90ft. sloops. The complete list of fixtures is as follows:

June 19, Friday.—Open race for small classes.
July 3, Friday.—Open race for small classes.
July 4, Saturday.—Open race for small classes.
July 11, Saturday.—Squadron run to Gloucester.
July 13, Monday.—Annual regatta.
July 15, Wednesday.—Annual cruise; squadron run, Marblehead to Vineyard Haven.
July 16, Thursday.—Squadron run; Vineyard Haven to Newport.
July 17, Friday.—Squadron run; Newport to New London.
July 25, Saturday.—Open race, Newport; open to E. Y. C. and N. Y. Y. C.
Aug. 1, Saturday.—Squadron run; Marblehead to Gloucester.
Aug. 3, Monday.—Open race for small classes.
Aug. 15, Saturday.—Squadron run; Marblehead to Gloucester.
Sept. 4, Friday.—Open race for small classes.
Sept. 5, Saturday.—Open race for small classes.

From the programme of the annual cruise, it will be seen that the Eastern Y. C. fleet is expected to arrive in New London Friday evening, July 17, and will be off the Pequot House when the New York fleet arrives on Saturday. When the two fleets meet considerable cannonading may be looked for.

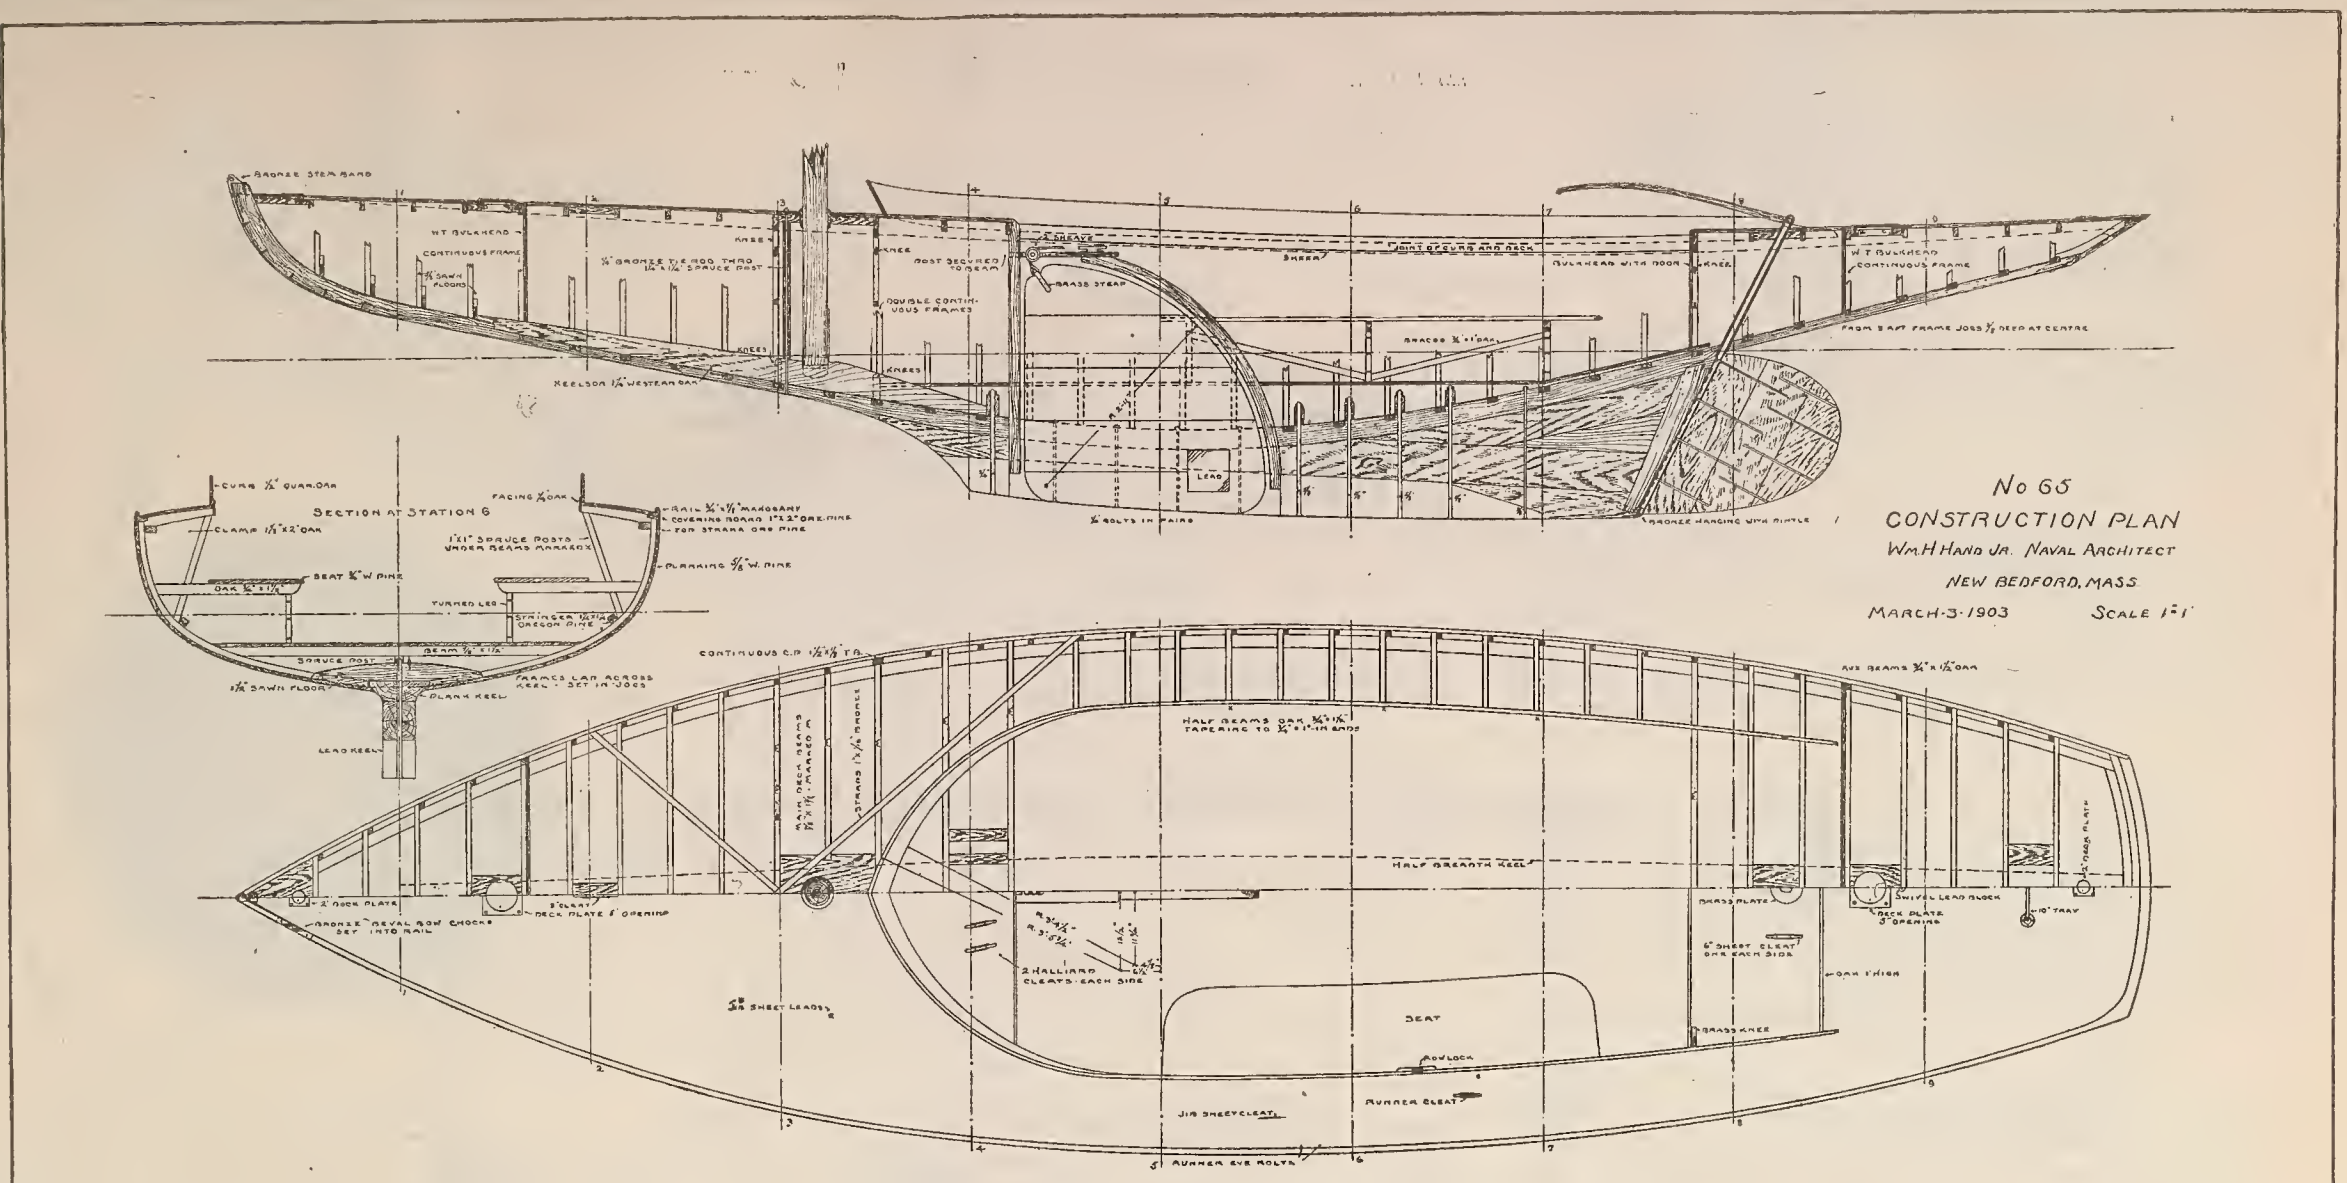
A meeting of the Boston Y. C. is to be held at the Rowe's Wharf Clubhouse on Wednesday evening, at 7:30, when several proposed amendments to the by-laws will be acted upon. The Membership Committee reports the following recent elections to membership: Full membership, Allen J. Litchfield, William B. Brintnall, Edward M. Gilman, James G. Casey, Sumner E. Brown, Charles A. Campbell, Beverly R. Wood, William S. H. Pease, Charles Henry Davis and Samuel N. Braman; Dorchester division, Thomas F. White, Louis A. Radell and John J. McCormack. It is announced that the non-yacht owner membership limit of 750 is about reached.

Messrs. Burgess and Packard have just designed for a syndicate of the San Francisco Y. C., headed by Mr. John W. Pew, a racing machine of extreme dimensions. She will be 70ft. over all, 28ft. waterline, 15ft. beam and 2ft. 9in. draft. With her centerboard down she will draw about 9ft. The forward overhang is 26ft., only 2ft. less than the waterline length. Her ends lay very close to the water, so that she will use very nearly all of her over all length when she is heeled. While she is a cabin yacht, she will be no less extreme than the Quincy cup defender, Outlook. There will be a vertical bridge truss above the deck and running through the cabin, from a little abaft the stem to a little forward of the taffrail. The after part of this truss is latticed. The steering gear and wheel are set up on top of it. She is of the scow form, her forward end being drawn in somewhat more than in the Outlook. She is designed to race for the San Francisco challenge cup.

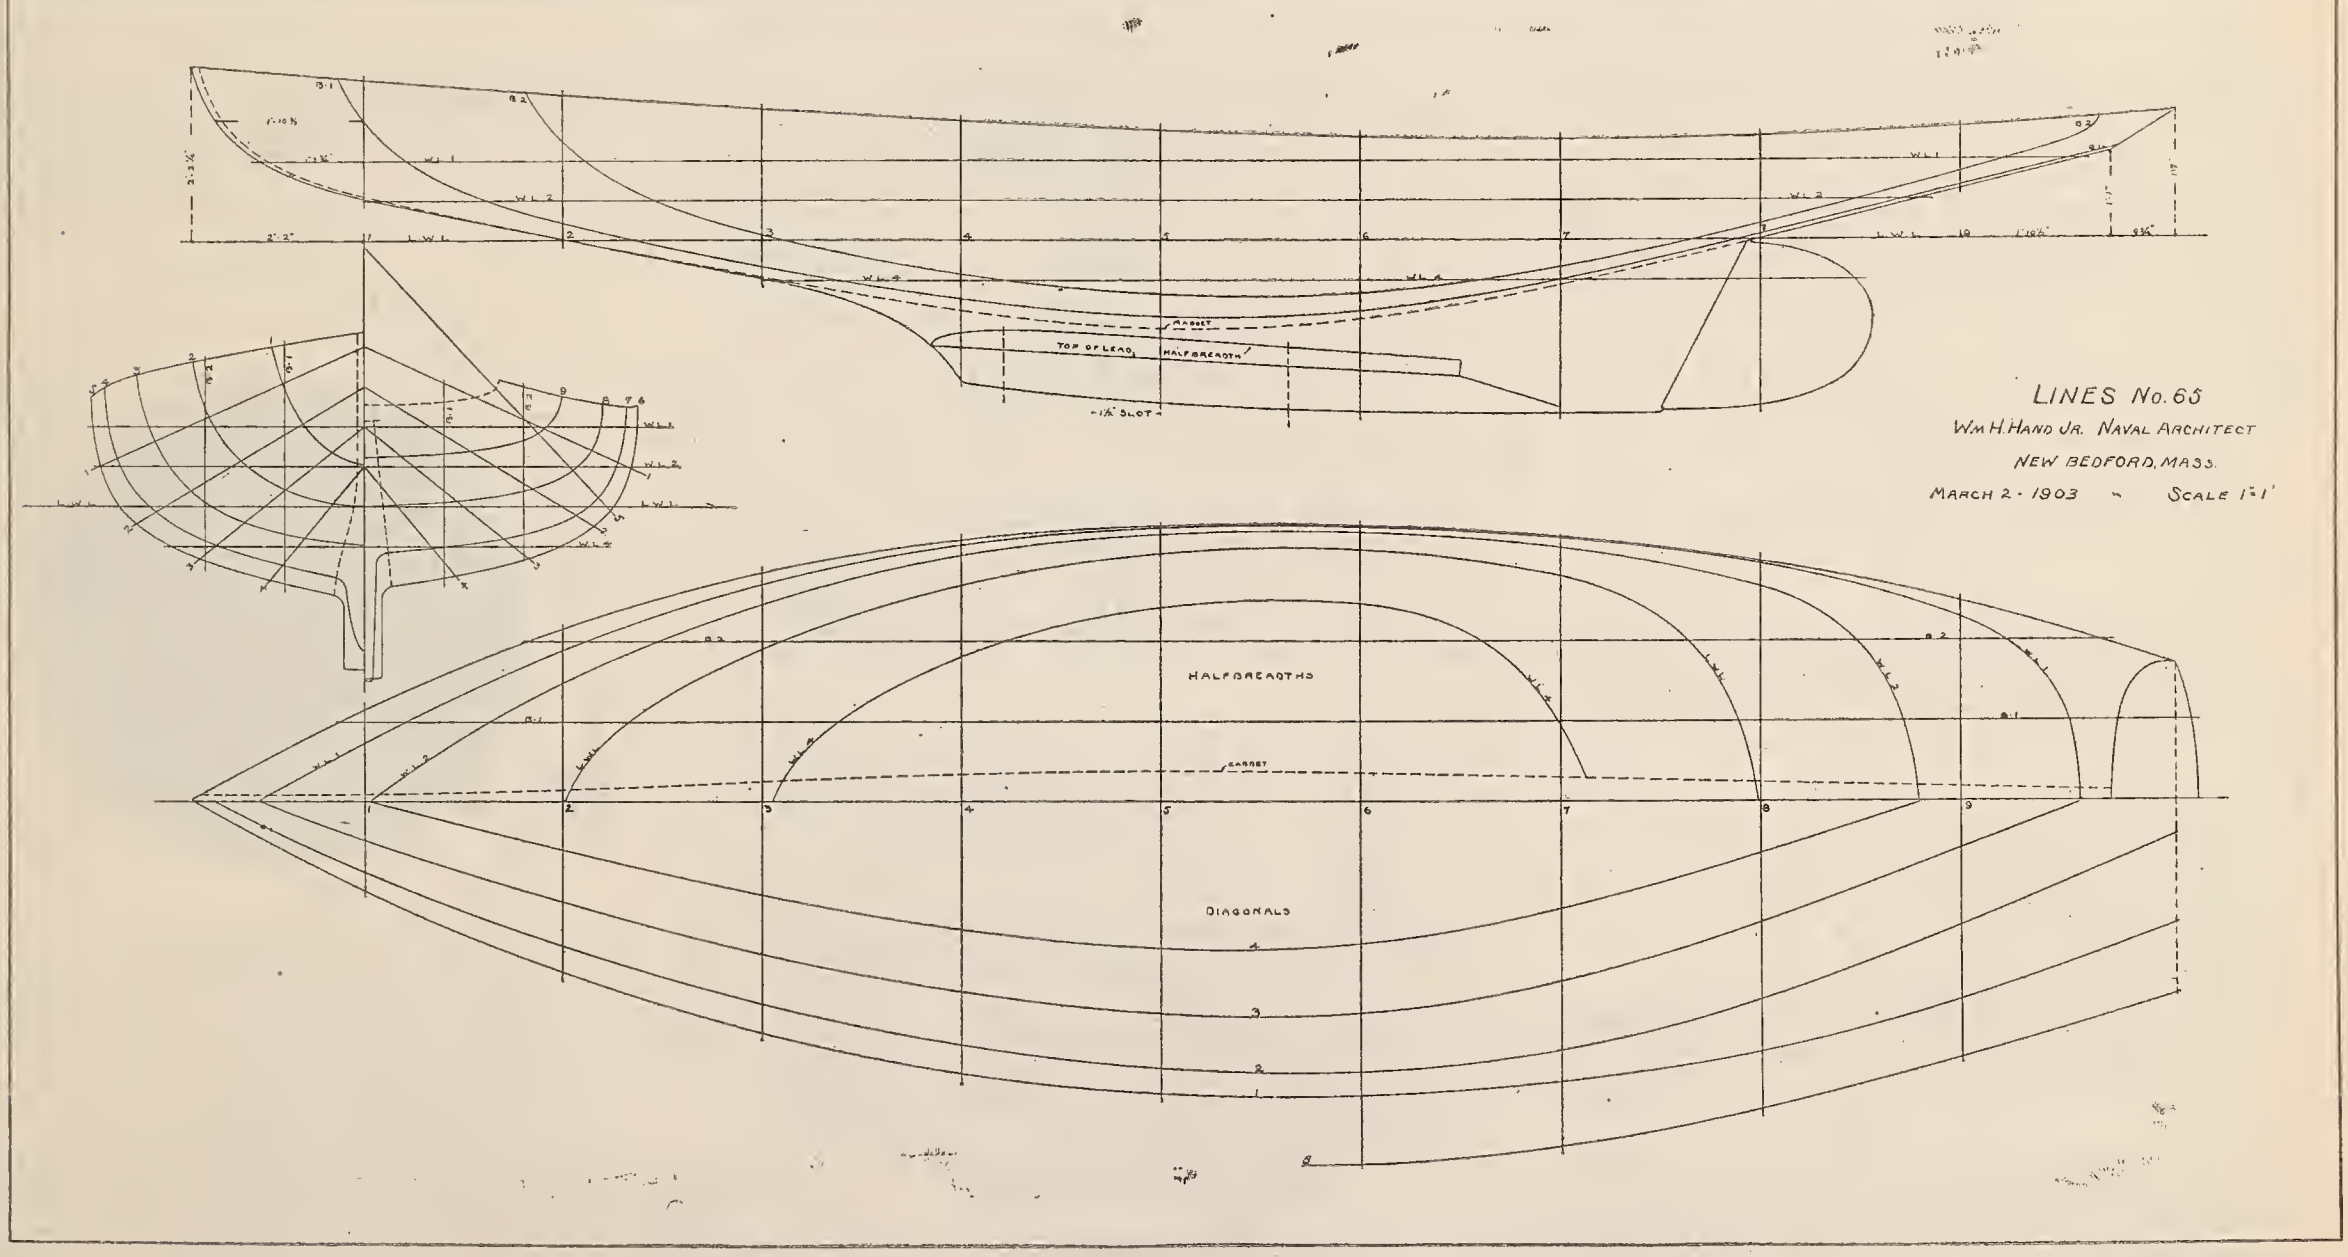
Mr. E. A. Boardman has sold the 21-footer Gadfly, owned by Gilpin Lovering, to Mr. W. H. Trumbull. He has an order for a 15-footer for Mr. William Parker, of Halifax, N. S. The 22-footer, designed by Mr. Boardman for Mr. George Lee, will be built by White, of Manchester.

Messrs. Small Bros. have an order for an auxiliary cruising yawl for Mr. H. E. Pratt, of Los Angeles, Cal. She will be a keel boat, 35ft. over all, 27ft. waterline and 5ft. draft, and will have a very moderate sail plan. They have sold the 21-footer Thecla, owned by Mr. C. W. Chapin, to Mr. William Claflin. She will be raced in Buzzard's Bay. These designers report that work is progressing on the auxiliary 85ft. schooner for Mr. W. A. Gardner. The hatches, combings, skylights and companionways are being made in Neponset.

JOHN B. KILLEEN.



CENTERBOARD 15-FOOT KNOCKABOUT—CONSTRUCTION PLAN—DESIGNED BY WILLIAM H. HAND, JR., 1903.



CENTERBOARD 15-FOOT KNOCKABOUT—DESIGNED BY WILLIAM H. HAND, JR., 1903.

YACHT CLUB NOTES.

Mr. Hollis Burgess has made the following sales: 44ft. waterline cutter Alborak, owned by Gen. Chas. J. Paine, of Boston, to W. Starling Burgess, of Boston. Alborak is to be rigged as a yawl, and will have an auxiliary engine installed. 25-footer Dragon, owned by William G. Barker, of Salem, Mass., to George H. Ball, of Boston.

Mr. Frank Bowne Jones has made the following sales through his agency: Yawl Quo Vadis, owned by Freeman H. Bettys, to W. Bernard Duke; sloop Helene, owned by Geo. O. Curtis, to Frederic J. Schussel; sloop Empronzi, owned by Alfred Peats, to Roy A. Rainey; sloop Dixie, owned by E. W. Colloque, to Arthur P. Hatch; raceabout Belinda, owned by Jacob I. Bergen, to Francis G. Stewart; knockabout Gowan, owned by F. G. Stewart, to F. V. Bennis; knockabout Bobs, owned by W. A. W. Stewart, to Allen P. Hallett; knockabout Viper II., owned by Dr. W. D. Hennen, to H. S. Appleton.

Mr. Adrian Iselin has chartered the English-built steam yacht Surf from Mr. F. D. Lambert, of Leith, through the agency of Messrs. Tams, Lemoine and Crane. Dr. Walter von Bruning, of Berlin, Prussia, has sold the American schooner Lasca, through Messrs. Tams, Lemoine and Crane, to a member of the New York Y. C.

The 60ft. launch built by the Electric Launch Co., Bayonne, N. J., for Mr. W. F. Morgan, of Brooklyn, was launched on April 24. She was named Delibah. The yacht will be equipped with two gasolene motors, and she will have twin screws. It is expected that she will develop a speed of fourteen knots.

Mr. C. J. Nelson has had a 36ft. waterline auxiliary schooner built by Messrs. Gorman & Sons, of Bay Ridge. The power will be furnished by a 10 horse-power Standard engine.

Isolita is the name selected for the sloop now building by the Herreshoff Mfg. Co. for Mr. E. Walter Clark, of Philadelphia. She is a centerboard boat 70ft. over all, 50ft. waterline, 15ft. 6in. breadth and 7ft. draft.

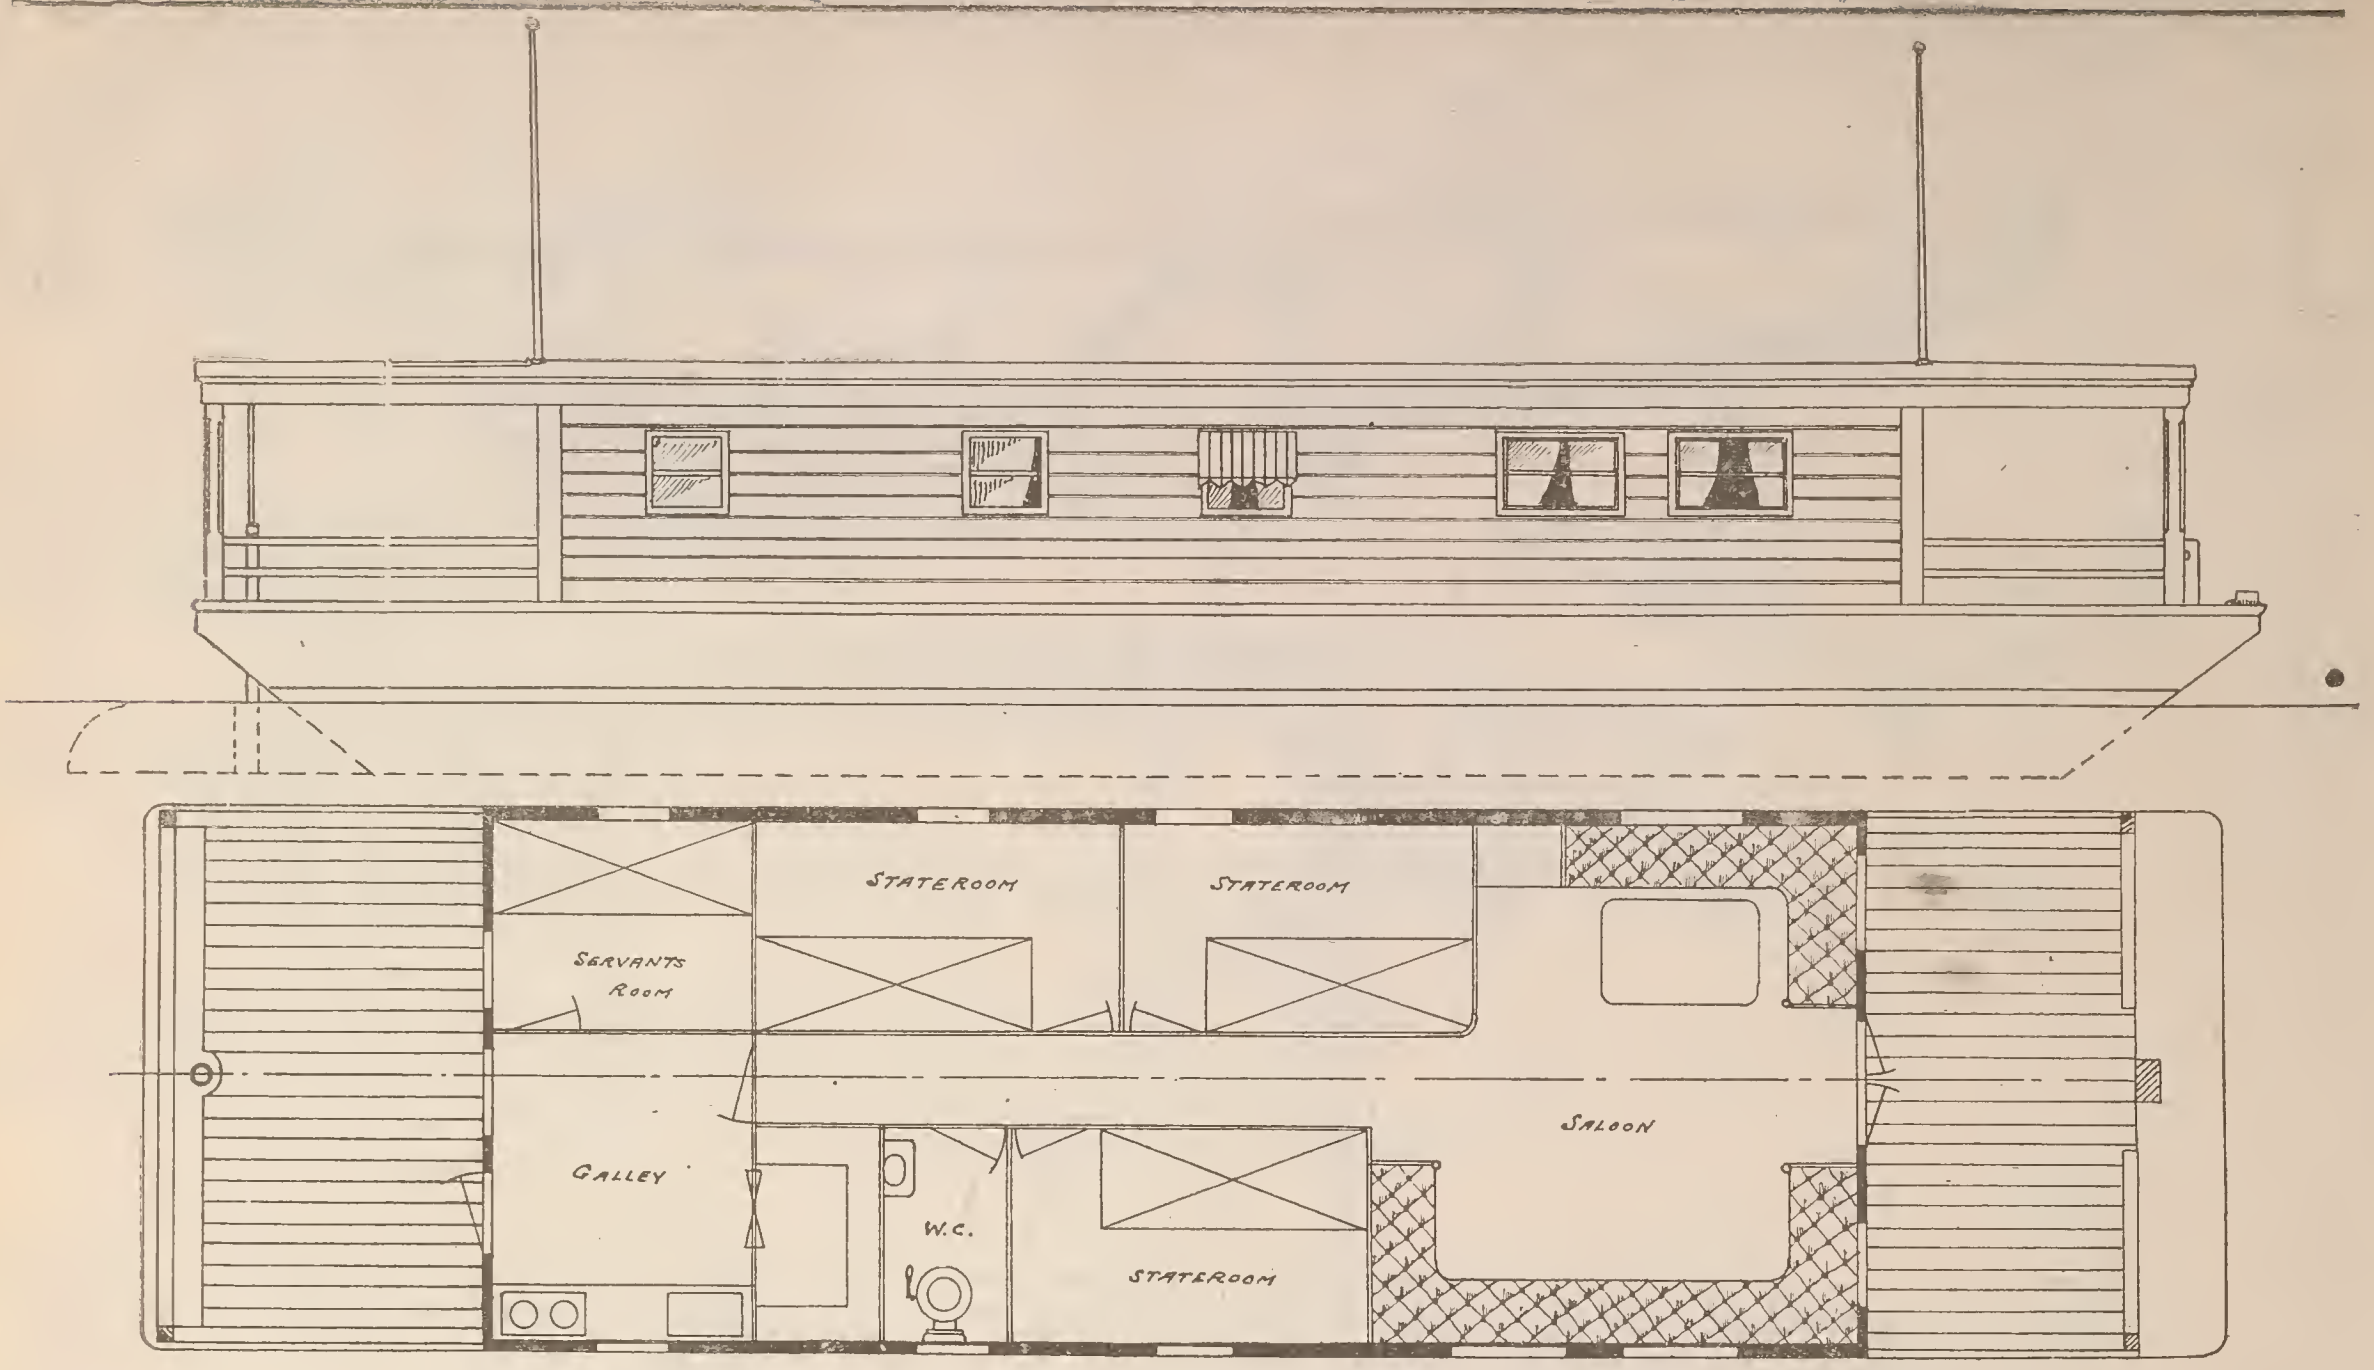
Haouli, the new steam yacht built from designs by Mr. Henry J. Gielow for Mr. F. M. Smith, was launched from the yard of the builders, Messrs. J. N. Robbins Company, Erie Basin, on Saturday, April 25. The yacht is constructed of steel and is 211ft. 3in. over all, 166ft. waterline, 21ft. 6in. breadth and 9ft. draft. She has a double bottom and six watertight bulkheads. Under ordinary running Haouli will make twenty miles an hour, but under forced draft she will make twenty-five miles. The yacht was built under Mr. Gielow's supervision, and only the best material was used in the construction of the vessel.

