Below decks she is well laid out and has good room. In the forward part of the boat is the forecastle. Abaft of this are quarters for five officers, with shower bath, messroom and lavatory. Next comes the galley, which is quite large. Abaft the galley is a thwartship bunker, extending the full beam of the ship. Then come the boiler and engine spaces and the stokehole.

The owner's quarters are abaft the engine space. Mr. Fletcher's stateroom is finished in white mahogany. It is a large room about 12ft. in length and extending the full beam of the yacht. Connected with it is a private bathroom. The suite consists of five staterooms and three bathrooms. These are finished in mahogany and white enamel.

In the deckhouse, forward, is the dining room and pantry on the port side, and on the starboard side is a passage. Aft of the machinery space there is a smoking room and a drawing room. These are finished in mahogany. Above the deckhouse there is a promenade bridge, and there is a raised bridge for the navigating officer.

Carmina is fitted with electric plant, steam steerer, engine room telegraph and all of the modern cruising equipments, with the exception of an ice-making plant. It was thought best to save the room this would take up, and it is also estimated that it will be more economical to store ice on a yacht of her size. She will be commanded by Capt. Nicholas Dand, who is a veteran yacht master.

The steam yacht Pantooset, owned by ex-Commodore A. S. Bigelow, of the Eastern Y. C., sailed for Europe Saturday, passing out by Boston Light at noon. A number of friends of Capt. A. C. Corkum, master of Pantooset, accompanied the yacht as far as the light in a tug. Before leaving the anchorage these friends went on board and presented Capt. Corkum with a beautiful silver loving cup.

Pantooset will proceed to Southampton by way of Fayal, where she will continue fitting out. From there she will go to Cuxhaven, Germany, where Mr. Bigelow and party will join her. She will then pass through the Kiel Canal and up the coast of Norway, as far as North Cape. Returning she will go up the Baltic as far as St. Petersburg. She will then return to Cuxhaven, where Mr. Bigelow and party will leave her. She will then return direct for America, arriving in Boston about Sept. 10.

Mr. B. B. Crowninshield has sold the schooner Attaquin, owned by Mr. Durbin Horne, of Pittsburg, and now under charter to Mr. Lawrence Jones, of Louisville, Ky., to Mr. Robert P. Bonnie, of Louisville, Ky. She will be used in the South. He has also sold the 18-footer, Tokalon, owned by Mr. R. J. Randolph, Jr., to Mr. M. Williams, and the 18-footer Janet, to Mr. C. W. Jaynes.

The Y. R. A. 25-footer Chewink II., designed by Messrs. Burgess and Packard, and built by Fenton, of Manchester, for Mr. F. G. Macomber, Jr., was tried out last week. She is said to have shown great speed and is looked for to be especially fast at reaching.

At a meeting of the judges of the Eighteen-foot Knockabout Association, held April 27, it was voted that all existing boats in the Association shall be remeasured and reweighed before receiving certificates of racing numbers for the season of 1903.

JOHN B. KILLEEN.

Sailing House Boats.

BY FRANK H. BALL.

AMONG those who turn to the water for recreation and rest are found several distinct classes. Some care only for yachting of the most strenuous kind, and live on the excitement of speed contests, or of battle royal with the ocean when the odds are all on the side of old Neptune. Others prefer to take their water in less heroic doses, and to them the hardships incident to fighting out a storm at sea more than offset the pleasure to be derived from such an experience. This is the class who seek the more protected waters of bays and rivers, where, with comfortable quarters from which to radiate, they take to the water as much or as little as suits their mood, and when the game is not to their liking they are not compelled to play.

With this second class the summer cottage is the usual thing, or the anchored house boat for those who find a special charm in life afloat. The house boat is well adapted to this kind of life, because it furnishes a movable base from which to make day excursions in the smaller craft, but the moving of a house boat from one anchorage to another, if accomplished by a tug, is ordinarily a rather monotonous experience, depending somewhat on the power and speed of the tug, and such trips are undertaken merely for the sake of reaching the objective point. The latest plan, and one which seems to be growing in favor, is to equip the house boat with sails of moderate size, with which it may be comfortably navigated, thus adding something of the pleasure of yachting without sacrificing anything of the comfortable roominess of the house boat. One of the pioneers among this class of sailing house boats is the Sommerheim, which appeared on Great South Bay in 1897. The Sommerheim is a flat bottomed boat with a large house and a sail plan of moderate size.

Prior to the advent of the Sommerheim it had not been new for sailing vessels to be provided with roomy quarters of the house boat kind, but in all these craft the first idea was to build a sailing vessel, and next to plan a cabin and other conveniences adapted to the vessel; while in the Sommerheim the subject was approached from the house boat end, and after the cabin had been planned, a vessel was designed to carry this cabin and lend itself in every respect to the conveniences and comforts which are desirable in a boat which is to be used as a summer home. The Sommerheim was the result of this idea of building a hull to suit a cabin, and a description of her may be interesting.

First a few words in regard to the method of designing. It has already been stated that the cabin was the first subject to be considered. Referring to the plan view, the arrangement will be easily understood. The main cabin was made on each side. The two staterooms next forward must be 6½ feet each in length athwart ship to provide for the berths, and, in order to make a suitable passage fore and aft between these rooms, it is necessary that the cabin, or house, shall be 16 feet wide, and this determines the minimum beam of the middle section of the boat at the bottom. A roomy kitchen forward of the port stateroom makes the house long enough for a single stateroom for the cook and a light and airy toilet room on the starboard side, and the dimensions of the house are fixed at 32 feet in length and 16 feet in width.

Having decided on the house, a hull must be designed to carry it. A flat bottomed boat is the best adapted to shallow waters, and a scow stern makes a cheap construction and furnishes a roomy after deck. The breadth of the bottom amidship is fixed by the house at 16 feet, and, inasmuch as an outside passage fore and aft on deck is desirable, the sides are given a flare of two feet each to provide such a passage, and the beam is thus fixed at 20 feet on deck. The length over all must be determined with a view to reasonably good lines for moving through the water, and the depth made sufficient to insure the necessary strength of the structure. In the Sommerheim 70 feet was selected as a desirable length, with 15 feet of deck aft of the house and 23 feet forward, and a depth of hull amidship of 4 feet. By placing the cabin floor on the floor frames of the boat, the head room may be made 7½ feet in the clear, without causing the house to rise above the main deck more than is necessary for desirable window room, and a house of this kind does not interfere with sails, nor seriously affect the windward sailing of the boat. The roomy bow may be used for water tank, ice box, general storage and quarters for the boy or man who constitutes the ship's crew. In the Sommerheim a large water tank in the bow and another in the stern, having a capacity for two weeks' supply, are piped to the kitchen, toilet room and staterooms. A stationary ice box with a two weeks' capacity makes it unnecessary to renew these supplies except at convenient intervals.

The after deck of the Sommerheim, 15 feet long by an average width of 17 feet, contains a large cockpit in which the wheel is located. When riding at anchor the house protects this cockpit from the wind for those who are seated, but does not obstruct the view forward for those who are standing, and the man at the wheel has a clear view of the water in all directions. This cockpit is large enough for two hammocks and several steamer chairs, without interfering with the handling of the boat. An awning covers this deck, and is set so that the sails clear it under all conditions. It is on this deck that the house boat party spend most of the time, and in fine weather meals are served under this awning.

The interior arrangement of the several rooms of the cabin is clearly shown in the plan view. In the main cabin sliding curtains at each side shut off the berths from the center of the room, with space enough before the berths for convenient dressing. It will be seen that sleeping accommodations are provided for eight persons besides the cook. The berths are all single beds hinged at the back like the upper berths of sleeping cars, and underneath each berth is a full sized box for clothing. Hair mattresses on woven wire springs make sleeping accommodations that do not suggest anything of the hardships that are often incident to life on the water, while wire screens in all the windows insure freedom from flies or mosquitoes, for it is very essential to a full enjoyment of this sort of life that petty annoyances and inconveniences be reduced to a minimum. If a person is spending but a few weeks on the water he does not mind sleeping on a hard bed, but it is quite another thing if he plans to spend a whole summer afloat, and expects to go back to the same thing year after year with keen enjoyment. The general arrangement of the Sommerheim will be recognized as a comfortable one, and in no respect has anything of comfort been sacrificed for the sake of adapting her to the use of sails.

In the matter of sails, simplicity of rig and convenience of handling were the first consideration. The yawl rig was selected for the Sommerheim because it is more convenient to handle than either the sloop or schooner, and is surer in stays, a matter of some importance, particularly in shallow waters. The sails best adapted to this service are what is known as the "leg o' mutton" type, with its single halliard and without gaffs to hoist aloft. For the mainsail a jig attached to one end of the halliard provides for stretching the canvas after it has been hoisted with the single purchase end, thus making the hoisting of this large sail an operation that may be easily performed by a boy. The mainsail is sheeted to the after end of the cabin within reach of the man at the wheel, and the jib sheets lead to the cockpit, making the boat a "single hander" and more comfortably so than the ordinary catboat. Three shallow keels and a small centerboard forward of the mainmast furnish the necessary lateral resistance for windward work. It must be remembered that the Sommerheim is not a racing machine, and the center of effort of her sails is so low that there is never any question in a gale except as to the ability of the sails to survive, so that reefing is an unknown operation. It is true that this condition is only to be obtained by a sacrifice of possible speed in light airs, but when one has his house with him there is no need of great haste, and, as the breeze freshens and the yachts are busy tying reefs, the Sommerheim may be seen romping ahead at an ever increasing speed, until, owing to her superior size, when the smaller craft get down to two or three reefs, she begins to show them a clean pair of heels. One of the pictures which accompany this article shows the Sommerheim in a breeze, and it is easy to believe that she is doing better than ten miles an hour. Even in these strong breezes she handles so easily that the house boat family look upon her as a sort of family horse to be driven by anybody, and it is a fact that much of the sailing of this boat is done by the ladies of the party during the absence of the men, and with no other assistance than that rendered by the ship's boy, who hoists the sails and gets up the anchor; so that the frequenters of Great South Bay have become accustomed to meet the Sommerheim in fresh breezes with a smother of foam under her bow and a girl at the wheel, and with the prospective man on the forward deck the only representative of the sterner sex aboard.

This sort of thing would not be practicable except under certain conditions. It is of the utmost importance that the boat must be so designed that constant alertness is not required to adapt the spread of canvas to the force of the wind and the carrying power of the boat, but, on the contrary, there should be nothing to do when under way but to steer and hum the refrain, "The harder it blows, the faster she goes." Then, too, the summer cruising should be limited to protected waters like the great bay on the south shore of Long Island, with its hundreds of square miles of shallow water swept by ocean breezes, and with good anchorage everywhere for a craft of this kind; so that it is only necessary to round up and let go the anchor at any time to be in a comfortable harbor.

Vessels of the Sommerheim type seem destined to grow in popularity, and particularly so because the pleasure to be derived from them is so large a return on the comparatively small first cost and the cost of keeping them in commission.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Mr. Charles G. Davis entered upon his duties as manager of Captain "Tom" Webber's yacht building plant at New Rochelle on May 1. Mr. Davis brings to the business a ripe and valuable experience acquired elsewhere, having been superintendent of construction at the Electric Launch Works, Bayonne, N. J., and manager of the Metropolitan Boat & Launch Co., Astoria, L. I. Webber's yard is one of the best known about New York City, many famous racing and cruising yachts having been built there, and under Mr. Davis' management the business is sure to thrive.

Mr. H. C. Baxter, of Brunswick, Maine, has sold his steam yacht Venezia, through Manning's yacht agency, to Mr. J. H. Morris.

Mr. Charles E. Graham, of New Haven, Conn., has sold his schooner Adrienne to Colonel Austin, of New York City, through the agency of Messrs. Macconnell Bros. These brokers have also sold the 21ft. knockabout Widgeon for L. H. Dyer to H. I. Whiteside, of Bayonne, N. J., power launch to W. B. Smith Whaley, of Newton; sloop Nayade, for F. E. Heath to C. L. Angell, of New York; 40ft. cabin launch Firefly, for F. H. Adriance to G. P. Granbury, of New York; 22ft. raceabout Dixie for Mr. Agassiz to H. B. Dexter, M. Y. R. A.; 21-footer Zaza to W. S. Fairchild, of Newark, N. J.; 36ft. speed launch for Edward Oswald to C. E. Laidlaw, Jr., and knockabout Raduga for F. S. Schussell to Richard H. Swartwout.

Ex-Commodore Lewis Cass Ledyard has sold his schooner Corona, through the agency of Mr. Frank Bowne Jones to Mr. Arthur F. Luke, of Pittsburgh.

Arcturus, the English built auxiliary, owned by Mr. Rutherford Stuyvesant, New York Y. C., arrived in New York on April 28. She sailed from Southampton on April 6 and left Fayal on April 14. Arcturus encountered heavy weather after leaving the Azores. She was designed by Mr. St. Claire J. Byrne and built by Ramage & Ferguson, Ltd., at Leith, in 1895. She is built of steel, and is 109ft. over all, 148ft. waterline, 27ft. 2in. breadth and 13ft. draft.

Mr. Stanley M. Seaman has made the following sales: Launch Helen for Messrs. Ulrichs, Brooklyn, to the commission on additional water supply for New York City; Lawley raceabout Nirvana, for Mr. E. C. Griffin, to Mr. Charles A. Morss, of Boston; catboat Pete, for Mr. Ferdinand Starbuck, to Mr. I. C. Eaton, of Jersey City.

Mr. Clarkson Cowl, of New York City, has sold his steam yacht Ardea, through the agency of Messrs. Gardner & Cox, to Mrs. Maude Sherman.

Mr. Hollis Burgess has made the following sales: The steam yacht Hanniel (in conjunction with Messrs. Gardner & Cox), owned by Mr. C. H. W. Foster, of Boston, to Mr. Clarkson Cowl, of New York City; the 32ft. waterline cutter Vayu for Dr. Richard H. Harte, of Philadelphia, to Mr. G. H. Winans, of Kalamazoo, Mich. She will be taken to Buffalo through the Erie Canal, and from there to Michigan. The 25-footer Jingo, for Mr. R. T. Paine, second, of Boston, to Mr. George B. Doane, of Boston. The 21ft. knockabout Minx, for Mr. T. S. Hathaway, of New Bedford, Mass., to Mr. Henry F. Strout, of Brookline, Mass.

Khama, the English-built racing cutter recently purchased by Mr. Seymour J. Hyde, New York Y. C., sailed from the Clyde on April 25 for New York. It is expected that she will arrive on this side about June 1.

Inia, the steam yacht built at Morris Heights for Mr. Henry S. F. Davis, was launched on Saturday, May 2. She is 103ft. over all, 84ft. waterline, 15ft. breadth and 5ft. draft. Inia is a flush decked vessel and is schooner rigged. Her builders guarantee a speed of fifteen miles. The dining saloon is in the forward deck house and is connected with the galley by a dumb waiter. The crews and officers' quarters are forward. Aft of the machinery space are four staterooms for the owner and his guests and a saloon. The yacht will be completed by June 1.

Canoeing.

Prizes for Canoeists.

IN order to encourage canoeists and small boat sailors, who do their knocking about on inland waters, to keep a record of their trips and experiences, the publishers of FOREST AND STREAM offer cash prizes for the best accounts of cruises taken during the season of 1903. As few restrictions as possible will be imposed, and those given are made only with the view of securing some uniformity among the competitors' stories, so that the judges will be able to make a fair award.

The prizes will be as follows:

First, $50.00.
Second, $25.00.
Third, $15.00.
Fourth and Fifth, $10.00 each.
Sixth to Eighth, $5.00 each.

I. The cruise must be actually taken between May 1 and November 1, 1903.

II. The cruise must be made on the (fresh water) inland streams and lakes of the United States or Canada.

III. The canoe or boat in which the cruise is made must not be more than 18ft. long over all.

IV. An accurate log of the trip must be kept, and all incidents and information that would be of value to other canoeists covering the same route should be carefully recorded.

V. A description of the boat in which the cruise is made should preface the story, and a list of outfit and supplies.

VI. Photographs of the boat and of the country passed through, not smaller than 4x5, should, if possible, accompany each story, and they will be considered in making the awards.

VII. Stories should contain not less than five thousand words, written on one side of the paper only.

VIII. An outline chart of the trip drawn on white paper in black ink (no coloring pigment to be used) should also be sent in.

IX. Competitors should avoid the use of slang or incorrect nautical expressions in their stories, as it will count against them in awarding the prizes.

Each manuscript to which a prize is awarded shall become the property of the Forest and Stream Publishing Company. All manuscript should reach the office of the Forest and Stream Publishing Company, 346 Broadway, New York, N. Y., on or before December 1, 1903.

New York C. C. Racing Events, 1903.

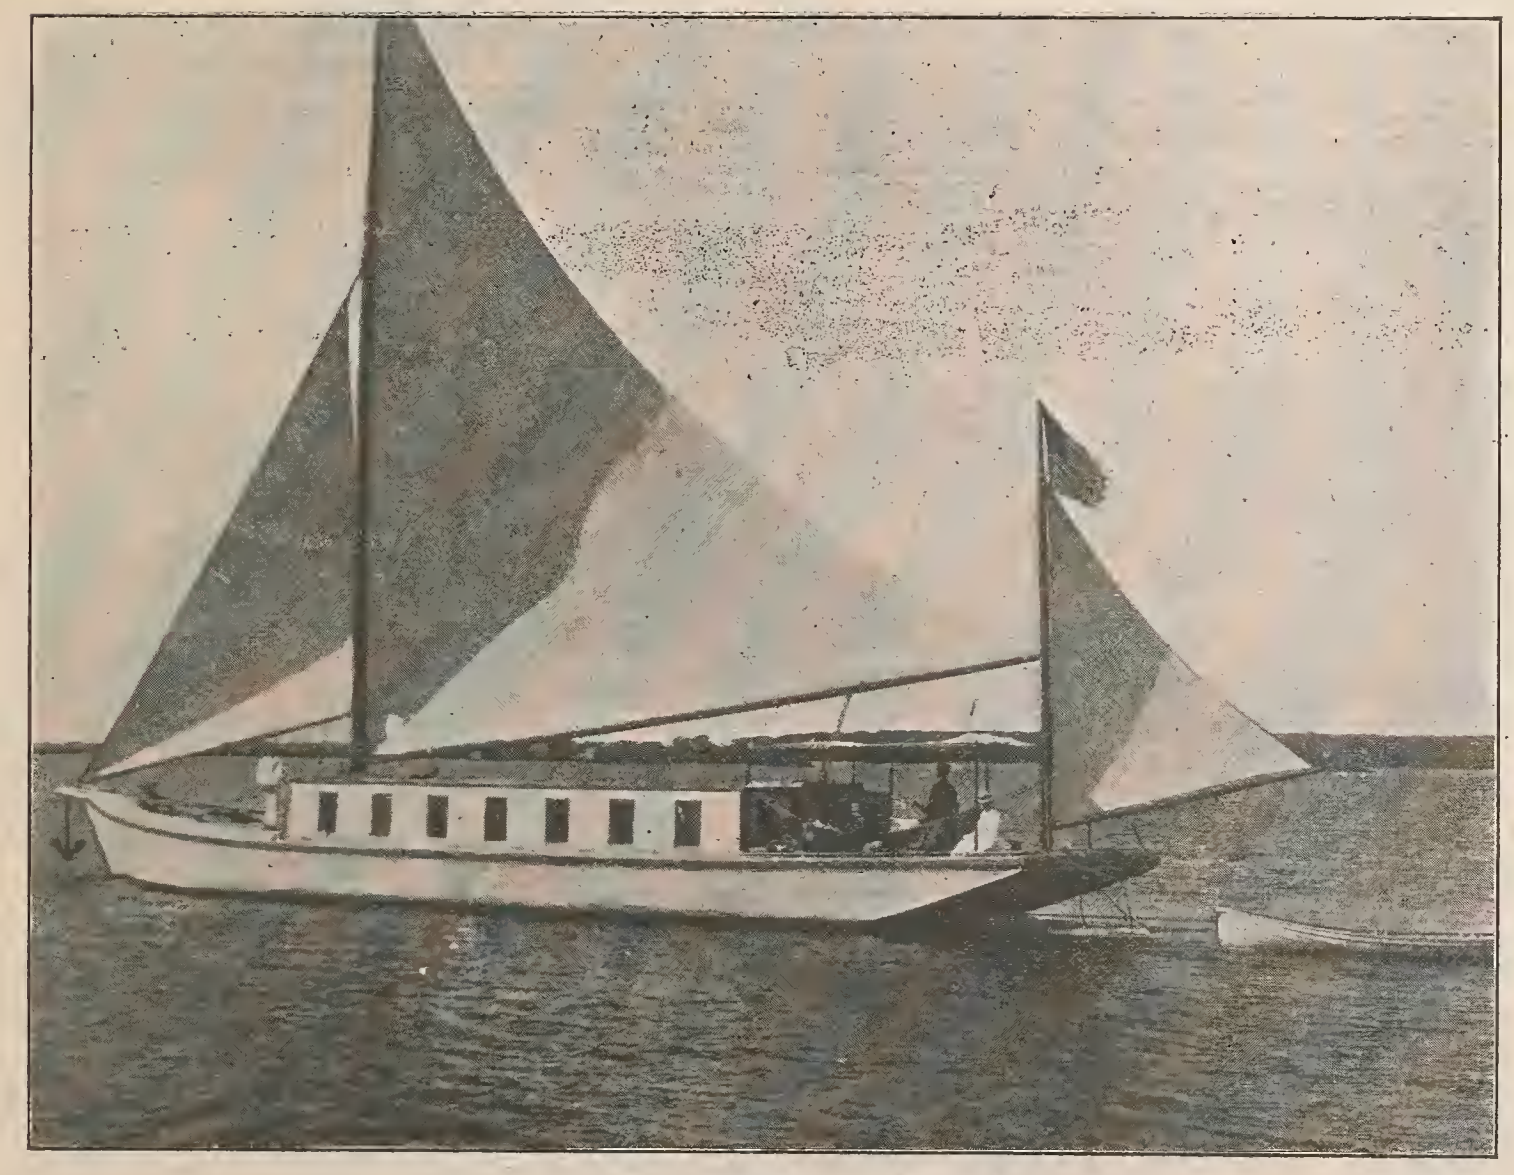
The following canoe regattas will be held during season of 1903:

Spring Regatta, Saturday, June 13.—Events: 3:00 P. M., record sailing, decked canoes, 3 miles; 3:15 P. M., record sailing, open canoes, 3 miles; man overboard race; open canoe paddling, double blades, half mile; open canoe paddling, single blades, half mile; open canoe paddling, single blades, tandem; tail end race. Courses and distances subject to change at option of committee.

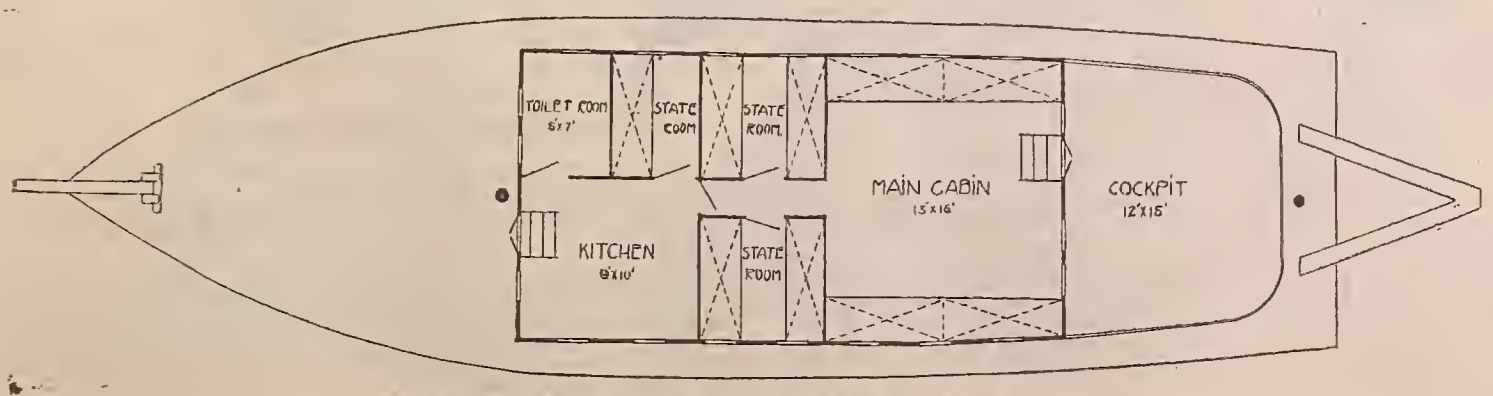
Saturdays, July 11 and 18, and Aug. 1.—3:00 P. M., record sailing, decked canoes, 3 miles; 3:15 P. M., record sailing, open canoes, 3 miles.

Fall Regatta, Saturday, Sept. 12.—Full list of events will be announced later and will include: 3:00 P. M., record sailing, decked canoes, 3 miles; 3:15 P. M.,

SAILING HOUSE-BOAT SOMMERHEIM.



SAILING HOUSE-BOAT SOMMERHEIM.



SAILING HOUSE-BOAT SOMMERHEIM—CABIN PLAN.

record sailing, open canoes, 3 miles; which will complete the series of five record races for each class. Flags will be given winners of each race, and first and second prizes to the winners of greatest and second greatest number of points, respectively, for the series, and for each class. System for scoring points will be posted on bulletin board in club house. All canoeing events open to members of any canoe club or American Canoe Association.

Gravesend Bay Yacht Racing Association schedule for races for season of 1903:

June 6, Marine and Field Club.
June 20, Brooklyn Y. C.
June 27, New York C. C.
July 11, Bensonhurst Y. C.
July 25, Marine and Field Club.
Aug. 1, Brooklyn Y. C.
Sept. 5, New York C. C.
Sept. 19, Bensonhurst Y. C.

Classes and courses will be announced through circular by the Association.

A. C. A. Membership.

The following have applied for membership to the A. C. A:

Eastern Division.—H. P. Cunningham, Medford, Mass.; Wm. J. Burbeck, Lowell, Mass.; Wm. A. Packard, Boston, Mass.; John W. Rice, Winchester, Mass.; Wm. E. Crosby, West Medford, Mass.; Clifford Talbot, Winchester, Mass.; A. J. Goodwin, Boston, Mass.; Chas. H. Littlefield, Jr., Lawrence, Mass.; Robert B. Parkhurst, Lawrence, Mass.; John R. Newman, Boston, Mass.; H. K. Newhall, Boston, Mass.; Arthur A. Ridgeway, Boston, Mass.; Geo. W. Thompson, Boston, Mass.

Central Division.—George S. Kellogg, Buffalo Canoe Club, proposed by Charles P. Forbush; G. Fred Merrick, Rochester Canoe Club, proposed by Al. T. Brown; Frederick C. Irving, Gouverneur, N. Y., M. H. Kennedy, New Brighton, Pa., proposed by H. T. Kreamer; S. T. Blemming, John W. Boyce, Pittsburg, Pa., proposed by H. E. McLain; Lyman B. Kirkpatrick; Frank T. Sage, Irondequoit Canoe Club, Rochester, N. Y., proposed by John S. Wright; Hiram M. Rogers, Rochester Canoe Club, proposed by John S. Wright; H. S. Sturdevant, Rome, N. Y., proposed by Jesse J. Armstrong; John Henry Coon, Buffalo Canoe Club, proposed by John S. Wright; and W. O. Amsler, Otto Benkiser, Alton Brown, W. H. Brown, G. T. Hildebrand, C. A. Robb, Gregg Rogers, J. H. Smith, H. G. Welsh, all members of the Duquesne Canoe Club, Pittsburg, Pa., proposed by A. W. Heeren and H. W. Breitenstein.

Atlantic Division.—Dr. Wm. B. Breek, Dr. Stuart B. Close and Mr. George V. Strahan.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Rifle Range and Gallery.

Fixtures.

June 15-16.—Union Hill Schuetzen Corps twenty-fifth anniversary shoot. P. Stumpf, Capt.

June 18-20.—St. Louis, Mo.—Tournament under auspices of Central Shooting Bund. Horace Kephardt, Sec'y.

July 6-7.—New Haven, Conn.—South New England Schuetzen Bund annual schuetzenfest, under the auspices of the Independent German Rifle Company. H. C. Young, Sec'y.

Cincinnati Rifle Association.

CINCINNATI, O. At the regular meeting of this Association on April 26 the following scores were made. Strickmeier was champion for the day with 231, raising his record 2 points. The handicap contest that has been running for some months came to a close last shoot, Gindele winning first class medal, Odell second class and Topf third class. Conditions of scores below, 200yds., off-hand, German ring target. Wind unsteady from 9 o'clock:

						Honor.
Strickmeier	231	223	222	215	214	66
Hasenzahl	229	222	220	217	214	65
Gindele	227	222	220	215	209	63
Payne	227	220	220	213	211	62
Bruns	217	208	200	198	196	48
Roberts	217	206	204	203	203	69
Odell	215	214	215	211	210	60
Nestler	214	212	212	211	207	65
Hofman	214	211	211	207	206	61
Hofer	211	208	207	203	196	67
Lux	211	207	207	200	200	57
Freitag	209	209	202	201	193	53

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

May 6.—Walkerton, Ind., Gun Club shoot.
May 6.—Litchfield, Ill., Gun Club shoot.
May 5-6.—Lexington, Ky., Gun Club shoot.
May 6-7.—De Witt, Ia., Gun Club shoot.
May 6-7.—Luverne, Minn., Gun Club shoot.
May 6-7.—Union City, Ind.—Parent Gun Club's tournament.
May 6-7.—Lafayette, Ind.—Lafayette Gun Club's tournament.
May 6-7.—Titusville, Pa., Gun Club's annual tournament. T. L. Andrews, Sec'y.
May 7-8.—Wilmington, Del.—Wawasett Gun Club's target tournament.
May 7-9.—El Reno, Okla.—Oklahoma Territory Sportsmen's Association tournament.
May 9-10.—Chicago, Ill.—Spring tournament of the Grand Crescent Gun Club.
May 11-12.—Crawfordsville, Ind., Gun Club shoot.
May 12-15.—Pekin, Ill.—Illinois State Sportsmen's Association tournament.
May 13-14.—Crawfordsville, Ind., Gun Club's tournament.
May 13-14.—Dubois, Pa.—The Interstate Association's tournament, under the auspices of the Dubois Rod and Gun Club. U. S. N. Crouse, Sec'y
May 15-17.—Oceau Park, Cal.—Pacific Coast championship bluerock tournament, under auspices of Ocean Park Country Club. L. Herzog, Sec'y, Los Angeles.
May 16.—Trenton, N. J., Shooting Association's tournament. J. R. Taylor, Genl. Mgr.
May 16.—East Walpole, Mass.—All-day shoot of the Neponset Gun Club. Edgar Bills, Sec'y.
May 17-18.—Cedar Lake, Ind., Gun Club tournament.
May 18.—Marion, Ind., Gun Club's tournament.
May 19-21.—Osceola, Ia.—Iowa State Sportsmen's Association's twenty-sixth annual tournament.
May 19-22.—Wissinoming, Philadelphia.—Thirteenth annual tournament of the Pennsylvania State Sportsmen's Association, under auspices of the Florists' Gun Club of Philadelphia. V. V. Dorp, Sec'y.
May 21-22.—New Paris, O., Gun Club's tournament.
May 21-22.—Kenton, O., Gun Club's tournament.
May 21-22.—Kenton, O.—Shoot of the Kenton Gun Club. A. G. Merriman, Sec'y-Treas.
May 24-26.—San Francisco, Cal., Trapshooting Association's three days' bluerock handicap tournament. Open to all; $1,500 added. C. C. Nauman, manager.
May 26-27.—Dubuque, Ia., Gun Club's fourth annual amateur target tournament. A. F. Heeb, Sec'y.
*May 26-27.—Brownsville, Pa.—Brownsville Gun Club tournament. W. T. Doherty, Sec'y.
May 27-28.—Williamsport, Pa.—The Interstate Association's tournament, under the auspices of the West Branch Rod and Gun Club. H. A. Dimick, Sec'y.
May 27-28.—Fort Wayne, Ind.—Two-day bluerock tournament of the Corner Rod and Gun Club; $100 added. John V. Linker, Sec'y.
May 29-30.—Union City, Ind.—Spring tournament of the Parent Grove Gun Club.
May 30.—Altoona, Pa., Rod and Gun Club's tournament. G. G. Zeth, Sec'y.
May 30.—Tournament of the East Harrisburg, Pa., Shooting Association.
May 30.—Newport, R. I.—Second annual tournament of the Aquidneck Gun Club. J. S. Coggeshall, Sec'y.
May 30.—Detroit, Mich.—Winchester Gun Club's Decoration Day third annual tournament; all day. Rose system and average prizes. Sliding handicap, 16, 18 and 20yds. D. A. Hitchcock, Sec'y-Treas.
June 2-5.—Baltimore, Md.—Third annual Baltimore County shoot; three days targets; one day live birds; $500 in purses and prizes. Hawkins and Malone, Managers.
June 3-4.—Boston, Mass.—The Interstate Association's tournament, under the auspices of the Boston Shooting Association O. R. Dickey, Sec'y
June 3-5.—Parkersburg, W. Va.—Sixth annual tournament of the West Virginia Sportsmen's Association, under auspices of Ohio Valley Shooting Association.
June 4-5.—Greenville, O.—Spring tournament of the Greenville Gun Club
**June, second week.—Shreveport, La.—Caddo Gun Club's tournament.
June 7-8.—Ligonier, Pa., Gun Club's tournament.
June 8-12.—Ossining, N. Y.—New York State Association for the Protection of Fish and Game's forty-fifth annual tournament, under the auspices of the Ossining Gun Club.
June 9-10.—Lafayette, Ind.—Indiana State shoot, under auspices of Lafayette Gun Club.
June 9-11.—Sioux City, Ia.—Ninth annual amateur tournament of the Soo Gun Club. B. F. Duncan, Sec'y.
June 9-11.—Cincinnati, O.—Seventeenth annual target tournament of the Ohio Trapshooters' League. Chas. T. Dreihs, Sec'y.
*June 10-11.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.
June 16-19.—Warm Springs, Ga.—The Interstate Association's tournament, under the auspices of the Meriwether Gun Club. Chas. L. Davis, Sec'y.
June 16-18.—New London, Ia.—Seventh annual midsummer target tournament of the New London Gun Club.
*June 17-18.—McKeesport, Pa., tournament.
June 24-25.—Rutherford, N. J.—Interstate Association tournament under the auspices of the Union Gun Club.
*June 24-25.—New Castle, Pa., Gun Club's tournament. James Atkinson, Sec'y.
July 4.—Topsham, Me.—All-day tournament of the Riverside Shooting Club. Fred W. Atkinson, Sec'y.
*July 7-8.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.
July 8-9.—Huntsville, Ala.—The Interstate Association's tournament, under the auspices of the Huntsville Gun Club. E. R. Matthews, Sec'y.
July 8-10.—Arkansas State Sportsmen's Association's thirteenth annual meeting and tournament, under the auspices of the Jonesboro, Ark., Gun Club, of which Matthews is Sec'y-Treas.
**July, second week.—Memphis, Tenn., Gun Club's tournament.
July 14-16.—The Americus, Ga., second annual interstate target tournament. H. S. McCleskey, Sec'y.
*July 21-22.—Beaver Falls, Pa., Gun Club's tournament. W. R. Keefer, Sec'y.
July 30-Aug. 1.—Viroqua, Wis.—The Interstate Association's tournament, under the auspices of the Viroqua Rod and Gun Club. Dr. R. W. Baldwin, Sec'y.
*Aug. 5-6.—Brownsville, Pa., Rod and Gun Club's tournament.
Aug. 12-15.—Toronto, Ont.—Annual tournament of the Dominion Trapshooting and Game Protective Association. A. W. Throop, Sec'y-Treas., Ottawa, Can.
Aug. 19-20.—Ottawa, Ill.—The Interstate Association's tournament, under the auspices of the Rainmakers' Gun Club. Paul A. Selember, Sec'y.
*Aug. 19-20.—Millvale, Pa., Gun Club's tournament. Wm. Bussler, Sec'y.
Aug. 25-28.—Lake Okoboji, Ia.—Annual Indian tournament. Frank C. Riehl, Chief Scribe.
*Sept. 1-2.—Irwin, Pa., Gun Club's tournament. John Withero, Sec'y.
Sept. 2-3.—Akron, O.—The Interstate Association's tournament, under the auspices of the Akron Gun Club. G. E. Wagoner, Sec'y.
*Sept. 9-10.—Enterprise Gun Club tournament.
*Sept. 23-24.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.

Oct. 20-21.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y
Saturdays.—Chicago.—Garfield Gun Club; grounds W Fifty-second avenue and Monroe street. Dr. J. W. Meek, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.
**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J. Bradfield, Sec'y, Vicksburg, Miss.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

The programme of the Interstate Association's Trapshooting tournament, given for the West Branch Rod and Gun Club, Williamsport, Pa., May 27-29, will be sent to applicants. There are ten programme events each day, alternately 15 and 20 targets, excepting event 8 at 25 targets. Entrance based on ten cents per target. Lunch will be served on the grounds each day. Purses divided 40, 30, 20 and 10 per cent. Targets 2 cents, included in entrance. Guns and ammunition may be forwarded to W. A. Myers, 145 W. Third street. To three low guns each day $5, $3 and $2. Mr. Elmer E. Shaner, secretary-manager of the Interstate Association, will manage the shoot. For further information apply to the secretary, H. A. Dimick, 344 Pine street, Williamsport, Pa.

From the Parkersburg, W. Va., Journal, we take the following: "The ladies of this city are beginning to take up the handling of the shotgun more and more, and it is very probable that within the next year or so an association will be organized for the purpose of getting all the fun possible out of the art of smashing bluerocks. The amount of interest shown by them in this sport exceeds by far that evidenced by the men. There are a number of ladies in this city who are becoming very proficient in breaking moving targets, and the more skillful they become the more enthusiastic are those who are just beginning." And thus mere man finds out, day by day, that he is losing dominion. Is it not time to form a union?

The Aquidneck Gun Club, of Newport, R. I., has issued the catalogue for its shoot to be held on May 30. There are ten programme events, 10, 15 and 20 targets, entrance 60 cents, 90 cents and $1.20. Shooting commences at 10 o'clock. Handicaps 16 to 20yds. The Rose system will govern. Sweepstakes optional. Targets one cent. Highest total of manufacturers' agent, $10. They may shoot for targets only. To first, second and third amateur making highest totals, $20, $10 and $5; to fourth, 100 loaded shells. To lowest, $5. To the shooter making the longest run, a Stevens rifle. Guns and shells to the secretary, Mr. J. S. Coggeshall, 32 Church street, will be delivered on the grounds.

The Sunday Call states that "at a meeting of the Montclair, N. J., Gun Club, May 2, it was decided by unanimous vote to form the club into a stock association. It was voted to issue 250 shares of stock, all of which will be taken by the members. From the funds derived from the sale of stocks the club grounds will be placed in better condition, and additional traps will be added, so that large squads may shoot at the same time.. Next Saturday afternoon the club will hold a match shoot."

The secretary, Chas. G. Grubb, of Pittsburg, writes us that "on April 29, the Board of Control of the Western Pennsylvania Trapshooters' League held a meeting and decided that on and after May 26-27, the team shoot will be shot on the second day in place of the first day, as heretofore. They also decided to abolish 'no bang no bird.' Interstate rules will be used in the future, commencing with the Irwin shoot, May 5-6."

The intercollegiate contest held on the grounds of the Clearview Gun Club, at Darby, Pa., Saturday of last week, was won by Harvard with a score of 200 out of a possible 250. There were five men to a team. The other team scores were: Princeton 197, U. of P. 173, Yale 172. Messrs. Dupont, of Harvard, and Stutesman, of Princeton, tied on 44 for high individual score; in the shoot-off Stutesman won.

On Thursday of last week, Capt. A. W. Money returned to New York from Colorado Springs, Colo., to which place he took his son, Mr. Harold Money, soon after the Grand American Handicap at Kansas City last month. He reports that a decided improvement in Mr. Harold Money's condition has set in since his stay at Colorado Springs, whereat all his friends will heartily rejoice.

"The Trapshooter's Ready Reckoner," published by Forest and Stream Publishing Co., is a work embodying a series of tables showing at a glance the division of purses under all the approved tournament and club conditions of competition, in sweepstakes having entries from one to fifty. It was compiled by Mr. J. C. Clark, secretary Kansas State Sportsmen's Association.

Capt. A. W. Money and Mr. H. "Gates" shot a team match against Messrs. Frank Butler and A. "Hoffman" at Smith Brothers' grounds, Newark, N. J., on Friday of last week, 40 birds per man, 80 birds per team. Capt. Money and Mr. Butler were each high man on their respective teams, 37 out of 40, thus Mr. Butler is now in the crackerjack class.

The programme of the Pacific Coast championship bluerock tournament, May 15-17, its first annual event, given under the auspices of the Ocean Park, Cal., Country Club, enumerates a long list of merchandise prizes and added money. There are several important trophy events. Mr. L. Herzog is the secretary, Los Angeles, Cal.

The Middlesex, Mass., Sportsmen's Club will hold a shoot on Memorial Day, on its grounds at East Lexington. June 17 has been fixed upon as ladies' day. Prize events and team competition will be the main features of the day's shooting. A basket lunch, served in the ample tent, will be a pleasant incident of the gathering.

The Nebraska State shoot for 1904 was fixed to be held at Columbus. At the Nebraska State shoot last week, at Lincoln, Mr. W. H. Heer, of Concordia, was high average. He broke 358 out of a possible 375. Mr. L. E. Reed, of Ohiowa, won the championship medal.

In the final shoot for the Troisdorf medal, at Watson's Park, Chicago, on May 2, there were five contestants who had previously won it in events of the series, namely, Messrs. Rupel, Roll, Barto, Shogren and Bellman. Roll scored 43 and won.

The Cincinnati Gun Club has five sets of traps installed on its grounds, placed in a semi-circle at the outer edge of the boundary of the live-bird traps. This is some of the preparatory arrangements for the great forthcoming tournament of the club.

Capt. C. G. Blandford, of the Ossining, N. Y., Gun Club, informs us that, concerning the amateur State Association championship medal, the conditions are 100 targets, instead of 60 singles and 20 pairs, as at first announced.

The fifth contest of the series at 500 targets between Messrs. Van Ness and Gambell, of Cincinnati, O., was finished on May 2. Each contest was at 100 targets. Van Ness broke 442; Gambell broke 437.

Mr. Leonard R. Finletter, in the shoot-off of the tie of the Riverton Gun Club's April cup, on the club's grounds, near Philadelphia, was the successful contestant. He killed 13 straight.

At the Colt Gun Club shoot, May 2, Hartford, Conn., the main contest was the fifth medal shoot, thirteen contestants. It was won by Mr. E. Hubbell, with a score of 23 out of 25.

In a team match, five men on a side, between the Williamstown and North Adams, Mass., Gun Clubs, April 29, North Adams scored 104 to 84. Each man shot at 25 targets.

The Union Gun Club, of New Jersey, will hold shoots on May 16, 23 and 30, on the grounds of the Boiling Springs Gun Club, Rutherford, N. J.

Mr. Irby Bennett, energetic and urbane as usual, was a visitor in New York last week.

BERNARD WATERS.

Colt Gun Club.

HARTFORD, Conn.—The fifth medal shoot of the Colt Gun Club was held in the afternoon of May 2. The club medal, a trophy always eagerly contested for, was won by Mr. Hubbell with a score of 23. The winner is proud of the fact that this score has never before been equalled at the present traps. Five new members were added, with prospects of many more, and the club is in a flourishing condition. The full scores were:

Events:	*	1	2	3	4	Events:	*	1	2	3	4
Targets:	25	25	25	25	25	Targets:	25	25	25	25	25

Field	17	11	13	..	..						

R. MCFETRIDGE, Sec'y.

Winchester Gun Club.

DETROIT, Mich.—At the regular shoot, May 2, the weather was favorable for good scores, and some good shooting was done. The class medal winners were Guthard, Ford and Leggett, A. B and C respectively.

The handicaps are for the trophy event, the sixth; all the rest except the fourth (which was from the 18yd. mark) being at 16yds. The fifth was doubles, and the last the club event. Following are the scores:

Events:	1	2	3	4	5	6	7
Targets:	10	10	15	10	10	25	25
Guthard, 18	7	9	14	8	..	20	23

L. W. GRAVES, Sec'y.

Dover Sportsmen's Association.

DOVER, N. H., April 24.—Although the local gun club shot upon their own grounds on April 25, Fast Day, yet we had a better attendance than we expected. Maine was represented by Mr. Darton and Mr. Adams, from Portland, and Mr. Drew from Berwie.

The conditions for shooting were not the best, the varying attitudes and extreme angles made hitting difficult. Some good scores were made by the best shots, but the most interesting was a match by Darton and Corson at 50 targets. Corson broke 44 targets, and won, though it is but fair to say that Darton has not shot any since December. Mr. Corson had the best average for the day.

D. W. HALLAM, Sec'y.

Nebraska State Shoot.

LINCOLN, Neb., April 30.—The twenty-seventh annual tournament of the Nebraska State Sportsmen's Association closed to-day.

The attendance was good; twenty-one shot through the two days' programme. The second day's programme was not shot, owing to rain and snow storms. On the last day the added money was doubled, and 3½ cents each was charged for targets.

At the meeting of the Association, held on Wednesday evening, Columbus was selected as the place for holding the next meeting. Dan Bray was elected President; Gus Sievers, Vice-President, and Gus Schroeder, Secretary and Treasurer. All reside in Columbus. The trade was represented by Norton, Kirby, Bates, Riehl, Budd, Carter and Sharp. The first five shot for targets only.

W. H. Heer, of Concordia, won high average, scoring 358 out of a possible 375. L. E. Reid, of Ohiowa, won the championship medal; he was tied by Linderman and B.-27, and in the shoot-off broke 24 out of a possible 25 and won by two targets over B-27.

First Day, April 28.

Events:	1	2	3	4	5	6	7	8	9	10	11	Total

Norfolk Gun Club.

NORFOLK, Va.—The weather was delightfully spring-like at the Norfolk Gun Club's opening shoot of the season, on its grounds, April 28. The main event was at 35 targets, the summary of which follows: Gallagher 25, Taylor 25, Talbot 25, Agelasto 18, Phlegar 18, Gunther 16.

ON LONG ISLAND.

Interstate Park Farewell.

Interstate Park, L. I., April 29.—The Interstate Park Farewell tournament, held to-day, was well attended. This park, so conspicuously identified with trapshooting history within the past few years, will be closed permanently to trapshooting, or, rather, it is understood that April 30 was the day fixed upon for such closing. It was also a testimonial benefit to Mr. Henry Whitehouse, who has long been identified with the park, and who always exceeded his best endeavor to please its patrons. A pocketbook containing upward of $70, contributed by the shooters present, was given to Mr. Whitehouse, Mr. C. A. Lockwood making the presentation speech in behalf of the donors.

Nos. 1, 2 and 3 were regular programme events; Nos. 4, 5 and 6 were extra events. Nos. 1 and 2 were each at 15 targets, $1.25 entrance; No. 3 was at 20 targets, $1.50 entrance.

The main event, at 50 targets, $2.50 entrance, was shot in two parts, 25 targets each. The money in this event was governed by high guns, 40, 30, 20 and 10 per cent.

The competition was close. Mr. Sim Glover, of New York, and Mr. T. B. Rider, of Freeport, L. I., tied on 47, for the cup and first money. They agreed to divide the money and shoot off for the cup. They tied on 23 out of 25 in the first shoot-off, and Mr. Rider broke 23 to Glover's 22 in the second shoot-off, thereby winning the cup. He was heartily congratulated by every one present. In this contest between the professional and the amateur, all the sentiment seemed to be with the amateur. The scores follow:

The managing committee had the following members: Chairman, C. A. Lockwood, Jamaica; John S. Wright, 318 Broadway, and J. Charlton, 116 Liberty street, New York.

Brooklyn Gun Club.

Brooklyn, L. I., May 2.—There were seventeen contestants at the Brooklyn Gun Club's shoot to-day. A stiff wind depressed the flights of the targets, making shooting very difficult. It was a busy afternoon, nevertheless. Considering the high wind, some of the scores were excellent.

Targets:	10	15	25	25	15	10	25	25	25	20	10

JOHN S. WRIGHT, Manager.

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., April 28.—Mr. E. Emmons, of Royersford, Pa., was the only contestant who killed straight in the handicap event, 20 birds, $20, class shooting, three moneys, given by the Keystone Shooting League. Three tied on 19, namely, Messrs. I. W. Budd, of Pemberton, N. J.; Ed. Johnson, of Atlantic City, and L. Smith.

The weather conditions were unfavorable for comfort and good shooting. There was no wind to help the birds, though the latter were good.

Emmons, 29	22222222222222212222—20
Budd, 30	121*2212222121211211—19
Johnson, 30	22220222222221222222—19
Smith, 30	22222112222222220222—19
Rothaeker, 29	02221222222222222202—18
Geikler, 27	12121202212202221212—18
Lamb, 28	02111211112*22222122—18
Gavin, 27	22222221120211222222*—13
Morris, 28	22210222222022002222—16
Cella, 27	02010202222102111202—14
Hibbard, 26	00100002012220101022—10

Miss-and-out, $3:

Johnson	2222222222	Lamb	20
Geikler	2222222220	Budd	0
Smith	1122222222	Lamb	20
Gavin	2221122222	Morris	222222222*
Cella	2210	Hibbard	20
Budd	0		

May 2.—A stiff wind and good birds taxed the skill of the contestants of the Keystone Shooting League shoot to-day.

Of the nine contestants in the officers' trophy event, Budd was the only one who killed straight.

A match at 50 live birds between Messrs. J. Morris, of Philadelphia, and A. J. Miller, of Camden, was won by the former, 45 to 40. They will shoot another race at 50 birds next Saturday. The scores were:

J Morris	22222222222222222222022022222122222222222022202210—45
A J Miller	02102222022222222202222001222222*21212022021110111—40

Officers' trophy shoot, 15 birds, 28yds. rise:

Budd	121211222211212—15	Rothacker	0122201022222121—12
Harrison	122121122221021—14	Miller	2222222022022102—12
Harvey	2222222022202222—13	Bird	1201102220111111—12
Johnson	2222202222222202—13	Bucknell	02*122122202020—10

Grassman nd Geikler withdrew.

Club handicap, 10 live birds, handicap rise:

Rothacker	2222222222—10	Bucknell	2102220222— 8
Winchester	2222222222—10	Bird	1200111101— 7

Budd	2212122210— 9	Gifford	1220120020— 6
Harvey	0222222222— 9		

Trap at Watson's Park.

CHICAGO, Ill., May 2.—All those having won the Troisdorf target medal during last year and this year shot the ties off here to-day at 50 targets each, to see who would become the holder of the medal. Rupel 41, Roll 43, Barto 38, Shogren 33, Bellman 39.

Sweeps that followed:

Targets:	25	15	10	10	Targets:	25	15	10	10
Rupel	21	13	8	7	Shogren	17	12	8	6
Roll	20	12	7	9	Bellman	18	..	..	..
Barto	23	13	10	5					

All sweeps $1 entrance, targets extra. No. 4 was at 5 pairs. Rupel and Roll shot at 19yds.; the rest at 16. WATSON.

Trap Around Reading.

READING, Pa., April 27.—The Independent Gun Club leased the shooting grounds in the race track enclosure at the Three-Mile House, for this season, and will hold a series of shoots. The first will take place on Memorial Day. A magautrap is being installed.

Mahanoy City, Pa., April 25.—Articles of agreement have been signed for a 13-live bird match for $100 a side between John Donohoe, of Coles, and William Lloyd, of Morea, the contest to take place at Mahanoy City Park, Saturday, May 16.

Bethlehem, Pa., April 22.—In a competitive live-bird shoot at the traps on Saeger's farm to-day Arthur Beahm won, killing 8 out of 10 birds. C. Brader killed 6, H. Saeger and R. Breisch 5, and Q. Fehr 4.

Lebanon, Pa., April 23.—Fred Ehrhorn defeated Job Weaver in a live-bird match for $200 a side at East Lebanon. Ehrhorn killed 8 of his quota of 12, while Weaver grassed 6.

Lebanon, Pa., April 30.—Fred Haddon defeated Fred Ehrhorn in a shooting match at 50 bluerock targets each, by the score of 32 to 26, on the Keystone Gun Club grounds at East Lebanon. They shot for a $20 purse.

Reading, Pa., April 29.—James Wertz, of Temple, defeated George Kerr, of this city, in a live-bird shooting match to-day on the Spring Valley grounds, this city, by the score of 47 to 43. Each man shot at 50 live birds, $50 a side.

Reading, Pa., April 26.—The Spring Valley Shooting Association, of this city, elected the following as delegates to the annual convention and State shoot of the Pennsylvania State Sportsmen's Association, to be held May 19-23 at Philadelphia:

Delegates: Arthur A. Finke, Elmer E. Rutter and John A. Esterly. Alternate: J. Boyd Mishler.

The delegates were instructed to vote for York for the 1904 State shoot. DUSTER.

Cincinnati Gun Club.

CINNCINNATI, O., April 25.—The Cincinnati Gun Club prize contest of to-day had twenty-three contestants. A steady rain fell while the last 35 targets were shot at. The scores: Gambell (19) 45, Medico (18) 45, Linn (16) 42, J. B. (16) 41, R. Trimble (21) 41, Capt. (16) 41, Du Bray (16) 41, Faran (17) 41, Harris (19) 41, Maynard (19) 41, Ahlers (19) 40, Joe H. (16) 39, Coleman (18) 37, McB. (16) 37, Block (18) 36, Corry (18) 36, Nye (18) 34, Lindsley (17) 34, Falk (16) 33, Ackley (16) 32, Herman (16) 31, Jack (16) 31, Silas Green (16) 24.

Third match of race at 500 targets, April 18:

Targets:	20	20	20	20	20	
Van Ness	20	20	17	17	17	17—91
Gambell	17	19	18	16	17	17—87

Fourth race, same, April 25:

Targets:	20	20	20	20	20	
Van Ness	18	18	18	19	19	19—92
Gambell	16	16	18	19	20	20—89

Totals to date:

	1st race.	2d race.	3d race.	4th race.	Total.
Van Ness	89	85	91	92	357
Gambell	87	89	87	89	352

May 2.—The weather was very windy. The Troisdorf medal event had twenty-two contestants, of which, Mr. Ed. Rike, at 16yds., was high with 43; Mr. A. Gambell, at 19yds., was second with 41 out of 50. The scores: Rike (16) 43, Gambell (19) 41, Harris (16) 40, Faran (16) 39, Ahlers (20) 38, Ackley (17) 37, Block (17) 37, Anderson (16) 36, Nye (16) 36, McB. (18) 35, Maynard (18) 35, J. B. (17) 35, Herman (16) 35, Steinman (16) 35, Sunderbruch (16) 34, Barker (18) 34, Falk (18) 33, Corry (16) 33, Willie (16) 33, Medico (18) 32, Williams (20) 28, Jack (16) 26.

Five scores in 500-target race:

Van Ness	89	85	91	92	85—442
Gambell	87	89	87	89	85—437

Team race, 50 targets, 16yds.:

Gambell 40, Rike 44, Medico 40, Faran 35, Barker 35, Nye 37, McB. 32, Jack 40, Corry 31, Willie 34; total 368.

Ahlers 40, Harris 42, Coleman 37, Maynard 33, Block 42, Anderson 39, J. B. 27, Herman 34, Ackley 30, Steinman 42; total 366.

Intercollegiate Shoot.

May 2.—The Intercollegiate shoot between five-man teams of Harvard, Princeton, U. of Pennsylvania, and Yale, held at Darby, Pa., on the grounds of the Clearview Gun Club, to-day, was won by Harvard with a score of 200. Each man shot at 50 targets, unknown angles. Dupont and Stutesman tied on 44, high score. In the shoot-off at 25 targets, Stutesman won, 23 to 18. Highest run was a tie between Dupont and Motter, the Harvard and Yale captains. The scores follow:

Harvard.		Pennsylvania.	
Dupont, captain	44	Loudin, captain	39
Marsalis	39	Robertson	31
Ingalls	42	Henderson	32
Corbett	37	Adams	34
Bancroft	38—200	Perkins	41—173
Princeton.		**Yale.**	
Archer, eaptain	37	Motter, captain	42
Pardoe	35	Rosenthal	36
Gaines	39	Sturgis	28
Stutesman	44	Hall	29
Munn	42—197	Dupuy	37—172

As in the match of the day before between Harvard and Pennsylvania the Crimson's victory was due mainly to the very creditable work of their captain, E. E. Dupont, who broke 32 out of his last 33, making a run of 28 straight; F. Ingalls also helped to keep their score up.

Of the last four intercollegiate matches Harvard has won two (and was one bird behind the winners in each of the others). Princeton one, and Yale one, while in the dual shoots during this period Harvard has defeated Yale once, and Pennsylvania twice; and Princeton has also defeated the Quakers. The latter, however, deserve great eredit for the pluck they have always shown under what were often very discouraging conditions.

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., April 30.—Our shooting day has been changed from Saturday to Thursday. To-day's shoot coming the day following our special meeting, at which time the by-laws were amended making the above change, all the members could not be notified, and the attendance was small. The change is expected to meet with universal satisfaction with the shooters, and bring out a larger attendance than we have been able to get on Saturdays.

The Marshall cup this week was won by Mr. Marshall with a score of 24. Scores in the Marshall cup event: Marshall (5) 24, Spencer (2) 15, Smith (4) 20, Briggs (5) 23, Fenn (3) 18, Winans (3) 18, Du Bois (3) 18, Hoctor (2) 19, Adriance (0) 21.

Following are the scores in the other events:

Events:	1	2	3	4	5	6	7	8
Targets:	10	10	10	10	10	15	15	15
Hans	8	..	8	..	8	11	..	12

DUB.

Ossining Gun Club.

OSSINING, N. Y., May 2.—At the regular Saturday shoot of the Ossining Gun Club to-day we were glad to welcome as guest Mr. W. A. Moulton, Jr., of Minneapolis. Mr. Moulton had never shot over the grounds before, and was using a strange gun. Considering these handicaps, his scores show up very well. Event No. 4 was "quail shooting," walking through the grass toward the magautrap house, gun below the elbow, waiting for a bird to jump. This is sport worth trying. No. 6 was at 5 pairs:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	10	5	15	10	10	10	10
Hans	5	8	10	..	9	4	7	9	6

A Aithison	..	..	..	3	..	..	..	..	..

C. G. B.

IN NEW JERSEY.

Hell Gate Gun Club.

April 28.- Col. John H. Voss, big chief of the Hell Gate Gun Club's tribe, was the only one of the twenty-seven members that faced the traps to grass all his birds at the regular monthly shoot of that organization, held at John Hen's grounds, Carlstadt, N. J., on Tuesday of last week. Dennis, Muench, Foster, Woelfel and Gardella scored 9 each, while Schorty, Wellbrock, Meckel, Baudendistel, Dannefelser, Albert and Kreeb finished third with 8 kills each.

The birds were a fair lot, but owing to the warm weather the scare ropes were much in evidence. The scores:

	Yards.	Points.	
F Trostel	28	6½	2001211001— 6
M F Dennis	26	5	2112111011— 9

Events 7 and 9 were at 20yds. J. L. H., Sec'y.

North River Gun Club.

Edgewater, N. J., May 2.—Pleasantly cool weather and a strong wind were the weather conditions prevailing during the shoot of the North River Gun Club to-day. The wind was about 12 o'clock; that is, it blew toward the shooters when facing the traps. The targets flew high and erratic many times, owing to the wind, and good scores were a matter of extreme difficulty to make. The series of cash prize shoots was begun to-day.

There were twelve contestants present to-day. Mr. Gus Greiff's gun was too high at the comb, and as a consequence kicked him in the cheek at every shot, making accurate shooting impossible. The grounds are pleasantly situated at Edgewater, on the west shore of the Hudson River, and are reached from New York via Fort Lee Ferry from 125th street. The scores follow:

Targets:	15	10	10	15	10	10	10	10	25	10
Greiff	12	7	6	8	4	..	..	..	6	5
Morrison	10	6	4	12	2	..	5	..	19	5

Franklin Gun Club.

May 3.—The Franklin Gun Club, at its shoot to-day, had ten shooters. The following contestants shot at 30 targets: E. Black broke 8, Williams 19, Right 7, A. Right 12, Kishpaw 11. Williams shot at 10 and broke 5; W. Pope shot at 11, broke 3; H. Pope shot at 19, broke 14; C. Ramage shot at 10, broke 5; F. Ramage shot at 10, broke 1.

Trap at Smith Brothers' Grounds.

Newark, N. J., May 1.—The match between Messrs. Money and Gates on the one hand and Messrs. Hoffman and Butler, shot at Smith Brothers, 30yds., 40 birds each, was won by the former, 72 to 70. The birds were first rate, and a strong wind added to the difficulties of the competition. A dinner and the price of the birds was the subject of difference.

Pattenburg Gun Club.

Pattenburg, N. J., May 4.—The Easton boys did good work. A very pleasant match was witnessed Saturday, the 2d inst., between the Pattenburg Gun Club and the Independent Gun Club, of Easton. The Pattenburg boys, shooting different positions and being new in the business, did not show much of a score, but showed good courage, which will be to their credit in future matches. The match was a contest for the suppers, the losing side paying for his friend's supper. A first-class supper was supplied by Papa Milbers, and an exceedingly good time was had by all. Scores: Markley 17, N. Bonnell 12, J. Teidy 20, T. Williams 14, G. Richards 15, N. Stamets 15, Hansman 22, C. Huff 10, T. Fredericks 24. H. Gane 7, Coken 16, S. Gane 15, O. Sked 18, Holbrook 11, Ivey 15, G. Hann 14, W. H. Maurer 21, H. P. Milbern 19, H. E. S. 24, L. Kitchen 15.

C. W. Bonnell, Sec'y.

Union Gun Club.

Rutherford, N. J., May 2.—There was a good attendance, eighteen shooters, at the Union Gun Club's weekly competition. Ten events were shot, 15 and 25 targets, a total of 200 for the programme. Apgar made high average, 170 out of 200. The weather was pleasant, but a high wind made difficult shooting. The club will hold shoots on every Saturday of this month. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	Total
Targets:	25	25	15	15	15	15	15	25	25	25	Broke.

Glen Rock Tournament.

Glen Rock, Pa., May 4.—The following are the scores made at the Glen Rock Gun Club shoot, held May 1-2. The first day the shooting was very hard, on account of a very strong wind, making the targets very erratic. Storr was high man, missing only 18 targets out of 200, on the first day. Krueger, of Lancaster, was high man on the second day, breaking 192 out of a possible 200; he made a run of 98, breaking the ground record.

May 1, First Day.

Events:	1	2	3	4	5	6	7	8	9	10	11	12

New Publications.

"The Waterfowl Family."

The volume of the "American Sportsman's Library," which refers to the taking of those water fowl which are interesting to gunners, is not happily titled. "The Waterfowl Family" is too broad, for of course waterfowl in the dictionary sense of the term covers many families, and a half dozen orders of birds not mentioned in this book. The volume is devoted to duck shooting, rail shooting, and shore bird shooting, by Dr. L. C. Sanford, with three chapters on the waterfowl of the Pacific Coast by T. S. Van Dyke, and eight pages of "Diagnoses of Families and Genera" presumably by Dr. L. B. Bishop, whose name appears as one of the authors on the title page, though it is not found in the table of contents nor at the head of either of the three principal divisions of the volume.

The book is made up rather largely of interesting natural history matter concerning the birds described in it. There is a brief Introductory, giving some of the characteristics of the duck family; about sixty pages are devoted to various forms of the shooting and capture of ducks, seven pages to the decrease of wildfowl and about 130 to descriptions and brief life histories of the various fresh-water and salt-water ducks. Chapter V. treats of goose shooting, to which ten and a half pages are given; the rest being devoted to descriptions of the different species. Chapter VI. tells of the swans and their shooting. Chapter VII. gives a very brief account of rail shooting, and describes the different rails and their near allies, which have been taken on this continent. The remaining seven chapters of the book deal with shore bird shooting, the shooting being entirely subordinated to the natural history side of the subject, as is very proper. In fact, the shooting occupies less than fourteen of the nearly two hundred pages of this section of the book.

Mr. Van Dyke's contribution to the volume covers about sixty pages, and treats broadly of wildfowl and shore bird shooting on the Pacific Coast. It is attractively written, but, as may be supposed, is very general in character.

"Diagnoses of Families and Genera" are useful, and will repay study. There is a good index.

The book is fully illustrated, and most of the drawings are admirable. Mr. Fuertes' drawings of birds leave nothing to be desired. The two or three outdoor scenes by Martin Justice and A. B. Frost are also capital, but we could get along without some of the pictures by Mr. Charles Livingston Bull.

The volume is a useful one, and will have a place in many a library, but the treatment scarcely seems adequate to the subject. Price, $2.

PUBLISHERS' DEPARTMENT.

Peanuts and How they Grow.

The peanut has a national reputation; in fact, it is known the world over. Coney Island, Revere Beach or the hundreds of summer excursion grounds would not be complete if there were not the peanut and the peanut venders. The circus would lose a part of its attraction if the hot, parched peanuts were not on sale. They are mostly grown in the States of Virginia and North Carolina, on the Seaboard Air Line Railway, the great through line between New York and Jacksonville, Fla. The peanuts are being grown to some extent by the Northern immigrants who have settled at Pinebluff, N. C., the new winter health resort located just six miles south of Southern Pines, the famous winter resort, where thousands of Northerners go each winter. The peanut grows on a little plant that looks like it might be a cross between the sweet potato and tomato vine. The peanut, like the tomato, has a blossom on the vine; from the blossom shoots downward a needle-like branch that enters the ground, and from the tip end soon after it enters the soil begins to form a little soft oblong pod that finally develops into the full grown peanut. The vine spreads out on the ground somewhat similar to a cucumber vine, covering, however, a space much smaller than the cucumber, only about two feet in diameter. The settlers at Pinebluff have sent up North, specimen vines of the peanuts to their friends, and they have been shown around with much interest; and recently there has been a demand for the vine from the schools up North so as to show an object lesson to the children, and many of the vines have been furnished the schools by Mr. John T. Patrick, agent of the Seaboard Air Line Railway, located at Pinebluff. A demand has been made on him by the schools for cotton plants as they grow, and rice as well as peanuts, and he has promptly responded to their demand; in fact, Mr. Patrick has added many interesting specimens to the schools and private collections North. He has a private collection at Pinebluff worth going to see.—*Adv.*

Interchangeable 1,000-Mile Refund Tickets.

Commencing June 1, 1903, interchangeable 1,000-Mile Refund tickets will be placed on sale, limited to one year from date of issue, good only for transportation of the owner, with usual free allowance of 150 pounds baggage, over any of the following lines:

Baltimore & Ohio Railroad. (Between all points east of Ohio River, and between Pittsburg and Kane. Also to and from points on Philadelphia & Reading Railway, and Central Railroad of New Jersey, between Philadelphia and New York.)

Chesapeake & Ohio Railway. (East of and including Huntingdon.)

Delaware, Lackawanna & Western Railroad.

Erie Railroad. (East of and including Jamestown and Suspension Bridge.)

Lehigh Valley Railroad.

Pennsylvania Railroad.

These tickets will be sold at rate of $30 each, subject to refund of $10 on surrender of cover to Trunk Lines Mileage Ticket Bureau, No. 143 Liberty street, New York, at any time within eighteen months from date of purchase.

This form of ticket will be issued in deference to requests of numerous patrons of the lines in interest desiring one ticket good over several lines instead of having to provide themselves as at present with a separate ticket for each line they desire to use.

Agents at principal stations of the railroads named above will have these tickets on sale and give all further information regarding them that may be required.—*Adv.*

Concerning Proctor's Theaters.

The scheme of producing complete plays with strong, refined vaudeville between the acts, to avoid the long waits one has to endure in the average theater, has been worked successfully from the theoretical stage to a now practical form of entertainment. The old idea of producing stock plays has now become passé, and the new form is rapidly becoming popular at all of Mr. Proctor's houses devoted to this idea. The theater opens say at 1 o'clock. Six acts of vaudeville are presented, and then comes the first act of the play, followed by a good specialty which works before the front curtain and entertains the audience while the stage is being set for the second act. This policy is maintained throughout the play until the fall of the curtain upon the last act of the comedy or drama, whereupon the vaudeville section is put in motion again until the evening performance. Thus it may be seen that if you drop into one of the Proctor houses you are assured of entertainment of the proper sort at any hour of the day between 1 P. M. and 11 P. M.

Michigan is well known as one of the finest fishing resorts of the land, and game fish may be had there in perhaps greater variety and abundance than anywhere else in the United States. Much that is interesting about this region is told in the beautiful booklet entitled "Where To Go Fishing," issued by the Grand Rapids & Indiana Railway. This booklet is notable for its three beautiful colored pictures of brook trout, rainbow trout and small-mouthed black bass. It is very fully illustrated by half-tones of scenes and incidents along the line of the road, and beside contains a map that will be very useful to any one contemplating the trip to Michigan.

W. H. Heer, amateur shooter of Concordia, Kas., won the Kansas State championship with U. M. C. Arrow shells, April 21, scoring 88 out of 90. April 24, R. O. Heikes won high average at Troy, Ohio, by a score of 361 out of 400 flying targets. F. P. Ryder, using U. M. C. Arrow shells in the shoot-off for the Farewell Cup at Interstate Park, April 29, won a silver loving cup for first average, with a score of 93 out of 100 flying targets.

"Brush, Stubble and Marsh" is the title of an admirably illustrated booklet issued by E. I. du Pont de Nemours & Co., of Wilmington, Del., for free distribution to applicants. The full-page illustrations of upland game birds and water fowl are the superlative of artistic excellence. Full-page illustrations of a setter and a pointer round out the theme.

"The Trapshoter's Ready Reckoner" is a necessary part of the equipment of every secretary of a gun club. By turning over its leaves the gunner or score-keeper can tell at once just how the different money prizes should be divided, and a vast amount of labor and uncertainty is avoided, while time is gained and general satisfaction guaranteed. Price 25 cents.—*Adv.*

Mr. W. R. Crosby, at the Paducah, Ky., tournament, April 28 and 29, won high average. On the first day he broke 169 out of 175; second day, 173 out of 175. On the second day he made a run of 109 straight. His average for the two days was one target short of 98 per cent. He used 44 grains of E. C. No. 1.

"The Trapshooter's Ready Reckoner" contains a series of tables showing the divisions of the purses at shoots having from one to fifty events, and events from ten to fifty targets, at the usual amounts of entrance and targets. Price 25 cents.

Spratts Patent (America), Limited, have been awarded the contract to bench, feed and fit up the Ladies' Kennel Association summer show, May 29-30. Spratts cakes will be used at the Wissahickon, Pa., open-air show.

The attention of lovers of good bass fishing is called to the advertisement of the York Lake property on the Delaware River in another column of this issue.—*Adv.*

New Advertisements.

The steamers of the Red Cross Line, which during spring, summer and autumn ply between New York and Halifax, N. S., and St. John's, N. F., offer an easy and delightful method of reaching Nova Scotia or Newfoundland, which is likely to be taken advantage of by many sportsmen. To one who has had nearly a year of the struggle of business or professional life, there is no better preparation for the different life of camp than a few days' rest on the ocean.

The large Scotch estate offered by Messrs. Lidderdale & Gillespie in another column should appeal strongly to the American who can afford himself the luxury of 3,000 acres. The place yields annually about 1,400 birds, of which 600 are grouse, and there are rabbits in great numbers. The opportunity seems well worth looking into.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

VOL. LX.—No. 20. No. 346 BROADWAY, NEW YORK.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1903.—No. IV.

MASSACHUSETTS.

CHAP. 206, Laws 1903, amends Sec. 2 of Chap 92, Revised Laws, to read: Whoever takes, kills or has in possession, or buys, sells or offers for sale, a woodcock or ruffed grouse, commonly called partridge, between the first day of December and the first day of October following, whenever or wherever such bird may have been taken or killed, or whoever at any time buys, sells, offers for sale or has in possession for sale a woodcock or ruffed grouse, commonly called partridge, whenever or wherever such bird may have been taken or killed, shall be punished by a fine of twenty dollars for each bird.

SUNDAY BASEBALL AND FISHING.

SUNDAY baseball is engaging the attention of various authorities in New Jersey and New York. In New Jersey a grand jury has been instructed by Judge Van Syckel that it would be its duty to indict the police from chief down unless ball playing were stopped on Sunday; and this was followed last Sunday by the arrest of many players.

In New York, on the contrary, the courts are inclined to be more lenient, at least with private and "quiet" games. In a recent New York city case, Magistrate Duell dismissed a complaint against a ball player, who had been arrested at the instance of the Sabbath Committee on the charge of interfering with the repose and religious liberty of the day. In the course of his decision the magistrate said:

"Many acts on Sunday are now tolerated as inoffensive that were punished severely when the present statute was originally enacted. Fishing is one. To engage therein along our river front fifty and one hundred years ago was to invite arrest, conviction and fines, as appears by the police court records of those times. Now, thousands may be found each Sunday at favorite points along the river, and they fish from sunrise to sunset without molestation; large steamers go to the fishing banks on Sunday, carrying many thousands whose patronage is solicited by advertisements in the daily papers; they are not disturbed. Carriage, bicycle and automobile riding and century runs may be pursued with immunity under all circumstances and during all hours of the day, so long as the statutory speed limit is not exceeded, which is the same on Sunday as on other days.

"Sunday excursion trains and steamboats take multitudes from our city during the spring, summer and fall for all kinds of fun and frolic, including baseball, pitching quoits, throwing hammers, playing tennis and croquet, swimming, bathing and unrestrained picnicking. Golf players go by thousands to nearby links on Sunday for enjoyment and exercise. Now each of these forms of amusement is as much within the inhibition of the law as baseball playing, and locality, whether in the city or country, is not taken into account by the law which is of universal application throughout the State."

This is the Sunday of New York city. As far as the fishing is concerned, the law which forbids it is not enforced. The police would not dream of interfering with the Sunday fisherman. The sport is essentially quiet, it is pursued in places remote from any persons who might be disturbed by it, even were it as boisterous as Sunday baseball. The playing of baseball as it is played in New York city vacant lots on Sunday is often attended with clamor, profanity and obscenity, and no person who had ever been within hearing of it, whether magistrate or unofficial citizen, could rightly characterize such playing as anything other than an outrageous nuisance.

TAXIDERMISTS AND GAME HEADS.

IN view of the extremely small number of wild buffalo in existence, the value which they possess and the powerful temptation to kill the game for sale to taxidermists, we suggested recently that some system should be adopted by which taxidermists might be required to register the buffalo heads they offered for sale. It is a satisfaction to record that restrictions of this character have been adopted by several States this year, with respect not only to buffalo, but other game as well. In Wyoming the new law provides that all professional taxidermists who mount specimens of game animals, birds or fish for profit, shall be required to post in a conspicuous place in their shops a list of the names of all persons who furnish them with raw or unmounted specimens, and this list, together with all unmounted specimens in their possession they are required to exhibit to the State game warden or his assistant upon request.

Montana requires taxidermists to take out a license, paying a fee of $25 annually, and on the first day of the month every taxidermist must make a written report to the State game and fish warden of all the articles of game, the kind and number of each, by whom owned, and the residence of the owner, received during the past month; also of all the articles of game shipped, and when and where shipped during the month, together with the amount and kind of each on hand on the last day of the month, by whom owned and the owner's address.

Of similar character is the Idaho law which forbids entirely the taking of moose, buffalo, antelope and caribou at any time, and restricts killing and possession of other game in a season to "one elk, two deer, one mountain sheep, one ibex, one mountain goat," and provides that these limitations shall not apply to a taxidermist "taking and having in his possession the heads or skins of birds or animals for the purpose of preserving the same when such heads or skins are accompanied by an affidavit showing that they were taken from birds or animals killed in compliance with the provisions of the act." Another Idaho law makes possession of any buffalo or bison or of a part of one prima facie evidence that the possessor took it contrary to law.

It is clear that if such adequate regulations as those here outlined shall be enforced with diligence by the authorities, the situation thus created is a vast improvement over the old system of laxity under which was maintained a shameless traffic in the heads of buffalo killed by poachers. Such certification as to the origin of game animals and birds might well be of wide application. What is good for the buffalo and the mountain sheep would be good, too, for the heath hen of Martha's Vineyard. We have been so lavish of our wild life and so thoughtless and free in exterminating it, that we are now ready to adopt any means, no matter how hardly they may press upon the individual, which will save the remnants.

PUBLIC FISH AND PRIVATE WATERS.

COLD CREEK, a trout stream in Watertown, N. Y., has been stocked with fry from the State hatcheries for several years, and the fishing in it has been open to the public. Some of the pasture lands through which the creek runs have recently been acquired by new owners, who have posted their lands and shut out the public from these reaches of the stream, and a special deputy sheriff has been charged with the duty of keeping fishermen out. This action has naturally aroused protests from the debarred anglers. A correspondent writes:

"Those of us who have been interested in the planting of trout in our streams are indignant at such action, and we wish to know if there is any remedy. We fear that if one farmer can close his creek, containing State trout, more can and will, and we do not believe it is the intention of the fish laws to furnish State trout for private waters."

Certainly it is not the intention of the State to stock private streams. Theoretically all fish are deposited in public waters, and applicants for fry are required to specify that the waters for which they secure the stock are open to the public. In fact, no doubt many persons do get fish for their own private waters by deceiving the commissioners, describing these waters as public. The average conscience does not hesitate to deceive the State, and to get something for nothing where dealings with the State are concerned. Men who hold places of responsibility and trust in the business world will lie without any squeamishness when it comes to asking for fish from the State hatcheries. There was a president of one of the large life insurance companies who for years obtained trout fry from the commission by signing the usual blank declaring that the waters for which they were intended were public, when, as a matter of fact, they were put into his private pond, which was surrounded by a high fence through which the public could with difficulty see the water, much less get to it and fish in it. To defeat such schemers, the Legislature some years ago adopted a law providing that all waters stocked by the Fish Commission should thereafter be open to public fishing. This, however, went too far, since it invaded the rights of property and violated the landowners' privilege of the exclusive occupancy and use of his own land, and it was in this respect unconstitutional.

Under the existing system no remedy is suggested for the Watertown anglers who have been shut out from Cold Creek. In Massachusetts complications of this character are obviated by a requirement that before a stream shall be stocked from the State hatcheries the owner or owners shall agree that the waters shall be open to the public after the expiration of three years following the stocking, during which all fishing is forbidden. A clause of this character might well be incorporated into the application blanks used by the New York Commission and others, and the contract should be made so binding as to run with the land, and apply in such cases as this of Cold Creek, where new proprietors come into possession.

As for the owners of private streams, they should procure their fry from private trout breeders, just as they buy their poultry and hogs from private breeders. There is no good reason why the taxpayers should contribute free fish for the individual citizen, even though he be greedy enough and dishonest enough to attempt to secure them.

We regret to learn of the death of Dr. W. O. Blaisdell at his home in Macomb, Ill. Dr. Blaisdell's name had long been familiar to the readers of FOREST AND STREAM by his frequent communications to its columns. Among the last of these was a charming account of a family reunion in which he had participated at the old home in East Orland, Me., with fishing experiences on Toddy Lake. "I hope to be there again another summer," the story concluded. Dr. Blaisdell was conspicuous for his public spirit; never seeking political office, he was always foremost in every enterprise to advance the interest of the community, and his life was such that he was endeared in a peculiar degree to the people of Macomb. It will be recalled that Dr. Blaisdell was greatly interested in the introduction of foreign game birds. He imported a number of chuckor partridges and other species from India. At his instance the Legislature passed a bill for the protection of the birds, which Gov. Altgeld vetoed, assigning as his reason that there were too many trivial things already classed as crimes, and he could not assent to the Legislature making the killing of these birds an offense. As the result showed, the law was not essential in this particular case, for the birds did not survive the transportation from India to Illinois.

From the Yellowstone Park comes the melancholy news of the death of Uncle John Yancey, for many years a picturesque figure of the eastern portion of the Park, where he had a lease and kept a stopping place for travelers. Uncle John was what the newspapers call one of the pioneers in the Park, and came there, if we recollect aright, about twenty-five years ago. All travelers to and from Cooke City—which years ago was so famous as the coming mining center of the West and is now so completely forgotten—stopped at Yancey's, as did also many Park tourists as well as people who had been hunting to the east of the Park, and wished to go out to the railroad by way of the Hot Springs. Uncle John Yancey was a native of Kentucky, but moved into the West a long time ago. He was typical of the earlier settlers in the West, cordial and hospitable, not given to frivolous conversation, a positive character who understood himself and human nature at large very well indeed. He was a man who possessed many warm friends, and he will be sadly missed. He was about eighty years old.

New Hampshire has provided a commission to make a general survey of the forests, with a special view to a determination of their value as conservers of the water supply. The field force is made up of experts designated by the Bureau of Forestry. The results of the survey, it is probable, will be made a basis for asking from Congress the establishment of a White Mountain national forest reserve.

Canada proposes to change the name of Hudson Bay to Canadian Sea, for the sake of emphasizing the fact that the water is an inland sea wholly within Canadian territory and control. It is extremely late in the day to talk of doing away with a name which is so interlinked with the history of Canada. For the sake of these associations the old name should be retained.

What is a rattlesnake good for? Good for one dollar if it is killed in Vermont. That is the size of the bounty

The Sportsman Tourist.

A Visit to Pitcairn's Island.

In Three Parts—Part One.

Before I was quite six years old and not old enough to be sent to school, I took a notion to learn to read, and on applying to my father to be taught, he turned me over to a young uncle, who taught me to read and write, and put in a whole winter at night doing it.

As soon as I could read I read everything I could get hold of, but books were not so plenty sixty years ago as they are now, and at first I could not get many of them, I was lucky enough afterwards to get all I wanted. I had been reading nine months when one morning I was perched up on top of a drygoods box in front of a store reading the local news to a party of men, when an old gentleman stopped, and after he had heard me read awhile and had sized me up, began to question me. On my telling him that I had no books, he took me to his library and handed me the first two I ever owned—"Robinson Crusoe" and the "Mutiny of the Bounty." Then he told me to use this library of his when I wanted more books. I used it for many years after this. The library would be considered a small one now; then it was the largest one in the city. This gentleman's name was Anderson, he continued to lend his books to us boys while he lived, and at his death he left his library to our public school; they still have it. Andrew Carnegie and his brother Tom were two of the boys who used this library, and we both attended the same school, the First Ward school in Allegheny.

This book, the "Mutiny of the Bounty," first directed my attention to the Pacific Islands, and I next hunted through the library for everything else that told about them; then I read all the geography and travels in the library and all of Cooper's and Walter Scott's works; and when I had got a few years older I began to form plans to visit these islands; but I had to wait many years before I got to them. On the first day of March, 1874, I found myself in San Francisco. I had just been discharged from the regular cavalry down in Texas and had gone to California to see the country; I did not see much of it at that time, as it afterward turned out, for on the morning after my arrival in San Francisco I took a walk down to the docks and saw there a large steamer that was taking on stores and making ready to go somewhere, and on my asking an old sailor, who was hanging around, where the ship was going, I was told she was going to the South Pacific after whales.

Here was my chance at last. I did not want to see California now; it would be the islands now or never. Going on board I asked for the captain, who, after he had questioned me and looked at my army discharges (I had three good ones), shipped me for a fireman, I telling him that I had handled engines and boilers and could run his engine if it should be found necessary at any time. My telling him this was, as I afterward found out, the sole reason for him taking me; he wanted no fireman, but did want a man who could run his engine if necessary. Going ashore I took another look at the ship that was likely to be my home for the next year or two; and she afterward turned out to be one of the most pleasant homes I ever had. She looked more like a man-of-war than a whaler; and as I afterward found out, this old captain of ours tried to make her as much like a man-of-war as he could, He carried a small magazine of small arms, and I afterward had charge of it; and we never entered or left a port in which one of our naval vessels was lying without manning our yards and dipping our colors. This ship was then the largest steam whaler afloat; she was too large, in fact, and a year or two after I made this voyage in her the company that she belonged to sold her.

I had shipped as a fireman, but I never did any firing then; in fact, we carried no firemen, our firing being done for us by men who would be sent us from each watch on deck, the same men were always sent, so after the first few days we did not have to give them much instruction. We always attended to the water in the boilers ourselves. I would not trust that to a Kanaka, and they were our firemen. I should not have got a chance to go at all, only our chief engineer had a day or two before this undertaken to whip the whole police force of San Francisco when he was drunk; and they had half killed him. He was laid up for repairs. I stood his watch at the engine until we had got to the Sandwich Islands, and by this time he was able to get drunk again, and had the misfortune now to run afoul of the captain, who fired him and promoted me. The captain had had this rod in pickle for him when he shipped me. I did not know that though, but it would have made no difference to me if I had. I was bound to see those islands.

Captain Williams was as fine an officer as ever walked a quarter deck, but was very strict; his orders had to be obeyed to the letter. After shipping with him and before I had gone on board I had a terrible account of him given me by the wharf rats. They told me that he was one of the most tyrannical captains afloat. Captain Samuels, who was sailing the ship Dreadnaught out of San Francisco, might be a little worse than Williams, but not much; they thought I had better keep away from him. I had heard all about Samuels; who has not heard of him? He may not have been more than half as black as these fellows painted him, either. I have no doubt now that I could have got along with him as well as I did with Williams, and I got along with him all right. I would never want a finer officer than he was. I listened to those fellows, then thought that I could stand this captain until we should have got as far as Honolulu, then if he did not suit me, I could jump his ship and come home on the first passenger ship that called there. I had money enough with me to carry me around the globe.

We carried five mates, five boat steerers or harpooners, two engineers, or rather two men who were rated as engineers; neither I nor my partner had a license, and by law we had no business here at all. But this company was not paying $90 or $100 a month to a man who would put in one-half of his time looking at himself while the ship was under sail; we would not cost them half as much. We carried also a carpenter, a steward, and a crew of about twenty-five white men and sixty natives, Kanakas we called them. We had a steamer, but we seldom used the steam except when on the whaling ground or when entering or leaving port. When the engine was stopped and the ship was under sail we engineers would have nothing to do; then I would put in my time with the watch on deck learning to be a sailor. The ship carried an immense spread of canvas, courses, topsails, topgallant and royals, and before we got home again there was nothing about the sailing of the ship that I did not learn; at a pinch I could have sailed her home myself. We left San Francisco under steam and steamed all the way to Honolulu, getting there in eight days, a quick trip for us if we did sail on Friday; the crew had predicted that in consequence of our having sailed on that day it would take us a month to get there.

As soon as I could get away I went ashore to see the island, this would be the first one of my islands. I wanted very much to visit the beach on which Captain Cook was killed; he had told me a great deal about those islands out here, but I could not get to it.

We had come to anchor between the quarantine and the city, this seemed to be the regular anchorage in the bay. One of our men-of-war, the Hartford, I think it was, and a number of merchantmen were at anchor here.

Going ashore I put in an hour or more looking around town, but kept out of the drinking places. I had found out by this time that to get along with this captain of ours we would have to let whisky alone; I could do it, and did. At last I found myself out at the King's palace, at the edge of the town; it was a large white house in the middle of a fine park; and seeing that this park seemed to be a public one, I walked in, but had not been here long when an orderly came to me and said in very good English that the King wanted to see me. This summons rather took me aback, as the only kings I had ever had any acquaintance with were those we find in a deck of cards; I would rather find them in my hand if there was any money on the board, and I hardly knew how to conduct myself before a real king. However, I concluded to answer him as I would any other gentleman, "yes, sir" or "nor, sir," and let it go at that.

This worked all right, and after I had apologized to him for trespassing on his grounds and he had told me that I was welcome there, he took me in to what I suppose was his throne room, though the only thing in the shape of a throne here was a large arm chair, over which was spread a cloak made of feathers, the chair and all of the furniture seemed to have come from the United States, a large clock certainly had, the name on its face said so.

Next he led the way across the hall to his library, a fine one, and we took seats here, then he began to question me about the United States and what part of them I had come from. He seemed to be well posted about the country. Next he gave the orderly, who stood behind his chair, an order in the native tongue, and he going off brought in a tray, on which were a bottle of brandy, glasses and a box of cigars.

He poured out a glass of brandy for the King, and was about to fill a second one for me when I stopped him, telling him to pour me out only a small quantity; then I told the King that I had a wholesome dread of Captain Williams and his irons and did not want to return on board under liquor.

"Yes, I know the captain," he said laughing; "tell him if he won't call on me I will on him. I'll see him this afternoon."

"Yes, sir, and about what time shall I say?"

"Oh, I won't fix the time. I don't want him to parade his crew for me."

The King lit a cigar and pushed the box to me. I was taking one, but he told me to light that one, then take a dozen to smoke later on. "You won't find any like those in town here," he said. "I had those sent to me from the United States."

They were Havanas that would cost me 25 cents each in the United States. I took a dozen that I and the mates smoked later on. One of them I kept, and wrapping it in tinfoil made a case to hold it, and kept it for ten years as a reminder of my visit to the King.

That afternoon the King, in company with Captain Williams, came on board. The chief mate had us lined up at the gangway. The King, as he stepped on deck, noticed me and stopping in front of me, said, looking at my feet, "Well, you did not get put in irons after all, did you?"

"No, sir; I made out to escape the irons."

Turning to the captain he said, "I don't want this man put in irons on this voyage, Captain, I have him tabooed, remember." I was never put in irons.

We had come to the Sandwich Islands to ship a crew of natives, and as soon as we had got them and had taken all the coal we could find room for, we sailed again, the Navigator Islands or Samoa being our next destination. But I never saw those islands, and they were about the only ones of all I had ever read about and some I had never even heard of that I did not see; for when half way to them we met whales and began to kill them, and following them up they led us away from Samoa.

The captain's orders were to call in at Valparaiso, Chile, about the first of July, and he arranged it so that the first saw us off the harbor. We ran in under steam and came to anchor, and I took the first opportunity to get ashore. I expected to be here much like a fish out of water; I could not speak Spanish. I had once thought I could, but on trying it on a Mexican (Greaser) after I had given him some of my best Spanish he told me in poor English that he did not understand much English. He had not recognized my Spanish at all.

I had gone ashore with our steward, and as I climbed up on the dock a ragged boy about 14 years old came running to me and asked me in good English if I did not want a guide?

"That is what I want. Where did you get your English?" His mother was English; she had taught him. She afterward turned out to be Irish though, but she had taught her boy to speak good English. His name was Juan Blanco—John White. He led me up town to what he thought was a fine sight; it was a large bulk store window filled with cheap watches, knives, telescopes and nautical instruments, sextants and compasses. The boy had never owned a knife; I took him in and got him one. The dealer was an English Jew. Before I left him I had all his small jackknives, six dozen of them, all his hooks and lines, combs and looking glasses. I wanted smoking tobacco; he did not keep it, but taking a card wrote some cabalistic signs (they were in Yiddish, I guess) and told Juan to take me to another store farther up the street. Here I got the tobacco for 20 cents a pound, taking $4 worth of it. I wanted these things to give to natives when we touched at their islands; we would land at most of them this summer; I would see plenty of islands. I was curious to find out what was on that card and told Juan to ask the Jew, who spoke no English. It was a request for him to sell me what I wanted at wholesale, and he did, too.

He had boys' knee-pant suits, the first I had ever seen; they had come from England. I got a suit and cap for Juan, and wanted to get him shoes and stockings, but he would not wear them. As soon as he had got his new clothes the boy walked into a back room, and pulling off his old ones, put the new ones on, then crammed the old ones into a corner, to be got later. There was not a hole or corner in the city that he did not know; and every one who spoke English knew him; he used these men to practice his English on. I had him with me every time I came ashore after this; and as the other white men in our crew used him as a guide, he was kept busy. We had come to meet a brig that should have been here with stores for us, but she did not get in until two days after we did, then we transferred our oil to her, took her coal and stores, and on the 5th of July sailed again; we celebrated the Fourth with a boat race in the harbor.

Our next port of call was Juan Fernandez, Robinson Crusoe's Island, where we called after fresh beef.

This was one of the islands I could not miss; it is not the island Defoe places Crusoe on, and there have been wasted oceans of ink and much valuable space in our newspapers trying to prove that it is or is not, his island. I took a hand in the last controversy that was started about it myself a year ago. I think I settled it then, for that time at least; no one replied to me, anyhow. It is the island that Alexander Selkirk put in his time on, anyhow, whether he was Defoe's Crusoe or not.

I saw here what is pointed out as being Crusoe's cave, and what was, no doubt, his lookout. There may be some doubt about the cave, there can be none in regard to the lookout. He would have had it just where it is claimed it is. There is a copper plate fastened up here on the rocks, put here by the crew of a British man-of-war, which says that Alexander Selkirk spent four years and four months on this island, and that he was afterward a lieutenant in the English Navy; and it gives the date of his death.

This island is covered with beef cattle now, and there is a colony of Chilians living on it. It is only 400 miles from Valparaiso. I asked the boys here for Crusoe's goats, but they could not understand my Spanish, so I failed to find the goats.

A ship could be loaded in Valparaiso with curiosities that are reputed to have come off this island—cones made of the wood growing here, wild flowers pressed and dried, shells and stones, all off Robinson's island; he is called Robinson there, never Crusoe.

From Crusoe's Island we went back to our old whaling ground north of the Society Islands, Tahiti, and from there worked down until at last we found ourselves late in the season off Tasman's Land, south of Australia, and ran in to Hobart Town for coal. This marks the farthest point that I ever got from home. Next we stood northeast again, and by about the first of December had got up in the neighborhood of Pitcairn's Island, the scene of the Mutiny of the Bounty. I had not visited it, yet I was anxious to see it. I had seen all the other islands except Samoa, that I had ever heard of, and some that I had never heard of; I wanted Pitcairn's Island now; I would need no interpreter on it. I had an old set of charts that covered the whole South Pacific, and each day at noon, when the mate in charge of the deck "took the sun" I would get our position from him and mark it down. I always knew as much about where we were as the captain did. Our second mate had taught me to take the sun months ago; I had known how to take it in theory long before I ever saw a ship; and he gave me the necessary practice, and I often would borrow a sextant, then using my watch that I kept close to Greenwich time, I would take the sun myself; then work it out to see if the mate and I agreed; we generally did.

On Saturday, the 19th of December, I came on deck just before noon; the fifth mate, Mr. Watson, was ready to take the sun; I held his chronometer for him; then when he had taken and worked out his position he gave me our latitude and longitude; it placed us about 130 miles southwest of Pitcairn's Island. The mate went below to give the captain his report, and when he came on deck again he went aft to the wheel and changed our course a little. When he came forward again I asked, "Where are we going now, Mr. Watson?"

"Right to the island; the captain means to call in there."

"We should make it before daylight to-morrow, sir, if this wind holds."

"Yes, we may make it by midnight; the wind is rising now."

We were under sail going about eight knots, or over nine land miles, an hour, with the wind nearly astern of us. I had no watch to stand, our engine was not

running; but I made it a practice to go on deck very often, both day and night, and stand a watch "before the mast." I had learned to go aloft and furl and reef, and could take my trick at the wheel. I had learned that when a boy on an old river steamboat, the pilot there taught me to steer; and if there was no one around to report us I would put in an hour at a time steering for him while he sat behind me smoking and passing remarks. It was contrary to law for me to touch that wheel of his; I had no pilot's license. It was contrary to some more laws for me to do what I was doing on this ship; I had no engineer's license, but laws were made to be broken, and they often are broken. I was hardly two weeks on this ship before I was steering her. I had to learn the compass first; that did not take long. Then I had to remember that now my tiller ropes were crossed, we steered here by a wheel at the stern, we had no pilot house. Next I would have to remember when the mate told me to "port my helm" to answer "port it is, sir"; and not cause him to have to repeat it; then break the seventh commandment with his mouth, and my head with a hand spike.

Each member of the watch took his turn at the wheel; I often would take it out of my turn, then steer for hours while the Kanaka, who was supposed to be steering, lay fast asleep at my feet. The mate would not object to that, though; it saved him trouble. If he wanted to know "how her head was," I could tell him, "Nor'west by west, sir; half west." If the Kanaka was steering the mate would have to find out how her head was himself.

So now the next morning, when the "dog watch" was called I went on deck with it, and found the ship hove to. The third mate, whose watch we relieved, said he had hove to at 6 bells, that is three o'clock. It was now four, and according to the mate's reckoning we should be close in to the island. There is no light on it, and he might go ashore on it in the dark; or what was more likely, might pass it and not know it.

It was quite dark yet, but after we had been on deck a while I went up to the main crosstrees to see if I could see anything of the island. I thought I saw it, but was not sure, and told the mate that I thought it was off our port quarter, about six miles away.

"That is where it should be," he told me, "but we will wait until it gets lighter."

While we were waiting the mate and I compared notes as to what each of us knew of the Mutiny of the Bounty. The only account of the mutiny that I had ever seen was this one that had been given me when a boy by Mr. Anderson, and I think it was the only one that was ever written. This account had been written by an English lady, who had got her version of it from the officers themselves; she had no chance then to get the men's side of the story, and from her comments on what she did get I do not suppose she would have given their side of the story even if she had it.

I do not believe that there has been a successful mutiny on shipboard since the time of the buccaneers, but that the officers were the most to blame for it; for if the ship has a good set of officers there are always enough men who don't want to mutiny to stand by these officers and put a mutiny down in short order. I can imagine about how long a mutiny would last on board a ship commanded by this old captain of ours, or by any one of the five mates he had here; and four at least of these five mates could command any ship afloat. It might last ten minutes, or until I had got my magazine open and had passed out pistols to the part of the crew that did not want to mutiny. After that there would be no more mutiny—not on this ship. But we are forgetting all about the Mutiny of the Bounty. In 1787 the British ship Bounty, Lieutenant Bligh, with a crew of about 70 men, was sent from England on a three-years' voyage among the South Pacific islands. They had orders to leave hogs and goats on some of the islands for the use of shipwrecked men, and to collect seeds and bread fruit trees to be planted on the West India Islands. They sailed around Cape Horn and visited a number of the islands and had been out about 18 months when the mutiny took place.

Bligh was, from all accounts, a very tyrannical officer, who was always quarreling with his men; and he seemed to have a quarrel on hand at all times with one or more of his petty officers, the very men he should have kept friendly with. Fletcher Christian, the boatswain, took offense at something Bligh had done to him and headed the mutiny.

They surprised Bligh in his cabin, and tying him with ropes, brought him on deck, and lowering two of the small boats, put him, his officers and 18 of the crew who refused to join the mutiny, in them, then giving them five days' rations but no arms, sent them adrift.

Bligh tried to appeal to his crew, asking them to release him and return to their duty, promising to treat them better hereafter and not to lay this affair up against them; but Christian told him that he was in command of the Bounty now, and that Bligh should do all his talking to him.

Bligh again addressed the crew, and Christian now shoved a musket in the lieutenant's face, telling him to leave or be shot. They sailed forty-three days on their five days' rations, but got water and a few berries on some rocky islands they touched at; rode out one storm lying to, using their masts, sails and oars for a sea anchor; and at last made land at Timor, 3,500 miles from where they had been sent adrift, losing only one man on the whole voyage, he being killed when they were trying to land at one of the rocky islands. This was probably the longest voyage ever made in ship's boats, and only Englishmen or ourselves could have made it and come out of it alive.

In the meantime the crew took the Bounty to the Society Islands, where part of them stayed and were afterward arrested, brought home to England, tried and let go. It is not generally known, at least I have never seen any mention of it, but I found out while I was among the Society Islands, that some of these men had come back here after being released at home and had lived and died here. Their descendants are here yet. I formed the acquaintance of a number of boys who were the great-grandsons of these men. These boys were of a lighter color than the rest of the natives; they spoke English, and some of them could both read and write it, though their fathers could not; the boys had been taught by a missionary. The father of one of the boys was the chief of his island, his boy was anxious to go to the "white man's country." I started to take him there, but the captain vetoed it—but of this later on.

The men who still stayed on the Bounty next took her to Otaheite, the largest of the islands, and here took on board twenty native women and a dozen native men, then sailed back to Pitcairn's Island; and here, after they had broken up and burned the Bounty, they built huts on shore and took possession of the island, there being no other people on it. For the next few years they lived in peace; then the black men mutinied in their turn and killed Christian and several others. Then the rest of the white men with the help of their native women, killed off all the black men.

There were only four of the white men left now. They were Adams, Young and McCoy and another whose name I have forgotten; he has no descendants on the island now, the others have.

A year or two after this McCoy made whisky out of corn that they raised; but he drank so much of it that it killed him. Then old John Adams, who had really been the head of the mutiny, for he had furnished the brains while Christian had done the work, took charge of the island's affairs; he poured out all the whisky and forbade any more to be made; built a chapel and school for the children who were growing up, and brought order out of what had been before this but little better than a colony of savages. Nothing was heard of the people for many years; it was not known in England where the men were. When these islands out here had been searched for the mutineers, Pitcairn's Island had not been visited; its existence was known, but it had never had any natives on it and was thought not fit to live on; so they did not waste time searching it.

In 1808 the American whaler Topaz, Captain Folger, called here. He and others knew of the island, but no one had been here for years. When the Topaz was still several miles out at sea, it was met by a number of small boats that were manned by white men and boys, who, much to Captain Folger's surprise, hailed him in English and bade him welcome.

Old John Adams was still on deck. He had his school for the children and was holding church services, using the Episcopal ritual. The people were still good church men when I was there, but since then I believe, some missionary has got hold of them and "converted" them to some other denomination. Had I remained on the island, as the old governor wanted me to do, I should have directed that missionary to slide out to some of the other islands, where he was needed more; he was not needed there.

When Captain Folger got home, he reported where the people were, and a British man-of-war was sent to the island. John Adams was the only one of the mutineers alive, and he asked to be left to die here. They let him remain, and he died years after, a very old man.

This was all I knew of this affair then, but after I had seen the island I was curious to find out what had become of Bligh. I knew that he had not died a vice admiral. The captain had a small library in his cabin that he let us use, and going to it I got an English encyclopedia, and on looking in it for Bligh I found him. After he had got home ofter losing the Bounty, they gave him another ship and sent him back after those bread-fruit trees; and this time he got them and got home without having had another mutiny. A few years after this, when England was at war with Spain, he was given another ship. The crew of this one mutinied, and taking him and the ship into a French port turned both over to the enemy. He never got another ship, but a year or two after this he was sent to govern a colony in Australia. In a year he had got to be so tyrannical that they threw him into prison; and while he was waiting for his trial he died.

While the mate and I were telling each other what we knew of the mutiny, it had been getting lighter all the time, and now the island could be seen from the deck. It was just where I thought I had seen it, so now we squared away for it. It was now six o'clock and time to call the watch. The dog watch that we were on only stands two hours, the others stand four. The new watch came on deck with the fifth mate, Mr. Watson, in charge of it. We were standing right down to the island with all sails set; on most vessels the light sails would have been taken in by this time, but we carried such a large crew, each watch of ours being as large as most crews are, that we generally waited until the last minute before doing any thing. There was plenty of time yet, but Watson, when he saw how close in he was, started in to do half a dozen things at once as was usual with him. He sent a man forward to heave the lead, had the courses brailed up, the light sails taken in, and the anchors cleared to let got; and all this time the leadsman could find no bottom.

There was one thing he did not do, though, that I wondered at, he had not sent up his colors yet.

The captain made it a rule to fly his colors on Sunday, no matter where we were, and we were going into port now, and on Sunday, too, and they should be up, I knew that if the captain should come on deck about the first thing he would miss would be those colors, and then Watson would hear about them. So when he had at last stopped his "Stand by" long enough to take breath and think of what he wanted stood by next (every order given on ship board is prefaced by "Stand by!" it means attention), I said, "You have not got your ensign up yet, sir; shall I send it up?"

"Yes, please do, I forgot it. Lucky the old man is not up yet."

The colors were down in the captain's cabin, and going down there I found that he was up, and telling him that I had come for the colors I went to the signal locker to get them.

We had a number of our own flags here, a set of foreign ones, and under all of them a large new one that we seldom used; I got it out and taking it on deck bent it on and sent it up just as Watson was singing out, "Stand by to let go your anchors, let go!"

We anchored within 500 yards of shore, letting go both anchors. The watch had the deck to wash down and an awning to put up. I had nothing to do, but remained on deck, seated on the rail looking at the island. Nobody seemed to be stirring on it yet. I could just see the village back behind the trees that lined the beach.

After a while a man came down to the beach and put a canoe into the water, then paddled out to us, coming alongside, just under where I was seated. He was a rather old man and was dressed in a shirt and pair of trousers of native cloth, with a red cotton handkerchief around his neck, but no hat nor shoes.

Looking up at me he asked, "What ship is this?"

I told him.

"Is she a whale ship?"

"Yes, sir, she is an American whaler."

"She is a big one, though," he says, looking at her from stem to stern.

"Yes, sir, she is the largest one in the trade now." I began to think that I had the governor of the island here, and invited him to board us. He paddled forward, and the mate had his watch open the hatch, and I helped the old fellow on board just as Captain Williams came on deck. He walked forward, and taking the old man by the hand says, "I am glad to see you again, Governor."

"And I am glad to see you among us once more, Captain Williams; you have a fine ship this time, sir. I took it to be one of your men-of-war when I first saw it; but your young man here tells me it is a whaler."

"Yes, I am not commanding men-of-war now. The war is over, you know."

Captain Williams had commanded a naval vessel in the War of the Rebellion; he ranked as commander then, and tried to act like one yet; this was why some men did not like him.

The captain and the governor walked back now, and taking seats under the awning, held a long confab. At last they came forward to where I was standing leaning against the foremast fife rail, and the first thing I heard the governor say was, "Well, Captain, to-day is Sunday."

Yes, the captain believed it was.

"Yes, it is Sunday, and now I don't want any trading done to-day; but if there is anything you want for your crew, tell me and I will send it off."

No, there was nothing the captain wanted very badly, he had just called in to see how they were getting along.

"Well, now that you are here, you most remain with us a few days, won't you?"

Yes, the captain wanted to give his topmasts an overhauling; he would be here for several days.

"Then I can send you off plenty of fresh vegetables to-morrow?"

"Yes, send them off, and in the meantime I will see my steward and find out what he can let you have; I don't suppose you want anything loaded to-day?"

No, to-morrow would be soon enough; he never had anything done on Sunday that he could possibly help.

The steward came on deck to call the captain to breakfast; he asked the old governor down, too; but he would not go; he had eaten his breakfast long ago, he said. Then turning to me as the captain left him, he asked, "Have you any Englishmen on board?"

"No, sir; we are all Americans here. Captain Williams won't carry a foreigner in his crew."

One of our big bare-footed Kanakas walked past us just then; and the governor, pointing to him, said, "You don't call him an American, do you?"

"Oh, yes; or at least he will be one of us as soon as we take in his islands; those fellows will make good enough Americans."

"Are you going to take the islands?"

"Yes, just as soon as England or Germany makes a move to take them; then we will. We need them ourselves then; we don't need them before that though."

"The captain tells me that he has a fine crew here."

"Yes, sir, we are a pretty civil lot, that is for sailors; we try to be gentlemen; when we go ashore you won't have to call on your police to keep us in order."

"Oh! I have no police, nor any whisky, either."

"That we don't want. This is a temperance ship; it has got to be while Captain Williams sails it."

The old fellow laughed, then turning to the white members of the watch who stood near, he said, "Gentlemen, I welcome you all to our island, I am the governor here; when you come ashore call on me, I have church up in my chapel at three o'clock to-day, I would like to see as many of you there as can come; you will come, won't you?"

"Yes, governor; I mean to call on you to-day if I can get ashore. I have come many thousand miles just to see your island. I read about it when I was a small boy and have been trying to visit it ever since."

The governor left us, and had not been ashore more than ten minutes before his boat came off again with a younger man, who had it loaded with fresh pork, yams, dressed chickens and a basket of eggs. He said that these were for the captain's dinner. The steward was called, and he and I helped to get the stuff out of the boat; then the man was about to shove off.

"Hold on," I told him, "don't go yet. You must come down and take breakfast with us."

He hung back and did not want to board us, but I at last got him to come and took him down to breakfast, which was ready. Our mess was made up of the petty officers, the engineers, steward and boat steerers, and I seated our visitor with us. He told us that about one ship a year called, and ours was the first one that had been here in a year on which they spoke English. A French man-of-war had been the last ship to call,

After breakfast I took him all over the ship, then to my cabin and gave him a handful of smoking tobacco. I did not know at that time that tobacco was tabooed here. It was, though. He told me that the governor did not allow it to be used, but the men wanted it.

"I have several pounds of it here that I meant to give you men," I told him.

"I can take it to-morrow and give it out when the governor is not around. He does not watch me as close as he does the rest; I am his son-in-law."

"I have a lot of knives, fish hooks and lines and the like that I want to give your boys; will he object?"

"Oh, no; you can give them what you please, he don't care; and the boys may ask you for these things, if they do don't let him know it, or he will whip them."

"He won't whip more than a dozen of them if he waits until I tell him about it, then."

The man told me his name, and asked me to come ashore in time to take dinner with him; then he left us.

I wanted to go ashore now, but the captain always held church service on Sunday morning at ten o'clock; he merely read the morning lesson out of the prayer book, using the capstan for a pulpit, while his mates and a few of us who knew the Episcopal hymns, sang one or two of them; he never compelled any of us to attend; but most of the crew did. I meant to wait until after church, then ask for shore liberty, I had always been given it when I asked or it. But at nine o'clock the second mate, Mr. Robinson, came on deck to go ashore and asked me to go with him; he did not want a boat's crew. The anchor watch dropped our boat into the water and the mate and I taking each an oar began to pull ashore. CABIA BLANCO.

[TO BE CONTINUED.]

A Word from Samoa.

PAGO PAGO, March 30.—*Editor Forest and Stream:* As one of your subscribers I feel that I want to say a few words regarding your interesting publication. FOREST AND STREAM is always good, and your Christmas number was particularly so.

I quite agree with Mr. Charles Cristadoro in his "Embarrassment of Literary Riches," and I particularly agree with him in regard to Mrs. Churchill's work in FOREST AND STREAM, and her work on Samoa in general. It is certainly the best that has ever been written of Samoa, and she has proved that she has brains, an observant eye, and a fluent pen. She gives us the real Samoa just as it is, and without favor. All her Samoans are real people, just as they are here in real life. I speak as one who knows what he is talking about, for I have lived in Samoa twenty years and have been Vice Consul of the United States under every Consul from 1888 up to the present time.

Mrs. Churchill's "Samoa 'Uma" is a beautiful volume, and it is a pleasure to read it, for it is the real Samoa—"the real thing." The book is a credit to the author and a credit to her publishers, and the moderate price of this valuable work places it within the reach of everyone who ought to read it and get a clear idea of this little corner of the United States away off here in the South Pacific.

I can safely say that "Samoa 'Uma" offers us the first glimpse of the real Samoa.

May other books of the same sort from the same author and the same publishers follow "Samoa 'Uma," and then we shall be sure of the real thing.

W. BLACKLOCK.

Natural History.

A Bird's Education.

SO FAR as regards the current discussion as to how animals learn, whether by instinct or instruction, my study of birds leads me to take a medium position; perhaps I would better say to take sides with both parties. Birds acquire knowledge partly by instinct and partly by tutelage, and the same is no doubt true of all other animals. This statement will be borne out by several concrete cases.

Some years ago I made a number of experiments in rearing young birds taken as early as possible from the nest. Among them were meadowlarks, redwinged blackbirds, brown thrashers, bluejays, woodthrushes, catbirds, flickers, redheaded woodpeckers, and several other species. Nearly all of them were secured some time before they were naturally ready to leave their natal places. Without any instruction from parents or older birds they soon left the nests I had improvised for them, hopped about on the cage floor for a while, and presently insisted on clambering upon the perches, to which they clung in the regulation way. Indeed, I noted again and again that the impulse to seek a perch was so strong that the birds seemed to be moved to it by an imperative command. Nor were they long satisfied with a low perch, but instinctively mounted to the highest one they could find.

The same was true in regard to flight. No feathered adult was present to tutor them in the art of using their wings, yet they soon acquired that power of their own accord. It was inborn—the gift of flight. True, they were awkward at first, and gained skill only by degrees, but the original impulse was in their constitution. It is no doubt true that parent birds in the outdoors do teach their young to fly, but if the bantlings were left to themselves, they would acquire that art through their original endowment, although more slowly and with many more hard knocks.

As everyone knows, juvenile birds at first open their mouths for their food. Proof may not be at hand for the opinion, but I am disposed to believe that they never need to be told by their parents to do that; their instincts prompt them. It must be so, I think, for to suppose that the bird baby only a day or two from the shell could understand a parental command to open its mouth would be to presume that it has the instinct to grasp the meaning of such a behest, and that is more difficult to believe than that nature simply impels it to take its food in that way.

Now, when young birds are taken from the nest and reared by hand, they insist for a long time on being fed in the juvenile manner. However, by and by they begin of their own volition to pick up food after the manner of the adults. At first they are very clumsy about it, but they persevere until they acquire skill, and presently they refuse entirely to open their mandibles for food. Here again nature is their sole guide. Without human or avian suggestion they also learn to drink in the well-known bird fashion; also to bathe, chirp, frolic, and do many other things. In drinking who has ever seen a pet bird try to leap like a dog, or take in long draughts like a cow or a horse? No, nature made them birds, and birds they will be. It is noticeable, too, that when birds begin to peck, or bathe, or seek a perch, they do not usually act as if they were deliberately planning to do so, as if they were carrying on some process of thought leading to choice, but rather as if they were naturally impelled.

The chirping of birds is mostly, if not wholly, a matter of inheritance. For instance, my little wood-thrushes, as soon as they reached a sufficient age, called just like their relatives of the sylvan solitudes; my brown thrashers uttered the labial chirp of the species; my redwinged blackbird exclaimed "Chack! chack!" after manner of his kind; my bluebirds expressed their feelings in the sad little purr of *Sialia sialis;* my flickers did not borrow the calls of the redheads, but each clung to its own language; my catbirds mewed like poor pussy in trouble; and so on through the whole list. True, these pets may have heard their parents' calls before they were taken from the nest, but it is not at all likely that they would have remembered them, for at first they only "cheeped" after the manner of most bantlings, and only a good while afterward did they fall to using the adult chirp. Besides, while still in the nest, they must have heard many other bird calls; why did they not acquire them? Heredity has laid a strong hand upon birds, and has drawn a sharp dividing line among the various species.

Instinct also plays a large part in moving the bird to sing and to render the peculiar arias of its kind. For instance, a pet woodthrush of mine, secured at an early age and kept far away from all his kith of the wildwood, became a fine musician. And what do you suppose was the tune he executed? It was the sweet, dreamy, somewhat labored song of the woodthrush in native wilds. He never sang any other tune. I think he sang it better than any wild thrush I have ever heard. It was louder, clearer, more full-toned, but the quality of voice and the technique were precisely the same. Who was his teacher? No one but nature, heredity, instinct, whatever you choose to call it. There was no wild thrush within a half mile of his cage.

The case of a pet thrasher was almost as striking. It is true, he may have heard several of his kin singing about the premises during the first spring of his captivity, but it is not probable that he learned their melodies so early in life. As the next spring approached, he began to sing the very medleys that the wild thrashers sing with so much earnestness and skill, and this was long before any thrashers had come back from the South.

I must now describe several cases in which inherited instinct did not prove so true a teacher. A young robin was once given me by a friend, and was kept by myself and others until the following summer. Strange as it may seem, he never acquired the well-known robin carol. Sometimes there were vague hints of it in his vocal performances, but for the most part he whistled runs in a loud, shrill tone that no wild robin ever dreamed of inflicting on the world. They were more like crude human efforts at whistling than anything else. Indeed, I think they were picked up from the whistling he heard about the house. Some of his strains were very sweet, and all of them were wonderful for a bird. A friend played "Yankee Doodle" on a cornet, and Master 'Rastus—for that was his name—gave a very fair and funny imitation of part of the air. There were many robins carolling in the trees about the premises, and 'Rastus was often left out of doors among them, but he never acquired the redbreast minstrelsy.

A similar instance was that of a pet redwinged blackbird, which, instead of whistling the labored "Grook-o-lee" of his species, learned to mimic all kinds of sounds in and out of the house, among them the crowing of the cocks of the rear yard. These two instances would indicate that some birds must at least be associated with their kin in order to learn the songs of their species.

My comical pet bluejay gave proof of the need of parental training. While he intuitively called like a jay, he never was able to sing the sweet, gurgling roulade of the wild jays. On the contrary, he treated us to all kinds of odd, imitative, mirth-provoking performances that no self-respecting jay in the open would think of enacting. After several months of cage life he was given his liberty. Now, indeed, he showed his lack of jay bringing up, and how little, in some respects, mere instinct can be relied on. When evening came he perched on a limb of the maple tree before the house in a place as exposed as he could well find, not knowing that there was more danger in an outdoor roost than in his shielding cage. I could not induce him to come down, nor could I climb out to the branch on which he sat, and so I was compelled to leave him out of doors.

The next morning he was safe, the screech-owls of the neighborhood having overlooked him in some way. The next evening he went to roost in the same exposed place, and that was the last I ever saw of my beloved pet. He was undoubtedly killed and devoured by the owls. Had he been reared out of doors in the usual way, his parents would have taught him to find a roosting place that was secure from predatory foes. No one has ever seen a wild jay sleeping in an exposed place.

In her charming little book, "True Bird Stories," Mrs. Olive Thorne Miller says that she "once watched the doings in a crow nursery." I quote:

"The most important things the elders had to do was to teach the youngsters how to fly, and every little while one or both of the parents would fly around the pasture, giving a peculiar call as they went. This call appeared to be an order to the little folk to follow, for all would start up and circle round for a minute or two, and then drop back to the fence or the ground to rest.

"Once, while I was watching them, this cry was given, and all flew as usual except one bob-tailed baby, who stood on a big stone in the middle of the field. He was perhaps so comfortable he did not want to go, or it may be he was afraid, and thought mamma would not notice him. But mothers' eyes are sharp, and she did see him. She knew, too, that baby crows must learn to fly; so when all came down again she flew right at the naughty bird, and knocked him off his perch. He squawked, and fluttered his wings to keep from falling, but the blow came so suddenly that he had not time to save himself, and he fell flat on the ground. In a minute he clambered back upon his stone, and I watched him closely. The next time the call came to fly he did not linger, but went with the rest, and so long as I could watch him he never disobeyed again."

Evidence this not only of parental teaching, but also of parental discipline. Here is another bit from the same volume bearing its lesson on its face: "A lady told me a funny story about a robin. He was brought up in the house from the nest, and never learned to sing the robin song, for he had not heard it. He plainly tried to make some sort of music, and one of the family taught him to whistle 'Yankee Doodle.' He whistled it perfectly, and never tried to sing anything else. Once this Yankee Doodle robin got out of the house and flew up into a tree. When the wild birds came about him he entertained them by whistling his favorite air, which sent the birds off in a panic."

Do not facts cited in this sketch prove that birds know and acquire some things through the promptings of instinct, while other things they can learn only by avian teaching? LEANDER S. KEYSER.

Our Batrachians and Reptiles.—II.

AS WAS stated in the first paper on this subject, the class of Batrachians is divided into two orders, the *Caudata,* including the tailed forms, commonly known as salamanders, and the *Salientia,* including the tailless forms commonly known as frogs, toads and tree toads. As both of these orders are well represented among our animals, a chapter will be devoted to each, the present one to the salamanders, and the next to the frogs and toads.

Of the species belonging to the order *Caudata,* about sixty are now known to inhabit the United States. They are fairly abundant in most parts of the country. The dry, hot deserts of the west and the cold, bleak northern

Fig. 1.—*Necturus maculatus.*

boundaries offer them but little chance for life, but even in such places they are occasionally found. In favorable situations from New York southward they abound, and may almost be regarded as the commonest form of animal life, but their nocturnal habits and their rather repulsive appearance has prevented most people from becoming intimately acquainted with them.

As an entire group they cannot well be discussed, for the reason that all we know about their structure, appearance, and habits shows them extremely variable in these particulars. We must therefore divide them into smaller groups, and for this purpose we can use to advantage first the external characters furnished by the legs and gills. Proceeding in this manner we will have:

I. Those species which in adult life develop two pairs of legs but retain the bushy external gills (suborder *Proteida*).

II. Those species which in adult life develop two pairs of legs but lose these external gills (suborder *Urodela*).

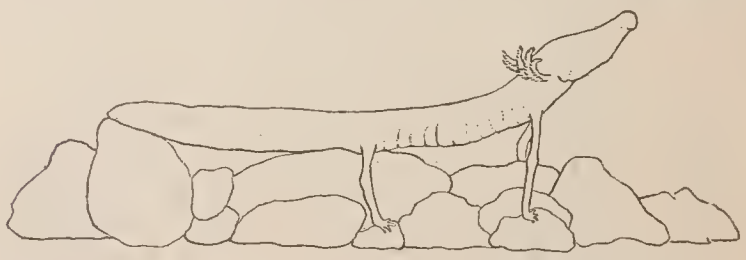

Fig. 2.—The Blind Salamander (*Typhlomolge rathbuni*) from Texas.

III. Those species which in adult life develop only the front pair of legs but which possess external gills (suborder *Trachystomata*).

So far as members are concerned, this division is a very unequal one, for only three species belong to the first group and two to the last, while all remaining salamanders, the only *true* salamanders, in fact, belong to the second.

A common representative of the first group is the spotted necturus, perhaps better known by the names of water-dog, alligator, water-lizard, or gilled salamander. It is a large species, sometimes attaining a length of two feet, and in color varies from black to ashy brown. The lighter colored specimens are rather handsomely spotted above with dark brown or blackish. As is shown in the figure, the three sets of bushy gills stand out on the sides of the neck like plumes; in life they are bright red. It is a widely distributed species, having been reported from the territory extending from Montreal to Alabama, west to Wisconsin, Kansas, western Arkansas and Louisiana. It seems to be wholly aquatic, but that it does not depend entirely upon its gills for respiration is shown by the fact that it has also well developed lungs, and has been observed to come to the surface for air. It has seldom been seen to go on land. In habits it is for the most part nocturnal, but will occasionally come from its place of concealment during the day time and move about by crawling over the bottom or by swimming rapidly by means of its broad, oar-like tail. Its food consists chiefly of the smaller water animals, fish, insects, crustaceans and mollusks, but it is voracious enough to bite at almost any promising morsel, and as a consequence is often taken on the angler's hook. In some places it is exceedingly abundant. It is recorded that at Ecoise, Michigan, 2,000 were taken in a minnow seine at one haul, and near Evanston, Illinois, a fisherman who had out 900 hooks caught 500 of these animals in one day. Although one has been cooked and eaten and pronounced excellent by

two enthusiastic scientists, it is hardly probable that it will ever be regarded by the fisherman as acceptable game. There is no foundation, however, for the belief that it is poisonous. Another species which may be known as the speckled necturus has been obtained from the streams of North and South Carolina. It differs from the one described above in the shape of the head, the arrangement of the teeth and in the color, which is a nearly uniform brownish or slate color dotted over with small whitish specks.

In the next figure is shown one of the most recently discovered American salamanders, a white, sightless species, which three or four years ago came to the surface with the first rush of water from an artesian well at San Marcos, Texas.

Coming now to the large suborder *Urodela,* which includes over 50 species, we will consider first the two species which are distinguished from the others by the fact that they alone are destitute of eyelids, and although

Fig. 3.—The Hellbender (*Cryptobranchus alleghaniensis*).

without external gills, they still retain a gill slit on each side of the neck. The commonest of these is known by some of the same vernacular names that are applied to the necturus, but the euphonious "hellbender" seems to belong to it alone, and it may therefore be known by that name or its scientific designation, *Cryptobranchus.* It is our largest salamander, for although its total length may not exceed two feet, its body is broad and heavy. It may also claim the title of the ugliest salamander, for its coarse, sprawling form, flat head and slimy skin make it a repulsive object. In the larger streams and lakes from Pennsylvania to Iowa and southward to South Carolina and Louisiana it is common, and in some places unpleasantly abundant. It is cordially despised by fishermen who too often find it upon their hooks, and who derive some satisfaction in making its flat head still flatter by crushing it with the first convenient stone. It is very tenacious of life, and so far as is known has very few natural enemies, two facts which easily account for its abundance. Its food is of a varied character, and it does not scorn to feast to repletion on any offal which may come its way. When caught it will sometimes make an attempt to bite, and, judging from the manner in which I have seen it seize and hang on to a stick, a nip from one might be anything but pleasant.

The next animal which is, like the hellbender, devoid of eyelids and provided with a gill slit on each side of the neck, is a southern species and does not occur north of southern Indiana. It is known as the *Amphiuma* or locally as the Congo-snake or Congo-eel. Its form, indeed, is such as to recall very strongly the snake or eel rather than a salamander, but the presence of two pairs of diminutive legs and the smooth skin places it at once among the batrachians. In length it may reach three feet

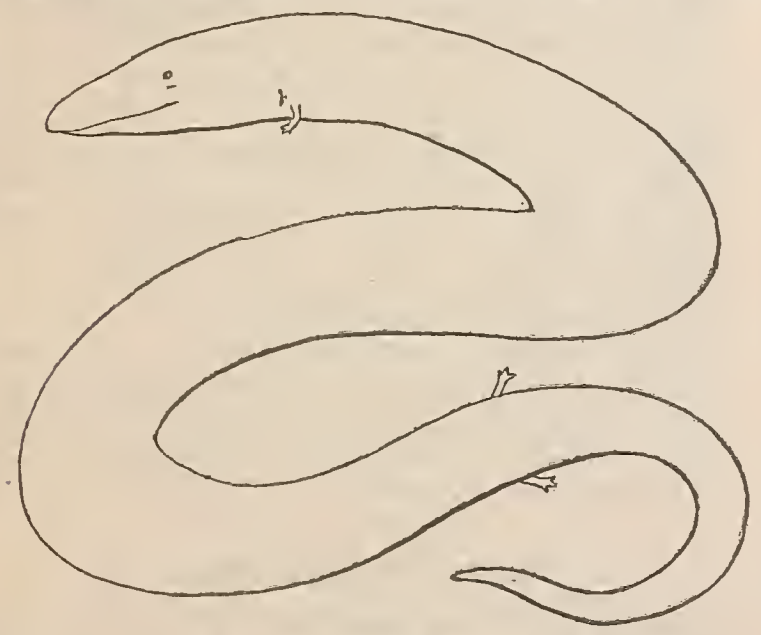

Fig. 4.—Congo Eel (*Amphiuma means*).

and in color it is dark slaty or reddish brown, paler below. The head is long and pointed, and its whole structure appears to adapt it to burrowing about in the mud along ditches or streams. It has been found three or four feet under ground. Its food consists of small fishes, beetles, and other aquatic animals. At times it has been known to leave the water, possibly to look for some more favorable location, possibly in search of food or a mate. Its eggs, which have been found but once, are about a third of an inch in diameter, and each one is inclosed in a spherical capsule which is connected by a slender cord with the others in such a manner as to make the mass resemble a string of beads. Dr. O. P. Hay, who made this discovery, reports that the embryos inclosed in these eggs had each three pairs of conspicuous gills, but these must be lost very quickly, for specimens only three inches long have been collected which bore no trace of them. Dr. Hay also reports that the large female which he found under a log in a swamp coiled about the mass of eggs, "on being teased with a stick seized it in her mouth and springing from the floor on which she lay, whirled round and round in a spiral form and twisted the stick in his hand unless he held it tightly."

Turning now to the smaller salamanders which are found so abundantly under rocks or logs or leaves in the forests or about the margins of ponds, we find that they possess uniformly eyelids and have no gill slits. In form their bodies may vary from short and stout to comparatively slender, and in color they range from black to brownish or yellow or bright red. They are all inoffensive little animals which probably accomplish much good work in ridding us of noxious worms and insects. Their eggs are sometimes laid snugly and attached to blades of grass in the water, but some species produce a large solid mass as large as one's fist consisting of a large number of eggs surrounded by a milky white jelly.

Perhaps the most widely distributed representative of these animals is the tiger salamander, *Ambystoma tigrinum.* It is also one of the largest of this group, as it sometimes reaches a length of nearly a foot; the body is heavily built and looks as if swollen. The ground color is a livid blue-black, brown or black, but scattered over the back and sides are numerous spots of bright yellow, which vary greatly in size, shape and arrangement; they may even run together so as to almost cover the whole upper surface or they may be almost absent. The belly is usually wholly overlaid with sulphur yellow, through which brighter yellow spots show indistinctly. It is distributed from Maine to Florida, California and Mexico. It is usually found in the water or along the shore of some quiet pond, but it is not confined to such locations, and specimens have been found in hot, dry earth a long distance from water. Some years ago the author kept a large specimen of the tiger salamander for several weeks in a small aquarium and found it a most interesting pet. It seemed to be most contented when lying covered up in the sand above the water's edge, but occasionally went into the water of its own accord. It shed its epidermis about every ten days, always going, for this purpose, into the water, where it remained for some time after the process was complete. The skin was slipped back from the head and drawn off the body like a glove and showed perfectly the form of the animal. The colder months were spent almost wholly beneath the water, but every ten or fifteen minutes a trip was made to the surface for air. It learned very quickly to eat nearly everything that was offered to it, and while a captive its bill of fare included two small frogs, a large caterpillar, angle-worms, and numerous pieces of raw meat. A dead mouse was once offered to it, but although it made an honest effort to swallow the morsel, its throat was too small and it was forced to desist. The tiger salamander lays its eggs early in the spring in pockets of from twenty

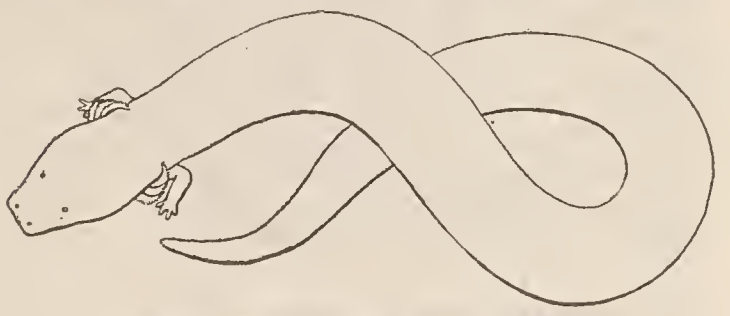

Fig. 5.—The Mud Eel (*Siren lacertina*).

to fifty, attaching them to blades of grass in the water. The tadpoles emerge in twenty-five days. In about a month the fore legs appear and a little later the hind legs. By the middle of August, under ordinary conditions, these larvæ have reached a length of over four inches, the gills begin to be absorbed, and the animal soon betakes itself to the land. In the southwestern part of the United States and in Mexico the larvæ have their metamorphosis delayed indefinitely, and perhaps never lose their gills. In such a case the reproductive organs become fully developed and the siredons or axolotls, as they are known, are able to reproduce their kind. It may also be of interest to state that axolotls are sold in the markets of the City of Mexico to be used as food.

Another interesting salamander is the species commonly known as the scaly or four-toed salamander (*Hemidactylium acutatum*). It is a small brown animal with small pale spots on its back and sides which is found in certain localities in the eastern half of our country. It lays its eggs in damp moss near the roots of trees and on the banks of ponds, but it seems doubtful if the larvæ go into the water. Their gills are absorbed very early, and they then betake themselves to some place of concealment near, but not in, the water. The adults have been heard to make a low squeaking sound.

Besides these two species there are many others, each exhibiting its own peculiar style of structure, coloration, and habits, and the author would gladly furnish about them such information as is at his command, but space is limited. We will therefore pass to the consideration of the last group of salamanders which is perhaps best represented by the animal known as the siren or mud-eel, *Siren lacertina,* although a more southern species, called *Pseudobranchus,* differs from it only in having one gill slit instead of two or three, and three toes instead of four.

The siren occurs as far north as northern Indiana, but is very rare. Further to the south it is more common, and in some localities even abundant. In form it strongly recalls the *Amphiuma,* and its habits seem to be quite similar. By one observer it is said to feed on serpents, which it catches and holds with its teeth, but the specimens which have been kept in captivity fed readily on angle-worms, pieces of meat, etc. It gets its name of siren from a "shrill querulous song" which it is said to emit at times. Nothing definite is known of its breeding habits or the early stages.

We have now come to the end of the salamander group, but before leaving them the author cannot resist the temptation to call attention to the manner in which these animals have been misrepresented in ancient and even modern literature, as being able to withstand a degree of heat that would quickly prove fatal to any other form of life. There is no more foundation for this idea than there is for the idea that the salamanders—or in fact any of the batrachians—are poisonous. The notion is ridiculous, but has obtained credence so long that in spite of the fact that scientists have repeatedly demonstrated its falsity it has not yet been entirely dissipated.

Spring in Nebraska.

WYMORE, Nebraska, April 28.—*Editor Forest and Stream:* I see blossoms, blossoms everywhere. That wall of pink—all shades of pink—is the peach trees. The white blossoms among the green leaves are on the pear trees; the greenish blossoms are on the plum trees; and that bank of snow is the cherry trees. Last and prettiest and most fragrant of all are the red and white blossoms in the apple orchard, and all within two hundred feet of where I sit.

I have read of someone who ridiculed the old man for planting trees, because he could not expect to eat of the fruit. That does not worry me. Let me see: I bought this ground in 1893, only ten years ago. In the fall of that year I planted walnuts; they came up the next year and for the past three years have had walnuts on the trees. Not a tree was set out until the spring of 1894, nine years ago, and we have had some fruit for several years past, and the prospect is that from this time on we will have more fruit than we can take care of.

I am only fifty-four now, and who knows but that I can plant a dozen more orchards and eat the fruit; but, as Antoine would say, "that make no dif." I love to plant trees, and have helped to plant over 200 shade trees this spring.

I am holding the first office I ever held in my life: I am Park Commissioner for my home town. It is not one of your vulgar salaried positions, but a pure sinecure, all work and no pay; and I would rather be Park Commissioner than to be President. I fancy I can hear some ward heeler say, "What a cheerful old liar he is, to be sure;" but my oldest and best friends will say, "No, he is not lying, he is just a crank."

Some of our visitors smile when they hear us speak of two fine elms in the yard as "Cyrus-Mary" and "William-Sarah." But that has been their names ever since, my wife held them up while I set them; and the first always speaks to her of her father and mother, who have crossed the great divide, while the other reminds me of my father, who rests in the National Cemetery at Nashville, and of my old pioneer mother, now living on a ranch in northwestern Nebraska, and still a widow.

What sight on earth can be more beautiful than a green lawn well set with shade and ornamental trees on this spring evening, just after a good rain?

And all this in the Great American Desert; but surely the promise has been fulfilled that "the desert shall blossom as the rose."

A. D. MCCANDLESS.

P. S.—Just thirty-six hours later. The ground is covered with snow, the ice is three-quarters of an inch thick, and the blossoms are all gone. The leaves on the walnut trees are black, and that beautiful prospect that I saw day before yesterday is gone, like Hans Breitmann's barty, "afay in de Evigkeit." Uncle John says that it was just such a morning as this, a hundred years ago: Napoleon had been haggling with Jeff for several days to get him to throw in a few span of Missouri mules, but when he got up and saw the snow he closed the trade and was glad to go without the mules. But it's great weather for the wheat.

McC.

Rev. Newton Mann, of Unity Church, took occasion in his last Sunday's sermon to hand the following brotherly bunch to the Rev. Robert E. Lee Craig, rector of Trinity Cathedral, anent his recent experience up in the sandhills of Thomas county with the meadowlarks:

"The sorry spectacle is still presented in these days of a piety which has no affiliation with morality; a service of God without obligation of kindness to His creatures.

"Was there ever a more melancholy illustration of this than the story of a prominent Omaha minister who administered the sacrament and christened babes out in the State a few days ago, and then amused himself on the way back by shooting song birds?

"For bringing into town the bodies of twenty-two meadowlarks, he was arrested and fined $110, and is unable to see any wrong in his course, only regretting the personal inconvenience to which he was subjected.

"It is such things which show how far the shadows of the dark ages still reach down among us, and stealing over us disturb not the least our equanimity."

The Governor of the State has not yet made his appointments of State Game Warden and Fish Commissioner, but the consensus of opinion is that he will shortly do so and that an entirely new roster of officials will be installed. There are numerous applicants for both positions, and Governor Mickey will experience little vexation in selecting good men for the places.

Dr. Frank Owen and Joe Sykes were out at Oberfelder Lake near Lodge Pole, Sunday, and returned Monday with 62 pounds of black bass. The catch numbered 25 fish, the largest weighing a trifle over five pounds. Oberfelder Lake is on the ranch of Bob Oberfelder, ex-State Fish Commissioner, and is the best stocked lake in Nebraska.

"Shorty" Kimmel, the hermit guide, fisherman and trapper at Cutoff Lake, was in my office this morning, and he reports the bass rising very encouragingly at Cutoff, and with the first real sultry weather he predicts excellent sport for the casters. Croppie and ring-perch are larger this spring than for years, and just now are biting voraciously.

Up near Ericson, on the Elkhorn, Big Bass Lake, for years famous for its big-mouth bass, is going dry. The dam below the lake broke during the unprecedented blizzard of April 29, and the lake is now but a miniature of its former self.

SANDY GRISWOLD.

OMAHA, May 7.

A Tame Wren's Return.

OWEGO, N. Y., May 8.—A few days ago Jennie Wren came to rent the same little cottage that she took last spring. While at breakfast we heard her little gushing song, and rushed out into the grounds to welcome her; for we had been waiting these many days for her to appear and take her summer cottage. There she sat, perched on top of the old house, singing in an ecstacy of joy and delight, and we, too, were happy to know that here she would live through the warm weather, and that we should watch her build her nest, and see her baby birds flitting among the branches of the trees.

Do you think that she is the same Jennie Wren that was with us last year, and that she has been thinking during the winter of this little house on top of the grape arbor that was waiting for her, and that she has flown from her southern home to spend the summer with us?

Surely it must be so; for Jennie returns to the same nesting place year after year; she knows the little box that you have placed in a tree for her, and if once you induce her to take it, this friendly little bird will make her home with you every year, if you treat her kindly.

But how do I *know* that this is our last summer's Jennie? I will tell you.

Last summer, after weeks of tender coaxing, our Jennie became so tame as to fly to a long slender pole, which was raised in the air, upon which she lit and ate the worm or spider which we offered to her; then, after raising two broods of little ones, she flew away to her home in the south. Last week we determined to try to make this new little Jennie as tame as our last summer's pet; so the old bamboo fish pole, about ten feet long, was put into service again; a nice fat spider was placed on the end, and the pole was carefully raised toward the little bird; nearer and nearer it approached and still little Jennie did not fly. Imagine our astonishment to see the dear little bird suddenly fly to the pole, alight upon the perch fastened to the end, and take the spider. There is not the slightest doubt that this is the same little bird that spent last summer with us, and that she has returned, full of confidence and love, ready at once to take up the old life.