The 21ft. sloop built by Messrs. Wallin & Gorman for Messrs. John R. Brophy and Alfred Mackay, has been named Ogeemah. She was designed by Mr. Brophy, and her complete plans appeared in FOREST AND STREAM some time ago. She is 30ft. over all, 20ft. waterline, 7ft. 6in. breadth and 5ft. draft.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

The racing schedule laid out by the New York Y. C. is a very elaborate one, and there will be some thirty-five events. The racing begins on May 21, and in consequence it is essential that all the boats be measured as soon as possible. In order to expedite matters



OUTBOARD PROFILE AND CABIN PLAN OF HOUSE-BOAT DESIGNED BY SWASEY, RAYMOND & PAGE.

Mr. George A. Cormack, the secretary of the club, has had the following circular letter sent to all yacht owners who are members of the club: "As it is required by the racing rules that all yachts be measured before sailing in the club events of 1903, it is requested that you at once notify the measurer at the clubhouse if you wish your yacht measured under the new rule, and if so, state where she is laid up so that some of the necessary measurements may be taken before the yacht is put in the water.

"Your prompt attention to this matter will not only greatly facilitate the work of the measurer, but also avoid the possibility of delay in obtaining the new racing measurement of your boat."

* * *

The Bayside Y. C., that was organized last year, is to build a new clubhouse on the shore of Little Neck Bay.

* * *

At a recent meeting of the Jamaica Bay Y. R. A., the following officers were elected: Chairman, Benjamin F. Daly, Jamaica Bay Y. C.; Vice-Chairman, Homer C. Macy, Canarsie Y. C.; Treasurer, Henry Lange, Old Mill Y. C.; Secretary, E. V. Pardessus, Bergen Beach Y. C.

Dates for association races have been fixed for Sunday, July 5, and Labor Day, Sept. 7.

Dates for the regattas are as follows:

Sunday, June 14.—Jamaica Bay Y. C.
Sunday, June 21.—Old Mill Y. C.
Saturday, July 18.—Canarsie Y. C.
Sunday, Aug. 2.—Bergen Beach Y. C.

The association has adopted the rules of the American Power Boat Association to govern races in the motor boat classes.

A number of boats will be built for the new one-design class.

The new class of boats will be of the knockabout type, 19ft. on the waterline and 28ft. over all, with 10ft. breadth and of light draft.

To add to the interest in this new class, Mr. William G. Gallagher, of the Jamaica Bay Y. C., has offered a cash prize of $250, or a cup of equivalent value, provided a certain number of boats were built.

* * *

A meeting of the American Power Boat Association was held at the Columbia Y. C. house, foot of West Eighty-sixth Street, New York City, on Wednesday evening, April 22. The following officers were elected: President, W. H. Ketcham, Columbia Y. C.; Secretary, John H. McIntosh, Columbia Y. C.; Treasurer, A. B. Cole, Manhasset Bay Y. C.; Measurer, Henry J. Gielow, Atlantic Y. C.; Executive Committee, the officers and Dr. E. B. Sherwood, Shattemuck Y. C.; Frank Bowne Jones, Indian Harbor Y. C., and J. H. Wainwright, American Y. C.

Secretary J. H. McIntosh read a letter from the Marine Motor Association of Great Britain, which said that the motor boat races for the Harmsworth Cup would take place in Queenstown Harbor on July 11. The cup will be awarded to the fastest boat not over 40ft. long; there are no other restrictions. Mr. McIntosh stated that at least one boat would be sent over to represent the American Association in the races.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Design for a Houseboat.

THE plans of the houseboat that we publish herewith were made by Messrs. Swasey, Raymond & Page. The design shows a craft of simple construction and large accommodation that could be built at a comparatively small cost. The boat is of the stationary type, having neither sail nor motive power, and would have to be towed from place to place.

She is 49ft. 6in. over all, 44ft. 6in. waterline, 13ft. breadth and 1ft. 8in. draft. The forward deck is 6ft. 6in. long and the after deck is 7ft. 6in. long. The cabin house is 34ft. long and the roof over this extends the full width and length of the boat in order to give protection to the forward and after deck. The sides and the ends of the cabin house are covered with weather boards in order to make the cabins warm and tight. The roof is covered with canvas and by putting up iron stanchions it could be covered with a canvas awning so as to afford protection from the rain and sun. This would make a comfortable lounging place and would make the cabins much cooler as the awning would save the roof of the cabin from the sun's direct rays.

The main saloon is in the forward end of the boat. This room is 12ft. long and has windows on three sides. Wide lounges extend around four sides of the cabin. A passageway 2ft. 3in. wide runs aft from the main cabin to the galley. On the port side of the passage are two staterooms 8ft. long and 5ft. wide. On the starboard side is another stateroom 8ft. long and 5ft. wide, and a toilet room 3ft. by 5ft.

The galley is 6ft. 6in. long and 7ft. 6in. wide. Opening from the galley is a pantry 3ft. by 5ft. On the port side of the galley is the servants' room, 5ft. wide and 6ft. 6in. long.

This plan conveys a good idea of what a large amount of room may be had on a small houseboat. The interior arrangement could, of course, be changed to meet special requirements, but the room has been economically and carefully disposed of in every way.

Canoeing.

A. C. A. Membership.

The following have applied for membership to the A. C. A:

Eastern Division.—H. P. Cunningham, Medford, Mass.; Wm. J. Burbeck, Lowell, Mass.; Wm. A. Packard, Boston, Mass.; John W. Rice, Winchester, Mass.; Wm. E. Crosby, West Medford, Mass.; Clifford Talbot, Winchester, Mass.; A. J. Goodwin, Boston, Mass.; Chas. H. Littlefield, Jr., Lawrence, Mass.; Robert B. Parkhurst, Lawrence, Mass.; John R. Newman, Boston, Mass.; H. K. Newhall, Boston, Mass.; Arthur A. Ridgeway, Boston, Mass.; Geo. W. Thompson, Boston, Mass.

Central Division.—George S. Kellogg, Buffalo Canoe Club, proposed by Charles P. Forbush; G. Fred Merrick, Rochester Canoe Club, proposed by Al. T. Brown; Frederick C. Irving, Gouverneur, N. Y., M. H. Kennedy, New Brighton, Pa., proposed by H. T. Kreamer; S. T. Blemming, John W. Boyce, Pittsburg, Pa., proposed by H. E. McLain; Lyman B. Kirkpatrick; Frank T. Sage, Irondequoit Canoe Club, Rochester, N. Y., proposed by John S. Wright; Hiram M. Rogers, Rochester Canoe Club, proposed by John S. Wright; H. S. Sturdevant, Rome, N. Y., proposed by Jesse J. Armstrong; John Henry Coon, Buffalo Canoe Club, proposed by John S. Wright; and W. O. Amsler, Otto Benkiser, Alton Brown, W. H. Brown, G. T. Hildebrand, C. A. Robb, Gregg Rogers, J. H. Smith, H. G. Welsh, all members of the Duquesne Canoe Club, Pittsburg, Pa., proposed by A. W. Heeren and H. W. Breitenstein.

Atlantic Division.—Dr. Wm. B. Breek, Dr. Stuart B. Close and Mr. George V. Strahan.

Sugar Island Regatta Committee.

Editor Forest and Stream:

Commodore Hyatt, of the American Canoe Association, asks that I advise you of the appointment, by him, of the Regatta Committee for the camp at Sugar Island, in August next, consisting of the undersigned, as chairman, with Messrs. Charles E. Britton, of Gananoque, Canada, and Hiram C. Hoyt, of Rochester, representing the Northern and Central divisions. We hope to have one member from the Western division associated with us, but to date I have been unable to secure an acceptance from anyone in that territory.

J. K. HAND,
April 27, 1903. Chairman Regatta Committee.

Rifle Range and Gallery.

Fixtures.

June 15-16.—Union Hill Schuetzen Corps twenty-fifth anniversary shoot. P. Stumpf, Capt.

June 18-20.—St. Louis, Mo.—Tournament under auspices of Central Shooting Bund. Horace Kephardt, Sec'y.

July 6-7.—New Haven, Conn.—South New England Schuetzen Bund annual schuetzenfest, under the auspices of the Independent German Rifle Company. H. C. Young, Sec'y.

Rifle at Shell Mound.

SAN FRANCISCO, April 13.—The weather conditions at Shell Mound yesterday were excellent. The Red Men Schuetzen Company held their annual shoot for members only. John Feldermann made the fine score of 73 out of 75 possible.

D. B. Faktor was the "bright particular star" of the Golden Gates, making 230 twice in 10-shot matches. J. E. Gorman made 95 and 93 with revolver. Scores of the day:

Red Men Schuetzen Company, prize shoot: John D. Feldermann 73, Capt. H. Grieb 70, H. Weber 69, J. A. Mohr 68, W. Dressler 67, J. Mahr 67, P. H. Rulffs 66, John Steiner 65, Capt. C. Oldag 65, C. G. Strippel 63, H. Bach 63, H. Schlichting 57, H. Schulz 57, O. Von Borstel 57, D. Tamke 57, M. Dickert 56, W. Kreutzkamm 54, J. Oldag 50, H. Schult 49, L. Bernstein 49, F. Meichsner 45, H. Schlichting 44, O. E. Rosberg 41, E. Runge 40, W. Wurzbach 37, H. Cordsen 36, C. Koelberer 28, W. R. Meyer 27, A. Mingst 25, H. Ritzau 23, J. Horn 17, C. G. Rosberg 13, C. Stein 11.

Golden Gate Rifle and Pistol Club, monthly medal shoot, gold medal: A. F. Bridges 216, O. A. Bremer 209, W. Ehrenpfort 175, 150.

Re-entry match: D. B. Faktor 230, 213; A. Gehret 229, 215.

Club trophy: D. B. Faktor 230, 213; O. A. Bremer 220, 210; W. F. Blasse 219, 204; G. Tammeyer 214, 208; A. Gehret 209; E. Woenne 197.

Pistol: W. F. Blasse 87, 82.

Re-entry match: Dr. Smith 89, W. C. Pritchard 95, 90, 85, C. H. Becker 86, 86, 84, 84, 82, 80.

Revolver: J. W. Tompkins 78, H. Hinkel 78, 76; C. A. Becker 79, M. J. White 86, 71; J. Kullmann 85, 84.

Re-entry match: J. E. Gorman 95, 93; P. A. Becker 89, 89, 86; G. W. Hoadley 78; J. W. Tompkins 76, 72; M. J. White 81; J. Kullmann 85, 77.

Rapid-fire match, six shots in thirty seconds: G. W. Hoadley 47, 47, 46, 35; J. R. Trego 46, 46, 42; M. J. White 37, 33, 15.

San Francisco Schuetzen Verein, monthly medal shoot, champion highest score class: A. Pape 423; champion medal, first and second classes, not filled; third class, Lieut. H. Meyer 403; fourth class, D. Dunker 313; best first shot, O. Lemcke 23; best last shot, D. Dunker, 25.

Norddeutscher Schuetzen Club, monthly bullseye shoot: Capt. J. Thode 167, G. H. Bahrs, 212. F. P. Rathjens 623, H. Huber 776, F. C. Rust 1034, D. Salfield 1045, J. Peters 1051, John De Wit 1258, F. P. Schuster 1305, H. Meyer 1456, O. Lemcke 1519.

Germania Schuetzen Club, monthly medal shoot: First champion class, D. B. Faktor 218; second champion class, W. F.

Blasse 218; first class, D. Salfield, 202; second class, W. Burkholder 220; third class, A. Schaefer 181; best first shot, J. Young 25; best last shot, A. Gehret, 23. ROEEL.

The United States Revolver Association.

NEW YORK, N. Y., April 21.—Several important records with the pistol at 50yds. have recently been made. One of these is the 50-shot record made by Thomas Anderton on April 4th, when he succeeded in raising the former record four points. I am sending you herewith a fac simile of the score with the shots all plotted on one target. The official score and the accompanying certificate required by the rules are as follows:

Thomas Anderton ..... 10 10 10 9 10 10 10 10 10 10—99
9 9 10 10 10 9 10 9 9 9—94
9 10 10 9 9 9 10 10 10 10—96
10 10 10 10 10 10 10 10 10 10—99
8 9 9 8 10 9 10 10 9 10—92—480

T. Anderton's Record-Breaker, 480 out of 500.

April 4, 1903, Massachusetts Rifle Association, Walnut Hill, Boston, Mass.—On April 4, 1903, Thomas Anderton, residing at Boston, declared his intention to shoot for record with the pistol at 50yds. The shooting was done in accordance with the rules and regulations governing the pistol championship matches of the U. S. R. A., the details being as follows: Standard American target, Smith & Wesson, .22cal. pistol, 2½lbs. trigger-pull, 10in. barrel, open sights, 50yds. Verified by the undersigned. The first shot of the score was fired at 3:08 P. M., and the last shot at 3:52 P.M. Weather conditions very cloudy and raining. Witnesses: W. F. Spencer, J. Murray, scorer.

A 20 and 30 shot record was also made by Mr. E. E. Patridge on March 28. The official score of the 20-shot record is as follows:

E E Patridge.....10 9 10 10 10 10 9 10 9 10—96
10 10 9 10 8 10 10 9 10 10—96—192

The 30-shot record made at the same time includes one more 10-shot string, counting 95, as follows:

E E Patridge..... 9 9 10 10 10 9 10 9 9 10—95

Or a total of 287 for the 30 shots.

A fac simile of the 30-shot record, with the shots plotted on one target, is submitted herewith; also the corresponding certificate:

E. E. Patridge's 30-shot Record.

March 28, 1903, Massachusetts Rifle Association, Walnut Hill, Boston, Mass.—On March 21, 1903. Mr. E. E. Patridge, residing at Medford, Mass., declared his intention to shoot for record with the pistol at 50yds. The shooting was done in accordance with the rules and regulations governing the pistol championship matches of the U. S. R. A., the details being as follows: Standard American target, Smith & Wesson .22cal. pistol, 2lbs. trigger pull, 10in. barrel, open sights. Verified by the undersigned. The first shot of the score was fired at 3 P. M., and the last shot at 3:30. Weather showery. Witnesses: W. F. Spencer, J. S. Murray, scorer.

All the above shooting was done strictly in accordance with the rules and regulations adopted by the United States Revolver Association, and the above scores are now recognized as the official records. A. L. A. HIMMELWRIGHT, Sec'y-Treas.

Iroquois Rifle Club.

PITTSBURG, Pa.—In the competition of the Iroquois Rifle Club's spring tournament, Mr. L. P. Ittel was the victor, and demonstrated that he is a class man. Following are the scores of the twenty prize winners:

L P Ittel	75 74 73—222	R Rahm	71 69 69—209
H H Fisher	74 74 73—221	W C Galbreath	73 69 67—209
E C Reed	74 73 73—220	U Altenburger	72 66 65—203
A J Huebner	74 72 72—218	W G Fry	69 67 65—201
R F Phillips	73 72 72—217	F B Young	68 65 65—198
D L Black	74 72 70—216	J O Smith	66 64 64—194
C C Hofmeister	70 70 70—210	W Mosbaugher	64 64 61—189
H Gnilreps	71 70 69—210	J Gergmann	64 61 60—185
C Leacy	72 70 68—210	R M Speer	61 58 58—176
G Williams	71 70 69—210	H S Strubel	63 59 52—175

Following are the ten prize winners in the bullseye match: C. C. Hofmeister, D. L. Black, J. Bergmann, R. F. Phillips, L. P. Ittel, R. Rahm, G. Gnilreps, W. C. Galbreath, A. J. Huebner, H. Gnilreps.

In the memorial trophy match Rahm was first. He had to shoot off a tie with R. F. Phillips, who beat R. R. by two points.

The daily press dispatches state that the executive committee of the National Rifle Association has fixed May 18, 19 and 20 as the dates for the trial shoots to determine upon the personnel of the team which is to represent this country at Bisley, England, in competition for the Palma trophy. The trials will take place at Sea Girt, N. J.

We are informed that Mr. Joe Link, for many years known to rifle shooters, has taken the Dooley place at Springfield, L. I., where he will conduct a target ground and keep his eye on the well-known snipe grounds.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

April 29.—Wellington, Mass.—Boston Gun Club's annual team shoot. H. C. Kirkwood, Sec'y, 23 Elm street, Boston.

**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J. Bradfield, Sec'y, Vicksburg, Miss.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

On the grounds of the Boerckle Gun Club at Bridesburg Station, Pa., April 25, a team of business men from Frankford and Kensington met in a team match, 25 targets, and a prize sweepstake at 10 targets, the results of which were as follows: Frankford team—G. Redifer 19, Alvin 19, H. Johnson 18, J. Dawson 17, W. Rodgers 16, D. Mercer 14; total 104. Kensington team—J. Ploucher 23, W. Dawson 21, E. Belson 13, J. Ploucher, Sr., 11, E. Carter 12, J. Martin 12; total 92. Prize sweep, 10 targets, 16yds. rise, unknown angles—W. Dawson 8, H. Johnson 8, J. Martin 7, Alvin 7, Rodgers 5, J. Dawson 4, Mercer 4, Werner 4. Shoot-off, 5 targets—W. Dawson 4, H. Johnson 3.

At the Kansas State shoot, Concordia, April 21-23, Mr. Fred Gilbert made a run of 112 straight on the first day. He broke 196 out of a possible 200, total of the day's programme. Mr. W. H. Heer won the State championship. He tied with Mr. E. L. Wetzig and Mr. Ed. O'Brien on 29. Heer and O'Brien broke 30 straight in the first shoot-off, Wetzig scoring 28. In the second shoot-off the scores were: Heer 29, O'Brien 28. On the second day, Gilbert and Heer tied on 195 out of 200; Dave Elliott was second with 191; Fort was third with 190; Riehl and Timberlake fourth with 186. On the third day, Gilbert was high with 190, and high for the three days.

The Chicago, Ill., Gun Club has issued its programme for 1903. There are two main weekly events, one at 25 targets per man, handicap, one at 15 targets, optional sweepstake. The annual prizes will be valuable souvenir articles, and a special annual prize, valued at $20, will be given to the member who has made the highest percentage without handicap. The regular club shoots are held on Saturday afternoon each week between April 30 and Nov. 1. The grounds are at Seventy-ninth street and Vincennes road. Mr. A. A. Walters is the secretary.

A correspondent informs us that Mr. A. L. Traver, captain of the Poughkeepsie Gun Club, is enjoying himself in the wilds of Colorado, and will not return before the middle of May. The Poughkeepsie club has been notified that the fourth shoot of the series for the intercounty cup must take place at Ossining some time next month, or before the State shoot. As Capt. Traver is one of the strongest men on the Poughkeepsie team, the up-river men naturally hope for his return before the match comes off.

On the Clearview Gun Club's grounds at Darby, Pa., the University of Pennsylvania team of trapshooters defeated a team of the Century Wheelmen, April 25, by a score of 200 to 184. The conditions were six men to a team, 50 targets per man. The scores were as follows: Pennsylvania—Lowden 35, Robertson 35, Henderson 34, Adams 32, Farwell 27, Perkins 37; total 200. Century Wheelmen—Harrap 41, Conwell 25, Morgan 26, Shaffer 32, Colliday 25, Fountain 35; total 184.

Mr. W. T. Nash, of Indianapolis, Ind., won the Troisdorf trophy in a series of twelve amateur shoots given by the Limited Gun Club, breaking 347 out of 400 targets shot at, an .868 per cent. gait. Eight of the scores made were counted. Mr. Nash participated in the G. A. H., at Kansas City recently. He participated in the shoot of the Brooklyn Gun Club a few weeks ago and made many friends by his amiable personality and skillful competition.

Capt. C. G. Blandford, of the Ossining Gun Club, was in New York on Monday of this week, arranging all the minor details of the programme of the New York State shoot. He had with him the beautiful medal, the trophy for the 100-target event at 16yds., 60 singles and 20 pairs. It bears the inscription "Championship New York State, 1903." It is beautifully designed, and a large diamond pendent, which it bears, does not lessen its attractiveness.

High average was won by Mr. B. D. Nobles, of Olean, at the two days' tournament of the Olean, N. Y., Gun Club's shoot, April 21 and 22, shooting from the 20yd. mark. Mr. L. V. Byers, of Rochester, was high on the first day; Messrs. Nobles and H. M. Stewart, of Rochester, were second. On the second day Mr. F. D. Kelsey, of East Aurora, was high average; Mr. Nobles second high average.

At the second tournament of the Western Pennsylvania Trapshooters' League, on the grounds of the Herron Hill Gun Club, Pittsburg, April 22-23, Mr. L. J. Squier won high average with a total of 321 out of 350 targets. Messrs. F. E. Mallory, 312, E. Hickey, 311, Raven and L. B. Fleming, 307, were second, third and fourth in the order mentioned.

Mr. Eugene Doeinck, who for the past ten years has been secretary of the Hell Gate Gun Club, resigned that office at a meeting held last week in their club rooms. Mr. Doeinck in future will make his home in Liberty, Sullivan county, where he has purchased a hotel. After the meeting a farewell dinner was given by Mr. Doeinck to the club.

Mr. W. Sands was present at the April shoot of the Emerald Gun Club at Newark, N. J., on Tuesday of last week, after an absence from New York since December, 1902, in Jacksonville, Fla. His health was much benefited by the Southern visit. His skill had not diminished, for he scored 9 out of 10, the highest score made in the club event.

The New Utrecht Gun Club, at a meeting held in Brooklyn, L. I., last week, decided to continue club competition, and therefore will resume the club shoots in the near future. Targets will be used, and arrangements with Mr. J. S. Wright, manager of the Brooklyn Gun Club, will be made for the use of his club's grounds.

The Trenton, N. J., Shooting Association announces a tournament for May 16. There are eleven programme events, at 15, 20, 25 and 30 targets, entrance $1.30, $2.50, $3 and $3.50. All moneys 50, 30 and 20 per cent. Shoot begins at 10 o'clock. Mr. J. R. Taylor is the general manager.

Messrs. Apgar, Keller and Griffiths were visitors at the shoot of the Boston Gun Club, held at Wellington, on Wednesday of last week. Apgar, from the 21yd. mark, made a run of 28 breaks, first in the prize match, in which Griffiths was second with 26 out of a possible 30.

At the Patriots' Day shoot of the Haverhill, Mass., Gun Club, Climax broke .944 per cent. of 180 targets and won high average. Dickey was next with .897. Both shot from the 20yd. mark. Rule and George were third with .888 per cent. Thirty-seven shooters participated.

At a meeting of the North River Gun Club, of Edgewater, N. J., on April 24, officers were elected as follows: President, Geo. Allison; Vice-President and Captain, Jas. Morrison; Secretary-Treasurer, Jas. R. Merrill; Lieutenant-Captain, Fred Vosselman.

The programme of the Dubuque, Ia., Gun Club's fourth annual tournament, May 26 and 27, is now ready for distribution. There are twelve events each day, each event at 15 targets, entrance $1.50, $5 added. There are ten average prizes, $5 each, for entire programme events. Mr. A. J. Schmid is secretary-treasurer.

The Glen Leaf Gun Club, of Reading, Pa., took action recently for club competition. Officers elected are: President, J. Rightmeyer; Vice-President, John Fick; Secretary, H. Gensley; Treasurer, W. Enck; Captain, Louis Rightmeyer.

The total programme of the three days' Nebraska State shoot provided 600 targets. Messrs. Gilbert, Heer, Fort and D. Elliott were the only ones to break over 90 per cent. in the three-day programme, respectively, 581, 566, 545 and 544.

On the grounds of the Florists' Gun Club, at Wissinoming, Pa., on April 25 Messrs. L. Z. Lawrence and D. S. Donat broke 93 in the 100-target event. Mr. Lawrence made straight scores in 15 and 20 target events.

In a match shoot between Messrs. A. Felix, of Philadelphia, and A. J. Miller, of Camden, Pa., April 25, at Holmesburg Junction, Pa., 100 birds per man, 30yds. rise, the score were Miller 88, Felix 85.

Attention is called to the communication of Messrs. Von Lengerke & Detmold in our trap columns this week concerning trophies which belonged to the late Jacob Pentz.

In a match at 100 live birds, on the grounds of the Keystone Shooting League, Holmesburg Junction, Pa., Mr. A. Felix defeated Mr. A. J. Miller by a score of 91 to 81.

The Media, Pa., Gun Club held its first monthly shoot on Saturday of last week. Eleven members were present. The scores are sure to improve in time.

The Hudson County Consumers' Gun Club will hold a live-bird shoot at Guttenberg, N. J., on May 22.

The next annual meeting of the Nebraska State Sportsmen's Association will be held at Junction City.

The Hudson Gun Club will hold a live-bird shoot at Guttenberg, N. J., on May 8.

BERNARD WATERS.

Limited Gun Club.

INDIANAPOLIS, Ind., April 25.—The Limited Gun Club, of Indianapolis, recently finished one of the most successful shoots in the history of the club. It was called the Troisdorf trophy shoot, deriving its name from a handsome gold medal donated by the Troisdorf Powder Co. There were twelve weekly contests, and each contestant was allowed to count his eight scores. If a member attended only eight, nine or ten shoots he could only select eight, and it is needless to say that all the members tried to be present at all the shoots. It was a strictly amateur handicap shoot, and each contestant was handicapped according to his score in the previous shoot, and by the final result, it is readily seen that some of the members reached the 20yd. mark. The medal was finally won by W. T. Nash, he having broken (taking his eight best scores) 347 targets out of a possible 400, making a percentage or 86¾.

The next high guns were: John W. Cooper, 344, or 86 per cent.; W. C. McIntosh, 343, 85¾ per cent.; Ed. Dickman, 342, 85½ per cent.; Gus. Moller, 337, 84¼ per cent.

The contest was enjoyed by all the boys, and the chances are that another shoot will be started as soon as the weather will permit.

B. B. ADAMS, Sec'y.

Ossining Gun Club.

OSSINING, N. Y., April 25.—The attendance at the shoot of the Ossining Gun Club to-day was a little better, owing to fine weather. Some of the boys showed lack of practice, while the bad shooting of some of the others could only be attributed to a few of the other hundred reasons that shooters have in stock to explain bad shooting.

E. Ball was the bright and particular star, negotiating 24 out of his first 25. No. 6 was from the 18yd. mark. Each event was at 10 targets:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

Leominster Gun Club.

LEOMINSTER, Mass.—At the shoot of the Leominster Gun Club last week the weather was cold and a high wind prevailed, the latter being so violent that the contestants could not stand steadily at the score. Under the circumstances, the scores were not at all bad. Mr. Neaf Apgar was high man.

JAS. R. MERRILL, Sec'y.

Emerald Gun Club.

Newark, N. J., April 21.—The Emerald Gun Club held its April shoot on Smith Brothers' grounds to-day, with eighteen contestants participating. The day was pleasant. The birds were a fair lot. A pleasing feature of the meeting was the presence of Mr. W. Sands, who had been absent in Jacksonville, Fla., since December, 1902. He was much improved in health. The scores follow:

	Points.	Yards.	
F J Kalle	6	25	1121110111— 7
Dr G V Hudson	7	28	011211*111— 8

New York German Gun Club.

Carlstadt, N. J., April 22.—The New York German Gun Club held its shoot on Outwater's grounds, with a good attendance, twenty-five contesting. The club event was at 10 birds, but it was unfinished owing to the insufficient number of birds on hand, owing to the failure of birds to arrive as per contract, much to Mr. Outwater's disappointment.

The scores will be shot up at the next regular shoot. This event was the postponed club event from April 15.

The scores, 10 birds, distance handicap, unfinished event:

J H Wellbrock, 29	21022212*1—8	P Albert, 28	02011

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., April 25.—The main event of the Keystone Shooting League's competition to-day was the match between Mr. A. Felix and A. J. Miller. The club events were shot first, the first being the club handicap at 10 birds, in which Fitchgeraid and Geikler made straight scores.

The scores of the handicap shoot for club cups, 10 live birds, handicap rise, follow: Geikler 10, Fitzgerald 10, I. W. Budd 9, Rothacker 9, Davis 9, Harrison 9, Thomas 8, Sanford 8, Winchester 7.

Shoot for officers' trophy, 15 birds, 28yds. rise: Harrison 15, I. W. Budd 14, Geikler 14, Fitzgerald 14, Miller 14, Rothacker 14.

Match, 100 birds, 30yds. rise:

A J Felix	2202222222222002011200222—19

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, L. I., April 25.—At the shoot of the Brooklyn Gun Club to-day there was a good gathering, favored by pleasant weather. Mr. John S. Wright was in good form, and was high average in the programme events in their entirety. There were thirteen contestants, a lucky number, all evidence to the contrary notwithstanding. These shoots have a steady support, are convenient to reach by Kings County Elevated R. R. All information pertaining to them will be furnished by Mr. Wright, 318 Broadway. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11

Schenectady Gun Club.

SCHENECTADY, N. Y., April 27.—I send you a clipping from the Schenectady Gazette, giving an account of the spring tournament of the Schenectady Gun Club, which is correct:

The match that has been going on for the last seven weeks, from March 14 to April 25, inclusive, among the members of the Schenectady Gun Club, came to an end last Saturday afternoon.

The prize winners are headed by one of the youngest and most enthusiastic members, H. J. Borden, who smashed 99 out of a possible 100 targets, leading the veteran Livingston by one target. The conditions of the match were to test the skill of the shooters during the windy, stormy and disagreeable weather of early spring, when the worst conditions for the trapshooter invariably prevail. The match was intended to give the shooters the problem of getting 25 successive breaks in one event in any four of the seven successive Saturday afternoons.

There were fourteen entries for the match, seven of whom finished and seven withdrew.

There were four prize cups awarded to the four high guns, who were as follows: H. J. Borden, first, with 99 breaks; H. M. Levengston, Jr., second, with 98 breaks; H. E. Grecne, third, with 97 breaks; S. K. Warnick, fourth, with 97 breaks.

The full score of those who shot during the month is as follows:

Events:	1	2	3	4	5	6	7	Total
Targets:	25	25	25	25	25	25	25	Broke.
H J Borden	24	25	..	..	25	..	25	99
H M Levengston, Jr	..	25	25	..	25	..	23	98
H E Greene	25	24	24	..	24	..	..	97
S K Warnick	25	24	24	..	..	..	24	97
J O Adams	24	24	24	..	24	..	..	96
C A Arnold	23	19	..	..	23	..	22	87
V Wallburg	21	23	..	..	..	20	23	87

Each event was shot on a different date as follows: No. 1, March 14; No. 2, March 21; No. 3, March 28; No. 4, April 4; No. 5, April 11; No. 6, April 18; No. 7, April 25.

VALENTINE WALLBURG, Capt.

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., April 25.—The weekly shoot of this club, held to-day, was favored by fine weather and a good attendance, including two new members, Mr. Bissing and Mr. Klein, to-day being Mr. Klein's first experience at the game. The principal event to-day was No. 6, for the Marshall handicap trophy, which was won by Mr. M. F. Hoctor, who, with his handicap, made a straight score. To-day is probably the last Saturday on which this club will hold their weekly shoot, as there is a special meeting scheduled for Wednesday evening, the 29th, at which time it is expected that the day for regular shoots will be changed to Thursday.

We have just put in a set of two ground traps for field practice, which were used to-day for the first time, and over which the boys had considerable fun, as well as good practice.

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.

* Shot along.

SNANIWEH.

Olean Gun Club Tournament.

OLEAN, N. Y., April 23.—The fourth annual tournament of the Olean Gun Club was held here at the Jersey Farm Association grounds, April 21 and 22, under very unfavorable conditions, which in a measure account for the rather small scores made. A cold raw wind sent the targets high and wild for the first day, and the second day the wind was not so high, but weather cold and rainy, making shooting difficult and very unpleasant. The attendance was good, considering all things. The targets were thrown from a magautrap with almost perfect satisfaction, hardly a dozen targets being broken out of the 7,000 thrown.

Shooters from Rochester, Buffalo, East Aurora, Randolph, Warren, Kane, Bolivar and Wellsville attended.

The trade was represented by Forest H. Conover, Geo. R. Ginn and W. B. Lyons. These gentlemen aided the management immensely in conducting the shoot, and made many friends, who wish to see them in future tournaments here.

The programme had a total of 190 shots each day. The first day L. V. Byer, of Rochester, won high average, and B. D. Nobles, of Olean, and Harry M. Stewart, of Rochester, tied for second high average. The second day F. D. Kelsey, of East Aurora, won high average, and B. D. Nobles, of Olean, won second high average. The high average for the two days was won by B. D. Nobles, who broke 305 out of 380 targets from the 20yd. mark.

Taking everything into consideration, the shoot was a success, and all the boys had a good time, and we wish to see them all again.

First Day, April 21.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Shot

Brunswick Gun Club.

BRUNSWICK, Me., April 24.—Appended find tabulated scores of a little shoot held yesterday afternoon on our grounds at Merrymeeting Park. We had thirty entries, and threw 2,550 targets. A. G. Fisher, fresh from the G. A. H. at Kansas City, was conceded the winner before the contest opened, from the fact that he had been in constant practice for past winter at Colorado Springs. He shot finely, and did what was expected by breaking 87 per cent., and winning the trophy as champion of Bath, Brunswick and Topsham. The runner-up was ex-President Webber, of the home club, who has not had any practice since last August. He greatly pleased his friends by smashing 82 per cent. in fine shape.

In the team race, out of a total of 250 shot at the result was: Brunswick 180, Bath 167, Topsham 137.

MAXWELL.

Springfield Gun Club.

THE Springfield Shooting Club, of Springfield, Mass., held a very successful shoot on their grounds April 20. A large crowd of shooters were present from out of town; New Haven especially sent a number of good shots. The programme of twelve events called for 200 clay birds, but darkness put a stop to the shooting after the tenth event was over.

The trade was represented by T. E. Doremus, Neaf Apgar and T. E. Keller.

In addition to the printed programme, a National Sportsman contest with thirty entries was run. Only nineteen shooters were on hand to shoot the event. This was a 25-bird race, $1 entrance.

The prizes for this event were three in number. This event was handicapped by giving birds plus the shooter's score, so each shooter had a fair show of winning. The first prize, a .38-55 caliber Winchester rifle, was won by Frank Buck, whose score was 25, including a handicap of 8 birds; second prize went to E. L. Mott, whose score was 22 including a handicap of 8 birds; third prize was won by E. H. Pinney, score 21 including a handicap of 6 birds.

A large number of targets were thrown, some 6,000 in all. There were five special prizes for club members, and they were won as follows: First, C. L. Kites, lancewood trout rod; second, Dr. S. B. Keith, reel; third, D. C. Downing, Webster's Dictionary; Fourth, E. H. Pinney, pocket knife; fifth, Edward Bagg, box of cigars.

E. C. Griffith, of Pascoag, R. I., and B. W. Claridge, of New Haven, had it nip and tuck for high average for the day, Griffith winning by 4 birds.

The following table gives the scores of the best shooters, also their per cent. for the day's shooting:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Griffith	165	140	.848	Chapin	105	71	.676
Claridge	165	136	.824	Dr Keith	165	93	.563
Apgar	165	127	.769	Sidway	130	72	.553
P H	130	100	.769	Doremus	130	65	.500
Mills	130	96	.738	E Bagg	105	51	.485
Barstow	130	95	.731	Pinney	130	57	.438
Le Noir	150	109	.726	Metcalf	90	39	.433
Hermann	130	93	.715	Dr Hubble	130	54	.415
Kites	165	116	.703	Keller	165	68	.412
Edgerton	130	90	.692	Coats	90	36	.400
Downing	130	90	.692				

These scores were made in the National Sportsman contest, each shooter shooting at 25 birds: Buck (8) 25, E. L. M. (8) 22, Wills (4) 22, Pinney (6) 21, Hawes (6) 19, Dr. Keith (0) 19, Cady (8) 18, Keyes (10) 18, F. Bagg (6) 18, Rice (8) 18, Sidway (0) 17, Le Noir (0) 17, E. Bagg (5) 16, Downing (0) 15, Blair (5) 15, Kites (0) 14, A. C. Merritt (4) 14, Hills (0) 13, Coats (0) 13.

C. L. KITES, Sec'y.

W. P. T. S. L.

PITTSBURG, Pa.—The second tournament of the Western Pennsylvania Trapshooters' League ended Thursday, April 23, on the grounds of the Herron Hill Gun Club, on Davis Island, Pittsburg, Pa. The programme for each day called for ten events of 15 targets.

The trade was represented by Charles G. Grubb, Frank Lawrence, L. J. Squier, J. E. Hicks and Charles Young.

The new score sheets, gotten up by Elmer Shaner and Charles Grubb, were used all through the tournament, and were quite a success. Instead of the usual blackboard, sheets of paper 15 by 42 inches, properly ruled and numbered, are used. By this system, the original scores are always on file in the office, thereby preventing any errors being made in transcribing the scores from blackboard to squad card, which often happens, making it very unpleasant both for the management and contestant.

The feature of the first day was the four-man team race, which was won by the Millvale Gun Club.

On the first day Ed. Hickey, of Millvale, was high man, and L. J. Squier second. On the second day Squier was high, with Fleming a close second.

The five highest averages shooting through the two days' programme were as follows:

	First Day.	Second Day.	Total
L J Squier	159	162	321
F E Mallory	152	160	312
Ed Hickey	160	151	311
Raven	155	152	307
L B Fleming	146	161	307

The individual scores were as follows:

Wednesday, April 22.

CHARLES G. GRUBB.

Trophies Which Belonged to Jacob Pentz.

NEW YORK, April 24.—*Editor Forest and Stream:* We have in our possession the following articles owned by the late Mr. Jacob Pentz, "Uncle Jake," so well and favorably known to most of your readers: A grand elk head, a good elk head, a good moose head, a pair of elk antlers on carved wooden head, a pastel picture of leaping salmon, two male mallards stuffed, hanging position, a rare hybrid duck mallard, hanging position, and a pair of eider ducks, hanging position.

It was the wish of Mr. Pentz to dispose of these articles before his death, and some of them were in our possession before he died. Several articles were sold, but the estate is now anxious to close out what there is left, and if you can assist in disposing of the articles, which can no doubt be procured for less than actual value, you will confer a favor upon us as well as the heirs of Mr. Pentz. Any fair offer for these goods will be accepted. As Mr. Pentz had thousands of good personal friends throughout the country, I should think that some of them would be pleased to have some remembrance of "Uncle Jake."

VON LENGERKE & DETMOLD.

Haverhill Gun Club.

HAVERHILL, Mass., April 22.—The weather man was exceedingly kind, as he favored us with a beautiful day for our Patriot Day tournament, April 20, and a goodly number of shotgun enthusiasts were present. Among the number were Mr. Powell, of Newport, R. I.; Mr. Odkirk, of Concord, N. H., and Mr. Bell, of the Howard Gun Club, genial gentlemen all, and splendid shots. This was their first visit to our club, and we shall be pleased to see them again. Of our old friends from Boston, Lynn, Lowell, Amesbury, it is the same old story, they know where they are always gladly welcomed. A glance at the summary will tell who they are, and how well they shot.

Our old standby Lambert was not with us in person, but it's a sure thing that his heart was, and many was the inquiry for the old "war horse."

The day was about as near perfect as could be for target shooting, and the boys made good use of it, as the summary will show. In the prize handicap Climax won first, George second, and Bell third. High average for day, Climax, .944; Dickey, .897; Rule and George, .888.

In all, 5,025 targets were thrown, and an average of .784 made by the thirty-seven shooters, some of whom had never before shot at a target.

S. G. MILLER.

Boston Gun Club.

BOSTON, Mass., April 22.—The third last Boston Gun Club serial prize shoot was held on their grounds at Wellington today, fifteen shooters participating during the afternoon. Among the ever welcome visitors were Apgar, Keller and Griffiths, the former negotiating the high run of the afternoon and first position in the prize match, and the latter securing a well-earned 26 for second place in the match. Phillips and Bell, both members of the Harvard team, easily kept up with the procession, and bid fair to make the regulars hustle in future shoots. Other scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	
Targets:	10	15	*	10	15	15	10	*	15	15	10	Av.

Kansas State Shoot.

THE Kansas State Sportsmen's Association held its annual meeting and tournament the past week in the snug little city of Concordia, April 21-23, and it is only fair to say that the meet was very pleasant and satisfactory. Owing to the effect of the Grand American Handicap, so recently held, the attendance was not as large as usual, but the boys stayed through to the end and thoroughly enjoyed the week in the Grasshopper State. The programme consisted of 600 targets, 200 each day, in 15 and 20-target events. Money was divided on the Rose system. A number of trade representatives attended, shooting only for the price of targets.

The new officers chosen at the annual meeting Wednesday night are: H. Thiele, President; Ed. O'Brien, Vice-President; E. L. Wetzig, Secretary, and W. A. Mattesou, Treasurer. The next annual meeting was voted to Junction City.

April 21, First Day.

Perfect weather attended the opening of the shoot Tuesday, and thirty-four men faced the traps for the competition. Of these were a goodly number of trade representatives, who shot for targets and average only. Gilbert was easily high man, with a run of 112 without a skip. Fort got second honors, and Anderson and Heer tied for third.

The State target championship was won by W. H. Heer, much to the gratification of a large crowd of local enthusiasts. He was compelled, however, to shoot two special strings to win, and both Wetzig and O'Brien, who tied him on the first score, did splendid work. The total targets of the day's programme events was 200. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Total

O'Brien	11101111101111111111111111111—28

April 22, Second Day.

The programme was continued Wednesday amid the most favorable conditions, and nearly all contestants improved their scores. Heer made the best gain and tied Gilbert for the first place. Dave Elliott got in for second and Fort for third, while Riehl and Timberlake tied for fourth place. Many visitors were present, and the day was altogether most pleasant.

The programme events had a total of 200 targets. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Total
Targets:	15	15	20	15	15	20	15	15	20	15	15	20	Broke.

April 23, Third Day.

The last day was stormy in the extreme, and the good averages made by some of the boys suffered severely. The wind blew a veritable gale all day, whipping in over the cottonwood trees of the Republican River bottoms in fierce gusts, that sent the targets spinning in all directions from the true line of flight. Gilbert won out, notwithstanding, and Frank Cunningham came forward with an excellent score for the day, taking second place from Heer and Linderman, who tied for third.

In the total week's work only four men made a 90 per cent. average, the honors going to Gilbert, Heer, Fort and Elliott. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Total

KILLMORE.

Danville Rifle and Gun Club.

DANVILLE, Pa., April 21.—The three-day shoot of the Danville Rifle and Gun Club was well attended. There were two live-bird events on the third day. Messrs. Butler and Keller, by their pleasing personality and professional courtesy, made many friends, and added to the success of the tournament. The scores:

First Day, April 21.

Highland Gun Club.

GORGAS STATION, Pa., April 25.—Two events, the challenge cup and the club event, were shot at the shoot of the Highland Gun Club to-day. In the challenge cup event, Doc Wentz was high with 22 out of 25, and he and W. Harker tied on 21 in the club event. The scores:

Challenge cup event: Doc Wentz 21, Harper 21, Laurent 20, Cantrell 20, Dalton 19, Hamill 19, Dunlevy 18, McMichael 18, Pinkerton 18, Denham 16, Myers 15, Everett 15, Aimen 16.

Club event: 2 Crooks 22, Doc Wentz 22, Hamill 21, McMichael 21, Dalton 21, Denham 20, Laurent 20, Dunlevy 19, Schaeffer 19, Cantrell 18, Everett 18, Larsen 17, Harper 17, Pinkerton 15, Myers 14.

Trap at Fullerton.

ALLENTOWN, Pa., April 25.—Find appended a few scores made at Fullerton, Pa.

Under the efficient management of C. F. Kramlich, Wm. F. Behneyc had a big shooting tournament at St. Charles Hotel. A live-bird match was held, each man shooting at 10 birds, and killing the number given below: J. Weiler 7, Walker 9, Jones 10, Milson 7, Englert 7, Mertz 10, Francotte 8, Mack 8, V. Miller 3, Kile 9, Blose 9, Steitz 6, Howard 8, Snyder 5, Straub 7, Brey 10, Hillegas 5.

In addition there were seven events at targets. Each man shot at 10 and broke the number given:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

PUBLISHERS' DEPARTMENT.

The Cotton Plant.

MANY people north of Mason and Dixon line wonder how cotton grows, and as few have been South, we give a description of the cotton plant furnished us by one of the Northern settlers at the Winter Health Resort, Pinebluff, N. C., the town that has been built up by Northern people: "We concluded to plant a little crop of cotton and give you a faithful description. The seeds are about the size of a small bean, with a very tough dark hull covering the kernel or meat, as the Southerners call it. The hull is covered with a fuzzy cotton-like substance, which is the ends of the cotton fiber that was left sticking on the hull in the ginning process. Each fiber or hair of cotton sticks in the hull just like the hairs enter the human scalp. The hair or fiber of good cotton is about an inch in length. The cotton seed is planted in North Carolina from April 20 to May 10. The farmer having a period of twenty days to plant. In favorable weather the cotton sprouts and is up in a week's time. The young plant looks as much like young buckwheat as two twin brothers, and unless it is a month old a Northern man would take an oath on it being buckwheat. The blossom is in the shape of a hollyhock. When it first blossoms out early in the day, the flower is white; by evening it is a deep red. The next evening the blossom drops off and leaves a tiny green ball about the size of a large garden pea. In a few days it is as large as a small marble, and it grows and grows until it becomes the size of a guinea egg, and then it bursts open, and in a day or two the fleecy staple hangs from the ball in its snowy whiteness, and a field of cotton in October, November and December resembles a new fallen snow. We Northerners who have come South to live do not plant the cotton for the market, as we can make larger profits on poultry, vegetables and fruits; but the income to the native farmers of the county in which the Northern people have located (Moore county) is more than a quarter of a million dollars annually."

Last of the Season.

THREE-DAY TOUR TO WASHINGTON UNDER THE PERSONALLY-CONDUCTED SYSTEM OF THE PENNSYLVANIA RAILROAD

THE last Pennsylvania Railroad Personally-Conducted Tour to Washington of the present season leaves Thursday, May 14. Rate, covering railroad transportation for the round trip, hotel accommodations, and transfer of passenger and baggage, station to hotel in Washington, $14.50 from New York, $13 from Trenton, $11.50 from Philadelphia, and proportionate rates from other points. These rates cover accommodations for two days at the Arlington, Normandie, Riggs, Ebbitt, Shoreham, Cochran, Gordon, Barton, or Hamilton hotels. For accommodations at Regent, Metropolitan, National or Colonial hotels, $2.50 less. Special side trip to Mount Vernon.

All tickets good for ten days, with special hotel rates after expiration of hotel coupons.

For itineraries and full information apply to ticket agents; Tourist Agent, 263 Fifth avenue, New York; 4 Court street, Brooklyn; 789 Broad street, Newark, N. J.; or address Geo. W. Boyd, Assistant General Passenger Agent, Broad street station, Philadelphia.

The advertisement of the Billings & Spencer Co., of Hartford, Conn., introduces to our readers perhaps the largest firm of tool makers in the country, or if not the largest, at least a firm whose reputation is world-wide, and is second to none. Of the tools and the hardware which they produce, many are needed by sportsmen, as yachtsmen, gunners, campers, anglers and others. The very beautiful and fully illustrated catalogue which they issue shows some of these tools which, singly or in combination, are the handiest things that the outdoor man can have in his kit. This catalogue will be sent on application.

The Marlin Firearms Co., New Haven, Conn., have issued, for free distribution, a circular illustrative and descriptive of their new Grade B repeating shotgun, just out. It is designed for those who desire a gun specially fine at a moderate price.

Messrs. Macconnell Bros., Yacht Agency, 52 Broadway, N. Y., have removed their Boston office to 53 State street, and have placed in charge Commodore James R. Hodder.

New Advertisements.

Many an angler is anxiously awaiting news from the Northeast which shall tell him that the ice has gone out of the lakes, and that he can take his train on the Boston & Maine

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903 BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MAY 9, 1903.

VOL. LX.—No. 19 No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1903.—No. III.

IDAHO.

ACT OF MARCH 11, 1903.—Sec. 9. It shall be unlawful for any person or persons, company or corporation, or the agent or employee of such company or corporation, to sell, offer or expose for sale or have in his, its or their possession for the purpose of selling or offering for sale, any species of fish protected by this act, or any part of a carcass of any of the animals mentioned in this act at any time of the year.

THE YELLOWSTONE PARK.

AMONG the many possessions in which Americans take a peculiar and just pride is the Yellowstone Park. Nowhere in the world, so far as known, is there any combination of natural beauties and of natural wonders so marvelous as to equal this. Niagara is stupendous; the Grand Cañon of Colorado awe-inspiring in its vastness; geysers and hot springs in various portions of the world are mysterious and wonderful. But here, in the Yellowstone Park, we have a combination of prairie and mountain, lake and rock peak, abysmal cañon and volcanic spring, which makes the region literally one of the wonders of the world.

The wisdom of the National Government in setting apart this region as a National pleasuring ground has been vindicated a thousand times. Nor was argument ever needed to support this wisdom. At the same time, it is astonishing to see how few Americans know what the Park contains, and it is perhaps not too much to say that—except among the residents of the States which border on this reservation—the Yellowstone National Park is better known in Europe than it is in America. This should not be so.

The recent visit to the Park of President Roosevelt, and that charming writer, Mr. John Burroughs, calls renewed attention to the reservation. The time for their trip was wisely chosen, for, as the readers of FOREST AND STREAM know, the wild things of the Park can be seen to better advantage during the winter than during any other season of the year.

The visit of these eminent gentlemen to the Park was a source of the greatest pleasure to them. It is not given to many lovers of nature to be able to rub shoulders with elk and antelope, and mule deer, and buffalo and mountain sheep. Usually the views had of these animals are too fleeting.

A visit to the Yellowstone National Park is an approach to nature, and if he who visits it is so situated that he can leave the beaten track of tourists and wander off by himself among the green timber on the side of some towering mountain, he finds himself in actual contact with nature.

It is but little more than thirty years since the bill creating the Yellowstone National Park passed Congress, and yet to the generation that is now growing up we venture to say that the history of this bill is largely unknown.

The first discovery of the Yellowstone Park region was made by John Coulter, one of the party of Lewis and Clark, who, toward the close of their expedition returned again to the mountains; but the story that he brought back to the little village of St. Louis was discredited by all who heard it except his old commander, Capt. Clark. "Coulter's Hell" became a by-word, and Coulter was regarded as one of the most picturesque liars of the early part of the nineteenth century. It was not until 1869 that a party of travelers from Montana visited the region of the Park, where they saw such wonders that when they returned to the settlements they dared not tell of them publicly, lest their reputation for truthfulness should be forever destroyed. In the year 1870, a party of leading citizens of Montana, among whom were N. P. Langford, Gen. D. H. Washburn, Samuel T. Hauser and Cornelius Hedges, started for the Park and saw far more than had been seen by any one who had previously been there. On his return Mr. Langford wrote a stirring account of the region, which was published by Dr. J. G. Holland, then editor of Scribner's Magazine. While this party was on the ground, in what is now the National Park, Mr. Hedges suggested "that there ought to be no private ownership of any portion of that region, but that the whole of it ought to be set aside as a great National Park."

On the lecture platform and in the press Mr. N. P. Langford urged this action by Congress, and Mr. Hedges also wrote freely on the subject. The matter was taken up by the Hon. W. H. Claggett, delegate from the Territory of Montana, who, in consultation with Mr. Langford, drew the bill, which afterward passed Congress, setting aside the Park as a National pleasure ground.

In the hurly burly of the American life of to-day events of momentous importance follow each other in such quick succession that they no longer make any adequate impression on our minds, and it is gratifying to see that recently public acknowledgment has again been made of the important services of Mr. Langford in securing for the American people what is one of their most precious possessions. To him more than to any man alive we owe this possession.

In the dozen years that followed the setting aside of this reservation, there have been many attempts by private persons and corporations to use this public property for private gain. Railroad people, hotel people, lumbermen and men of many other trades have striven to make money for themselves out of what belonged to the people as a whole. In the defense of the Yellowstone Park, the FOREST AND STREAM, for more than twenty years, has done its share. And to-day the rights of that reservation are so firmly established as to be in little danger.

CITIZEN AND SPORTSMAN.

THE terms good sportsman and good citizen are interchangeable. Not every good citizen is a good sportsman, but every good sportsman is a good citizen, and his conduct in the field, as out of it, may be judged by the civil standard not less than by that of sport. In estimating the character of the actions of those who go afield, we are prone to give undue prominence to the quality of sportsmanship and too little to that of citizenship. The first is largely conventional, the second is very real.

Consider, for an example, the meadowlark episode in which Rector Craig of Omaha is concerned, applying to it the principle that one who goes shooting should be a good sportsman—which is to say a good citizen. Having been wont to kill meadowlarks in the gentle springtime in Virginia, Mr. Craig took a notion the other day that he would like to renew the sport with the birds in Nebraska. Now it would have been the part of good citizenship, as a preliminary to April gun practice on meadowlarks in Nebraska, to have consulted the Game Laws in Brief, or, not having that useful little manual at hand, to have taken counsel of some member of the parish who was wise in such matters, and to have learned whether under the game law meadowlarks were legitimate quests. This was the plain, simple precaution called for by ordinary everyday practical common sense. And common sense is an important factor in good citizenship, which is to say good sportsmanship.

Having neglected to exercise a rational prudence in determining the lawfulness of meadowlark shooting, Mr. Craig found himself in the extremely unpleasant predicament of being under arrest for violation of the game laws. This was a situation further to test one's good citizenship. A good citizen will recognize his individual amenability to the laws of the land. He will be governed by an intent to observe the law; and when he discovers that through ignorance he has violated it, he will, though it may be with sore chagrin and possibly some secret resentment of the unpalatable dose, take his medicine like a man. He will not rant and roar that he is a peculiar person above and beyond the law. He will not give out loud proclamation that his arrest and punishment were outrages on an innocent because ignorant lawbreaker. He will not bluster a determined purpose to fight the law to the last ditch, and to make it hot for the minions of the law who have had the audacity to treat him as if he were a common person over whom the law had control.

Such talk on the part of individuals brought to book for game law infractions is by no means uncommon. The Omaha rector is only a new illustration of a type we have always with us. There was the former Connecticut Adjutant-General, who conceived that his adjutant-generalship relieved him from the application of the Maine law forbidding the taking of fawns; and there was the Brooklyn Doctor of Divinity, who fancied that his exalted position in the community gave him license to kill Connecticut quail in close time. These people are familiar. Their talk is cheap. It avails them nothing. In the end they pay their fines, just as do other offenders caught in the act. The only profit of their boisterous contumaciousness is in the wider publicity their cases acquire, and the more emphatic and instructive the public lesson taught—the lesson that the game laws are made for all alike and all alike are subject to them and must obey them or pay the penalty; and that obligations of good citizenship are as binding in the field as out of it.

INHOSPITABLE ARKANSAS.

THERE has long been friction between the resident and the non-resident on Arkansas hunting grounds. Clubs made up largely of Memphis and St. Louis memberships have acquired extensive tracts in Arkansas, either buying the land outright or leasing the hunting rights, and have constituted preserves from which the native hunter was excluded. The Arkansan has retaliated by imposing a hunting tax upon the visitors; but this has not been sufficient to remove the ill feeling between the two classes. Now Arkansas has resorted to the heroic measure of forbidding any hunting by a non-resident. The new law, which has just been signed by Gov. Davis, provides that "it shall be unlawful for any person who is a non-resident of the State of Arkansas to shoot, hunt, fish or trap at any season of the year."

A number of well-known Arkansas sportsmen, among them J. M. Rose, Esq., of Little Rock, vainly endeavored to settle the matter by excepting the clubs from the operation of the non-resident law, and making it apply only to the pot-hunter. Just at the critical moment a certain non-resident appeared on the scene and unwisely tried to bully the Legislature, and thus undid the work of the mediators; and at about the same time two Memphis men made an eviction of a large party of Forest City hunters from Mud Lake, claiming that they owned the lake, when in fact it was a meandered lake and they owned only to the bank. These two things were the immediate irritants which caused the bill to be adopted.

This is a severe blow to the non-resident members of Arkansas clubs who have investments in club houses and outfits. It is sincerely to be regretted that a compromise could not have been effected. As matters stand now, the non-resident will be kept out, at least until the next session of the Legislature which will meet in 1905.

Paul B. Du Chaillu, the well-known explorer and author, died in St. Petersburg on April 30. Born in New Orleans in 1838, Du Chaillu went in early life to Africa, where his father held an American consular appointment in the Gaboon. In 1855, in the course of an exploration of 8,000 miles in the wilds of Africa, he discovered the gorilla, his account of which was at first received with incredulity by the scientific world, though subsequently substantiated by the discoveries of other travelers. He was the author of "Exploration and Adventure in Equatorial Africa," and other works on Africa; "The Land of the Midnight Sun," "The Viking Age," and other works. He was an indefatigable traveler, and at the time of his death was pursuing a long-planned study of Russia. Paul Du Chaillu was a most entertaining companion, and his was a personality that won and held friends.

The Sportsman Tourist.

A Reminiscence of Buffalo Days.

IT was twenty-four years ago that Billy Jackson and I had the following adventure. It was during the days when, as Alex. Bodkin, then United States Marshal, said: "It was impossible to impanel a jury in Montana that would convict a man of trading whisky to an Indian," those days when you could travel all the way from the Missouri to the Yellowstone River and not find a single bona-fide settler; but, scattered over the country from forty to sixty miles apart, were trading posts. Great Falls, Lewistown or Billings were not thought of as yet; nor had the iron horse of the Northern Pacific, much less the Great Northern, yet made his entry into Montana. Immense herds of buffalo grazed where large and prosperous herds of cattle and sheep now range, and thousands of happy homes grace the valleys and river bottoms. Then the red man and Indian trader reigned supreme, the buffalo being the lodestone which attracted both, and the poor animals were ruthlessly slaughtered for the "almighty dollar," which was surely gathered by the merchants at Fort Benton and on the Yellowstone, at both of which points, supplied by river navigation, were established mercantile firms who carried immense stocks of goods which were sold to both Indians and traders—outfitting points for all.

It was one of Montana's typical falls; all the month of November it was dry and cold, but no snow, and the ground was as dry and hard as a bone; the bright sun would often raise the temperature to as high as 50 degrees during the middle of the day.

Billy Jackson, the interpreter, and myself were told to take a four horse team and find White Calf's camp somewhere on the Musselshell River. We were in the employ of Joe Hamilton and "Pike" Landuskey, at old "Lucky Fort" trading post on Flat Willow.

We loaded up with an assortment of goods such as Billy thought was proper for such a trip, mostly groceries and dry goods; "fire water" being absolutely barred by Joe's orders.

One cold frosty morning we struck out, myself on the "hurricane deck" of a "cayuse," and Billy handling the "ribbons." The second night out we camped on the Musselshell about two miles below Johnny Harr's trading post. He had been outfitted by Hoskins & McGurl, of Baker's Battle Ground or Huntley's Ferry, as it was sometimes called. Not wishing to let Harr know that we were operating in his "sphere of influence," we "rolled" at daylight the next morning down the river, as we could plainly see by a large fresh travois trail that the camp had gone that way. As the road was fine we bowled along at a good rate until, about 3 P. M., we rounded a bend and came upon the camp we were hunting for.

Billy engaged the first Indian we met in Piegan, and he at once conducted us to Little Plume's lodge, where we soon had the strings off the horses and they were taken by an Indian boy out to the herd, and we were soon comfortably seated in the lodge enjoying a smoke and the warmth of the lodge fire.

Little Plume was and is, perhaps, the most remarkable Indian I ever met, and Joe Kipp says he is the most remarkable one he ever knew, and that is saying a great deal. It is said, and I believe truly, that he has never taken a drink of intoxicating liquor. Anyhow, at that time he was a man of about thirty years of age, and as fine a specimen of physical manhood as one could wish to look at, with a handsome, bright and intelligent face; a natural leader, though one that would be more likely to lead in the direction of peace and civilization than in rapine and war. His looks did not belie him, as it is stated he is now one of the most prosperous Indians today on the Blackfeet Indian Reservation. He will certainly carry my best wishes to his grave, for I have a lurking suspicion that but for his prompt action and friendship, I might not now be writing this story.

We had not been long in the lodge before I discovered that one of Little Plume's children, a boy, was seriously sick with a bad cold on the lungs, with danger of pneumonia ahead. In our grub outfit were a few pounds of onions. I went out to the wagon and got some of these, and a frying pan and some sugar, and brought them into the lodge and proceeded to cut the onions in the frying pan. That done I covered them liberally with brown sugar and put the whole on the lodge fire and spent about an hour cooking the mess, putting in occasionally a little water. When I was done I had about three pints of rich brown onion syrup. I then got Billy to explain to Little Plume that I was a medicine man, and that my medicine was all ready for that boy, and that if he did not take it it might be all off with his heir. I sat up all night with that kid and doped him with onion syrup, with the result that in the morning his cold was broke. Little Plume and his wife, with true Indian stoicism, said nothing.

That day we drove a pretty good trade until well after noon, when I took a nap, only to be awakened by Billy about 4 o'clock and informed that there was whisky in the camp and that he had not as yet found out where it came from. We went out together to investigate. There was no question as to the presence of liquor, and in abundance, too.

It was plainly evident to me that in a short time the entire camp would be helplessly drunk, as indeed they were. Men and women were crying in loud excited tones to one another; hides, robes and furs were being unearthed from the recesses of lodges, and were piled outside in heaps, ready for the women to pack them to the trader. This looked mighty blue for us: groceries and dry goods were at a discount when fire water was in sight. We might just as well pack up our outfit and "silently steal away" unless this business was stopped. I went into the lodge and soon came out with my Winchester over my arm, and told Billy that I would be back in an hour or two, that I was going to see who the trading party consisted of, and whether it would be advisable for us to pull out for another camp or for home. Billy only said, looking at me:

"Leave that gun here, you don't want that."

"What? For four years I have not traveled a half mile without my rifle and I don't think I'll begin under the present circumstances to travel without it," I replied, as I started.

"Better leave it," he called after me, but I went on, ignoring his advice.

The camp consisted of about 150 lodges—perhaps 750 men, women and children. As I picked my way through the small fallen cottonwood trees which had been cut down by the women for the ponies to gnaw from, I observed that the ground all about the camp was thickly strewn with broken frozen green branches of the fallen cottonwoods, an inch or two in diameter and from six inches to three feet in length.

As I went up a rise out of the timber where the camp was located on to a prairie bench, I had a good view of the whole camp, which made a slight bend in shape like a crescent, while at the lower end I could see for perhaps a mile across a long prairie on a level or a trifle lower than where I stood. This prairie was literally alive with moving beings; coming and going, running and walking, gesticulating and yelling. While I was observing the scene on the prairie below, my attention was drawn to a dispute that had just arisen about fifty yards from me among the lodges between a man and, I presume, his wife, about taking some robes to the whisky trader. She, apparently, with woman's natural economy in trade or barter, wanted to take only certain skins, while her lord insisted on taking the whole pile. The dispute waxed warm, when a neighbor lady intervened in behalf of the wisdom of her sex; when Lo, insulted at this slight put upon his authority, deliberately knocked the intervener down. At this three or four more ladies interfered in behalf of their friend, one of them picking up a frozen cottonwood limb and cracking him over the head. In a moment the air was dark with frozen cottonwood clubs, which were breaking like icicles over Blackfeet heads. The men, who until the first blow was struck, were amused spectators, were at once active participants in the melee, when suddenly a diversion was caused by the appearance of an old man, who went among them and roundly scored them for their foolishness in taking up valuable time in such silly quarreling over such a trivial matter, when such a glorious good time was ahead for all. The Indian is a true communist.

Looking shame-faced the woman who had started the row shouldered the large bundle, and with her lord proudly bringing up the rear with his battered head, headed down the river, and so did I.

Two caravans were moving across the prairie, one loaded with hides and furs, and the other with gallon kegs and bottles and their contents.

I had seen many drunken Indians before, and although I realized that as a rule he is really more harmless than a drunken white man, I was not anxious to mix with them, so I made a trail of my own about thirty yards to the left of the returning column. I had traveled about two-thirds of the distance across the prairie when I could see both columns appearing from and disappearing into a dense thicket of willows and cottonwoods, which lined a creek coming in from the north which cut off the prairie bench on which we were traveling, the bench being about twenty feet above the creek bottom. About the time I observed this, Billy's advice came home to me about the rifle; a young Indian, espying me with the gun over my arm, took it as an insult, I suppose, and the long-endured wrongs of his race working on his mind, assisted, no doubt, by the contents of his bottles, one of which he carried in each hand by the neck, and perhaps the noble spirit of the martyr coming over him, placed both hands to his breast and tearing open his shirt exposed his manly breast, and, striking a tragic attitude, dramatically defied me to shoot, bravely referring to me as a "cowardly white dog." With a friendly nod and a smile of forbearance I passed on. Had I only turned off to the north away from them a few hundred yards, and cached the gun or emptied the magazine and thrown it away, I would have saved myself about the greatest scare I ever had. But I was yet to learn another trait of Indian character, and that was that it was an established rule when the camp was on a spree for all hands to lay aside all firearms, a rule which could with profit be imitated by whites. But, although I had been more or less among Indians from Fort Pierre to Fort Benton for six years, this was my first experience where the whole camp was on a spree. But I passed on and soon forgot about my dramatic friend.

About a hundred yards to the north of the point where the trail disappeared down the prairie embankment into the willows, and about thirty from the creek, stood a cabin which I knew belonged to Eaton. Nearby was a pile of logs for firewood; I could see a fire near the woodpile, also a wagon with a sheet stretched over the bows and two white men. I made for the cabin to see who it was. As I neared the camp I recognized both Eaton and Dunn. I called to them, asking who was doing the trading; they answered, inviting me to their camp, and told me it was Nigger Andy, and named three white men, all of whom have since met with violent deaths.

I was standing debating whether to go down to the whisky trader's camp at once or go over to Eaton's camp and have a chat with him and Dunn and get the latest news from the Yellowstone, whence I knew they had just come, when a party of particularly noisy young Indians appeared coming up the bank of the creek; they were about fifty feet from me. One of them observing me called to me; I responded pleasantly and started for Eaton's camp, but the jolly crowd would not have it that way, and started after me. Now, for the first time, I wished I had left that gun as Billy advised. They all came at me with yells of displeasure, but I did not believe they intended to do me any harm, so I faced about to see what they wanted. One of them was about ten feet ahead of the others; as he closed in on me he grabbed for my head, which I threw back, with the result that he caught the brim of my hat (it was a new one, too), and, stumbling as he grabbed it, his whole weight came on my head and nearly knocked me off my feet. In an instant my hat brim formed a collar around my neck and blood was running down my face. I jumped a[illegible] from him, but the others were upon me. Mad with pain, discretion was thrown to the winds. In an instant I had felled one of them, using the barrel of the rifle as a club; I made a pass at a second one and he was *hors de combat*. By this time the crowd had increased until I felt it was necessary to use other measures, so I pumped a cartridge into the chamber and brought the rifle to my shoulder, warning all to keep back. I gave one swift glance at Eaton's camp and saw both he and Dunn [illegible] still near their fire; I cried to them to unlock the cabin door and I would make a run for it and get inside. Where I knew I would be safe for a time, anyhow.

In the meantime I kept walking backward, and facing an increasing number of foes in a circle which was momentarily being reinforced from all directions, and I plainly saw that in a few minutes I would be outflanked and my retreat cut off. As quick as a flash I turned and made a run for the cabin door, only to find on my arrival that it was locked with a large padlock. Before I could turn or seek the protection of Eaton's camp, the mob was upon me.

What occurred during the next minute or two is yet in my mind more like a dream than anything else. It sounded to my ears as though a hundred angry, revengeful voices were talking at once. I was conscious that a number of other hands than my own were on that rifle, and that it was full cocked. With a cartridge in the chamber, it might be discharged any instant. Oh, the grip I had on that gun!