MRS. B. W. LORING, SR.

A Robin in Extremis.

MORGANTOWN, W. Va., May 5.—Do birds commit suicide? It would seem from circumstantial evidence that they do. This morning while passing a large sycamore tree in the State University grounds, I happened by some chance to look up into the tree, and there I saw a robin about twenty feet from the ground hanging to a string by the neck. Each end of the string was wrapped around limbs about eighteen inches apart, and the middle was wound around the robin's neck, so that it was hanging about midway between the two limbs. I at first thought it was dead, but while looking at it, I saw its wings move, when I rushed into one of the buildings, got a ladder, and soon had it rescued.

Its life was nearly gone, but after a little while it revived and flew away. A partly built nest in the tree would indicate that it was carrying a string to put in with its building material, and in some way became entangled in the string with the above result.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Hunting Deer With Hounds.

ALBERT, W. Va., April 26.—*Editor Forest and Stream:* I am glad to see that the number of sportsmen who favor hunting deer with hounds is on the increase. I have never been able to understand why so many Northern sportsmen were opposed to that way of hunting. I have always believed that their opinions were not based on any very extensive personal experience. One sportsman says the hounds catch and kill too many deer. They may do this in Maine, or New York; I have never hunted there, but they do not here. We have good hounds—hounds that can catch a red fox, but I have known of but one deer killed by dogs. This, a very small one, became entangled in a wire fence just before reaching the water.

Last fall I asked Mr. Isaac Van Meter, of Old Fields, W. Va., how many deer he had ever known to be caught by hounds. He thought for a moment, and then replied: "Very few, very few, indeed." Mr. Van Meter is a very truthful, honorable gentleman, a sportsman in the very best sense of the word. I know of no one better qualified to speak on the subject. His hunting experience covers a period of at least fifty years, and he has owned literally hundreds of hounds. He had no idea why I had asked the question, so could not be biased in any way. Some writers in FOREST AND STREAM seem to believe it a dead sure thing for the hunter when hounds are used. The hounds are *bound* to start a deer, the deer is *bound* to come straight to the hunter, and so close that it cannot be missed; a sure-enough cinch. This may be true elsewhere, but it certainly is not true in West Virginia. I should say the chances are about 16 to 1 in the deer's favor.

I would not for a moment underestimate the skill necessary to successful still-hunting, but, "whether it is nobler in the mind" to shoot your deer running at full speed, or to shoot it while lying in its bed, as is often done by still-hunters, I leave to my readers to decide.

A true sportsman will always jump a rabbit or quail before shooting. Why not a deer? When hounds are used, very few wounded deer escape, while in still-hunting a large proportion do escape.

There is one reason for using hounds which to my mind overcomes all that can be said against them. I refer, of course, to the appalling loss of life to those engaged in still-hunting. Dozens of hunters are killed every fall. Where hounds are used, these fatalities do not occur.

To change the subject, I have been much struck with the bill of fare encountered by Northern sportsmen in logging camps. Beans and sow-belly seem to be the mainstay. I assure you a very different diet is served to the West Virginia logger. I have eaten in a number of camps in the last five years, and have uniformly found the fare good, an abundance of it, and always well cooked.

The cook has to be a good one or the men will not stay. A few days ago I took dinner at Eyth & Fravel's camp near this place. We had roast beef, excellent bread, baked beans, stewed apples, potatoes, boiled cabbage, tomatoes, and stewed peaches; oleo, coffee, some kind of small cakes, doughnuts, sponge-cake, and pies. All of this, and the greatest abundance. The cake and pies are on the table at all meals. Sow-belly is practically unknown. Fresh beef is always on hand, so are bacon and eggs. The wages paid are about as follows: Sawyers, $1.50 per day; swampers, $1.15 to $1.50; drivers, $1.35 straight time (straight time means every day, work or no work). In addition to the sums mentioned, all receive their board, rain or shine. Eyth & Fravel's camp is equipped with spring beds. This, however, is not usually found in other camps in this section.

In regard to game, will say that we have in this section bear, deer, pheasants, foxes, red squirrels. No gray squirrels, no turkeys, no quail. Plenty of brook trout; very small, however.

A. P. BUTT.

CHICAGO AND THE WEST.

An Arkansas Gobbler.

Mr. Geo. L. Babcock, now of Warren, Ark., writes: "I was quite surprised to find game so plentiful in this State, which as a game country has had little advertisement. There are numbers, really legions, of quail, ducks, rabbits, squirrels, deer and turkey—not to mention 'coons and 'possums. The streams also have good supplies of fish, some of them of the game variety—notably the black bass, called trout in local idiom; and, wholly from hearsay, I am inclined to believe that there are trout in the State, probably in the Ozarks.

"There are game laws on the statutes, but they are suffering from a bad attack of inanition. In fact, the open and closed seasons on game and fish are not definitely known to one person in ten.

"Now, although I am a native of the old Gopher State, it has never been my fortune to get within rifle shot of a deer; so when I found that there were deer all around me down here, out came the rifle. I went to a cosy club house on Boggy Bayou, near Arkansas City, fully persuaded that a deer would soon be mine. Being from a deer country, I am not wholly a fool about the methods obtaining in their pursuit. I know that brass bands are not good company, but was surprised to learn that a cow bell was. T'is said that the deer are used to cows, which is understandable since I met many wild looking bovines in the woods, and that any ordinary noise, if accompanied by the clank of a bell, would not disturb the beauties. However, I refused to burden myself with any such contrivance, and contented myself with the slow and stealthy tactics of Deerfoot. Armed with a .30-30 Marlin and a bad cough, which seriously disturbed the serenity of my stalking, I spent many long and ear-strained hours in the woods. The dry leaves and exasperating growth of vines and briers were also not strikingly conducive to my slinking success. I hunted faithfully for two days with no loss of determination or enthusiasm, because I had several fleeting—very fleeting—glimpses of white flags, which I knew belonged on the stern end of my elusive quarry, but secured no shots until Saturday afternoon. It was an ideal day, cool, clear, and with a very slight drift of air from the northwest. This seemed to be the squirrels' 'at home' day, for I was annoyed occasionally by being subjected to some wholly unprovoked attacks of villainous squirrel billingsgate. I'll bet I would have felt bad if I could have understood what those bushy-tails said to me. It is a pet idea of mine that the woods inhabitants understand each other's remarks better than we do, so I made haste each time to escape from the vicinity of the angry little chaps—didn't want them to tell any tales on me to the deer.

"I had managed to thread my way into a dense brier patch, further complicated by overhanging vines and creepers pendant from the trees. While carefully crawling under an unusually heavy bunch of this, some pyschic influence caused me to look to the right—plumb into the startled eyes of a beautiful doe, who was lying down not four yards from me. As I close my eyes I can still conjure up a picture of that deer. The surprise was mutual, and our scrambles simultaneous—I to get from under those vines, she to get away. Well, she got away, thanks to the vines, for I was neatly snared long enough to give her the needed start. I tried one shot, but missed. Knowing that my shot had frightened all deer within hearing, I hastened, as it was growing late, to a runway between Boggy Bayou and a branch of Boggy laboring under the gruesome name of Dead Man's Bayou, where I sat upon a stump with my ears and eyes as wide open as nature would permit.

"After about an hour's wait and rumination on how I missed that doe, I was very nearly startled off my stump by the sudden roar of heavy wings in my rear. Turning cautiously I saw what I supposed was a buzzard folding his wings in a tree across the bayou. After some moments' blank staring, it dawned upon my benighted Northern intelligence that I was rudely spying upon a regal wild turkey in his boudoir. Since the twigs between him and me precluded all possibility of a certain shot, it was up to me to do some tall and crafty crawling in the brush. After some twenty minutes' display of my woodcraft, interspersed with numerous breath-holding pauses, occasioned by the uneasy movements of the suspicious bird, I had an obstructed view of his highness at about sixty yards' range. He was craning his neck and using first one eye and then the other, trying to discover what manner of beast I was. Due to the increasing darkness and my nervousness, a bead was a mighty hard thing to draw, but, after some seconds' wavering, the foresight settled on the breast (no head shot in that light and with the head abobbing, too), and I pulled trigger. If I had missed that turkey! But I didn't. He toppled—it was so satisfactory to see him topple instead of fluttering—off his perch and hit the ground with a thump fit to scare all the deer in the county. Of course it was my luck to be on the hither side of the Bayou Dead Man, and it was a matter of some twenty minutes before I reached the gobbler, and you can imagine that I didn't stop to pick any flowers, either. I lugged him to camp over my shoulders—a proud and happy chap, although the bird was heavy and the woods dark. I'll remember that walk back to the club house for some time. I located many trees, stumps, logs and bushes by personal contact—was scratched by briers, torn by thorns and tripped and thrown by creepers, but with all, my elation was not abated one jot. The gobbler weighed seventeen pounds—was 'an old booster'—and had to be parboiled before roasting; but the game flavor remained, and was fully up to the advance notices. Beats tame turkey. The little .30-30 ball had entered in the V of the wish-bone, and torn a large hole in his back, breaking the 'elbow' joint of the left wing. On cleaning, no vestige of the heart could be found.

"Fine quail shooting is plentiful in the vicinity of Warren. We were out many times during the winter and had grand sport. The birds seem to be a trifle smaller than our Minnesota quail, and are certainly as quick. Since the cover they use is almost a jungle, a good bag is a prideful achievement. But the deer do not have a fair show. They are hunted with hounds and fire hunted—otherwise by jack light. Nevertheless they are numerous, especially in the bottom lands along the rivers.

"The Saline Fishing and Hunting Club was organized here in Warren April 2 with a membership limit of fifty—membership full already. It is the declared intention of the club to prosecute all violators of the game and fish laws, and it has already posted a reward for the conviction of anyone violating the laws. A neat little club house is in process of construction on the Saline River, 3½ miles from town. Some of the members are fond of fox hunting, but, contrary to the usual custom, they run at night. The town is full of hounds, and a few blasts on a horn will immediately collect a very respectable pack of eager dogs.

"The duck shooting is fine if one can strike them in January when the water is low. At high water the birds are far back in the woods, where it is almost impossible to get at them, and they seem to have no regular morning and evening flight, nor any regular route. All the shooting is done through the tops of the trees as the birds come flying over the forest from all directions. Those I shot this winter were all mallards, though I saw a few pintail and some wood ducks, but I missed the lively little teal of the rice swamps."

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The Siberian Fur Industry.

CONSUL-GENERAL HALLOWAY writes from St. Petersburg, April 3: "The leading market for Siberian furs is Irbit, 1,000 miles east of Moscow, and 150 miles east of the Ural Mountains and Nizhni Novgorod, where annual fairs are held. The fair at Irbit is held in February each year and that at Nizhni Novgorod in July and August. The former is much the largest, and has just closed, the supply of fells consisting of bear, glutton, lynx, elk, reindeer, stag, musk deer, fox, sable, marten, mink, ermine, polecat, squirrel, Alpine wolf, and blue, silver, and red fox, and one or two kinds of wildcats indigenous to Kamchatka. The Siberian black hare has become very scarce, as well as blue fox, which brings about $50 per fell.

"The supply was not equal to that of former years. The number of buyers from all the leading capitals of Europe and America increased and prices were higher, which is attributed in part to the fact that the world has adopted the American fashion of wearing furs outside, instead of as linings, which requires better skins.

"Although a Russian company enjoys the monopoly of catching Alaska seals, they are all sold in London, and none are to be found in the Russian market. It is claimed by the leading experts that unless Russia, the United States, England, Canada, and Japan agree to put a stop to pelagic sealing, seal fells will disappear from the market.

"Previous to September, 1902, Russian squirrel fells were only used as linings for ladies' shubas, but the demand at the Nizhni Novgorod fair during that year was so great that the price increased and the undressed skins (on which there is no duty in America) sell at from 10 to 30 cents each. It requires from 100 to 250 to make a jacket, 60 to 150 for a cap, 20 to 40 for a boa, and 5 to 10 for a muff. Pale squirrel tails are sold at $2.63 a pood (36.112 pounds), and dark squirrel tails at $3.13 per pood. White foxes are sold at $6 each. Undressed sable skins sell from $15 to $200 each, and it requires from 50 to 100 to make a jacket, 30 to 60 for a cap, 2 to 12 for a boa, and 2 to 6 for a muff.

"Sable and ermine remain the favorite furs with those who can afford to purchase the best.

"Local merchants at Irkutsk purchase a considerable quantity of furs from hunters and trappers, as do all merchants throughout Siberia, which, if not shipped direct to Moscow and St. Petersburg, find their way to the annual fair at Irbit in February, where the leading fur houses of the world are represented by buyers."

Elk in Jackson's Hole.

THE following note, published in Wonderland, the Gardiner, Montana, newspaper, will interest many of our readers:

"In a personal letter to the editor of this paper, Frank Sebastian, who is well known here, but at present a prosperous ranchman of the Jackson Hole country, writes: 'I see by the papers that we are all out of grub and the elk all starving to death, so I thought perhaps you would wonder how your old neighbors down in this region were making it. So far the only one I can hear of that is out of grub is the storekeeper, and of the elk, there will be quite a number die along Flat (Little Gros Ventre) Creek, but having broken into the hay stacks a few times they refuse to rustle and stand around waiting for another chance to break in again. The winter has been quite severe, but there are horses wintering on the hills and the elk back in the hills are looking all right. About 300 head are wintering just below here and but three have died so far and two of these were calves, and unless unusually severe weather prevails from now on, I think 10 per cent. will more than cover the elk loss in here.'"

New Jersey's Game Commissioner.

GOVERNOR MURPHY has appointed Percy Hayes Johnson, of Bloomfield, as Fish and Game Commissioner, to succeed William Halsey. Mr. Johnson has been Deputy Game Warden since 1886. He is president of the Troy Meadow Fish and Game Association, and was one of the organizers of the Brookfield Game Association in Bloomfield.

New Brunswick Cow Moose Butchery.

WE are permitted to quote from a private letter received May 6, the following remarks:

"I have just received a letter from a friend down in New Brunswick, which I quote in substance as follows.

"'I spent Saturday and Sunday in the woods. Got a shot at some geese, but failed to stop any. I am sorry to have to report that I found partly decomposed bodies of two cow moose near the camp, while half a mile up the barren lies the body of a third, all killed late last fall. On going out I saw two moose quietly feeding by the roadside. A friend saw a fine big bull feeding near the lake a couple of weeks ago with a broken hind leg hanging loose, the bone not having mended. He had been shot last fall and had yarded near the lake.'

"The killing of the cow moose was, of course, in violation of law. These moose were shot at night and the guilty parties, after ascertaining what they had done, were afraid to make any attempt to get the meat, so the bodies were allowed to rot. The limping bull, it seems to me, emphasizes a fact which all sportsmen ought to take to heart—not to shoot at all until conditions are such that the shot may be well placed. It is evident that there are parts of the provinces where the very thorough protection of game noted by Mr. Hough does not exist. This violation of the law must certainly have been known to some of the game wardens. Nevertheless several months have elapsed and no one has been brought to account, although there is good reason to believe that a little investigation would have uncovered all the facts."

To this we may add that if Mr. Flewelling, the Deputy Surveyor General, or any prominent game protector in New Brunswick, should, as a result of this letter, make inquiry of us as to the sources of this information, we will give him the name of an entirely responsible gentleman who will lay before him all the facts that he has.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

On the Opening Day.

FROM a friend of mine, whose good nature and veracity cannot be doubted, I obtained the following account of a fishing excursion which took place at the opening of the trout season for this year:

For at least a month previous to the 15th of April, George and I had been conjecturing as to what locality and brook in particular should be honored by our attention on the opening day of the trout season.

After discussing various streams, the merits of which it had been our good fortune to have had a previous knowledge, we decided that there was not one among them that could possibly possess the qualifications of Spring Brook; this meandering, as it did, through a sparsely settled locality should, we decided, be equally clear and warm as any of the others; there was, moreover, one great point in its favor which was that for many years there had been maintained by parties of a neighboring town, a costly and well constructed trout pond, located in the vicinity of the stream's headwaters. This pond had been well stocked with several varieties of trout; that early in March the great bulkhead which had for so long been the means of retarding the general flow of the stream, and which had kept the pond well filled with water, had been swept away by freshets, thus leaving it to drop back to its natural bed.

This was, to our minds, a point worth considering, the trout contained in the pond, some of which were known to be lusty fellows, we had no doubt hade been swept away down the stream and were sure to be found by crafty fishermen like ourselves lurking in the deep pools below.

This fortunate piece of information was further augmented by George, who declared there were mighty few people who had any knowledge whatsoever of the washout, and I, knowing that he was speaking of his native wilds, considered that he ought to know whereof he spake.

Having decided, then, that Spring Brook should yield up its own, and having obtained the usual outfits of fishermen who fear that the elements are ging to combine to spoil sport, a costume which usually appeals to one not deep in the science of capturing the speckled beauty, to be possessed of a superabundance of pockets, the purposes for which these are really designed being within the grasp of some (usually the wearer), the general public, however, is left to mere conjecture. Having obtained, as I have said, a complete set of these regimentals, and laden with rods, baskets and bait-cans, we boarded a late afternoon train, our objective point being a small town in the vicinity of our stream, where we were to spend the night, in order that we might be able to make an early start the following morning. Upon our arrival at D—— late in the evening, and after having obtained a substantial lunch, which was in itself a glowing tribute to our host, who must have come from old fighting stock, in order to have maintained on the corner of this shack the emblazoned sign Hotel, we retired to the chamber we were to occupy for the night, our genial host piloting us up the creaky stairs, lamp in one hand, in the other a good sized hamper, containing our grub for the following day. With the warning to keep an eye peeled for Roberts' bull and a fervent prayer for our success, our host departed.

I forgot to mention that this little jerked town is something of a railroad center; I didn't know it before, but I learned it that night, for after we had turned in, prepared for a few hours of rest and sleep, along came what is commonly termed "a mile of empties," the engine doing the ordinary amount of puffing and the box cars playing their enjoyable tattoo on the rails. I am sure I heard this train as it departed in the distance for at least ten miles; I am willing to make affidavit as to ten; it may have been more, but I wouldn't swear as to more than that. Next came a lone engine bent upon scraping together a long tail of empties; I am sure that its intentions were carried out to the letter. How many more of these disturbers of the peace passed and repassed beneath our window I am unable to state; they became so numerous that I lost all count, and finally fell asleep trying to guess how many hundreds of miles of track they would cover if combined in one long train.

Having slept, as it seemed to me, about ten minutes, but in reality full four hours, I was awakened by George, who seemed to take a diabolical pleasure in informing me that it was time we were up and doing, for we had determined to be the first ones on the ground, even if we had no sleep at all; so out I crawled and groped about in the darkness for the stand on which matches and the lamp had been left. These articles having been discovered, I began getting into my clothes, relating to George the while a wonderful dream from which he had rudely awakened me. How I had hooked a mighty trout, safely landed him, and was proceeding to inspect my prize, when, to my wonder and astonishment, it rose on tiny wings and flew swiftly toward the stream; how I, awe-stricken at this wonder, still felt that I could not allow it to escape; so, rushing forward, I smote it with the butt of my rod, felling the creature to earth; just here, while I was slipping my suspenders over my shoulders, something fell with a crash on the floor, and even in the dim light I was able to discern that it was a flask of some sort which some miserable fellow had put into my hip pocket; however, I swallowed my chagrin, merely remarking to George that my spirits were ebbing already.

As the boy would say, "it was darker than a stack of black cats" when we emerged from the hotel, the rain was drizzling down in a manner which seemed to indicate that it meant to continue, but we started on up the road, and after a half hour's walk came to the point where our stream intersects this thronging thoroughfare; here we clambered over the fence by the roadside and struck off into the wilderness of rain and darkness, guided chiefly by the gurgle of the tiny stream. I thought that tramp would never end, and it seemed as though we walked miles innumerable, crawled over and through a thousand fences ere we reached a point sufficiently far enough up stream to warrant our stopping and whipping it back.

With the consent of all hands we proceeded to tackle the lunch-box, to which George had desperately clung during our weary march; our spirits seemed to revive with every bite, so that after satisfying the inner man, the outer one felt fit for anything, and despite the drizzling rain we soon fell to fishing.

Having caught my hook several times upon overhanging limbs and twigs I at length came to the conclusion that it was altogether too dark for me to fish, so laying aside my rod I patiently awaited the coming of the morning light. At length the darkness began to give way and a dull, misty light to take its place; I began to discern neighboring objects and to speculate as to what they were. Here stood a spreading elm and yonder was the straggling outlines of a rail fence, and still further down the stream I could discern, as I supposed, several stumps, scattered along at intervals.

As it became brighter, I prepared to resume operations, and incidentally glanced down the stream again to locate the positions of those stumps in order that I might not run afoul one while fishing. Imagine my surprise to see one of those stumps suddenly move in my direction and another to bend over and right itself again; this phenomena was easily explained by a closer inspection, which proved to me that my supposed stumps were, in fact, human beings, and how human they were can best be judged from the fact that each and every one of them was a fisherman, and out here in this pouring rain on the same errand bent and actuated with the same ideas as were we—i. e., that this stream would be the best in the neighborhood, and that each one of them would be the first on the fishing ground.

After thrashing the brook for a couple of hours or so, and meeting some thirty of our fellow beings, we at length crawled beneath the lowest strand of a barbed-wire fence for at least the fifth time that morning; this particular fence, however, manifested an affinity for my coat-tail that I had not remarked in any of the others. By this fence we came upon a man who informed us, among other things, that he lived near by, and who also commented on the number of fishermen that he had observed during the morning; he, however, stoon stalked away in the direction of a farmhouse to be seen not far distant, so our attention was given to fishing once more.

Up to date I had taken three chub, and was beginning to feel proud of the exploit, for George had not even hooked a chub, when my vain boastings were interrupted by a sound from the direction of the farmhouse, and glancing back I beheld our acquaintance of a few moments since, leading some kind of an animal into this very pasture in which we were fishing. At once my imagination took fire, the warning to keep an eye peeled for Roberts' bull; the hint as to the number of fishermen about, as dropped by the farmer, instantly flashed through my mind. This, I was sure, was an unique plan of the farmer to clear us off his premises; a fierce bull, I felt confident, had been loosed upon us. So, calling out a warning sentence to George, and grasping the butt of my rod in one hand, with fish-basket trailing out behind, away I sped for a neighboring fence, just as fast as a pair of rubber top boots and rainy-day costume would permit. Twice I stumbled over mounds of earth, and once I plunged the tip of my rod into the soft earth, causing it to bend nearly double, but I plowed madly on, determined that no bull should gore me if I could be the means of helping it. At last I reached the fence, and safe and sound upon the other side I paused to look back. There was George walking slowly along by the stream and my bull grazing peacefully near the bars.

Some moments later, when George came up to the spot where I was seated, still breathing like an old-fashioned bellows, he, with many a guffaw, remarked that I need not have been in such haste, for even a good sized calf like this one had never been known to harm anyone.

For some time after my adventure with the supposed bull—I am safe in calling the adventure mine; indeed, I might leave out all mention of the bull and still have just as valid a claim to the adventure—as I was saying, for some time after this there was peace. I saw nothing that I felt compelled to shy at or run away from; naturally I was inclined to growl somewhat at the weather and things in general, but for the most part everything passed smoothly until somewhat later in the day. I should judge that it was along about three o'clock in the afternoon; the rain had ceased and I could see George fishing on the opposite side of the stream some few rods on. He had just landed the finest trout of the day; that isn't saying a great deal, but it was encouraging, just the same, for at the moment I was struggling for the third time within ten minutes with my hook, which somehow seemed to delight in coming into contact with objects foreign to the use for which it had been designed. Manfully I strove to restrain sundry inelegant but effective expressions that came to mind, for this last time I had hooked on to a stout root on the opposite side of the stream. I decided that, contrary to my habit, I would not yank this time and break the hook and stand a chance of losing some few feet of line as well; this time I would, like any decent-minded citizen, cross the stream, unhook my tackle, and return to my own side after so doing. The stream at this point could not be more than four or four and a half feet in width, I conjectured. Of course I didn't care how deep it was; ordinarily I am not considered the most sprightly creature that walks. I know my failings, too; but crossing this stream would be as easy as hopping across a puddle in the road; its firm even banks would afford a safe start and alighting. So I laid aside my rod, drew my boots up at the hips, stepped back a pace, and lit out. If all human calculations were correct, what a lot of worry and fuss we could spare ourselves in this "vale of tears." It happened either that this particular brook laterally stretched somewhat as I took wing, or else something unknown retarded that astonishing leap I made. Any way, the fact of the matter is I alighted plump in the middle of the stream. Whew! How cold that water was. I have the habit of a cold morning plunge, but I never ran up against anything like this. Vainly I grasped at the muddy bank; in up to my shoulders, I could hardly stand upright, so swiftly did the water rush about me. Then it dawned upon me that, clad as I was, I could not emerge from this roaring torrent without assistance; so I bellowed lustily for George to come and rescue me. I did not shout in vain, for in a moment up galloped George, who proceeded to grasp me by the collar and haul me up the slippery bank, and no small job it proved to be. Having seen me safely landed on terra firma, he proceeded to laugh immoderately, going through as many contortions of voice and form as a professional limber-man and grand opera singer combined. This, indeed, was a last straw. I would stand it no longer. I had been imposed upon. Who was to blame I couldn't say, but I felt it, just the same. When all these mishaps happen to one meek, unoffending man in the course of one day, it is time he retired to the peace and quiet of his regular vocation. So I decided, and back we started, arriving in town late that night. George has not yet ceased explaining to our friends what a fleet runner I am, and how much I resembled a muskrat when he saw me first in that muddy stream, my rubber hat only visible on its surface.

JOHN B. AIKEN.

Memories of Lake Whitney.

Editor Forest and Stream:

READING that most interesting account in a recent number of the FOREST AND STREAM about early days on Lake Whitney, New Haven, Conn., brings to mind my college years and the happy days spent on that interesting sheet of water at the end of the horse car line. My thoughts go away back to 1877, and I want to tell about my very first experience in a birch canoe on any stage in any water. There was a good sportsman, George Greenleaf, who sang in our old St. John Street M. E. Church choir, and he used to tell the basses in Prof. Benjamin Jepson's musical organization in the organ loft, between the acts on rehearsal nights, of the great sport hunting and fishing he had at the lake in his old birch. As I seemed to have the right sort of appreciation, it was agreed that he was to call for me after Saturday morning Greek one bright spring morning. We got to the lake and George found his canoe somewhere in a barn or shed. It may have been cared for by the celebrated fisherman of pickerel mentioned by your correspondent, only I did not have the good luck to meet him. I do remember the neat little low house covered with vines by the landing. We pushed off and sat right down in the bottom of our craft, and I remember how much more staunch she seemed than the pine log dugout over which I wielded my virgin paddle on Four Mile Run on the Ticonderoga Flats. No two boys with their guns and tackle ever make a trip with the wind unless they try a sail for a short time. So we rigged up a big coach umbrella, which made us fairly fly, and concealed our identity from a staid boat full of girls from Miss N.'s boarding school, for we were like all young sportsmen, very shy with young women folks, and, besides, we did not want to be annexed to any female ambitions on that day, at least. I well recall how we passed up to the north end, under the bridges, and saw the water lilies bursting into bloom, and the swarms of small fish about the stems of the water plants, and occasionally got a sight of a big father pickerel down in the dark depths below.

We kept right on up the inlet, finding no difficulty in threading its crooked channel by looking sharply after dangerous roots, until we neared the falls over which we would have to carry. We decided to hide the boat and take luncheon. We were amused at the antics of a little box tortoise about the size of a Mexican dollar which we had caught and tied with a narrow ribbon to a thwart. We would abandon him feigning death on his back, but just as soon as we left we could hear the "turkle" turn-turtle. This he could do with ease every time. A fire was built of twigs and several lamb chops were unwrapped from a modest brown paper package. They did not go badly toasted on long sticks stuck into the ground near the coals, and the drips falling on the fresh bread made a good substitute for butter. This was our first course. The perch and other fish were just swarming in the cool water of the creek down under the deep banks upon which we were dining, and it did not take me long to catch a lot of them. Perch are best when skinned, as we do up in Lake George in the summer when in a hurry. Besides, there is no harder work than scaling these armor-clad beauties in the old way. The fish is taken in the left hand and a slit is cut with a sharp knife from the center of the back down parallel with the gills. Then

the knife is run down along the backbone to the tail. Keeping a firm hold on the head, with thumb and knife blade you start the skin on the right side of the back just back of the head, and the skin comes off nicely, disclosing the fine white meat. Turn your fish and do the same with the left side, and cut off the head and all comes away, leaving the fish ready for the pan after a little rinse in the clean water. George had the "spider" ready—I never heard the word "skillet" until later in life; there was some hot pork sizzling in the pan just to show that there was no coldness, and the heap of sweet meat was piled in and covered just long enough to get hot, when off came the cover and the perch were allowed to brown.

After our feast and a good nap, we went about with the guns, but had no luck, and went home finally as happy as two young boys ever were in this beautiful world with our baskets full of lilies for the fair friends in New Haven.

George pointed out the old church, painted white as I remember, with green blinds, in true New England fashion of the time, and we landed and peered cautiously into the darkened interior, and George said that they had a choir there on Sunday led by a man with a big double-bass viol instead of an organ, which made me very anxious to attend services there on Sunday; but, of course, that was not to be thought of, because the faculty would report me absent from college chapel to my loving parents, who, by the way, would not have cared to what church I went on Sunday, and I should have received twenty marks and a "Warning," with a big W for my indiscretion. How strange such things seem when one looks back from the point of view of manhood's freedom.

Peter Flint.

ON THE DELAWARE NEAR NARROWSBURG.

Canoe and Camp Life Along the Delaware River.

VII.—Running Water.

"The foam-flecked globes on the eddies ride,
Thick as the schemes of human pride
That down life's current drift amain,
As frail, as frothy, and as vain."

—Scott.

"Water swiftly flowing,
But stationary waves!
Water gaily going
O'er the rocks it laves!
Bounding like a puma,
Full of curves and light—
Laughter, foam and fume! A
Winding rush of light!"

—Milaspara.

The most casual observation of earth's contours, even those of one small section of any country, brings conviction that the elevation of the land was ordained; for its foliage, fruits and flowers are the result of growth as they feed upon water. The uprearing of hills and mountains was by divine will, to give motion to water. Forest, garden, orchard and meadow are fed by it as it flows on and through the land, quite as much as by the direct rains from clouds. It goes in prepared paths,

AN EYE HARVEST ON A CLOUDY DAY.

whose margins are winding lines of deeper green and special beauty. It has power to cleave mountains (as at Delaware Water Gap), as well as to circle gently among the sedges, and cherish the huge roots and snowy blooms of its lilies.

The moss-tapestried dell, the clusters on the grape-trellis, the greensward sweetly starred with squirrelcups and adder-tongues, the wooded, fair valleys and upland meadows, all owe their beauty to flowing water, hastening toward and yearning for the sea—unresting, benign as all vegetable life drinks it, and as it sings and croons to tree and plant, like a loving mother. To use the couplet of Izzet Molla:

"It purls and murmurs as it moves
In circles round the tree it loves."

Green under tree canopies, its depths a sun-shafted fantasia, we owe to it the fragrance and blessing of every blossom, the plowing and harvesting, the dripping, moss-covered old well-buckets near a countless host of happy homes where the vine clambers, and the lilacs bloom.

Try to recall the very happiest hours of all your life—some morning of the long ago whose joys lie fair and sweet in memory, some moonlit evening or starlighted night far off, but hallowed in recollection. Almost certainly you will be led back to a brook or river that you loved in childhood, and left with it to joy again over the impalpable but vivid treasure. The music of a stream, the song of a wild bird, the sight and scent of a country flower. In how many hearts have they not only arrested but turned back the flight of time, and left men boys again, "just for to-night!"

There is no inorganic substance so remarkable as water. Perpetually changing, always smiling-earnest, steadfast, joyous, sleeplessly unwearied! We have set for ourselves the task of studying it as it flows in the Delaware. A difficult task and sure to be badly performed, for it is "like trying to paint a soul!"

We have reached the upper Westcolang Rift, and have even been down as far as Narrowsburg—fishing, loafing, eating our bread in midsummer laziness; but always trying to see the hues and curvature and to hear the music of the flowing water.

It is "only the Delaware;" but this river is quite as lovely for a hundred miles as any like reach of the Rhone. Search through the Scotch hills or the Bernese Oberland, and you will find no sweeter water-music, and no fairer scenes.

Of course the Delaware is seen most distinctly in the gray light of cloudy days, for then its fire is largely limited to its own foam; it is not drowned in golden mist caused by strong sunlight, and the shift and dance of its radiance and lights are not so complex and bewildering. It is water gathered in mass, flowing rapidly. We lack time and space here to tell of its rise in mist from the ocean, its propulsion by kind winds, its descent over and upon the land while it is often seamed with lines of fire and shaken by bellowing thunder; or how it dwells as invisible moisture in clear air, or forms clouds that drift as ranges. Besides, something of this will be told when I come to write of clouds.

Filtering threads of rain and dew have massed on the slopes, hills and bottoms, and have waked to a musical life of their own tinkling as rivulets and rills beneath the plumy spires of ferns and the tangle of birch roots, their lyres bursting forth as springs welling to form brooks that, in turn, join in the loving work of feeding and swelling the volume of a large stream.

Here is a pitifully inadequate picture of the Delaware about two miles from Narrowsburg, and of an angler there, happy under his old straw hat.

Grant to him the power of blotting from his perception all that wondrous beauty of the far-foliaged vista up the river, with its soft gloom, mystery, and play of shadows. Take from him all consciousness of the blue fire of the sky, throbbing with faintest mantlings and quiverings of change, and of the exquisite finish and curvature of the water-sculptured rocks. Close his ears to the silver bell of the thrush, the jangled chimes of the bobolink, the boom at the end of the long air-dive of the early-flying nighthawk, and the resounding banjos of the bullfrogs back in the moist, rush-guarded nooks of the bank. Let no haunting odors that live along the riverside distract his attention with smells of thorn-blossom, crab-apple, leek or sedge. Banish all capacity to do aught but behold the motion and light in that water. What does he see?

Far up the stream broods the mystery. Out of the hills emerges the river, advancing in a placid reach which is so often miscalled an eddy. It is a view faintly seen through mists that rise above its first little plunge and foam at the head of the rift, where the hesitating current has poised for its first leap, and the water breaks into an irregular line, like the links of a horizontal but loosely held and shaken chain.

What next?

The pen falters. I seek refuge in the following description of a master at whose feet I have sat for twenty years, and who was probably the keenest-eyed student of Nature that the last century produced:

"When water, not in very great body, runs in a rocky bed much interrupted by hollows, so that it can rest every now and then in a pool as it goes along, it does not acquire a continuous velocity of motion. It pauses after every leap, and curdles about, and rests a little, and then goes on again; and if in this comparatively tranquil and rational state of mind it meets with an obstacle, as a rock or stone, it parts on each side of it with a little bubbling foam, and goes round; if it comes to a step in its bed, it leaps it lightly, and then after a little plashing at the bottom, stops again to take breath. But if its bed be on a continuous slope, not much interrupted by hollows, so that it cannot rest, or if its own mass be so increased by flood that its usual resting places are not sufficient for it, but that it is perpetually pushed out of them by the following current, before it has had time to tranquilize itself, it of course gains velocity with every yard that it runs; the impetus got at one leap is carried to the credit of the next, until the whole stream becomes one mass of unchecked, accelerating motion. Now, when water in this state comes to an obstacle, it does not part at it, but clears it, like a race-horse; and when it comes to a hollow, it does not fill it up and run out leisurely at the other side, but it rushes down into it and comes up again on the other side, as a ship into the hollow of the sea. Hence the whole appearance of the bed of the stream is changed, and all the lines of the water altered in their nature. The quiet stream is a succession of leaps and pools; the leaps are light and springy, and parabolic, and make a great deal of splashing when they tumble into the pool; then we have a space of quiet curdling water, and another similar leap below. But the stream when it has gained an impetus takes the shape of its bed, never stops, is equally deep and equally swift everywhere, goes down into every hollow, not with a leap, but with a swing, not foaming, nor splashing, but in the bending line of a strong sea-wave, and comes up again on the other side, over rock and ridge, with the ease of a bounding leopard; if it meet a rock three or four feet above the level of its bed, it will neither part nor foam, nor express any concern about the matter, but clear it in a smooth dome of water,* without apparent exertion, comevery swell and hollow of the bed with their modulating grace, and all in unison of motion, presenting perhaps the most beautiful series of inorganic forms which nature can possibly produce; * * every motion of the torrent ing down again as smoothly on the other side; the whole surface of the surge being drawn into parallel lines by its extreme velocity, but foamless, except in places where the form of the bed opposes itself at some direct angle to such a line of fall, and causes a breaker; so that the whole river has the appearance of a deep and raging sea, with this only difference, that the torrent-waves always break backwards, and sea-waves forwards. Thus, then, in the water which has gained an impetus, we have the most exquisite arrangement of curved lines, perpetually changing from convex to concave, and vice versa, following

A RAINBOW EFFECT.

is united, and all its curves are modifications of beautiful line"†

Yet, as we mentioned when writing of mere hues and motion of clouds, all this motion and curvature are governed by sternest laws, even through all their change, haste, seeming confusion and chaos!

Just below the scene shown in the picture, the water is less rapid, and the bottom more rocky; and if the angler stands on the shore where the stream curves, and with the sun low behin dhim, he sees the water breaking in foam-bells, and tossing beryls and pearls; and through the mist rising over each rock and the foam just below it, hover tiny sections of rainbows waving and dancing in witchery of motion, the length and width of the rapids alive with not only the water-motion, but with the formless ghost-brilliance of water-born butterflies poised above the seething caldrons where tormented masses of foam-fire make the water brightly opaque, water not only alive, but all crowned with iris-children that dance in a thousand mad and merry waltzes along the rocky floor. In those pools the bass, buttress-guarded by the rocks above them, seek safety when the grinding ice-gorges of winter threaten them.

And this is but one aspect of the river, in what may be (inaccurately) called one light. But wait till the twilight deepens!

Up from the horizon rises a disk of dull gold, faintly starring the flood with fairy glints, until it widens to a long-flaming ribbon of radiance, golden-fringed, but dotted with innumerable points of transient black, the whole boiling fire-line full of gracefullest motion. And as clouds gather and the night-pall shuts out the view with its veil, the stream changes to only a field where dim, fantastic foam-sprites reign like ghosts, and the tired eye is glad to be released from the stress of looking. But we

* There is a rock abreast of the uppermost of the Three Sister Islands at Niagara, over which the water leaps smoothly in a dome six feet above the stream when slightly above normal flood, and without the slightest pause or foam.—L. F. B.

† Ruskin.

have noted that all waves in rapids are stationary as the water races; while on lakes the waves advance, and the water only rises and falls in undulation. Also that on lakes the waves break forward, but that in rapids they break backward.

And what does the angler hear?

Blended water-notes, made under different physical conditions, that form the general voice of the stream. But from the greatest plunge, and where the current is most swift and strong, comes, at intervals, a bass, throbbing note capable of making the candle-flame inside your tent dance and flicker, and, at favorable moments, will even cause the flames of your camp-fire to sway in unison with its vibrations.

When deflected from a bank in mass, the water purls and gurgles as if laughing at its own sinuous change. Over rocks it dashes in an uproar made up of tiny sounds as numerous as its own drops, and goes on in gurgles and chuckles. Hundreds of stony points break its motion, and each will have its separate bevy of water-notes. This all varies with width of stream—its volume, depth, obstruction, character of the bed, the incline and height of banks, and kind, density and amount of foliage, with corresponding changes of resonance and echo. Density, humidity or aridness of air also influences the sounds of the stream. We can tell when a storm is brewing, for the voice of the Delaware increases in volume and distinctness. Over its shallows and among small rocks, it has a slow, droning, slumberous sound, like that of a steady wind moving slowly through a forest, or water flowing over the even edge of a wide dam. Unobstructed in wide reaches, and shallow, it has the inimitable purl, so exquisite that even in music, the sweetest sounds are called liquid. Yet these purling notes have a whole calendar of their own special chords, with their own multiform and blended vibrations. If you have the will to place a few rocks in such shallow water, you can, by changing the character of the obstruction, alter the whole general voice of the stream, through waking new notes.

Thus flows the Delaware for hundreds of miles, a broad line of harmonies, thrilling through its own forests, with whose music it forever blends. It is a harvest of the eye, and a delight to the ear:

"With its lithe and merry motion o'er the algæ where the green,
Waves beside the rocks of yellow, and beneath the water's sheen,
With a low, mysterious music in the elm trees overhead,
Till the oriole translates it, and you know just what they said."

The day has wearied us with its fullness of sight and sound along the river. We eat a ten o'clock supper, and the night hours pass unheeded. As we push back the tent-flap and look out, the cool grays of morning have changed the moods of river, hills and forests; nature thus appearing in dress after dress, each seeming to be lovelier than the one which preceded it. L. F. Brown.

New England Fishing.

Boston, April 9.—*Editor Forest and Stream:* The recent lecture of Dr. Field, of the Institute of Technology, to which I alluded in a former letter, contained much valuable information concerning the lobster. The annual expenditure for the crustacean, he declared, to be about $10,000,000. While it is distributed to some extent from the Straits of Belle Isle on the north to the Capes of Delaware, on the south, the greatest number are caught in the waters of Nova Scotia and Maine, and the chief markets are the cities of Boston and New York. The high price at which they are sold, being in reality about 90 cents a pound for the food, and the diminished size of those offered are conclusive proofs of a decrease in the supply. Reference was made to the statistics in Capt. Collins' reports—the average catch, as there shown, per pot in 1901 in Massachusetts being 84, and in 1902 but 33.

The female carries the eggs from nine to eleven months, according to the temperature of the water, their development being retarded by a cold temperature. The hatching season he affirms to be the months of May, June and July. The infant mortality is enormous, the young, on coming to the surface of the water, being devoured by fishes, so that only a few survive out of a maximum brood of 100,000 eggs. He claimed that "if from every 10,000 eggs two lobsters survived and could be raised to maturity the total number of lobsters would remain the same if none were caught." It is well known that the lobster is of slow growth, requiring five years or more to reach maturity.

Two years elapse between the different broods. The chief obstacle to artificial propagation has been the difficulty of finding suitable food, this being as yet an unsolved problem. While it is generally known that the efforts of the United States Fish Commission have been continued for several years in an endeavor to propagate lobsters for restocking at Woods Holl, Mass., the attempt has not as yet been as successful as its promoters have desired.

As a means of increasing the supply, the professor suggests the taking of the young for food and saving the mature lobsters as breeders. He declares a close season impracticable. If the writer has not been misinformed, the plan of a close season of several years has been tried successfully in the case of the lobster fisheries of Norway. In this connection the friends of the lobster industry will be glad to learn that a resolution providing for the issue of a call by the Massachusetts Commissioners for a convention for the purpose of conferring on this subject and others by Commissioners of all the New England States and representatives of the New York market, the Maritime Provinces of Quebec, Nova Scotia and New Brunswick, has been passed by the House of Representatives and is now in the Committee of Ways and Means of the Senate. A favorable report of that committee is confidently expected. It is not unlikely that the combined experience of those who will be called together will be productive of much good, and it will be a cause of much satisfaction if some plan shall be devised by which this decadent industry may be saved from utter annihilation.

Capt. Collins is having constructed a naphtha launch 32ft. 10in. long with a breadth of beam of 7ft., designed by himself, for use on the coast in enforcing the lobster and bird laws. The captain has recently returned from a trip of two weeks on the United States steamer Grampus. This has given him a much needed rest and at the same time has afforded the opportunity of investigating the condition of the lobster fisheries of Maine. He went as far as Rockland, putting in at various points on the coast. He reports that the lobsters have been caught down to the limit of length (10½ inches). The Grampus is in command of Capt. E. E. Hahn, and the work in which it is engaged is that of collecting egg-bearing lobsters, and is to be continued till June. She was fitted out at Gloucester, starting from that port on April 23. In spite of the 10½-inch law, the lobster fishermen have for years been taking everything, small and large, from the tip of Cape Cod southward, and the result is well known. This is true not only in the waters of southeastern Massachusetts but in those of Rhode Island and Connecticut as well.

If the same plan is pursued in the waters from Boston to Halifax there is no need of invoking prophecy to foretell the result.

Twice within a few years the Governor of Massachusetts has prevented the passage of a nine-inch law by interposing a veto, and if all lobster fishermen would strictly observe the present law it is possible that the decadence which has been noted the past few years would cease.

The proceedings of the proposed conference will be watched with great interest by all lovers of the succulent crustacean.

The Clearwater Club has returned to Boston from Grand Lake, having captured in all 124 salmon, of which Mr. C. C. Butler took 23. The trip was made in a private car to Princeton, thence by steamer across Big Lake. The members made their headquarters at the Rose Camps. Mr. A. W. Burke, of Boston, was the fortunate captor of the first fish, and Mr. J. C. Rowe, of Hartford, the largest one.

From Berkshire county reports of fine trout fishing continue to come in. The Pittsfield Sun of April 30 states that William P. Taylor took 14 trout on Tuesday, April 28, which weighed 13½ pounds; Wallace Jones 12 trout weighing 10 pounds 11 ounces; C. H. Sage and C. M. Gibbs 25 trout that weighed 17½ pounds, and on another day they caught 20, among them several large ones.

Fred Crawford, of North Adams, by report of May 1 in the Evening Transcript, caught his second two-pound trout, beating the record of local sportsmen so far. Berkshire fishing is coming to the front wonderfully this spring.

Illegal Fishing and Hunting.

Deputy Shea, of Ware, has put one culprit into court recently for fishing in closed waters; another who pleaded guilty of Sunday hunting and of using a ferret; a third who will come up for sentence May 9 for fishing in a closed brook. Deputy Luman, of Palmer, has made an arrest for fishing in a closed pond; sentence reserved in this case. There are no doubt other cases which do not come to the knowledge of the public except in the immediate neighborhood.

Capt. Collins has accomplished much in organizing an efficient warden service, and he is still working on that line.

Under the law prohibiting the sale of all trout except those artificially reared, commonly known as domestic trout, none can be sold less than nine inches in length, which was the legal length prescribed for domestic trout before the legislation of the present year. The law extending for five years the close season on deer contains a provision allowing "the owner or occupant of cultivated land" to drive deer away, but not with dogs, nor must the deer be wounded."

A law has been signed prohibiting the killing of heron or bittern, but "the owner or keeper of a trout hatchery or pond may kill one in the act of destroying fish."

Maine Fishing Resorts.

News comes from Bemis that there were twenty-five guests in the camps May 1, and before breakfast Mr. Wallace Stevens, of Rumford Falls, landed two five-pound salmon, and Mr. and Mrs. W. L. Thatcher a three-pound trout and a four-pound salmon. The high wind and cold weather of the next two days made fishing difficult, but Mrs. G. H. Drake took a 4½-pound trout. Parties from Lewiston, Lisbon Falls and Brunswick, Me., have had good success, and those who have returned took ample evidence of their skill along with them.

Mr. C. P. Stevens and Mr. W. W. Lee, of Malden, Mass., have gone to camp "Vive Vale" for a few days. Messrs. H. C. Kennedy and W. R. Kissam, of Brooklyn, are having good sport at the Birches.

Among the guests at the Mountain View House are Mr. E. O. Noyes and others from Brockton, Mass.; J. H. Flynt, of Boston, and D. S. Prentiss, of Worcester.

In a cottage nearby is a party from Fitchburg, Mass., composed of M. B. Damon, F. J. Nichols, Thomas Sheldon, D. W. Clifford, and W. W. Sargent. They have made good catches, but are not going to say much about them till ready to break camp.

Bald Mountain camps are not neglected, having arranged to care for such well known sportsmen as Ward N. Boylston and H. D. Daniels, of Boston; Walter Hinds, of Portland; Clement R. Hopes and party, of Philadelphia, and Mayor F. E. Boothby, of Portland, who on Wednesday, May 6, took four salmon weighing 6, 5, 5, 3 pounds, respectively. D. D. Clark, of North Attleboro, got a 4½-pound salmon. Mr. Hinds's largest salmon weighed 4½ pounds. At Haines Landing Hon. Seth Larabee, of Portland, is high line with a 7½-pound salmon. Mr. Hamilton, of Boston, has taken two 4-pound salmon. Smaller ones have been taken by Mr. and Mrs. Arthur Connor and F. A. Nichols, of Boston. Dr. C. W. Hutchins, of Boston, has beaten his last year's record, having taken a salmon weighing 8 pounds, and is contemplating building a camp for occupancy next year. At Bemis not many large fish have been taken, but Mrs. Chester Bisbee, of Rumford Falls, in less than an hour took five salmon and one trout, the largest weighing 5 pounds. Messrs. C. E. Guild and D. E. Adams, of Boston, are getting a good number, but not very large fish. Fish are beginning to take the hook at the Upper Dam, and a few anglers have arrived. Catches at Middle Dam are reported as running from 2½ to 5½ pounds.

From Kineo it is reported that large trout have been unusually prominent in the catches that have been made. Among well known anglers that have arrived is Mr. A. D. Foster, of Boston, a member of the State Association. He is accompanied by Mr. Reginald Foster and Mr. J. G. Wildman, of Boston, and Dr. and Mrs. Burnside Foster, of St. Paul, Minn. Mr. Henry Lord, of New York, has taken possession of his cottage, having recently returned from a winter trip to Africa and Italy.

At this resort the fishing will be at its height in about two weeks. Belgrade Lakes are reported to have yielded phenomenal fishing for trout this season, both in point of numbers and size. Dr. Gallagher, of New York, recently returned, taking six trout averaging over 4 pounds, the largest weighing 6½ pounds. Mr. Harry J. Boyd and wife, of New York, are also making good catches. The Hotel Belgrade is open to guests with a recent addition of twenty-five rooms, a new dining room and other improvements.

At Lake Webb, Weld, Maine, Mr. F. H. Whitin, of Whitinsville, Mass., has taken a 6-pound salmon, and Hon. A. D. Russell, of Augusta, one weighing 4 pounds, and several others have caught large fish. Varnum Pond has furnished much sport to several Farmington anglers as well as to some Massachusetts sportsmen, among whom may be named the Hon. George Fred Williams, of Dedham and Boston, who recently returned, bringing six large fish taken by himself and party.

The secretary of the Springvale Fish and Game Club, Mr. F. H. Wood, reports to Chairman Carleton that fine fishing has been obtained in Mousam Lake of his town, salmon weighing 8½, 9 and 15½ pounds each, and square-tail trout of 4 to 5 pounds' weight. The lake has had the benefit of restocking yearly for a long time. This should be an eye-opener for niggardly politicians who begrudge every farthing appropriated for protection and propagation made in the interest of sport. There is cheering news from New Hampshire, but details must be deferred till later.

Dynamiters Punished.

From Rutland, Vt., we learn that the State Fish and Game League has made a successful crusade against a gang that has been engaged extensively in taking trout by the use of explosives. Several arrests have been made, and it is expected others will follow. To such an extent has this dastardly work been carried on that many good trout streams have been divested of fish.

Prof. R. L. Garner appeared before a select and fairly good sized audience on Thursday evening in Steinert Hall, where he exhibited the cage in which he lived in African jungles. Your readers have so recently read the report of his address before the Massachusetts Fish and Game Protective Association on the occasion of the annual dinner, published in Forest and Stream, that it is unnecessary to repeat it. Central.

In Maine Waters.

Bangor, Maine, May 9.—*Editor Forest and Stream:* The past week has been one of anticipation largely among Maine anglers, at least in the eastern and northern sections of the State, for the expectations of warmer weather were hardly realized until the latter part of the week. Mooschead, as predicted in the letter of a week ago, did not furnish any great sport during this, its second week of open season, partly because the rush had not commenced, and more because the very cold water and corresponding dull weather during the first part of the week prevented any good catches, except in rare instances.

Monday was a cold rainy day, most disagreeable and lacking in results, and while Tuesday opened the same way, mid-forenoon found the sun poking through the clouds, and before noon it was, as a day, all that the lover of a clear and comfortable day could desire. Consequently that day saw some good catches by those who were out on the lake, and others who were at nearby ponds trying for the smaller trout to be found therein.

Probably the most successful party at the big lake was the Greeley party from Bangor and Gloucester, Mass., who went to the lake a week before, or as soon as the ice was thoroughly cleared from Moosehead. In the party were Geo. H. Greeley, Dr. Isaac Strickland, Frank Noyes and F. G. Moon, of this city; Dr. J. E. Garland, C. W. Luce and Frank S. Greeley, of Gloucester, Mass.; Mr. Doscher, of Jersey City, N. J., and Mr. Brooks, of Augusta, this State. They had a great time, chartering Capt. Henry Sawyer's new steamer for their entire stay, and making their headquarters at Seboomook. Their best and only real good fishing was in Big Duck Cove, and the largest trout (they say they caught no lakers) weighed three pounds, being taken by Mr. Luce.

The Crow's Nest at Sandy Bay has not opened for spring fishermen, but there are still some big squaretails left in this famous fishing locality, judging by the experience of two workmen who are building camps and fixing up those already built. They pushed out from shore in a canoe the other evening, and in a few minutes had landed a very handsome string, not only enough for their own use, but three of which they took to Greenville the following day and gave to friends, the three weighing 10½ pounds.

Arno Bacon and Ralph Emerson, of this city, spent several days during the week at the East Outlet of the lake, fishing two days along the shore by Sand Bar, the Lamb farm and around Sand Bar Island. They had splendid success, catching all the fish the law would permit them to bring home, some weighing as heavy as 4¼ pounds, and the majority squaretails. Mr. Emerson hooked and played for a long time a big laker, but the fish fought well, the leader had already seen rather hard service, and finally the fish succeeded in carrying off the troll and half the leader. Some fish were taken during the same time at the dam at the outlet, but lively sport has not yet begun there, although it is looked for every day. One day the party went to Indian Pond, five miles down the river from the Outlet, and enjoyed some splendid fishing, catching a very nice string of trout, which were taking both flies and worms. The raising of the gates above to permit the sluicing and driving of the logs raised the water in Indian Pond, where, because of low water, it had been poor for several days.

Another successful trip was that made by Abel Hunt, of this city, who went to Jackman and had some fairly good fishing there in the Moose River near Big Wood Pond, and then returned to Moosehead, spending the rest of his outing alongshore from the Outlet to his old

favorite grounds, off Sand Bar. He was very fortunate, getting some splendid sport and a long string of fish, not one of which was a togue, but all squaretails or redspots. Mr. Hunt tells of seeing at Jackman one of the finest strings of trout he had ever seen brought into Jackman by D. Hancox, of that village, and a friend, who had been fishing in the river not far from the railroad bridge. There were several of the trout that weighed between five and six pounds, and none were small. It was such a string, he declares, as one seldom sees anywhere, and was worth duplicating—if one were able.

Other successful Moosehead Lake parties include Engineer Alden Spear, of the B. & A. train, who visited Squaw Pond between trains with a friend and brought back 107 trout, while Baggage Master Frank McClure, of the same train, went with a friend to Fitzgerald Pond, getting their full limit for the day. At Seboomook, on Tuesday, one sportsman is reported to have caught four or five trout that weighed four pounds apiece, and as six members of the Seboomook Outing Club from Newark, N. J., went to the head of the lake this morning under the able leadership of Fred Castle, this feat will undoubtedly be entirely eclipsed during the next ten days.

A Bangor man who was driving through the town of Jonesport the other day passed three boys heavily laden with sizable brook trout in the road, and was told, upon inquiry, that there were 150 in the three strings, all caught in Indian River, which is a fine trout stream.

C. S. Winch went with two friends to a brook out beyond Clifton and brought in a handsome string of some forty-five or more trout during the week.

Probably the best and steadiest fishing to be furnished by any pond during the week, unless, indeed, it may be that the St. Croix system has done equally well, was Tunk Pond, which always furnishes some splendid sport with both trout and landlocked salmon as soon as the sun begins to warm the water. N. E. Bragg and a friend from this city fished there for a day or two this week, landing between them eighteen fish, one taking eight salmon and a trout, the other nine salmon. At the same time Dr. Haskell, of Brunswick, and a friend took twelve salmon in one day, and B. E. Clark, of Bar Harbor, landed six more. When the Bangor men left for home there were five anglers still there, and the fun was fast and furious. Tunk Pond is among the jewels for fishermen, and is easily reached by the Washington county route.

Those who have fished in the Passadumkeag stream claim that it is the finest trout stream in America, and the writer can say from personal experience that it is great, although he fished it under the drawbacks of very cold weather, late in the season of 1902. All who go there get great sport, and the fish rise to the fly there earlier, perhaps, than in any other trout stream in Maine. J. N. Merrill and S. A. Maxfield, of this city, were at Lee last week and went down the stream as far as Upper Taylor Brook, logs preventing their getting any further down. While the big trout are more likely to be met with in the deeper pools below that point—and they sometimes run as heavy as four pounds—still they had such sport as they had heard about, and took out of that stream 150 handsome brook trout.

To-day may be said, in truth, to be the real opening of the fishing season in the northern and northcasterly parts of the State, and the trains out from this city to the east and northeast have each and all borne their portion of the anglers who had been waiting for warmer days before starting for the fishing waters. As a sample train, the writer found on the morning train for Greenville anglers who were going to Williams Stream, Seboomook, Northeast Carry, Capen's, Lily Bay, Sugar Island and Kineo, while the Sterns party on Sugar Island, the Camp Comfort Club on Sand Bar, and other parties already on the spot, must be having the greatest of sport, as the weather is warm, the sun bright, and the fish not having been very voracious since the leaving of the ice, they must be eager for the bait.

HERBERT W. ROWE.

Salmon Culture in America.

Editor Forest and Stream:

In your issue of May 2, I read with much interest the second letter of Commissioner Babcock, of British Columbia, expecting to find some facts and figures which would prove his former confident assertions that salmon culture on the Pacific Coast had been a great success. From this letter it appears that Mr. B. has held his present position of Fisheries Commissioner of the Province of British Columbia since November, 1901, and that he "devoted a part of October and November to the investigation of a limited portion of the spawning grounds of the sockeye salmon of Fraser River, and during the entire spawning season of 1892 he devoted as much time to the spawning grounds of the Fraser and Thompson rivers as the limited season would permit." On this small experience of one season and part of another he tells us that all who have written of the vast numbers of salmon that overcrowd the Pacific rivers, notably the Columbia, the Fraser and the Skeena, from Sir George Simpson to Livingston Stone, including Capt. Butler, Lieut. Schwatka, Charles Hallock, Samuel Wilmot, Thomas Mowat (who managed the first hatchery on the Fraser), and all the witnesses who testified before the Commission in 1891, were mistaken, and that no such state of things as they all described ever existed, and he asks how, "without statistics," the Old Angler ever came to believe that such was the case? My answer is that I was intimately acquainted with Samuel Wilmot and Thomas Mowat; that I am in regular correspondence with Mr. Charles Hallock (who devoted twenty years to the study of Pacific Salmon, from whose "Salmon Fisher" I quoted largely in a former letter), and with the friend, who has had years of experience on Fraser River, from whose letter, written last February, describing the salmon run, I quoted as follows: "The salmon enter this river in such enormous numbers as to stop boats. It would seem to me that the force of their weight in rugged places would kill thousands, forcing them against the shores and rocks by pressure from behind. The weaker must succumb to the tremendous force of struggling millions, and be literally jammed to death." These writers had no "ax to grind," no reason to exaggerate, nor any motive to suppress the truth, and I mean no disrespect to Commissioner Babcock when I say that I prefer their testimony, based on many years' experience and observation, to his, based on the limited experience of a part of two seasons on spawning grounds which are reached by a very small percentage of the vast numbers that enter the mouth of the river.

As this is a vital point, largely affecting salmon culture on the Pacific Coast, which Mr. Babcock not only ignores but by implication denies, and one which both he and Mr. Stone studiously concealed in their letters to Mr. Marston, of the London Fishing Gazette, I quote some further well known authorities as to the overcrowding of Pacific rivers—and notably the Fraser and the Columbia. In his work on "Vancouver Island and British Columbia," Mr. Matthew Macfie, F. R. G. S., says in writing of the salmon in Fraser River: "At certain times the cañons or gorges of the river are so crowded with salmon that the navigation of canoes is virtually impeded. The Indians catch them there with a pole, attached to one end of which is a transverse piece of wood. Into this are stuck tenpenny nails. Leaning over the gorge they strike the nails into the fish, impaling one or two at each descent of the pole." The same writer says of the Columbia River, "that on a sudden falling of the waters the numbers of salmon left on the banks are so immense as to cause the river to stink for miles." The late A. C. Anderson, Inspector of Fisheries in British Columbia, in one of his reports says: "In the Fraser River, as well as in the Columbia and Sacramento, the quantities of spawned fish that die in their downward journey and lie rotting on the banks or are carried in thick masses down stream, are so great that I am forced to the conclusion that the salmon of these rivers do not reach the sea after spawning, but perish after that natural function is performed." From a report made by Mr. Livingston Stone to the late United States Commissioner of Fisheries, Prof. Spencer F. Baird, describing the enormous schools of salmon in the Sacramento River, I quote the following: "It was a sight never to be forgotten; for several rods below the bridge the salmon formed one black, writhing mass of life. Piled together, one above another, they charged in solid columns against the bridge and dam, which trembled and shook continually under their blows. Not daunted by their repeated failures, they led attack after attack upon the fence, one column succeeding as another fell back. Finding the fence impassable, many fell back a little and tried to jump the bridge. This some succeeded in doing, sometimes striking the men on the bridge in their leaps, and sometimes actually jumping between their feet. For an hour and a half this fierce assault continued, when, exhausted by their efforts and discouraged by many failures, they fell back to the deep hole just below the rapids, arrested for the first time in their progress up the river." In another report Mr. Stone writes: "The grating was an entire bar to the salmon, and the experiment satisfied me that the salmon which ascended the river to spawn never returned to the sea. The numbers which passed above the grating before it was finished must have been hundreds of thousands, while thousands crowded against its lower side when completed, vainly attempting to pass. As to their return, I failed to discover a single live salmon, though thousands of dead ones lodged against the upper side of the grating."

I make these long quotations to show how disingenuous were both Mr. Stone and Commissioner Babcock in their letters to Mr. Marston, in leading him to infer that to artificial culture the enormous catches of the Sacramento and the Columbia are to be ascribed. While no "statistics" are wanted to enable the reader to form a correct opinion of the foregoing statements, they are absolutely necessary to enable Mr. Marston and the scientific doubters of England to judge whether artificial culture has increased the run of salmon in Pacific rivers. One thing, I think, must strike every man of common sense who has read this discussion in FOREST AND STREAM, namely: If the supply of salmon in the Sacramento and Columbia rivers was so enormous as described above by Mr. Stone in 1877, and in the Fraser and Skeena as described by Messrs. Anderson and Mowat in 1885, and by Samuel Wilmot's Commission in 1892, there can be no need of artificial culture to keep up the supply with which natural propagation has overstocked the Pacific rivers. Proper close times and judicious protection will do more than all the hatcheries the Government can operate at public expense.

There has been a hatchery in operation on Fraser River since 1885—no less than eighteen years—and 98,089,800 young salmon have been turned out of it; but Commissioner Babcock says: "I do not believe that any fair deduction can yet be made from the work carried on." How then can he so confidently assert that it will be of any practical benefit? How does he know, without statistics, that the hatcheries have helped the catch on Columbia River? If he can make no fair deduction after eighteen years' operations, how many years must elapse before he can do so? He tells us that "the conditions on the Fraser are such that it will take a considerable period to show whether the run is or is not decreasing." But what assurance has he that the artificially hatched fry will not be subject to the same law of "periodicity"—of good and bad years—which is the only reason he assigns for the establishment of hatching houses, since the run is not shown to be decreasing?

This regular irregularity or "periodicity" in the run of salmon is not peculiar to the Fraser River, nor to the Pacific Coast. The same thing is seen, on a smaller scale, of course, in all the salmon rivers of the Atlantic Coast, both in Europe and Amercia. This has long been noticed in the rivers of Scotland and Ireland, and it is still more noticeable in those of Quebec, Nova Scotia and New Brunswick. One hundred years ago, when all the rivers were more abundantly stocked than they are now, this "periodicity" was more marked. But the salmon fishermen of the Maritime Provinces still look for the fat and the lean years, and make their calculations with much confidence that the fourth year will compensate for the previous bad years. This was the very argument that induced the first Minister of Fisheries, the late Hon. P. Mitchell, to take up fish hatching as a departmental work. The present writer, then Inspector of Fisheries for Nova Scotia and New Brunswick, was the most urgent and persistent advocate of the process then in its infancy at the Stormonfield hatchery on the Tay in Scotland. In common with the enthusiasts of Scotland, who expected that artificial culture would restock the thirty-two deserted rivers of that country which had once been good salmon streams, the writer hoped that hatcheries would not only increase the stock in the few remaining salmon rivers, but would restock and restore the numerous deserted rivers in the Maritime Provinces. The same hope animated the Fish Commissioners of the United States, notably the late Spencer F. Baird, who employed Mr. Livingston Stone and the late Seth Green to restock the deserted salmon rivers of the Northern and Eastern States. After thirty years' operations Mr. Stone told us, in your issue of March 7, that the result was total failure; that his efforts to restock the Merrimac, the Connecticut, the Hudson, the Delaware, and the Susquehanna, had not been successful, and have now been abandoned. The same total failure to restock deserted rivers with artificially hatched fry, or to increase the catch in the remaining salmon rivers of England, Scotland and Ireland, and the like failure of similar efforts made in France, Germany, Sweden, and Norway, has led to the practical abandonment of further exertions both in Great Britain and on the continent of Europe.

In no country in the world has salmon culture been pursued on so great a scale as in Canada. Since 1874 there have been built sixteen hatcheries. Eleven of these were in eastern Canada. One in Ontario has long since given up salmon culture, and one in P. E. Island has been abandoned as a failure after eight years' operation and the planting of 6,085,000 fry in a single river, without any results except the loss of all the money expended. There remain in active operation since 1874—twenty-nine years—nine salmon hatcheries. Three of these are in Quebec; three in Nova Scotia, and three in New Brunswick. From the hatcheries in Quebec have been planted 105,889,000 young salmon; from those in New Brunswick, 125,486,000; from those in Nova Scotia, 81,882,500. In all these Provinces the catch of salmon was greater before the hatcheries were built than it has been in any year since. In 1874 the catch in New Brunswick was 3,214,182 pounds; in 1901, the last year for which I have the figures, the catch was only 1,235,350 pounds. What became of the 125,486,000 fry that had, in the interim, been turned out of the hatcheries? In 1874 the salmon catch in Nova Scotia was 1,758,818 pounds. After twenty-nine years' operation the catch in 1891 had fallen to 557,802 pounds. What practical benefit resulted from the 81,882,500 fry hatched out in the houses? This is what the official reports show as the result of thirty years' salmon culture in eastern Canada. What reasons can Commissioner Babcock give to lead us to believe that any better results will follow from the same system pursued in western Canada? So far, he himself being judge, he has given none, for he admits that "the conditions on the Fraser are such that it will take a considerable period to show whether the run is or is not decreasing." As Mr. Hallock and Mr. Stone have shown, the "conditions" on the Columbia are precisely similar to those described on the Fraser, and of course it will take just as long a period to show whether the run on that river is or is not decreasing, and yet the hatcheries on these rivers have been in active operation for eighteen years, during which time the Fraser River house has turned into the stream 98,089,000 fry. I have no figures showing what has been done in the Columbia River hatcheries, but I presume the results are not less.

From my private and official experience of seventy years among salmon fishermen, and from my observation of the effects of over-fishing in all rivers of New England and eastern Canada, now so visible in the steadily decreasing catch of the Maritime Provinces, I regret to see the same greedy system being pursued on the Pacific Coast and in British Columbia. Mr. Babcock concludes his letter by telling us that "the combined Fraser River and Puget Sound pack in 1901 was 2,400,606 cases of 48 pounds each, making 115,229,088 pounds, which, he says, is nearly half the annual pack of the world. Surely there can be no need of hatcheries on such rivers as these!

If Commissioner Babcock, in view of the experience of Europe and eastern America, covering a period of over thirty years, expects to keep up this enormous catch by means of artificial culture, he is simply chasing rainbows, and I know not which most to admire, his calm indifference to the past history of salmon culture and the lesson it teaches, or his sublime faith in oodles of ova and figures of fry. But I doubt if this last letter will make a convert of Mr. Marston, while I am quite sure that the "scientific gentlemen" will see in neither of them any reason for changing the opinion which a better knowledge of the literature of salmon culture, both in Europe and America, has forced upon them.

THE OLD ANGLER.

Some New Jersey Fishing.

ASBURY PARK, N. J., May 2.—While the trout season is now a month old, the news from the very few streams in this (Monmouth) county are very meagre. Of a truth may it be said that the results to be attained in any of the nearby streams are scarcely worth the endeavor. While they are continuously re-stocked, they are so persistently fished that fingerlings are about the only reward.

Perch fishing, however, has been at the front the past month, and never have I seen them either so abundant or of such fine size. I have been able to make thus far eight trips to the different lakes and have taken many fish and of a size much larger than I ever before caught. I recently took eight in rapid succession which weighed on average one pound each. Using trout tackle, these fish made glorious battle, and are strictly worthy the attention of any angler. Como Lake, three miles to the south of this place, seems to be fairly alive with these toothsome, sprightly fellows, and has been most liberally patronized.

But little has been done in salt water thus far; nothing in the surf save a few ling, and in the rivers flounders in but very limited numbers. Blackfish are, however, biting fairly well, and they are favorites with many. The spring run of whiting is now due, and while it lasts but about two weeks, affords fine sport and abundance of it. They seldom bite during the day, but at night feed ravenously. They run in weight from one to three pounds each, fight hard and are a good table fish.

LEONARD HULIT.

CHICAGO AND THE WEST.

A Day With Wisconsin Trout.

I WAS never at this place, Wautoma, before, but just wandered in up here, because I could not stay in the city any longer. I came alone, too, which is always a dismal thing to do, and not to be thought of under any ordinary circumstances. There are, however, offsets and compensations all through life, and I can already testify that my solitary trout trip might have been very much worse. Indeed, some of the pleasantest trips I ever knew have been made when I have just started off without any plan, and have gotten off the train wherever I felt like it. There is nearly always some sort of fishing within reach of any town you strike, and nearly always some one to go fishing with you. I got off here in the dark at 8:40, and by 9 o'clock I had my fishing companion selected, and had heard of a half dozen trout streams within as many miles. The two of us caught 74 trout on the fly yesterday, and that isn't so bad for haphazard, as I think the most captious must agree.

My new friend is a tall kid of about 20, Art Bean by name, son of the hotel man. He killed 200 prairie chickens around here last season, keeps a setter, uses a fly by choice over a worm, and knows every stream hereabout from front to back. You might keep his name for reference some day, and maybe he will take you to Strouss creek, as he did me. It is only three miles away from Wautoma. We found it alive with small trout, and got about three dozen 9-inchers, nothing over 10 inches. About a third of our fish were rainbow trout, and in this water they rise cleaner and fight harder than the brook trout. Our stream runs through farming land, and at places the cleared banks allow a chance for decent fly-casting, but typically this is a brush creek, and in the denser parts one could only let his fly float down into the holes ahead, which is not fly-fishing. Art used worm for a while in the morning, but soon discarded it. By a misunderstanding as to where he was to come with the rig, we got separated, and so I had two hours just when I got into the best water. At lunch we each had just 27 trout. It was then late, but we drove to the next bridge, Art going down and I up stream. I took my fish on royal-coachman, Wickham's-fancy, and some small English flies, blue and olive duns. Art, in the evening, was using a big nondescript fly, with magpie wing and black silk body. When wet this fly looked much like the "stick bait," or caddie larva, of which all these streams are full, on which the trout were feeding. In half an hour's fishing Art lost seven of these flies, all he had, and took 16 trout to my 4, which wasn't bad for a kid. He said they would not take any other fly for him, and he had larger fish than I, when he used this fly. The trout would rise to my royal-coachman in the evening, but would not eat it the way they did this "stick fly," as we called it.

The White River.

The White River, which has some good rainbows in it, is almost at our door here, and it is only 5 miles to Benjamin's farmhouse on the White, where the anglers usually go, but the farmers are spearing suckers down there now, so I pass it by. One angler last week had 12 fish that weighed 17 pounds, all taken in that part of the White, mostly, I suspect, on bait. Only a few days ago an 8-year-old boy caught a 1¾-pound brook trout on worm in the White just below here. A 3½-pound trout was caught below the mill here last year, on minnow. So there are a few good fish in the White, though it is now hit hard.

Morris Creek.

There is a little creek called Morris Creek, 2½ miles from Neshkoro, which latter is 3 miles down the Chicago & Northwestern Railway from Benjamin's, and 10 miles below here by rail on the same road. This little creek is on Mr. King's farm. Mr. King is the foundryman at Neshkoro, and last week he and a friend got a dozen nice trout in there. He says they run large. The history of Morris Creek is singular. It was stocked years ago by a druggist named Britton, of Berlin, Wis., and he always got good trout when he went out, but no one ever knew where. The trout got as big as 1 pound, 1½ pounds, and so on. Lately Mr. Britton died, and his secret somehow got out. This tip might do for a holiday some time.

Lunch Creek.

Four miles from here, and three miles from Benjamin's, is Lunch Creek, which is reported good. I have not tried it as yet, but it is a good tip till into May, at least.

The McCann River.

Last week, by the merest chance, I heard and spoke of the McCann River, and the fact that it has rainbows in it. At that time I did not know within 200 miles where the McCann River was, but somehow it sounded fishy. Mentioning the name by chance here, I find that the McCann River is about 7 to 10 miles west of Wautoma, Benjamin's or Neshkoro, all points close together in here on the Northwestern. Three days ago a man speared a 5-pound rainbow on the McCann. My companion, Art, says he knows that river, and speaks with awe of the rainbow, which he says no mortal fly-rod can hold. But few of these fish are taken, and as I understand it, no brook trout at all in that stream. It is stated to me to be a deep, bold stream, going through swamp, but also through country partly farmed. It is open enough for fly-casting part of the way. Here, then, is something of a challenge to adventuring, and if all goes well Art and I may run over for a look at it, though they say it is too early for the rainbows there.

Snow.

It snowed here this morning good and hard, and it did not stop snowing until noon, which kept us in doors instead of on the streams. Yesterday it rained in the morning, and was cloudy all day. The cold rain of last night turned into snow. All this may have killed the fishing, but we shall see as to that, it being no part of an angler to despond. We shall see as to this McCann River!

(P. S.—At 3:30 the sun came out. What is the good in despair? I recall the words of a childhood song:

"So, what is the use in repining,
For where there's a will there's a way;
To-morrow the sun may be shining,
Although it is cloudy to-day!"

Boating on the White.

Again I counsel ye to remember the name of Carl Bartl, Princeton, Wis., a few stations south of here on the Northwestern. Carl takes you out for trout on the White or the McCann. He has a boat at Neshkoro, and it is a favorite trip with him to drop from Neshkoro down to Princeton and fly-fish for bass.

President Roosevelt's first camp in the National Park.

June or July is better for that. All these streams of the White, the McCann, the Wautoma Creek, Straw Creek, Morris Creek, etc., drain into the Northern Fox River, which runs into Winnebago Lake—the old water trail of the voyageurs to the Mississippi Valley. Lake Winnebago and the Green Bay waters naturally abound in small mouth black bass. The upper waters of these Waushara county streams are spring fed and cold and carry trout. They run through sandy country, and are full of insect food. Straw Creek is partly rock bottom, and so is part of the McCann River. This is the same formation as that of the Pine River, a dozen miles northeast of here, which I have always thought

John Burroughs in the National Park. E. Hofer in the background.

to carry more trout food than any water I ever saw. There is always a certain interest in prowling about new country. Perhaps we have blundered into a bit of sporty country up here, and something worth remembering.

The Pickerel and the Wedding.

There is always something to see, to hear or to learn, wherever you go. The eternal tragedy, the eternal comedy, go all over the world. Yesterday Art showed me a farmhouse, where a few months ago a discontented soul killed his wife and himself, shooting his wife while she held a three-months'-old baby in her arms. "We was going to lynch him then," said Art, artlessly, "but as I rode through the edge of the wood back of the house I saw him lying there looking at us. He was dead. He had shot himself three times. Nervy, wasn't he?"

Again, as we rode on, he showed me a little house by the roadside. "Old woman lives there, 85 years old," said he. "The town keeps her. Her husband died a while ago, and she can't run the farm. She used to be an English noblewoman years ago, and she ran away with the coachman and came to America. They lived here a long while. I guess she was an English noblewoman all right, too, for once in a while she comes down to town and gets a pint of alcohol, and she drinks it straight, and never bats an eye."

But as I was going to say, I saw an odd looking fly in Art's collection, a combination of squirrel-hackle and apparently quill and silk body. Art said that fly was a very good one, very hard to wear out and very useful on the local streams. "The fellow that makes them lives here," said he. "His name's Hubbell. He's the Justice of the Peace." I somehow liked the sound of Hubbell, J. P., and presently looked into the matter. What and whom do you think I found? An old-time reader and contributor of FOREST AND STREAM, a friend of Chas. Hallock, a veteran trout and bass fisher, an amateur fly-tyer, and also an inventor of new and deadly forms of artificial revolving minnow and frog baits. The room of R. W. Hubbell, Justice of the Peace, is more angling shop than justice shop, and here I learned how these very killing local flies are made, having a long talk over these and kindred subjects.

"I find that early in the spring this white silk grub I tie, with a bit of worm on the end, will kill trout before they will rise to the fly. My first fly is the black-gnat—but you see I tie it different from any black-gnat you ever saw. The next is what I call my Morning-Belle, squirrel hackle and green body, and so. Then I make a mosquito, with gray body, and here's a grasshopper with yellow and brown body and gray squirrel hackles—I never use any feathers in any of my fly-tying. I'm proud of my grasshoppers. You don't have to chase 'em, and they don't come off. They're better than the real thing.

"Fishing?" said the Justice, tipping back judiciously. "Well, it's more important than anything else, sometimes, if not all the time. But there's some folks who don't seem to understand that. Now, not long ago I had a young fellow and a girl up before me. They'd been engaged, but had a falling out, and I guess the fellow was going to leave the girl because she changed her mind. I knew the pickerel were biting, out here in the mill pond, and it was time to be out, so I heard the case fast as I could, fined the young fellow, sent 'em all out, and went fishing. In less'n n' hour I heard someone hollerin', and saw a fellow motioning, over on the bank. It was the town marshal. I didn't pay any attention to him, for I didn't want to be disturbed, but bimeby he motioned so hard I started over toward him, and just as I did I got a bite and hooked a big pickerel. At last I heard what the town marshal wanted. 'Say!' says he, 'them folks wants to git married!'

"'Well, why don't they then?' says I.

"'But they want you to do it,' says he. Wouldn't that cramp you? Here I'd just fined him, and now I was busy.

"'There ain't no hurry about that,' said I. I thought maybe she'd change her mind again. All this time that pickerel was just chargin' round, and I had all I could do to keep him out of the weeds.

"'They can't wait!' hollers the town marshal. That made me mad. Couldn't wait! Here I'd just fined the man! 'You go on back an' tell 'em they got to wait!' says I to the town marshal. 'I'm busy, and I allow it's a sight more important for me to get this pickerel 'n it is for them to get married.' So I went right on and played my fish, and at last I got him in the boat. He was a beauty. Then I went on in and married 'em, but not before, I want to tell you. Some folks are just naturally unreasonable."

The Trout Season.

CHICAGO, Ill., May 9.—The trout season in Wisconsin has now been on for more than three weeks, and in Michigan for more than one week, but thus far it cannot be said that there has been any decent fishing weather in either State. We have been having a most inclement and changeful spring season. I wrote from Wautoma, Wis., last week, that we were having snow there on last Thursday. This snowstorm stretched pretty much all over Wisconsin and into Michigan, and spoiled the trout fishing plans of many a hopeful angler. The boys, who were up on the Prairie River, came back telling stories of snow and ice, although some nice trout were basketed along the upper reaches of the Prairie, above Dudley's place. Mr. Edward G. Taylor came back early this week and reported very bad weather, but had some nice trout. Mr. Chas. Antoine had but one day's fishing out of ten, and had the bad fortune of seeing his daughter taken down with scarlet fever, the latter being still ill and unable to be moved. The latter party, Messrs. Antoine and Taylor, stopped at the Bates place and, along with other friends, registered their unqualified condemnation of the weather clerk.

The same unfortunate weather conditions prevailed over the southern peninsula of Michigan, and the Saginaw special car party met bad times above Grayling. Mr. Mershon writes that the weather was beastly. On May 1 there were snow flurries. The next day came off very decent, but somehow or other the trout would not rise. On examination they were found literally gorged with bottom food. The stream was covered with natural flies just hatching from the water, and it was easier for the fish to feed from the bottom than from the surface. On the next day it came off cold, with a rain from the north. "On this day," says Mr. Mershon, "I drove up stream ten miles. Most of the other boys stayed in the car. I only took an occasional fish until just about dusk, when they began to rise, and for a few minutes I got them fast, taking 23 nice ones, all over the 8-inch limit, and a very fine basket of fish. The stream was alive with fishermen, most of them, however, fishing with bait and carrying their fish in a flour sack, and I don't think the bait-fishermen got any more than I did."

Mr. Mershon, in his three days' fishing took respectively 34, 9 and 23 trout, all over 8 inches, but the party, on the whole, did not stack up a very big average. The special car of the Saginaw party will go into commission again to-night for a three days' trip, the party to be made up under charge of Mr. Many, of Cleveland, one of the orthodox and accepted anglers of the Saginaw Crowd. Mr. Mershon and Mr. Morley will be unable to join this party, the personnel of which is a trifle indefinite at this writing. This party ought to have better success than that which went up on opening day, as we surely must have spring some time.

The Coleman Lake Club.

The season has opened well at the Coleman Lake Club, of Wisconsin, this being the preserve formerly

known as the Gaylord Club. Among others who go up from Chicago to the first fishing on this well-known preserve are Messrs. Wm. Holabird, Wm. G. Beale and W. H. Whiteside. These should meet good fishing, as to-day, May 9, the weather is warm and conditions are more favorable. Mr. F. M. Stephenson, president of the Coleman Lake Club, is still absent in Mexico with his friend, Mr. Wm. Kent, also of this city. These should meet success in their project of a bear hunt in Mexico this spring. Mr. Stephenson is due in Chicago this week, but it hardly need be said that promptly upon his arrival he will start for Coleman Lake Club to join his fishing companions in that delectable vicinity.

Bass Fishing.

We have had no bass fishing in this part of the world, owing to the backward condition of the spring. At this writing the weather conditions are a trifle better, and to-day a great many of the best-known fishermen start for their initial trip of the season. Among these are Messrs. Fred Peet, A. C. Smith, W. Homan, Geo. Murrell and others of the Chicago Fly-Casting Club, who go to Cedar Lake, Ind. I have often mentioned this lake as being the first of the bass fishing waters near Chicago to open up in the spring.

Fly-Casting Club.

Quite a number of Chicago anglers will go up to Fox Lake chain this afternoon. Lake Villas is the most popular point of disembarkation for this coterie, and Fourth Lake, Channel Lake, Grass Lake, Crooked Lake and others of this well-known chain will be fairly well patronized to-day and to-morrow.

Angler Ill.

Advices from Saginaw state that Major Farnham Lyon, one of the oldest members of the Saginaw Crowd, is in the East, ill, and it is doubtful whether he will be able to join the party in any of the summer fishing trips which have been planned. This is much to be regretted, as on the schedule of the Saginaw Crowd is a second trip to the grayling waters, which were discovered by that band of worthies last summer. Mr. C. E. Davis is in command of the expedition to these waters, and I hope to have more definite news regarding this trip before long. It is not necessary to say that Major Lyon will be much missed by all his friends should he not be able to join the party.

Wisconsin Fish Commission.

The Wisconsin Fish Commission will this year plant wall-eyed pike perch fry to the number of about 100,000,000. There will be planted about 1,000,000 muscallunge fry. The commission has been keeping a good eye out for specimens of muscallunge for the World's Fair at St. Louis. The best specimen thus far secured is 4 feet 2 inches long, weighing 43 pounds.

The authorities of Wisconsin are having difficulty in collecting the license fees from the different county clerks over the State. It is thought that the money collected for hunting licenses during the past year should figure about $50,000, and the State Fish and Game Commission may have to bring suit against some of the clerks to compel them to remit fees collected by them under the State license law.

Pelee Island Club.

Members of the Pelee Island Club of Lake Erie are this week making preparations for the summer campaign, which is still some distance in the future. These gentlemen buy several gross of flies, sinkers, etc., every year. The method of fishing is to use a four-ounce sinker, above which is attached a four-foot gut leader. On this leader are strung a live minnow, a red ibis fly and a bright green hackle. The upper end of this leader is attached to the fisherman's line, and in spite of the heavy encumbrance at the lower end of the tackle, the latter is usually able to discover when he has a bite. A great amount of such flies, tackle, etc., is lost on these reefs during a day's fishing.

Looking Backward.

During a very recent visit through northern New York State, some people and different incidents once more called to my mind the mental and physical harvests reaped, and the fine store of reminiscences enjoyed by men of the forest and the stream who, as they approach the "sere and yellow" period of physical inactivity, still live life over and over again in memory. Such lives are apt to make us wonder if we have misused any years. By knowing such men we recall some of another kind we have known. A few years ago there died in one of our fine uptown hotels a man 73 years old, alone, excepting for his nurse and doctor. He left $350,000 to institutions of various sorts because he couldn't take it with him. He had only what money could buy, absolutely nothing else. Poor man, he only realized when it was too late what he had missed. Many a hunting and fishing story I told him in his declining years, and he read with interest my small contributions to Forest and Stream; yet he had never pulled a trigger nor cast a fly. The precious instinct, however, was there, but his motto seems to have been "wealth first, then play." He only got the money, absolutely nothing else. Surely an unenviable end.

In Syracuse I called on Gen. Bruce, unfortunately for me late in the day; the next time I will go earlier so I can hear more. Gen. Bruce soon forgot his official duties, and in the most natural manner possible became the agile youth by the brook side, dwelling on the scenes of so long ago, which are yet as distinct to him as those of yesterday, and making his hearer a part of the play. As he puts it, "Those days, those scenes, those sensations came before my mind so distinctly, so real in detail, so charming in fact that the brush of the artist would be sacrilege." A moisture was in the eyes as he said, "Nature will owe me little when I quit her for good."

Thus do such men live life over and over again, and furnish living pictures of men as men should be as they go along, loved by everybody.

A slight lameness keeps the general from hunting, but it don't keep him out of the woods, where he whiles away pleasant days listening to his old guide's stories.

In the store of W. A. Able, Uncle Daniel Lefever told his famous bear story, and for me to undertake to tell it would be as foolish as the artist dabbling in the mind pictures of Gen. Bruce—simply foolish. I do not hesitate, however, to say that Uncle Daniel will accommodate all comers.

T. E. Batten.

On the Potomac.

Five thousand people went fishing yesterday. Four thousand eight hundred came home empty handed, but the other two hundred had fine luck. The fish were in the river, but the fellow who goes fishing only once a year, the Sunday after the first really enthusiastic fishing stories appear in the newspapers, doesn't know how to get them out of the water. And this man and his wife and daughters and best girl lined the banks of the Potomac from the Aqueduct to the Chain Bridge and filled the river with a thousand boats. It was said by old fishermen that there was never such a crowd out before in the history of the river.

The newspaper stories last week of the perch fishing were the most alluring that have appeared in a long time. The good fishermen who came back last week from trips had long strings of big white perch. They told of other catches even bigger than theirs. Always they had seen a man that caught 50 pounds of perch in two hours and had them weighed on a correct pair of scales to verify his statement. These stories, with the clearness of the water and the clouds in the sky yesterday morning, proved a combination too strong to be resisted by the fellow that goes fishing only once a year.

The great crowd simply went fishing. It got what it went for. It got tired and sunburned. The people who went out to get fish got them. Certain it is that the perch are big and plentiful this year, and some of the catches yesterday were excellent. The best luck was had by those who tried the river not far above the Aqueduct Bridge, the first half of the stretch between there and the Chain Bridge. A good many baskets of perch weighing from three-quarters of a pound to a pound were caught. Around the Chain Bridge the fish were smaller, though there were plenty of them.

The herring ran plentifully also, and it was possible to snag them by the basketful with good tackle and the trick of knowing how. The largest catches of the day went to the herring snaggers. They threw their lines from the bank into the center of the current, above Chain Bridge, and on an average snagged an important fish once in three or four throws.

The boatmen and the railway caught the harvest of the day, however. The railway hauled 5,000 fishermen two ways. The boatmen rented their boats at double rates. Everything that would float was rented before noon, and the usual price was a dollar for the day for the worst specimens and 25 cents an hour for the fairly good looking rowboats. The bait boys, too, made money selling worms at 10 cents a half can. And late in the afternoon the same boys sold fish at 25 cents a string to the fishermen that bought the bait and were afraid to go home without something to show for their day's work.—Washington Post, May 4.

Pennsylvania and New York Trout.

Sayre, Pa., May 9.—The trout season should be in its prime, and but for lack of a few warm rains to stir the streams up and freshen our vegetation, it would be. Happier results are, however, to be shortly expected.

The best day's catch the writer is aware of was made by Frank Baker, of Speedsville, N. Y., and consisted of 35 nice sized trout. The stream around Speedville, Slaterville Spa, Richford, Harford Mills, McLean and in the vicinity of Cortland are all easily fished, and traverse as pretty a lay of country as can be found in southern New York.

There are two or three beautiful and usually fruitful trout streams in Enfield township to be reached from Ithaca.

The streams below Towanda on the State Line and Sullivan branch of the Lehigh Valley are probably as prolific of good sized trout as any in this section of Pennsylvania, but the country, on the whole, is a bit rough and inaccessible.

There are a few inviting trout streams around Owego, and the distressed business man, unable to cope with such country as lays smiling under the sun around Monroeton and Towanda, could not well do better than to work out the Owego streams and the land between Harford Mills and Richford. As a matter of fact, this section along the line of the southern Central, between Sayre and Auburn, is an ideal trouting country for the physically weak angler to bestir himself in.

M. Chill.

Quail in the City Parks.

The quail in Van Cortlandt Park are surely well aware of their safety within its confines. While speeding for Yonkers and dinner about noon on Sunday last, I was surprised to hear a strong "Bob White" seemingly within a few yards of the road. Dismounting from my wheel I tried to get sight of the bird, but the repeated calls was all that rewarded my search. This was in a swampy piece of ground with Broadway on the west, the Mosholu Road on the north, and rising rather abruptly to the Putnam Railroad tracks and deer paddock on the east. What with trolley cars, automobiles and steam cars passing incessantly on three sides of this plot of a few acres, it would seem as if Bob White was fast becoming accustomed to civilized surroundings.

C. L. S.

Yachting.

Shamrock III. got under sail for the first time since the accident, on May 7. Shamrock I. was also out, but the breeze was too light for the boats to have a brush. They drifted around with the tide after the wind died out entirely, and finally got back to their anchorages at Gourock. The day following Shamrock III. went out alone to stretch her sails. There was a fresh breeze blowing, and the new spars stood well. She has received a new boom as well as a new mast. The boom is stiffer than the old one, and is quite a bit longer.

The two Shamrocks sailed a race over a forty-mile course on May 9, and the new boat again demonstrated her ability to beat the old one on all points of sailing. The boats started out soon after nine o'clock; at this time the breeze was light and club and jib topsails were carried. The start was made at half past ten, the old boat got away ahead and to windward of the new boat, but after a little while Shamrock III. worked out to weather of Shamrock I. and they were soon on even terms. Shamrock III. rounded Powder buoy eight seconds in the lead. Spinnakers were set, and the new boat drew away from the old one in good shape. Off Gourock pier Shamrock III. had a lead of one minute and twenty seconds, but the old Shamrock was doing well and holding a better breeze. The day's trial proved to be more of a sail stretching spin than a regular race. Shamrock III. proves her ability to beat the old boat, yet Shamrock I. is showing up well.

Columbia and Reliance had their first brush on the afternoon of May 5, and in the light breeze Columbia had rather the best of it. Reliance left her moorings off New Rochelle just after three o'clock. A club topsail and a reaching jib topsail were set over the lower sails. Reliance was headed toward Sands Point, and Columbia was becalmed off to the eastward. The wind was S. W. by S. Reliance was put off before the wind and the spinnaker was set to starboard. After a few moments Reliance's spinnaker was taken in, her boom jibed over and the spinnaker reset to port. Columbia was trying to get out of a soft spot in the meantime, and Constitution was becalmed in Glen Cove. Reliance's spinnaker was taken in and she was headed for New Rochelle, and a baby jib topsail was set. Columbia had caught a little breeze and stood after Reliance. After jogging around a while Columbia caught up a little on the new boat, but was still some distance to leeward.

It was just after half past four when Columbia and Reliance came together. Reliance had a reaching jib topsail set, while Columbia had a smaller one aloft. As they headed for Red Springs Point, the new boat was some distance to windward. Columbia drew ahead slowly in the light breeze, and Reliance was kept off and given a good full and picked up a little, but was forced to pass astern of the old boat.

Columbia was put on the wind, and as she took the port tack her jib topsail was taken in. Reliance followed suit and took in her jib topsail. Columbia was out to weather, and the boats were moving along on about even terms. When Columbia tacked a little later Reliance was also put about, and she was then right astern of the old boat. On this tack Columbia opened out a little on Reliance, and when she finally came up into the wind she was some distance ahead.

The result of this spin was, to say the least, immensely disappointing, for it was generally believed that Reliance would show her heels to Columbia in any weather. It is understood that on this occasion both boats were pushed for all they were worth, and even making allowance for poor sails Reliance ought to have done better.

So far seven suits of sails have been made for Reliance, representing an output of about $100,000. With such a large number to select from it does seem as though one really good suit could be found. The sails bent so far on Reliance have been indifferently good, and it is certain that the boat will not be at her best until she gets some good canvas.

Scows, unless they can be heeled well down, cannot be driven in a light breeze, and this appears as well to a boat as large as Reliance, as it does to the small craft. This has been demonstrated in the racing during the past few years to everyone's satisfaction. It is now said that Reliance needs 20 per cent. more sail, this additional canvas would undoubtedly help her in light and moderate breezes, but it would be next to impossible to keep such an enormous rig in the boat in a strong wind. Even if the rig stood the boat with such a sail area would be a constant danger, not only to those on board, but to rival craft, for a boat of that type and enormous rig would be extremely difficult to handle in a breeze, and, besides, she is very likely to take matters in her own hands, as did one of the 90-footers at Newport two years ago.

Constitution is from three to eight minutes faster in any weather than Columbia, and she will demonstrate that in the racing this summer. It is hardly possible that Columbia will be selected a third time to defend the cup, and as we said some time ago, Constitution can defend the cup safely. This being the case, it is more than probable she will have occasion to do so. Mr. August Belmont, Constitution's owner, is a thorough sportsman, and the yacht will be raced under his management this year. All yachtsmen would be glad to see Mr. Belmont's boat selected for the important and delicate task of defending the America's Cup.

The annual meeting of the Beverly (N. J.) Y. C. was held on May 5, and the following officers were elected: Com., George W. Halloway; Vice-Com., Blair Ferguson; Sec. and Treas., William T. Kirk, Jr.; Finance and Elective Committee, John W. Hamer, Gilbert M. Wilson, William T. Kirk, Jr., Jade C. Wilson and Henry W. Hall; Regatta Committee, Theodore Bonfield, Chairman.

English Letter.

THE only test race of the two Shamrocks that has been sailed resulted in the victory of the old boat on time. The new yacht was set to give her ten minutes in 34 miles, and through a fluke she failed .to do it. She could, I believe, give the old boat about 12 minutes over a 34-mile course in ordinary weather, provided both always had the same wind. But as that time represents nearly two miles of separation, one can never tell how one is served by the wind, as compared with the other. On every occasion on which the yachts have been sailing close together the new boat has left the old one with the utmost ease. Up till the time she lost her mast the mainsail was very poor, and a good sail would have made a sensible difference in her speed to windward. Her superiority in very light winds (in which the old challenger is also very good) has been most pronounced, and if one of the Cup races should start with this weather with a freshening breeze toward the finish, so that the time limit will not be reached, there can be little doubt but that she will win. For the rest, no person can gauge her chances until Reliance is tried. It will be most interesting to note Herreshoff's success with a boat of her type. Over here she might win a lot of races if she turns out as I expect, but Cup conditions seem rather to favor a boat of Shamrock's type, which will keep going in the slight swell, even if the breeze be light, and which will heel easily up to a certain point. The defender, if Reliance be chosen, will probably have to allow Shamrock quite a longish time allowance.

I have seen the expression of a doubt in many papers as to whether Shamrock I. is sailing as well as she did two years ago. Of course, it is impossible to tell, but there is no earthly reason for believing that she is not. Her canvas is good and well set, and Bevis is a thoroughly good skipper. The new vessel has always sailed in the same trim as when she first came out of dock. Nothing whatever has been altered. Experiments will, no doubt, be made with a view to improvement, but as yet none have been tried, and she has been sailing under all the disadvantages inseparable from a new vessel, and with a rather faulty mainsail. On the other hand, the older boat is in her proper trim, and so far as those who know most about her are aware she is going as well as ever.

On 17th inst., at Weymouth, Shamrock III. lost her mast, under circumstances with which readers are no doubt familiar. The immediate cause was the parting of the foremost rigging screw on the starboard side. One of the men—the steward—was pitched overboard by the recoil and drowned, in spite of a gallant attempt to save him. The yacht was brought up to Southampton on Monday and docked, along with Shamrock I. No damage was received by the hull, and she will be under way again in a week or two. She is going out as a cutter, not under ketch rig. The old Shamrock is also going over to sail trial races with her. From this it will be known for certain that she sails in the Cup races in the trim found best over here. It would be almost as interesting as the Cup races themselves if Shamrock I. were once more to get a chance at Columbia. Perhaps she may be entered for some of your ordinary regatta races, but I know nothing of that. With a skipper who knows how to lay a yacht on the wind, some of the doubting Thomases of the press would be surprised to note the result of such a race. At present they seem to regard nothing but the figures of her cup races, discounting nothing by the evidence of their eyes and forgetting the result of her real trials with Shamrock II.

Over here we are so well pleased with the new challenger that it almost seems permissible to look forward to the defense of it next year in Belfast Lough. In the event of your losing it, I have heard it said that you will challenge with a schooner. From a spectacular point of view this would be charming, and it might bring a class of schooners into existence over here, but I cannot possibly see why you should stand a better chance with a schooner than with a cutter. It is a thousand pities that no scantling scales are to be in force for future Cup racers. They could only conduce to putting designers on even terms, and, whether you win or lose this time, the type of the future Cup racers will be so good that it will be a shame to make the yachts themselves ephemeral.

An astrologer over here has cast the horoscope of the new Shamrock, with the most discouraging results. Curiously enough, he did not think to do it before she was dismantled. However, now that it is done, it appears that the vessel was launched when the planets were exercising some highly disturbing influences. There is something about a scorpion in it, and other unpleasant things, but in view of the great success achieved by St. Patrick (on whose day she was launched) over the snakes in Ireland, one may fairly expect his influence to counterbalance that of any celestial bug.

E. H. HAMILTON.

Boston Letter.

BOSTON, May 11.—The Regatta Committee of the South Boston Y. C. has arranged the programme for its Y. R. A. open race to be sailed off City Point on Memorial Day. This will be the twenty-sixth year that this club has opened the racing season in Massachusetts Bay. Classes are provided for 25-footers, 22-footers, 21-footers, 18-footers, and 15-foot sailing tenders. The 21-foot class provided for will be class R, recently formed by the Yacht Racing Association, and governed by the general rules applying to class S, with a few additions to keep the sail area of freaks low enough to give a normal boat a chance. The manner in which classes are provided for the first races of the season has considerable bearing upon the programmes of other clubs, and so it would look as though there would be nothing doing in class S this season. The sailing tender class is one in which great interest is taken by the members of the South Boston Y. C. and other clubs in Dorchester Bay. In the South Boston Y. C. the rating is obtained from the over all length, plus the extreme beam. There is no limit on sail area, and only mainsails and spinnakers are used. The crews consist of two men only. Time allowance is figured at the rate of two seconds per inch per mile.

MIRA.

Owned by Charles Lane Poor. Designed by Gardner & Cox. Built by B. F. Wood, at City Island, 1899.

The Regatta Committee has announced that the following Saturday races will be given:

May 30—Y. R. A. open.
June 20—Club race.
June 27—Sailing tenders.
July 18—Sailing tenders.
August 1—Club races.
August 15—Sailing tenders.
August 22—Sailing tenders.
August 29—Club race.

Three of the new 22-footers designed and built by Messrs. Burgess and Packard and built by Messrs. Hodgdon Bros., at East Boothbay, will start on an ocean race to Marblehead Saturday. The total distance sailed will be about 110 nautical miles. The boats are Opitsah V, owned by Mr. Sumner H. Foster; Tetsu, owned by Mr. S. W. Lewis and Mr. F. B. Talbot, and the third is owned by Mr. H. H. White. They will start as early as possible Saturday morning and will endeavor to make Cape Porpoise on the first day's run. The next day they will sail from Cape Porpoise to Marblehead. Mr. H. H. White's steam yacht Wild Goose, will convoy the trio and will tow their tenders while they are racing. The 22-footer designed by Mr. Fred D. Lawley and built by James Burgess, of Duxbury, had a trial in Duxbury Bay last week, and it is said to have shown great speed. Another 22-footer, designed by Mr. Lawley for Mr. J. C. Neale, is being built by the Hanley Construction Company.

At the Hanley Construction Company's shops, Quincy, the 18-footer Yo San, designed by Messrs. Burgess and Packard for Mr. R. J. Randolph, Jr., is nearly finished. An 18-footer by the same designers for Mr. B. D. Barker is in frame. The 28ft. yawl designed by Mr. Isaac B. Mills for Mr. B. D. Amsden, has been given a trial. She proved fast and able. A 90ft. gasolene yacht is being set up. A machine has been built at the yard for weighing yachts of the restricted classes.

The 27ft. over all scow designed by Mr. E. A. Boardman for Mr. Bacon won her first race at Chicago last week, beating a fleet of new boats by three minutes. The Chicago yachtsmen said she was the best boat they had seen on the wind in pointing and footing. Mr. Boardman has sold the 25-footer Chispa, owned by Mr. W. E. Dexter, to Mr. T. L. Gilliatt, of Beverly. The 18-footer designed for Mr. Reginald Boardman has been finished by White, of Manchester. The Malcolmson 18-footer has been launched and will be called the Allanda. She will start for Providence Thursday. Mr. Boardman had a little brush in his 18-footer Arrow with Mr. A. A. Packard in Nic-Nac last week, in which it is claimed the Arrow had a little the best of it.

Commodore Franklin L. Codman, of the South Boston Y. C., has announced in general orders No. 1, that Mr. Joseph H. Corrigan has been appointed fleet captain. Commodore Codman has announced that he will call a cruise to the eastward some time in July, if sufficient number of yacht owners respond to warrant issuing the order.

The 36-footer designed by Mr. B. B. Crowninshield for Mr. W. E. Rogers and built by Lawley was given a trial last week which proved quite satisfactory. She will be used on Lake Champlain. A 25-footer designed by Mr. Fred D. Lawley for Mr. J. Swift, Jr., of New Bedford, was launched last week. A cruising 21-footer, also designed by Mr. Lawley, was launched last Friday. She will leave in a few days for Kennebunk, Me. The steam yacht building in the west shop for Mr. C. G. Emery, N. Y. Y. C., from designs by Mr. A. S. Chesebrough is expected to be launched in a couple of weeks. In the east shop the cabin is being finished on the 40-rater for Col. R. H. Morgan. The Y. R. A. 25-footer, Sally VII., for Mr. Lawrence F. Percival is partly planked. The cabin joiner work is being fitted in the 25-footer for Mr. F. E. Sweetzer. The cabin work is being finished on the 64-rating schooner for Mr. John M. Richmond. A 22-footer for Mr. Whittier is planked, and the keel is out for the Walker 22-footer. The 43-rater designed by Mr. B. B. Crowninshield for Mr. Trenor L. Park will be launched this week.

A meeting of the Beverly Y. C. is to be held at the Exchange Club Tuesday afternoon, at which a new constitution, by-laws and racing rules will be acted upon.

JOHN B. KILLEEN.

The Manhasset Bay Challenge Cup.

UNDER the declaration of trust governing the match for the Manhasset Bay challenge cup, challenges of clubs wishing to enter for this season's match to take place on June 29 and 30 and July 1, must be filed with the club secretary not later than May 15.

So far four challenges have been filed, these coming from the Indian Harbor, Shelter Island and Atlantic Y. C.'s and the yachting department of the New York Athletic Club. In adition to these, two other challenges are pending.

The representative yacht of the Indian Harbor Y. C. will be the Oiseau, the best known of all the 30ft. class, which will be sailed by her owner, Mr. Henry L. Maxwell. The Shelter Island Y. C. will in all probability be represented by the new 30-footer now building for Mr. Oscar B. Weber at Greenport. This boat was designed by B. B. Crowninshield and should make a hard competitor to beat. Her entry is dependent upon the builder completing her in time, and in the event of her not being ready the club will probably be represented by Kalmia, designed by Wm. Gardner.

The 30-footer, Bagheera, formerly Astrilde, will enter from the Atlantic Y. C., and is owned by Mr. Hendon Chubb. She is one of the Bar Harbor class of last season, and was designed by Clinton H. Crane.

The New York Athletic Club will be represented by Flosshilde, owned by Mr. W. David Hennen. She was designed by Crowninshield, and sailed last season in the 30ft. class of the Shelter Island Y. C.

The Manhasset Bay Club will have as cup defender the sloop Alert, which is owned and will be sailed by Mr. James W. Alker. She was the champion of the Bar

Harbor class last season, and was designed and built by Herreshoff.

With these entries the Manhasset Bay Y. C. is assured keen racing, and whichever boat finally wins the coveted mug will certainly have to make a good showing to do so.

The match will be managed by a committee consisting of a representative appointed by the Indian Harbor Y. C. (the first club challenging), one by the Manhasset Bay Y. C., and a third member to be selected by the two first chosen. The Indian Harbor Y. C. will be represented by Mr. Stuyvesant Wainwright, of the American Y. C., and the Manhasset Bay Club has chosen Mr. Walter C. Kerr, of the Seawanhaka-Corinthian Y. C., to act for them. Both of these men have had extended experience both as racing men and committeemen, and are thoroughly conversant with the racing rules, so that the supervision of the match will be in good hands.

In addition to the committee boat, the Manhasset Bay Club will provide a club steamer to enable its members and those of the challenging clubs to witness the series.

Pellegrina.

We are glad to announce that Colonel R. N. Morgan, of the New York Y. C., has again joined the ranks of yacht owners, and will fly his flag (a blue swallow tail with a vertical zigzag red bar) on board his new cruiser Pellegrina, designed by Messrs. Burgess & Packard, and now ready for launching at the yard of the builders, Geo. Lawley & Son, Corp., South Boston. We are indebted to Messrs. Burgess and Packard for Pellegrina's plans.

Colonel Morgan had the 35ft. waterline cutter Rondinella built in 1900 by Stearns, of Marblehead. She was designed under the former New York Y. C. measurement rule as the largest boat that could be run with two men. Pellegrina was designed to fit in the K class New York Y. C. new classification 40ft. sailing length as a cruiser. Her rig is about the same size as Rondinella's, which contained about 1,800 sq. ft. of canvas. Pellegrina is 3ft. longer on the waterline than Rondinella, and is of somewhat heavier construction and has less ballast.

Pellegrina hails from Plymouth, and any interested reader may trace her name back to the Pilgrim Fathers.

Her dimensions are as follows:

Length—		
Over all	57ft.	
L. W. L.	38ft.	
Overhang—		
Forward	8ft.	9 in.
Aft	10ft.	3 in.
Breadth—		
Extreme	13ft.	2 in.
L. W. L.	12ft.	10 in.
Draft—		
Extreme	8ft.	1¾in.
Freeboard—		
Forward	3ft.	11¼in.
Aft	3ft.	½in.
Least	2ft.	8¼in.

Below decks Pellegrina makes up six berths aft, as the Colonel wishes to provide room for his sons' Harvard chums. Two would be a sufficient crew, but in order that the boat can make any necessary trips without the owner, a competent sailing master will be shipped.

The interior finish is of mahogany with the sides of cabin house and under side of cabin top white enamel. The furnishings, such as carpets, curtains and cushions, are to be in green. The stove in main cabin is of Dutch tiles, representing attractive marine studies. Stowage room has been well looked after, and each guest will be provided with ample space for his dunnage. A good locker for bags is found under the cockpit and deck on the starboard side.

The Yapeni Aquatic Club.

The Yapeni Aquatic Club of Bordentown, N. J., will hold a regatta at their house, Bordentown, on the Delaware, on Decoration Day, May 30. A very interesting day is anticipated with races in the afternoon and a dance in the evening. The programme for the races will be: Event No. 1, launch races, 16ft. and 21ft. classes; No. 2, skiff race; No. 3, bateau race; No. 4, one man single paddle; No. 5, one man double paddle; No. 6, two men single paddle; No. 7, two men double paddle; No. 8, three men single paddle; No. 9, four men single paddle; No. 10, tilting tournament; No. 11, tail end race; No. 12, hand paddling; No. 13, tug of war; No. 14, overboard race; No. 15, swimming race; No. 16, sailing race; No. 17, novice race.

The club had decided to make this, the first regatta of the season, a purely club event. No one but members are entitled to enter. Members and their friends will be cordially welcomed. Dr. Wm. M. Kester, Captain; Chas. S. Osmond, Mate.

The officers for the year 1903 are: Com., Horace G. Reeder; Vice-Com., Richard C. Woodward; Sec'y, J. Bert Reynolds; Purser, Chas. E. Burr; Capt., Dr. Wm. M. Kester; Mate, Chas. S. Osmond. Board of Directors: Geo. W. Swift, Dr. I. C. Leedom, Frederick W. Taylor, Chas. A. Tyler, Harry C. Ford. C. S. O.

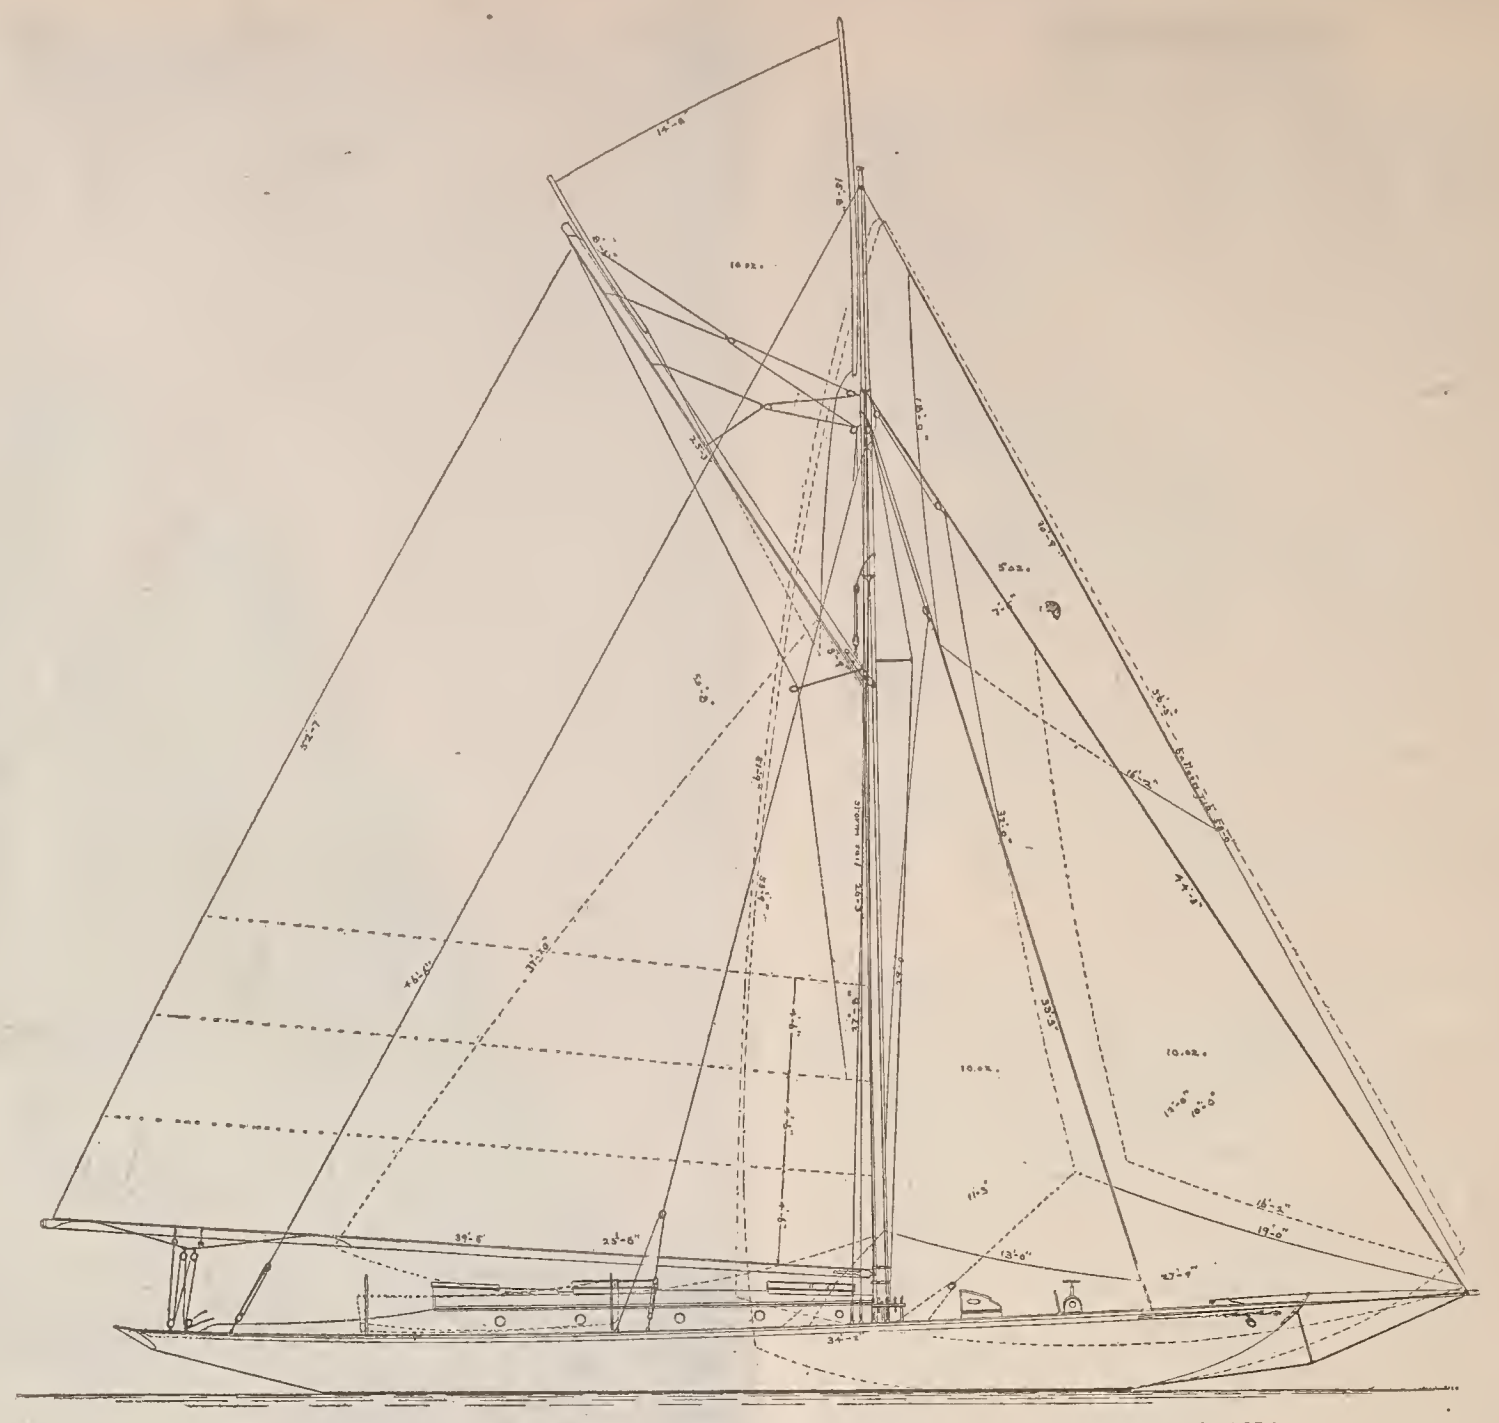
YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Mr. Frank Bowne Jones has sold, through his agency for Mr. A. Howard Hinkle, of Cincinnati, the English-built cutter Senta, to Mr. Thomas M. McKee.

* * *

The Buffalo Gasolene Motor Company have moved into their new quarters on Niagara Street, Buffalo, N. Y. Their new plant will be one of the largest and best equipped factories for the construction of gasolene motors in the country. All the machinery, which is of the latest and most approved design, is run by electricity.



SAIL PLAN OF THE 38-FOOT WATERLINE CRUISING CUTTER PELLEGRINA.

Designed by Messrs. Burgess & Packard for Col. R. H. Morgan, 1903.

The third annual meeting of the Southern Gulf Coast Yachting Association, held at Biloxi, Miss., Sunday, April 26, was fruitful of good results for the upbuilding of the sport in the South. The delegates of the association paid the Southern Y. C. the compliment of adopting its new rule of measurement, which is highly flattering to the local club. This rule of measurement was gotten up for the express purpose of being fair to every kind and size of yachts that might desire to race. It is the outcome of a lifetime of study of yachting and the yachting rules of the world, and it was intended to meet with the approbation of the entire yachting fraternity in both the old and the new hemispheres, which has been the case to the great reputation of the Southern Y. C., and not for the purpose of favoring any one club in a union of clubs nor of fostering a particular size nor type of yacht. It is safe to say that there will be no winning type of boat come up that the Southern Y. C. will not have a share in the game, and that was another reason its new rule was desired to be absolutely fair and impartial to any kind of a hull that might be deviscd. What rule could be fairer to any particular design, or to all kinds of models of boats than one that does not require any hull measurements at all?

The next best thing accomplished by the association was in adopting a uniform classification of yachts. In adopting one set of rules and one classification for the six association regattas the main object of the formation of the S. G. C. Yachting Association is accomplished.—L. D. Sampsell, in the New Orleans Times-Democrat.

* * *

Mr. Hendon Chubb has purchased the 29ft. waterline racing sloop Astrild, through the agency of Messrs. Tams, Lemoine & Crane. Astrild was built at Wood's yard, City Island, last year, from designs made by Messrs. Tams, Lemoine & Crane. She is 45ft. over all, 29 ft. waterline, 9ft. breadth and 6ft. 6in. draft. She carries 1,222 square feet of sail.

* * *

The sloop yacht Halaia, built and owned by Messrs. J. P. and C. E. Loud, has recently been sold to a Mr. Paul, of Philadelphia, through the agency of Mr. Frank N. Tandy. Halaia is a 35ft. cruising sloop, designed and built by Stearns, of Marblehead.

* * *

Mr. Dumont Clarke, New York Y. C., has sold, through the agency of Mr. Stanley M. Seaman, the steam yacht Tranquilo to Mr. Frederic Nicholls, Royal Canadian Y. C. The yacht has been sent to Toronto by way of the Hudson River, Erie Canal and Lake Ontario. She will be used between Toronto and Lewiston this season, and next year be taken to Lake Sinco.

* * *

Mr. Thomas H. Wheeler, of New York City, has purchased the steam yacht Empress, through the McIntosh agency. The steam yacht Clermont has been chartered through the same agency to Mr. Charles G. Gates.

* * *

A small centerboard sloop is being built at Wood's yard, City Island, for Mr. Anson Phelps Stokes, from designs by Messrs. Tams, Lemoine & Crane.

The steam yacht Doll, ex-Viola, has been sold by Mr. E. C. Converse, through the agency of Mr. Frank Bowne Jones to Mr. William T. Rainey. She was designed by Mr. A. S. Cheseborough, and built by the Geo. Lawley & Son, Corp., in 1895.

* * *

The English-built turbine yacht Emerald arrived in New York on May 4. She left Greenock on April 17 and stopped at Fayal, Azores, to recoal, leaving there on April 23. Very bad weather was experienced throughout the trip, and the yacht's sea-going qualities and machinery were put to the severest possible test. The yacht is owned by Sir Christopher Furniss, and is under charter to Mr. George Gould. Captain Donald Tod brought Emerald out to the States. He spoke in the highest terms of the yacht's behavior at sea. He also spoke of the turbines and commented on the freedom from vibration when running. Emerald is 236ft. over all, 28ft. 8in, breadth and 18ft. depth.

* * *

On May 7 the last meeting of the Harlem Y. C. was held in its old quarters on East 121st Street, New York City. On the first day of June the club's headquarters will be transferred to the new location at City Island.

* * *

Mr. John W. Gates is having a shoal draft steam yacht built by the Racine Boat Mfg. Co., of Chicago. The vessel is built of steel and is 100ft. long, 17ft. breadth and 13in. draft. She is to have a guaranteed speed of seventeen miles, and is to be delivered to the owner complete at Port Arthur, Texas, on Oct. 1.

* * *

Messrs. T. F. Smith & Co., Jersey City, are building a number of good-sized power yachts. Among the largest is an auxiliary schooner 54ft. over all, 13ft breadth and 3ft. draft. She is to be equipped with a 40 horse-power White & Middleton gasolene motor, and it is expected she will develop a speed of 12 miles. The high speed launch for Mr. Albert A. Guigues, of Newark, is 50ft. waterline, 8ft. breadth and 2ft. 4in. draft. With a 60 horse-power Dutton motor she will have a guaranteed speed of 20 miles. Mr. G. W. Butts, of Hoboken, is having a launch 29ft. long, built from designs made by Mr. W. P. Stephens.

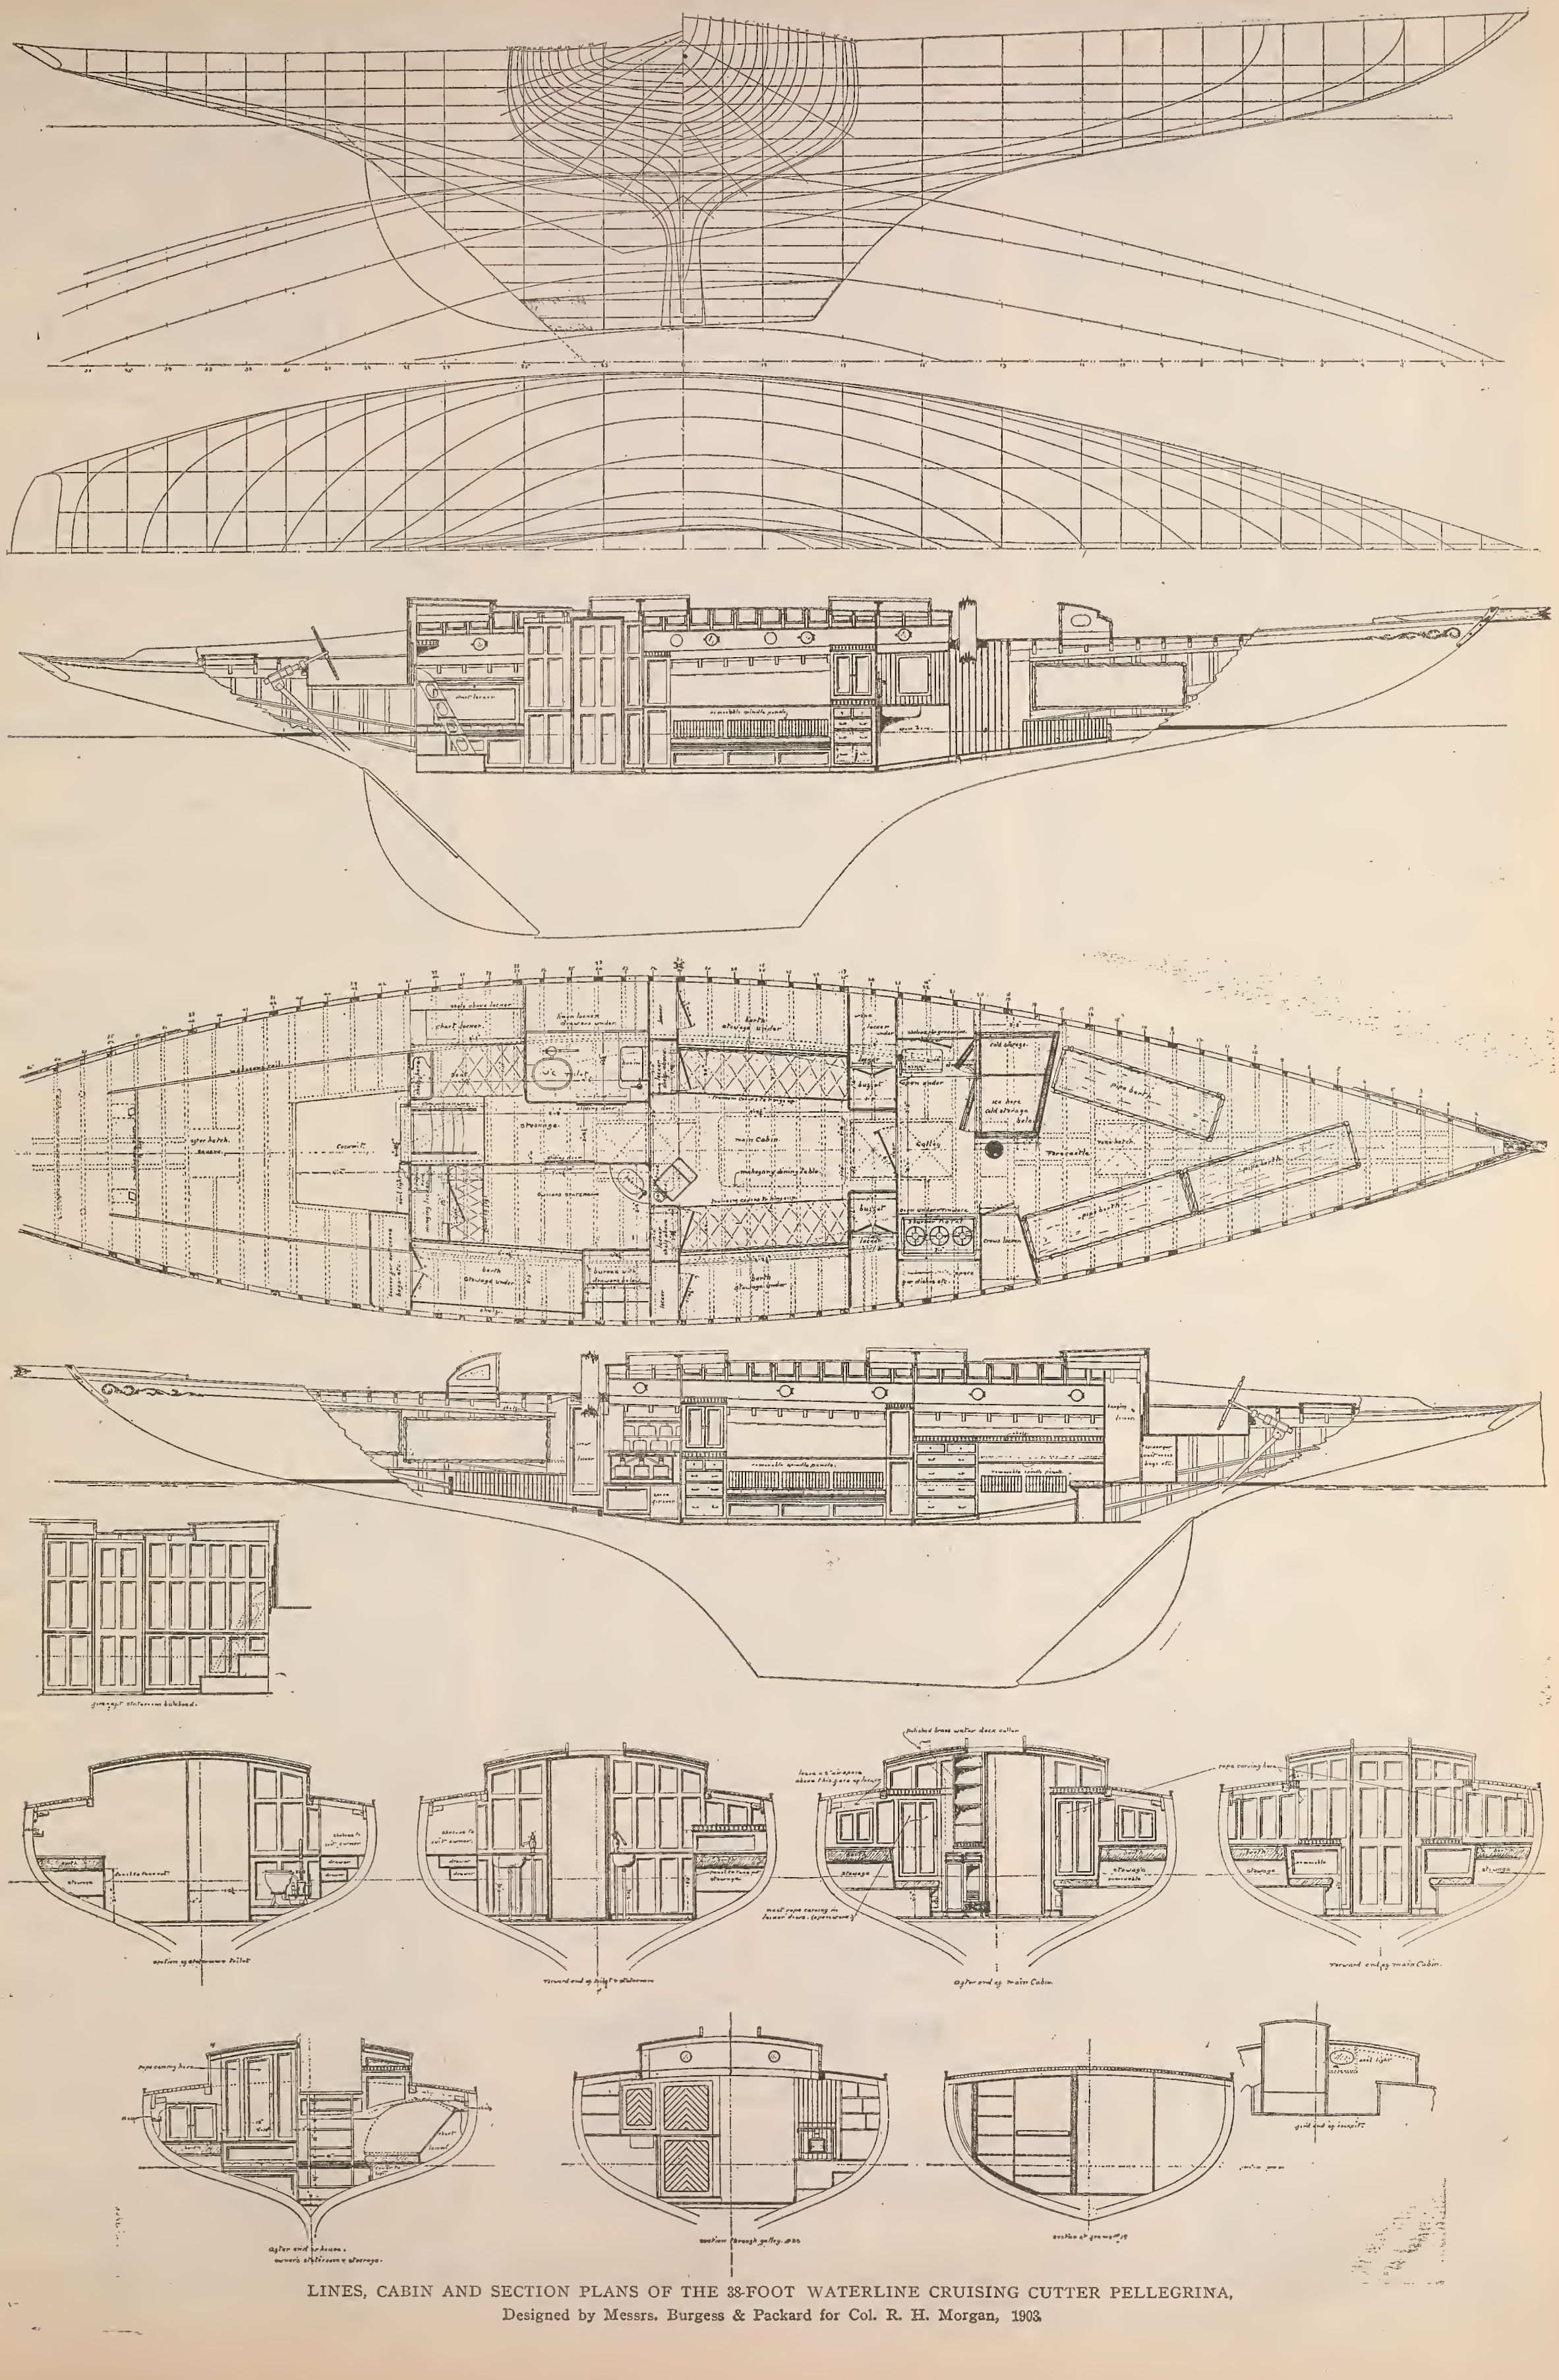
* * *

On May 8 Khama, the 60ft. waterline cutter owned by Mr. Seymour J. Hyde, put back to Gourock for the second time. She sailed from this port on April 24, but returned a day later, as there had been a misunderstanding between the sailing master and the navigating officer. The mate was put in the captain's place, who quit, and on May 3 the yacht again started on her voyage across the Atlantic. When some forty or fifty miles off T—— very heavy weather was encountered, and as the yacht was damaged, she again put back to Gourock for repairs. The yacht will leave for this side as soon as she is refitted.

* * *

The Regatta Committee of the New York Y. C. has sent out the following announcement:

"For the accommodation of members of the club and their guests the Richmond will leave the foot of East Thirty-first Street on May 21 and 23, at 8:30 A. M., and



LINES, CABIN AND SECTION PLANS OF THE 38-FOOT WATERLINE CRUISING CUTTER PELLEGRINA,

Designed by Messrs. Burgess & Packard for Col. R. H. Morgan, 1903.

will make a landing at Echo Bay, New Rochelle, to meet the 9:02 A. M. train from New York. (Trolley car service from station to landing.) She will also make a landing at Glen Cove (N. Y. Y. C. station No. 10), at 11 A. M., leaving there at 11:15. She will touch at these two points on her return.

"Members' tickets and also extra tickets, at $3 each, including lunch, but exclusive of wines, etc., can be obtained from the committee at the clubhouse. (Ladies' tickets on the same terms.)

* * *

Scioto, the steam launch built at Morris Heights for Mr. R. M. Gilbert, has had a trial trip, and will soon leave for Lake George, where she will be used. Scioto is 65ft. over all, 57ft. waterline, 10ft. 6in. breadth and 3ft. 6in. draft.

Book Notices.

There have appeared in the columns of Marine Engineering during the past year an intensely interesting series of articles by Mr. E. W. Roberts, on the subject of gas engines. The demand for these articles has been so great that the publishers have been induced to republish them in book form. It is, perhaps, only necessary to print the table of contents to show how thoroughly practical, comprehensive and valuable the book must be to builders and users of gas engines. Table of Contents.—Chapter I, General Types of Engines; Chapter II, Carburetors and Vaporizers; Chapter III, Igniters and Ignition; Chapter IV, How to Handle Gasolene; Chapter V, How to Operate Gas Engines; Chapter VI, Installing Gas Engines in Boats; Chapter VII, Hunting for "Troubles"; Chapter VIII, Preparing for a Cruise; Chapter IX, Making Repairs.

In order to round out the completeness of the book and to make it as valuable as possible to its readers, three chapters have been added from the pen of Professor W. F. Durand, entitled: The Design of Motor Launches, The Construction of Motor Launches, The Powering and Propulsion of Small Boats.

These twelve chapters make a book of 150 pages, which include a large number of illustrations. The work is well worth the low price asked for it—$1.50.

Another interesting book published also by Marine Engineering, is a most interesting and cleverly told story of an engineer's life at sea, entitled The Professor on Shipboard. The price of the book is $1. These two books, if ordered together, may be had for the sum of $2. We do not know of a better investment or a more valuable addition to one's library. Address Marine Engineering, 309 Broadway, New York.

* * *

The year book of the American Power Boat Association has recently been issued. The book contains the articles of association, by-laws, racing and measurement rules as well as the time allowance and square and cube root tables. The book sells for 25 cents, and copies can be obtained from the Rudder Publishing Co., 9 Murray Street, New York City.

Canoeing.

Prizes for Canoeists.

IN order to encourage canoeists and small boat sailors, who do their knocking about on inland waters, to keep a record of their trips and experiences, the publishers of FOREST AND STREAM offer cash prizes for the best accounts of cruises taken during the season of 1903. As few restrictions as possible will be imposed, and those given are made only with the view of securing some uniformity among the competitors' stories, so that the judges will be able to make a fair award.

The prizes will be as follows:

First, $50.00.

Second, $25.00.

Third, $15.00.

Fourth and Fifth, $10.00 each.

Sixth to Eighth, $5.00 each.

I. The cruise must be actually taken between May 1 and November 1, 1903.

II. The cruise must be made on the (fresh water) inland streams and lakes of the United States or Canada.

III. The canoe or boat in which the cruise is made must not be more than 18ft. long over all.

IV. An accurate log of the trip must be kept, and all incidents and information that would be of value to other canoeists covering the same route should be carefully recorded.

V. A description of the boat in which the cruise is made should preface the story, and a list of outfit and supplies.

VI. Photographs of the boat and of the country passed through, not smaller than 4x5, should, if possible, accompany each story, and they will be considered in making the awards.

VII. Stories should contain not less than five thousand words, written on one side of the paper only.

VIII. An outline chart of the trip drawn on white paper in black ink (no coloring pigment to be used) should also be sent in.

IX. Competitors should avoid the use of slang or incorrect nautical expressions in their stories, as it will count against them in awarding the prizes.

Each manuscript to which a prize is awarded shall become the property of the Forest and Stream Publishing Company. All manuscript should reach the office of the Forest and Stream Publishing Company, 346 Broadway, New York, N. Y., on or before December 1, 1903.

A. C. A. Division Meets.

The following letters have been sent out by the pursers of the Eastern and Western Divisions of the A. C. A:

Eastern Division.

Medford, Mass., April 28, 1903.

Dear Sir: It having been decided by the Executive Committee and approved by the commodore, the annual meet of the Eastern Division A. C. A., will be held at Canobie Lake, Salem, N. H., May 29, 30 and 31.

The lake is easy of access, being about six miles north of Lawrence, and reached by electric cars going to Canobie Lake Park, where the association launch will take you to camp.

The lake is very picturesque, thickly wooded shores, clear water for bathing, with fine paddling and sailing courses.

All canoes and camp equipage shipped to Canobie Lake Station, B. & M. R.R., care of H. L. Backus, will be cared for and forwarded to camp.

Those desiring tents or tent floors are requested to make application to the chairman of the Camp Site Committee as soon as possible.

Mess will be provided at an expense of $1 per day.

The Regatta Committee has arranged the following programme of races to take place Saturday, May 30:

War canoe. Club four—single. Club four—double. Tandem—double. Tandem—single. Single—single. Single—double. Relay. Rescue. Tilting tournament. Division Trophy (6 miles) exempt from upset rule. Combined 3 miles. Novice sailing 3 miles.

It is earnestly desired to increase the membership of the association this year, and to that end every member should try to interest new members in the A. C. A.

Application blanks may be obtained of the Purser.

At the last meeting of the executive committee of the association, an amendment was made to the constitution and by-laws providing that "Any active member in good standing may commute dues for life by payment at one time, to the purser of his Division, the sum of fifteen ($15) dollars."

The fund thus created is greatly needed by the board of governors, and I hope will meet with the support of many in this Division.

The national meet will be held at Sugar Island, St. Lawrence River, August 7 to 21, 1903. Per order

O. C. Cunningham, Purser.

Benjamin F. Jacobs, Jr.,
Vice-Commodore.

Western Division.

Cleveland, O., April 30, 1903.

To Members—Greeting: The annual meet of the Western Division, A. C. A., will be held at Ballast Island, July 5 to 18, 1903. It is the wish that we may have a full attendance of all members of the Western Division, and as many from the other divisions as can find it convenient to be on hand. All will be welcome, and we will try and give all a good time.

Information about camp sites, tents, meals, routes, etc., can be obtained from the purser. (He has nothing else to do but answer letters.)

A programme of races and events will be sent out about June 1, by the Regatta Committee.

Be sure and come.

Geo. W. Gardner.
Vice-Commodore.

A. W. Foote, Purser,
1301 St. Clair St., Cleveland, O.

Princeton C. C.

A canoe club has been formed at Princeton University, with a fleet of some forty canoes, and sixty members. The club has taken over the boathouse on the canal—a relic of Princeton's rowing days, and the gift of Robert Bonner in 1874—for its use, and its members have already done a considerable amount of cruising and exploring in the Millstone and other tributaries of the Raritan, the upper Passaic, and the Delaware.

The members of the P. C. C. gave a most successful "smoker" in the grill room of "Tiger Inn," Princeton, Friday evening, April 24, having as their guests Messrs. H. C. Allen, W. N. and F. G. Furman, F. W. Donnelly and H. C. Hill and J. H. Fritz, of the P. I. C. A., Trenton, and H. L. Pollard, Vice-Com. A. C. A., and J. K. Hand, of New York. Much enthusiasm was shown, and the A. C. A. is likely to enlist a large number of new members from the ranks of the P. C. C., who will, it is hoped, in their turn, arouse an interest in canoeing in the different parts of the country, from which they hail. Speeches were made by Messrs. F. C. Wallower, President of the club; Miner C. Hill, H. C. Allen, H. L. Pollard, W. A. Furman and J. K. Hand. A number of the members of old Nassau's Glee Club sang delightfully, and refreshments were served, "With a stein on the table, and a good song ringing clear." We hope to hear frequently from the P. C. C. in the way of cruising and camping and racing at the neighboring clubs and the camps of the A. C. A. 464.

A. C. A. Membership.

The following have been proposed for membership to the A. C. A:

Atlantic Division—A. S. Gregg Clarke.

The following have become life members to the A. C. A:

Hon. George W. Gardner, Cleveland, Ohio; John S. Wright, Rochester, N. Y.; Reade W. Bailey, Pittsburg, Pa.; Walter C. Witherbee, Port Henry, N. Y., and C. Fred. Wolters, Rochester, N. Y.

Rifle Range and Gallery.

Fixtures.

June 15-16.—Union Hill Schuetzen Corps twenty-fifth anniversary shoot. P. Stumpf, Capt.

June 18-20.—St. Louis, Mo.—Tournament under auspices of Central Shooting Bund. Horace Kephardt, Sec'y.

July 6-7.—New Haven, Conn.—South New England Schuetzen Bund annual schuetzenfest, under the auspices of the Independent German Rifle Company. H. C. Young, Sec'y.

Palma Trophy Matters.

From the daily press we reprint the following:

"Washington, May 10.—The secretary of the National Rifle Association, Lieut. Albert S. Jones, and Col. E. J. Dimmick have, with the consent of the Secretary of War, made arrangements with the Ordnance Department for new, carefully selected rifles for use by the team that is to go to England to shoot for the Palma trophy. The War Department will order the best shot from each military department sent to Sea Girt, N. J., to take part in the competitions to be held May 18, 19 and 20, to determine the personnel of the team.

"Assistant Secretary of War Sanger, as president of the Board on Promotion of Rifle Practice, will appoint a committee of seven, composed of three members from the regular establishment, three from the National Guard, and one civilian, to select the team. Ohio, the District of Columbia, New York, New Jersey and Pennsylvania have notified the National Rifle Association of their intention to send representatives to the trials for places on the team. The United States Marine Corps has brought its crack shot, Lieut. Thomas Holcomb, home from the West Indies to represent the corps."

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

May 11-12.—Crawfordsville, Ind., Gun Club shoot.

May 13-14.—Crawfordsville, Ind., Gun Club's tournament.

May 13-14.—Dubois, Pa.—The Interstate Association's tournament, under the auspices of the Dubois Rod and Gun Club. U. S. N. Crouse, Sec'y.

May 15-17.—Ocean Park, Cal.—Pacific Coast championship bluerock tournament, under auspices of Ocean Park Country Club. L. Herzog, Sec'y, Los Angeles.

May 16.—Trenton, N. J., Shooting Association's tournament. J. R. Taylor, Genl. Mgr.

May 16.—East Walpole, Mass.—All-day shoot of the Neponset Gun Club. Edgar Bills, Sec'y.

May 17-18.—Cedar Lake, Ind., Gun Club tournament.

May 18.—Marion, Ind., Gun Club's tournament.

May 19-21.—Osceola, Ia.—Iowa State Sportsmen's Association's twenty-sixth annual tournament.

May 19-22.—Wissinoming, Philadelphia.—Thirteenth annual tournament of the Pennsylvania State Sportsmen's Association, under auspices of the Florists' Gun Club of Philadelphia. V. V. Dorp, Sec'y.

May 21-22.—New Paris, O., Gun Club's tournament.

May 21-22.—Kenton, O., Gun Club's tournament.

May 21-22.—Kenton, O.—Shoot of the Kenton Gun Club. A. G. Merriman, Sec'y-Treas.

May 24-26.—San Francisco, Cal., Trapshooting Association's three days' bluerock handicap tournament. Open to all; $1,500 added. C. C. Nauman, manager.

May 26-27.—Dubuque, Ia., Gun Club's fourth annual amateur target tournament. A. F. Heeb, Sec'y.

*May 26-27.—Brownsville, Pa.—Brownsville Gun Club tournament. W. T. Doherty, Sec'y.

May 27-28.—Williamsport, Pa.—The Interstate Association's tournament, under the auspices of the West Branch Rod and Gun Club. H. A. Dimick, Sec'y.

May 27-28.—Fort Wayne, Ind.—Two-day bluerock tournament of the Corner Rod and Gun Club; $100 added. John V. Linker, Sec'y.

May 29-30.—Union City, Ind.—Spring tournament of the Parent Grove Gun Club.

May 30.—Orange, N. J.—Decoration Day shoot of the Nishoyne Gun Club. Ralph B. Baldwin, Sec'y.

May 30.—Shrewsbury, Mass.—Shoot of the Worcester Sportsmen's Club.

May 30.—Altoona, Pa., Rod and Gun Club's tournament. G. G. Zeth, Sec'y.

May 30.—Tournament of the East Harrisburg, Pa., Shooting Association.

May 30.—Newport, R. I.—Second annual tournament of the Aquidneck Gun Club. J. S. Coggeshall, Sec'y.

May 30.—Detroit, Mich.—Winchester Gun Club's Decoration Day third annual tournament; all day. Rose system and average prizes. Sliding handicap, 16, 18 and 20yds. D. A. Hitchcock, Sec'y-Treas.

May 30-31.—Pullman, Ill.—Calumet Gun Club's target tournament. E. B. Shogren, Mgr.

June 2-5.—Baltimore, Md.—Third annual Baltimore County shoot; three days targets; one day live birds; $500 in purses and prizes. Hawkins and Malone, Managers.

June 3-4.—Boston, Mass.—The Interstate Association's tournament, under the auspices of the Boston Shooting Association O. R. Dickey, Sec'y

June 3-5.—Parkersburg, W. Va.—Sixth annual tournament of the West Virginia Sportsmen's Association, under auspices of Ohio Valley Shooting Association.

**June, second week.—Shreveport, La.—Caddo Gun Club's tournament.

June 7-8.—Ligonier, Pa., Gun Club's tournament.

June 8-12.—Ossining, N. Y.—New York State Association for the Protection of Fish and Game's forty-fifth annual tournament, under the auspices of the Ossining Gun Club.

Saturdays.—Chicago.—Garfield Gun Club; grounds W Fifty-second avenue and Monroe street. Dr. J. W. Meek, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.
**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J. Bradfield, Sec'y, Vicksburg, Miss.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

Messrs. Budd and Burmister have issued the programme for their tournament, to be held at Arnold's Park, Iowa, June 2, 3 and 4. In added money and average money, $200 are added. There is a like programme each day, twelve events, eight at 15 targets, entrance $1.50, and four at 20 targets, entrance $2. To each of the 15-target events, $4 are added; to each of the 20-target events $5 are added. High averages, first to seventh inclusive, $10, $8, $7, $6, $5, $5 and $4. Shooting commences at 8:30. Moneys in 15-target events divided 40, 30, 20 and 10. Twenty-target events, 30, 25, 20, 15 and 10 per cent. Trade representatives welcome to shoot for targets. Grounds open for practice on June 1. For further information address Mr. John Burmister, Spirit Lake, Ia.

The programme of the Interstate Association's trapshooting tournament, given for the Boston Shooting Association, June 3 and 4, has like competition for each day, namely, ten events, 20 targets each, $2 entrance, and $2 added money. Average money $50, open to all who shoot the whole programme through; one money. Dinner will be served on the grounds. Targets 2 cents. Rose system, 5, 3, 2 and 1, will govern. Guns and ammunition, prepaid and marked with owner's name, shipped care O. R. Dickey, Wellington, Mass., will be delivered on the grounds free of charge. He is the secretary, and will furnish all pertinent information to applicants.

The programme of the tournament of the Calumet Gun Club, Pullman, Ill., May 30 and 31, has like events for both days, fourteen in number, 10, 15 and 20 targets, entrance based on 10 cents per target. There is a total of 200 targets, $20 entrance. The Rose system will govern the division of the purses. Each day $5 to high gun; $3 to second high gun; $2 to low gun. Shooting commences at 9:30. A set of traps will be provided for those who will shoot for targets only. Guns and shells, freight prepaid, can be shipped to J. W. Hoffman, 310 Morse avenue, Pullman, Ill. Mr. E. B. Shogren, manager, 164 Dearborn street, Chicago.

The programme of the Neponset Gun Club's all-day shoot at East Walpole, Mass., on May 16, provides 20 events, all at 10 targets, except the last, which is a miss-and-out. Shooting commences at 9:30. Ammunition and guns sent to the Neponset Gun Club, care J. F. Freese, will be delivered on the grounds free. Targets 1½ cents. Mr. C. A. Flower is the president. Mr. E. L. Bills is the secretary.

The Worcester Sportsmen's Association will hold a shoot May 30, on its grounds at Shrewsbury, Mass. The programme contains twelve events, 10, 15 and 25 targets, 195 in all, with a total entrance of $15.30. Professionals and paid experts barred from money. Shooting commences at 10 o'clock. There will be three merchandise prizes for those shooting through the entire programme.

The Nishoyne Gun Club, of Orange, N. J., will hold a shoot on May 30, commencing at 10 o'clock. There are ten programme events, at 15, 20 and 25 targets; 50, 75 cents and $1 entrance. Lunch and ammunition obtainable on the grounds. Take Eagle Rock trolley car from D., L. & W. R. R., Orange station; also Erie R. R., Orange station. Mr. Ralph B. Baldwin is the secretary.

The Richmond Gun Club, of Staten Island, will hold a live-bird shoot at Smith Brothers' grounds, Newark, N. J., commencing at 1 o'clock on Saturday of this week. The main event will be at 15 live birds, for a solid silver cup and the championship of Richmond county. Optional sweepstake. Visitors are welcome. Mr. A. A. Schoverling, P. O. Box 475, New York, is the manager.

The Amherst Gun Club, at a meeting held on May 6, elected officers as follows: President, Charles S. Branch; Secretary and Treasurer, Thomas R. Hill; Executive Committee, H. B. Perry, J. W. Harlow, A. R. Bridgman, C. R. Kenfield, O. S. Cady, L. H. Dickinson; Captain of Rifle Range, Henry Adams; Gunmaster, J. F. Page; Master of the Range, A. F. Bardwell. It was decided to have a shoot on Memorial Day.

At a recent meeting of the J. F. Weiler Gun Club, Allentown, Pa., officers were elected as follows: President, W. L. Gillette; Vice-President, Charles Hohe; Secretary, Schindel Weiler; Financial Secretary, C. F. Kramlich; Trustees, C. L. Straub, J. J. Flickinger, Harvey Frankenfield; Captain, C. L. Straub; Assistant Captain, C. F. Kramlich; Sergeant-at-Arms, Ben Beidler.

The two days' tournament at Irwin, Pa., May 5 and 6, was a success in attendance and class of competition. Mr. Luther Squier, of Wilmington, Del., was high average with a total of 325 out of 350. He made a run of 75 straight. Fleming was a close second. The Millvale team, four men to a team, won the trophy event with 175 out of 200.

The Leesport, Pa., Gun Club, at its annual meeting, held recently, elected officers as follows: President, John Haines; Vice-President, James Adams; Secretary, W. C. Bagenstose; Treasurer, R. H. Fields; Trustees, Thomas Dunkel, Alvin Snyder and Howard Hener; Captain, Howard Hener. The annual spring shoot of the club will take place on Saturday of this week.

Messrs. Chris. Interman and Leonard Marcey have agreed to shoot a 25-bird match for $50 a side, which will take place on Friday, May 22, at Guttenberg, N. J. Mr. Marcey receives a handicap of 2yds., while Interman stands at 30yds. On the same day Messrs. Karl Bjurman and Sam Luckham will shoot at 10 birds each, for $25 a side.

The Poughkeepsie, N. Y., Press, states that "Hudson has a new gun and rod club, and that doubtless means contests and sport with the Poughkeepsie Gun Club. The main purpose of the club is to prevent violations of the game and fish laws, with shooting at target and whipping for trout on the side."

The excellent programme of the New York State shoot, published elsewhere in our trap columns, this week, is worthy of the careful consideration of trapshooters. A number of items in it convey information of special importance. Those who desire copies of it should address Capt. C. G. Blandford, Ossining, N. Y.

At the Rockwell City, Ia., tournament, May 6, Mr. C. W. Budd, of Des Moines, won high average with .915 per cent. C. B. Adams, of Rockwell, Ia., was second with .905 per cent. The programme provided 200 targets for the total of the regular events.

Mr. J. L. Head, of Peru, Ind., famous as a leading trapshooter of eminent skill, and a successful representative of one of the great ammunition companies, was a visitor in New York on Tuesday and Wednesday of last week.

The secretary, Mr. A. B. Richmond, Grand Rapids, Mich., informs us that the second annual tournament of the Consolidated Sportsmen's Association, of Grand Rapids, will be held on June 23, 24 and 25, and that $1,000 in added money will be given.

Mr. C. G. Grubb, of Pittsburg, Pa., writes us as follows: "The Board of Control of the Western Pennsylvania Trapshooters' League has changed the dates of the Ligonier shoot to Sept. 15 and 16, instead of Oct. 20 and 21."

At the De Witt, Ia., tournament, May 6 and 7, Mr. L. Walrod, De Will, was first average with .923 per cent. H. C. Watson, Sewickly, Pa., was second with .894; Mr. W. B. Linell, Eldora, was third with 89 per cent.

To decide the individual target championship at the University, the U. of P. Gun Club will hold a shoot on Saturday of this week, on the grounds of the Clearview Gun Club.

Mr. S. H. Vandegrift, of Pittsburg, known in shooting circles as "Sandy McPherson," will make New York city his permanent place of domicile in the near future.

The Towanda, Pa., Gun Club announces that its next annual tournament will be held on July 4. Mr. W. F. Dittrich is the secretary.

We are informed that the Illinois State shoot, which was fixed to take place this week, has been postponed to October.

BERNARD WATERS.

Some Nebraska Shots.

OMAHA, Neb.—Now, for a little chat about our Western shooters. W. H. Heer, of Concordia, Kans., and well and favorably known to all our local shots, is the crackerjack of them all, and I do not except event Fred Gilbert, the Spirit Lake trapper, or Alphabetical Elliott, from the hamlet down on the Kaw. Heer is a unique character, a plain, common, coal digger, a graduate from neither Yale or Harvard, but an affable, good-natured all-round man. He is a big, smooth-faced six-footer, and when shooting wears a mammoth broad-brimmed black slouch hat, turned up in front, like an old-time border ranger. He is a left-handed shooter, and holds his shotgun like a rifleman holds his rifle, close up with a very crooked arm. There are but few like him. He is wondrously quick, surprisingly graceful, and one of the very best target shots in the world. At the late State tournament at Concordia he won the State championship, with 78 out of 80, from the 20yd. mark. On the second day Fred Gilbert had to break his last 50 targets straight to tie him for high average, which he did, both getting 195 out of 200. At Lincoln, the Nebraska State Sportsmen's tournament last week, Heer won out high, beating experts and all with but 17 misses in 400. Against him were such men as C. B. Adams, of Rockwell City, Ia., high man at El Paso; the "old vet" Chippey Budd, of Des Moines; Tom Norton, of Kansas City; Major Kirby, of Cincinnati, and all the best of Nebraska's shooters.

Lew Reed, of Ohiowa, this State, is another rattling fine man with the hammerless, of whom the world abroad knows but little. In type he is the direct opposite to Heer—an undersized, clerical looking chap, but like the Kansas man, an "awfully" decent fellow. When he shoots he pulls his gun down out of the clouds, then crouches lower and lower until in the attitude of a sprinter awaiting the pistol's crack, when he squeaks, "All ready, pull! and into a nebulous cloud bursts the asphaltum pigeon. Dick Linderman, of Weeping Water, and Frank Beard, of Herman, tied Reed for the championship at Lincoln with 24 out of 25, and on the shoot-off Linderman was almost an odds-on favorite, but he was last in the race, the result being Reed 24, Beard 23, and the redoubtable Richard but 19. There was lots of money won and lost on this shoot-off. In the regular event for the championship, Dan Bray, "Old Single Eye," of Columbus, was considered a cinch, but after breaking his 23 straight, he fell down on both No. 24 and 25. Reed, this season, has won high average at most all of the State shoots, and is a man to be classed with the very best of them.

The premiers, so far as Omaha goes, are W. D. Townsend, the popular and energetic sporting goods man, and holder of the State's dickey bird championship; Henry McDonald, manager of the gun club park, and County Commissioner, and Frank Fogg, the voluble druggist. These three are in a class by themselves. Then follows in succession George W. Loomis, Billy Brewer, Charlie Lewis, Dave Morrell and Dick and Tom Kimball. All of this bunch, in addition to several out in the State, are getting ready to go after Mr. Townsend's honors, the dickey bird belt, and a number of specials are being arranged for the near future. Townsend won the title at the Grand Island shoot a month ago with 48 out of 50.

Over the State are such great shots as Dan Bray, of Columbus; Dick Linderman, Weeping Water; Gus Sievers, Grand Island; Gus Schroeder, Columbus; William Veach, Falls City; W. A. Waddington, the sheriff of Holt county; O'Neill; W. H. Illian, Albion; Frank Beard, Herman; Frank Nicholson, Nebraska City, and "Forey" Moore, Frank Williams and P. J. Hindmarsh, of Lincoln. The latter gentleman is a noted field shot, has had unlimited experience in the big game regions, and is the best wild-fowl shot I ever saw.

The new officers of the State Sportsmen's Association are: Dan Bray, Columbus, President; Gus Sievers, Grand Island, and G. A. Schroeder, Columbus, Secretary and Treasurer. In the balloting for the site for the state tournament for 1904, Columbus won out over Omaha by a majority of 2 out of 41 votes.

The Dickey Bird Gun Club opened their regular weekly shoots at their park out on the Military Road yesterday, and the Omahas will inaugurate the regular season Saturday, May 16, at their charming grounds at the other end of the big bridge.

In place of the State shoot here next May, Billy Townsend and Henry McDonald will give a big sweepstakes the first week in October, two days at targets and one at live birds. The Omaha grounds being on the other side of the Missouri, the live-bird day will be observed as of old, before the modern crop of sycophants and pretenders developed, and when pigeon shooting was one of Nebraska's most popular pastimes.

Dickey Bird Gun Club.

The Dickey Bird Gun Club's inaugural medal shoot for 1903 took place Saturday, with the following scores, 25 targets to the man:

Dreisback	1111111110111111110100101—20
Vorhees	1111111111011111111011010—21

SANDY GRISWOLD.

Greensboro Gun Club.

GREENSBORO, N. C., May 9.—The Greensboro Gun Club held its weekly shoot to-day under unfavorable weather conditions, gusty, strong wind and a bad light. Mr. E. H. Storr was a visitor. The scores follow:

	Shot at.	Broke.		Shot at.	Broke.
Storr	105	86	Proctor	60	30
H Lee	67	50	Daniels	60	29
Welsh	90	47	Tate	90	32

"I dare say," she remarked acridly, sitting up in bed, when he stumbled in at 2:30 in the morning, "that you have been sitting up with a sick friend or attending a lodge meeting?" "Neither one," he replied, "I've been playing poker, and I sloughed off 35 good bones. Where's my night-shirt?"—Washington Star.

Luverne Tournament.

WHAT promised to be a good shoot, both as to numbers and favorable opportunities for making good scores, proved quite the reverse, as when on Wednesday morning, May 6, the boys began to assemble upon the Luverne, Minn., Gun Club grounds, the wind was blowing fiercely, nor did it let up for two days. This kept many at home, and prevented those present from making even fair scores.

Both the attendance and the weather was a great disappointment to Mr. Schwartz and others of the club who had labored hard and offered good inducements for patronage.

H. C. Hirschy and Tom Norton assisted the management by shooting through.

Spirit Lake sent up their usual two members, Slocum and Michelson came from South Dakota, Patch came from Iowa, and with the local boys there was a total of fifteen men present during the shoot.

Hirschy proved the best judge of the wind, and easily won high average, yet had little edge over Schwartz the last day.

This is a little too far north for Norton, as he is not acclimated.

There are plenty of shooters in the near vicinity that should have been present, yet there is not much pleasure in shooting when 70 and 80 per cent. is the best a good man can make. The scores:

First Day, May 6.

Richmond Tournament.

RICHMOND, Va., May 5.—The tournament given by Messrs. Harris, Flippen & Co. was a great success. It had a large attendance. It was conducted on liberal lines, and was designed to introduce the ammunition of which that firm has the agency in Richmond. Everything was free. Interstate rules governed. There was a gold medal, which has to be won three times by one contestant before becoming his property. The winner must, when challenged, defend it, or forfeit it, within thirty days from challenge. Mr. Polk Miller, well known to fame in the shooting and kennel world, on behalf of the contestants, extended thanks to Messrs. Harris, Flippen & Co. Mr. J. A. Anderson won the medal.

The scores, 50 targets: J. T. Martin 39, W. F. McLelland 34, O. J. Thompson 30, Lee Lorraine 45, Dr. Hillsman 43, H. S. Hawes 42, M. D. Hart 40, J. W. Harrison 38, H. Brown 40, T. H. Fox 35, T. R. Kemper 33, G. W. Peters 37, H. P. Collins 20, E. H. Storr 44, B. W. Jones 31, J. A. Anderson 47, P. J. Flippen 39, Jas. Walters 37, R. H. Johnson 39, D. Edmonds 33, J. T. Leach 6, W. Harris 16, W. C. Saunders 30, A. K. Thomas 13, E. S. Jones 11, Tomson 25, Ruffin 32, Ford 24, J. W. Bauer 32, Atkinson 35, V. Hechler 27, Cersley 34, Neurhor 30, Dr. McGuire 23, J. R. Ossining Gun Club.

OSSINING, N. Y., May 9.—To-day the weather conditions were such that fine scores were foregone conclusions. However, the scores herewith presented are not likely to make back-liners of any of the shooters who took advantage of the day. The ancient game of golf detracts somewhat from our Saturday matiness in summer. Our friend J. Henry and his clever niece, Miss Holland, were welcome visitors to-day. Miss Holland handles her pump gun like an expert, shooting in fine time. No. 5 was at 5 pairs:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	10	10	10	10	10	10	10
J Hyland	9	6	6	6	4	7	7	7	..
C Blandford	10	8	9	9	7	7	9	7	9

C. G. B.

Baltimore Shooting Association.

BALTIMORE, Md., May 9.—The regular weekly shoots of the Baltimore Shooting Association commenced to-day. The interest is maintained by subdividing the competitors into classes A, B and C, a medal being the prize in each class. Lupus and Hawkins tied on 46 in Class A; Roberts was first in Class B with 40; Chelf took the lead in Class C with 31. The medal contest is at 50 targets. The scores:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	10	15	10	15	50	Targets:	10	15	10	15	50
Malone	9	13	9	13	39	Street	..	..	5	8	31

Roberts	9	15	10	13	40	Cox	9	14	..	..	..

Hillside Gun Club.

CHESTNUT HILL, Pa.—The monthly shoot of the Hillside Gun Club had nine contestants. The main event was at 50 targets, unknown angles, handicap. The scores:

W. Haywood (15) 53, N. Caie (14) 51, M. Bisbing (10) 50, J. Haywood (17) 50, R. Bisbing (9) 48, W. Aimen (15) 47, C. Larson (12) 46, J. Hamil (12) 46, L. Parson (9) 44.

Sweepstake event, 10 targets, 16yds., unknown angles: Caie 9, Hamil 9, Bisbing 8, J. Haywood 7, M. Bisbing 7, W. Haywood 7, Laurent 6, Parson 4, Aimen 4.

Franklin Gun Club.

FRANKLIN FURNACE, Pa.—The shoot of the Franklin Gun Club to-day resulted as follows: Shooting at 25 targets, C. Barnage broke 12, A. Right 9, F. Kishpaw 9. Shooting at 30, H. Pope broke 23, J. Williams broke 19.

Lexington Gun Club.

LEXINGTON, Ky., May 7.—I am inclosing with this a copy of the scores of the shooters in attendance at the live-bird and target tournament of the Lexington Gun Club, May 5 and 6. Am inclosing clipping from one of our local papers, the Democrat, containing fairly accurate accounts of each day's shooting.

The programme, as advertised, was not adhered to closely, events being substituted to suit the shooters.

The live birds were an unusually good lot, but an utter absence of wind, together with the warm weather, and the fact that the traps were set inside the diamond of the ball park, made the birds show up splendidly, and the dust told plainly the shooters just where they were placing their lead. Mr. A. W. Du Bray, of Cincinnati, O., shot through the entire programme at live birds, and was high average man, he only failing to score on five birds, three of which were dead out of bounds. Mr. C. O. Le Compte, of Eminence, Ky., won high average on targets, and this shooting from the 18yd. line.

Events 1, 2, 3 and 4 were miss-and-outs.

No. 1 was at 28yds., $2 entrance, birds extra.

No. 2 was at 28yds., use of one barrel only, $2.50 entrance, birds extra. Ties divided.

No. 3 was a handicap, $2, birds extra. Clay and Rogers divided.

No. 4, was a handicap, $3, entrance, birds extra.

Bill Nye, 31	22222	22222222222	20
Thos Clay, 30	20	2222222221	2112211
A W Du Bray, 32	22222	2221211111	11*
R H Smith, 28	21220	0	210
C O Le Compte, 32	0	222120	210

*Re-entries.

North River Gun Club.

Edgewater, N. J., May 9.—The weekly shoot of the North River Gun Club to-day was well attended. There were fourteen shooters who participated. Dudley and Schneider shot excellently well, considering the difficult shooting. The weather was pleasant. Dudley was high in the prize shoot with 22. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	15	15	15	10	25	15	10	10	10
Vosselman	6	10	..	12	3	13	..	..	6	3

*Griffith	..	..	..	..	..	..	..	..	7	..

*Re-entry. Event No. 6 was the handicap prize shoot. Event No. 10 was at 5 pairs. JAS. R. MERRILL, Sec'y.

Hudson County Gun Club.

The Hudson County Gun Club, of Hudson county, N. J., a new organization to enter the field, held another successful shoot on the grounds of the North Hudson Driving Park, Guttenberg, N. J., May 8, and ten shooters faced the score, of which Chris. Interman was the only member to grass 10 straight. Leonard Marcey, a new but coming shot, crowded Interman to the last round; that last bird is probably going yet.

Following the club event a team race on somewhat novel lines was hotly contested; all at 30yds., L. I. rules, gun below elbow, and the old point and half point system to count. Capt. Ryan's team won by one-half point. Ex-Captain Hayes, of Hoboken, acted as referee. Scores:

No. 1 was the club event. No. 2 was at 5 birds:

	No. 1.	No. 2.
J Zeller, 28	20001011*1— 5	0211*—3
P Sullivan, 30	0110011000— 4	02122—4
L Marcey, 28	1112111110— 9	00111—3
K Bjurman, 28	0011102100— 5	.....
V Jagels, 28	1111101110— 8	02*12—3
C Interman, 32	1211211212—10	.....
J McCauley, 28	0101200220— 5	10000—1
G Bellkamp, 30	1000112111— 7	21122—5
T Filemora, 30	0100102111— 6	00012—2
V Fink, 30	020*001110— 4	1*122—4
J Ryan	....	11211—5

Team race, Long Island rules, all 30yds., points to count:

	Points.		Points.
Capt Bellkamp	21212—3½	Capt Ryan	12120—3
Interman	10011—3	Marcey	10111—4½
Jagels	00111—3	Zeller	21111—4½
McCauley	01011—3	Sullivan	10010—2
Filemora	02011—2½—15	Fink	20202—1½—15½

The Higher Idea.

WYMORE, Neb., May 3.—I have evolved a great idea, and may need help to make it a permanent success. The Wymore Gun Club has been having trouble. The people of this community, having their own ideas as to the best way to settle up a new country, and with their well-known strenuosity and push, have been, and are, now engaged in raising large families of boys. And every time the gun club scored up to shoot there would be a great crowd of boys on hand, bent on picking up the empty shells. This made trouble, which culminated last Friday. It was shoot day, and the boys were on hand in droves, and when a shell was dropped a scramble took place that discounted a football game. The sheriff of the county was a visitor that day, and when he went to trap No. 1 and announced that he was going to march down the line and that the boys had better take some other road I realized that the wrong thing had been said just at the right time, and that there was going to be trouble. I knew the metal of the "bad men" present, and that they would accept the sheriff's challenge.

"Or, if a path be dangerous known,
The danger's self is lure alone."

I wrote a hasty note to my wife and sent the buggy to my house with the command to the driver, "Spare not for spoiling of thy steed, the best of mine shall be thy meed," then I seized the guns of the young and hot-headed members of the club and locked them in the club house, and cleared for action.

Then the sheriff called pull and missed his bird, and swore that the load was as slow as the one that Crosby used which struck him in the back when he went out to examine his target for shot marks.

Then the sheriff, in a moment of abstraction, dropped his empty shell between his feet. "Rattlesnake Pete" and "Bad Nasty O'Fallon" and their gangs dove in from different directions, while "Alkali Ike" and "Slim Jim" and their cohorts came in from the flanks, and "Shorty Budd" and his crowd from "Jew Jake's" ranch piled on top; "King Fisher" and "Ben Slade" stood off and threw cow chips at the bunch.

I gave the rescue signal, and the club, acting as one man, pulled the sheriff out, and set him against the club house to cool off just as the buggy returned from the house, the horse covered with foam. I ran and unloaded the buggy and distributed among the boys, twelve copies of Outing, thirteen of Sports Afield, and sixty-two of FOREST AND STREAM, and in five minutes you could pick up the hind foot of any of them. They were our slaves. "Wild Bill," who had taken no part in the scrimmage, had gotten hold of the current number of FOREST AND STREAM, and was reading Mr. Vandiveer's entertaining letter about "Bad Men of the West," and when he reached the story of King Fisher's signboards at the forks of the road, and read the paragraph, "So great was the fear of him that both desperadoes and law officers dared not travel on the forbidden highway," he was overcome with a lassitudinous lethargy which produced drowsiness, and he became as limp as a rag. He complained of being tired, very tired. We walked him up and down the park a while, and then took him home. He was better, but still dazed.

I will pay postage, express or freight, on a limited supply of back numbers of these publications, and if the publishers will kindly furnish them they will be doing the club a great favor, beside doing some splendid work for game and bird protection by helping to educate the boys along right lines, etc.

A. D. MCCANDLESS.

Millport Tournament.

MILLPORT, Pa., May 6.—The second annual tournament of the Oswayo Valley Rod and Gun Club, held at Millport, Pa., Tuesday, May 5, was without exception one of the most enjoyable affairs that has been held in this vicinity for some time. The weather was perfect, and the magautrap worked to perfection.

The visitors from Olean, Bolivar, Wellsville, Sabinesville, Galeton and Coudersport were unanimous in their praise of the management and the treatment accorded them.

The Oswayo Valley Rod and Gun Club is practically a new organization; however it numbers some sixty members, with more coming in at every meeting. The great majority being amateurs, are naturally "gunshy" and "afraid of the cars" when lined up with 80 or 90 per cent. men; but this season will no doubt develop some good clay breakers if the enthusiasm keeps up that is with us now.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., May 7.—The following scores were made at the regular weekly shoot of the Rochester Rod and Gun Club:

Bonbright cup, handicap:

	Shot at.		Scored.		
	Singles.	Pairs.	Singles	Pairs.	Total.
Riekman	19	5	12	2	14
Adkin	18	5	14	6	20
Clark	22	5	13	5	18
Wride	19	5	17	4	21
Mosher	18	5	11	6	17
Newton	16	5	15	9	24
Kershner	16	5	14	8	22
Bonbright	16	5	15	5	20
Stewart	15	5	14	8	22

This contest is for an elegant sterling cup, donated by Mr. Bonbright, to be contested for weekly from April 1, ending June 3. High scores (total) to win.

Contest for club prizes, handicap. Winchester repeating shotgun and other prizes to be contested for weekly, beginning April 1, ending Sept. 2, the shooter winning the greatest number of contests to be the winner:

	Shot at.	Scored.		Shot at.	Scored.
Rickman	28	19	Stewart	25	23
Adkin	27	19	Kershner	25	22
Clark	32	17	Bonbright	25	22
Wride	29	23	Newton	26	22
Mosher	28	20	Borst	28	21

Monroe county championship, diamond medal, 100 targets. This was a challenge contest, Stewart defending against Bonbright, the challenger. The scores: Stewart 98, Bonbright 90, Kershner 85, Newton 88, Byer 84, Adkin.

Florists' Gun Club.

WISSINOMING, Pa., May 9.—Mr. Howard Ridge, of Philadelphia, was high average at the shoot of the Florists' Gun Club to-day with 89. Apgar was second with 87. The shooting was exceedingly difficult, so that under the conditions the scores were very good.

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

Total for 100 targets: Ridge 89, Apgar 87, French 84, Bell 84, Fisher 81, Houseman 81, Newcomb 80, Francotte 77, Daudt 75, Murray 73, Pleasanton 73, Sheeler 72, Downs 70, Park 68, Wentz 66, George 64, Shew 64, Hall 45.

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., May 9.—The weather was pleasant, the birds first rate, and the shooting variable, at the shoot of the Keystone Shooting League to-day. J. Rothaker was high in the totals of the two events by killing 22 out of the 25 shot at.

Club handicap, 10 birds:

McCoy, 30	22*0222022— 7	Budd, 30	1101222202— 8
Morris, 27	2211120222— 9	Geikler, 28	22222*2*22— 8
Bucknell, 28	2122000212— 7	Miller, 29	21002201*1— 6
Rothaker, 29	1222122202— 9	Thomas, 28	1122022202— 8
Hood, 28	2222220221— 9	Harrison, 28	*11020*121— 6

Officers' trophy, 15 birds, handicap rise:

McCoy, 30	122222222022202—13	Geikler, 28	2222022*2222222—13
Rothacker, 29	122222220202222—13	Miller, 29	122212210122222—14
Hood, 28	1200212122022—12	Harrison, 28	0122101210111*1—11
Budd, 30	112111110021222—13		

Messrs. A. J. Miller and John Morris shot a 50-bird match, for $100 a side, and Morris again was the victor. The score was close, 39 to 38, as follows:

Miller	22201220122222220002222102222020120212122220002222222—38
Morris	22220122222222220222022002202221022222002022202222—39

Chicago Gun Club.

CHICAGO.—The opening shoot of the season of the Chicago Gun Club took place on Saturday, May 2, and a good attendance was noted, with results as below. The weather was warm and bright, an ideal day for the sport. The boys have some good prizes to shoot for this season, and it is expected there will be some exciting shoots before the season is over:

Monthly handicap, 15 targets: Lord (2) 13, Morton (3) 13, Bowles (2) 12, Patrick (4) 15, Allin 14, Boroff (1) 15, Burcky (1) 13, Morgan (3) 14, O'Brien (4) 15, Mrs. Howard 10, Parker (6) 15, Boltman (2) 15, West (4) 13, Willard (1) 15.

Trophy handicap, 25 targets: Lord (3) 20, Dr. Morton (6) 21, Bowles (4) 20, Patrick (8) 21, Allin 19, Hanagan 13, Morgan (5) 11, Weart (6) 18, Boltman (3) 23, Ike (3) 24, Dr. Mather (12) 13, Mrs. Howard (9) 11, Willard (2) 24, Boroff (2) 22, Dr. Burcky (7) 21, O'Brien, (7) 26, Parker (11) 23.

Franke—Clayton.

MR. PAUL FRANKE defeated Mr. W. H. Clayton in a 100 live pigeon match, May 3, at Blue River Park, Kansas City. The weather was fine, and the birds fairly good. Franke shot in rare form, and made the record run, on these grounds, of 87 straight kills. The match was for $50 a side and the price of the birds. Scores:

W H Clayton	11111011122201112222112 21—23
	10110111112222211112212122—23

KILLMORE.

Remington Gun Club.

ILION, N. Y., May 2.—The Remington Gun Club opened the season at their grounds on East Main street to-day with a good attendance of club members. A strong east wind, which was blowing at the time, prevented high scores being made, although some good shooting was done under the unfavorable conditions. Bluerock targets, thrown from a magautrap, were used. The following are the scores made:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	10	25	15	15	10	Targets:	10	25	15	15	10

Tomlinson	7	19	..	..	..						

Enterprise Gun Club.

MCKEESPORT, Pa., May 9.—The distance handicap used by the Enterprise Gun Club at its shoot on last Saturday cut scores all to pieces. Sixteen-yard man wins over all. Each man shot at 50 targets. Scores: Powely (14) 25, Noel (14) 30, McCombs (14) 19, Douglas (14) 22, Murry (15) 26, McFarland (16) 32, Rotzsch (16) 23, Barrickman (16) 35, Black (16) 27, Maxwell (16) 28, Lindberg (16) 18, Ohs (16) 26, Mains (18) 29, C. H. (18) 25, Stepham (19) 33, Cannon (19) 33, Knight (19) 31, Calhoun (20) 34, Cochran (20) 31.

There were nine prizes, won by contestants in the following order: Barrickman, Calhoun, Cannon, Cochran, Stepham, Knight, Noel, McFarland and Mains.

Special event, 25 targets: Cochran 23, McFarland 18, Stepham 17, McCombs 14, Cannon 18, C. H. 16.

Boston Gun Club.

BOSTON, Mass., April 29.—The Boston Gun Club's fourth annual team shoot was held on their grounds to-day, sixty-one shooters being in attendance, making the tournament one to be remembered as time flies by. The weather clerk simply outdid himself, furnishing a June day, warm and balmy enough to allow all to divest of coats, sweaters, etc., and take things easy in shirt sleeves, which was quite sufficient evidence that each particular shooter was enjoying himself to the limit.

To state who was there would take a good long time, and even then, we doubt our ability to speak of all; but not a few came from long distances to join us on this festive occasion. E. C. Griffith, Pascoag, R. I.; Root and G. A. Clark, Providence, R. I.; N. A. Cutler, I. O. Converse and S. P. Wilder, Fitchburg; Secretary Hallan, Corson and Fisher, Dover, N. H.; S. M. Gonzales, N. C. Tozier, H. Webster and Childs, Haverhill; F. Hilliard, W. Hay, C. A. Alley and Rowe, Lynn, Mass.; C. F. Kneil, Brockton; P. H. Powell, Newport, R. I.; Tenney and Andrews, Leominster; H. Boynton, Lowell; S. B. Adams, Portland, Dupont, Ingalls, Phillips, Corbett, Marsalis and Marshall, Harvard Shooting Club; R. D. Hodsdon, R. W. Dennison, H. A. Philbrook, Dr. Gleason and Fairbanks, Watertown; E. G. Bullard, New Bedford.

The trade was quite ably represented by B. L. Woodard, though at present he is not himself, but improving each day, so it will not be long before he is around again, and welcome he will be when he begins his regular attendance with us again; T. H. Keller, Jr., Neaf Apgar, W. D. Thompson, O. R. Dickey, and H. C. Kirkwood.

The club itself was amply prepared for the large attendance, an extra set of expert traps being installed about 30yds. to the left of the magautrap, the two sets of traps making a combination hard to beat, and able to give a good account of themselves.

The tournament itself was under the direction of H. C. Kirkwood, most ably assisted by Mr. F. P. Miller in the office, and Mr. J. H. Wild and F. L. Baker as scorers. We also must not forget the trappers and pullers, as they are part of a successful shoot, and they certainly did work like Trojans, and never quit till the shooters packed up their guns and grips and departed.

At 12 o'clock the club's upstairs room was thrown open for lunch, and safe to say there were very few but full squads that made their way there. This part of the programme was in charge of Miss H. J. Kirkwood and Mrs. H. C. Kirkwood, and needless to mention each individual was looked after in the best possible manner. The club certainly fared well in having such managers of inner-man necessities as the two ladies proved to be, and many congratulations were received on this point.

The conditions for shooting were indeed very good, at one time a slight drawback being a strong southeast wind; but as it soon died away, there were no kicks coming on this. Naturally enough, the interest centered in the team match, Fitchburg Watertown, Haverhill, Birch Brook, Harvard and Boston lining up for honors with the Providence Gun Club and Keller Dubs, shooting along to increase the interest. After the last pop of the guns was heard, totals summed up and certified, the Fitchburg "farmers," as they style themselves away from home, were easily first with 121, a lead of 6 targets; Boston second with 115, Harvard third with 112, Watertown fourth with 110, Haverhill fifth with 99, Birch Brook sixth with 98. The Providence team, shooting as an extra team, broke 1 more target than the Fitchburg, but were not eligible for the prizes, which consisted of five sterling silver-mounted stag handle cork screws, and it was not long before the winners were wanting to get to Boston to use them, and see what kind of luck they brought with them. In the team match the individual honors rightly belong to Andrews, breaking 28 out of 30 in the prettiest way imaginable, each target being covered in just the right way, and leaving no doubt as to the scoring end.

Individual honors of the day were taken care of by Griffiths in the same old quiet and enviable way of his, his percentage of .886 being a good one sure, 70 of his targets being at the 19yd. mark. Cutler was a good second in the amateur class, .840 being the result of his efforts. Sarge, third with .823. In the expert class Apgar led with .846 to his credit, Leroy following close with .829. Other scores as follows:

Targets:	10	10	15	15	15	15	15	15	10	10	15	15	15	Av.
Griffiths, 19	10	7	14	14	14	14	14	15	7	9	12	14	11	.886

Paducah Tournament.

PADUCAH, Ky.—The Paducah Gun Club's third annual tournament, was notable for the high class talent which was in attendance. The first two days were devoted to targets; the third day to live birds. Mr. W. R. Crosby won high professional average for the two days, breaking 342 out of 350. A bountiful luncheon was served free. The two days' summary, April 28 and 29, follows:

	First Day.		Second Day.		Total.	
	Shot at.	Broke.	Shot at.	Broke.	Shot at.	Broke.

Chesapeake Gun Club.

NEWPORT NEWS, Va., May 6.—The opening shoot of the Newport Gun Club's season took place to-day. Delightful weather favored the event. The scores were good, considering that this was the first shoot, and the number of shooters was fairly large. Mr. Thomas F. Stearnes led the field with the good score of 91 out of a possible 100. Mr. Jack Rabinson, a new member of the club, shot at the traps for the second time. He did good work, making a score of 71.

The club will shoot every Wednesday afternoon during the rest of the season. The scores:

Programme of New York State Shoot.

FOLLOWING is the programme of the New York State shoot:

Monday, June 8, 5 P. M.—Annual meeting of the New York State Association for Protection of Fish and Game, in the rooms of the Ossining Steamer Company, Corporation Rooms, Main street.

First Day, Tuesday, 10 A. M.—State event No. 1, 25 bluerocks, $3; all ties divided, Rose system; events 2 to 9, each 20 targets, $2 entrance. State event No. 10, Grand Handicap, 25 bluerocks, 11 to 22yds., entrance $2.50; first prize, silver cup presented by Jacob Ruppert; second, 35 per cent.; third, 25 per cent.; fourth, 20 per cent.; fifth, 10 per cent.; sixth, 10 per cent. of purse. Shoot-off for medal only.

Second Day, Wednesday, 10 A. M.—No. 1, merchandise shoot, open to all amateurs, 25 bluerocks, entrance $5; all ties shot off miss-and-out; 50 cents fee charged to all who shoot off. Nos. 2 to 9, open events, as per first day, 20 bluerocks, each $2 entrance. While the merchandise event for amateurs is being shot, a special set of merchandise prizes for professionals will be shot for, a list of which follows the regular merchandise list in the programme.

Third Day, Thursday, June 11, 10 A. M.—State event No. 1, 25 bluerocks, entrance $3; six moneys; all ties divided. Eight open events, Nos. 2 to 9, 20 bluerocks, each $2. State event No. 10, 25 bluerocks, entrance $3, six moneys; all ties divided.

Fourth Day, Friday, June 12, 10 A. M.—No. 1, 25 bluerocks, entrance $3; all ties divided.

No. 2, four-man team championship of New York State, 25 bluerocks per man, $2.50 each; clubs may enter one or more teams; money divided 40, 30, 20 and 10 per cent; in addition to money, men on the winning team will receive each a pair of gold cuff buttons, presented by I. T. Washburn.

No. 3, championship event: 100 singles and 20 pairs; individual amateur championship of New York State Association for 1903; entrance $6, all at 16yds.; targets 3 cents each, included in entrance in this event; winner will receive a diamond medal, costing $100, presented by the Ossining Gun Club. This medal becomes absolute property of the winner. Moneys divided according to entries.

No. 4, Dean Richmond trophy, value $1,150; three-man team, 50 bluerocks per man, entrance $10 per team.

Five per cent. will be deducted from event No. 1, first day; No. 1, second day; No. 10, third day, and No. 1, fourth day, for high averages in State events, exclusive of handicap and merchandise events.

Interstate rules to govern.

We will shoot rain or shine, stands being covered. Shooting each day begins at 10 A. M. Targets included in the entrance fee in all events. Rose system, unless otherwise specified. Paid representatives or professionals may shoot for targets only, or may enter regularly in open events, figuring in division of first money only and weekly high average money.

Ossining is a station on the N. Y. C. & H. R. R. R., thirty-one miles from New York city. The shooting grounds are ten minutes by trolley from the station.

Average money prizes will be given to five shooters making highest average in open events for the three days. Five ten dollar gold pieces to five highest averages.

Shooters, if eligible, must enter in the entire programme each day.

If at any time they wish to withdraw, money will be refunded for the remaining events.

Any claim of an error made in scoring must be corrected at once. Watch the score board!

Guns and ammunition sent care of Barlow & Co., will be delivered on the grounds free of charge.

A good dinner will be served on the grounds at reasonable prices.

All popular loads will be for sale on the grounds.

Targets will be thrown from three magautraps.

A silver cup will be given the professional making the highest general average in the open events during the week.

The management reserves the right to challenge any shooter's standing as an amateur, and to refuse any entry.

Paid experts living in New York State and members of a club which is itself a member of the New York State Association, may shoot in the team races.

Professionals are absolutely barred from competing for the diamond medal.

Manager, Charles North, Cleveland, O. Club manager, Chas. G. Blandford, Ossining, N. Y.

The Ossining Gun Club has issued the following circular:

The following events in the shoot of the New York State Association for Protection of Fish and Game, which is to be held at Ossining, N. Y., during June 8, 9, 10, 11 and 12, will appeal to shooters residing outside of the State of New York: Monday, the 8th, will be devoted to the shooting of small sweeps and practice. Tuesday, the 9th, there will be eight events at 20 bluerocks each. Wednesday, the 10th, there will be a classified merchandise event, in which there will be given a $100 Parker, $80 L. C. Smith, $80 Lefever, $80 Remington, and many more prizes of value, aggregating over $800. This event is open to amateurs only. Following the merchandise event there will be eight open events at 20 bluerocks each.

On Thursday, the third day, there will eight open events at 20 bluerocks each. Professionals will be allowed to figure in the division of first money only.

The five shooters making highest averages in the open events will receive a ten dollar gold piece.

A $40 gold medal, presented by Frederick Potter, will be given to the amateur member of State Association for general high averages in State events, not counting the handicap.

We have decided to make the merchandise event open to all amateurs.

Shooters may obtain programmes by addressing C. G. Blandford, Club Manager, Ossining, N. Y.

High averages will be taken only from the scores made in the eight open events each day at 20 targets each, Tuesday, Wednesday and Thursday. Rose system. Cheap hotel rates. Ossining is only one hour's ride from New York city on the N. Y. C. & H. R. R.

C. G. BLANDFORD,
Club Manager.

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., May 7.—To-day was the first club shoot since the day was changed to Thursday. The scores were good, considering the weather—strong north wind and an occasional dash of rain and enthusiasm. Well, in both cup events there were ties, necessitating shoot-offs.

The first event of interest was for the Marshall cup, at 25 birds, and resulted in a tie between Winan and Marshall, each scoring 21 points. In the final shoot-off Winan won out with 22. Scores:

Winan (3) 21, Marshall (3) 21, DuBois (2) 20, Adriance (0) 19, Wettereau (2) 19, Traver (0) 17, Briggs (3) 16, Hoctor (1) 15, Fenn (2) 15, Smith (2) 14.

Winan now has three wins out of the necessary six to acquire ownership to this cup.

The next event was for the club cup, at 25 birds. This is a large silver cup, valued at $50, bought by the club, to be put in competition on club shoot days, the first Thursday of each month. This event resulted in a tie between Fenn and Briggs, each scoring 20 points, and shoot-off resulted in another tie, each scoring 18 points; and in the final shoot-off Briggs won out on 21. Scores: Fenn (2) 20, Briggs (3) 20, Winans (3) 19, Smith (2) 19, Adriance (0) 18, Du Bois (2) 16, Hoctor (1) 16, Marshall (3) 14, Wettereau (2) 18, Traver (0) 9.

This event was shot during a thunder storm, which accounts for lower scores than were made in some of the other events.

Following are the other scores:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	10	15	10	15	25	Targets:	10	15	10	15	25
Winans	5	7	4	8	..	Marshall	..	..	4	5	..
Hoctor	6	8	8	..	..	Briggs	..	..	2	..	..
Traver	5	5	6	6	..	Adriance	..	..	..	..	18
Hans	10	11	..	..	21	Wettereau	..	..	..	..	20
Du Bois	6	9	..	..	..						

DUB.

Dover Sportsmen's Association.

DOVER, N. H., May 9.—Following are the scores made to-day on Gage's Hill:

	Shot at.	Broke.		Shot at.	Broke.
*Corson	62	52	Hallam	65	26
Fisher	65	42	Warren	30	11
St. Evens	75	42			

*Two straights and eighteen consecutive breaks.

Wilmington Tournament.

WILMINGTON, Del., May 9.—The two days' tournament given by W. M. Foord and L. J. Squier on the grounds of the Wawasset Gun Club, Wilmington, Del., was one of the most successful shoots ever given in this city.

The programme called for eleven events at 15 and 20 targets, a total of 175 for each day; $37 was added each day, and the money divided Rose system. The sliding handicap, 16 to 20yds., was used all through the tournament, and while this system was new to most of the contestants, it proved to be quite a success. There were forty-one entries on the first day and twenty-two shot the entire programme. Squier won high average with 157 out of 175 from the 18yd, 19 and 20yd. marks; Skelly second with 152 out of 175 from the 18, 19 and 20yd. marks. There were thirty-two entries on the second day, and nineteen shot the entire programme. Mink was high with 163 out of 175 from the 18, 19 and 20yd. marks. Squier was second with 162 from 18, 19 and 20yds.

Fifteen men shot through the entire two days' programme, and only three men shot for price of targets during the two days.

The special purse for amateurs who shot through the programme and failed to win their entrance amounted to $31, and was divided between eight men, and it paid them 80 per cent. of the amount they lost.

The trade was represented by T. H. Keller, Neaf Apgar, J. M. Hawkins, Frank Butler, Ed Banks, J. T. Skelly, L. Z. Lawrence and L. J. Squier.

Mr. Geo. Formau, who has "been there" before, handled the cash in a very satisfactory manner.

Messrs. Hawkins and Skelly helped hustle squads, and Mr. D. S. Daudt, who is always willing and ready to lend a helping hand, conquered the magautrap.

The shoot was a big success, and the boys had a good time, and we hope to have them with us again.

First Day, May 7.

Rockwell Tournament.

ROCKWELL CITY, Ia., May 6.—The Rockwell City Gun Club's two-days' tournament did not have as large an attendance as was expected, and the lack of live birds did not allow them to complete the programme. For the same reason the special match between O. C. Battger, of Ollie, Ia., and Al Gilson, of Fonda, was not shot.

C. W. Budd was the only manufacturer's agent present, and shot through the first day's programme for targets only. He was high with .915 per cent.

After lunch it was decided to shoot the target events on second day's programme, as two averages were given for the two high guns. W. B. Linell won first and C. B. Adams second.

The weather was pleasant in the forenoon, but soon after lunch it began raining, and was very disagreeable the balance of the day.

HAWKEYE.

Dewitt Tournament.

DE WITT, Ia., May 7.—The tournament of the De Witt Gun Club closed to-day. The attendance was good on Wednesday, but quite a number went home on Wednesday evening. Event No. 2 on this morning had twelve entries, which was high for the day. The weather was fine both days, but owing to a bad background the scores were not high.

HAWKEYE.

Boston Gun Club.

BOSTON, Mass. May 6.—The Boston Gun Club's final shoot of their spring prize series was held at Wellington to-day, and a disagreeable day prevented what was sure to be a large attendance. The finishing up of the various matches brought the interest up to fever heat, in spite of the small attendance, and many an exciting 10 and 15 target event was the outcome. Bell managed to keep up his good work, breaking a 25, displacing an old 19, a jump of 6 targets, enough to land him in first place at the finish. Woodruff also increased his score, his efforts of 23 cutting out a 21 and securing second place. Baker third, not availing himself of the opportunity to throw out scores. Ties were in abundance on fourth, fifth and sixth places, Spencer, Gleason and Kirkwood each having 165, the two former having the advantage, and through B. G. C. rules are to shoot off for fourth and fifth places. Seventh place went to the shooter present the most times, Frank, and a little bit low for him, too; but wait till next series, and there will be another story to tell. Eighth and last places were taken care of by Prior and Lee, the latter wishing there had been another shoot to cut out a 12, which would have had to go, as the new gun has shown lots of improvement the last few shoots. The consecutive match was won by Rule, of Lowell, 45 being a score no one could beat, though Griffiths' 41 looked like a winner at the time, but then you never can tell what is coming. Other scores:

Events:	1	2	3	4	5	6	7	8	9	10	11

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, L. I., May 9.—The shoots of the Brooklyn Gun Club have settled down into quite substantial events of late, the hustling manager, John S. Wright, making new students as the old ones graduate, or business cares or change of domicile engage them elsewhere. Mr. H. S. Welles was the bright particular star of the shoot.

Chicago Gun Club.

CHICAGO, Ill., May 9.—In the handicap trophy shoot of the Chicago Gun Club to-day, O'Brien was first, Waters was second, Patrick was third. The scores were as follows: Walters (4) 24, Patrick (8) 22, Buck (6) 20, Lefferts (7) 22, Franklin (6) 18, Dr. Morton (6) 20, O'Brien 26, Young 14, Hensler 13, Zacker (4) 17, Bowles (4) 22, Burcky (7) 14.

In the first shoot-off between Patrick and Bowles they tied on 9. In the second shoot-off Patrick won, 9 to 5.

No. 2 was a sweepstake at 15 targets, handicap, as follows: Walters (2) 14, Patrick (4) 16, Morton (3) 13, O'Brien (4) 16, H. Young (2) 8, Hensler 11, Zacker (2) 9, Bowles (2) 12, Burcky (4) 7, Parker (6) 13, Mrs. Howard (5) 9.

Brownsville Rod and Gun Club.

BROWNSVILLE, Pa.—The fourth two-day target tournament of the Trapshooters' League of Western Pennsylvania will be held on the grounds of the Brownsville Rod and Gun Club, May 26 and 27. The programme calls for 175 targets each day, five of 15 and five of 20-target events; entrance $17.50 each day; moneys divided under the Rose system, the ratio being 6, 5, 4 and 3 in 15-target events and 7, 6, 5, 4 and 3 in 20-target events. Targets, 2 cents, included in entrance, 1½ cents for each and every target trapped added to the purses in each event; and in addition to this, the Brownsville Rod and Gun Club adds $125 as follows: $50 to each day's programme; $4 to the 15, and $6 to the 20-target events, and $25 to the two low guns shooting through the two days' programme and not winning their entrance; to be divided equitably between them, and not to pay more than their entrance. No shooter, excepting a paid representative, will be permitted to shoot for targets only. Everybody welcome.

W. T. DAUGHERTY, Sec'y.

PUBLISHERS' DEPARTMENT.

Up State Business Notes.

NEW YORK, May 9.—*Editor Forest and Stream:* It was indeed a pleasure to call at the factory of the Lefever Arms Co. The Messrs. Durston, president and secretary of this concern, are naturally well pleased over the fact that one of their medium grade guns won the Grand American Handicap at Kansas City. The writer was greatly pleased when examining some of this company's fine grades to discover a workmanship and quality of the very highest, which is a great credit to American arms.

This was true also of a visit with Mr. Farwell, Secretary of the Baker Gun Company, at Batavia. While it is well known that this company make a good medium grade of guns, it is not so well known that in the finer grades of their work there is nothing lacking.

I was informed by Mr. A. W. Savage that their produce for 1903 is sold up in all departments.

Mr. Wolcott, manager of the Fred Divine Rod Company, of Utica, showed me many samples of their hand-made rods, of various woods used in this class of work, and for all waters. It was here that I saw the bait-casting rod made by this company that won the world's record at Chicago.

Mr. W. H. More, formerly with the Winchester Company, was keeping house at the Syracuse Arms Company's offices in Syracuse during Mr. Buell's absence in the Adirondacks, where his son is staying on account of impaired health. Mr. More is enthusiastic over the outlook for the shotgun business.

T. E. B.

Down in Dixie.

THERE are many opportunities in the South for making money, especially to those who understand manufacturing some useful article and have the means to start manufacturing on a small scale. Mr. Fred Oliver, of Pennsylvania, went to North Carolina a few years since with comparatively small capital, and to-day he is a wealthy man. He made his first money by starting a small cotton-seed oil mill. Mr. Julius Lewis, a Northern man, went to Raleigh, N. C., and started a small hardware business, and he made, within a few years, enough money to afford to retire from business. Mr. Lewis was elected chairman of the Selectmen of the County of Wake, which has located in its district the State Capital. Northern men are not only welcome down South, but in many instances elected to important offices. If you want to learn something about the South, there is no better man to write to than John T. Patrick, of Pinebluff, N. C., who was founder of the prosperous Northern men's settlement and winter resort, Southern Pines. Last year there were more than ten thousand people from the North who visited Southern Pines. It is a noted health resort, and Pinebluff is another place being built up by Northern men and women.—*Adv.*

Gettysburg and Washington.

PERSONALLY-CONDUCTED TOUR VIA PENNSYLVANIA RAILROAD

THE battlefield of Gettysburg, and the National Capital in all the glory of its spring freshness, are attractions so alluring that few would feel like refusing to visit them. It is to place these two attractions within easy reach of every one that the Pennsylvania Railroad Company announces a tour over the interesting battlefield, through the picturesque valleys of Maryland, and an entertaing stay at Washington.

The tour will leave New York 8 A. M., and Philadelphia 12:20 P. M., Saturday, May 23, in charge of one of the company's tourist agents, and will cover a period of six days. An experienced chaperon, whose especial charge will be unescorted ladies, will accompany the party throughout. Round-trip tickets, covering transportation, carriage drives, and hotel accommodations, will be sold at the extremely low rate of $22 from New York, $21 from Trenton, $19 from Philadelphia, and proportionate rates from other points.

For itineraries and full information apply to ticket agents; Tourist Agent, 263 Fifth avenue, New York; 4 Court street, Brooklyn; 789 Broad street, Newark, N. J.; or address Geo. W. Boyd, Assistant General Passenger Agent, Broad street station, Philadelphia.—*Adv.*

Mr. E. C. Griffith won high average at Boston, Mass., April 29, fifty shooters present. Mr. E. Brady won first high amateur average; Mr. Wade was second; Mr. Livingstone third, and Mr. Skannal fourth, at Vicksburg, May 4-6 tournament of Mississippi Valley Trapshooters' League. Mr. J. T. Skelley won second average at Wawasset Gun Club tournament, Wilmington, Del., May 7. Mr. Lester German killed 97 out of 100 pigeons, defeating Mr. E. L. Smith at Baltimore Shooting Association grounds, Baltimore, May 6. All shot "Infallible."

The fashion of using telescopic rifle sights now being once more generally adopted, carries one back nearly forty years, to the time when we first saw these telescopes used for antelope hunting on the flat plains of Colorado. Those telescopes were made by Malcolm, of Yew York State, and the Malcolm Rifle Telescope Mfg. Company is still making telescopes for rifles at Syracuse, N. Y. It is interesting in these days of change to know of so old a business. The Malcolm company send out to applicants an illustrated catalogue of their product, which may be adapted to any rifle.

No angler can very well read the price list of rods issued by the Fred D. Divine Company, of Utica, N. Y., without being interested in the fine rods described in it, and more or less thrilled by the pictures of the fish and fishing scenes which it pictures. The Divine rods have had a reputation for many years, and as the business grows, this reputation spreads and increases. Besides rods and their accessories, the Divine Company sell a nesting boat and various articles for outfitting the camper. Catalogue on application.

Under the title "Hints about Camping," the Canadian Pacific R. R. Company has issued a pamphlet interesting and useful to tourists and pleasure seekers. It contains much information that contributes to the enjoyment of a successful camping trip, and deals with guides, canoes, outfits, fishing tackle and arms, and tells how to prepare for the table the results of the day's sport. Some hints on practical taxidermy bring to a close a useful folder, which is embellished with a number of attractive illustrations.

At Derry, Pa., April 29-30, Peters shotgun ammunition won high general average. At Irwin, Pa., May 5-6, the latter won both first and second averages for the two days. At Glen Rock, Pa., May 1-2, E. H. Storr made high average for the two days; he used Peters factory loaded shells. The tournament at Richmond, Va., May 5, was given by Harris, Flippen & Co., agents of Peters Cartridge Co.

New Advertisements.

The many outers who are constantly investigating of what is the best sleeping bags, tent or other contribution to camp comfort would do well to write to Mr. T. C. Phelps, 11 Central street, Boston, Mass., sending him a stamp for his new catalogue, which develops some original ideas in these directions.

To the great number of Adirondack enthusiasts who spend their outings in Hamilton county, the name Morley is familiar. Mr. Morley's resort now accommodates in his hotel and cottages 250 people; and he tells us that he has the best woodcock, grouse and deer hunting in the State. He furnishes a catalogue on application.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903 BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MAY 23, 1903.

VOL. LX.—No. 21. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

AS TO DISCUSSION.

THE literature pertaining to the sports of land and water may be divided, in a general way, into two phases, that which is descriptive in its character, and that which is speculative or controversial.

In descriptive writing, the success of the writer depends on his skill in arranging his fund of incident pleasingly and sensibly; in drawing clear word pictures, and in infusing a certain spirit and interest which can only emanate from his own individual genius. He assumes that all will look at his word pictures from his own view-point, as he is quite warranted in assuming. Flowing thus unopposed that writing, if good, is a pleasure to its author and to its readers.

But in the other phase of literature pertaining to land and water, the discussional, each party to it is almost certain to have his own personal view-point, which, in many cases, he partially or wholly, according to the opposition, is bent on maintaining, more as a defender than as an impartial demonstrator.

In a debate or controversy, the men who can dispassionately, logically and pertinently confine themselves to the real issue are a small percentage of the whole. As a rule, men who can so discuss a pet hobby are naturally of an equable temperament and broad views, or who have had long continued rigid discipline in dealing with their fellow men, or both combined. Discussions, conducted courteously and impartially, cannot fail to be both pleasing and improving.

Controversy in field matters should be conducted with special reference to the gentlemanly amenities, for as a class, sportsmen are gentlemen. Controversy, as conducted in the struggle for existence in everyday life, wherein each one more or less directly endeavors to surpass his fellows, is out of place in matters of sport. In everyday life the competition is unceasing. In the world of sport all should meet on a common ground of good fellowship and common good.

As a rule, FOREST AND STREAM'S correspondents are admirably courteous and fair in their discussions, and we desire to compliment them for accomplishments as debators. Occasionally, however, one becomes restive and pugnacious under criticism or opposition, then, ignoring the subject matter at issue, he becomes personal. A blue pencil with a broad end is then likely, as a mediator, to be invoked. A kind word turneth away wrath, but a blue pencil deracinates the wrath itself.

When a debator abandons the subject matter and becomes personal, he makes a double display of weakness, for he confesses, on the one hand, that he cannot hold his own in the debate on its merits, and, on the other hand, that he feels a greater or lesser degree of malice toward his opponent, as expressed by the utterance of unkind personalities. We feel quite certain that some of our correspondents, on meeting erstwhile opponents, have felt indebted to us for the suppression of personalities, on discovering how many claims to good companionship they found in their opponents' society.

Unpleasant personalities have nothing of good in their favor, but have unlimited possibilities of harm.

In many instances the parties directly opposed to each other overlook entirely the fact that there is another party directly interested in their debate, which party has a right to insist that the debate shall be conducted in a manner courteous and instructive, for the greatest good of the greatest number; that party is composed of the readers of the journal in which the debate is carried on.

The same care and politeness should be observed as if all the parties, in their proper persons, were gathered together under one roof.

It may justly be remarked that the journal bearing a debate or debates has a character for dignity, justice and proper censorship to maintain, hence an editor, as an impartial arbiter and responsible censor, would be remiss in his duties if he did not scan unpleasant personalities with an unfriendly eye and trim them with a firm hand.

However specifically as this general subject concerns FOREST AND STREAM, we desire to express our pleasure at the excellence of our contributors' offerings, for they are sensible, refined and instructive. As they have been in the past, so will they ever be in the future.

SPRING NIGHTS.

THE first ten days of the month have been shuddery with more than the normal amount of chill east winds. Though bright, they lacked moisture, and the thirsty earth has dried, and dried, till all the paths and by-ways are powdery with dust. The wavy softness of the spring is giving place to a slow, partially stunted, inelastic leafage grown old before its time, like the child-life of crowded tenements. Victims of an unfavorable environment, little men and women, scarce out of babyhood, so with the spring foliage of 1903. Baby leaves looked for quickening showers that never came, and are now toughening to stoical indifference. But at night, when the winds are still, and the fever is gone from the parched ground, Venus smiles in glorious brilliancy from the western sky to see the mounds of snow white fog that heap silently together in the hollows. As the planet floats to the horizon the moon throws a flood of radiance that brings the dim features of the landscape into full relief, and presently we find the knolls and upland a-glisten with heavy dew. Now we hear the drip, drip of the eaves. Quiet, comfortable, a sound of contentment. Gone is the chill of the east wind from the heart as that soft tattoo stirs up memories of home life under the old roof tree of the past. Longfellow says:

> "The night shall be filled with music,
> And the cares that infest the day,
> Shall fold their tents like the Arabs,
> And as silently steal away."

So we find it. Up from the marshland comes the rythmic peep! peep! peep! peep! of frogs; an humble melody, but music nevertheless. The harsh tones of a restless meadow hen's cackle blend to smoothness with the sounding chorus in its regular time beats. Hark! the whistle of a wildfowl's wing! At intervals we hear, now distinct, now far away and dream-like, the music of birds that pass in the sky above. A shooting star trails its fiery way for an instant across the zenith, and the bird voices seem to rise and fall in comment, as it flashes by. So let us go abroad and rejoice in these soft "spring nights." Truly, they are "filled with music"—nature's music—for those whose hearts are properly keyed.

IN THESE DAYS.

WHO of us all may read the signs of summer for the continent? On the one hand lie the tropics, on the other the frozen north; here the manati and the crocodile, there the walrus and the Arctic bear. To the northeast are the moose and the eider duck; to the southwest the tiny deer and the creatures of the torrid desert. A range of forty-five degrees of latitude and sixty of longitude implies difference of environment hard to comprehend save by the seeing or the feeling. A range of 15,000 or 20,000 feet in altitude means corresponding differences.

On the middle Atlantic Coast the sun shines down with blistering heat through a smoky sky. Under the heat and drouth of late April and May the meadows are already becoming parched and brown, although the frondage of the trees has as yet hardly lost the tender green of spring for the darker hue of summer. The fields of rye have reached full height, have headed out and will soon be ready for the sickle. The birds have all come, and many have passed on to their homes further to the north. Others have built their nests and hatched their young. Young crows, big headed and short tailed, rest on the border of the nest, keenly watchful of the approach of hard worked father and mother, bringing food; owlets, fluffy and round headed, sit at the mouth of their hole and stare about. Of some birds the young are already abroad.

In the fields men sweat as they follow the plow or sow the seed.

On the prairie which flanks the mountains, the backbone of the continent, the grass is green, but it is hidden now by a covering of deep snow. The cattle, which a few days ago were rejoicing in the fresh springing herbage, now stand about, belly-deep in drifts, starving and waiting for the snow to melt. The little calves lately born, if not hopelessly chilled by the cold storm, drag vainly at the mother's udders for nourishment that they cannot yield. To the cattle and to their owners this sign of summer comes as a bitter mockery.

Among the higher mountains which overlook the stricken prairie, there is as yet no sign of spring. Valleys, ravines and gulches are piled deep with snow, and the glaciers have thickened many feet by its heavy fall. Mountain sheep are still nearly white, for they have not yet begun to shed their long winter coats; bears have come out of their holes and are prowling over the foothills searching—too often in vain—for something to fill their empty bellies. They make long journeys over hard frozen snow banks, and tear away rocks on the mountain sides to reach the nest of mouse or ground squirrel. It has been a hard winter on mountain game and it is still hard.

Away to the westward, on the shores of the still Pacific, is the beautiful land of flowers, a land named for the saints and the angels, a land where in feeling it is always summer. Now cultivated fields and mountain sides alike are green from the plenteous rains of winter, and roots and grain and fruits are almost ready for the harvester's hand. Here is a land that smiles always, ever growing richer, more populous, happier. Well has it been called the right hand of the continent.

From the northern part of the Bering Sea the pack ice has not yet vanished. Esquimaux are still killing walrus and narwhal along its slowly receding border; whalers are waiting in their harbor for leads to open, through which they may press on toward the Arctic Sea. Inland the snow still covers the earth, but here and there strips of green show where the strengthening sun has called forth the leaves of the Arctic plants—a sign of summer.

IN his diary for the years 1787 and 1788, John Quincy Adams wrote:

> Game laws are said to be directly opposed to the liberties of the subject; I am well persuaded that they may be carried too far, and that they really are in most parts of Europe. But it is equally certain that where there are none, there never is any game; so that the difference between the country where laws of this kind exist and that where they are unknown, must be that in the former very few individuals will enjoy the privilege of hunting and eating venison, and in the latter this privilege will be enjoyed by nobody.

This was an enlightened view when we consider that it was expressed in New England a hundred years ago, when the necessity of game protection had none of the popular appreciation it has in our time. No community realizes the necessity of game protection while the native game supply is abundant. If the birds or the game animals are in hosts to-day, it is the complacent confidence of human nature to fancy that they will be plenty always. It took a prescient eye to see in the future a time when without game laws "the privilege would be enjoyed by nobody." In all of Adams' diary are no truer words than these. Nor could he have dreamed of the growth of population, the marvelous perfection of firearms, and the popularizing of hunting as a sport and the effect of all these upon the game supply. Time has demonstrated that but for the protection offered by the game laws, in New England as in every other part of the land, the existence of a continuing and perpetuating stock of game would long ago have become a thing of the past. A sufficient and unanswerable retort to any benighted fogy, who in these times questions the wisdom and public utility of game laws as a system, is the simple question, Without game protection where would there be any game? Adams shared the view of his time that protecting the game meant the securing of a privilege to be enjoyed by "very few individuals." That view was based upon observation of the European system of preserves. The spirit of the American system, on the contrary, is to secure the privilege of hunting to the greatest number of citizens.

Newfoundland's experience with a $100 non-resident license fee for caribou shooting has been decidedly disastrous to the interests of those who have in past years derived a considerable revenue from American sportsmen. A reduction of the fee at the first opportunity was a foregone conclusion. It has been made $50.

The Sportsman Tourist.

A Visit to Pitcairn's Island.

In Three Parts—Part Two.

I LOOKED over my shoulder just before we had got in, to see when to stop rowing; I was bow oar, and noticed that a number of men and one boy had come down to the beach to meet us. I meant to get that boy as soon as we landed. The men dragged the boat ashore, hardly giving us time to get out of it, then began to shake hands with us. I looked around for the boy, and saw him some distance up the beach; he stood there sticking his toes in the sand; he had run off before we landed. The mate saw him and said, "Yonder is your boy already. I wonder who told him that you were coming?"

The white members of our crew had a standing joke that I would try to steal a boy off of every island we touched at, and a mate was supposed to examine my cabin and engine room each time before we raised the anchor, to see that I did not have both half full of boys. This had been started while we were among the Society Islands early the last summer. We had taken a fine whale one morning, the first one we had got in more than two weeks, and just as he was brought alongside, the weather began to get thick and the barometer was falling. We could not cut in while the gale that was coming was on; and if we rode it out, with the whale towing astern, we might lose him; the nearest island was only twenty miles away and we ran down to it and came to anchor in smooth water between a reef and the land. This was Sander's Island, it is the second largest one of the group, Tahiti being the largest.

While we were cutting in and trying out here, I took a lot of smoking tobacco, some hooks and lines and a few jack-knives, and hailing a canoe, had it take me ashore. Always when I landed on one of these islands I hunted up the boys, and after I had given a few of them tobacco and fish hooks they would then do the hunting for me.

This was the island that had those half-breed boys on it; they were the descendants of the mutineers of the Bounty. I soon had half a hundred of them around me, and in a short time one-half of them wanted to go home with me. I made up my mind to get at least one of them if the old man did not stop me. I meant to smuggle the boy on board, then keep him out of the captain's sight until we had sailed, then as long as I had not bought the boy he probably would let me keep him. The mates would know that I had him; but none of them, except the chief mate, would interfere; it was not their funeral; and I and four of the mates were very friendly.

I picked out a boy about 14 years old, who was dressed in a cotton shirt and a pair of leggings, and that was all. He told me that he was the chief's son, but his father had about thirty boys, and had told them that any of them could go to the white man's country if the ship would take them. I took the boy to his father, and after I had given the chief some tobacco, hooks and lines and a large jack-knife, I asked him if he needed this boy in his business.

No, I could have him; and I also might take half a dozen of the brothers; he had too many blanketety blanked boys here anyhow, they were in the road here; he must have at least thirty of them; he would be blanked if he knew how many he had. The blanked missionaries had told him that he must keep these boys and raise them, and he added: "Do you know what else they told me?"

"No, what was it?"

"They told me I must send off all of my wives but one; I told them they might go to Hades." That was not what he called the country, but it will do.

"Yes, I told them I was chief here; let them teach the boys if they want to; but I need all the wives I have; who would feed these boys after I had sent their mothers off?"

The missionaries evidently had not converted this chief enough to hurt him; he could swear in two languages fluently and had five or six wives. I told him to keep them.

"How many chiefs are there on this island?" I asked. I knew he was not the only one.

"Three," was the reply, "just two too many."

"Well, then, why don't you take these men and boys and drive these other chiefs off?"

"The blanked English won't let me. I tried that, but they sent a blanked gunboat here and told me to quit fighting, that is what the blanked missionaries are here for, to watch me; I am no fool, I know it."

These people do not care for their children; I have had a nearly full-grown girl offered to me for a few of our silver dollars, but I wanted a boy; and if I had any place to put them I should have taken the chief at his word and got half a dozen of his boys; but I took this one.

I stayed to dinner with the chief and as many of his boys as could crowd into his shack. Two of them got up a fight over this; both wanted to get in; the smaller of the two seemed to be "it." He landed on his brother, knocking him out, then ran in and took his place on the floor alongside of me. His father told him to get out.

"No, chief," I said, "I want him in here; this boy seems to be a fighter."

"He is; he has half of the boys on the island whipped. I wish you would take him."

"I'll leave him here until he has whipped the other half. I am going to taboo him now; he must be let do as he pleases here."

"That is what he does do, now."

I afterward found out that this boy was his father's favorite, on account of his fighting propensities, I suppose. All these boys spoke good English and many of them read it; their father could not read though.

I had a number of them write their names in my note book, and one of them wrote the native name for his island. We ate dinner seated in a circle on the floor, while the wives of the chief waited on us; I had the chief point out the mother of my boy; he said I might take her also if I wanted her; he could get another one.

I took my boy on board and kept him there for a day; then the gale having blown itself out we got under way the next morning, and had got about a mile off shore when the captain noticed my boy and wanted to know what that native was doing on board? Some one of the mates told him that I had him. He had the ship rounded to and a boat lowered; then he sent for me and told me to take charge of the boat and land that boy again in his own country. I did so, and came back expecting to be landed in a pair of irons myself, but I never heard any more about it from the captain. I did from the crew though. This is what the mate was driving at now here on the shore of Pitcairn.

"I see him, sir," I told the mate; "I will get him," and I started toward him, but the boy began to run again.

"Don't run away. I won't hurt you. Come here."

He hesitated a moment, then ran down to me and held out his hand.

"You can speak English, can't you?" I asked.

"Oh, yes, I am English," and looking me all over, he asked, "You are, too, are you not?"

"No, I am an American from the United States."

"Oh, I know where that is; my uncle is there, don't you know him?"

"No, I think not. What is his name?"

"Tuesday October Christian."

"Oh, yes; I have heard of him, but I have never seen him. He may be there though. It is a big country, you know; I can't know every one in it."

He wanted to see my boat, and he examined it all over, then wanted to know what I called it.

I told him it was a whale boat, and showed him the two harpoons and the lance, and how to use them.

"The whales come around here sometimes, but we never try to kill them."

"You could not, your boats are too small, and it is dangerous to kill them unless you know how. When we put this iron in one he sometimes gets mad and tries to do the killing himself. When he does he would smash this big boat as if it were an egg shell, but if they come while we are here we will kill a few of them; we only want a few more, then we are going home."

"Can't you take me home with you?"

"Why, yes, I could; I want a boy, but your father would not let you go."

"Oh, yes, he will, if you ask him."

His name he told me was Johnnie.

"Is it? My name is John also. What else do they call you besides Johnnie?"

"My whole name is John Adams Christian. Is your name John Adams?"

"No, it is John Anderson."

"Why every John here is called John Adams."

"That is because they call you after that old governor who is dead; his name was John Adams."

He kept examining my clothes; my cap and shoes were a great curiosity to him; there was not a pair of shoes on the island then. He wanted to know what kind of stuff my clothes were made of I told him flannel out of wool off a sheep.

"That captain who came with you had nice clothes. I thought he was the nicest man I had ever seen."

"That is not the captain; he is the second mate, Mr. Robinson. When he speaks to you always say 'sir' to him; we have to do it; but you need not say sir to me, any more, only 'yes' and 'no'; and tell the other boys not to do it."

"The governor makes us say 'sir' to every one. If I said only 'yes' to him he would whip me."

"Well you need not say 'sir' to me; I don't want a boy to do it."

Our crew had to address me and my partner as "master" and say "sir" to us; the captain kept up his gunboat rules in that as he did in everything else; but if the men forgot, as they sometimes did, to add the sir I never called their attention to it; though a mate or the captain, if he heard them, would give them a keel-hauling for it right away.

I took my notebook and pencil and had him write his name, then had him add "Pitcairn's Island, December 20, 1874," and told him to write his name and address that way for any of our officers who asked for it, but I forgot to tell him to change the date, and next day when he wrote it for the captain he was a day behind.

He handed me the book but kept looking at the pencil, it had a rubber tip, and he asked what this was for, and I showed how to use it.

"Have you got two of these?" he asked.

"Yes, a dozen of them; you may keep that one, if you want it."

"I'll have to keep it hid though, or I won't have it long. The governor will take it from me; he needs pencils badly now; he has only two short pieces in the school; they are to teach us to write with; when I want to write I take a burned stick and write with it, and I can make pictures, too."

"Then I'll bring you colored pencils and white paper, and you need not hide that pencil; tell the governor that I can get him all he wants, but he must not take anything I give you boys from you; I will stop that in a hurry if he tries it."

He came back to the clothes now, and would like to have some out of that cloth. All the clothes he had on were a pair of knee pants and a small shirt, neither of them had any buttons on them, only strings, and he had no pockets, his shirt bosom was his pocket.

"I am going to get you clothes like mine," I told him; "there is a man on the ship that can make them."

Oh, his mother could make them if I got him the stuff.

He stood up and gave the whole beach above us a close looking over, as though he were expecting to see some one; then asked, "Have you got any tobacco?"

I handed him a small bag of smoking tobacco, telling him to keep it and I would get him some more; then I gave him paper to make his cigarette. Next he wanted a flint and steel to light it.

"We don't use them," I told him, and striking a match I lit his cigarette, then threw the match away. He got it and tried to light it again.

"It won't light but the one time," I explained; "don't you know what matches are?"

He had never seen one before.

This boy was 14 years old, but was nearly as large as a boy of 16 would be at home. He was entirely white, the only trace of the native woman being his long black hair that hung down on his shoulders. He proposed that we go up to the village, keep out of the governor's sight, get all the boys and explore the island.

I told him I meant to do that to-morrow, but to-day I wanted to see that chapel, and we started, he going up in rear of the village so as to hide his tobacco, he said. When half way up he crawled in through a hedge, and coming out again said, "It is where the governor can't find it now, I have a place in there that he knows nothing about."

The chapel was a long, low, one-story affair, having a cross on the roof with the English flag flying above it. The old ship's bell off the Bounty was hung to a post in front.

The door stood open, and going in we found a young woman who, the boy had told me, was their teacher; this was their school. She came forward to meet us. She was dressed in a sort of a Mother Hubbard gown of native cloth, while her hair, which was brown instead of black, hung down clear to her waist. Had she been well dressed she would have passed for a lady anywhere. By the way, she was in America only a few years ago on a visit; but did not come East. I saw a notice of her in a California paper. I should like to have seen her again, she is a middle-aged woman now, but has never been married. Before we left the island the governor was making his plans to give her to me and keep me there.

"Cousin Amelia," Johnnie called out, "that ship is from the United States, and here is a man off it who can speak English, too."

"Of course he can, what else did you think he spoke? He is English the same as we are," then to me:

"You don't know how glad we were when we saw your ship at daylight this morning. We watched to see what flag you would have."

She started to show me what she called their organ; it was one of our old style parlor organs. The name plate was on it yet, and I told her it had come from New York. She sat down and played it and could still get music out of it, but it was rather worn; they had been using it for many years. She showed me their library, consisting of a few school books, prayer and hymn books, Testaments and about two dozen old magazines that they had put cloth covers on; none of the magazines were less than six years old, most of them being dated 1867. Then she brought out a book made by sewing illustrated papers, Harper's and the London Times, together; hardly a page of this had not been torn and mended again. I felt sorry for them when I saw what a poor library they had and how much they thought of it, and told her I meant to get her new books right away.

We got back to the beach and got the boat into the water, and I sculled out to the ship and found the captain on deck under the awning, and told him that I had come on board to try and get them some books.

"Go to my cabin," he said, "and take all of my magazines, and get what the mates have and take them ashore. If you see the governor tell him that I will be ashore myself this afternoon. I am going to remain here a few days. Any time you want to visit the island take a boat and go; you need not ask me; tell the mate in charge of the deck that those are my orders."

I thanked him; this was a privilege he had never been known to give any one except his mates, and they had to notify him before they left the ship.

Going to his cabin I got all his magazines, then a lot from each of the mates; then the first mate gave me a big bundle of picture papers; next I got all of my own and the steward's. None of these magazines were over a year old; we made a practice of buying them in every port we called at; the last had been got at Hobart Town, only a month ago; it had taken them several months to get these though. I made up a large bale of them; then began to hunt up the stuff for Johnnie. I had not flannel enough, but there was a man on board who acted as my tailor, and I could get it from him. He went by the name of Marblehead, from the port he hailed from down East. I had got him out of a scrape last summer when he went to sleep up in the crow's nest; and came near wrecking us on a reef. I happened to go aloft in time to see it and reported it; we missed it; and that was all. Then the captain had him put in irons, and sending for me a short time after had me give an account of the affair, and I asked for Marblehead's release and got it. Ever since then this man had made my caps, altered all my clothes and never charged me a cent for it. Going to him now I got a lot of flannel, new canvas, thread and buttons, telling him I would get enough of these from the steward to-morrow to pay him back; but after he had seen Johnnie himself he refused to take any pay. I got a new cap from him also. Then I hunted through my books and got "Cook's Voyages," "The Life of Columbus," "The Swiss Family Robinson" and "Peter the Whaler." Then I got the paper and pencils, a jack-knife, about 200 hooks in a tin box, a ball of lines, some lead sinkers, a comb and glass, a box of matches and a box of colored crayons. These I made into a bundle and took all ashore, where I told Johnnie to open his bundle and get his cap out of it. When I next looked at him he had all the books out and wanted to know whom they were for?

"For you. Everything there is yours."

"I must keep these hid, then," he said, "or they won't be mine long; the governor will take them."

"I won't let him; tie up your bundle now and let us go."

We went to the governor's house, and leaving the bundles outside we went in. The governor and our mate were there. After our greeting I told him about the books, and we brought them in.

I was about to cut the strings off his bundle when he stopped me and untying them carefully laid them away for fishing lines. Then sitting down on the floor he acted like a boy over his first pair of boots.

"Why, here are more books than I ever expected to see again, and all nice, clean ones, too. Now the women and girls must go to work and cover them right off before they are given out."

He piled them on a table now, then turned his attention to John's bundle. "What have you in that, John?"

"He has some flannel for clothes and a few things that I got for him. He must be let keep them. I have given John a few books; he was afraid that you might take them. You must not take anything I give these boys from them, governor, I won't allow that to be done, remember."

"Oh, I won't take anything from them. Let me see that bundle, John."

John was slow about letting him see it; he was still afraid of being plundered. John saw his knife for the first time now and made a grab for it.

"Let me see that knife, John," the old fellow told him.

John had shoved it into his shirt bosom; he brought it out very slowly now.

"It is a better one than I have, but that boy has no business with it. He will cut himself or some one else before he has it an hour; he has never had a knife yet."

"Well, he has that one now, let him have it. I had about two dozen of these knives. I will give you and John's father good ones. Can't I give the rest to your boys?"

"Yes, give them anything you can spare them except tobacco. If one of them asks you for anything let me know it."

"Yes, sir, I'll bring him right here. Now, governor, if one of these boys should happen to forget your order and ask me for a few fish hooks or a knife, we need not half kill him, you know; how am I to know what a boy wants unless he asks for it? Our boys at home would ask me for what they wanted quick enough."

Next he got hold of the fish hooks. "Here is what I want. Do you know that these boys have lost all the hooks I had and can lose them as fast as I can make them? I want to set the boys to fishing to keep them out of mischief."

"Well, you don't want those hooks to do it with; those are for John. I can get you all you want to-morrow."

"Let me do that now," the mate says; "the steward has them."

He next got hold of the books and asked if Cook were not an Englishman?

"Yes, it was he who discovered this island of yours and a lot of others. He found one too many when he found the Sandwich Islands; the Kanakas killed him there."

"Yes, I must read about him when I get time and about Columbus, too; I have heard of him."

"Here is 'Peter the Whaler,' sir."

"Well, John will want that; he wants to go whaling; they all do, but they won't."

"Maybe some of them will before I get through with them; I need not tell you about it, I thought."

After the books had been returned to John, we set out for John's house for dinner. His father proved to be the man who had come aboard us that morning. The house was one of the largest in the village, none of them being very large. It had a living room with a small kitchen in the rear. The front room had a rough table with a number of benches around it; the floor was the earth beaten hard and smooth; but as rude as these houses were, they were the best I had seen yet on any of the South Sea Islands.

The beds were ranged around the wall and screened with mats, and a number of shelves had pieces of English pottery, flowers and shells; everything was neat and clean.

John hid his bundle, then going back to the kitchen brought in the whole family, his father and mother, a sister older than he and a boy about ten years old. The boy ran out again as soon as he saw me, but John dragged him in again, and in five minutes I had him climbing all over me. His name was Albert Edward, a namesake of his then Royal Highness, the present King of England. This boy was ready to go whaling, also; in fact, before I left every boy on the island was ready to go. John's mother turned out to be the governor's daughter; that made John the old fellow's grandson.

The girl brought in for dinner a dish of roast pork, yams and string beans, and bread made of corn and taro root. The woman was sorry that she had no white bread for me, but I told her that I ate corn bread at home when I could get it. After dinner the bundle got another overhauling. John's mother said that there was cloth enough there to make clothes for half the boys on the island. I told her to make it up for her own two boys. She was glad to get the needles; she said there were only four of them here now among all the women. I told her I would bring her plenty for them when I next came ashore. She brought out an old pair of scissors that had come off the Bounty; they were curious looking things; I told her I had plenty of nice steel ones on the ship, and I would get them for her to-morrow. I gave her a dozen pair, and received those old ones of hers, and brought them home with me; they are in a museum now, together with a knife and fork, probably 100 years old, which she had, and a number of spoons made of horn.

John now gave his orders about how he wanted his clothes made; he wanted a jacket like mine and a shirt with a wide collar with anchors on it, such as I had. She could make the shirt, but did not know about the anchors; I told her I would get the anchors for him.

Then we started out to see the village.

CABIA BLANCO

Natural History.

My Next Door Neighbors.

THE family which for years has taken the home next to mine for the spring and summer moved in not long ago, and I am very glad to see them back again. They are good tenants, quiet and attentive to their own affairs—not mine. They keep no dogs; their children break no glass; they never ask me to do any repairs on their house. Their water pipes do not burst, their ceilings do not fall, and if there are any leaks in their roof during bad storms, they never say anything about it to me. Of course, like other mortals, they have their peculiarities, and occasionally I see people staring rather hard at the head of the house who always wears a red coat. But, on the other hand, he never obtrudes his taste in dress on his neighbors, and I feel that any little eccentricity of this kind is more than made up for by his general good manners. And if the husband's taste in dress is a little pronounced, his wife is very modest in hers, for she is always becomingly clad in gray. Perhaps she is a Quaker.

I feel that I am very lucky to have such tenants. Their home is only about twenty feet from my house, and of course such close propinquity gives great opportunity for annoyance; but we get along splendidly.

I think that very likely my tenant has the same good opinion of his landlord that I have of him. He pays his rent regularly, and is never troubled by me. In fact, I have never spoken to him, and there is no intercourse between the families. If circumstances ever brought it about in just the right way, I feel sure that the two families might associate with pleasure and profit to both. But perhaps it is better to take no risks. That we have not met on a social footing seems a little odd, for if I recollect aright, they have occupied their present home for parts of ten or a dozen years. Perhaps this failure to get better acquainted may be accounted for by the fact that we do not speak the same language. I am a kind of a foreigner, for my ancestors came to America only about 275 or 280 years ago, while his have been here for uncounted ages. I make myself most easily understood only in English, while he uses the language that all screech owls have spoken since the beginning of time. Very likely he may feel for me something of the contempt which many true Americans—so-called—have for all recent immigrants from the old world.

In the tremendously stout branch of an old oak tree which stands twenty feet or more from the corner of the house, there is a hole perhaps thirty feet from the ground, where long ago a side branch was broken off. This hole is the home of my next door neighbors, a pair of little screech owls (*Megascops asio*).

Each year about February they make their presence known by becoming tuneful, and from five or six o'clock P. M. to midnight the male bird may be heard trilling his love song on the branches of the trees close to the house. In March there is less of this shrill song, but often at night a curious cooing sound is made by the birds, their voices rising and falling as they whisper to each other among the branches. Now, too, they begin to be seen; either standing in the mouth of the hole at evening and in the morning, or just at dusk flying about among the branches of the oak, or passing from tree to tree and bush to bush about the place.

Every spring they are looked for with interest, and if for any reason they do not appear, great disappointment is felt by all members of the family.

It is usually toward the last of March that they become most active and begin to be most frequently seen. Sometimes they alight in the wistaria vines on the house and within a few feet of the building. I remember that on March 29 a few years ago, one of them was discovered about seven o'clock in the evening, standing on the topmost twig of a little lilac bush about four feet from the piazza and not more than eight from the steps up and down which people were passing into the house. The twig on which the bird was perched was hardly as thick as a lead pencil, and it stood on the extreme tip. Every now and then the strong wind which was blowing in gusts from the west caused it to lose its balance, and it was forced to flap its wings and to reach out one foot and grasp the twig further down, to hold itself on its perch. For the rest of the time it stood quite motionless and bent forward, as if scanning the ground eight or ten feet below it. It remained here for nearly fifteen minutes, and then someone passing near with a little more noise than usual, disturbed it and it flew away, and at the same time its mate flew out from a neighboring spruce tree.

This spring there was some doubt as to whether their house would be vacated by its winter tenants in time for them to take possession. Often the gray squirrels occupy it during the winter, and sometimes carry so great a quantity of leaves and other rubbish into it, that it is really impossible to get it cleaned out in time. This year, also, a couple of starlings were seen loafing about the hole in March, and it was thought possible that they might take possession and decline to yield to the old time occupants. However, none of these things happened, and at the proper time the Megascops family moved in.

The hole occupied by the owls faces west, and often when I am dressing in the morning I see one of the birds sitting there with half its body exposed, its chin sunk on its breast, apparently asleep. As the sun gets higher and the light stronger, the bird gradually sinks down and disappears. Yet sometimes at eight o'clock or half-past, its gray head may be seen rising into view, and it looks out for a moment or two and then again sinks back out of sight.

We believe that the eggs are laid and the female begins to sit quite early in April, but about this we cannot be sure. Sometimes during the first two weeks in April, just after sunset, an owl is seen sitting in the hole, showing its whole body. Usually it sits motionless, looking toward the setting sun, but if one raps sharply on the window pane with the knuckles the bird may turn its head to see what the noise is, and then look back to the west, and will pay no attention to further rappings.

It has usually proved that the two birds are different in color, the male being red and the female gray. While the female is sitting, it is not always easy to see the owls, for during the day the male does not move at all, but remains hidden away in some secret recess which is not always known. Some seasons this resting place is in the top of a pine tree, among the thick needles, where it is very hard to see the bird, but one year he spent the day on the horizontal branch of a hemlock tree which stretched out over the lawn, and was exposed to the full glare of the sun. From one point on the branch grow half a dozen small but rather thick-leaved twigs, and the owl used to sit among these, which perfectly concealed him. His perch was about ten feet above the heads of people passing across the lawn, but usually he paid no attention to such passersby, unless, as sometimes happened, they stopped beneath him and pointed at and talked about him. Then he was likely to draw in his feathers and erect his horns.

Just about sunset every evening the little red owl commonly leaves his place of concealment and flies to a nearby branch of the oak tree over the drive, to wait there for half an hour until it shall grow dark. The children are usually playing or riding their bicycles on the drive, shouting and screaming, and while he is not in the least disturbed by the noise, he appears to take some interest in their movements, and bends over to watch them.

About the last of April the birds are commonly seen together among the branches of the oak, and it is therefore supposed that the young are hatched. Often at this time they are seen to have something in their bills which they take to the hole, and from this time on they seem to be hard at work feeding their young.

For two or three seasons toward the end of April the children used to find about the place the bodies of English sparrows. Sometimes these were headless, at others their breasts had been torn away. When the head had been cut off, this had been done with great neatness, as if with a sharp instrument. The death of these sparrows was attributed to the owls, and it was hoped that they would continue the good work.

One day, after one of the boys had come home from school, he was looking at the owl and saw beside him on the branch on which he was perched two small colored objects. As he could not tell what they were, he climbed the tree, and found two song birds placed side by side, apparently for the owl's dinner. On several occasions after this, feathers of thrushes, scarlet tanagers and warblers were found on the lawn.

One day in June as we were at dinner, Sylvia came rushing in and told us that a baby owl was to be seen in the hole. This caused great excitement in the family, and everyone left the table to look at the owl. Later in the evening a second head was seen. Then it was suggested that a ball be tossed in the air near the hole to see what would happen. As soon as the young owls saw the ball pass near them, they climbed out of the hole and looked on with the greatest interest.

The next night one of them fell from the tree, which drew a family crowd. When it was picked up, the mother owl flew close to the head of the person holding it, snapping her bill and uttering a low whistle. The little owl, placed on the branch of a tree, climbed bravely upward, and before long was out of the way of cats or dogs. Both young owls were covered with white down, but already had wing feathers strong enough to keep them from being hurt by falling. Several times after this they fell, but always, when given a fair start, were able to climb pretty high again. The old owls were seen until mid summer, and often spent the day in plain sight on the branches of the oak, where they were seen by visitors, who frequently insisted that stuffed birds had been put up in the tree for the purpose of hoaxing them.

Several times during the summer the male owl was seen sitting on the gravel in the walk with his wings partly extended, apparently taking a sun bath. Yo.

False Natural History.

Editor Forest and Stream:

In an article arraigning Mr. John Burroughs, your contributor Hermit lucidly remarks, "Keen observers are springing up throughout the world and their studies of nature are deeper and far more logical and far beyond the knowledge of Mr. B. Possibly so, and Hermit cannot object to a few citations from scientific observers, even if they sustain the naturalist that he dogmatically condemns.

With reference to Mr. Burroughs' contention that birds fly untaught, it may be said that Spalding has shown experimentally that young swallows can fly as soon as they reach the proper age. As regards his assertion that the bird sings in due time without a hint from its parents, Mr. Burrough a little overstates the fact. Romanes, Groos and Weinland agree that while the song of birds is instinctive, it can never be so quickly nor so fully expressed as when the parents serve as models.

Mr. B.'s query, "Does a kitten need to be taught how to catch his prey," excites Hermit's unbounded astonishment, and he innocently remarks, "That a naturalist should ask such a question is beyond my comprehension." Despite Hermit's contention that tutelage is necessary to form a mouser or ratter, I am convinced that the observation of scores of FOREST AND STREAM readers is to the contrary. Again I adduce experimental evidence. Prof. W. Mills a few years ago subjected a new born kitten to constant observation for 135 days. All the doings and misdoings of the little creature from the day of its birth were minutely chronicled in a published diary. Before it opened its eyes it spat at a dog, and even at the professor's hand when, through fondling the dog it had acquired a canine odor. On the forty-second day it keenly smelt of the professor's fingers that had handled a recently killed mouse, and when given the defunct, it seized it with teeth and claws and growled when an attempt was made to take it away. On the 118th day a living mouse in a pasteboard box was presented it, whereupon it eagerly smelt of the box and followed it when carried away, and when the mouse

was released, seized it with a growl and played with it before killing it.

Mr. Burroughs' observation that young chickens understand the various maternal cries Hermit pronounces an error. Now, the behavior of newly hatched chickens has been the subject of much experimental investigation. In common with all young birds they evidently come into the world with a remarkable amount of inherited knowledge. Chicks hooded immediately upon emergence from the shell, and then, after the lapse of two days, given an opportunity for the first time to exercise their visual power, were observed at the end of two or three minutes, to follow movements of crawling insects with precision, and in a few minutes more to peck at minute objects with an instinctive perception of distance. Placed upon a carpet the chick, as a rule, remained quiescent, put upon gravel, it forthwith began to scratch, the material evidently acting as a stimulus to the dormant instinct. An unhooded chick, upon hearing the maternal cluck, at once ran to the hen, leaping over and dodging obstacles as though habituated to arduous locomotion.

As a rule, it may be said that maternal example awakens sleeping impulses, as did the gravel with the chick alluded to. Chicks covered by a hen walk twice as soon as those incubated, ducklings swim and birdlings sing sooner with parental encouragement. Hermit seems to believe with Mr. Long that an animal's failure or success in the battle of life depends upon its maternal training, a very pretty theory and one attractive to sentimentalists, but void of due foundation. No instruction is given, in the proper sense of the term. Not as the human mother at the cradle, does the mother bird sing to her nestlings; she is moved by no conscious interest in her offspring's future. Of such charmers, but, nevertheless, seducers of the public, as Maeterlinck, Seton and Long, it may be said that were they to profit by the works of Lloyd Morgan, Groos, Romanes and other students of animal instincts, their writings, while perhaps less remunerative to themselves, could be of greater value to the world.

A. H. GOURAUD.

The Intelligence of the Wild Things.

Editor Forest and Stream:

I HAVE read with much interest the papers in FOREST AND STREAM on the above subject, and as I venture to dissent from some of the conclusions which the writer Hermit arrives at in his article in that paper of April 18 last, I trust to your courtesy to allow me to express them.

He argues against the assertion of Mr. Burroughs that "the young of all wild creatures do instinctively what their parents do and did." He supports this by a series of assertions that old birds teach their young ones to fly, and animals their young to walk, and presumes, I think, when he asserts that without such instruction they could neither fly nor walk; but he does not attempt to prove that without that instruction they could do neither, for that is the correct alternative of the argument. Granted that imitation being so strong in all living creatures, it is only natural that they should strive to do what their parents are doing before their eyes; but I submit that the young of all from man downward, will, if left to themselves, instinctively make use of the modes of progression with which they are blessed. A bird taken from the nest, as I have often done, and caged before it can fly, will, when matured, if allowed liberty in a room, fly about it as gaily as an old one; and to my loss, occasionally, if the window is left open, fly through it as straight and strong as either of its parents. Animals born in a perfect condition—the calf or the lamb—walk without teaching from the moment they are dropped. Children, though too often encouraged by an overfond mother to stand and walk before their legs are strong enough to bear them, would undoubtedly find their legs, as the saying is, as soon as nature gives them strength, from crawling to standing upright and walking without assistance.

With regard to the action of the dove in pushing its fully fledged young ones off the dove cot: this is not, I take it, in order to make them use their wings, but because the old ones are about to breed again, and are jealous of the presence of the older brood.

Again, is not Hermit altogether begging the question when he says that "wildfowl bred on our northern lakes will not go south without old birds to lead the way." What proof, may I ask, has he that that is so? I venture to think the wonderful instinct which induces birds to migrate would not be found wanting in those birds to do so, because they had no leaders to show them the way. No doubt the migration of birds is one of those mysteries of nature quite beyond the power of men to dogmatize about, and I look upon it as an unwarrantable assertion to make that it is not inborn in those birds that practice it, given to them by their Almighty Creator.

Then, with regard to the question of birds being taught by their parents to sing, or make any other noise similar to that of their parents: here again Hermit believes in the necessity of instruction. Now, though undoubtedly the young copy their parents, I contend that without assistance we see every day evidence of the fact that such teaching is unnecessary. Witness the caged bird which has never heard a note, but who will, on arriving at maturity, sing with ease the natural song of its species. Chickens reared in an incubator, though removed miles from any other fowls, will likewise, when old enough, and the breeding season begins, if cockrels, crow, and if pullets, cackle and cluck exactly like the parents they have never seen.

Hermit also contends that birds are not taught by nature irrespective of their parents to select the food most suitable for them: surely one sees this contradicted continually.

Cage birds that feed on grain will, if given a variety of seed, invariably choose that which is most suitable to them, though I admit confinement generates a morbid taste for a seed that is detrimental to them. Soft bill birds could never be persuaded to touch grain, but readily take to insects or chopped meat, though they are tempted to eat moist mixtures of a kind that may, if given in excess, be injurious. This all goes to prove that caged birds do not find any difficulty in sustaining their life by food which only nature has taught them is good for them. Poultry also without parental instruction will, if given latitude in the variety of food placed before them, select that which is best for them, until again the morbid taste created by domestication induces them to indulge too freely, if tempted, in what is deleterious to them.

I do not, as will be seen, deny that the example of parents has a great effect on their offspring, but I venture to support the theory that, especially if the environments are the same, young birds and animals will invariably exhibit, when fully grown, all the habits and idiosyncrasies of their species, irrespective of parental instruction.

F. C. BLUNT, Colonel.

RYDE, Isle of Wight, May 4.

Pranks of Wood Rats.

KETTLE FALLS, Wash.—In the make up of the wood rat the mischievousness of the monkey is united with the industry of the beaver; and both are guided by a perversity which would land him in an idiot asylum save that the inmates would prove entirely too orderly and systematic in their every day life to suit him even a little bit.

Once he has taken possession of an empty cabin, do not turn in there to stop over night for the sake of avoiding a thunder storm; for, unless you succeed in shining the little wretch's eyes and blowing him into sausage, you have got a job on hand which will last the night long. Sleep is out of the question, as he delights in raising a racket in comparison with which an Irish wake would prove seductive harmony.

Visiting the empty cabin of a miner, I found that the cook stove had been left with the end door of the stove swung wide, and the griddles and crosspiece of the top removed; and while the whole interior of the stove was filled with the nest of a wood rat, the inside of the nest being lined with moss, the nest was continued up on top of the stove, piled with every imaginable kind of trash which the little brute could drag into position, until the whole affair on top of the stove looked like the rush house of a muskrat.

In the woodhouse adjoining the kitchen of my old home at Valley, a wood rat once came to preempt the whole affair, and for some days he remained so cunningly hidden in the daytime that I was unable to rout him from his retreat. Turning himself loose at night, he made things lively in general. Burrowing beneath the sill or lower log of the cabin and coming out under the floor of a closet, he then gnawed a hole through the floor, when he proceeded to utilize the closet for general purposes.

Something in the line of carpentry called the jack plane into use, and the resulting shavings were piled in the corner of the woodshed for kindling. The following night was a busy one for the rat, and happening to go into the closet next morning I found a pair of my shoes that were lying on the floor—and were the only things on the closet floor—literally crammed full of shavings, each and every one of which had been drawn singly through the tunnel and up through the floor. Evidently there had been no thought of nest-making, as the closet afforded no hiding place whatever, and the shoes were some distance apart. His work had been very painstaking and neat, and not a scrap of a shaving had been left on the floor, while the shoes were tightly packed to the ends of the toes. A trap was then set for him in the closet near his entrance hole, which he somehow managed to spring with his head, leaving only the bristles or long hairs of one side of his upper lip fast in its jaws. This appeared to satisfy his curiosity fully, and he left for parts unknown.

Nineteen years ago a party of my neighbors went on a prospecting trip into the mountains east of the Pend d'Oreille River, and journeying along the bank of the stream as the noon hour approached, they camped for dinner near the log cabin of a placer miner, whom they could see at his work on the river bank a short distance away. Dinner was cooked and they had just began their meal when the miner arrived on the scene, bade them good morning and passing on to the cabin unlocked the padlock of the door and vanished inside. But a few minutes elapsed when he reappeared, bareheaded, with pale face and eyes that blazed with wrath, and rushing up in front of the seated group he presented a .50 caliber needle gun at full cock and announced that the first man who moved in his seat would be shot dead.

One of the group, Mr. R. B. Lane, was a good talker, and he quietly and coolly asked the infuriated miner to raise the muzzle of his gun and tell them what was wanted.

"Oh, if I only knew which one of you blankety blanked scoundrels it was there'd be no foolin' about it!" cried the miner. "And now I don't want a bit of nonsense or I'll kill some of ye right where ye set."

"Look here, my friend," said Lane, "listen to me a moment before you do something you may have to regret. We don't know what you mean, and now I ask you to quiet down and tell us what you want."

"I want my buckskin bag of gold dust that some of ye's got. Ye needn't try to deny it, for it was there when I went to work this mornin' and there's been nobody along since but you fellers; and I want ye to hand it out without a word."

"Well, my friend," said Lane, "just as good looking men as you or I have been mistaken before to-day; and now I ask you to be very sure you are right before you attempt anything rash. Please go back into your cabin and make a careful and thorough search so you will know to a dead certainty whether your gold is really gone."

The calm, dispassionate tone of the speaker had its effect, and the half crazy miner, after a moment's hesitation, turned and reentered the cabin.

Some twenty minutes elapsed when he again reappeared—without his gun—and Lane said that of all the humiliated men he ever saw, and of all the abject apologies to which he ever listened, they had now the most perfect examples.

Asking the whole party into his cabin he showed them where in the side wall of the cabin he had a block of "chinking"—one of the billets of wood used to stop the cracks between the logs—which he could pull loose; and where behind it he had a place in which to hide the gold sack, and as the cabin had been built in an excavation in the river bank, this part of the wall was below the surface of the ground, forming a cunning hiding place for his gold. On his first entrance into the cabin he had felt for his treasure, and the bag was gone. Then followed the scene which had destroyed the appetites of the prospectors.

Returning for his second search he discovered that the hole continued along the log beyond his reach. Tearing the remaining blocks of chinking loose, bit by bit, he followed along to the back wall of the cabin, when he felt and drew forth his precious sack, unbroken, but with the teeth marks of an avaricious wood rat plainly legible in the folded top of the sack.

Pranks and trickery of this kind soon teach the pioneer that when one of these pests appears there is but one thing to do—make war, and war to a finish; for a pair of spectacles, the family Bible, a stick of stove wood, a bottle of peppermint, clothes-pins, iron wedges, socks, or broom handles—everything is fish that comes to his net, and his industry is yet unmeasured.

ORIN BELKNAP.

Food Birds of the Eskimos.

From the "Proceedings of the Linnæan Society."

BY J. D. FIGGINS.

POSSIBLY at no other place on the globe are birds so extensively used for food and clothing as they are in North Greenland. A portion of this bleak and barren coast is inhabited by a small tribe of Eskimo, commonly known as the Arctic Highlanders, consisting of about 250 individuals, and divided into seven or eight settlements. Through force of circumstances these natives are strictly carnivorous, and a large supply of meat is required, not only for their personal use, but for their numerous packs of sledge dogs. Seals and walruses are the animals most hunted in order to obtain food, but they are not to be depended upon entirely, as it is impossible in some years to secure the necessary numbers. Caribou are not common, and are very hard to obtain. Narwhals are taken during the early spring, but usually in very limited numbers, and they make only a slight change in the usual bill of fare. Whenever there is a shortage of seals and walruses—and this occurs often—the natives depend almost entirely upon birds. Seals and walruses often desert a locality for a year or two, and to be prepared for this the natives locate their villages as near bird rookeries as possible, regardless of unfavorable conditions. The stupidity of the birds renders them an easy prey for the hunters, whose methods of capture are very simple. As soon as the birds arrive in the spring the harvest begins, and ceases only when an abundance of other game is assured.

While at Cape York during the summer of 1896, I was invited by a party of native hunters to accompany them on an expedition to the great rookery of dovekies (*Alle alle*) near that place, and being greatly interested I gladly accepted their invitation. It was a strictly business affair with them, and they requested me to leave my gun behind and take along a net, which, of course, I did. A half hour's row brought us to the foot of a high cliff, the base of which was piled to the height of about two hundred feet with boulders, detached from it by the action of the elements. This mass of loose and treacherous rock—entering the water at an angle of about 45 degrees—was the breeding ground of the dovekies, and here they were to be captured.

These birds deposit their eggs well down in the crevices among the smaller stones, and at the time of my visit the young birds were nearly ready to leave the nests. A curious subdued murmur, made by the plaintive call of the young birds, formed a kind of background of sound for the louder notes of the adults, whose incessant chatter gave abundant proof of the countless thousands breeding at the rookery. Climbing to an altitude of about one hundred and fifty feet we reached the flight zone of the dovekies, where there was a continuous movement of large flocks, whose sole employment appeared to be flying round and round in circles which extended from within a few feet of the cliff to well out over the water. Consequently to come within striking distance of the birds, it was only necessary to watch a flock, and while they were away on their circuit, to take a position screened from behind a large rock in their line of flight.

A curiously constructed net is used at present for capturing the birds. It consists of a hoop about two feet in diameter across which a net, slightly bagging, is constructed. The hoop is secured at the end of a light pole about ten feet in length, and when in use the nets remind one very much of lawn-tennis racquets on a large scale, being swept forward with similar strokes. The hunter places the net on the rocks in the opposite direction from which the birds are expected, and on their approach raises it to meet them with considerable force, which stuns or entangles them in its meshes. The net is quickly drawn to the hunter and the victims secured. A firm, quick pressure under the wings usually causes almost instant death, but to make their capture doubly sure, the wings are crossed on the back, which prevents flight in case they survive the deadly pressure. Again the net is placed in position ready for a new strike. The escaping birds of the flock invariably dart aside in unison when the strike is made, but they apparently forget all danger by the time they have again completed their circuit, for they repeat the movement time and time again until their diminished numbers make the casting of the net a labor that is practically without result. A new flock is then selected, and the work continued until a sufficient number of birds is secured.

Before the advent of the white man, from whom materials for net making are obtained, a more primitive method was employed, namely, throwing stones, and it is still carried on by the younger generation with considerable success. Dovekies display great curiosity, and if the hunter sits quietly in full view, he will soon have an audience of them near him, all bent on occupying one rock, regardless of its size, or of their numbers. A compact flock of birds soon results, and a well directed stone thrown into their midst does great execution. Stones may be thrown a number of times at the same flock before they decide to adjourn. I experimented with both

methods, but found the latter most successful, as I was either too late or too soon with the net, much to the amusement of the natives.

On Saunders Island the method of bird catching is not quite the same, as the birds and conditions are different. The net is used, however, to advantage. At this rookery Brünnich's murre (*Uria lomvia*) is the principal species taken, although when a very large supply of birds is needed, kittiwake gulls (*Rissa tridactyla*) are also hunted. The rookery is on a perpendicular cliff, rising from the water to a height of several hundred feet, the birds occupying a space about half a mile in length, and from a few feet above high tide to the very top, and every projection of rock is covered with birds, so that standing room appears to be at a premium. Hunting at this rookery is little short of murder, for the stupid birds can be clubbed from their insecure perches or netted by the hundreds. Approaching the cliff in his kayak, the hunter gently presses his net against bird after bird that in its struggles to escape thrusts its head into the meshes of the net which entraps it. Each bird is quickly drawn to the hunter and dispatched, those remaining not being at all disturbed, and the space made vacant by one is immediately occupied by another. When the sea is smooth the natives often climb upon the ledges of rock and club the murres, hundreds being killed in this way in a very short time. The hunters frequently meet with accidents at this rookery, for the perpendicular cliff and a heavy swell make "kayaking" dangerous.

Puffins (*Fratercula arctica glacialis*) and eider ducks (*Somateria mollissima borealis* and *S. spectabilis*) are much prized by the natives, and are killed by spearing from the kayak. The spear is simply a sharpened rod of iron set into the end of a light shaft. At fifteen or twenty yards the hunter seldom misses his mark. Ptarmigans (*Lagopus lagopus*) are also taken, but in very limited numbers, as they are not common. Dovekie and murre skins are used throughout the tribe for making clothing, and hundreds of them are preserved each year for this purpose. In removing the skin, the wings are cut off near the body, and the skins are cut loose at the base of the neck and stripped over the body. The Eskimo's simple, but effective, method for removing all fat and making the skins soft and pliable, is to give them a thorough chewing.

It would be impossible to estimate the number of birds taken by this tribe each year, even when other game is plentiful, but it must be enormous. Still, the birds do not appear to be on the decrease, for the outer edges of the rookery have a new appearance that leads me to believe the breeding area is being extended. A few years ago an epidemic caused the death of a large percentage of the Eskimos, and as the food demand was consequently less, the extension of the rookery may have resulted. This, of course, is merely a conjecture, but it seems plausible.

From an economic standpoint the birds of this cheerless Arctic region are in the superlative degree a necessity to the Eskimo, and without them they would long since have perished by famine. That the natives can never exterminate the birds seems assured, for the greater portion of them are inaccessible; and if the great herds of seals and walruses become extinct, and even the natives themselves cease to exist, the birds will probbaly still continue to rear their young among these desolate and rocky surroundings.

Food Flavors.

New York, May 14.—*Editor Forest and Stream:* You no doubt recall an editorial published in Forest and Stream a year or two ago bearing on the flavor given to the edible products of various animals by the food which they eat. This editorial drew out several letters from correspondents confirming the position which it took, and to my mind was very interesting.

I have just been reading a paper printed in the Proceedings of the Linnæan Society on the Mammals of Westchester county, by Mr. John Rowley, and quote from it a few words of testimony on the subject of the editorial just referred to. In his notes on the muskrat, Mr. Rowley says:

"The name 'muskrat' is obviously applied to the animal because of the musky oil which the glands secrete; and this secretion so strongly permeates the entire anatomy that a piece of flesh cut from any part of the body will be found to savor strongly of this essential oil. The flesh is eaten by some people, but unless very much disguised in the cooking, the musky flavor is so strong as to be extremely disagreeable. I am informed that a 'professional' muskrat trapper who fed his fowls during the winter largely upon the carcasses of muskrats, the following spring found that the eggs were so strongly impregnated with the musk as to be unmarketable."

Sage.

A Mysterious Bird Mortality.

Clarksdale, Miss., May 8.—*Editor Forest and Stream:* A very curious and apparently inexplicable visitation of mortality has recently been inflicted upon many birds in this locality. On the morning of May 6 it was the common talk of the town of Clarksdale that the streets and yards were strewn with numerous dead birds, as well as the roads in the immediate vicinity of the town. So far as could be learned by limited inquiry this strange phenomenon did not extend far outside of Clarksdale as a focus. I regret that I was so occupied indoors at the time that but little attention could be given by me to the subject. The mortality was mainly confined to one day, or night, but some additional dead birds were found on the following day.

As well as could be learned by inquiry this mortality embraced all the common varieties of birds that come here in the spring and remain during the breeding season. Only two of these dead birds came under my own observation, one of which, by reference to Audubon's work, was identified as a vireo; the other was of the size and general appearance of the sparrow family, except that the bill was too slender. One gentleman said that among eleven birds picked up by him in his yard there were seven different species, one of which, from his description, was an indigo bunting. It does not appear that any of the abundant English sparrows were among the victims. My information is that none of the dead birds showed marks of violence on their bodies.

I have heard no plausible theory offered to account for this extraordinary occurrence, and have none to offer myself. Can any of the readers of Forest and Stream suggest a solution of the case?

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in Forest and Stream.

Saskatchewan and the Rocky Mts.

For many years after the California and Oregon trail had been opened, and regular journeyings by wagon train were taking place between the Missouri River and the Pacific Slope, the far Northwest was still an unknown country. Its trade was a monopoly of the Hudson's Bay Company, and few people penetrated it, except the employes of that great corporation, and the occasional free trappers who crossed it. Except for the trading posts dotted here and there over the vast region, its only inhabitants were the Indians and the so-called Red River half breeds, who in many qualities of mind and body, and in many of their ways of life closely resembled the Indians.

Among the interesting out-of-print books on this territory, is one entitled, "Saskatchewan and the Rocky Mountains," a diary and narrative of travel, sport, and adventure during a journey through the Hudson's Bay Company's Territories in 1859 and 1860, by the Earl of Southesk, formerly Sir James Carnegie, a Scottish nobleman, very much devoted to sport, absolutely ignorant of America, and of course of the West, but eager to travel and to find good shooting, as well as to recruit his health by an active open-air life in a healthy climate. To him in the year 1858 a friend recommended the Hudson's Bay country, and, as it happened, this friend exercised a very powerful influence in the councils of the great company that dominated those enormous territories in British North America. Said the friend: "The country is full of large game, such as buffalo, bears and deer. The climate is exactly what you require." As a result of this conversation, in the spring of 1859, Sir James Carnegie sailed from England for New York, and early in May joined Sir George Simpson, then Governor of the Hudson's Bay Company, and proceeded westward with him to Saint Anthony, Minnesota, where he met James McKay, a Scotch half breed and an employe of the company, whose brother was to be his guide during his journey.

The party traveled westward, meeting various adventures, and at last reached Fort Garry, now Winnipeg. The Indians whom they constantly met, the birds and the mammals, the methods of travel, now wallowing through marshes and again ferrying across flooded streams, were all strange to the Scotchman, who nevertheless bore himself well under these new conditions. At Fort Garry he purchased his supplies and hired his men, and with considerable outfit, including one wagon and seven Red River carts, the expedition started for Fort Ellice.

These, of course, were the days of muzzleloading arms. The men carried smoothbores, running from the ordinary Hudson's Bay fuke up to excellent heavy double guns, which carried a bullet accurately for 100 yards or more. The leader of the expedition, besides a smoothbore, had a pair of double-barrel Purdey rifles.

They had not been long gone from Fort Garry when they met with a large camp of Red River half-breeds, who were now just starting on their annual summer buffalo hunt. With some of the characteristics of these people the author was disgusted, yet he was much interested in their appearance, as shown by the following description:

"Fervently as I wished them away, it cheered one's spirits to see the hunters on their march. There was infinite picturesqueness about them. Their long moving columns sparkled with life and gaiety. Cart-tilts of every hue flashed brightly in the sun, hosts of wild wolfish dogs ran in and out among the vehicles, troops of loose horses pranced and galloped alongside. The smartly-dressed men were riding their showiest steeds, their wives and daughters were traveling in the carts, enthroned on high heaps of baggage. Many of the women were clearly of unmingled Indian blood. Tall and angular, long masses of straight black hair fell over their backs; blue and white cotton gowns, shapeless, stayless, uncrinolined, displayed the flatness of their projecting figures. Some wore a gaudy handkerchief on the head, the married bound one also across the bosom.

"In M. B.'s first cart there sat a singularly handsome girl, a dark-complexioned maiden of the mixed French descent. As with so many of her race, her countenance bore a half-shy, half-disdainful expression; she looked like one who would be amiable to few, ill-tempered to most, but true to the death to her husband or her lover.

"The hunters were all in their summer clothing, wearing the usual brass-buttoned blue capot, with moleskin trousers and calico shirts. Wide-awakes, or cloth caps with peaks, were the favorite head-coverings. Gaily-embroidered saddle cloths and belts were evidently preferred to those of a less showy appearance; red, white and blue beading, on a black cloth ground, seemed to form the most general arrangement.

"Mr. R., who accompanied us part of the way and slept that night at my camp, rode beside me on his well-bred old white horse adorned with red and black trappings. He himself wore the dark blue capot, a black cap, and black moleskin trousers and moccasins, and to English notions looked a most unsportsmanlike figure, but, like all the rest, he rode gracefully and well.

"They sit very upright, with the leg nearly straight up and down. Their saddles are exceedingly small, either mere Indian pads, or narrow Spanish frames, high before and behind, with a long peak to the front. Over such a frame they strap a blanket, and sometimes also place another beneath, but nothing can keep these ill-contrived saddles from galling the horses' backs."

At Fort Ellice the party reached the border of the buffalo country. Here they feasted on fresh tongues, carts came in from the plains bringing fresh hides, and also four calves to be added to the tame buffalo already grazing about the fort. Here another man named Pierre Nummé was hired. Journeying on toward Fort Qu'appelle, they began to meet antelope, or, as they were there called, cabree, of which a good number were killed. At this place there were some Ojibway Indians ,but they were now in the country of the Crees, both of the woods and of the plains. Also, they were near enough to the Blackfeet and the Assinaboines to feel some doubts as to how these people might receive them.

It was July 4 when they left Qu'appelle fort, and only a little later they began to see buffalo—at first a few scattering bulls. They were now in a sandhill country, of which the author says: "These hills, covering a considerable tract, are about 200 feet high, and are entirely composed of sand as fine as that of the sea shores. Near them the grass grows short and scantily, much as on some of the 'links' along the Scottish coast. The Crees fancy that the souls of good men enter into a paradise concealed amidst these arid ridges." It will be remembered that the Blackfeet Indians locate the home of the dead in a sandhill country not far from this. Now they began to see bulls and to be seized with the lust of killing that seems to attack all men when such temptation approaches them.

"As I returned from the second chase I perceived McKay and Nummé driving a large buffalo before them, which on my nearer approach I found to be an old bull, very thin and sickly and hardly able to move. It was a mercy to save him from the cruelty of the wolves; so, as he had to die, I rode past him on Black and gave him a shot for practice sake—a buffalo's strange form making him a puzzling mark for a beginner—but I placed it too high, as one is always apt to do, and it merely dropped him on his knees without depriving him of life. I then dismounted, and, walking close up to him, fired both barrels of my gun right at the center of his forehead. There was no result, no more than if a clod of earth had struck him; the bull continued in the same position, glaring at me with savage eyes; the densely matted hair on his thick skull had completely defied the penetrative force of a smoothbore. McKay then gave me my Purdey rifle. At the very first shot the conical bullet passed clean through hair and bone, and the huge buffalo rolled over, dead.

"Soon afterwards we saw another bull feeding about, a good distance away on the prairie. I mounted the Bichon, M'Kay took his favorite Wawpooss, and we set out, using every depression in the ground to conceal ourselves from view. The bull, however, quickly observed us, and made off at a remarkably fast pace, with a long start in his favor besides. After some miles' galloping we began to near him. McKay was leading, though not by much, and when signs of the finish appeared, he drew rein and let me pass on.

"The bull was still running, but in evident distress. Suddenly he stopped short in a small hollow, turned round and faced me. Bichon was rather blown, and as I checked him at the edge of the hollow he made a great stumble, as nearly as possible falling on his head—in which case I should have landed directly on the horns of the buffalo. Happily my pony recovered himself in time, and the bull remaining at bay about ten yards from me, I dropped him with a bullet in the shoulder, and finished with another in the brain. Like many of the males at that season this fine, well grown bull was exceedingly scant of flesh, so we left his carcass and merely brought in the tongue. Even that was tough eating, though far from being rank or ill flavored."

Buffalo were abundant, and there was much hunting. Cows were killed for food and especially fine bulls with perfect horns and long manes and beard for heads to be taken back to the old country. There is much that is curious and interesting in the various accounts, and the author continually mentions that his balls struck the buffalo high, the old-time common blunder made by the novice. It was now mid July, a season when, as was formerly well known, the buffalo bulls were quite as likely to fight as they were to run, and two or three times a group of bulls declined to move off when approached by the author, who usually left them to themselves. He mentions also about this time seeing a peculiar looking skull with slight much curved horns—that of the buffalo ox. Later he saw one of these animals, but was unable to overtake it. At the Bad Hill a couple of bears were seen and shot at, but the wounded animal got into the brush and no one dared to follow it. The next day it was found dead.

Carlton House and Fort Edmonton were the next points reached. Mr. Hardisty was in command at the first of these forts, and as usual he gave every assistance to the traveler. At Fort Edmonton was met Mr. Woolsey, a missionary, who gave the author much information about the country and the Indians, and especially about that great Blackfoot Pi-tah-pi-kiss (Eagle Ribs), figured by Catlin and still remembered by old men in the northwest. Shortly after leaving Edmonton the author encountered Mr. Moberly, of the Hudson's Bay service, a gentleman who formerly was a correspondent of Forest and Stream, and just before leaving Edmonton he had hired as a guide over the new country into which he was to pass, Piskun Monroe, a Scotch half-breed, whom it was important to engage as interpreter, for he not only knew the Blackfoot language, but was on intimate terms with the tribe, being closely connected with it by blood." This man, old John Monroe, is still living on the Blackfoot reservation in northwestern Montana, hale and hearty at an age between 75 and 80 years.

They were now traveling through the swamps and the timber, by roads that were difficult enough, but they at last came within sight of the great mountains, and his first view of their stupendous peaks repaid the leader for all the sufferings and difficulties of earlier days.

With the mountains came a new fauna. There was fishing, and there were marmots, porcupines, wild sheep and white goats. Their first efforts at hunting these animals were not very successful, but they got much practice in climbing. A little later sheep were met with so abundant and tame that numbers were killed on a single hunt. And while at first most of the animals killed were

ewes and lambs, a little later the hunters came upon large herds of rams and a number of unusually fine specimens were secured.

It was now September and the best of hunting. Bears were plenty in the country, but, though signs were seen, none were killed.

From here they crossed over a rough spur of the mountains to what was called Kootenai plain, losing some horses on the way and traveling straight across the peaks and not by a known trail. From the Kootenai plain their route was to old Bow Fort on Bow River, which they were anxious to reach, partly because their provisions had largely given out, though they still had abundance of dried sheep meat, of pemmican and of tea. Goats were abundant here, but, as a little earlier with the sheep, they had not yet learned how to hunt them. The game constantly saw the hunter and climbed away, and he speaks of them as "enchanted beasts;" beasts which, however, at last he succeeded in circumventing. Toward the end of the month an Assinaboine hunter was met who guided the party to the camp of his own people, Stonies, who were killing goats and moose. These people were Christians and very simple, good natured and anxious to learn from and please the white men. From Bow Fort the route was back to Edmonton, which they reached October 12, finding Mr. Christie then in charge.

Leaving Edmonton October 17, they started down the Saskatchewan River in a boat, but before long the river froze, and it was necessary to send to Fort Pitt for horses in order to escape from the country. On the first day of November the men arrived, bringing sixteen horses, and six days later they were at the fort. It was now winter and the weather very severe. They passed along by way of Fort Carlton to the Touchwood Hills, and thence to Fort Pelly, where they passed Christmas day. From here by dog teams they reached Fort Garry, and in February Sir James Carnegie found himself in Boston and took passage for Liverpool.

Nebraska Game Country.

Although the springtime in Nebraska is most aggravatingly short, there is no sweeter or more charming cycle in all the horoscope of the year. The April rains, which fall with so gentle patter upon our fertile plains and low, graceful hillsides, quickly start the young grass and in less time than it takes to tell it, almost, field and wayside are carpeted with a delicate emerald which painter can never hope to imitate. Just now the universal green is spangled with numerous wild flowers of early bloom, and overhead arches an expanse of azure flecked daily with fleecy splotches of cloud that cast shifting shadows upon the peerless landscape below. Not a tree or a shrub but which now shows the effect of its recent drenching, and table-land, hillside, and gully, swept of their recent covering of dead grass and ragged leaves, by the boisterous winds that proceeded the heavy rains, have fully awakened from their long winter's slumber. Along the glorious Elkhorn's bottom the stunted oaks, glistening cottonwoods, plum and straggling elms have donned their early summer raiment as dainty and fresh as the face of the schoolboy's sweetheart. Aromatic pink blossoms and furzy bursts of faint color in every miniature canyon gives promise of a rich harvest of crab apples, golden plums, purple crow-eye grapes, wild rose buds and the acidulous sumach berry. Along the gushing Rawhide, the Papio and Silver Creek pungent water cress crowds its tender shoots along with clumps of wild musk and tough sawgrass, while bordering the wooded banks are tangles of lacy ferns, maiden-hair, Johnny-jump-ups and sturdy little polypods.

The thorny locust is just sending forth its almost stifling fragrance from adjoining thickets, where the alder buds are swelling and sweet azaloas blowing. The Morpho butterfly undulates upon the sensuous air, the dragon fly flits in and out of odd nooks and crannies over the dark places, and from the woods higher up the valley comes a lilt of melody from robin, thrush and tanager. This is Nebraska at the dawn of the first month of summer.

Notwithstanding the past winter, for continued intensely cold weather and heavy drifting snows, was the worst we have experienced out here since 1888, and notwithstanding the statistics I have accumulated from all parts of the State, show that fully 33 per cent. of the quail crop was frozen and starved to death, there are undoubtably more of these birds in the State to-day than ever before in its history—thanks to the three years' prohibitive law, which expires on the last day of next October. Deputy State Game Warden George Carter, of North Platte, told me some weeks ago that fully 50 per cent. of the quail had been winter killed, according to the warden's figures, but he has amended this opinion by reason of more recent and broader information, and now puts the birds' loss at 20 per cent., but I consider my own estimate the nearer correct. However, there are going to be thousands of birds in all sections of the State, and the sportsmen are jubilant over the fact that they will be allowed to indulge in their favorite sport once more this fall. With a favorable season of breeding Nebraska's tangly creek bottoms will afford better quail shooting than can be found elsewhere in the United States, north or south.

But if the quail are going to be plentiful, what about the chicken? If I should presume to lay before the readers of the FOREST AND STREAM the facts with reference to the plentifulness of this royal game bird in Nebraska at this period, I know I will be charged with willful extravagance and an attempt to falsely boom the State through the medium of its wonderful game resources. But to those who are familiar with my enthusiasm as a sportsman and my selfishness in keeping good things to myself, these assertions will be taken as anything but idle gossip. So far as life is concerned, I am fast getting on the other side of the slope, and if I was purely selfish the general reader would receive no information with regard for chances at the sport I love so well. Why should I care if you all went hungry, just so I had my fill? But I do care. I never did enjoy fishing or shooting alone, and now as the years keep rolling steadily on, I find myself in these times of restored plentitude less able to endure fatigue. I try to convince myself that it is simply some temporary indisposition or weakness, but from the way I felt the other evening after coming in from the snipe bogs, I sadly fear it is something that has come to stay. It doesn't bother me, though, as I used to think it would—a kind provision of an all-wise Providence—and it is simply my generous nature, my keen interest in the generations of younger and brawnier sportsmen, who can tramp and row and climb and shoot and fish with all the ability to endure that I once knew, that influences me in telling what I tell.

And the chicken.

While they are not to be found in such flourishing abundance over as wide a scope of territory as in former years, they are every whit as numerous in certain localities—especially in the lonely sandhills—as they were half a century ago, and it will be no trick at all this fall for even an ordinary shot to kill the limit—fifty birds per day—at hundreds of different points in the northern and western parts of this State. While riding across a measureless tableland on Barber's big ranch out in Cherry county on the 23d of March last, en route for the ducking grounds on Pelican Lake, we saw thousands of chicken at a single glance of the eye in any direction—more chicken than many sportsmen have seen in all their lives together. It was early morning, with the sun just sending his arrowy shafts of gold across the almost limitless and closely cropped expanse of pasture land. The birds were sitting everywhere—two's and three's generally, but sometimes as many as two hundred in a bunch. The cocks were "a-boom-oom-oom-ooming" in the bounding ecstacy of the trysting time, walking and jumping and sweeping around, with tails outspread like fans, the unimpressible hens, and the spectacle was such a rare one, that, as keen as we were to get our blinds made, we pulled up the teams and watched them for many moments. And coming into Wood Lake from Stilwell's ranch, after the hunt was all over, we flushed both chicken and sharptail grouse at intervals of less than a quarter of a mile for the entire distance of the forty miles or more. And it was the same throughout the whole sandhills world—and it is a big one—as we were told by Stilwell, Ballard, Harris, Francke, Baird, Anderson, and scores of other ranchers and cattlemen. Last fall, coming from Stilwell's, we saw the same picture, only thirty-five miles further north. We were on our way to Valentine then, instead of Wood Lake, and after we had crawled down the long rocky escarpment of the roaring Niobrara, and struck the wagon road in the valley along the river's shore, we were fairly startled by the rising of flocks of pintailed grouse that numbered their thousands and thousands, and as they got up in front of us and from along the brushy banks, they streamed in veritable sheets across the broad river. I warrant you it was a sight that but few sportsmen in these modern days have ever seen.

The movement on foot in Nebraska to interest sportsmen as well as the farmer and the public generally in the preservation of the birds, is one that commends itself favorably to every righteous minded man, woman and child among us. That much has already been done in this line is demonstrated by the fact that many of the birds that were all but driven out this section of the world—notably the blue bird—are returning and many other species which for several years have undoubtedly been on the wane—robins, larks, chickadees, nuthatches, chewinks, song sparrows, thrushes, cedar and jay birds—are conspicuously increasing. Even the twittering, sheeny-coated martin has returned quite numerously to various localities that have not known the bird for years and years, and there is a marked increase, at least in this particular region, of the little feathered denizens of all kinds. No longer ago than yesterday, while driving out the Ponca road along White Tail Run, I saw, about the cupola of the little old rustic church at the base of Long Hill, scores of sweet-voiced martins in aerial convolution, and the sight and sound took me back to the days when I was a boy "back in Ohio."

Nebraska is certainly a great bird State—probably the greatest in the Union. There is something like 400 varieties that dwell at least a portion of the year with us, and all our citizens should take an especial pride in their protection and preservation, not from any mere sentimental standpoint, although sentiment alone is sufficient to furnish a most abundant reason for this plea—but from a serious consideration of the economic relation of the birds to man.