Suddenly I saw or rather felt a bright flash in front of my eyes; I glanced up and to this day my eye still retains the photograph then taken; a large bright-bladed butcher knife in a dusky hand, the point about six inches in front of my face and a pair of dark wicked eyes peering with murder into mine. I closed my eyes to shut out the sight, and in that moment, expecting to feel the cold steel cutting its way to my heart, a panorama of all my life passed in instantaneous review—and still I never relaxed my grip on that gun, and still the pandemonium of angry voices sounded in my ears. But why did not that knife bury itself in my body?

I opened my eyes. The knife was not there; the pulling and straining at the rifle was not so strong; the density of the crowding at my right side was less; more light was in my eyes. Suddenly an Indian standing near my right arm disappeared as by magic, in another moment one who stood directly in front of me reeled back and struck the ground about eight feet away, then another and another. In a few moments I was standing alone beside my deliverer. I still held the rifle; I glanced up and there stood Little Plume glaring at those around him like an angry god.

Not a word passed [illegible], satisfying himself that none cared to dispute possession of the field with him, he turned to me and uttered two words in English: "Me gun," pointing to the rifle. Lowering the hammer I gave it to him. He recocked it, fired it in the air, pumped out the remaining cartridges and giving them to me said in his own tongue, "Come."

A brave Indian who could talk very good English now appeared and swore by all the gods in his calendar that he would see that no harm came to me or any other white man. He was careful to say all this in English. I had noticed him in the background of my assailants.

Little Plume at once became pleasant to all, explaining that I did not want to have any trouble, and that it was all a mistake: for all to come to his lodge the next morning and I would show them that I would recompense all who had been injured. We then visited the trader's camp, after I had washed the blood from my face, which had been scratched and bruised in the melee, and found that Eaton had been correct. The outfit belonged to three white men, hard characters, who some few years afterward were hung for horse and cattle stealing at the mouth of the Musselshell River on the Missouri.

I accompanied Little Plume to his lodge, where I learned that a short time after I left for the trader's camp he had learned from Billy where I had gone, and that I had taken my rifle in spite of his advice.

Billy said Little Plume made no reply, but shortly he went out, saying nothing as to where he was going.

Next morning there was held a big pow-wow. Both the injured families—that is, the parents of the young bucks who had received broken heads—presented their grievances and wanted about all we had in the wagon as indemnity, but ended by taking a few pounds of sugar, a few yards of calico and some other nick-knacks to the amount of perhaps two dollars, beside some plugs of "black strap" tobacco. A cheaply paid for lesson.

I afterward saw Eaton and asked him why he did not unlock the door of the cabin when I cried to him to do so. He gave as an excuse that the whole thing occurred so quickly that he had not realized anything until Little Plume was on the ground and had the game under control. He had not seen the Indian with the knife until he went head over heels, knife and all.

But those days are gone; and such scenes are only memories of the frontier. Their place has been taken by civilized pursuits less hazardous and more pleasant, the natural sequence of the opening to settlement of all savage populated countries.

Nigger Andy was a remarkable character. With the general characteristics of the negro, he combined a surprising amount of nerve and physical bravery, with abnormally developed combativeness and aggressiveness. He possessed another quality not often found in the negro, for he was apparently as much at home in a frigid as in a torrid or temperate climate. It was understood he had spent a number of years as far north as Athabasca Lake among the northern Indians, where he had lost both hands and feet by freezing. He used wooden pegs for both, with iron hooks in the ends of the arm pegs to seize hold of anything, and he used them, too, with amazing agility and success. He handled a Winchester as rapidly and successfully as anyone with both hands. He was usually good natured, unless antagonized, when, especially with Indians, he was a fiend incarnate. He was looked upon by the Indians as a sort of evil spirit to be placated or avoided. He was murdered in cold blood, shot in the back, at Junction.

J. H. BOUCHER.

A Cruise in the Ojibway Paradise.

In Two Parts—Part Two.

After breakfast the next morning an application of hot skilly candle was made to the bottom of the canoe, and we were ready to start again. When packing up the provisions we found that a squirrel had got into one of the sacks and helped himself to about a dozen prunes, leaving a handful of seeds in one corner. We had decided not to go to Temagami Lake by the regular tourist route, but through a chain of lakes to the west and come into Temagami by the Northwest Arm. So instead of keeping to the south over Diamond Lake, we turned to the west. Part of the way we had a head wind and made haste slowly. Near the head of Diamond Lake is a deposit of rock that has no doubt been placed there by glaciers. It is a short distance below the mouth of a stream that comes down through a narrow gorge and empties into Diamond Lake. The deposit extends two-thirds of the way across this arm of the lake, but does not reach either shore. It is slightly curved and rises two or three feet above the water, sloping off gradually at the ends. Coming up the lake toward it, we could almost believe that some one had been using up their spare time building a stone wall across the lake to fence off their share of the water. The stones were fitted perfectly together and were as large as good-sized building stones. The face of the wall toward us was regular and even, while the side toward the gorge was piled up with smaller stones and debris. The ice coming down this narrow gorge had spread out, depositing its burden of rock in the lake a short distance from the mouth of the gorge.

We went up this river till we came to a place that had evidently been used as a dumping ground for all the rocks and boulders that were left over when the North American continent was made. The portage around this medley was about a half mile long. We then crossed a small lake, made a short portage to another lake, which we crossed, and landed on the portage to Wakimika Lake, which is noted for the number and size of its small mouth bass. We were going to stay here a day and try the fishing, so we put up our tents on the other end of the portage where there is a good camp ground with a most beautiful outlook. Wakimika is an Indian word meaning clean or clear, and is well suited to this lake, for the water is clear and cold. We found the bass large, of a very dark color and flesh firm and unusually fine flavored. The lake is about four miles long and a high wind was blowing, which made it rough and sent the waves rolling up the sandy beach in front of our camp.

While the guides cooked dinner we went out on the beach to see what mementos had been left. We found the foot prints of deer and wolf, the wolf following the deer as usual. There were also foot prints of moose, crane, man and a smaller foot print that might have been made by either a woman or a boy; when we found a fort made of sand with pine cones planted in a circle around it we concluded they were the foot-prints of a boy. The Doctor's special find was a yellow-jacket's nest, and many of the yellow-jackets appeared to be at home at the time. We heard a sound from camp, and were soon deeply interested in the mysteries of fried black duck, baked beans and other delicacies.

The lake was too rough to go fishing, and the afternoon was spent making a comfortable camp. Indians had camped here on a hunting trip, for their drying rack was standing and we found an Indian's ax near it and the hoofs and bones of moose.

The wind went down in the evening, and, the skillet handle having been duly applied, we started out to get huckleberries for a pudding Sam was to make next day. We rigged up one rod with a very small spinner, thinking we might get a fish for breakfast, and on the way to Huckleberry Island hooked and landed a 2¾ and a 4¼-pound bass. It was hard to resist the temptation to rig up both rods and try the fly-fishing, but the huckleberries were still to be picked, and we wanted to cross the lake to a marsh that is a feeding ground for moose and deer. Besides there was a most beautiful display of color in the western sky that required all our attention. The setting sun was painting the heavens in gorgeous colors and festooning the broken clouds with gold and silver tinsel. The changes in drapery and color were taking place so rapidly we could but watch in amazement.

When we reached the marsh it was too dark to see any animals, but we could hear twigs snapping and knew that an animal of some kind was not far away. We kept perfectly still for some time, then Sam struck the canoe with his paddle and a deer gave a frightened snort or whistle, and we could hear it plunging through the brush.

In the morning it was raining, so we spent the forenoon around the camp-fire. The Doctor had burnt the soles of his shoes, and they broke across the ball of the foot, keeping the soft insoles wet. Bob got a piece of thick birch bark and made a pair of insoles, which he fitted in the Doctor's shoes, and we heard no more complaints about cold, wet feet. Sam mixed up a batter of bacon fat, flour, baking powder, sugar and water, then stirred in the huckleberries. He wrung a small muslin bag out of hot water, shook a handful of flour in the inside of it and poured in his pudding. There was a bucket of boiling water on the fire, and he dropped the pudding in it to boil for two and one-half hours. Telling Bob not to pour cold water in the bucket, he shouldered the gun and went off in the rain to hunt grouse. In about two hours he came back, and when the pudding was done he served it with a sauce made of flour, water, sugar and a little vinegar. It was simply delicious, and when cut, was as light as a puff and a marvel of outdoor cooking. I adopted the tactics of the small boy and ate my pudding first, but after having tasted it, I did not want to come down to bread and bacon, so I finished on more pudding. No one was feeling very hungry after dinner, and I did not think I could possibly want anything more to eat that day, so I told Sam to cook some dried peaches, and we would have bread, butter, tea and peaches for supper.

In the afternoon we went to the marsh and followed a pretty little shallow river for some distance, hoping to see a moose. There were fresh moose tracks all along the shore, but we saw no moose. On our way back to camp, late in the evening, I thought of the dried peaches with bread and butter for supper and wished some one would say he was hungry, but no one said a word about supper. I kept quiet till we were almost to camp, and then I said: "Perhaps we had better cook this fish and some bacon for supper." They did not have the grace to smile, but just laughed outright; still I believe they were glad of the suggestion.

That night, under a clear sky, with the moon hanging low in the west, Wakimika lay calm and peaceful.

"The winds and the waves lie together asleep,
And the moon and the fairy are watching the deep,
She dispensing her silvery light,
And he, his notes as silvery quite."

The next morning we broke camp and made an early start for Obabika Lake. The heavy fog lifted like a gray blanket, and when we heard the cry of a loon, Sam said, "I guess we will have wind on Obabika." With Wakimika perfectly calm I did not see why we should expect wind on Obabika. When we got near the head of the lake the canoe was turned and a magnificent view lay before us. Wakimika Lake lay calm and beautiful, surrounded by high, pine-covered hills, to which a poplar, here and there, gave a touch of bright color, while away toward the west the high, broken, dark blue hills rose, one beyond another, till they faded off in the distance. This is certainly a country of magnificent distances.

Before we reached the mouth of the little river we were going to follow, the water became so shallow we had to get out and walk. The guides wanted to carry me ashore, but I had ceased to be a tenderfoot. The water was very low in this stream, and it was full of driftwood, often compelling the guides to wade. When we were well down the river we found the water was coming in the canoe faster than we could bail it out, and on moving the packs discovered we had run a snag through the bottom. The Doctor got out and walked, but I stayed in till I saw he was getting along all right. The walking was not good and we had to keep near shore for fear of getting lost, for the bush was full of trails, made by moose, crossing in every direction. When we had been walking for some time we heard the guides calling us. The sound seemed to come from the direction we were going, but we did not think it possible they had gone past without us seeing them. Lest we had in some way turned round and were going down stream instead of up, we threw some leaves in the water to make sure of our direction, for there was no perceptible current. Finding we were going in the right direction, we hurried on as well as we could and answered the calls, but the wind carried the sound away from the guides, and, thinking we were lost. Bob came back to hunt us.

The canoe was beached on the shore of the river, just above a small lake, and Sam was building a fire.

There were numerous leaks requiring the use of a hot handle, but the hole needed a patch. Some pitch was put in a skillet and set on the fire, when hot, a square of muslin was put in it, and then laid over the break, a hot iron was run over this, and the canoe was ready for the water. Guides always carry pitch when using a birch bark canoe. We crossed the lake and found more water in the other end of the river.

When we came to Obabika Lake the wind was very high and the lake full of white caps. Obabika consists of two arms, each one about four miles long and from one to two miles wide. We came in at the upper end of the North Arm, and the wind, dead ahead, had a full sweep of four miles. We kept along the shore and pulled into a cove, where we were somewhat protected and cooked our dinner. The Doctor and I put on dry stockings and laid our shoes by the fire. After dinner we walked around the cove and along the stony beach as far as we could go. The Doctor walked past and within ten feet of a grouse sitting under a pine tree, but it never moved. I ran back and called Bob to bring the gun, and he shot it. We could not walk around the point, and went back to where the guides were loading the canoe. It was rough water to go out in, but we could not make camp where we were, and there were three good camp grounds farther up the lake. When we got out in the rough water there was an exhilaration in the roaring of the elements, but we made slow progress around the point and finally pulled into a bay, where the Obabika River has its source. An Indian lives on this bay, and we went to buy some potatoes from him, for we had cooked the last of ours for dinner. The green potato tops had all been frozen, except in very sheltered places. Hanging on his drying rack were some fish, two or three small muskrats and the nostrils of several deer. I caught a field mouse in one of his canoes and threw it as far out in the river as I could, but in an incredibly short time the little fellow was back to shore and off in the weeds.

We were not far from the first camp ground, and when we reached it all agreed it was wiser to stop here till the wind fell. Sam had been very anxious to reach the second camp, as it was close to fine bass fishing as well as a very beautiful location, but there was a mile of open water it would be impossible to cross in the heavy wind. We were camped on a point with a high, well wooded hill back of us. On the left was the open lake, while in front and extending some distance to our right, was a beautiful cove or bay with a wide sandy beach. The waves would come in, roll half way up this sandy beach, curl over, break and then recede to make room for the next; while out on the point they were beating and dashing against the rocks. There was a buoyancy and exhilaration in everything.

"And free as a bird was the song of my soul,
As I heard the wild waters exultingly roll."

Instead of being shut in between four brick walls with only little square loop holes to let in the sunlight, or to look out through and see our neighbor's grass plot, we were in the woods, with the blue sky above us and all nature spread out at our feet, while the winds and the waves rehearsed one of their grandest anthems. It was a glorious afternoon.

The camp was furnished with a table, benches and a hat rack. A deep slanting cut had been made in a tree with an ax, then a piece of a smooth, hardwood limb, about one foot long and less than one inch in diameter, one end cut wedge shaped, was driven firmly down into this cut and the other end nicely rounded. In this way a hat rack had been made that grew more substantial as the years went by. You can go to the woods and with a knife, an ax and a little ingenuity surround yourself with many of the comforts of civilization. Sam baked a corn pone in the skillet for supper, then he and Bob carried the canoe in off the beach and made everything snug for the night, for the wind was rising. The Doctor had a headache, which Sam greatly relieved by an application of hot cloths, and we went to bed. It was a wild night, and the storm cast its mystic spell upon us as we lay on the pine boughs, under the canvas, and listened to the moanings of the wind in the pine trees and the roaring of the waves as they broke on the beach. It was the music of the ages being rehearsed in one long, grand anthem.

In the morning it was raining so we rolled up our blankets and ate our breakfast of stewed grouse, toast and pan cakes in the tent. It was raining too hard to go fishing, and the guides, using the tarpaulin, rigged up a shelter over the table, then built a fire by the side of one of the trees, for the air was chilly, and we sat here most of the forenoon. For dinner we had soup made with beef and vegetable tablets. Our bread was getting scarce, and Sam took all the hard pieces, cut them up and stirred them into the soup just before serving it. By two o'clock the weather had improved some, so we took our rods and a trolling line and went out to fish. We were going to troll for lake trout on our way to the bass-fishing grounds. Using a large spinner and a pound of lead for a sinker, we put out three hundred feet of line and never touched bottom. The water in all these lakes is so clear that we could see every stone on the bottom where the water was from ten to twenty feet deep. About half way up the lake a wind storm had come down the hill on one side, leaving behind it a path about one hundred yards wide, on which there remained neither tree nor bush. Crossing the lake, it caught and cleared the point of an island, then continued on its way up the hill on the other side, clearing its path as it went.

Near where the two arms join, there is a sand bar extending half way across the lake, and on one side of this bar more large bass can be caught to the minute than in any place I ever heard of before, and on the other side about as few. This is an ideal place for fly-fishing, and one hour in the early morning or late evening, with a good rod and fly-book, would repay many days of disappointment. Lying on the beach at the point was a box that would hold about a half peck. Early in the season a party had come to this point, by way of the Matabitouan River, and had carried this box full of earth and worms for bait, but by the time they reached here the worms were nearly all dead. Earth worms are not always desirable traveling companions when you go on a fishing trip, and it did seem absurd to carry them from New York to Obabika Lake, where you could catch more fish in an hour, with a fly or small spinner, than you could possibly use.

Looking across the lake from this point we could see a bare rocky hill, with a few low, green bushes growing here and there. In the subdued light of the misty afternoon the colors in the rock came out clear and beautiful. The cobalt blue and yellow ochre mingling with the dull reds and browns, and the soft grays and greens made one of nature's kaleidoscopes. On our way back to camp we were caught in a very heavy shower that came in our faces, and made us rather damp. After the shower we had a most brilliant rainbow; indeed, it was a complete circle, one-half in the sky and the other in the water with scarcely a break between.

About a pint of the soup had been left from dinner, and Sam heated it, adding a little thickening. It was excellent served as a gravy on our mashed potatoes. The wind was chilly, so the guides built a fire in front of our tent, and we went to bed, leaving it burn, for there had been so much rain we felt there was no danger of fire. In the night we were awakened by some one fixing the fire. Sam had gone to bed in damp clothes, and, getting cold, had come and fixed the fire, then wrapping up in his blanket, he lay down beside it the rest of the night. The next morning we watched for the sun to make its appearance above the hill on the opposite shore. The light increased in brilliancy and the green faded out of the treetops, behind which the sun would presently appear, and they became as burnished gold against a background of pale yellow light. The sun soon took its place in the heavens and began its daily round, while the gold melted away, leaving green pine trees in its stead.

We packed up, and were soon on our way up the north arm of Obabika. Again we heard a loon cry, and Sam said, "We'll have wind on Temagami." I began to understand that the cry of the loon meant wind, and advised killing the loon, so we could cross Temagami. At the end of this arm we portaged into a shallow, little lake, and the guides walked along the shore while we took the canoe across and into deeper water. Lying on a rock on the shore we saw the skin of a snake, which I thought rather strange, for we had not seen a snake on the trip. We crossed Obabika Bay and came in the northwest arm of Temagami. Here we saw an eagle's nest with two young eagles in it. One of them was perched on the edge of the nest, and they were making a good deal of noise. The nest was in the crotch of an old dead pine tree, just where the top had been broken off, but the stump still stood high above the surrounding trees. After a morning's trip that had been full of interest and beauty, we reached the open lake and stopped for dinner. In the open lake the water was very rough, and a stiff head wind made our progress slow. When an especially big wave came, Bob, who was bowman, would deflect the top of

it with a dexterous move of his paddle. We reached Bear Island and landed on the dock in front of the residence of the Hudson Bay Factor, Mr. Wood, who was there to receive us and kindly took us to his home, while the guides put our tents in shape.

There are a number of Indian families living on Bear Island, besides the Hudson Bay Company's factor. The homes of these families, with the company's two store rooms and the buildings for the use of the fire rangers, makes quite a settlement. We had eaten the last of our bread for breakfast, and were almost out of bacon and butter. Mr. Wood took us to the store room, and we bought a can of corn for supper and a small piece of bacon. This is another advantage in going out this way, we could procure fresh supplies near the end of the trip when we were short of provisions. Mr. Wood keeps a register of all visitors to the island, and our names were added to the list. This book is very interesting, for some of the visitors comment quite freely on their experiences, and we found some names we knew. We bought a pound of butter from an Indian woman, and light, well-baked bread from another. These houses were neat and clean, and the windows were draped with white muslin curtains. One of the women had a register, and we wrote our names for her.

The Ojibway Paradise is an ideal one for Temagami Lake, its islands and surroundings are very picturesque. From Bear Island you look out over a wide expanse of clear, blue water to a broken shore line, miles away. The shores and islands are covered with statcly pines, whose beautiful, dark green foliage is set off by the yellow greens and browns of the cedar that fringes the islands to the water's edge. Temagami is a large lake lying about 1,200 feet above sea level, and has an outlet on the north, south, east and west. To go down the south arm and follow the Temagami and Sturgeon rivers to Sturgeon Falls, where a train can be taken for home, makes quite a cruise, and is not an impractical way out. Another way out is through Obabika Lake and river, but this route is not practical on account of low water and driftwood.

Mr. Wood had a black bear cub about six months old. It was a beautiful animal and quite a pet. There are a number of cows on the island and two horses. They could tie calves and take them in a boat, but I did not see how they got horses in there.

Mr. McLaughlin, the chief fire marshal of this district, invited us over to the rangers' house for the evening. The wind was cold, and we were glad to gather round the stove in the rangers' kitchen instead of round a camp fire. The rain poured down in the night, and it blew so hard I thought our tent would go, but it had been well put up. It was not raining in the morning and the wind had fallen, but the weather was not very promising, and we were undecided as to what was best to do. We had seen but little of Temagami and knew the trip up the North Arm to Devil's Mountain was well worth taking, but the weather was bad and likely to get worse. We had expected to get home on the 15th of September, and to do so, must get the Saturday boat on Temiscaming, which we decided to do. Mr. Wood treated us with the greatest consideration, doing everything he could to make our stay on the island pleasant.

By the time we were ready to start the wind was rising, and we found the lake quite rough, in places choppy, and where we had a head wind the work was hard and progress slow. We crossed the mouth of Ko-ko-ko Bay—an Indian name meaning a kind of small owl—and entered the east arm of Temagami Lake. A short distance down this Sam said, "That looks like two deer swimming accross to the island ahead of us; paddle for all you're worth, Bob, and we'll see them." The deer reached the island first and we saw them go ashore, then we paddled swiftly around to the other side, and there stood the buck ready to swim across to the mainland. He stood an instant and looked at us, then turned back and plunged into the bush. Keeping on around the island, we saw the doe looking through the bushes just ready to come down to the water. They were beautiful creatures, and we were very close to both of them. When we had gone some distance we looked back and saw one of them swimming back to the shore from which they started.

This arm of Temagami would average a mile or more in width, and from Bear Island to the end of it, is a distance of from seventeen to twenty miles. The wind was very high, but we were traveling with it, and our canoe rode the big waves with ease. It was a splendid ride, full of life and exhilaration, and believing that our guides would not become panic struck in case of danger, but would know what to do and do it, we enjoyed it to the utmost. A black cloud that hung in the west gave us some uneasiness for awhile, but it drifted to the north. We pulled round a point, on which there was a little bark cabin, into quiet water. Here we saw a party of tourists in their canoes, apparently undecided whether to pull out into Temagami or not. We reached the portage and cooked and ate our dinner in front of a shelter house on the other end.

We had made good time. The guides estimated that, from the time it took them to paddle the distance in calm water, the wind had carried us from five to six miles. Crossing two or three short portages and several small lakes, we reached White Bear Lake. All through this country the dead pine trees, that have not shed their bark, are covered with a long, gray moss called caribou moss, making them look like old, gray-whiskered sentinels. It smells not unlike new hay, and the moose eat it in the winter.

From White Bear Lake a chain of lakes can be followed to Friday Lake and the Montreal River, and so back to Haileybury. This is quite a pretty trip, and there is good bass fishing all the way. We did not have time to visit the Indian village, but crossed White Bear Lake, made a short portage to a small lake, from which we reached Rabbit Lake. This lake is V-shaped, and in windy weather there is a head wind on either one arm of the lake or the other. We reached the lake late in the afternoon, and the wind was falling, but the waves were high. We decided to push on as far as we could that night, and by the time we reached the point the wind had entirely gone, and we pushed on to the end of the lake above Rabbit Chute. Rabbit Rock, from which the lake gets its name, is on this point, and bears a striking resemblance to a monster rabbit. Before we reached the end of the lake

"The sun in his robe of glory,
Had glided down the west,
And, reaching his couch of splendor,
He silently sank to rest."

The gorgeous color from the setting sun oversprcad the whole landscapc, and we were floating on a lake on fire from the setting sun. It was a superb display of light and color.

We reached the end of the lake about dark; found a charming camp with table, benches and lots of pine for beds, so cooked and ate our supper by moonlight. It was a beautiful night, and we lay down on our bed of pine boughs and were lulled to sleep by the voices of the night that whispered softly to us in the tree tops.

The next morning we started early, for, while we had made a long run the day before, the long, hard portages were yet to come. Just below camp we entered the Matabitouan River, which is full of boulders, and we had to steer very carefully for awhile. Rabbit Chute is very wild and rugged, the water rushes through a split in the rock and goes down over a series of falls and rapids. This is a long portage, but the guides were carrying everything over on one trip. If we had started in this way they would have had to make two trips over each of these long portages, thus losing much valuable time. There were numerous shallow rapids where we walked along the shore, and the guides led the canoe down with its light load.

On one portage we clung to the side of the hill for at least a mile and a quarter.

Just before we stopped for dinner we passed the camp of a party of men from Pittsburg and Allegheny. They were breaking camp, intending to take the morning boat on Temiscaming. Sam had shot two grouse on one of the portages that morning. These he cooked with an onion and served a whole grouse to each of us, regardless of our protests. They were fine, and it is needless to add we ate them all.

After giving the canoe a hot application we continued on our journey, and soon landed on the end of the Mountain Portage. Here we found trunks, boxes of canned goods and boxes of other things, suit cases, satchels, tents, a wagon and two horses. Mr. Bonner, at the mouth of the Montreal River, was going to haul this camp outfit to his place, where the club would take the boat in the morning. Mr. Bonner had brought their duffle this far up the river, and they had taken it in canoes as far up the river as they could and there put up their tents. Properly equipped, they could have reached Lady Evelyn Lake, by way of Haileybury, with less trouble. Here they would have had fine bass fishing, beautiful surroundings, an opportunity to reach many different lakes by taking one day trips, and could have gotten supplies if needed.

The length of the mountain portage depends on which way you are going and the weight of your load. If going up stream with a heavy load the carry is nearer two miles than one, but if down stream with a light load, the carry is about one mile. We took our duffle and started up the mountain. The grade is not very steep and the path is good. Near the top of the mountain we came out of the bush on a large flat rock, and before us lay one of the grandest views we ever beheld. On our extreme right towered Bald Rock Mountain, bare and alone; then came Temiscaming in its calm and sleeping beauty, with a broken line of blue hills away beyond; and there lay Bronson's farm, with its spacious white frame dwelling, its big white barn and well-kept outbuildings, its broad meadows, grain fields and pasture lands, with their herds of cattle; then another glimpse of Temiscaming away to the north, on our extreme left. This farm was not down in a valley but lay well up on a plateau, and its fertile fields, with every evidence of wealth, stood in marked contrast with Old Baldy and its desolate surroundings.

From this rock the mountain falls away abruptly, and there are two portages. One is steep and in wet weather dangerous, the other one not so steep but much longer. The guides took all our duffle and went down the steep path, but we walked over the long one. The water was very low, and the canoe had to be led a good part of the way, so we reached the end of the portage before they did. From this on till we reached the Montreal River, we were constantly coming to shallow rapids, where we were in danger of scraping the patch off the bottom of our canoe.

The Matabitouan River empties into the Montreal a short distance above its mouth, and when we reached the Montreal our canoe trip was about over. When we came out into Temiscaming the guides pulled ashore in front of Bonner's house and unloaded the canoe for the last time. We had completed a canoe cruise of two hundred and fifty miles, in which eleven miles of carrying had been done. On the regular tourist route there is only about five miles of carrying.

Mr. Bonner gave us permission to put our tents up in his front yard, and that night we slept on a bed of dried pea vines. While the guides were putting things in shape for the night, we followed a trail that brought us to the Devil's Notch, a gorge on the Montreal River, from twelve to twenty feet wide with sheer walls of rock from forty to a hundred feet high, through which the water boils after coming over a long rapid. When we got back to Bonner's the club had arrived and were packing up their belongings for the night, having procured supper, breakfast and lodging at Bonner's.

It blew a perfect gale that night, and the rain came down in torrents. With every gust of wind I thought our tent would go and, from the thundering of the waves on the beach, I expected to see them running mountains high, with the steamer tied up at Ville Marie. But the tent stood, and the steamer came in the morning only a half hour late.

When the steamer came the wind had fallen and the rain was only a drizzle. Anchoring out in the lake the captain sent the pointer ashore, and trunks, boxes, duffle bags, satchels and passengers were taken aboard. We had bid farewell to two as painstaking, reliable and chivalrous guides as ever pitched a tent.

The seats in the pointer were so wet that most of the passengers preferred the standing room. The wind was so cold we were glad to stay in the cabin, and, reaching Temiscaming dock about noon, we went to the hotel, changed our clothes, got dinner, packed our trunk and boarded the south bound train on the Temiscaming branch about three o'clock, reaching Pittsburg, without further incident, Monday morning, Sept. 16.

"Away from the dwellings of careworn men,
The waters are sparkling in grove and glen;
Away from the chambers and sullen hearth,
The green leaves are dancing in breezy mirth."

A. W. C.

"Fine Trout Fishing—Not."

IN last week's number A. W. C. related how she had found at McPherson Lake this legend left by some unknown party which had preceded her own. Hardly had that number of FOREST AND STREAM found its way to the news stands, when Mr. W. M. Fuller, Clerk of the Court of Special Sessions, of this city, called to tell us that he was the author of the inscription. He was there in July of 1902, and with him were H. W. Foote, Assistant Professor of Chemistry in the Sheffield Scientific School of Yale, and H. F. Merriam, of Summit, N. J., and also of the Sheffield Scientific School; Duncan, the guide, and a fox terrier, who did not count. Mr. Fuller is enthusiastic over the country as a moose preserve; signs of the game were seen in greatest abundance. He expressed the warmest admiration, too, for the pluck of our fair correspondent, whose triumphs over the difficulties of the arduous trail, he declared, entitle her to all credit. Of these, however, A. W. C. is disposed to make light. "The fatigue and hardship I endured," she writes, "were not to be compared with those incident to a day's shopping. We have engaged our guides for a hunting trip next fall and expect to go into the country north of Lake Temiscaming. If I do not get a moose I may consider that trip a hardship."

The Wake of the Muskrat.

IT is a memory of fifty years ago. The scene is the bank of an old canal that after the advent of the Boston and Providence Railroad had fallen into a state of neglected desuetude. It was a glorious October evening; not a breath of air stirred the tinted tops of the tall maples already coloring from the early frosts. Overhead, riding high in the heavens, the full orbed queen of night cast its soft radiance over the landscape, save where the thick pines that crowded closely the side of the towpath threw their dark shadows over it to the water's edge.

Beneath one of the largest trees that commanded a long reach of the canal stood a boy with a gun and a black dog with complicated pedigree. All around him was the silence of the desert. Rather more than a mile away on the banks of the Blackstone lay the quiet little village from whence he had come, but no sound of industry or revelry reached his ears. Half an hour passed. The silence oppressed the boy, and he stooped and patted the dog by his side, whose only response was a grateful look upward and a gentle wag of the tail. A faint sound like a footfall reached their ears, and startled by it in this lonely spot the boy and dog shrank further back into the shadow. Along the towpath came a tall, spare, gray-haired man with a long single barrel gun on his shoulder, a veritable Natty Bumpo, whom the boy instantly recognized as old Sol. Rogers, known through all the neighboring villages for his success in shooting and trapping muskrats. Just below the boy he stooped over the low bank and drew to the surface a wire trap about three feet square by one foot in depth, and finding it empty carefully replaced it and went on down the path. Rather discouraged at the appearance of so formidable a competitor, the boy stood a few moments contemplating a quest of other fields, when a short distance above him and a few feet from the opposite bank a black spot suddenly emerged from beneath the mirror-like surface of the water. So silently had it appeared that not a ripple was visible. For a moment it remained perfectly still and then began moving slowly across the stream toward him, leaving behind a large diverging wake that sparkled in the soft moonlight like strings of pearls. The boy's heart began to beat furiously; the black dog stood as if carved in ebony, and the eyes of both were fixed upon the apex of that V-shaped ripple. Many years have passed since then, but the exquisitely fascinating suspense, the ecstasy of that moment will never be forgotten.

Slowly, almost imperceptibly, the little three dollar gun that had never before been pointed at any game larger than a red squirrel, was brought to the cheek long before the point of that ripple came within its limited range. Would he see us? Would he take the alarm? dive? were the agonizing thoughts that coursed their way like lightning through the boy's brain, and still the wake grew wider and wider as the black point came steadily toward him.

The trigger was pressed and the report, light as it was, seemed startlingly loud to the boy in that silent valley. The shot had hardly left the barrel when the black dog sprang with his full strength from the low bank into the water, and a moment later laid at the boy's feet a muskrat that measured full two feet from tip to tip.

Since then the boy has sought and found the elk and the grizzly in their strongholds of the Rockies and the Sierra Nevadas; the antelope and buffalo, when "in miles and in millions" they crowded the plains of Montana and Wyoming, often heard the sound of his rifle. And on one still moonlight night such as he has attempted to describe he wandered alone along the banks of the Galatin and watched a pair of beavers swimming about in a still bend in the river; the black spot was much larger, the wake far more imposing, and all the accessories seemed much the same; but it failed utterly to bring back the keenly thrilling sensations that filled the boy's breast on the banks of that old canal.

Perhaps it was because the black dog with the complicated pedigree was absent. Perhaps the change was in the boy himself. Who can tell? FORKED DEER.

CALIFORNIA.

Letters to a Chum.—IV.

(*Concluded from page 342.*)

THE following day we spent in fishing with fair success. That is to say, I caught six trout and four grayling. I have read about two men catching 250 trout in one day, and getting well roasted for it, too; but they must have been different trout from the ones we caught. It takes time and patience to catch trout. They are cute and shy. The big ones, which were the kind I wanted, were most likely to be found in deep water under the shade of the overhanging willows, and in dark and difficult places. Once they see you, they will not bite your hook. One has to keep out of sight and make long casts in order to catch them at all, and one has to have a suitable outfit. The smaller the line the better, as they are not so likely to see it and get scared. And to throw a light line successfully requires a slender, delicate pole. When you have a three-pounder hooked on such an outfit there is "something doing." You can't pull him right in as you would a bullhead. He won't come. If you could get him on to a hog hook and a sash cord you might do it. But with a fly-casting outfit, if one uses too much muscle, he loses his fish. As I said before, it takes time to catch big trout, but it is time well spent. I believe I once heard you say you would rather shoot at a duck and miss than to catch a cargo of fish, so I take it that you are not deeply interested in the subject. I will cut it out.