In September and October last I made many notes of passing bird life in Nebraska, and while I observed that the migrants were tardier coming down from the north than I had seen them for years, there were many more of them when they did come. It was not until September 10 that the warblers whose mean line of northern migration is along the British boundary, put in an appearance. But from this date on till October 20 there were plenty of all kinds of migrants that linger a brief time with us—juncos, white-throated sparrows, thrushes of several varieties, and mingling with this late issue I noticed were many red-breasted nuthatches, Canadian peewits, and our sturdy little hyperborean friend, the golden-crowned kinglet. As late as the last of October, on certain lowering days, almost storms of robins and blackbirds came in, and for days they were here in confusing thousands. There is no doubt whatever that last year, in this and adjoining States was a particularly auspicious one for the birds, and what incontrovertibly contributed to this happy condition, was the better sentiment which prevails among men with reference to their care, protection and preservation. In a little pamphlet written by Professor Bruner, of the State University, and scattered broadside throughout the State, he says:

"To appreciate the beauty of form and plumage of birds, their grace of motion and musical powers, we must know them. The ease with which we may become familiar with the feathered neighbors robs ignorance of all excuses. Once aware of their existence and we shall see a bird in every bush and find the heavens their pathway. One moment we may admire their beauty of plumage, the next marvel at the ease and grace with which they dash by us or circle high overhead. The comings and goings of our migratory birds in springtime and fall, their nest-building and rearing of young, their many regular and beautiful ways as exhibited in their daily lives, stir within us impulses for kindness toward the various creatures which share the world over with us. But birds will appeal to us most strongly through their song. When your ears are attuned to the music of birds, your world will be transformed. Birds' songs are the most eloquent of Nature's voices; the gay carol of the grosbeak in the morning, the dreamy, midday call of the pewee, the vesper hymn of the thrush, the clanging of geese in springtime, the farewell of the bluebird in the fall—how clearly each one expresses the sentiment of the hour of the season!"

In nearly every case where the food habits of our birds have been carefully studied, do we find that the good done far exceeds the possible harm that might be inflicted by our birds. Allowing twenty-five insects per day as an average diet for each individual bird, and estimating that we have about one and one-half birds to the acre, or in round numbers, 75,000,000 birds in Nebraska, there would be required 1,785,000,000 insects for each day's rations.

Again, estimating the number of insects required to fill a bushel at 120,000, it would take 15,625 bushels of insects to feed our birds for a single day, or 937,000 bushels for sixty days, or 2,343,750 bushels for 150 days. These estimates are very low when we take into consideration the number of insects that various of our birds have been known to destroy in a single day. For example, the stomachs of four chickadees contained 1,028 eggs of cankerworms. Four others contained about 600 eggs and 105 mature females of the same insect. The stomach of a single quail contained 101 potato beetles, and that of another upward of 500 chinch bugs. A yellow-billed cuckoo shot at six o'clock in the morning contained forty-three tent caterpillars. A robin had eaten 175 larvæ of *Bibio*, which feed on the roots of grasses, etc. Birds, like all other animals, feed upon that food which is most readily obtained, hence the insectivorous kinds destroy those insects which are most numerous—the injurious species.

Ed Krug, a prominent naturalist and inveterate fisherman, is at his own private box down on the Waubuncey, and reports the bass rising famously. Yesterday he landed 21, the largest tipping the scales at 5¾ pounds.

Frank Dworak, president of the South Omaha Gun Club, on the bottoms below Bellevue, ten miles south of Omaha, on April 12 killed 104 jacksnipe, including one pure albino, which he has had mounted.

Ex-United States Senator Manderson and George A. Hoagland will leave Saturday for Woman's Lake, northern Minnesota, for a try at the muscallonge.

MAY 15.

Hearing Deer Walk.

Editor Forest and Stream:

A recent correspondent remarks at length on the noiselessness of a deer's movements when undisturbed, and says in all his years of experience he has never "heard a deer walk." I have. Once when my long-time comrade on hunting trips and I were spending a night far from camp, and were trying to sleep on the boughs and under the boughs (overhanging), we more than once distinctly heard deer walking quite near us. In the morning we found several tracks, and one independent fellow had come within about twenty feet of us. We had not disturbed him, and he had not disturbed us, for the rain and the charm of the situation had kept us awake most of the night.

Another time I was on a fishing trip with a party and another party came to the same Adirondack pond to hunt deer. We assured the newcomers that they were welcome, and we would be quiet at night and keep our fire down so as to facilitate their hunting. ("Jacking" was then legal.) Reassured, they made themselves at home, and the one who was to hunt was soon asleep preparatory to his night's work. We soon knew his fate would be disappointment. Talk about a lion's roar! I have never heard that, and I don't want to if it is any worse than that man's snore. We were morally certain no deer would come to the pond that night. The hunter and guide went out between 10 and 11 o'clock, but soon gave up and the snoring was resumed. I could have slept better in a thunder storm. During that night I "heard a deer walk" on the side hill above the pond, but of course he did not "come in."

Again: On two different occasions when I had taken a friend into the woods to give him a shot at a deer, he heard the deer (undisturbed) coming for some distance in the woods before appearing in sight. In one case the deer came into view about 100 yards away, and in the other case about 200 yards. Both times my friend told me of hearing it in advance of the animal's appearance.

I do not question your correspondent's statement that he has not "heard a deer walk," nor that in general they can go quietly if they wish (I also know something about that); but my experience and that of several friends teaches us that they do not always wish to. Like man's, their practice varies.

JUVENAL.

All Around Guns.

ORIENT POINT, N. Y.—*Editor Forest and Stream:* I do not suppose there is any shotgun so popular as the "all around." For more than forty years I, with most of our shooters, believed the 10-pound 10-bore was the right gun for this locality, where the game is principally ducks, rabbits, quail and snipe. All is changed now. I sell ten 12-bores where I sell one 10-bore. Were I compelled to carry and use it in all my shooting, I would not accept the best 10-bore 10-pound $100 hammerless gun as a gift—made in this or any other country. The same gun cannot be the best all around gun for all localities. In some parts of the world I would rather carry a 6-bore than a 12, but these are not the parts of the world I live in. It is folly for (what some call) small bore cranks to contend that a 16 or 12-bore can do the execution of a 6 or 8-bore, either a short or long range.

In selecting a gun the shooter should take into consideration the kinds of game he has to shoot. Mr. Hammond, in his book "Hitting vs. Missing" (which I have just finished reading), gives good advice to those about to choose guns. We agree exactly as to size of bore, length of barrel, weight, etc—of the "all around" gun. He recommends 12-gauge hammer or hammerless, length of barrels 28 inches, weight 7

pounds (length and drop of stock to suit the shooter). The above gun corresponds almost exactly with my own gun, which I have used for the past five years. This gun has become so dear to me that when I am pretty sick it does me good to have it stand near me where I can look upon it. Of course, in all the fifty-five years of my shooting I have used and owned many guns, large and small, but I have never owned one so bewitching and true as the one I now have. In the five years' use I have given it I have never had a shell misfire. This speaks well for the ammunition as well as the gun.

A good duck load for a 7-pound gun is 3¼ drams of black powder, or its equivalent in smokeless, and 1⅛ ounces of No. 4 shot is considered all right by most of our duck shooters—unless to be used over decoys. In this case No. 5 or 6 shot are preferred.

UNCLE DAN.

Staten Island Game.

PRINCE'S BAY, Staten Island, N. Y., May 18.—*Editor Forest and Stream:* The sportsmen in general on Staten Island are glad to know that Gov. Odell has signed the bill to protect gray squirrels at all times in Richmond county; also that it will be unlawful hereafter to kill rabbits while snow is on the ground, and the close season for quail has been extended until the year 1908. All this has been done by the push and energy of the Richmond County Fish and Game Association (incorporated), and I know that all members will thank our good Assemblyman, and be ready for him in the future if he puts himself in our way for us to help him in our way.

Now, as to Staten Island, gray squirrels being protected at all times, some people will laugh at the idea, but it is simply a sentiment. There are a whole lot of people on this island who wish to see the wild things preserved as long as they can. Staten Island is slowly but surely being denuded of its forests, and streets are being cut through field and marsh; people from the city proper are buying land and building homes here, and it will not be many years before Richmond county, or the interior of it, will be one grand park; and it is well that the squirrels should be protected; by and by they will become tame, and no one will be sorry that they are still with us.

Protecting rabbits when the snow is on the ground means more rabbits next year. Dogs are not of much use trailing rabbits when snow is here; but there is another animal that gets its work in then—the two-legged cur. It carries a club and tracks its prey through the snow until the rabbit is found sitting; then one blow with the club does the rest. That is sport, I suppose, but I never saw it registered as such.

The quail that the game association bought and put out in 1900 have done fairly well. They can be heard now every morning from Sequin's Point to near the Great Kills on the south side of the island, and on the north side, in the vicinity of Rossville and Greenridge, they seem to be fairly well established. We have a hard time to bring them through the winters; they must be looked after and fed; but the trouble is little compared to the satisfaction one may get if he likes to hear the sweet call of Bob White.

I wonder what has become of the "War Cry" from Port Richmond? Does he send any more arrow-heads wrapped up in a rattlesnake's skin? ***

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Wild Trout that I Have Met.

MY experience with uneducated, wild and roving trout has been more limited than I would like it to have been. I have sat on the bank of a well-stocked trout stream and after having tried every fly in my book unsuccessfully, have seen the trout not twenty feet away from me breaking the water and flouting their tails at me in mute disdain. I have seen a trout cast goo-goo eyes at me from a few feet down in a clear, crystal pool as the flies skitted over the surface above it. I have even gone so far as to imagine that that trout laughed at me. In one instance, up in Maine—the home of big trout and bigger trout stories—I actually had a trout, in his wild dash at a moth miller which had dropped alongside the boat, leap into the boat with the moth miller in his mouth. On another occasion, after getting up at daylight and working hard for an hour or two and not getting a rise on the lake, I laid my rod on the gunwale of the boat and incautiously allowed the leader to work loose and become wound round the rod toward the tip, the flies hanging overboard, when up came a lusty trout who, seizing a fly, snapped my tip, but, thanks to the strength of the leader, paid the penalty that all rash trout deserve if the hook, leader, line and rod hold out.

After reading the following veracious description in the Duluth News-Tribune by Mr. Grant, of his trout, Friday, I made a resolution never again to tell any more fish stories.

Let the story speak for itself:

"John S. Grant, who lives in a comfortable log camp on the banks of the Cloquet River, six miles from Woodland postoffice, came into Duluth the other day for some fishing tackle.

"'What's the matter, John?' inquired the clerk, who waited on him. 'You look as if you had lost your best friend.'

"'I have,' was the reply. 'I have lost Friday.'

"'Friday? Who is Friday? I thought you lived alone.'

"'Well, I did—only Friday. He was my tame trout. I took him a year ago about this time, in a net, and he was such a handsome critter that I hated to kill him, and for a week kept him in a pail in the kitchen. At first he was pretty shy, but after a time he would come up to the top of the water and eat out of my hand. And finally, one day, as I was sitting out on the piazza, smoking, he flopped out where I was, and lay right down side of me, just as though he wanted to keep me company.

"'From that time on, Friday—I named him Friday because it was on that day I caught him—Friday and me was inseparable. Wherever I went, he went. All through the summer he camped down in front of the door, and I tell you the way he would jump up and catch a fly beat anything I ever saw. And in the fall he would follow right along after when I was on the trail of a deer. When the snow come, I fixed up a box for him by the stove, and there he stayed until the other day, when he went with me down to the river, where I was sluicing some fire-wood.

"'I had to cross on a log, and Friday, he followed right along after, just as he always did. But the log was slippery, or something, and he missed his fin hold, and fell into the water.'

"'Didn't he ever come back?' queried the clerk, who was beginning to get interested.

"'Come back? No, Friday never come back,' responded Grant, with a mournful shake of the head.

"'The poor little feller drowned. I found him the next day, and gave him the decent burial he deserved.'

"And John, paying for his tackle, took the first car back to Woodland and the grave of his little tame trout."

CHARLES CHRISTADORO.

Fish and Fishing.

Disappearance of the Ice in Canada.

AT last the ice has left Quebec's northern lakes and a few trout have rewarded the efforts of patient fishermen on the lakes adjacent to the city, which are always open a fortnight or so before those along the line of the Quebec and Lake St. John Railway. Very little, however, has yet been done in the way of fly-fishing. East winds have been the rule since the ice went out, and up to the second week of May there has been but a couple of warm days in Quebec. It was well on toward the end of the first week of the present month before the ice left the last of the lakes along the line of the railway. Nothing had been done in the way of fishing in any of them up to the commencement of the following week. It will be the third week of May this season before the fishing will be good in Lake Edward, and it will doubtless be better a week later. There will be no fly-fishing for trout worthy of the name until well on toward the end of the month. Ouananiche are reported extremely abundant in Lake St. John this spring, and though the ice only went off it on the 5th inst., a number of splendid specimens of the fish found their way to the Quebec market for the following Friday, when they sold for 14 cents per pound. Needless to say they were taken by bait. Unfortunately there is a very great deal of this fishing done in the spring of the year. Fly-fishers for ouananiche ought to find excellent sport at the mouths of the Metabetchouan and Ouiatchouan by the time this letter appears in print, and the sport should continue good there until well on into June. By the time it slackens off, there is generally good fishing to be had in the Grand Discharge. This year the snow in the woods is melting very slowly on account of the cold weather, and it would not be surprising if the fall of the water in Lake St. John which precedes the opening of the fishing in the Grand Discharge, will be somewhat later than usual. At all events, I intend to watch the reports from the north very carefully in order to keep American friends posted through FOREST AND STREAM'S columns of the progress of the season.

A few fishermen destined for the Lake St. John country have already put in an appearance here. Messrs. R. F. and W. W. McCormick, of Biscayne Bay, Florida, arrived some days ago, and are going to fish on the Tourilli Club waters prior to visiting Newfoundland for salmon fishing. Rev. Dr. Zimmerman, of Syracuse, has taken up his headquarters at Lake Edward, ready for the first big trout of the season there. Messrs. Preston Lea and H. Swift, of Wilmington, Delaware, have passed through Quebec on their way to the Stadacona lakes, and Dr. Porter, of Bridgeport, R. J. Fisher, of Washington, and W. E. Lincoln, of Pittsburg, were here a day or two ago en route to the Metabetchouan. It will be fully a week from present writing before there will be much of a rush to northern waters.

Salmon Fishery Dispute.

The Government of the Province of Quebec and some of the best known salmon fishermen of Canada and the United States are parties to an important lawsuit arising out of the right of fishing in the river Moisie. Alexander Fraser, of Quebec, claims to have owned the fishing rights of the Moisie, in virtue of his proprietorship of the banks of the river. For some years he leased the fishing in the river, and some time ago Messrs. Fitch, Boswell and others, of Quebec, became possessed of it. A little over a year ago, Mr. Ivers Adams, of Boston, purchased Mr. Fraser's property for $30,000, and claims the sole right of fishing in the river. On the other hand, the Government has always claimed the ownership of the fishing rights in the Moisie, in virtue of a judgment of the Imperial Privy Council, which declares the Province to be the proprietor of the fishing in all public navigable waters. The details of the present lawsuit possess a very great interest to all salmon fishermen on navigable waters. While Messrs. Boswell and Fitch were exercising their supposed rights to fish the Moisie, as owners of the riparian privileges, the Government resolved upon asserting the rights declared to belong to it by the highest court of the empire. They therefore notified Messrs. Boswell and Fitch that they were fishing upon Government waters and asked them to come to an arrangement with their officers. The owners refused to recognize the alleged rights of the Government. Meanwhile, Mr. Adams became proprietor of the riparian rights of the river. Then Messrs. Boswell and Fitch, who had become dispossessed of proprietary rights before they were aware that any negotiations were afoot for the change, applied to the Government for a lease of its rights. The Government believed it proper first to give a refusal of its rights to Mr. Adams, who had purchased the river from Fraser in good faith, and Adams took the Government lease for $2,500 a year, so as to be sure that nobody could interfere with him. The Government is naturally delighted to have made this lease, which they regard as a quasi recognition, at least, of the correctness of their claim. This year, however, Mr. Adams dropped the lease, which has been promptly taken up by Messrs. Boswell and Fitch. Both parties now propose to fish the river and a conflict may ensue. The Government lessees naturally look for Government protection, and the whole case has been thrown into court to decide whether or not the Moisie is a public navigable and floatable river forming part of the dependency of the Crown domain of the Province, and whether the defendants, Fraser and Adams, have any right to fish the river. The outcome will naturally be looked for with very great interest, for if the ultimate decision be favorable to the Government's contention, many anglers will find that they have paid out good money for supposed salmon fishing rights to riparian owners who do not really control the fishing of the streams at all. The present test case will doubtless be appealed from court to court until a final judgment is obtained from the Privy Council.

Lieut.-Col. Andrew C. P. Haggard, D. S. O.

The many American and Canadian sportsmen who have met Colonel Andrew Haggard or have read his stories, will regret to learn that he has been very ill all the winter, which he spent in Italy and the south of France. He is back again in England, however, contributing, as before, to the columns of the Field, and busy preparing two new books for the press, one a novel, the other a volume of sporting yarns from Canada, Newfoundland, India and Japan, to which Mr. John Bickerdike has written an introduction.

Royal and Other Fishermen.

An English letter says that the Prince of Wales has lately had a very good week of salmon fishing on the Dee. The King's Balmoral and Abergeldie waters extend for fourteen miles, beginning at Invercauld Bridge, while a few miles lower down the river His Majesty has another stretch.

The fact that King Edward is a very poor angler reminds me of a story which I lately read of another monarch whom he has lately visited. I mean the King of Italy. Victor Emmanuel is very fond of fishing, but it is the one sport at which he has no luck. One day he was out for several hours and was returning to the castle with the keeper, on foot, with three poor fish on a string, when they met a poor man with a magnificent catch of trout. The peasant planted himself before the King and asked a light for his pipe, and when he had received it, he said with scorn: "You seem to be no great things at fishing. To look at your catch one would think you were the King." His Majesty, rather red in the face, asked why. "Oh," returned the other, "he thinks a good deal of himself, but he is a very poor body more fit to be a king than a sportsman." E. T. D. CHAMBERS.

Fifth Annual Tuna Tournament.

SANTA CATALINA ISLAND, Cal., May 12.—As the big steamer Hermosa drifted into the dock at Avalon a line of men appeared not far away, which reminded some of the passengers of the old-time Chicago or New York hackmen, but it was a little different. Instead of "Have a hack?" it was "Have a boat, sir?" "Tuna boat, sir?" "Glass bottom boat, sir?" "For the Admiral Dewey, right this way." "Here you are for the glass-bottomed side-wheeler Admiral Sampson." "Here you are, the 'Teddy' glass-bottom boat." "Going yellow tailin', sir? Fine boat, sir; best of tackle." and many more from as jolly-faced and pleasant-voiced a lot of sea dogs as ever spliced the main brace. There are horses at Avalon, but the "livery" is boat, Avalon being a sort of a Venice, where you get into a glass-bottomed boat or a launch to go anywhere; and a very delightful custom it is. But it takes some time to get accustomed to hearing the wealthy residents of Avalon talk of launches and boatman as they would of horses and carriages, as every one has his launch and "driver" or boatman.

The hotels and boarding houses at Avalon—all have their quota of tuna anglers from all over the country who are anxiously awaiting the arrival of the big game, which is due now.

Judging by former years, the exact arrival of the game is very uncertain. Sometimes they come in April, then disappear; again it is May 15; and one year they did not arrive until June, and then came with such a rush that many were taken. Eastern anglers are often astonished at the small number of tunas taken. In no one season have over 200 been taken with the regulation rod and line of not over 24 strands; and no angler has beaten Mr. E. L. Doran's record of eighteen for the season. The reason for this lies not in the small numbers of fish, but in their game qualities. They come in thousands, fairly covering the sea at times; but the angler who takes his fish without several or indeed many losses, is fortunate indeed. There have been known certain anglers who could never land their tuna; yet offer up lines, hooks and rods year after year. The average fish in its best condition is apt to demoralize the average angler, and a wreck of tackle is the result. In a word, the chief reason why more tarpon are taken than tunas lies in the fact that the tuna in its best condition is much harder to take, and again, there are in the United States many hundreds of miles of coast providing tarpon fishing, from Aransas Pass around to the mouth of the St. John's in Florida, not to speak of Tampico, while the tuna, remarkable to relate, is, so far as sport with the rod is concerned, confined to the three or four-mile limit between Avalon Bay and Long Point of Santa Catalina. The season for this fish may be said to be from May 15 to August 15, though it changes every season, and fishes have been hooked at Catalina in February.

The angling tournament given this season by the Tuna Club, organized by Chas. F. Holder several years ago to encourage rod fishing and prevent the waste and over killing of large game fish, is attracting much attention, and many well-known anglers are on hand hoping to beat some of the records. Among them are

Col. Stearns, of Los Angeles, who holds the tuna record for 1902, and Mr. John W. Northrop, of Chicago, who is one of the best-known sea anglers in the country, having taken about every big fish that swims, including the big devil fish of the Mexican Gulf. The following are the Tuna Club's records up to date, and as may be surmised, the club record of 251, of Col. Morehouse, president of the club, until he is beaten, is the plum which anglers are reaching for.

The fifth annual angling tournament of the Santa Catalina Island Tuna Club opened with this month of May.

The only restrictions are the rules of the Tuna Club that rods and reels must be used and that rods must not be less than 6 feet 9 inches in length, the tip of which must not weigh more than 16 ounces. By "tip" is meant all that portion of the rod from reel seat to end of rod. The line must not exceed 24 threads or strands and be capable of sustaining a dead weight of not more than 48 pounds. All anglers must bring his or her fish to gaff unaided, and the fish must be reeled in, a broken rod either before or after gaffing disqualifies the angler. The tournament is open to amateurs only, professional boatmen, those engaged in allied industries on the island and members of their families being barred, except as in special class I.

The present holders of cups and records are: Largest tuna—C. F. Holder, Pasadena, season 1899, 183 pounds; Col. C. P. Morehouse, Pasadena, season 1900, 251 pounds; F. S. Schenck, Brooklyn, N. Y., season 1901, 158 pounds; F. V. Rider, Avalon, season 1901, 158 pounds; John E. Stearns, Los Angeles, season 1902, 197 pounds.

Black Sea Bass.—F. V. Rider, Avalon, season 1898, 327 pounds; T. S. Manning, Avalon, season 1899, 370 pounds; F. S. Schenck, Brooklyn, N. Y., season 1900, 384 pounds; A. C. Thompson, Pomona, season 1901, 384 pounds; H. T. Kendall, Pasadena, season 1902, 419 pounds.

Largest Yellowtail.—F. V. Rider, Avalon, season 1898, 41 pounds; F. S. Gerrish, Jacksonville, Fla., season 1899, 37 pounds; R. F. Stocking, Los Angeles, season 1900, 48 pounds; T. S. Manning, season 1901, 33 pounds; Dr. Trowbridge, Fresno, season 1902, 47½ pounds.

The game fishes listed in the tournament are the tuna, black sea bass, albicore, yellowtail, whitefish, sheepshead, bonito, rock bass. Handsome prizes are offered in all these classes for both boatman and angler. There are prizes to the boatman for the boat which takes the first fish of the season, and for the best equipped boat, all of which has had its influence in making Avalon the admiration of anglers for the sportsmanlike methods which hold there. Everyone fishes with a rod—no one uses a handline or any kind of a line larger than a number 24 Cuttyhunk. If the fish can't be caught with this he is not caught at all, but that he is caught the records show. Local anglers are looking forward to the visit to Avalon this week of Dr. Van Dyke, of Princeton, a famous lover of the rod, who is in Los Angeles as moderator of the Presbyterian General Assembly. The rugged cliffs of Santa Catalina are far different from the charming scenes Mr. Van Dyke has pictured yet none the less beautiful, and it is the hope of many to see this disciple of Walton have a full measure of the "fisherman's luck," of which he writes so charmingly.

SENOR X.

At the Aquarium's Table.

Where they Like to see Every Boarder with a Good Appetite.

ALWAYS after a newly captured fish has been put into a tank at the New York Aquarium, the first thing to be done is to feed it, or try to get it to eat. At some periods of the year some fishes in nature may go entirely without food for a long time, and in captivity they may do the same, or eat very little; but as a general proposition a fish that is doing well eats well; and there is nothing that pleases those who have the care of captive fishes so much as to see the stock with good appetites. That means that the fishes are feeling well, to begin with, and their taking food regularly and in sufficient quantities means that they are keeping up their strength, and, so to speak, their spirits. As long as a fish eats it is all right. The newcomers are not only tempted with the most attractive food that can be supplied to them, but they are actually fed by hand; that is, the food is actually put into their mouths, and this very likely is done day after day; and the biggest and clumsiest of the fishes are the ones likeliest to be fed in this manner.

Every effort is always made to give the fishes generally what they would like to eat, and their diet is varied as much as possible with marine delicacies such as shrimps, soft shell clams, and so on; and it is sought to satisfy even the tastes of individual fishes. For example, the green parrot fishes like soft clams, shells and all, and they get them, these beautiful fishes eating the entire clam, biting out small chunks and chewing up the pulp and shell very fine and swallowing all. Most fishes that eat one sort and another of crustaceans, reject the shells. But that's the way the green parrots like clams, and that's the way the clams are fed to them. On the other hand, there are some fishes that get their soft clams on the half shell, these being the angel fishes, the cowfishes and the trunkfishes, and as it has been found that it is better for these fishes' health that they should not eat the tough head of the clam with the leathery, skinny hood that covers it, that part is cut out before the clams, on the half shell, are put into the tanks for them.

Indeed, the dietary is quite varied, as some fish are vegetarians, many carnivorous, and a few omnivorous. The vegetarians are few in number, and feed on soaked cereals or green plants in season. Beside shrimps and clams, the carnivores have various tastes. Some will eat only living fishes that they can capture; others thrive on dead fishes from which the bones have been removed; some require a diet of small crabs, and almost all enjoy a bit of salted codfish as a delicacy. Besides the fishes there are the turtles, seal, lobsters, sea-anemones and others to provide for, each requiring a special knowledge of its wants and habits through all the seasons.

Many an anxious consultation is held over fishes that refuse to eat or that develop some disease and lose their wonted vigor. This one needs a salve for some wound, that one is suffering from some fungus growth. The latter is treated by hydropathy literally; that is, if it is a fresh water fish it is put into salt water, and vice versa, for the fungi that live in one kind of water cannot live in the other.

Another matter of prime importance to the welfare of the inhabitants is the constant circulation of the water in ample volume. The regulation of the temperature also requires constant attention. Fishes are commonly called cold-blooded; they are, in fact, variable-blooded, and are keenly susceptible to fluctuations in the temperature of the water. In the aquarium not less than in the open water, these sensibilities play an important part in the life of fishes, and success in management means almost hourly attention to the regulation of the temperature. The New York Aquarium is furnished with a refrigerating apparatus on the one hand, and a warming apparatus on the other, so that salmon from the icy waters of Maine may feel at home, while the tropical fishes are comfortable in the neighboring tanks.

The men in charge of the fish get to know the peculiarities of every individual. In fact, this is necessary to success, and it is knowledge acquired by experience, not found in books. They tell us that fish of different kinds put together in a tank will fight till one kind is killed out, and that occasionally those of the same species will hound certain individuals to death; or perhaps it will be one only that is made the butt of all the rest. This trait is characteristic of the trunkfish.

The species of fish of which the New York Aquarium has the largest number, but of which the public sees the least, is the killifish. Although they are only from one to three inches long, they are as quick witted as the brightest of the big fish. They have to be, for they have so many enemies. At the aquarium they have an opportunity to display their powers of adaptation. They have only one opportunity to show what they can do in this direction, but they make good use of it. There is only an instant in which to decide upon the use which they will make of this opportunity, but there is no hesitation in making the decision.

The "killies" are collected every day for the aquarium by a man employed for the purpose. They are needed in large numbers, for they are used as food for the other fish. Every day a quantity of them are thrown to the bass and trout alive. It is then that they display their intelligence, or instinct, whichever it is. One is inclined at first thought to believe it is the former, for it is certain that they have never been called upon to meet the enemy in tanks shaped like those into which they are thrown. They quickly adapt themselves to the conditions under which the conflict for survival must be fought. The foe is as keen in the hunt as the hunted. It is a war of the wits.

The striped bass are kept in one of the oval basins on the main floor. There are a score or more of as fine specimens of the species as a fisherman ever looked upon in it, and it is tantalizing to one fond of fishing to watch them lazily moving across the white enamel bottom. A few minutes before 4 o'clock one of the keepers approaches the tank with a pail containing a hundred or two of the little fish. He leans over the edge, dips his hand into the pail, takes out a handful and tosses them into the center of the pool. There is a sudden commotion in the water. The bass are rising to the surface with a rush. It is now or never with the little fish. Do they lose their heads? No! The fight between the bass and their supper is now on. Will the bass have their supper? They have jumped for the largest of the "killies," leaving the smaller ones for dessert.

When by themselves the smaller "killies" usually remain at the bottom of their tank. They do not seek the bottom now. It is safer on top. With sundry darts they spring for the side of the tank. They know the habits of bass. The bass jump for their food. The small fish says to himself: "If I can only get to one side of the tank before the bass gets me, I have a fighting chance. Unless he is exceptionally clever, he cannot get me without hurting his snout when he jumps for me." He succeeds in reaching the white tile side, and finds there many of his fellows. They swim along the tank side in groups, and the bass leave them alone for a time.

Probably no angler would think of the weakfish, for instance, as one that could be induced to take food from the hand; but the weakfish at the New York Aquarium will eat in this manner.

That lightning-quick fish, the mackerel, and others of his quick moving family, can likewise be brought to take food from the hands, though they do not come up and pause and take the food deliberately from the fingers. They seize it out of the fingers as they flash past; doing this, however, of a deliberate purpose, so that it may be said of them, too, that they will take food from the hand.

In fact, there is hardly a fish which comes to the aquarium which will not take food in this way after being there six months or more. The fishes that will take food thus include not only the common, familiar kinds, but the strangely-shaped and bright-colored varieties from the tropics.

They are indeed so ready to do this that the man who feeds them has to look sharp and see that they don't bite his fingers. There are here plenty of fishes, and some of them not so big, either, with teeth sharp enough and jaws powerful enough to enable them to bite to the bone.

At the same time there are plenty of the fishes here that don't nip and catch in that way, but eat with more deliberation, and there are plenty of them that are at the top of the water waiting for the man that feeds them when he comes along, or that come to the top to meet him the instant he raises the screen above their tank.

Here is the orange filefish, from local waters, an odd looking fish, which comes to the top and feeds from the hand with absolute confidence. Its small curious mouth, when open, presents a round orifice not much more than big enough to take in a lead pencil. It takes its food by suction.

The orange filefish comes up for the shrimp held out for it and mumbles around it without any hurry at all until it gets it just right, and then sets its suction going and takes it in, and it takes in this way shrimp after shrimp.

A little further along there comes to the surface for his daily treat of killies a big portly triggerfish from Bermuda—a veteran; this old chap has been here since 1897, and it comes up now at regular feeding time regularly and waits with its nose right at the top of the water, and rolls its eye at you as it waits.

The man with the feed holds a killie down, puts it, in fact, right into the fish's mouth, and the old chap stays there and takes the killies as they are handed down.

Indeed, some of the fish at the aquarium are fed as if they were infants who were just being weaned, or in the trying period of developing teeth. Instead of presenting the food to them on the end of one's finger, however, a slender, sharp pointed stick is used. The sea anemones, the African catfish (among the livcliest fish in the aquarium), the Siamese climbing perch, sunfish, paradisefish, the amphiuma, or Congo snake, the white axolotl, the Spanish ribbed newt, the common newt, and the triton are some of those which receive their food in this way. To all of these is given minced beefsteak. As they are not sticklers the steak is only top round. These fish are kept in the glass jars in the laboratory and have no opportunity to secure food for themselves. They are always glad to get their meal, which varies from one little piece of the minced steak to a number of pieces. Mr. Spencer gives them their meal about 4 o'clock in the afternoon. He carries it about on a little wooden spade which suggests a butter paddle such as the good housewives of New England work their butter with. Beginning at the end of the row, he stops in front of each jar in turn, and, taking a morsel of the meat on the end of his stick, pushes aside the ulva floating on the top of the water, and pokes it into the mouth of the fish, which, as a rule, jumps for it. Sometimes the meat sticks on the end of the stick and then the fish has to give it a pull. Some of the fish are so small that they have difficulty in swallowing a single morsel. They are always greedy for it, however, and ready to undertake the task.

"Blue Crab!" exclaimed a trim young woman teacher in charge of a flock of scholars, reading the label on a tank and glancing then into the tank itself, "I don't see any blue crabs."

But scarcely had she spoken when there came swiftly floating down from above through the water of the tank a lot of small fragments of clam that had been thrown in. And scarcely had the first of these fragments reached them when the bottom of the tank fairly swarmed with the liveliest lot of small crabs ever seen, and lots of them. There are in this tank upward of one hundred and fifty young blue crabs, ranging from one-quarter of an inch up to three inches in length.

Before that food came down they had all been buried in the sand at the bottom of the tank. Now they were all out dancing and prancing and jumping about, grabbing at pieces of the floating clam and grabbing it away from one another, and two crabs pulling at the same piece; little blue crabs—and the blue is the liveliest of all crabs—everywhere, and every one on the jump and go.

The tank that had been a moment before so quiet, was now a scene of great activity and excitement, and the young teacher and her flock were quite fascinated by the show; as, indeed, are all who chance to see this little spectacle of the blue crab tank at feeding time.

When one of the little crabs has got its claws on a fragment of clam, it may dart upward through the water; the blue crab is a greeat swimmer. It puts out one big claw, bent with the elbow to the front like a cutwater, and trails the other straight behind like a rudder or steering oar, and propels itself with its swimming claws.

Many of these little crabs take their food and climb up the back or one of the side walls of the tank and stay there to eat it, where they are less likely to be disturbed by others; so that now all the walls of the tank are sprinkled with variously sized small crabs scattered irregularly, while the bottom of the tank still swarms with them, and the previously vacant water is alive with them, darting here and there. So that it is a lively tank, indeed, this tank of the small blue crabs; and many pause to look at it.

There is one crustacean which need have no fear of the vivisectionist. It is the prawn, the first cousin of the shrimp. There are a number of them at the aquarium, where they are kept in a round jar in the laboratory. The reason that they need never fear the vivisectionist is that they are so nearly transparent that one may see their little hearts, livers and lights, and black linen thread tract right through their sides. They look as if they were made of glass with a tinge of sea green in it. Except for the two tiny dark bead-like eyes on the ends of two horn-like projections on their heads, one can scarcely distinguish them from the water in which they swim, they being so nearly colorless. When they swallow a morsel of clam, which they do from time to time when they are hungry, one can observe its progress to the digestive apparatus. Strangely, the white morsel looks black when once it is inside the prawn. This is because no light can pass through the clam, and none can be reflected from it. It is no more than a black period inside of a short paragraph of a fish. Prawns are three or four inches long. In shape and actions one might suppose them to be embryonic lobsters. They have miniature claws in front and a tangled undergrowth of legs. Great feelers—great for such an atom of life—go before to warn them of danger. Behind they have a paddle-like extremity which serves the same purpose as a similar organ on the lobster. By suddenly doubling themselves up they are able to shoot themselves backward when danger threatens before, but they are not as pugnacious as lobsters. Prawns are regarded as good to eat.

Since the death of the big West Indian seal, long famous for its habit of squirting water over the bystanders around its pool, many of the visitors have transferred their attentions to Nellie, the harbor seal, apparently with the hope that Nellie will cut up some similar antics. The handsome harbor seal has always been a favorite here, but her pool is now surrounded daily by more people than ever.

Nellie was never a joker like the big West Indian, but she is a lively creature and a lightning quick swimmer, and often in making the circuit of her pool she will jump three-quarters of her length out of the water. She has always been very intelligent and seems now to be

getting more so all of the time. For instance: Every day at 4 P. M. a man brings out of the feed room at the aquarium a tin bucket in which is contained the harbor seal's supper, which he sets over between the outer and inner railings of the seal's pool, at the platform end, there to await the coming of the man who does the actual feeding.

Nellie always comes up on the platform at this time, too, for she knows as well as anybody what is in that bucket. There on the platform she waits for the man who is to feed her. He climbs up over the railing and steps over to the pool's platform and stoops and says: "Shake hands, Nellie," which Nellie never fails to do, putting up her flipper promptly.

If the man who daily feeds Nellie comes along, as he sometimes does, rather early, and goes for the feed himself, then Nellie, as he passes along near the side of the pool, swims along inside as close to him as she can get, jumping out of the water two or three times on the way in joyous eagerness and anticipation. And when the man appears with the bucket she jumps out of the water and splashes round again and then bolts for the platform to meet him there.

But passing the pool thus early one day recently the man was surprised to see that Nellie did not follow along in the pool parallel with him as usual, but stayed right on the platform, whither she had already gone, without budging. This was strange, and looking back he saw Nellie close by the inner railing and throwing up a flipper apparently to him; and, looking again, he saw the flipper resting now on the top of that inner railing square abreast, as he now observed, of the tin bucket, which was already there, and which, to all appearances, Nellie was trying to point out to him.

It had been brought out that day a little earlier than usual, and it had chanced to escape the man's eye; but it had not escaped Nellie's.

When one of the small turtles in the pool of little alligators, turtles and bullfrogs gets hold of a piece of meat bigger than it can swallow at a gulp, it spreads its hind legs apart, as though to brace itself, and then fastens the claws on one or the other of its fore feet in the meat and pulls; just as a small boy might pull with one of his hands on something tough that he held between his teeth. In this way the turtle pulls his food into pieces that it can swallow.

There are in this small pool many small turtles, including many varieties, and they all have pretty good appetites; but some of them are too lazy to hunt around for the food when it is thrown in, or they have hazy notions of right or wrong, for no small turtle will hesitate to grab the food out of another turtle's beak if it gets a chance.

A small spotted turtle here picked up a piece of meat the other day and was industriously clawing it apart and eating when there lumbered up to it a snapping turtle twice its size which snatched the food from the spotted turtle's mouth and calmly bolted it. The spotted turtle was powerless to resent this treatment, but a minute later the spotted turtle got a chance at this same snapping turtle and got even in great shape.

When the spotted turtle had been deprived of that piece of meat it swam on a foot or two beyond the snapper and then turned around, by chance or intention, just in time to see the snapping turtle pick up from the bottom of the pool a good sized piece of meat, which it had found itself. For that piece of meat little spotterino now made a dive. It couldn't have begun to pull it away from the bigger snapping turtle, but when it came upon the snapper unawares, snipped the meat out of its beak, and was off with it before the snapper could put its wits together and shut tight.

With the piece of meat in its mouth the little spotted turtle kept right on, paddling away as fast as it could, like a small boy who had snatched something and was running away with it. The lumbering snapping turtle didn't try to follow, but the little spotted turtle took no chances. It got away from the bigger turtle as fast as it could and as far. Other turtles reached out for the meat, but the spotted turtle evaded all and made for a clear space on the bottom of the pool ten feet away; it was like going out into the open lots of a town, where there would be no houses, no people around at all, and then devoured its prize. Truly, there's something going on all the time in this pool of reptiles and batrachians.

The big sturgeon which died at the aquarium recently was not the only specimen there on exhibition. There are three more swimming about in the tanks. The sturgeon is an interesting fish with a telescopic mouth. Its mouth has not the usual bony jaw opening like that of most fish. It is on the under side of its head, like that of a shark, and is more like a hole than anything else. In front of it, hanging down like a thin beard, are a number of sensitive tentacles. Whenever the surgeon in his search for food skims the surface of the bottom, these tentacles sweep the ground. If they chance to pass over the end of the siphon of a soft-shelled clam, the information is immediately telegraphed to the brain, and the telescopic mouth unfolds into a tube over the neck of the clam. Its gills begin to work with the speed of bellows when a fire is being stirred up. The sand blows out of them on either side in a little cloud. In a few seconds the sand around the clam has been sucked through the gills and the clam is fitted into the mouth of the sturgeon. Once inside the vestibule of the sturgeon's mouth, the shell is crushed to pieces, the gills again working like a busy pair of bellows. The clam, it is needless to say, does not follow the fragments of the shell.

Weakfish near New York.

PRINCE'S BAY, Staten Island, N. Y., May 18.—*Editor Forest and Stream:* Weakfish are here and ready for business. It is early for them to take the hook in these waters, but their actions prove the fact. On the14th, 15th, and 16th good catches were made at Gifford's, and yesterday two or three were caught here in Prince's Bay in near shore, and, as we call it, "under the light." Any fisherman from New York who has fished in Prince's Bay will know the location "under the light" and "on the flats," two good places for these large yellow-finned tide runners. ***

Canoe and Camp Life Along the Delaware River.

VIII.—The Camper's Sky and Clouds.

"The heavens recount the glory of God, and the firmament proclaims His handiwork."—From Wellhausen's Translation of XIX. Psalm.

"Underneath the young, gray dawn,
A multitude of dense, white, fleecy clouds
Were wandering in thick flocks along the mountains,
Shepherded by the slow, unwilling wind."
—Shelley.

THE wild, savage instinct lingers in nearly all civilized men, and blazes forth during an outing with rod or gun. The diverse moods of my tent-mate prove this.

On Sundays he "dresses up"—white shirt, collar, a sedate face under his sober hat, patent-leathers, cuffs, and a clean shave. He protests as he sees men fishing. But we take the canoe on the train up to Curtis' Eddy, just above Cochecton, and make a Sunday run down the river to the tent at the head of Upper Westcolang Rift; and in the favorable morning light he loves to watch and follow the bass, gliding about over their now disused beds that look like big submerged soup-plates lined with little stones. He tells how the fish make them, change color during the time of actual spawning, and how the male fish guards the vitalized eggs. He says it is a shame to pursue and kill them, as they never do us any harm, and have as good a right to life as ourselves. This is when he wears his Sunday face and clothes, and feels and talks what he is, a dignified college professor.

But on Monday morning he dons a blue shirt, brown overalls, coarse shoes, and a horrible straw hat. All through the week he grows more and more disreputable; and by Saturday he is eating fried fish with his fingers, and talking in the rough dialect of a backwoodsman. He

PURE SKY AND REFLECTIONS.

voices his impatience at my slow preparations to join him in the canoe for a try at the fish with modern tackle; for our tamarack poles have been broken, stolen, and whittled up on wet mornings for shavings to start the camp-fire.

"Don't ye see 'em jumpin' out there?" he protests. "Hurry up!—rain's a comin' soon, an' they'll bite fine!"

"Thought you didn't approve of killing bass."

"Pooh! Nonsense! That was last Sunday. See, there's another jumpin' and aggravatin' me. Hurry up!"

Yet even on a Saturday afternoon, and especially after supper, if he stretches himself on one of the two rubber mattresses from the tent, and smokes, he quite charms me with the grace and taste of his conversation. But he talks rather pompously, as if he were lecturing to his classes. Here is a sample of his remarks after he has "flopped down," has a cigar "going," and while he scans the sky and its cloud-ranges as evening twilight approaches:

"Now, this is comfort, and what I often did when a boy—watched cloud-castles over the fields of the old homestead out in the West, forty years ago. It was a dream-life. I pictured faces in the 'thunder-head' clouds, flocked and balanced in the heavens. Mountains, rivers, islands of the blue sea, titan birds, faces, boats and persons in them floating down azure rivers; dragons, alligators and elephants; and I tell you those clouds of that long ago were my castles in Spain. I even wrote some verses about them. Don't run away—I'll let you off if you will listen to two of the stanzas: had them in our village paper, and the girls said they were fine.

"A fair, illumined cloud, rose-tinted mist,
Rises above the groves of verdant yew,
Joins with the clouds above, whose checks are kissed
With sunlight mild, and forms a castle true!
A castle wondrous fair, suspended in the blue:
All subtle pearls and purples in the sunset ray;
Made beauteous by the rich light melting through.
Nor fancy's pencil bright, nor poet's sweetest lay,
Can justly to the mind this fairy scene portray!

"Columns and terraces, and lofty towers,
Ane deftly fashioned, as divinely planned.
The massive portals are bedecked with flowers—
Wreath crowning wreath and band encircling band:
While on the snow-white dome, superbly grand,
A golden staff supports the flag of bliss,
On whose pink folds are traced with cunning hand,
The symbols of man's earthly happiness,
In wild confusion thrown, yet nothing placed amiss!"

"Why don't you applaud?" he growls. "You ate three fish for breakfast, and have drank four lemonades since we came in this afternoon. Indigestion—that's your trouble. How hard it is for a 'poet' to find appreciation! But really you ought to study the clouds."

We watched them while on the Delaware, as boys watch a circus.

This article is for the casual reader, who would skip dry details about cloud perspectives and some of the laws of light and color. Besides, no writers about clouds can account for much of their phenomena. So the few hundreds of words here devoted to them will be woefully incomplete and fragmentary.

The sky should be regarded as a clear, fiery-blue liquid, yet full of air that is more or less saturated with moisture that is visible when cold has condensed it. A cold wind rushing out of an Apine valley often forms clouds in the warmer, moist air which it finds below. A snowy mountain-peak frequently has its cloud-banner streaming out, but stationary in high wind, as if some wizard had tied it to that pinnacle. It is caused by the moisture being condensed into a visible cloud which is constantly blown away and as constantly formed, as the air swoops over and past the peak..

This invisible moisture in the air will cause endless change of hues in the sky without clouds, tinting its transparency in a dozen blues, faint pinks and purples, mauves and greens. I do not now speak of hues of clouds, but of transparent sky without clouds, where the moisture becomes sufficiently visible in sunlight to make tender changes of hues in the sky itself, just as dust is shown along the line of sunshine that traverses a room. So the absolute purity of the sky's deep blue is endlessly changed by invisible moisture, which is yet capable of affecting the color of the sky itself. And when clouds do appear, the sunbeams falling just along their edges and darting beyond them, show this vapor partially in effects that country boys sometimes call "the sun drawing water," and which artists so often try to show on their canvas skies.

Perhaps the leading feature of all clouds is their constant and perpetual changefulness of form and hue. No part of any cloud remains the same either in shape or color, for two consecutive moments.

The sky scenery is divided into three great cloud classes—the upper (cirrus), central (stratus), and lower, or rain cloud.

The cirrus clouds never touch even the highest mountain pinnacles, and are always full of hair-like and parallel lines whose direction is also parallel with the wind, to which each cloud always presents its narrowest point. The outlines of all cirrus clouds are very sharp, with distinct edges. When they gather in flocks and fill the sky, their number is like the leaves of the forest; and they are apt to be agitated by lofty winds which bend, break and serrate them, but without marring or destroying the individuality of any. These clouds show the coolest and softest white, pearl-gray and scarlet tints. They contain no impurities; and as light is caught and held in them, they become saturated, as a sponge with water, with the most exquisite colors, perhaps unequaled by any other hues in nature.

The whole sky is often covered with them, each sharply visible, yet often so ethereal that you can see the stars through their films. They then make the sky a titanic canopy of fleecy wool. And there will not be one of these thousands of clouds in any one of their myriad rows which will not appear to embody a distinct thought and plan; separately set, poised and balanced, yet with a thoughtful location when considered in relation to the whole giant company! It stands like a soldier on dress parade, just where it should be, in orderly companionship with the host of which it forms so tiny a part, and symmetrically aiding to make the sky a concave of petrified foam—yet tender white, pearl, mauve and pink throbbing through it all in moments when nature tries to surpass even herself, and the vault becomes transfigured! It is an unspeakable, visible plan of buoyant, sublime repose. Yet it has its unwearied, subtle passion and change on the uplifted floor of the heavens. This whole pageant, quite as much as flowing water, is governed by inflexible laws of perspectives, curvature, light and hue, as it marshals itself from the zenith down to its retirement into the horizon, melting back into the sky recesses—"folded veils of variable mist."

Thus we always find in clouds the purest vital beauty—felicitous fulfillment of function. It is quite as manifest in the stratus, or central cloud.

To this second class belong the sky-mountains with their radiant summits and buttresses of cold shadow—clouds which fling themselves into crags and precipices more gigantic than a dozen Matterhorns, yet gashed with cañons seemingly as solid as rock, and under crowded, uplifted peaks, domes and promontories—torn with cavities and tunneled with long reaches of perspectives leading back to the open firmament beyond, and with sunlight pouring through them, showing tender little fields and points of intensest blue sky; sometimes all in peace; still, fixed; and again boiling and tortured in convulsions, like Milton's flinging of "hills with all their woods."

And breaking through all this will be a dozen aisles, each full of its histories of distance and space, "fifty hollow ways among bewildered hills—each with their own nodding rocks and cloven precipices and radiant summits and robing vapors, but all unlike each other except in beauty, and all bearing witness to the unwearied, exhaustless operation of the Infinite Mind."

And as if to show that she is never satisfied with her own beauty, nature will often set above all this as a canopy, an upper concave flecked with innumerable fields of the higher cirrus clouds, also graced with exquisite glories of colors.

The magnitude of the stratus cloud formations is also amazing. So is their seeming solidity. Anywhere in them the aeronaut could breathe freely; yet with all their actual, evanescent fragility, they look massive as stone! Real mountains are thus mocked with their own forms, and multiplied in size while filled with unspeakable brightness and many-hued fire. There is no Alpine or Himalayan mountain view but sinks to insignificance in comparison with these unsubstantial pageants of the sky, which can be well seen almost any midsummer day along the Delaware. Far too often we scarcely note, much less see them. Even when specially looked at, I have heard

this dialogue between an artist and sportsman of taste, and a mere fisherman:

"What a magnificent, fiery sunset in clouds!"

"Y-a-a-s! Looks as if the sky had been wearing a mustard plaster."

It is difficult to have patience with such vulgarity before all that infinity of loveliness, equally infinite in all its parts and divisions of parts. For if you select from all that conflagration a single square inch of the picture, and study it, you find that it has the vital purity and delicacy of a leaf of the wild rose, and that it still triumphs over and defies you with its infinity quite as much in that subdivided, tiny spot, as in the marvelous whole—each point of mist and color too tender, changing, subtle ,delicate and mysterious for analysis. To those of open eye and humble heart I say, study the stratus cloud; for in the above struggle for some approximate description, I have only made pitifully weak and imperfect mention of some of its numberless attractions.

Lastly, to the rain-cloud belongs the white wreath that broods over or steals along the mountain sides, appearing, vanishing, reappearing and widening to junctions with other mists, and often ascending and blackening with increased and electric life, to take possession of the whole sky. It then plays with thunderbolts, reigning perhaps in gray monotony, or forming afar off; and, rousing and carrying its own winds, it advances toward you, the white and gray couriers crowning it like a skirmish line before the ominous main body. Or it may be seen retreating, and fringed with dreamy, down-reaching, wind-swerved rain-curtains far away among plains and hills. But it is so comparatively near that it cannot be studied in really titanic masses, sky-wide, like the cirrus and stratus.

Its most fearful life is when it seems to fill the sky because it is nearer, and brings its twisted, tortured motion across your path in the sweep and fury of the thunder-storm. It is always heavier than the rain it releases. Its edges become ragged, hurrying, fitful. And its gloom and indescribable electric oncoming and threatening murmur, its fiercer voices, sulphurous being, wildness, and impending swoop over you while it yet seems to be relentlessly shattering its own self with chaotic frenzy,

SUNSET AFTERGLOW ON CLOUDS.

form what is probably the most impressive scene of earth.

Its intense gloom is yet visible through enormous space and height, a gloom full of wild haste and crouching fear, its mad swirls of hurrying drift being flung up and onward, every writhing wreath full of its own special passion of torture, yet all overpowered and swept along by one omnipotence. Lurid colors, uncontrolled, posing fury, a sky-wide Terror being chased and fleeing before a power infinitely greater than itself!

No wonder that not only children, but many strong men, dread the advance of the maddened rain-cloud!

Here, again, nature uses the power of contrast. The rain-cloud passes; streams of fire come from its inky folds, and it bellows in pain. But as it retires into the hollows of distance, the rear guard of its rain-drops pattering on wet foliage like showers of buck-shot, note the sweet promise and blessing which it shows not only in the rainbow, but in the golden-green colors dancing on washed and sparkling forests and hills. White, dreamy, sun-flecked peace of thousands of delicate, snowy clouds, trooping to transform the heavens from their dark horror into ineffable light; while the heated hills steam like overdriven horses—the inexpressible beauty of "sunshine after rain!"

But why attempt the impossible? Far abler pens than mine have shown themselves impotent to tell of such scenes. He who dares attempt to describe them must be audacious in words; and the chances are many to one that he will not only miserably fail, but feel that his language is pompous and ridiculous, even when he has an humble desire, freed from all self-consciousness, to try and stimulate study of clouds—the downy-winged sea-angels from above whose driving shadows the scrolls of the heavens are unfolded, and from which pour the showers which wake to life the grateful laughings and sparklings through woods and meadows, rivulets and brooks that join to make the volumed music of rivers like the Delaware.

Before me are a dozen photographs of clouds; no camera can show their beauty, and no engraver represent a thousandth part of their delicacy and finish of curvature and hue. Look at the sky-pictures themselves. See them, teeming with that Vital Spirit of Nature described by Kreeshna, the Hindoo Deity, as he addresses Arjoon, the pupil. It is the Sanscrit key-note of all later writings about nature:

"I am moisture in the water, light in the sun and moon, found in the firmament, human nature in mankind, sweet-smelling favor in the earth, glory in the source of light." (See Bhagvat Geeta Dialogues.)

All this is not rhapsody, but benign fact, and as vitally true of the sky and its clouds as of the earth and its peoples, whom Jean Paul came to know so well that Carlyle said of him:

"Every gentle and generous affection, every thrill of mercy, every glow of nobleness, awakens in his bosom a response; nay, strikes his spirit into harmony; a wild music, as of wind-harps, floating round us in fitful swells, but soft sometimes, and pure and soul-entrancing as the song of angels. His is the spirit which gives life and beauty to whatever it embraces. Inanimate Nature is no longer an insensible assemblage of colors and perfumes, but a mysterious Presence with which he communes in unutterable sympathies. The infinite Night, with her solemn aspects, Day, and the sweet approach of Even and Morn, are full of meaning for him. He loves the green Earth with her streams and forests, her flowery leas and eternal skies; loves her with a sort of passion in all her vicissitudes of light and shade; his spirit revels in her grandeur and charms; expands like the breeze over wood and lawn, over glade and dingle, stealing and giving odors."

L. F. BROWN.

In Maine Waters.

BANGOR, Maine, May 16.—*Editor Forest and Stream:* The week has passed, and with it have passed all the desirable fishing records hitherto held in the State of Maine—to hear the enthusiastic anglers tell it themselves. And, beyond question, the conditions have been such as to make the past week one long to be remembered among the fishermen, who in 1902 had so much that was untoward to interfere with their perfect enjoyment of the best week's sport for the parallel week, ever enjoyed by visitors to the Maine trout waters.

This has been a week of peculiar conditions for Maine, especially in May, when sportsmen usually begin to watch the skies with care, and the direction of the wind with real concern. The very unusual conditions of low water, and, following soon after the cold weather, a delightful spell of warm weather, have united to bring the fishing up to date with a rush, and those who have had sufficient time to go to the fishing grounds and stay right there for twenty-four hours, or until they had all the fish they wanted or could carry, have enjoyed sport such as has not been experienced by them in long years of annual visits to Maine waters.

There has been, too, another interference with one's fullest enjoyment, when a half hundred of the best fishing waters have been made secondary in quality for the weeks of spring fishing, by holding back the water and raising it as high as the law would permit, to be used later in driving the logs. This year all is changed, and the high water does not come nearly as high in these reservoirs as has become customary since the log driving concerns secured control of them, in a measure. Particularly is this true at Moosehead Lake, which is lower this season than for several years, owing to the early freshets which rushed away the snows depended on for a later supply of driving water. This low water prevents the fish getting into the bushes and swamps along the shore of the lake, in search of insects, and as a consequence the fish have been very hungry and ready to attack almost anything that gave promise of having food qualities.

Another important feature of the past week has been the forest fires, which have raged in almost every section of Maine where there was woods, and has undoubtedly caused extensive damage to the timberlands. It has been so long since we had rain that in many places the ground and twigs were almost parched, and offered good food for the spark that sooner or later came that way. Several camps, private and public as well, have been seriously threatened, and, in some cases, even wiped out, and unless rain comes soon and in abundance, there will be large extra expense to camp owners in replacing that which the fire destroys.

It is probable that the past week has seen brought into Bangor the largest square-tail trout caught by a fisherman in Moosehead for many seasons. P. H. McNamara, of this city, was one of a party at the lake, and he landed, among others, a trout that weighed 6½ pounds, which is believed to be the record fish for those waters during the present season.

Green Lake, which panned out fairly well for the first part of the season, hasn't reported its run of smelts up the brook yet, and until that event the fishing will continue to be poor. Reports say that but one man had the courage to fish there during this week, and he happily landed a five-pound salmon.

Perhaps no two strings shown in this city have created as much interest and admiration as those of the Sterns party from Moosehead and the Pierce party from Burnt Pond. The former party was composed of Ezra L. Sterns, Col. I. K. Stetson, Hon. Wm. Engel, Collector of Customs, Albert R. Day, Capt. H. C. Chapman, E. E. Walker, and Elgin Greenleaf, of this city. They had a magnificent string, led by a fish weighing 5¼ pounds, taken by Mr. Greenleaf. The other string was not as large, even proportionately, but few handsomer trout will be seen in eastern Maine this year than the five exhibited by Assistant Postmaster A. H. Pierce and Postal Clerk H. A. Jordan, who were at Burnt Pond. Their largest weighed four pounds.

Governor John F. Hill, of Augusta, Councillor Wm. T. Haines, of Waterville, and Dr. F. G. Kinsman, of Augusta, have just returned from a trip to the Passadumkeag Stream, where they fished with great delight and most desirable results, from the source to Cold Spring. They camped out one night and caught lots of fish, none weighing above a pound, but affording some of the very finest stream fishing ever enjoyed by any member of the party. On the way home Dr. Kinsman left the others and stopped off for a day at Cold Stream Pond, Enfield, and caught eight good fish to take home.

It was at Cold Stream Pond, too, that Postmaster G. D. Libby, of Gardner, hooked "the grandfather of them all," as he puts it. Mr. Libby was at the pond all the week with a friend, J. F. Wight, of Boston, and both had been having very good luck—so good that there was an abundance of fish for the table and some to set aside against the departure for home. While trolling Friday afternoon, Mr. Libby had a tremendous strike and played his fish for a long time, once getting the fish near enough to the boat to be seen—and it was a bouncer, the largest he ever hooked, he says, and those who were near at the time support his story. But finally the fish got the better of the angler, and, much to the latter's disgust, escaped.

Wm. G. Dillingham and George A. Crafts, of the Eastern Manufacturing Company, accompanied by Fred Ayer, son of the president of that company, all of this city, have returned from a great trip to Sisladobsis Lake, where they landed forty-seven handsome salmon. They brought home all the law allows, and had an abundance of salmon, in all desirable ways of cooking, while in camp.

The sea salmon do not seem to be coming in great schools, and up to date only one has been taken during the week, a 19 pounder caught yesterday by C. P. Hodgkins, of this city. At Calais an occasional one is being taken, but the best run there is in early June, while the best run at the Bangor Pool is any time, and you are fortunate to be on hand during its continuance.

HERBERT W. ROWE.

New England Angling.

BOSTON, May 16.—*Editor Forest and Stream:* Some facts regarding the Megantic Club will be read with interest not only by the 238 members of it but by many others who have partaken of its benefits. The club has exerted a powerful influence in the cause of protection in Maine, and many of its members have been zealous workers in other States. This is especially true in Massachusetts, where a goodly number of them have joined the State Association, some of whom have been for several years members of its Board of Management.

Previous to its formation, some fifteen years ago, Canadian Frenchmen were wont to come over the line into Maine and kill deer in winter time while in their yards for their hides. In fact, indiscriminate slaughter of all kinds of game was the rule with them winter and summer.

Not only has this wanton destruction been stopped, but, under the guidance of efficient directors, a careful observance of the game laws has been secured on the part of its members and visiting sportsmen. In addition to this a fish hatchery has been established and placed in charge of a competent superintendent. Last August 140,000 young fish were liberated in L, Big Island, Rock, Grant, Northwest and Arnold ponds. In the latter were placed 2,000 landlocked salmon obtained from the United States Fish Commission last fall. 200,000 trout eggs were obtained by purchase, and 20,000 salmon eggs, as a gift from the United States. The fishing is reported to be constantly improving in spite of the fact that 163 members and 84 guests visited the preserve last year. One new camp at Chain of Ponds has been recently built.

The managing director, Mr. Stephen F. Johnson, of Boston, who has recently returned from a trip across the preserve, reports that materials and help have been provided to put the club house and camps in thorough repair prior to the opening, which occurred May 15. He, however, advised members not to visit them earlier than the 20th, and says fly-fishing is not likely to be good till June. The club house is in charge of Mr. E. MacPherson; the Chain of Ponds camps are to be managed by Mr. C. F. Sprague.

Mr. L. Dana Chapman has retired from the position of secretary and treasurer, and Mr. E. A. Phippen is assistant clerk and secretary, while Mr. P. C. Wiggin is now treasurer.

A new rule has recently been adopted by which hereafter guests will be permitted to visit the preserve only when accompanied by a member.

Secretary Phippen tells me to-day that Mr. L. O. Crane, of the directors, has already started with a party for the preserve, and several other members are getting ready for the trip. The organization of this club is one of the marvels of the times, and is due to a man who has a genius for this sort of thing. Mr. Bernard Hyneman, of Hyneman Brothers, Milk street, has just returned from the Cupsuptic. Several of the salmon he caught weighing from 3½ to 4½ pounds, together with a handsome showing of trout, were on exhibition last Thursday in the window of the Boston and Maine Railroad office on Washington street. Mr. J. C. Ackerman, of Boston, who was one of Mr. Hyneman's party, captured a salmon weighing 7½ pounds. Mr. Hyneman says he returned greatly delighted with his trip. They had pleasant weather and found things lively, several other sportsmen from New York and from cities of Maine were all getting good catches. Another gentleman just returned from the Rangeleys is Mr. James Brown, of the Railroad News Company. Mr. Wm. S. Hinman, of Boston, returned from Clear Water recently, bringing a salmon caught by himself which weighed 11 pounds, and was 31 inches in length. Mr. Hinman reports a good number of anglers and everybody having good luck. On Thursday, May 7, Dr. C. A. Moore and S. W. Bass, of Lawrence, landed five trout from 6 to 8½ pounds each, a total of 36¾ pounds. Dr. Frank Stratton, of Swampscott, got one weighing 9 pounds, and Dr. C. W. Hutchings, of Boston, one of 8 pounds. Mr. S. W. Staples, Taunton, Mass., after a two hours' struggle, more than half the time after dark, brought to gaff a salmon weighing 12½ pounds.

Dr. Aldrich, of Somerville, took a salmon 12¾ pounds, and Mr. W. S. Gilman a laker 11¾ pounds. Mrs. E. G. Gay captured a lake trout weighing 11¼ pounds. On Monday, May 11, Mr. N. F. Staples, of Taunton, after a struggle of more than two hours, succeeded in landing a salmon weighing 15 pounds, which was 33 inches long. Several others have taken trout, bass, salmon and lakers from 3½ to 7½ pounds. This is a wonderful record for Clearwater.

From Lake Webb, Weld, reports continue rosy. Messrs. Whiting and Taft, of Whitinsville; Dr. Walter Hoyt, of Waltham; Mr. C. M. Reed, of Providence; Mr. Edward Stanley and family and Mr. M. W. Forester, of Dixfield, Me., have met with excellent success.

Fine fishing is the report from Middle Dam. Doctors Twombly and Jones, with two friends from Colebrook, N. H., on May 5 took two 7-pound salmon, and others weighing 6, 4, 4½ and 5½ pounds each. The two days following they caught several trout and salmon from 1½ to 5½ pounds each.

Dr. Thayer, of Fairhaven, Mass., had good fly-fishing on B Pond May 10, taking ten trout from 1½ to 3½ pounds each. May 9, Mr. F. Rolfe, of Rumford Falls, from Pond-in-River got ten trout and salmon, the largest 4½ pounds. Several others have had similar luck. At Bemis is a large number of fishermen who are having good sport. Mr. and Mrs. Adam Leighton and their son Hugh C., of Portland, have enjoyed a delightful week in one of the Bemis camps, Mr. Leighton having taken a 4-pound salmon fishing from the dock. An old-time fisherman from North Woodstock, Mr. Isaac W. Andrews, is

MAY 11, 1903.

Speckled trout taken in Belgrade Lake, Me., by H. L. Boyd. The largest weighed 8lbs. 2oz.; the next one 7lbs. 14oz.
Photo copyright, 1903, by H. L. Boyd.

here for a few days, as are also several parties from Lewiston and Rumford Falls, and many other places in Maine, and not a few from Massachusettts. Mr. Edward H. Richards, of Woburn, left for Bemis on Thursday.

From Haines Landing come reports of a great week for fish and fishing. Hon. Joel Wilbur, of Phillips, stands at the head with a 9¾-pound salmon to his credit, also three others from 3½ to 4 pounds each. Mr. J. N. Well, of New York, has taken several, the largest 5 pounds. Mr. and Mrs. Bliss, Mr. Charles N. Wood, of Boston; Mr. and Mrs. H. B. Coe, and Mr. and Mrs. W. W. Sabin, of Portland, have made good records, the ladies having outclassed the gentlemen in the number of fish taken. Commissioner H. O. Stanley and Hon. S. W. Carr may be named among the well-known anglers at this resort.

At the Bald Mountain camps an unusual number of trout are brought in this season. Fifteen fish a day are secured frequently by a single boat. Among the successful ones are Mr. W. D. Hines, Portland, and Ethel M. Hines, a 12-year-old miss who has taken six fish from 2½ to 4 pounds. Others are Dr. N. M. Marshall and Mr. A. L. Edgecomb, of Portland; Dr. F. L. Cochrane, New York, and Mr. Clement R. Hooper, who is entertaining Mr. John C. Lowry and Mr. H. C. Jones, of Philadelphia.

Guests at Mountain View are happy every day, but May 7 was a record-breaker. On that day Mr. Noyes, of Brockton, took two good salmon; J. H. Prince, of Boston, two trout, 4 to 4½ pounds; F. I. Nichols, Fitchburg, six salmon, from 3 to 5¼ pounds, and a 3-pound trout, and F. C. Sheldon, Fitchburg, two salmon, 3 and 6½ pounds. Some of the new arrivals are A. L. Harlow and F. J. Pierce, of Gardner, Mass., and Wm. A. Putnam, of Leominster.

Reports from all the lakes in the Rangeley country agree that the season is proving a remarkable one. Hon. Joel Wilbur, whose name has already been mentioned, wrote to a friend on May 9: "Weather perfect, fishing best for years. To-day I reached the limit, 25 pounds." Mr. Walter Twombly, who guided your correspondent more than 20 years ago at Kennebago, has done something the past week he has not done before in the twenty-six years of his experience as guide, namely, he "went a-fishing," and he got a fine string.

Mr. C. W. Porter, of Lynn, is at his Dodge Pond camps with a party of five. Messrs. Breed and Proctor are at their camp on Rangeley.

Fishing at Moosehead is reported good, and great expectations are indulged by all for a rushing season. Mr. E. H. McKenzie, of Boston, and J. E. Dunning, of Belmont, Mass., are among the anglers at Kineo.

Mr. Harlow says there is good fishing in Round Pond, where he recently took thirty-five in one day. He reports seeing three big moose in the road in going to his camps; also that three black bears swam the Dead River and all came ashore at the same place.

Anna Held, the famous singer, has gone to Belgrade for rest and sport, being an ardent lover of the gentle art. Her husband, Mr. Ziegfeld, and several members of the company are in the party. Mr. H. L. Boyd, of New York, is reported high line for the past week, having taken one trout over 8 pounds and another 7 pounds 10 ounces. Mr. Wm. Bourne, of New York, has had good luck, also Messrs. J. M. and J. T. Frank, of the same city.

The trolling season on Winnepisseogee and Winnisquam is now at its height. The Messrs. Wax, of Boston, have taken lakers from 4 to 8 pounds each, and a total of nearly 70 pounds. Mr. Jesse Eddy, of Boston, with five others, recently took in one day nineteen trout, with a total weight of 70¾ pounds, and two salmon 11½ pounds at Lake Winnisquam.

Newfound Lake has furnished good results to Messrs. Henry F. Elliot, Wm. H. Bean and J. C. Stott, of Boston, and Mr. Wm. Nevins, of Clinton, Mass.

Connecticut Lake has been the magnet that has attracted Judge Edgar Aldrich, of the United States District and Circuit Court. At the Summit camp on the lake he has had as guests at various times Senator Wm. E. Chandler, Senator Spooner and other men of note.

Several local fishermen have taken fine strings from Mulliken Brook, Gale River and other streams accessible from Littleton, N. H. From Simm's Stream Mr. Lee Barber took a trout weighing over 3 pounds which was 31 inches in length. Congressman McCall opened his summer home at Mt. Prospect, Lancaster, a few days ago.

Mr. Rollin Jones, of Boston, has gone to his camp on Winnepisseogee for a stay of two weeks.

A lull is reported in the fishing of brooks in southern New Hampshire as well as in the western part of Massachusetts due to dry weather. Many forest fires continue to be reported throughout New England, and unless rain comes before long there will be loss of trout in all mountain streams. It is reported from Pittsfield that dynamiters are at work on the Housatonic River and other streams. The wardens are on the watch for the miscreants and are likely to "pinch" them.

There is a flurry of suppressed excitement in southern Berkshire, due to the report that President Cleveland is expected in Tyringham the last of this month or first of next. Two years ago he was reported as getting good luck in whipping the streams of this section, getting fish where the natives little expected.

Trout fishing on Lake Quinsigamond is reported to have disappointed our Worcester friends this season, and some of them are disposed to blame the fresh-water smelts which they say have become so abundant as to gorge the trout.

Some people think the fishing in the Maine lakes, even, would be better if there were less of these fish in the waters. Right or wrong in this instance, it is a great thing to know what will and what will not disturb the balance of nature.

Human ingenuity has accomplished wonders in the work of propagating fish, providing them food, etc., but it is quite likely there are not a few things yet to be learned. Certain portions of the work in this line have not yet passed the experimental stage.

Some of our big-game hunters are watching the proceedings of the New Brunswick Assembly at Fredericton, where a few days ago Hon. A. T. Dunn, Surveyor-General, presented a few radical changes to the game laws. First, to debar non-resident guides. Second, to shorten the season on moose one month. Third, to prohibit the shooting of partridges for two years. Fourth, to prohibit the trapping of mink, otter and sable for a period of three years. This as a protection to beaver. Fifth, to prevent camp helpers from getting a license to shoot moose. The close season for beaver is extended to 1907. All our New Brunswick moose hunters are on the qui vive to know the outcome. CENTRAL.

Some Belgrade Big Trout.

BELGRADE LAKES, Me., May 11.—*Editor Forest and Stream:* Guests of the Central House have had very good fishing the past week.

Messrs. Sackett and Gallagher took five trout of 5½ pounds, 4 pounds 14 ounces, 4¾ pounds, 3½ pounds, and 2½ pounds, respectively.

Mr. Gibbs, of Montclair, N. J., took nine, the largest 6¾, 6¼ and 5¾ pounds, and six from 3¾ to 3½ pounds, Alger Farnum, guide.

Miss Ada H. Powell, of Brooklyn, took six of 6, 5, 4¼, 3½, 3 and 2 pounds 10 ounces, Lonnie Morrell, guide.

Monday, May 11, H. L. Boyd took two trout, one 8 pounds 2 ounces and 7 pounds 14 ounces, Alger Farnum, guide. These are the two largest fish ever taken in the Belgrade region, but as the fish are getting more numerous every year we look to see larger ones at any time.

Bass have commenced to run into the shoal water, and fly-fishing for same should be at its best soon.

H. L. B.

CHICAGO AND THE WEST.

Trout Fishing Looks up.

CHICAGO, Ill., May 15.—A pronounced change for the better in fishing matters occurred this week, and good catches of trout are reported along all the streams which offer any decent fishing in this part of the country. Of these, the Prairie River is making the best show at the present writing. Mr. Charles Antoine, of this city, with his friends, Dr. R. B. Miller and Dr. C. W. Carson, are at the Bates place, above Dudley's, and have been meeting with excellent success for the past few days. Catches of thirty and forty trout have been not unusual for one rod, and Mr. Antoine has sent down to his friends a bunch of some fifty trout, which averaged in the 8 and 10-inch class, with some over 1 pound, so that it may be seen the sport has been good for at least a part of the time. Mr. Edward G. Taylor, also of this city, has gone up to the Prairie again this week. He spent a day at Delos Cone's place, and intends trying the fishing on that part of the stream. Other anglers of this city are starting to the Prairie to-day and to-morrow, so that probably the stream will be well occupied for most of next week.

A special car party of city officials and friends, headed by Mayor Harrison, will leave Chicago to-day or to-morrow for a trout fishing trip on some northern river, not at this writing determined. Mr. Graham H. Harris will be of this party, and also, it need not be said, Colonel Bill Haskell, of well established piscatorial fame.

The Bass Fishers.

The bass fishers are out in good force these warm days, and the big-mouths are now running. Some excellent takes were made by the parties reported last week. To-morrow will see a still larger number go out for the better-known waters of the vicinity. Bass Lake, Cedar Lake, Maxinkuckee Lake and other Indiana waters are reported to be doing well, and I hear also that bass fishing has begun on Pawpaw Lake, Gun Lake and others of the good waters of the lower peninsula of Michigan. Gun Lake is a water which I have never fished, but from stories I heard last fall regarding it, I think it is very well worth a visit from the Chicago talent.

Shooting Bass.

A Chicago gentleman, who does not care to have his name known, drops a note, saying that boys and men are shooting bass at Hickory Creek, near New Lenox, Illinois. The informant says: "I understood that you might take steps to stop this. I am not a sportsman, but I do not like to see the destruction even of fish life. I do not care to get the ill-will of residents there, as I am a new resident myself." The complainant's advice has been referred to State Game Commissioner Lovejoy, who properly hands it over to Nat H. Cohen, president of the Fish Commission. I have no doubt that Mr. Cohen will take prompt measures to stop this violation of the law. The spearing of suckers is now in practice very largely over rural Wisconsin and parts of this State, and the man who sees a fish running in the water and who is after that fish with a spear or gun is not apt to stop to ask whether it be sucker, trout or bass. The spring run of bass was a little delayed this year, and is now well on toward its close. The Kankakee River ought, by this time, to offer a little sport below Momence. The carp are not quite so much a nuisance in that part of the stream as further up in Indiana, where the river is more sluggish and runs through the big marshes.

Minnesota Tip.

I offer as a bass fishing tip Elbow Lake, Harbor county, Minnesota, near which are twelve other lakes, from two to seven miles in extent. These waters contain both muscallunge and bass, the Crow Wing Lakes, eleven in number, a part of the head waters of the Mississippi River, offering good sport at bass, wall-eyed pike, pickerel, etc. Parties can be accommodated, and perhaps this is a good place to keep in mind for the muscallunge trip.

Wisconsin Trout Tip.

I offer as an additional trout tip for Wisconsin the town of Sparta, from which, at a distance of some eight or ten miles, good trout fishing can be reached on the head waters of the La Crosse River. There is some fly-fishing along the La Crosse and two or three other streams in the vicinity, but for the most part the fishing is rather brushy. This used to be a great trouting locality some years ago, and even to-day will yield fair returns. The best place to head for on this

stream is the Trout Falls, something like eight or ten miles from Sparta. One can camp out or can find accommodations at the farmhouses near Trout Falls. Sparta is to be reached by the C. M. & St. P. Railway. This is a district which I have not heard of as being much patronized by Chicago anglers.

Gone to Fox Lake.

The following anglers are among those who left this afternoon for Fox Lake and adjacent waters, near Lake Villa, Ill.; Messrs. L. Ries, C. C. Ingraham, T. Anderson, E. A. Wood, William Paulsen, Chas. Oak, M. Wedertz, T. Ambrose, W. G. Ruskin, Chas. Lawrence, Dr. S. B. Friend.

For the Nepigon.

Mr. W. P. Powers, of Chicago, with one or two friends, will go up for some of the big trout of the Nepigon this coming month. He ought to get plenty of trout and plenty of flies at the same time. Mr. Powers is an old trout fisherman and has had considerable experience in Wisconsin, Michigan and the Canadian provinces. Last summer he fished in the Gaspé country and was on the Grand Pabos with a friend of Montreal, who holds a fishing on that stream.

Fort Tarpon.

A party of Chicago anglers, made up of Messrs. William Nash, O. Von Lengerke, C. H. Lester and Dr. J. N. Shallenberger, will start in a week or ten days for a tarpon trip at Aransas Pass. Mr. Delos Thompson, of Rensselaer, Ind., will also be one of the party, and there was talk that Dr. R. B. Miller might be on hand also for the tarpon festivities.

Mr. J. C. Haskell, of this city, has regularly visited the Aransas Pass country for several years, and he told me this week that during his several trips he had taken to his own rod fifty-four tarpon. On one day he knew of thirteen of the fish being taken at Aransas Pass. The custom is to beach the fish, have a look at him, measure him and turn him loose again, unless a good specimen is required for mounting.

Something Doing in Saginaw.

From certain ominous indications the appearances are that something more is doing over Saginaw way. The next party of these doughty anglers to take the field will probably be composed of Messrs. C. E. Davis, W. B. Mershon, George Morley, Tom Harvey and James Peter. The whereabouts of the trip is not yet determined. There seems to be a feeling among the Saginaw Crowd that their favorite streams have been pretty hard hit this year and last.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

As to Perch, Cooked or Otherwise.

Editor Forest and Stream:

To skin, or not to skin; that is the question;
Whether 'tis nobler for the soul to harbor
Thoughts of things that are, yet might be t'other-
Wise, or fret one's fingers with the spine
Festered with slime, and scales unknown to justice.
To jab; to squeal—for in that messy strife
What stings may come as knife swerves keen from aim
And gives us paws, pitted with punctured pain!

Excuse the metre. There's a cog loose in the poet-machine, and to catch the mail I haven't time to screw it up.

But why, brothers, go to the trouble of skinning your perch, anyway? *Cui bono?* Just split them down the back, broil or fry them flesh side down, and eat them out of their skins as you would do a potato. Nobody asks you to eat the scales, and if broiled you aren't likely to find any to speak of after the process.

Drop a stout log across a cradle knoll or a couple of rocks, and build your fire against it in the hollow on the lee side. Prop up your wire broiler against the log on the windward side where the coals glow red, and your cooking will be a delight to a hungry man; and the cook need not be served personally, half-cooked, as an entree. Sir Sam White Baker says, "always carry a gridiron. A frying-pan is good if you have fat, otherwise it is useless. With the gridiron you are independent," and Sammy's head was level, even though he knew not of the Yankee wire oyster broiler.

But now, here's something that I want to know. Perhaps Dr. Reinhart can get back at me!

Harking back to boyhood days and disinterring from the dust of ages a glass tank, I've started an aquarium down in my laundry among the potted geraniums. Therein dwells a perch, yellow, caught with a hook one bitter cold day in April and carried five miles in a pail on a bicycle. Life has lost charms with him, for he will not eat. He scorns a buzzing fly, worms he coldly ignores with a frigid, fishy eye at me the while. It's too early for small pollywogs. What, then, shall I give him? I believe he did take a worm or two at first, but now he must be in love, in spite of the season. Does he want company? Let some fishwise ancient say. J. P. T.

Salmon Culture in America.

Editor Forest and Stream:

Mr. C. H. Barkdull, in your issue of May 9, gives me the unique information that "the hatching and propagation of salmon is just like everything else." And then he sneers at "unfortunate Englishmen" like Prof. Huxley, Francis Francis, Frank Buckland, Sir I. Gibson Maitland, of the Howietown hatchery, and all those specialists who, from time to time, have had charge of the Stormontfield hatcheries on the Tay in Scotland, before fish hatching was thought of in America; at the late Samuel Wilmot, the present Professor Prince, and Mr. Livingston Stone, the most experienced fish culturist now living in America, and including the Old Angler, "who should know something about what he has been angling for," (sic) because none of them have been able to make salmon culture an economical success either in Great Britain or in Canada. He fills nearly a column of your journal with platitudes about the enormous extent of the canning business on the Pacific Coast, and vast amount of capital invested in it, which he estimates at $100,000,000, and concludes by telling us that he is interested in a number of fisheries in Alaska, and will have in operation there two hatcheries this season, and then he "extends a cordial invitation to the Old Angler, Mr. Stone, and other unfortunate fish culturists and skeptics to join us and let us teach them how to increase the number of some varieties of salmon, and at the same time decrease the numbers of others already too plentiful."

Mr. B. then tells us that "out West we have the prettiest girls, the richest gold mines, the best battleships, the biggest trees and the most salmon of any country in the world, and *with the assistance of Uncle Sam* (the italics are mine) we intend to show England and the world that we can keep up the supply of our increasing products, if we have to do it artificially." All this will be very interesting to Mr. Marston, of the London Fishing Gazette, but I doubt that either he or the scientific skeptics he is opposing, will see in it anything more than the broad assertions without proof contained in the previous letters of Mr. Stone and Commissioner Babcock.

The Old Angler, who is just entering his eighty-second year, regrets much that age will prevent him from accepting Mr. Barkdull's kind invitation to extend his knowledge of salmon culture and learn what need there is of hatcheries on rivers already overcrowded with fish. It would be a great acquisition to his present knowledge to learn the feat of "eating his cake and having it, too." Meanwhile, he sincerely hopes that all Mr. B.'s expectations will be accomplished. THE OLD ANGLER.

Asbury Park Fishing.

NEW YORK, May 6.—I ran down to Asbury Park last week to see the outlook for striped bass angling for the coming season which opens on Decoration Day by some of the anglers catching a big one. The weather having been so propitious, all the boys are looking forward to a good season for big fish, such as we had in 1900 and 1901. Last year our catch was very poor, and the only reason we can give is that the water was very cold during June.

Our fishing is principally done at the flume, which is a long box-like structure about 300 feet long and 25 feet wide, allowing the surplus fresh water to run off from Deal Lake into the ocean. This forms a brackish pool of considerable extent in which a bed of skimmer clams have taken up their abode and from which we get most of our bait. The pier above the flume was greatly damaged by last winter's storms, so we all have to fish from the beach unless it shall be repaired shortly, which seems doubtful. I went over to the head of the flume where the water rushes out from the lake and found the village boys scrapping herring from the box, just below where the water tumbles over forming quite a waterfall. The herring rush into this box in large schools and remain there until dipped out by the boys with their nets. The boys stand on the tops of the short spikes which protrude from the bottom of the flume and by industriously running crab nets through the water bring up from one to six shining, struggling fish, and the herring are the largest I have ever seen, the majority weighing a pound each and containing very nice sized roe. The boys sell these beautiful fish for ten cents a dozen, and are always willing to throw in a half dozen extra if any one objects to the price.

One of the bad features is that the farmers of the vicinity bring their wagons and by using a dip net as large as a barrel catch these fish by the hundreds and thousands, both roe and milt fish. They bury one near each hill of corn; this forms the richest of fertilizers and causes the corn to grow doubly fast. The farmers say that if a hill of corn is dug up the roots of corn will be found all intertwined into the decaying fish. This is probably why the herring fisheries are becoming poorer year by year. Yours for the preservation of bird, beast and fish, MAGNUM OPUS.

The Sea Trout Question.

Editor Forest and Stream:

When a writer like Charles Hallock, who has spent thirty years of an active life in the study of salmon and trout, whose books are read by all true anglers on both continents, differs from an angler like Walter M. Brackett, whose admirable pictures of fish have delighted anglers the world over, and whose experience in fishing all the waters of Canada and the Eastern States covers a still longer period, as to the species of a *Salmo,* and when one of the leading ichthyologists of America, consenting to act as arbiter, pronounces them both wrong; when old anglers like Mr. Gregory, of Quebec, Mr. Manuel, of Ottawa, Mr. R. T. Morris and "I. W. B." range themselves on one side, and E. A. Samuels, Mr. Mershon and Mr. Von W. form upon the other side, your many readers, who are divided in opinion, must have been greatly edified when informed by L. F. Brown, in your issue of April 18, that "the question was immaterial to sportsmen, and of very little practical use to science."

His brilliant suggestion in your issue of May 9, that a "commission of three expert North Atlantic Coast anglers be appointed to settle the question," shows beyond a doubt that he knows very little about the matter, and is not qualified to give an authoritative opinion. Where will he get any more experienced, expert or intelligent anglers than Messrs. Hallock, Brackett, Mershon, Morris, E. A. Samuels or the late Thad. Norris? All these have held varying opinions both as to the habitat and habits of the so-called sea trout. His offer of fifty dollars toward the expenses of a commission shows only that science cannot expect much information from his pen.

THE OLD ANGLER.

Fishing in a Providence Park.

PROVIDENCE, R. I., May 12.—The people of this city are to enjoy an opportunity for fishing seldom equalled by any municipality. Roger Williams' Park Lake is to be thrown open to the fishing public July 1, 1903. For a long time past the fish of this park has troubled the "man with the rod" and at last a new superintendent of parks and a liberal city government are to allow the fishermen to realize their fondest dreams. This place has always been closed to fishing except occasionally a few have been stolen in the night; several men and boys have been at different times arrested and fined the customary $20 and cost. Some never got caught at it. A few years ago a police sergeant was accused of fishing there, but it never was proved.

There are some large fish in this lake of over 100 acres, and on several occasions they have been found dead on the shore. Probably died of old age.

Two years ago Assistant Superintendent James Costello saw a great commotion in the water, and rowing out to it in a skiff found a large pickerel, six pounds' weight, about dead by trying to swallow a sunfish which was too large for him.

There are being built by a local boat builder twenty-five flat bottom skiffs for fishing purposes only. Superintendent Fitts is not to allow the round bottom cedar skiffs to be used for fishing. Almost every kind of common fish abound here in great numbers. Bass, pickerel, white and yellow perch, eels, carp, and, it is said, landlocked salmon have been planted there, although I never heard of any being caught. About 50 cents per hour will be the price of a boat for fishing, and no fishing from the banks and no pot fishermen allowed, as only a certain number of fish of each species can be carried away. A non-resident license is not required in this State. SELDOM.

A Brook Trout in New Jersey Salt Water.

PERTH AMBOY, N. J., May 12.—*Editor Forest and Stream:* Peter Rasmussen, of this city, recently took a ten-inch brook trout from his fyke net at the mouth of the Raritan River. Where do you reckon it came from?

Yachting.

Yachting Fixtures for 1903.

Members of race committee will confer a favor by sending notice of errors or omissions in the following list, and also changes which may be made in the future.

MAY.

20. New Rochelle, spring regatta, New Rochelle.
21-23-26-28-30. New York, special races, 90-footers, Glen Cove, L. I. Sound.
23. New Rochelle, Y. R. A. of L. I. Sound special, New Rochelle.
25. Royal Canadian, club, Toronto.
30. Royal Canadian, club, Toronto.
30. Seawanhaka Corinthian, club, Oyster Bay.
30. Harlem, Y. R. A. of L. I. Sound, annual, City Island.
30. Indian Harbor, Y. R. A. of L. I. Sound, special, Greenwich.
30. Bridgeport, Y. R. A. of L. I. S., special, Bridgeport.
30. South Boston, Y. R. A., open, City Point.
30. Columbia, open, Chicago, Lake Michigan.
30. Chicago, cruise to Indian Harbor.
30. Williamsburg, open, spring regatta.
30. Atlantic, club, Sea Gate.
30. Riverton, club, Delaware River.
30. Toledo Y. A., Monroe Piers.

JUNE.

1. Atlantic, ocean race; Sea Gate around Fire Island and Northeast End Lightships back to Sea Gate.
6. Seawanhaka Corinthian, club, Oyster Bay.
6. Columbia, eleventh annual Michigan City race.
6. Chicago, handicap race, Lake Michigan.
6. Royal Canadian, club, Toronto.
6 Marine and Field, Y. R. A. of G. B.
6 Knickerbocker, Y. R. A. of L. I. Sound, annual.
8. Pavonia, open, Bayonne.
8-12. New York special races, 90-footers, Sandy Hook.
9. Atlantic, annual, Sea Gate.
10. Atlantic, 90-footers, Sandy Hook.
10. South Boston, club, City Point.
10-12-13-15-16. Manchester, trial races for selection of challenger for Seawanhaka cup, Manchester Harbor.
11. New York, fifty-seventh annual, all classes, off Sandy Hook.
13. Chicago, special, Lake Michigan.
13. Boston, club, South Boston.
13. Royal Canadian, club, Toronto.
13. Seawanhaka Corinthian, club, Oyster Bay.
13. Larchmont, spring regatta, Larchmont.
14. Jamaica Bay, club, Jamaica Bay.
15. New York, Glen Cove cups, Glen Cove.
17. Larchmont, races for 90-footers, Larchmont.
17. Boston, Y. R. A., off Point Allerton, open.
17. Dorchester, open, Dorchester Bay.
18-19. New Rochelle, club, New Rochelle.
19. Eastern, special, open, Marblehead.
20. Brooklyn, Y. R. A. of Gravesend Bay.
20. Corinthian, first championship, Marblehead.
20. Seawanhaka Corinthian, 90-footers, Oyster Bay.
20. Atlantic, club, Sea Gate.

20. Columbia, motor boat race, Am. P. B. A., Hudson River.
20. New Rochelle, Y. R. A. of L. I. Sound, annual.
20. Chicago, handicap, Lake Michigan.
20. Royal Canadian, club, Toronto.
21. Old Mill, club, Jamaica Bay.
21. Gloucester, N. J., annual, Delaware River.
25-26-27. Seawanhaka Corinthian, Y. R. A. of L. I. Sound, annual and specials.
27. South Boston, club, City Point.
27 New York, special race for 90-footers, Newport.
27. Boston, club, Marblehead.
27. Chicago, special. Lake Michigan.
27. Royal Canadian, club, Toronto.
27. New York C. C., Y. R. A. of Gravesend Bay.
30. New York, special race for 90-footers, Newport.
30. Royal Canadian, L. S. S. A. regatta, Oakville.
29-July 2. Manhasset Bay cup races, L. I. Sound.

JULY.

1. Royal Canadian, Queen's cup race, Toronto and L. S. S. A. regatta, Oakville.
2. New York, special race for 90-footers, Newport.
3. American, Y. R. A. of L. I. Sound, annual.
3-4. Eastern, special, open, Marblehead.
3-6. Williamsburg, annual cruise.
4. Corinthian of Marblehead, special, open.
4. Columbia, annual open regatta, Lake Michigan.
4. Royal Canadian, club, Toronto.
4. Seawanhaka Corinthian, club, Oyster Bay.
4. Atlantic, club, Sea Gate.
4. Toledo Y. A., Monroe Piers.
4. Chicago, race for Pfister cup and handicap race.
4. Hartford, Y. R. A. of L. I. Sound, annual, Saybrook.
4-11. Larchmont race week, Larchmont.
5. Jamaica Bay, Y. R. A.
6-8. New York, special races for 90-footers, Newport.
9-11. Beverly, Seawanhaka raceabout series, Buzzard's Bay.
11. Chicago, special, Lake Michigan.
11. Moriches, club.
11. Seawanhaka Corinthian, club, Oyster Bay.
11. Royal Canadian, club, Toronto.
11. Bensonhurst, Y. R. A. of Gravesend Bay.
11. Norwalk, Y. R. A. of L. I. Sound, special.
11. Corinthian, second championship, Marblehead.
11. Eastern, run to Gloucester.
13. Eastern, annual, Marblehead.
11. Penataquit Corinthian, open, Bay Shore.
14. Hempstead Bay, club.
15. Eastern, cruise, Marblehead to Vineyard Haven.
16. Eastern, cruise, Vineyard Haven to Newport.
16. New York, fifty-eighth annual cruise, rendezvous Glen Cove.
17. Eastern, cruise, Newport to New London.
18. Atlantic, club, Sea Gate.
18. South Boston, club, City Point.
18. Penataquit Corinthian, special, Bay Shore.
18. Indian Harbor, motor boat race, Am. P. B. A., Greenwich.
18. Seawanhaka Corinthian, club, Oyster Bay.
18. Corinthian, third championship, Marblehead.
18. Savin Hill, club, Dorchester Bay.
18. Canarsie, club.
18. Riverside, Y. R. A. of L. I. S., annual.
18. Corinthian of Stamford, Y. R. A. of L. I. Sound.
18. Corinthian, 3d champ., Marblehead, Massachusetts Bay.
18. Winthrop, Y. R. A., open, Winthrop.
18. Chicago, races for Warrington and Lillienfeld cups.
18. Royal Canadian, L. Y. R. A., skiff races, Toronto.
21. Inter-Lake Y. A., open, Put-In-Bay.
22. Inter-Lake Y. A., open, yacht and power races, Put-In-Bay.
23. Inter-Lake Y. A., squadron sail and auxiliary race, Put-in-Bay.
24. Inter-Lake Y. A., open, Put-in-Bay.
25. Boston, club, Hull.
25. Seawanhaka Corinthian, club, Oyster Bay.
25. Royal Canadian, L. Y. R. A., skiff races, Toronto.
25. Hartford, Y. R. A. of L. I. Sound, special.
25. Marine and Field, Y. R. A. of Gravesend Bay.
25. Hempstead Harbor, Y. R. A. of L. I. Sound, annual.
25. Bridgeport Y. R. A. of L. I. Sound, annual.
25. Chicago, club, Lake Michigan.
25. Penataquit Corinthian, cruise, rendezvous Bay Shore.
27. Atlantic, club, Sea Gate.
27-29. New York, Newport series, all classes, Newport.
28. Squantum, Y. R. A., open, Quincy Bay.
29. Quincy, Y. R. A., open, Quincy.
29-Aug. 1. Corinthian midsummer series, Marblehead.
30-Aug. 1. Boston midsummer series, Y. R. A., Hull.
30-Aug. 1-4-6-8. New York trial races for selection of defender of America's Cup.

AUGUST.

1. Atlantic, club, Sea Gate.
1. Seawanhaka Corinthian, club. Oyster Bay.
1. Eastern, Marblehead to Gloucester.
1. Chicago, special, Lake Michigan.
1. Brooklyn, Y. R. A. of Gravesend Bay.
1. Manhasset Bay, Y. R. A. of L. I. Sound, special.
1. Columbia, race to Highland Park, Lake Michigan.
1 Royal Canadian, club, Toronto.
1. Penataquit Corinthian, open, Bay Shore.
1. South Boston, club, City Point.
2. Bergen Beach, club, Gravesend Bay.
3. Eastern, special, open, Marblehead.
4. Boston, Y. R. A., open, Marblehead.
5. Chicago, race to Milwaukee.
5-8. Corinthian Marblehead midsummer series.
6-8. Indian Harbor, Y. R. A. of L. I. Sound, specials and annual.
7-8. Milwaukee, open.
7-8. Lake Michigan, Y. R. A., meet at Milwaukee for all classes.
8. Seawanhaka Corinthian, club, Oyster Bay.
8 Corinthian, fourth championship, Marblehead.
8. Moriches, novice race.
8. Royal Canadian, Canada cup race.
8. Shelter Island, Y. R. A. of L. I. Sound, annual.
9 Chicago, cruise, rendezvous at Charlevoix.
10. Boston, club, Marblehead.
10. Manchester, Crowhurst cup, open, W. Manchester.
10-16. Hempstead Bay, cruise.
11. Manchester, Y. R. A., open, W. Manchester.
12. Misery Island, Y. R. A., open, Salem Bay.
12-15. Atlantic, race week, Sea Gate.
13. East Gloucester, Y. R. A., open, Gloucester.
14-15. Annisquam, Y. R. A., open, Annisquam.
15. Penataquit Corinthian, special, Bay Shore.
15. South Boston, club, City Point.
15. Horseshoe Harbor, Y. R. A. of L. I. Sound, annual.
15. Moriches, special.
15. Huntington, Y. R. A. of L. I. Sound, annual.
15. Seawanhaka Corinthian, club, Oyster Bay.
15. Eastern, Marblehead to Gloucester.
15. Corinthian, fourth championship, Marblehead.
15. Royal Canadian, club, Toronto.
15. Chicago, special, Lake Michigan.
15. Savil Hill, club, Dorchester Bay.
15. Hartford, Y. R. A. of L. I. Sound, special.
16. Williamsburg, ladies' day.
17. American, Y. R. A., open, Newburyport.
17. New York, autumn cups, Glen Cove.
19. Moriches, ladies' regatta.
20-22. Duxbury, Y. R. A., open, Duxbury.
20. First America's cup race; balance of races to be sailed on alternate days, Sundays excepted, until result is determined.
22. South Boston, club, City Point.
22. Corinthian, fifth championship, Marblehead.
22. Royal Canadian, club, Toronto.
22. Chicago, special, Lake Michigan.
24-25. Wellfleet, Y. R. A., open, Wellfleet.
26. Moriches, McAleenan cup race.
27-29. Columbia, Lipton competitive cup races, Chicago, Lake Michigan.
27-29. Cape Cod, Y. R. A., open, Provincetown.
29. Seawanhaka Corinthian, club, Oyster Bay.
29. South Boston, club, City Point.
29. Chicago, special, Lake Michigan.
29. Royal Canadian, club, Toronto.
29. Corinthian, sixth championship, Marblehead.
29. Savin Hill, club, Dorchester Bay.
29. Huguenot, Y. R. A. of L. I. Sound, annual.

SEPTEMBER.

1. Chicago, special, Lake Michigan.
4-5. Eastern, open, Marblehead.
5. Seawanhaka Corinthian, club, Oyster Bay.
5. New York C. C., Y. R. A. of Gravesend Bay.
5. Royal Canadian, cruising race, Toronto.
5. Indian Harbor, Y. R. A. of L. I. Sound, fall regatta.
5. Eastern, special, open, Marblehead.
5. Chicago, special, Lake Michigan.
5. Columbia, cruise to Indian Harbor.
5. Hempstead Bay, open.
5. Penataquit Corinthian, special, Bay Shore.
7. Atlantic, club, Sea Gate.
7. Moriches, annual, open.
7. Seawanhaka Corinthian, club, Oyster Bay.
7. Jamaica Bay Y. R. A.
7. Larchmont, fall regatta, Larchmont.
7. Lynn, Y. R. A., open, Nahant.
7. Williamsburg, cruise.
7. Norwalk, Y. R. A. of L. I. Sound, annual.
7. Sachem's Head, Y. R. A. of L. I. Sound, annual.
7. Penataquit Corinthian, open, Bay Shore.
9-11. Columbia, races for Webb cup, Chicago, Lake Michigan.
10-12. Seawanhaka Corinthian, Y. R. A. of L. I. Sound, specials. and fall regatta.
12. Bay State, Y. R. A., open, Lynn Bay.
12. Chicago, handicap race to Kenosha.
12. Columbia, fall regatta, open, Chicago, Lake Michigan.
12. Royal Canadian, Prince of Wales cup race, Toronto.
19. Chicago, special, Lake Michigan.
19. Seawanhaka Corinthian, club, Oyster Bay.
19. Larchmont, schooner cup race, Larchmont.
19. Atlantic, fall regatta, Sea Gate.
19. Bensonhurst, Y. R. A. of Gravesend Bay.
19. Manhasset Bay, Y. R. A. of L. I. Sound, fall regatta.
26. Riverside, Y. R. A. of L. I. Sound, fall regatta.
26. Seawanhaka Corinthian, club, Oyster Bay.
26. Chicago, handicap, Lake Michigan.
27. Williamsburg, open, fall regatta.

OCTOBER.

3. Seawanhaka Corinthian, club, Oyster Bay.
3. Columbia, special, Lake Michigan.
10. Columbia, special, Lake Michigan.
17. Columbia, special, Lake Michigan.

BAD weather prevented the two Shamrocks from getting together but once last week. The boats will not have any more trials on the other side, and are now being put in shape for the voyage across the Atlantic. Cable reports state that Shamrock III. and Shamrock I. will leave the Clyde for the States on the thirtieth of May. Erin, Sir Thomas Lipton's steam yacht, will convoy Shamrock III., and the ocean-going tug, Cruiser, which was recently purchased by Sir Thomas, will look after the first Shamrock.

After spending several days at Bristol, Reliance left there on May 15 for the westward. While at Bristol she was given a new boom and a new gaff and other improvements and changes were made. Reliance reached New Rochelle on Saturday morning, and at noon that day she was towed to City Island, where she was hauled out on the railway at Jacobs' yard to have her bottom cleaned.

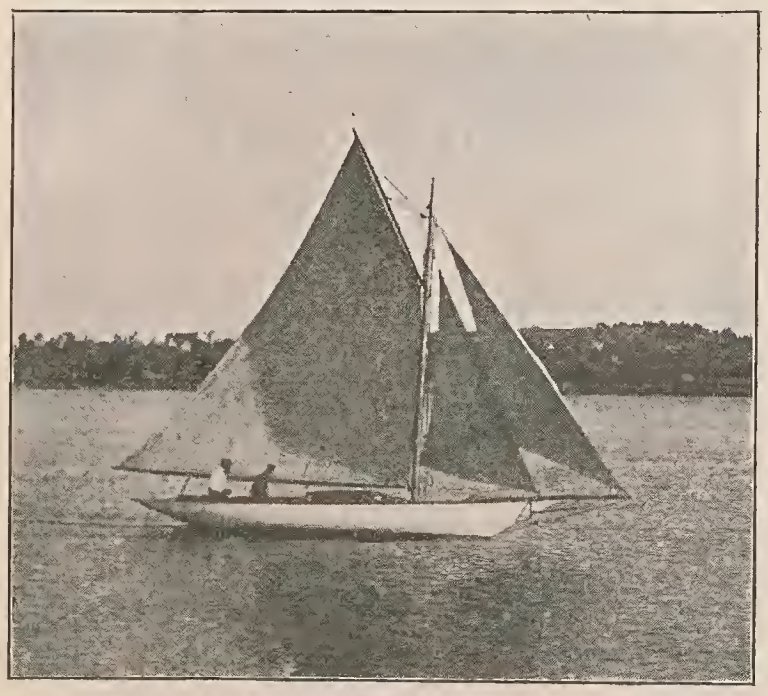
Columbia has been hauled out at the Morse Iron Works, South Brooklyn, in order to have her bottom rubbed down. Constitution was to have been hauled out at New London, but owing to an accident to the railway that would take some time to repair, she was towed to City Island, and will be hauled out at Jacobs' yard as soon as Reliance goes overboard.

In an Eighteen-Footer—Some Short Cruises and a Longer One.

Honorable Mention Story in "Forest and Stream" Cruising Competition.

BY E. P. MORRIS, NEW HAVEN, CONN.

THE Lapwing is a small cutter of a type now becoming obsolete. Her dimensions are O. A., 27ft. 9in., L. W. L. 18ft., beam at water-line 6 ft. 11in., draft 4ft. The displacement is 6,400 lbs., ballast on keel 2,400 lbs., inside ballast about 600 lbs., sail area 404 sq. ft. She is of my own design, and in the FOREST AND STREAM of Nov. 14 and 21, 1896, I gave her lines and some account of her building. Any reader who is sufficiently interested to turn back to his files will see at once why I say that she is of a partially obsolete type. The midship section is a very easy and, I still think, a pretty S curve, but she has too little beam and bilge and is too thick through the floors. She is a low-powered boat, with the defects and the virtues of this type; she has a good deal of room inside, but a narrow cockpit; she does not carry her sail easily, but she is reasonably fast with a small sail spread, and she is easy in a sea and easy to handle. She is, however, a small boat, at the best, and has to turn in sometimes when larger boats go on in comfort.



LAPWING.

The spars are heavy and the running rigging was new this year, so that I felt complete freedom from the apprehension that something would give way at a critical time. I carry two anchors, 30 lbs. with 30 fathoms of cable and 40 lbs. with 35 fathoms, the latter stowed below. The tender is 10ft. long, unusually high and wide, and a good boat if properly handled, though I got into serious trouble once with it, as I shall have to confess below.

In the cabin arrangements there is nothing unusual except the placing of the stove. This is fastened down upon the forward end of a slide which runs back under the cockpit. The after end of the slide holds the dishes in slots, so that all these things can be pushed back out of sight. When the slide is drawn forward for cooking, the stove comes under the companion-hatch and the fumes of cooking escape easily. This arrangement, which I have not seen on any other boat, has proved extremely convenient and I should be glad to furnish drawings and dimensions to others who may wish to try it.

As to meals I seldom cook under way, but have a hot breakfast before starting and a three-course dinner at night. We use canned provisions almost entirely and especially canned soup, which invariably forms a part of the dinner; fresh fruit and water are the only things for which we are ever forced to land.

The Lapwing was built at Pemaquid Point, Maine, during the summers of 1895 and 1896. In September, 1896, I brought her around to New Haven and for the next three years used her in the Sound. In July, 1900, I took her back to Pemaquid and cruised about the Maine coast as far as Mt. Desert. The following summer I could not get away and she stood high and dry, on the spot where she was built, until August last, when I set her afloat again. At this point my summer's cruising begins.

All the cruises started from the old wharf half a mile inside of Pemaquid Point. On the shorter trips, of which I will give somewhat brief account, I was accompanied by some member of my family (who fortunately share my love of sailing and take turns in going with me), and I was skipper and crew and cook and steward. Occasionally, in reefing or coming to or getting under way I allowed my guest to take a hand at the tiller.

I.—To Blue Hill Bay and Back.

This was a cruise with an object and, like all cruising that is limited to a definite course and time, it had an element of "business" in it; we felt obliged to make our runs, regardless to some extent of weather or comfort.

The log in brief is as follows:

Saturday, Aug. 9.—Pemaquid to North Haven in Fox Island Thoroughfare. Distance, 34½ miles.

Aug. 10.—A drift across the East Bay to Green's Landing in Deer Island Thoroughfare. Distance, 9½ miles (the shortest whole day's run of the summer).

Aug. 11.—To Blue Hill Bay. Wind E.N.E.; thick weather and part of the course sailed by compass. Distance, 16 miles.

Aug. 12.—Returning by the same course. To North Haven with puffy northwest wind; single reefed. Distance, 25½ miles.

Aug. 13.—To Pemaquid. Wind northwest. Distance, 34½ miles. Total for the cruise, 120 miles.

This was a cruise of much variety, which extended to the scenery, the weather and the people and things that we met. The course from Pemaquid to Deer Island Thoroughfare is the one usually followed by yachts going along this coast and is therefore well known to Maine yachtsmen. After one passes Whitehead, there is a rather curious alternation of sheltered and open water. The Muscle Ridge Channel is much more protected by the outer islands than one would suppose from the chart; the West Bay is comparatively open; Fox Island Thoroughfare is like a river; the East Bay is open and Deer Island Thoroughfare is similar to the Muscle Ridges. And each of these five stretches is just about six miles long.

I cannot say that the weather alternated so regularly, but it began and ended with breezes almost too strong and there was a calm in the middle. We started, in reality, on the afternoon of the 8th, but ran at once into a heavy southeast blow, which raised immediately the question whether we should go on or turn back. Everybody who sails goes through this experience and knows the quick calculations about a harbor, the hasty balancing of common sense (or perhaps mere common fears) against pride, and the discomfort of putting back, as we did. When we met strong winds on the return, however, in almost the same spot, we were within sight of home and of course had no thought of turning back. We had started that day under two reefs and staysail with a puffy northwest wind which gradually lessened as we got along to the Georges. I shook out a reef soon afternoon and F. got out the lunch; we expected nothing but a quiet afternoon's sail. But it was not so willed. I was just taking up a pilot biscuit well spread with cold chicken, when a violent puff came out of Muscongus Bay, the sea rose, the boat jumped, the spray blew and the scene was changed. I wished for my second reef, but we were near home and I contented myself with lowering staysail and began to jockey the boat up toward the land with the mainsail half full. By way of contrast to our excitements, a big schooner yacht went past us just at this time, getting in her topsails, to be sure, and slacking off her mainsheet, but going on her way with so little fuss that a lady on the deck could keep her seat quietly in an armchair. Yet I do not know that she was enjoying herself more than F., who regardless of the waste of good provisions was making merry over my pilot bread, which had seized the opportunity to slip down to the cockpit floor. My boat is so sharp and heavy that

she holds her way well in a choppy sea and I had no difficulty in getting into smooth water and reaching my mooring, but I had evidence that it was a fresh breeze when we met a good-sized cutter under two jibs and trysail—making, by the way, a pretty and an unusual picture.

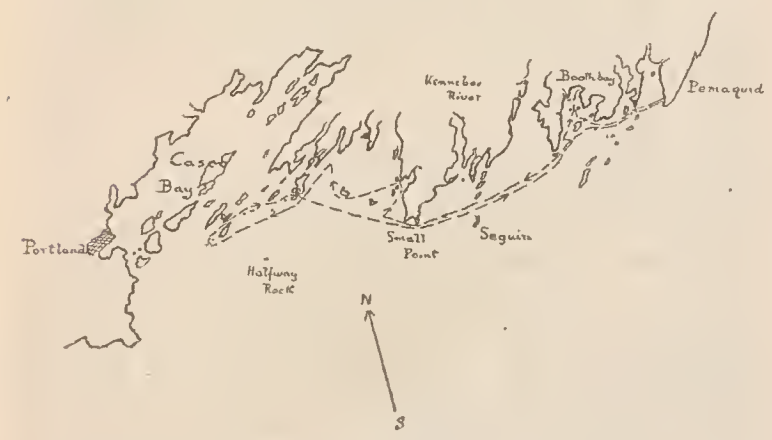
On this cruise I had my only experience this summer of sailing in a fog. It was in going from Green's Landing to Blue Hill Bay. We worked to the eastward as far as Long Ledge Beacon before it shut in thick. From there F. gave me a compass course E.N.E. to the buoys at the narrow entrance to the Bay. I held this course for nearly an hour, then made land (which looked very near and very high) on the starboard bow. Suspecting that the tide had set us to windward I kept alongshore, looking sharply for rocks, until we made a black can buoy. I saw this for an instant only under the sail and very absurdly took it to be a schooner at a distance with her jibs down; F., partly correcting my exaggeration, thought it was a fishing boat. But it was the buoy we wanted and from this point all was easy. I do not usually like fog, but this experience was rather exhilarating.

In returning through the same channel the next day I had a chance to test the plans which I try to have ready in case anyone should fall overboard. It was only F.'s hat; had it been the owner of the hat I should have been less cool, but so far as the test went I found myself equal to it. We were close hauled on the starboard tack. I came about, stood back a little, gybed over, ran down with all sheets slacked off to stop the boat's way and picked up the hat to my satisfaction. But it is surprising to see how far a boat gets away from an object dropped overboard and to discover how easily one loses sight of an object in the water while he is bringing the boat back to the spot where it was lost. I suppose the only safe course is to use the tender.

North Haven, in Fox Island Thoroughfare, is a favorite anchorage of mine. We lay there our first night out, one of the most beautiful star-lit nights I have ever seen, and again on our last night. This time there was a strong northwest wind and every boat in the place seemed to be in use, some of them double-reefed and carrying ladies and children, others with crews of boys and heeling over under whole sail. It was a most animated picture. While we were watching it, a fisherman came in, luffed up and let got his anchor. But his peak halliard jammed and he was in some danger of dragging down on a neat yacht astern of him. Then the animation of the scene increased rapidly. Loud profanity from the man in charge of the yacht, excited gesticulation from the feminine owner ashore, dignified silence on the part of the fisherman; no damage to the neat yacht.

The anchorages that I used on this trip need no description; in fact, one can make a lee almost anywhere in the Muscle Ridges or in either Thoroughfare. One who is going over the course for the first time should try to get the advantage of fair tides through the Muscle Ridges; in the other narrow channels it is not so important. "Obstructions are well marked," as the Coast Pilot says, but the very number of buoys and spindles is so great as to be confusing. I should not care to go through without checking off the buoys on the chart.

II.—A Leisurely Cruise.



After three days ashore I started with a new passenger to spend a few days among the islands in Casco Bay.

Saturday, Aug. 16.—Under way at nine and sailed to the westward inside of Ram Island, past Boothbay and inside of Sequin with an easy northwest breeze. Off Small Point it fell light and I worked up toward Small Point Harbor, intending to go into a cove at the head of the bay. Some fishing boats, however, moored behind an island showed me that I need seek no further and I ran into the little harbor called Carrying Place Cove, deep, fairly well sheltered and extremely pretty. The bottom is, I think, rocky, but we lay in comfort and sat late on deck enjoying the beauty of the evening. Distance, 20 miles.

Aug. 17.—In accordance with the plan of the cruise we made a very leisurely start at nine, wind northwest, cold and strong. We ran along the outside of the fringe of islands, following in a general way the indentations of the shore until about 1.30, when we went inside between Junk of Pork and Green Island—two expressive names. Then followed an hour of delightful sailing between Jewell and Crotch Islands, with bright sun and keen little puffs of wind that made a single reef comfortable. About three, after a stretch of more open water and some flying spray, we turned into Pott's Harbor and anchored on the northern side in Basin Cove. Here we instantly began to experience all that has been said or sung of the pleasures of harbor after storm. Not that we had had a storm, but the wind had been fresh and cold and there had been enough water aboard to make us ready for escape from it; inside, under the shelter of a hill, we lay in absolutely unruffled calm and the sun shone down with comforting warmth. On either side were shores wooded to the water's edge and at the head of the cove was a farmhouse surrounded by pastures, with an old tide-mill, now disused, on one side. In this peaceful scene we spent an afternoon of Sunday calm. M. sketched, while I smoked and dozed in the warm sun and turned alternately to the quiet cove and to the outer bay, where others, less wise, it seemed, than we, were seeking the pleasures of activity under two reefs and clad in oilers. The only drawback to this almost perfect anchorage is the strong tide which runs from the basin above the old tide-mill. There is good water up the middle of the cove as far as the turn. Distance, 19 miles.

Aug. 19.—Under way at nine, wind light northwest. With a fair wind we had no difficulty in going out by the southern passage, where there are seven buoys within one mile. Sailed quietly over to the Cuckolds and tacked up into Boothbay Harbor, by way of getting a contrast to our previous anchorages. Here all was bustle and motion and noise, not altogether agreeable noise. A band was parading ashore and the launches and fishing boats of Boothbay are equipped with a peculiarly offensive kind of motor. But in this harbor there is always much that is interesting; this time I kept my eyes upon a fine large cutter, whose graceful sheer proclaimed her a Fife boat, even before I saw her long English tiller. Distance, 25½ miles.

Aug. 19.—A short and easy run to our mooring at Pemaquid in time for lunch ashore. Distance, 7½ miles. Total for the cruise, 72 miles.

This kind of unhurried cruising, making an easy start and turning into harbor in the middle of the afternoon, does not carry one far, to be sure, but the making of long runs is not the object of cruising. It is only the very inexperienced who suppose that sailing is a lazy occupation; the quick and constant motion of a small boat, the work of cooking and cleaning, the occasional heavy straining at cable or halliards—altogether these make a good day's work. In addition to them six hours' sailing is enough. Perhaps such easy cruising may not satisfy the energy of youth, but I commend the plan to the middle-aged.

III.—A Small Boy's Cruise.

For the sake of completeness I will mention here my cruise with H., who had at the early age of five his initiation into a sport which I should like to think that he may pursue for fifty years to come. I expect him to begin paying me back about twenty years from now with cruises in a yacht of larger size, bought, I trust, with his own money, on which I shall be an honored passenger, doing no work and offering advice with paternal freedom and with the positiveness of age and experience.

We sailed to Boothbay in rain and a light breeze, spent the night in peace broken only by its rolling off the bank, laid in supplies for the next cruise, rowed about the harbor and got home for lunch, a well-pleased pair. I was gratified afterward to hear him describing to his mother the operation of "pumping up" the anchor of a schooner; his technical terms were not quite correct, but his observations had been precise and detailed. Distance, 15 miles.

IV.—A Drift.

My wife and I had spent some time over the charts, planning a six days' cruise which should take us into the upper Penobscot Bay, to Castine, down Eggemoggin Reach and home through the Thoroughfares. In ordinary weather this could have been done without pressure, but we struck a week of extraordinary light winds. The first day we had a reasonable breeze, but after that there was only one stretch of about two hours when we were really sailing; the rest was a drift in the lightest of light airs. And from the morning of Friday to Sunday noon it was a dead beat with sheets not once started.

In such a cruise there was nothing of interest on the sailorizing side and I will compress the log into a few sentences.

Tuesday, Aug. 26.—Pemaquid to Owl's Head Harbor, with moderate southwest breeze. Distance, 27½ miles.

Aug. 27.—To Camden at 1.30. Turned in to escape the unendurable heat. Distance, 7½ miles.

Aug. 28.—To Buck's Harbor (Cape Rosier) across the bar between Job and Lime Islands. Distance, 17 miles.

Aug. 29.—To North Haven, down East Penobscot Bay. bar between Job and Lime Islands. Distance, 17 miles.

Aug. 30.—To Burnt Island in the Muscle Ridges. Spent four hours at anchor to avoid drifting down the bay. Distance, 13½ miles.

Aug. 31.—To Pemaquid at 8.30 P. M. The afternoon almost a dead calm. Distance, 21 miles. Total, 103½ miles.

But if the weather was calm, so were we, and if the sun was hot (and it was), we kept our tempers cool. It was a disapointment to give up Castine and Eggemoggin Reach, but it had its compensations. The last day was especially trying to the soul; we rolled about all the afternoon in a heavy swell, taking eight hours to make seven miles, within plain sight of home, watching the fog sweeping over the land and expecting it to reach out to us at any moment. There was no breeze on the water and we seemed to progress only by the jerk-jerk of the main-boom as the boat rolled. Yet we kept a philosophic mind. Once I am told that I gave way. As we came down the East Bay, making for North Haven where we expected mail from our deserted family, the nice breeze which we had had for two hours left us just before I could round the buoy into Fox Island Thoroughfare. This was hard and my composure was further shaken by a big schooner yacht which walked past us with her upper canvas full. Instead of standing over to the shore for a breeze I kept making impatient short tacks at the buoy. Of course I missed it and it is reported that I did not bear my failures with a perfect equanimity. If I did break down here—and I find nothing about it in the log—it was the only time. When we got up early for a good start, as we did every morning, and had no breeze till nine, we rowed about the harbor; when the heat became unbearable, I put up an umbrella for the first and only time in all my sailing or I made the ends of the staysail sheets fast to the tiller and used them as tiller-ropes, steering from a shady spot forward of the mainsail.

And all the time which was subtracted from the pleasures of sailing we gave to the other pleasure of watching the shores and fixing upon our memory the beautiful scenery of the upper bay. Thus in exchange for some lost experience in managing my boat I have a most distinct picture of Owl's Head Light, a vivid mental photograph of the West Bay full of vessels and yachts becalmed—all hazy, like a Japanese sea-picture—and at the very time when I was losing my temper at the entrance to Fox Island Thoroughfare I now find that I was the gainer by a dark-toned evening memory of the harbor I was so impatient to enter. It was, in particular, a piece of good fortune that we were obliged to give up Eggemoggin Reach and go down the East Bay past Eagle Island. When we left Buck's Harbor there was just breeze enough to give us steerage-way close-hauled and keep us comfortably cool, and the whole scene, as we worked past Pumpkin Island Light, was wonderfully beautiful. The water-surface, after two days of calm, was absolutely level, not rippled by the breeze but marked with a tracery of fine lines, and from this level surface the shores and islands were reflected with a dark effect, a sort of steel-gray, like the reflection in a Claude Lorraine glass. The islands were of varying shapes and colors, some sloping and green with grass, others abrupt and crowned with spruces, and the rocks about the water-level were of a deep reddish brown. The distant scenery was not less beautiful; the Camden Hills were in the west, Mt. Desert in the east, Cape Rosier and the Blue Hill behind and Isle au Haut ahead. We met no yachts and but few vessels on this sail and I fancy that the middle passage between Deer Island and North Haven is less known than the West Bay and the Reach. However beautiful the latter may be, I do not see how it can be equal to the East Bay, and Owl's Head, the most picturesque single spot on the West Bay, seemed to me to be surpassed by Eagle Island Light with the precipitous and richly colored island of Hardhead lying opposite to it.

Of things of human interest, also, there was no lack. Off Pumpkin Island, at the head of the Reach, two large schooner yachts met. One, the smaller and newer, dipped her ensign, the other acknowledged the salute by firing a gun and the first responded by another gun. I am—or try to be—a cruiser and boat-sailor, not a yachtsman, and I have at times smiled at the anxious care which yachtsmen bestow upon their various flags, but there was something so gracefully courteous in the droop of the ensign across the white mainsail, something so dignified in the slow passing of the two vessels, that I forgot to scoff and suffered an instantaneous conversion.

A moment later a small catboat, sailed by two nice-looking boys crossed my bow and to my astonishment I saw the name Morris in big black letters across her stern. Now my name is a respectable one, handed down from a descent Welsh ancestry and I sometimes, in an etymological mood, trace it back through the Morris dance (in which my forefathers doubtless figured with conspicuous grace) to the Latin Maurus. This is all very nice, but I had not expected, even in these days of amazing yacht names, to see it painted on a boat. "Hallo," I said, "what have you got my name on your boat for?" The boy who was steering dodged this impertinence by a counter-question, "What is the name of your boat, then?" "Lapwing." "Where's she from?" "New Haven." "Did you sail her up here?" "Yes." "What, around the Cape?" said he, and I never saw a more lively incredulity on a boy's face. "Yes," I answered, and I could not refrain from straining his imagination still further by adding, "and I am going to start back next week." The two boys looked at each other a moment and each read the other's skepticism in his look; "Oh, go on," said number two, and they turned their back upon the gray-bearded jester. I hope they read Forest and Stream.

Another boat-load of boys, somewhat older boys who might have been college students, I met in the Muscle Ridges late one afternoon. They had their tender across the cockpit, the tide with them, the wind aft, no lookout (or so at least I thought) and a generally happy-go-lucky air. After crowding me almost into a buoy they saw me and one of them shouted, "How do we go to get to Rockland?" "Go around Ash Island, there, by the beacon," I answered and pointed as well as I could. When I saw them last they were headed for the bar on the wrong side of Ash Island, where there is about two feet of water. No chart, no knowledge of the place, no lookout! But they had the cheerful confidence of youth which carries one far and, contrary to all propriety, usually carries one safely.

I tried three new anchorages on this trip. Owl's Head Harbor was the best of them; it has good bottom and water enough, especially on the eastern side, and it has the great advantage of being within an eighth of a mile of the regular course into the West Bay. It is a much better small boat harbor than Rockland and better than one would expect from the chart. Buck's Harbor is also good, but it is disfigured by a quarry and the bottom, at least where I anchored, is rocky. The anchorage behind Burnt Island, just off the Muscle Ridge Channel, I took because it was too late to look for anything better. I don't think I could judge it fairly, for I ran back to it and a retreat is depressing; so was the dark hole itself, so were the mosquitoes which swarmed down on us, so were the deserted quarries. Besides, I partly slipped from the bow and wet one leg to the knee. But on the most impartial judgment it is not a good harbor, though it would give shelter from an easterly and is very near the course.

V.—Pemaquid to New Haven.

The object of this cruise was to bring the Lapwing to her home port between Sept. 2 and Sept. 22, with as much pleasure as possible on the way. The friend who started with me, H. W. F., is a well-tested woodsman, quick in expedient and cool in a crisis, but of limited experience in cruising. I give the log almost as it was written, adding remarks in parenthesis and reserving general comments to the end.

Tuesday, Sept. 2.—Morning foggy, but clearing, wind W.N.W. Dropped the mooring at 12, taking the usual westerly course past Ram Island and the Cuckolds. We took tricks of an hour at the tiller. (This custom we observed very punctually and I found it a great relief to the monotony.) As the wind was ahead and we could not make the mouth of the Kennebec, we stood up Sheepscot Bay and anchored in Herman's Harbor at five. (A ledge runs partly across the entrance, covered at high water; otherwise this is a good small-boat harbor.) Distance, 10¾ miles.

Sept. 3.—Up at four and, as there were two to divide the work, under way at five with everything in order for the day. Light northwest wind to Sequin, then light southwest breeze, which gradually backed round to south and increased, so that we reacheed straight across to Cape Elizabeth outside of Half Way Rock. Anchored in Wood Island harbor at five, exactly 12 hours under way. Distance, 36½ miles.

Sept. 4.—Blowing hard southwest, dead ahead, and thick. Some vessels came in, but none went out. At anchor all day. Late in the afternoon there was a sudden shift of wind to northwest, followed by a beautiful golden sunset.

Sept. 5.—Under way at 5.10, wind northwest and fresh. Carried whole sail to Cape Porpoise, then luffed up into smooth water and put in one reef. The wind increased and off Bald Head Cliff we put in a second reef and changed jib for staysail. Off Portsmouth we saw two naval boats racing; one was rigged with two sliding gunters and seemed to be having the better of the other, which carried two standing lugs. I had never seen either rig before. Both boats had large crews and stood up well in the strong breeze. So far we had made a fine run, fully five knots an hour, but about this time I noticed that the tender was filling from the splashing over her bow. I put off bailing, hoping that she would go all right, but as we headed more to the eastward she took a wide sheer and capsized. I laid the boat to and hauled the tender alongside. F. took hold of her gunwale to turn her over and did it, but his left thumb was frightfully jammed between the boats, the nail being almost completely torn out. As the tender went astern, the oars floated out, but I paid no attention to this, being occupied with binding up the wound. Then I started for the nearest harbor. This was Newburyport, some three miles away to leeward, and I anticipated no difficulty in getting in, but we met a most extraordinary head tide between the jetties, against which I could make no headway. As I was beating across, the tender, which I had only partially bailed, turned over again and I anchored. Righted the tender with the boat hook, got my anchor with very great difficulty in the strong tide and tried it again. Failure; anchored again, and here we lay for three hours within sight of a trolley line which would have taken us quickly to a surgeon, but unable to get to shore because of the loss of the oars. It was a long and wretched afternoon. Finally, about six, a tug came into the harbor and, when I explained the situation, towed us up and under the pilotage of one of the men, whose kindness to strangers I shall not soon forget, we fell into the hands of a very skillful surgeon. Happily it proved that amputation, which we had feared, was unnecessary, though the injury will leave permanent marks. Distance, 45 miles. (First, haul the tender alongside and bail her before she is half full. Second, lash in the oars. Third, use the boat hook to turn her back, if she does capsize. I wish I could have learned these elementary rules at a less price.)

Sept. 6-7.—In Newburyport harbor, at anchor off the yacht clubhouse. With much reluctance we decided that F. must go home by train and I therefore telegraphed to White of New Haven (*quem nomino honoris causa* and because he is known to hundreds of Yale men) to send me the man who had made the trip with me in 1900. He arrived very promptly on Sunday morning and in the afternoon I set F. ashore, both of us deeply disappointed at this termination of his cruising. (But we have since exchanged vows to explore Buzzard's Bay together next summer.)

Monday, Sept. 8.—An early start and a slow sail around Cape Ann. Wind south and light. Hoping to cross directly to Provincetown the next day we did not push on to Marblehead, but turned in early to Gloucester. (This cost us a whole day. We counted too hopefully on crossing the Bay.) Anchored in the cove at the head of the harbor at 2.30. Distance, 25¾ miles.

To me this is the most interesting harbor on the coast and a fleet of fishing schooners is a finer sight than a fleet of yachts. Put a pair of them alongside and the yacht looks like a toy, as indeed she is.

Sept. 9.—Foggy and breeze late from S.S.E. Stood close-hauled along the shore toward Marblehead, looking at the fine summer houses. Toward noon the wind backed to southeast and increased, so that we had to give up Scituate. About 12.30, rounding the Graves, we stood up Hypocrite channel for Boston. This was an interesting sail and consoled me for the short day's run. Anchored near the wharves of the N. Y. and N. E. Transportation Co. and I made a hasty rush, the details of which I now recall with amusement, for the Southern Terminal Station, where I hoped to intercept my family on their way to New Haven. I was disappointed in this, but I learned some lessons in regard to the effect of wearing rough clothes. The conductor of the train hailed me in highly peremptory tones with "Hi, there! Where are you going at?" and the well-dressed passengers, an acquaintance or two among them, did not even glance at me. Once before, on an earlier cruise, I was refused entrance to a hotel and was for a time under suspicion of stealing my own boat, and I consider myself qualified by these experiences to add a chapter to Stevenson's Inland Voyage.

The storm signals (S.E.) were flying when I returned to the boat and the afternoon was made uncomfortable by the constant passing of tugs and steamers. Distance, 28 miles.

Sept. 10.—The weather looked threatening and we were not under way till 11. Passed the new seven-master lying at anchor and had an easy sail to Scituate. Distance, 20 miles. (The best anchorage is not behind the breakwater, but up the harbor out of the swell.)

Sept. 11.—Under way at 5.30, wind light northwest. In the expectation of a shift to southwest we ran down close to the land for a slant to Provincetown. The wind came in, however, southeast and we had a long slow beat across. Passed a lobsterman with an auxiliary engine in his boat. As soon as he got hold of the buoy, he set his wheel hard down and kept going in a small circle, hauling in the slack by hand. When the slack was gathered in, he put the warp over a snatch-block on a davit and then around a winch attached to the motor and so hauled the pot by machinery. I saw plenty of evidence this summer of the spread of the motor among fishermen, but nothing more ingenious than this. Reached Provincetown at 6.15 and anchored on the western side of the harbor. Distance, 31½ miles.

Sept. 12 to 16.—Lay in Provincetown harbor, waiting for good weather and a pilot. This is, I believe, a not uncommon experience even for large yachts. The tedium of waiting was partly relieved by visits to the shore and talk with pleasant acquaintances and was, for one night at least, entirely dispelled by one of the dispensations of what P., a former Rhode Islander, sometimes calls Providence-town. For this harbor, though fairly good for vessels, is a poor place for small boats. It is so wide that, if one anchors near the town, a strong southerly breeze puts him in a position of discomfort, and in a northeaster or an easterly gale there is practically very little shelter anywhere. One must be ready to shift anchorage with every change of weather. This characteristic of the harbor got us into the scrape of which I propose to make full confession. Late on Friday the wind was coming strong from the southeast and it looked like bad weather. We therefore put in two reefs, to be ready for anything, and went over to the south side, anchoring directly opposite one of the old forts and, for extra assurance, putting down both anchors. Here we lay in comfort over Saturday; the storm signals were flying (S.E.) and we had no communication with the shore. Just before sunset there was a slight break in the sky to the northwest, but it seemed to settle down again for a southeast blow, and our judgment appeared to be confirmed by the red lantern (easterly winds) at night on the signal pole, which we naturally interpreted to mean southeast. We turned in therefore as usual. About 11 I woke to find the boat moving about in a lively fashion and the wind N. to N.N.E.; we were on a lee shore and much too near the beach. The weather was as bad as possible, blowing hard, raining, black, intensely cold. We waited an hour, not so much hoping for a change as dreading the trouble of doing anything. Then we went on deck; sounded; 6ft. and the tide half ebb. There was nothing for it but to get under way. We got the small anchor with some difficulty, set the mainsail two-reefed and both went forward to get the large anchor. It appeared to be impossible to break it out, though we were both straining on it and the boat was sheering violently to one side and the other; in fact, it had come up from the hard bottom at once and we were all the time hauling it against the bobstay. The utter blackness of the night and the violent motion of the boat partially explain a blunder which now seems incredible. When we discovered the facts, it was too late; we got off on the wrong tack, touched, went on a little, touched again and finally paid off and stopped, broadside to the sea. We got the mainsail off at once, dropped the small anchor to bring her head to the wind when she floated and went below to wait. She was heeled over so much when she took the ground that she did not thump, and as the tide fell she went slowly down on her bilge. I felt great confidence in her strength, but it was, of course, possible that if the sea rose it would drive her sideways on the beach before the tide turned. Revolving these possibilities, we braced our bodies on the sloping bunks and braced our spirits with tobacco. For I could not cook, and pilot bread and sweet chocolate, though sustaining, are not comforting. As the tide came in and the boat began to rise to an even keel, I kept an anxious eye upon Long Point Light, directly over the stern, for the first signs of swinging, and when at last the anchor held her and the light began to shift to the starboard quarter, our spirits rose with every thump. About 3:30 we went on deck again, cleared up the tangled gear, set mainsail and staysail and clawed off "like a pilot boat," as P. remarked. A substantial breakfast, a warm drying sun and a general clear-up soon dissolved this little episode into a mere memory, amusing rather than dismal.

Sept. 16.—Rounding the Cape, we intended to start early in the evening of Monday, the 15th, but the breeze was too light. Under way at 1:15 A. M., with a pilot aboard, wind light N., cold and clear. A slow beat from Wood End to Race Point. Outside there was a heavy easterly swell which made it necessary to keep well off shore, and the wind was light all day, N. to N.N.E. It is almost impossible on this run not to feel impatient, and our progress was in reality slow; we passed Cape Cod Light (Highland) at 7, Nausett about 11, Chatham about 2:30. The Marconi station, on the Highlands, is very impressive; the four enormously high lattice-work towers seem the higher because of the low building between them, and the strange structure somehow increases the desolation of this part of the Cape. As we neared Monomoy, about 4:30 or 5, we could see lines of breaking seas ahead, and it seemed possible that we might have to go out around the Shovelful Shoal. But Bearse's Shoal began to cut off the swell, and some of the breakers proved to be only tide rips. My tables gave low water at 4:30, and I counted upon a favorable tide around Monomoy Point. Instead of that I found to my surprise, a strong head tide and heavy rips. At the Point the tide was too much for us, and we had to anchor to wait for slack water, which, by my tables, I supposed must be at 10:30. But, again, to my surprise and confusion, the tide rip began to smooth out soon after 7. (I worked this all out afterward. The turn of the current at Monomoy is some two or three hours after the turn of the tide. I now remember that I was confused by this two years ago, and I ought to have remembered it. Eldridge's tables give the time of currents; the Government tables do not.) While we were at anchor we had some soup and coffee, and at 7:30 we rounded Monomoy, stood N.N.W. to clear the Handerchief, and then kept off for Bishop and Clerk's Light. (The fishermen usually preserve the old English pronunciation and call this Bishop and Clark's.) There was a full moon and moderate breeze; I took the tiller and sent P. and the pilot below. Having had only two hours' sleep Saturday night and none on Monday night, I fell asleep while steering and had to stand up to keep awake. I was thus engaged at 12, when I entered upon my fiftieth year and I meditated somewhat on the question how long a man of my age should continue to amuse himself by sailing about in a little boat. (As long as one can get pleasure and renewed vigor out of it, I suppose.) As we neared Hyannis, about 1, I called the men, went below and instantly fell into a sleep so profound that I did not waken when we came to anchor or when the two men came down into the little cabin and made up their berths. Distance 64½ miles; time, exactly 24 hours.

As the passage around Cape Cod is rather long for small boats, I add a note or two:

1. The chance of going into Chatham is too slight to be considered. I once followed a fishing boat in, but it was a quiet night and I might just as well have anchored outside, near Monomoy. This time I saw a fisherman stand in twice and turn back each time, evidently because the sea on the bars was too heavy. And this was on a clear day with moderate breeze.

2. Yachts going south often wait a long time for a westerly or northwesterly wind, but the local pilots go in almost any kind of settled weather, and rather prefer a N.E. wind, because it is fair from Monomoy to Hyannis.

3. A knowledge of the currents is extremely useful. Eldridge's tables give this information pretty fully.

4. The coast from Chatham north is so clear that this part of the passage can easily be made at night.

5. Pilots from Provincetown to Hyannis can be had for $12 to $15, and I suppose at Hyannis also, going north. After trying both methods I shall take a pilot for my little boat, not only for his knowledge and help, but also, I will say frankly, for his moral support. Anything more forbidding, desolate, depressing than the outer side of Cape Cod I cannot imagine.

Sept. 17.—Under way about 10, wind E. and strong. Passed Succonnesset Lightship at 11:25 (the captain gave us the exact time), and had a fast run with fair tide through Quick's Hole, but at the western end of the Hole we ran into the heaviest tide rip I have ever seen. The poor little boat was almost helpless; one sea would catch her before she had recoveded from the preceding, and solid water repeatedly came over the bow and broke against the cabin house, something that I have rarely seen on my boat. Reached New Bedford at 4:30. Distance, 40½ miles. Chose a quiet anchorage on the Fairhaven side, away from steamers, and had a good night of sleep.

Thursday, 18th.—We made two attempts to go out, but found the sea and S.E. wind too heavy.

Friday, 19th.—Wind E., but the clouds began to break about 7. Under way at 8. There was a strong swell outside and we kept off shore, expecting a shift of wind to the S.W. It did not come, and we had a rather uncomfortable day, rainy and thickish, with a very threatening sky. P.'s weather prophecies, which are apt to be pessimistic, became quite appalling. We held on, however, resisting the temptation to run into Newport, and about 5 rounded Point Judith and anchored behind the breakwater, very glad to get relief from the swell. Distance, 36 miles. (I suppose this is not a very good anchorage. The bottom is hard sand. We lay quietly in the angle of the breakwater; no other boat or vessel was in that night.)

Sept. 20.—Wind E.N.E., sky overcast. Under way at 5:35. The swell continued, but the tide was fair and, when we got into Fisher's Island Sound, very strong, so that we made a rapid run. Off Black Point it turned against us, but the wind had risen and we made nearly five knots. In the rain squalls, of which there were four or five, I stood by to slack the peak halyards, but we carried whole sail all day and ran into Sachem's Head at 5:30, exactly. Distance, 57 miles in just 12 hours, the best run my boat has ever made.

Sept. 21.—Under way at 6, tied up at White's at 6:35. Distance 12½ miles. Total for the cruise, 408 nautical miles in 19 days, counting the first and last together as one. Of these, 8 were spent in harbor, 11 under way.

My experience in cruising is not sufficient to warrant me in offering advice to others, but the following remarks may pass as comment:

1. Under very favorable conditions my boat, with a tender in tow, makes five knots; under ordinary conditions three knots is all that I count upon, and forty miles is a good day's run. The trip from New Haven to Pemaquid has each time taken about three weeks, with ten to twelve sailing days. This has required some pressure, and the next time I shall allow four weeks. I know that this will seem an absurdly large allowance, but I believe that the speed of boats and the distance that can be made in a day are habitually much over-estimated.

2. The good harbors for vessels are often poor harbors for small boats. To get the necessary rest one must lie in a really quiet berth. I have often wished that there was a good "Coast Pilot for Small Yachts." Perhaps FOREST AND STREAM might get from different men with local knowledge a series of short articles giving practical descriptions of small harbors—the "dodge-holes"—to be cut out and inserted into the Coast Pilot.

3. The kind of knowledge I have found most useful in such a cruise is, first, familiarity with the use of charts; second, knowledge of tidal currents; third, knowledge of the weather. Most boat sailors would, I think, reverse this order. It is certainly worth much to be able to foresee shifts of wind some hours in advance, but I have found the ordinary weather prophecies productive chiefly of vain hopes or of useless forebodings. The cruiser from harbor to harbor makes his decision about starting in the morning, regardless for the most part, of the evening indications. But I know that this is heresy.

4. How far such a cruise in a small boat involves dangers beyond the ordinary risks of sailing I do not know, but so far as I can see the risk is not great. I have never had anything that could be called an adventure; the accident to my friend's hand, related above, comes nearest to it; if this had happened to me when I was alone with my wife or one of my daughters, it would have been somewhat serious, but I could certainly have made a harbor somehow. I have, I suppose, grown cautious with years, but caution combined with sense is what makes cruising safe.

The total distance for the summer was 718 miles; the time spent aboard the boat was thirty-six days.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Messrs. Wallace Bros., of Norfolk, Va., are supplying and fitting the handsome schooner yacht Virginia, owned by Mr. F. W. McCullough, of Norfolk, with 25 horse-power Buffalo marine gasolene motor. The skipjack Doctor, owned by Mr. C. H. Bull, 4 horse-power Buffalo marine motor, and building for Mr. C. C. Couper, of Norfolk, Va., a handsome 32ft. hunting launch with 14 horse-power Buffalo motor. Mr. McCullough's yacht will be finished and ready to go into commission about the end of the month, Mr. Bull's boat by June 1 and Mr. Couper's launch about June 15.

The $10,000 clubhouse of the Hampton Roads Y. C. is being pushed energetically, and is expected to be completed by July 15.

Mr. J. R. Hodder, ex-commodore of the Winthrop Y. C., has recently disposed of his knockabout Ariel through the office of Frank N. Tandy to Mr. C. A. Williams, of Worcester. Ariel, ex-Giralda, is a 25ft. knockabout. Mr. Williams will use her for cruising in Buzzard's Bay.

The following sales have been made through the agency of Mr. Stanley M. Seaman: The steam yacht Kalolah for Mr. H. H. Hogins to Mr. Dumont Clarke. The auxiliary yawl Dione for Mr. Gouverneur Paulding 2d, to Mr. Frank F. Streeter, of Boston, Mass.

Commodore Arthur Curtiss James, of the Seawanhaka-Corinthian Y. C., has issued the following orders through his Fleet Captain, Franklin A. Plummer:

1. The squadron will rendezvous at Seawanhaka Harbor, Oyster Bay, on Saturday, May 30, in order to take part in the opening exercises at the clubhouse.
2. A meeting of captains will be held on board the flagship at 10:30 A. M.
3. On signal from the flagship at noon, the club burgee will be mastheaded on the club flagstaff, and all vessels in harbor will dress ship simultaneously.
4. In observance of Decoration Day all ensigns will be half-masted.
5. Immediately after dressing ship all yachts will be inspected by the commodore. The fleet captain has offered a cup for the yacht which the committee appointed by the commodore shall place first for decoration and general commission.
6. At 4 P. M. a reception will be held on the flagship, to which all captains, members and their guests are cordially invited.
7. On Sunday, May 31, divine services will be held on board the flagship at 11 A. M., conducted by the fleet chaplain, Rev. George R. Van De Water, D.D.

Captains are earnestly requested to have their yachts in harbor during the ceremonies.

A bad explosion occurred on board the new auxiliary yawl Vagabond, anchored off Ninety-second street, Hudson River, on Saturday, May 16. Captain W. E. Rich, of Vagabond, was ashore at the time of the accident, and the crew were filling the gasolene tanks from a barrel. Just what caused the explosion is not known, but it is thought that some of the gasolene leaked into the boat's bilge, and the gas arising from this fluid filled the cabins, and when one of the men lighted a match the explosion followed. The yacht was being put in shape for a cruise to the eastward, and there were several men on board besides the crew. All were more or less burned, including Mrs. J. Blois Gibson, the yacht's owner. Assistance was rendered by nearby boats, and those who had jumped overboard were picked up. The Japanese steward was burned worse than any of the others, and was taken to the hospital in a critical condition. The sails, rigging, and spars were destroyed, and the hull of the yacht was badly damaged. The fire boat New Yorker filled her with water and she sunk at her anchorage. Preparation for raising the yacht were made on Monday.

Vagabond was a new boat, having been recently launched from the yard of her builders, the Geo. Lawley & Son Corporation, South Boston. She was designed by Mr. Fred D. Lawley, and was intended solely for cruising, and was very elaborately and handsomely fitted. She is 71ft. over all, 51ft. waterline, 16ft. breadth, and 9ft. draft. The yacht was insured for $20,000.

Resolute, the new auxiliary schooner that was built for Mr. J. M. Masury from designs made by Messrs. Cary Smith and Barbey, was launched from the yard of the builders, the Townsend & Downey Shipbuilding Company, Shooters Island, on Monday afternoon, May 18. Resolute is 124ft. over all, 90ft. waterline, 23ft. 8in. breadth, and 14ft. draft.

At the Herreshoff plant at Bristol the schooner building for Mr. Morton F. Plant is nearly plated. The steam launch building for Mr. Cornelius Vanderbilt is practically finished. She is 26ft. long and will be equipped with a 30 horse-power motor. She will be used as a tender to Mr. Vanderbilt's steam yacht North Star. The 35ft. steam launch Sunbeam built for Mr. J. C. Hutchinson, of New York city, developed a speed of 18 miles on her trials.

Dr. J. B. Palmer, of New York City, is having a raceabout built at Webber's Yard, New Rochelle, from designs made by Mr. Henry J. Gielow.

The Larchmont Y. C. went formally into commission on Saturday May 16.

The following charters have been made through the agency of Messrs. Tams, Lemoine & Crane: The steam yacht Felicia, owned by Mr. E. W. Bliss, to Mr. Charles Steele; the schooner yacht Sea Fox, owned by Mr. Anson Phelps Stokes, to Mr. Arthur T. Kemp.

The annual dinner of the Shelter Island Y. C. was held at the Lotus Club, New York City, on Friday evening, May 15. The officers of the club are: Com., James Weir, Jr.; Vice-Com., Arthur E. Whitney; Rear Com., John W. Weber; Sec., William B. Hill; Treas., Harold Otis, and Fleet Surgeon, George F. Little, M. D.

Mr. Frederick W. Vanderbilt, owner of the steam yacht Conqueror, is having another steam yacht built by the Ailsa Shipbuilding Company, of Troon, Scotland. She was designed by Mr. George L. Watson, and is a very large vessel, being intended for ocean cruising. The yacht is to be 240ft. on the waterline and will be completed early next year.

The turbine steam yacht Lorena, that was designed by Messrs. Cox & King, and built by Messrs. Ramage & Ferguson, at Leith, Scotland, for Mr. A. L. Barber, of New York City, attained a speed of 21.88 knots on her trials.

Mr. Pembroke Jones has offered a cup to take the place of the Paget cup, won by him in Carolina last year. The cup will be raced for by the Newport special thirties, and will go to the boat winning the greatest number of points from July 1 to Sept. 15. A win counts two points and a second place one point.

The Regatta Committee of the Atlantic Y. C., which is composed of Mr. Henry J. Gielow, Chairman; Mr. Frederick Vilmar and Mr. Charles E. Schuyler, has given out the following racing schedule for the present season:

Saturday, May 30, Decoration Day.—Classes J and below; short courses; start, 2:30 P. M.

Monday, June 1.—Ocean race; Sea Gate around Fire Island and Northeast End Lightships back to Sea Gate; start, 10 A. M.

Tuesday, June 9.—Thirty-seventh annual regatta; all classes; long courses; start, 11 A. M.

Wednesday, June 10.—Ninety-footers; course from Sandy Hook Lightship fifteen miles to windward or leeward and return; start, 11 A. M.

Saturday, June 20.—Classes M and below; short courses; start, 3 P. M.

Saturday, July 4.—Classes J and below; short courses; start, 3 P. M.

Saturday, July 18.—Classes M and below; short courses; start 3 P. M.

Monday, July 27.—Ocean race; from Newport to Nantucket Shoal Lightship to Sea Gate; start, 10 A. M.

Saturday, Aug. 1.—Classes M and below; short courses; start, 3 P. M.

Wednesday, Aug. 12, to Saturday, Aug. 15, inclusive. Race week.

Wednesday, Aug. 12.—Classes J and below; short courses; start, 2:30 P. M.

Thursday, Aug. 13.—Motor boats; short courses; start, 2:30 P. M.

Friday, Aug. 14.—Classes M and below; short courses; start, 2:30 P. M.

Saturday, Aug. 15.—Water sports; start, 2:30 P. M. Illumination of yachts, fireworks, etc.

During race week should the owners of two or more yachts in any one class, not provided for, desire to race, the Regatta Committee will, upon application, provide for them, and suitable prizes will be awarded.

Monday, Sept. 7 (Labor Day).—Classes J and below; short courses; start, 3 P. M.

Ocean Race.—From Sea Gate to Nantucket Shoal Lightship; thence to Northeast End Lightship and Sea Gate; start, 10 A. M.

Saturday, Sept. 19.—Fall regatta, all classes, long courses; start, 11 A. M.

Aria, the steam yacht built for Mr. Edward H. Blake, of Bangor, Me., was launched from the yard of the builders at Morris Heights on Saturday, May 16. Aria is built of steel and has a flush deck. She is 165ft. over all, 138ft. waterline, 18ft. breadth and 8ft. draft. She has triple expansion engines of 1,000 horse-miles. The yacht will be delivered to her owner on June 4.

Canoeing.

Prizes for Canoeists.

IN order to encourage canoeists and small boat sailors, who do their knocking about on inland waters, to keep a record of their trips and experiences, the publishers of FOREST AND STREAM offer cash prizes for the best accounts of cruises taken during the season of 1903. As few restrictions as possible will be imposed, and those given are made only with the view of securing some uniformity among the competitors' stories, so that the judges will be able to make a fair award.

The prizes will be as follows:

First, $50.00.
Second, $25.00.
Third, $15.00.
Fourth and Fifth, $10.00 each.
Sixth to Eighth, $5.00 each.

I. The cruise must be actually taken between May 1 and November 1, 1903.

II. The cruise must be made on the (fresh water) inland streams and lakes of the United States or Canada.

III. The canoe or boat in which the cruise is made must not be more than 18ft. long over all.

IV. An accurate log of the trip must be kept, and all incidents and information that would be of value to other canoeists covering the same route should be carefully recorded.

V. A description of the boat in which the cruise is made should preface the story, and a list of outfit and supplies.

VI. Photographs of the boat and of the country passed through, not smaller than 4x5, should, if possible, accompany each story, and they will be considered in making the awards.

VII. Stories should contain not less than five thousand words, written on one side of the paper only.

VIII. An outline chart of the trip drawn on white paper in black ink (no coloring pigment to be used) should also be sent in.

IX. Competitors should avoid the use of slang or incorrect nautical expressions in their stories, as it will count against them in awarding the prizes.

Each manuscript to which a prize is awarded shall become the property of the Forest and Stream Publishing Company. All manuscript should reach the office of the Forest and Stream Publishing Company, 346 Broadway, New York, N. Y., on or before December 1, 1903.

A. C. A. Division Encampments.

To the several commodores and Officials of each division of the A. C. A.:

I herewith extend my greeting and well wishes for the success of your Division Encampment, and to each member attending. I wish to express a sincere hope that you and your friends will enjoy your recreation to such an extent that your next desire will be to attend the annual A. C. A. meet at Sugar Island.

I exceedingly regret that owing to my recent illness I probably cannot attend the Division Encampments.

NATHANIEL S. HYATT,
Commodore A. C. A.

A. C. A. Regatta Committee.

Editor Forest and Stream:

I take great pleasure in advising you of the appointment of Mr. A. W. Friese, of Milwaukee, Wis., as a member of the Regatta Committee of the A. C. A., representing the Western Division.

J. K. HAND,
Chairman Regatta Committee.

A. C. A. Membership.

The following have been proposed for membership to the A. C. A:

Atlantic Division—A. S. Gregg Clarke.

The following have become life members to the A. C. A:

Hon. George W. Gardner, Cleveland, Ohio; John S. Wright, Rochester, N. Y.; Reade W. Bailey, Pittsburg, Pa.; Walter C. Witherbee, Port Henry, N. Y., and C. Fred. Wolters, Rochester, N. Y.

Take inventory of the good things in this issue of FOREST AND STREAM. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

May 21-22.—New Paris, O., Gun Club's tournament.
May 21-22.—Kenton, O.—Shoot of the Kenton Gun Club. A. G. Merriman, Sec'y-Treas.
May 24-26.—San Francisco, Cal., Trapshooting Association's three days' bluerock handicap tournament. Open to all; $1,500 added. C. C. Nauman, manager.
May 26-27.—Dubuque, Ia., Gun Club's fourth annual amateur target tournament. A. F. Heeb, Sec'y.
*May 26-27.—Brownsville, Pa.—Brownsville Gun Club tournament. W. T. Doherty, Sec'y.
May 27-28.—Williamsport, Pa.—The Interstate Association's tournament, under the auspices of the West Branch Rod and Gun Club. H. A. Dimick, Sec'y.
May 27-28.—Fort Wayne, Ind.—Two-day bluerock tournament of the Corner Rod and Gun Club; $100 added. John V. Linker, Sec'y.
May 29-30.—Union City, Ind.—Spring tournament of the Parent Grove Gun Club.
May 30.—New Haven, Conn.—Decoration Day shoot of the New Haven Gun Club. John E. Bassett, Sec'y.
May 30.—Orange, N. J.—Decoration Day shoot of the Nishoyne Gun Club. Ralph B. Baldwin, Sec'y.
May 30.—Shrewsbury, Mass.—Shoot of the Worcester Sportsmen's Club.
May 30.—Tournament of the East Harrisburg, Pa., Shooting Association.
May 30.—Newport, R. I.—Second annual tournament of the Aquidneck Gun Club. J. S. Coggeshall, Sec'y.
May 30.—Detroit, Mich.—Winchester Gun Club's Decoration Day third annual tournament; all day. Rose system and average prizes. Sliding handicap, 16, 18 and 20yds. D. A. Hitchcock, Sec'y-Treas.
May 30.—Scranton, Pa., Rod and Gun Club's fifth annual tournament. J. D. Mason, Sec'y.
May 30.—Buffalo, N. Y., Audubon Gun Club's all-day shoot. E. P. Reynolds, Field Capt.
May 30.—Gallatin, Tenn., Gun Club's shoot. W. G. Harris, Sec'y.
May 30.—East Harrisburg Association's tournament.
May 30-31.—Milwaukee, Wis.—Shoot of the South Side Gun Club.
May 30-31.—Pullman, Ill.—Calumet Gun Club's target tournament. E. B. Shogren, Mgr.
June 2-4.—Arnold's Park, Ia.—Budd & Burmister's tournament. John Burmister, Spirit Lake, Ia.
June 2-5.—Baltimore, Md.—Third annual Baltimore County shoot; three days targets; one day live birds; $500 in purses and prizes. Hawkins and Malone, Managers.
June 3-4.—Boston, Mass.—The Interstate Association's tournament, under the auspices of the Boston Shooting Association. O. R. Dickey, Sec'y.
June 3-5.—Parkersburg, W. Va.—Sixth annual tournament of the West Virginia Sportsmen's Association, under auspices of Ohio Valley Shooting Association. J. F. Mallory, Sec'y.
June 4-5.—Indiana State shoot, under auspices of the Lafayette Gun Club. R. A. Livenguth, Sec'y.
June 4-5.—South Dakota State Sportsmen's Association's annual tournament, under auspices of the Vermillion Gun Club. G. Harris, Sec'y.
**June, second week.—Shreveport, La.—Caddo Gun Club's tournament.
June 7-8.—Ligonier, Pa., Gun Club's tournament.
June 8-12.—Ossining, N. Y.—New York State Association for the Protection of Fish and Game's forty-fifth annual tournament, under the auspices of the Ossining Gun Club.
June 9-10.—Lafayette, Ind.—Indiana State shoot, under auspices of Lafayette Gun Club.
June 9-11.—Sioux City, Ia.—Ninth annual amateur tournament of the Soo Gun Club. B. F. Duncan, Sec'y.
June 9-11.—Cincinnati, O.—Seventeenth annual target tournament of the Ohio Trapshooters' League. Chas. T. Dreihs, Sec'y.
*June 10-11.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.
June 16-19.—Warm Springs, Ga.—The Interstate Association's tournament, under the auspices of the Meriwether Gun Club. Chas. L. Davis, Sec'y.
June 16-18.—New London, Ia.—Seventh annual midsummer target tournament of the New London Gun Club.
*June 17-18.—McKeesport, Pa., tournament.
June 24-25.—Rutherford, N. J.—Interstate Association tournament under the auspices of the Union Gun Club.
*June 24-25.—New Castle, Pa., Gun Club's tournament. James Atkinson, Sec'y.
July 4.—Towanda, Pa., Gun Club's annual tournament. W. F. Dittrich, Sec'y.
July 4.—Topsham, Me.—All-day tournament of the Riverside Shooting Club. Fred W. Atkinson, Sec'y.
*July 7-8.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.
July 8-9.—Huntsville, Ala.—The Interstate Association's tournament, under the auspices of the Huntsville Gun Club. E. R. Matthews, Sec'y.
July 8-10.—Arkansas State Sportsmen's Association's thirteenth annual meeting and tournament, under the auspices of the Jonesboro, Ark., Gun Club, of which Matthews is Sec'y-Treas.
**July, second week.—Memphis, Tenn., Gun Club's tournament.
July 14-16.—The Americus, Ga., second annual interstate target tournament. H. S. McCleskey, Sec'y.
*July 21-22.—Beaver Falls, Pa., Gun Club's tournament. W. R. Keefer, Sec'y.
July 30-Aug. 1.—Viroqua, Wis.—The Interstate Association's tournament, under the auspices of the Viroqua Rod and Gun Club. Dr. R. W. Baldwin, Sec'y.
*Aug. 5-6.—Brownsville, Pa., Rod and Gun Club's tournament.
Aug. 12-15.—Toronto, Ont.—Annual tournament of the Dominion Trapshooting and Game Protective Association. A. W. Throop, Sec'y-Treas., Ottawa, Can.
Aug. 18-20.—Grand Rapids, Mich.—Second annual target tournament of the Consolidated Sportsmen's Association of Grand Rapids; $1,000 added. A. B. Richmond, Sec'y.
Aug. 19-20.—Ottawa, Ill.—The Interstate Association's tournament, under the auspices of the Rainmakers' Gun Club. Paul A. Selember, Sec'y.
*Aug. 19-20.—Millvale, Pa., Gun Club's tournament. Wm. Bussler, Sec'y.
Aug. 25-28.—Lake Okoboji, Ia.—Annual Indian tournament. Frank C. Riehl, Chief Scribe.
*Sept. 1-2.—Irwin, Pa., Gun Club's tournament. John Withero, Sec'y.
Sept. 2-3.—Akron, O.—The Interstate Association's tournament, under the auspices of the Akron Gun Club. G. E. Wagoner, Sec'y.
*Sept. 9-10.—Enterprise Gun Club tournament.

*Sept. 23-24.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.
Oct. 6-7.—Allegheny, Pa.—North Side Gun Club's tournament. L. B. Fleming, Sec'y.
Saturdays.—Chicago.—Garfield Gun Club; grounds W Fifty-second avenue and Monroe street. Dr. J. W. Meek, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.
**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J. Bradfield, Sec'y, Vicksburg, Miss.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

The third annual Maryland County shoot for amateurs, to be held at Baltimore, Md., Shooting Association's grounds, Pamlico Road, June 2-6, has a programme of special interest for amateurs and professionals. June 2, practice day, has a programme open to all; seven events, of which six are at 15 and 20 targets, with a uniform entrance as follows: Experts, $2; semi-experts, $1.50; amateurs, $1. No. 7 is the Baltimore Handicap, 50 targets, entrance $1; handicaps 14 to 22yds.; eleven merchandise prizes, of which four go to the lowest scores. June 3, first day, has a programme for all, and score for county amateurs only. Added money, $52. Six events have 15 and 20 targets, $8 and $10 respectively added; entrance 80 cents, $1, $1.30 and $1.40. No. 7 is the county amateur championship of Maryland, 100 targets, $2 entrance. A long list of experts, residents of the county, are barred. This event has twenty prizes, of which five go to the lowest scores. Open to all are ten events, each at 20 targets, $5 added, with three different class entrances, as follows: Experts, $2; semi-experts, $1.50; amateurs, $1; five moneys, 35, 30, 20, 10 and 5 per cent. A gold signet ring, donated by Mr. Lester S. German, will be given for high average in sweeps. June 4, second day, is for county amateurs only; $52 are added. The first six events are like to those of the first day. Event No. 7 is at 50 targets, three-man team race, $1 per man entrance; for the team championship of the county. There is a list of prizes for teams from first to fifth, and for four lowest teams; also prize for highest individual score. June 5, third day, is a double programme for county amateurs only, and also open to the world. There are three county amateur events, of which the third is the State championship cup event, 15 birds, entrance, price of birds, with an optional $5 sweep. There are six live-bird events open to the world, of which three are $2 miss-and-outs. There is also a programme of ten 20-target events, like that of the previous day. A gold signet ring, donated by a member of the Baltimore Shooting Association, will be given to high average. Targets, 2 cents. Four sets of three traps, Sergeant system. Any one may shoot for targets only. Lunch will be served on the grounds. Ten-gauge guns 2yds. back of 12-gauge. Known traps, unknown angles. Shooters' badges, 25 cents. Programme commences at 9 o'clock. "You can borrow a gun to fit you on the grounds." The manager is Mr. J. Morell Hawkins. Assistant manager, Mr. James R. Malone.

The Pawtuxet, R. I., Gun Club may this year abandon its heretofore Memorial Day shoot, and throw its support in favor of the Aquidneck Gun Club's shoot at Newport. Concerning the Pawtuxet Club, the Newport Herald states: "Interest in the weekly shoots of the club is growing, the attendance Saturday having been the largest of the season, and including a number of visitors. The prize shoots of the club will begin June 6, and it is believed that by that time the Saturday afternoon events will have become the most important trapshooting events around Providence. The traps have been placed in the best condition and some of the latest improvements have been added. The new officers of the club have been working hard for its interests, and there are prospects that the club will have the best year of its career."

The Richmond, Va., Leader, states that "the City Gun Club, which is composed of some of the best colored shots in the city, will hold its initial shoot of the season next Tuesday afternoon, beginning at 4 o'clock, at its shooting grounds, in the rear of the old expositions grounds. The club, which numbers some twenty-five or more members, has been presented with 550 rounds of shells by Harris, Flippen & Co., for this contest. The club will give its first annual outing to Buckroe Beach June 22, where they will contest with crack teams from Newport News and Hampton. The officers of the club are: George W. Bragg, President; John C. Lewis, Vice-President; Dr. D. A. Ferguson, Secretary; Dr. E. R. Jefferson, Treasurer; George St. Julien Stephens, Scorer; E. A. Randolph, Referee; D. P. Bragg, George Jenkins and James H. Smith, Executive Committee."

At the Interstate tournament at Du Bois, Pa., May 13 and 14, Mr. Luther J. Squier was high gun both days, with a score of 181 out of 190 each day, a total of 362 out of 380. Mr. J. T. Atkinson, of New Castle, was second on the first day, with 176. Mr. L. B. Fleming, of Pittsburg, was third, with 175. On the second day, Nobles, of Olean, N. Y., was second, with 181 scored; Atkinson was third with 177.

The secretary, Mr. G. G. Zeth, writes us as follows: "Please cancel the date, May 30, claimed in your Fixtures column for shoot of Altoona, Pa., Rod and Gun Club. The shoot has been postponed owing to the fact that Harrisburg's claim for that date appeared in the sporting papers a week earlier than ours. The future date will be announced shortly."

Mr. A. B. Richmond, of Grand Rapids, Mich., writes us: "I wrote you a few days ago asking you to insert in your Fixtures column the dates June 23, 24 and 25 as the dates for the second annual target tournament of the Consolidated Sportsmen's Association. It has been decided to change those dates to Aug. 18, 19 and 20."

We are informed that the Committee on the May Walk of the Independence Shooting Club, of Plainfield, N. J., reported, and that the May walk will start from the hotel on May 24. This is an excellent feature, both as it refers to physical culture and utility in emergency, for a shooter, who attends a shoot, may walk from necessity afterward.

At the annual meeting of the New Jersey State Sportsmen's Association, held at Newark, N. J., it was decided to hold this year's tournament some time next fall, possibly in September. The place was not definitely agreed upon, but there is a probability that Trenton will be approved by a majority of the Association members.

In the programme of the Maryland County shoot is the following: "By request of the Baltimore Shooting Association, the following was granted Jan. 1, 1903: 'Any county amateur who wishes to joint the Baltimore Shooting Association in the future may do so without fear of being barred from the Maryland County shoot.'"

The Buffalo, N. Y., Audubon Gun Club has resumed competition with earnestness. It is holding semi-monthly shoots, and has divided the contestants into classes A, B and C, with badges as an object of competition in each. The club announces an all-day shoot fixed to be held on May 30.

The Brighton Gun Club was organized at Neenah, Wis., recently, with officers as follows: President, Alfred Galpin, of Appleton; Secretary, N. Strange, Menasha; Treasurer, P. M. Conkey, Appleton.

The programme of the Western Pennsylvania Trapshooters' League, at the Enterprise Gun Club's grounds, McKeesport, Pa., June 17 and 18, has a like number of events for each day, alternately 15 and 20 targets, entrance $1.50 and $2. There is an important list of merchandise prizes for competition. Targets 2 cents, ½ cent deducted and added to the purses in each event. Th Rose system will govern.

Mr. Carl Von Lengerke, a popular trade representative, was a visitor in New Orleans recently, where he shot in good form, thence he journeyed into Louisiana. He, besides doing a successful business, was adding personally to his long list of friends.

Mr. John E. Bassett, the secretary, writes us as follows: "The New Haven Gun Club will hold an all-day tournament on Decoration Day, May 30. They will add $30, throw targets for 1½ cents, and serve a plain but substantial luncheon free to shooters."

The Florists' Gun Club, of Philadelphia, will probably be strongly represented at the Pennsylvania State shoot this week, as that club has been strongly represented at the traps in preliminary practice in some weeks of late.

A feature of the shoot of the Brunswick Gun Club on Thursday of this week is a match between Messrs. A. G. Fisher and Samuel Whitmore, at 100 targets, for $10 a side. Sweepstake events will be a part of the programme.

At the Oklahoma shoot, held at El Reno, May 7 and 8, Reust won first in the live-bird championship with a score of 23 out of 25. Heer was first in target averages for the two days.

The programme of the third annual Maryland County shoot has the following in large type: "Look out for Capt. J. R. Malone's ninth annual midsummer shoot in August, 1903."

The champion event for the individual amateur championship of New York is to be at 100 single targets only, and not at 60 singles and 20 pairs, as mentioned last week.

The Emerald Gun Club's May shoot has been postponed to June 2. The regular June shoot of this club will take place on June 16.

The New Britain, Conn., Gun Club contemplates holding an all-day shoot May 30 on its new grounds, and thereby make a formal opening.

It is rumored that the Bayonne, N. J., Gun Club will shoot a ten-man team race at Bayonne with the Secaucus Gun Club, for a purse.

The Scranton, Pa., Rod and Gun Club announces that it will hold its fifth annual tournament on Decoration Day, May 30.

BERNARD WATERS.

Schuylkill County League Tournament.

TREMONT, Pa., May 14.—The Schuylkill County League of Game and Fish Protective Associations held a semi-annual tournament to-day. Delegates and shooters were present to the number of fifty or more. The irrepressible T. H. Keller, of New York, was of the visitors, and was shooting in good form.

Officers for the ensuing year were elected as follows: President, Dr. H. J. Bricker, of Mahanoy City; Vice-President, Fen Cooper, Mahanoy City; Secretary, Samuel Gore, Pottsville; Treasurer, B. V. Murphy, Tremont; Solicitor, W. J. Whitehouse, Pottsville.

The next meeting of the League will be held next September in Pottsville.

The Peters Cartridge Company cup and the County medal were the main events. The former was won by the Llewellyn team; the Tremont team was the holder. The County medal was won by David Wise, of Minersville; the prior holder was C. F. Seltzer, of Pottsville.

Peters trophy team shoot, five-man teams, 20 targets per man:

Pottsville Team No. 1.—Wise 19, Seltzer 17, Rehrig 15, Pritchard 17, Knittle 14; total 82.

Tremont Team No. 1.—Bradley 13, Bonewitz 15, Machemer 19, Murphy 14, Dillfield 17; total 78.

Pottsville Team No. 2.—Davenport 17, Haverty 17, Gore 17, Schuster 16, Wool 14; total 81.

Llewellyn Team.—Weir 18, W. Lawrence 17, Adams 18, G. Lawrence 16, Daubert 17; total 86.

Beckville Team.—J. Springer 13, Knittle 12, E. Springer 10, Beck 14, Krammes 14; total 63.

Tremont Team No. 2.—Simon 14, Leininger 16, Weal 13, Maguire 12, Faust 13; total 68.

Trenton, N. J., May 16.—The tournament of the Trenton Shooting Association, held to-day, was a pleasing success. Wilmington, Philadelphia and New York were well represented in the competition. There were eleven events. Mr. Luther J. Squier was high gun with a total of 186 out of 200, the programme total. Neaf Apgar was second with 185; Chris. Feigenspan was third with 184. A steady breeze added to the difficulties of the shooting. Four extra events were shot. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	Shot at.	Broke.

North River Gun Club.

Edgewater, N. J., May 16.—The members of the North River Gun Club, at the weekly shoot to-day, were favored with delightfully clean and pleasant spring weather. Mr. Gus Greiff, who has been out of form for some time past, shot well and showed a positive gain in form. In event 11, at doubles, he scored 9 out of 10. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	10	15	10	15	10	10	25	15	10	10	10	10

Events Nos. 1, 6 and 11 were 5 pairs; event No. 8, handicap prize shoot.

JAS. R. MERRILL, Sec'y.

The Italian Gun Club.

On May 12 the members of the Italian Gun Club assembled in full force at Outwater's grounds, on the banks of the Hackensack, Carlstadt, N. J., the occasion being the regular monthly club contest at 10 birds, in which fourteen members faced the score. Saldarini, with 9 kills, won the club event. His eighth bird was a hard driver, which he failed to stop. Barbieri, Germolini and Rigani divided second honors with 7 kills each. Raoli shot up his April score, which added six birds to his yearly average. As usual, there was a large gathering of friends, and the day was a most pleasant one for the sport. The scores were as follows:

Feist	1110212000—6	Covati	200011*012—5
Minewini	00101*0010—3	Arignoni	1010211000—5
Barbieri	2021012201—7	Beneetti	1000010220—4
Gerbolini	220*11*111—7	Dr Felice	1000100022—4
Gazzola	0120100112—6	Raoli	1020002201—5
Rugani	0012210211—7	Di Barnardi	0000200022—3
Saldarini	2221212022—9	Raoli	2220100022—6
Anguivola	0202010002—4		

Franklin Gun Club.

Franklin Furnace, N. J.—In event 1 at 10 targets, the scores were as follows: Andrew Wright 3, Harry Pope 9, John Williams 5, W. J. Pope 6, Frank Kishpay 5, Alfred Right 4, Elmer Black 1.

Hudson Gun Club.

Jersey City, N. J., May 19.—There was a good attendance and pleasant weather as favorable conditions for the weekly shoot of the Hudson Gun Club. Some excellent scores were made:

Events:	1	2	3	4	5	6	7	8	9
Targets:	15	15	15	15	15	25	25	20	25
Schorty	14	15	15	14	13	23	19	15	..

Events 6 and 7 were at 20yds.

Erie Gun Club.

Carlstadt, N. J.—The Erie Gun Club, one of the oldest shooting organizations of South Brooklyn, wound up its winter season in true shooting style at Outwater's grounds, Carlstadt, N. J., on Wednesday of last week. There will be no shooting during June, July and August, as the club contests are at 14 birds instead of 7 as in former years.

Charles Plate won the club event with a score of 13, losing his sixth bird, a fast right-quarterer. Henry Dohrman and Charles Detlefsen divided second honors with 12 each, while Finnigan, Hitchcock and Sweeney tied for third place with 11.

As a wind-up of the season, John Hen served one of his old-time dinners, and the boys were at the score from soup to pivot. The birds were a fair lot, and many friends were present. Scores follow:

H Dohrmann, 28	02122222201211—12
G Humphreys, 28	01120221*01011— 9
C Plate, 28	11211012222212—13

P Finnigan, 26	22101*22102211—11
H Jankowsky, 27	12121000001111— 9
D Mohrman, 28	20212010101201— 9
M J Sweeney, 27	2202212*021111—11

Jeanette Gun Club.

There was a good attendance Friday last at the regular monthly contest of the Jeanette Gun Club, on the grounds of the Hudson County Driving Park, at Guttenberg, N. J. Although the day was mild, the birds proved to be a good lot of flyers, as the scores will show. Schorty, on the 20yd. mark, won Class A medal with 10 straight, defeating Steffens, Greiff and Loeble, all at 30yds. George Haggerdorn, a guest, also grassed 10, and Henry Pape won the Class B medal, at 28yds., with a straight score—well, a few were hard ones, while President Fred Ahlers decamped with Class C prize with 8, losing his first and tenth birds. Following the club event, Chris. Interman successfully defended the challenge medal, defeating Chas. Meyerdiercks by a score of 14 to 11. Next in order was the team race at 5 birds a man between Capt. Ehlen's team and one headed by Capt. Pape, which resulted in a victory for Ehlen's team by 5 birds, the score being 32 to 27. Preceding all events, C. Meyer, with the gun that "Frank got," defeated Chas. Steffens in a 5-bird match at 30yds. rise, both contestants using brush guns. Scores:

F Ehlen, 25	*111121210—8	C Interman, 28	2102221121—9
F Kastens, 28	1122110122—9	G Haggerdorn, 30	2222222222—10

Richmond Gun Club.

Newark, N. J.—Albert A. Schoverling was very much talked about on Saturday of last week by winning a solid silver loving cup and the championship of the Richmond Gun Club, at Smith Brothers' grounds, Newark, N. J. F. Hatkins and Ed Lovett were close seconds with 11 each, and divided second honors in the cup race. Baron Von Walkenberg, Fessenden and Hawes divided second money in the sweepstakes with 12 each.

In the 5-bird event Schoverling, Reierson and Hawes were high guns and divided first and second moneys.

The birds were, as usual, a fast lot, and the day an ideal one. Following are the scores:

No. 1, 5 birds, $2, 29yds.:

Schoverling	22220—4	Reierson	1221*—4
Bechtel	10001—2	Hawes	1*112—4

Richmond Gun Club championship, 15 birds, Rose system:

A A Schoverling, 30	20222222222*222—13
G Bechtel, 29	10*12011*221002—9
E Joline, 29	212222*02121122—13
F Hatkins, 29	120121002222202—11
M Reierson, 29	11020*200120101—8
E Lovett, 29	102222202001222—11
L W Colquitt, 29	220212202022222—12
Von Walkenberg, 30	0220*022022202*—8
F P Fessenden, 29	2*2222220222022—12
W Pearsall, 28	200222212000222—10
A Hawes, 28	122222221022020—12

H. P. Fessenden was referee.

Union Gun Club.

Rutherford, N. J., May 16.—There were twenty-three contestants at the weekly shoot of the Union Gun Club to-day. The scores follow:

GEO. W. MAINS, Sec'y.

Crawfordsville Tournament.

COMING so close on the heels of Paducah, it will interest all lovers of trapshooting to know that Tobacco Bill has "gone and done it." Just laid Fritz Gilbert, his side partner, in the shade; 398 out of 400 in a two days' tournament is the record. We must not forget that Pop Heikes was a busy boy; he made 199 the first day and 193 the second day. There were so many other good scores that all cannot herein be singled out, yet Hughy Clark going down the line with 194 is not to be passed by.

The happiest lot of shooters—and among them the best that every gathered at one tournament of like nature—met at Crawfordsville, Ind., May 11, and the day was so perfect, the trap on its good behavior, as it was run by a one-legged mad. Ed. Voris was there to greet them, and all his lieutenants were ready to attend to every want, and the most complaint I heard was that the dinner furnished was too good. Read the scores all over; they tell the tale of the most perfect conditions.

This is the twenty-fifth time that Crawfordsville has held a spring tournament, and as Pop Heikes has attended most of them, he only desires to live to attend twenty-five more of just such perfectly managed tournaments. When Crawfordsville claims dates there is no use of worrying about anything only your shells, and then not to forget the dates. Voris, Stillwell, Snyder, Helm, Lacy and about fifty more very good gentlemen will attend to all the details, and what they overlook you can rely on Dad Detrick not failing in the smallest particular. Few clubs have a keeper living in the club house. Long live the Crawfordsville Club, and may more records be made on their perfect grounds.

Several years ago Ralph Trimble was just starting out, and he made a record at this city which has not been equalled, breaking 144 out of 145 targets, all reverse angles.

Tramp Irwin shot through a live-bird programme and killed 100 per cent. There are many other very large scores on record made there, and there will be many more in the future. But who can beat the one herein chronicled. It may stand for years, and may never again be excelled save at the historic grounds at Crawfordsville.

First Day.

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Cincinnati Gun Club.

CINCINNATI, O., May 9.—The Cincinnati Gun Club cash prize contest resulted as follows:

Barker (18) 45, Medico (16) 45, Gerlaugh (16) 45, Gambell (20) 44, Ackley (15) 44, Herman (17) 44, R. Trimble (21) 44, Wilson (17) 44, Faran (18) 42, Nye (16) 41, Ahlers (19) 41, Willie (16) 40, Capt (17) 40, Maynard (18) 40, McB. (16) 39, Corry (17) 39, Harris (19) 37, Falk (16) 36, J. B. (17) 36, Roanoke (16) 35, Lindsley (16) 35, Block (18) 34, Du Bray (17) 34, Jack (16) 32.

Team race, 50 targets, 16yds.:

Gambell 49, Medico 46, Faran 46, Wilson 44, Ackley 44, Capt 42, Lindsley 41, Roanoke 37, Jack 33; total 382.

Maynard 46, Harris 43, Block 43, Herman 42, Gerlaugh 38, Willie 37, Du Bray 36, McB. 36, J. B. 33; total 354.

At the annual meeting the following board was elected: R. H. West, G. W. Schuler, J. B. Mosby, Dr. A. B. Heyl, Fred Dreihs, Joe Coyle, Lou Ahlers, J. E. Worth (Maynard), Herman Jergens. Officers will be named at regular monthly meeting.

Three hundred and fifteen thousand targets were thrown the past year. One and one-third fare has been obtained for State shoot all over United States.

Interstate Tournament at DuBois.

DU BOIS, Pa., May 16.—The trapshooting tournament given by the Interstate Association for the Du Bois Rod and Gun Club, on May 13 and 14, was a very pleasant affair. The first day, as far as weather conditions were concerned, was perfect, and thirty-three contestants, some of them of national reputation, faced the traps in all of the events brought off. Twenty-three took part in the entire programme of the day. Some of these were members of the local club, and several were from surrounding towns. The shooting was witnessed by a large number of people, quite a few of the spectators being ladies.

There were ten events, four at 15 targets, four at 20 and two at 25. L. J. Squier, of Wilmington, Del., was high gun for the day, and he made the largest number of straight scores, five. Out of the 190 targets shot at, Squier missed but 9. J. T. Atkinson, of New Castle, Pa., was second high gun with 176 breaks. L. B. Fleming, of Pittsburg, Pa., was third high gun with a total score of 175 breaks.

Messrs. Guinsburg, Quinn, Kelly and Wolfe made up a squad of local men who participated in all of the events. Messrs. Munch and Sullivan shot in all but one event. Kelley was in the best form among the local men, his total for the day being 167. Guinsburg scored 155, Quinn 146, Munch 139, Wolfe 136, and Sullivan 120. The number of targets shot at by Munch was 175, and by Sullivan 170.

Burgoon, of Clearfield, Pa., was well up among the number with the high scores, scoring 164 out of the 190. Sizer, of Kane, Pa., broke 171, and No. 96, the cognomen of a gentleman from the same city, broke 166.

The new score sheets, copyrighted by Mr. Chas G. Grubb, of Pittsburg, Pa., were given a trial by Manager Shaner, and they gave the best of satisfaction. Manager Shaner stated that he will use them at all Interstate Association tournaments in place of a blackboard, the possibility of mistakes being reduced to a minimum when using them.

The programme of the second day was an exact duplicate of the first day. Thirty contestants, but three less than the number taking part the first day, participated, and twenty-two shot in all of the events. It was another favorable day for the marksmen, the weather being fine and the scores made were first class.

Again Squier carried off the high gun honors, shooting at 190 targets and breaking the same number as he did the first day, 181. Nobles, of Olean, N. Y., was second high man with a score of 178, Atkinson was third with 177. Dr. W. Jessop, of Kittanning, Pa., and L. V. Byer, of Rochester, N. Y., tied for fourth place with scores of 172 each.

The local club was represented by Messrs. Sullivan, Quinn, Kelly, Munch, Cotter, Guinsburg and Wolfe, and each one took part in all of the events. Kelly again led the home talent, scoring 163 breaks. Wolfe was close up to him with a score of 158. Burgoon was in good form, as he was on the previous day, and he broke 163 targets.

The tournament was handled in a very able manner by Manager Shaner, assisted by Mr. Chas. G. Grubb, of Pittsburg.

The scores of both days follow:

First Day, May 13.

Events:	1	2	3	4	5	6	7	8	9	10	Shot

Clearview Gun Club's Shoot.

DARBY, Pa., May 16.—The Clearview Gun Club handicap event at 25 targets was won by Forden, after tieing with Smith on a full score, the tie being decided by the tossing of a coin after two tie shoot-offs. The handicap allowances counted as breaks. The scores:

	Hdcp.	Brk.	Total.		Hdcp.	Brk.	Total.
Jones	19	..	19	Elwell	11	7	18
Ludwig	8	5	13	Bell	20	2	22
Fisher	23	..	23	Downes	20	3	23

Rambling Trap Notes.

Bunkerhill, Ill.

WHAT was to have been a live-bird plant proved to be a lively shooting match. Some of the Bunkerhill boys had intended to have a pigeon farm, but suitable quarters could not be arranged and the birds went to the market after being shot at by Messrs. Cumming and Payne, of this city. It was hoped to arrange a match between shooters of this and adjoining towns, but it fell through. Our townsmen then tried their skill, with the following result:

Cummings .....2102011220122012210221221221222200121022221022 1202—40
Payne .....1012122111210212122001222122121021211221 2*2102101201—41

Litchfield Contest.

The boys are not faltering. They believe in using our nice grounds when the "sun is shining." The shoot held last week had the ineentive to make our boys get around and try for better scores:

	Shot at.	Broke.		Shot at.	Broke.
Snell	115	98	Close	60	47
McDonald	25	23	Ripley	50	29
Acree	50	23	Mcyers	75	58
Yeager	25	9	Carroll	25	8
Miller	30	4			

Iowa Boys Get Together.

The Grand Mound Club got the shooting fever this week, and eleven of the boys looked up their long neglected guns and went out to shoot the rust off them. The scores show lack of practice, as only two made straight scores:

Events:	1	2	3	4	5	6	7	
Targets:	10	10	10	10	10	10	10	Broke.
Mack	6	6	6	2	..	4	4	28

J Shaddow	8	6	10	7	8	6	4	53
B L M	10	9	7	..	..	..	..	26
Dad	..	..	..	..	..	4	3	7

Colored Trapshooters' League.

Last week the colored trapshooters met at Pleasant Hill, Mo., and engaged in a little practice at the traps. During the day an organization was perfected among the colored men, which is expected to be to the colored shooters what the G. A. H. is to the whites, as some good system of handicapping will be used.

The officers are as follows: President, Ed. Armstead, Kansas City, Mo.; First Vice-President, Leon Jordon, Kansas City, Mo.; Second Vice-President, J. E. Cohron, St. Louis, Mo.; Secretary and Treasurer, T. H. Cohron, Pleasant Hill, Mo.; Directors: S. A. Edwards, Kansas City, Mo.; N. G. Fulbright, Merriam, Kans.; T. H. Dawson, St. Joe, Mo.; R. H. Monday, Pleasant Hill, Mo., and Ed. Fort, Kansas City, Mo.

The next annual merchandise shoot will take place at Kansas City during the horse show or fall festivities, in order to secure half fare rates.

Harvey McMurchy was looking around for a good opportunity, and he spied out Mr. Cohron during the G. A. H. and offered a medal for the colored boys to shoot for, and here is the score of the McMurchy inter-city medal contest: Cooley 13, Fort 14, Jordon 16, Edwards 21, Crochett 13, Gudgell 11, Monday 15, Gibson 19, Armstead 18, Cohron 19, Monday 16, Dixon 13.

Bonesteel.

Mr. Leach, secretary of the Bonesteel, S. D., Gun Club, sent in a statement that the shooting season will open up on their grounds on May 26. There will be nine events of 15 targets each, $1 entrance, four moneys, Rose system. In addition to this, Mr. Spotts, who holds the Peters Cartridge Company's medal, has consented to put same up for open competition. This should call together a large crowd of shooters.

Instead of giving added money, the club will charge one cent for targets, that will be the same as adding $10 to the purses for each 1,000 targets thrown. There should be a large gathering, as Fairfax, Lynch, Bristow, Butte, Armour and Geddes are our near neighboring towns.

The sliding handicap will be used, the losers going up and the winners going back a yard. This should even up matters a bit and give all a chance.

Irving, Ill.

Phil Standor, Irving, Ill., has sent a programme of a two days' shoot that he will hold June 10 and 11, at Irving, Ill. All amateur shooters are invited to come and have two days' shoot. A good lunch will be provided, and the air will be fresh and fine, as the shooting will be on Mr. Standor's farm. JOLLY.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., May 13.—To-day the contestants in the shoot of the Rochester Rod and Gun Club made scores as follows:

Bonbright cup:

Kershner	16	5	12	7—19	Adkin	18	5	16	8—24
Bonbright	16	5	14	8—22	Coughlin	20	5	15	4—19
Newton	16	5	14	10—24	Rickman	19	5	14	7—21
Worth	18	5	14	6—20	Wray	20	5	13	5—18
Clark	22	5	16	7—23					

Club prizes:

Kershner	25	23	Adkin	27	21
Bonbright	25	22	Coughlin	29	13
Wride	28	11	Rickman	28	23
Worth	28	21	Stewart	25	23
Clark	32	24	Newton	26	25

In the cup event, column 1 denotes allowance of singles; column 2 denotes allowance in doubles; column 3 denotes number of singles scored; column 4 denotes doubles scored, and column 5 is the total. In the club event, column 1 denotes allowances; column totals.

Winchester Gun Club.

DETROIT, Mich.—At the regular shoot, May 16, some good shooting was done. Ford, in the shoot-off of the tie with Hitchcock for the Class B medal, broke 24 out of 25, and only 4 out of 60 got away from Andrew Reid, of Walkerville, shooting from the 18yd. mark, and it is almost a certainty that the lost targets have holes in them.

Following are the scores, the fifth event being the trophy handicap, the sixth the club event, and the seventh the shoot-off:

Events:	1	2	3	4	5	6	7	
Targets:	10	15	15	10	25	25	25	
T Reid, 18	6	11	9	..	19	21	..	
Brodie, 16	6	15	13	9	23	20	23	
Ford, 18	..	..	..	6	20	20	24	
Hitchcock, 18	8	12	12	9	21	20	20	
Leggett, 16	..	..	..	..	13	15	..	
A. Reid	10	13	..	10	..	..	23	
Clark	4	12	13	8	..	..	17	

D. A. H.

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, L. I., May 16.—At the shoot of the Brooklyn Gun Club to-day, Manager John S. Wright had a class of nine post-graduates, and the shooting as a whole was excellent for amateurs. Ten events were shot, a total of 120 targets. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	15	10	15	10	15	10	10	15	10	10
Hagedorn	14	8	14	7	11	7	10	13	4	8
Coims	13	9	12	7	12	9	7	12	7	10
Bergen	9	7	11	8	12	8	9	13	..	..
Frost	11	5	8	7	10	9	6	8	7	7
Hitchcock	13	10	12	8	..	7	8	..	..	..
Dreyer	10	6	10	6	12	..	8	11	7	..
Wright	11	9	12	7	12	9	8	12	7	..
Hansleiter	10	7	9	7	8	8	3	10	4	..
Pagson	2	2	5	3	6	2	..	5	..	..
Mohrman	9	9	11	6	..	..	..	..	..	..

No. 9 was at 5 pairs.

Neponset Gun Club.

EAST WALPOLE, Mass., May 16.—Events 13, 14, 15, 16 and 17 was the 50-bird prize event, with the following handicaps: Griffiths, 20yds., Campbell 18, Kirkwood 19, Fenton 18, Cuke 17, Puck 17, Barry 18, Tarkens 18, Sawyer 17, Linfield 18. Three prizes:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19

Hardenburg	..	6	4	7	6	5	..	..	..	..	28	.56

*Extra events.

Our next shoot will be held on May 30, Decoration Day, and will be the club's fifth annual tournament.

The indications are that there will be a big crowd of shooters on hand, who will participate in the 10-target events scheduled for that day and extra events if time will permit.

Extensive improvements are being made at the grounds, and we will be prepared to accommodate and take good care of all who come. This shoot will be open to all; four moneys, 40, 30, 20 and 10 per cent., excepting in special prizes for high average, which will be divided, 50, 30 and 20 per cent. Will shoot rain or shine.

J. D. MASON, Sec'y-Treas.

S. D. S. A.

OMAHA, Neb.—The annual State tournament of the South Dakota Sportsmen's Association will be held in Vermillion, Thursday and Friday, June 4 and 5. Twelve events will be pulled off each day, including target and live-bird shooting. H. G. Taylor, president of the Association, writes from Mackling that about forty shooters will contest for money prizes and medals. The shoot will be given under the auspiees of the Vermillion Gun Club, and the annual election of officers will be at the Waldorf Hotel, Thursday evening. All money will be divided 35, 30 and 20 and 15 per cent., and American Association rules, modified, will govern. Manufacturers' agents and profcssionals will be allowed to shoot for price of targets only. The C. H. Arland trophy event is open only to members of the Association. The live-bird championship medal event will be a hummer. Shooting begins promptly at 9 A. M. and 1 P. M. Targets trapped at 2 cents; live birds at 15 cents.

SANDY GRISWOLD.

Colt Gun Club.

HARTFORD, Conn.—The Colt Gun Club held their sixth medal shoot Saturday, May 16. H. J. Mills, of Bristol, made the highest score of the day. Four new members were added to the club, namely, John Stone, Wm. G. Grose, Clarence A. Bill and George Allison. These, with the recent former additions, go to show that trapshooting is steadily on the increase in Hartford. The scores were:

Events:	1	2	3
Targets:	25	25	25
Mills	..	22	24
Cook	..	22	..
McFetridge	22	21	..
Hermann	21	21	21

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., May 16.—The officers' cup and the club handicap were the main events of the Keystone Shooting League's weekly contest at the traps to-day. Mr. H. L. Coleman killed the 10 straight in the club handicap. Harrison and Fitzgerald tied on 14 in the officers' trophy event. The special match between two shots was postponed. The scores:

Club handicap, 10 birds, optional sweepstake:

Coleman	2222222222—10	Fitzgerald	2011111*22— 8
Harvey	2222022122— 9	Morris	2222022220— 8

Oklahoma Tournament.

EL RENO, Okla., May 9.—The annual meeting of the Oklahoma Territory Sportsmen's Association was held here this week. This is perhaps the youngest association of its kind in the United States; but it is very wide-awake, and will be more so in future, through the action of its members in their annual meeting just closed, in which they decided to hold their shoots open, in future, to all comers, and to separate the live-bird and target events. They realize that Oklahoma is one of the few States (they like to call themselves a State, and in all justice it should be one now) where live-bird shooting is not tabooed, and they want to hold a big midwinter meet and invite all who wish to come and participate.

The next annual meet will be held at Oklahoma City, and the boys there promise that there will be nothing lacking of an attractive programme when next they send them out.

The weather this week was so bad that the programme was carried through under much difficulty, but the boys kept faithfully at it, and thus compelled a successful issue of their undertaking. Their programme was devoted to amateur competition, but trade representatives who attended were shown the utmost courtesy. The sum of $300 was added to target events, moneys divided Rose system, three and four places in the short and longer races, and birds thrown from magautrap and expert traps, the full limit of allowance under Association rules.

The winners of averages were Heer, Ruest, O'Brien, Kirby, C. Dickson and Riehl. The State target championship was won by Reust, of McCloud, for the fourth consecutive time. It was shot for in the two 25-target events the second day.

Reust also won the live-bird championship, with 23 kills. This programme was spoiled by the lack of birds, the representatives and others who had lost three or more being compelled to drop out in order to allow possible winners to complete their scores:

KILLMORE.

Florists' Gun Club.

AT the regular shoot of the Florists' Gun Club of Philadelphia, at Wissinoming, Pa., May 12, the weather conditions were perfect. A large crowd was present, and many ladies were in attendance. Shooting was over two magautraps run by electric motor, and their work was perfect.

In the club shoot at 50 bluerocks, Geo. Anderson was high with 47.

For Eisenlohr prizes, with handicap allowance added, Anderson had a total of 55.

For the 75 shots, Fox and Landis were high with 67, Anderson 65, Sheeler 63, Shew 63, Mrs. Park 63, Sanford 63, Sterling 62, Bucknell 61.

After the shoot the annual shad dinner was served at the Delaware River club house, adjoining the Florists' grounds. Over 100 members and friends participated. The day was voted a grand success.

F. E. Butler kindly assisted in many ways in running the shoot.

Club shoot, 50 bluerocks:

Anderson	23	24—47	F E Butler	18	18—36
Mrs Park	21	25—46	C W Haywood	13	23—36
Landis	23	23—46	Reed	17	19—36

Ossining Gun Club.

OSSINING, N. Y., May 16.—The scores herewith were made at the regular Saturday afternoon shoot of the Ossining Gun Club. We have got the magautrap working fine, and hope to get the final win on the Inter-county cup from the Poughkeepsie boys next Saturday. We cordially invite any shooters who may care to try our grounds preparatory to the State shoot to come here Saturday, the 23d inst., and shoot a few sweeps with us if they are amateurs; and shoot along with us if they happen to be professionals. The addition to the club house is completed, and other work is being rapidly pushed forward. We are expecting a big crowd at the State shoot, and will be prepared for them. The first batch of programmes have been sent out, and we have plenty more for the asking. Come up Saturday and see how you like the grounds.

C. G. B.

Remington Gun Club.

ILION, N. Y., May 9.—Although to-day was not one of the regular days for a meeting of the Remington Gun Club, there were several members present at their grounds on East Main street for a practice shoot, and they all showed up in good form. E. D. Fulford, the well-known trap shot, was present, and tested a shotgun which has been just completed for him. The fact that he broke 94 per cent. would show that the gun was very much to his liking.

The new rifle range at the club grounds is nearly completed and will be used the first time May 23.

W. H. GRIMSHAW, Sec'y.

Manufacture of Firearms in France.

MR. HILARY S. BRUNOT, Consul at St. Etienne, writes to the State Department as follows:

The number of sporting guns of divers sizes and models turned out by the important manufactories of St. Etienne is annually increasing, the production for 1902 being considered in excess of that of the preceding year.

According to the official figures published recently by the Chamber of Commerce of St. Etienne, the number of gun barrels in an unfinished state presented to the proving house was 103,172 in 1902, of which 1,538 were rejected at the first trial, and 3,101 at the second. The remainder received the proof stamp, showing an increase of 26,210 over the preceding year. The great majority of the barrels were made of steel, the rest comprising ordinary guns, pistols, revolvers, etc. There were 269 cannon to be used against hailstorms.

At no other epoch in the history of the industry of St. Etienne were such favorable results reported. The value of sporting guns has likewise increased; the arms are better finished and command higher prices.

On the other hand, the national manufacture of arms is going through a crisis, and many skilled workmen have been given a month's notice, the Government orders not being sufficient to employ as large a number as formerly. This is the situation not only at St. Etienne, but at Government factories located in other parts of France. These establishments are at the disadvantage of being limited to one single product, viz., military arms, while the manufactories supported by private capital can engage also in making sportsmen's supplies, such as bicycles, gun tools and novelties, gun cases, trunks and valises, lanterns, cutlery, fishing rods, reels and paraphernalia, swords, games, etc. Thus they are able to divert their energies to meet demands in various branches of the trade, according to changes of fashion or popular whims.

In reference to recent inquiries on this subject, it may be stated that French patterns of sporting guns are not well known in the United States, though we buy enormous quantities from Belgium. Foreign-made barrels bear Government proof marks as a guaranty of the safety of the arm, and the dealer, in selling, usually lays stress on this point. A large, new proof house has been recently constructed at St. Etienne, equipped with the best modern devices for testing the guns made in this vicinity.

City Park Gun Club.

NEW ORLEANS, La., May 13.—The Times-Democrat contained the following account of a shoot, May 13, at which Mr. Carl Von Lengerke, of New York, was present:

The mid-week competition for the prize shoot took place yesterday at the Gun Club grounds. A good number of members was in attendance.

Among the visitors to the club was Carl Von Lengerke, the New York representative of a powder company. Mr. Von Lengerke reached the city yesterday morning, and complained of being tired, but was nevertheless high gun of the day, breaking 35 targets out of a possible 40.

Of the regular competitors Maurice Kaufman was high gun in Class A, with a score of 32, while Lee headed the list in Class B with 34. Full scores:

Class A.

	Yards.	Totals.		Yards.	Totals.
	16	19		18	15
C Von Lengerke	19	16—35	Benedict	16	13—28

Buffalo Audubon Gun Club.

BUFFALO, N. Y., May 16.—The Buffalo Audubon Club is holding semi-monthly shoots, and is getting "on earth" again. A number of new members have joined at the last meetings, and some of the new shooters are making the old heads hustle. At the shoot held on this date, Burgwaldt won Class A badge with 20, Capt. Foster Class B badge with 24, and Savage Class C with 18. The club will hold an all-day shoot on May 30. The scores of the shoot follow:

E. P. REYNOLDS, Field Capt.

PUBLISHERS' DEPARTMENT.

North Carolina.

IF you want to locate in the State where there are better opportunities than in any other section of the Union—the State that has superior climate, excellent water, splendid facilities for manufacturing and fine locations for poultry raising, fruit and vegetable farming—you should go to North Carolina. It is only ten hours' ride from New York city. The freight advantages are such that the fruit and vegetables gathered in the afternoon reach Washington city early next morning. The fruit and vegetable growers of North Carolina—especially those around Pinebluff—have finer marketing facilities than growers in any other territory in the South. For information, write J. T. Patrick, Pinebluff, Moore county, N. C.—*Adv.*

About Your Vacation.

LITTLE journeys to lake resorts and mountain homes will be more popular this summer than ever. Many have already arranged their summer tours via the Chicago, Milwaukee & St. Paul Railway, and many more are going to do likewise. Booklets that will help you to plan your vacation trip have just been published, and will be sent on receipt of postage, as follows:

"Colorado-California," six cents.

"In Lakeland" and "Summer Homes," six cents.

"Lakes Okoboji and Spirit Lake," four cents.

F. A. Miller, General Passenger Agent, Chicago.—*Adv.*

The Hunter Arms Co., Fulton, N. Y., writes us that "Billy Crosby, under dates of May 11 and 12, broke the world's record for long continued shooting at Crawfordsville, Ind., in a two days' programme event. He shot 200 birds each day, missing but one bird each day, or a continuous shoot of 398."

"The Trapshoter's Ready Reckoner" is a necessary part of the equipment of every secretary of a gun club. By turning over its leaves the gunner or score-keeper can tell at once just how the different money prizes should be divided, and a vast amount of labor and uncertainty is avoided, while time is gained and general satisfaction guaranteed. Price 25 cents.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903 BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MAY 30, 1903.

VOL. LX.—No. 22. No. 346 BROADWAY, NEW YORK.

IN THE DAYS OF OLD NEW YORK.

THE citizens of New York have just been celebrating the two hundred and fiftieth anniversary of its establishment as a government. Like St. Louis, Chicago, St. Paul, Winnipeg and many another, New York had its origin in a fur-trading post; and the chronicles of its beginning are for the most part records of barter with the Indians for peltries. In the annals of the first years of New York the antiquarian who is something more than a dry-as-dust delver in the musty records of the past may find abundant interest in the chronicles which have come down to us of the wild people, the wild animals and the wild ways of those times. The first traders came here not long after Henry Hudson's landing; and for many years thereafter the traffic in peltries was the life and substance of the place. Daniel Denton, who was here in 1670, and whose "Brief Description of New York" is one of the rarest and most prized of the early books relating to the city, gives us many quaint descriptions of the settlement, the Indians, and the game as he saw them.

"The inhabitants," he tells us, "consist most of English and Dutch, and have a considerable Trade with the Indians for Bevers, Otter, Raccoon skins, with other Furrs; As also for Bear, Deer and Elke skins; and are supplied with Venison and Fowl in the Winter and Fish in Summer by the Indians which they buy at an easie rate."

"The commodities vended from thence is Furs and Skins before-mentioned; As likewise Tobacco made within the Colony, as good as is usually made in Mary-land: Also Horses, Beef, Pork, Oyl, Pease, Wheat, and the like."

The rivers he found "very well furnished with Fish, as Bosse, Sheepsheads, Place, Perch, Trout, Eels, Turtles, and divers others." And of the Long Island shore he relates that there was there a store of "Whales and Crampasses," of which the inhabitants were beginning to make a successful fishing industry. In further description of the Long Island country adjacent to New York, he writes:

"For wild beasts there is Deer, Bear, Wolves, Foxes, Raccoons, Otters, Musquashes and Skunks. Wild Fowl there is great store of, as Turkies, Heath-Hens, Quailes, Partridges, Pidgeons, Cranes, Geese of several sorts, Brants, Ducks, Widgeon, Teal, and divers others: There is also the red Bird, with divers sorts of singing birds, whose chirping notes salute the ears of Travellers with an harmonious discord, and in every pond and brook green silken Frogs, who warbling forth their untun'd tune strive to bear a part in this musick."

Which goes to show that Denton had music in his soul and was a very good sportsman in his day. Certainly he had the art of seeing things, of picturing his world in colors so charming that it has attractions for us as we see it with him. Here is one of the enticing bits of his review of the inducement New York and its surroundings held out for the European:

"And how prodigal, If I may so say, hath Nature been to furnish the Countrey with all sorts of wilde Beasts and Fowle, which every one hath an interest in, and may hunt at his pleasure; where besides the pleasure in hunting, he may furnish his house with excellent fat Venison, Turkeys, Geese, Heath-Hens, Cranes, Swans, Ducks, Pidgeons and the like: and wearied with that, he may go a Fishing, where the Rivers are so furnished, that he may supply himself with Fish before he can leave off the recreation."

Of the Indians of New York and Long Island, Denton naïvely remarks, "it is to be admired [i. e., wondered at] how strangely they have decreast by the Hand of God, since the English first settling of those parts. * * * And it hath been generally observed that where the English come to settle, a Divine Hand makes way for them, by removing or cutting off the Indians either by Wars one with the other, or by some raging mortal Disease." One less pious and not so ready to see the working of the "Divine Hand" might find as one potent agency of the decrease the thrifty traffic of the traders in drink. Wooley, another New York chronicler of that day, tells us of the Indians and their love of liquor:

"The Skins of all their Beasts, as Bears, Bevers, Raccoons, Foxes, Otters, Musquashes, Skunks, Deer and Wolves, they bring upon their backs to New York, and other places of trade, which they barter and exchange for Duffles [blankets] or Guns, but too often for Rum, Brandy, and other strong Liquors, of which they are so intemperate lovers that after they have once tasted, they will never forebear, till they are inflamed and inraged * * * as if they were metamorphosed into the nature of those beasts whose skins they barter." The long story of the Indian and the white man's drink began very early in this country and the melancholy record is not yet completed.

That the New York Indians were no mean hunters, Wooley bears testimony when he writes:

"They lived principally by Hunting, Fishing and Fowling. Before the Christians especially the *Dutch* came amongst them were very dexterous Artists at their Bows, insomuch I have heard it affirm'd that a Boy of seven years old would shoot a Bird flying: and since they have learn'd the use of Guns, they prove better marksmen than others and more dangerous too (as appear'd in the Indian War with *New England*)."

Wooley is the chronicler of early New York who must always be held in grateful memory by sportsmen for his cheerful little story of an adventure with a bear in Mr. Robinson's orchard, a plot which is supposed to have extended from Cedar street to Maiden Lane, in the financial district where the ground is covered with twenty-story skyscrapers.

"I was one with others," he relates, "that have had very good diversion and sport with them in an Orchard of Mr. John *Robinson's* of *New York;* where we follow'd a Bear from Tree to Tree, upon which he could swarm like a Cat; and when he was got to his resting place, perch'd upon a high branch, we dispatc'd a youth after him with a Club to an opposite bough, who knocking his Paws, he comes grumbling down backwards with a thump upon the ground, so we after him again." Whether he got the bear or whether the game was lost in the wilderness which is now City Hall Park, Wooley neglects to tell.

MYSTERIES OF THE DEEP SEA.

TO THE average man or woman there is perhaps nothing less known or more mysterious than the sea. We behold it from some little point and follow it with the eye for a short distance till its surface meets the horizon, but we know nothing of what is on it or beneath it, or where its waters come from or whither they go. Less than a generation ago our knowledge was much less than it is to-day, but even still we are only at the beginning. The subject is one which must continue to fascinate us, and we may now learn much more than is generally known about it by a recent contribution from the pen of Mr. C. H. Townsend, the Director of the New York Aquarium.

The most extensive inquiries into the mysteries of the sea have been made by the Governments of the United States and of Great Britain, but others of the European powers and an individual—the Prince of Monaco—have conducted important investigations.

The two questions about the sea that most immediately present themselves concern its depths and the life which inhabits those depths. Up to about the year 1872 the work of making soundings was difficult, and those made were untrustworthy, because they were made with hempen rope which did not sink easily and was greatly drifted by currents. In 1872, however, on the British vessel Challenger, Sir William Thompson devised a means of sounding by which wire was substituted for rope, and by this means the erroneous results previously made were corrected.

The sounding wire sinks rapidly and presents but small surface either for friction or to be affected by currents. With the wire are sent to the bottom several instruments, a thermometer for temperature, a self-closing cylinder to bring up bottom water, and a cylinder to bring up the bottom mud. The weight is usually a 60-pound iron shot, which detaches itself when the bottom is reached. To the reel on the deck of the vessel is attached an indicator, showing the number of fathoms of wire that have run out. When the sounding has been made, the wire is reeled in again by steam.

The greatest depth at present known was discovered in the year 1900 by the United States cable survey ship Nero, near the Island of Guam. Here the sounding was 5,269 fathoms, or nearly 6 miles. Previous to that, depths had been found north of New Zealand considerably more than 5,000 fathoms, and there are many other depths in the Pacific Ocean only slightly less.

It is, of course, well understood that the surface of the sea nearly everywhere carries an abundance of small animal and plant life. This life is the cause of the phosphorescence so often seen in the sea. These minute plants and animals are continually dying and falling to the bottom, and their remains constitute a large part of the mud which forms portions of the bottom of the deep sea.

From every body of land there is continually being carried into the sea through the erosive influences of air and water by brooks, rivers, tides and currents a vast quantity of matter which forms the floor of the sea near to the shore. Much of this suspended matter is carried a long way out from the shore, but deposits formed of this material do not commonly extend into the ocean more than 100 or 200 miles from the shore. These are the terrigenous deposits. Beyond this what are called pelagic deposits are made by the sea instead of by the land, and consisting largely of the remains of the minute plants and animals just referred to, and known as diatoms, radiolarians and globigerinæ. Beyond these so-called oozes, in the still deeper portions of the ocean, are the red clay deposits which are practically destitute of life or of the remains of life. These deposits lie so deep that the shells of surface organisms which fall toward the bottom are dissolved by the water before they reach it.

Most of the knowledge which we have of the life of the deep sea comes from dredging by vessels especially fitted up for this purpose, and of such vessels none has done more than the United States Fish Commission Steamship Albatross, which is no doubt the best equipped deep sea dredger in existence to-day. From this vessel have been made a vast number of soundings and dredgings, some of them from a depth of over 4,000 fathoms, which have added enormously to our knowledge of the life of the deep sea. The operation of dredging may take but two or three hours for moderate depths, or, as in the case of the deepest dredge haul—that from 4,173 fathoms—ten hours was required to take in the line. Besides the dredge, there is used the tangle, of loosened strands of rope, which is dragged over the bottom and frequently brings up great numbers of invertebrates. The Prince of Monaca has devised a deep sea fish trap in which fishes have been taken two miles below the surface and gill nets set far below the surface have also captured fish, and promise to yield good results.

In the great depths of the sea it is always cold, the temperature being near to the freezing point. It is also known that at great depths the pressure of water is something tremendous, and that the deep sea animals can only exist there because their tissues are so permeated by fluids that the pressure is balanced, while if brought to the surface, and the pressure which keeps them firm is withdrawn, they almost fall to pieces.

Practically no light is found at a depth greater than 200 fathoms, yet many of the animals are brilliant in color, red, yellows, purples and greens predominating. There is an entire absence of blue. Although sunlight is absent at these great depths, many of the animals—both fishes and invertebrates—are phosphorescent and produce their own light. Some of the deep sea animals are wholly blind, and those which have eyes very likely see by the light of the phosphorescence which is being emitted by themselves and so many others of the creatures that are found in these depths.

Dr. A. P. Knight, Professor of Animal Biology in Queen's College, Kingston, Ont., has conducted a series of dynamite explosions in water to determine the effect upon fish. The results show, for one thing, that such explosions are more destructive in deep water than in shallow water, where the pressure resulting from the explosion is not sufficiently great to rupture the swim bladder. The most significant fact brought out was that when dynamite cartridges are used for fishing, in addition to the fish which come to the surface and float and are taken, a much larger number may be merely stunned and escape, or be killed outright and sink to the bottom. Among those which come to the surface are so many immature that not one-third of the number killed is marketable. Dynamiting is one of the most wasteful of all the modes of fishing.

The Sportsman Tourist.

Climbing a Burning Mountain.

(The interesting facts and experiences recorded under the above caption were taken from the letters and Consular reports of the late Major Albert Woodcock, and were indicted by him in the month of May, 1886, at the United States Consulate, Catania, Italy.)

SICILY is one of the insular possessions of Italy. Catania, a beautiful city of 105,000 inhabitants, is a thriving seaport town of the island. It is situated at the foot of Mt. Ætna on the seashore. It has several very fine streets. One is named "Via Lincoln," for our loved and lamented President. These streets are paved with lava, and are as smooth as a parlor floor. The houses are built of lava. The walls are veneered with white limestone or marble. The lava of the past centuries is like granite, and is susceptible of a fine polish. Catania has over 100 churches and some 80 old convents. It is a quaint old town. It was founded 729 years before Christ. The old town is buried in lava. The present city rests upon it. The old Greek theater has been partially excavated, also the amphitheater. The latter was capable of seating 2,500 people. The city has a beautiful park called Villa Bellini. It is a lovely gem. In it flourish tropical plants and trees and the choicest of flowers bloom there the entire year.

The climate is admirable. The summers are no hotter than those of Illinois. The heat, however, is long and continued, without rain, and the sun is intensely glaring. Such continuous heat, with but little moisture in the air, is debilitating. Most of the Sicilians take an afternoon sleep of two or three hours. The winters are very mild, frost is seldom known, "the beautiful snow" never visits us, but we can always see it glimmering in the sunlight upon Mt. Ætna. The Catanese never have fires in winter. I find an occasional fire necessary for comfort.

During the past centuries Catania has several times been shaken to the ground by earthquakes. It has been scalded and scarred by lava streams. In fact, as stated above, the old town is buried in lava. Mt. Ætna is the prominent feature of the landscape. It rises gradually from the sea, piercing the sky with its cone to a height of over two miles.

On the 17th of this month we had an earthquake shock. Ætna commenced to growl and roar in the distance like some infuriated monster. Occasionally sharp peals, as of distant thunder or the discharge of artillery, were heard, great, black clouds of smoke from the main crater were seen shooting upward thousands of feet in the heavens, soon great volumes of flame burst forth from the side of the volcano at the altitude of a mile, half-way up the mountain, and the excited cry of "An eruption! An eruption!! An eruption!!!" arose from all parts of the city, and a shower of fine cinders came sifting down upon us, making it unpleasant to walk in the streets.

At 5 P. M. of the following day, a party of five, in two cabs, left Catania to visit the scene of the eruption. The party consisted of two Italians, two Englishmen and an American. One of the Englishmen was Charley Worthington, a gentleman of fine education and heart-culture. The eruption is distant from Catania about 18 miles. Our way wound upward through groves of orange, lemon and olive. The bright green foliage of the orange and lemon interspersed with the sober gray of the olive and fig makes the sides of Ætna very beautiful to the height of 700 or 800 feet. Myriads of flowers of every hue were by the wayside. The sweet breath of these, mingled with the perfume of the pearly blossoms of the orange, filled the air with their fragrance. The scene about us was one of enchantment, but higher up in the distance was one of terrific grandeur. There a huge column of black smoke from the main crater, and the fierce column from the burning one, united thousands of feet up in the heavens, formed a perfect arch of wonderful symmetry that darkened and glowed alternately. The apex of the arch floated away in a great river of billows toward the setting sun. The sun looked wan and lurid 'midst the sulphurous smoke as it descended behind the mountains. There was not a cloud in the heavens save those from the burning mountain, which were being driven westward by the wind. The full moon rose clear and bright above the Calabrian range, silvering its peaks. Far beyond us the grand old Mediterranean Sea stretched away to the horizon in perfect tranquillity. Its beautiful bosom wimpered and shimmered with the silver glitter of the moon. Our ride up the mountain was a most delightful experience.

We left our cabs at Nicolosi, and hired mules and guides. It was still 8 miles further up to the eruption. Mounting the mules, we began to climb in earnest. When within 3 miles of the scene our mules could advance no farther. We then continued our climb on foot to within a mile of the eruption, where we halted for a rest and lunch. The scene before us was terrific. We ate our bread, cheese, and meat, well-seasoned with scoria, a heavy shower of which was raining down upon us from the volcano. After a rest of thirty minutes the order was to advance. Our guides, the two Italians and one other, refused to obey, declaring it was dangerous. Worthington and the American moved forward alone. A mountain, called Mont Grasso, loomed up in front, and a short distance south of the conflagration. To reach this we had to pass over the old lava bed of 1766. There was not a vestige of a path. We had a wild scramble over lava rocks that were like sea-tossed billows suddenly transformed to stone. They were rugged, sharp, contorted and twisted into every conceivable shape. Great seams and fissures yawned in every direction. To fall into one of these would be death. We moved slowly and cautiously till we reached the valley between the mountain and the fiery monster. In threading this valley we were nearly blinded by the smoke, and almost suffocated by the sulphurous gases.

When we reached the extreme end of Mont Grasso (the nearest point to the eruption) we climbed up its precipitous side about 100 feet and seated ourselves. Before us (no obstacle intervening) was one of the grandest exhibitions nature ever produced; tongue cannot tell it, or pen describe it. There were three monster cones side by side. Each was spouting flame thousands of feet into the heavens. Every few moments there seemed to be great internal throes of nature, when with a report as of a hundred cannon, there would be whirled into the sky, in gyrations, floods of liquid lava and red glistening lava rocks. These would fall again into the craters or just outside of their rims. Clustered about were other smaller craters, all shooting upward livid flames, or spouting red-hot lava jets, some of them resembling fiery fountains, and there seemed to be a rivalry among them as to which could spout the highest. The incessant roar was deafening. It reminded me of the battle of Chickamauga with its continuous discharge of cannon and thousands of rifles. From the craters a river of lava came rushing down, bearing upon its surface great, black, unmelted boulders. It poured over a precipice in fiery sheets, forming a wonderful cascade. It then branched off into three different streams that wound along like monster fiery serpents. A little above the fall there seemed to be beneath the red hot river's bed some gigantic power imprisoned and struggling to be released. I told my companion it must be old Vulcan who, the classics allege, lives and works in Ætna, forging thunderbolts for Jupiter. It would puff, puff, puff like a mammoth high-pressure steam engine, and then, all of a sudden, with a burst of thunder, would hurl the river bed with its superincumbent lava gyrating into the heavens. A seething, boiling whirlpool would instantly set in, which, in a few seconds, would again be flooded by the advancing tide. Again the puffing would be resumed, and in a few minutes there would be a repetition of the terrific scene. The heat was scorching. A strong breeze blew from the east, driving away the sulphurous vapors, else we could not have kept our position for a moment.

While gazing with awe and bated breath at the wonderful scene, the ground suddenly opened within a stone's throw of us, and up shot a large number of great, redhot blocks that glowed with white heat. They fell back in the same spot, the ground closing over them. Many long flickering, beautiful tongues of orange, red, blue and green flame shot upward from the place. Soon again there was a sharp detonation of thunder, and from the same spot, higher up, still went another great shower of glowing blocks, of which some fragments fell uncomfortably near us. You ought to have seen an Englishman and an American climb! We went up that steep mountainside with the agility of squirrels, and throwing ourselves down upon the narrow crest of the mountain, continued to gaze and wonder. The mountain upon which we were shook and trembled beneath us, as if it had an ague fit. We had experienced the quaking when seated near its base, but on the crest the sickening motion was intensified and it seemed to rock to and fro. At first we felt like clinging to the rocks lest we might be shaken off, but a sailor gets used to a storm, and a soldier to battle, so we, after awhile, got used to the oscillating trembling motion. When scoriæ rattled down upon us like hail, we had all we could do to protect our hands and faces. That mountain to-day (May 30) cannot be ascended. It is surrounded by lava, and at times has been covered with fire. The spot that so suddenly opened up its battery and frightened us from our perch, afterward became a burning crater.

We dared not descend where we climbed up. After an hour or two spent upon the crest watching this most majestic exhibition of nature, we threaded our way on the mountain top to its south end, the most distant from the eruption, and there descended. Then came the slow, tedious struggle over the old lava bed. When we had recrossed it Mr. Worthington's hands were worn through and bleeding, and the writer's light buckskin gloves were torn to shreds. When we reached the place where we had left the mules we found that guides, companions and mules had left us, and we crawled back to Nicolosi on foot. Entering our cab we noted that the sun was gilding with golden light the eastern mountain tops, and that the sea was blushing a beautiful rose color beneath his ardent glances, but we were too tired and sleepy to return his glorious smile. We fell asleep in our cab, and were awakened at the door of the Consulate, in Catania, at the hour of 9 A. M.

Our streets are black with cinders. The ashes have fallen upon southern Italy. An English captain complained to me that his beautiful ship was begrimed and blackened by the storm of scoria while yet far distant upon the sea. The three great craters described have since consolidated into one. The latest news is that Nicolosi is a doomed city, that a fiery stream of lava 500 feet wide and 45 feet thick is slowly advancing upon it. Bprello and Bellpasso are threatened. Every movable thing has been taken from Nicolosi. The water of the cisterns has been pumped out to prevent explosions that would be caused by the hot lava sealing them up and converting the water into steam. The gates of that city are closed, and it is surrounded by a cordon of soldiers to prevent anyone from entering. A bulletin this moment received announces that the eruption within the last 24 hours has greatly decreased; that the lava flood is within 1,000 feet of the town, but it is hoped that the town may yet escape. Burning lava, when exposed to the air cools and thickens and moves slowly, but irresistibly. The fresh warm lava continues to pour along on top of the cooler strata. This forms great ridges and spreads over much space, and when at a distance from the erupting crater makes slow progress. The ridge is constantly cracking, and throwing off on either side great masses of burning matter. Vineyards are being destroyed, trees are burning, and everything is laid waste that the fell destroyer reaches. It will take centuries to deface the track of the fiery demon, and render the ground again arable, should there not be another visitation of Ætna's wrath. ALBERT WOODCOCK.

(Edited by his son, Dr. A. J. Woodcock.)

RIVERSIDE FARM, Byron, Ill.

A Visit to Pitcairn's Island.

In Three Parts—Part Three.

As we went on our way to see the village, whenever we would pass a house, one of the women or girls would run out and drag me in to see where they lived. They had a lot of questions to ask about men who had left here, some of them years ago, and seemed to be surprised that I did not know them; they had gone to the United States; it was useless to explain that both the absent Pitcairn Islanders and I might be in the United States and still be 3,000 miles apart; they have no idea at all of distances or the extent of any country.

In about an hour we had got up to the chapel again and found the governor there ringing his bell to call the children to Sunday school. He called us in and said, "Mr. Robinson tells me that you could teach my boys about everything that is taught in your schools at home. Now teach them to-day. It will give me a rest; I generally teach them." Then giving Robinson, who was here, too, the girls to teach, he turned his hour glass and left us.

I had about twenty-five boys, of all ages, from 6 to 18, but the youngest of them could read quite well. Their lesson was the third chapter of St. Matthew, about John the Baptist in the Wilderness. They had about six Testaments among them; a boy would read a verse, and then pass his book to the next boy.

They told me that John the Baptist was the patron saint of about half of them here; about every second boy was named John. I told them that they could have him, but I claimed the other John, the evangelist, as mine. I was not a Baptist myself. Then turning over to St. John's Gospel, I told them about him, how he was Christ's youngest disciple, and that he had lived to be nearly one hundred years old. Then we turned to his book of Revelations, and I told them how he came to write them.

They wanted to know about my country, the people in it and the animals we had. In telling them about the animals I had to keep in mind the fact that these boys had never seen an animal larger than a goat. One of them had seen the picture of an elephant, and asked about him. I told them where the elephants came from, what they used them for there, and what we used them for.

Another boy had read about the buffalo. I told them about him and how we shot them and how the Indians shot them with bows and arrows. Then I told them who the Indians were. They wanted to know what a horse was like. What he ate and if he would bite them.

At the end of an hour the old governor came in, turning his hour glass again, put me and the boys over on the side the girls were on. Then going out he rang his bell, and every one on the island came in, all taking seats on our side of the chapel. The governor going to his reading desk, announced: "I expect the captain and his crew here this afternoon. When they come let every man and boy stand up; the women and girls need not rise." Then he began to read out a hymn; but in a moment stopped and held up his hand, and we all got on our feet.

I looked over my shoulder and saw that the captain had brought three of his mates, all the white crew and all but an anchor watch of the natives. He had just landed the crew and marched them up here. The steward and several others who were Catholics, had come of their own accord; he had not compelled them to come. The governor seated the crew, then led the captain up to his reading desk, and then took his seat along with us.

The captain gave out the hymn, "Come, let us join our friends above," and these natives sang it about as well as a congregation on shore would do, though few of them had hymn books. Then the captain read the lesson, a chapter out of the Bible, and then made an address. After church, Mr. Robinson, who had been ashore all day, took the crew on board, while the captain and his mates remained ashore.

Early next morning the small boats began to come off, bringing fresh meat and vegetables, and they kept on bringing them until the captain told them to stop. They wanted no money; they had no use for it at that time; but the captain gave the men and large boys shirts and cloths out of the "slop chest"; the value of these would be charged to the company as pay for fresh meat. The women did not fare as well. A whale ship does not carry any dry goods, but I got them a few later on.

The first boat to come off was the governor's, and he had John for a passenger. I took the boy down to breakfast with me. The first thing that caught his eye was "the big lot of white bread that we had," this mess of ours was called the second cabin mess; we always had fresh biscuit.

I offered it to John, but he wanted the hard bread. "Let him have it," said the steward. "When he has eaten it as long as we have he won't want it quite so bad."

After breakfast, taking John with me, I went below to help to get the stores we meant to give them. We gave them a part of nearly everything we had—flour, sugar, coffee and vinegar—were what they wanted the worst. I showed John all over the ship. A little dumpy engine that stood forward to work the windlass and capstan claimed the most of his attention; he wanted to see it go, but we had no steam up. I took him everywhere except to the captain's cabin, that, I told him, I would find an excuse to get into some time during the day. I left the cook's galley until the last, I wanted to see what the boy would do when he first saw a negro. The cook was a full negro, who weighed about 300 pounds, and was nearly as broad as he was long. We called him Baltimore; his name was Collins. He was very good-natured, and when not busy cooking or telling his Kanaka help how to cook (they did the most of it), he would be either singing hymns or playing the banjo. That banjo was kept going from morning to night; when he did not have it I did. Baltimore was sharpening a knife on a steel and singing "On Jordan's stormy banks I stand" at the top of

his voice just as we came in. John gave him one look, then with a yell fell out of the door backward.

"Well, what is the matter with you? Have you never seen a nigger before?" Baltimore asked.

"No, he has not," I explained.

"Well, what are you going to do with this boy, take him to the white man's country, too?" Baltimore asked.

"Yes, I am, if you'll feed him for me."

"Oh, I'll feed him. Do you like pie, Johnnie?"

John did not know.

"Yes, he likes it; if he don't I do; get it out."

He brought out a pie he had made for the cabin and cut each of us a piece.

John took a bite and found that he liked it.

I had a small magazine on board that contained 25 Sharps rifles and as many Colts pistols, with plenty of ammunition for both. The captain had given me charge of it early in the voyage. I went to it to show John a gun, for he never had seen one. The first thing that took John's eye in the cabin was the library. He got hold of the big Webster dictionary, but could make nothing out of it. Then I showed him the barometer and explained how it could tell us when a storm was coming, and the chronometer, telling him that it gave us the time in England. Next I unrolled the chart and pointed out his island. He wanted New Zealand and Norfolk Island, I found them for him. Then I had to explain the sextant. The captain got out his telescope for him, and then gave us a shotgun to clean. We took it on deck, and I had John fire it off.

By this time dinner was ready. The captain had a custom of dropping down on some mess nearly every day to see if there were any complaints. There never was one; the ship had the name of being one of the best fed in the trade, but this custom of his may have been one reason why we did not have anything to complain of; the steward never knew just when or where the old man would turn up to ask questions. He came past our mess to-day and asked me "What are you going to do with this boy?"

"I had meant to take him home with us, sir, if you will allow me to do it."

"Well, I don't know that I have any objection to you taking him, but don't take him without seeing the governor about it first."

After dinner I got a pistol, my pockets full of ammunition and a barrel stave for a target, and taking a native boat, John and I went ashore, and after he had got all the boys in the village together we went out a mile from town and proceeded to hold target practice. I had given the men smoking tobacco today, and the boys had most of them got hold of some by this time; some were smoking, the rest were trying to the moment we had got clear of the village.

I put a boy on picket to let us know when the governor was coming, then after I had fired a few shots I let each boy shoot. After a while the picket gave the alarm; the governor was in sight. I had the boys get their cigarettes out of sight and lighted one myself to account for any smell of tobacco. When he found that none of us had been shot he was greatly pleased; he told me, as he left us, that he had no use for firearms.

After the target practice we explored the whole island. It is only about five miles across either way, and about twenty miles square; a mere speck on the ocean, so small that many of our maps do not show it at all; but as near as I can remember now my chart gave the latitude as 22 degrees 30 minutes south and 120 degrees west longitude. There are no springs on the island. They have to depend for water on a small pond in the middle called Brown's waterhole. This is fed by rains, and as it does not rain here at times for a year, they are often rather short of water. No ship will ever take any unless it should be out of water altogether.

Their largest animal now is the goat. They did have a few beef cattle years ago; but a number of years before I visited them the islanders had all left here, going to Norfolk Island, and after a time finding that if they remained there all were likely to die, they returned here, to find that meanwhile these cows had overrun the whole island; they had to kill them off, not having room for them, but were sorry afterward that they had not kept some. But there is no room for the cattle; in fact, there was hardly room for themselves now, and the governor wanted to send a colony to New Zealand.

They raise everything that will grow in that climate, and it is growing twelve months in the year; winter is unknown; they only have a rainy season instead. They always have plenty to eat and some to give to any ship that calls.

As small as this island is, it has been found more than once by shipwrecked men, who have been kept until they found a chance to leave; one or more never left, but remained here until they died. I can think of worse places than this for a man who had no family at home to remain in. Only that it was at that time cut off from the rest of the world, except when a whaler called, I should have stayed there myself; they tried hard to keep me.

The next day John came aboard dressed in his new clothes. His mother had made trousers, shirt and jacket, but had put no pockets in them. Marblehead, the ship's tailor, put pockets in the jacket and anchors on the collar; then went to work and made the boy a sailor suit of white cloth, with gilt buttons on the jacket. John got inside of this suit as soon as it was finished.

After dinner I got out all my needles and scissors and all the steward had left of his private venture. We were going home now, so he let me have at cost the things he had carried to trade among the islands—muslins, calico, silk, thread, ribbons and woolen cloth. Making these up in two bundles I gave one of them to John's mother, and asked her to give the other to Amelia Young; but she said Amelia would think far more of them if I gave them to her. John's father consented to my taking the boy home with me. "I give him to you; take care of him," he said.

"I will take the same care of him that I would of my own brother," I told him, "and see that he gets back here if he wants to come. I did not intend to ship again, but I can if I want to, and may now; if I don't our steward will bring him back for me; I started out here this time with $200 in gold, and have most of it yet and have all my pay coming to me when we get back, and while I have money he has it. I meant to go back to our army when I got home; I was in it a good many years, and if John wants to go along I can have him taken as a trumpeter.. I expect I will have a row with the governor before I get John, though."

"You go at father real rough," John's mother advised; "that is the only way to get along with him. He will be disappointed, too; he told me he was going to keep you here and marry you to Amelia Young."

"Oh, he is counting his chickens before they are hatched; if he is not careful I may take her with me along with John."

I went up to the school to give Amelia her present and bid her good-by.

"You are not going," she said; "the governor is going to keep you; he told me so; he wants you to teach these boys; I can take the girls."

"He can't get me. The captain would not let me stay or I might stop here. I may come again, though, and stay here."

"Well, I wish you would, we want you."

Next I went to the governor and found him in a peck of trouble; I had given the boys about three dozen jackknives, and he said that in a week they would have everything on the island that could be be cut, cut down; they were at it from morning to night; he saw nothing but a boy and a knife everywhere he went.

"Well, let them cut, that is what those knives were made for. I called to tell you that I am going to take John home with me."

"The captain promised that he would not take any of my boys or men with him."

"He is not taking him, I am."

"Well, you won't; he can't go."

"Can't he? I say he can and will. Now you don't want the boy to spend his life on this island, do you?"

"I have spent my life on it, and my father spent his on it, too."

"Yes, I know he did; and had your father belonged to any other country but England, he would not have been let spend his life here; he, most likely, would have finished his life from a ship's yardarm."

"Have you a family at home?"

"No, I was never married."

"Then stop here; I will get you a wife and when I die you will be governor."

"Who will you get me?"

"Any of these young women here; any one you may want."

"How would Amelia Young do?"

"Yes, I can get you her. Do you want her?"

"She may not want me."

"Oh, that will be all right. I can tell her to take you. Anything I want here is done. I'll get you her."

"No, sir; I could not stay, even if I wanted to, and I don't; the captain would not let me. By the way, governor, since you won't let me have John, have you any objection to my taking Amelia Young with me?"

"No, you can take her, I'll let you have her, but I can't give you a boy."

We came out now and I said, "Well, it is no use, Johnnie, he won't let me have you."

"I am going, anyhow," John told me.

That evening at dark John's father, who had been on board taking supper with us, was going ashore, and asked John if he were coming. "No," he replied, "I am going to stay here after this."

The next afternoon I told John's father what the governor had said, and added, "But if the captain don't stop me I am going to take him anyhow; so if he turns up missing you will know where he has gone to."

Next morning after breakfast we got ready to leave; I took John forward to see me start the donkey engine and our anchors come in; and we began to move off. Going into the engine room my partner asked, "Have you seen the governor?"

"Not to-day; I am not looking for him just now."

"Then he is looking for you; he was here a moment ago."

"Why, is he on board?"

"Yes; he goes out to sea a few miles with every ship that calls here."

The governor came down and said, "I am after John, I want to go ashore now."

"All right, go ashore, but you don't get John. I have him now and mean to keep him."

"I can't let you have him. I would hate to have to complain to the captain about you, but yon can't take him. Had you asked for any other boy I have, you might have got him. You have been kind to us and I would not refuse you, but I won't give you John."

The governor went on deck and we followed him; the captain was standing forward of the foremast. I thought to send John to him; but as soon as the boy saw him he took off his cap, and walking up to him asked, "Can't I go home with you, please, sir?"

"No, Johnnie, the governor won't let me have you, I guess."

"Now you can go home with me, can't you?" the governor asked, grabbing him by the arm.

"Just stop that right now, sir," the captain told him. "You must not abuse that boy for wanting to go with us; I won't have that."

"No, certainly I won't abuse him; he is my favorite grandson, or I should have let your young man have him."

The ship was rounded to, and the governor's canoe was brought alongside; he and John got into it, and the governor bidding us good-by, paddled off, while we swung around and started again. I had turned to go below, when one of the white crew says, "Look, sir, your boy is going to swim back to us." John stood up in the canoe, he had thrown his cap off and was now pulling off his jacket, while the governor, who had stopped paddling, was dragging at him. They were likely to upset. The old captain made one of the quickest moves I had ever seen him make. Going with about one jump to our nearest boat, he called out, "Stand by, here, this boat's crew." The Kanaka crew took their places in the boat; it took us only about a minute to get a boat in when we were in a hurry, and we were in one now. I jumped in and sent one of the crew out again. If we picked them up I would get the mate to bring the boy back.

But they did not upset. In a minute the governor got John to take his seat again; then waving his hand to us started off. So again we turned our nose to sea, and in an hour the little island was far astern.

For nearly ten weeks after leaving the island we saw no whales. I was in hopes that the old man would try some other part of the globe next; I wanted to go to the coast of Japan, for I was in no hurry to get home, and would as soon stay out for the next two years; the life suited me, it might not have suited me, though, if I had been with some captains.

At last we got two rather small ones, and three days after this ran into a school of about a dozen of them. This was Captain Williams' luck; we could find whales when no one else could. There were at least a dozen in sight from the "crow's-nest," and slowing down, our boats were called away.

I was supposed not to have anything to do with these boats, and on some ships I would not be allowed one of them when it was after a whale; but early last spring, as soon as we had got on the whaling grounds and before we had seen a whale, I had got permission to go in Mate Robinson's boat, and the first time our boats were called away after the lookout had given his cry of, "There she blows; Oh blows!" I took my place in the boat as bow oar. I chose the bow so as to be able to see the crew and not make any mistakes. I had nothing to learn from them about rowing. I had been rowing a boat ever since I was ten years old, whenever I could find water enough to float one. But these whale boats were new to me, and then in the bow I could see the harpoon thrown and the lance used. We were lucky this day, and got one of the largest whales that had ever been taken in the South Pacific; the crew said he had been taken because a landsman had been in the boat; however, we got him, and ever after this, when the boats were sent away, if I was not on duty I took my place as bow oar for Robinson. But I was not satisfied yet, I wanted to go and kill a whale myself, but never expected to get a chance to do it; very few captains would give me a boat, even if all his mates were crippled, and our mates never had had anything wrong with them until now.

Just before we left Pitcairn's Island our fifth mate, Mr. Watson, was taken down with what we thought was the typhoid fever, and he still had it. When the boats had been sent away a few days ago he had not gone. I was in the engine room then and did not go, but I had been doing a good deal of thinking since. I wanted his boat next time. So to-day, when the boats were called and he came on deck to take him, the captain said, "I am not going to send your boat today, Mr. Watson; you are not fit to go."

I was standing beside Mr. Robinson and said, "I have a notion to ask for the boat, sir."

"Go and ask for it" he told me; "you will get it."

Walking up to the captain, I said, "Will you please let me have Mr. Watson's boat to-day, sir? I think I can get you one of those whales; I should like to try."

"Yes, go ahead and try; you may not get one, you probably won't, but you can try, I like to see a man try, and try and bring that boat back again whether you get a whale or not."

Running forward to the boat I called out, "Stand by here, No. 5." The boat-steerer ran and took his place, and the Kanaka crew came forward, but stood looking at me.

"Get aboard, men; be in a hurry about it." And taking my place at the stern, I told the men, who stood at the falls, to lower away, and we were dropped into the water. Before I had left the deck I saw a large whale that was nearly astern of us and at least three miles away; he could only be seen when he rose on the swell. I steered for him, but when I had got to within less than a mile of him he began to move off, but left very slowly; he had not seen nor heard us yet. I looked down at my crew; they were pulling on those oars for all they were worth, and the sweat was rolling down their naked breasts.

"Men," I told them, "I want that whale to-day. Get him for me."

"Oh, we get him, sir," my stroke declared. "We follow him all day, if you say so."

After a while the whale stopped again, and we began to close up on him very fast. I kept my eye on the boat-steerer, he would nod to me when we were in close enough; we dare not speak nor make a noise, or the whale would be off again.

Soon the steersman gave me his signal to stop rowing; I raised my left hand, and the oars came up together while the boat moved still further forward, then stopped, and the steersman, drawing his arm back, sent the iron home. As soon as I saw it strike, I threw myself down and called out, "Stern all!" and my crew sent the boat astern in a hurry. The whale lay for a moment after he had got the iron, then throwing himself half out of the water went down, but did not go far; he only took half of one line with him. These lines are 1,800 feet long, and I had seen a whale take nearly two of them out before he stopped. When he came up againg and began to blow, I saw that we had hurt him bad; the foul air and water he was expelling was tinged with blood.

Now he started towing us, and headed right for the ship; that was where I wanted him to go; we were all of four miles away from it now.

He only ran a mile, then stopped. I thought there must be something wrong with him; I had seen them tow us five or six miles before now.

"No, he is all right," the boatsteerer declared; "he is lazy, that is all. He counts you a whale, anyhow. This is the best day's work you have ever done, sir; this won't be the last time you will command this boat if you sail with the old man again."

Now we closed in on him again, and the boat-steerer

put another iron into him, then the whale sounded again, but did not stay down long, and when he came up this time he started towing us in a circle, but soon tired and stopped again. Now he was ready to be lanced. The mate generally does the lancing, but this boat-steerer always did the lancing for Watson in this boat. I wanted to lance that whale, but if I made a mistake my boat would be smashed, and I and my crew lost; there was no boat near to pick us up. I could order Woodruff back here and do the lancing myself, but was afraid I would make a mess of it.

"Do you think I can lance him?" I asked.

"Why, yes; if you want to, you can. You have seen it done often enough."

"Yes, and I want to do it; I want to have it to say that I killed my whale. I will never get another chance like this."

He took my steering oar, and going forward I picked up the lance. When about two lengths from the whale I nodded and the oars came up, but the momentum of the boat carried it up close to the whale. Bracing myself now I drove the lance in, then pulling it out, drove it in again, then jerking it out I called, "Stern all!" and the boat was sent astern in a hurry. But we need not have been in one, the whale did very little thrashing around, and in ten minutes rolled belly up dead. Next I got a line on him to tow him, then looked to see where the ship was. It was coming to me at full speed, the lookout having reported me fast some time ago, and the ship had been kept close in to me since. I had my whale lashed alongside, mine being the first to be brought in, then had my boat hoisted in and stepped on deck. I felt a foot taller than I had when I had left the deck two hours before. The second largest whale we had taken on the voyage was lashed alongside there, and it was mine. The old captain was marching backward and forward across the deck near the wheel. Going up I saluted and said, "I have to report, sir, that I have brought that boat back and a whale also."

"Yes, sir, I see you did, and you brought me a good one, too; you have done well, sir."

The other boats came in during the next hour, bringing in two small ones between them; they had to tow theirs in, while we lay here hove to, but these three filled us up, and we were ready to go home now.

We were nearly out of coal, having only a few tons left, and were not using the steam except when it was absolutely necessary. The nearest coal would be in the Straits of Magellan, and it would be a good deal out of our way to go for it, but we were ahead of time anyhow, so the old man concluded to go there when off Cockburn Channel, the entrance to the straits, we got up steam again. It is dangerous for a ship as large as ours to go in here under sail, though most steamers use the straits instead of doubling Cape Horn, and a ship under sail has been known to pass through them; our old New Bedford whalers sometimes did it. There is probably only one meaner spot on the globe than in here in these straits, and that one is just below them, off the Horn.

There is a penal colony here belonging to Chili, most of the prisoners seemed to be here for having been engaged in some revolution at home, from what I could learn about them. They seemed to be, most of them, quite intelligent, and they did not appear to be guarded very closely. They cannot get away, for if they left by land and were not frozen to death, the Indians would kill them.

I tried to see some of the Patagonians, but did not succeed in meeting any of them; they are perfect savages, and the men average six feet in height. This place is called by the English Port Famine. When we were ready to leave I had my cabin and engine room searched in real earnest, and not in the crew's imagination. The Chilian officer of the guard, a young fellow hardly more than a boy, did the searching, but it was convicts he was looking for, not boys. I took him all over the ship to show it to him after the officers had convinced him that we had no convicts, and did not want any, and it was from him that I got most of my information about this country. He spoke very fair English, and finding that I had been a soldier he questioned me about our army, and told me about his; then going ashore he and I visited the prison, and I took dinner with him in his quarters. Just after we had got clear of the straits our lookout reported a sail. As she was several miles to the windward, we would not have paid any attention to her, but the lookout said that she seemed to be in distress, so we stood down to her. She proved to be an English merchant ship, and had her ensign set at half-mast, union down. Our captain asked what was wrong, and they said that they had no water; could we spare them some?

"Yes, all you want. Send your boat."

While the boat was coming I went down and got a bucket of fresh water and brought it up. When their boat came alongside I saw that it was in charge of a boy of 18, the ship's second mate; he was the captain's son, he told me; his boat's crew were all, except one, young Irishmen, the one being a Dane. I passed the water down to the mate, but before taking any of it himself he passed a cup of it to each one in his crew. He said they had been on short allowance of water for a week, and had used the last this morning. They had been 168 days out from London and had been 14 days off Cape Horn trying to double it.

On my remarking that he was the youngest mate I had ever seen, he told me that he had been born at sea and had always followed it, and could now sail his ship anywhere on the globe.

We gave them eight casks of water, all they would take; and Captain Williams sent one of our boats, with me in charge of it, to help get the water to them. I was a mate for a short time to-day myself again, that was for getting him that whale. Had I stayed with this captain I no doubt would have been a sure-enough mate in time. After we had got the water on board the captain asked me down to his cabin and set out the wine and cigars, while the young mate poured a drink and cigar to each of my boat's crew. Captain Williams had told me to offer the captain anything he might need in the way of supplies, but he said they had plenty now to last them to Valparaiso; they meant to call in there; the ship was bound for San Francisco. When we were leaving them the young mate walked aft to his colors, that had been set right-side up now, and began to dip them; I took ours and dipped them in return.

We called in again at Crusoe's Island, then ran across to Valparaiso, and while we lay here, I had a chance to repay Woodruff, the boat-steerer, for getting me that whale, and did it in a rather funny way, too. He had gone ashore, got drunk and fallen into the hands of the police, and I being ashore, concluded to get him released, for if the captain had to do it Woodruff would hear about it afterward. Going to the calaboose I found an old judge, who, while he could speak English, could not read it, as I soon discovered. I had on a suit of clothes made of officers' cloth and a cap on which Marblehead had worked in yellow silk letters an inch high "Engineer"; the judge took me to be a mate. I let him keep on thinking so, and asked for my man. Yes, I could have him; and giving an order in Spanish to two officers, they each took a rifle, which was carried there then instead of a club, and going back to the cells brought Woodruff out between them. I was afraid that he might still be drunk and give us away, but he took in the situation as soon as he saw me and stood in front of me holding his cap in his hand.

"Well, Woodruff, what is wrong here. Drunk again as usual, are you?"

Yes, sir, he had been drunk, but he hoped I would overlook it this time; it would not occur again, sir.

"Not for fourteen days, it won't. I have overlooked it in your case too often. It don't do you any good. Could you come ashore if you tried and not get drunk?"

Yes, sir, he thought so.

"Well, I don't. You are a disgrace to your ship and the flag you sail under; get aboard the ship now and see how fast you can do it; I'll have a pair of irons there ready for you; it will be fourteen days this time."

"He knock two of my men here down, and tell me he can whip all the men I got," the old judge told me.

He could have done it and so could any of us if the police did not use their guns, but I did not say this to the judge.

"Oh, he is not half as dangerous as he looks to be; I can handle him. How much will his fine be?"

"Un peso, one dollar, if you are going to punish him."

"I am going to do it, then, and he knows it." And handing the judge his dollar we left, Woodruff taking care to keep far enough behind me to carry out the idea of my still being a mate.

From Valparaiso we ran up to Callao, Peru, and here I took a saddle horse and rode out to Lima to see the cathedral, said to be the finest one in South America; Lima is only a few miles from Callao, its seaport; a street car line runs out to it now.

Next we ran across to Honolulu and left our native crew there, then steamed to San Francisco, and the white crew were paid off and discharged; very few had more than a few dollars coming to them, having drawn their wages close up at the different ports we called at.

Most whaling crews are paid by what is called a "lay." They get their share of the price of what oil is taken, but this ship belonged to a stock company, who paid regular wages and took the oil themselves. It would have been better for most of these men had they been compelled to wait for their pay until now; as it was, the most of them would have to hunt a ship right away or let a shipping boss hunt it for them, then let him skin them.

I had not drawn a cent of pay, I had not needed it; I had taken money with me and brought part of it back, and now had all my wages due me, except what I owed for clothes. The captain counted out $485, then $25 more, saying, "These are for that whale you got me. I told the agent about it, and the company pays you this." The whale would be worth at least a thousand dollars to them, but I had never expected a cent for it. The captain was anxious to have me ship again, but I told him I would go back to the army now, that I had only gone this time to see the islands.

The captain told me that he meant to send a good organ to Pitcairn's Island, and that one of the company's ships that would sail now in a few days had orders to call there and leave it. I saw a way now to get my stuff to them, and went to work right off to find what I wanted to send. I hunted through nearly all the book stores in the city for a copy of the "Mutiny of the Bounty"; most of them had never heard of it. At last I found a man in a second-hand book store who knew it, but he told me it had been out of print for forty years or more. I got a fine copy of "Robinson Crusoe," a school geography and large atlas, a chart of the flags of all nations in colors, a history of the United States, a copy of Dana's "Two Years Before the Mast," Greenwood's "Reuben Davidger," "The Cruise of the Beagle," Cooper's novel, "The Crater," "Cast Up by the Sea," "Gulliver's Travels," about two dozen boys' magazines, a lot of pictures, more white paper, crayons and pencils, enough hooks and lines to last these boys a lifetime, more knives, drawing books, water colors and brushes, and a large bundle of dry goods for the women. When I had this stuff all collected my room at the hotel looked like a variety store. I had so much of it that I was afraid the ship would not carry it for me, so I went to see the captain. We had met this ship among the islands last summer; she was lying at anchor there with a broken shaft and her engineers could not mend it; they were two more such "engineers" as we were, only more so; the captain called them blacksmiths. I and my partner went to work on his shaft and mended it after a plan of mine; it held for him until he got home, he told me.

"You can send a ton if you want to," he assured me; "and can come and deliver it yourself. I am keeping a berth in my engine room open for you. Captain Williams has told me about you. You got him a whale, I am told."

"Yes, sir, I was lucky enough to get him one."

"Yes, he told me all about it; he gives you a good character, and a good one from him means something with us. He said you were one of the few landsmen he had ever carried that would make a sailor. He said he never had to follow you with a club to keep you from getting drunk; he had never seen the sign of whisky about you."

"No, sir; I took care that he did not. I knew that to get along with him I would have to cut the whisky out, and I cut it out."

"Now come with me this voyage and I'll have you qualified for a mate when we get home and make you one, that is what you want, is it not?"

"No, sir, I don't intend to follow the sea any longer."

"Well, Williams said he thought you wanted a mate's berth, and he told me that I had carried worse mates than the one you would make right now."

"I am much obliged to him, I am sure, but I don't want to go again; if I did it would be with him."

"You are different then from some men I have met, you could not pay them enough to get them to sail with him the second time."

"Yes, sir, there are such men, but the most of them are men that neither you nor Captain Williams would want the first time if you knew them; they have to be put in irons too often; I never had the least trouble with Williams."

I boxed up my stuff and put a letter in the box, telling the old governor to give the box to John just as it was; that there were no shotguns in it. I directed it to the Governor, Adams Town, Pitcairn's Island. Then I took a train to St. Louis to go to the cavalry again.

I did not hear from the island for the next ten years; but in 1884, just ten years after I had left the island, I found myself in San Francisco again. I had come down from Arizona with a lot of military prisoners, who were going to Alcatras Island, in the harbor, a military prison; and after I had got rid of them I took in the town again, and did not omit the docks, either. I found a schooner that had just come from the island, and asked for the governor and Johnnie. The captain told me that the governor was still living, but he could not place John. "He may be the young man who acts as the governor's aid," he said. "He has a grandson about 25 years old, who seems to be running things there just to suit himself. When I was there anything I wanted I had to apply to him for before I got it, and he is as sharp as a steel trap, too; he may be your young friend."

Yes, he was Johnnie, there could be no doubt about that; and so he had never gone a-whaling.

Since writing this the news has reached us of a hurricane and tidal wave that swept the Society Islands in January of 1903, destroying half of the people on them.

There were none of those Society Islands that I saw, and I was ashore on several of them, but were at least 20 feet above high tide. If a wave high enough to wash people out of cocoanut trees a hundred feet high passed over those islands it must have blotted out Pitcairn's Island.

CABIA BLANCO.

Natural History.

Bird Nesting.

THE average man (if he thinks of the subject at all, which is doubtful) imagines, I suppose, that every tree or thicket at this season of the year is full of birds' nests and that he has only to poke his nose in to find them. Let him try it. I will bet him a new hat that he may go poking around all day through Central or Prospect Park without being able to find a single nest, except by mere accident.

But he must not think the worse of his eyesight on this account. The fact is, a bird's nest generally is about as hard to find as the proverbial needle in the bundle of hay. (I speak, of course, of the nests of the Passerines or smaller variety of birds.)

However naturalists may differ on the question of protective coloring in plumage, there can be no difference between them, I fancy, as to protective coloring or assimilation in nest building. The closeness with which a bird can make its nest harmonize with its surroundings is little less than marvelous.

When I was a boy my fondness for bird-nesting amounted to a passion almost, and many is the holiday (and, I fear, day stolen from school) I passed in wandering through the woods, or by hedgerows, with eye keenly on the alert. I remember that nothing used to surprise me more than that I should find so few nests. Often I would feel convinced that I must have passed some, and would retrace my steps to examine certain spots—dense, leafy thickets, or close, grassy hedges—where it seemed to me birds couldn't help building, but usually in vain. "Where do they build, anyway?" I would exclaim, not without resentment, deeming, with boyish logic, that the birds had no right to conceal their nests. I was unacquainted then with nature's scheme of protective coloring and assimilation. I do not doubt that I often failed to see nests that were directly under my eye. Indeed, I recall that I seldom found a nest except through some indiscretion on the part of the owner.

Now, if this is true of the trained eye of a boy, how much more true must it be of the eye of an adult, which either never had any cunning or has lost it!

This was brought home to me forcibly during a recent stroll through Prospect Park.

On the shore of the lake is a thick, scrubby tree of the thorn family, in which during the winter I had observed the remains of a nest, probably a bluebird's. During my recent stroll I passed this same tree, which was covered with green leaves and blossoms (presenting a very different appearance from what it had in the cold, bleak days of January), and it occurred to me that possibly the bluebird had returned and built in it. So I went up to it, and getting directly under the branches, made a careful examination, but no new nest

could I discover, nor yet the remains of the old one, which, no doubt, had been scattered to the winds long before the winter was past. I was about to turn away, but unconsciously, as I may say, reverting to a habit of youth, stood a moment to shake the tree, when I heard a flutter of wings. Looking in the direction of this I saw, to my great astonishment, a bluebird arise from its nest, which now, to me, was perfectly plain or discernible. Why I had not seen it before I could not understand. It reminded me of those puzzle pictures in which a face or something quite distinct in its outline is lost in a harmonious setting.

I had not proceeded far on my walk when I observed a robin perched on the limb of an aged, weather-beaten fir tree, with something in its bill. I drew back to observe her (for it was a female), saying to myself that her nest would be in a leafy elm close by, but there's where I made the mistake. A minute or two after I had drawn back where I could not be seen by Mistress Robin, she made a little race along the limb of the scraggy pine and popped into her nest in the fork. There it was, matching the rusty gray bark to perfection. Somehow these experiences aroused in me a little of my old-time passion, and the evening being inviting, I continued my walk down the peninsula—a part of the park which extends east from the water tower, and is, perhaps, more unfrequented than any other part. Certainly it is admirably adapted for nest-building, being thickly covered with trees and thickets. Here, then, I set about seriously to see whether I had lost all my old skill. But, will it be believed?—after an hour's patient hunt—peeping here, peering there, glaneing everywhere—I was obliged to confess myself absolutely beaten: not a single nest had I found! Once again I asked myself the question: "Where do the birds build?" It was somewhat humiliating, but I had to admit that they build just in such places as I had been scarching. And there was no doubt at all that I had overlooked many. Truly the motto of the birds in nest-building seems to be, *Ars est celare artem.* Which may be freely translated thus: The greatest art is to conceal art.

Such birds as build large nests which cannot be concealed, build them well out of reach. A notable exception to this class of nest-builders is the osprey, commonly called the fish-hawk. Though its nest can be seen a mile away, there is no attempt made at placing it high, at least systematically so. But woe betide the venturous youth who conceives the idea of inspecting the inside of it, whether from mere curiosity or with felonious intent. I was recently down in southern New Jersey, where fish-hawks are quite numerous, and I had brought to my notice the case of a youth such as I have referred to. I went to see him and found him in bed, if you please, with his chubby head swathed in bandages. At first he seemed disinclined to talk, but after I had bestowed a few bad names on fish-hawks and told him a few of my own early adventures, I won his sympathy and he opened up and gave me a graphic account of his experience.

I shall make no attempt to reproduce his words, not being skilled in the southern Jersey dialect. Suffice it to say that ignoring the popular disapproval of any molestation or disturbance of the fish-hawk (which is almost as sacred as the buzzard) and ignoring, likewise, the warnings of his elders as to the bird's defensive powers, the boy determined to make an inspection of a nest which had excited his curiosity from childhood, a great big basket of a thing on the top of a blasted pine in the middle of a field. After reconnoitering, therefore, for a while, he found out when the owners were usually absent, and selecting his time (the hour after dawn—I pause a moment to picture him, in my imagination, as he emerges from the silent little frame cottage, stained and worn with half a century of rain and wind and sun. He gazes intently in the direction of the well-known tree, and then across the sandy pinelands, which the sun is just beginning to illumine. The pines are black against the horizon, while shadows linger here and there, but afar there is a glimpse of blue-gray ocean with a fringe of white breakers on the shore, and lo! as the boy gazes he sees the hawks winging their flight thither. His heart gives a great throb and then) he made a dash for the tree and was up it in a jiffy. But when he reached the nest he found to his disgust that not only could he not peep in, but he couldn't even reach his hand over the side.

A squeaking of young birds inside only whetted his curiosity, so he promptly proceeded to demolish the nest, or pull it apart as best he could. This proved no easy job, and in his eagerness to get a glimpse of the fledglings, he lost his prudence (if, indeed, he had any) and outstayed his time. He was busily engaged in tearing out sticks when he heard a rush of wings and then a series of angry cries, and then, as he expressed it in his naïve fashion, "I kinder thought a cyclone struck me!" Fortunately, he had presence of mind to cover his eyes with his left hand, while with his right he tried to defend himself. But what is a boy's bare hand against the beak and talons of an infuriated fish-hawk? Needless to say, in a little while he fell to the ground exhausted and bleeding. His cries, as well as those of the hawk, attracted the attention of a plowman, who was driving his team afield in the peaceful early morning. Seizing a breeching strap as the nearest thing at hand, he rushed to the rescue. By this time the other hawk had returned, and both birds valiantly attacked the plowman, but he beat them off sufficiently to enable him to raise the prostrate boy and bear him to safety. After he had been revived (for he was insensible when found) he was taken home and put to bed, with lacerated head and hands and a fractured leg in addition.

When my hero had reached this point in his narrative he asked for a glass of water, and his kind old mother, who sat by, got up to fetch it. Taking advantage of her absence he pulled me down toward him and whispered: "Don't tell the old lady, but I'll get even with them pesky hawks yet!"

He spoke with the grit of a true-born Yankee. However, I told him that "getting even," especially with birds, was all a mistake. "Besides," I added, "the hawks may get even with you." But I could see that he was not impressed. Alas, when did the words of wisdom or experience impress youth?

In connection with the above story, a fact which I have observed, occurs to me. It is this: If you disturb a bird while it is building, or even after it has laid its eggs, it will not show much concern and may even appear indifferent, flying off to a distance or quite away; but let you disturb it after the young have made their appearance and then behold the demonstration of frenzied anxiety and fear you have occasioned. Perhaps the greatest demonstration of this kind I ever saw was occasioned not by a boy or a man, but by an owl.

I was walking in the woods and heard a commotion among the leaves a short distance away—the loud tchick—tchicking of robins, and the louder twit-twiting of wood thrushes, with a shrill under chorus of lesser bird notes. Approaching the spot I descried Minerva's bird perched on the limb of a tree. True to its character of wisdom, it appeared to be quite undisturbed at the outcries of the feathered mob about it. At sight of me, however, it took wing and softly disappeared in the dim aisles of the woods, with the mob howling at its heels, so to speak.

It is certain that the small boy does not enjoy much popularity among the birds, but his unpopularity is as nothing compared to that of the owl. And the birds have reason, as the French say. For, as a despoiler, the boy is always more or less stupid and blundering, while he is often merciful, but the owl is at once subtle, unerring and pitiless. Save the helpless tribe of songsters from Minerva's pet.

FRANCIS MOONAN.

Our Batrachians and Reptiles.—III.

HAVING, in our last chapter, disposed of the tailed batrachians inhabiting the United States, we are now ready to turn to the tailless forms. These are well known to everyone, for frogs and toads are found everywhere except in the very driest and the very coldest regions. Some 800 species have been collected and named, and of these between fifty and sixty occur within our limits. They are all inoffensive animals and of the greatest value to the agriculturist, for they feed almost exclusively upon insects and are efficient aids in removing thousands of these [illegible]. When caught they have the rather disagreeable [illegible] of defending themselves by discharging their urine, and it is a common notion that this fluid is a producer of warts on the hands of those who are touched by it. Repeated experiments by the author and others have demonstrated that this is a mistake, and, like many other popular ideas must be relegated to the realm of superstition. By zoologists the tailless batrachians are divided first into two groups, according to the character of their breast bones, and these two groups are further subdivided by the characters furnished by the teeth and fingers. However, as a discussion which would involve the dissection of numerous specimens would be out of place here, we may conveniently divide our American species into the three following groups:

Fig. 1—Outline drawing of the Northern Frog—*Rana septentrionalis.*

I. Toads, no teeth on the upper jaw.

II. Frogs, upper jaw with teeth, fingers not enlarged at the tips.

III. Tree frogs, upper jaw with teeth, fingers and toes more or less enlarged at the tip to form a sticky adhesive disc.

Of the first group we possess several species, but the common toad or wart-toad *Bufo lentiginosus,* being best known, will be described. It is an abundant animal in the whole of eastern North America, and extends its range toward the south and west as far as Montana, Arizona, and Mexico. It is quite variable in coloration; its back is usually grayish or olive-brown with irregular patches of dark brown, but specimens have been collected which were almost a uniform black or uniform brick red. Beneath the color is nearly the same as above, but of a much lighter tint. In size it may attain a length of body and head of five inches, but is usually smaller. The females are larger than the males. The habits of the toad are mostly nocturnal, although it is not uncommon to see one hopping about in the daytime. Usually, however, it hides away in some hole or obscure corner and comes forth at evening to seek its food. This consists almost wholly of insects, and such great quantities are devoured that intelligent gardeners and farmers seek to induce the little animal to take up its residence on their grounds. One full grown toad was once seen to eat at one time twenty-three squash bugs, and a little later ninety-four caterpillars. The prey was taken by suddenly extending the tongue from the mouth and then as suddenly drawing it back with the insect adhering to it. In its efforts to swallow some unusually large morsel or keep down some obstreperous worm, the toad performs some curious acts which seem ludicrously intelligent; such as pushing a bite down its throat with its hands or some convenient stone, or rubbing its stomach to make its dinner lie well.

It spends the winter season buried in the mud or in some hole, but it emerges early in the spring and the loud, trilling love song of the male is one of the surest signs of the approach of warm weather. It very quickly seeks the water, where a mate is found. The eggs are deposited, not in a mass, as are those of the frogs, but in long strings consisting of a double line of eggs inclosed in a tube of gelatinous matter. Two such strings contained 8,840 and 2,200 eggs respectively. The tadpoles are nearly black and hatch very early. The metamorphosis occurs near the middle of July, the young toads at that time being about half an inch long.

From the wart-like excrescence of the toad there exudes a thick whitish fluid which is very acrid and serves to protect the animal against its enemies. It is said that this secretion will make a dog's mouth sore and will even cause inflammation of the human skin, but the writer, who has handled hundreds of the animals, has never observed the latter to be true. The skin of the toad is shed from time to time, and many observers state that this skin is at once rolled up and swallowed by its former wearer. Numerous stories have appeared from time to time describing the finding of toads sealed up in solid rock or buried in some hollow tree, where they must have remained torpid for an indefinite period. There is every reason to doubt these tales, for experiment has shown that when deprived of food and air the animal very quickly dies. Dr. J. A. Allen, however, has described the finding of some toads at the bottom of an old well, where they had probably remained for ten or fifteen years at least. They were torpid, but being taken out they soon recovered and hopped away.

Very much like the toad in appearance, but differing from it in having teeth in the upper jaw, and the pupil vertical instead of horizontal, are several species which may be called burrowing toads or frogs. The distribution of these is very poorly known, as they apparently spend most of their existence underground, coming to the surface only at long intervals to lay their eggs. They are also strictly nocturnal, and next to nothing is known of their habits. The single species of this curious group which occurs in the eastern United States is known as the spade-foot frog, *Scaphiopus holbrooki.* Both names refer to the peculiar flattened spur with which the extremities are armed, and which is used by the animal in digging its tunnels. It is most interesting because of its ability to utter loud cries, which are, according to several observers, second in volume only to a steam whistle. Dr. E. D. Cope, who has written more extensively than any other author on American batrachians and reptiles, in speaking of this species, says: "Though so widely distributed, it is seldom seen. After rains in spring and summer its cries may be heard at night, proceeding always, so far as my experience goes, from temporary pools. I have observed it twice in Pennsylvania, twice in New Jersey, and once in Massachusetts on the main land opposite Martha's Vineyard. Specimens from the latter locality, which I kept in a vivarium, buried themselves in the earth by day, but issued at nightfall and industriously explored their surroundings. Their burrows were concealed by the loose earth, which fell into and filled them, but below this the bony top of the head could always be found. Frequently one eye projected from the débris, presenting with its brassy colored iris a most singular appearance. On being irritated with a hard object they utter a clattering note entirely unlike that of the breeding season."

Of the true frogs we have about a dozen species, but this number is apparently greater from the fact that several species are extremely variable and present a number of varietal or sub-specific forms in different parts of the country which they inhabit. The best known frog in the United States is the leopard frog, *Rana pipiens.* Its range extends from Maine to Oregon, New Mexico, and Florida, a larger territory, perhaps, than is covered by any other batrachian. In most localities it is plentiful, and it is often used as food. In color and form it is quite variable, but as yet no satisfactory explanation of the variations has been put forward. In general the color above is ashy, olive, or bright green; below, uniform white or yellowish. On the back and sides are numerous rounded or oval brown spots of small or medium size, usually bordered with yellowish. The spots on the back are larger than those on the sides and are often arranged in two or three irregular rows. The dorso-lateral folds, ridges of skin lying one on each side of the back, are conspicuous in this species and are usually of a lighter color than the neighboring skin. The upper surfaces of the limbs are more or less barred and spotted. A full grown specimen may measure four inches from tip of nose to end of body, or have a total length of about eight inches.

The habits of the leopard frog are quite as interesting as those of the toad. Its favorite home is the margin of some quiet pond or stream where the grass runs down to the

water's edge. Here it can lie, concealed by its perfect protective coloration, until some unwary insect comes close enough to be seized and eaten. Here, too, it is itself comparatively safe from its arch enemies the snakes, and can escape from the small boy by jumping headlong into the ever ready water. When it dives it usually goes straight to the bottom, where by kicking about vigorously it can so roil up the mud as to hide it very effectually. Sometimes, however, if there is vegetation in the pond, it will simply dart in among the leaves and stalks of the water plants and come to the surface some distance away and slyly watch proceedings from behind some fallen leaf or twig. Occasionally it tires of the monotonous sedentary life and travels away to considerable distances from the water, hopping about in the cool damp grass. When winter comes it retires to some quiet pool and in company with others of its kind buries itself in the mud to remain dormant until the advent of spring. It is, however, not a good judge of time, and is liable to break the sleep at any warm day, come to the surface and croak away, only to be forced once more to retreat to the mud. Its song is quite variable and difficult to describe. Prof. Cope says that its voice may be imitated by the syllables chock, chock, chock; but at times it sounds like derisive laughter, and again a sort of low querulous tone. It is on hand again with spring, and at once proceeds to hunt up a mate. Eggs are laid very early, in favorable years even as soon as the middle of March. They are laid in great masses consisting of the small eggs inclosed in a large quantity of jelly. The tadpoles escape in about forty-five days and are dark brown and about five-sixteenths of an inch long. They grow rapidly and in August or September undergo their metamorphosis. The young frogs are about an inch long and seem to spend most of their time in the grass near the pond which they have left, but they scatter out, and such as survive find their winter quarters wherever they may happen to be when cold weather sets in.

The largest of all our frogs is the bullfrog, *Rana catesbiana,* a species which is distributed over a territory almost as extensive as the one just described. It may be distinguished at once by its large size and by the fact that there are no dorso-lateral folds. The color may be pale yellow, green, brownish or even deep brown above, beneath it is white or yellowish. Usually the back is more

Fig. 2—The Tree Toad.

or less blotched with brown and sometimes the lower surfaces are similarly marked. In length it may reach eighteen inches from the tip of the nose to the end of the outstretched legs. The bullfrog is notoriously an inhabitant of the brooks, rivers, and lakes, being seldom found in small bodies of water. It probably never strays far from its home in search of food. Its note, which is well known to all who have approached its haunts, is a loud, hoarse bass "bi'wum" repeated several times and under favorable conditions can be heard at a distance of several miles. It is said that if the bullfrog is teased or whipped it will cry like a child. The food of this creature is of an extremely varied character, and on glancing at the list of things which it is recorded to have eaten one is inclined to think that it will swallow any living thing which can pass down its throat. In times of hunger it will even eat a weaker individual of its own kind. A grass-snake three feet long was found in the stomach of a large bullfrog by Dr. Jos. Jones, of Georgia. The tadpoles of this frog attain a large size and require two years for their full development.

The bullfrog is a common article of commerce in all the larger markets of this country, and so great a delicacy has it become that most serious inroads have been made on its numbers. The great demand has led to numerous efforts to start "frog farms," but, so far as the author is aware, they have not been crowned with any startling degree of success. The difficulty seems to lie in the fact that living food cannot be supplied in sufficient quantity to satisfy the frogs' voracious appetite.

We now come to the group of tree frogs, almost all of which are species of small size, adapted by their peculiar toes for a life on the stems or leaves of plants. Many of the tree frogs, however, spend the greater portion of their time hopping about among the dead leaves in the woods, and some are seldom, if ever, found anywhere except among the pebbles along the margins of some pond or stream.

A common example, illustrative of the latter kind, is the cricket frog, *Acris gryllus,* which is abundant everywhere in the East about fresh water. It is one of our smallest frogs and may be known by its small size, warty skin, and the peculiar triangular dusky spot between the eyes. Often there is considerable green in a border to the triangular patch just mentioned and in a stripe down the back. The sides, behind the fore legs, have a dusky stripe and another of the same kind from the eye to the shoulder. The color, however, is variable, and in the same individual may change rapidly. The abdomen is always white. It is a cheerful little creature and even on the hottest days of summer may be heard executing its rattling song. It appears very early in the spring and lays its eggs at once. The tadpoles transform in August or September and shortly after this they go into winter quarters.

As an example of a tree frog which spends much of its time in trees, our account would be incomplete without mention of the chameleon tree frog, *Hyla versicolor,* whose note is so well known as announcing an approaching rain. It is an animal which is far more often heard than seen, but if one will take the trouble to follow up the cry the songster can usually be found sticking on some branch or leaf or fence rail. It has the ability to change its color so as to resemble its surroundings, and one must look closely to find it. Usually the color is a light gray with dark mottlings, but the gray may give way to green of varying shades. The species may be recognized, however, by the clear yellow color which covers the groin and the thighs, as well as by its large size for a tree toad, and the short, squat, toad-like form. It spends the winter in the ground or in hollow trees, never, so far as is known, going into the mud, as do the true frogs. It emerges early in April or May, and at once begins its loud love song. The eggs are deposited singly or in small clusters attached to grasses growing in the water near the shore. They have very little gelatinous matter about them. The tadpoles emerge in two or three days, and by the end of July complete their metamorphosis and climb at once into the neighboring trees and bushes. Their food is almost exclusively of insects. The tree frog is to some extend nocturnal in its habits, a fact which probably accounts for its evident enjoyment of the twilight hours and the few minutes of darkness which precede a storm. At such times, all through the summer, it gives its loud, clear, trilling note which tells us that although unseen these pretty woodland singers are always about us.

W. P. HAY.

Seaboard Air Line.—IX.

Report to May 15, 1903, from Bay Ridge, which is in Greater New York, on the Eastern Shore of New York Bay.

THERE is a corner in the edge of a certain piece of woodland, where the rubbish of years, in the shape of broken branches, decaying stumps, and a general accumulation of riff-raff has been cast, till, with the lapse of time it has formed a goodly mass—jungle, in a small way, one might call it. Saplings, and various woodland growths, thrust their way through this dead ramage resting upon the damp mould that nourishes their life, to the freedom of the pure unfiltered air and sunshine.

Briers and vines weave here and there, binding with curious interlacings the whole mass so securely that none but the most persevering investigation is ever likely to penetrate the secrets its holds.

In this sheltered nook the spring starts very early. The first balmy airs from the southland that wander there, are more than likely to be welcomed by the rustle of the tender green drapery in which our little jungle has already clothed itself.

Every trailing vine gives greeting from its quivering tips; and the plumes of the saplings are bowing right and left with graceful movement.

It is a choice retreat, largely patronized by the "elite" wood-folk. Indeed, so crowded does it often become with the arrival of transient feathered guests in spring and autumn that I have mentally dubbed it "The Migrants' Club."

One is sure to find interesting material there at all times, and especially when the migration is passing. A few days since a yellow-breasted chat was perched in one of its cool corridors. I could not see him, so well had he screened himself from view, but his voice seemed so full of complaint that I paused to listen.

"It is all very well," he said, "this talk about soft green foliage waving about. Sentimental stuff; I tell you it's too dry! too dry! too few bugs and beetles, very few worms, and all of 'em dried up. Its too dry! too dry! I'll move on." And he did, that very night. This has been the plaint of practically all our transients who used the "Air Line" this spring. They have not utilized their stop-over tickets to any extent. We have had no rush, but rather a steady increase of travel from the first week in April, till its culmination during the first week in May, since which time it has gradually diminished.

The "redstart contingent" was very noticeable in point of numbers, as also were the "black-throated blue" warblers. Last spring the chewink, rose-breasted grosbeak and the vireos secured special mention in my report. This year, with the two exceptions above noted, the review was much as usual. It is certainly interesting and curious to note the varying numbers of certain migrants from year to year, and I have never been able to satisfy myself in regard thereto.

It was a stirring sight in the afternoon of March 23, when a gang of nearly 200 fine Canadas passed us on their way north. The bay was shrouded with low-lying fog, that covered the craft at anchor from their trucks down, so that one could locate them only by their topmasts. Overhead, where the geese swung along under the blue sky, all was clear, and their wild clangor rang musically over the fog-bank below. Travel is practically over for this season. The first broods of robin and starling are already foraging on their own account, so I think we shall "close our books" and join our little residents in a prayer for rain, to refresh the dry earth and relieve the parched throats that show their discomfort by the widely opened beaks that we see on the lawn and in the trees, where our birds move restlessly in their discomfort.

WILMOT TOWNSEND.

The Eagle's Prey.

WHILE returning from meeting last Sabbath, and while driving through the pine forest between the village of Meyers Falls and our home, with my wife and two of our children in the back, a large eagle crossed the road about a hundred yards in front of the team, flying some twenty feet above the ground, and bearing in its talons a porcupine.

We were greatly astonished, and I want to ask the readers of FOREST AND STREAM if any one else has ever seen this strange animal in the talons of an eagle?

ORIN BELKNAP.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

The Land of the Whoopers.

OMAHA, Neb., May 20.—The question whether the Crow, Lone Tree and other small streams of the region roundabout Cheyenne, Wyoming, are tributary to the North or the South Platte River, and which was referred to me for solution by a number of sportsmen out that way, is answered, so far as the angler's interest goes, anyway, in the following letter from the Attorney-General of Wyoming:

CHEYENNE, Wyo., May 13.—I am in receipt of your favor of April 29, requesting my opinion as to whether or not the South Platte River is tributary to the North Platte. I presume that this question is suggested by virtue of the provisions of Chapter 22 of the Session Laws of Wyoming of 1903, which provides a special open season for fishing from the Big Horn and North Platte Rivers and their tributaries. This law would apply only to the tributaries of the North Platte River or Big Horn River in Wyoming, and would not extend beyond the boundaries of Wyoming. As the South Platte River does not touch Wyoming, the question as to whether or not it is a tributary of the North Platte would have no bearing on the interpretation of this statute.
Very respectfully, J. A. VAN ORSDEL, Att'y-General.

The reason for desiring this matter established is that the Wyoming laws prohibit fishing in all streams of the State before June 1, with the exception of the tributaries of the Big Horn and North Platte rivers.

While duck shooting this spring out in the Cherry County sandhills, we saw a flock of eleven whooping cranes, and the sight awakened the most pleasant memories of my early days in Nebraska, back in 1886-7-8-9, when this now almost extinct bird flourished plentifully here. It was on Sunday, March 29, when we saw these birds, while Gerard and I were on our way from the ranch to Pelican Lake, and our attention was first called to them by the trumpet call of the leader when they were high up in the air. The expectation of seeing a whooping crane being remote; indeed, I remarked to the kid that they were swan, whose hoarse, but sonorous and musical "hoo-roo-ooo-ooo-oo!" is much like that of this big white, crimson-crested crane, but as they wound down and settled on a sandy point of "the island," and that far-reaching clarion call again came quavering over the barrens, their identity flashed through my mind at once.

Lolling down in the warm sand Gerard and I watched them for fully an hour. It was a fine opportunity to study the great bird, though at a long distance, and we improved it fully; in fact, until they finally rose with a chorus of hoarse cries and circled up into the upper sunlight and then off and out of sight over the distant Red Deer Lake.

For the benefit of our modern hunters, whose chances for becoming familiar with this grandest of all the game birds that ever chose Nebraska's lonely wilds for a feed and resting place, lies in the pages of history, I will say that the sandhill crane, with all his beauty and wariness, alongside the whooper, is an inconspicuous fowl. Larger than the biggest of the sandhills by fully ten or eleven inches in extent of wing, and from a foot and a half in length, of whiteness that vies with the purest snow, save the dab of velvet black on the tip of the pinions, and carmine streak over the crown of his head, he is the most impressive feathered biped known in this section since the fabled wonders of the prehistoric days. When cleaving the golden sunlight of early spring over the blue lakes, reedy marshes, sandy barrens, pasture lands and choppy hills of Cherry County, he is a sight to tingle the blood of the most stoical, and incredible as it may seem to the young sportsman of to-day, there is no mistake about it. Twenty years ago Nebraska was one of the most favored feeding and resting grounds for the whooping crane there were in the whole country.

Just a short way northeast of Rogers, out on the Platte, lies a quite extensive half open valley and half billowy prairie, which was formerly thickly covered with the delicate and curly buffalo grass, with clumps of hybrid acacia, and splashes of moccasin flowers mingling with cat-o-nine-tails, flags and tules as you approach the river. This stretch of country was a great stamping and picking grounds of not only sandhill cranes, but the big whoopers, who never like to associate with the former or any of the lesser breeds, but in this instance their fondness for the place overcame their prejudice, and they were often found there together. They were always to be seen here through the dreamy month of October and well into the gloom of November, but as soon as the air became bitey it would start them all off for their winter homes in the balmy South. The whooping cranes are, without an exception, the wariest, most cunning and resourceful of all our big game birds and about the hardest to get a shot at. And yet, by our superior intelligence, we used to outwit them frequently in the old days out about Rogers, and in another letter later, I will tell you of the last shot I got at one, way out in the sterile fastnesses of Duel county, in March, 1894. What goose shooting is now, whooping and sandhill crane shooting was to the few gunners who went out from this city in the days of which I write. My! how it used to make my blood bound to lie there in a blind in the low hopples or tall, yellowy grass and listen to that penetrating and weird hoo-roo-ooo-oo-oo, long drawn out and rolling, seemingly, from every point in the autumnal skies, as a flock of these great birds approached me. If you find it hard to lie still now and await the incoming of a line "auh-unking" Canadas, you would have found it an insurmountable task to have done the same twenty years ago for the onrush of a ragged bunch of whoopers. To bat an eye meant the dashing of your hopes. Rigid and still as a statue you had to lie or crouch, until the low whiff-whiff-whiff of their fan-like wings fractured the atmosphere above you, until you could see the carmine of the eye and the long raucous throats stretched out over you. Then to your feet, and what a sound and what a sight—what a climax of frenzy, as you view the tangle of monstrous

white birds, with broad wings hammering the air desperately, every bird climbing distractedly toward the sky, sheering, tumbling and lurching in all directions at the same time, the sunlight glancing from their dark green, dagger-like beaks and crimson domes, and the very earth and air vibrating as with the peals of thunder. That was whooping crane shooting, and it makes my blood leap, my nerves tremble and my brain whirl to recall it.

Local sportsmen are quite indignant over the report that a number of wealthy Eastern gentlemen have, or are about to purchase, Three Springs and Raccoon lakes, as well as the old Anse Newberry ranch north of Cody, 400 miles up the Elkhorn, and are going to turn the same into a game preserve for their own personal use. They intend, so the story goes, to prohibit all shooting and fishing there excepting that which they indulge in or oversee themselves. They are to get possession some time this summer. Three Springs and Raccoon lakes, with their bordering marshes, and running waterways, have been a favorite ducking grounds for Omaha and Nebraska sportsmen for years, and thus to lose them now will be an aggravation, indeed. I was one of the very first of the Omaha wild fowlers to visit Newberry's; in fact, I almost pride myself on discovering Anse's cozy hunter's hostelry, and surely it was I who gave the place, through my unpretentious sporting effusions, the most of its pristine glory. Newberry's shack then, was a rude log structure of two rooms, with crudely tanned buffalo skins for a partition and with a mere paucity of conveniences and comforts. But things have changed since those dim old days, and the Newberry mansion to-day is complete and fairly modern in all its details.