The river we were on was for the most part a rushing, roaring torrent, but there was a stretch of it below camp about a mile long, where it ran through a sort of marsh, or swamp, that was dead water, deep and wide. It was next to impossible to get through the tangle of brush and nettles that grew in that swamp. Such a bed of nettles I never saw elsewhere, many of them six and seven feet high, and they will slap across one's face and eyes in the most aggravating manner at unexpected moments, and leave a sting behind that is not soon forgotten. These nettles grow among a kind of bush or willow whose branches are tangled and interlaced together in a very discouraging manner.

In this stretch of dead water there were many young mallards. Some of them could fly, and some could not. It was very amusing to watch them on the water when once one had forced a way through to the water. The open season had not yet begun for ducks in that State, and I never attempted to shoot any of them, though they were tempting enough.

There were many deer and bear tracks in that swamp, but it was impossible to hunt in there successfully. Once I nearly stepped on a fawn in there and only got a glimpse of him. One bound took him out of sight. When the sun had gone behind the mountain in the evening, by watching closely with the field glasses, one could see deer come out of the swamp and bushes and stand in the open looking the ground over. Nothing but does and fawns ever did this. An occasional buck might be seen, but he would act differently. He would stand on the edge of the brush and look around, then he would dart across on a keen jump and never stop until he was under cover again. I am unable to account for this unless it is that the law protects all deer without horns at all times—only bucks may be killed in the open season. I soon found out that a buck was a mighty cute and smart animal, but it is hardly to be expected that they should be posted on law. Be this as it may, I never saw a buck stand out in the open, and I did see does do so many times.

In the mountain range to the east of us there was one peak much higher than the surrounding ones that I concluded to take a look at. It looked about two miles away, but Lem said it was nearer fifteen miles. Taking an early start one bright morning I set out for the top of it on horseback. The horse took me safely for about two-thirds of the distance, then it became too steep for him, so leaving him in a grassy glade I went on on foot. It makes me tired yet to think of that climb. I will not weary you with the details of it. At the top there was a rim rock that stood about perpendicular, and I had to look a long time before I found a place where I could scale it. When I got up there I found there was still more climbing to do and more rim rocks to scale.

To cut it short, at about 2 P. M., I reached the very top, and had a splendid view, which I was unable to enjoy. When I got up there I was perspiring freely, having come up on the sunny side, and out of the wind, but on the top a keen wind was blowing that went through my light clothing like a knife. I was taken with a fit of coughing, my nose began to bleed, and I spit blood. I was so dizzy I could hardly stand. I stayed about three minutes up there, then started back.

It was a bleak, desolate place, nothing but sharp, rough rock that looked as if it had been roasted until it was shattered, and in some places it appeared to have been melted. I believe that mountain to be just a big pile of black lava.

I went back much faster than I had gone up, and as soon as I got off the top I felt all right again. I found my horse where I had left him and got back to camp just at dark, feeling about as tired and hungry as I ever did in my life. I brought back eleven mountain grouse and saw two deer. I had a splendid shot at both deer, but as they had no horns I did not molest them.

Supper was waiting for me—broiled venison steak, fried mountain trout, fried young grouse, baked potatoes and hot biscuit, and strong tea. Ye gods and little fishes! Stop a moment, my friend, and think what that supper meant to me after that trip.

We certainly lived on the fat of the land in God's country. After supper, pipe and yarns. Ah me! Those were good days! My soul longs for more of them!

Lem informed me that the blow-flies had got at our venison and spoiled the most of it, and that there was a thick green mould on some of it from being in so damp a place. In a sneaking way I was glad to hear this bit of news. Now I could go deer hunting again in earnest. The following morning found us all mounted and ready for a hunt. We took a new direction this time, going west. It was a long hard climb for about two hours up to a point where Lem said we might expect to find a big buck. To the east the view was magnificent, but I cannot stop now to tell you about it.

We all dismounted and turned the horses loose. All the rest of the party sat down on the grass to enjoy the view; but I was out for blood. I wanted another buck. I do not understand this wild desire that comes over one to take the life of some innocent and harmless animal. I know I am not naturally cruel. I hate to see suffering. I would not willingly hurt a fly, nor wantonly destroy any of God's creatures, yet I have that insane desire to shoot and kill. I do not understand myself.

I once found a muskrat caught in a steel trap on the bank of a stream. The poor little fellow was suffering horribly. Both hind feet were in the trap and he was entirely helpless, just dragging the trap and himself around by the front feet. "You poor little cuss," I thought, "I'll soon get you out of that," and I went up to him to open the trap and let him out. The moment I touched the trap to liberate him, he twisted around to my hand and set his teeth through one of my fingers. My sympathy must have been pretty thin, for I grabbed a handy club and pounded him to mince meat.

I think it cruel to set a trap for any animal, and I am resolved never to do it. I would not step on a worm, but I would do my utmost to kill a deer, and then feel sorry afterward. It takes up the most of my time trying to make amends for what I do the rest of the time. A man is a strange creature; I do not understand him.

But enough of moralizing. On to the hunt. I kept on up the mountain through a grove of quaking aspen, then up through a tangle of bushes and rocks. Deer tracks were numerous and I expected to see a deer at any moment. I came out at the top of a ridge and stood at the apex of a long steep slant to the south, covered with bushes. I could look over a thousand acres of ground, but no game was in sight. I loosened a big round boulder that lay handy and rolled it down the hill. Away it went at express speed, bounding and skipping along, mowing down the bushes, and making a big racket, while I watched for something to run. Nothing there, so I went on. Farther on I came to a miniature lake of clear cold water away up there. Old logs were criss-crossed around it, and a covey of mountain grouse stood around on the ground looking as solemn and wise as a flock of owls. These birds are the tamest wild things I ever saw, and the best eating of any game bird I know of. I was after bigger game then and did not want to shot until I saw something worth while.

On the far side of the lake 100 yards away, was a dense green pine forest of magnificent timber. Great big trees that had never heard the sound of an ax. In here I was in fairy land again. Here was animal life in profusion—birds and squirrels, hawks, eagles, magpies, jays—the flit of wings everywhere—and I never saw squirrels so thick, or so noisy, or so small. In telling Lem of them later he called them "rock squirrels and not much good." Deer tracks were thick and big. I felt that I had found an ideal spot for sport. The ground was almost level on that portion. The shade was deep and refreshing after the hot sunshine of the open. A five-minute walk brought me to a little open glade, where the sun shone brightly on a half acre of wild flowers entirely surrounded by a heavy dark green forest. When I saw this glade ahead of me I expected to find a deer in it, and I approached and looked it over carefully, but it was empty. So I went on across it and entered the forest on the other side. Ten steps from the open I jumped a buck. He was lying down. I heard him get up. Heard his bones crack, or something, just as they always do. Once you have heard a deer get up off the ground you will never confuse it with any other sound.

I soon got my eye on him through an opening between the trees, and I saw that he had big horns. I carried my gun all ready for quick work, loaded, cocked and at present. When I first got my eye on the buck he was swinging his head around, looking for what had disturbed his rest, and he got his eye on me at just about the instant I saw him. I could see only a small part of him—one horn and part of his shoulder—between the trees. The moment he saw me he was off like a flash. The moment I saw him I raised my gun and fired a snap shot. I dared not take time to look for the sights. I knew it was then or never. I really could not tell whether he had beaten my bullet or not. I feared he had. He started off toward the little opening behind me that I had just crossed, swinging in the direction he had started. I saw a little opening between the trees where I could see out to the sunshine in the little glade. I covered this with my rifle, and in a moment I saw a yellow streak flit across and I fired at it. Then I worked the lever and turned to the next opening ahead of him, but had to wait a couple of seconds before he flitted by, then I fired again. I did this the third time, then I saw him no more. He didn't seem to be going so very fast or he would have gotten away before I could shoot at him so many times.

I thought he must be hit, at least I hoped he was, but could not tell. I hurried back to the glade and looked around. Nothing there. Then I went up to the place where I had first seen him. Here there were plenty of signs. Where he had made the first jump he had evidently fallen flat and there was blood on the ground. The next leap was a long one, and here again he had fallen, and left more blood. It was easy to trail him, for at each jump he had fallen and scratched around getting up. He seemed to have made very long leaps, but lit on his head every time.

As I was following the trail I suddenly heard a noise around to my left. Glancing in that direction I saw him standing on his hind legs and nose. Then he made another of those long leaps without getting on his front feet at all. While he was in the air I took another snap shot and hit him by the side of his tail. Then he lay still, and I ran down there. As I came up to him he swung his head over and gave me the most pitiful look out of his big liquid eyes and groaned.

Clark, that look haunts me yet. I felt like changing places with the poor thing. If he had gotten up and tried to fight me I should have felt all right. Or, if he had done something to deserve such treatment, there would have been some excuse for me. I said to myself, "We needed meat. Bah, a flimsy excuse; we could have gotten along without it." As plainly as animal eyes can talk, he said to me, "How could you be so cruel?" I don't know but what he hurt me as badly as I did him, only in a different way, and it lasts longer. Sometimes I think I am getting to be a chicken-hearted fool; and then, again, I think that it is right. That we have no right to hurt any of God's creatures; that they are not harming us. Hi ho, this question is too big for me. I shall never solve it. A thousand times since that I have wished that I had found no deer that day; and a thousand times have I looked with pride on that deer's head, where it hangs on my wall, and thought of the good shooting, under difficulties, that I did that day.

Well, I cut his throat with my hunting knife, and then looked to see where I had hit him. Altogether I had fired five shots at him, and there they all were, as plain as day. They were not well placed, but all had found the mark. One shoulder was crushed (my first shot, I think). One front leg was broken in two places, and the other front foot and four inches of the leg were gone entirely. I had shot too low, but I had hit every time. There is satisfaction in that.

Then I went out to the edge of the timber, and making a trumpet of my hands, I let a "Halloo" that went echoing around and around in the still air. In a moment I had an answer, away down there, seemingly half way down the mountain side, and in twenty or thirty minutes Lem was with me with the gray horse. Lem said that they had heard my first shots, bang—bang—bang—bang—and had listened to hear my call for a horse. When this did not come as soon as he thought it ought, he had told the girls he thought I had missed. Then came my last shot, and he knew in a moment just what had happened. He told the girls that I'd got him, and he jumped on his horse and was well on his way up to me when he heard my call.

We dressed the deer. Then went to look at the place where I had shot him. Along the trail we found the missing front foot. The bullet had evidently hit the bone fairly and cut off the cords or some of them, then in making a leap he had caught the severed part under a root and jerked it off. Lem said it was a wonder I had hit him at all in the place I had to shoot through. I did not tell him that I was a "crack" on wing shooting, which, I believe, I might have done with some truth.

Be that as it may, I am proud of the work I did that day with my Savage, and only sorry that I did not hit his heart the first shot.

Now, old friend, I think I've told you enough of this hunt to make you want to go with me next time I go to that place, which will be next August, if the Lord is willing.

Wishing you prosperity and happiness, I am always,

Yours truly,

RICHARD A. PADDOCK.

Natural History.

The Wild Pigeons.

Editor Forest and Stream:

I once kept a diary. It was only a business sort of a diary—just a few jottings each day—a record of things and events most important to me. But I had kept it for years and would give much if I had continued it. It runs up to the time of the Chicago fire!

Then it had to stop for a time. Events were too many and too important to be recorded. This time was prolonged and the leisure time to write it up never came. So ended my diary.

I used to take no end of pleasure in the stories and discussions of the brethren of the goodly fellowship of FOREST AND STREAM, and used to "chip in" now and then with an observation of my own, and humbly hoped I might, in a small way, be entitled to call myself one of them.

Then came a time—a year and a half ago—when circumstances called me to start on a long, long journey, which resulted in taking me around the globe—giving me experiences in many lands, including the Hawaiian Islands, Japan, China, the Philippine Islands, the Malay Peninsula and India.

I thought that surely all this would furnish me many an observation and adventure worth offering to my brethren of FOREST AND STREAM.

But it was "Chicago fire" over again. There was too much to write—an embarrassment of riches—and from the time my steamer carried me west from the Golden Gate, till by going ever westward, I sailed up Boston Harbor and sighted the blessed old gilded dome of the State House, and until now, I have never found it possible to relieve my spirit by sending you a word.

Worst of all, by some oversight, my file of FOREST AND STREAM was not forwarded to me, and I found them, a tall pile on the top of my desk, when I returned—enticing, but impossible—and absolutely untouched, even yet.

But who could resist the stimulus of your recent issues to take a hand again? Every number and almost every page is a challenge. Sometime I do still hope to tell a few things and to propound a few conundrums which came to me in those marvelous lands, where I longed as never before, for more naturalistic lore and for some of the "goodly fellowship" to enjoy and experience with me.

A vast amount of hunting and fishing I did, but it was mainly of the kind that is done from car window and from the bridge or bow of a steamer, or from the cab of an engine. If any one thinks that is unfruitful sport and unworthy of record, I hope some day to convice him to the contrary.

But just now I want to be permitted to pay my tribute to that most magnificent performance—"Photographing the Wild Turkey"—by Charles L. Jordan, in your Christmas number. It was as modestly as fascinatingly told, but, gentlemen, what a performance was that!

His quest, begun as far back as 1878, and continued in various ways and places till the final grand campaign, beginning in November, 1899, and continued with absolute devotion, with exception of but one single day, for six months! And with what a result! A liberal collection of the finest and rarest photographs in the world, with which he can take all the world into his confidence—worth endless pages of descriptions, be they never so well done, and better than all other possible trophies—tail feathers or wings or beards or actual skins, and secured for all time and for all scrap books of the lovers of the wild and fine in all the world.

I would rather have that collection of photographs —that "turkey gallery"—than anything of the kind I can think of, and I would pride myself more on having taken one of them myself than on the best and luckiest shot I ever made with rifle; and who has not at some time or other made at least a shot or two over which he is inclined to hug himself?

I have wanted to take a hand in several of the late discussions. I wanted to help "do up" Didymus and add my testimony about squirrel migrations. But he seems to have been sufficiently attended to.

The perennial question of the disappearance of the passenger pigeon, however, I cannot let pass without a word. I have seen (unfortunately, I cannot now tell where—perhaps in your own columns) the suggestion that a vast extinguishment of pigeons took place in the Gulf of Mexico—the great flight having been caught in migration by a terrible storm, and the birds being drowned by myriads. This was the statement that ship masters reported sailing for miles over the sea—the surface of which was covered by the bodies of the birds.

Now there are many things which, to me, make this story interesting. Numerous instances are on record of a species being nearly or quite exterminated by some cataclysm of nature—some change of conditions before which a species is helpless.

It is but a few years ago that we were lamenting the destruction of nearly all the bluebirds by an untimely and tremendous freeze in the Southern States, whither the birds had migrated, and they are only just beginning to grow plentiful again in the North in the spring.

Some years ago a new deep-sea food fish, the "tile fish," was discovered in the Atlantic, and great preparations were made to fish the new locality and make avail of this new source of supply.

Suddenly, for some reason, the polar current invaded the haunts of the tile fish, reduced the temperature below the living point for the tile fish, and their dead bodies, unaffected by any disease, simply covered the surface of the ocean for many a league.

Again, the old order prevailed as to the temperature of the water, and slowly, coming up from the southern waters, the tile fish repopulated its old haunts. Temperature soundings assured Col. McDonald, the shrewd old Fish Commissioner, that tile fish conditions were restored, and he sent out a ship to see if the fish had not returned, and I was present at Wood's Hole when the expedition returned with one genuine tile fish, in proof of the colonel's theory. That historic fish I had the pleasure of examining.

Recent testimony has shown that wild ducks and geese may be destroyed in numbers by a gale at sea. That a great flight of pigeons might be so destroyed I have not a doubt.

The first question would be: "Did the passenger pigeon in its southern migration go south of the United States?" The second would be: "Is there any living witness to, or authentic record of, pigeon mortality in the waters of the Gulf?"

If such a thing occurred, there should be living witnesses of it—for the disappearance of the great pigeon flight was not so very long ago. Sailor folk see many strange things which never find their way into print, and it is quite conceivable to me that such a thing might have occurred in the Gulf waters and have escaped general notice or important record.

The simple fact is that the going out of the pigeon has never been satisfactorily accounted for. Not all the stories of the destruction of vast numbers by man and beast at the pigeon roosts begin to account for the numbers that were wont to assemble. Up to the last the accounts were of millions still unslaughtered. The Gulf story comes the nearest yet of anything adequate, provided, always, the species in its migration ever went so far.

Let me close with a pigeon story of my own—a modern and truthful one. Last summer I saw a flock of twenty or thirty passenger pigeons. Moreover, it was in Massachusetts! I blessed my eyes with the sight. I went more than a hundred miles to see it, for I knew they were there.

They were in the aviary of Professor Whitman, the director of the School of Natural History at Wood's Hole, and the great student of the Columbidæ.

They are hardy birds and breed well in captivity. They were raised from a pair or two obtained some years ago from an Indian in Wisconsin. These few birds are the only ones known to me to be in existence of the species that delighted my boyhood and which covered nearly the whole continent.

It was a sight that thrilled me, and I couldn't look at them long enough. By their aid I could bring to my mind the hurtling wings and swift rush of the hosts as I knew them once.

I wish that a dozen, and then a hundred, and then a thousand lovers of the pigeon would, as fast as possible, get pairs of these birds and carefully protect them till numbers could be liberated all over the country, and so the species be preserved to the world.

C. H. AMES.

BOSTON, Mass., April 27.

"Intelligence of Wild Things."

Editor Forest and Stream:

And so it is the intelligence of wild things that is causing the wheels to gyrate once more. I have never read John Burroughs, but I shall since reading Hermit's criticisms of him. He seems quite sensible at all points quoted by Hermit.

How much of the intelligence that it is necessary for bird or animal to maintain life is taught by the parent bird or animal? None. The young learn some things by observation, but the mother never teaches in any sense of the word. We have chickens that were taken from under the hen as soon as they were out of the shell. Drop a crumb before them and they pick it up; that is the first and they do it very naturally. A bird flies by outside the window and with a warning note they squat and "freeze," as Seton Thompson puts it. A hat thrown across the room produces the same result. The mother never taught them that, as she is still on the nest hatching the rest of the eggs.

All our chickens were isolated when young from all grown birds; the roosters crow and the hens cackle just the same as other fowl. We have a goose that was hatched under a hen and has never seen another goose, yet it calls and does all the things that other geese do. Does the old rooster teach the young to crow? No! As soon as the young rooster attempts to crow the old rooster begins to fight and drive him away. This is everyday knowledge to farm folks. With our chickens is a hen that sat on a nest of eggs that failed to hatch, yet she goes round clucking just the same as if she had a brood of young chickens. This does not look like the result of reasoning. No, she is acting according to the compelling force that is above and beyond the bird.

We once hatched five wild and five tame duck eggs under a hen. Though there was no difference at all in size or markings, we could pick every wild duck as soon as they were hatched simply because they were wild ducks. The teaching of the wild things is from a vastly higher authority than the parent.

When we want to laugh give us the new school of natural history; when we want to seriously consider the matter, give us John Burroughs, Chas. Hallock and the like, and they need a whole lot of fixing.

The greatest trouble young birds make is by trying to fly before they are able. Who has not heard a great fuss among the birds, only to find some young bird out of the nest before it is able to fly. It has, perhaps, caught on some lower branch, where it sits looking wise as an owl, but every attempt at flight brings it to a still lower branch, and the old birds can do nothing but raise a clamor and draw the attention of prowling animal or boy. The young man trained in the journalistic school who writes natural history at a day's notice is doing the same thing. He may be carried for some distance by an accidental gust, but the ground is beneath and the jolt will be the harder when it does come.

How the wolf holds its tail is another important matter. Now, while the wolves howl about us every night and keep our dogs in a perfect frenzy, we have seen comparatively few wolves and those at such distance as to be useless as a nature study. I should like to know how the student gets so close as to make a minute study of them. We have been among the wolves all our lives. We know their disappearing shadow as they fade away across the bronze hills; their howls are as the chirping of robins in the trees round about; we know how they look and act when fast in a steel trap, but closer details we could not give and be honest.

Now, here is another live question for the naturalist: Who ever heard of a mother teaching her children to tell falsehood? What mother ever taught except against all untruth? And yet how universal is the practice among men. Is this, too, a compelling force which makes us act out our nature, or is it the result of our greater reasoning power?

E. P. JAQUES.

DURHAM, Kas.

Editor Forest and Stream:

As Hermit in FOREST AND STREAM's issue of April 18 criticises John Burroughs, one of our first naturalists, I feel sure that he will not object to explaining one or two of his own statements in order that some of us who are not so well informed as he in natural history matters, may understand just what he means.

He speaks of a song sparrow in his dooryard which has visited the place for fourteen years. I should like to know how he knows that it is the same song sparrow. If it can be demonstrated that the same bird has been seen for fourteen successive years, it is an extremely interesting matter as giving a fact about the age to which this species lives—a matter about which I had supposed little or nothing was known.

Incidentally I should like also to learn how Hermit knows that the sparrow is teaching "his year old boy" to sing, and also since his acquaintance with the family life of this bird is so close, why the song sparrow's wife will not consent to live in the woods. What feminine argument does she advance in favor of a life in the fields? Has not her husband sufficient force of character to induce his wife to do what he thinks would be for the family advantage?

Hermit tells us of many extraordinary things about birds and animals and I read his articles with great pleasure. But when he makes statements like those about the song sparrows, it seems to me that they should be supported by evidence which will satisfy others.

INQUIRER.

Editor Forest and Stream:

In the article on "False Natural History," in the April 18 FOREST AND STREAM, Hermit makes a statement which he does not explain.

He says, speaking of birds: "The young females learn nest building and how to rear a family, and the young males learn to sing. These birds learn by observation and by teaching."

How do the young females learn nest building? Do they study the position of each straw in their home nest and remember it until the following spring? They were not present to see it built, and the old birds build no sample nests for their benefit in the fall. The woodpeckers frequently excavate nesting cavities in the fall, but not for this purpose, as some species use them to spend stormy winter days in. But the song birds build no nests in the fall, and yet, on their return the following spring, these young females build their own nests and rear their own broods. They surely do not at this season wait until the old birds build to see how it is done. Who has watched a pair of birds building a nest with an audience of last year's birds perched on an adjoining limb? It seems to be the custom at this time for the builders to drive away all intruders.

He also says: "The young males learn to sing," and he says that young roosters learn to crow. I have known a young rooster that was raised in a city back yard, way beyond hearing and seeing any of his kind, yet at a certain age he began to crow and could crow as well as any other rooster.

CHRESWELL J. HUNT.

All Watches are Compasses.

Editor Forest and Stream:

A friend points out that, in describing the mode of using a watch as a compass in your issue of March 7, there was an important omission. In your issue of March 21 your intelligent correspondent, Coahoma, kindly responded to my request and explained the rationale of the process, but the omission seems to have escaped his notice. My friend sends me the following, clipped from London Truth several years ago, from which it appears that up to noon the distance between the hour hand and twelve must be counted forward, but after noon the count must be backward:

"A few days ago I was standing by an American gentleman when I expressed a wish to know which point was north. He at once pulled out his watch, looked at it, and pointed to the north. I asked him whether he had a compass attached to his watch. He replied, 'All watches are compasses.' Then he explained to me how this was. Point the hour hand to the sun, and south is exactly half way between the hour hand and the figure XII. on the watch, counting forward up to noon, but backward after the sun has passed the meridian. For instance: Suppose that it is eight o'clock, point the hand indicating eight to the sun, and the figure X on the watch is due south. Suppose that it is 4 o'clock, point the hand indicating four to the sun and II. on the watch is exactly south. My American friend was quite surprised that I did not know this. Thinking that, possibly, I was ignorant of a thing that everyone else knew, and happening to meet Mr. Stanley, the African explorer, I asked that eminent traveler whether he was aware of this simple mode of discovering the points of the compass. He said that he had never heard of it. I presume, therefore, that the world is in the same state of ignorance. Amalfi is proud of having been the home of the inventor of the compass. I do not know what town boasts of my American friend as a citizen."

THE OLD ANGLER.

A May Day Moving.

WYMORE, Nebraska.—*Editor Forest and Stream:* On the first day of May last year a moving took place at our house. We had noticed for several days that a squirrel had made two holes about twenty feet north of our cistern, in the back yard; but we saw no sign of the little trespasser until the first day of May, when we saw what we call a ground squirrel, or striped gopher, coming along the front sidewalk, with a little squirrel in her mouth and one following her. The little fellows were very little larger than a peanut. These two she deposited in one of the new holes north of the cistern, and returned to the front sidewalk and soon came again with one in her mouth and one following, but when she passed the bay window the little fellow that was following made a sneak and went in against the wall in the corner made by the bay window. The old one went on and deposited the one she was carrying and went back to the sidewalk after more. She came that time with one in her mouth and one following; and when she passed the bay window the little one that had been playing hookey came out and joined the cavalcade, and the three were deposited in the hole by the cistern. She kept this up until she had transferred thirteen from the old home to the new, and it was one of the most interesting sights that it has ever been our pleasure to witness. We at once deposited some oatmeal in two little piles near the new hole, and frequently saw nine or ten of the young ones around a pile of oatmeal, eating as though they were hungry, two or three down on all fours and five or six standing up, but we never were able to see the whole thirteen out at one time. This was witnessed by my wife and Susie, our baby, who is old enough to teach school, and both are very credible people. Why did the squirrel move her little family from the front sidewalk to the new holes near the cistern nearly 150 feet, and why did she move on the first day of May?

A. D. MCCANDLESS.

A Cow Moose and a Leaky Guide.

IT cost Mr. J. L. Mott, grandson of Jordan L. Mott, of the Mott Iron Works, $800 recently to kill a cow moose in Washington county, Maine.

It is understood that nothing was heard of the illegal killing until after Mr. Mott had left the State; then, however, his guide, while under the influence of liquor, talked about the matter, and when it came to the ears of the authorities it was not difficult to secure satisfactory evidence of the shooting.

Mr. Mott, who is a Harvard student, was at Cambridge last fall when a representative of the Game Commission visited him there, bearing a warrant for his arrest for the offense. Owing to the illness of a member of the family no effort was made at the time for his extradition. Recently Mr. Mott, through his counsel, entered a plea of *nolo contendere* to the charge, and was let off with a payment of $500 as a fine and costs amounting to $300.

The animals killed are said to have been a cow and calf moose, and the penalty prescribed by the statute is a fine of not less than $500 and not more than $1,000 or imprisonment for not more than four months. It is thus seen that Mr. Mott escaped with the lightest possible penalty; yet even so, cow moose come high.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Mr. Craig's Meadowlarks.

OMAHA, Nebraska, April 27.—*Editor Forest and Stream:* Rev. Robert E. Lee Craig, Rector of Trinity Cathedral, arrived home this morning from the sandhills, and calling at his home I had a talk with him about his arrest out in Thomas county for shooting meadowlarks. He said that the telegraphic story of the regretted occurrence, while true in the main, was inaccurate in detail.

"I was entirely innocent," said he, "of the fact that I was violating any game law of the State when I shot those birds on my recent hunt in the sandhills near Thedford. Back in Virginia I have been killing larks ever since I was ten years old, and in Kentucky they are not protected by the law at all. Coming in from the ranch of my host, Mr. Yates, out in Cherry county, about thirty miles from Thedford, which is in Thomas county, I amused myself by breaking the monotony of the journey shooting meadowlarks. I bagged twenty of them, mostly in Cherry county. When I got into Thedford I went to the depot carrying my birds, tied with a string in full view of every one, and on arriving at the station I threw them down on the platform where they lay for one hour and a half. In the meantime some malicious person informed the sheriff that I had these birds and he came to the depot and sat there talking with me until train time, and when I picked up my birds to get aboard he arrested me. He took me before the justice of the peace, where I was arraigned by the county attorney on a charge of killing song birds. The attorney read the statute, which imposes a fine of $5 a bird, and the court fined me $111—$110 for the 22 larks killed and $1 for the gallant sheriff. I pleaded not guilty, insisting that I was innocent of having violated the law, and furthermore the larks in my possession were killed in Cherry county, over which the authorities of Thomas county had no control. This was met with the reply that ignorance is no excuse in the eyes of the law, and the fact that I had the birds in my possession was all he cared about. He then said that I must pay the fine and costs at once or give bonds for my appearance at the next session of the county court, May 8, which I did in the sum of $500. My gun was confiscated by the sheriff, who pleasantly informed me that it would be sold to the highest bidder inside of ten days, but if it is, that sheriff's bondsmen will find a healthy damage suit on their hands. I have engaged the very best legal talent in Omaha to manage the settlement of this regrettable difficulty and the law will be tested to the utmost."

SANDY GRISWOLD.

The Duck Hunt at Lost Island

MARSHALLTOWN, Ia., April 28.—It was Pete and Sam, Fritz and Charley who left Marshalltown one evening this spring en route to the shack at Ruthven, Iowa, where Trumbull, Mud and Lost Island lakes unite to form a triune paradise for duck shooters—when there are ducks. The impedimenta of the party consisted of general sportsman's duffle, guns, gum boots, shells, etc., to which in this case were added a full food supply and a fat Swede cook of repute in the toothsome and digestible preparation of genus anas to its legitimate end. Boats and other necessary paraphernalia remain at the shack from year's end to year's end, and have for the past twenty years.

Of the occupations of the party: Pete is a furniture dealer, fair, forty and single, with a voice like an evening bird song when addressing a lady or dealing with a customer. Sam, who profits from hides, wool and petroleum. His great grand something or other fit into the Revolution and commanded the Constitution or Constellation or some other American frigate of renown in some of the sea fights that have been posted in full sheets on the billboard of history. Charley sells everything to smoke, from a six inch section of rope to Havanas at a dollar a throw. These three are crack shots in the field or at trap. Then there was Fritz, last year a neophyte, to whom forcible adjuration and criticism of an adverse, and at times profane, character had been necessary in order to remind him that a gun was made to shoot and he placed to discharge it when a bunch of bluebills swooped down to the decoys. Last year Mr. Winkle might have given him cards and spades. This year Mr. Tupman or even the long game keeper himself, might have felt proud of his performance. As a managing editor he sees that his subordinates make a mighty good daily newspaper. That was the personnel of the party. Lew had intended to make one but took typhoid and shot what few ducks he got this spring in his fever dreams. And, in passing, it might be noted that dream shooting beats spring shooting—in one way, at any rate.

Once at the shack shooting dragged. It came on cold; the ice stayed in the lakes and the ducks hiked south. Some ducks were secured over the decoys, but shooting in general was unsatisfactory. Charley left for home satisfied that life is too short to wait for a spring breakup when so many and varying interests demanded his presence at home. Pete, Fritz and Sam stuck it out.

Still the ducks were slow in coming. They took up their decoys and moved to a neighboring situation that proved no better. Another party preempted the place they had vacated and when they returned they found the squatters in possession. Then the ducks came and they had the gratification of seeing the newcomers gather 70 to 100 ducks daily over the decoys set where theirs had been a day or so previous. The boys watched the shooting and mumbled language that would cost money if used on the public street.

Over several miles distant from the shack were ponds where the ducks were rising, to judge by the clouds of birds making toward them daily. Fritz and Sam teased Pete to make a trip to Cheseponds in hope of a good day's sport. Not by a participled sight Pete wouldn't go. He had shot ducks within sight of the shack for twenty years and wasn't going out into the world after trouble at this late day. Sam and Fritz went, however. They subsidized a Norwegian lad to hunt one of the ponds while they watched their decoys at the other. The birds came in fast and the shooting was furious if not always to center. The shells gave out and Fritz walked two miles to a farm house and secured by purchase eighteen more. When these had been used each had killed to the legal limit and they started on the six-mile trip in return. But they had ducks, bluebills and redheads galore, with an occasional canvasback showing grandly among its more plebeian brethren. Sam was happier than the old admiral had ever been over his own peculiar aquatic successes. Fritz was speechless.

Arrived at the shack Pete met them. He'd killed a poor quarter dozen and was in that condition yclept "sore" in the vernacular. They threw the ducks at him and upon him and over him and Pete simply stood and gazed with an occasional mild (?) exclamatory remark as the situation became more pronounced. When the last one was unloaded, "Well," said Pete, "by J—inks! you did get 'em." But Pete was "sore" and ready and willing for trouble. Had he been in the place of his illustrious Hebrew namesake who grew "sore" on a memorable Biblical occasion and cut off a Roman ear, our Pete would have annihilated a Roman battalion. *Tempora mutantur,* Pete simply smoked at the ceiling and raged inwardly.

The party had set the following day as the date of leaving. Pete's meditations ran strongly on this phase of the situation. He wanted to stay, but wanted the others to make the proposition. They sat silent or together reviewed the day's shooting. Pete's cigar grew short. He heaved a sigh and said lugubriously, "I would like to have one day of decent sport." Then the others howled, and a trip to the ponds was arranged instanter. Next morning they went.

Some future time the tale of Pete's performances upon that memorable day will be decreed as traditionary and received with incredulity. At present they are authentic history duly attested by Sam and Fritz. Stretched at full length on a haystack in the middle of the pond Pete raged like Achilles. Singles, double far out or close in, melted down at the crack of his gun. Flocks paid a toll of three or four. Fast or slow he took them all in with an aim unerring as fate. Between flights he danced madly on his mound of hay with the grace and vigor of a whirling dervish. Bluebills flocked in like a streak of summer lightning, stopped suddenly and stayed. A small duck came like an arrow low over the stack. Ten feet away Pete dropped the head of the duck on one side of the stack and its body on the other. Bird after bird without a miss, while the others on the outskirts picked up stragglers. It was fierce and altogether satisfying. Altogether the three went back to the shack with sixty-eight ducks as the day's bag, hungry, tired but happy and ready to go home on the morrow. Next year—perhaps we will have a law against spring shooting in Iowa.

MOS.

A Proposed Massachusetts Preserve.

IF the present plans of some of the leading members of the Grafton Country Club are carried out, the name of Frank Forester, who has done more than any other man to inspire Americans with a love of sport in wood and field, will be perpetuated in a most appropriate manner. The idea is to have an immense game preserve extending over nearly fifteen square miles, and to be known as the Forester Club.

There has been a movement on foot for the last two years among certain members of the Grafton Country Club to purchase the Brainey property, which is south of the club, the purpose of which would be to unite the Brainey property, the Grafton Country Club, the Red Farm, the town farm, Woodland, Lordvale, Edgewood, Potter Hill and Elmwood into a large game preserve.