Dear old Anse, how loth we will be to give him up. I can close my eyes now, as I sit here at my scarred and rickety old desk, and look back and again enjoy the entrancing scenes and stirring incidents of my first visit to his homely roof and the famed Lugenbeel marshes. What a magnificent bag of mallards and redheads we made, and what a battle our old pointer, Don, now basking away his waning days on Ted Ackerman's ranch, up near Spearfish, had with an otter, and how we did yank the rock bass from the Raccoon's mossy and limpid waters. You remember it, Jack, don't you—it was only a little over fourteen years ago. You recall, don't you, sometimes, even way out there in your new home on the Columbia, what a picture of rapturous enchantment old Anse's old log and sod house, with its bunches of ducks hanging on the back walls and the dark façade of old Thunderburg frowning down on the lapsing waters of Three Springs. What did we care for the faraway world, what did we care whether the ducks flew or the fish bit? Did not untrammeled nature supply all the senses demanded out in that wild and remote nook of the universe? Such scenes as environed that old frontier tavern in those old days, glowing as they did at sunrise or eventide upon the background of that barren old sand mountain, beautiful as Bifrost before the portals of Valhalla. And must we now say farewell to that sacred spot in nature's heart, those old hunting grounds, where the tints not so detectable in the atmosphere, kindled the glassy lake's surface when the sun went down, and where the fragments, even of each cloud, formed on its delicate texture a perfect image.

A game preserve, indeed—yes, it must be so, it is in the air, and the Lugenbeel is not the only spot to which this is coming. That we must make up our minds to. Even Billy Brewer is now organizing a club in Omaha, with the object in view of purchasing the Stilwell ranch out in the Cherry county sandhills for a game preserve. Mr. Brewer's idea is to buy the Stilwell place, which embraces nearly one thousand acres and takes in over half of Hackberry Lake, a great bass as well as ducking grounds; the east end of Clear Lake, a noted canvasback resort, and runs clear down to the north shore of Dewey Lake, one of the grandest lakes in all that wild region, with plenty of bass and bluegilled sunfish and wild fowl grounds unsurpassed in the State. The sod hunting lodge is to be quadrupled in size, and many improvements made about the living house and corral. The membership is to be limited to fifty Nebraskans, and Stilwell, one of the best duck shots in the country and an all-round efficient and intelligent man, is to be installed as gamekeeper, who will reside there the year round. Mr. Brewer is counting on getting the deal through by next October.

There is some talk of bringing the big coursing meet, which for several years has been held out near Friend, to Omaha. This may be true, but I doubt it, for it is quite probable that the people who brought about the anti-pigeon killing law, would bob up as the friend of the long-eared Jack. The four days' card planned for next fall is a grand one, and if it were possible to run it off near this city, it would attract an immense attendance. The pastime is very popular out at Friend, as well as through the whole southwestern and southern part of the State, and coursing devotees flock there from all quarters of the country. Many of the best bred and speediest greyhounds in the United States are owned by Nebraska leashmen, and this fall arrangements are being made for some entries of dogs from over the ocean. Backed, as it is, by the leading business men of Saline and adjoining counties, the sport equals, if it does not excel, that of the great Kansas and California meets. Owners hereabouts are already getting their strings in condition for the spring trouts on the open prairie, and when fall rolls around the speculators will have as fine a lot to pick from as ever ran against each other in the country. It is a notable fact that the Nebraska Club uses only Nebraska rabbits, although some judges pretend to claim that the Montana and Idaho breed is the best, but if they can outrun our own long-eared buffoons of the plain, they are surely birds. Rich purses will be hung up this coming autumn, and whether held here or at Friend, the meet will be one of the most important ever held in the West.

Some time this week I intend, for the exclusive benefit of the FOREST AND STREAM, to take a run out to O'Neil and take a look over the State field trial grounds, said to be the finest in America.

There will be a regular exodus of prominent anglers from Omaha coming week. Judge Munger, Attorney Summers, Clerk Thummel, Marshal Homan, of the U. S. Court, and the writer will go to Sheehan's on Lake Washington, Minn.; Martin Meyer and George Hayes to the Nishna, this State; Dr. Owen and Thos. Orr to Lake Jefferson, Minn.; Judge and Wilber Fawcett to Lake Winnibigoshish, Minn.; Myron Learned and Will Hamilton to Three Rivers, Wis.; Fred Goodrich and Bob Lowe to Lake Ida, Minn.; Editor John Weaver and City Editor Joe Polcar and Artist Billy Pixley to Okoboji; Robert Patrick, W. S. Poppleton and some Washington friends to the Patrick ranch in the Wyoming mountains, and Hon. Tom Nolan, R. L. Metcalfe, editor of the World-Herald, and Dr. Wirth to Hackensack, Minn. SANDY GRISWOLD.

Roughing It.

ANY expression or term is rendered intelligible only through its relationship to its environment, and, therefore, the accepted meaning may change very materially, from time to time, to correspond with a change in surroundings.

"Roughing It," for instance, in the times of Lewis and Clark, and their immediate successors in western explorations and trans-continental expeditions, meant a contest with difficulties which were impossible to anticipate and also the risk of life; while now, the same expressions when applied to the Adirondacks, means actual luxury with merely a rough setting.

On the whole, shooting, fishing and camping expeditions are, nowadays, owing to the supervision and assistance of professional guides, rather smooth affairs, as is indicated by the increase in the patronage of these recreations by the female element. There are few unexpected hardships, and the matter of fatigue can usually be kept well within the capacity of a frail member of a party; but occasionally circumstances will get beyond control; a party may get into the trough of the sea, so to speak, with a resulting shaking up that will fairly represent a genuinely rough time, as such is understood in this day and generation. Here, for instance, is an example. Last autumn, because of an error by one of several persons who repeated a message, which originated in French on the edge of the Canadian woods, was told to the occupant of a telephone station, and was thence transmitted to a telegraph operator, who translated and forwarded it by his method to the States, a citizen of Quebec and the writer reached a remote railroad terminal, almost simultaneously, on our respective ways to join a noted hunter—to whom each felt an exclusive right—in a search for moose.

Being unable to determine by a comparison of, my written and his oral, evidence, which of us was out of time and place, we agreed to drive the 35 miles to the rendezvous and allow Pierre himself to choose between us. The surprise, confusion, and forceful remarks of the old chap need not be dwelt upon; it is enough to say that his trapping partner was sufficiently moved by the explosion of feeling to go to his assistance and divide us "share and share alike." During the long uncomfortable drive the Quebecer and I had been so shaken together and had corporally commingled to such an extent that neither of us objected to a union of our forces while proceeding to the hunting grounds.

A coolness having sprung up between the two hunters and some Maine game wardens, it was deemed wise that we should make a detour around a corner of that State, which necessitated an additional drive of 30 miles in company with our canoes, and it also necessitated the search for an unfamiliar brook on which we proposed to float into the Canadian branch of the St. John's River. By starting the teamsters with canoes before dawn, we were enabled to congregate at the end of the wagon road about 4 o'clock in the afternoon. This drive was even more severe than that of the day before, and we were glad indeed to dismiss the buckboard, the spring of which had been rendered nugatory by duffle and enter the timber on foot as an advance guard of the wagon, or rather running gears, which bore the canoes.

We had been informed that the brook would be found after following an unused lumber road "4 miles," and with the thought of pitching our camp upon its banks in time to catch some trout for our evening meal, we went merrily forth filling our lungs with the fragrant breath of the woods. Ere long we came upon a fallen tree, which had to be cut in twain before the canoes could pass, and, worse luck, every now and then another similar operation had to be performed; we found too, that many springs were busily engaged in emptying themselves into the forsaken road and thus converting it into a quagmire. The deep holes had to be corduroyed and from the shallower ones we had, time and again, to pry the conveyance and even the horse. Indeed, we had to go to the rescue of each other whenever a flying leap fell short of a substantial footing, and a deep and pertinacious mud puddle would threaten interment. When the sun went down, peeping at us through the trees from over the shoulder of a distant hill, we were seen still deep in the woods and the mire, and still tugging at the horse, the wheels, or our boot straps. The only thing that saved the informant of the distance to the brook from our wishes of speedy discomfort 'midst painfully heated surroundings, and also a prospective drubbing (if our wishes failed in their purpose) was the possibility that he meant an indefinite "for" instead of a precise "four" miles.

The Quebecer went on ahead with the hope and anticipated pleasure of soon finding the longed-for opening in the woods and signalling back to us that cheering information. When, however, we came up with him sitting bedraggled and disheartened on a log, convinced that we had lost the way, we stopped to think. To spend the night in that morass was out of the question for us, and also the horse—the poor brute, having fallen in the slough a number of times, was being chilled by the night air—to return was seemingly beyond the endurance of any of us and so, whether or not we were astray, we preferred going forward. The moon arose, and by the by was most cordially welcomed, to find us, man and beast, cut loose from most of our impedimenta and forging ahead for anywhere.

Sooner or later a broader expanse of illuminated sky was noticeable, and presently we entered a small clearing in the middle of which were several log huts and, from one of these, rays of light were escaping through chinks between the logs. Well, thank heaven, we were somewhere! Without announcing our arrival, we pushed open the door of the illuminated hut and saw four youths ranging in age from 18 to 25 years, eating an ill-smelling mess, onions predominating, from a filthy shelf by candle light. We stared at each other through the doorway for a few moments, and then, in the French language, we were invited to enter and were offered food and shelter. We crossed the threshold to find the hot and foul air of the room insufferable, and we not only declined the food, but also the shelter, and hastened out into the night, though not before we had noticed cautious glances by the occupants at a pair of boots which protruded from one of the bunks. Outside in the moonlight we built a fire, and while having a frugal meal of tea and biscuits, woefully discrepant with our needs, discussed our new acquaintances.

Pierre, who had been caring for our overworked horse, joined the circle and remarked, "De axes ees rusty; de chaines fer to draw de logs ees rusty, too; de han's of de men ees soft; no feed ees here fer de horses; sure dis ees no logging business what dey do." After a while our hosts came from the hut, the four young men being accompanied by a middle-aged man whose frame was large and face as villainous as I had ever been so unfortunate as to look upon. No crime named in the statute books was uncongenial to that degenerate countenance. Is he a Bill Sykes? I wondered. Simultaneously, with their arrival, an old gray mare emerged from the timber into the fire light and was promptly seized by the forelocks by one of the group and so cruelly kicked in the belly that I arose to object. She was released and I became the focus of threatening looks from under contracted brows. When our food was disposed of the strange wood dwellers still squatted like Indians near our fire, looking on and smoking in silence. The Canadian and I were very tired, after our two days of travel, over some 70 miles of frontier roads, to say nothing of swamps, and it was important that we should sleep, in order to be equal to the demands of the morrow; but where? Our tents were upon the abandoned wagon some distance back, over that awful tote road; and to go into the hut was not to be thought of. Pierre and Tom decided that we two "sports," as they called us, had better take possession of a vacant log stable, while they would seek cover in such a locality as to enable them to detect any attempt on the part of our foundlings to forage upon our supplies in the rear. Accordingly, we were escorted to where the preparations were to be made and looked on while the Hudson's Bay blankets were laid athwart the doorway and my sleeping bag placed further inside of the shanty. As there was no door, we constructed a sort of barricade of odd bits of wood as a substitute and then crawled into our covering. Jove! the earth floor was hard and the inequalities of it necessitated frequent turning so as to make an equal distribution, over our anatomy, of the rapidly accumulating sensitive spots. We had been asleep—I do not know how long—when, with a resounding crash, in fell our barricade. I felt my roommate jump into the air and heard him exclaim, "You get out of here right quick!" I turned over in my sleeping bag, as soon as its narrow confines and my aches would permit, with the expectation of finding myself covered by a gun in the hands of the villains; but, instead, gazed into the moonlit countenance of the gray mare, whose home we probably occupied.

The citizen of Quebec would be the first to be stepped upon, should the critter make good her threat to enter, and I felt so much relieved, by the absence of bipeds in the rumpus, that I took no part in repairing the abatis, and promptly fell asleep. Within what seemed a very brief time, I was again startled by a warwhoop from the Canadian, who barely escaped being trampled underfoot by our persistent friend. Once again he braved the night air in scant apparel and rebuilt his defenses without an attempt to formulate into words his views upon the subject. This repression and self-control impressed me deeply, even in my drowsy condition.

When for the third time we were rudely recalled to a consciousness of our overpowering fatigue and misery, as well as our inability to persuade the old mare to be merciful, I expected to hear a flow of oratory which would clear the surcharged atmosphere of its oppressive gloom, and when my roommate returned to his blankets and mildly said, in subdued tones, "We seem to be having a large-sized night mare," my mental tensions relaxed and I shook with suppressed laughter. The morrow was another hard luck day, and the thought of it makes me weary. Our horse's feet slipped between the logs of a corduroy, and broken bones were narrowly averted, the shafts snapped and our broad opportunity for exercise was enlarged by having to carry the canoes and luggage a long slippery way to the much sought for brook; we had little else to eat than hard tack, and as cold rain came down in torrents, wetting us through and through, we did not find a landing place along the brook on which we embarked about three o'clock, till darkness made tent-raising a difficulty, and eventually we threw ourselves upon the wet earth, practically supperless, for the night.

Let me hasten to say that the glorious sun arose in a clear sky the next morning and dried our clothing and our tears; it cast impressively beautiful lights and shadows upon the placid surface of the St. John's River; aroused all of our latent enthusiasm and warmed our hearts into gladness. The rough features of our "roughing it" were ended, and thenceforth we had a thoroughly enjoyable time, and what is more each of us was so fortunate as to get a bull moose.

It just occurs to me that I have put a period at the

end of my yarn before telling of our discoveries relating to the den of bipeds we "dug out" from their concealment on our first night in the woods, but on reflection, I realize that that story would be a digression from "Roughing It," and so, therefore, with King John I will merely add, "I had a thing to say, but I will fit it with some better time." LIPPINCOTT.

BALTIMORE, Md.

CHICAGO AND THE WEST.

Wisconsin Game Law.

CHICAGO, Ill., May 23.—I met Fred Merrill, of Milwaukee, in Chicago the other day, and he said he thought that the Wisconsin Legislature was this week going to pass the bill prohibiting spring shooting in that State. It seems that we are not to have quite such good fortune. The new bill, as passed later this week, allows an open shooting season from April 10 to 25 on ducks and geese only. Pickerel are classed in the same category with bass and pike, and are protected March 1 to May 25. The bag of ducks is limited to 15 a day.

Moreover, my brethren, the State of Wisconsin swings into line with the FOREST AND STREAM platform, and absolutely prohibits the sale of game of any kind at any time!

We surely can report a distinct advance, almost a startling advance, in our game laws in the West for the past two years. Texas, Illinois, Wisconsin—these names ought to be written high on the roll of honor for this spring. To be sure the Wisconsin law, although it gives but a 15 days' season in the spring, is a loop-hole law, and to that extent is bad. The limit of the bag to 15 birds a day is also to some extent a loop-hole, since the clause is hard to enforce, but it is a movement in the right direction. Upon the whole, we may say to-day that Wisconsin is further along the troublous road of game and fish protection than she has ever been before in all her history. This is not to say that Wisconsin has been remiss in the past, for she has always before this spring led the State of Illinois distinctly in her attitude in regard to the game laws. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Game Protection in Wisconsin.

ACCORDING to the official report of the Wisconsin Department for Protection of Game and Fish, 52 illegal hunters and fishermen were arrested last month and the receipts for confiscated articles amounted to $351.80, and the fines to $530. The largest seizure was made by Warden Follbrecht, and was a shipment of 1,078 black bass from Green Bay to Chicago. The fish were sold for $153.30. The most seizures in the month of April were made by Warden Valentine Raeth, of Milwaukee, containing gill nets, hoop nets, fyke nets, set lines, decoys, and six illegal shipments of fish. He also arrested, with Warden Vollbrecht, a man in Dodge county for fishing with nets, who was fined $25 and costs. On April 18 Raeth arrested two hunters from Illinois for shooting ducks in Kenosha county. They were fined $20 each. The wardens, Geo. Redmond and A. Johnston, arrested fifteen illegal fishermen in Marathon county, twelve of them were convicted.

MILWAUKEE, Wis, May 17.

The Wood Rat.

Editor Forest and Stream:

In the course of my wanderings I once held the camp for Frank Geduhn, at the head of Lake Macdonald, Idaho; to which returning after a day's absence, I found a large part of the contents of my grip scattered about the floor and many articles missing. A pack of playing cards, among other things, was distributed about the floor of the cabin in a most promiscuous manner. Hair brush, razor case, soap, and other materials which had been left on a table were gone, and a heavy volume was balanced on the edge, ready to fall. Suspecting the cause (for Frank had had provoking experiences with wood rats at his other camp at the foot of the lake), a search was begun for the rascal's nest. In vain every probable place of resort was investigated, until we chanced to move a box which was used as a stand for a washbasin, when lo! the interior was a sight! Not only were my own missing articles brought to light, but the nest itself was in great part composed of several towels which were folded in the form of a turban, and intertwined with many articles of domestic use. The animals did not seem shy or secretive after their lair was discovered, but scampered about the premises like tame kittens.

These rats had fluffy tails an inch and a half wide at least. The body color was bluish gray. I am glad we don't have these creatures East. They are worse than tame crows, by whom I have suffered much in days past.

CHARLES HALLOCK.

The Wolf's Tail.

SEYMOUR, Texas.—*Editor Forest and Stream:* In the May 9 number of FOREST AND STREAM Mr. E. P. Jaques, in his article on "Intelligence of Wild Things," says he would like to know how anyone gets near enough to a wolf to make a study of their habits. Where he is located it is very possible that, on account of the comparatively thick population, the wolves have become so cautious that they are seldom seen. Here, however, it is common to see anywhere from two to twenty in a day's ride, sometimes not more than thirty to sixty yards off. I have ridden along the tops of bluffs several times and seen wolves hunting cottontail rabbits in patches of plum bushes or broom weed below me. When running game they carry their tails high over their backs and waving like a foxhound making game. When carrying anything or traveling during the daytime the tail is carried low, the tongue is almost invariably hanging out, and they have a general air of being tired to death. Sometimes when with a wagon or working force the beggars will trot up to within fifty yards, sit down and watch you work for ten minutes or so, yawn two or three times and trot off again. I've seen them sit perfectly still and watch a pack of dogs come toward them till within seventy-five yards. Evidently they were under the impression they were not seen. MARK HOPKINS.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Canoe and Camp Life Along the Delaware River.

IX.—Visitors.

"The' hain't nothin' like an aou'door fire, an' a shanty like this, an' a bed o' browse, fer raal, genywine, restin' comfert."—Sam Lovel, in Robinson's "Uncle Lisha's Shop."

"I love thee, O thou dim and dreary feeling!
I love thee, O thou desolate communion
Of the lone spirit with Nature, now revealing
To her fond worshipper in that sweet union
Of hidden brightnesses which lie enshrined
In the dark recesses of the unconscious mind,
A smothered flame, a torrent which doth need
The hand of Nature and of Solitude
To waken it; and then with headlong speed
Shoots forth, until the mind, unformed and rude,
Doth by that healing stream burst into being—
All pure, all bright, all beautiful, all seeing!"

—Thackeray.

ONE who really camps out is not merely with nature, but a part of nature. And one who looks at nature while "dressed up," and from the dawdling porch-chair or the soft seat and shade of carriage or automobile, is something distinctly apart. More and more, this is realized by the seeker for summer recreation and joys. More and more, the summer campers, and their proportion of women, increase along the Delaware. Rough, drunken, profane men are now the decided exception; for they are instantly branded as sham sportsmen. Families that camp out are increasing, with their charming personalities of matron and miss in heavy shoes, flannel skirts, and waists that were discarded for

SUNSHINE.

home wear, but treasured for use during a tenting month or fortnight. There is not a day here but an artist would be charmed with a vision of a Hebe or Juno, "loose an' free" in outing dress, and an old straw hat pinned into jaunty shape and often trimmed with gathered bunches of real wild flowers—daisies, bee-balm, delicate ferns, or meadow or pond lilies. And from under these hats smile freckled, brown and healthy faces. How grateful they are to the eyes of the real sportsman!

There is nothing which will more quickly win the chivalrous interest, admiration and service of a camper or angler, than the discovery of one of these modern river-naiads. How well she fits her sylvan environment! She likes to camp; she loves to fish. She is fond of what he loves. Seated on the camp-stool under the trees beside the tent, still and often timorous in the canoe as it shoots rift or rapid, or when proudly showing her new-found skill in cooking at an out-of-doors fire, her presence is at once a godsend, blessing and benediction! Right here is such a personage now, frying bass on the tiniest fire, over which you could place an inverted milk-pan—she has learned to cook with as small a fire as possible, and avoid the smoke and heat of the larger one. And my cynical old comrade is inviting her father, mother and chaperon, to "come across the creek to-night and take pot luck with us." I can read on his old face, the stern resolve to bankrupt our larder in giving that "spread," and I know that I shall quarrel with him for the privilege of acting as waiter while this nymph of the bronzed cheek and wavy hair of softest brown is eating from our tin plates, with a pewter spoon and a bone-handled knife and fork. Our sugar will not be sweet enough for her, and so we shall go to a friendly farmer's house and bribe his wife to sell us a jar of wild honey. And both of us are conscious of the fact that when we get back to town, each will accuse the other of being a gray-headed old fool.

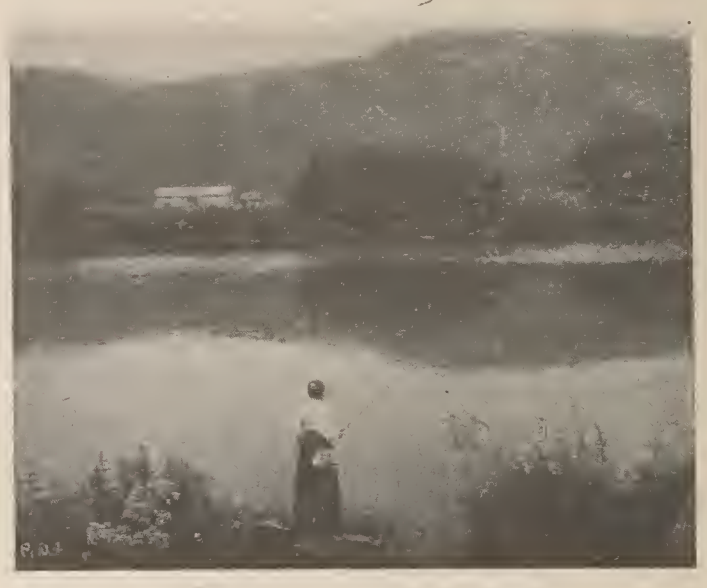
Meanwhile, we watch the charming picture of the real mistress of her camp as she fries and serves the fish, and we eat in the most exquisite of dining-rooms; all frescoed in gold and green and blue, and filled with water and foliage music; and which shows some signs as evening comes on, of getting its ceiling bespangled.

If this experience is dangerous to us old fellows with daughters at home older than this Diana, think of the peril to the two college boys over in the next tent! Such a camp is the special trap of little Dan Cupid. I watch my tent-mate choke down his admiration, assume his sternest exercise of will, and proceed to study its Queen.

An old waist with a bunch of daisies at the corsage, a gypsy hat trimmed by herself with a sprig or two of delicate ferns, big shoes, flannel skirt of blue, and bewildering curls that refuse to be imprisoned, and get loose to fall and look at a happy face with black eyes, and the indescribable hue of bounding health which blooms, regnant, in the bronzed cheeks. That is all: but it is enough! Such a young sportswoman should be avoided by the young man unless he is prepared to risk serious danger to his peace of mind. I know of several mishaps to bachelor life right here on the Delaware, because of the young man's too great confidence in himself.

Emerson says in a poem that the weeds and brambles he found along the shore were very beautiful there, out with the sky and uproar; but that they were unsightly and noisome when he had gathered and taken them home. Many of these woman campers are beautiful at home; but it is perilous indeed to meet them on these shores.

Several of these family parties are located along two or three miles of the Pennsylvania shore, and



A SUCCESSFUL WOMAN ANGLER.

two more are located on the New York side. We exchange visits, the men to eat, smoke, and exchange fishing and hunting yarns, the women to gossip about the delights of the outing, and plan for fishing and canoe excursions. A charming matron member of one of these families has quite enslaved the two "ancient" sportsmen by her ability to cast far out and land an occasional bass from a favorite standing-point on shore. and by her skill, shown while bathing, in mounting and balancing herself on that most unsteady of boats, a rubber sleeping-mattress.

And we keep asking each other: "Why do not more women camp?" The quarters need to be rough, but are easily maintained as comfortable. Tens of thousands of women waste their strength in social ambitions and struggles; and upon the advent of summer, they are in the tumult, strain and dazzle of life on some Atlantic liner, or flitting butterflies as they scamper through Europe. They are throwing away priceless opportunities to add many years to their none too useful lives, by camping out beside some fair lake or stream, or a forested river like the Delaware. It would be amusing if not so pitiful, as they stand before the masterpieces of the Dresden, Rome, Florence and Paris picture galleries, and voice their admiration for the work of Titian and Angelo, Tintoret and Raphael; to witness how blind they are to the fact that, back at home, say on this river Delaware, there is not one hour or minute of any day without its treasure of actual scenes that those very painters would humbly own were infinitely more lovely than anything ever placed on canvas. Raphael often spoke of the wild rose in sunlight, and would not even take up his brush, saying that flower was the painter's despair. There are nooks and dells right along this shore, where hundreds of

A BALANCING FEAT.

blossoms of the wild rose star their green bushes, smiling forth new proof of Ruskin's statement that it is the supreme flower in nature's wild garden.

Another social advantage among campers is that they are known in advance to be presumably desirable comrades and acquaintances. For there is something about wealth which, far too often, hardens the heart, and causes the degeneracy manifested by insolent exclusiveness. Real "campers-out" are members of that noblest human life, and most vital foundation of the nation's hope, the cultured middle classes. And they believe in and enjoy the democracy of tent-life. They are possessed in generous measure, not only of love of nature, but of love for their fellow men. Right here are citizens from widely separated towns—merchant and judge, doctor, attorney, and journalist, state official, banker, manufacturer and railroad man. Among their most prized neighbors are two farmers, a shoemaker and a school teacher, happy in their tent across the river.

And we all exchange visits, suppers, and gifts of wild flowers, and realize that some of these friendships formed on the stream will last through life. Such people are the glory of a nation, and certainly have far richer measure of sincerity, usefulness and nobility

than many of the over-dressed, boudoir-fed and pampered habitués of our seaside and mountain hostleries and palaces.

But, after all, we like our wild visitors the best. A pair of blue herons have been roosting in the top of a tall pine half way up the hillside. They are not disturbed; their shy presence and half companionships are pleasant as they drift on slow wing to their lofty perch at sunset. They are good dots of wildness in the swampy places, and can be brought near to the eye by use of opera glasses, as they wade in sedges and through open watery shallows free from reed grass, while they look for frogs and fishes.

Nearly every day we see one or both of the single pair of bald eagles that have a home somewhere in these hills. The soaring and diving of three or four fish-hawks furnish another subject for interest and conversation. During a few mornings we have heard the rise and quacking of a dozen or two of mallards, widgeons, teals and brants, fleeing on rapid wings from our approach. Circling hen-hawks and shouting flickers voice their approval of the summer above and among the treetops. Swallows range like happy dogs and skim the water's surface. Indeed, a fellow camper is listing the wild birds which have visited our trees during a fortnight. Here are about one-third of them:

Helldiver, heron, gull, three kinds of owls, blue jay, nuthatch, kingfisher, woodcock, stakedriver, chickadee, lark, martin, brown thrasher, bobolink, wren, loon, tree-sparrow, crossbills, crow, hermit thrush, snipe, phœbe, catbird, robin, whippoorwill, mourning dove, sandpiper, kingbird, bunting.

Rabbits, squirrels, chipmunks, a woodchuck, an old hen with her brood of chickens and wandering far from home, dogs, horses, cows, two calves, quail and yellowbirds have also been close to our camp. On two "muggy" mornings we have been startled and surprised by the drumming of a partridge, which some dream of spring has charmed into making that love-call. And as we visited a wide marsh far below, and found a lagoon, we located two muskrat houses; and one of their inmates swam across our bow, his arrow-like course guided by that unseen but well-known black and hairless tail. He dived unsociably, and probably entered his home below the waterline! But we wish we could call on him in a friendly way, and learn if he and his wife prosper in their summer foragings, and whether the children are well.

Among our most welcome visitors are the small boys and girls. Nothing makes my chum so happy as to take a youngster in triumph on his shoulder and deposit him in the canoe, put a trolling lure and line into his hands, and paddle about, watching the child's delight in his possession of the place of honor, so different from his subdued and humble presence down in one end of the boat, even then a place greatly longed for because he can see the men fish. And grateful mothers in some of the farmhouses have sent him little paper-covered glasses of maple syrup, and pans of hot biscuits, tokens of their appreciation for his kindness to their "chicks." And the fathers sometimes visit us to smoke a pipe and chat, saying, "Never mind the trespass signs; come an' go as ye like." They even bring the wives and children down for a smell of the smoke and a bask in the light of the evening fire. My chum visibly grows younger, and says that these are rich compensations for the lack of sense of greater wildness which the camper has along lakes and streams in the remote forests of Wisconsin, Nova Scotia or Quebec.

And now, having tried to tell something of the beauty in nature, and in human nature, and, perhaps, sadly tired the angler who may have scanned these articles in disappointment for some facts about the actual angling along the Delaware, I will try to furnish, in the next number of FOREST AND STREAM, facts about the fishing—where to go, what bait to use, where to fish, and what kinds, numbers and average weight of fishes a fairly skillful angler may expect to get, with average luck. He shall not have occasion to complain that I never give him practical aid if he wants to go a-fishing on this river.

L. F. BROWN.

Maine Angling News.

BANGOR, Me., May 23.—*Editor Forest and Stream:* This week has been a record breaker among the fishermen who have troubled the Maine waters with fly or baited hook, and owing to the peculiar conditions of the season, has resulted in some of those strings, such as the oldest visitors to Moosehead, the Rangeleys and other famous waters used to catch in "the good old days when fishing was fishing." As Commissioner Ring remarked to the writer, "This season will go down as the most successful season throughout Maine that the fishermen have ever enjoyed, at least since there has been a record."

Singularly enough, this has resulted from almost the opposite condition of what would have been prophesied as necessary to success with rod and line. Had anyone been anxious to make a name for himself as a forecaster of the fishing for the spring of 1903, he would have considered the phenomenally cold weather and rainy days of last spring to be coupled with the poorest of success, and would have said that to have good sport, Maine would have to enjoy a long month of warm days with occasional showers to warm the water. On the contrary the month has been, except for a comparatively few days, rather cool, although those few days have been scorchers for the time of year, and have brought the fish, trout, togue and salmon to the surface quickly, ready to take anything that offered chance of a meal. Perhaps the strongest cause of the good success has been the low condition of the waters, as the early freshets, coming before the lakes cleared of ice, dropped the water and prevented the fish getting into the bushes and swamps around the shores, and so picking up quantities of feed, even while they were out of reach of the average fisherman. To repeat, not for years have there been so many successful fishermen in Maine as during the present season up to date, and the fish taken have certainly averaged larger than usual.

The forest fires, to which reference was made in last week's letter, have, fortunately, been controlled, although not without some tremendous work on the part of the fire wardens and their assistants, who worked night and day, almost, for a week, in the effort to prevent the spread of the flames to more valuable timber than was destroyed or, as in some cases, to valuable resort property, as, for instance, the well-known camps at Indian Pond, near Moosehead Lake, which were reported to have been wiped out. Fortunately only an old lumber camp belonging to the same man was burned, and, although the camps took fire, the flames were extinguished and the fire controlled until all danger was passed. Later, heavy showers swept across the State, drenching everything in their paths, so that the timberlands of Maine practically escaped the great danger of destruction. Had not this relief come, Maine might readily have seen another fire to match the famous Miramichi fire, since conditions were ripe for such an event, and it was impossible to obtain men enough to fight the fire's advance. In one town every able-bodied man and all the boys obtainable turned out and, in two crews, fought the enemy night and day. Yesterday Commissioner Ring, who is both forestry commissioner and fish commissioner, assured your correspondent that all the fires in the State were out, and no further danger is to be apprehended. This is a year when the origin of such fires will be closely investigated, and woe betide the luckless camper who is neglectful of the rights of others in this regard and leaves a spark of his campfire alive when he breaks camp or goes out for a fishing trip.

Considering these different conditions, therefore, it is surprising that such records have been made. In fact, the records of some almost make a true sportsman to blush for those who permitted their enthusiasm to so far outweigh their sense of sportsmanship, and catch more than could possibly be used in camp or carried home. But it is always so, and the only protection the fish have when some people are around is not to feed.

The Seboomook Outing Club, which has been—or at least whose first detachment has been—at the club's hotel at Moosehead Lake, has had wonderful luck. During but three days' fishing they caught 60 trout, several weighing from 3 to 5½ pounds each, while they secured several good salmon weighing from 4 to 9 pounds, and togue ranging all weights from 22 pounds down. To enumerate the strings taken by the different men would be to greatly prolong this letter. It is enough to say, that in all the years of this party's coming to Moosehead, none of the club ever had such sport with the fish. Mayor H. M. Doremus, Collector of Customs G. L. Smith, M. R. Sherrerd, R. L. Ross, W. T. Johnson and Fred Castle, all of Newark, N. J., and all under Mr. Castle's guardian eye, were in the party.

Other parties on the lake included one of Geo. M. Sherman and James M. Hall, of Boston, who took in a few days 90 trout, ranging from 3 pounds down; Clifford Bass and Dr. Eagan, of Gloucester, Mass., who took in a week 40 trout, one a 5-pounder; F. S. Snyder and H. W. Priest and wives, of Boston, who spent a week at the former's camp on Williams Stream, and took 150 trout; A. D. Thayer, of Franklin, Mass., and wife, who have been among the earliest fly-casters, and have had great sport, getting 12 in one trip of a few hours; J. F. MacGowan, of Boston, who also caught on the fly some exceedingly handsome trout, leading all rivals, some of his trout weighing better than 3 pounds, and a salmon of equal weight; Willard H. Wheeler, J. H. Spafford and Wm. C. Atwater, of New York City, and Arthur H. Dakin, of Boston, had great sport farther down the lake, about Deer Island, taking all the law allowed during their week, a 4-pound trout being their best squaretail; another party of only two, caught in the same vicinity in a few hours, 5 handsome trout; A. W. Ford, of Salem, Mass.; F. D. Barrows, J. S. Rowe and E. B. Spearing, of Foxcroft, fished at the Outlet, and in one day took 18 squaretails from 4½ pounds down; another party at the same place took, in a little over two hours, 33 lakers, as the residents call the togue. These are but samples of the sport that has been going on at Moosehead for the week.

Fishing at Sebec was rather slow for a few days, owing to the presence of logs, but as soon as they passed through the sluice and into the river, the salmon and trout began to take the troll again and some fine catches have resulted. Dr. Holt, of Dover, took two salmon weighing 5 pounds 7 ounces and 4 pounds 11 ounces; Fred Carr, of Sangerville, 3½ and 4-pound salmon, and 14⅝-pound togue; N. J. Lamb, of the same town, 2 togue and a salmon averaging over 4 pounds each; Judson H. Root, of Hartford, Conn., had great sport with the fly at Long Buttermilk Pond, a mile from Sebec, where he took togue weighing 10½ and 15½ pounds, salmon of 4 pounds and less, and quantities of trout. Mr. Root thinks that when togue do rise to a fly they are about as gamy as one need ask for.

Attempts to stock Dexter Pond, or Silver Lake, or Lake Wassokeag, as it is called by the adherents of the several names, have never proved very successful, and the fishermen have begun to believe there were no salmon there. Lately several fishermen, while trolling, have lost their entire troll and extensive portion of their lines, through the rushes of some big fish. Roscoe Burrill, of Dexter, is the only prize winner so far, however, he landing a 2½-pound salmon.

Up the main line of the B. & A. the sport has been great, although as those lakes opened later than Moosehead, the best sport is yet to come. At Nahmakanta Lake, Victor Hodgins, of this city, Arthur Felts and John H. Small, of Boston, secured a fine string, while a party from the Debsconeag Club, Wm. R. Noon, of Boston, and Gordon Merritt, of Ridgewood, N. J., took in a day and a half at Rainbow Lake, 33 pounds of trout. Mr. Noon, who has gone home, landed at the home pond, First Debsconeag Lake, a 19-pound lake trout; C. H. Gray and a friend of Oldtown, were at the same camps, and caught a splendid string at Rainbow, some as heavy as 3 pounds.

Traffic Manager G. M. Houghton and J. W. Cratty, of this city, were guests of Express Agent Moody, of Patten, at the latter's Shinn Pond Camp, and in their visit of Saturday and Sunday took a splendid string, one trout weighing 4½, and six going better than 3 pounds.

At Portage Lake the sport is fast and furious, and fine strings are being landed every day. A big string, hung up at the station as the down train passed through there to-day, attracted great attention. Dr. Dobson, of Ashland; Warren Pratt, Col. C. P. Allen and C. F. A. Phair, of Presque Isle, are among the lucky fishermen there this week.

Herbert Lawton, Morton G. Baldwin and H. C. Jealous, of Boston, and W. E. Scoville, of New York City, have been at Square Lake for ten days, but owing to the lake being full of logs and other untoward circumstances, some of which they could understand, they didn't have the record-breaking sport that success elsewhere would indicate was awaiting their arrival. Two or three fish a day seemed to be the limit, and but few salmon were taken. Yet they had continual evidence that there are immense salmon and togue there, which, for some reason, could not be induced to take the lure. Mr. Lawton took the banner for salmon, getting two of 8 and 5½ pounds.

The St. Croix waters continue to hold up well; in, fact, it is doubtful if sport will be longer continued with more satisfactory results, in any system in the State, as in some part of this chain one finds sport from the leaving of the ice until the end of the season. Capt. W. S. Higgins, of this city, and Lieut. H. G. Gilmore, U. S. N., went there the other day and caught all they wanted of salmon, bringing away all they were allowed to, and they might readily have taken many more. J. Putnam Stevens and G. M. Barney, of Portland, fishing at Grand Lake stream, caught 42 salmon.

Megunticook Lake, at Camden, which is famous, not so much for its big trout as its close proximity to the sea, and to the mountains, affording a seashore resort, a lake city and a mountain range all close by, is demanding its share of credit as a resort for big trout. L. M. Chandler, of Camden, caught there a 2¾-pound trout.

And speaking of ponds that are making new records, there is Peabody Pond in Bridgton, where the salmon fishing is the wonder of the town, and everybody who can secure a rig is after the gamy fish. Horace G. Larrabee leads the string at present with a 10½-pound salmon, while Fred Libby is right behind with an 8-pounder.

Lake Auburn evidently feels that it has been much maligned, as the majority of fishermen had come to believe that fishing in that much-stocked lake was wasted time. Yet this week the beautiful little lake has been nobly cleared of such imputations, and furnished in three days' fishing only, not including many that could not be recorded, 26 trout and 78 salmon. The largest salmon weighed 9½ pounds.

The largest bass ever hooked in the Kennebec River north of Augusta, in which waters bass are numerous and grow to great size, was taken this week at Skowhegan by Fred Niblen, of New York, and weighed 7¼ pounds.

Among the ponds reached from Bangor is one, Floods, which, in the earliest years of his childhood the writer used to hear of as a wonderful spot for fishing, and out of which came the strange trout that had no red spots on them. Immense strings of these fish were caught there, some of them of large size, and it was many years before Bangor anglers found that these "silver trout" were really the American saibling, and were indigenous to but one other water in New England or the East, Lake Sunapee, in New Hampshire. So hard were the anglers after the beauties that the pond suffered severely, and in later years the U. S. Fish Commission has taken a great deal of its saibling spawn from the supply there. When the fishing was at its height J. Henry Peavey, of this city, at his own expense, secured a supply of salmon and stocked that pond. In a few years he caught one of his salmon, which had grown to a 13-pound fish, but now for several years not one has been taken or seen. This week, while Mr. Peavey and Fred E. Thomas, of this city, were out there together, they saw Geo. W. Gould, of Brewer, hook and land a salmon, which upon being weighed, was declared to be 9½ pounds. Mr. Gould and C. H. Patterson, while at the pond, caught also 24 of the saibling, while Mr. Peavey and Mr. Thomas, having but one day there, landed 13, the heaviest a 3-pound fish. Perhaps no more beautiful string has been taken there in recent years than was caught by Fred S. Cohoon, of Brewer, who displayed a string of 12 in that city, ranging from 3 pounds down, four of the fish ranging above a pound and a half. Singularly enough, this species of trout can only be caught in deep water, still-fishing. The salmon was caught on a piece of a chub, whereas this fish will usually only touch a smelt or fly.

As Senator Frye and a party of friends are at Mooselucmeguntic, and State Councillor Haines, of Waterville, is entertaining Governor Hill and his council at Great Pond of the Belgrade chain, next week's record will doubtless eclipse even this; but no square-tailed trout will exceed the record held for so many years now by Senator Frye, for the largest trout ever landed in Maine on a fly.

HERBERT M. ROWE.

Montana has experienced much trouble in years past with the killing of big game by depredating bands of Indians while off from their reservations. A law was passed by the Legislature this year which is designed to prevent the recurrence of such conditions. It prohibits the carrying of firearms by roaming Indians; any Indian who is found with arms while away from his reservation is guilty of a misdemeanor, and all such arms are to be seized and confiscated and sold for the public benefit.

CHICAGO AND THE WEST.

The Bass Fishing Season.

CHICAGO, Ill., May 23.—Warm weather, slightly overcast, offers good promise to the bass fishers of Chicago to-day, the week-end being the great time of departure of these clans. Some scores went out last week, most of them to the lakes of upper Illinois, but thus far no very great catches have been reported. A half dozen big-mouths or less was about the average for each party. The lakes of the Fox Lake chain seem to hold out remarkably well, in view of the tremendous drain upon them at the hands of the Chicago contingent. I suppose there are actually thousands of anglers who fish these waters every summer, but, although extremely heavy takes are not common, nearly every expert bait-caster who goes up into the better districts can report some sort of success on his return.

It is the belief of most of the boys that the best bass fishing has not yet come, and it certainly is the case that the season is not yet at its zenith in regard to the numbers of anglers going out. From time to time I offer the names of some of the anglers who go up into the Fox Lake country, but it is impossible to get at the personnel in full of this Chicago bass fishing aggregation. In all likelihood it runs into the hundreds every Saturday in good fishing weather like this. The Milwaukee & St. Paul, the Wisconsin Central and the Northwestern roads, on Saturday afternoon and evening, carry actually hundreds of bass fishermen, some of them expert, some of them merely enthusiastic, many of them ignorant, but all anxious to get out of doors.

These men carry all kinds of equipment, but of late it has become the custom for them to secure their live bait here in Chicago. It seems something of a paradox to say that Chicago is a better place to get live frogs than the country, yet such is unquestionably the case. More than one bass fisherman has gone up into the Illinois and Wisconsin country in expectation of catching his own frogs, only to find that some scores or hundreds had been ahead of him with the same intent, and cleaned out this line of speckled beauties. The tackle stores now carry live frogs in quantities and sell them in little baskets especially prepared for the purpose. One firm here in Chicago had, before 12 o'clock to-day, sold a little over three hundred dozen bait frogs to bass fishermen. This was Von Lengerke & Antoine, and this firm will have on hand for next Saturday five hundred dozen frogs. When it is remembered that this is but one of the several concerns which handle live bait frogs, it may be seen what dimensions have been attained by the frog industry in this city.

We have not yet reached the dignity of handling worms over the tackle counters here, but I notice that the first-class dealers to-day carry preserved shiners, preserved frogs, etc., nicely done up in glass and looking as good as some of the preserves mother used to make. As to the virtue of these pickled goods I cannot personally speak, but should think that the little pickled minnows would be very good for those who care to bait fish for trout early in the season. It is an open secret that some of the largest catches, and of the largest trout taken in Michigan early in the season are on salted minnows. A minnow packed in salt, however, becomes brittle and hard to handle. These preserved baits are perhaps better.

Tips on Bass.

I offer as tips on bass waters this week the Lauderdale Chain of Wisconsin, reached via Elkhorn, on the Milwaukee & St. Paul Road; also Gun Lake, Michigan, earlier mentioned, as an excellent bass water. One of the largest black bass ever displayed in a Chicago show window was taken in Gun Lake some years ago, and reports say that water is good in early summer.

The Wautoma District.

I have had something to say recently regarding the Wautoma district of Wisconsin, and whether due to this fact or not, at least one party, that of Mayor Harrison and his friends, have within a few days been up in that country, this being the point chosen by the Mayor last week, by aid of the Northwestern Railroad people. The party did not do anything extraordinary in the way of fishing; in fact, seemed to have picked out the worst rivers in the neighborhood. The Mayor and his friends put in one day on the McCann, with slight results. They had few trout, not over half a dozen to a rod, and very small. They went too far down on the stream, going in at Dakota, instead of eight or ten miles above that point. They agree that the McCann is a beautiful river, but that it would be a much better trout stream if it had some trout in it. Without doubt there are some big rainbows there, but it is not sufficiently well stocked to offer good fly-fishing at this time.

The party seem to have struck on Straw Creek, which is sometimes called the south branch of the White River. So near as I can tell from the description of Mr. Harris, who was with the party, they fished Straw Creek above White River and down to the latter stream. Here Mr. Harris got thirty-five trout in one day, the others coming in with smaller numbers. Mayor Harrison, who fished with Colonel Bill Haskell as his steadfast companion, had moderate success, and perhaps he was served with poetic justice, for he inflicted great personal pain upon Colonel Bill, in that he compelled the latter to fish with a fly all day long. Anyone who knows Colonel Bill Haskell must imagine his going out and being forbidden to drop a fat worm into certain likely pools. It is reported, I wot not with what accuracy, that Colonel Bill Haskell actually took four or five trout on the fly. Just fawncy! At any rate the party got enough trout to eat, although they did not eat them, but brought them home. I think they would have done better had they gotten in on Willow Creek, Chaffee Creek or Hall Creek, which are further away from the railroad and less fished.

Upper Wisconsin.

The reports on that famous stream, the Prairie River, are all in at this date, so that one can give a pretty good estimate of the fishing there. The season has shown a great number of trout taken, and from all appearances the stream is holding its own with last year, some anglers thinking it is better and some believing it not quite so good. Mr. Charles Antoine, who has been on the stream for three weeks this spring, thinks he did not catch quite so many trout as he did last summer, but he had five or six days of splendid fishing, taking a great many half-pound trout and a few over a pound. He sometimes got a couple of dozen, on one day 39, on another 47, and once he and Mr. E. G. Taylor brought in 63 between them. He sent down some very pretty trout.

Among other Chicago men in at Bates' place, on the Prairie, with Mr. Antoine, were Messrs. Andrews and Simmons, with Mr. Warder, Superintendent of Lincoln Park, and Mr. Ludlow, of the Chicago Fly-Casting Club. Dr. Miller and Dr. Carson returned home last week from the Prairie.

Mr. T. G. Ryan and a couple of friends from Appleton, Wisconsin, were out at Dudley's place on the Prairie, the middle of this week. My friend Mr. Neal Brown, of Wausau, spent a day earlier in the week at Dudley's, returning to Wausau Tuesday morning.

Mr. E. G. Taylor fished at Bates' for some time, and then dropped down to the stream below the Dudley dam for one day, among the bigger fish. He took fourteen trout during the day, which weighed a little over 8 pounds altogether. The trout were coming well at the time, and his basket was a very pretty one indeed for this country.

I dropped in at Delos Cone's place on the Prarie, Monday afternoon of this past week. At the time a thunderstorm was just brewing, and for about an hour before the shower the trout came better than I ever saw them do on that river. All the big ones were moving about in midstream, and there were more of them than one would have believed were in the entire river. Chester Cone and I took fourteen that afternoon, and we had five which came in between ¾ of a pound and 1 pound. I found the McGinty fly the best for the big trout at that time. The next day it rained very hard all forenoon and after the rain nothing rose at all, except the stream itself, which crawled a foot higher up its banks. Of course this ruined the fishing, and the following morning coming off cold and windy, the most diligent whipping of the waters failed to get any response, Chester and I, in five miles of fishing, scarcely taking a dozen decent trout between us.

Trout Before a Storm.

This is the third time that I have happened to catch the big trout coming freely just before a thunderstorm, once last year in Michigan, once on Lunch Creek, Wisconsin, a couple of weeks ago, and this time on the Prairie. There must be something in the atmospheric conditions which induce the big trout to go on the feed just before a storm. Perhaps in their philosophy they know that there is going to be a rainy day when they will not want to go out of doors, and hence load up while things are propitious. Yet the high water is supposed to bring down abundant feed. I give this up, along with all the other trout problems, which have never been solved by the scientists from Sir Isaac Newton down. It is a pity Sir Francis Bacon was not a trout fisherman.

As to flies in upper Wisconsin, Mr. Antoine found the Captain, black silk body and white double wings, and the double-wing hare's ear and woodcock his best killing flies. He tried McGinty for two days and did nothing. Mr. Taylor left word for me to use grizzly-king and professor, which I did not find killing. Chester Cone used the cow-dung, and I found McGinty and Abbey my best killers. It would be hard to establish any rule of action from such data, though personally I am beginning to believe a great deal in the Hon. Watt Humphrey's pet fly, the McGinty, for stirring up big trout when nothing else will do it. It is a freak fly, and on its first appearance on a stream the trout will hail it with joyfulness. At least, perhaps, they will.

Speaking of the numbers of anglers on the Prairie River, brings one face to face with the fact that there is not trout fishing for all the trout fishers. On last Sunday there were thirty-five anglers at Bates' place on the Prairie, of these about twenty-five being Merrill fishermen, who came up by team, some twenty miles. About 200 trout were taken from the stream that day. Nothing could save even this prolific water except the continuous stocking, which is done above Dudley's place.

The Single Fly.

The cult of the single fly is growing in Wisconsin. Henry Dudley, the veteran keeper of "Dudley's" on the Prairie, tells me that he has not fished with more than one fly on his cast these last five years. Chester Cone, although but sixteen years old, is an angler always safe to bring in trout. He scorns worm and never uses more than the single fly. This is the fashion employed by Mr. E. G. Taylor also. It is the index of a semi-dry style in trout fishing. For whipping about in the air and flicking at a definite spot the single fly is much sweeter to fish than two or three. One who tries it will find that he saves much time in freedom from disentanglements. Three flies together on the same cast have a great way of getting fond of each other's society, even with the most careful handling, and even when the wind is not high. The average trout fisher, however, will perhaps long cling to the triple fly, on the theory that when one has three different patterns up he can the sooner discover what fly the fish are taking. In seven cases out of ten it will be the stretcher, no matter what the others may be.

Amateur Fly Tying.

The height of skill which can be attained by the amateur fly-tier is evidenced in one of the noon-day Wishininne stories to-day. It seems that Mr. Ed Ellicott, city electrician, while absent with the Mayor's party at Wautoma, Wisconsin, constructed an artificial fly of such exceedingly lifelike appearance that when it was placed upon the table it took wing, rose and flew out of the window. This story is vouched for by no less an authority than Colonel Bill Haskell. The same story is also vouched for by that doughty angler of yore, Kit North, in Noctes Ambrosianæ.

Decoration Day.

There will be the usual annual exodus of anglers on Decoration Day, hundreds in all. Among those to leave Chicago, May 29, will be a majority of the Chicago Fly-Casting Club, who will repeat last year's trip to the Lauderdale lakes, Wis. This trip will be of two or three days' duration, as the participants may prefer. The party will leave Chicago at 3 o'clock Friday afternoon and may return Sunday evening, leaving Elkhorn at 5:30 P. M., or Monday morning at 6:28 A. M., which latter will bring the members back to Chicago at 9:30 A. M. The expenses for this trip, including 'bus, railroad fare and hotel bill, is only $6.50. This certainly puts bass fishing within the reach of all.

The Chicago Fly-Casting Club begins its season of club events at Garfield Park this afternoon, May 23. Subsequent dates will be June 20, July 25 and Aug. 22 for the competitions in distance and accuracy, bait and fly-casting. In delicacy with bait and fly, the following are the dates: June 6, July 11, Aug. 8 and Sept. 5.

Easier Now.

A personal letter from Nate H. Cohen, president of the Illinois Fish Commission, expresses gratification at the recent improvements in the Illinois game and fish laws.

"After July 1," says Mr. Cohen, "when our new law goes into effect, providing for three paid wardens at $900 a year and expenses, it will be much easier to control enforcement of the law, as these wardens will be immediately under me, and when these violations occur I can send one of them to investigate. The way the law is now, it is almost impossible to get any convictions, as they depend upon fees. In most instances there is not sufficient evidence to convict, and the warden gets nothing."

Western Man Goes East.

Senator John C. Spooner, of Wisconsin, has bought an extensive estate in northern New Hampshire, which he will use as a game and fish preserve. The property formerly belonged to the late David Blanchard, of Pittsburg, N. H. The Spooner preserve will be a distinct addition to the large estates already used as game preserves in different parts of New England.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Tarpon and Tuna.

Which Is the Hardest Fighter?

A RECENT article states that the tarpon and tuna are recognized as the two great game fishes, but that the tuna is "but the wind that blows," compared to the doughty tarpon.

This is at such variance with my experience with both of these fishes, that I am inclined to believe that some "catfish" angler is trying to get a rise from among the sea anglers, and that he has never seen a tuna, much less a tarpon. The relative game qualities of these two fishes will doubtless always be a question for dispute, and it is mainly a matter of individual experience; but when it comes to the question of fighting qualities there can be but one view. The tuna is the king, and I say this, well knowing the struggles some anglers have had with the tarpon. I have caught both fishes, and both have so many splendid qualities appealing to the angler that I would, in a just and fair summing up on points, place them on a par; but the tarpon is a herring, while the tuna is the king of the mackerel. You may see the tarpon lying in some snug corner or under mangroves like a garfish or pickerel. No one ever saw a tuna at rest; it is the prototype of action and restless energy—always rushing or moving—a hunter par excellence.

I shall never forget my return to tarpon fishing after several seasons of the tuna. At first I was amazed at the ease with which I managed my catch. None of my fish were under five feet, and none took me over fifteen minutes to land—with an 8½-foot rod—and in no case did I push the fishing. If I had ten minutes would have seen the quietus of every tarpon. And this is no reflection on this splendid game that went into the air like a bird, a dazzling, blazing glory of the sea—to fire one's blood with the desire for conquest along this line—without end.

Certain long, slender tarpon have been known to fight for several hours. One towed a party of New England anglers several hours at night. Another towed a boat three hours out into the gulf, and the experience of a single season of tarpon in Florida and Texas would make a book; yet, I have never heard of a tarpon that could equal the fight made at Santa Catalina, in which Mr. Woods, of Chicago, was fought for seven hours, the rod being then taken by his boatman, who played or fought the fish seven hours more; and then the fish escaped after showing about a foot of its broad tail that suggested an 8-foot fish. Neither has Judge Beemishe's play, during which he was towed 20 miles, been equaled; and it should be mentioned that nearly all tarpon are caught and played from light boats that no angler would think of hooking a tuna from; 18 or 20-foot four horse-power launches being used in all these contests, the boat alone being a very heavy pull for the fish.

The two fish are noble jumpers, but the tuna does not leap when hooked, and here the tarpon scores against it, but the tuna gives spectacular displays when feeding, and has been known to jump over the boat of an angler. The tarpon is caught mainly in shallow water, hence does not sulk to any marked degree, unless it is taken in the deep channel or reaches deep water, when it outsulks the king of the sulkers, the salmon. But the tuna is a blue water fish, and will often plunge down, though some of the best fish that have been taken have played near the surface. The tarpon varies—some are very gamy, others are poor

fighters, and the same is true of the tuna. Certain male fishes, during the breeding or spawning season, are weak and can be caught by women; indeed, a boy has been known to catch such a fish which weighed over 150 pounds, and I have seen a boy not over 12 years of age land a 6-foot tarpon in ten minutes, but these fishes were not normal. A tuna weighing 125 pounds in its best condition, will fight successfully from three to five hours, towing a heavy boat from 10 to 20 miles, and this certainly cannot be said of any tarpon of similar size; and after long experience with both I consider that one tuna of 125 or 130 pounds, if harnessed to two tarpons of like weight, would drown them or tow them both. There is no surrender to the tuna; he fights to the last and often comes in as dead as a door nail, dying of heart failure.

It is not my intention to disparage the splendid tarpon that has no peer in its peculiar field, but physically, it is no match for the tuna, pound for pound, the latter occupying a field quite as peculiar and distinct. In a recent book on tarpon fishing, published by an English sportsman, he claims that no skill is necessary in taking these fishes. I venture the statement that this gentleman has yet to meet a tarpon at its best, as such a fish can easily demoralize a tyro. It is difficult to tell what the Florida average of rod catches is, but Aransas Pass alone claims 178 tarpon, taken during the season of 1902. I have not the figures, but I doubt if any angler has taken over 17 tunas at Avalon in any one season or that 100 fish over 100 pounds' weight have been taken in any one season. Hundreds of tunas are hooked, and they are there by thousands, but almost every novice loses 10 or 12 to every one hooked, and the surface strike and fierce rush, throwing water high in air, I have seen demoralize an angler so thoroughly that he hooked but one in twenty—more or less. In taking a number of tarpon, which were over 5 feet in length, none towed my boat—a very light one—200 feet. On the other hand, I never hooked but one tuna that did not tow me from two to ten miles; but there "are others," and doubtless they have had quite different experiences with this splendid game. LOWHOOK.

Massachusetts Fishing.

BOSTON, May 23.—*Editor Forest and Stream:* The Executive Committee of the Massachusetts Central Committee for Protection of Fish and Game held a meeting on Thursday, May 21, those in attendance being H. A. Estabrook, chairman; A. B. F. Kinney, of Worcester; Counsel Herman S. Fay, of Marlboro; James R. Reed, A. C. Sylvester, of North Attleboro; and William B. Phinney, of Lynn, the clerk of the Legislative Committee on Fish and Game. Mr. Phinney has been president of the Lynn Fish and Game Association several years, and a member of the Executive Committee ever since the formation of the Central Committee three years ago. The cause of protection has received loyal support from him as a legislator, and much credit is due him for the work accomplished the past winter. Chairman Estabrook is not only a sportsman of wide experience, but has labored earnestly for many years in promoting the interests of the devotees of rod and gun. The work of the committee under his leadership this year reflects great credit upon him and upon the Fitchburg Club of which he has been president. He was instrumental in securing the cooperation of several clubs in the vicinity of his city which sent witnesses to the State House at the time of the hearing on the anti-sale bill, of which the FOREST AND STREAM gave a full report. All the other members of the committee have been zealous and efficient in the discharge of their duties, and the result is well known.

On Thursday evening the meeting of the State Association was well attended and the president occupied the chair. The proprietor of The Nottingham, Mr. Amos Whipple, a member of the Association, was one of the diners. The chairman of the Metropolitan Park Commission, William B. de las Casas, Esq., spoke about game in the parks, and Mr. Kinney on the protective work of the Association. Several members spoke of recent fishing trips. Several candidates were elected members and a number of new names were proposed. In the hill sections of the State the brooks are now very low, but should we have rain before long there will be better fishing.

Another State Reservation.

From Pittsfield comes news that leading citizens of Berkshire county are moving to have "Constitution Hill" in Lanesboro set apart by the State. The hill is near the old homestead of Josh Billings, and about ten miles from Greylock. The more such reservations the better for the game.

The "Sandwich Woods" would be an admirable tract to be set aside in the same way. Here there probably has never been a time since the landing of the Pilgrims when there were not quite a good many deer. If placed in the care of the State they could be better protected from fires and the game could be perpetuated. There are other tracts scattered over the State that could be purchased at small expense and rendered more useful in this way than in any other.

From New Hampshire Commissioner Wentworth reports as follows: "They have had the best stream and lake fishing in this State this spring we have had for years." I. P. Ransom, a well-known guide, casting a fly for trout, hooked and landed a 10½-pound salmon in Sunapee Lake. The fly was a Parmachene-belle. Salmon seldom take the fly there, the commissioner declaring he has not known of more than half a dozen being caught on a fly the past ten years. Judge Edgar Aldrich had a singular experience with a salmon on Connecticut Lake. The fish went to the bottom and sulked—started again and went straight for the shore (which was not far away), made a leap and landed high and dry seven feet from the water, where it was captured by the guide. This may sound like a "fish story," but it is vouched for by young Judge Shurtleff, of Lancaster.

The open season on Diamond Pond and Dublin Lake commenced May 20. Bass fishing all over the State begins June 1.

Mr. A. F. Cate is reported as having taken a salmon weighing 10 pounds at Newfound Lake, and many others have been caught from four to eight pounds.

Mr. C. F. Danforth, of Boston, writes me that five golden trout (*Aureolus*) were taken from Dan Hole Pond, New Hampshire, the first part of this month. These are familiarly known as Sunapee saibling, and are said to be the first which have been taken from this pond for three years. This fish is indigenous to Dan Hole, and, I am informed, to only three other bodies of water in the United States. Mr. W. F. Robinson, of Boston, caught one of these fish weighing five pounds. A young lad, son of Mr. Joseph Gridley, of Boston, took a salmon there weighing 6½ pounds recently. Mr. A. T. Sisson, of the J. B. Hunter Company, Summer street, took a six-pound lake trout on a fly at Newfound Lake, which is a rare thing, as lakers seldom rise to a fly.

From the Rangeleys and Moosehead reports of great fishing continue to pour in. If we can credit all the fine reports, there has not for many seasons been a month of May like this for angling in the big lakes of New England. Details must be deferred to my next letter.

CENTRAL.

The Devilfish and Some Other Fishes in North Carolina.

FOREST AND STREAM for April 18 came to hand while I had by my side "Brickell's Natural History of North Carolina," published in 1737. The reference to Elliott's "Sports of the Carolinas," under the caption, "A New Jersey Devil Fish" (p. 310), caused me to turn to the older account of the fish given by Brickell in the early part of the preceding century. In this the record was first published (p. 224) that "the devilfish, so-called, is of a monstrous large size and strength, for it hath been known to weigh a sloop's anchor, and run away with the vessel for a league or two, and to bring her back again almost to the same place against the tide."

The proper scientific name of the devilfish appears to be *Manta birostris*, and Mr. Fowler was under a misapprehension when he declared otherwise. I think he would admit now that such was the case.

But my main purpose in writing is to elicit information respecting several other names current in North Carolina in the early part of the eighteenth century and recorded by Brickell. Such are:

"Sea-Tench" (p. 234), evidently applied to the blackfish or tautog.

"Welch-men" (sing. Welchman), described (p. 239) as "the largest sort of perches," and as "a very firm, white and sweet fish." This is evidently the black bass.

"Irish-men" (sing. Irishman), mentioned (p. 239) as "the fourth sort" of perch, "a more flat fish than any of the former, and much resembling a *bream*, being all over speckled or mottled with black and blue spots." This is undoubtedly the crappie or calico bass.

I cannot recall mention of the name Irishman (for the crappie) in any other work, but Tench and Welchman have been repeatedly recorded. Can any of your readers give instances of the use of any of those names now and specify the exact localities in which they are used? I am sure others besides myself would be much obliged for the information. THEO. GILL.

WASHINGTON, D. C.

A Sucker in a Cypress.

A STORY comes from Jeanerette, La., where about thirty pounds of fish were recently sawed out of the heart of a cypress log. The other day when the larger end of an immense cypress log was being passed under the saw of the mill of the Jeanerette Cypress Lumber Company, one of the millmen made the discovery that in a hollow of the log was some substance that was evidently extraordinary. His examination acquainted him with the fact that a large fish had been sawed up with the log. The log was one that had been cut about the usual distance from the ground, but which had a hollow one one side above where it had been cut. The hollow space opened out in a hole of a few inches in diameter on the side of the tree. The hollow space itself, however, was of ample dimensions. Occupying a great proportion of the space were the sawed remains of a large sucker, probably a "choupique," estimated to have weighed at least thirty pounds. The explanation that has been offered for the lodgment of the fish in so unexpected a place was that in high water when the hole in the side of the tree was below the surface of the water, a small fish got through the hole into the hollow. The fish failed to swim out of the hole before the water fell. Enough water remained in the hole at all times to permit the fish to live, and it "waxed fat" in its peculiar abode, and at least remained fresh, if not alive, when the log was being rafted and when it was run into the mill.—New Orleans Times-Democrat.

Rhode Island Angling Notes.

PROVIDENCE, May 20.—*Editor Forest and Stream:* Salt water fishing has superseded the fresh water sport and large catches of tautog are reported all along the bay. It is not an unusual occurrence for a party of men—some women, too, enjoy the sport—to bring home fifty pounds each of the toothsome fish. Mussels are the popular bait in the spring.

The black bass fishing of this State seems to be traveling backward for some unknown reason. It is three years since any large catches of large bass were made. The law is on all fresh water bass waters until July 1, except Lake Mosuansicut and Sneachs Pond.

Some fine brook trout have been caught in a small pond within the city limits this spring. The brooks which form this reservoir are known to contain trout, but to catch them with a hand line and by a boy twelve years old who was fishing for "sunnies," is something unusual. I had always supposed that trout were in the brooks at this season of the year. Is it possible the brooks have been limed and the fish driven into the pond by it? The pond I refer to is Upper Canada Pond.

The Providence Journal announced last week the capture of a brook trout in a seine set for salt water fish in Narragansett Bay, and many fishermen are wondering at it. If they had read FOREST AND STREAM a few months past they would know from the very best authority that brook trout are not killed by salt water, and that they will live in it.

Assistant Superintendent Costello got after two fishermen last week who were fishing in R. W. Park. They left, taking some pickerel "as long as your arm," as James says. They abandoned their box of shrimp and Mr. Costello threw a handful in the lake, and white perch as large as shad grabbed them up eagerly. There will be great sport there July 1.

I should like to say to J. L. K. about the trout caught in a fyke net in salt water which he mentioned in FOREST AND STREAM of May 23, that I reckon that trout came from some brook which connects with the salt water, even if said brook was ten miles away.

Let J. P. T. try some salt water shrimp for that pet perch of his. No perch ever refused to bite at shrimp. I have found nineteen shrimp in the stomach of one perch. SELDOM.

The Sea Trout Discussion.

Editor Forest and Stream:

The only men who are really qualified to decide the sea trout "question" are those native anglers for fifty years along the waters where the sea trout live, and who have watched and studied their haunts and habits at all seasons of the year.

There are hundreds of such anglers in Nova Scotia, New Brunswick, Newfoundland, Cape Breton, and Prince Edward Island, and other North Atlantic Coast points.

Even those students and anglers who have made occasional visits to sea trout waters, and have returned to the States and written books and articles for many years, are not experts to decide or further write about this "question." Already they are in the following situation:

We cannot settle this matter; therefore we must discuss it forever.

Forty years ago the discussion annoyed me. It has been continued from time to time. It is about time the wranglers showed a disposition to practically dispose of it. They express a great desire for truth. Then let them file their briefs before men who really know, and accept the decision of a commission of anglers who alone are really competent to decide. If they want the truth which they cannot find themselves, let them raise the other four hundred and fifty dollars, while I, not interested in the "question," but desiring relief from the discussion, contribute fifty. And until some practical step is taken to really solve the "problem," perhaps the three per cent. of your readers who are still interested in it will allow a respite to the other ninety-seven per cent. who are satiated with the long discussion. L. F. BROWN.

Yachting.

Yachting Fixtures for 1903.

Members of race committee will confer a favor by sending notice of errors or omissions in the following list, and also changes which may be made in the future.

MAY.

30. Royal Canadian, club, Toronto.
30. Seawanhaka Corinthian, club, Oyster Bay.
30. Harlem, Y. R. A. of L. I. Sound, annual, City Island.
30. Indian Harbor, Y. R. A. of L. I. Sound, special, Greenwich.
30. Bridgeport, Y. R. A. of L. I. S., special, Bridgeport.
30. Southern, annual, New Orleans.
30. Keystone, club, Woodmere, L. I.
30. South Boston, Y. R. A., open, City Point.
30. Columbia, open, Chicago, Lake Michigan.
30. Chicago, cruise to Indian Harbor.
30. Williamsburg, open, spring regatta.
30. Atlantic, club, Sea Gate.
30. Riverton, club, Delaware River.
30. Toledo Y. A., Monroe Piers.

JUNE.

1. Atlantic, ocean race; Sea Gate around Fire Island and Northeast End Lightships back to Sea Gate.
6. Seawanhaka Corinthian, club, Oyster Bay.
6. Columbia, eleventh annual Michigan City race.
6. Chicago, handicap race, Lake Michigan.
6. Royal Canadian, club, Toronto.
6 Marine and Field, Y. R. A. of G. B.
6 Knickerbocker, Y. R. A. of L. I. Sound, annual.
8. Pavonia, open, Bayonne.
8-12. New York special races, 90-footers, Sandy Hook.
9. Atlantic, annual, Sea Gate.
10. Atlantic, 90-footers, Sandy Hook.
10. South Boston, club, City Point.
10-12-13-15-16. Manchester, trial races for selection of challenger for Seawanhaka cup, Manchester Harbor.
11. New York, fifty-seventh annual, all classes, off Sandy Hook.
13. Chicago, special, Lake Michigan.
13. Boston, club, South Boston.
13. Royal Canadian, club, Toronto.
13. Seawanhaka Corinthian, club, Oyster Bay.
13. Larchmont, spring regatta, Larchmont.
13. Beverly, club, Monument Beach.
14. Jamaica Bay, club, Jamaica Bay.
15. New York, Glen Cove cups, Glen Cove.
17. Beverly, open sweepstake, Monument Beach.
17. Larchmont, races for 90-footers, Larchmont.
17. Boston, Y. R. A., off Point Allerton, open.
17. Dorchester, open, Dorchester Bay.
18-19. New Rochelle, club, New Rochelle.
19. Eastern, special, open, Marblehead.
19. Indian Harbor, 90-footers, Greenwich.
20. Southern, Baldwin and Walker cups, New Orleans.
20. Beverly, club, Monument Beach.
20. Keystone, club, Woodmere, L. I.
20. Brooklyn, Y. R. A. of Gravesend Bay.
20. Corinthian, first championship, Marblehead.
20. Seawanhaka Corinthian, 90-footers, Oyster Bay.
20. Atlantic, club, Sea Gate.
20. Columbia, motor boat race, Am. P. B. A., Hudson River.
20. New Rochelle, Y. R. A. of L. I. Sound, annual.
20. Chicago, handicap, Lake Michigan.
20. Royal Canadian, club, Toronto.
21. Old Mill, club, Jamaica Bay.
21. Gloucester, N. J., annual, Delaware River.
25-26-27. Seawanhaka Corinthian, Y. R. A. of L. I. Sound, annual and specials.
27. South Boston, club, City Point.
27 New York, special race for 90-footers, Newport.
27 Boston, club, Marblehead.
27. Beverly, club, Monument Beach.
27. St. Paul, cruise, rendezvous St. Paul, Minn.
27. Chicago, special, Lake Michigan.
27. Royal Canadian, club, Toronto.
27. New York C. C., Y. R. A. of Gravesend Bay.
30. New York, special race for 90-footers, Newport.
30. Royal Canadian, L. S. S. A. regatta, Oakville.
29-July 2. Manhasset Bay cup races, L. I. Sound.

JULY.

1. Royal Canadian, Queen's cup race, Toronto and L. S. S. A. regatta, Oakville.

2. New York, special race for 90-footers, Newport.
3. American, Y. R. A. of L. I. Sound, annual.
3-4. Eastern, special, open, Marblehead.
3-4. Bay-Waveland, Southern Gulf Coast Y. A., Bay St. Louis, Miss.
3-6. Williamsburg, annual cruise.
4. Corinthian of Marblehead, special, open.
4. Columbia, annual open regatta, Lake Michigan.
4. Beverly, first Corinthian, Monument Beach.
4. Royal Canadian, club, Toronto.
4. Seawanhaka Corinthian, club, Oyster Bay.
4. Atlantic, club, Sea Gate.
4. Toledo Y. A., Monroe Piers.
4. Chicago, race for Pfister cup and handicap race.
4. Hartford, Y. R. A. of L. I. Sound, annual, Saybrook.
4-11. Larchmont race week, Larchmont.
5. Jamaica Bay, Y. R. A.
6-7. Beverly, trial races for 21-footers for defense of Seawanhaka-Beverly cup.
6-8. New York, special races for 90-footers, Newport.
9-11. Beverly-Seawanhaka, Beverly cup, Monument Beach.
10-11. Mobile, Southern Gulf Coast Y. A., Mobile, Ala.
11. Chicago, special, Lake Michigan.
11. Moriches, club.
11. Seawanhaka Corinthian, club, Oyster Bay.
11. Royal Canadian, club, Toronto.

28. Squantum, Y. R. A., open, Quincy Bay.
29. Quincy, Y. R. A., open, Quincy.
29-Aug. 1. Corinthian midsummer series, Marblehead.
30-Aug. 1. Boston midsummer series, Y. R. A., Hull.
30-Aug. 1-4-6-8. New York trial races for selection of defender of America's Cup.
31-Aug. 1. Gulfport, Southern Gulf Coast Y. A., Gulfport, Miss.
31-Aug. 18. Keystone, cruise, rendezvous, Woodmere, L. I.

AUGUST.

1. Beverly, third Corinthian, Monument Beach.
1. Atlantic, club, Sea Gate.
1. Seawanhaka Corinthian, club, Oyster Bay.
1. Eastern, Marblehead to Gloucester.
1. Chicago, special, Lake Michigan.
1. Brooklyn, Y. R. A. of Gravesend Bay.
1. Manhasset Bay, Y. R. A. of L. I. Sound, special.
1. Columbia, race to Highland Park, Lake Michigan.
1. Royal Canadian, club, Toronto.
1. Penataquit Corinthian, open, Bay Shore.
1. South Boston, club, City Point.
2. Bergen Beach, club, Gravesend Bay.
3. Eastern, special, open, Marblehead.
4. Boston, Y. R. A., open, Marblehead.
5. Chicago, race to Milwaukee.
5-8. Corinthian Marblehead midsummer series.
6-8. Indian Harbor, Y. R. A. of L. I. Sound, specials and annual.
7-8. Pass-Christian, Southern Gulf Coast Y. A., Pass-Christian, Miss.
7-8. Milwaukee, open.
7-8. Lake Michigan, Y. R. A., meet at Milwaukee for all classes.
8. Seawanhaka Corinthian, club, Oyster Bay.
8 Corinthian, fourth championship, Marblehead.
8. Moriches, novice race.
8. Beverly, fourth Corinthian, Monument Beach.
8. Royal Canadian, Canada cup race.
8. Shelter Island, Y. R. A. of L. I. Sound, annual.
9 Chicago, cruise, rendezvous at Charlevoix.
10. Boston, club, Marblehead.
10. Manchester, Crowhurst cup, open, W. Manchester.
10-16. Hempstead Bay, cruise.
11 Manchester, Y. R. A., open, W. Manchester.
12. Misery Island, Y. R. A., open, Salem Bay.
12-15. Atlantic, race week, Sea Gate.
13. East Gloucester, Y. R. A., open, Gloucester.
14-15. Annisquam, Y. R. A., open, Annisquam.
14-15. Southern, Southern Gulf Coast Y. A., New Orleans, La.
15. Beverly, fifth Corinthian, Monument Beach.
15. Penataquit Corinthian, special, Bay Shore.
15. South Boston, club, City Point.
15. Horseshoe Harbor, Y. R. A. of L. I. Sound, annual.
15 Moriches, special.
15. Huntington, Y. R. A. of L. I. Sound, annual.
15. Seawanhaka Corinthian, club, Oyster Bay.
15. Eastern, Marblehead to Gloucester.
15. Corinthian, fourth championship, Marblehead.
15. Royal Canadian, club, Toronto.
15. Chicago, special, Lake Michigan.
15. Savil Hill, club, Dorchester Bay.
15. Hartford, Y. R. A. of L. I. Sound, special.
16. Williamsburg, ladies' day.
17. American, Y. R. A., open, Newburyport.
17. New York, autumn cups, Glen Cove.
19. Moriches, ladies' regatta.
20-22. Duxbury, Y. R. A., open, Duxbury.
20. First America's cup race; balance of races to be sailed on alternate days, Sundays excepted, until result is determined.
22. South Boston, club, City Point.
22. Southern, Rawlins, Tranchina and Oliviri cups, New Orleans.
22. Corinthian, fifth championship, Marblehead.
22. Royal Canadian, club, Toronto.
22. Chicago, special, Lake Michigan.
24-25. Wellfleet, Y. R. A., open, Wellfleet.
26. Moriches, McAleenan cup race.
27-29. Columbia, Lipton competitive cup races, Chicago, Lake Michigan.
27-29. Cape Cod, Y. R. A., open, Provincetown.
29. Seawanhaka Corinthian, club, Oyster Bay.
29. South Boston, club, City Point.
29. Chicago, special, Lake Michigan.
29. Beverly, sixth Corinthian, Monument Beach.
29. Royal Canadian, club, Toronto.
29. Corinthian, sixth championship, Marblehead.
29. Savin Hill, club, Dorchester Bay.
29. Huguenot, Y. R. A. of L. I. Sound, annual.

SEPTEMBER.

1. Chicago, special, Lake Michigan.
4-5. Eastern, open, Marblehead.
5. Seawanhaka Corinthian, club, Oyster Bay.
5. New York C. C., Y. R. A. of Gravesend Bay,
5. Royal Canadian, cruising race, Toronto,
5. Southern, Fornaris cup, New Orleans.
5. Indian Harbor, Y. R. A. of L. I. Sound, fall regatta.
5. Eastern, special, open, Marblehead.
5. Chicago, special, Lake Michigan.
5. Columbia, cruise to Indian Harbor.
5. Hempstead Bay, open.
5. Penataquit Corinthian, special, Bay Shore.
5. Beverly, open, Mattapoisett.
7. Indian Harbor, club, Greenwich.
7. Beverly, open sweepstake, Monument Beach.
7. Atlantic, club, Sea Gate.
7. Moriches, annual, open.
7. Seawanhaka Corinthian, club, Oyster Bay.
7. Jamaica Bay Y. R. A.
7. Larchmont, fall regatta, Larchmont.
7. Lynn, Y. R. A., open, Nahant.
7. Williamsburg, cruise.
7. Norwalk, Y. R. A. of L. I. Sound, annual.
7. Sachem's Head, Y. R. A. of L. I. Sound, annual.
7. Penataquit Corinthian, open, Bay Shore.
9-11. Columbia, races for Webb cup, Chicago, Lake Michigan.
10-12. Seawanhaka Corinthian, Y. R. A. of L. I. Sound, specials. and fall regatta.
12. Keystone, open, Woodmere, L. I.
12. Beverly, seventh Corinthian, Monument Beach.
12. Bay State, Y. R. A., open, Lynn Bay.
12. Chicago, handicap race to Kenosha.
12. Columbia, fall regatta, open, Chicago, Lake Michigan.
12. Royal Canadian, Prince of Wales cup race, Toronto.
19. Chicago, special, Lake Michigan.
19. Seawanhaka Corinthian, club, Oyster Bay.
19. Larchmont, schooner cup race, Larchmont.
19. Atlantic, fall regatta, Sea Gate.
19. Bensonhurst, Y. R. A. of Gravesend Bay.
19. Manhasset Bay, Y. R. A. of L. I. Sound, fall regatta.
26. Riverside, Y. R. A. of L. I. Sound, fall regatta.
26. Seawanhaka Corinthian, club, Oyster Bay.
26. Chicago, handicap, Lake Michigan.
27. Williamsburg, open, fall regatta.

OCTOBER.

3. Seawanhaka Corinthian, club, Oyster Bay.
3. Columbia, special, Lake Michigan.
5. Southern, fall, New Orleans.
10. Columbia, special, Lake Michigan.
17. Columbia, special, Lake Michigan.

THE two Shamrocks, together with the steam yacht Erin and the ocean-going tug Cruiser, will leave for the United States on Thursday, May 28. Late cable reports state that it is possible that Sir Thomas Lipton will enter Shamrock I. in all the races against Columbia, Constitution and Reliance where she is eligible.

THE body of Collier, the steward on board Shamrock III. that was knocked overboard and drowned when the yacht was dismasted April 17, was recovered on last Saturday. It was found in Church Hope Bay, Portland, and it was identified by the clothing, the features being unrecognizable.

CONSTITUTION met with a slight accident while being hauled out on the railway at Jacobs' yard at City Island on Tuesday, May 19, which made it necessary for her to be put in the dry dock of the Morse Iron Works at South Brooklyn. She was to have been hauled out at New London, but an accident to the railway there made it impossible and she was towed to City Island. Reliance was on the railway at Jacobs' yard, but as soon as she was put overboard Constitution was warped on to the cradle. When the latter boat had been hauled about two feet out of water, the piling gave way and this allowed the ways to spread and the yacht careened to port. The cradle was lowered immediately and Satellite, the yacht's tender, towed her into the stream. The accident might have been a very serious one, and it was fortunate that the piling gave way when it did, for had she been further out of the water she might have been badly injured.

The following morning she was towed to South Brooklyn, where the water was pumped out, and after an examination was made it was seen that she was not badly hurt. Two plates were found to be badly dented, but the frames were uninjured, and no other damage was sustained. The dents were hammered out of the plates, and a few rivets that had become loosened were tightened up. Constitution's bottom was found to be very foul, and the crew were put to work rubbing it down. Mr. N. G. Herreshoff was sent for as soon as Mr. Belmont, Constitution's owner, heard of the accident, and he made a thorough examination of her when she was in the dry dock, but found the hull intact, with the exception of the two dented plates.

New York Y. C.

GLEN COVE, LONG ISLAND SOUND.

Thursday, May 21.

RELIANCE and Columbia met in the first of a series of five races on Thursday, May 21, and the new boat won by 14 min. and 43 sec. The race was an unsatisfactory one in many ways, but Reliance demonstrated her ability to beat Columbia with ease in smooth water and a light breeze.

There was a large fleet of steam and sail yachts on hand to see the race, and several hundred New York Y. C. men with their guests were on board the steamer Sirius. In the morning there was but little wind, and at noon it was practically a calm.

The Regatta Committee, composed of Messrs. S. Nicholson Kane, Newbury D. Lawton and Edward H. Wales, were on board Privateer, Mr. R. A. C. Smith's steam yacht, which was used as the committee boat. As there was no wind at twelve o'clock the committee postponed the race until 1:25. About this time a light S. W. breeze worked off the Long Island shore, and the preparatory signal was given at 1:40. A signal on the committee boat announced that course 3 would be sailed. The boats started from a buoy off Matinicock Point. E by N. ¼ N., eleven miles to and around a mark off Eaton's Point, then W. N. W. three miles to and around a mark off Green's Ledge Light, and then S. W. by W. ½ W. back to the starting line. Total distance twenty-five miles.

Besides Mr. C. O. Iselin and Mr. N. G. Herreshoff there were several other well-known amateurs on board Reliance. Mr. E. D. Morgan also had several of his friends with him on Columbia. At this time the wind was very light from the S. W. by S., making the first leg of the course a reach. Both boats had their balloon jib topsails set in stops.

Reliance was some distance from the line when the starting signal was heard. Her handicap was up at 1:57, but she did not cross until one minute later. The balloon jib topsail and balloon staysail were broken out just after the gun. Reliance was ahead and to windward of Columbia, which boat crossed at 1:59:10, with Mr. Morgan at the wheel. Columbia's balloon jib topsail was broken out just before she crossed. The headsails on both boats were lowered and set in stops again. The tide was now running flood, and the boats made but slow progress against it. Reliance drew away from Columbia at once, and the latter boat was unfortunate enough to run out of what little wind there was, and before she got out of the flat spot Reliance had a big lead. Headsails were experimented with on both boats, first reaching jib topsails would be set in place of the balloon jib topsails, and then the ballooners would be set again.

About half past four, when Reliance was off Lloyd's Neck, she got a better breeze. The breeze was all overhead, for there was not a ripple on the water. Columbia soon caught the new wind, and both boats moved along at a smart clip. Reliance gybed around the first mark off Eaton's Neck at 4:56:10, and stood off for the second mark with the wind, which was steadily increasing, over the port quarter. Columbia was timed at the first mark at 5:05:00, which showed a gain of 7m. 40s.

Both boats were heeled well down by the freshening breeze, and they traveled very fast. Reliance covered this leg of the course, a distance of three miles, in 13m. 40s. Columbia was being slowly left astern by Reliance, although she was doing some pretty sailing. For some reason or other Columbia did not break out her jib on this reach, and lost more ground by not doing so. Reliance rounded the second mark at 5:09:50 and Columbia at 5:20:10, which showed another gain of 1m. 30s. for Reliance.

Sheets were flattened down, and the boats could just lay their course back to the finish line. The breeze was now quite fresh, and both boats were heeled well over. Reliance threw a lot of spray off to leeward as she moved through the water, but her wake was remarkably clean, and she continued to get away from Columbia. The tack on Columbia's jib topsail carried away, and it was some time before another sail could be set. Luck seemed to be against Columbia, for the wind lightened up and headed her as soon as Reliance crossed, and she tacked just on the finish line. The times at the finish follow:

Reliance	6 14 36	Columbia	6 29 19

Reliance gained 4m. 23s. on this leg.

Saturday, May 23.

The second of the series races between the 90-footers was held on Saturday, May 23. The boats were unable to finish within the time limit, owing to the light breeze. More interest was centered in this race, as all three boats were on hand. The damage that Constitution sustained while on the railway at City Island had been repaired, and she was apparently in splendid racing trim.

There was a good N. E. breeze in the morning, and there was every indication of a good race, but as the day wore on this breeze petered out, and very much the same conditions prevailed as in Thursday's race.

The Regatta Committee were again on the steam yacht Privateer, and at 1:20 the preliminary signal was sounded. At this time there was a little northerly breeze blowing. The signal on the committee boat indicated that the boats would cover exactly the same course that they did on Thursday. At 1:35 the preparatory signal was given.

The first leg of the course was a reach, and there seemed to be a diversity of opinion on board the three boats as to what headsails should be carried. Reliance crossed at 1:50:20, with a reaching jib topsail set, with Constitution on her lee quarter with her staysail, jib and big jib topsail set. Columbia was in the weather position, but some distance behind with her balloon jib topsail set, the handicap gun was fired before she was over the line, and she crossed at 1:52:24. Reliance began to pull away at once, and Constitution luffed out on her weather. Jibs and staysails were lowered on Reliance and Columbia, in order to give their big light sails every chance. Some few minutes after the start the number 2 jib topsail on Constitution was lowered, and her balloon jib topsail was set in its place. Columbia was headed out into the Sound, and she passed astern of Constitution.

When off Oyster Bay Reliance caught a slant and drew away still more from her competitors, but before long Columbia had the breeze also, and she began to close up on the new boat perceptibly. Constitution also picked up a little, and a balloon staysail was broken out on Reliance. Even with this sail set Columbia kept gaining, and a similar staysail was set on the old defender. Columbia and Constitution were well out in the Sound, and Reliance was almost becalmed. Her spinnaker was set and allowed to run well forward. Those on Reliance finding the spinnaker was doing no good, took the sail in.

A big towboat bound west with a long string of barges astern, came along at this point, and had it not been for the courtesy and thoughtfulness of the captain, the tow might have seriously interfered with the boats. The captain of the towboat, whose name was Honeybrook, kept out of his course in order, and by so doing prevented any annoyance whatever.

When off Eaton's Point Reliance was over a quarter of a mile ahead of Columbia, and some distance to windward. Constitution was astern and to windward of Columbia. As Columbia was still gaining on Reliance this boat again set her spinnaker. She carried this sail till she was well up to the mark. Reliance gybed over just before she rounded the mark, and Constitution, which was a long distance behind, made the fatal mistake of gybing at the same time. The times at the mark follow:

Reliance	5 23 50	Constitution	5 29 25
Columbia	5 25 52		

Columbia had gained 2s. on this leg on Reliance and 5m. 28s. on Constitution.

The boats got more wind on the second leg of the course. Reaching staysails were set, and the three boats made good time. Reliance reached away from the other two boats very fast. Reliance's big jib top-

sail was taken in just before she reached the second mark, and her jib was broken out. The same changes were made on Columbia a few minutes later. The boats' times at the second mark follow:

Reliance .....5 39 50 Constitution 5 46 47
Columbia 5 43 17

On this leg, a three-mile reach, Reliance beat Constitution 1m. 22s. and Columbia 1m. 25s.

On the beat back to the finish line all three boats carried baby jib topsails. The wind was getting very light again. Reliance, however, continued to open the gap between herself and Columbia. Constitution's jib topsail met with an accident, and it was replaced with another. Constitution was put on the starboard tack, apparently hunting a better breeze. What little breeze there was seemed to be aloft, and Reliance's big club topsail was catching every puff. A fresher breeze was seen working out from the westward, and it reached Reliance first, as she was so far ahead. The breeze shifted a little and allowed Reliance to lay her course for the mark. The new breeze reached Columbia first, and Constitution felt its influence a few moments later. In the fresh breeze Reliance was laid well out and her topmast had a pronounced buckle in it. Her jib topsail was taken in, and when it was found the race could not be finished within the time limit, her club topsail was sent down on deck. Reliance kept on and crossed the line even after the committee had signalled "no race." Columbia held on to her club topsail and crossed the line 5½m. after Reliance.

The Coupe de France and Italian Cup Matches at St. Remo.

BY GEOFFREY DE HOLDEN-STONE.

FROM a British point of view, especially that of a keen yachtsman, there can be no doubt that until the above matches were sailed at the end of last month, the present Mediterranean season has been of the dullest. For at present—although it seems only the other day that the 52-footer Magdalen lost us the possession of the Coupe de France on a question of measurement, not because she was not quite as speedy as Quand-Même II.—we find her in Signor Tonietti's ownership, the only modern boat of her size and type in the Mediterranean; though, singularly enough, she was beaten in her first match by Spring, ex-Mildred, ex-Eldred; a boat which, as well as Caprice, is even more out of date than Penitent.

Yet apart from such sport as she may show during the remainder of the season, there will be little or nothing to excite British interest. For British and Continental owners of large craft appear to have lost all touch with Riviera yachting, although the various race committeees on the littoral have abated no whit of their wonted liberality in the matter of trophies and prize money. Indeed, there is little reason to expect the owners to re-enter the game; although it is true that a similar depression existed in British waters during the autumn which preceded the building of Britannia: an epoch which heralded the palmiest period of British yaeht racing, the latter nineties.

In view of these facts, one can only commend the foresight of the committee of the Yacht Club de Franee in deeiding, nearly two years ago, that in future the Coupe de France should be contested by ten-tonners instead of the "twenties." Had not some such arrangement been made, it is probable that yachting on the Riviera littoral would have been entirely confined to the smallest classes, and the matches for the national trophy remained in abeyance. For, had one of our 36-footers in the Solent class appeared as a challenger, she would probably have been out-measured by the French rule. And as no such ehallenge was sent from either the Solent or Clyde, despite opportunity, such a contingency would seem to have been thought of by British owners. Clearly, then, the only chance of a contest was to be expected from Italy. And yet no Italian builder had turned out any racing boat bigger than a ten-tonner.

However, the result of the first contest under the new conditions was, as will be remembered, distinctly discouraging to French yachtsmen; for Union, the syndicate boat built to defend the Coupe de France against the Duc d'Abruzzi's Artica, failed so badly in her trials that they were forced to defend with the Bordelais boat, Mons. Donault's Suzette, which was not built as a defender, but merely for the ordinary class racing of a Riviera season. What this last might have done in capable hands, with properly fitting sails, need not be discussed; but the fact remains that her skipper, impatient of expert advice, tinkered with her English-made sails until he ruined them, and subsequently so mishandled her that she had no chance against the Italian challenger.

Nevertheless, undaunted by defeat (or perhaps only too certain that his boat had not been seen at her best), Mons. Donault allowed Suzette to be named as the challenger for the Coupe de France matches this year, sailed at San Remo on the 27th and 29th ult., the history of which is, perhaps, without a parallel in the annals of the sport for contradictory form, to say nothing of sheer luck. For mark what happened. So soon as the challenge was received, no less than three defenders were designed by the most skillful builders in Italy: Leda, for the Duc d'Abruzzi; Sally, for Signor Coltelletti, and Nada, for Commander Floris. All three were launched early in the current Mediterranean season, and the result of their trial spins at San Remo made it apparent that the Costaguta boat Leda was not only a better boat than Artiea, but unusually speedy in light airs, while the Oneto-built Sally was the best of the trio in a hard breeze. Their form, at least, was known, and they were elearly not susceptible of any great improvement; so their owners proceeded to race in the ten-ton series with Suzette at the ensuing regattas, and as the latter was no better handled or canvased than heretofore, they beat her in the hollowest fashion, day after day, for weeks.

Yet during these San Remo trials, it was evident to the eognoscenti that the Gallinari boat Nada was not so far behind either of her rivals as to be out of the running for the Cup defense. Indeed, seeing that the disposition of her lead was clearly all wrong, and that her American-built canvas was not only too heavy, but could not be made to fit or draw at all, the best judges were unable to gauge the extent of her possible improvement. Fortunately Gallinari, of Livorno—the builder also, by the way, of those speedy racing four-tonners Sfinge and Nemesi—was given a free hand in this respect, and having unshipped a goodly portion of Nada's inside ballast and replaced it with outside lead, thus stiffening her considerably under sail, he discarded her American sails and ordered a new racing suit from a Cowes firm of world-wide reputation. The result of all these alterations more than vindicated his judgment, for Nada defeated Leda and Sally in such wholesale fashion in the final trials at San Remo that the defense committee had no other option than to choose her as their representative.

Yet again, mark what happened. Nada's victory seemed to be assured, for although Suzette's skipper, under pressure, had had her mast re-stepped in its originally designed place, it was seen when she sailed to the line on the morning of the 27th, that she still wore her spoilt English mainsail. On the other hand, Mr. Cramer, Nada's amateur skipper, had not only never set foot aboard her until that morning, but knew nothing of the course, never having previously sailed in San Remo Bay. Nevertheless, he sailed the defender well enough to beat Suzette on the first round of the course, but just as the latter rounded the western mark for the second time, the breeze, previously fresh from S. E. by E., suddenly chopped around and put her so far ahead of Nada that the Italian boat could never again overhaul her. On the 29th, again in a light easterly, Nada was ahead all the first round, but standing in too far on a shoreward leg, was held in a flat patch for over fifteen minutes, while Suzette—which, on this day had her French-built mainsail—picked up a streak outside, overhauled all the time she had lost, and won easily by over nine minutes. She thus recovered the trophy, despite bad handling, by a lucky fluke on each day. The truth of this, the correctness of the San Remo trials, and the previous form of all engaged, has since been established beyond cavil in every match which these ten-tonners have sailed, as one or other of the Italian boats, usually Nada, has invariably beaten Suzette from start to finish. Thus does familiarity score, in combination with true breezes.

Yet poorly sailed and disappointing as these matches were, those for the Italian Cup, between the five-tonners—Mons. Damoy Picon's Titave, sailed by Paul Tossens, and Signor Dall'Orso's Melisanda, of which Signor Ettore Bocciardo was skipper—were extremely interesting and well-fought out. In fact, so smart was the performance of both that they beat the Coupe de France boats on corrected time on each day. At the same time Titane's victory was more or less a foregone conclusion, for not only had she been sailed into her best trim from the beginning of the season in all the Riviera regattas, but had proved herself to be one of the fastest five-tonners afloat by the ease with which she had won nearly all the matches in her class. Melisanda, on the other hand, was only just launched from the Costaguta yard at Voltri, in time for the Italian Cup matches, and practically started an untried and untrimmed boat. And smartly as she was handled by her amateur skipper, it was scarcely to be expected, under the circumstances, that he should defeat such a clever professional as Paul Tossens; the latter in a boat which he knew as well as the back of his hand.

Both trophies have thus been won by French yachtsmen; but the Regis Y. C. of Italy has already challenged afresh for the Coupe de France, and the matches will be sailed early next year. Another Nada may well be forthcoming from the Gallinari yard, or the same boat may be used with good prospect of success. On the other hand, it is unlikely that any French designer will succeed in turning out a boat to beat Suzette. At the same time it must not be forgotten that, although the latest British-built 36-footers on the Solent and Clyde—such as Sorais II., Nyama, or Barabel—might be somewhat over measurement under the French rating rule, there are others, such as "D", "Girleen" or even one of the 36ft. class of three seasons ago, which could be brought within that rating with very little alteration, and would, furthermore, stand an excellent chance of once more bringing the Coupe de France to the British side of the channel.

Boston Letter.

BOSTON, May 25.—The yacht racing in Massachusetts Bay will open Saturday with the Y. R. A. race of the South Boston Y. C. It is expected that nearly all of the yachts that will race during the season will be present, and, with a good breeze, some rare sport is assured. The biggest class in the fleet will be the 18ft. knockabouts. There have been more of these boats built during the past winter than at any other time since the class was formed. There must have been at least 25 new ones built, and possibly more. As only a few of the older boats have been sold in other waters, the elass should be a very large one, indeed. Two of the extreme 25-footers will be ready to race, Chewink III., owned by Mr. F. G. Macomber, Jr., and Great Haste, owned by Mr. T. K. Lothrop, Jr. The third of the new 25-footers designed by Messrs. Burgess and Packard for Mr. J. E. Doherty, will not be ready for some time. There is another new one, designed and built by Mr. Walter Kelley for his own use, which may be ready. There will be a good bunch of 22-footers in the first race. A new one is now being built by Fenton, of Manchester, for Mr. W. H. Joyce, of Philadelphia, from designs by Messrs. Burgess and Packard. This will make ten boats for the class. Three of these boats raced from Boothbay to Marblehead last week, starting on Saturday. The first day's run was to Cape Porpoise, a distance of about 50 nautical miles. They carried a good breeze all the way, and finished within a few seconds of each other, rather a remarkable performance, considering the distance sailed. Class R, the modified elass of 21-footers, to do away with the freaks in class, will elaim the entries in boats of this length. Several of the boats of last year have been sold, and have been sent away from Boston, but it is thought that there will be enough left to make a good race.

Mr. B. B. Crowninshield reports the sale of the 51ft. gasolene launch, Harriet N. Crie, to parties who wish to remain unknown for the present; the 35-footer Heron, owned by Mr. F. C. Swan, of New York, to Mr. W. J. Badger, of Boston; the 21-footer Micmae, owned by Mr. Richard Hutchison, to Mr. Howard Palmer, and the 21-footer Dabster, owned by Mr. George P. Keith, to Mr. Francis Skinner, Jr. He has been eommissioned to design an 18ft. knockabout by Mr. Keith.

The membership committee of the Boston Y. C. announces that the following members have been elected: Samuel N. Braman, B. P. C. Clapp, A. A. Elston, F. L. Shevlin, Justin W. Lester, Sumner E. Brown, L. A. Chase, C. G. Hall, Arthur H. Vinal, A. B. Whittier, Vincent Farnsworth, Frank E. Dickerman, Amun U. Joasted, and G. C. Hawkins, regular; Carl O. Zerrahn and Ernest Manahan, Rochester division, and R. W. Strout, Marblehead division.

The following sales have been reported by Hollis Burgess: 50ft. steam launch Caprice, owned by Mr. John Pettigrew, of Springfield, Mass., to Mr. G. A. Gibson, of Boston; 45ft. sloop Fanita, owned by Mr. Francis H. Bacon, to I. H. Porter; 21ft. knockabout Louise, owned by Mr. R. L. Shewell, to Dr. Morton Prince; 21ft. raceabout Kittie, owned by Mr. Harry Lewis, of Gardiner, Me., to Mr. Charles M. Brush, of Brookline; 21ft. raceabout Idol, owned by Mr. C. F. Lyman, to Mr. E. M. Padelford, of Washington, D. C.; 19-footer Caterpillar, owned by Mr. E. B. Maltby, to Mr. Ralph Nason.

The Manchester Y. C. has announced the following fixtures:

June 10, 12, 13, 15 and 16, Wednesday, Friday, Saturday, Monday and Tuesday—Trial races for Seawanhaka cup.
July 7, Tuesday—First championship.
July 21, Tuesday—Second championship.
August 3, Monday—Y. R. A., open.
August 4, Tuesday—Crowhurst cup.
August 11, Tuesday—Third championship.
August 17, Monday—Club handicap.
September 7, Monday—Club handicap.

The Seawanhaka cup committee is composed of Arthur M. Merriam, chairman; E. A. Boardman and Horace B. Pearson, secretary.

The following fixtures have been arranged by the Wollaston Y. C.:

May 30, Saturday—Chase cup.
June 17, Wednesday—Club handicap.
June 27, Saturday—First club championship.
July 7, Saturday—Moonlight sail.
July 18—Saturday—Ladies' day.
August 1, Saturday—Second club championship.
August 15, Saturday—Clam bake.
August 29, Saturday—Third club championship.
Sept. 5, 6, and 7—Annual cruise.
September 26, Saturday—Chase cup.

The regatta committee of the Quincy Y. C. announces the following fixtures:

June 13, Saturday—Club handicap.
June 17, Wednesday—Club handicap.
July 16, Thursday—Ladies' Day.
July 18, Saturday—Club handicap.
July 29, Wednesday—Y. R. A. open.
August 1, Saturday—Club handicap.
August 15, Saturday—Club handicap.
August 29, Saturday—Club handicap.
September 7, Monday—Club handicap.

The Winthrop Y. C. announces the following fixtures:

June 6, Saturday—Class handicap.
June 13, Saturday—Interclub class handicap.
June 20, Saturday—Class handicap.
June 27, Saturday—Interclub class handicap.
July 11, Saturday—Class handicap.
July 18, Saturday—Y. R. A. open.
July 25, Saturday—Class handicap.
July 26, Sunday—Club run, programme later.
August 1, Saturday—Interclub series.
August 8, Saturday—Class handicap.
August 15, Saturday—Interclub class handicap.
August 16, Sunday—Club run, programme later.
August 22, Saturday—Class handicap.
August 29, Saturday—Interclub class handicap.
September 5, Saturday—Class handicap.

The Beverly Y. C. announces the following fixtures:

June 13, Saturday—First club race.
June 17, Wednesday—Open sweepstakes.
June 20, Saturday—Second club race.
June 27, Saturday—Third club race.
July 4, Saturday—First Corinthian.
July 6, Monday—Trials for interclub match.
July 7, Tuesday—Trials for interclub match.
July 9, Thursday—Interclub match with Seawanhaka-Corinthian Y. C.
July 11, Saturday—Interclub match with Seawanhaka-Corinthian Y. C.
July 18, Saturday—Second Corinthian.
July 25, Saturday—Club cruise and race at New Bedford.
August 1, Saturday—Third Corinthian.
August 8, Saturday—Fourth Corinthian.
August 15, Saturday—Fifth Corinthian.
August 22, Saturday—Van Rensselaer cups.
August 29, Saturday—Sixth Corinthian.
September 5, Saturday—Open race.
September 7, Monday—Open race.
September 12, Saturday—Seventh Corinthian.

All of the above races will be sailed off Wings Neck, with the exception of the Van Rensselaer cup race, which will be sailed off Marion, and the open race of September 5, which will be sailed off Mattapoisett. The Corinthian races only will count for club championship.

JOHN B. KILLEEN.

Mr. Frank Bowne Jones has chartered the steam yacht Viking, owned by Mr. Franklin Haines, to Mr. James A. Garland; the steam yacht Ardith, owned by Mr. Guy Loomis, to Mr. F. W. Wurster. Mr. Jones has sold the yawl Sultan for Mr. C. A. Van Iderstine to Mr. F. E. Brown.

New Rochelle Y. C. Spring Regatta.

NEW ROCHELLE, LONG ISLAND SOUND,
Saturday, May 23.

The New Rochelle Y. C. opened the racing on Long Island Sound by giving its spring regatta on Saturday, May 23. The regatta was marked by a small list of entries, only seven boats starting. The race was a very unsatisfactory one, it being little more than a drifting match, and the results were inconclusive.

Grasshopper was the only new boat among the starters. She was designed and built by Mr. "Larry" Huntington, and was sailed by her designer.

All three classes sailed twice over a triangular course. The start was made off Echo Bay, then to and around the spar buoy on Hen and Chicken Reef, then to and around Middle Ground buoy on the northeast end of Executive Rocks, and back to the starting line.

The preparatory signal was given at two o'clock, and the raceabouts were sent away at 2:15. Mavis crossed in the weather berth with Rogue under her lee, while Grasshopper went over on the leeward end of the line. The little puff that helped the boats cross did not last long, and they were almost without steerage way soon after the start.

Dorothy was first to cross in her class, and she was followed by Caper, Adelaide and Knave.

At the end of the first round Mavis was over three minutes ahead of Grasshopper, and Rogue was so far behind that she withdrew. Dorothy had a good lead on Adelaide, while Knave was only a few seconds ahead of Caper. On the second round Grasshopper did better, and cut down Mavis' lead materially. Adelaide also did better and closed upon Dorothy considerably, while Knave got away from Caper a little. Mavis was the first boat to finish, followed by Grasshopper, Dorothy, Adelaide, Knave and Caper. Mavis beat Grasshopper 1 minute 12 seconds. Dorothy beat Adelaide 3 minutes 16 seconds, and Knave beat Caper 4 minutes 3 seconds.

The wind was very light and variable up to the last leg of the second round, when a fresh northerly breeze came up and gave the boats a little windward work.

The summary follows:

Raceabouts—Start, 2:15.

	Finish.	Elapsed.
Mavis, H. Pirie	4 24 36	2 09 26
Grasshopper, Harold C. Pryer	4 25 38	2 10 38
Rogue, A. Bryan Alley	Did not finish.	
Larchmont 21ft. L. W. L. Class—Start, 2:20.		
Dorothy, Louis G. Spence	5 17 56	2 57 56
Adelaide, J. J. Dwyer	5 20 12	3 00 12
New Rochelle One-design Class—Start, 2:20.		
Knave, R. M. Bavier	5 27 41	3 07 41
Caper, P. L. Howard	5 31 44	3 11 44

The winners were Mavis, Dorothy and Knave.

Lloyds' Register of American Yachts.

IT is with considerable pleasure that we are able to call attention to "Lloyds' Register of American Yachts," which has just been issued. For years past there has been a great need for a really good and complete book containing a record of American yachts. The "Lloyds' Register of British Yachts" contained a very fair list of American boats, and that book was used by all interested in the subject as being standard. Last year a prominent member of the New York Y. C. approached the English Lloyds and told them of the great demand for a register of American yachts and requested them to get out an American Yacht Register of the same high order as the English edition. This they agreed to do, and the first issue of the work is remarkably complete and accurate considering that it is a first attempt.

It seems strange that it was necessary for an English firm to have to come to our rescue in this matter and that no American concern had the enterprise to take up the subject, but now that the Lloyds have come into the field they should have the hearty support of all American yachtsmen, and we hope to see a long list of American subscribers for the next edition. Lloyds' American Edition of Yachting will undoubtedly be accepted by all the clubs throughout the country as standard, just as their English edition has become the authority on the other side.

The book contains particulars of 850 steam and power yachts and 1,939 sail yachts, or a total of 2,789 yachts, all of which are owned in the United States or Canada.

The addresses, clubs and yachts of upward of 2,500 owners are given in a separate list arranged alphabetically, according to the names of the owners.

There are illustrations in colors of the flags of 94 American and Canadian yacht clubs, with the names of their officers, in the book, and of 1,073 private signals of yacht owners.

A list of the yacht builders and designers of the United States also appears, with the names of the yachts built or designed by them, and lists of signal letters, and of the late names of yachts.

Particulars of the classification of those American yachts, which are classed by Lloyds' Register Committee, are given in the book, and in this connection it may be mentioned that the society's rules for the building and classification of yachts have recently been completely revised, and will shortly be ready for publication.

The subscription to the American Yacht Register is $7.50. Applications for the book should be addressed to Lloyds' Register of Shipping, 15 Whitehall Street, New York City.

YACHT CLUB NOTES.

The regatta committee of the Beverly Y. C., of Monument Beach, Buzzard's Bay, has made up the following racing schedule for the season of 1903. All the races will be sailed over the club's courses off Monument Beach, with the exception of the open race held on September 5, and that regatta will be sailed at Mattapoisett:

June 13—First club race.
June 17—First open sweepstakes. Prizes added by club.
June 20—Second club race.
June 27—Third club race.
July 4—First Corinthian race.
July 6 and 7—Trial races for 21-footers for defense Seawanhaka-Beverly cup.
July 9, 10 and 11—Seawanhaka-Beverly cup races.
July 18—Second Corinthian race.
July 25—Rendezvous, 9 A. M., for the cub cruise.
August 1—Third Corinthian race.
August 8—Fourth Corinthian race.
August 15—Fifth Corinthian race.
August 29—Sixth Corinthian race.
September 5— Open race, Mattapoisett.
September 7—Open sweepstakes. Prizes added by club.
September 12—Seventh Corinthian race.

* * *

The regatta committee of the Indian Harbor Y. C., composed of Messrs. Frank Bowne Jones, chairman; Charles E. Simms, T. J. McCahill, Jr.; E. S. Wheeler, and H. C. Nash, has laid out the following schedule for this season's racing:

Saturday, May 30 (Decoration Day)—Race for the 30ft. class and club handicap.
Friday, June 19—Race for the 90-footers Reliance, Constitution and Columbia.
Saturday, June 27—Club handicap and race for sailabouts.
Saturday, July 18—Race for power yachts.
Saturday, July 25—Club handicap and race for sailabouts.
Thursday, August 6—Races for special and one-design classes.
Friday, August 7—Races for regular racing classes.
Saturday, August 8—Annual regatta for all classes.
Saturday, September 5—Races for all classes.
Monday, September 7 (Labor Day)—Club handicap and race for sailabouts.

* * *

The Ventnor Y. C., of Atlantic City, has elected the following officers: Com., E. Stanley Grove; Vice-Com., Morris Johnson; Rear-Com., George A. Crawford; Fleet Capt., J. F. Snyder; Sec'y and Treas., H. M. Fitton.

* * *

Mayor Weaver, Commodore of the Seaside Park Y. C., has appointed the following committees for the season of 1903: House Committee—B. B. Lister, chairman; H. F. Orleman, John D. Johnson, Calvin F. Crowell, Morgan Lister. Membership Committee—Harvey T. Weber, chairman; James A. McGann, George H. Thacher. Regatta Committee—George S. Gandy, chairman; R. Herbert Crowell, Herman Muller, Ormond Rambo, Frank Thacher, Lynn Sailer. Press Committee—Joseph R. Wilson, chairman; Marshall P. Sullivan. Entertainment Committee—Thomas Nelson, chairman; John D. Johnson, Jr., Marshall P. Sullivan.

* * *

Mr. L. D. Sampsell, secretary of the Southern Y. C., has given out the following fixtures of the Southern Y. C., and the dates of the Southern Gulf Coast Yachting Association racing circuit:

Southern Y. C., New Orleans, La.
May 30—Annual regatta.
June 20—Com. Baldwin cup, model cabin sloops; Walker cup, open sloops.
August 22—Rawlins cup, model cabin sloops, over 20ft. rating; Tranchina cup, open sloops; Oliviri cup, round bottom catboats.
September 5—Fornaris cup, cabin sloops, over 30 ft. rating.
October 5—Fall regatta.

Southern Gulf Coast Yachting Association, racing circuit:

July 3, 4—Bay-Waveland Y. C., Bay St. Louis, Miss.
July 10, 11—Mobile Y. C., Alabama.
July 17, 18—Pascagoula (Miss.) Y. C.
July 24, 25—Biloxi (Miss.) Y. C.
July 31 and August 1—Gulfport (Miss.) Y. C.
August 7, 8—Pass Christian (Miss.) Y. C.
August 14, 15—Southern Y. C.

* * *

The Metropolitan Y. C., of New York City, was given a charter by the Secretary of State at Albany on May 20. The club is made up in a measure of members of the Harlem Y. C. For several years past the Harlem Y. C. has been running two club houses, one at 519 East 121st street, New York city, and another at City Island. This spring it was decided to abandon the club house in 121st street and make the club headquarters at City Island. Some of the older members of the organization objected to this move, and it is these men who have organized the Metropolitan Y. C.. James F. Lalor, vice-commodore of the Harlem Y. C., was elected commodore of the new club, which now has a membership of over one hundred and a fleet of forty yachts. The officers of the Metropolitan Y. C. follow: Com., James F. Lalor; Vice-Com., Samuel Smith; Rear-Com., J. A. Symmers; Fleet Capt., J. J. Barr; Fleet Surgeon, Dr. F. Amabile; Finan. Sec'y, Julius Gutman; Record. Sec'y, Richard Lankenor; Treas., J. H. Andrus; Cor. Sec'y, William Fitzgerald; Steward, Charles Theobold. Board of Directors—George Oakes, James Fitzgerald, Harry Mason, T. J. Canavan, J. F. Lalor, William McCann, and J. H. Andrus.

* * *

The Bay View Auxiliary Y. C. has recently been organized. The membership is composed of men who are owners of auxiliary yachts and who make Jamaica Bay their headquarters. The following officers have been elected: President, J. Arthur Carlings; Com., Horace Pettitt; Vice-Com., J. G. Nelson; Fleet Capt., Winslow Allen; Sailing Master, Capt. M. A. Griffiths; Treas., H. A. Gregory; Sec'y, T. B. Willis.

A club house is to be erected as soon as plans can be made. Up to the time the new building is completed the members will occupy temporary quarters at Bay View Landing. The club flag is a crimson "fouled" anchor on a white field, with three blue stars below the flukes.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

The steam yacht Rival, owned by Mr. Turner A. Beall, has been chartered through the agency of Messrs. Colven & Bickmann to Mr. H. H. Sands.

* * *

Mr. Everitt Coffin, of New Rochelle, has purchased the 37ft. yawl Abeona. The sale was made through the agency of Mr. William T. Douglass.

* * *

Mr. Frank Lovett, of Yarmouth, N. S., has purchased the schooner yacht Columbia from Mr. James M. Whitall, of Philadelphia.

* * *

The Seawanhaka-Corinthian Y. C. has chartered the steamer Gay Head, through the agency of Messrs. Sadler, Perkins & Field. The boat will be used by the club members to see the America's Cup races.

* * *

The English-built steam yacht Surf, owned by Mr. F. D. Lambert, of Leith, and now under charter to Mr. Adrian Iselin, Jr., arrived at New York on May 19. The yacht stopped at the Azores.

* * *

The year book of the Yacht Racing Association of Massachusetts has recently been issued. The book, which is more complete and better gotten up than ever before, contains the racing rules, restrictions and records of 1902 races. The book is bound in drab buckram and there is a picture of Little Haste on the cover.

* * *

The following sales have been made by Mr. Hollis Burgess: The 50ft. steam launch Caprice, owned by Mr. John Pettigrew, of Springfield, Mass., to Mr. G. A. Gibson, of Boston; the 45ft. sloop Fanita, owned by Mr. Francis H. Bacon, of Milton, Mass., to Mr. I. H. Porter, of Somerville, Mass. Fanita is now being rigged as a yawl. The 21ft. knockabout Louise, owned by Mr. R. L. Shewell, of Brookline, Mass., to Dr. Morton Prince, of Boston; the 21ft. raceabout Kittie, owned by Mr. Harry Lewis, of Gardiner, Me., to Mr. Chas. M. Brush, of Brookline, Mass.; the 21ft. raceabout Idol, owned by Mr. C. F. Lyman, of Boston, to Mr. E. M. Padelford, of Washington, D. C.; the 19ft. jib and mainsail Caterpillar, owned by Mr. E. B. Maltby, of Boston, to Mr. Ralph Nason, of Boston; the 21ft. knockabout Meander, owned by Mr. Henry W. Peabody, of Boston, to Mr. E. M. Padelford, of Washington, D. C.

* * *

The State Department at Washington made public on May 17 an account of how Mrs. Robert Goelet's yacht Nahma three weeks ago successfully passed the Dardanelles and steamed through a maze of Turkish red tape.

On April 27 Mrs. Goelet, with a party of New York friends, entered the Dardanelles on her yacht Nahma. The Nahma carries two six-pounders mounted forward and aft, "for saluting purposes." When the sentinels on the Turkish fortresses caught the outlines of these guns under their tarpaulin coverings, there was a rushing to and fro, signals flashed back and forth, and soon a shot plunged across the Nahma's bow and the yacht hove to.

Mrs. Goelet had a dinner engagement in Constantinople for which she had already broken all speed ordinances, and she did not like interference by Turkish officers with her plans.

The officers were polite, but firm. The Nahma was a warship, witness the six-pounders, and to such the passage was closed. Two days of delay followed. Mrs. Goelet demanded that Minister Leishman secure from the Sultan respect and proper reparation for her broken dinner engagement and a passage for the Nahma.

Although an extensively married man, Abdul Hamid is not without a sense of humor. At any rate, the Nahma, six-pounders and all, was allowed to steam on at the end of two days as a yacht and not as a warship. His Sultanic Majesty also conferred on Mrs. Goelet the Grand Cordon of the Turkish Order of the Chefakat, which was not much, after all, for a woman who had done what the powers have never been able to do with all their armaments.

Canoeing.

Prizes for Canoeists.

IN order to encourage canoeists and small boat sailors, who do their knocking about on inland waters, to keep a record of their trips and experiences, the publishers of FOREST AND STREAM offer cash prizes for the best accounts of cruises taken during the season of 1903. As few restrictions as possible will be imposed, and those given are made only with the view of securing some uniformity among the competitors' stories, so that the judges will be able to make a fair award.

The prizes will be as follows:
First, $50.00.
Second, $25.00.
Third, $15.00.
Fourth and Fifth, $10.00 each.
Sixth to Eighth, $5.00 each.

I. The cruise must be actually taken between May 1 and November 1, 1903.

II. The cruise must be made on the (fresh water) inland streams and lakes of the United States or Canada.

III. The canoe or boat in which the cruise is made must not be more than 18ft. long over all.

IV. An accurate log of the trip must be kept, and all incidents and information that would be of value to other canoeists covering the same route should be carefully recorded.

V. A description of the boat in which the cruise is made should preface the story, and a list of outfit and supplies.

VI. Photographs of the boat and of the country passed through, not smaller than 4x5, should, if possible, accompany each story, and they will be considered in making the awards.

VII. Stories should contain not less than five thousand words, written on one side of the paper only.

VIII. An outline chart of the trip drawn on white paper in black ink (no coloring pigment to be used) should also be sent in.

IX. Competitors should avoid the use of slang or incorrect nautical expressions in their stories, as it will count against them in awarding the prizes.

Each manuscript to which a prize is awarded shall become the property of the Forest and Stream Publishing Company. All manuscript should reach the office of the Forest and Stream Publishing Company, 346 Broadway, New York, N. Y., on or before December 1, 1903.

A. C. A. Membership.

The following have applied for membership to the A. C. A:

Central Division—Robert M. Codd, Jr., Buffalo, N. Y.; A. E. Davenport, Buffalo, N. Y.; Joseph A. Hall, Rochester, N. Y.

Eastern Division—Theodore T. Pettingill. Dedham. Mass.; William E. Marshman, Lawrence, Mass.; H. W. Fenno, Auburndale, Mass.; Jesse E. Gray, Medford, Mass.; Minot T. Phelps, Manchester, N. H.; H. W. Walkling, West Medford, Mass.; J. A. Burdakin, Dedham, Mass.; Geo. H. Gage, Lawrence, Mass.; Edward B. Stearns, Lester P. Howe, Joel S. Daniels, Darwin J. Forsaith, Manchester, N. H.

Rifle Range and Gallery.

Fixtures.

June 15-16.—Union Hill Schuetzen Corps twenty-fifth anniversary shoot. P. Stumpf, Capt.

June 18-20.—St. Louis, Mo.—Tournament under auspices of Central Shooting Bund. Horace Kephardt, Sec'y.

July 6-7.—New Haven, Conn.—South New England Schuetzen Bund annual schuetzenfest, under the auspices of the Independent German Rifle Company. H. C. Young, Sec'y.

Rifle at Shell Mound.

SAN FRANCISCO, Cal., May 11.—There was a good attendance at Shell Mound range yesterday. Weather conditions were fine. F. E. Mason did good work with target rifle. Scores:

Golden Gate Rifle and Pistol Club, monthly competition shoot, Pistol Club trophies: W. C. Pritchard 92, B. Jonas 82, C. A. Becker 75, F. Kington 66.

Re-entry match: W. C. Pritchard 93, 90, 90, 85; D. D. Smith 90, 88, 88, 86, 84, 83; C. A. Becker 84, 80, 81; Kington 70, 74.

Revolver Club trophies: J. E. Gorman 87, J. R. Trego 83, M. J. White 83, William Proll 82, W. F. Blasse 82, J. W. Thompkins 72.

Re-entry match: J. E. Gorman 94, 90; J. R. Trego 86, 81; J. W. Thompkins 85, 73; William Proll 84; M. J. White 81, 79; W. F. Blasse 81; F. Kington 61, 60; C. A. Becker 82.

Gold medal: F. E. Mason 226, 225, 225 bars; Martin Blasse 223, 221, 210, 207, 207, 207; G. Tammeyer 222, 219, 214, 213, 212, 211, 205.

Silver medal: M. Kolander 187, 186, 165, 160.

Re-entry match: D. B. Faktor 223, 219, 218; C. M. Henderson 208, 206.

Club scores: F. E. Mason 227, C. M. Henderson 221, G. Tammeyer 219, O. A. Bremer 214, Martin Blasse 210, W. F. Blasse 201, M. Kolander 186.

Germania Schuetzen Club, monthly medal shoot: First champion class, F. E. Mason, 228; second champion class, G. Tammeyer, 219; first class, H. Stelling, 208; second class, H. Bornholdt, 204; third class, J. Beuttler, 186; best first shot, S. Heino, 25; best last shot, M. Kolander, 24.

Competition shoot, open to all marksmen: F. E. Mason 219, D. B. Faktor 211, Herman Huber 205, M. F. Blasse 203.

San Francisco Schuetzen Verein, monthly medal shoot: Champion highest score class, F. P. Schuster 446; champion medal class, K. Wertheimer, 405; first and second classes not filled; third class, Charles Oldag 368; fourth class, J. Beuttler, 356; best first shot, E. Doell, 25; best last shot, F. P. Schuster, 24.

ROEEL.

Cincinnati Rifle Association.

CINCINNATI, O.—At the regular meeting of this Association on May 10 the following scores were made. Conditions, 200yds., offband, German ring target:

						Honor.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.

**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J. Bradfield, Sec'y, Vicksburg, Miss.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

The Union Gun Club will hold an all-day shoot at Rutherford, N. J., on May 30.

The next shoot of the Fulton Gun Club will be held on June 3. Every one welcome.

The Richmond Gun Club will hold its next shoot at Concord, Staten Island, on Decoration Day.

The Sec'y-Treas., C. L. Kites, informs us that the Springfield Shooting Club will hold a fall tournament on Sept. 7.

The New Jersey State Sportsmen's Association, as a representative body, seems to be consistently reposeful.

Mr. Fred Quimby arrived in New York on Monday of this week after a long business trip in the West. He will remain about a week before taking wing again.

The South Side Gun Club, of Newark, and the Union Gun Club shot a six-man team race, at Rutherford, on Saturday of last week. The Union Club won by a score of 250 to 225.

The members of the Binghamton Rod and Gun Club and Owego, N. Y., Gun Club are considering a series of club shoots, competing alternately on each other's grounds.

The match between Messrs. S. Whitmore, of Brunswick, Me., and A. G. Fisher, of Bath, each shooting at 100 targets, resulted in favor of Mr. Whitmore, by a score of 89 to 84.

Mr. Frank Lawrence was a visitor in New York after the Pennsylvania State shoot. He journeyed to Williamsport, Pa., on Monday, to attend the Interstate Association shoot, May 27 and 28.

The Hunters Rifle Club contemplate holding a shoot on the club grounds at Elizabeth, N. J., on Decoration Day. A 50-bird match, between Mr. Henry Orstat, of Elizabeth, and Mr. Geo. Wheeler, of Newark, will be a feature of the meeting.

The North River Gun Club, of Edgewater, N. J., announces a holiday shoot on May 30, commencing at 1 o'clock. In a 10-man team match with the Spring Valley Gun Club last Saturday, the North River Club won by a score of 171 to 133; each man shot at 25 targets.

Keep in mind this bit of information which the Cincinnati Gun Club emphasizes in its programme: "Reduced railroad rates, one and one-third fare for round trip on the certificate plan. Be sure and get your certificate. Ask your agent for them now."

Mr. C. A. Lockwood, of Jamaica, L. I., will give a Decoration Day shoot near Rockaway, on the east shore of Jamaica Bay. The expert, Mr. J. S. Wright, has been engaged as manager. Mr. Lockwood will entertain his friends with a dinner on that day. The event has all the essentials of a pleasant outing.

On May 23 the Poughkeepsie Gun Club was represented by a team at Ossining with a purpose to take back the Inter County Cup, which it held for a time, till the Ossining Gun Club concluded to take it. There were seven men to a team, 25 targets to a man. The scores were: Ossining, 142; Poughkeepsie, 133.

Mr. T. B. Nichols, of Nichols, Iowa, won the Smith Cup with a straight score of 20 targets, at the Iowa State Shoot, at Osceola, May 21. In the averages, Booth was first with 373 for the first two days, shooting at 440 targets; Crosby, second, 372; Heer, third, 368; Gilbert, fourth, 367; Marshall, fifth, 360; Budd, sixth, 359.

The week beginning June 7 is notable for the great tournaments fixed to take place in it. The New York State Shoot, at Ossining; the Ohio Trapshooters' League, at Cincinnati; the Caddo Gun Club's tournament at Shreveport, La.; the Ligonier, Pa., Gun Club's tournament, and several others, will afford ample opportunity for the shooters of all points of the compass to get busy.

The estate, on which are the clubhouse and traps of the Brooklyn Gun Club, is to be sold on June 18, and as a consequence, the last shoot of the Brooklyn Gun Club was shot on those old grounds on last Saturday. Mr. John S. Wright, the club manager, with his usual energy, has new grounds in view, and it is quite possible that the old clubhouse will be moved to the new grounds and shooting resumed in the near future.

Mr. D. W. Hallam, secretary of the Dover, N. H., Sportsman's Association, writes us the following kind remembrance: "The regular field days of the Dover Sportsman's Association are Memorial Day, May 30; Fourth of July and September 30, Labor Day. We shoot ever Saturday, from 4 to 6 P. M. If any of our friends should happen to be in our vicinity call and see us at the grounds, where we will furnish you with guns and ammunition."

The programme of the Cincinnati Gun Club's forthcoming tournament has a guessing event, purse $25, class guessing, two moneys, 60 and 40 per cent.; "60 per cent. to the one making the nearest estimate to, or the exact number of shooters who will participate in this tournament, and 40 per cent. to the next closest estimate. Only those who participate in the tournament are eligible to guess. All guesses must be in writing, and must be in by June 1, or bear P.O. mark of that date." Do ties divide or guess the tie off?

Mr. S. M. Van Allen, an expert, is reported by the Brooklyn Eagle to have done some remarkable shooting on Tuesday of last week: "Stephen M. Van Allen broke the world's record at 1,000 clay pigeons, consecutive shooting, by breaking 995 out of a possible 1,000, at Jamaica. The event took place at his cottage, at the Three Mile Mill, in the presence of a number of invited guests. George Morris acted as referee, and William Seeley as scorer. One hour and thirty minutes were taken from the time that the first shot was fired to the close of the shoot. The shooting was done in stands of 100 pigeons, at a 30-foot raise. The birds were thrown by hand. Van Allen scored his first miss at his fifty-first bird. His longest run without a miss was 372, and he broke 765 with but four misses. Van Allen is manager of the Mansion House at Jamaica, and is quite a trick shooter."

The programme of the seventh annual tournament of the W. Va. State Sportsmen's Association, under the auspices of the Ohio Valley Shooting Association, Parkersburg, W. Va., June 3, 4, and 5, provides $160 added money. The events are alike for each day, eight at 15 targets, $1.50 entrance, $3 added, and four at 20 targets, $2 entrance, $5 added, with the single exception that on the second day after the sixth event the State championship at 50 targets, entrance $1.50, will be shot. Every one will stand at 16 yards. Experts shoot for targets only, at 1 cent each. Shooting commences at 9 o'clock. Grounds open for practice on June 2. High gun for three days, expert class, will receive a gold medal. Three lowest averages, $4, $6 and $8. The Rose system will govern the moneys. Shells shipped, care of Mallory Brothers & Stewart, prepaid, will be delivered on the grounds free.

The programme of the Soo Gun Club's tournament, June 9-11, at Sioux City, Ia., has like events for each day, eight events at 15 targets, four at 20 targets, entrance $1.50 and $2, with $10 added to each event. There is one exception on the second day, No. 7, at 15 targets, which is the Interstate Championship Contest, silver cup to high gun. In cash and merchandise, $500 will be added. Meals served in the clubhouse. Shooting commences at 9 o'clock. The tournament is for amateurs. Professionals are barred from the purses. Shooters scoring 93 per cent. or over will be charged $3 per day extra: 92 and less than 93, $2; 91 and less than 92, $1. The fund so created will be equally divided among those who shoot through the programme and score less than 89 per cent. Professionals will have $15 per day, $10 to first high gun, $5 to second. Targets, 2 cents. Grounds open for practice on June 8. Ship shells and guns to J. W. Boyd, 506 Fifth Street.

The programme for the Interstate Association's Trapshooting tournament, given for the Meriwether Gun Club, Warm Springs, Ga., June 16-19, provides two days of target shooting, ten events each day, alternately 15 and 20 targets, $1.50 and $2 entrance, and $8 and $12 added money. On the third day there are two live bird events, of which No. 1 is at 8 birds, $8 entrance, birds included, 30 yards' rise, class shooting. No. 2 is at 12 birds, $12 entrance, birds included, handicaps 25 to 33 yards. Three moneys, Rose system, ratios 5, 3 and 2. On the fourth day, the Warm Springs, Ga., annual Live Bird Handicap will be shot. The conditions are 25 birds, $25 entrance, birds extra, four moneys, Rose system, ratios 8, 5, 3 and 2. The Meriwether Gun Club guarantees $500. The contestant who makes the highest score will receive a handsome piece of sterling silver plate in addition to the money prizes. If a tie for it, it shall be shot off miss and out. Targets 2 cents. The grounds will be open for practice on June 15. Lunch served free to contestants. Guns and ammunition prepaid and marked in owner's name, forwarded to Chas. L. Davis, Warm Springs, Ga., will be delivered on the shooting grounds free of charge. The target events are handicaps, distances 14 to 23 yards. The handicap committee has a membership as follows: Col. J. T. Anthony, Charlotte, N. C.; Col. Thomas Martin, Bluffton, S. C.; Messrs, R. H. Baugh, Birmingham; F. C. Wilson, Savannah, and F. H. Woodworth, Chattanooga. Special rates, one and one-third fare on the certificate plan, from all points south of the Potomac and Ohio rivers, and east of the Mississippi River, including Washington, Cincinnati and St. Louis.

The programme of the seventeenth annual target tournament of the Ohio Trapshooters' League, to be held under the auspices of the Cincinnati, O., Gun Club, June 9-11, states that there will be $300 added money, and $1,750 in guaranteed purses. All stand at 16 yards. Targets, 2 cents. No one barred. Shooting commences at 9 o'clock. Targets thrown 50 yards, unknown traps, unknown angles. Professionals will pay $2 per day extra; all others will pay $1, this fund to be divided among all amateurs shooting through all the regular events, and who do not win their entrance fees. There are eleven 15-target events on the first day, of which No. 6, 25 targets, is the Press-Post Trophy; Nos. 7 and 8, 30 targets, the State Journal Cup, and No. 11, special at 25 targets; all the rest are at 15 targets, $1.50 entrance, $5 added. The Press-Post trophy event is for a guaranteed purse of $250, all surplus added; forty-two high guns. Regular entries $3.50, close June 1; penalty entries $5. On the second day, besides the regular events, Nos. 6, 7 and 8, 50 targets, are for the L. C. Smith trophy, $7 entrance, for a guaranteed purse of $500. The special event, the Sportsman's Review trophy, is at two-man team race, 25 targets per man, optional sweeps for $2.50; entrance per team, $1. On the third day, besides the regular events, Nos. 6 to 10, 20 targets each, is the Ohio Trapshooters' League Grand International, at 100 targets, for the championship of the world, at 16 yards, entrance $14, for a guaranteed purse of $1,000, and all surplus added. No. 11 is the Shooting and Fishing 5-man team race, 50 targets per man, $1 per man entrance; 30 singles and 10 pair. To each of the 15-target events, $12 will be added.

BERNARD WATERS.

She had fifteen million dollars,
  Placed in bonds, and shares, and rents;
He had fifteen million dollars,
  So they merged their sentiments.
Now they've raised a son who's valued
  At exactly thirty cents.

—Chicago Tribune.

IN NEW JERSEY.

Union Gun Club.

Rutherford, N. J., May 23.—Between events 5 and 6 the contest for the Shooting and Fishing trophy took place between teams of the South Side Gun Club, of Newark, and the Union Gun Club. There were thirty-two contestants present. The scores follow:

North River Gun Club.

Edgewater, N. J., May 23.—The North River Gun Club of Edgewater, N. J., shot a team match with the Spring Valley Gun Club at the latter's grounds, resulting in a victory for the North River Gun Club by 38 targets. The following are the scores:

North River Gun Club—Richter 15, F. Truax 22, Glover 21, Monahan 21, Eickhoff 16, Allison 17, Vosselman 15, Merrill 15, Morrison 20, Harland 9; total 171.

Spring Valley Gun Club—Smith 15, Geiger 16, C. E. Fisher 18, C. B. Fisher 20, Mapes 6, Addis 8, Blanchard 12, Singer 15, Bahr 16, Keesler 7; total 133.

We will have a large shoot on Decoration Day, May 30, shooting to commence at 1. P. M.

JAS. R. MERRILL,
Sec'y North River Gun Club.

New York German Gun Club.

Louis T. Muench, Dr. Hudson and Emil Steffens were the three high guns on Wednesday of last week at Outwater's grounds, at Carlstadt, N. J. The event was the regular monthly contest of the New York Germant Gun Club, at which eighteen lovers of trapshooting faced the score. Baudendistel, one of the coming stars of the club, had the misfortune of losing his second bird, that was hard hit, and finished his score with a total of 9.

Block, Von Kattengill, Schlicht and big Pete Albert tied for third place with 8 kills each. Little Charlie Brown, a son of one of the old-timers, made his first killing on that day with a score of 5 out of 10. Following the club event, the balance of the April scores, on account of the scarcity of birds, was postponed until the May shoot. Garms, Muench and Steffens were the only ones to score 5 each. The birds were a good lot of flyers.

Brooklyn Gun Club.

Brooklyn, N. Y.—At the shoot of the Brooklyn Gun Club on Saturday of last week, there were fifteen shooters present. Owing to the fact that the estate, on which the clubhouse and traps are situated, will be sold on June 18; this was the last shoot on the old grounds. Mr. John S. Wright, the club manager, has other grounds in view, and the club devotees will not be disturbed to any important degree. The scores:

Events 1, 2, 3 and 4 are sweepstakes at 10 targets.

Indianapolis Gun Club.

INDIANAPOLIS, May 18.—We have organized in this city a new gun club, called the Indianapolis Gun Club. It is incorporated under the laws of this State, with a capital stock of $5,000, divided into 1,000 shares of $5 each. We have secured by purchase 16 acres of land, which, for natural advantages, cannot be surpassed anywhere in the country. It is, in dimensions, about 825 by 900 feet, and is located on one of our trolley lines, within 15 minutes' ride from the business center of the city. The land was purchased at $100 per acre, and before the title had passed we were offered $150 per acre cash, or about $800 profit on our investment. It is the intention of the promoters of this club to make it more of a State shooting park than a purely local one. Stock has been taken by a great many of the well-known shooters of the country. We propose erecting a large clubhouse and making such other improvements as will be necessary to have a strictly first-class trapshooting park, and will spend upon improvements alone, in the neighborhood of $4,000. We propose making this the best equipped grounds in the United States, having in view the securing of the largest trapshooting events which will ever be held in this country. We are going upon the theory that it is only necessary to show the shooters of the country and those interested in such sport that our grounds are superior to those of any other club, and that in addition to this we are able to handle the crowd.

We will have sufficient frontage to place six sets of traps in a direct line, extending from one side of the ground to the other, and enabling the shooting to be done toward the north. The trolley line runs directly in front of the clubhouse, and one can step right off the car on to our platform. Indianapolis is so centrally located that it is an easy matter for shooters from all sections of the country to reach us, and on account of its advantage as a railroad center, it will be of less difficulty to secure rates than at most other points.

W. T. NASH.

Chicago Gun Club.

CHICAGO, Ill., May 16.—Lem Willard was the winner of first in the weekly trophy contest, after a shoot-off with O. O'Brien, with whom he tied. The conditions of the Chicago Gun Club's weekly trophy are 25 targets, unknown angles, handicaps extra allowances. The scores:

	Shot at.	Hcp.	Score.		Shot at.	Hcp.	Scores.
Willard	26	2	25	O'Brien	32	7	25
Zacker	29	4	23	Bowles	29	4	22
B S Carson	31	6	15	Paterick	33	8	21
Mrs Carson	32	7	13	Walters	29	4	16
Borroff	27	2	14	Weart	31	6	17
Ikey	28	3	20	Dr Morton	31	6	20
Franklin	31	6	18	Dr Franklin	25	0	10
Boltman	25	3	19	J L Jones	36	11	11
Harrity	25	0	17	Darlington	25	0	13
Weber	28	0	17	Mrs Howard	32	7	15
Elias	25	0	21				

In the monthly handicap at 15 targets that followed the weekly event, Paterick, Willard, Weart, Ikey and Dr. Buckley made straight scores. O'Brien and Dr. Morton scored 14 each. Zacker and Boltman scored 13; Bowles, Walters, Weber and Elias each broke 12; Darlington, Franklin and Jones tied with 10 broke.

A. A. WALTERS, Sec'y.

Iowa State Tournament.

OSCEOLA, Ia., May 21.—The annual tournament of the Iowa State Sportsmen's Association closed to-day. The attendance was good, and the tournament a success in every way. The programme was a large one. The two first days, May 19 and 20, at targets, called for thirteen events each day, and the third day had three live-bird events: one for the State team trophy, one for Ottumwa diamond badge, and one at 15 live birds, which was cut to 12, owing to supply of birds running out.

The weather the first two days was pleasant, with a good breeze; but the last day was warm and sultry.

Event No. 8, for Smith cup, is not included in averages. Six teams tied for State team trophy, and the shoot-off was miss-and-out. Klein and Gilbert won on the eighteenth round. This gives them the ownership of this cup, as they have won it three times in succession.

Eleven were tied for the Ottumwa diamond badge and agreed to shoot off in next event, miss-and-out, to save birds. Marshall, Crosby, Hindmarsh and Bottger won, and will divide the entrance money next year.

The Association meeting was held on Wednesday evening. Spirit Lake was selected as the location for holding next annual meeting. The following officers were elected: C. W. Budd, President; Fred Gilbert, Vice-President; John Burmister, Secretary; Chas. H. Copley, Treasurer. Board of Directors: Frank Duncan, Dr. Douthett, Henry Steege, T. B. Nichols, W. B. Linell. Legislative Board: Geo. McCulley, J. F. Powell, Dr. C. E. Cook and J. W. Gray.

The manufacturers were represented by Marshall, Riehl, Crosby, Gilbert, Budd, Lord and Whitney.

T. B. Nichols, of Nichols, Ia., won the Smith cup with a straight score. The win was a popular one, as he is a favorite with the sportsmen of Iowa. The scores:

First Day, May 19.

HAWKEYE.

In Memory of Dr. Burdette.

NEW YORK, May 25.—Hudson county lost a valuable citizen and the Jersey City sportsmen a very enthusiastic member, in the death of Dr. John B. Burdette. Dr. Burdette settled in upper Jersey City over forty years ago. He was a pupil of Dr. Louis A. Sayers, whose memory he cherished devotedly. He graduated from the New York Physicians and Surgeons, and settled in upper Jersey City in 1858. At an early date, by his indomitable will and force of character, he soon took a front rank in the community as a safe and successful practitioner, and his reputation as a surgeon was not confined to the State.

He was an enthusiast in all outdoor sports, a charter member and first president of the Jersey City Heights Gun Club, a club that much, through his energy and wise direction, obtained a very serviceable reputation throughout the county, having challenged all the clubs in the United States and defeated all it met at the traps, notably the Fountain Gun Club of Long Island, when the Fountain Club was flushed with its victories at the New York State shoot, having won the Richmond cup and the diamond badge. The J. C. H. Gun Club, under the marshalship of Dr. Burdette, defeated the club in a match of 20 men a side, 10 birds each man, the score standing, J. C. H. Gun Club, 175 birds; the Fountain, 161.

The doctor was a man of strong individual character. He hated hypocrisy or insincerity, and his anathemas against a rascal, in whatever line he might be, were vehement.

Often exceedingly brusque in his manner, he had a kindly heart. He rarely sent in a bill, never to a poor man, and not a little of his extensive practice was in dispensing of charity. He had a keen sense of humor and could tell and enjoy a good story. He and Captain Ruben Johnson (of glorious memory) were for years, until the captain's death, almost inseparable companions.

Many happy days we have spent with the genial doctor and his other Dromio, Dr. Levering, at the camp on Lake Hopatcong, long ere its magnificent shores had been mortgaged by the bulls and bears of Wall Street. Day after day would the doctor seat himself, just off Sharp's Rock, with his two poles (I mean poles, not rods) and watch those bobs, and many a nice pickerel and bass graced the larder of the camp, the result of his patience and skill.

How well we remember the time he brought in a 7-pound pickerel, which Old Southpaw Al Heritage, our caterer, so admirably planked and served as he said, a la French.

The doctor was with us a charter member of the Gull Island Club, away down Pamlico Sound way, and did some good shooting with the black brant. He will be missed by many.

JACOBSTAFF.

Whitmore—Fisher.

BRUNSWICK, Me., May 21.—S. Whitmore, of Brunswick, defeated A. G. Fisher, of Bath, in a 100-target contest at unknown angles, on the grounds of the Brunswick Gun Club to-day. The men were very evenly matched and shot in fine form. Whitmore was the favorite, and did not disappoint his admirers. Below we give the score:

Whitmore	11111011111111111111110111—23	
	11111111111111010111111001—21	
	10111111111111111111111111—24	
	11111111111101110011111I1110—21	
		89
Fisher	10001111111111111111101011—20	
	11111111011111011111111111—23	
	01110001011111101111111111—19	
	10111111111111111110111110—22	
		84

At the 14th of his second round Whitmore's gun failed to cock.

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
S Whitmore	120	110	91.6	Nason	100	68	68.0

Dunning	100	70	70.0				

Others shooting only one or two events were Sinnett, Furber, Footer, Toothaker, Luce and Atkinson.

Ossining Gun Club.

OSSINING, N. Y., May 23. The Inter County Cup remains at Ossining. During the fall of 1902 the Ossining Gun Club offered a $50 loving cup, to be shot for by teams of seven men from Orange, Rockland, Dutchess and Westchester counties. Several teams signified their intentions of competing, but after the wasting of a lot of paper and ink, that which promised to furnish plenty of friendly rivalry for the possession of so handsome a cup, as there are at least ten clubs in the counties named, almost turned out a fizzle. The Poughkeepsie club lifted the cup once, and we went up in force and brought it back. The Poughkeepsie boys tried to lift it to-day, and tried hard, but it stays here by a narrow margin of seven birds. Winans, of Poughkeepsie, and Clark, of Ossining, were not up to their usual form, while P. G. Smith, of the visiting team, smashed 24 out of 25, which is way above any previous performance of his. Washburn, of Ossining, shot, as he usually does in team work, at the head of the bunch, tieing Smith with 24. Altogether, it was a fine afternoon's sport, and we hope this is but the beginning of a series of friendly contests between the two clubs. The three highest averages were made by members of the home team, Blandford 89, Ball 87 and Washburn 86 per cent. Kindly mention that the book of the N. Y. State Association contains names of clubs belonging to it, but the secretary has neglected to write in the addresses of many of the clubs. We hope that clubs that have failed to receive proper notice of the next meeting will kindly notify the secretary of the Ossining Gun Club, Mr. J. Curry Barlow, to that effect.

Dickey Bird Gun Club.

OMAHA, Neb.—There was an unusually large attendance at the second regular summer shoot of the Dickey Bird Gun Club Saturday, but the scores, owing to the gale that swept transversely over the grounds, was instrumental in keeping the score way below the Dickies' normal standard, Vorhees winning the medal with a total of 19 out of 25.

Vorhees	1111110111111011110110001—19
Morrison	1011101011010101110111111—18
Downs	1101101011010101110110001—18
Toozer	1111100011100110001000100—15
Hoye	0111000001111000111001110—13
Sherwood	1100011101011100101010110—15
Nicholson	1001100110111001010100111—15
Lane	1100111001110001111101110—16
Craig	1111010010000111111011011—16
McDonald	1111100111111100010111110—18

After the regular shoot there were a number of sweepstakes, in which some thirty shots, non-members and members, participated, and in which the scores were improved, notably, McDonald broke his twenty-five straight, Toozer twenty-two and Vorhees twenty. On Decoration Day the Dickies' will give a grand all-day sweepstakes, open to all.

The Soo Gun Club of Sioux City, Ia., is making elaborate preparations for their annual summer shoot, June 9, 10 and 11, and W. F. Duncan writes me that among the entries will be such men as Budd, of Des Moines; Townsend, Herr, McDonald, Loomis, Fogg and Kimball, of Nebraska; Gilbert, of Spirit Lake; Gottlieb, of Kansas City; Riehl, of St. Louis, and many other of the high-class trappers. The prizes will aggregate over $4,000, and both amateurs and professionals are eligible. The premier event will be the insterstate championship contest on June 10. Last year the cup was won by Guy Burnsides, of Knoxville, Tenn., and 50 per cent. of this year's purse will go to him. The high gun will get the cup, while the remaining 50 per cent. of the purse will be distributed among the contestants, according to their standing.

SANDY GRISWOLD.

Chesapeake Gun Club.

NEWPORT NEWS, Va., May 20.—The Chesapeake Gun Club will hold a big shoot at Riverview Park next Wednesday afternoon. Special events are being arranged for the occasion, and a number of visiting shooters will attend as the guests of the club. Among the visitors will be Mr. Du Bray, a gun company representative and one of the well-known "crack" shots. Members of the Norfolk and Portsmouth clubs will also be among the visitors.

The weekly shoot of the club was pulled off yesterday afternoon. The weather was fine for the shoot and some very good scores were made, but the number of shooters was rather small.

Mr. T. F. Stearnes led the field and Mr. Jack Robinson, who was shooting for the third time, was second.

The scores of yesterday's shoot follow:

Events:	1	2	3		Events:	1	2	3
Targets:	25	25	25		Targets:	25	25	25
T F Stearnes	23	22	24		Fred F Allen	8	8	12
Jack Robinson	22	21	19		W K Stow	20	19	..
Harry Westacott	21	18	21		Jno DePirs	22	18	..
Fleming Saunders	18	20	21					

The members of the club hope to have a good team to represent them at the annual State shoot, to be held at Lynchburg this year. No team has been selected as yet, but an effort will be made to get one together.

G. B. J.

Baltimore Shooting Association.

BALTIMORE, Md., May 23.—At the weekly shoot of the Baltimore Shooting Association to-day scores were made as follows:

Pennsylvania State Shoot.

The week of shooting, according to the programme presented for May 18-21 by the Pennsylvania State Sportsmen's Association, the competition at flying targets being under the auspices of the Florists' Gun Club, Wissinoming, the competition at live birds being under the auspices of the Keystone Shooting League, at Holmesburg Junction, was an eminent success. Upward of 100,000 targets were thrown in the four days devoted to them, although Monday was a practice day, and not recognized as a part of the programme events.

The programme was wisely and justly arranged. It was liberal in its provisions. It provided competition for amateur and professional alike, though the amateur was given the greater consideration. Special effort was made in the division of the moneys to provide for that unfortunate tournament class which has difficulty in scoring 80 per cent. In the open amateur sweeps $5 was added to fifth place, $3 to sixth place, so that a contestant who broke 10 or 11 out of 15, or 15 or 16 out of 20 targets, would win something even if small. High and low average money was provided. For the open amateur sweeps State Association members only were eligible to win the averages. The daily averages were $10 to the four high guns and $5 to the two low guns, $2.50 each. The general average prizes for three days, 300 targets, were $10, $7, $5 and $3, first to fourth, respectively, class shooting. Lowest general averages, $5, $3 and $2. There also was a trophy for the State Association members making highest average in State events 1, 3, 4, 5, 7 and 9, and a trophy to lowest average. These events had a total of 165 targets. In the open amateur sweeps, all shooters were taxed 50 cents. This fund was divided among all amateurs who in the three days' events failed to win their entrance.

An admission fee to the grounds was charged. Four magautraps, run by electric motor, threw the targets. This part of the tournament was in charge of the expert, Mr. Charles North, who has had much experience in all the details of tournament matters.

The tournament was managed by Mr. D. S. Daudt, who is a crack shot himself, either at targets or live birds.

The cashier's office was in charge of the expert, Mr. J. K. Starr, assisted by Messrs. A. B. Cartledge and H. H. Stevens.

Other assistants at the target traps were:

Trap No. 1.—A. L. Whitaker, referee; J. L. Horn, scorer; F. C. Schneider, rustler.

Trap No. 2.—John Haek, referee; Ned Nieukirk, scorer; H. Reed, rustler.

Trap No. 3.—J. Elwell, referee; Chas. Reed, scorer; W. N. Purcell, rustler.

Trap No. 4.—A. G. Daudt, referee; F. Rieley, scorer; F. Zeigenfuff, rustler.

The weather much of the time was sultry and oppressively hot, more like days of August than of spring.

The grounds are delightfully situated close by the beautiful Delaware River, and are enjoyable in themselves, apart from the good competition which they afforded. A good substantial lunch was served. The merchandise prizes, added money and guaranteed prizes were offered by the Florists' Gun Club.

The annual meeting of the Association was held on May 20, a large attendance being present. A large number of new clubs were elected to membership, which denotes an increased interest in trapshooting, and permanency and greater importance of the State Association. York and Williamsport made application for the State shoot of 1904. York was awarded it, and the vote was made unanimous. Officers were elected as follows: President, J. O'Hara Denny, of Ligonier; Vice-President, John A. Wilson, of Franklin; Secretary, J. N. Runk, of Chambersburg; Corresponding Secretary, Allen N. Seitz, of Glen Rock; Treasurer, J. H. Worden, of Harrisburg; Board of Directors: C. F. Kramlich, of Allentown; J. F. O'Neill, of Wilkes-Barre; Dr. Geo. Goebel, of Philadelphia; Geo. Crane, of Mountville, and R. R. Bennett, of Pittsburg. Messrs. Denny and Wilson, beside offering a tropy in the live-bird competition, have promised one for target competition next year. It will become the permanent property each year of the winner. The different reports indicated that the Association was in prosperous and sound condition. The press members were shown special consideration. Nice carbon copies of the scores were furnished them promptly, for which they were grateful and have kind remembrance.

In the open amateur sweepstakes of the first three days, L. Z. Lawrence was high average with 289 out of 300. J. T. Skelly and J. A. R. Elliott tied for second on 288; J. T. Atkinson was third with 283, and Edward Banks was fourth with 282.

Monday, Practice Day.

Monday was not a programme day, yet there were upward of ninety shooters who were on the grounds for practice. The star performance was that of Mr. J. A. R. Elliott, who broke 98 out of 100. Pyle was close up to him with 97, Brewster was 96. There were a number of others who shot well, but these were practice events and were no part of the regular programme. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	Shot at.	Broke.

First Day, Tuesday, May 19.

The masses of shooters visible in every part of the grounds were sufficient evidence that the tournament was one of the greatest. All the events were well filled. There were about 150 shooters.

There were three State events, of which No. 1 was a sweepstake, 20 targets, $2.50 entrance $100 guaranteed, surplus added, divided 25, 20, 18, 15, 12 and 10 per cent.

No. 2 was the Milt Lindsley trophy.

No. 3 was the Florists' handicap, 25 targets, $1 entrance, optional sweep $1.50, Rose system, 8, 5, 3, 2, 1 points, speed handicap. There were nine prizes, the first being a Lefever hammerless gun; second a Stevens single-shot rifle. M. S. Brey made a clean score of 25. Six—Fox, Mink, Dover, Landis, Stroh and Anderson—tied on 24.

The open amateur sweeps were six in number, four at 15 and two at 20 targets, entrance $1.50 and $2, and $8 added to each. This made a total of 100 targets, $10 entrance and $48 added. The purses were divided Rose system, 8, 5, 3 and 2 points; added money was given, $5 to fifth place, $3 to sixth place. These events were open to all amateurs and State Association members. Manufacturers' agents were barred from the purses, but one-half cent on each target they shot at was reserved for daily average for them.

Shooting commenced shortly after 9 o'clock and continued to late in the afternoon. Of the 100,000 and upward of targets thrown during the shoot, 27,000 were thrown on this day, hence the four magautraps were kept reasonably busy. Mrs. W. K. Park was the only lady contestant, and although she shot well, she was not up to her best skill. J. A. R. Elliott broke 98 out of 100, but the daily average money for high and low guns being for State Association members exclusively, he could not share in it. The general averages were governed by the same conditions. H. L. Coleman, of Higgins, Pa., scored 97 and took first. Chlay, Smith and Skelly scored 96 each. There was a large percentage of the contestants who averaged 90 or better, as the scores show:

	Open Amateur Sweeps.							State.

In State event No. 2, the Milt Lindsley trophy for two-man teams, 25 singles and 5 pairs, $4 entrance, $10 added, divided 50, 30 and 20 per cent., twenty-three teams entered. There was also an Association trophy, which went absolutely to the winner, and individual trophies to the members of the winning team. Eight or more teams, four moneys. First was won by the North Side Gun Club team No. 2 with a total of 66 out of a possible 70, as follows:

North Side G. C. No. 2.	S.	D.	T'l.
Atkinson	24	9	33
Watson	25	8	33
	49	17	66

Keystone Shooting League.	S.	D.	T'l.
Fox	24	10	34
Ridge	24	6	30
	48	16	64

Independent Gun Club.	S.	D.	T'l.
Landis	23	7	30
Mink	25	8	33
	48	15	63

West Chester Gun Club.	S.	D.	T'l.
Humer	24	9	33
Rogers	21	9	30
	45	18	63

Oil City G. C. No. 1.	S.	D.	T'l.
Eaton	25	7	32
Chlay	23	8	31
	48	15	63

The totals of the other teams were as follows: North Side No. 3, Shaner and Fleming, 62; Altoona Gun Club, Smith and Halderbaum, 61; Ligonier Club No. 1, Jessop and Bessemer, 60; Ligonier No. 2, Denniker and Trego, 60; North Side No. 4, Pyle and Irwin, 59; Harrisburg Gun Club, Kreuger and Stephens, 59; Keystone, Cooper and Coleman, 58; Oil City No. 2, Bates and Huff, 58; Florists' Gun Club, No. 2, G. O. Bell and Cartledge, 58; Ambler Gun Club, C. W. Haywood and Pfleger, 58; Towanda Gun Club, McCabe and Montague, 57; Wilkesbarre Gun Club, Stroh and T. B. Harris, 56; West Branch Gun Club, Everett and Flock, 55; Florists' Gun Club No. 1, Sanford and Anderson, 55; Keystone League, No. 2, Eames and Harrison, 54; Chambersburg Gun Club No. 1, Minnick and Russell, 51; Chambersburg No. 2, Runk and I. C. E.; North Side Gun Club No. 1, G. Henry and J. Fisher, 49.

Second Day, Wednesday, May 20.

There were three State events on this day, as follows:

No. 4, the Wolstencroft trophy, 50 targets, $1 entrance, optional sweep of $2; $10 added, divided 30, 25, 20, 15 and 10 per cent., Wolstencroft trophy to the winner. Five tied for the trophy with scores of 48, namely, Messrs. Coleman, Atkinson, Denniker, Eaton and Ridge. In the shoot-off at 25 targets, Coleman broke them all and won.

No. 5 was the Sportsmen's Merchandise Handicap, 25 targets, $2.50 entrance, speed handicap. This event was postponed till the following day owing to lack of time in which to shoot it.

No. 6 was the Harrisburg trophy for three-man teams.

The open amateur sweepstakes were like those of the preceding day.

On this day the entries touched high water-mark, and made a new record for the number of entries at a State shoot, and ranked well with the greatest open shoots of the United States. The total of entries for the day was 180. This made a heavy competition to handle, consequently the full programme of the day was not completed. The open amateur sweepstake events were shot off first. The competition was of such a high order that an extraordinarily large number of the contest[illegible] were in the money, and as a consequence the purses were [illegible] up very fine. Messrs. L. Z. Lawrence and J. T. Skelly, in[illegible]e non-resident professionals, were high in the amateur sweep[illegible]s with 97 out of 100. Messrs. F. Cooper, of Mahanoy City an[illegible]. B. Fleming, of Pittsburg, took first average with 96 out of [illegible]0, though tied by Hawkins and Johnson, professionals. Mes[illegible]ward Banks, of New York, and E. C. Watson, of Tyrone, Pa., tied on 95, the money going to Watson, as he is a resident amateur. Ten tied on 94, namely, Apgar, Griffith, F. Coleman, Trafford, Stephens,

Humer, W. S. Smith, Shaner, Atkinson and Fisher. The scores follow:

	Open Amateur Sweeps.							State.
Events:	1	2	3	5	6	7		4

Shoot-off of the tie in State event 4 for Wolstencroft trophy: F. Coleman 25, Atkinson 23, Denniker 22, Eaton 21, Ridge 21.

The Harrisburg trophy, for three-man teams, 25 targets, $6 entrance, $10 added, divided 50, 30 and 20 per cent., had thirteen entries. This was a closely contested race and evoked much interest. The J. F. Weiler Gun Club, of Allentown, proved to be the victors with the excellent score of 72 out of 75, the members of it making 23, 24 and 25, a score which is hard to beat. The Harrisburg Shooting Association, the Clearview Gun Club, and the Carlyle Gun Club scored 70 each. The scores:

Oil City Gun Club—Eaton 24, Chlay 21, Graham 23; total 68.

J. F. Weiler Rod and Gun Club—Kramlich 23, Schlicher 25, Brey 24; total 72.

Harrisburg Shooting Association—Stephens 22, Brewster 24, Humer 24; total 70.

North Side Gun Club No. 1—G. Henry 23, J. F. Fisher 22, Pontefect 18; total 63.

Keystone Gun Club, of Lebanon—Cooper 22, Coleman 22, Trafford 21; total 65.

North Side Gun Club No. 2—Atkinson 25, Watson 21, Fleming. 24; total 70.

North Side Gun Club No. 3—Knode 23, Pyle 21, Shaner 25; total 69.

Florists' Gun Club No. 1—Sandford 19, Anderson 25, Bell 18; total 63.

Clearview Gun Club—Bucknell 25, Rogers 23, Fisher 22; total 70.

Keystone Gun Club, of Philadelphia—Fox 25, Landis 19, Ridge 19; total 63.

Carlyle Gun Club—Parker 25, Kreuger 22, Stroh 23; total 70.

Ambler Gun Club—Brennan 21, Mink 24, Pfleger 20; total 65.

Ligonier Gun Club—Denniker 23, Bessemer 20, Jessop 21; total 64.

Third Day, Thursday, May 21.

Besides the regular six open amateur sweepstakes of the previous tournament days, there were three State events.

No. 7 was a swepstake, 20 targets, $2.50 entrance, $100 guaranteed, surplus added, divided 25, 20, 18, 15, 12 and 10 per cent.

No. 8 was the Reading trophy for four-man teams, 25 targets, $8 entrance, $10 added, divided 50, 30 and 20 per cent.; eight more teams, four moneys. The Reading trophy, and the Association trophy to the winner, the latter absolutely individual trophies to the members of the winning team.

No. 9, the Consolation Handicap, was not shot, the postponed Sportsmen's merchandise handicap of the previous day's programme being put in its stead.

The interest in the shoot was well sustained both by the contestants and the spectators. As on the previous days, the open amateur sweepstakes were shot first. Three professionals, Messrs. J. A. R. Elliott, Luther Squier and L. Z. Lawrence made high average, 97 out of 100, but as they were non-resident professionals, they were barred under the conditions governing these events, as explained hereinbefore. Mr. W. S. Sherer, of Carlyle (Parker), tied with Fox on 96, but Fox being a professional, the first money went to the former. Messrs. Skelly and Atkinson tied on 95, the former a professional; the latter amateur. Bucknell, Trafford, Humer, Banks and E. Johnson tied on 94. There were a total of 116 contestants in all the events. The scores in the open events follow:

	Open Amateur Sweeps.							State.
Events:	1	2	3	4	6	8		7 5

Shoot-off for second and third prizes in Merchandise handicap: J. F. Fisher 24, Trego 24, Bates 24, Harvey 24, Newcomb 24, Pfleger 23, Eaton 23, Huff 23, J. B. Haywood 23, Schools 22, W. K. Park 21, I. C. E. 21, Brey 21, Fleming 21, Atkinson 21, Anderson 20, Brewster 20, Wynn 18, Chlay 17.

T. B. Harris won first with 25 straight. First prize was a Parker hammerless gun. Third was a Mullins' duck boat; fifth a Marlin repeating rifle. Seventh a Winchester rifle. There were twenty-five prizes all told. Lots were drawn to determine the allotment of the remaining prizes, and the winners, from second to twenty-fifth, were in the order mentioned here: Bates, Trego, Eaton, Huff, Schools, Chlay, Fisher, Harvey, Newcomb, Pfleger, Haywood, Park, I. C. E., Atkinson, Fleming, Brey, Brewster, Anderson, Wynn.

In the State sweepstake event at 20 targets, Pyle, Brewster, Cooper and Atkinson made straight scores, while Pfleger, Huff, Trego, Kreuger, Fleming, Denniker, Anderson, Ridge, Henry, Kellogg, Harris and Fox missed but one.

Reading Trophy.

In the Reading trophy event, four-man teams, there were ten entries. The contest was exceedingly close, but one target dividing several of the teams in their totals. The North Side Gun Club team No. 1 won with 94 out of the possible 100. The North Side Gun Club team No. 2 was second with 93. The Carlyle Gun Club was third with 92. The scores:

Carlyle Gun Club.		Brandywine Gun Club.	
Kreuger	22	H Minker	20
Humer	24	H Irwin	17
Brewster	23	B Coffroad	17
Stephens	23—92	D Irwin	17—71
Keystone Shooting League.		**J. F. Weiler Gun Club.**

Denham	18—65	Pyle	23—88
Oil City Gun Club.		**North Side G. C. No. 3.**	
Eaton	24	Denniker	25
Bates	22	Trego	20
Chlay	20	W S Smith	24
Huff	21—87	Jessop	24—93

This concluded the target programme.

Fourth Day, Friday, May 22.

The competition at live birds took place on the grounds of the Keystone Shooting League at Holmesburg Junction, under the auspices of that organization.

There were four events on the day's programme, the conditions of which are given in connection with each event. A feature of the day was the extraordinary number of entries in the different events. The 10-bird handicap had 51 entries; the 12-bird event had 48, and the two State events also filled well. There were many of the contestants who had achieved national fame both as sweepstake and match shooters. Miss Annie Oakley (Mrs. Frank Butler) was of the number, and shot well, though want of practice probably has put her somewhat out of the exeellent form in which she shoots when at her best.

Event 1 was open to all. The conditions were: 12 live birds, $10 entrance, birds included, handicaps 26 to 33yds.; class shooting, 50, 30 and 20 per cent. Of the 48 contestants Trafford, Atkinson, Jebb, Hull, Johnson, McCoy, Bessemer, Stevenson, Budd and Thomas scored the full number, 12; but there were so many in the tie it split up the money rather fine, the straight scores paying $16.10; second and third, $6.44 each. Fifteen tied on 11, and eleven tied on 10:

Nov. 4, at 10 live birds, was a handicap, 26 to 33yds., $7.50 entrance, birds included; three high guns. For every five entries over twenty, one extra money was made. Eleven made full scores, which covered all the moneys. They were Sarge, Everett, Vandegrift, Greiff, J. L. Smith, I. Budd, Felix, E. Johnson, Seitz, Wills, and Atkinson. The scores follow:

Sarge, 29	2222222222—10	J Thomas, 28	2222220212— 9

State event 3 was the Denny-Wilson trophy, 15 live birds, $10 entrance, birds extra, cup and 40 per cent. to the winner; next three highest scores to receive 50, 30 and 20 per cent. respectively. Thirty-two entered. Of these, nine withdrew at an early stage, when it became apparent that a miss or two put a contestant out of winning any sum worth continuing for. Fred Coleman and J. Vandegrift scored straight, and the shoot-off was postponed till the following day. The conditions of this trophy provided that a shooter scoring three consecutive wins became the owner, and any one failing to score that number within five years, it then would be competed for by those who had scored wins on it. The previous winners were J. J. Hallowell, of Philadelphia; F. Cooper, of Mahanoy City; J. T. Atkinson, of New Castle, and W. S. Bessemer, of Millvale.

Ten tied on 14; seven tied on 13, and three tied on 12. The scores:

McCoy	222222222222*—14	Wynn	12110120w
Crossland	122122222221022—14	Geist	222222222*20222—13

Event 2 was the L. C. Smith trophy for three-man teams, 15 birds per man, 45 birds per team; entrance per team, $25; divided 40, 35 and 25 per cent. Six teams entered. The Keystones, of Lebanon scored first with 43, Trafford killing straight, while Cooper and Coleman missed only one each. The Keystone Shooting League No. 2 was second with 42, J. Vandegrift being the contestant with a straight score on his team. In the 10-bird event, and the Denny-Wilson trophy he also killed straight, making a total of 40 birds for the day. Eames, of Keystone No. 2, lost his last dead out. The Pottstown team was third with 41, Geist scoring straight, his two team mates, Emmers and Brey, scoring 13 each.

Fifth Day, Saturday, May 23.

This was the last day of the shoot. The weather was comfortably pleasant, though too warm for the birds to be at their best. The shoot-offs were specially interesting to the shooters and the spectators. The exhibitions of skill were first class. Coleman was shooting in remarkably fine form. He was putting in both barrels within quick time and accuracy, and though shooting so quickly, he was shooting with judgment. If not quite sure with the first at times, he always made sure with the second. He caught his birds so quickly that they did not have time to get up speed and become hard. Vandegrift also was shooting in fine form, and was pressing Coleman hard, and though he lost finally it was only after a race which was high class. Coleman's work was extraordinary throughout the tournament. He won the State championship, the Wolstencroft trophy at targets, the Denny-Wilson trophy, the Williamsport trophy, and was a member of the successful team which contested for the L. C. Smith trophy.

The shoot-off of ties at 5 birds, for the Denny-Wilson trophy, first 20 at 28yds., then 10 birds at 31yds., resulted as follows:

Coleman	22222222222221121122222222222—30
Vandegrift	12122112211111222212211102111—29

Coleman thus won the cup.

The first event was a 10-bird handicap, open to all, $7.50 entrance, birds included, 26 to 33yds.; three high guns; for every five entries over twenty, an extra money was made. There were thirty-three entries. Elliott was the back-mark man, 32yds.; E. Johnson, of Atlantic City, was one yard nearer. Six tied on straight scores, Elliott, Trafford, Morris, Vandegrift, Jebb and Johnson. There were twelve 9s, but 9 was of no value. The scores follow:

Elliott, 32	2121112122—10	Vandegrift, 30	1122121121—10
Sarge, 29	2222222202— 9	Geikler, 28	0122022220— 7
Felix, 29	2220222222— 9	Jessop, 29	*011*00222— 5
McCoy, 29	22222222*2— 9	Dimmick, 28	1000202212— 6
Bucknell, 29	2222222022— 9	Everett, 28	22212122*2— 9
Bessemer, 30	22*2222w	Seitz, 29	111*110012— 7
Hoffman, 29	2222022022— 8	Emmers, 29	2212220222— 9
Budd, 30	1111111220— 9	Taylor, 28	1012021222— 8
G Henry, 29	21222122*2— 9	Brewster, 29	*222220022— 7
Harrison, 28	2121200w	Du Bray, 29	2*20222202— 7
Geist, 28	2220222222— 9	Trego, 29	1211*12222— 9
Humer, 29	212222121*— 9	Schools, 28	2100221101— 7
Byers, 28	2020202112— 7	Tebb, 28	2222222222—10

Trafford, 30	2222222222—10	E Johnson, 31	2222222222—10
Morris, 27	2221222212—10	J S Smith, 29	1222121110— 9
Kreuger, 29	2120211*11— 8		

Thirty-seven contestants entered for the Williamsport trophy, the diamond badge event, the championship of Pennsylvania, 15 live birds, $10 entrance, birds extra, class shooting, 40, 30, 20 and 10 per cent. Six tied with straight scores. Coleman killed 15 straight and won. Kreuger got a sitter in the twelfth round, an alert bird, pointing straightaway. Kreuger hit it hard with his first, was slow with his second, and the bird flew away skyward. The scores of this event follow:

Emmers	222222222222222—15	Eames	2022010w
Trafford	012222000w	Fitzgerald	12*21**w

Boston Gun Club.

BOSTON, Mass., May 20.—The second shoot of the summer series was held at Wellington to-day, the attendance numbering a baker's dozen. Some complained of the unlucky number, and knew they would not be able to shoot, and according to the scores, they were quite right. Frank was easily high gun, his pairs, however, being a serious drawback, but singles were just to his liking, and he let very few of them get away. Gleason was next in line, rapidly getting used to the 18-yard mark, and soon there will be no holding the Doctor, who recently put the club record at 93 out of the 100.

Other scores as follows:

May 13.—The Boston Gun Club opened their new prize series at Wellington to-day, a small attendance only being present, but no lack of enthusiasm, and the shoot in itself proved to be just the right kind of a social gathering. New distances proved a setback to most all, though the worst to be afflicted was the winner of last series, and the two yards seemed to cause no end of trouble. This will not last long, as John is just the boy to ferret out the whys and wherefores, and it will not be his fault if he does not find where the trouble lies. Good scores were on a vacation, one clean score being all the 14 shooters could find, though one way and another, there were quite a few of those unkillable targets grassed, and surely the shooter that did it felt way up into the 90 per cent. class, when such a mistake happened. In a little impromptu team match, both sides scored even, and the question of superiority of one over the other is not yet settled, though each claims to be the winner. Major Hallam, however, says: "Wait till next time, and we won't do a thing to them," and so the story goes.

Cincinnati Gun Club.

CINCINNATI, O., May 16.—The Troisdorf medal contest resulted to-day as follows: Barker (17) 48, Harris (17) 48, Ahlers (19) 46, Rike (16) 46, Rhoads (16) 46, Gambell (19) 45, Medico (16) 45, Block (17) 43, Faran (16) 42, Herman (16) 42, Miles (16) 42, Linn (17) 41, Willie (16) 40, Coleman (19) 39, Corry (16) 39, Capt. (16) 39, Nye (16) 39, Sunderbruch (16) 38, Ackley (17) 36, Jack (16) 35, Falk (17) 34, Steinman (16) 34, Krohn (16) 34, Boyd (16) 34, Roanoke (16) 33, Frohliger (16) 31, Maynard (18) 31, Lindsley (16) 30, Farmer (17) 29.

Team race, 25 targets:

Rhoads' Team—Rhoads 25, Gambell 24, Barker 23, Medico 23, Block 22, Ackley 21, Nye 20, Willie 20, Faran 19, Maynard 19, Boyd 18, Capt. 17, Miles 16, Krohn 13; total 280.

Rike's Team—Rike 24, Sunderbruch 24, Linn 23, Harris 23, Ahlers 22, Herman 21, Frohliger 21, Jack 19, Corry 17, Lindsley 17, Krehbeil 16, Williams 16, Roanoke 14, J. B. 13; total 270.

May 18.—First race, 30 singles and 10 pairs, three high men out:

	Singles.	Doubles.	Total.
Gambell	29	17	46
Medico	26	16	42
Van Ness	28	12	40
Alkire	24	15	39
Stout	26	13	39
Ahlers	27	11	38
Faran	25	9	34

One hundred target sweep, three moneys:

Gambell	19 20 19 20 19—97	Ahlers	17 18 18 16 17—86
Alkire	16 16 20 20 17—89	Faran	16 15 18 18 17—84
Van Ness	18 16 18 17 19—88	Stout	20 18 14 16 16—84
Medico	16 19 18 16 18—87		

Gambell ran 56 straight; Alkire 50 straight.

Twenty-five target sweep: Gambell 24, Alkire 23, Van Ness 23, Medico 22, Faran 20, Stout 15.

May 12.—Match race, 25 pairs: Medico 41, Rhoads 39, Gambell 39, Ahlers 38.

May 14.—Match race, 50 singles: Rhoads 49, Medico 47.

No. 2, same: Gambell 48, Rhoads 46.

Match race, 100 targets:

Rhoads	24 25 25 23—97	Gambell	24 23 23 24—94

Poughkeepsie Gun Club.

POUGHKEEPSIE,, N. Y., May 21.—The "Marshall Cup," this week, was won by Mr. Coutan with a score of 24 points.

Scores: Coutan (6) 24, DuBois (4) 23, Traver (3) 23, Smith (2) 22, Marshall (5) 22, Briggs (4) 20, Winans (2) 19, Russell (1) 16, Pickenpack (4) 18. Scores in the other events:

Events:	1	2	3	4	5	6	7	8	9	10	11

DUB.

Answers to Correspondents.

No notice taken of anonymous communications.

G. B. T., Lakeport, N. H.—While walking on the beach at Old Orchard, Me., a few days ago, I came across a queer fish or animal, which I would like very much to have you name and describe. I send a rough drawing. It was about 11 or 12 inches long and covered with a shell like a turtle; the tail or spike is three-square and 5⅛ inches long, and the whole body of a dark brown, a little lighter on under parts. It covered itself with sand very quickly. The forward part was concave, and there was quite a suction when pulling it out of the sand. There were twelve or more legs with claws like the small claws of a lobster, and he kept them so busy that he was hard to examine. Please tell me about him in correspondence column. Ans. Your drawing and description make it quite certain that your animal was a horseshoe crab (*Limulus*), a genus of crustacean found along the Atlantic coast from Maine to Florida and the West Indies. They are very common from southern New England southward. Two doubtful species are found on the coast of Asia. The position of *Limulus* is as yet uncertain. While generally regarded as a crustacean, there are some who believe that its relationships may ultimately prove to be with the scorpions. The horseshoe crab frequents sandy and muddy shores, where it burrows just beneath the surface. Sometimes it comes out and walks over the bottom, feeding on small animals which live in the mud. Its eggs are laid near high-water mark, usually at the time of the full moon, when the tides run unusually high, and at this time the horseshoes are gathered, to be used as manure on land, as food for hogs, chickens and ducks, and the eggs for food for trout, which are very fond of them. The spawning takes place in May, June, July and August, and perhaps still earlier further to the south.

PUBLISHERS' DEPARTMENT.

Reduced Rates to Asheville.

Pennsylvania Railroad will sell, account the meeting of the American Society of Civil Engineers, at Asheville, N. C., June 8 to 12, excursion tickets from New York to Asheville at the rate of $21.70 for the round trip, tickets to be sold good going, June 5, 6 and 7, with final return limit of June 15, inclusive.—*Adv.*

The Southern States

Is the coming section of America, and if you want to locate in the most prosperous State of the Union—the one in which there are the most cotton factories, furniture factories and diversified factories of all kinds—write J. T. Patrick, Pinebluff, N. C.—*Adv.*

The Malcolm Rifle Telescope Manufacturing Co., Syracuse, N. Y., recently received a target of 5 shots from Henry L. Cole, of Whitefield, N. H., which is a conclusive testimonial in itself of the sterling efficiency of the Malcolm Co.'s products. The target is a bullseye the size of a half dollar, and each of the 5 shots is a bullseye. It was made with a Rough Rider telescope mounted on a Stevens 12-inch .25-caliber pocket rifle. The Malcolm Rifle Telescope Manufacturing Co. will be pleased to send descriptive circular to applicants.

Mr. T. H. Keller informs us that at the Pennsylvania State shoot, May 18, 19, 20, Mr. James Atkinson, of New Castle, Pa., won the high average in the open amateur events, also high average in the State events, and the combined general average, and tied the winner of the State championship. In the regular events, shooting at 500 targets, he scored 476, an average of over 95 per cent. He shot Peters Ideal factory loads, Dupont powder and a Parker gun.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903 BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 6, 1903.

VOL. LX.—No. 23. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

VACATION TIME.

WE are now in the height of the outdoor season, and for a few months longer the consideration of the vacation soon to come, or just enjoyed, will have large share in our thoughts.

It is a trite saying that each of us is at heart a savage and desires, at least once a year, to return for a little while to the habits of those primitive ancestors who depended for support on the flesh of the beasts which they hunted, the fish which they caught from the waters, the shellfish gathered from the seashore, or the roots and fruits yielded by the soil. This may be true, but whether it is so or not will probably never be known. It seems more probable that since the pleasures of life consist chiefly in its changes and its contrasts, so we, who are civilized, who live in cities, towns, villages or at all events in houses, and are bound by all the restraints of civilized society, find our highest pleasure in escaping for a time from that society and the restraining fetters consequent on our ordinary close association with men. We long for a freedom unknown in our daily life, for an independence known only to natural things who wander at will, when and where they please, and who lie down and sleep at their own good pleasure. We long to go where we please; to stop when we feel like it; to eat when we are hungry, and not at set times; to lounge in camp, in our oldest clothes or without any clothes at all; to be for a little time our own masters.

One and all the civilized people of the world are struggling in a race for such measure of wealth as shall give them absolute independence, shall enable them to do precisely as they please. None of them ever attains the sum of his desires. The man who has become a multimillionaire has formed the habit of making millions, and this habit has become stronger far than was his old desire for freedom, for a time when he could travel, could spend his days in fishing or shooting, or in studying natural history, or could buy back the old farm where he was born and go there to be for the rest of his life a farmer.

Yet, for a little time, each one of us who spends his vacation in the forests, or among the mountains, or on the seashore, who makes his fishing trip, his hunt for big game, or spends two or three weeks cruising on yacht or tiny catboat, is richer far than any of these multimillionaires, for he is doing the things that he has longed for and looked forward to; he has thrown aside for a little while all sense of responsibility, and has once more become a child with the child's freedom from care, but with far more than the child's capacity for enjoyment. Let him make the most of his good time. It will not last long, and a whole year may elapse before it comes again.

The early spring trout fishing is over, and summer trips are now beginning. Long ago yachtsmen fitted up their boats, and now every spare moment is spent on the water, preparing for races or cruises to take place during the next three or four months. Until the summer is well over the sports of the water will be the only ones presenting themselves to most readers of FOREST AND STREAM, but close upon them will follow trips into the mountains for big game, the strenuous climb after mountain sheep and goats, the careful stalk of the sleek deer and the high fronted bull elk. As the heat of summer wanes, men will begin to get their dogs in condition, and the covers of the East and the prairies of the West will be crossed and recrossed by the active ranging beauties, and the flat crack of the shotgun, with its smokeless powder, will awaken echoes all over the land. Later still, when sharp frosts have killed vegetation North and South, and the air is bracing and the ground rings hard under the foot, quail and ruffed grouse will be followed, and from the north will begin to appear the wildfowl, sometimes in such numbers as to almost darken the skies, and then as it grows colder and colder, and winter is at hand, the duck shooter's time has come, and hidden in blind or battery he takes toll of the swift-flying birds that dart to his decoys.

There is a wonderful variety of fur and feather and fin in this broad land of ours, and if population, civilization and progress have covered much of it so thickly that there is no longer place there for the wild creatures that we love to pursue, yet there still remain many spots, far from the haunts of man, where good shooting and fishing may be had. In all directions the country is traversed by railroad lines anxious to give good service to the sportsman, and to induce him to travel over their roads. Of steamship lines the same is true.

For many of us there is the opportunity for a good vacation.

IN THE EARLY HOURS.

OCCASIONALLY there comes, just before the dawn, the gleam of a strange peculiar light that shines in the eastern sky—an unfamiliar glisten, refraction rather than reflection. It is soft and thin, like the glimmer of zodiacal light, spanning the afterglow of a clear sunset. Only in the calm of early hours, when the east is absolutely filmless, does this weird, evanescent halo rest upon the world. It is the "avant courier" of the dawn, not always seen, but when once the charmed eye has looked upon its soft beauty as it holds the sleeping woods, his is a dead soul indeed that does not thrill to the memory.

Phœbe often awakes and seems alive to the witchery of its shining, for time and again the plaint of the lonely little voice will add its far-away effect to the prevailing quiet.

Pho-e-be! Pho-e-be! cries the little gray bird, and, for a space, all nature seems to await the answer that never comes. Now the dawn is rapidly brightening over the earth, till presently the thin, soft sheen we have noted is gone—vanished with the first touch of the morning breeze that rustles the leaves.

Tera-lee! tera-loo! sing the robins, in quick response to one another, while as yet the other members of the feathered choir are silent. How the echoes fling their rollicking notes far and wide through the early twilight.

Olio! Olio-cheee-e!—a pause—*Olio-cheee!* Up from the dell where the night mist still lingers comes the exquisite voice. A swamp robin, sweetest songster in all our woodlands, is charming. Clear, bell-like the magic call seems to signal the late risers among the wood folk, for soon the sounding trill of the wren is heard, as it sings to a running accompaniment of vireo warblings, while the stirring *tu-e! tu-e!* of the oriole is answered among the tree-tops by the full-throated challenge of a great crested flycatcher. The deep chest-notes of a yellow-breasted chat announce the fact that the tenants of the shrubbery are awakening, and soon we hear them, brown thrush, chewink, catbird—the air is filled with bird music. "Grace before meat" is the rule with the majority of bird families, and though it is said that "the early bird catches the worm," still, we find he generally sings with exquisite grace ere he proceeds to do the catching. Even the rank and file—plebian birds, we may call them—squawk and cheep and chirrup to the best of their ability before breaking fast. Soft-winged owls and other night prowlers will utter uncouth sounds before starting on their silent quest for food. But it is the bird music that rings out on calm mornings just before the dawn that impresses the hearer with its fervor. They put their little hearts into their songs "in the early hours," long before the dew drops begin to sparkle in the sun's rays.

THE United States consumes a million bullfrogs a year, of a gross value to the hunters of $50,000; and the frog as food is growing in popularity. This means increased pursuit; and as was pointed out in a bulletin of the United States Fish Commission in 1897, "the unrestricted hunting of frogs threatens their practical extinction in all places where their abundance and shipping facilities or proximity to market render the business profitable." It is probably within the observation of more than the person who may read this note that waste places which once resounded with the mellow bellow of the bulls by night are now silent; the frogs have been caught until the stock was exterminated. Up to date, in spite of the recurring story of marvelously profitable frog farms, artificial culture has not been achieved; every story of frog farming, when traced to its source, proves to be a fake pure and simple; or else the farming is found to consist only in catching small frogs and penning them in swamps and ponds until they grow to marketable size. As the frog supply cannot be replenished by artificial means, it is highly expedient that the native production of this valuable resource should be conserved; and one reasonable means to this end would be the protection of frogs in the breeding season, and a restriction of the annual period in which they may be taken. Such a provision has just been adopted by Pennsylvania in a law which makes it unlawful to take bullfrogs between July 1 and November 1.

MR. FOWLER'S paper on the question of public fishing rights in lakes will be read with much interest, because the subject is one which appeals to a vast number of anglers in a very direct and personal way. It is only a truism to say that the hosts of fishermen are multiplying while the waters available for fishing are decreasing, because so many of them once open to the public have come into the control of individuals and associations by whom they are strictly preserved for their own use. In some States all bodies of water exceeding a specified area are by statute declared to be free to the public for fishing. Thus in Massachusetts the law is that "the fishery of any pond, the area of which is more than twenty acres, shall be public." And New Hampshire has the same size limit: "All natural ponds and lakes containing more than twenty acres shall be deemed public waters." The New Hampshire law goes further than this, for it provides that, if such waters are surrounded by private lands through which no thoroughfare gives access to the lake, county commissioners may lay out a thoroughfare to it through a way condemned for the purpose. While, as Mr. Fowler suggests, the operation of the New Jersey law in seizing private waters is akin to the seizure of private lands and has the color of an invasion and confiscation of property, the principles of riparian rights are so complicated that one would be unsafe in foretelling what the courts might ultimately decide in a case like this.

TO THE Audubon Society of North Carolina has been entrusted the duty of appointing special game constables who shall work under the Society's direction for the enforcement of not only the laws for the protection of song birds, but of the game laws as well. In other words, the game warden machinery of the State is controlled by the Audubon Society. Under these circumstances it is believed that sportsmen, both residents and those who visit the State for shooting, will be glad to contribute to the resources of the Society by affiliating themselves with it as members. Membership is of two classes: One of sustaining members, who pay an annual fee of $5, and the other of life members, who pay one fee of $10, with no additional fees thereafter. Prof. T. Gilbert Pearson, the secretary, tells us that a number of Northern sportsmen have already shown their interest in the Society by joining it, and there probably are many others who would be glad in this way to contribute to the work. Prof. Pearson's address is Greensboro, N. C.

IN another column is recorded the agreement entered into by the members of the Millinery Merchants' Protective Association with the Audubon Society and the A. O. U., by which the dealers pledge themselves to abstain from traffic in the feathers and skins of gulls, terns, grebes, hummingbirds and song birds. As the agreement covers importation, the good effects of the pledge will not be limited to this country. This result is a distinct achievement for the bird protectors, the importance of which is beyond computation. It were much to be desired that the example thus set by the dealers of New York might be followed in other great markets of the world where the traffic in wild bird skins is enormous. One Berlin firm has recently placed an order with Russian agents for 80,000 skins of one species; and it is recorded that a single cargo of wings of willow grouse received at Archangel amounted to ten tons.

The Sportsman Tourist.

The Witch of Bay of Islands.

THE Bay of Islands, in which Camp Island and Boundary Rock are situated, is not on the Newfoundland seaboard. Boundary Rock is the outer guard of an archipelago of barren rocks and spruce-covered islands on the Nova Scotia coast; it is the last bit of *terra firma* between Canada and the Irish shore. For an average of two hundred days a year the surf thunders against the northeastern side of the ledge and the rock is dimly visible as a black streak amidst the white spray. The least easterly wind raises a sea which would capsize any boat, no matter how skillfully handled, if the occupants attempted to cross the channel between Camp Island and the breakers. It is only in the months of April and May that any rational human being wishes to set foot on the rock-weed grown slopes and naked ledges.

From the last of March to the middle of May the summer migration is going on along the Atlantic seaboard. Every fine day from sunrise until noon the flight goes on. Wildfowl in millions are making their way from the Atlantic Coast of the United States to their breeding grounds in Labrador, Newfoundland and Hudson's Bay. One who has not seen them can have no conception of the huge flocks of eider ducks, coots, ice ducks, and sheldrakes which pass along the coasts on their way to the alder swamps and marshes of the Northern *Terra Incognita.*

I made it a rule to devote one week of each year to wildfowl shooting, and as I have a prejudice against unnecessary work, I usually hired a man to do my rowing and pick up cripples. Abijah Best was an elderly man who could neither read nor write. He and his family lived in a 15 by 20 shanty which could be reached in a rowboat if the weather was fine, or by a footpath across the bogs when it was stormy. He fished lobsters in the spring, when he was not too lazy to tend to his traps, "lay around all summer," and starved during the fall and winter. His family inherited his dislike for manual labor, and positively declined to attend school. Every winter some misguided individual kept them from starving, and they increased like New Zealand rabbits or English sparrows.

The Captain kept a "general store" and had a comfortable house; his wife ran the store, and possibly that accounted for the fact that the Bests had no dealings there. My guns, cartridges and shooting suit were at the Captain's house; his dog was waiting for the coach at the bottom of the field, and when I alighted welcomed me as an old acquaintance. Poor Kaiser! that was ten years ago; he was a young dog then and one of the best retrievers I ever shot over. No sea was too rough for him, no weather was too cold. He was hideous to look at—most mongrel Newfoundlands are; but he had more intelligence under his disreputable looking hide than the majority of hundred dollar pedigreed kennel aristocrats can lay claim to.

Kaiser's mistress received me at the door. "That dog's been clean crazy since the Captain got your guns down and oiled them this morning; he knows as well as possible you are going out to the Rock. Just make yourself at home as you used to do. Your clothes are laid out on the bed, and the Captain's down at the wharf fixing up the boat with that Bijah Best."

I changed my clothes and walked down to the beach, preceded by the dog. The Captain and Abijah were stowing away the forty odd sea duck decoys. The Captain and I left Abijah to finish stowing the decoys and returned to the house for the guns, cartridges and provisions. He explained it was such a fine afternoon we had better row out to Camp Island and stay there for the night. We could sleep until close on daylight and have the decoys out as soon as it was light enough to shoot. We should be perfectly fresh for the morning's sport, and the row back would not fatigue us as much as if we had to row back next day. I had been there before; I had no wish to row eighteen miles in a day with soft hands (and nine miles home with a sore shoulder), so I gladly assented.

The first time I was out on the rock the Captain took four Queen Anne muskets and a French fusee with him; these weapons were converted flint locks, and fired the old fashion "beaver cap." The breechloader had supplanted this armory, however, and we only took two guns each, a single 10 bore and a double-barreled 12. Abijah had a double muzzleloader, the barrels of which were attached to the stock by a few fathoms of copper wire and some cod line. He carried his shot in a leather bag, his powder was in an enormous ox horn. There was just enough wind to enable us to sail the first six miles. The islands were still wearing a wintry look with patches of snow here and there and masses of ice still clinging to the rocks. The harbor was full of harbor birds, coots, "lords," ice ducks and sheldrakes, but they gave us a wide berth. Every now and then a small bunch of sea ducks (eider ducks) would allow us to get within a dundred yards of them and rise as soon as we got the cartridges into one of the guns; an occasional seal would rise astern of us and watch us for a minute or two before he dived again, and here and there we would see a fish hawk suspended over the shallow water in shore watching for perch or sculpins. It was an ideal afternoon, and the trip itself was worth the thirty-mile drive.

We made the little cove on Camp Island just at sundown. An old sheldrake was in possession, and as he flew out I ventured a shot at him and knocked him down. Kaiser went overboard and brought him in to the landing while we were running the boat between the rocks. As there was no camp on Camp Island and there might be twenty degrees of frost before morning, it behooved us to rig a shelter and collect drift wood for a fire. Part of the island is covered with low spruce trees blasted by the sea breeze and dense as a Mississippi canebrake. We rigged up a tent with one sail in the shelter of the bushes, collected enough wood for the night, "brushed down" the floor of the camp, spread another sail over it and cooked our supper. After supper we lit our pipes and sat in the fire light. Abijah was the most superstitious man in the country. We had very hard work to induce him to spend the night on Camp Island, and I do not think he would stay there alone for a thousand dollars an hour. I had had some experience of the superstitious nature of the older fishermen in this locality; a number of them still believe in witchcraft, and every polling station along the shore contains an island or a rock on or near which Captain Kidd buried money.

In addition to the legends relating to Captain Kidd and his mythical treasure there is another reason why some of the islands are avoided at night. Many of them serve as the last resting place of victims of the frightful shipwrecks which were once so common along this inhospitable coast. A lighthouse keeper I used to know had buried over thirty bodies and parts of bodies during the time he lived on one of the islands. Only a year before the date I write of, the Captain found a man's body floating in the cove our boat lay in. Who or what he was no one knew. He wore a charm with the square and compasses on it and half a dozen people in the district clubbed together and paid the expenses of a decent funeral. Stories like these lose nothing by the telling. Sixty or seventy years ago the section of coast I refer to was practically without roads, there was no telegraph, nine-tenths of the population could neither read nor write, communication with civilization was by schooner, and when the civil power desired to investigate a reported case of wrecking or some transaction closely verging on piracy, they appealed to headquarters and a sloop or gunboat was sent to do the work which one constable can perform at the present time.

It is only three years since the Government broke up the last nest of outlaws at Whitehead, a place within an hour's journey of the Western Union Telegraph Company's headquarters. The story of arson, ship sinking and general rascality which came out at the trials reads like a romance of the eighteenth century Cornish wreckers. The Munroe gang received their deserts and are expiating their offenses in penal servitude, the telegraph line runs from one end of the shore to the other, every settlement has its schools, armed cutters patrol the coast and look after wrecks, the dangerous shoals are buoyed, there is a lighthouse on every important cape, and a steamer calls at the village wharves twice a week.

Superstition dies hard, however, and it may be a couple of generations before the belief in ghosts, witchcraft and "spells" is totally extinct in these regions.

To resume my story, however, we had our supper, Abijah cut up enough drift wood for the night, and about half past nine we turned in. The camp was a comfortable one, the night was calm and frosty, the Captain slept like a boy and I did not wake up until two A. M. As we had eaten some very salt smoked salmon for supper, and as I did not care for black tea, I requested Abijah to go to the spring and fill the kettle with water. The spring was not fifty yards away, but the man politely but firmly declined to go unless I went with him. Under ordinary circumstances I should have been exceedingly angry, but the thought occurred to me that Camp Island might be haunted, and if that was the case I should like to find out the ghost's history. I accordingly picked up the kettle and went to the spring myself. On my return I asked Abijah why he was so reluctant to go, as our usual attendant, Solomon, would have gone in a minute. Perhaps it was the fact that I had employed him in the woods some time previously and given him a prescription to cure a cow of his (which a neighbor had bewitched) that made him communicative; at any rate he hummed and hawed for a while, then, with a glance at the Captain, who was snoring like a trombone, he began his narrative.

You never saw old man Toffts; he died 'way before your time, but maybe you've heard of him. He came to these parts on a 'Merican pirate in the last war (1812). She was wrecked somewhere off Sambro and most of her crew was drowned, but Toffts came ashore on some of the rigging, and the Indians found him and kept him alive. He came down to these parts when the shore was all woods and a man could kill a moose 'most anywheres he was minded to try. You didn't have to take out papers for a bit of land in them days; you built your house where you wanted to and put in your crop and nobody came along to trouble you. Toffts built a place on Toffts' Point, and ran a fence right across from the tall cliff to the other side. It was good land and he fenced off maybe two hundred acres and said he'd shoot anyone who came across the fence without leave. He had great learning and could read print as fast as a man could talk, and he was a great man to work. He must have cleaned up ten acres first and last; the piles of rock he took out are all round the old cellar yet—rocks two men couldn't handle by themselves. He lived there all alone for some time, and then he got a woman who couldn't talk at all. They did all their conversation on a slate and with their hands. She was a real smart woman, as strong as a man, and too bad to look at, and from the day she came there Toffts began to make money. He never had any more than a little "flat" before that; but she hadn't been with him three months before he went out fishing in the flat and came back in a new fishing boat, with new sails, all fresh painted and with lines and gear on board her. He sailed right into the harbor here, and when some of the folks asked him where he got her he says, "I made a trade for the little old flat and I guess I got the best of it, too."

Two days afterward a fellow came around the point and he says that he was out fishing among the islands a day or two before. The fog was very thick and he hears a man rowing along easy, he sings out, "Who's there?" and the answer came back, "The Devil." He didn't take no more notice for a minute or two, then the fog begins to rise and he sees Toffts rowing straight for a big boat which was not a hundred yards ahead of him. Her sails were all set and there was no one on board. Toffts hooks into her and steps over her side, then he sings out, "What do you think of my trade?" and when the fellow rows up to her the little flat was gone. That was enough for him. He saw Toffs had traded boats with the Devil, and he turned his own boat around and put for the shore.

There was five houses round the harbor in them days; there's forty now; and Toffts tried to raise a crew to go fishing with him, but no one would go in such a boat. She would have held four men, but two could manage her. "Very well," says Toffts, "if you men won't come you can stay ashore; but death's as handy to you on shore as it is at sea. There's going to be a burying in this harbor before three months, and it won't be a body washed up, neither."

That very afternoon some boys went into a house and one of them picks up an old rusty pistol, points it at his brother and says, "I'll shoot you." He swore he never laid his hand on the trigger, but the pistol goes "bang," and the boy drops on the floor stone dead. The man that owned the pistol swore he hadn't loaded the pistol; and then the people knew that Toffts was a witch and had put a spell on the harbor.

A few days afterward some men were out on the island and they seen a little man-o'-war close in shore. They rowed off to her and told her there'd been a man murdered in the harbor, and the captain puts in and sends a boat's crew after Toffts. The captain sends for the people and begins to swear them on the Bible, and a man wrote down all they told him, and then read it over to them and they put a cross to it. He examined four or five people and they all told him what Toffts had said; and the man who owned the pistol swears it wasn't loaded. Just then the boat came back with Toffts handcuffed and his feet tied. The captain looks as black as thunder, and says: "Untie that man and bring him up here." Then he reads over what the folks had sworn to and says very stern like: "What's the meaning of this infernal nonsense?"

Toffts doesn't seem at all took back. He says: "This here's quite true; I did say some of them would die ashore. I believe the boy's brother did shoot him accidental, and I was fishing near Halibut Island when the thing happened. Yes, sir, it's all true, but I didn't put no spell on him, and I didn't trade boats with the Devil; and if I had put a spell on him, there ain't no law against witchcraft. What I want to know, sir," says he, "is why I've been put in irons and my feet tied and brought on board this here vessel? I would have come on board quiet and civil, but that young officer slapped the irons on before I could open my mouth to speak."

The captain he got very red in the face, and turned to the men who told him about the murder. Says he: "What the devil do you fellows mean by reporting a murder to me and bring me in here on a fool's errand? First you say Toffts killed the boy and then you all swear his brother shot him, while Toffts was fishing at Halibut Island, six miles away. I've wasted a whole day in getting in this cursed harbor, and listening to your stories about witchcraft, and now I have got to stay here all night or run the risk of knocking the bottom out of the vessel on one of these blasted rocks. Get off my ship, the whole gang of you," says he, "and never you dare to board a King's ship again with a parcel of lies about witchcraft and swapping boats with the Devil, you pack of longshore pirates." Then he turns to Toffts and says: "I'm sorry my officer exceeded his instructions, but they told me you had shot the boy yourself. Go with this man and get something to eat and a glass of grog, and the boat'll take you back where they fetched you from, and here's a guinea to make up for the mistake."

Toffts says he will pilot the man-o'-war out and she needn't stay all night. The captain says yes, and he does it.

That was all the harbor folk wanted to know about him; a man who could bewitch a King's officer and make him believe he hadn't put a spell on the boy was a man to leave alone.

Toffts went back home, and after that him and the deaf and dumb woman used to go fishing together; no man in the harbor would dare set foot in the boat. They used to catch more fish than any four men; and when Toffts pulled his boat up for the winter it was the same with his trapping. If one of the harborers got a mink, he killed an otter; and he had some kind of a scent he used about his traps that tolled all the foxes to them, like them tollers in the boat toles up duck and drakes.

It would be about five years after the boy was shot that that same boy's father comes across one of Toffts' traps with a mushrat in it. He picks the trap and mushrat up and starts down the lake; it was snowing at the time and he had quite a lot of fur with him. Just as he was getting off the ice he slips on a rock and sprains his ankle. There he was, five miles from home, a big pack of fur, no food, and a sprained ankle. He left his load and cut a stick. It took him ten hours to go the five miles, and when he got home his foot was frozen. When he comes to his own door and goes to open it, he hears something rattle. There was the trap with a mushrat in it and a witchwood branch lying in the snow. He never looked at another trap that winter, his feet was so sore.

Next fall there was three or four families come to the harbor, the Captain's grandfather here was one of them; and when the old residenters told them that Toffts was a witch, they laughed at them. The Captain's grandfather was a magistrate; when people went to him for law on Toffts he daren't give it them; but when Tobe Smith's father pointed a gun at him he fined him $10 and sold two nets of his to pay the fine. I was only a little gaffer then, but I can mind the time.

Toffts kept very much to himself over on the point; he used to go to Halifax once a year, and maybe once in three months he'd come to the harbor to buy stuff from the Squire's store. Witches always have money, and the Squire used ter say to him kind o' pleasant like: "Give my respects to Captain Kidd next time you see him, Mr. Toffts, and ask him if there ain't two or three bottles of sherry wine left in that Spanish ship that sunk outside Boundary Rock. I'm a great believer in the Good Book when it says, 'Wine that maketh glad the heart of man.'" Then Toffts would bring the old man two or three bottles of wine the next time he came. Some folks said that he smuggled it; but I've seen the bottles with the shells on them when I was a gaffer fifty years ago.

Things went on very quiet for some time; new people begun to come into the harbor and some of them made friends with Toffts. It was one New Year's day over sixty years ago that the row happened. I wasn't born then, but my father saw it with his own eyes. The deaf

and dumb woman came to the Squire's door for tobacco. Toffts was ill in bed, or she told the Squire he was, writing on paper to make him understand. There was two women that were bad friends in the store, and one of them was settin' on the bench with the dummy. The other one says, knowing she couldn't hear, "You're a well matched pair, you and the witchwife."

She answers back, "I ain't afraid of being taken for her sister, anyway. I don't know which of you is the ugliest, she with half her teeth out, or you with eyes all squinty and red hair."

There'd have been war right there, but the old Squire put his foot down. The dummy never let on she understood, she just spit on the floor and trod on the place. That very evening them two women's husbands were in a camp twenty miles off getting out ship timber. They had some words, and before the other men could part them, they out knives and stabbed one another. They were carried out, and neither of them did a day's work until spring. This set the people near crazy. The Squire had to own up to hearing the women saying them words, and the whole settlement saw the men brought in on a sled. Still the Squire wouldn't give no law, and when the people told the old doctor about it, he called them a pack of fools and told them to shut their mouths.

At that time was a fortune teller at Halifax, and the people got that scart of Toffts they made up $20 and sent Bob Kaiser's father and a man called Hezekiah Tuffin—him Tuffin's Island's named after—to see the fortune teller and find out what they was to do. They were gone just a week, and when they came back the answer they brought was "Fight the devil with fire." The folks took it that the witch was to be burned, and seven of those that had been worst bewitched by Toffts laid out to do it, when the Squire went away to buy his goods in the spring. I've heard my father say that that was the awfullest winter he ever remembered—the two men stabbed, four cows died, and toward spring the wolves came and killed every sheep in the harbor. There hadn't been any wolves for twenty years before that, nor were there any for nearly thirty years afterwards.

Two days before Good Friday the schooner came along, and the Squire went aboard. Then the seven men who were to burn Toffts met in one of their houses and prayed, and swore on the Bible never to give one another away. The man whose boy had been shot was boss of the crowd and he said if the others went back on their word he'd do the thing alone. There was an old log shanty where the new church stands now, and they decided that they would tie Toffts to a stake in the middle of the building and set it on fire at the four corners. It would be quite a job to get him, as his house was built of big logs, he had two good guns, the dummy was as strong as a man and carried a sheath knife all the time.

The only way was to get him away from his own house and take him to the shanty after dark. This was easier than they thought for. On Good Friday afternoon his boat comes round the head with him in it, and he walks up to the Squire's store, leaving the boat on the beach with his gun in it. When he came back, boat and gun were gone. It's the best part of ten miles from the store to Toffts' Point by land, and there was nothing for him to do but walk it. Before he had gone half a mile the men had him tied to a tree, with a gag in his mouth. Then one of them fetched a sled; they put him on it and drew him over to the shanty just as soon as it was dark. They had brush ready piled in the place and a stake fixed in the floor. One of them takes the gag out of Toffts' mouth and said: "If you want to pray, now's your time. You haven't more'n a few minutes to do it in; then there'll be an end of you and your witchcrafts; and may the Lord have mercy on your soul."

Toffts got very white. Says he: "You'll repent this when it's too late, and you're standing under the gallows, on Halifax Common, with the soldiers around you."

As he says this, Tuffin's dog came in and jumped on him. "This here dog," says he, "has better sense than you men."

"Get outer this," says Tuffin to the dog, and with that the dog goes to the door, turns round and says, as plain as a man: "I'm going to the harbor to tell the folks what's going on here, and to bid them get the grave clothes ready for two of ye." With this he claps his tail between his legs and bolts for the next house, yelling "Murder!" and "Fire!"

Tuffin drops down on the floor in a fit, and from way up in the air outside comes the awfullest Voice: "Father, I can't rest in my grave if you murder Toffts. He never shot me."

The men were too scared to speak. Tuffin lay on the floor and foamed at the mouth, and Bill Harrigan was down on his knees praying, when he heard his dead boy's voice. Then the Voice outside said: "Loose him and let him go," and with that the cords drops off Toffts of their own accord, and he kneels down by Tuffin and says: "I'm going to let this man's blood or he'll die right here." He lets him hear a pint of blood, and the man comes to, very weak and scared.

"Now," says Toffts, "I'm going back to the slip and I want my flat and gun fetched where I left them. If they're not back there before an hour there'll be trouble for somebody. Perhaps you men had better walk along of me; nothing will hurt you while you're with me."

They were a badly scared crowd, but the worst was to follow. Just as they got to the road they met the Devil himself in the likeness of the old Squire's black bull. He was standing in the middle of the road. They were right on to him before they saw him. His eyes were like red hot cinders and the smoke was coming out of his mouth like a coal fire.

"Stop!" says he.

"Keep right on!" shouts Toffts, "don't do his bidding."

And with that he breaks a dogwood stick out of the bushes and goes for him. There never was a Spirit or a Devil yet that durst face a dogwood stick. The Devil gave one jump and went into the bushes, and they could hear him stamping and calling "Stop! stop!" as they went by. There wasn't much stop to them until they got to the slip. The first thing they saw there was Toffts' fishing boat with the dummy and two men aboard in the moonlight.

"A nice mess you'd a been in, if you'd burnt me," says Toffts, "with him waitin' for two of you at the slip"—pointin' his finger to where they left the bull,—"and her that's just as bad waiting for you on the water. Now go, and on the word of a man, I'll never meddle with you. The dog hasn't told anybody. You let me go before he could get here; but I'm afraid the Squire will get to hear of it before long."

The Squire did hear of it, but the crowd guessed they'd better tell him the truth of it themselves than let him get the story from the Devil in the likeness of his bull. The day he came back the whole crowd went up to his house and made a clean breast of it. He sends the constable after Toffts, and when he comes he asks him how much of this is true. Toffts says it's all true, but he didn't want no law on the crowd, as they'd promised to leave him alone.

The Squire swells out and says it ain't his business to say whether there's going to be law or not. Says he to the crowd: "I could send the whole pack and bilin' of you up to Halifax to be tried for 'tempted murder, but seein's you've promised not to do it again, I'll be easy with you this once, and make it an assault and battery case. The fine'll be $5 each and damages a dollar. If any of you have not got the money two quintals of codfish will do as well, so long as it's well cured." Turning to Toffts he said: "You told me you didn't want no law in a criminal case; that's contempt of court, that is; and the law allows me to put a fine of $20 on you for it; but seein' this is the first offense and you didn't know no better, I'll be content with putting an injunction on you instead; and the injunction is that you go out of the witchcraft business and stay out of it. I can't fine you for witchcraft, but I can get at you for contempt of court, and every man you bewitch after this it'll be contempt, and cost you $20."

Toffts said he was quite willing to quit if the harborers would leave him alone; and he takes the Book and swears on it. The Squire makes them shake hands all round, and them that had the money paid their fines, and them that hadn't brought in the codfish that day. Toffts kept his word. He made a lot of money and his boy went to the States and made a lot more. When the dummy died the boy went and fetched the old man. Nobody dare live in the old house, so it rotted down.

Two years ago his grandson came down here in a little steamer of his own; he was awful rich and he spelt his name differently. He was cruising about the islands for nearly a month. Maybe he thought his grandfather buried money out there. He gave the parson a hundred dollars for the new church; and his wife, a fine lady with diamonds on, bought all the old plates and dishes and spinning wheels she could get hold of. There was one of the men who were going to burn his grandfather still living, and "on the poor." I'm blessed if he didn't go to see him and get him to tell the story. He gave the old fellow two suits of clothes and $10 in cash, and had him out to dinner on the steamer. Folks say, though, the Devil still lays around the islands after dark asking men to trade boats with him, and offering to show them where old man Toffts buried his money. I'm a poor man and ain't got no learning, and I'm mortal afraid to meet him.

The morning was breaking, and the Captain's snores ceased. Abijah proceeded to boil the kettle and get breakfast ready. Kaiser uncoiled himself and proceeded to worship the guns in anticipation of the day's sport. I was in a brown study, thinking of Charley Tuffts, the actor (who under another name is known from one end of the world to the other), his charming little wife and their little deaf and dumb boy. I had dined with them on their yacht, the White Witch, on more than one occasion during the last summer, and Mr. Tuffts had told me that his grandfather and father had lived in eastern Nova Scotia. He had omitted, however, to tell me that the founder of his family had terrorized an entire community for years, and come within measurable distance of being burned at the stake as a "witch" in 183—, only saving his life by a clever bit of ventriloquism.

When the day's shooting was over I asked the Captain if he had ever heard the story.

"Why, yes," he replied, "you couldn't get Abijah Best to go near Toffts' Point after dark for $20. I can just remember the old man myself, and how he used to cure warts. His son went into the railroad business and made money and his grandson is a play actor in the States. He owns the old homestead, and sends me the money to pay the taxes on it every year. I gave him an old brass blunderbuss with a bay'nit to it that used to belong to his grandfather, and he sent me this gun, that I had to pay $20 duty on, as a present, he was so pleased to get the old thing. It's a queer thing how some of those fellows that go to the States make money and get on in the world, isn't it?"

I thought of the grandfather curing warts in his old age and the grandson visiting the scenes of his "witchcrafts" in a steam yacht, and I agreed with him that it was.

EDMUND I. L. JENNER.

NOVA SCOTIA.

Talk not of the idleness which is full of quiet thoughts. Is it idle to be up with the day—to feel the balmy coolness of a rich May dew—to watch the coming splendor of the sun—to see the young lambs leap—to hear singing, a mile above us, the strong-throated lark, the spirit of the scene—is this idle? Yet by some 'tis called so. The sluggard who wakes half the night to lay lime-twigs for poor honesty the next day; the varlet who acknowledges no villainy on the safe side of an act of parliament—he calls one a loiterer and a time-killer; be it so—it does not spoil the fishing. Idle! why, angling is in itself a system of morality!—Douglas Jerrold.

To the ordinary Englishman who shoots, the caliber of the sport open to any citizen of New York who cares to buy a rifle and pay for a license is something of a surprise. The deer are so numerous that it is estimated that in 1902 more than 6,000 were shot by licensed sportsmen within the State forest domains. The rate of cost for deer-stalking in the Scotch Highlands is reckoned roughly at £40 per stag. Consequently, on the British scale, the sportsmen of New York State enjoyed what would, in these islands, represent £240,000 worth of sport with deer alone.—The Country Gentleman (London).

Natural History.

The Intelligence of the Wild Things

Editor Forest and Stream:

E. P. Jaques, in FOREST AND STREAM, May 9, 1903, makes the following statement:

"How much of intelligence that is necessary for bird or animal to maintain life is taught by the parent bird or animal? None."

Then he states further: "We have chickens that were taken from under the hen as soon as they were out of the shell. Drop a crumb before them and they pick it up; that is the first and they do it very naturally."

Why did Mr. Jaques take these chickens into the house and act the mother to them? Why didn't he turn them out doors and let them go it alone, if they do not need a mother's care and teaching? Simply because he knew that they would perish if left to themselves so early in life. He would not be afraid to turn them out with the hen.

I want to congratulate Mr. Jaques because of his peculiar breed of fowls that produce chicks that will pick up crumbs as soon as they are out of the shell. All the chickens in the world, except his, absorb the yolk when born, and do not eat food for twenty-four hours. The poultry books and papers claim that twenty-six hours after the chick is out of the shell is soon enough to begin feeding. Mr. Jaques' chickens remind me of the Kansas farmer's cucumbers. He planted the seed, then started for the house. Finding that the vines would overtake him, he broke into a run, but he was too late. Feeling for a knife to cut away the tangle of vines he found a cucumber had gone to seed in his pocket. When I read this story I thought it hard to beat, but Mr. Jaques' chickens can "take the cake," or crumb.

While farming I handled thousands of chickens hatched under hens. When I remember the time and patience expended by myself and help in teaching motherless chicks to eat, I envy Mr. Jaques the possession of his automatical superintellectual breed of fowls.

Mr. Jaques does not seem to understand the questions under discussion. I will quote from his paper to prove this:

"A bird flies by outside the window and with a warning note they squat and 'freeze,' as Seton Thompson puts it. A hat thrown across the room produces the same result. The mother never taught them that, as she is still on the nest hatching the rest of the eggs." How fortunate Mr. Jaques is when he desires to prove a phenomenon. His chickens, unlike other chickens, are active when first out of the shell, ready to assist him in proving his argument. And then, too, that accommodating bird that undoubtedly had heard that the chicks were out of the shell and flew by the window just in time to prove the statement that was to appear in FOREST AND STREAM. However, the quotation is useless, for no one disputes that fowls inherit fear and many other attributes. The question is in relation to the mother's ability to teach her young the enemies to avoid. Fear is inherited by all, or nearly all, young animals. The human family is no exception to the rule. But I do not believe that the speech of the lower animals is inherited. It would be just as unreasonable to claim that human speech is inherited.

Mr. Jaques claims that when young roosters attempt to crow the old rooster drives them away. This statement shows Mr. Jaques' superficial method of examining a question. I shall have to plead guilty of falling into the same error. When I begun my farm life I saw the old roosters drive the young roosters away, and I wrote to a farming paper: "It would seem that old cocks try to prevent young cocks from learning to crow." Careful study of fowls later caused me to change my mind. I was obliged to swallow my former statement, although it was a bitter pill. I, like hundreds of others, hate to be caught in error, especially when that error appears in cold type over one's name. By a careful study of fowls through the year, I noticed that the old roosters did their crowing in the morning, until young roosters were old enough to crow. Then they changed their habit and would crow at any hour of the day. It did not take me long to find out that the old roosters were giving the young ones lessons. I also found that it was jealousy that caused the old roosters to drive the youngsters away, and not a desire to prevent them from crowing. That was knowledge acquired years ago. During my eighteen years of hermit life that knowledge has been verified every year. On my road to the city, in the edge of the woods, I walk through a flock of chickens numbering several hundred. These chickens run at large with their mothers. The old roosters do not crow through the day until the young roosters are old enough to learn. When the young roosters are good crowers, late in the fall, the old ones resume their habit of crowing in the morning, and the young imitate them.

It seems to me that I should be thoughtless and witless if I could not comprehend such a simple problem.

Some years ago my attention was called to a hen that had adopted a litter of kittens. When I first saw them they had got their eyes open. Every day I spent an hour or more watching the old hen and her strange family. The hen would let the cat suckle the kittens, but when they were through she would drive the cat away and hover over the family. The cat was a tramp that fed with several others on swill brought from the city for hens and hogs. As far as I could see, the cat was willing to let the hen rear her kittens. The whole affair seemed natural and was as intelligently arranged as if it had happened to human beings. I carefully noted the actions of the old hen and kittens. The kittens soon learned the calls of the hen, and the hen certainly understood the calls of the kittens. The hen would wander into the bushes, scratching for insects which she ate without offering them to her adopted family. When the kittens wanted rest and sleep, they made a thin cry and the hen would immediately hover them. If they wanted food their cries sounded to me like the call to hover, but the hen understood and led them to the milk dish. If the dish was empty she led them to the hen yard and looked for bits of meat or bread. If she failed to find food, she went to the house door and called until some

one of the family brought out milk. Before the cat deserted her family, the hen would lead the kittens to a flat ledge where the cats sunned themselves. The cat usually hunted up the hen in the early days, for a relief from an overflow of milk. Several times I saw the hen hunt for the cat when the kittens were hungry. When the cat weaned the kittens the hen seemed to understand that she must look to the family for food.

I noticed that the kittens, as they became older, failed to play like kittens taught by a mother cat, and their voices remained weak and thin. In many ways they showed a lack of cat teaching. On the other hand, they adopted some of the ways of the hen. They would scatter like chickens and would scratch in imitation of the hen. I did not see them eat the insects which they found, excepting grasshoppers. Mr. Parsons was a practical man and wanted eggs, so he killed the kittens. If I had known what he intended to do I should have offered to buy the lot for further study. I remember that I sent FOREST AND STREAM an account of this case—I think a clipping from a local paper. The intelligence of the cat, hen and kittens, under strange conditions, was so evident that a dull observer could not make a mistake. The cat reasoned that the hen would take good care of her family, and she was contented, like some human mothers that give their babies away. The hen understood fully that the kittens would not eat the insects which she found, and reasoned that she must look for food in another direction, and intelligently acted upon this reasoning.

Mr. Jaques seems to be unfortunate in his home observations of the wolf. He claims to have been among wolves all his life, and yet could not get near enough to see how they carried their tails, and he questions the statements of others. If he would use his thinking powers he might come to the conclusion that there were other localities outside of Kansas where the wolf could be studied at close quarters. In my boyhood days I saw wolves frequently in the State of Maine. My father sold out his business in the town of Oldtown, where he sold goods to the Indians and lumbermen, and moved into the wilderness. Bears, wolves and other wild things ranged around the new home. Often I have seen wolves skulking around the sheep yard at night time, and once a wolf chased a sheep into the barn. Six feet below the floor there was a hog pen. The sheep jumped into the pen and the wolf followed. When the wolf found he was penned he acted like a whipped cur. He hugged his tail between his legs, something I had never seen before.

Our cows pastured on the intervales in the woods, and it was no unusual thing to meet a bear or wolf in the old logging road when late in the afternoon we were searching for the cattle. At this period there were no deer in that part of Maine. Years later the wolves retreated to the northern wilderness and deer returned in great numbers.

In the fifties, while in the woods for Nathan Frost, of Orono, I saw wolves frequently. In the fall six of us went in to build a camp and hovel. While we were taking our supplies from the bateau to the camping ground we often met a very large wolf in the path. Sometimes he would refuse to leave the path. After we had leveled a spot for the camp, and while we were eating dinner, this wolf walked to the middle of the cleared spot and showed his teeth. Cal. Bumpus, the boss, threw an ax at him and he left, but did not hurry. He, and all the wolves of my observation, carried his tail hanging down naturally. I except the one in the hog pen and those I have seen in traps, and young ones at play in captivity that raised their tails.

Inquirer writes that he would like to know how I know that the song sparrow is teaching his year-old boy to sing? I answered this question fully in one paragraph of my paper, but for Inquirer's benefit I will repeat. I stated that the old male would sing the mating song often enough to give the young male a lesson. That he did not sing to the females which he brought into the woods, "or sing the mating song when alone, but instead he sung a low twitter by the hour." I should be dull of comprehension if, after fourteen years of this exhibition, I could not understand what was going on in my dooryard.

Inquirer also writes: "He speaks of a song sparrow in his dooryard which has visited the place for fourteen years. I should like to know how he knows that it is the same song sparrow?"

This is a fair question, and deserves an answer in full. I have just read the revised proof of this sparrow's history, which, with other natural history items will appear later in book form; therefore I can only give a limited answer. I know this little sparrow by his individuality. Then, too, he is the only sparrow that visits my dooryard, excepting now and then when he brings in one of his children. Again, he was wounded fourteen years ago in the wing and the short feathers over the wound persist in standing up after each moult. This sparrow is well known to hundreds of summer visitors. A Governor of the State and his wife formed his acquaintance years ago.

Inquirer wants to know why the song sparrow's wife will not consent to live in the woods? If he knows anything about the life of this sparrow, he must know that it is a bird of the farm and field. The females select the nesting site and rear the young; the male sings but does very little toward the support of a family. This sparrow's wife sticks to the fields and will not nest in the woods, although a former mate, that was shot, did rear one brood in the woods near my cabin.

From my boyhood days I have been interested in natural history, and for the last eighteen years I have spent the most of the time in careful, and I trust intelligent, observation of the wild things about me. I feed the birds and supply nesting material of various kinds. The birds have learned to know me and are fearless when I pry into their domestic affairs. As the years go by I am more and more impressed by the close relation between bird ways and human ways. Courtship and marriage are as variable and interesting as in the human family, but there is no divorce in the bird family. Once mated is mated for life. The male birds return from the south about a week before the females and young. The old females assist the young females in selecting nesting sites, which usually are in the immediate locality of the mother's nest. The mother looks after the welfare of her year-old daughters; in this way family ties are maintained. I see this trait in many birds that visit my cabin, such as catbirds, woodthrushes, veeries, ovenbirds, robins, towhee buntings, chestnut-sided warblers, black-throated warblers, redstarts, chickadees and song sparrows. It proves that blood is thicker than water in the bird family as well as the human family. I have seen mother birds assist in nest-building in several instances. Years ago I saw this trait in the caves swallow. The young birds would begin a nest on the plain clapboards, which would fall before it was half built. The old birds took a hand and induced the young birds to select a secure spot. I have known the old bird to use force to keep a foolish youngster from a dangerous nesting site.

My reason for criticising Mr. Burroughs' article in the Atlantic Monthly was stated in my first paper. His positive statements, so plainly at variance with the sentiments found in all his books, will be quoted by numerous writers, and will furnish the munition of war to hundreds of scribes who are wholly ignorant of the questions in dispute. Mr. Burroughs has eloquently described hundreds of intelligent acts of the lower animals. I have long been an admirer of his brilliant descriptive powers, and I would rest satisfied if I possessed half his ability to describe what I see in my study of nature. But the intelligence of wild things is a fixed fact, and the sentiment is growing rapidly with the intelligent public. Nature studies are now more common in our schools, and the lecture field is overrun with students of nature. Instinct is no longer king of the wild things. He is deposed and must take his place with the commoners.

M. A. WALTON, "Hermit."

GLOUCESTER, May 19.

What Are They?

Editor Forest and Stream:

Last fall, while taking a stroll with my hound through a rather wild strip of woods, I ran across a fox hole which looked as though it had sheltered a family of foxes that summer. I thought no more of the find for a time, but this year, when I was shown a young fox, one of a litter of five, which had just been dug out, I thought that possibly the hole I had found might also be inhabited.

One morning recently my brother and I started out to find it and see if it was occupied. We easily reached the place, which was on the side of a steep hill and in the middle of a patch of catbriers. The entrance was directly under two fallen trees. These were crossed and evidently had been utilized by the foxes as a means of concealment of the entrance of the burrow, since part of the branches were under the pile of dirt that had been taken out of the hole. The trees, therefore, had been there before the hole was made.

There were no signs of habitation around the outside, but I was very anxious to dig it out as I had never seen the inside of a fox hole.

This promised to be a difficult job, as the space was a small one and the only tool we had was a sod cutter that we had brought along with which to kill snakes. We had not come with the intention of digging; merely to see if the hole was inhabited. We intended to excavate after we had satisfied ourselves as to this.

However, we began, and after a while got the trees out of the way and reached the hole itself. This went into the hillside horizontally for about two feet and then took a sharp turn to the left and from there went straight ahead, it was very hard digging, as the ground was full of large stones and the sod cutter was not of so much use to us as our hands.

Where we started the hole was about six inches under the ground, but rapidly deepened till it was two feet below the surface. It kept at this depth for a while, going upward, following the slant of the hill. Finally, after cutting many roots and removing many stones, we reached a place about eight feet from the entrance, where the burrow forked; it was now a question which fork to follow. I said the right; so we fell to work on that one. We had gone a short distance when my brother brought a stick about five feet long and pushed it into the hole. He drew it out and examined it, and on the very end were a few hairs. This evidently was the right way to the nest. We dug on vigorously, and suddenly we gave a start, we had heard a noise from the hole—there was something there.

I leaned down and peered in, and could see a lot of leaves, evidently a nest. After going a little further we pushed the sod cutter far in and pulled down the nest, which seemed to be up on a ledge. At first nothing came, but all at once I saw a dark object on the bottom of the hole; it was crying. We pushed the flat blade of the sod cutter under it, and slowly pulled it out. At the first glance it resembled a new-born kitten, it was blind and apparently a few hours old, and was a trifle short of four inches in length. It was dull black, with round ears and noticeably large claws.

I looked back into the hole again and saw two more. We took these, and were examining them when we heard a rumbling noise. Like a streak of lightning something darted through the chamber where the kittens were found into a third branch of the hole. No one could see what it was. We tried to dig it out, but we struck an immovable boulder and our progress was stopped.

The identity of the young ones was and is a mystery. They certainly kept us guessing on the way home. Every animal was suggested, from a bear to a rabbit, but my brother and I were sure they were skunks.

Fortunately for us there was at home a cat that had kittens, but they were almost weaned, and we had our doubts about the old cat caring for the little beasts. We took away the kittens and put in the small animals. The cat smelt them and turned them over a couple of times, and then left the box. We were very anxious about them, but left them there, and an hour afterward, when we returned, the youngsters were peacefully taking their dinner and the old cat was perfectly contented.

For one day they were with their new mother, but it was feared that she might not have milk enough to raise them, as her other kittens were so old.

Happily for us, that very night another cat had three kittens. These were promptly drowned and the unknowns now had another mother. With this cat they have thriven from the 10th of May (the day we found them) till the present time. They began opening their eyes one week after we got them, May 17.

At first they were thought to be gray foxes, and some still think they are, but now that they are two weeks old the general opinion is that they are raccoons. They have turned a little lighter color, the head is a little brown, decidedly so behind the ears, and there is a slight suspicion of their having rings around their tails.

But the strongest argument against their being 'coons is that a 'coon, so far as I know, never breeds under ground. They make their nests in hollow trees or stumps, but friends, who have lived for years in the country, say that a 'coon does not breed under ground.

Perhaps the readers of FOREST AND STREAM can throw some light on this question.

MILFORD, Conn., May 25.

The Antelope's Power of Scent.

Editor Forest and Stream:

I see by the last issue of your paper that Juvenal has "heard deer walk." In the remarks which I had made some time ago in which I said I had never heard a deer walk, and to which, I presume, Juvenal refers, I neglected to say that all of my experiences among deer had been in localities where there were no deciduous trees, and consequently no leaves on the ground at any time, which might account largely for the silent movements of deer which have come under my observation, and it might be safe to presume that some of those deer which he refers to as having heard walk were in dry leaves. Certainly the one he refers to as having heard walking at a distance of 200 yards must have been tramping on some very noisy substance. Thus it is that different experiences are often had amid different surroundings and conditions, which, if they were all understood, would often save long discussions.

For some years I tried to determine for myself, by observation, a fact concerning antelope, and am still not quite satisfied, and would like to hear the opinions, based on experience, of some FOREST AND STREAM readers. I almost decided for myself that an antelope could not scent a hunter.

Of course, all will agree that they do not depend upon their nose and ears to detect danger to the same extent that deer do, but rely chiefly upon their eyes, while exactly the reverse is the case with deer, and in all my stalking them I never had my presence betrayed by their scenting me, although often the wind appeared directly from me to them. I never talked to anyone about it until once I was out on a hunt for antelope with an old hunting and trapping companion, who was experienced as well as observing, and one evening he came into camp and said: "Do you know I have often doubted whether or not an antelope had the power of scenting danger, but now I know they can't." He was one of these very positive people, and once he was thoroughly convinced of a thing, no power on earth could change him. He then told me of the occurrence of the day in which he was so thoroughly satisfied that they were unable to scent him, and it further strengthened my belief in that direction.

EMERSON CARNEY.

MORGANTOWN, W. Va.

[The suggestion as to antelope made by Mr. Carney is new to us and very interesting, and it is hoped that anyone who has made observations bearing on the matter will give FOREST AND STREAM readers the benefit of them.]

Philadelphia Zoological Society.

THE Thirty-first Annual Report of the Board of Directors of the Zoological Society of Philadelphia has just been printed. It consists of the report by Mr. Arthur Erwin Brown, secretary, of the finances and condition of the Society, to which is added the results of the investigations by Dr. C. B. Penrose, of the pathological conditions of certain animals which had died during the year.

At the close of the year the membership of the Society was 1,851. The admissions during the year were 252,555, to which is to be added 125,000 tickets issued for the benefit of pupils of the public schools. The total receipts for admissions for the year were $32,476.55, an increase over the previous year of nearly $7,000. August was the month of greatest attendance, nearly $6,000 having been received, and February that of the smallest attendance, only about $750 having been received. The receipts for May, 1902, were $1,500 more than for May of the previous year; those for August, 1902, more than $2,000 than in August, 1901. The increase of admission through the year was steady.

During the year 2,450 animals were exhibited, and of these 51 species had never previously been shown in the gardens. Two very small American deer, one from an unknown locality in the Southwest, and the other from Tampico, Mexico, are now regarded as *Mazama texana,* Mearns; found from southwestern Texas to the southward.

A considerable number of animals were born in the garden, of which the most interesting by far were two bears, hybrid between a male grizzly and a female black bear. Unhappily these were destroyed by the mother immediately after birth. They were born February 10. Three black bear cubs, born February 6, were cared for by the mother until February 17, when they also were destroyed.

A series of important experiments have been carried on by Mr. Brown in the effort to determine the hygienic effect upon many tropical and subtropical mammals of free access to fresh air and of exposure to variations of temperature, greater than usually permitted in zoological gardens. Certain African monkeys were exposed to outdoor air daily during winter, except in stormy weather, for periods ranging from ten minutes in very cold weather

to five hours in moderate weather. These monkeys remained in perfect health, with the exception of one, which died from disease of the liver, in no way related to the exposure. A number of other similar interesting experiments, all of them successful, have been tried. Generally the effort was made to keep down the temperature of the larger buildings, and before the end of the winter considerable variations were allowed to occur. Thus in the antelope house a temperature of 48 degrees was reached, in the carnivora house 43, the monkey house 42, and the elephant house 38 degrees. An average maximum for all these buildings was not much more than 60 degrees. In no case was any injurious effect or discomfort apparent among the animals, which have been unusually free from sickness. It is to be recalled that the large orang, "Chief," which lived in the collection from November 16, 1893, to November 3, 1897, had been in the open air, with snow on the ground, before reaching the garden. After his arrival, less attention was paid to the temperature of his cage than has been the case with any of the other anthropoids owned by the Society, and it often fell to 60 degrees or less. He was always healthy, and his death was caused by intussusception.

These observations suggest radical changes in our methods of treatment of many species in the direction indicated.

Dr. Penrose's investigation into the pathological condition of the animals which have died in the garden are extremely interesting, and promise much in the direction of prolonging the life of captive wild animals.

As might be expected, tuberculosis was by far the most common disease, this trouble having claimed no less than thirty specimens, of which twenty-five suffered from general tuberculosis. Kidney trouble was also common, and the various forms of diseases of the lungs and their connected organs claimed a number of victims.

The number of additions to the Society's collection was large, and on the whole the condition of the Society shows most gratifying improvement over the previous year.

Milliners and Bird Feathers.

To settle the differences between the Audubon Society and the millinery trade over the varieties of birds which should properly be used for hat trimmings, the following agreement has been entered into between the Millinery Merchants' Protective Association, the Audubon Society of the State of New York, and the American Ornithologists' Union:

The members of the Millinery Merchants' Protective Association hereby pledge themselves as follows:

To abstain from the importation, manufacture, purchase, or sale of gulls, terns, grebes, humming birds, and song birds.

To publish monthly in the Millinery Trade Review a notice informing the millinery trade in general that it is illegal to buy, sell, or deal in gulls, terns, grebes, humming birds, or song birds, and that no means will be spared to convict and punish all persons who continue to deal in the said prohibited birds.

To mail printed notices to all dealers in raw materials, importers, and manufacturers of fancy feathers and to the millinery trade in general, that all violations of the law will be reported to the proper authorities.

To notify the millinery trade by printed notices as to what plumage can be legally used.

It is further agreed on the part of the Millinery Merchants' Protective Association that on and after Jan. 1, 1904, the importation, manufacture, purchase, or sale of the plumage of egrets or herons of any species and of American pelicans shall cease, and the said birds shall be added to the list of prohibited species mentioned above.

It is understood and agreed that the restrictions referred to in this agreement as to gulls, terns, grebes, herons, and humming birds, shall apply to the said birds irrespective of the country in which they may have been killed or captured.

The Audubon Society of New York State, on its part, hereby agrees as follows: To endeavor to prevent all illegal interference on the part of game wardens, with the millinery trade; to refrain from aiding the passage of any legislation that has for its object restriction against importation, manufacture, or sale of fancy feathers obtained from domesticated fowls, or of the plumage of foreign birds other than those specifically mentioned above.

It is agreed by each of the parties that this contract shall remain in force for a period of three years from the date of its execution.

Give me the clear blue sky over my head, and the green turf beneath my feet—a winding road before me, and a three hours' march to dinner—and then to thinking. It is hard if I cannot start some game on these lone heaths. I laugh, I run, I leap, I sing for joy. From the point of yonder rolling cloud, I plunge into my past being, and revel there, as the sunburnt Indian plunges headlong into the wave that wafts him to his native shore. Then, long-forgotten things, like "sunken wreck and sunless treasures," burst on my eager sight, and I begin to feel, think, and be myself again. Is not this wild rose sweet without a comment! Does not this daisy leap to our heart, set in its coat of emerald!—Hazlitt.

A little bird sat on a telegraph wire,
And said to his mates, "I declare,
If wireless telegraphy comes into vogue
We'll all have to sit on the air."
—London Fishing Gazette.

Take inventory of the good things in this issue of FOREST AND STREAM. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

That Brotherly Bunch.

Editor Forest and Stream:

Your entertaining contributor, Mr. Sandy Griswold, in a recent number of FOREST AND STREAM, makes allusion to a "brotherly bunch" that was "handed out" by Rev. Newton Mann, in a sermon preached by him, to a brother minister, the Rev. Robert E. Lee Craig: Reverend Mann is quoted as follows:

"The sorry spectacle is still presented in these days of a piety which has no affiliation with morality; a service of God without obligation of kindness to His creatures. Was there ever a more sorry illustration of this than the story of a prominent Omaha minister who administered the sacrament and christened babes out in the State a few days ago, and then amused himself on the way back by shooting song birds?

"For bringing into town the bodies of twenty-two meadowlarks, he was arrested and fined $110, and is unable to see any wrong in his course, only regretting the personal inconvenience to which he was subjected.

"It is such things which show how far the shadows of the Dark Ages still reach down among us, and stealing over us disturb not the least our equanimity."

Never was an objurgation uttered that fitted more aptly the man who uttered it. Every line of this truly Christian "brotherly bunch" fits the Reverend Mann like a kid glove. It is truly a "sorry spectacle" when a man wearing the garb of a minister of the Gospel, who presumably "administers the sacrament and christens babes," seizes upon so flimsy a pretext to hurl mud from the pulpit at a brother minister.

I take it that the Reverend Craig is a Southerner, judging by the longest end of his name. However the meadowlark may be regarded in the North, in the South he is a perfectly legitimate object for the sportsman's gun. It is true he is too easy a mark when on the wing to interest skillful shots, but even these do not disdain the meadowlark when other game is scarce. But he is a prime object of pursuit for the beginner and the boy gunner. The bird is nearly as large as the partridge—American partridge—*Ortyx virginianus,* vide Audubon—and makes a most excellent dish for the table.

As to the meadowlark being considered a "song bird," it is probable that the idea never occurred to anyone except the Reverend Mann, and that only for the purpose of affording occasion for his own dulcet song of detraction of his fellow of the cloth.

The meadowlark very infrequently utters a short and melancholly ditty, which the negro humorists paraphrase into the words "laziness kill y-o-o-u-u," which constitutes his only claim to the character of a "song bird."

As to associating the idea of "immorality" with the shooting of meadowlarks, the absurdity of the suggestion is its own refutation.

A "sorry spectacle," indeed, that such an incident should be made the occasion of dragging religion into the mire of vilification of a brother.

The Reverend Craig certainly had enough of the buffetings of evil fortune, when, innocently depositing his bag of meadowlarks on the station platform, he was engaged in friendly conversation by the complacent game warden until the train arrived and he was about to step on board, to be then informed that he had violated a local game law, of which he was ignorant, and haled before a magistrate and heavily fined; I say he had abundant grounds for "regretting the personal inconvenience to which he was subjected" without being made the recipient of a shower of mud from his "brother in the Lord."

"It is such things which show how far the shadows of the Dark Ages still reach down among us" * * and do "disturb the equanimity" of some of us.

If the Reverend Mann's congregation are edified by such Gospel as that, the Lord help him and them.

COAHOMA.

MISSISSIPPI.

The Whooping Crane I Missed.

SPEAKING about the last shot I ever got at a whooping crane, don't you always, when reviewing your many trips afield and the numerous incidents connected with them, try to decide in your minds which shot, of all the thousands you have made, you most regret missing? Anyway, I do. Such reflections bring back to me a flood of happy memories of the days and nights I have spent amid nature's best scenes, and of almost every game bird and animal in this great country of ours. I can close my eyes now and see them from the Aroostook and Adirondacks to the cane brakes and teal swamps of Louisiana, from the gulf to the St. John's country in upper Canada, all through the great plains land of the Dakotas and Nebraska, from the crystal lakes of Minnesota, through the mountains, to the Suisun marshes in California, and how they stood, ran or flew among their surroundings, for I have shot at them all, except mountain sheep, and I'll get one of them this fall, and whenever I think of those old day joys I get feverish with the longing for just one more trip.

Sometimes I think my most regretted miss was when I failed to down a cow moose across a three hundred yard stretch of bog up in Maine with an old time single breechloading Sharps rifle, while hunting with my beloved old friend, Dr. H. W. Carpenter, of Ohio. Then I think it was the big wildcat I failed to injure up in the wilds of Paulding county in the north part of the Buckeye State, while deer hunting with Lon Oliver and John Perry. I was standing on the slanting trunk of a fallen monarch that had lodged against another of his kind, thirty feet above the ground, watching a runway, when the bobtailed feline walked right under the log beneath me, and I missed it clean, with one of those old-fashioned double-barreled rifles, one barrel on top of the other, and which were manufactured forty years ago by an old gunsmith at Painted Post, New York. Again it is a big male swan—and to-day I wouldn't shoot one for a hundred dollar bill—out in Deuel county, this State, in March, 1894, when the Barrister and I made the biggest bag of canvasbacks and redheads ever brought into Omaha in either ancient or modern times; a pesky singing coyote way up on the Little White River in South Dakota, when the Merganser Club was encamped on the Lake Creek marshes; a flamingo on the St. John's River, Florida, or the albino dove I got two cracks at one year ago last summer, while out plover shooting with the selfsame Barrister—and so on and so on ad infinitum, for my old comraderie of the field, I must confess I have made many, many misses, yet you can take it for granted that my kills have been leagues and leagues in excess of them.

Now I am almost positive that the shot I most regret missing, all circumstances considered, or at least the one that occasioned me the keenest chagrin and disappointment, was that out in Deuel county in the spring of 1894. It was on a wild and blustery March evening and I was on my way home to Hamilton's ranch, together with Hamilton himself, in his little old single horse wagon, after a day with the ducks on Lake Maverick. We had traveled probably a couple of miles from Maverick's rice-fringed shores and the light was growing uncertain, when we descried three whooping cranes standing in the center of a little alkali pond off on the prairie about three hundred yards from the wagon trail. The great white birds loomed up as big as ostriches, and, bubbling over with excitement on the instant, I insisted on undertaking to get a shot at them.

"It's no use, Sandy," declared Hamilton, as he pulled up his little rat of a tan colored cayuse, "but if you want to try it, all right. I'll wait for you. But you see there isn't a particle of cover, and you might as well try to sneak on the man in the moon. We might as well drive on."

But with those three big white birds—last remnants of a noble race—standing out there in the shadows like marble images, Hamilton might as well have argued with the gentleman he referred to of lunary habitation.

The wagon at a standstill, I was out in a jiffy, and, pulling off my cumbersome ulster and throwing it over the ducks in the back end of the wagon, I took my gun from Hamilton's hands, and, slipping in a couple of Ideal shells loaded with 1s, I got down on all fours and started on my laborious and almost hopeless journey toward my quarry. On my hands and knees I traveled fully one hundred yards, without attracting, apparently, even the slightest attention from the birds, but fearing to advance further in such a conspicuous attitude, I fell flat on my belly, rested a moment, and then continued on my wearisome way. I was breathless with anxiety and almost tired to death with my tortuous mode of locomotion, but, spurred on by my success thus far, I crawled on, writhing over the stunted grass, straggling yucca spikes and sandburrs, like some fabulous serpent of an unknown realm. I took advantage of every tiny hillock upthrown by the previous night's industry of mole or long-eared plains mouse, every bunch of thin tumble weed, roll of Russian thistle, or unbrowsed grass, every old wind-filled buffalo wallow or blow-out, depression of any kind or character, until I actually succeeded, in an incredibly short space of time, in getting within sixty yards of a trio of the grandest birds it had ever been my good fortune to see—grander because they were even then so scarce that the sight of a small flock flying way up beneath the blue arch once in a while was a treat but rarely enjoyed. So it will not be difficult for sportsmen to define the feelings which thrilled me. Like dreary hours seemed the few moments it had taken me to reach this point of vantage, and when I peered forward and saw my great birds standing there, so white and still that I could almost catch the light from their keen black eyes, it seemed to me more like a dream than a reality, and I took up as little time as possible in catching my breath and calming myself for the shot.

The nearest bird to me was an old male, and a tremendous big one. I could descry, even in the lowering light, the crimson crest, the greenish dagger-like beak and staunch, lead-colored legs. He stood fully five feet from the alkali moisture to his carmine crown. He had a monstrous body, nearly twice as large as his nearest companion, and great flowing plumes overfell his sloping flanks. It was only here, on the barren plains, between the ghostly sandhills, that one could hope to see such a magnificent creature of our western solitudes. I certainly never before saw such a bird and never expect to again.

There was no use in trying to shoot in the cramped condition in which I had found myself. I was nervous with hope and fear and all in a tremor from my hard journey from the wagon. Quickly, however, I formed my plan, and once determined I summoned all my powers, all my control, and jumped to my feet, expecting to lay the big bird dead, even at that long range, in his tracks before he could even raise a feather of those mighty pinions.

But alas! quick as I was, the old whooper was quicker. They had evidently discovered me before I made this final move, and the very second my prostrate form was in motion, there sounded on the air a note of ringing distinctness, a note like no other I had ever heard before, it seemed to my wrought up fancies, and one I will not try to imitate with letters, and three pairs of enormous white sails were spread to the wind, three long necks were outstretched, and three clouds of snow went climbing heavenward with a speed that made my heart hop into my mouth like a redhot cannon ball, and palsied my fingers, and struck me dumb. Shoot!

On my life I tried to! But instead of a standing target, it was a swiftly flying one, a traget slicing off the thin cold air at the rate of a mile a minute. It seemed to me, when I did touch the trigger of my old Parker, my big bird was a hundred yards away, leading his two lesser consorts by possibly a dozen yards or more. The king of the feathered world I realized was out of reach, but I did bang away at one of the lagging birds with my first barrel, and with my second at the other. My eyes were blinded with rage, but my ears were still alert and I caught that searching, long-drawn and rolling hoo-roo-ooo-oo from out the far away blackness of that early March night, and the trance was broken!

Not one single snowy feather, not a wisp of down did they leave floating in their wake, and as I turned sadly and dejectedly toward the wagon, which I could see dimly

now through the rapidly thickening darkness, and Hamilton beckoning me to accelerate my gait, I sobered up and thought to myself how unholy it would have been to spoil anything so rare and so beautiful as the scene I had just gazed upon, and as I trudged along, head hanging low, over the short stiff grass, I sought to console myself with the reflection that few gunners in even those now distant days were allowed to behold what I beheld, and not in a long lifetime had many hunters succeeded in worming themselves over the prickling verdure within easy shot range of the noblest and most graceful of all the wild things God ever created.

And now. No more do I regret missing that shot; while at the time it was the most terrible disappointment in the many, many long years of an arduous sportsman's career, it will now forever more, so long as I do live, stand out in bold and sacred relief, not as the greatest regretted, but as the luckiest of all the shots I ever missed.

"You always were a fool," was all that greeted me from Hamilton, as I enveloped myself in the big ulster and crawled up on the rickety seat beside him.

According to a rumor from Lincoln, George L. Carter will succeed George B. Simpkins as chief deputy game warden and fish commissioner for the State of Nebraska. The appointment, if made, will go into effect July 1. Carter is one of the present deputies and has made a very creditable officer.

Warden Simpkins returned this morning from Humbolt, Neb., where he prosecuted John Scheidegger, S. B. Rice, Martin Bush, Rudolph Vertiska, Bob C. Carry, and James Lee for seining in Horse Shoe Lake. The parties settled by the payment of $51.31 for the ten fish found in their possession.

Coming home from Stillwell's, out in Cherry county, this spring, we passed along the southern shores of Red Deer Lake, one of the best ducking waters in the sand hills, and famous for its geese and canvasbacks. We saw thousands of ducks, principally canvas, in the open holes, while sitting all over the ice, in all directions, geese were seen in bunches of ten to half a hundred. Inquiring of the driver, an old-time plainsman, how the lake had received its name, he said:

"It may strike you, gentlemen, as a trifle singular, but thirty years ago the region immediately around about this lake, which was considerably larger then than it is now, was frequented by species of white-tailed deer that I never saw or heard of anywhere else. It was a small animal, a veritable dwarf of a deep red color that changed but a trifle in winter or summer, and so attractive were they to the early hunters and trappers out here that they were literally exterminated long before the country had begun to settle up. Now, this is no fairy story, but the truth, for I saw the deer many times myself, but nothing like them anywhere else. I killed a seven-year-old buck right off that neck running back to the hills there, and it wasn't as big as a full grown antelope, and weighed but ninety pounds, and was plump and fat at that. In those times, when any of us old trappers proposed a deer hunt, the invariable query was 'Where shall we go—down to Red Deer?' and ever since then this lake has gone by that name."

The fact that the late Legislature even failed to correct the very grievous "bull" in our present game law covering the shooting of doves and upland plover, is a matter of deep regret to all provident sportsmen. The law makes the open season on these birds from April 15 to October 30, and as dove shooting through August and September in this State is one of the gunner's chief delights, they are much provoked at the original framers of the bill for not attending to this matter, and instead of the preposterous season they granted for killing these precious birds they should have studied the requirements of the case and made the lawful period what it should have been. As it stands now a shooter cannot be molested for killing doves all through the nesting season, and, more's the shame, there are plenty of them who suffer no qualms of conscience about doing it. The dove law should have been from July 15 to November 30, and the plover season from July 1 to November 30. The all-wise drafters of the original bill also failed to give the grandest bird of them all—the jacksnipe—any protection at all, and its original incentive undoubtedly was the creation of a ways and means to compensate a few political heelers through the medium of the wardenships. The protection of our game and fish was a secondary consideration. However, the law has finally been massaged until it is more than fairly acceptable, and if it is enforced, will answer very well until an improvement can be made.

A large and enthusiastic gun club was organized out at Alliance on the evening of May 1. The officers chosen were: F. E. Allen, president; L. A. Shawver, secretary, and C. Glensdale, treasurer. C. Porter was appointed captain of the trap-shooters, and W. G. Dielan of the rifle range. Board of directors, L. N. McFall, J. F. Horney, E. G. Morris, S. M. Smyzer, and L. A. Shawver. The club makes its bow with sixty-four charter members, and the membership is limited to one hundred. Adjacent to a large area of chicken, plover, curlew and ducking grounds, the Alliance Gun Club is in a position to be quite a factor in upholding the game laws. Some antelope, too, linger on the broad plains of Box Butte county, of which Alliance is the county seat, and many trout have been planted in the Rock, Snake, and Blue Water rivers.

SANDY GRISWOLD.

OMAHA, May 22.

According to the Daily New Advertiser of British Columbia, Professor Prince, Commissoner of Fisheries for Canada, stated recently at Ottawa that he had witnessed the capture of a B. C. salmon weighing 84 pounds, but that the largest ever caught was taken out of the Skreena in B. C., and weighed 104 pounds. He further stated that in the eastern Province of Canada, where the salmon do not reach these gigantic proportions, fish are caught as large as the Norwegian salmon of 50 pounds, or thereabouts, which are recorded from time to time. The annual catch of salmon throughout Canada appears to be worth about twenty-five million dollars.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Canoe and Camp Life Along the Delaware River.

X —Illusions.—Over-Confidences.—Facts About the Fishing.

"Is there ony room at your head, Saunders?
Is there ony room at your feet?
Or ony room at your side, Saunders,
Where fain, fain, I wad sleep?"
—Ballad of Chevy Chase.

"Then here's to the lass;
And here's to the bass
That she fears she may not get!
And here's to the grace
Of her radiant face,
As she calls for the landing-net."
—Bentley.

OUR tent is rather small to protect two large men while sleeping through rainy nights. This is about the only fact on which we have agreed during the last week. For there has been a tacit understanding that whatever is asserted by one of us, the other must deny. Hence, differences about who shall rise from the comfortable talk of first wakefulness each morning, get out of his blanket and start the fire, "put on" the coffee-pot, and empty from the canoe the water that accumulates during rains. Also as to who shall wash the dishes and go up to the farmhouse after milk and butter. It applies especially to who shall paddle the canoe about with this latest addition to our bevy of campers, a charming woman and her more charming little daughter. Each reminds the other that he is too old and feeble for *such* work, but each has the illusion that the other should do all the routine work, and play afterwards. This is a worked "system" rather than anything caused by actual desire. But it has led to mutual accusations of inability to see, hear or understand anything whatever, and to confident statements that there is one man who sleeps in our tent who offensively plumes himself on seeing and knowing a lot that ordinary mortals cannot behold. And each asserts that the other is that man. Endless disputes have resulted from this attempt to spice our outing days and nights with friendly contention.

For example, I look into my tiny mirror and discover that the bite of a wood-tick has caused a discolored spot under what seems to be my right eye. When Damon's attention is called to it, no sympathy is received. He says:

"You go about in a comic opera trance, boasting that you can see, and don't realize as you see your own face in that mirror that what seems to be your right eye is really your left one. Been writing a lot of articles reproaching readers with lack of sight! Been preaching that men should study rather than describe; and then describe in a long published article every week for three months! How much of the stuff you have 'described' have you actually seen? Why can't you keep out of print and be satisfied?"

"And who begged me to write 'em?"

"I. More's the pity. Heal yourself, doctor! Hurry up, now—want to get out on the river. Awfully fine sky—almost as blue as those I saw when I was at Flor——"

And then I have the satisfaction of proving to him that although the deep blue of Italian skies has been raved about for a thousand years, they are several shades of blue lighter than these over the Delaware. He makes another attack:

"You'll stop fishin' or eatin' to tell a victim he cannot behold a tree. You cannot see one yourself! Look at that one standing on the bank across the brook. I suppose you think you see it as upright, and do not believe you actually see it standing on its head."

"Nonsense!"

"Sure! That's what I'm talking about in you. Been looking at landscapes through our camera for a month and seeing them turned topsy-turvy, and don't know that your eye is a little camera, lens and all; and that you really see things bottom upward!"

"Do you mean to tell me that I see this water as if it were above the mountains; and that they are shown on my retina with their tops downward?"

"Exactly!"

I change the subject, but secretly write a letter to an oculist friend in town—don't get the answer I want, and say nothing about it.

Then this wise comrade rigs up a tiny instrument he calls an "aerometer," and puts it in a high wind, saying:

"Think this breeze advances uniformly, don't you?"

Then he demonstrates to me that wind is not a uniform force, that what he calls its "internal working" is "a series of infinitely complex phenomena, variable and irregular in their movements beyond anything that can be conceived—even the smallest portion of the air-current which can be examined being proved to have no 'homogeneous' parts, but consisting of an exceedingly complex tangle of tiny and diverse currents." Or, as Langley states: "In a high wind, the air moves in a tumultuous mass, the velocity being at one moment perhaps forty miles an hour, then diminishing to an almost instantaneous calm, and then resuming."

And he gets me befogged in a demonstration, with hundreds of algebraic figures, that the faster birds fly the less power they require to support themselves in air, and to swiftly advance—just as, per contra, power must be increased by corresponding leaps and bounds as the speed of steamships is increased. I vote the whole discussion pedantic. But he will not be shaken off.

"And you think that the reflections of that foliage just above this little reach of calm water in the brook, are the same foliage that you see direct! You really see the under side of the reflected leaves, and the upper sides of the actual leaves. And how do you know that your sensitiveness to hue is the same as mine? What you call blue may really be yellow to me."

We grow silent, watchful, figuratively circling each other like a pair of cats about to fight. He continues:

"Maybe the moon *is* made of green cheese."

His drawl and half-shut eyes are insufferable.

"How do you know it is not? Nobody has ever proved that Nature did not gather all the milk for a million years and——"

"Bother! Come to breakfast; the fried fish are fine, and eating is one more thing we can agree about."

"All right; but you can't have the canoe for two hours. Made an engagement last night to paddle Mrs. R. and her Dorothy over to the point, and try to get some water-lilies. Fine looking widow! Notice how her hair catches the sunbeams?"

So that was why she had declined my invitation.

"And there's another thing. You have been writing a lot of high jinks about loveliness of environment. One chapter on sky and clouds, another on running water, and more about tent-mates and watching whippoorwills; and all that has been skipped by readers who have wondered whether you ever would show you really know something about this river and its fishing, and tell them where to go to land a few bass and how much time and money that will cost! Ponder on that while the widow and I take our canoe ride." And he paddles away with the lady and her child.

It would be a pleasure to furnish the names of several dealers who sell good fishing-rods, lines, reels, flies and leaders, landing-nets, boats, cameras and tents. But these numbers are not advertisements, and real anglers and canoeists know where such supplies can be found. No guide, hotel, or tackle-dealer can be named here, and the railroad is specified solely for the information of sportsmen. It is assumed that the sportsman has priced and purchased the small sleeping-tent, canoe, camp cooking utensils, and fishing tackle.

Get a time- table of the Erie Railroad, and make Hancock station the destination for the start of the outing. The 8:55 A. M. train from New York reaches Hancock, 164 miles, at 1:27 in the afternoon. Fare for round trip, $7.10. The 8:00 A. M. train from Buffalo reaches Hancock, 261 miles, at 2:27 P. M. Fare for round trip, $11.70. The tent can be shipped as baggage; the canoe, crated, will cost about $1.40 per 100 pounds from New York to Hancock, and about $1.56 per 100 pounds from Buffalo. Tent and canoe can be easily carried to the river from Hancock depot.

Use an eight-ounce lancewood (it is hard to get a good one now), or split bamboo fly-rod, with not less than 200 feet of oiled silk line, six foot single leaders, and a solid reel, for the constant work will find any weak spots in it. The ideal lure for the bass is the Montreal fly, on say No. 4 hooks. The next best fly is the Parmachenee-Belle. Casts of fifty feet should be readily made with proper rod, line and flies. The bass taken on flies will be the liveliest ones, but will not be over two pounds in weight. If the comparatively clumsy fishing with bait is insisted upon, use small catfish, frogs, minnows and hellgramites, here listed in the order of their excellence. The largest bass will be taken with bait, as they lie deeper, are lazier, and far more cautious.

Carry the following list of locations, towns and fishing places along the fifty-three mile cruise from Hancock to Lackawaxen. Remember, trains are always available, and all the towns have fairly good hotels. Guides with some knowledge of boating can be hired at any point on the route.

Towns and Fishing Places, Hancock to Lackawaxen.

Hancock.
Junction of Rivers—Shehawken.
Nobody's Eddy—Good fishing
Town of Stockport—Good fishing.
Dillon's Eddy.
Tom Pollock's Rift—Good fishing.
Wooster's Eddy.
Town of Equinunk, Pa.
Equinunk Eddy—Fair fishing; wall-eyed pike.
Town of Lordville.
Lordville Eddy.
Weston's Bend—Good fishing.
Bouchou Eddy.
Cold Flats.
Long Eddy—Upper part, good fishing.
Town of Long Eddy.
Basket Eddy.
Basket Rift—Good fishing.
Town of Kellam.
Little Equinunk Eddy.
Tyler's Rift.
Dark Eddy—Good fishing.
Town of Hankins.
Hankin's Eddy.
Golden Eddy—Good fishing.
Pine Flats.
Ross Island—Good fishing.
Town of Callicoon.
Bush's Eddy.
Pine Tree Eddy.
Curtis' Eddy—Good fishing.
Towns of Cocheeton, N. Y., and Damaseus, Pa.
Damascus Eddy.
South Cochecton.
Milanville, Pa.
Cochecton Falls. (Guide needed to shoot these.)
Gordon's Eddy.
Town of Narrowsburg, N. Y.—Good fishing.
Arnold's Eddy—Good fishing.
Jim Dunn's Rift.
Van Gilder's Eddy.
Town of Tusten.
Tusten Rift—Good fishing.
Ten Mile River Eddy.
Ten Mile River Rift.
Mast Hope Eddy—Good fishing.
Town of Mast Hope, Pa.
Upper Westcolang Rift—Good fishing.
Lower Westcolang Rift—Good fishing.
Little Falls.
Lackawaxen Eddy.
Town of Lackawaxen.

The above list of good fishing places can be relied upon by the canoeist and angler. Not all of these places have been personally fished by me to the extent of knowing their continued worth as lurking places for bass; but I have had the list checked and verified by the well-known canoeist and angler, Mr. W. F. Patterson, of New York, who has cruised for several summers on this special part of the upper stream.

It should be remembered that when the flies are cast on reaches of the river between these more prominent eddies and rifts, much good fishing may be found. The bass are liable to be where least expected, and the drifting canoeist can find such places by using the flies steadily. For example, there is a very special small eddy, locally known as "Black Jim's Eddy," about two miles below Narrowsburg, over toward the New York side of the river, where the railroad line runs close to the bank, that has very often yielded remarkable fishing. It is about midway between Arnold's Eddy and Jim Dunn's Rift.

The above list of places is merely given in manual form; but any average angler with average tackle, if he

takes the canoe run, is sure to find such good bass fishing in many places along that fifty-three miles that he will indeed be hard to please if not satisfied.

The delights of scenery along all that run have been mentioned in preceding numbers. It can be readily repeated from any station, as the work of placing tent and canoe on a freight train, and their transportation back up the river, are easy and prompt. Try the trip! The most exacting bass fisherman can hardly fail to be satisfied! And if to his love of angling he adds a love of natural beauty, this certainly is the ideal canoe trip for the Atlantic Coast and Mississippi Valley sportsman. Bass may be taken on and after June 16.

L. F. BROWN.

Fishing Rights in Lakes.

Editor Forest and Stream:

The lake region of the northern part of the State of New Jersey has long appealed to the angler and lover of nature. A number of the largest lakes have been preempted as summer resorts and have lost, in part, that rugged simplicity of their original garb bestowed by nature. Large hotels and cottages on their banks, dancing pavilions, picnic grounds, small steamers plying in their waters and Sunday excursions have worked a material change.

There are many lakes, however, which appeal most eloquently to the man who likes to rough it, and who visits the inland waters of the State to leave behind all thoughts of dress and hotel life. Invariably the smaller the lake the wilder it is in scenery and the less liable to be changed by the atmosphere of a summer resort and its conventionalities.

Before the railroads opened up the region, the native angler had the lakes to himself and the fishing was free to all. Of late years the attention of men of wealth has been attracted to the section and many of the lakes have been bought outright and treated as preserves, on which none but the favored few are allowed to wet a line.

The buying up of these lakes has lately reached such a pass in many communities that the native angler has been out of it altogether, and many men of the cities have seen their favorite fishing haunts disappear and have had to look elsewhere for their pleasure.

The native Jerseyman is always resourceful and has great faith in the Legislature of his State, and for a number of years has been demanding legislation to remedy the existing evil. It remained for Sussex county, which is in the heart of the lake region, to take the initiative. Many of her lakes had been bought up, and when, a few years ago, the owner of Swartswood Lake, one of the largest sheets of water in the county, refused to allow free fishing, matters reached a climax; mass meetings were held and at the next election all other rural campaign questions became subservient to it. The result was that the Assemblymen from that county went to the State Legislature pledged to secure for their constituents free fishing in Swartswood Lake. The county representatives succeeded and the Legislature in the year 1901 passed an act which is highly novel and furnishes a good example of special legislation for the benefit of a certain community, which, because of constitutional barriers, had to be so drafted as to embrace every county of the State.

The law applies to any county in the State having fresh water lakes of a water surface area exceeding one hundred acres, but before the law shall take effect in any county, the act must be submitted to the citizens for acceptance or rejection at the next local election.

It provides for the appointment by the Supreme Court of a Board of Commissioners, to be known as the County Lake and Park Commission. The commissioners are given the power "to acquire and make available to the inhabitants of the county and to the public, rights of fishing common to all, in fresh water lakes within said county having an area of water surface exceeding one hundred acres, and lands not exceeding ten acres adjoining thereto and within said county for public use and enjoyment therewith;" and have power "to take in fee or otherwise, by purchase, gift, device or eminent domain, said rights of fishing in said lakes aforesaid and said lands adjoining thereto as aforesaid."

Sussex county accepted the act by popular vote and a commission was appointed, but before any proceedings were taken by this commission in the condemnation of rights of fishing in Swartswood Lake, the constitutionality of the law was brought up for review in the Supreme Court on a writ of certiorari taken by Mr. Andrew Albright, the owner of Swartswood Lake. The Supreme Court, in a decision handed down in the fall of 1902, upheld the act on all grounds, and the case has now gone to the Court of Errors and Appeals, whose decision is awaited with much interest.

Among the many constitutional questions involved the one of great interest to the public and to the owners of lakes on which the public is not allowed to fish, is whether the right of fishing is a public use and can be taken and condemned as a severable interest in lands. The act does not contemplate the actual purchase, by condemnation, of the land under water, or, in other words, the lake itself, which would carry with it the right of fishing, but simply the purchase of the right of fishing in the lake, which right is severable from the ownership of the land. In this particular it differs from any park act heretofore passed by other States and has no parallel in legislation. It would seem to be not only novel, but vicious and ill-considered, and legislation that should be frowned upon, as paving the way for further assaults upon constitutional provisions.

If the act is sustained, and adopted in other States, it would have the effect of creating many public fishing preserves which could not in any sense be called public parks, nor justified from that standpoint. The owner of the fee to the land under water in the lake loses the control of the right of fishing in the same, which control was his sole reason for purchasing. The lake with the right of fishing vested in the public, would be practically of nominal value to the owner and he would be in no better position, as to fishing on the lake, than any citizen of the county or the public at large. Such legislation would render any land owner subject to having his estate turned into a public picnic ground while he still perforce must own the land in fee and pay taxes thereon.

If the act provides for the purchase of the lake and the lands surrounding it and the establishment of a public park, it might be justified and the right of fishing would then be incident to the park and a part of the public enjoyment to be derived.

Again, the right to fish may be for profit or it may be for pleasure. It cannot be gainsaid that fishing for profit stands on the same footing as any other private business. We cannot place fishing for pleasure on a higher plane than other wholesome sports. If legislation of this character is sustainable, no private owner of real property in rural districts, whether he own land under water or woodland or meadowland will be safe from what may be termed legalized trespass by the public.

Fishing is only one of the many wholesome recreations of the people. The public likes to hunt and play golf and baseball; our strenuous President and other good citizens find enjoyment in chopping down trees. Certainly a law which would condemn for public use the right to play golf or baseball or chop down trees or hunt on the land of a private citizen cannot be justified; yet there is as much reason and right in laws of this character as can be found in the law in question.

The right of fishing, speaking from a legal standpoint, is a right of profit in another's freehold, and if this right can be properly taken for the benefit of the public as a public use, we can well say that any other right of profit can be taken, such as the taking of fruit. The small boy element in any community exceeds the number of anglers. Moreover he has more time. The picking of fruit in all stages of growth is one of his favorite pastimes. Why not condemn for his benefit the right of taking fruit? Surely if this legislation is for the benefit of the public, the number of individuals who would really derive enjoyment therefrom should be taken into account.

On the whole, it would seem that the usually conservative State of New Jersey has gone entirely too far in this particular legislation.

KENNETH FOWLER.

JERSEY CITY, N. J.

Massachusetts Legislation.

BOSTON, May 30.—*Editor Forest and Stream:* The Fish and Game Commission in their report for 1902 recommended several changes under the head of New Legislation. First—Providing for re-stocking ponds that had been stocked by them on petition of selectmen or of thirty or more citizens of a town. The law has been so amended as to provide for a second term of three years of protection.

Second—For the better protection of song and insectivorous birds there has been added after the fine specified, ten dollars, the following: "For each bird taken or killed or each nest disturbed or destroyed contrary to the provisions of this section." A very evident improvement.

Third—To prevent the use of explosives in fishing waters. The wording is, "Whoever kills or destroys fish by the use of dynamite, or other explosive, or explodes dynamite or powder in fishing waters shall forfeit ten dollars for each offense."

Fourth—The so-called millinery law, relative to possession or wearing the bodies or feathers of certain birds, has been made clearer and more specific.

In each of these cases the statutes have been materially improved and strengthened. It augurs well for sportsmen's interests when members of a committee on fish and game are willing to be guided to a great extent by men who make a special study of those interests, and upon whom in a great measure rests the responsibility of proper care of fish, wild animals and birds. The sportsmen of the State have reason to remember with gratitude the members of the committee of 1903, as well as the commissioners.

Another bill which has received the Governor's signature and which pleases the shore people of Barnstable very much, prohibiting the taking of fish by nets and seines in the waters of Barnstable and Marshpee on Nantucket Sound. Another good bill is the one prohibiting the use of drag-nets, set-nets, purse-nets, seines or trawls in ponds. This law forbids the use of floating devices in connection with trawls and makes ten hooks constitute a trawl.

Another bill places a bounty of $5 on a wildcat, Canada lynx, or loupcervier. Whether there be any of the last named in the State I cannot say. I have never seen one nor heard any man say he had seen one at large in Massachusetts.

The bill providing compensation to farmers for damage done by deer is now in the Governor's hands, as is also the right-of-search bill in such shape as it is. I hardly expect it would be recognized by the man who made the original draft. Capt. Collins informs me that the commissioners did not think it wise to urge further legislation on lobsters just now, in view of the request for authority to call a convention of commissioners and others from the lobster producing States and the British Provinces. An act for this purpose has received the Governor's signature. In case such a convention is called elsewhere than in Boston, the commissioners are authorized to attend it.

Representative Warner's trout bill has been rejected. It made the trout limit 5 inches. Mr. Warner, representing several clubs in and near Northampton, desired that there should be a uniform law in all those counties, but inasmuch as Berkshire, which now has no legal limitation as to length, would not agree to a 6-inch limit, he urged the bill for 5 inches, although he and his constituents would have been better pleased with a 6-inch law such as is in force throughout the State with the exception of Berkshire county. In all probability this may be regarded as a finality for the present session of the Legislature.

A new association for protection of fish and game has just been organized at Middleboro, largely through the efforts of Senator Pratt and Dr. W. C. Woodward, who was for several years a zealous member of the State Association, and has been made secretary of the new society. Under the leadership of such men we predict for it a bright future. These local associations are not only of much benefit to the individual members, but exert a powerful influence in the inculcation of the protective sentiment throughout the community and in securing proper legislation.

In this connection it is a source of disappointment to read the fourteenth annual report of the Southern Massachusetts Fish and Game League, in which it is announced that "this document will conclude the doings" of the League. It is true the object for which it was originated, viz., the abolition of seining and trap-fishing in Buzzard's Bay, has been accomplished. The attempt to regain admittance to the Bay may never again be attempted by the Menhaden Fisheries Company, yet possibly it may be; but there are other fields yet to conquer. The report alluded to concludes as follows: "We desire to express our obligations and thanks to our secretary, without whom there never would have been any League, and who has, until his health has failed him and he is able to do no more, given his time and influence to the work from first to last." Your readers will remember that when the Executive Committee of the Central Committee was first chosen, George H. Palmer, Esq., of New Bedford, who has been so many years secretary of the Southern Massachusetts Fish and Game League, was elected one of its members. His failing health is a serious loss not only to his immediate associates, but to the cause of protection in Massachusetts.

The names signed to the report as the Executive Committee, beside that of the secretary, are Arthur Rickitson, president; Robert Bennett, vice-president; Henry M. Knowles, treasurer; Charles S. Randall—the last name will be remembered as for many years a member of Congress. Would it not be possible for these gentlemen by a little effort on their part to awaken an interest among the hundreds of sportsmen in their city and vicinity in forming a New Bedford Fish and Game League for the care and propagation of fish and game in their section and generally throughout the State, in conjunction with the work of other clubs? On whom else will Secretary Palmer's mantle fall? How much it would rejoice his heart to see a large, wide-awake club arise from the ashes of the old league of which he has been so long a part! It is to be hoped that a movement of this kind will soon be inaugurated.

Col. E. B. Parker has recently returned from a fishing trip in Vermont. Accompanied by Mr. A. S. Richardson, of St. Albans, he fished on brooks in Waterford, a few miles from St. Johnsbury, with very fair success. He fished from the same bridge from which he took a plunge unintentionally three years ago, as recorded in FOREST AND STREAM at that time. He informs me that the people of Vermont are regretting very much the calling to higher service of former Commissioner Titcomb regarding his accepting a position under the United States Commission as a great loss to the State. The Colonel says he shall soon make another visit to his preserve, provided there is plenty of rain, but not otherwise. He is an ardent sportsman, and is regretting his inability, for business reasons, to join his friend, Mr. J. M. Hoyt, of Lynn, who has recently started for the Rangeleys.

Yesterday I met "Stepie" Johnson, managing director of the Megantic Club, who has just returned from the preserve. He says their woods have narrowly escaped the fires which have been raging all around them. Mr. Woodruff and brother, of New York, Mr. Talcott, of New Jersey, with Mr. Barker, of Scranton, Pa.; Mr. Woodburn, of Connecticut, and Mr. Harrison, of Pawtucket, are having good sport and getting all the trout they can use. Treasurer P. C. Wiggin has just left Boston on a wedding tour to Quebec and will stop at the club house on his return and then go to his camp at Chain of Ponds. Mr. Bateman, of Quincy, left yesterday for Spider Lake. A new dining camp is being built at Arnold Pond, and Mr. Johnson says one night last week the workmen had plenty of light to work by in moving lumber all night long from the forest fires. Secretary Phippen is to start for the woods in a few days, and others will soon follow. Mr. Eben H. Davis, proprietor of the Lakeside on Umbagog Lake, who has been engaged all winter in literary work for D. C. Heath & Co., left Boston on Thursday for his hotel, where he will remain till late in the autumn. He with others occupied Deer Park Lodge for several seasons and says he owes his life to the recreation he has enjoyed in the woods.

Congressman S. W. McCall, a friend of sportsmen's interests, left Winchester on Thursday with his family for his summer home in Lancaster, New Hampshire, and it is reported that Senator Spooner, of Wisconsin, has recently purchased a large tract of land in northern New Hampshire for a game preserve.

Mr. Herbert Thayer, member of the House from Franklin, informed me that his brother, Mr. A. D. Thayer, and wife have just returned from Moosehead, where they had excellent sport, and Mrs. Thayer captured a laker weighing 13½ pounds. The A. D. Foster party of five from Boston averaged a hundred pounds daily while at the lake. Mr. George S. Harris, Luther Greenleaf, C. B. Devereaux, and F. D. Hall, of Boston, and J. L. Fassett, of Ware; W. C. Freeman, of Providence; E. W. Bourne, of New Bedford; E. J. Hodgdon, of Haverhill; Mr. and Mrs. Fred R. Hill and two daughters from Medford, have all met with gratifying success. The Tisdale party, A. A. Tisdale, L. A. Tisdale, with six friends from Leominster, are getting plenty of fish. Mr. and Mrs. Fred S. Parker, from Bedford, are at Kineo with several friends, including Mr. and Mrs. W. J. Lamb and Mr. W. C. Mentzer, of Somerville. Mr. E. Haring Dickinson, of Boston, is accompanied by several friends at his private camp on the lake, and Mr. N. C. Nash, Boston, of the State Association, with Mr. F. A. Seamans, of Salem, is camping on "Little W" at the head of the lake. A party from Worcester, Charles H. Sibley and four others, are taking their share of fish. The Mohawk Fishing Club, composed of Haverhill and Boston sportsmen, is well represented in Mr. Snyder's camp at the head of the lake by the president, C. W. Arnold, Hon. A. P. Jacques, and others from Haverhill; Richard E. Frazier, George Waterman, P. B. Heintz, and Jacob Mosser, of Boston. Mr. A. B. Shaw, of Leominster, is reported to have taken a 19-pound togue. Mr. and Mrs. F. E. Dudley, and Miss Dudley, of Haverhill, are at Northwest Carry. Mr. Heintz, of the Mohawks, has taken a 5¾-pound squaretail trout, and President Arnold one weighing 4 pounds. Fred S. Lufkin, of Gloucester, is well to the front with an 8½-pound salmon. Mr. W. H. Wesson, of Springfield, is entertaining Nathan D. Bill, J. W. Kirkham, Samuel J. Fowler, and Frederick Harris at his camp at Moody Islands. Rev. Leonard K. Storrs, of Brookline, and Elias J. Bliss are getting plenty of trout and togue. The Watson party, including John J. Pew, A. B. Cook and others, have gone out, having taken 330 trout and 20 togue

during their stay of two weeks. Mr. E. S. Farmer and party, including his niece, Miss Locke, of Arlington; E. F. Perkins, J. E. Thompson, and F. X. Fitzpatrick, of Boston, have made daily catches of from 40 to 60 trout and togue. Mr. C. M. Harriman, of Boston, and party, including A. C. Wharton, H. A. Blackmer and others, of the Whale Club, New Bedford, have left camp after a week of good luck. Mr. R. Provost, of Philadelphia, is entertaining several friends at the cottage he has just erected at Cathance Lake.

Reports of fine fishing at Cold Stream Lake, Enfield, are at hand. Among anglers there have been Gov. Hill and Hon. William T. Haines, of Augusta, and Eugene M. Hersey, of Bangor, former president of the Maine Sportsmen's Association. Commissioner Carleton, returning from a recent trip, reports that he never saw anything like the fishing which was had one day while he was at the lake. He caught that day the full allowance and the fish were taking the bait just as freely when he quit fishing as at any time during the day. "Every angler on the lake that day had the same good luck, and there were no favored sportsmen at all; * * * there was no difference whether water was shallow or deep." He says he will go there again soon. Mr. J. Franklin Wight, of Wellesley, A. F. Brett and W. R. Thain, of Boston, have also had good luck there.

Fly-fishing is on at Belgrade Lakes, and it is said that it has not been as good at any time in the last five years. Among those enjoying it are Charles C. Hoge, of New York; R. B. M. Cook, of Port Chester; A. H. Soden, of Boston, and the Wells party, including Mr. and Mrs. C. M. Wells, Mr. and Mrs. A. B. Wells, of Southbridge, Mass., and Mr. and Mrs. H. E. Gale, of Haverhill, Mass. There is a long list of new arrivals from New York, Brooklyn, Boston, and elsewhere. Big catches of 80 and 100 bass a day are reported of common occurrence now with promise of still greater ones as the water becomes warmer. The Anna Held party have gone to Paris, Me., to remain a couple of months, returning to Belgrade for September.

Mrs. E. J. Jennings, of Farmington, has to her credit a 12-pound salmon taken recently at Clearwater, and H. I. Spinney captured two togue, 9 and 10 pounders. But Mr. J. M. S. Hunter, of the Farmington Chronicle, is the happiest man in town, having brought to gaff a 10½-pound salmon. This is what he says: "I have fished for twenty years and that is the first fish that I ever caught that ever gave me full satisfaction." The struggle lasted two hours, and after it was landed in the boat it was found to have a hook, leader and several feet of line attached to it, the hook being firmly imbedded in the jaw of the fish. The moral to be drawn is, use strong tackle if you want to save your fish in Clearwater.

An Albino Trout.

Mr. Roy Stuart, of Farmington, captured a 2-pound albino trout, said to be the first one of the kind ever taken from the lake. Mr. and Mrs. A. B. Bergen have taken possession of their camp. Messrs. W. S. Ames and E. J. Tucker, of Boston, and several others, have been stopping at Unity Camp a few days. At Haines' Landing the Mooselookmeguntic House and cottages have been taxed to their utmost capacity to accommodate the host of sportsmen from different parts of the country. There seems to be no limit to the fine catches the anglers have been getting. Mr. and Mrs. A. W. Bliss and Mr. and Mrs. A. W. Tedcastle, of Boston, had exceptional success—the ladies (as usual) taking the largest fish, 6½ and 7 pounds. Charles N. Wood, Frank Ridlon, L. Pfingst, of Boston; Fred S. Kinner, of Milton; W. H. Coe and J. R. Marble, of Worcester, are a few of the Massachusetts fishermen guests at the hotel.

From Rangeley it is reported that several wealthy Massachusetts gentlemen are making plans for a large game preserve, to extend over fifteen square miles, which is pleasing to the citizens, and the project will receive their aid. Dr. F. W. Palfrey, Alexander Jackson, Julius Matthews, A. J. Maybury, E. G. Reynolds, F. L. Roberts and F. C. Brown, of Boston, and C. A. Taft, of Whitinsville, have had good sport. Everything is lovely at the Bald Mountain camps, F. A. Kidder and C. C. Badger, of Boston, and Mr. Clark, of North Attleboro, doing their full share in keeping up the fishing record.

The writer met Mr. James Brown, of the Railroad News Company, since his return from Bald Mountain camps, and he reported the finest fishing in all his experience, and he is a veteran angler. He said they threw back all less than 2 pounds, and there were usually twenty boats out, and the most of them would come in with not less than 15 fish, averaging from 3 to 5 pounds in weight. He says, "This is straight."