The above comprises some 3,000 acres, and adjoining the above property on the north, about Doherty Pond, there is a large quantity of woodland which is especially desirable for cover for partridges, and on the south the Crosby farm, and about the Fitzpatrick property and the House Rock a large amount of open land, which is well known as the best quail ground in or about Worcester. This all makes up a total of some 10,000 acres.

Those interested in the welfare of the club secured an option on the property, and in the past three days papers have been passed, so that the ownership of the Brainey property is now vested in the newly founded Forester Club.

The ownership of the club is divided into a certain number of shares of $100 each, and that the same will be a success will be easily seen from the fact that the following gentlemen have come forward freely and interested themselves by subscribing for the stock: P. W. Moen, Eben Draper, of Hopedale; H. T. Whitin, of Whitinsville; Randolph Crompton, of Worcester; Charles S. Barton, William Marcy, Chester Lasell, of Whitinsville; H. W. Wyman, Charles Crompton, George Crompton, George B. Inches, of Grafton; Samuel Colton, of Millbury; Harry W. Smith and William B. Schofield, of Worcester, and Marston Whitin, of Whitinsville.

A meeting of the club will shortly be held, when a committee will be chosen to take charge of the interest of the club, which will, of course, include the hiring of a suitable game keeper to look after the property and arrange as to purchase of quail, pheasants, hares, etc.—Boston Herald, May 1.

Where Tired Trap Shots May Build Up.

DUNBARTON, N. H., May 1.—*Editor Forest and Stream:* How the readers of FOREST AND STREAM do respond to things pertaining to fish and game. The day following my receipt of FOREST AND STREAM containing my account of our New Found Lake fishing trip, I received a letter from a well-known trap shooting expert. The latter writes: "I am run down and tired out shooting at targets. I now want a rest and building up. Can't you tell me of some place to go where I can catch some brook trout and also gain some pounds in weight?" I have written this tired expert and advised his going to the headwaters of Mad River in Waterville, N. H. He ought to catch some small trout; he will surely gain in both weight and health if he has not passed the point where it is possible for improvement. Waterville is an ideal spot in the Granite State. When you get there you have reached the end of the road. If you cannot pick up there your case is hopeless.

C. M. STARK.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

A May Fishing Trip.

SURELY there is nothing more invigorating, more life-giving to both body and soul than fly-fishing for the gamy trout in the cool, sweet days of May. There are still some places where the hopes and ambition of an angler's heart may be gratified, and among these few chosen regions are the Adirondack Mountains. Exquisite scenery, clear rippling streams, shady pools and blue, placid lakes more than add to the charm of casting a fly for the speckled trout in this region. With these visions of the pleasures and delights of a spring fishing trip to the North Woods, it was small wonder when the Veteran proposed we should sojourn to the woods for a few days' outing.

Preparations were soon made, and our sections engaged on the Montreal express for the night of May 10. We were to reach our destination at an early hour of the morning, and the Veteran decided the best plan would be to take our breakfast with us and eat it at the station before driving seven and a half miles through the woods to the lake, for if the morning was cold such a drive on an empty stomach would hardly prove pleasant. The Veteran therefore told Al (who is his right-hand man and always accompanies us on such trips) to buy a coffee pot with cups, spoons, etc., and in fact everything which would supply us with a good meal.

Finally the day for our departure arrived, and a quarter past eight found us at the station waiting for the train that would carry us to the heart of the North Woods. A sharp, clear whistle and with puffing and panting the huge express rumbled in. Another minute and I landed safely on the platform, when, to my surprise and dismay, we commenced to move out of the station without giving the Veteran or Al a moment in which to board the train. Suddenly I perceived the latter, loaded with bags and bundles, scrambling up the steps, and heard the Veteran say sharply: "Hurry up, Al, for goodness sake or we'll get left!" Al managed to reach the platform and the Veteran followed close behiend. "If I had jumped on first," said the Veteran, "do you know where Al would have been now? At the station with most of our belongings. Fortunately I managed to get him started and kept him going."

We turned in about ten o'clock, and, lulled by the rocking motion of the car, I soon was in dreamland. Somewhere near four o'clock I awoke, and lifting the curtain peered out of the window. Never will I forget the beautiful scene that met my gaze. We were passing a marshy piece of ground overhung by a white, quivering fog, which stretched toward the east and was met by a dark line of woods. The sharp points of the spruce and tamarack trees stood out black and clearly defined against the pale, bluish-green sky, and suspended just over their tops, glittering and silvery, hung Venus, the morning star.

As we skimmed smoothly along another exquisite vista presented itself to the gaze. We had reached a more elevated region and for miles in every direction stretched the forest in undulating hills met by mountain ranges. To the northeast, nestling amid the brown and green of the hills, lay Big Moose Lake, overhung with white, misty clouds, which caught and reflected the color of the sky above. Gradually the rosy tinges deepened until the long golden rays of the sun appeared above the wood-clad mountain.

"Fulton Chain," said the porter. "Time to get up." My dressing was quickly accomplished in the pure, cold air which flowed through the car from the open ventilators, and in a short time we were all together on the platform waiting as the train slowed down and finally drew in at the little station.

The keen, crisp air smote our cheeks as we stepped off the car, filling every chink and crevice of the lungs with life-giving ozone, and the first sound that greeted our ears, as the noise of the train died away in the distance, was the clear, mellow note of a white-throated sparrow.

We found a good fire going in the station, and a man awaiting our arrival. The ground was hard with a heavy frost, and the cold air quickened one's appetite immensely, so when the Veteran said, "Come, come, Al, get breakfast ready!" the words sounded most welcome and agreeable.

Al commenced undoing the package which contained our morning meal, when suddenly he looked up with a dismayed and chagrined expression.

"What's the matter?" asked the Veteran.

"The eggs," he answered, dismally. "I forgot the eggs."

"Just as I supposed," said the Veteran, laughing. "You are a nice one! Now all we have for breakfast is coffee and toast. A little more, though, and you would have been left with the eggs."

"Oh, pshaw!" said Al, disconsolately, and as this is his favorite expression when disturbed, the egg episode caused us not a little fun and amusement at his expense.

The Veteran then proceeded to make the coffee. Well, the thought of it even now makes my mouth water, and a cup of this beverage, combined with a hot piece of buttered toast, more than appeased our hunger. The repast finished, a big strong team of grays drove up with the three-seated wagon, and we were soon ready for the drive to the lake.

The woods, stripped of every leaf, for as yet the buds were scarcely visible, appeared very different from the summer season, and were brown, open and sunny, the gray trunks of the trees standing out distinctly, especially those of the smooth, stately beeches.

Suddenly a fox darted across the road ahead of the wagon, and later we caught a glimpse of a deer running

through the woods. An occasional bluejay screamed overhead high up among the bare branches, and now and again a white-throated sparrow whistled sweetly. Except for these sounds all was silent in the great forest, and how delicious was the quiet and solitude after the noise of the train. Only those who love the woods can experience the sensation of peace and rest that steals over one on leaving the turmoil of the civilized world and entering the wilderness.

A brisk drive of an hour or more over the hard frosty road and we saw the blue waters of the lake glimmering through the trees. Another minute and we were shaking hands with all our old friends once again. The lake appeared even more beautiful than ever, with its closely wooded mountains sloping down to the shore, and the bare rock on old Baldy glistening in the sunshine. Trout, omelet and pancakes quickly relieved that gnawing feeling, for Al had taken possession of the kitchen, and soon prepared a royal breakfast, and thus redeemed himself greatly for the loss of the eggs.

The following morning dawned clear and cool, with a snap and sparkle in the keen mountain air. The Veteran decided West Pond would be the best place for us to try first, so about ten o'clock Wallace (one of the men) had our traps ready, and we, with rod in hand and fly-book in our pocket, started out for our first fishing expedition of the season.

This sheet of water lay a mile from the camp, and was reached by a lovely path winding through the woods. Just as we left the clearing and entered on the old carry, a fine buck leaped out from the side of the path and stood not thirty yards away, with head erect, gazing defiantly at us. His horns were commencing to show and he evidently was in prime condition. With the bright woods as a background and the smooth trunks of the trees as a frame, he afforded a most beautiful picture of wild life.

We soon reached the pond, which stretched out before us like a big sapphire. The lake is about a mile long by a quarter of a mile wide, with two sloping ridges meeting at the lower end and a large marsh bordering the shore. Beside its beauty it is very wild and secluded, a place designed to delight the heart of sportsman or angler. The boat in readiness, we were soon skimming over the smooth surface, propelled by a skillful hand and paddle, and bound for the lower end of the pond.

The Veteran, who had been arranging his flies and leader on the way down, cast first, toward the shore near an old moss-covered log. Two or three times the well-directed flies struck the water and floated life-like for a second or two. Then, with a rush and swirl, a lusty trout jumped for the tail fly. A quick turn of the Veteran's wrist and he was fastened on the hook, struggling and rushing here and there in his effort to break away. He fought gamely for several minutes, when the net was slipped gently under him and our first *Salvelinus fontinalis* of the season lay flopping in the boat. He was a beauty, with bright gold sides dashed with crimson spots and an olive-green back; he weighed about a pound or more. Wallace continued to paddle us slowly around the lower end of the pond, fifty or sixty feet from the shore, so that we could cast under the bank or very near to it.

The fish were rising well. Some were missed, these mostly by myself, and many were hooked and brought to net. Nearing the marsh we turned and skirted across the pond, casting in by the grass and rushes, where the water was quite shallow. Here the Veteran had a splendid strike from evidently a large fish, but, much to our sorrow, after fighting hard several minutes, he carried off all the flies and part of the leader in one last desperate rush for liberty. However, another speckled beauty soon replaced the loss and landed safely in the basket. Once, letting the flies drop near a fallen tree partly submerged, a nice trout made a vicious lunge at the middle fly, and failing to strike quick enough I missed him. I cast immediately near the same place and he rose splendidly again, this time with success. The tip of the rod bent under his quick, savage plunges and strong rushes. This was the largest fish I had hooked up to this time, and the pleasure and excitement of the moment were intense, for he played gamely until landed.

The delights and fascinations of such fishing are unbounded, and as we whipped the water with our flies and gazed upon the wild, enchanting scenery surrounding us, one fully realized the pleasures of angling.

The morning flew by, and it was three o'clock before we paddled up the lake to the landing. Our catch consisted of twenty-one fine trout, plump and fat, varying from ten ounces up to a pound in weight. Certainly our first day's fishing had turned out well, and we returned to camp satisfied and contented.

The following afternoon found us off in a slim guide boat with rods and tackle, our destination the inlet. To those who love nature in wild primitive beauty, this stream is a veritable paradise. Moving slowly along on its winding path, and casting our flies on the mirror-like surface of the water, we could enjoy to the full the wild, exquisite scenery.

To the south stretched a grassy marsh, thickly covered with young pine, spruce and hemlock trees, and so close together did they grow that as one looked over them they appeared like a miniature forest, while beyond lay a ridge of undulating hills.

On the north side the grass and alder bushes grew close along the water's edge, with here and there a bed of fresh green moss festooning the bank, and the trees were larger, blending into the woods very near the shore, so as we floated along one now and then would catch a glimpse into the dark cathedral-like forest. The woods here rose into a small mountain, whose summit is a mass of glistening rock sparsely covered with poplar and birch saplings. Toward the northeast towered another mountain, its sides heavily clad in soft green timber standing tall and majestic against the bright sky.

The banks bordering the stream were thick with bushes decked with a pretty little pink flower, and the buds on the trees just about to burst were tinged in soft yellow and green, while here and there nestled a brilliant rose-colored shadberry bush. A sweet spicy aroma filled the air from the tamarack, spruce and balsam trees, and the jays flitted about overhead uttering their harsh cry, intermingled with their more pleasing bell-like note. A flock of blackbirds chattered noisily in a clump of alder bushes, and a cock-of-the-woods rattled and hammered on a neighboring stump. But above all rang out the clear, wild ethereal song of a hermit thrush, as he sat in some dark recess of the shadowy woods pouring forth pure liquid notes. He is a true wood bird, and loves only silence and solitude.

It was while gazing on the lovely scene that lay about us that my reverie was suddenly aroused by hearing the Veteran ejaculate, "Just look at that fish's head! It's as big as a woodchuck's!" and hastily looking toward where his flies floated and danced on the water, I perceived a dark object emerge from the glassy surface and make a lazy grab at the flies. The line snapped back as the Veteran struck sharply, but only a rapid swirl remained to tell the tale of where probably a two-pound trout had sunk swiftly from sight. "I won't give you up just yet," said the Veteran, as he cast again in the vicinity of where the fish had disappeared. The tail fly, a brilliantly colored professor, struck the water very close to the overhanging bank, and almost immediately there was a splash, followed by a wide swirl. The line drew suddenly taut, and the fish was hooked. Several minutes of sharp fighting and he commenced to weaken, but just as Wallace was about to slip the landing net under him, he gave a quick flop, and, evading the meshes, dashed off again up stream. When he finally succumbed we discovered that he was not the "old woodchuck head" as we had supposed, but a very handsome fish of a pound and a half in weight.

"Cast over on the other side of the boat," said the Veteran, turning to me; and following his advice I dropped my flies on the opposite side. Almost instantly I was rewarded by a rush and a tug as a trout jumped and greedily seized one of the flies. With a quick turn he headed up stream, making the reel sing merrily as he took out line. Once or twice he managed to carry the line under the boat, and then I would think he was surely gone. But no, his treacherously quiet mood in a second or two would change to sudden activity, and with renewed vigor away he would go, churning and lashing the water. His pink, speckled sides gleamed and flashed as he sent showers of sparkling spray in every direction, but after five minutes' gamy fighting he gave in. Two or three final flops and he lay quivering and glistening in the net, a two-pound trout.

This, however, was only the beginning of the sport which was to follow, for the fish were coming more to the surface as the afternoon sun warmed the water, and broke around us with resounding splashes. Making a cast at one of these I missed a fine strike, for I am very much of a novice, and have a great deal to learn. Later, however, with the Veteran's advice as to where and how to cast my flies, I hooked a pair of trout at the same time that played with vim and vigor and gave me not a little fun and excitement.

A dozen beauties followed, the Veteran hooking and landing a number, while I had my full share of the sport.

Finally, when the sun had slowly sunk from sight, and the dusk of evening was gathering, our basket held nineteen trout and we decided that it was time to go home and give the fish a rest until another day.

Just as we turned down stream a pair of black ducks came scurrying around the corner, sending long, dark fleeting shadows over the glassy surface of the water. With a swish and whistle of wings they shot by, sailing higher as they came out on the lake, and finally melting into the pink glow of the sunset sky. The faint far note of a hermit thrush fell upon our ears as we glided on, and a minute later we reached the lake. Pulling the boat over the bridge we soon had all our traps arranged and were rowing for home in the twilight of the spring evening.

Many more pleasant trips followed, and the time for our departure came only too quickly.

One clear beautiful morning we drove away, watching the blue waters of the lake gradually disappearing among the trees behind us, and it was not without pangs of regret that we bade good-by to the charms and pleasures of the North Woods.

CAMILLA.

Spring Days in Nebraska.

OMAHA, Neb., April 30.—Nebraska, once the Great American Desert, is a fabled region, indeed, with more bird and floral life than any State in the Union, and as near the ideal, from the sportsman's standpoint, as any locality I can think of. Just a great rolling ocean of pasture and plain, and of wooded valley, it is a veritable paradise. Sparkling lakes, dashing in slow beat of wave or quicker pulse of ripple, against pebbly shores, and rural streams, singing their siren songs between grassy banks, are now calling to all who delight to go a-fishing, and, in these modern recreative days, this includes a large majority. Every day now parties are radiating away from this point and the gamy black bass is their quarry. Some go out to Hackberry Lake, at Stillwell's, in the Cherry county sandhills, others down on the Waubuncey, out to Ericson, up to Noble's or even into the greatest bass domain in the world—fair Minnesota. Even right here, at our very dooryard, big catches are being made every morning and every evening, at Cut-off and Manawa.

The revivifying fervor of spring never fails to start the blood in his veins whose birthright has been the line and rod, and the yellowhammer never rattled so merrily with his flinty beak against cottonwood or sycamore, nor meadowlark sing softer, nor air smell sweeter, nor sun shine brighter, grass spring greener, than to the devotee when he goes, in the first days of bursting summer, to the scenes along lake and river he loves so well. To him is always welcome the face of nature, whether wreathed in smiles of yellow gold or sombre with shadow and wet with tears. My heritage is a love for the woods and the waters, fields, plains and mountains, and now in these days of the new summertide, I wish to all similarly constituted, whether they be of high or low degree, withered and decrepit with the winter of age or flushed with the spring of life, pleasant and peaceful hours of honest sport by all watersides and full baskets and long strings of wythes.

The fishing everywhere, in this latitude, is now bordering on the very best season—from the middle of May till the last of June—and lucky, indeed, is he who can snatch a few days from office or counter to loll about some favorite lake or stream in quest of the toothsome delicacies lurking within its depths. With what ardent hope is the silvery spoon cast upon the water's bosom, and as the eager rise is followed by a vicious strike, what matchless excitement fills the heart. Truly such a moment is worth more than a year's routine of theater, ball or reception. Two or three pounds of gleaming yellows, whites and greens at the end of one's favorite line desperately struggling for liberty and for life are priceless to the man whose legacy is a split bamboo and a reel of silk thread.

Here in Nebraska—and there is lots and lots of good black bassing here—it is the present month when the sport is at its best, but up in Minnesota the best time is in June, along about the middle. In July and August there is but little bass fishing anywhere, either here or in Minnesota.

As soon as the ice quits moaning, cracking and booming in our lakes, and then disappears within the mysterious and limitless maw of sunshine and wind, the Nebraska sportsman takes to the water as naturally as a duck. There is something in the May ozone of the Antelope State that urges one to hie to lake or stream, and, while I said there is plenty of good bass fishing at odd ins and outs throughout Nebraska, most all of our anglers, who can afford the expense, go up to Minnesota for trips of any extent and duration, and for years and years Lake Washington has been the Mecca of a very large proportion of the Omaha sportsmen. It is about eighty miles this side of St. Paul, and one of the most beautiful lakes and best bass grounds—both big and little-mouth—in all the State, and maugre the backward spring, Pat Sheehan, proprietor of the Red Squirrel's Nest, on the east crag, writes me the bass are rising most voraciously, especially at the trolling spoon. Pat's place is the favorite resort of Omahans on account of its easy access, its clean beds, attractive table and perfect boats and the unswerving attention they receive there. Pat also informs me that the croppie—and they run from a pound to two up there—are biting lively, but the wall-eyed pike are shy and backward. To reach Lake Washington from Omaha, you take the Northwestern line to Kasota Junction, thence across six miles of the most entrancing stretch of woods and fields that lies out of doors, in one of Oscar Basey's big hunting wagons and behind one of his spanking teams, to Sheehan's and Lake Washington. It is a charming trip—the greatest out of Omaha—for even one day's fishing. One night on a Pullman, at Kasota Junction at four in the morning, at Sheehan's one hour later, then sport till eight at night, back at the Junction at ten, and in Omaha bright and early the next morning, and invariably, too, with a basket of bass that would make the eyes of any ichthyologist hang out on his cheeks like horse chestnuts.

By the way, in talking with Judge Charles Ogden, one of Omaha's leading attorneys and an ardent angler, of course, last night, he told me that it had just been discovered by some of the lawyers up in Minneapolis that Minnesota's fish laws are so many dead letters. While they embrace all of the requirements anent an open and close season, how and where to fish and all the factors looking toward the protection and preservation of the fish, they fail to provide any penalty for the violation of any of the provisions, save the confiscation of the fish one may have in his possession. While Nebraska fishermen have never experienced any difficulty whatever in bringing home what fish they desired, they are always more or less apprehensive owing to the various understandings about their rights to ship or bring fish out of the State.

The report of the superintendent of the Nebraska State fish hatcheries for 1901-2, just out, shows that during the period covered by the record that the following fish were distributed among the waters of the State: Black bass, 28,590; croppies, 15,225; perch, 18,000; channel cat, 23,285; walleyed pike fry, 11,104,000; brook trout fry, 93,000; rainbow trout fry, 241,000, and 1,026 fingerlings and brown trout in small numbers. The planting of carp has been abandoned excepting on application of private parties, and in this connection the superintendent says: "The output of carp during the present biennial period was 4,450. Owing to the strenuous objection of anglers and sportsmen, no application for carp to stock public waters or lakes has been considered. We have filled all applications for carp to stock private ponds the present season and have fed several thousand of them to our adult bass and trout. Were it not for the fact that the carp are the only fish that will live in many shallow ponds on farms and ranches, I would favor the discontinuance of their culture altogether."

It has taken a long series of years to bring about this healthful belief, and I am vain enough to believe that it was my own unceasing warfare against this coarse and undesirable species that is mainly responsible for this happy condition at last. But it is better late than never, and that Nebraska has seen the last of her carp culture I haven't the slightest doubt. Other fishes, in addition to those mentioned in the preceding paragraph, that have been planted in the waters of the State, during the past year, were 4,000 blue gill sunfish—a delightful little pan fish and one that flourishes vigorously in the alkaline-tainted lakes of the sandhills; 5,000 yellow bullheads, and various quantities of various other kinds of unimportant species.

The anglers out in Cheyenne are having no end of trouble in endeavoring to settle the question whether the Lone Tree, Crow, Coyote and other small streams of that section of the State are tributaries of the North or South Platte rivers, and I have been written to for my opinion. The last Wyoming Legislature passed a law prohibiting fishing in all streams of the State prior to June 1, with the exception of the tributaries of the Big Horn and North Platte rivers. Fishing in all tributaries to these streams is permissible after May 1. After careful research I am convinced that Lone Tree, the Crow and other small waterways are tributary to the South Platte, and at the same time that the South Platte is tributary to the North Platte, and therefore the Cheyenne rod wielders are safe in plying their favorite sport in all these streams. Some of the State authorities out there claim that the South Platte is not tributary to the North Platte, but is a distinct river in itself, and with the North Platte, another distinct river, form a junction and thus create

the Platte River proper. This, however, I consider erroneous, as the South Platte, where it joins the North Platte, is a stream of not much more than half the volume of the North Platte. The latter is also the longest, widest and most important stream every way, and is undoubtedly the Platte River proper, and in the name only above the confluence of the two streams is called the North Platte. I have written Attorney General Van Orsdel for his opinion, and expect to receive it in a day or so.

The jacksnipe are still with us, and big bags are being made daily by Omaha shooters on the other side of the river. The cause for the wonderful abundance of this choice bird this spring is still being marveled at by all our gunners, but none can advance a tenable theory why this is so. While their long stay here is easily accounted for by the unseasonable weather, it is a different proposition when you try to explain the conditions that have made it possible this spring to kill one hundred jacks on the same grounds every day in the week for three straight weeks. Bags of these dimensions have been the rule and not the exception and I would like to hear from the FOREST AND STREAM on this matter.

SANDY GRISWOLD.

Canoe and Camp Life Along the Delaware River.

Snaps with a Pocket Camera, and Fly Casts with Tamarack Poles.

VI.—The Camp-Fire.—Two Pictures

In the dance of the camp-fire's ruddy light,
In the flame and smoke so free—
In the glow of its embers red and bright,
Are comfort and cheer for me!

"Light through summer foliage stealing,
Shedding a glow of such mild hue—
So warm, and yet so shadowy too—
As makes the very darkness there
More beautiful than light elsewhere."

—Moore.

WE are back in camp after a perfect angling day, with a fresh wind from the west, and showery weather. Pond Eddy has swarmed with schools of bass. Two rods have landed four fish, each weighing over three pounds; and we have hooked and released about fifty more whose weight would average nearly one and a half pounds. We are regarding this hunger to hook so many fish, with a feeling rather akin to shame. But we seek forgetfulness of it in a renewed study of our environment.

In the tent is a recent number of a famous English magazine, which was purchased on the Erie train as we "came up" from New York. It contains an article about salmon fishing in Norway; and its writer warns his readers that he did not go to Norway to look at scenery, but to kill salmon. He killed them by dozens, and was blind to the loveliness and grandeur of the titanic Norse scenery—to the tender grace and beauty of the acres of lilies-of-the-valley that grow on or near every meadow. He was a fisherman, perhaps an angler, but hardly a sportsman, much less an artist or poet. Walton was a poet, and delighted in and studied the beauty around him—joyed in the pleasantness of pure air, low lap of waves on beaches, forest odors, and winding light of water as it circled in sedgy shallows, or deepened with baby murmurings, and in the evening sleep of blue-flag blossoms, pond lilies, and wild roses. More and more, the angling becomes an excuse to live in the forest and beside the stream, and for handling the blackened coffee pot and dingy frying-pan or camp kettle, over that very soul and joy of tent life, the simple camp-fire.

Camp-fire! What varied memories that word will summon to the reader! Even the sodden, extinguished embers of such a fire, abandoned months ago, are full of interest. Kindled, and roaring its actual life, the camp-fire is a comfort and inspiration—joyous, free, wild; and gracious with all the nameless hypnotism of a primitive home. Its pillar of smoke by day is a glad sight to the angler in his boat, or busy with the trout as he wades the brook. Over where that blue column rises lazily through the green draperies of the trees, is home! And its pillar of fire by night dances a welcome, as the flare of the flames pushes back the wall of darkness that closes around from the forest, where owls hoot in lonely nocturne, and the whip-poor-wills are calling.

How reality, day-dreams, memory, longing, good cheer, anticipation, hope, hunger, appetite and restfulness, cluster and intertwine in its lambent flames and blue smoke-drift! Joy in its morning replenishment and cooking incense; while its resinous woods "grow precious in burning," giving out their sweets and filling all the air with an enchantment of odors that draw to your camp even the most practical and hard-headed natives. For its builders, who sit around in a circle and smoke the pipe or cigar of peace, feel drawn close together, their faces lighted up fitfully, showing them under a hypnotic spell—that touch of nature which makes the whole world kin. The camp-fire is the shrine of the hunter and fisher—sacred to sport, and whereon we make burnt offerings to nymph, satyr and dryad. It is the Arcadian holy of holies. Seated in that circle, we become children again, and people the fire's white-hot heart with armies, flaming villages of tiny houses, scarlet parades of little demons, ranks of flaming hills—all throbbing with heat and life. We weave air castles there in the *dolce far niente* of the angler's and camper's outing. We drive back the dark by piling high on the fire great heaps of cedar, pine, spruce or hemlock boughs that snap and crack in the heat like volleys of rifle shots, and send up through the chimney of the wide air, millions of flying sparks. We deepen beside it, a hunger that fairly tears at the throat; we grow ashamed—almost alarmed—as supper is eaten; and corn bread, baked potatoes, coffee, fried fish, cheese, bacon, and beans baked there in the ground, march in a motley procession into our mouths. Then the pipe or cigar, the heart's ease, the surcease of sorrow, as lustrous Hesperus sinks through the trees to the western horizon!

At the camp-fire we renew courage—faith to fight life's battles; and, blessed fact! sleep is given to us. There, we find and cherish perfect human companionships in some spot which we have longed to see for months "as the hart panteth for the water brooks"—memories of it shining clear and far when we may have been haunted and hounded by business cares and specters, and personal griefs. We joy in the fire's fierce life, love its embers as they burn low, and listen to their whispers even when we are rolled in our blankets inside the tent, whose canvas flaps are parted as we hear the falling of a burned stick, and we look out, noting the sudden, flickering burst of flame, and its tiny column of smoke that floats toward the river's ceaseless flow and murmur. Some last impressions of its intermittent crackling, with louder snaps from the smouldering back log, are borne to our subconsciousness across the borders of dreamland, and the roused midnight wind stirs the foliage and ruffles the river with its low cadences and crooning—the

"still sound
Of falling waters, lulling as the song
Of Indian bees at sunset, when they throng
Around the fragrant Nilica, and deep
In its blue blossoms, hum themselves to sleep."

It is humiliating to merely festoon this subject with rather tawdry garlands of words. Oh, for simple words to show all this in its simple verity, when we love it so! Oh, for power to shake off the blighting self-consciousness, the "playing on sweetly modulated pipes of diction," and to search out and use the plain language

POND EDDY—MORNING.

that would show, as in a sacred picture, the beneficence and life of the open-air fire before the camper's tent!

But one fact is certain. Such a spot is the home of Health. Let any man sleep for a month in a tent beside the upper Delaware River in July, noting the absence of mosquitoes, the restfulness, the appetite he has, and then let him try sleeping in his city room during August. He will often feel that he will suffocate. For the free, wide air, the tent life, the harmonies of the flowing water, the mystery of forest and mountain, there is where Health dwells with her hand-maid, Happiness!

Sam. Johnson wrote of the illusions of hope and the futility of believing that "the deficiency of the present day will be supplied by the morrow." Ruskin sadly "admitted" that men are so constituted as to be incapable of satisfaction with anything. Some bilious poet was guilty of a line, which has been quoted by half

POND EDDY—EVENING.

the misanthropes: "Man never is, but always to be, blest." Even Burns whined from his carousals: "Man was made to mourn."

Those fellows should have had a month of fishing with kindly, jolly comrades, every day full of correct life and hard work, change, study and sight; and every evening a hearty supper in the woods beside the stream and a camp-fire of their own building—a supper cooked by themselves, with dishes to wash and skillet and kettle to clean and hang up; and then a long draught of comradeship before sleeping in a tent, around and over which leaves whisper, and eerie night-voices come wandering to mingle with the liquid song of the water that we feel is alive, happy, tremulous and dimpling with joy as it circles, eddies and glides—talking in surging words that break and die upon its pebbled lips, and murmuring to itself a sinless secret hidden forever in its heart.

There, if anywhere, men will wrench themselves loose from the myth of the fallacy of hope—know that they are in a land of tenderest blessing, and will be glad they are alive; and they will realize how inconceivable it is that creative intelligence is not doing all things well. Away with the falsehood that black fate will at last extinguish the blessings and harvests of noble purpose and loving life! Go a-fishing, camp, build a fire by your tent, and learn that the "philosophy of despair" is but another name for a disordered liver. You will postpone for many years the date of your death. Meanwhile, you will learn to know the real preciousness of the philosophy embodied in Hindoo ethics:

"Blessed is he that, lying on his death-bed, finds the sum total of happiness he has brought to the world to be greater than the sum total of pain he has inflicted upon the world; for the balance shall be given back to him a thousand fold."

And now, as the light of the morning brings the joy like it, and we rise "kindled with the wine of sleep," our comrade hands me the two pictures of the river near our camp at Pond Eddy, one looking northeast over the river in early morning light, with shadows and comparative grayness of hue over all the landscape; and the other, a rosy view of sky and water just before sunset.

Much of the tenderness and delicacy of hue in the actual scenes are lost by the imperfect processes of photography and engraving; but the reader should feel the steel-gray, sharp tint and outline of the one, and the wild-rose glow, the radiant mist, the atmospheric transfiguration of the sunset scene, the water transparent in green and pure amethyst blue; while, owing to a sudden onrush of the current, a swell has been created, on whose near side is stamped the lengthened reflection of the pointed tops of the stone pier just above, which is itself invisible behind the cluster of foliage. He should feel the blended radiance and bright mystery, the distinct, sharp-edged, purple shadows in and around that tree, the preciousness of the vista of far hills along the opposite shores.

And he will understand how cheap and even nauseating it would be to describe the scene in the words of the man who glares, and calls it "perfectly bewtiful." For he will realize that if he had been privileged to witness that scene in its actuality—in all the loveliness of the special, rare moment when Dame Nature was trying on one of her most exquisite robes, he would have been silent, hypnotized, and all words would have been impotent to describe it. And in studying the picture he will remember what has already been stated in these articles, that the brightest color possible to photographer, printer or painter, is merely pure white, which is pitifully inadequate to show the throbbing blue of that sky, deep, quivering, transparent, no spot in its lighted, orange glory where the delicate color is not in a state of transition, "things which the angels work out for us daily, yet vary eternally, and never found but once," the whole "almost human in its passions, almost spiritual in its tenderness, almost divine in its infinity," and so "producing scene after scene, picture after picture, glory after glory, working still upon such exquisite and constant principles of the most perfect beauty that it is quite certain it is all done for us, and intended for our special pleasure." The real picture was a mile long; this picture is mere black ink on white paper, and less than three inches long.

Such earth-scrolls are unfolded to one who goes a-fishing on the Delaware, and we are grateful. Let the rod bend and sway, the reel scream, and the flies kiss the water of rapid and pool. Let the black bass leap, dart, shoot and fight in a glorious, thrilling struggle. But do not follow the example of that Norse salmon-fisher, and merely go a-fishing to fish.

L. F. BROWN.

Fish and Fishing.

Spring Fishing Prospects in Canada.

THE month of April brought me the usual spring crop of letters from the United States filled with inquiries concerning the prospects of the early fishing in Canada. If I have not been able to reply to all of them personally, it is by no means because of disinclination to oblige by giving the desired information, but because it was not mine to give. Our springs are just as uncertain things as they are anywhere else, only perhaps a little more so. An apparently very early break-up of the Canadian winter in the end of February or beginning of March is frequently but the prelude to a very late spring. This is our experience at the present time. A very fine month of March has been followed by an extremely disagreeable, backward and cold April, so far, at least, as the first three weeks of it are concerned. It is pretty safe to say that there will not be many fish caught in northern Quebec on the first of May, the opening day of the trout season, this year. All the lakes are still covered with ice, and will be for some days to come. The streams are for the most part clear of their winter covering, and there are spots where the next few days may yield a few trophies to the persistent angler, but artificial flies will not be killing for another ten days or a fortnight, except in very favored localities.

For all practical purposes—so far as the angler is concerned—the ouananiche season does not open before the 15th of May, and sometimes the date is even later. It all depends upon the breakup of the ice on Lake St. John. By the third week of May there is always good sport to be had around the shores of the lake and in the mouths of many of its tributaries, especially of the Ouiatchouan and Metabetchouan, for those who are not very particular about hotel accommodation. The Hotel Roberval only opens, as a rule, about the time when the fly-fishing in the Grand Discharge is commencing, and prior to that time the angler who visits Lake St. John must be content with country fare and accommodation, which can easily be obtained at Roberval. The conductors and other employes of the railway will readily direct passengers to lodgings, and it is quite easy to obtain boats or canoes and men to row or paddle them. This sport is always good between the 15th and 20th of May around the west and south shores of the lake, though it does not commence at the Grand Discharge to any extent before the second week of June. For this early fishing in the lake I have always found large and gaudy flies to be the best. Though the sport is good all round the shores above mentioned, the pool immediately above the railway bridge which crosses the mouth of the Ouiatchouan River some seven miles south of Roberval, yields the best return of genuine enjoyment to the angler, not only because of the greater number of fish to be found there, but also because of the beauty of the surroundings and the fact that the ouananiche of the pool immediately below the heavy

rapids of the river are certainly more gamy and sportive in their habits when hooked than those taken out of the quiet waters of the lake. The best of this fishing is usually done by sportsmen from Quebec, who know from past experience of the attractions of this pool, though it is rather surprising to me that it is not visited by larger numbers of American anglers. Its facility of access is very much in its favor.

There are no indications, so far, of the breaking up of the ice on Lake Edward, and I would not advise a visit there by anglers before the 15th of May. I hear that several parties are booked to arrive there for the trout fishing in the last week of May and the first of June. About the same time several parties of club men are to pass through Quebec on their way to their fishing preserves. Among them are several members of the Amabalish, the Triton and the Metabetchouan Fish and Game Clubs.

Anglers will be gratified to know that there has been much less illegal fishing through the ice this last winter than usual, thanks to the good work done and the watchfulness displayed by the guardians of the Sportsmen's Fish and Game Protective Association of the Province of Quebec. While they have served as excellent deterrents they have not succeeded in capturing any offenders against the fishery laws, though they undoubtedly would have done so had there been many violations of the law, for in running down offenders against the game laws they have been singularly fortunate of late, several of these having been fined from fifty to one hundred dollars each for killing moose and caribou out of season.

Nepigon Trout.

Anglers everywhere will rejoice to hear that there is no truth in the report recently set afloat by a Duluth, Minnesota, paper to the effect that trout fishing in the Nepigon River was likely to be impaired, owing to a mysterious disease which, it was alleged, had been prevalent among the fish; that the disease was gaining in virulence, and that hundreds of the fish were to be found dead on the shore daily. The Ontario fishery department directed the attention of their agent at Nepigon to the story, which he pronounced utterly false. No foundation can be imagined for the report, which must have been manufactured out of whole cloth, and it is a well-known fact that the fishing in the Nepigon had not been so good for many years past as it was last year. The Ontario authorities are evidently determined that it shall not be allowed to deteriorate, and will therefore again pursue the policy introduced last year of exterminating, as far as possible, "all such things as be devourers" of the game, to quote the words of good old Dame Juliana Barnes or Berners. Last year the work of destruction of the coarse fish in the river was carried on with such success that no less than 1,800 pike, 389 pickerel and 803 suckers were taken and destroyed.

New Brunswick Salmon Waters Sold.

Last week there was a sale of salmon fishing waters by the New Brunswick Government at Fredericton. Out of ten fishing leases advertised, only four were sold—two four-year leases and two nine-year leases. The four-year leases were the rafting ground reserve on the Restigouche and Metapedia River on the western bank from the mouth to the Quebec line. The former was bid in by J. W. Ayer, of Bangor, at the upset price of $50 per annum, and the latter by Frank Whitehead for the Restigouche Salmon Club at the upset price of $100 per annum. The nine-year leases sold were the Upsalquitch River and branches and the Northwest Miramichi from the mouth of Big Sevagle to and including Little Falls.

Thomas Malcolm got the Upsalquitch for the Restigouche and Western Railway at $1,600 per annum, $600 in excess of the upset price. The Northwest Miramichi was knocked down to R. W. Armstrong, of Newcastle, at $70 per annum, $20 more than the upset price. The six other advertised leases were all offered, but there were no bids for any of them.

Those not sold were:

Four-year leases, to expire March 1, 1907, Restigouche River: From head of tide up to I. C. R. bridge, upset price $100; from Quatawamkebgwick River to Victoria county line, upset price $50; Quatawamkebgwick River from mouth to 15 mile tree, upset price $250; Quatawamkebgwick River from 15 mile tree up to head (in New Brunswick), upset price $250.

Nine-year leases, to expire March 1, 1912: Pockmouche River and branches, upset price $25; Green River and branches, upset price $50. E. T. D. CHAMBERS.

Massachusetts Notes.

BOSTON, May 2.—*Editor Forest and Stream:* A meeting of the board of management of the State Association was held on Thursday, April 29. The board voted that a meeting of the association be held in May, and arrangements have been made to hold it at the Nottingham, Huntington Avenue, on Thursday evening, May 21.

It was also voted that the laws relating to the killing of birds be printed on cloth in Italian for posting in all sections of the State where Italians are employed.

Mr. Kinney came from Worcester to be present at this meeting. Ex-President B. C. Clark was on hand as usual, and Dr. B. V. Howe, who seldom misses a meeting.

A recent acquisition to the board, Mr. J. C. Phillips, of New Beverly and Boston, was present. Mr. C. W. Dimick was missed, as he has been away for some days on a business trip to Washington, D. C., and Columbus, Ohio.

The bill to prohibit pickerel fishing through the ice has been defeated, and those who have expressed an opinion of the bill in the hearing of the writer say they are satisfied and some go so far as to say they are glad it failed of passing. Lovers of trout fishing in general have little regard for pickerel.

President Reed, on Marston's Mills stream, Barnstable, one day last week took 19 red perch, averaging 10 to 12 inches in length, 1 trout weighing a pound, another a pound and a half, and a dozen pickerel, the largest about 2 feet long.

Several severe forest fires have been reported in various parts of the State, which will cause some destruction of what cover for birds the portable sawmills have permitted to remain.

From the Rangelcys and Moosehead the ice has gone out. Some of the Rangeley group were nearly clear on the 27th, but the correct date of the departing of the last ice floes, according to reports, must be set as the 28th.

Already several anglers are trying the fish, but we shall not know with what success for some days.

Some Massachusetts sportsmen not previously mentioned by your correspondent, who returned from the Cape with trout, are Congressman McNary, Fred Gilpatric and Arthur Russell, of Boston, who fished Senator Nye's stream at Bournedale. Mr. Fred Hascall with Mr. and Mrs. Balch, of Boston, had good sport on Mashpee River. On account of the death of the former proprietor, Mr. O. M. Holmes, the Hotel Attaquin has been closed to visiting fishermen this spring.

Ex-President Cleveland and Joe Jefferson were frequently entertained by Mr. Holmes. Prof. Myron Whitney, of Watertown; Fred Hubbard, Bert Hubbard and Frank Farquhar, of Newton, and Dr. T. W. Proctor, of Boston, have met with fair luck in Cape waters.

Fine catches are reported from eastern Maine and from New Hampshire. W. L. Goodwin, of Boston, took one salmon 10½ pounds, another 8½ from Greene Lake, while J. T. Gardner, of Boston, in one day took four salmon with a total weight of 30 pounds. The same day his companion, Wm. T. Jenkins, of Boston, caught three, weighing in the aggregate 17 pounds. At Lake Hebron, Mr. H. O. Stevens, of Boston, took a lake trout that weighed 9 pounds. Reports from Grand Lake came in so rosy that the Clearwater Club decided to go there. Will have more about their trip and some other things next time.

CENTRAL.

In Maine Waters.

BANGOR, Me., May 2.—*Editor Forest and Stream:* This has been a great week in the history of the inland lakes of Maine, since they have opened unusually early, following in the lead of the lakes nearer the seashore, several of which were before reported open, having been clearing from ice at various dates between April 1 and the present writing, according to location and conditions.

Moosehead and the Rangeleys, about the last to clear from ice except those in the very highest altitudes, opened during the week, the former breaking up completely by Tuesday, the 29th, and the steamers arriving at Greenville Junction from Kineo on that day were only about six hours from the time when, in 1902, the boats steamed down to the wharf. The following morning the first party, the well-known Greely party from Bangor and Massachusetts points, arrived and went to the head of the lake in their chartered steamer, where they will put in a fortnight or ten days with the fish. The Rangeleys cleared the 28th, which beats the record for those lakes, as in 1902 the fishing could, so far as the ice was concerned, begin the 29th. Thus the more famous lakes of Maine are at last all open, even if not in the best of condition to be fished.

Here at Bangor, the devotees of the salmon pool have worked steadily all the week, as for the previous fortnight, and with slightly better results. Two fish have been taken, one by Charles Hodgkins, who holds the record for the first and largest fish thus far this season, and who captured on Thursday of this week a salmon weighing 22½ pounds. The other fish was taken earlier in the week by Arthur E. Weeks, of New York City, and weighed 15 pounds.

But while these are all the fish that have been taken at the pool, and the weirs down river have been equally barren of results, there have been salmon caught in the Penobscot, and big ones, too. It was but a few days ago that a young fellow, a law student from another city, went down to High Head, opposite South Brewer's principal stream, the Segeunkedunk, and with a cockroach for bait, on a line carrying a sinker, caught and landed a salmon of good size. His success was infectious, and the next day or so, another law student who wanted to unite the shades of Walton and Eros in a grand effort, cut him a "pole," attached to the end of the pole a piece of fishing line with a hook tied to it, baited his hook with a piece of fresh pork and invited his young lady to go fishing with him at the big High Head wharf, which is really a good place to go for results, since many landlocked salmon are liberated during the passage of the logs through the dam at Hines' Pond and thence, via the Segeunkedunk, find their way into the Penobscot and are frequently caught there during the running of the drive. As they sat and watched the water, which was very high, it being flood tide, a salmon broke not far away, and the young fellow cast his bait, which gleamed red and white, out upon the water toward the break. Almost immediately it was seized, and then began a tussle between the fish and the fishing couple, the latter winning after a desperate fight, which he innocently told the writer, lasted all of fifteen minutes. It took both of them to drag the fish over the edge of the wharf to safety, and it was so heavy that it snapped the eight-pound scales on which the man tried to weigh it, so suddenly that fish and scales dropped out of his hands. Owing to his innate chivalry, the fish was not weighed, but was presented to the delighted young woman, and for several days the young man, whose bashfulness is only exceeded by his truthfulness, wouldn't tell anyone of his catch because he thought he would not be believed, as he had always thought that it was understood among fishermen that salmon could only be caught at the pool with an expensive rod and flies. The next day he fished at the same place and caught a small salmon, probably a grilse, or perhaps a landlocked salmon from Hines' Pond, but a week of further effort failed to bring another sea salmon to his hook.

The exceedingly cold, raw weather of the past week has prevented any remarkable results from most of the Maine lakes, the water being so cold that the fish do not rise readily. Still, excellent catches are reported from some places, notably Sebec Lake, the St. Croix lakes and Tunk Pond, the latter of which are nearer the sea and have been open for some time, long enough in fact, for the first chill of the water to be slightly moderated.

At Sebec the fishing has been better than it has been for many years at such an early date, although in general the fish have run somewhat smaller than last year. The Prince party, from Waterville, caught all the law allows, and it is reported that one man had taken 30 during his stay. When they came to pack up and start for home, after having cooked their salmon in every way they could conceive to make them slide down more easily each day, they found there were still several fish over the weight of 25 pounds, which the law allows one to transport, and their less fortunate neighbors were provided with fish. Some of their fish, it was reported, weighed as heavy as 4 pounds apiece, and there were none less than a pound. The Files-Trafton party, from Gardiner, had the trip of their lives, and landed a splendid string of beautiful fish, the heaviest going plump 7 pounds.

At Tunk Pond, among other fishermen were W. W. Doane and Miss Doane, of Brewer, who are two as enthusiastic anglers as one is likely to meet in father and daughter, and both of whom look eagerly for the first opportunity of wetting a line in Tunk. They were gone two or three days, and caught nine salmon, a 4-pound togue and a large trout.

The handsome string of the season, however, and one which few men will duplicate, and none surpass, was brought into Bangor on the midnight train from Vanceboro, Friday. Robert B. Blair, of this city, and Dr. Pitt H. Jones, of Springfield, were at Duck Lake for a day or two, and fished in that lake and Junior, two of the best of the famous St. Croix system of salmon lakes, and parts of the original salmon basin commonly known among anglers as the Grand Lake waters, whence have come the majority of the salmon eggs distributed over this country by the United States Fish Commission. During their stay at the lakes they fished perhaps six hours in all, not over that, and caught 18 salmon, 4 togue and a pickerel. The salmon averaged about 2½ pounds each when caught, and were most regular in size and very handsome fish, while the togue were all of good size. Mr. Blair brought his share to Bangor and placed them on exhibition during the day, with a surrounding of the Archer spinners and flies which were used in taking them. At one time, so he told the writer, he had a salmon on the spinner and another on the fly at the same time. No better fishing can be found in any lakes in Maine than can be secured in those of the St. Croix system from now until the 15th of July, but there will be little sport with the fly there until after June 1. A letter from Grand Lake stream (in this same system), received by your correspondent this week, says that the salmon there are running about a half pound heavier this season than last, and that among some thirty sportsmen there at that writing, about thirty salmon a day were being caught. This proportion will increase materially as the water warms, and soon the sport among the salmon will be fast and furious, throughout the entire system. It is noticeable that the salmon taken in the lower lakes of the system are not as large as some taken in the upper waters, and in Dobsis and Upper Dobsis, reached most conveniently by way of Lincoln or Winn, on the Maine Central R.R., there are large fish taken in fairly good numbers up to the middle of August, and even to the close of the season in those waters, Sept. 15.

Among the passengers to Moosehead of the past week were President Frank W. Kinsman, Jr., of the Hamilton Bank, New York city, who, with his wife, his brother, Dr. F. G. Kinsman, and the latter's wife, of Augusta, went through to Roach Pond. Mr. Frank Kinsman has leased for twenty years a tract of land on the shore of the first Roach Pond, and there he will have built at once a handsome cottage, not of the log cabin style, and a second house for the help. There will be commodious sitting and dining rooms, an immense stone fire-place, chambers affording sightly views of the pond, and all the other features which make a cottage in the Maine woods charming beyond description.

Other arrivals at Moosehead included Dr. C. S. Dunn, of Haverhill, Mass., and a friend, who have gone up to open the former's cottage, "Dunncliff," just above Harford Point, and at the entrance to the thoroughfare between the mainland and Moose Island; Dr. L. F. Hatch and family, who will spend the summer at the Moose-

head Lake Sanatorium, a mile or two from Greenville Junction on the westerly shore; Mr. and Mrs. H. L. Hoyt, of New York, who have gone to Indian Pond for several weeks, where the trout have been rising for several days. Mr. F. D. Parsons, of Springfield, Mass., made the lake a flying visit and would have stayed three days, but the wind blew almost a gale, fishing was impossible, and although he braved the elements long enough to get a heavy strike, the conditions were too bad, and after losing his fish he returned to his hotel, packed his trunk and started for home.

The finest, and, in fact, the only good fish so far reported, has been at Indian Pond, where Mr. F. W. Durgin, of Bangor, has been for the past week. Every day he has had splendid sport, the fish rising to the fly as well as they do even later, and he caught a string that would have turned many an angler green with envy. One weighed 3, another 2½, a third 2 and there were a great many only a half pound lighter. On the morning of his departure for Bangor he went out and caught an even dozen. Mr. Durgin is almost invariably successful at these camps, and spends probably more time there than any other guest, his health compelling him to spend all the time he can spare from his business in the woods. And the only flies he asks for, at any time of the season, are the silver-doctor and the Parmachenee-belle.

The fishing has begun well at Jackman, where they get good fishing as soon as the logs begin to run in the river. Off the bridge on one day a Bangor man who is just home from there caught a nice string, some as heavy as four pounds, others two and three in weight.

At Lake Hebron in Monson, where they catch nothing but togue, the fish are getting ready to warm up, and some have been caught. W. C. Pickard fished there a day or two since and took four that weighed eighteen pounds.

Probably, so soon as the great advantages of the waters along the new Fish River division of the Bangor & Aroostook Railroad are known, these will furnish some of the finest sport obtainable in the State. Already they are deservedly popular with those who are pioneers, and who always seek for wild spots unsullied by the snort of the locomotive or the hotel of the tourist sportsman. Portage Lake is a finely stocked lake; Eagle, Square and others of the Fish River chain are even better it is said, and one is sure of great sport. Portage opened last week, as did also Eagle, and St. Froid was reported to be breaking up on Friday. Mrs. Hallet, wife of the superintendent of that division, no doubt caught the first trout of the season in that region, at least among anglers from below the Aroostook line. While on a visit to her husband last week she caught in the Fish River a 2¼ pound square-tail trout.

HERBERT W. ROWE.

CHICAGO AND THE WEST.

The Trout Season.

WAUTOMA, Wis., April 20.—The trout season of Michigan will open to-morrow, perhaps under circumstances now wholly auspicious, if the weather man is to be believed. A severe storm is now raging over the Northwest, and at Ashland, Wis., and at points in the north peninsula of Michigan, snow has blocked all railway traffic. This is something of a change, for the last outlook was good, with warm weather and soft winds. The present storm is over Wisconsin to-day, and should be due in Michigan south peninsula to-morrow.

Let us hope that the blizzard may be dissipated before it reaches the fishing country of Michigan, so that the first trips of the Saginaw and Grand Rapids boys may not be unhappy adventures. As for the Saginaw Crowd, the car will leave Saginaw at midnight to-night. By wire to Chicago I had invitation to join this expedition, which is one of the most important angling functions of the year, but, unhappily, I was away, so cannot join these stalwarts, much to my keen regret, for they always go where there are trout, and go well equipped. The telegram forwarded, comes from Mr. W. B. Mershon, and ends: "A prompt answer turneth away wrath." I hope my office sent the prompt answer. As to the wrath, it is at this end of the line, for I do not willingly forego any journey with the Saginaw Crowd. They are old experts, not a tenderfoot among them, and they savvy trout plenty.

Game Law Tragedy.

A saddish sort of tragedy took place near Frankfort, Mich., day before yesterday, in which B. B. Spafford, a deputy warden, shot and killed Chris McLain, a farmer, after a desperate encounter. McLain was of the opinion that this is a free country, and that the game laws were not made to be enforced. It is pitiable that his ignorant stubbornness brought him so bad an ending. MeLain, his son, and three other men were spearing fish out of season and Spafford and another deputy attempted to arrest the party. In the fight Spafford was pinned to the earth by a spear in McLain's hands, the weapon tearing the flesh near the heart. While upon the ground Spafford fired a bullet into the base of the spine, of his retreating assailant, death being instantaneous. Spafford gave himself up. He lives at Cadillac.

Wisconsin Hatchery Needs Water.

It is something of a self-evident fact that a fish hatchery ought to have water in order to be successful. Heretofore, the Wisconsin State Hatchery at Madison, has always had what seemed an abundant and exhaustless supply of good water from a series of springs and artesian wells, but of late this supply seems to be diminishing, so that the State Fish Commissioner is thinking of reducing the size of the propagating ponds. The board held a meeting this week to discuss this and other matters, and to canvass certain measures now before the Legislature.

Golf and Bass.

Mr. P. S. Elting, of Hannibal, Mo., asks the somewhat perplexing question, "Where can two young railroad men get some good bass fishing and good golf grounds for a couple of weeks in June or July?" I don't know that one serves the ancient sports of the angler a good turn by encouraging golf, tiddledewinks, ping-pong or other allied games, but we have to take care of our friends, and maybe Mr. Elting will give up golf for bass fishing after a while; so I would advise him to go to Moeatwa Park, Mich., where the golf links are regularly maintained, and where a good bait-caster can usually get a dozen or twenty black bass in a day in Black Lake. There may be other points on the lake coast where the summer hotels have golf links. Some of these hotels are situated at the mouths of short arms connecting Lake Michigan with deep inland lakes, such as Spring Lake, Black Lake, etc., in which latter there is at times excellent fishing. It is easy to furnish good bass localities or good golf localities, but to get both in one is not so easy.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Santa Catalina.

AVALON, Santa Catalina, Cal., April 20.—*Editor Forest and Stream:* The close of one of the most remarkable winters in many years has been celebrated. Southern California has had about twenty-eight inches of rain, or a little over half the average of New York, and as a result the land is blossoming as a rose, verdure running riot in hill and dale and mountain, and nowhere is it more pronounced than at Catalina, the sea angling headquarters of Southern California. The island is from a distance an emerald in a setting of azure, literally, as the blue water approaches the very rocks, Catalina being a mountain range rising suddenly out of the deep sea. In the interior the mountains and hills are covered with verdure, the Mariposa lily in places gives it a lavender hue, while here and there a golden sheen strikes the eye telling of the yellow daisy, the copa del oro, the poppy and a host of others, while the golf fiends fight the yellow violet which would cover the greens were it not for the care of the keepers.

Santa Catalina is perhaps the only place in America where the angler is king, where almost everything is subservient to him, and when it is known that nearly 100,000 people visited the fishing grounds last year, some idea of the sport may be had. The town is in the Bay of Avalon, about half a mile around, and is a perfect crescent guarded by two lofty rocks, one on either side. The north portion of the beach is laid out as an esplanade, has a sea wall on which a line of seats afford lounging places for the people from the many hotels and cottages. The south beach is devoted entirely to the angler, and is filled with a collection of stands whose prototype is found nowhere else. Each boatman has about twenty feet fronting the bay in which is his stand with a well cushioned seat for his patrons and above his name and flag. Each stand is gaily painted, and leading out from them is the boatman's string of boats—row boats, tuna boats, sail boats and launches. There is about $150,000 invested in fishing boats here, and over 250 boats of all kinds can be counted. None of these belong to professional fishermen, all being part of a singular "angling livery," each boat being built for the angler's comfort, about 18 feet in length with a four horse-power engine and two comfortable chair seats facing the stern for the anglers. One can hardly imagine anything better arranged for comfort. The gaffer and boatman is engineer as well, and at the strike stops the boat and manipulates it.

The season of 1903 in on. Flying fish have arrived in the bay, and the anglers are gathering for the white sea bass season, which is supposed to begin with the arrival of the flying fish. The sea bass is the Pacific representative of the weakfish, but have been rarely caught ranging less than fifty pounds, a splendid creature which comes in schools—literally comes and goes—and specimens weighing 80 pounds have been taken in Avalon Bay, which has been the scene of many exciting experiences with these fishes.

The yellowtail, a game fish running up to fifty pounds, is biting and will soon come with a rush and turn the Catalina sea into gold. This fish is doubtless the hardest fighter of all fishes, pound for pound. Strong men have been demoralized by their first fish, and the writer saw a 150-pound man jerked from the Avalon dock by a big yellowtail. Did he drop the rod? No, indeed! He happened to be a good swimmer, and swimming with his legs he clung to the rod with his hands and fought the fish until he was picked up; and he saved the game. The yellowtail is far ahead of the salmon as a fighter, and if it was as rare as the salmon would make a sensation. But easily hooked, it is caught by everyone.

One of the remarkable sights to be seen here is what is known as the yellowtail fleet in Avalon Bay in July. Sometimes 200 boats are anchored together and 400 anglers are fishing with the rod for yellowtails. When someone hooks a fish the entire floating city utters a shout, which is a roar that can be heard half a mile away down the wind, and as someone always has a fish on, the sound is almost constant.

The yellowtail has no large representative in the North Atlantic. The amber jack of the Florida Coast is a cousin..

There is a procession of fishes from now on in these waters; the yellowtail and rock bass are now biting; the sea bass is due; the albicore is biting off Avalon Bay, a splendid fighter at seventeen pounds, and one at sixty-five pounds fought one of the most skillful anglers in the United States for four hours and was supposed to be a tuna until its long fins came into sight. Nowhere in the country does the albicore come so near a still water fishing resort as at Avalon, hence all the fishing is done with rods. The play of this fish is a series of savage rushes from start to finish, and a lusty fish has been known to wear out a strong man and carry off the line. The fish is, when feeding, dashing about at full speed, and takes the bait with a rush, hence the sport is strenuous and continuous, the fish fighting until it is in the boat. During the past year this fish has been caught almost every week without a break, it, with the rock bass, sheepshead and whitefish belonging to the class which do not emigrate, hence are always to be found, and afford excellent sport with a 16-ounce rod. The sheepshead is not its namesake of the East, but a singular red and black striped fish, the males having a white under lip and an enormously high "forehead." This fish is taken in the kelp beds which surround these islands, and large catches are being taken at the present time.

While this fishing place has become famous on account of the size of its fish, there are many fishes that afford excellent sport with light rods. The rock bass are particularly game; there are several different kinds and they all resemble the black bass to a remarkable degree, and on light split bamboo rods afford excellent sport—often leaping at the strike, but not having the staying qualities of this king of fighters. This is one of the all-the-year-around fishes to be taken at any and all times. The remarkable fishing of the past winter has attracted many eastern anglers who are on the island waiting for the tuna and sea bass season. The former, though not due until May 15, is liable to appear at any time, and even a month ago large schools were off the bay, but would not bite. Every season remarkable experiences with the tuna are chronicled, and men play this remarkable fish from one to fifteen hours. Colonel C. P. Morehouse, of Pasadena, still holds the record of 251 pounds—which scores of anglers cross the continent to beat every spring, and return filled with experience and wisdom, not to say bruises, to come again to cast the line in these stormless seas of eternal summer.

SENOR X.

Salmon Culture in America.

SEATTLE, Wash., April 19.—*Editor Forest and Stream:* Your publications concerning the hatching and propagating of salmon are of much interest to me. It is just such a discussion carried on through the valuable pages of your journal that brings out points of interest and conveys knowledge and information from different sources of this interesting and important science, and plants it where it belongs, in the minds of those that are unprejudiced and desirous of knowledge.

The hatching and propagation of salmon is just like everything else. If the unfortunate Englishman is so unsuccessful that he cannot accomplish good results along these lines, he should not, never for once, think that others cannot do that which he has failed to do, and do it successfully, "Old Angler" included.

Any man that has the courage or audacity to sign as "Old Angler" should know something about what he has been angling for. That term old should signify that he is able to discuss at length, from experience and observation, and from enlightenment and knowledge gained from standard works and statistics along this line, that the hatching and propagation of salmon is a success, and a great success, too. But we have yet much to learn.

As to myself, I do not claim to be a know-all about salmon. But I have made the hatching and propagation of this fish a study from my earliest boyhood days. I have closely followed and studied the progress made by the United States Fish Commission, have visited almost every salmon stream of any importance on the Pacific Coast, from the Yukon River in northwestern Alaska to the Salinas River in California, and after working among these fish for over twenty years (ten of which has been spent among them in Alaska), I feel that in defense of the great science of artificially hatching this valuable food fish I should assert myself.

I admire the stand that Old Angler has taken in regard to this matter, as it takes the affirmative and negative for a good debate; but he has convinced all of us on this coast that he is quite ignorant of the subject under discussion. His policy has been shortsighted all the way along. Thank God that the United States Fish Commission is not governed by men so weak in their untiring efforts as he and our English cousins have been.

He speaks of taxation for the direct benefit of a few cannery men. Does he know how much capital is invested in the cannery, cold storage and salmon business in general on this coast? At a rough estimate I would place the figures at from $75,000,000 to $100,000,000, one-half in the Coast States and the other half in Alaska. Does he know what the rate of taxation is on say $40,000,000?

We do not pay taxes in Alaska, neither do we receive any financial assistance from the United States Fish Commission. But we do pay the United States Government four cents per case and ten cents per barrel on all salmon from that section.

I acknowledge the fact that the canneries are good paying propositions, but are people not contented to eat canned salmon several thousand miles from where it is canned at from five to ten cents per pound? In the Coast States these fish, or a large percentage, are secured by individual fishermen who sell to the canneries at so much per fish, and where there is competition they get as much for their fish as they are worth. These fishermen all pay a license for the privilege of fishing

Does Old Angler know that the hatcheries on the Columbia and Sacramento rivers are increasing the numbers of salmon now every year so that canneries that were closed down several years ago because of the reduced numbers of fish, have been remodeled, improved and put into operation to receive the increasing numbers of fish that have been hatched and propagated by the means that he condemns? Does he know that large sums of money have been spent in private hatcheries in Alaska and that they are a decided success?

I am interested in a number of fisheries in Alaska myself, and will have in operation two hatcheries there this season. A cordial invitation is extended to Old Angler, Mr. Stone and other unfortunate fishculturists and skeptics to join us and let us teach them how to increase the numbers of the *Oncorhynchus tschawytscha, O. nerka,* and *O. kisutch,* and at the same time decrease the numbers of the already too plentiful and inferior species, *O. gorbuscha, O. keta,* and the destructive species *Fontinalis.*

Out West we have the prettiest girls, the richest gold mines, the best battleships, the biggest trees, and the most salmon of any country in the world, and with the assistance of Uncle Sam we intend to show England and the world that we can keep up the supply of our increasing products, if we have to do it artificially.

Come, gentlemen, become converted and join our ranks. I do not believe that the last appropriation of the United States Senate to the United States Fish Commission of $650,000 is a bit too big. We need more steamers like the Albatross and the Fishhawk, and more

men like Bowers, Moser, Wilcox, their valuable associates and assistants, to perfect this great science, and thereby lay the foundation of a work that will supply the coming generations with unlimited quantities of the choicest food fishes that would otherwise become extinct.

C. H. BARKDULL.

Further Notes Concerning Tarpon Tackle.

VICTORIA, British Columbia, March 1.—*Editor Forest and Stream:* In order to bring up to date some of my papers on tarpon fishing that you have published during the last two or three years, I send you the following notes, embodying the results of my latest experience.

Lines.

Hitherto I have recommended two or three tarpon lines, but now prefer a newer one, viz., Vom Hofe's No. 36, a bottle-green line of great strength and durability. It is coarser than most tarpon lines, but still by no means too coarse for the sport, although the standard reels used in tarpon fishing will barely carry four hundred and fifty feet thereof.

Tarpon fishermen are getting down to sensible ideas about the best size of lines, using much coarser and stronger ones than they did a few years ago. Even if it be true that a No. 24 line is the best for tuna fishing (which I most decidedly doubt), it has been proven too light for handling the silver king.

One should not adopt such a light line for big fish as to keep him constantly in dread of its snapping every time he holds the brake. On the other hand, the finer the line that is employed the more of it one can get on the reel, so there is a happy medium, and this, I think, is reached by Vom Hofe's new No. 36.

There are three of these lines on my reels to-day, two of them having been used at least five days per week for six weeks; and there is some life in them yet, although they have both been changed from end to end. These lines were not only used constantly by myself and friends, but were worked hard on tarpon, sharks, jackfish, jewfish and stingrays, many of these fish being of great weight.

Concerning the minimum length of line to use on a tarpon reel, I would state that I have never yet seen more than about 350 feet taken off; consequently I consider from 400 to 450 feet to be a sufficiency. In fact, it is very seldom, indeed, that one needs over 250 feet, except when he is fishing at anchor in a rapid current. Under such conditions a large tarpon will generally take out about 300 feet of line before the anchor is raised and before the oarsman has the boat under control.

Even if one is confident that he will never have to use more than 300 feet of line, he should not start out with less than 400 feet of new line on his reel, because, before it is worn out, it will be reduced considerably either by breakage or by cutting off of injured or overstrained ends. On this account I prefer 450 feet as an original length; and, as my reels will barely hold properly that much of the Vom Hofe No. 36 line, I have concluded that the size of the latter is my best limit for coarseness.

It is to be regretted that the numbers given to their lines by the various manufacturers are no indication of the diameters. For instance, the No. 36 Empire City line is much smaller than the No. 27 Hall, and, I think, smaller than even the standard No. 24 tuna line.

It seems that the number given to the line indicates only the number of strands of which it is composed.

Some sportsmen at Aransas Pass use a very coarse, inexpensive cotton line that is quite short-lived. Its only advantage is its cheapness, which, after all, is more apparent than real, owing to the greater loss of snells that its employment involves. It is furnished on the cheap outfits that are to rent at Tarpon, which outfits I would recommend no one ever to try.

It is now my invariable practice to tie a twenty foot loop on my tarpon line, fastening the end with a bowline knot. The end of this loop I run through the swivel of the snell and tie back about a foot with another bowline, thus making a short, four-ply length of line for the boatman to grasp when hauling a fish on to the beach.

Reels.

While there are in use no new reels that are superior to the old standbys, nevertheless there have lately been effected in the latter some decided improvements. The first of these is the "Rabbeth" handle drag, patented on January 14, 1902, and sold by Messrs. Wm. Mills & Son, of New York city, who, I believe, control the patent. The apparatus consists of a rather clumsy-looking double-handled attachment, suited to any large reel, and having a friction plate lying between two other plates. The inner plate is fitted tightly to the squared axle of the reel; the lower or main plate is attached to the two handles, and the third or upper plate is fastened by screws to the lower plate; and by the tightening or loosening of the said screws the maximum tension on the lines is increased or diminished. The accompanying cut will illustrate the working of the apparatus.

I purchased one of the first that were sold and used it at Tampico in March, 1902, and last fall at Aransas Pass, and found it is all that the makers claim. It prevents absolutely the breaking of one's line, provided that the latter be not rotten, saves both reel and rod from injury by overstrain, and avoids almost all danger to one's hands. The tension can be set for any amount up to ten or twelve pounds by simply tightening the screws. By the way, the first drags manufactured had two of the screws made as thumbscrews; so that, when a great deal of line is taken out, the grip on the friction plate can be reduced instantly; but I see by the diagram that these are no longer employed. Before trying my handle I had these thumbscrews removed and replaced by ordinary screws like the others which form the attachment, recognizing that the said thumbscrews would certainly take the skin off one's knuckles, in case the handle should slip out of one's fingers. A late modification of the Rabbeth handle-drag is the insertion between the plates of one or more paper washers so as to increase the friction, especially after the plates become worn.

Soon after the appearance of the Rabbeth drag, Vom Hofe, recognizing its effectiveness, brought out a modification of his tarpon reels involving the same results by an adjustment inserted under the handle.

I had this modification put on two of my reels last summer, and tried it last fall at Aransas Pass. It was quite satisfactory. There is but little to choose between the Vom Hofe and the Rabbeth drags, but the very clumsiness of the latter is a feature in its favor, as the handle is less likely to slip from one's fingers.

Vom Hofe has still later added another improvement to his reels, by means of which the handle is prevented from turning in the reverse direction; which improvement will, I think, make his reels the best that can be had. In fact, it looks to me as if the final perfect tarpon reel has at last been evolved. This latest improvement is a very simple one, consisting of a small beveled cylindrical stopper backed by a spring, so that when reeling in the handle strikes the beveled face and pushes the stopper back, thus letting the handle pass by, and when the handle is turned backward by the pull on the line it strikes against the cylindrical face of the stopper and is arrested instantly. A convenient little lever on the periphery of the reel throws the stopper into and out of action.

With this latest reel, when one is sitting waiting for a strike, he does not have to paralyze his thumbs by holding on to the brakes, but can simply grasp the rod itself in both hands and strike as hard as he likes the instant he feels a touch on his bait. If he so desire, he can reduce the preliminary intensity of his surge by fixing the handle so that it can make a single turn before it is stopped. Again, if one wants to make a cast, he can do so by throwing out of action both the stopper and the little drag, which is still a feature of the Vom Hofe reels.

Although I have had two of my reels fitted with this new stopper, I have not yet had an opportunity to test it; but I feel just about as sure of its effectiveness as if I had already given it a trial.

The proper tension for the line when it is all on the reel is from six to ten pounds. Any more would be liable to wedge the line on the spool and thus stop the reel's action, while any less would not be sufficiently effective. Of course, as the line is taken out, the action of the drag becomes more powerful because of the decreased leverage of the pull, so the adjustment of the tension should be made with due consideration for this condition.

These modern reels obviate the necessity for using any more the finger-guards that I recommended a couple of years ago; but I still expect to use a guard on my left thumb, because I intend to adhere to the forward brake, which consists of a small strip of thick rubber hose attached to the rod some twelve inches above the reel. Again, I think it advisable to adhere also to the use of the old leather brake on the reel, because, at the end of one's struggle with a big fish, when the doubled line has reached the reel, it is desirable to be able to put more tension on the line than the new handle drags will afford.

Notwithstanding all improvements in the reels, I still favor the wearing of gloves for tarpon fishing; because it is often the unexpected that happens, and one can still get a severe rap on the knuckles from the patent handle if the stopper happens to be thrown out of action.

Vom Hofe manufactured last summer, according to my specifications, five large tuna reels, one of which I own, capable of carrying some 900 feet of his No. 36 line. None of these reels have yet been used on tuna, but it was on one of them last November, at Aransas Pass, that I landed my record jewfish of 450 pounds, and my record leaping shark of seven feet seven inches length, concerning both of which fish I have already written you. I would state, though, that this was merely a happening, as either of my two smaller tarpon reels would have done the work as well—in fact, I landed a still larger fish on one of them.

With this large reel, a stout line and a good rod, I feel confident that a strong man would bring to gaff in two or three hours any tuna up to 500 pounds in weight, and this without wearing himself out. If luck befriend me, I may some day be able to prove the correctness of my surmise.

'Tying on Reels.'

Quite lately I have found a much easier way to tie on a reel than the one described in a previous paper. It consists simply in winding tightly with old tarpon line the short space between the upper end of the sliding cylinder and the rib at the top of the reel seat, thus preventing the reel from slipping, even should the ring work loose. The old method of attachment was both tedious and cumbersome.

Mills & Son have a patent method of fastening on the reel without tying; but I have not yet had occasion to try it, so cannot speak concerning its merits.

Rod Socket.

There has been in use for a year or two a strong leather socket that is screwed on to the front edge of the tarpon fisherman's chair, costing $2.50. No tarpon fisherman should be without one, for it both reduces the danger of injury from the butt of the rod and lessens the labor in handling a fish.

Hooks.

Some improvements have of late been made in tarpon hooks, mainly in the manner that I have been advocating, viz., the use of more metal. The large Van Vleck hook manufactured by Mills & Son appears to be the favorite, but Vom Hofe's latest is about as good.

Mills manufactures a small tarpon hook that is liked by some fishermen, but I do not find it to be sufficiently durable, as it both bends and breaks. It is useful as the lower hook of a pair, if one desires to try a double hook.

Concerning the advisability of employing double hooks, I am at a loss what to say. When the fish are biting fiercely, the two hooks are not needed, and are, in fact, a disadvantage, because they often injure the fish so that it is likely to die after it is released. When the fish are merely nibbling, the small lower hook will sometimes take them as they bite at the tail of the bait; but, on the other hand, it is possible that the second hook tends to frighten the fish and thus reduce the number of one's strikes. Double hooks should be attached by chain about five inches apart. In putting on the bait the lower hook should be passed into the mouth and out of one gill, then transversely through the body, just above the tail, and the upper hook should be driven through the lips from beneath in the usual manner. It would be interesting to hear from some of your readers on this question of double hooks.

There is a hook on the market having a flattened head and comparatively small eye, against which I wish to caution tarpon fishermen, for the flat eye causes the wire to break at the bearing. A sportsman at Aransas Pass presented me with three of these hooks, and by reason of them I lost a fine tarpon and a big leaping shark. However, it was on one of them that I landed my record-breaking jewfish; so, after all, my friend did me a good turn in presenting me with the hooks.

Chains.

Chains inserted between the hooks and the wire are an improvement over snells in which the hook is attached directly to the wire; but, as the said chains are expensive, it may be a case where *"le jeu n'en vaut pas la chandelle."* At any rate, I have lost very few, if any, fish for want of the chain.

Wires.

I am still experimenting on wires for snells, hoping to find one that will fulfill all the conditions for an ideal snell; but up to date can make no favorable report. Thus far I have tried the following: High steel piano wire, both heavy and light; soft Bessemer steel wire that is sold in straight four-foot lengths and which is pretty large in diameter; copper wire, both heavy and light; brass; phosphor-bronze; German silver. The objections to these various wires are as follows:

High steel piano wire soon gets brittle from the chemical action of the salt water, thus necessitating the adoption of heavy wire, which is extremely hard to make into snells. Moreover, it always comes in rolls and is impossible to straighten, or (when partially straightened) to keep straight. It is, however, the best of all the wires that I have yet tried. The soft Bessemer steel wire pulls out like molasses candy after it has been used on two or three fish. Copper is fairly satisfactory, but is not very strong, so it is necessary to employ a pretty heavy size, which is sometimes objectionable on account of sinking the bait too deep. I have not yet given up the hope of finding a copper wire suitable for snells. The brass wire which I tried was so stiff that it was necessary to take the temper out of the ends before bending. The snells broke at the bends. It is possible that there is procurable brass wire without quite so much temper; but, if so, I have not been able to find it. The phosphor-bronze wire that I tried was in the form of a cable, but it was so refractory that the loops came undone. The German silver wire proved to be too weak, as it broke in the eye.

If any of your readers will put me on to a good wire for snells I shall be much obliged to him, and shall certainly give it a trial on the first opportunity.

Leggins.

In one of my papers I outlined a pair of leggins that I stated my intention of having made in order to protect my legs from being bruised by the butt of the rod when handling heavy fish; so now desire to report that I have had them made, and that they are a great success, having saved me much discomfort on my last outing when struggling with sharks, jewfish and large tarpon. The leggins are made of two thicknesses of stout canvas, and each one is stiffened by sewing in four strips of thin hard wood about three-quarters of an inch wide, the fastening being done with three buckles. The leggins are attached to a belt by straps to prevent them from sliding down the legs. Their length is about eight inches, and the canvas wraps entirely around the leg. Although they look clumsy, they are quite comfortable. No one who tries the device will be disappointed therein.

J. A. L. WADDELL.

A Commission Suggested.

Editor Forest and Stream:

Those disputants who really seek only for the truth in the "question" about the sea trout, and who are so positive, should be willing to have a commission appointed to settle the matter: else they are subject to the imputation that they are posing as "naturalists" and wiseacres, wrangling for no other purpose than to see themselves in print.

The "question" is a strictly pedantic and immaterial one; and yet, to relieve many readers of FOREST AND STREAM from the weariness of the discussion, why not ask for say $500 from these gentlemen to defray the expenses of a commission of three expert North Atlantic Coast anglers, to be selected by your publication, to settle the "question" on briefs to be filed by the disputants, they to accept the decision as final.

It is quite immaterial to me which way such a commission might decide; but I will contribute fifty dollars toward the expenses of such a commission, provided the disputants will each contribute a like sum.

I do not believe that these disputants want this "question" (raised by themselves) really settled. They want to play it with hook and line, and to perch, as did Æsop's fly, on the revolving wheel of the chariot, and cry out: "What a dust I raise!" If this is not so, let them now disprove it by coming forward and settling it by an outside commission where they cannot pose as experts and "naturalists," or know that they are dinning their "views" into the general ear of the sporting public under the delusion that this public is edified.

L. F. BROWN.

A Lecture on the Yellowstone.

A VERY delightful entertainment was enjoyed by a party of about forty invited guests on the evening of Tuesday, April 28, at the store of Messrs. Abercrombie & Fitch, 314 Broadway, when Mr. F. C. Todd, of Baltimore, Md., gave an interesting account of his various trips through the Yellowstone National Park and the Jackson's Hole country, illustrating his remarks by a great number of most beautiful lantern slides. The occasion was one of very great interest and all present were enthusiastic about the talk and the illustrations which accompanied it.

The Kennel.

Fixtures.

May 19-21.—Montreal, Can., Canine Association's show.
May 29-30.—Hempstead, L. I.—Open air show of Ladies' Kennel Association of America.
Oct. 6-9.—Danbury, Conn., Agricultural Society's show.
Nov. 3-6.—New York.—Annual show of Ladies' Kennel Association of America.
Nov. 9.—Fourteenth annual beagle trials of the National Beagle Club of America. Charles R. Stevenson, Sec'y.

National Beagle Club.

At a meeting of the Executive Committee of the National Beagle Club of America, held in New York city on April 12, 1903, it was ordered that the fourteenth annual trials of the club commence on Monday, November 9, 1903, the place of holding the trials to be determined at a subsequent meeting.

CHAS. R. STEVENSON, Secretary.

Yachting.

RELIANCE left Newport early on Thursday morning, April 30. She was off Fisher's Island about two o'clock and at that time the wind began to freshen. The wind kept increasing in force and by three o'clock it was blowing very hard from the northwest and Reliance was moving along at a fast clip. About five o'clock Sunbeam, the yacht's tender, took her in tow. The heavy wind had kicked up a lumpy sea and the two boats spent the night inside the breakwater at Glen Cove instead of going directly to their moorings off Mr. Iselin's house at Premium Point, as was originally planned. Early next morning Sunbeam towed Reliance across the Sound to her moorings off New Rochelle.

Columbia and Constitution are now at Glen Cove, which place they will make their headquarters for the next few weeks.

On Saturday, May 2, Reliance was given a trial that lasted the better part of the day. In the morning the wind blew hard, but as the day wore on it moderated quite a little. Reliance left her moorings about half-past ten; at this time the wind was E.S.E. and blowing about twenty miles. Reliance stood across the Sound with the wind abaft of the beam; when under the Long Island shore sheets were flattened down and she stood down to the eastward. At this time she had a gaff topsail set over the lower sails and under this canvas traveled along handsomely with her lee rail just awash. She stood up to her work in excellent shape and the hard puffs did not lay her out at all. As she moved into the nasty sea she threw considerable water but did not pound any. After making several hitches to windward, sheets were eased well off and a small spinnaker was set. Running before the wind she moved very fast and after ten minutes the spinnaker was taken in. Sheets were trimmed a little and Reliance was headed into Glen Cove, where she anchored just before noon time.

About half-past two Reliance left her anchorage and ran over to where Constitution was lying with her mainsail hoisted. Reliance held along under the Long Island shore until she was abreast of Center Island, when she was put about on the port tack and headed for Larchmont. The wind had hauled around to the S.W., and was blowing about half as hard as it did in the morning.

Reliance was headed for Glen Cove again and sailed twice around Constitution. As she stood out of the harbor the second time Constitution followed. Reliance was a long distance ahead, and after holding the course for a while they both came about and stood in to the harbor. Constitution did not have a topsail set and was jogging along under lower sails. Reliance followed Constitution about for a time, but Capt. Rhodes apparently did not care to try conclusions with the new boat, and carefully avoided her. After several unsuccessful attempts to draw Constitution into a scrap, those on Reliance gave it up as a bad job and the big spinnaker was set and she was headed for New Rochelle. The mooring was picked up about half-past four and the yacht was snugged down for the night.

It is apparent that the three boats will not meet until the first race to be held on May 21 under the auspices of the New York Y. C.

THE following article is from the Boston Herald, and it speaks for itself. The several mishaps that have occurred on board the big racing boats during the last few years has prompted the owners of Reliance to take every precaution in case of accident:

"Dr. Thomas Monahan, of this city, graduate of Harvard, and a former well known 'varsity football player, has been appointed surgeon on the Reliance. He has been at the Massachusetts General Hospital for years, and also with Dr. Pfaff, who speaks highly of his ability. He joins the Reliance Sunday, and will be on her until after the cup races are over. This is the first time that a physician has been engaged for a probable cup defender."

SHAMROCK III.'s new steel mast was stepped at Greenock on April 30. New and much heavier rigging screws will replace the ones that were used before the accident. Shamrock III. will in all probability resume her trials with the first Shamrock on the Clyde about May 6.

MESSRS. LAPTHORNE & RATSEY have received orders from the owners of the three trial boats—Columbia, Constitution and Reliance—for complete suits of sails. This firm has turned out such superior work it is only natural that the owners of the big boats should want the best sails procurable; good canvas is necessary to get speed out of any boat. When the report reached the other side that Messrs. Lapthorne & Ratsey would make sails for the American trial boats the British press had much to say on the subject, and several of the papers intimated that we were taking an unfair advantage in ordering sails from an English firm, and that it was necessary for us to use English sails to keep the Cup. As a matter of fact these sails are English in name only, for they will be made on American soil (Messrs. Lapthorne & Ratsey's plant being located at City Island) and by American workmen. Now that this subject has come up, it might be recalled that the blocks, the hollow wooden spars and the steering gear used on Shamrock III. are all of American make.

Cruise of the Yacht Delight.

Winner of the Judge's Prize in "Forest and Stream" Cruising Competition.

BY H. P. VICBORN, WYANDOTTE, MICH.

ALL winter we had been dreaming and talking of our summer's cruise. Where should we go? The Doctor and the Cleric were longing to get into Lake Huron, to them an unexplored water. So it was settled we would go to Mackinac Island.

On Friday, July 11, just before the noon whistles blew, we slipped away from our anchorage at Wyandotte, a dozen miles below the city of Detroit, for our three weeks' outing; with Mackinac Island, at the head of Lake Huron, as the objective point.

The party consisted of the Doctor, being the owner and captain, his wife, and son. Fred came next, who for trustworthy usefulness is hard to beat. With the strength of a young giant—which is useful on a yacht—Fred was always willing to work overtime, running the galley, or scrubbing ship, or taking an extra trick at the wheel. The Cleric made up the balance of the crew.

The craft is a centerboard cruiser, yawl-rigged, about 25ft. on the waterline, 38ft. over all and 10ft. 6in. beam. Without the board she draws 3ft. Her design is by W. H. Hand, Jr., New Bedford, Mass. (Her lines were published in FOREST AND STREAM March 9, 1901:) She proved herself a good weatherly, tight, and fast boat.

THE YAWL DELIGHT.

We had figured on a tow up the river as far as the city of Port Huron to save time. In this we were disappointed. When the time came the friendly master of a freight steamer couldn't make his time fit ours, and we decided to go it alone up Detroit River, across St. Clair Lake, and then against the swift current of the St. Clair River, trusting to the chance of picking up a tow, the seventy-two miles or so between our starting point, and Lake Huron might take up so much of our vacation time that Mackinac could not be reached.

A light wind took us past the city of Detroit about three o'clock, but there was so little of it that at five o'clock, at the head of Belle Isle, we scarcely had steerage. We didn't like the prospects, and began to cast anxious eyes astern to see what might come along in the shape of help. If a tug had happened along at that time, I think we would have offered altogether too much to get into Lake Huron by morning. Presently an old wooden barge, with two more in tow,

RANGE LIGHTS, DETROIT RIVER.

came in sight. Our hopes ran high. Would they take a line? The Doctor worked the yacht out into their course, and for a few minutes we waited in suspense while Fred got a line ready. "The captain says No," was all that we got for a response. We didn't have much of an opinion of that particular captain, whoever he might be. "She was an elegant tow, too," said Fred, "going so slow, it would have been no trouble at all to get a line aboard." We were not sorry long. In about an hour the wind picked up quite fresh for some time, and we had the satisfaction of bowling along across Lake St. Clair, and nearly catching that disdainful barge entering the ship canal. It was getting dark as we entered the river, but as long as the wind held enough to make any head against the swift current, we were not going to stop. By eleven o'clock, abreast Tashmoo Park, we were going so slowly, however, that we decided to come to anchor and get some sleep.

There wasn't much wind to tempt us to up anchor, on Saturday morning, yet we got off as soon as possible. We solicited tows from several passing barges, but the milk of marine kindness seemed to have soured. It would do no good to tell of the many times our hopes of getting into the lake by nightfall were shattered. However, we kept at it all day, and by seven o'clock we were into the deep blue water of Lake Huron. We didn't have a gale of wind, but out of the swift current of the river it would count for more. We got our suppers, and then sat out in the cockpit until dark. The light wind from the south, which we had all day, swung round to the westerly a bit, and also freshened considerably toward midnight. With the wind off shore, there was no sea, and it turned out to be as beautiful a night's sail as any one could wish. One man was all that was needed on deck at a time, so by dividing the night into watches of three hours, every one had a good chance to sleep. When the Cleric relieved Fred at three o'clock in the morning, we were doing some fine traveling, and to "go one better" up went the balloon jib. At daybreak we were so near to Harbor Beach light that we could make out the breakwater without the use of the glass. All hands on deck to take in balloon jib, and we ran inside of the breakwater and let go the hook.

Harbor Beach is an artificial shelter built by the Government, and is the best of places to make for when cruising up the west shore of Lake Huron. The distance from Port Huron is sixty miles.

As soon as we came to anchor, the Madam and the Cleric went ashore in the dinghy, to get some necessary daily bread, as we had made no stop since leaving Tashmoo Park, and it was our intention to proceed with the favorable wind as soon as breakfast was over. Although it was Sunday morning, the merchants are so accustomed to vessels putting in the harbor for shelter that we got all we needed in the way of baked stuff, meats, fruits and ice. Back to the yacht, and breakfast; and as we were all hungry, we made the best of the opportunity. We could not tell when again would come the chance of eating a good meal with the boat on an even keel in sheltered water.

We got away through the north entrance to the harbor by nine o'clock under jib, jigger and two reefed mainsail, the wind freshening all the time, and swinging round to the west. We made the lighthouse on Point-aux-Barques, fifteen miles, in good time, though we had to shorten sail still more before we got out of sight of Harbor Beach. From the Point we laid a straight course across Saginaw Bay, for Au Sable, and started across at 10:45 under jib and jigger, decks to, and as we got away from the shelter of the Point the waves came higher and higher, and regular "granddaddies" came over our port bow.

POE REEF LIGHT SHIP, SOUTH CHANNEL.

Half-way over, we put three tucks in the mainsail and ran it up. Though the water came over in a vengeance, completely covering the Doctor, who had the wheel, it was a glorious sail, the yacht demonstrating her seaworthiness to our complete satisfaction, as she plunged into one sea after another. She seemed like a fiery race horse, determined to get there. Every one of us was willing to give the river sailing of a whole season for one such sail as we had on this Sunday afternoon.

We made a good landfall, and by five o'clock got ready to come to anchor at Au Sable, fifty miles from Harbor Beach. Not being familiar with the tortuous channel into the small river, we had the bad luck to get on the bottom. Fortunately, the bottom is hard sand, or we might have come to grief, as the waves lifted us up, and then let us down with a thump. It wasn't comfortable, anyway. Then by dint of much muscle we got her off without any apparent hurt. By this time we were disgusted with Au Sable and her shelter. It needed but a moment's fanning to blaze the spark, "Let's get out of this!" That is why we squared away and started for our next port, Alpena, deciding to get supper on the way. It was no go, however. Before we had gone half a dozen miles a suspicious feeling got into the air. It began with a hot off-shore puff or two; then it suddenly swung round to the north, and we turned tail and ran back to the shelter of the lately despised harbor at Au Sable. Taken altogether, there isn't much shelter to speak of. Most boats of any dimensions generally make for Tawas in the event of heavy storms, which is

some twelve or fifteen miles to the southwest of Au Sable. We didn't want to go so far out of our way, and succeeded in making the shelter of Au Sable without another mishap. This town was an important place in the palmy days of lumber; but now the most conspicuous part about it is the decaying and rotten docks.

The storm we expected didn't come during the night, and as the wind had got back into the quarter where we wanted it, we were anxious to get away on Monday morning. At nine o'clock we started out in a five or six-mile blow, carrying the balloon jib. Off Sturgeon Point Light we had to take it in, for thunder clouds were banking up ahead. As they swung round to the east and south, we took down the mainsail and jigger, too. The storm seemed to break all around us. Presently a squall sent us spinning out into the lake under the jib. This we were thankful for, as we had no relish for a closer proximity to the shore. Then it began to rain, and it rained! For an hour or more it rained, with calms and cross-puffs alternating, and there was nothing for us to do but wait and watch. We evidently got the tail end of several thunderstorms which swung round us. They did us no hurt, but they kept us guessing. About the middle of the afternoon it cleared up nicely, the wind swung round to southwest again, and we up mainsail and jigger, and then afterward the spinnaker, as the wind did not seem to want to hold. It developed that another squall was brewing. Nearing Thunder Bay we got it. Though we had plenty of time to get ready. The extra canvas came down, as well as the mainsail. A couple of schooners running for shelter behind Crow Islands didn't tempt us. We were going to Alpena, and twelve miles out wasn't port. There is no question in any of our minds why that particular sheet of water is called Thunder Bay. We had all kinds of thunder, and lots of each kind. To make it more interesting, the rain came with it, and also all sorts of wind. There wasn't anything on the programme left out. We kept at it, however, and, when at last, way after dark, we made fast to the dock in the river a little below the bridge, you never saw a more tired, wet, hungry lot of cruisers in all your travels.

THE YAWL DELIGHT.

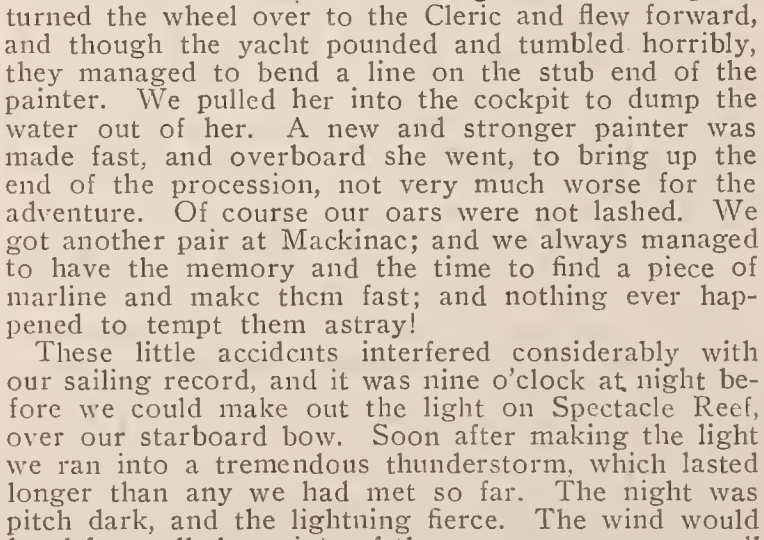
Supper was hastily prepared, and we proceeded promptly to put it out of sight. While so engaged we had a comical diversion. The river is so very narrow that some of the larger packing freight and passenger steamers making this port cannot swing and head out again, but must have the service of a tug to pull them out backward into the bay. So, when the City of Alpena, a big side-wheeler on the Detroit and Mackinac route, came thrashing in, the waves she kicked up made things look interesting on the yacht. It required the united efforts of the five people sitting at supper to prevent everything on the table rolling on the floor. The tug boats, as they went in and out, made scarcely less commotion, and we began to regret having come into the river at all. Next day we learned better places for small yachts to lie, can be found in the slips of the lumber company's docks, of which there are plenty. But unless you know the places, or have daylight, it would be difficult to find them. We improved our condition by making fast stem and stern lines to the dock, and throwing out a breast anchor to keep us off. In this way we were kept from pounding the dock, and the occasional rolling we got through the night only made us sleep the better.

We put in two nights and a day at Alpena, and found it one of the finest towns of its size. We didn't come across any yachtsmen; in fact, with one exception, we didn't find it possible to talk yacht to any one on the whole cruise. Perhaps this may be explained by our cruise being somewhat early in the season, and most of the yacht runs being in August.

Wednesday morning, July 16, broke fine and clear, the wind south by west. By nine o'clock we towed the yacht out to the end of the dock. We made good sailing of the beat down the bay, and by a quarter past twelve rounded the island, called Thunder Bay Island, on which is a light, and a life-saving station. All going well the next port would be our destination. The wind was quite fresh, but we were thoroughly rested and feeling in a frolicsome mood. We ran up the spinnaker, and probably broke all our records for sailing. There were some other things we broke which we wished we hadn't. Abreast Presque Isle Light Station we decided to take in the spinnaker. It would have paid us to do it sooner. For the halyard parted aloft, and down came 500 feet of light canvass into the lake. Coming up into the wind, the spinnaker boom dragged the water, pried but a moment against the shrouds, and crack! it went into two pieces. We managed to get the canvas and the pieces aboard, and stood away on our course. We bemoaned the loss of the use of the spinnaker, though, curiously enough, there never was a time after, on the entire cruise, when we could have used it.

Troubles never come singly, as we learned that day. Half an hour after the spinnaker went, the painter to the dinghy parted, and our precious little tender fell behind. Now that dinghy is no ordinary boat, and we couldn't for a moment think of abondoning it. At the rate we were going there was no time to shorten sail, and so a mad chase for the rescue began. We got a glimpse of her as she rose for a moment on the crest of a wave, and then she was lost to sight again. The Captain took the wheel, Fred went forward, and the Cleric handled the sheet. We flopped and tumbled about, and finally came in stays three feet from that 10ft. truant. Fred reached out expectantly; it looked as if it would be so easy; but the next wave broke between the yacht and the dinghy just at that moment, and she was twenty feet away in an instant. We filled away and came up again, and then again, and again, until it seemed as if we should really have to give it up. At last Fred got his grip on the boat, and it was well that he could hold like a giant. The Captain turned the wheel over to the Cleric and flew forward, and though the yacht pounded and tumbled horribly, they managed to bend a line on the stub end of the painter. We pulled her into the cockpit to dump the water out of her. A new and stronger painter was made fast, and overboard she went, to bring up the end of the procession, not very much worse for the adventure. Of course our oars were not lashed. We got another pair at Mackinac; and we always managed to have the memory and the time to find a piece of marline and make them fast; and nothing ever happened to tempt them astray!

These little accidents interfered considerably with our sailing record, and it was nine o'clock at night before we could make out the light on Spectacle Reef, over our starboard bow. Soon after making the light we ran into a tremendous thunderstorm, which lasted longer than any we had met so far. The night was pitch dark, and the lightning fierce. The wind would howl from all the points of the compass, so we got all the canvas down except the jib. It rained: that expresses it. After midnight it cleared up, but turned beastly cold. There was no wind, and the tremendous rolling of the dead sea, and the light on Spectacle Reef were the two things we could not get away from.



THE TOWN OF MACKINAC.

At daybreak a cold, strong wind came from the northwest, and we had a long, weary beat to get into the shelter of Mackinac Island, which we finally reached at eleven o'clock in the morning, tired, cold, wet and hungry again. We dropped our hook abreast the Lake View House, and after a hasty toilet, the first thing we did was to see what the inside of the dining-room looked like.

After dinner we felt better, and we figured out our sailing. Summary:

Wyandotte to Tashmoo Park	38	miles, sailed in	11	hours
Tashmoo Park to Lake Huron	34	" "	10	"
Port Huron to Harbor Beach	66	" "	10	"
Harbor Beach to Au Sable	50	" "	8	"
Au Sable to Alpena	48	" "	11	"
Alpena to Mackinac Island	110	" "	26	"
Total	340	" "	76	"

By Monday morning, July 12, we had all the sightseeing on the historic old island that we wanted, and we decided to start for home. The wind blew lightly from the north, when, at eleven o'clock, we up anchor, taking the west shore of Bois Blanc Island and the South Channel. There was scarcely a ripple on the surface of the lake. The sun, together with the reflection from the smooth water, became a little trying, so to make things more comfortable, we stretched the awning over the cockpit, and spent a lazy afternoon. By daybreak on Tuesday we had jogged along as far as Middle Island, and midday found us at Thunder Bay Island, with the wind almost gone. Without coming to anchor, the Cleric took the dinghy and went ashore to see what the island afforded in the way of provisions. The family of the Captain of the life-saving station were very genial; and as a result of the forage, he took back to the yacht three newly baked loaves, two dozen eggs, and two quarts of fresh milk, for which he had considerably difficulty in persuading the good woman to accept the sum of sixty cents! The great kindness of these people almost tempted us to make a stop. But we had decided to attempt the run from Mackinac to Port Huron without a stop, if possible, so we drifted on, promising ourselves a longer sojourn on the island if we ever came that way again.

THE FORT, MACKINAC.

About two in the afternoon the wind headed round to the south, and we put out on a long leg into the lake. At four o'clock we found another squall and some more thunder, and then rain. Surely Thunder Bay was most appropriately named. We fooled around under jib for a couple of hours, the heavy sea, which the squall kicked up, making the yacht pitch and roll badly. When the storm cleared at six o'clock the wind veered westerly, the sun came out again. We up mainsail and jigger, and managed to stand close-hauled down the lake.

Wednesday morning at eight o'clock found us northwest of Point-aux-Barques, the lighthouse barely visible through the glass. We managed to sail close-hauled with a steady wind all day, though the sea was heavier than is necessary for comfort. Passed Port Sanilac Light at half-past five, about eight miles out. At six o'clock we ran into another tempest, though we were not hunting for one. Several heavy schooners in sight made sorry work of it. One big fellow, going up, got all his canvas down, and threw out a hook as a howling blast came down the lake from the north. We had nothing but the jib up, and we smiled as we flew before the wind in the direction we were anxious to go. Selfishly, we didn't care how long, or how hard it blew, if it only came that way. Less than thirty miles away was the mouth of the river we were seeking. But it didn't blow that way. It blew just as hard most of the time, and all night long, and a wild night we had. But most of the time we got it from the south, and with the heavy sea it kicked up, we made slow progress working into it. Fort Gratiot Light was sighted long before daybreak as we tacked back and forth trying to make the mouth of the river.

A BLOCK HOUSE, FORT MACKINAC.

RELIANCE ON HER FIRST TRIAL SPIN.

Photograph copyright by James Burton, New York City.

We got in by seven o'clock on Thursday morning, and ran into a little slip at the city of Port Huron, sixty-nine hours from Mackinac Island, distance two hundred and forty-five miles.

This ended our great lake sailing on the cruise, and we were all glad to get a little rest again. No serious mishap had occurred, and none of us were any the worse which a good sleep would not cure.

Thursday and Thursday night gave us all the rest we needed, and on Friday afternoon we dropped down the river about ten miles to Stag Island, where we came to anchor and spent the night.

On Saturday afternoon we had a head wind, but with the stiff current, against which we had labored two weeks before, now in our favor, we made easy work of getting as far down as Algonac in time for an early supper, where we anchored and spent the night.

Sunday morning, July 27, we spent ashore, and at three in the afternoon, with a light head wind still, got to Star Island, at the St. Clair Flats, by half-past five. Laid up until half-past three Monday afternoon, and got to the Ship Canal a few minutes after four. In St. Clair Lake the wind was light, from the west, and late at night came to in the Detroit River, in front of the city. On Tuesday morning, after the Captain had seen the maker of the new suit of sails, which we were using for the first time on this cruise, and which fitted very poorly, we dropped down the river to our anchorage at Wyandotte, home again, safe and sound, and almost sorry the Cruise to Mackinac was a thing of the past.

Boston Letter.

BOSTON, May 4.—The steam yacht Carmina, designed by Mr. A. S. Chesebrough, and built by the Lawley Corporation for Mr. Charles Fletcher, of Providence, was successfully launched from Lawley's west shop Saturday afternoon. The yacht was christened by Miss Harriet May Fletcher, daughter of Mr. and Mrs. Joseph E. Fletcher, and granddaughter of Mr. Charles Fletcher.

It was one of the prettiest launchings that has ever taken place at the yard. The big hull started ever so slowly down the greased ways, gathering momentum as she passed out of the shop. She was allowed to go by the run, and no attempt was made to stop her until she had gone almost half the length of the basin. Then, when the strain was put on the big bow hawser leading from the head of the shop, it snapped. Carmina took a sheer toward the schooners at the end of the basin, and it commenced to look serious. She was snubbed, however, when she had all but crashed into the other yachts.

A special platform was built at the east side of the shop for the launching party, which, beside Miss Fletcher, was composed of Mr. and Mrs. Charles Fletcher, Mr. and Mrs. Joseph E. Fletcher, Mr. and Mrs. Fred Fletcher, Mr. and Mrs. Hartley, Mr. and Mrs. Peck, Mr. and Mrs. Kimball, Mr. and Mrs. Milner, and Mr. Daniel Jackson, all of Providence; Mr. J. R. Hooper, of Boston, and Mr. B. S. Murphy, surveyor of Lloyds British, under whose supervision the yacht was built. There was a big gathering at the head of the shop and the docks were lined with people. All of the shops were closed at noon in honor of the occasion.

Carmina is the largest steam yacht ever built at Lawley's. She is a big-bodied boat, with rather a full bow, and at once suggests stability. She is built of steel, the plating being on the raised and sunken system. Her deckhouses are steel framed and steel sheathed as high as the windows. Over this and for the rest of the distance the outside finish is teak.

She is 170ft. over all, 139ft. 9in. waterline, 22ft. beam and 10ft. 6in. draft. She has two water tube boilers of 250 pounds pressure each. She has a four-cylinder, triple-expansion engine of about 1,400 horse-power, driving a single screw. She was built under special survey of Lloyds, and is expected to be rated A1.