Guests at Mountain View are not grumbling. H. W. Clark, for twenty years or more a member of the Mass. F. and G. P. A., has had his usual good luck, as have also N. P. Damon, C. C. Sheldon and F. I. Nichols, of Fitchburg, J. H. Flynn, of Boston; F. J. Pierce, of Gardner and many others.

A 12½-Pound Salmon.

At Upper Dam, Mr. Llewellyn M. Bickford, of Brooklyn, has taken the record fish for this season, and it tipped the scales at 12½ pounds.

At Bemis, among the lucky ones, are Mr. and Mrs. J. F. Thompson, of Lowell; C. K. and L. A. Miller, Mr. and Mrs. McKeown, of Boston, and E. H. Richards, of Woburn. At the Birches is quite a party from Lynn, Mr. and Mrs. W. D. Nelson, Dr. and Mrs. F. L. Judkins, Mr. and Mrs. W. B. Littlefield, Dr. T. M. Smith, Thos. Welsh, James Manning, C. H. Baker and E. A. Greaton. At Allerton Lodge, where the late president of the State Association, Col. Rockwell, used to go often, is a Boston party of eight, among them Mr. E. B. Haskell and H. A. Priest. Mr. E. V. R. Thayer and party have gone to Mr. Thayer's cottage on Richardson Lake. Mr. and Mrs. N. N. Thayer, of Boston, are occupying one of the new cabins at the Barker. Senator Frye has with him at his camp Gen. Sewall, with Wm. Huntoon and wife as guide and housekeeper.

At the Ledges, a party consisting of Judge R. S. Ransom, Mrs. Ransom, son and daughter, also Mr. and Mrs. R. A. Dennis, with J. Mathieson, C. R. Hill and D. E. Heywood as guides, have had phenomenal fishing. These camps are owned by a company of eight, five of whom live in New York. Two new camps have been added to the group this spring, making five in all.

At Newfound Lake, N. H., Congressman Frank D. Currier and O. B. Sargent, of Canaan, N. H., took 12 trout that weighed upward of 60 pounds—this in one day in a single boat, and establishes a new record. Messrs. E. H. Weaver and David H. Clark, of New Haven, have also had good luck on this lake.

CENTRAL.

At the New York Aquarium.

Second Paper.

"THAT," said the aquarium attendant, pointing to the most beautiful specimen of all in the great collection, "is the angel fish, and that other," pointing to the loathsome clawed dragon lying in the bottom of the tank, "is a hellbender."

The women gasped. They didn't know for a moment whether the aquarium man was becoming profane when he said "hellbender." Then one of the visitors shuddered and said the fish with the awful name was the ugliest thing she ever saw.

"Well, I don't think so," said the caretaker. "It depends on the way you look at it. I don't find him ugly." The women were listening attentively, and a quizzical look came into the man's eyes as he continued: "Beauty is only skin deep, anyhow, and what this fellow lacks in good looks he makes up in good behavior. You may think, now, that the angel fish is charming, but it is about the meanest of the lot. One of those brought from Bermuda five years ago killed every other angel fish put in with it. And the lady fish over there," he went on, looking pointedly at his listeners, "gets along all right enough when there's only one in a tank. More than one results in a fight."

The peaceful stillness that reigns in the old aquarium is striking. Visitors who make the trip to the Battery and pass through the thick casement walls, leave the roar of the elevated and the noises of the street behind, almost as though they had stepped into an underground vault. Inside the light is subdued, and one hears nothing but the fall of water, and here and there a splash, as some speckled beauty jumps into air. Sightseers move around the circle of tanks talking in undertones, and giving vent to their interest in suppressed cries of delight. The atmosphere of the place is indeed impressive. Imagine, then, the surprise of those in the place one day last week when from the gallery came a child's shrill voice calling to his mother on the other side of the main floor:

"Oh, Muzzie, have they got any mermaids here?"

The sea anemone is the last animal on sea or land that one would pick as a fighter; but a certain little rock crab in the collection knows that he is. A battle between the fighting anemone and a thieving crab was described by L. B. Spencer, who has charge of the aquarium laboratory:

"I was feeding the anemone, a fair sized brown specimen," said Mr. Spencer, "with bits of chopped clam from a long stick. The crab, not content with his own share, darted at the anemone and attempted to steal the choice morsel from it.

"Then a funny thing happened. Fully thirty small thread-like coils shot out from near the anemone's mouth, striking the crab on all sides. These threads are said to having stinging powers equal to a nettle.

"Instantly the crab doubled up in apparent pain and started round that glass tank like one possessed. After numerous turns he approached again, and this time the anemone stung him hard, for after a turn or two he turned over on his back and wagged his flippers feebly.

"It was some time before he recovered. I tell you that crab has not been within hailing distance of the brown anemone since."

Installed in one of the big pools there is now a happy family comprising a large number of small turtles, alligators, crocodiles and bullfrogs. The pool is 28 feet long and 12 feet wide, and with plenty of water, and at one end there is a corrugated platform. The creatures could scarcely have quarters more comfortable or better adapted to their wants. Up the inclined plane as up the bank of a stream the animals climb at will.

About the middle of the pool is an old stump, upon whose top there is pretty likely to be found some turtle resting; and turtles love to creep under the stump for shelter or seclusion. Floating about in the pool's waters are a number of irregular-shaped slabs of cork, islands upon which the animals like to climb, and there are likely to be from one to three creatures on any one of these floating islands. And finally, among so many creatures, there is likely to be something going on all the time. For instance:

Around in front of a big bullfrog that was sitting on the inclined plane, drifted one of these floating islands. The bullfrog's eye caught it, and he thought he would like to take a sail on it.

The island was a foot and a half or so away, but that was a very easy jump for the bullfrog from his place on the bank. Landing on it, he gave the island a fresh start, under which it now sailed away with quicker movement.

The bullfrog had landed on one end of this slab. He was sitting thus when something began to weigh down the other end of the island. Then the bullfrog saw an alligator climbing up out of the water, his great head with long and powerful and wide open jaws and massive shoulders already up and more alligator coming. The bullfrog took just one look and then turned again once more toward the shore. It was a good deal further off now than when he first struck the island, but he had a great incentive now, and great as the jump was he made the shore handily, and left the island to the alligator.

There are things of this sort going on all the time. There's a turtle, maybe, on one end of an island and an alligator comes along and climbs up on the same end, submerging it and so floating the turtle off, the island supporting the 'gator, however, when called upon to bear his weight alone.

Turtles promenading on the bottom of the pool, in opposite directions, meeting, sometimes turn out readily and sometimes scrap for the right of way, but these fights don't amount to much, and on the whole the various creatures dwell together in peace and harmony. The different varieties in the tank include soft shelled, snapping, musk, slider and spotted turtles, and wood and Blanding's and diamond backed terrapin. The person who endeavors to pick out the representatives of the different varieties will have a task similar to that recently set by a publication which printed a series of faces, and after telling what the faces were supposed to represent left it to the reader to designate them properly. In that case there was a prize of $500 offered for the nearest guess. There is no prize offered for a correct designation of the different turtles. There was no correct guess in the case of the faces. The turtles are nearly as difficult to pick out.

In one division of the turtle pool there are two big loggerheads weighing 240 pounds apiece or more. One of them came in last winter and the other about a year ago. The one that came in last January has scarcely begun to eat; but there is nothing astonishing about that, for such turtles may easily go months without eating. The other big turtle not only eats all that is put in for itself, but all that is put in for the other fellow, too.

Commonly these big turtles are to be seen each with its head in its own corner of the pool; and at feeding time the food for each is put down in a corner at its head. The older turtle, which, somehow, doubtless in some fight at sea, has lost half its starboard forward flipper, begins promptly on its portion and eats steadily until it takes it all in. It has a head as big as a cocoanut, and it is a big, clumsy creature generally; but it goes about its feeding intelligently, and never misses a scrap.

By the time it has finished it is likely to find itself in the middle of the pool, to which it may have washed some of its food by the swashing of its massive body, and then from there it makes straight for the other turtle's corner, where the untouched food is lying.

The chances are that the other big turtle has backed out of its place before this, but whether to give the other a chance or to avoid it would not be so easy to say. At any rate, the first turtle goes up into the other's corner with the grace of a scow, and proceeds to strip that corner clean, too.

When a big turtle like this does find an appetite, it always seems to find a big one.

[TO BE CONTINUED.]

CHICAGO AND THE WEST.

The Bass Fishers.

CHICAGO, May 28.—The bass fishers are getting ready in numbers for their exodus to-morrow and the day after, and, fortunately, the promise is for decent fishing weather and decent-natured fish. For the first time in the season we have had a little touch of bass fishing, and the boys who went to the Fox Lake country last week brought back good catches. One of the best of these was taken by Messrs. Whitney and Salter, at Loon Lake, on last Monday, these two bringing home a basket of fifteen handsome big-mouth bass. The state of affairs at Loon Lake was typical of that existing now pretty much over this Illinois chain. The bass were on the feed at the first of this week, and they ought to continue so for a week or ten days at least.

Members of the Chicago Fly-Casting Club who will make the Lauderdale trip this week, are Messrs. A. C. and Frank Smith, F. N. Peet, Itha H. Bellows, E. W. Letterman, John Homan, with Messrs. Mason and Noyes. They ought to strike the Lauderdale country at just about the right time. This is a pretty and restful region, and one might be worse employed than spending a few days there at this time.

Nothing is doing in Indiana bass fishing, and thus far nothing startling comes from the lower peninsula of Michigan. It is a good time for lower Wisconsin and upper Illinois, and that is the way I should counsel any one to head at this stage of the game.

Trout Fishing.

The trout fishing reports from the lower peninsula of Michigan thus far, have not been very rose colored, and I should rather think that Wisconsin had beaten the south peninsula so far, if one is to judge from reports of friends. The Pere Marquette has not been in good shape as yet, and the Chicago boys have not yet gone over there for their trip, but on June 11 Messrs. Smith, Peet, Bellows, Letterman, Perce and Hascall, all of the Chicago Fly-Casting Club, will make an expedition thither. They will be joined by John Waddell, Asa Stuart and Mr. Avery, of Grand Rapids.

The three gentlemen last named were on the Pere Marquette May 7 to May 10, but they met a bad proposition. The water was covered with midges, the minute flies known as "curses" by some anglers, and the result was that the trout did not "come," nothing of very good size being taken.

An odd incident occurred during this fishing trip. Mr. Waddell was sitting on a bank, adjusting some flies, when Mr. Stuart came wading down midstream and frightened toward him a good-sized trout which was lying out on the rocks. Mr. Waddell was sitting motionless at the time, and the trout did not discover him as an enemy. With a stealthy motion he reached his landing net, made a scoop, and actually caught the live trout in his landing net. I think this feat has not been duplicated by very many. "I will show you how to catch 'em," said he to his friend.

These anglers above mentioned, and others, state that thus far the trout have been found out in midstream and in shallow water. This simply means that the hatch is on and that the trout are feeding either on the caddis grub or on the imago.

Wisconsin Stream.

I have heard lately of another good trout stream in Wisconsin, the Sturgeon River, which runs into

Lake Michigan waters. You have to ride about twenty-five miles over a wretched road, but the fishing there a few weeks ago was worth the trip, some trout being taken which went to a pound and a half.

The Pork and the Bass.

There are many reasons why the American hog should have a place emblazoned upon the national coat of arms. The more I think it over the more I believe the hog is not fully appreciated. Nobody and nothing around a camp is more useful than the hog, when properly prepared, and especially if it is a fisherman's camp, there may be divers uses for his porkship. Now here is Mr. Joseph H. Hunter, the patent lawyer, of Washington, D. C., who was out at Garfield lagoon last Saturday, enjoying the bait-casting contest of the Chicago Club. Mr. Hunter says that some of the finest bass fishing in the country is to be had on the Potomac and Susquehanna rivers. He thinks he is one of the few bait-casters who go out of the city of Washington, but says that he has sometimes splendid sport bait-casting for small-mouth bass. He uses a three-inch strip of pork rind and hooks it on the outside of one shoulder or corner, so that it whirls around in the water. He prefers this to frog or minnow. The bass, according to his story, lie out under the willows, or on the shady side of rocks, and when he casts his frog bait into the right spot it never travels more than two or three feet before the bass gets it, if he wants it. It is much like fly-casting. Mr. Hunter says that he has frequently caught twenty-five small-mouth bass of one and a half to four pounds in this manner during a day's fishing. He insists that a section of the American hog thus prepared, is better than any patent or natural bait which can be devised, and he ought to know, for he is a patent lawyer.

For the Anglers.

Hints may have been gathered from time to time in these columns of the extent of the Chicago angling traffic. Such dimensions does it attain that at least three of the leading railroads running north annually make special schedules on its account. The Chicago, Milwaukee and St. Paul trains touch the lower part of the Fox Lake country, and their schedule is arranged specially for the convenience of the week-end anglers to those nearby resorts. The Wisconsin Central Railroad touches the Lake Villa country, more especially, this being on the eastern side of the lake district. The Chicago & Northwestern, beginning tomorrow and thereafter until June 27, will put on a special Pullman, running to the muscallunge and bass country, the end of the run being at Watersmeet, Michigan. This train leaves Chicago at five o'clock and reaches Watersmeet at 6 o'clock in the morning, Sundays. It leaves Watersmeet at 9 o'clock in the evening, Sundays, and reaches Chicago 9:45 the next morning. Special schedules are made also on the Gogebic and other points by the Northwestern. That the railroads are wise in making up this accommodating service for the public is well proved by looking at any of the week-end trains going north out of Chicago.

Chicago Fly-Casting Club.

Following are the scores made by the Chicago Fly-Casting Club at the last weekly competitions:

	Acc'y & Del'cy, Per Cent.	Bait-Casting, Per Cent.
I. H. Bellows	93	97
G. W. Davis	..	90 4-10
H. G. Hascall	95 2-3	98 1-10
N. C. Heston	92 2-3	97 5-10
G. A. Hinterleitner	..	96 8-10
John Hohmann	..	96 2-10
E. R. Letterman	92	97 2-10
E. L. Mason	..	97 2-10
F. N. Peet	95 2-3	97 3-10
C. B. Robinson	..	94 8-10
F. S. Smith	..	96 3-10
Keiser	..	98 5-10
Noyes	..	93 6-10

Winning scores: Distance and accuracy, Peet and Hascall; bait-casting, Hascall.

Illinois Fish Law.

Interesting features of the new Illinois fish law are: Confining of the legal mesh of nets to one and a half inches square; making a penitentiary offense of the use of dynamite or drugs in fishing; enforcing the destruction of any gar fish taken in a net, the taker being guilty if he does not destroy such gar fish; providing a penalty for the use of spear on any fish except German carp (most excellent good!); a bluff at the enforcement of the old fish way law for dams on streams and rivers; the appointment of five fish wardens, under salary; making officers of the fish commission all sheriffs, deputy sheriffs and constables; establishing length limit on black bass at eleven inches; making it a misdemeanor to use seine without consent of owner of land on which seine or net is taken; making it unlawful to fish within 400 feet of any dam from April 15 to June 15; making it unlawful to use a trot or set line on any inland lake; making it obligatory to label packages containing fish in shipment, and to describe same. It is forbidden specifically to kill in any way except by hook and line, bass, pike, pickerel or wall-eyed pike. It is forbidden to kill any fish whatever by means of nets, in any waters, from April 15 to June 1, nothing in this section applying, however to Lake Michigan.

As to the spearing of carp, which seems to be allowable under this act, it is not so much to be taken as a sign of regeneracy on the part of the Illinois State Fish Commission as an assistance to market fishermen who make an idustry of selling carp. We are the great carp garden of the world. While we recognize that there is such a thing as a game fish, we do this without prejudice to our own rights, which rights appear to be more especially concerned with the rearing and selling of the leather-back nuisance which has ruined our Western streams. Tons of these fish are marketed by seining companies, who operate under the theoretical supervision of the Illinois State Fish Commission. That their operations destroy quantities of game fish cannot be denied. That we do not seem now able to remedy this matter is another fact which, apparently, cannot be denied. I doubt if there is a fish commission in America which has actually increased fish life to a greater extent, in proportion to its resources, that that of Illinois. The seining out and replanting of small fishes taken from cut-off bayous and sloughs is the most practical form of fish planting ever devised. It is one of the pities of the time that such splendid work should have been offset by the mistake, intentional or otherwise, which resulted from the general introduction of German carp.

Odd Angling Incident.

An odd incident happened last week to my friend Antoine, when he was fishing in the Prairie River. He saw a rise at his fly and struck, apparently hooking and certainly playing and landing a nice trout. Inspection proved that some one else had had hold of the fish before. It had a bait hook and snell fast in its mouth, and Mr. Antoine's fly, instead of hooking the fish, had fastened in the loop of the snell, thus holding the fish firmly enough to kill it. I never heard of an incident exactly similar.

The Waushara County Streams.

So far as I can learn, my own solitary trip up in Waushara county, Wis., around Wautoma, was about as fortunate as any, and the Saginaw men admit that their average was not as good as that which we made at Wautoma. Arthur Bean and myself took in our broken week's fishing 121 trout in all. These fish were not all over 8 inches, but I think were practically all over the 7-inch limit, and certainly we kept no little yearlings, as is the case with a great many fishermen who go in there, according to the story of my companion.

At Wautoma we seem to have blundered into a very interesting piece of country and one which is worth remembering. We saw a great number of gray squirrels as we rode about through the country, and the woods were quite full of nests. I was told that the squirrel shooting is very fine there in its proper season, and also advised that a great many ruffed grouse are to be found there scattered along in the covers which lie separated by the farming lands. There are some woodcock along the boggy streams. I saw one fine fellow one morning, and also a jacksnipe or two. Rabbits are very numerous. When one remembers that this is all along a river which offers an occasional rainbow trout and which, a little lower down, affords good fly-fishing for small-mouth black bass, I think he will agree that the district is worth remembering. I should not forget to say that a good many prairie chickens are killed in there in the opening week of every shooting season.

More directly in point, however, is the trout fishing, which I took pleasure in investigating during my short stop at Wautoma. Of course, on the snowy Thursday we remained indoors, but on the following morning Arthur and I hitched up for a trip to the McCann River, of which I had heard so much at one time or another. I found this was only a seven-mile drive from Wautoma. As to this McCann River, a prettier trout stream never lay out of doors. It reminds me very much of the Little Manistee River of Michigan. It is big enough to carry a splendid head of trout, and, moreover, its banks are not thickly covered, so that one can easily wade the stream and cast a fairly decent line. The bottom is harder than in most of the other streams in that district which we fished. The typical stream in this part of Wisconsin in some way resembles the sand bottom streams of southern Michigan, though it seems to me these Wisconsin streams are more difficult to wade than those of Michigan, very crooked, rather narrow, and with deep holes shelving under the banks, the bottom being made of loose and shifting sand, not always safe to tackle with anything but caution. The McCann River was the prettiest of these streams which we saw, and was more than comfortable for fishing. It needed only one thing, that is to say, trout. Residents tell me that eight or ten years ago people came from all over the country to fish the McCann. They seem to have fished it out. I hear that it is a little warmer stream than most of the other brooks of that vicinity, and for that reason it seems to have been chosen by the rainbow trout rather than the brook trout. At the point where we struck it, it held very few trout, as I proved by careful wading. We fished two or three miles of this stream with result of only two or three rises, a most disappointing experience on so beautiful a river. At the bridge, where we first turned out there was a swift, deep hole, and here Arthur tried the worm, with the result of a couple of slow, dull strikes and two rainbow trout, one of which weighed something like three-quarters of a pound. Disgusted, we pulled up and followed the stream down to the first mill dam. Here we found the residents spearing suckers, the party having already two or three bushels of suckers. In this part of the river I saw quite a number of rainbow trout, some of them weighing, I should think, between 1 and 2 pounds, but none of them offering to rise. The miller told me that earlier in the spring he very frequently saw large numbers of trout below the dam, but admitted that they were not so numerous as they once were. We heard of numerous good-sized trout being speared in this stream, in weights of 3, 4 and 5 pounds. These were all rainbow trout.

It is too bad that the McCann River cannot be properly stocked and preserved. If it were possible to make a preserved stream out of it, it would be one of the loveliest trouting waters that ever lay out of doors. I don't doubt that we had rather an indecisive experience on it, and presume other fishermen might be luckier at a later date. Indeed, I hear of one party who fished above us and who were reported to have taken 17 trout which weighed 35 pounds. This I accept with a large-sized grain of salt, as I do not believe the fish were rising in the McCann River on that day.

By noon we had had enough of it, and hence started home, resolved to fish our little stream, Straw Creek (I called this "Strauss Creek" in an earlier letter, but it should be spelled "Straw." The creek mentioned as Morris Creek is properly to be called Marr's Creek). On our way in from the McCann we crossed the little stream known as Lunch Creek, which at that point ran winding through a very pretty meadow, which came close to the roadside. I suggested that here was a chance to cast a good line. Art was rather reticent, and said that Lunch Creek was no good, and that it had been fished out badly last year. None the less, as we had but two or three fish at this time of the day, we decided to tie up for a moment and give this stream something of a trial. A storm was coming up, a heavy wind was blowing, and the sky was leaden and overcast. None the less, the little meadow and the crooked black stream formed such pleasant invitation that I began to fish just as though I intended to catch trout. I was using a new fishing rod, which pleased me all the way through, and as to fly, the McGinty, the same which I found so killing in Michigan last summer, and a fly which, so far as I know, had never been used in the State of Wisconsin. This combination seemed to work. I was laying out a long line and fishing up stream, when all at once, on a 30 or 40-foot cast, I felt a sharp tug, and hooked a beautiful trout of about 10 inches. I thought this was a mere fluke and supposed I should not catch any more fish, but presently I heard a shout from my companion a little way down stream, and saw him hold up a handsome trout. "Half pounder!" he cried to me, and presently he had in another one of equal size. As for myself, this gave me confidence, and I began to go up stream, taking what advantage I could of the heavy wind. The result was one of the most beautiful pieces of sport that I ever ran against in my checkered career. It seemed as if every trout in that stream had come up from the caverns, which extended under the meadow banks, and was now feeding in mid stream. They ate the McGinty fly, with its black and yellow body, and liked it so thoroughly that they tore the wings off of three of my new flies before I had worked the stream more than a few hundred yards. I put my trout in a pocket of my shooting coat, until finally they became too numerous, and I called Art to bring up my creel. His eyes stuck out when he saw my pockets. I had hardly a fish which would weigh less than half a pound, and I had a dozen or more of them before I quit.

As I worked up stream I met an old German farmer coming down, plunking a lead sinker and a bunch of worms into every choice hole along the stream. He had a cane pole so long that he could not carry it, but dragged it along from one hole to the other. As he stood fishing one hole in the crooked stream, I made a long cast into the hole. In an instant there was a flash and a splash. It took the old man some time to realize that I was connected with a trout so far away. I had hardly landed the trout before the old man was into the hole to see if he could not catch another. He showed me 5 trout which he had picked up on his way down the stream. I did not think it worth while to work over the water which he had visited. Presently the air grew colder, the wind changing, and the trout were off their feed.

We struck Straw Creek before long, and here, as I stood watching him, my friend Art picked out 8 or 10 handsome trout, 2 or 3 of them rainbows. We had 25 trout when we struck the hotel that night. At first we carried these trout in my creel, but the small creel would not hald the 25, so we put them into Art's big bass basket. They told us such a basket had not been brought into Wautoma in the last nine years, and I fancy it will be a long time before such another one is made. It was simply the weather and the McGinty.

As to Lunch Creek, it is fished nearly every day, and was fished after our trip there by bait fishermen in considerable numbers. When we came to clean up our trout so that I could send a few of them home, we found that 20 of them weighed 10¾ pounds, certainly a most handsome basket of fish to make thus by chance and under conditions apparently most unfavorable.

The following morning we got the other side of the picture. There was a cold, drizzling rain which did not let up all day long. None the less, Art and I went out once more, this time trying Straw Creek, on the scene of our earlier encounters. This time the trout simply refused to come. As I waded the stream I saw scores and hundreds of trout darting from under the logs, but none out in mid stream waiting for edible things to come along. The drizzle kept up all the time, until Art was drenched to the skin. My light rubber poncho, brought along for such an emergency, kept my shoulders dry and my spirits up until about 3 o'clock in the afternoon, when we ingloriously went home with scarce half a dozen trout between us.

Just to show a change, the next day came off clear, with a cold northwest wind, which is the sign of clearing weather in this part of the United States. I was half frozen during the night, and it was so raw, cold and windy that we concluded it was utterly useless to go fishing. In the afternoon, however, I got restless and asked Art to drive me out to some sort of stream so that I could stretch a line once more. He took me three miles to the lower reaches of this same Straw Creek, where there was a little meadow fishing. He told me that there were not many trout, but that I would have room to cast a fly; and as long as one can cast a fly he doesn't care whether he can catch anything or not. Left alone, I found myself on a quiet stream, with occasional riffles, an occasional piece of hard bottom and numerous deep holes shelving back under the banks. Reminding myself of the doings of the conquering McGinty, I mounted that fly again, but the trout would none of it. There was a tiny light-winged gnat about the size of a mosquito upon the water, and searching through my fly-book, I found an English fly with red body and mallard wings tied on 12 or 14 hook. I mounted this and began to fish up stream, dry fly-fashion. Wading into the lower end of a hole as quietly as I could, I would flick this fly here and there over the pool, more especially at what I guessed to be

the deepest parts, and then, casting it as lightly as I could, allow it to drift down stream. In this way I picked out 6 or 8 very nice trout, all about the 8-inch class, not to mention a dozen little fellows, which I put back into the stream.

The Big One.

It was on this afternoon, while I was using the little gray-winged fly, and after I had lost several trout which the tiny hook failed to stop, that I had my banner experience of the trip. I hope I am too old a fisherman to talk about the big one that got away, but that is what I must do. The wonder is that so noble a trout could live in this little, out-of-the-way stream, harried as it is by bait-fishermen, and open and unreserved as it seems to an observer. I was not so anxious to catch trout as to cast a fly, and observing a nice place along the bank where I could lay out a good line and try my new fly-rod, I measured off perhaps 50 feet, reaching out, cast after cast toward a certain likely looking black place under the bank. At last I thought I had the line lengthen to the right gauge, and as fortune would have it, I dropped the little fly into precisely the spot I would have chosen. I was almost frightened at what then ensued. With a rush and a splash and a flame of color the big old fellow, who lived there, came out into the air. He struck in a semicircle, his belly toward me, and again I saw the spectacle known only to the trout fisher—the deep, shaded spot of black water, the somberness, the shadow—all at once lit up by a flame of red and orange. You cannot paint that and you cannot describe it, but you see it once in a while if you follow the game of the fly and the trout. Naturally the old fellow hit his object, and as he went down I felt a tremendous pull at the other end of the line. He went out again three times, and I saw him plainly as I journeyed along and went down closer to him. I tried my best to get him to go up stream, where there was some open water, but this he refused to do. A few rushes, and he showed me that my new rod was not powerful enough to stop him, even had I dared to put much strain on the tiny fly. Then all at once there came that dead stop which every angler who uses three flies at a time will recognize. The trout had fouled me. The middle fly was stuck in a snag in the stream. I worked for several moments trying to free the fly, but fearing to put too much strain on the line. I had a telegraphic connection still with the trout, and at length, after four or five minutes' fighting him in this way, concluded I would have to wade down and try to free the entangled fly. As I stepped into the stream I saw the old fellow lying there over the white sand. He was a fine trout for so small a water, no four or five-pounder, but a trout that I suppose would have weighed 1¾ pounds on the scales, about what you call a 2 or 3-pound trout. As he saw me he immediately ran out. Once more the rod proved too flexible to stop him. He was off into a rushing little channel which passed over a bushy bed, in a flash he was tangled up once more. Once more I waded in up to my hips, and kicked loose the fly, which this time was holding him. Alas! the hook came back free, in its bend a little piece of brush not so large as a small lead pencil. I imagine that old fellow deliberately rooted his head into that brush pile until he got leverage sufficient to work out the little hook.

After this, not grudging my trout his escape and feeling pretty well satisfied withal, I went on down stream and went home in the darkness, with a dozen nice ones in the basket.

Other Streams.

At Wautoma I heard of several other streams which must be duly looked into at a later date. One of the best of these is Willow Creek, a stream which Wm. Wood, the keeper of Mr. Miller's preserve on the Pine, has told me about before now. Willow Creek is something like 12 miles from Wautoma. It is for the most part brushy, but they tell me that there are places where meadows run down to the banks, and the story is that the stream has not been fished this season and should be worth investigating.

Yet another stream is Chaffee Creek, which is reported to me as a little larger than Straw Creek. This must be something like 10 or 12 miles from Wautoma. It is said to contain places where one can cast a fly, and in earlier seasons has been the scene of some very heavy catches. We must see about Chaffee Creek one of these days before long.

Still another stream is Hall Creek, over in the same country, east of the Northwestern R.R. Willow Creek runs into Lake Poygan, and these streams seem to have a southeasterly course, paralleling the direction of the Pine River, which is the capital trout stream of this district.

I met an Oskkosh fisherman, who told me Willow Creek can be reached by way of Oshkosh. One takes a steamer and goes up the river to Tustin, thence taking rig to the Pine River village, or Poysipi village, the latter being near Willow Creek. The lower reaches of the Pine River can also be fished from these villages. Thus you will see that you can enter either from the east or from the west quite a good-sized trout country, which has streams open to the public, and streams which hold very decent fish. My own trip was too short to fully explore all this country, but I consider it one of the most interesting discoveries that I have made in quite a while.

The Main River.

At the village of Wautoma there runs the main Wautoma Creek, which a little lower down meets the Straw Creek, sometimes known as the South Branch of the White River. Below this point is the White River. Benjamin's farmhouse being only about 5 miles down stream from Wautoma. I started for Benjamin's place, but got side-tracked, as above described. Either from Benjamin's or from Wautoma one can reach all these streams which I have mentioned. Three miles below Benjamin's is the village of Neshkoro, which may be called the southern limit of the trout fishing of the White River. From Neshkoro the White runs through meadows offering most tempting opportunity for fly-casting. They usually fish it with a boat, but I am sure that a boat is not in the least necessary. I have heard of a couple of dozen fine black bass being taken in a day by the fly-fishermen on the White, below Neshkoro.

As to the trout fishermen, Benjamin's place this spring was well patronized by anglers, many from Oshkosh, some of them from Indianapolis, and one or two from Milwaukee. Mr. Hooper, of Oshkosh, and his son, had been in a couple of days when I saw them, but they took only about a dozen trout, the best day's fishing they had. These trout were very handsome fellows. They tell me that one hardly need expect to get very many trout there now, but is safe upon getting a good one if he gets any at all. The stream here is crooked and deep, and it takes a fisherman to do business, as the trout are pretty well educated. I have heard of rainbows as heavy as three pounds being taken in this part of the stream. A speckled trout weighing over three pounds has been lately reported on this same stream. I presume there are more big trout in these heavier waters than in any of the streams I have mentioned, and a man who is satisfied to fish all day and get one or two good ones might do well to stick to this water. If he wants a little more rambling and a little brushier and smaller water he can patronize some of the streams which I have mentioned, on nearly any of which there will be occasional stretches of meadow fishing, where there is good opportunity for casting the fly. I found all of these streams stocked with trout, which rise freely to the artificial fly. Indeed, I did not use a bait of any description during my trip, nor did my companion, Arthur Bean, try bait-fishing very much of the time. The streams are cold spring water, overgrown enough in long reaches to offer protection to the trout, and they seem to have been regularly stocked by the fish commission of the State of Wisconsin. The practice of taking yearlings ought to be discountenanced. An 8-inch limit on Straw Creek, for instance, would make of it a magnificent fishing stream. It is literally alive with small trout to-day. These streams all seem to resemble the famous Pine River in their abundance of natural trout food. The hatch of fly was not abundant in the cold weather during my stay, but the streams are full of larvæ. I took one trout on my last afternoon which seemed distended almost to the point of bursting. I killed and opened this fellow, and found his stomach to be literally crowded with what seemed to be black mud. This was no doubt made up of caddis cases in great part, but the greedy fellow seemed to have taken in a good deal of alluviam along with his larvæ.

I cannot say how fishing may prove later in this new district of mine, and presume, of course, that the first warm days of the season are the best; but I intend to look at some of the larger streams a little further from the railroad at a later date, and shall, of course, be glad to advise any inquirers of the proper sort in regard to later discoveries which may be made. This district is about 200 miles north of Chicago. Leaving Chicago at 3 o'clock in the afternoon one reaches Wautoma at 8:40 in the evening; not a bad schedule, as it leaves him free to open his fishing operations on the following morning after a full night of sleep.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Maine Fishing.

BANGOR, Me., May 30.—*Editor Forest and Stream:* The drought continues, and throughout the State there is still the same dry condition that was referred to in previous letters, resulting in frequent forest fires.

While this drought worked greatly to the benefit of the anglers for several weeks, it now appears that it is beginning to have a disastrous effect on the sport in some localities, although in others the fish continue to bite eagerly. In still others, there have been so many winds during the week that it has been, most of the time, impossible to fish, and even if one was venturesome enough to go out, the fish could not be prevailed upon to take the lure. Yet, as intimated above, this has not been universally the case, and some parties have enjoyed phenomenal success.

Probably none have surpassed the Thompson party of this city, made up of J. A. Thompson and wife, who have just returned home from a novel combination trip. They went to Katahdin Iron Works by rail, thence drove to Long Pond, where they fished in West Chairback, one of the most delightful trout ponds in the State; then journeyed by canoe and afoot to Lake Onawa, whence they returned to the shore of Long Pond by way of the Canadian Pacific to Henderson, the B. & A. to the Iron Works, and afoot via Houston Pond and over the Chairback range to West Chairback Pond for a day's fishing; finally arriving at Long Pond with all the trout they could carry. It was a great trip, and Mr. Thompson, who has fished in that section of the fish country for thirty years, never saw better sport than he had in three different days' fishing on this pond of the Chairbacks, one of the highest trout ponds in the entire State.

Judge John Howard Hill, of the municipal court, Portland, and Frank O. Haskell, of the same city, have been at Lake Onawa, enjoying the fishing there and at Long Pond with marked success. Some handsome salmon were taken by them at Long Pond, and the best trout fishing they ever saw was had at West Chairback Pond, which they visited one day.

Oliver W. Shad and Orin A. Barnard, of Boston, have been at Camp Houston, Katahdin Iron Works, enjoying some splendid sport among the trout of Little and Big Houston ponds.

Edgar Mowrey and Henry Lincoln, of Providence, R. I., are at Chairback Mt. Camps, Long Pond, where they are enjoying some magnificent sport. At latest accounts they were doing their best to break the famous record of the Chairback ponds, east and west, and had made a trip to Hedgehog, where in one day they caught 60 trout.

Although there are some lakes that are not holding up well, Dobsis, of the famous St. Croix system, is not one of them, and this pond, which is perhaps the best of the system, commonly referred to as the Grand Lake system, because of the fame of Grand Lake and Grand Lake stream, is continuing to furnish some great sport. Among those who have been there may be mentioned A. D. and Charles Warner, of Wilmington, Del., and Byron Eldred, of Boston, who took 44 salmon and 2 trout during their stay of three days, only half of which time could be devoted to fishing because of weather conditions; G. B. Freeland and his friend, Mr. Bird, of Boston, took 12 salmon of an average weight of 3 pounds each, in but one day; E. B. Burgess, of Somerville, and C. H. Smith, of Cambridge, are still there and are having grand sport.

Frank D. Parsons, of Millinocket, and a party of friends, some from Millinocket and others from New York, spent a day recently at Mud Pond, another tributary of Millinocket Lake, and caught a most unusual lot of handsome brook trout.

At Moosehead the past week has been one of mingled joy and disappointment, as the fish were very willing to bite when the lake was not too rough to fish. Still, in spite of windy weather and other drawbacks, some excellent strings have been taken by those who know how and where to fish in the big lake at such times. Arthur J. Bigelow, of Worcester, Mass., who is an expert on Moosehead angling, is at the Outlet for his spring stay and is having good sport.

Dr. C. P. Thomas and E. J. March have returned to this city from Moosehead, where they spent but two days, with such good success that they brought home 36 nice trout and several good-sized lakers.

A jolly crowd has been at Kineo for the past week, and is having great sport according to a member of one party, who was obliged to go home ahead of his friends. In the list are Frederick S. Parker, wife and daughter, of Bedford, Mass., who have a steamer all to themselves and are cruising all about the lake, and getting great sport whenever they chance upon a spot where the fish are taking hold well. Others on another steamer include E. S. Farmer, of Arlington, Mass., who is getting all that is coming to him in the way of trout; F. X. Fitzpatrick, of Cambridge, Mass.; W. F. Perkins, of Derry, N. H., who is getting some exceedingly nice square tails, weighing as heavy as 4¾ pounds, and lakers up to a 9½-pound limit. Miss Helen M. Locke is the champion of this party, having not only taken a dandy string of trout, but gotten near enough to a cow moose and calf to have taken a fine photograph if she had been supplied with a camera. In Duck Cove she saw the moose, and whiled away the time by catching 3½ and 3¾-pound trout. F. E. Thompson, of Arlington, who was making his initial trip to Moosehead, had the trip of his life, and is forever wedded to the life of the angler, for he took about two dozen fish during his stay, some as heavy as 3½ pounds.

E. M. Stannard, of Racine, Wis., was in the city yesterday on his way from Moosehead Lake, where he fished for a day or two and caught the banner strings for the West Cove anglers, taking ten or a dozen trout during the time he was there. One square tail weighed 4½ pounds, and there were ten togue in the lot.

Among the Kineo anglers, Fred S. Lufkin, of Gloucester, Mass., and H. A. Giddings, of Hartford, Conn., have led all comers with record fish, the former having taken the largest salmon of the week, an 8½-pound fighter, and the latter leading with the best square tail of the week, and, so far as fight goes, one of the best of the season, a 5½-pound trout. But these were not all the fish taken, nor all that these two enthusiastic fishermen secured. Mr. Lufkin took one of the finest strings seen at Kineo in many a day, including seven trout that weighed at least 2½ pounds each, and three togue of 14, 8 and 6 pounds. Mr. Giddings has taken a large number of average trout, two of the best weighed 3½ pounds apiece.

Several of the popular fishermen's clubs, annual visitors to Maine's great inland sea, are on hand for some of the sport that the others have been enjoying during the last fortnight. None will have a better time or leave a record of larger fish taken than the well-known Mohawk Club of Haverhill, which, for many, many years has been coming to Moosehead or some tributary waters. In the party this year are President C. W. Arnold, Chas. H. Davis, D. T. Kennedy, George L. Emerson, A. P. Jacques, D. T. Dudley and Walter C. Lewis, of Haverhill, Richard E. Traiser, George Waterman, Jacob Mosser and P. B. Heintz, of Boston, and it is a question which are more striking, their artificial flies or their uniforms, as this club has, throughout its existence, come to Maine adorned with scarlet waistcoats. A new club this year is under the direction of one of Moosehead's most ardent admirers, who has been coming to the lake from Boston for many years, but never before as the president of a sportsmen's club. C. M. Harriman has always had good success, and will live up to his reputation this time, while his fellow clubmen will do their best to beat him. The other members are A. C. Wharton, H. A. Blackmer, A. W. DeWolf and H. F. Carson, all of New Bedford, except Mr. Harriman.

Walter Wesson, of Smith & Wesson, Springfield, Mass., is entertaining a party of friends at his camps on the Moodies, and visiting the good fishing points in Mr. Wesson's handsome new steamer, built last year. In his party are Nathan D. Bill, Frederick Harris, Samuel J. Fowler and James W. Kirkham, of Springfield, Mass.

Grand Lake Stream advices are to the effect that the fishing there is a bit slack just now, as it is between the trolling season and the fly-fishing, although there have been about 200 successful visiting sportsmen there during the month just closing. Fly-fishing begins June 1, and after that date Grand Lake Stream will be a busy place for the fly-casters, who invariably get a good catch there as soon as the fly-fishing begins. Early fishing does not touch this stream, since it is closed to all but casters of the fly, and is open only from June 1 to October 1 of each year. In this stream, which is really the west branch of the St. Croix River, there are these special regulations as to fishing, and this not

only has a most beneficial effect in preserving to the sportsman one part of the great St. Croix system that may not be depopulated by the bait fisherman, but also affords the only fishing in St. Croix waters after September 15, the general date of close time for the river and tributary waters. This special regulation has been in force only two years, but already its beneficial results are being seen and recognized. Grand Lake stream is two and a half miles long, and in that distance after leaving Grand Lake, drops 196 feet, its frequent falls affording a continuous chain of pools that always contain the delightful salmon of these waters, which are strongly claimed by many to be the actual ouananiche of Canada, and every whit as delicious and gamy. The ouananiche stay in the river all summer, and the day is most unusual when the fish will not rise to the fly at some time during the day. Of course, readers of FOREST AND STREAM understand, when the ouananiche is attributed to Grand Lake and its outlet stream or river, that the same fish is to be found in all the waters of that system, among which are the Dobsis lakes, referred to in the earlier part of this letter. Others of the same chain stocked with this fish are Junior, Scraggly, Pleasant, Pocompus and West Musquash. These are all beautiful bodies of water and fished comparatively little. It is noticeable, in this connection, that the salmon of Grand Lake and Grand Lake stream, are showing up larger this last year or two, and now run from a pound to a pound and a half heavier than they used to do.

HERBERT W. ROWE.

Stag Lodge.

I HAD heard much of Stag Lake and Stag Lodge, and the wild country of northern New Jersey, where game and fish abound, but like very many others, I was perhaps a bit skeptical as to a full realization of the wildness and ruggedness of this particular section and of its natural beauty.

Not so, however, was it with Justus Von Lengerke, who, a quarter of a century ago, found good shooting on the Jersey City meadows, and gradually, as he prospered in life's struggles, pushed his way further and further back into the wilds of Jersey until he invaded Sussex county. Here he found everything to his liking—lakes, mountains, brooks, game, fish and plenty of room and lots of seclusion. Even then there was born in his mind a possibility, a probability, a hope of realization, which the years have enabled him to bring to perfection; money was needed and has been used, but the real success of Stag Lodge lay in the fact that the brain and muscle of its owner worked in unison and together. Where stumps and alders were, lawns and flowers are now. The shallow extremities of the lake were filled with dead and dying bushes; these have been pulled up, cut out and burned; spawning beds have place there now.

And this rough but gentle spot is within sixty short miles of New York. It seemed even nearer, thus does time speed in good company. We left New York in the middle of a hot afternoon and in less than two hours alighted from the train at Andover, Sussex county, N. J., where Carl met us with a span of horses, one of which is well bred and the other one just as good. They could and did go "up hill and down dale," while Teddie (just a yellow dog) sped along ahead or close behind, always alert, spying here and there, looking for an evening prowler by the roadside, be it chipmunk, cottontail or woodchuck; they were all his specialties, and needed speed and cunning to dodge the natural hunter.

On a beautiful rise in the road the team came down

THE LODGE.

to a walk. Here a view in every direction could be had, yet one made sad by the devastation caused by the woodchopper. Large stumps of trees only remained, that but a short time ago supported trees that met over this mountain road, shading it in summer and ameliorating its bleakness in winter, like a vast throne denuded of its splendor. It was here that Justus Von Lengerke first revealed to me his very close relationship to nature, his love of God's gardens, his reverence for the giants of the forest, recalling to my mind Cooper's "Pathfinder" or "Deerslayer." With a wave of the hand he exclaimed, "Isn't this a shame?" There in the valley stood the sawmill that had consumed the draperies which nature had laid so daintily over those gray rocks and laid bare the mountain's nakedness. "Thank God, I have many acres over there, to which, as long as I live the woodchopper shall be a stranger." And speedily the horses carried us on, down and up again, only now at all times with heavily timbered frames to our pictures, cool, invigorating, lovely. In many places along this road can be seen heavy broken boulders that but a few years ago contributed to the substantiality, danger and discomfort of the road bed. This master of industry, however, showed his long training and battles in the powder business by supplying it gratuitously to the committee on roads for blasting purposes, until now 'tis an ideal road, thoroughly devoid of its former bumping monotony, yet lacking in sameness at every turn. The drive of three miles and a half with the pure air and the ozone here at an elevation of 1,200 feet fits one for the feast that lies before him.

The sun had not yet set, when a break in the treetops revealed Stag Lodge, but the palisade at one end of Stag Lake had cut off the sun's last rays, in order to give the right shadows, the right touch to this home in the wilderness.

At the extreme east end of the lake is Stag Lodge, with its seventy feet of broad piazza, the center of which is uncovered, so that the nightly visit of Arcturus should not be missed. A feature of the interior is the great fireplace of the reception hall, built of unhewn stones gathered on the spot; and the running water with which the house is supplied is piped from a spring on the mountain side. Much ingenuity has been manifested in making the most of the natural conditions at Stag Lodge. Just back of the main building is the ice house, in the side of which is a natural refrigerator. Across the lawn, still in the rear, stands a modern barn, to the right a chicken yard, which is a "dug out" with the mountain on two sides and a three-foot stone wall on the other two sides; overhead are heavy timbers covered with earth, and over the door screened ventilators; here a hen can keep her mouth shut all summer and scratch and lay and hatch in summer attire all winter. A duck house by the side of the lake affords these fowls all the same sort of comforts of home. And still genius dimmed not nor wearied, for as you enter the grounds you pass an apple and vegetable store house which in like manner is largely constructed by nature.

It is not all wilderness at Stag Lodge, for 300 feet of hose are required to reach to the edges of the lawn, and here and there are flower beds; and on one side is the vegetable garden; and a half mile back the old deserted farm, where all supplies for man and beast can be raised.

In front of this most modern lodge lies the lake, sixty acres in extent. At one end a palisade rises 350 feet high. From its summit one can see Culver's Gap in the north and the Delaware Water Gap in Pennsylvania, 25 miles away in the west. Here the master of Stag Lake and Lodge points in all directions with natural pride, and shows one the vastness and wild grandeur of his domain, 500 acres in extent, and declares "he will live to enjoy it a hundred years."

In the lake are to be found pickerel, large and smallmouthed black bass, yellow perch, sunfish and "catties."

As the shadows died away, and the curtain of night closed upon the beautiful view, a whipporwill mounted a rock near the house and gave its call; an old frog of gigantic proportions asked for his "last drink," and the great horned owl announced his daylight once more, while the crickets chirped their supremacy in numbers, and even Teddy grew quiet as though impressed.

At the earliest dawn, when the palisade took on a golden hue, Mr. Von Lengerke was seen emerging from the lake, while Ernst, his son, cast a long shadow over the duck pond, where in front of him played many young ducks, darting over the surface after the early rising insects. The day was full of charm and interest. I was, perhaps, most impressed by the thought of the many days of manual labor done here by my host. Every improvement bears the stamp of his own handiwork. A prominent object in his gun cabinet is his hand-made ax. I asked Mr. Von Lengerke about the game, and he told me that he has woodcock, grouse and occasionally ducks, but he rarely kills a grouse, for he would "rather hear them drum than eat them." Then I became impressed.

T. E. BATTEN.

Angling and Charitable Deeds.

SUNDAY morning came at last, and our annual fishing trip to White River started about 6 o'clock. Mr. F. H. Josslyn, of Oshkosh, and the writer, after packing fishing tackle, wading boots, old clothes, lunch and many other things into the wagon, started on our 42-mile drive to Benjamin's farm, which was to be our home for a few days. At about 11:30 we stopped for lunch at a place which had been dubbed on one of our earlier trips, "Hotel Josslyn." The hotel is nearly all out of doors, being simply a very beautiful elm tree, which afforded abundant shade for ourselves and horses. After giving the team a chance to rest, we started on the "short half" of our journey, reaching Benjamin's about 3 o'clock. As it was Sunday, we did not fish, the more so that we found Dr. Milburn—the pastor of Plymouth Church, of Chicago—had arrived a little earlier than we expected. We talked over what "had been" and what we hoped might be our luck on the morrow, and spent an enjoyable afternoon and evening.

Clarence Young and George Lawrence, of Milwaukee, had secured the services of Owen Goodwin (the man who has always held the record for best catches in the White River country) to pilot them to the places where the big ones are found. Mr. E. W. Gillett, of Chicago, had Mr. Will Goodwin for his guide. As for Josslyn and myself, we had fished with Owen Goodwin so many times before we felt that we needed no guide.

Dr. Milburn and all the others came in Monday night with very excellent catches. After supper we again gathered in the big living room and talked it all over.

Just before turning in for the night Owen Goodwin made a hit with every one by telling a story on Josslyn that put him to the "blush." It seems last year they had made up a purse for an old lady in the neighbor-

THE LAKE.

"THE BOSS."

hood who had been unfortunate, and Clarence Young had carried it to her together with a big basket of Mrs. Benjamin's good things, and being too modest to take any credit to himself, told her Josslyn was the donor, ever since which time the good woman has been trying for a chance to kiss Josslyn to show her appreciation of his benevolent character.

Goodwin finished up by saying he would give a dollar toward another purse provided Josslyn would consent to being kissed. and he could be present when it was bestowed. Mr. Gillett immediately went Goodwin one better, and so on, until Dr. Milburn insured that purse to Mrs. Flynn by telling Josslyn it was assuredly his Christian duty to be kissed. Kissed he was the next day.

Between fishing and spinning yarns the time passed quickly, and we once more started home, taking back for our share 74 beautiful trout. H. R.

Are Fish Hatcheries a Success?

Editor Forest and Stream:

It seems to me that your editorial on "State Fish Hatcheries and Their Work," in the issue of May 16, wherein it is shown that a great many private waters, trout ponds and streams throughout the United States are rehabilitated and kept stocked from artificial hatcheries, is a refutation of the Old Angler's postulate that artificial fishculture is a failure in toto. The Caledonia Creek in Ohio, and the Blooming Grove Park waters in Pennsylvania are shown to be most prolific by annual tabulated statements of the fish caught by members of the clubs owning and preserving them. There are quite a number of private breeders, half a score, perhaps, whose success is attested by their annual output of fry, fingerlings, and ova, in adidtion to the two-year-old trout which are sold for breeding purposes to hundreds of gentlemen who own ponds and streams lying within their reach. I think it may be claimed that the landlocked salmon fishing of Maine, which is alrcady widely distributed over the State, and the bass fishing of sundry localities in several States, is due to artificial culture. Though success in these specialties is not sufficiently pronounced to bank much upon, still it cannot be denied that anglers are having a good deal of sport in these lines, and including fly-fishing for sea salmon as well in certain rivers of Maine.

The Old Angler's data, published in your columns, regarding the results of fishculture in Nova Scotia and New Brunswick, gathered from his protracted official experience as Inspector of Fisheries in those Provinces, cannot be gainsaid. He has no object, I mean, in misrepresenting. What he affirms simply witnesses that the fishculturists of Canada have not made the best use of their natural gifts, which are even better than our own as a whole.

In this connection it may be proper for me to say that I think he has written a very strong paper in demonstration of the uselessness and utter absurdity and waste of money in maintaining salmon hatcheries on the superabounding and jammed up rivers of the Pacific Coast. His arguments are backed by corroborative and convincing testimony, to which I myself have been an eye witness in years past. Why these hatcheries are maintained and encouraged out there—the *raison d'être* which he gives for their existence—need not be restated in these lines. The deposition stands without indorsement.

In the early history of the McCloud and Sacramento hatcheries, the efforts of Livingston Stone, the most eminent fishculturist of our time, were purely experimental, and were justified, as events proved. They were praiseworthy, not only for their logic, but their outcome. But in Columbia River and Alaskan waters all the conditions are as different as can be. Artificial hatcherics are certainly superfluous there. CHARLES HALLOCK.

New Jersey Coast Fishing.

ASBURY PARK, June 1.—The first striped bass of the season was taken at this point on the 27th inst. by Joseph Cawthorn, weight 13 pounds. This came in the way of just recompense, as he has given them most faithful trial the past three weeks. Kingfish are beginning to take the hook at all points along the coast, and they run of very fine size. As is customary, Manasquan River gave first results to bass fishermen, three or four having been taken there, the weight of which I have been unable to learn. Plaice, too, are in evidence, as they are being taken quite freely in all our rivers. What I wrote in relation to fine perch fishing two weeks since still holds good, and they are being taken at points where their presence was heretofore unsuspected. On Friday last, in Asbury Park, men took ten from Sunset Lake which weighed full 10 pounds; this average is phenomenal. What is a matter of interest here is the great run of tomcods with us the past two months. The waters fairly teem with them. LEONARD HULIT.

The Kennel.

Fixtures.

Oct. 6-9.—Danbury, Conn., Agricultural Society's show.
Nov. 3-6.—New York.—Annual show of Ladies' Kennel Association of America.
Nov. 9.—Fourteenth annual beagle trials of the National Beagle Club of America. Charles R. Stevenson, Sec'y.

Bloodhounds and Man Hunting.

PARIS, France.—*Editor Forest and Stream:* May I ask of the readers of FOREST AND STREAM who are posted on the subject, to give some information concerning the use of bloodhounds for the detection of criminals or runaways? If so, will they be kind enough to let us know:

1. Whether the use of bloodhounds is, so to say, officially recognized: are there jails or prisons where bloodhounds are kept for the purpose of following runaway prisoners? Are there lunatic asylums or other establishments where bloodhounds are kept for the purpose of recovering runaway lunatics, etc.; are there private detectives who keep such dogs and use them in their work, and is the use of bloodhounds rare or frequent, and where are they more generally used? Are bloodhounds kept for purposes other than the above mentioned? And can reliable accounts of their feats be provided?

2. Are there associations or prisons specially interested in bloodhounds, and having practical experience? Name and address, please.

3. A good deal has probably been written on the matter: could some reader tell me which are the most reliable publications, books, pamphlets, or papers of any sort? (Name of publisher also.)

I must explain that I ask for such information not out of mere curiosity, but because I wish to be able to give an account to French readers of the practical uses to which bloodhounds are put on the western side of the Atlantic. I must add, also, that I shall be much interested in all that concerns the training of bloodhounds, their education, trials, etc. HENRY DE VARIGNY.

[We trust that some of our readers will give the information which M. Varigny desires.]

Points and Flushes.

Mr. Chas. F. Brockel, 225 Main street, Danbury, Conn., writes as follows:

"Some mean thief stole my English setter Rod about a week ago. He is registered in A. F. D. S. B.; black head and ears, chestnut colored cheeks; white stripe between eyes; muzzle white-ticked black; black spot on left ribs; black spot on same side hip; rest white. Suitable reward leading to recovery of dog and no names mentioned.

All motorists and cyclists have at various times had encounters with dogs, and the following story describes a little experience of this kind. A driver of a motor-car had the misfortune to run over a fine fox-terrier, and, at once pulling up, he went back to the apparent owner, expressed his regret at the occurrence, and gave him a sovereign. Then he drove off, while the man observed: "That's what I call a real gentleman. Now, I wonder whose dog that was!"—Shooting Times.

Yachting.

Yachting Fixtures for 1903.

Members of race committee will confer a favor by sending notice of errors or omissions in the following list, and also changes which may be made in the future.

JUNE.

6. Seawanhaka Corinthian, club, Oyster Bay.
6. Columbia, eleventh annual Michigan City race.
6. Chicago, handicap race, Lake Michigan.
6. Royal Canadian, club, Toronto.
6 Marine and Field, Y. R. A. of G. B.
6 Knickerbocker, Y. R. A. of L. I. Sound, annual.
8. Pavonia, open, Bayonne.
8-12. New York special races, 90-footers, Sandy Hook.
9. Atlantic, annual, Sea Gate.
10. Atlantic, 90-footers, Sandy Hook.
10. South Boston, club, City Point.
10-12-13-15-16. Manchester, trial races for selection of challenger for Seawanhaka cup, Manchester Harbor.
11. New York, fifty-seventh annual, all classes, off Sandy Hook.
13. Chicago, special, Lake Michigan.
13. Boston, club, South Boston.
13. Royal Canadian, club, Toronto.
13. Seawanhaka Corinthian, club, Oyster Bay.
13. Larchmont, spring regatta, Larchmont.
13. Beverly, club, Monument Beach.
14. Jamaica Bay, club, Jamaica Bay.
15. New York, Glen Cove cups, Glen Cove.
17. Beverly, open sweepstake, Monument Beach.
17. Larchmont, races for 90-footers, Larchmont.
17. Boston, Y. R. A., off Point Allerton, open.
17. Dorchester, open, Dorchester Bay.
18-19. New Rochelle, club, New Rochelle.
19. Eastern, special, open, Marblehead.
19. Indian Harbor, 90-footers, Greenwich.
20. Southern, Baldwin and Walker cups, New Orleans.
20. Beverly, club, Monument Beach.
20. Keystone, club, Woodmere, L. I.
20. Brooklyn, Y. R. A. of Gravesend Bay.
20. Corinthian, first championship, Marblehead.
20. Seawanhaka Corinthian, 90-footers, Oyster Bay.
20. Atlantic, club, Sea Gate.
20. Columbia, motor boat race, Am. P. B. A., Hudson River.
20. New Rochelle, Y. R. A. of L. I. Sound, annual.
20. Chicago, handicap, Lake Michigan.
20. Royal Canadian, club, Toronto.
21. Old Mill, club, Jamaica Bay.
21. Gloucester, N. J., annual, Delaware River.
25-26-27. Seawanhaka Corinthian, Y. R. A. of L. I. Sound, annual and specials.
27. South Boston, club, City Point.
27 New York, special race for 90-footers, Newport.
27. Boston, club, Marblehead.
27. Beverly, club, Monument Beach.
27. St. Paul, cruise, rendezvous St. Paul, Minn.
27 Chicago, special, Lake Michigan.
27. Royal Canadian, club, Toronto.
27. New York C. C., Y. R. A. of Gravesend Bay.
30. New York, special race for 90-footers, Newport.
30. Royal Canadian, L. S. S. A. regatta, Oakville.
29-July 2. Manhasset Bay cup races, L. I. Sound.

SIR THOMAS LIPTON'S yachts, Shamrock III. and Shamrock I., left Gourock, Scotland, on May 28, for the United States. The boats were accompanied by the steam yacht Erin and the ocea-going tug Cruiser. Large crowds were on hand, and excursion steamers followed the boats for some distance. Shamrock III. will come out in a cutter rig, while the old boat is rigged as a ketch.

New York Y. C.

GLEN COVE, LONG ISLAND SOUND,
Tuesday, May 26.

The third of the serics races for thc 90-footers held off Glen Cove by the New York Y. C. was the first real test the boats have had and the race was interesting and exciting from start to finish. The race was sailed in a nice southerly breeze of about ten knots strength that held quite true throughout. Although Reliance finished first by two minutes, twenty-one seconds, the result of the race is still a matter for conjecture, as none of the boats have been measured, and it is believed the Reliance will have to allow Constitution quite a little time.

The boats sailed twice over a fifteen mile triangle. The start was made off Martinicock Point, thence E. ½ N. six miles to and around a mark off Lloyd's Point, thence N. W. four and one-half miles to and around a mark off Little Captain's Island, thence S. W. by S. four and one-half miles to the starting line. This made the first leg a close reach on the starboard tack, the second leg a broad reach with the wind over the port quarter, and then a close fetch back home. At the start all three boats were carrying the same canvas—big club topsails over the mainsails and No. 2 jib topsails over the staysails and jibs.

The Regatta Committee was again on board Mr. R. A. C. Smith's steam yacht Privateer. The preparatory signal was fired promptly at noon and the boats started fifteen minutes later. Reliance crossed the line right on the gun, Constitution was just on her weather quarter and Columbia was to leeward of Reliance. Reliance heeling down rather more than the other two boats began to draw away from Constitution at once. Reliance was pinched and luffed until she worked out to windward of Constitution, and while these two boats were indulging in a luffing match, Columbia, which had been left well behind, drew up a little, but as soon as Reliance and Constitution were put on their course again she was again left far behind. After the two boats had passed Center Island they caught some stout puffs that drew out of Cold Spring Harbor. This prompted those on Reliance and Constitution to take in their big jib topsails, a smaller one being set on Reliance, but Constitution was allowed to jog along with only her jib and staysail. She seemed to do better with a little less sail, and caught up all she had lost just after the start.

The times taken as the boats gybed around the first mark follow:

Reliance .....12 43 18 Columbia 12 45 17
Constitution 12 43 41

On this six mile reach Constitution had beaten Reliance 7s. and Columbia 2m. 6s.

After rounding, Constitution had her balloon jib drawing some time before Reliance's was broken out. A spinnaker was set on Columbia, but it is a question if it helped her any. Reliance and Constitution again got into a luffing match, and as the latter boat was to windward she had rather the best of it, and worked up on Reliance quite a bit. When the boats squared away for the mark, spinnakers were set and Reliance again pulled ahead a little.

The times taken at the second mark were:

Reliance .....1 14 09 Columbia 1 23 50
Constitution 1 15 10

On this leg Reliance had gained 38s. on Constitution and 7m. 42s. on Columbia.

After rounding, sheets were flattened down and a baby jib topsail was set smartly on Reliance. There was some delay in getting this sail set on Constitution. Reliance and Constitution held the port tack while Columbia took the starboard tack soon after rounding. Reliance and Constitution tacked once to starboard and were then put back on the port tack for the mark. The new boat had gotten away from Constitution a little on this leg. The last barge of a long tow fouled the mark, and Constitution, having to go out of her way, lost some little time. The boats were timed at the end of the first round as follows:

Reliance .....1 44 32 Columbia 1 59 40
Constitution 1 47 18

On this leg Reliance had beaten Constitution 1m. 45s. and Columbia 5m. 27s.

Baby jib topsails were set on all the boats after rounding. There was a twist in Reliance's and it was lowered and reset. On this leg Columbia did much better, and gained nearly two minutes on the leading boats. Jib topsails were taken in and balloon jibs were set in stops before the mark was reached. The times taken as the boats gybed around the Lloyd's Point mark follow:

Reliance .....2 12 20 Columbia 2 25 04
Constitution 2 15 09

Balloon jibs were broken out and as the wind had worked around to the west of south, preparations were made on Constitution to set the spinnaker, but it was not broken out. Constitution moved along very smartly on this leg, and made a decided gain on Reliance. Columbia set her spinnaker, but it did her more harm than good. Balloon jibs were taken in as the boats hauled on the wind. The times at this mark were:

Reliance .....2 40 29 Columbia 2 55 30
Constitution 2 41 41

On this leg Constitution had beaten Reliance 1m. 28s. and Columbia 3m. 14s.

The shift in the wind had headed the boats off a little, and they had a beat back to the finish line. Baby jib topsails were set on all the boats.

Reliance had rather the best of it on the beat home, although Constitution would pick up in the puffs. Columbia made a splendid showing on this leg, and cut down Constitution's lead noticeably. The times at the finish follow:

Reliance .....3 12 11 Columbia 3 28 02
Constitution 3 15 02

On this leg Reliance had beaten Columbia 50 seconds, and Constitution 1m. 39s.

On the first time around Reliance had beaten Constitution 2m. 16s. and Columbia 15m. 8s.

On the second time around Reliance had beaten Constitution 5s. and Columbia 43s.

The summary follows:

	Start.	Finish.	Elapsed.
Reliance	12 15 00	3 12 11	2 57 11
Constitution	12 15 30	3 15 02	2 59 32
Columbia	12 15 00	3 28 02	3 13 02

Reliance beats Constitution 2m. 21s. and Columbia 15m. 51s. on elapsed time.

Thursday, May 28.

The race sailed by the big boats on Thursday, May 28, bid fair to be a very exciting one at the start, but it was robbed of its interest while the boats were on the first leg of the course by an accident that happened to Constitution. After Constitution withdrew from the contest it became a procession with Reliance well in the lead. Constitution was pushing Reliance hard for first place, and both boats were within a mile of the first mark when Constitution's starboard topmast spreader broke and her topmast went over the side.

Thursday broke dull and overcast, and in the morning there was a little rain. The sky gave promise of thunder squalls, but none developed during the day.

The crews of Reliance and Constitution showed by their smart work that they had derived considerable benefit from the three previous races, and the boats were handled with more snap and vim.

At the start the wind was S. by W., and had a strength of about seven knots, but it breezed up as the race progressed. Shortly before twelve o'clock the Regatta Committee signalled from the steam yacht Privateer that the boats would sail over course R. The starting line was off Matinicock Point, thence eleven miles E. by N. ¼ N., to and around a mark off Eaton's Neck, thence three miles N. N. W. to and around a mark off Green's Ledge Light, thence eleven miles S. W. by W. ½ W. to the starting line. Total distance twenty-five miles.

The preparatory signal was made at noon and the boats started fifteen minutes later. All three boats had their biggest club topsails set. There was some pretty work seen between Reliance and Constitution when Captains Barr and Rhodes were jockeying for the start. Columbia stayed well away from these two boats, and took no part in the maneuvering. A reaching jib topsail was set in stops on Reliance, while a ballooner was set on Constitution. This looked like an error in judgment at the start, but it proved to be the proper sail, as the wind was well abaft of the beam. Captain Norman Terry, who looks after Constitution's sails, is one of the best in the country at this work and seldom makes mistakes.

Columbia crossed the line at 12:15:21 and broke out her reaching jib topsail. Reliance broke out her jib topsail just as the starting signal was heard, and as soon as this sail was broken out Constitution was luffed sharply and soon had a berth on the new boat's weather quarter. This done her balloon jib was broken out. Reliance crossed at 12:16:43 and Constitution at 12:17:00 It was a reach on the starboard tack to the first mark. Even though Constitution had the weather berth, she could not get by Reliance, and the latter boat got away from Constitution a little. For some reason or other Columbia had been kept off shore into a strong flood tide and was soon left behind. When off Oyster Bay the boats got a much fresher breeze, and Constitution began to close up on the new boat. When off Lloyd's Point the boats were abreast of one another. After passing Lloyd's Point the boats got the benefit of a much stronger breeze that drew out of Huntington Bay. One particularly wicked puff hit Constitution and laid her out and her starboard topmast spreader broke and her topmast went over the side, together with the club and balloon jib topsails. The latter sail went into the water and the boat was headed up into Huntington Bay and allowed to jog along while the wreckage was cleared away. Fortunately, none of the spars fell to the deck, the rigging preventing this, otherwise some one might have been injured. After the spars were gotten on deck and the gear cleaned up the boat ran back to City Island under mainsail, jib and staysail.

Reliance had a walkover after Constitution broke down, and the race was quite without interest. A smaller jib topsail was set on Reliance in place of the larger one after Constitution's accident. The boats were timed as follows at the first mark:

Reliance .....1 10 55 Columbia 1 14 28

Reliance had gained 4m. 55s. on this leg.

The boats now had a three-mile reach on the port tack to the second mark. As the boats drew over toward the Connecticut shore the breeze was a little lighter. The times taken as the boats luffed around this mark were:

Reliance .....1 27 45 Columbia 1 31 43

On this leg Reliance gained 25s.

Baby jib topsails were broken out on both boats as they were hauled on the wind. They could just lay their course for the finish line. Columbia parted the tack of her jib topsail and it went up the stay. It took some time to get this sail on deck and make repairs and reset it. Columbia appeared to point higher than Reliance. The times at the finish were:

Reliance .....2 26 21 Columbia 2 33 26

On this leg Reliance had gained 3m. 7s.

The summary:

	Start.	Finish.	Elapsed.
Reliance	12 16 43	2 26 21	2 09 38
Columbia	12 51 21	2 33 26	2 18 05
Constitution	12 17 00	Disabled.	

Reliance beat Columbia 8m. 27s. elapsed time over the 25-mile course.

Saturday, May 30.

The fifth and last of the Glen Cove series races for the 90-footers was sailed on Saturday, May 30, and Reliance was an easy winner.

The tide was running in and there was a good sailing breeze from the E. by N. when the preparatory signal was given at twelve o'clock. The course signaled was a twenty-five mile triangle, the same as was sailed by the boats in Thursday's race. The first leg was E. by N. ¼ N. eleven miles to a mark off Eaton's Point, the second leg was W. N. W. three miles to a mark off Green's Ledge Light, and the third leg was S. W. by W. ½ W. eleven miles back to the starting line off Matinicock Point. This gave the boats a beat on the first leg, and although Reliance made considerable more fuss than Coustitution and Columbia in the swell that rolled in from the eastward, it did not seem to check her headway any.

Up to 12:15 the time the starting signal was made, there was some pretty jockeying going on between Captains Barr and Rhodes. Constitution had perhaps the best of it, and as the boats came for the line, Constitution was nicely berthed on Reliance's weather. Owing to a mistake in time on Constitution, she crossed the line a few seconds before the gun, and when the recall signal was given from the committee boat she was swung around and recrossed the line on the port tack. At this time Columbia was crossing the line on the starboard tack, and although she had the right of way, she was forced about by Constitution. As the two boats crossed Columbia had a poor berth under Constitution's lee. In the meantime Reliance had secured a nice lead, and it wasn't long before Constitution pulled away from Columbia, and the old boat was left astern. All three boats had their big club topsails set and baby jib topsails as well, although the one on Reliance was quite a little smaller than those on the other two boats. The boats were timed at the start as follows:

Reliance .....12 15 06 Columbia 12 16 31
Constitution 12 16 26

All three boats held on the part tack over toward the Long Island shore, but Reliance stood in further than the other two. Columbia was the first to take the starboard tack. Constitution followed her and finally Reliance came about. They did not hold the starboard tack long, and after Columbia was again put on the port tack the others followed. The wind had been dropping little by little, and was now pretty light. Reliance again showed her wonderful light weather qualities, and footed faster and pointed higher than the older boats. Constitution also left Columbia well astern in the light air.

The boats made short hitches along under the Long Island shore, as the breeze appeared better close in on the beach. The wind became fluky after the boats had worked around Lloyd's Point into the mouth of Huntington Bay, and Reliance was able to lay her course for the mark. Constitution was headed off and had to make another tack to make the mark. The boats were timed at the first mark as follows:

Reliance .....1 56 58 Columbia 2 09 10
Constitution 2 02 24

On this leg Reliance had beaten Constitution 4m. 6s. and Columbia 10m. 47s.

It was a close reach to the second mark. Reliance stuck to her baby jib topsail and carried it all the way to the mark. Constitution tried a larger one when about half the leg had been covered, and Columbia set her balloon jib topsail when near the mark. All this experimenting with sails availed nothing, and Reliance continued to draw away from the other two boats. At the second mark the following times were taken:

Reliance .....2 18 36 Columbia 2 49 28
Constitution 2 27 13

On the second leg Reliance beat Constitution 3m. 11s. and Columbia 18m. 40s.

Balloon jib topsails were set on all the boats after gybing around the mark. The small ballooner on Reliance did good work, while the large ones on the other two boats did not serve so well. The wind had shifted around well to the south of east. Reaching jib topsails were substituted for the ballooners on Constitution and Columbia, while a staysail was set on Reliance. The race was quite without interest, for Reliance held the breeze and finished while the others were becalmed. Constitution and Columbia finally got enough breeze to buck the tide and cross the finish line. The times at the finish were:

Reliance .....3 50 17 Columbia 6 00 00
Constitution 4 16 03

On this leg Reliance beat Constitution 17m. 9s. and Columbia 1h. 38m. 51s.

The summary follows:

	Start.	Finish.	Elapsed.
Reliance	12 15 06	3 50 17	3 35 11
Constitution	12 16 26	4 16 03	3 59 37
Columbia	12 16 31	6 00 00	5 43 29

Reliance beats Constitution 24m. 26s. and Columbia 2h. 10m. 48s.

Harlem Y. C.

CITY ISLAND, LONG ISLAND SOUND,
Saturday, May 30.

SOME thirty boats started in the twenty-first annual regatta of the Harlem Y. C. that was given on Saturday, May 30, but owing to the lack of wind none was able to finish. The starting line was off Belden's Point, City Island, and the preparatory signal was given at 12:30. There was a good breeze from the E. at the start, but before the boats had reached the first mark it was almost a dead calm. The boats drifted around until 7:30, when the race was called off.

Atlantic Y. C.

SEA GATE, LONG ISLAND,
Saturday, May 30.

The Gravesend Bay racing season was opened on Decoration Day with a regatta given by the Atlantic Y. C. for classes J and below. Seventeen boats entered the event, all but two of which finished. One was disqualified for leaving the outer mark at the finish on the port instead of starboard hand.

Members of the Sea Gate organization were much gratified at the number of starters in the initial race of 1903, and had the wind held, the contest would have been a good one. As it was, the six-knot N. E. breeze blowing at the start, flattened to almost a dead calm shortly after the boats had been sent away. When the zephyr returned it sprang from the S. W. and just enabled the fleet to finish one round of the courses. At this stage of the contest Chairman Henry J. Gielow, of the Regatta Committee, ended the race.

The white spar buoys usually set by the Government off Fort Hamilton and Ulmer Park, for the Atlantic Y. C., were not in place. This necessitated a change of the usual courses.

Classes M and above were sent from the starting line off the landing pier at Sea Gate, to and around West Bank Light, leaving the same on starboard hand; thence to a stake boat anchored off the Government dock at Fort Hamilton and home. This 8¼-mile triangle was to have been covered twice.

Boats under Class M sailed a triangular journey of 4¼ miles, which took them from the starting line out of the bay across the ship's channel to Craven Shoal buoy; thence to the mark off Fort Hamilton and home. This course was to have been covered three times.

The smaller craft sailing the latter course were left by the failing wind in the channel at the mercy of a strong ebb tide.

The change of wind from the N. E. to S. W. gave the boats going to West Bank Light a run out and a run back, with a close hauled leg home from Fort Hamilton. The little fellows started with a reach. They got a fair wind on the change and had a close hauled board home from the fort.

Mr. Hendon Chubb's newly purchased 30-footer Bagheera (ex-Astrild), which will race for the Manhasset Bay Challenge Cup, showed up well and was the first of the larger craft to finish the long course. The fluky conditions, however, made the elapsed times absolutely worthless for purposes of comparison. Among other newcomers besides Bagheera were Mr. W. C. Towen's Class K boat, Nymph, and Mr. L. D. Marten's Surprise.

There are a number of additions to the Atlantic Y. C. fleet this year. One of the latest in the Herreshoff 30-footer, Onward, bought by Mr. S. E. Vernon, owner of Vivian. The craft will be brought round from Bristol in time for the annual spring regatta, which takes place over courses in the lower bay on Tuesday, June 9. The summary of the Decoration Day race follows:

Sloops—Class K—Start, 2:30.

	Finish.	Elapsed.
Nymph, W. C. Towen	5 34 55	3 04 55
Ondawa, H. J. Robert	5 35 50	3 05 50
Sloops—Class M—Start, 2:35.		
Bagheera, Hendon Chubb	5 16 20	2 41 20
Vivian, S. E. Vernon	5 38 45	3 03 45
Narika, C. H. Eagle	Disqualified.	
Surprise, L. D. Martens	Did not finish.	
Sloops—Class P—Start, 2:40.		
Cockatoo, W. A. Barstow	5 37 40	2 57 40
Vagabond, T. A. Vernon	5 46 22	3 06 22
Corona, J. E. Beggs	5 50 42	3 10 42
Kate (yawl), J. E. Negus	5 55 52	3 15 52
Sloops—Class Q—Start, 2:45.		
Trouble, W. H. Childs	5 04 52	2 19 52
Spots, D. D. Allerton	5 36 34	2 15 34
Sloops—Class R—Start, 2:45.		
Pickaninny, E. H. Low	5 57 20	3 12 20
Scalawag, E. S. Ludlow	5 58 28	3 13 28
Catboats—Class V—Start, 2:50.		
Rascal, D. G. Whitlock	4 55 43	2 05 43
Martha M., Richard Moore	4 57 03	2 07 03
Boozie, C. D. Durkee	Did not finish.	

The winners were Nymph, Bagheera, Cockatoo, Trouble, Pickaninny and Rascal.

Noddle Island Miniature Y. C.

EAST BOSTON, MASS.,
Saturday, May 30.

THE first race of the season of the Noddle Island Miniature Y. C. was sailed at Breed's Island Pond, East Boston, Saturday, May 30. The light air suited the little boats better than it did the real yachts, and they made a very good race. The summary:

21-inch class—Now Then, J. P. McLarne, owner, first; Fern, J. H. Young, second.

36-inch class—Eudora, E. Simmons, first; Growler, H. Hanson, second.

40-inch class—Crescent, B. E. Tedford, first; Post Boy, J. E. Wetmore, second.

24-inch waterline—Dalraida, J. B. McLarne, first; Concordia, H. W. Marrs, second.

30-inch waterline—Lark, J. H. Young, first; Bostonia, J. Black, Jr., second.

Keystone Y. C.

WOODMERE, LONG ISLAND,
Saturday, May 30.

THE Keystone Y. C. held its first open regatta on Decoration Day. Eight boats started in the race, and although the wind was light there was considerable interest in the races. The summary:

Class A.

	Elapsed.	Corrected.
Carrie Nation, J. J. Wood	1 10 24	1 08 34
Stroller, H. Hoerner	1 13 14	1 10 29
Jupiter, R. Brower	1 06 03	1 06 03
Anita, D. Hewlett	1 21 50	1 21 50
Viva, Dr. E. C. Smith	1 08 21	1 04 14
Class B.		
Ariel, B. Mott	1 17 46	1 17 46
Ripple, C. R. Price	1 09 45	1 09 45
Grace, J. Collins	1 11 21	1 09 08

The winners were Viva and Ripple.

Annual Cruise of the Goodenough.

Story Submitted in "Forest and Stream" Cruising Competition.

BY FRANK F. FRISBEE, DETROIT, MICH.

"On the clear and luminous water
Launched his birch canoe for sailing;
From the pebbles of the margin
Shoved it forth into the water;
Whispered to it, 'Westward! Westward!'
And with speed it darted forward,
And the evening sun descending,
Set the clouds on fire with redness,
Burned the broad sky like a prairie,
Left upon the level water
One long track and trail of splendor,
Down whose stream, as down a river,
Westward, westward, Hiawatha
Sailed into the purple vapors,
Sailed into the dusk of evening."

—Longfellow.

"Tug ahoy!"

"On board the schooner."

"Cast off our tow line, please; we can make it now."

"Aye! Aye! sir!"

"Haul in your line and stand by to get the canvas on her."

Thus spoke the Skipper of the schooner yacht Goodenough, as the tug Pioneer was towing her up Ste. Marie's River, just at the entrance of Waisky Bay, after we had passed Mosquito Bay and were nearing Round Island, and while the crew are getting sail on here the man at the wheel will introduce the dramatis personæ.

First, our good ship, for without a ship we could not cruise, the crew is easy to get.

The Goodenough is a pole-masted centerboard schooner, of a gross tonnage of 16; length, 45.9ft.; beam, 16ft.; depth, 5ft.; she is on the sharpie order; her bilge is sharp and her bottom nearly flat, though the angle from bilge to keel is something of an obtuse. Bow, straight; stern with little overhang; she has a good side out and considerable sheer; solid bulwarks a few inches high; she is cut away considerably aft, and has a clean run; with board up she draws about 3ft. 6in. at her skag; steers with a wheel; staysail, foresail, mainsail, spars and rigging heavy and strong; foresail larger than main, she being canvassed like the fishing boats of the upper lakes. Her board is small for a craft of her size and hardly comes 3 feet above her cabin floor, allowing her table to be flush—more board would be better.

SCHOONER YACHT GOODENOUGH.

Foremast stepped well forward and mainmast just aft of cabin house. Alleys nearly 3 feet, and very large cockpit, with seats on three sides. Very broad at stern, about 12ft., so there is lots of room on "fantail." Small windlass for hoisting anchor, well forward, right at end of bowsprit, and force pump in cockpit alongside of mainmast. Three boats are carried, one at davits on stern, one in either alley alongside of cabin; on cabin roof are coiled all lines, and here are laid oars, pike poles and twenty feet sweeps. On fan-tail is ice box and coal box, with room for odds and ends. Under alleys, opening from cockpit, are lockers, likewise under deck of fan-tail. Here are stored paints, oils, extra lines, green vegetables, etc.

A companionway with sliding cover opens up into cabin and oak (movable) steps lead down into main cabin—on one side a wine locker, two bunks and a closet, or small room, in which is a yacht water closet, and shelves for storing tools and certain supplies. This room makes a fair bath room, as the heat from the galley stove is felt through the bulkhead. On the opposite side of cabin are three full-sized bunks—making five in all—but by lowering the leaves of the centerboard table, two swinging Nantucket hammocks take care of two more of the crew, while aft of centerboard trunk is room for two folding cots, or shake downs, if needed. So nine or ten persons can be taken care of comfortably. Just forward of centerboard trunk a bulkhead, with door, cuts off the kitchen or galley. Here is a coal (or wood) yacht stove, lockers for supplies, a small pantry or closet with table top, for use of cook; a small bunk for cook, which is generally used for storage purposes. In her eyes is the chain locker. Under all bunks are large lockers for stowing extra clothing, and these are kept well aired by lattice-work fronts. Each berth is fitted with hair mattresses, which serve as cushions, being covered with blue denim. The cabin is lighted by three good-sized windows on each side, and one in stern, two in galley, with two dead lights forward, one window in bath room. There being no bulkheads, except forward, the cabin is always kept well ventilated, and there is never that stuffy odor often prevailing about small yacht cabins. There is good storage room in the lazarette. Height under cushions in center of cabin 6ft. 1in. The crown of cabin deck cuts this down at sides some inches.

CABIN OF YACHT GOODENOUGH, LOOKING AFT.

The table over the centerboard trunk will seat eight, and at a pinch, ten can "feed" nicely. A swinging lamp over the table gives good light at night, and with hatchway and windows closed the galley stove heats the cabin very well. In the fall for duck shooting, a small heating stove is placed aft of centerboard trunk. There is nothing fancy about the yacht. She is solid and strong, as she must face heavy seas and rough weather at times. Her finish is Georgia pine, oiled, with oak table and oak trimmings about centerboard trunk; planked with pine, her frames are oak—masts fir. She is not a natty yacht, but it is the verdict of all who see her or have the good fortune to sail on her, that she is Goodenough. Of course, no craft is perfect and we who sail the Goodenough, think we can improve on her next time, but like Mercutio's Mound, it will serve. With the above description and reference to the diagrams and photographs, a fair idea can be had of our craft, even if it would not serve for one to build with. Having described the ship, now comes the hardest part of my task—to give an idea of the crew—and as the cook is one of the most important, if not the real thing, aboard a pleasure yacht, we will commence with Percy, cook, and at times assistant sailor. He has sailed five voyages on the Goodenough and is a good cook, a fair sailor and quite a pilot for the north shore, and if he had not that failing, which is expressed regularly as being too fresh, would be a jewel on a cruise, but as our sailing is all done on fresh water mayhap that accounts for the freshness.

Next comes our skipper and managing owner, who we first christened Commodore, but as he is a very modest man, would have none of it. So it had to be Skipper. He is a man who knows the lakes, knows a boat, and as the saying is on the lakes, Can run either end of a ship, the pilot house or the engine. Having practically retired from business, our Skipper has a good time by giving his friends a good time, each year. Next on the regular crew is the man with many aliases. Each year sees him rejoicing in a new cognomen, and he in himself makes a numerous crew. For when the Professor, the Major of the Bun Department, the Inspector of Bilge Water, the First Mate, Nick of the Woods and Foxy Grandpa are all aboard you might say there are numerous folks about. Then he is keeper of the log and photographer in ordinary. The rest of the crew come and go, for it is hard for the average business man to leave his cares for a full month, so our friends come, stay a week, two weeks, or while they may, and then say farewell, and the Skipper, Cook and the M. of M. A., or for short, the Professor, sail the blooming ship.

We started out this year with one friend, from Detroit—Ed, for short. In the meantime our sails are hoisted, halyards all coiled, sheets well hauled in, and with a nice, fresh, summer breeze, we stand away on the port tack, slowly working up into Waiska Bay (pronounced locally Whiskey Bay). The Professor is at the wheel, and as the tug leaves us, bound back for the "Soo," the Skipper salutes her with his bugle, and she toots us Godspeed.

It was the 4th of August, a beautiful, bright sunshine made the blue waters sparkle and gleam, as the light breeze made it dance into little wavelets. Off to our left the dark wooded shores of Michigan loomed up dense and somber; while on our starboard was the rougher and more mountainous shore of Ontario.

The breeze, though fairly fresh, was ahead, and we had to beat out of the bay. We made one good leg over toward Bay Mills and then came about and were able to point toward Gros Cap. The Goodenough handles well in a light wind and when there is no sea on, and she came about without easing her stay sail or foresail sheets, though she does not do as well in a sea, as that is apt to knock her off. It was easy sailing, and the man at the wheel did not have hard work, but the Skipper recalled one experience of the year before, when we had to beat out with a wind north by west and nearly a gale of it, when our bowsprit would dip into solid blue water and spray would dash half-mast high. We had to reef down that day, but now it was a summer sea. As we gradually worked our way out we got over toward the Canadian shore and late in the afternoon neared Gros Cap, the first bold and really typical north shore coast, with hills from 600 to 700 feet above the lake. Now one wind shifts and we get it fair, so we can wing her out.

When the Goodenough is winged out, even if the wind is light, she fairly slides over the water. So we made good time, and leaving Goulais Bay by eight P. M., were abreast of Maple Island. Our lights were now gotten out, and as the evening air was cool, heavy coats donned. The wind shifted drawing out of Goulais Bay, and we had to put our booms to port with sheets just started. The Goodenough crept on silently into the gloom, her sharp prow cutting the inky black water with just a faint ripple, but we could see the dim outlines of Rudderhead getting nearer quite rapidly. Off on our port bow, dimly seen like banks of low-lying clouds, the Sandies could just be picked up with the glass, and about nine o'clock the light on Corbay Point was over our port bow. The Sandy Islands were between us and the open lake, for we had now passed out of the great Whitefish Bay and were fairly afloat on Great Lake Superior—The Brother of the Sea—the largest body of fresh water in the world, a veritable inland ocean, with its 1,500 miles of coast line, its 32,000 square miles of area, its 1,008 feet of depth, that is, 408 feet of water below sea level, and 600 feet above. It is 450 miles long, 170 miles wide (extreme), average nearly 100. It has great bays with numerous rivers flowing into them. It has large islands, about the coasts of which one could cruise all summer, and let not our Eastern yachtsmen think

"THE COMING SQUALL" ON LAKE SUPERIOR.

that the oceans, either Atlantic or Pacific, will give them better cruising water than will this inland sea. Hundreds of miles of interesting shore, comparatively virgin and uninhabited, lie before us, and while this cruise will deal with only an infinitesimal amount, as the Goodenough, in 1902, did not go far north, on her former voyages she has visited distant sections, so that the writer can say that "Yea, verily, the land is good and pleasant to look upon."

It might not be out of place at this point to give some more explicit sailing directions for the benefit of any yachtsman who may care to make this cruise than has been given in the account of our sail.

First, let me say that the charts accompanying this are only approximately correct, and not intended for use in sailing. There is not in existence to-day any detail chart of Batchewana Bay, and I am informed by the Canadian officials that it will be two years at least before one will be out. The U. S. Government has a chart of Lake Superior, which shows the north shore and the sailing courses for steamers. There is a detail chart of St. Mary's River, from the Soo to Whitefish Bay. These charts can be had at any Government survey office at the slight cost of fifteen cents each. From the Government Ship Canal to Point Iroquois, the channel is buoyed, and there are ranges and lights. Up the river as far and even beyond Point Aux Pins, the current would be an important factor with a sailing craft, and without a fair wind it would be best to tow that far. From that point good sailing water can be found, but to any one going for a first cruise, I would advise the procuring of a local pilot. These can be had at either the American or Canadian Soo. From Gros Cap up, the chart would suffice, until the bay was reached, and here one must have personal knowledge. There is plenty of water in the bay for any sized pleasure craft, but there are also lots of reefs, shallows and rocks. The bay is not so large, or is the navigation so difficult that any one cannot soon learn enough about it, to be enabled to escape disaster. Of course, the Goodenough being so light draft, makes her able to pass through waters that a keel boat or a deep-draft craft would have to steer clear of. We have seen deep-draft boats in the bay, and also seen them aground. Another advantage in having a local pilot is, if one wants to sail north of Bay there are many small harbors not charted, and you sometimes need one badly.

About Lake Superior hovers the romance of the past. The red man deified this great body of water. It has been long the theme for poets, pen and artist's pencil, and now the age of commerce has come, and on its mighty bosom float great fleets of steamers that have come to take the place of the red man's birch bark; truly as Whittier wrote in 1846:

"Behind the scared squaw's birch canoe
The steamer smokes and raves,
And city lots are staked for sale
Above old Indian graves."

There is a charm about the north shore of Lake Superior that holds and enthrals one, and once visited, each year brings a longing to return. Six years has the Goodenough been steered out of Saint Marie's River by the Scribe, and even now a longing to again sail over the crystal waters of this unsalted sea is strong within. Chapters and books can be written about Lake Superior and its enchanted shores, but an account of a yachting cruise is hardly in keeping with statistical information, or enthusiastic accounts of a whole section.

Overhead the dark dome of heaven is glittering with millions of stars, which seem to be much nearer us than in our home to the south. The air is so pure

and the entire absence of smoke and dust makes the heavenly bodies to seem much more numerous and brilliant. As we sail along we admire the great constellations, and in the north the glow of the aurora, which is often seen in great splendor on the north shore, even in summer.

[TO BE CONTINUED.]

English Letter.

THE weather has been so bad on the Clyde that since her new mast was stepped the challenger has been practically idle, and it has now been decided to send the two boats over to the States at once. Such sailing as has taken place has been purely informal, but from it one can only judge that the new boat is now sailing better than ever. The new mainsail is a vast improvement on the old one, but that does not account for the apparent improvement in her speed off the wind. The trials, such as they have been, have been partly sailed in the narrow water from Greenock down to the Toward Light, and one can never trust this course as a fair test. The best Clyde course is that of the Royal Northern, which is square, and with no very high land close by.

On Saturday, May 9, the two boats got under way and dodged about the Clyde, the new boat being manifestly kept in hand. Later on in the day they started from Gourock with spinnakers set, and ran down the river to the Cloch Lighthouse, where they had to stow spinnakers and reach with a quarterly wind on to the Skelmorlie buoy, coming back up to Greenock and then to the anchorage at Gourock. By the time they got back abreast of Gourock, the new boat was 14m. ahead, the water being dead smooth and the breeze with some heart in it. When the challenger came into the bay at the finish she was about two miles ahead. This was almost too good a performance to be true, for the distance sailed was not more than fifteen miles. Be that as it may, the new boat went just as well on the following Monday afternoon. The two boats were merely "sprinting," no set course being sailed. Still in a nice breeze the new boat in a turn to windward of about nine miles, beat the old one by at least two. Reaching over four miles she left the old boat a mile, or nearly so, astern, and returning over the same course she repeated this performance. As I say this astounding speed seems far too good to be true, but the old vessel seemed to be sailing nicely, too. On Tuesday they were out again, but the wind was very light and fluky. However, when they got a breeze the new boat went away as fast as ever.

I think you will find that the challenger is simply invincible in a moderate breeze, or what we would call a light breeze, as opposed to "a light air of wind." At Weymouth, when she had this wind, she sailed as fast as on the Clyde, and can, I believe, give the old boat not far off 25m. over the cup course in that particular weather. She seems, also, to be considerably faster now in stronger breezes, which may be due to her better sails.

No doubt yachtsmen on your side are surprised that no such interest is taken in these trials as that excited by your matches. But the cases are quite different, for whereas, yours are set races sailed regularly for the purpose of selecting a defender, these are simply sailed as a necessary preparation. Nothing depends upon them, the challenger having been long since chosen. As a matter of fact, only one set trial has been sailed, and it was spoiled by a fluke. The value of the old Shamrock as a trial ship, will be best seen in America. Those in charge of the new boat will be able to tell if they have got her in the same form as she is in now, whereas, if the second Shamrock were substituted that would remain doubtful.

From such reports as have been cabled over about Reliance, it looks to me as if she will be a source of much heart-searching. The increase in her sail points to dissatisfaction with her light-wind speed. It means more time-allowance, too, and I feel certain that no amount of sail will make that boat the challenger's equal in a light wind, while it must tell against her in a strong one. From her shape she must be a boat of very great initial stability, and that is dead against light-wind speed—at least with the wind forward of the beam. I believe you will find that Columbia and Constitution will often beat her. At the same time I have no doubt that, of her type, she is a grand vessel—she looks it in all the photos I have seen. But there will be trouble in the selection of the defender; that seems almost certain.

Our season, such as it is, will open in a fortnight. Yachts in this country may almost be said to be divided into two classes—cruisers and Lipton boats, for we have no big class racers, nor 65-footers. Khama, which started a few weeks ago for the States, fell in with bad westerly gales and ran back to the Clyde, where she lies at the time of writing.

E. H. HAMILTON.

Columbia Y. C.

CHICAGO, LAKE MICHIGAN,
Saturday, May 30.

THE race given by the Columbia Y. C. on Decoration Day was one of the most exciting in the club's history. A twenty-five knot N. E. wind held throughout the contest and it was accompanied by a heavy sea. The Class B boat, Nomad, finished with a broken gaff and would undoubtedly have won had she not broken down. The summary:

Class 1A—Start, 2:05.

	Finish.	Elapsed.	Corrected.
Vencedor	3 28 45	1 23 45	1 21 45
Neva	3 44 45	1 39 45	1 39 45
Class 3A—Start 2:05.			
Columbia	4 26 30	2 21 30	2 18 30
Widsith	4 52 00	2 47 00	2 47 00
B Classes—Start, 2:00.			
Vixen	4 22 30	2 22 30	2 14 45
Nomad	4 18 15	2 18 15	2 16 24
Jeannettie	4 24 00	2 24 00	2 24 00

The winners were Vencedor, Columbia and Vixen.

South Boston Y. C.

SOUTH BOSTON, MASS.,
Saturday, May 30.

In a very light air, from the southeast, the Y. R. A. open race of the South Boston Y. C., was sailed off City Point on Saturday, May 30. In the 25ft. class were Chewink III., Chewink II. and Bobs, one of the Bar Harbor 25-footers. Chewink II. and Bobs went over the line about the same time, but the wind was so light that Chewink III. was badly handicapped, and did not get across until just before the 22-footers were started. Calypso, the champion of the class for two years, had been sailing about the starting line, but as the wind was so light, she did not enter. Chewink II. got all the wind on the first reach, but on the second and on the beat to windward the new Chewink constantly gained on her. On the broad reach she still continued to gain, but she was not up to the older boat until two-thirds of the course had been sailed. The two got into a luffing match at the fourth mark, in which Chewink got the best of it. After rounding and setting spinnakers, Chewink III. steadily gained to the finish.

The work of the 22-footers in the light air was wonderful. They sailed over the same course as the 25-footers, and the leading boat beat the leading 25-footer by 3 minutes. Four of the 22-footers came up to the starting line, and they got away well together. For a short time they held together, and then Opitsah V. commenced to gain and soon walked out ahead of the other three. She held her lead without difficulty and won easily.

In the 18ft. knockabouts there were ten starters, all of which were well bunched at the start, with the exception of Yo San, which was about 3 minutes behind the others. Miss Modesty, a new Crowninshield creation, took the lead soon after the start and held it to the finish.

The one-design dories were not quite as close as usual at the finish on account of the lightness of the breeze. There were also two races for sailing tenders, a club race in the morning and an open race in the afternoon. The summary:

Class D.

	Elapsed.
Chewink III., F. G. Macomber, Jr.	2 16 42
Chewink II.	2 18 29
Bobs, E. V. Alvord	2 33 22
22-footers.	
Opitsah V., S. H. & H. I. Foster	2 13 42
Medric, Herbert White	2 17 11
Helen, J. R. Neal	2 18 58
Chief, S. C. Winsor	2 21 11
Class R.	
Harriett	2 25 00
18ft. Knockabouts.	
Miss Modesty, B. S. Permar	2 03 54
Question, J. S. Hunt	2 04 05
Mirage, J. B. Olmstead	2 06 14
Miladi II., F. R. Adams	2 06 26
Wink, L. B. Goodspeed	2 07 26
Kittiwake, H. M. Jones	2 07 40
Dominoe, C. C. Clapp	2 08 01
Patrice, A. W. Finlay	2 10 20
Biza, Alfred Douglass	2 10 24
Yo San, R. J. Randolph, Jr.	2 10 59
Millian, F. L. Woods	2 15 01

Class D—Sailing Tenders.

	Elapsed.	Corrected.
Merrill	1 06 15	1 05 51
Stickney	1 06 51	1 06 33
Borden	1 09 05	1 08 53
Colson	1 10 05	1 10 05
Landers	1 09 11	1 08 11
Cherrington	1 11 39	1 10 12
Trotman	1 14 13	1 14 02
Robinson	1 12 38	. . ..
One-Design Dories.		
Vera	2 23 24	. . ..

The following is the summary of sailing tender race in the morning:

Stickney	0 53 11	0 52 53
Merrill	0 53 55	0 53 31
Trotman	0 56 52	0 55 49
Colson	0 59 45	0 59 45
Weeman	Withdrew.	

Indian Harbor Y. C.

GREENWICH, LONG ISLAND SOUND,
Saturday, May 30.

THE spring races of the Indian Harbor Y. C. were sailed on Saturday, May 30. The boats sailed over a ten-mile triangular course. The preparatory signal was made at 2 o'clock, and the boats in the 30ft. class were sent away five minutes later. At the time of the start the wind was light from the E., but it soon hauled to the S. and W., which gave the boats a reach almost all the way over the course.

Oiseau started first in her class, followed by Alert and Flosshilde, and the boats retained these positions all through the race, and Oiseau won by a comfortable margin. In the handicap class for yachts 36ft. and under, Robin Hood won, beating Dart.

The day proved to be an unsatisfactory one, as the wind was light and flukey, and the results were indecisive.

The Regatta Committee was made up of Messrs. Frank Bowne Jones, chairman; Charles E. Simms, T. J. McCahill, Jr.; E. S. Wheeler, and H. C. Nash. The summary follows:

30ft. Class—Start, 2:05.

	Finish.	Elapsed.
Alert, J. W. Alker	5 02 25	2 57 25
Oiseau, H. L. Maxwell	4 56 17	2 51 17
Flosshilde, W. D. Hennen	Withdrew.	

Handicap Class.

	Start.	Finish.	Elapsed.
Dart, Mr. Washburne	2 20 00	Withdrew.	
Robin Hood, G. E. Gortland	2 38 00	8 19 20	5 41 20

The winners were Oiseau and Robin Hood.

The English-built steam yacht Kittiwake, now under charter to Mr. Joseph Leiter, arrived at New York on May 31, twenty-two days out from Greenock, Scotland. Bad weather was experienced, and on May 18 the yacht put into St. Michael's for coal and made some temporary repairs.

Orient Heights Y. C.

EAST BOSTON, MASS.,
Saturday, May 30.

THE first club race of the season for the Orient Heights Y. C. was sailed off the club house on Saturday, May 30. There were 9 starters and a good race was sailed. The summary:

Magnolia, J. F. Gunnerson	1 03 09
Louise, H. K. Brown	1 03 10
Ruth, L. Innell	1 07 29
Alinder, C. H. Hubbard	1 07 38
Elsie, Martin Cahill	1 07 50
Gladis, C. E. Rich	1 07 51
Harsp, John Watson	1 16 37
Orient, J. B. Martin	1 18 04
Molly, J. S. Donnell	1 57 14

Wollaston Y. C.

QUINCY, MASS.,
Saturday, May 30.

THE first club race of the Wollaston Y. C., the first of the series for the Chase cup, was sailed Saturday, May 30, in Quincy Bay, in a very light air. Wawenock, an 18-footer, was first across the starting line, and she increased her lead all around the course, finishing 14m. ahead of her nearest competitor. Neptune entered a protest against Wawenock for not being measured before the race, which the regatta committee will consider later. The summary:

	Elapsed.	Corrected.
Neptune, A. E. Linnell	1 51 05	1 29 30
Sheila, L. Hewitson	1 50 20	1 30 29
Pocahontas, Dr. W. J. Merrill	2 01 00	Not taken.
Wawenock, Walter Combs	1 35 30	Not taken.

Williamsburg Y. C.

FLUSHING, LONG ISLAND,
Saturday, May 30.

THE annual regatta of the Williamsburg Y. C. was sailed over the club's course in Flushing Bay on Decoration Day. A long list of entries gave promise of a good race, but the fresh E. breeze that blew at the start died out and the boats were barely able to finish the race. The winners were: Class B, Saracen; Class C, Pearl; Class E, Pastime; Class F, Imp; Class G, Yankee Girl.

Yacht Racing Association of Gravesend Bay

THE third season of the Yacht Racing Association of Gravesend Bay will open on Saturday, June 6. The only change in the actual make-up of the racing fleet is the stubstitution of the new Bensonhurst Y. C. for the Atlantic Y. C., which resigned early in the year.

All signs point to a good entry for the first race. Much work has been done in revising racing rules and all regulations governing the sport. The experience of two years suggested many beneficial changes. A new system of points has been adopted, similar to the one in use among many clubs on Long Island Sound. In this system a yacht gets one point for every boat she defeats with a premium of one point for starting and finishing the race. The Yacht Racing Association of Gravesend Bay now consists of the Brooklyn Y. C., Bensonhurst Y. C., New York C. C. and the Marine and Field Club.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Mr. Thomas W. Lawson, of Boston, has sold his steam yacht Dreamer, through the agency of Messrs. Tams, Lemoine & Crane, to Mr. A. C. Bedford, of New York City.

Allure, the 61ft. gasolene launch, built from designs by Messrs. Colven & Bickman, by the Marine Construction and Dry Dock Company, Mariner's Harbor, S. I., for Mr. Alexander Stein, was launched a few days ago.

Messrs. Sadler, Perkins & Field have completed plans of a power houseboat that is to be built for a Connecticut yachtsman. She is 116ft. long, 20ft. breadth and 6ft. draft.

The steam yacht that was nearing completion at the yards of the Racine Boat Mfg. Co., Racine, Wis., for Mr. John W. Gates, was destroyed by fire on May 31. The yacht was one of the largest ever built on the Great Lakes, and was intended for use on the Gulf of Mexico. The yacht cost in the neighborhood of $65,000.

The eight 25-footers built by the Holmes Shipbuilding Company, of West Mystic, Conn., from designs by Mr. C. F. Herreshoff, are for Messrs. C. Oliver Iselin, Paul Dana, J. Grosvenor, George Adee, Philip Adee, Gustave Kissell, August Belmont and C. O'D. Iselin. The boats, which cost about $2,500 each, are 46ft. over all, 25ft. waterline, 10ft. breadth and 4ft. 6in. draft. They are centerboard boats, and will have about three tons of outside lead ballast. They will carry 1,100 square feet of sail.

Mr. E. Pierson Beebe has sold his steam yacht Hope, through the agency of Mr. Frank N. Taudy. The new owner, whose name has not been made public, will use the boat for cruising on Massachusetts Bay.

Minga, the steam yacht built at Morris Heights for Mr. Walter E. Duryea, was launched on Wednesday, May 20. She is 65ft. over all, 10ft. 6in. breadth and 3ft. draft. Minga was built for use on the St. Lawrence River, and her builders guarantee a speed of twelve miles.

Mrs. J. B. Gibson died at her home in New York City on May 26, as a result of injuries received on May

16, when there was an explosion on board her auxiliary yawl Vagabond. Mrs. Gibson was a flag member of the New York Y. C.

* * *

The Regatta Committee of the Corinthian Y. C. of Philadelphia, composed of Messrs. Addison F. Bancroft, Chairman; Harvey J. Mitchell and John A. Inglis, have made up the following schedule for the season of 1903:

Saturdays, June 27, July 11, 18.—36ft. class races; Corinthian knockabout class races.

Saturday, June 20.—Annual race for all classes.

Friday, July 24 to Aug. 1.—Annual club cruise in Long Island Sound.

Monday, Sept. 7 (Labor Day).—Special club races.

Saturdays, June 6 to Oct. 24.—25ft. class races, 20ft. class races, 15ft. class races.

* * *

We give herewith the names of the clubs and the dates on which they will hold races for power boats under the rules of the American Power Boat Association:

Saturday, June 20.—Columbia Y. C.
Saturday, July 11.—Newark Y. C.
Saturday, July 18.—Indian Harbor Y. C.
Thursday, Aug. 13.—Atlantic Y. C.
Saturday, Aug. 29.—Brooklyn Y. C.
Wednesday, Sept. 9.—New Rochelle Y. C.

* * *

Strathcona, the boat built by Mr. Norman Macrae to defend the Canada Cup, was launched from Captain Andrews' yard at Oakville, Ontario, on Friday, May 29. She was designed by Mr. Arthur Payne, of the firm of Messrs. Summers & Payne, of Southampton, England. Work was begun on the yacht about the middle of March, and she has been put together in the best possible manner. She is 40ft. waterline, 59ft. 3in. over all, 13ft. 8in. breadth and 8ft. 7in. draft.

Canoeing.

A Canoe Cruise from New York to Sag Harbor, L. I.

BY THE SKIPPERS OF TOT, FOGGY DEW, PAPOOSE AND CHIQUITA.

On Sunday, August 10, at 8 A. M., we started from the Knickerbocker C. C. on the Hudson River on our cruise with the first of the ebb, with a good breeze out of the southeast, which grew steadily stronger, until opposite Hoboken we found it more comfortable to

THE HOME OF THE KNICKERBOCKER C. C.

shorten sail, the wind gained in strength and the seas became so rough that they continually flushed us and kept our cockpit bags filled. Notwithstanding, we made Sailor's Snug Harbor, S. I., by 11 A. M., where we stopped for lunch, also to reduce our water ballast, especially the Chiquita, which was flooded, the deck being awash on arrival at the harbor, and the contents of the water-proof bags all water-soaked, the water in canoe being above the bag openings, forced its entrance and damaged contents to such an extent that we had to impose on the hospitality of our Snug Harbor friends, so as to dry out the Chiquita's outfit in their laundry over night, while we camped in their boat house.

Monday, the 11th, we prepared to make an early start, but were delayed until 1 P. M. on account of a heavy rainstorm. The delay cost us the benefit of the tide, so that we had that, besides a heavy head wind to contend with in working our way out of the bay and Narrows, to the New York C. C., in Gravesend Bay, where we arrived at 5 P. M., barely in time to escape one of the severest storms of the season. The New York boys made us very comfortable and insisted on our enjoying their hospitality for the night.

Tuesday, the 12th, we were up and ready to sail at 7 A. M.; we started under reefed sails, with a heavy wind and sea; had to beat out and around Norton's Point, then had a fine reach down past Coney Island, Manhattan and Brighton beaches, to Rockaway Inlet, where we ran on the shoals and had to await the flood tide to float us, meanwhile we utilized the spare hour to get a light breakfast. By the time we had sufficient water to clear the shoals, the wind became so heavy we sailed up the inlet under reefed mainsail only, and made remarkable time. We arrived opposite Rockaway and signaled the bridge, which was promptly opened, and we continued on our course to the Edgemere carry. Here it became necessary to unload our duffle and carry our canoes and outfits, about 200 yards, to the continuation of the creek leading past Far Rockaway to Lawrence, where we arrived at 3 P. M., and made our first camp. This is a delightful camp ground, fine sandy beach and good bathing. We camped here the following day, Wednesday, the 13th, and broke camp on Thursday, the 14th, at 11 A. M.

We set sail with a free wind, passed the draws at Long Beach and arrived at Amityville at 3 P. M., where we lunched and stopped for mail. At 4 P. M.

TOT ON PECONIC BAY.

we again got under way and prepared to locate a camp site, but after an hour's sailing with nothing but marsh land in view, we crossed the bay to the ocean side, opposite Babylon, and made arrangements to spend the night at the Muncie Sanatorium, where, after beaching our craft, we put on dry footwear and indulged in the novelty of a ready-cooked meal.

Next morning, the 15th, we had breakfast at 8 A. M. and got under sail at 10 A. M., for a run to Patchogue. The wind and sea being very heavy, we made the run under reefed mainsails only, and arrived at Patchogue at 1:30 P. M., which was a remarkable run under such short canvas.

Here we camped on a small creek with a fine, sandy beach, where we were so well suited we remained until Sunday, the 17th, when we again set sail at about 10 A. M., for Canoe Place Inn, sailing most of the distance under reefed mainsail, the wind being very heavy. We sailed in this fashion through Bellport Bay, Moriches Bay, through the Quogue Canal into Shinnecock Bay, and arrived at Canoe Place at 6 P. M., a distance of about 40 miles. Here we figured on spending the night and enjoying a hearty meal with our host of past acquaintance, "Wells," of the Inn, but were doomed to disappointment—the inn having closed its doors. So we made the best of our chagrin, and pitched our tents on the bank at the entrance to the canal connecting Shinnecock and Peconic bays. Being prepared for such occasions, we soon had our three vapor stoves working and had the following bill of fare, in very short order: Tomato soup, steak, potatoes, peas, bread and butter, and preserved peaches as a dessert, to which we did justice.

Monday we remained and surveyed the neighboring country until 3 P. M., when we again broke ground and laid a course for Jessup's Neck. We were obliged to paddle through the canal, with our spars unshipped and fastened on deck, on account of the bridge, which was too low to allow our spars to pass. On arriving at the Peconic entrance, we again stepped our spars and sailed, again under shortened sail, the wind still holding its strength. Darkness overtook us and we were obliged to strike camp before reaching Jessups, the wind and seas combined being of such strength that we finished the last few miles under mere handkerchiefs.

The following day, Aug. 19, we again got under way toward noon, and reached Jessups at 2 P. M. Being

PAPOOSE UNDER SAIL.

short of provisions, water, etc., Tot and Chiquita volunteered to continue to Sag Harbor, to replenish our larder, while our comrades of the Foggy Dew and Papoose got their camp in shape at Jessups.

We got to Sag Harbor at 6 P. M., after a slow passage, the wind having moderated, but by 7 P. M., when we prepared to return, it again increased in strength and threatened to storm, but we figured we knew our bearings sufficiently well to start on the return trip to our Jessup's Neck camp.

We made good progress, but had a head wind to contend with until we had cleared the harbor, which took us till 8 P. M., so that darkness overtook us before we had more than half completed our return trip. We shortened sail and kept close together, but it grew so dark that we lost all bearings and trusted to dead reckoning how near we would strike to camp on making the beach. After what seemed like an endless period, we felt our boards scrape and had barely time to raise them before we ran into a patch of sea grass, which broke out impact. When we surveyed the beach we concluded we had landed about five miles below our camp, which proved to be a good two hours' paddle against current and wind. We finally reached camp at 1 A. M. After pitching our tent and cooking our supper, we found it was drawing near to 3 A. M. After a refreshing sleep, a swim in the clear, cool water of Peconic Bay, put us in fine spirits, and gave us a hearty appetite for breakfast and dinner, which we combined.

Wednesday, the 20th, until Friday the 22d, we remained in camp at Jessup's Neck, which we enjoyed in solitude, it being inaccessible except by water or a very long walk. The time we spent in fishing and sailing around camp.

Friday noon we broke camp for the final cruise home, which we made via the steamboat Shinnecock. We landed on the beach at Sag Harbor, adjoining the steamboat wharf, at 3 P. M., procured empty barrels

FOGGY DEW AND CHIQUITA.

for our duffle and prepared same for shipment direct to the club.

The canoes we shipped to New York on the steamer, and Saturday morning at 7 A. M., we lowered them from the deck to the river, and paddled around the Battery and up the Hudson to Hoboken, where we stopped at the Valencia Boat Club to step our sails and get breakfast. We left there on our last stretch up the Hudson at noon and arrived at the Knickerbocker C. C. at 1 P. M., finishing a delightful two weeks' cruise.

A description of the canoes, rigs, and outfits may prove of interest.

THE CAMP AT JESSUPS, SHOWING NECK IN THE DISTANCE.

The description of one canoe will answer for all, as they were similar in rigs, etc:

Canoes, 16ft., 30in. beam; removable water-proof bag cockpit; 3½ft. sliding seat, raised about 5in. above deck; Norwegian yoke tiller; sail area, 80ft.; reefed, 55ft. Camp outfit—Two 7x7 tents, with floor cloths, two cots or air beds in each; 4 sleeping bags; 4 folding camp chairs; 2 folding grub kits (containing tins for coffee, etc., also cooking utensils); 3 vapor stoves; 4 ½-gallon water jugs; 6 ¼-gallon oil cans; 3 changes of clothing and a suit of oilers for each; 1 repair kit, rope and tools, screws, etc.; 4 folding canvas buckets; rope and tools, screws, etc.; 4 folding canvas buckets; also a supply of provisions for a few days in advance.

A Knickerbocker.

Red Dragon C. C.

The corrected schedule of the Red Dragon C. C. follows:

Saturday, June 13, 1903, at 3 P. M.; high water, 4:20 P. M.

Event No. 1. Single blade, quarter mile.
*Event No. 2. Hand paddling.
*Event No. 3. Mixed Tandem, double blade, quarter mile.
Event No. 4. Double blade, half mile.
Event No. 5. Tilting tournament.
*Event No. 6. Tail end.
*Event No. 7. Tandem, double blade, half mile.
Event No. 8. Swimming.

Saturday, September 12, 1903, at 3 P. M.; high water, 6 P. M.

*Event No. 1. Double blade, half mile.
*Event No. 2. Standing in canoe, double blade.
Event No. 3. Single blade, half mile.
Event No. 4. Club trophy, half mile.
Event No. 5. Tilting tournament.
*Event No. 6. Tandem, single blade, half mile.

The events will take place off the club house, Wissinoming, Philadelphia.

* These events are open to the modern type of broad beamed open cruising canoe only, and the committee reserves the right to determine whether or not any canoe intended for use in these events is within this class.

A. C. A. Membership.

The following have applied for membership to the A. C. A:

Central Division—Robert M. Codd, Jr., Buffalo, N. Y.; A. E. Davenport, Buffalo, N. Y.; Joseph A. Hall, Rochester, N. Y.

Eastern Division—Theodore T. Pettingill, Dedham. Mass.; William E. Marshman, Lawrence, Mass.; H. W. Fenno, Auburndale, Mass.; Jesse E. Gray, Medford, Mass.; Minot T. Phelps, Manchester, N. H.; H. W. Walkling, West Medford, Mass.; J. A. Burdakin, Dedham, Mass.; Geo. H. Gage, Lawrence, Mass.; Edward B. Stearns, Lester P. Howe, Joel S. Daniels, Darwin J. Forsaith, Manchester, N. H.

Rifle Range and Gallery.

Fixtures.

June 15-16.—Union Hill Schuetzen Corps twenty-fifth anniversary shoot. P. Stumpf, Capt.

June 18-20.—St. Louis, Mo.—Tournament under auspices of Central Shooting Bund. Horace Kephardt, Sec'y.

July 6-7.—New Haven, Conn.—South New England Schuetzen Bund annual schuetzenfest, under the auspices of the Independent German Rifle Company. H. C. Young, Sec'y.

British Rifle Shooting.

MR. R. B. MARSTON, editor of the Fishing Gazette, of London, writes the introduction to a recently published little book, "Miniature Rifle Shooting," by L. R. Tippins. Mr. Marston sends me a copy of this book, in the belief that it might be interesting to many American readers. It is an interesting book, well written and thorough; but the most interesting part of it to a Western American is the fundamental nature of the work. It gravely encourages the inculcation of practices among the English youth and middle classes, which have been universal in this country time out of mind. In brief, it is the mission of the book to encourage practice with small bore rifles on short home ranges, either by the use of auxiliary rifle tubes or by the "adapter," the still simpler system by which one makes his weapon efficient enough at short ranges by pushing a small steel case into the chamber of the barrel. The author of this book admits that, while in America the use of the .22 rifle is very general, it is little known in England; the rook rifle, infrequent and expensive, being the only counterpart of the .22, as used in America. He also admits that the English trade has never perfected the small-bore ammunition as it has been done in America, and states that many millions of these cartridges are imported from America annually—a great tribute certainly to the American ammunition trade.

The whole plea of Mr. Tippins, who is himself an expert rifleman and winner of many prizes on Bisley range, is for a greater public familiarity with the mechanism and handling of the service arm. He speaks with impartial judgment of the merits and defects of the English military rifle, describes at length the questions of rifle sights, etc., in a way which would be entirely unnecessary in this country, and indeed treats the subject as if he were beginning something *de novo* for his country. One could have no better evidence of the vast difference existing between England and America. Here we have vast stretches of open country, free to any man. We still have left at least a part of our great game. This is why the American man is so generally a rifleman, not so much now as in the past, and less so in the future than to-day; but still very much more of a rifleman and very much better as a natural soldier, on that account, than any citizen of a European country. These facts, as paralleled by the training of the Boers in South Africa, are openly admitted by the editor and author of the book in question. I do not doubt that the interest in rifle clubs which has recently been stirred up among the English public by the Boer war, will do something toward the advancement of skill in rifle shooting in that country. Against any such growth is the unspeakable conservatism of the English citizen. The first thing to do for Mr. Marston and Mr. Tippins is to break through this conservatism, if our good friend in South Africa has not shot through it fully. The next thing to do will be to get space for outdoor shooting, and then something to shoot at. The rifleman will learn in sport what he will never learn in school or gallery. The technical or expert shooting of the rifle range is excellent in its way, but it does not make a soldier of the rifleman in any degree equal with the sportsman-rifleman. The man educated to the chase of the big game is the best natural soldier in the world, especially in these days, when discipline and drill count for so little, and individual self-reliance and initiative mean so much. Sergeant Tippins does not wholly like the indorsement of the English general who says that the American soldier is the best in the world. The admitted necessity for his own book, however, is pretty conclusive proof of the wisdom of that same general. In so far as this book shall encourage small-bore rifle shooting and familiarity with firearms, which is a customary and everyday matter in this country, it will approach the old land of England to the new land of America, and to that extent be a benefit to the former. When it comes to the last degrees of rifle shooting, however, I see no hope for England except to send her young men over to this country for their final education. We will take them and make riflemen out of them. As to making a sportsman out of an Englishman, it never was and never will be a difficult process, for they take to shooting as a fish to water, when they get the chance. As to the English army—and this is a pertinent comment, since the book in question is intended for the improvement of that army—the trouble with it has been that, though its officers were sportsmen and sometimes riflemen, its rank and file knew little or nothing about actual and practical rifle shooting. Poor Tommy Atkins could not be blamed for this. He bad had little chance to learn.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

[The Palma trophy is a matter of long-range shooting.]

Charles G. Grubb, 507 Wood street, Pittsburg, Pa., has deposited with W. S. Brown, 512 Wood street, Pittsburg, Pa., $1,000, representing several parties, for the purpose of a rifle match shoot between Louis P. Ittel, of Allegheny, Pa., and J. S. Louder, of Denver, Colo., the match to take place within a very short time at the Iroquois Rifle Club's range. Mr. Ittel is the challenger.

More than $5,000 is still needed to make a sufficient fund for the journey of the American team to Bisley, to compete for the Palma trophy. The preliminary tests at Sea Girt have demonstrated that there is team material of a very high order in point of skill.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

June 3.—Brooklyn, N. Y.—Shoot of the Fulton Gun Club.

June 2-5.—Baltimore, Md.—Third annual Baltimore County shoot; three days targets; one day live birds; $500 in purses and prizes. Hawkins and Malone, Managers.

June 3-4.—Boston, Mass.—The Interstate Association's tournament, under the auspices of the Boston Shooting Association. O. R. Dickey, Sec'y.

June 3-5.—Parkersburg, W. Va.—Sixth annual tournament of the West Virginia Sportsmen's Association, under auspices of Ohio Valley Shooting Association. J. F. Mallory, Sec'y.

June 4-5.—Indiana State shoot, under auspices of the Lafayette Gun Club. R. A. Livenguth, Sec'y.

June 4-5.—South Dakota State Sportsmen's Association's annual tournament, under auspices of the Vermillion Gun Club. G. Harris, Sec'y.

**June, second week.—Shreveport, La.—Caddo Gun Club's tournament.

June 8-12.—Ossining, N. Y.—New York State Association for the Protection of Fish and Game's forty-fifth annual tournament, under the auspices of the Ossining Gun Club.

June 9-10.—Lafayette, Ind.—Indiana State shoot, under auspices of Lafayette Gun Club.

June 9-11.—Sioux City, Ia.—Ninth annual amateur tournament of the Soo Gun Club. B. F. Duncan, Sec'y.

June 9-11.—Cincinnati, O.—Seventeenth annual target tournament of the Ohio Trapshooters' League. Chas. T. Dreihs, Sec'y.

*June 10-11.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.

June 16-19.—Warm Springs, Ga.—The Interstate Association's tournament, under the auspices of the Meriwether Gun Club. Chas. L. Davis, Sec'y.

June 16-18.—New London, Ia.—Seventh annual midsummer target tournament of the New London Gun Club.

*June 17-18.—McKeesport, Pa., tournament.

June 17-18.—Wilkes-Barre, Pa.—E. L. Klipple tournament.

June 18.—West Chester, Pa., Gun Club's all-day target shoot.

June 23-25.—Grand Rapids, Mich.—Consolidated Sportsmen's Association's second annual target tournament; $1,000 added. A. B. Richmond, Sec'y.

June 24-25.—Rutherford, N. J.—Interstate Association tournament under the auspices of the Union Gun Club.

*June 24-25.—New Castle, Pa., Gun Club's tournament. James Atkinson, Sec'y.

July 3-4.—Memphis, Tenn., Gun Club's two days' shoot. A. H. Frank, Sec'y.

July 4.—Towanda, Pa., Gun Club's annual tournament. W. F. Dittrich, Sec'y.

July 4.—Topsham, Me.—All-day tournament of the Riverside Shooting Club. Fred W. Atkinson, Sec'y.

*July 7-8.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.

July 8-9.—Huntsville, Ala.—The Interstate Association's tournament, under the auspices of the Huntsville Gun Club. E. R. Matthews, Sec'y.

July 8-10.—Arkansas State Sportsmen's Association's thirteenth annual meeting and tournament, under the auspices of the Jonesboro, Ark., Gun Club, of which Matthews is Sec'y-Treas.

**July, second week.—Memphis, Tenn., Gun Club's tournament.

July 14-16.—The Americus, Ga., second annual interstate target tournament. H. S. McCleskey, Sec'y.

*July 21-22.—Beaver Falls, Pa., Gun Club's tournament. W. R. Keefer, Sec'y.

July 30-Aug. 1.—Viroqua, Wis.—The Interstate Association's tournament, under the auspices of the Viroqua Rod and Gun Club. Dr. R. W. Baldwin, Sec'y.

*Aug. 5-6.—Brownsville, Pa., Rod and Gun Club's tournament.

Aug. 12-15.—Toronto, Ont.—Annual tournament of the Dominion Trapshooting and Game Protective Association. A. W. Throop, Sec'y-Treas., Ottawa, Can.

Aug. 18-20.—Grand Rapids, Mich.—Second annual target tournament of the Consolidated Sportsmen's Association of Grand Rapids; $1,000 added. A. B. Richmond, Sec'y.

Aug. 19-20.—Ottawa, Ill.—The Interstate Association's tournament, under the auspices of the Rainmakers' Gun Club. Paul A. Selember, Sec'y.

*Aug. 19-20.—Millvale, Pa., Gun Club's tournament. Wm. Bussler, Sec'y.

Aug. 25-28.—Lake Okoboji, Ia.—Annual Indian tournament. Frank C. Riehl, Chief Scribe.

*Sept. 1-2.—Irwin, Pa., Gun Club's tournament. John Withero, Sec'y.

Sept. 2-3.—Akron, O.—The Interstate Association's tournament, under the auspices of the Akron Gun Club. G. E. Wagoner, Sec'y.

Sept. 7.—Fall tournament of the Springfield, Mass., Shooting Club. C. L. Kites, Sec'y.

*Sept. 9-10.—Enterprise Gun Club tournament.

Sept. 15-16.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.

*Sept. 23-24.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.

Oct. 6-7.—Allegheny, Pa.—North Side Gun Club's tournament. L. B. Fleming, Sec'y.

Oct. 14-17.—West Baden, Ind., Gun Club tournament; $500 added.

Saturdays.—Chicago.—Garfield Gun Club; grounds W Fifty-second avenue and Monroe street. Dr. J. W. Meek, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.

**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J. Bradfield, Sec'y, Vicksburg, Miss.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

Rain later—perhaps.

Big tournaments East and West next week.

All signs fail in a dry time at a tournament.

It is better to have shot and lost than never to have shot at all.

Mr. Edgar L. Klipple, of Wilkes-Barre, Pa., informs us that he will give a shoot on June 17 and 18.

Mr. A. H. Frank, secretary, informs us that the Memphis, Tenn., Gun Club will hold a two-days' shoot on July 3 and 4.

The Maryland County shoot, June 2 to 5, at Baltimore, Md., is a large affair, the estimates being that 150 shooters would participate.

There is a rumor that Mr. W. R. Crosby is hiking eastward, and will be in time to participate in the Interstate Association tournament at Rutherford, N. J., June 24-25. It is said that he may remain in the East till he misses a target; therefore there is a reasonable presumption that he will be a permanent resident of the East.

The Hudson Gun Club, of Jersey City, will hold its annual meeting at No. 642 Newark avenue, on June 5. The next shoot of the club will be on June 7.

At Lakewood, N. J., May 30, on the Lakewood shooting grounds, Mr. H. Crowdic won the silver loving cup. He tied with Mr. B. Tilton on 23, and won in the shoot-off with a score of 24.

In the race between six-man teams of Messrs. Schoverling, Daly & Gales and the Richmond Gun Club, at Concord, Staten Island, May 30, the firm team won by a score of 119 to 73. Each man shot at 25 targets, 150 per team.

In a match between eight-man teams of the Olney and Clay City gun clubs, of Illinois, recently, the Clay City team won by a score of 103 out of a possible 200. A return match was arranged to take place on Tuesday of this week.

Mr. L. R. Nelson, of Winchester, N. H., issues a challenge this week in our trap columns. He makes a good, friendly, game proposition for the love of sport. Perhaps Mr. C. M. Stark, of Dunbarton, may lock horns with him.

The Ohio Trapshooters' League's seventeenth tournament at Cincinnati, June 9-11, is expected to be a record-breaker. Guaranteed purses, $1,750; added money, $300. Open to the world. Send for a programme to Chas. F. Dreihs, Cincinnati.

At Tamaqua, Pa., on May 30, Messrs. John J. Fisher, of Coaldale, and Thomas Fredericks, shot a match at 15 live birds, said to be for $200 a side. Fredericks killed 9, while Fisber killed but 4, which gave a reasonable line on which won the match.

In a match between Messrs. Martin Winters and Peter Dennis, at 16 live birds, Winters scored 12 to Dennis' 8. It was said to be for $150 a side. Mr. Dennis can console himself with the knowledge that there are many other trapshooters whose name also is Dennis.

An interesting target shoot was held at Richmond, Va., May 30. The famous trapshooters Capt. A. W. Du Bray and Mr. T. H. Keller were present. In the medal contest, for the gold medal donated by Harris Flippen & Co., Mr. J. A. Anderson, the holder, was defeated by Dr. Hillsman by a score of 45 out of 50.

The programme of the O. T. S. L. contains this paragraph under the head of "What You May Expect at the Cincinnati Gun Club Grounds": "And Arthur Gambell in all his glory, assisted by his referees and scorers, singing the Golden Rule." That rule should be in every set of rules, and Arthur Gambell would be one of the best of men to referee it.

Mr. C. G. Blandford, the energetic captain of the Ossining, N. Y., Gun Club, touches on the forthcoming State shoot, in his report of his club's shoot elsewhere in our columns this week. The list of merchandise prizes is long and valuable, the programme is good, and the shooters should rally to give so much earnest sterling effort their enthusiastic support.

Mr. J. A. R. Elliott will probably have an orbit about New York till after the Interstate shoot at Rutherford, which he will attend. Jim, in a sunny way, has taken to smashing targets in a remarkably successful manner for a beginner. He may be classed as one of our most precocious of young and rising shooters. Ninety-eight per cent., or 100 per cent. is good shooting.

At the Interstate tournament, given for the West Branch Rod and Gun Club at Williamsport, Pa., May 27-29, Mr. Luther Squier, of Wilmington, Del., was high professional average of the tournament. Mr. Neaf Apgar was second and Mr. E. D. Fulford was third. Their three days' scores and totals were as follows: Squier 168, 160, 165; total 493; Apgar 153, 161, 171; total 485; Fulford 167, 152, 165; total 484.

Mr. Elmer E. Shaner, secretary-treasurer of the Interstate Association, tarried a few hours in New York on Monday of this week, en route to Boston, whither he journeyed with Mr. Edward Banks via the Fall River Line, and due to arrive Tuesday morning. Mr. Shaner looked spick and span as a June bride, notwithstanding the long campaign of tournament management which he has gone through, with such distinguished success, this season.

A correspondent writes us as follows: "John H. W. Fleming, better known as Johnny Jones in trapshooting circles, wherein he has many friends, has received, during the past week, a 25ft. launch, equipped with a two horse-power motor, which has been in course of construction for him since early spring. Commodore Jones, in the future, please. He and a crew of able seamen started on a voyage for Rockaway, and are now something like a week overdue."

Mr. Elmer Jones, of Bonesteel, S. D., won the Peters Cartridge Company trophy, emblematic of the championship of Gregory county, at the second annual tournament of the Bonesteel Gun Club, May 26. He was against some of the best seasoned talent of South Dakota, but made a decisive win by scoring 45 to his nearest oppent's 42. The emblem was held by Mr. J. F. Spatz, who waived his rights and put it in open competition at the tournament above mentioned. The high averages were: First, W. A. Leach; second, J. F. Spatz; third, T. J. Thompson.

A correspondent writes us that "the West Chester, Pa., Gun Club will open its new grounds on Thursday, June 18, with an all-day shoot at bluerocks. We shall be pleased to see all our friends and will do our best to make them enjoy themselves. The grounds are located about a mile and a half east of town on the Philadelphia & West Chester trolley road. The cars stop at the entrance. The grounds have been newly fitted up with new club house, porch and board walks. There are large shade trees, which cannot be found at most such places. The programme will be as follows: Five 10-target events at 50 cents, three 15s at 75 cents, one 20 at $1, ten pairs doubles at $1; targets 1½ cents; purses divided by the percentage system. Shooting will commence at 10 A. M. Lunch and loaded shells on the grounds."

Carve in your hat the dates June 8 to 12, Ossining, New York, State shoot. It is not for up-State or down-State, but for all the State. Forget that your end of the State is better than any other end of the State. Rally at Ossining next week even if you have to sell a block of railroad stock or a load of hay. The programme is a sound one; there are merchandise prizes for every one who will help himself, and there are a lot of good men, hard workers, in charge. If there is anything you don't know about the shoot, but which you wish to know, write about it to Capt. C. G. Blandford, Ossining.

Under date of May 27 Mr. John L. Winston, secretary-manager, writes us as follows: "We wish to claim dates of Oct. 14, 15, 16 and 17, for our grand tournament, and West Baden Handicap at targets, $500 added money. This will be the greatest shoot ever given in the State of Indiana, and perhaps the greatest of the year. The hotel management is putting up this added money and taking every interest in making it a success, and any one familiar with the lines upon which this company handles affairs, will understand what this means. The location, surroundings and conditions for handling a crowd and entertaining it are perfect. The shoot will be held in the green showing in front of the hotel. Programme will follow."

BERNARD WATERS.

Corner Rod and Gun Club.

FORT WAYNE, Ind., May 30.—Herewith you will find scores of our tournament. It closed a very successful shoot. Wednesday was a very bad day, but nevertheless we had a very successful tournament. Considering that this is our first attempt, we are gratified at the outcome:

May 27, First Day.

Over forty contestants shot for the different prizes, and over 6,000 targets were thrown during the day. There were ten events and all were well contested. Five events occurred in the morning and five in the afternoon.

Messrs. W. R. Crosby and Rolla O. Heikes were tied for high gun, each breaking 192 out of the possible 200 targets. The programme to-day will be the same as yesterday, five events being shot in the morning and five this afternoon. The scores yesterday were as follows:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	15	20	20	20	25	15	20	20	20	25

May 28, Second Day.

There were five events in the forenoon and five in the afternoon. W. R. Crosby was high gun both morning and afternoon by the remarkable scores of 98 out of 100 and 99 out of 100. Every contestant showed up well. It was decided to postpone the merchandise shoot, which was to have been held Saturday, until Sunday, when it is expected a large crowd will be out to witness the contest. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	15	20	20	20	25	15	20	20	20	25

Dover Sportsmen's Association.

DOVER, N. H.—At our grounds at Gage's Hill on May 30, Memorial Day, we had a good local attendance, and some spirited shooting for the purse that an old friend had offered, to be won on open contest at distance handicap. Corson succeeded in winning, standing at 18yds. F. F. Wentworth was second at the same distance. The day was beautiful and a number of ladies graced the grounds with their presence.

There was also a challenge match at 25 targets each between Corson, Hallam and McShane on one team, and F. F. Wentworth, Sowerby and Warren on the other. The scores are as follows:

Hallam 15, Corson 14, McShane 13; total 42.

Wentworth 11, Sowerby 11, Warren 10; total 32.

For the purse, 50 targets: Hallam 21, Smart 27, Sowerby 17, Durgin 24, Hammond 24, Irving 16, Jones 23, Fisher 28, F. Wentworth 32, Corson 41, Stevens 30, Capt. Nat 20.

In the practice shooting there were seventeen men who took part, but as the summary would interest no one but ourselves, I do not send it. I may have made a mistake in writing of the time our grounds are open as appeared in your last issue. The time is from 2 until 6 on every Saturday afternoon.

D. W. HALLAM, Sec'y.

Richmond Gun Club.

CONCORD, S. I., May 30.—The Richmond Gun Club's shoot today was of unusual interest owing to some new competition. The employes of Messrs. Schoverling, Daly & Gales had a 50-target handicap, and there was some close competition for the gun club holiday cup. Schoverling tied for third with Cortwright in the employes' event, but waived his claim in favor of Cortwright.

In the handicap for a $5 gold piece Hearne was first with 42. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	10	10	10	15	15	15	15	15	15	25

Cortwright	14	Schoen	9
Kessell	17—119	Barth	6— 73

A. A. SCHOVERLING, Sec'y R.G.C.

Bristol Gun Club.

MAY 30.—The Bristol, Conn., Gun Club held a meeting a short time ago, elected officers and transacted other important business.

H. J. Mills, well known all over the Eastern circuit as a trap shot, was re-elected President, a position which he has held for about twelve years. Much of the prosperity of the club is due to the warm interest which he has always manifested in the affairs of the club. E. R. Burwell was elected Secretary, a selection which will undoubtedly prove of value to the club.

A large number of members assembled at the club grounds on Decoration Day, May 30, to take part in a shoot, of which the most interesting event was a gold medal handicap of 25 targets. This medal was designed especially for the Bristol Gun Club, and will prove a stimulus to much friendly competition among the club members, as it will be necessary, according to the rules, to win it three consecutive times in order to retain permanent ownership.

The club has adopted the distance system in handicapping, shooting from 12, 14 and 16yds., a shooter sacrificing two yards of his handicap on each win, going forward to his original position on losing.

The following are the names of the participants with score and handicap:

W T Smith, 12	1010001110000000010000010— 7
C W Edgerton, 12	1101101010111111101110111—19

G. W. MAINS, Sec'y.

Buffalo Audubon Gun Club.

BUFFALO, N. Y., May 30.—The Buffalo Audubon Club held an all-day shoot on the club grounds on Decoration Day. Shoot No. 1 was a handicap merchandise affair, high guns to have choice of the prizes. Foster, Kelsey and Talsma were high men, but the club had secured prizes enough to allow the eleventh to get in for something. Shoot No. 2 was a side shoot for a pigeon dinner, W. R. Eaton and J. J. Reed choosing nine on each side. Eaton's side won; score 172 to 153.

Event No. 3 was the big merchandise shoot, handicap, high guns to have choice of prizes. McArthur and Reynolds were high men, with Foster, Wilson, Norris and Cummings close up. All members who scored 15 received a prize in this event. The scores follow:

	No. 1. Shot at.	No. 1. Broke.	No. 2. 25 Shot at.	No. 3. Shot at.	No. 3. Broke.

Prizes for highest averages were divided as follows: First to H. M. Spencer, second to Dr. Monroe, and third to T. A. Allen.

A number of extra 10-target events were shot by shooters who did not participate in the prize events, as above; however, the scores made in the extra events were not handed in and I cannot give them.

J. D. MASON, Sec'y-Treas.

Ossining Gun Club.

OSSINING, N. Y., May 30.—Things pertaining to the State shoot, to be held here next week, are progressing nicely. We would like to see the shooters turn out in full force, though we can hardly expect to have near the attendance they had at the Pennsylvania State shoot two weeks ago. We have an attractive programme and a fine set of prizes, which should appeal to the average shooter. All practice work must be done next Saturday and Monday, as practice shooting will not be allowed during the days of the tournament.

The scores herewith appended were made on the grounds to-day:

Events:	1	2	3	4	5	6	7	8
Targets:	10	10	10	10	25	10	10	10

C. G. B.

Infallible Gun Club.

BUFFALO, N. Y., June 1.—At the semi-monthly shoot of the Infallible Gun Club, held on May 24, some excellent shooting was witnessed by those who attended. In the Walbridge trophy event Louis Dietzer put up a great race against the scratch men, and Parsons, who was shooting from scratch, broke 25 out of 26, a run of 25 straight, and then missed the last bird.

Si Maloney got 21 out of 27, which places him in second position in the race for the trophy. This young man is only twenty years of age, and gives every promise of being a top-notcher before many moons.

Parsons, who is leading for the trophy, is also young in years, being two years older than Maloney; but he is a fine shot, and has made many fine runs. He began trapshooting about one year ago, and is very fond of the sport.

SANDUSKY.

Championship of Indiana.

FORT WAYNE, Ind.—Mr. Max Witzigreuter, of Fort Wayne, Ind., and Mr. Hugh M. Clark, of Wabash, on May 26, contested for the state championship on the grounds of the Corner Rod and Gun Club. Besides the championship, there was a side bet of $100. Two of Mr. Witzigreuter's birds were lost dead out. He made a straight run of 31 at the finish. Mr. J. L. Head, of Peru, the former champion, acted as referee. The scores:

Witzigreuter	221*2210212221211 1*1122212222122111112112211122111—47
Clark	2222222222220222220022222222222212222022022222222—45

New York Athletic Club.

MAY 30.—At Travers Island, on the grounds of the New York Athletic Club, by the shooting contingent of the Association, scores were made as follows:

Events:	1	2	3	4	5	6	7	8	9
Targets:	25	10	25	25	*	10	10	10	25
Greiff	20	6	16	16	6	8	9	7	21

Hagedorn	18	5	18	20	6	5	4	10	17
De Wolf	..	..	13	..	..	..	..	..	..

Aquidneck Gun Club's Tournament.

NEWPORT, R. I.—The second annual tournament of the Aquidneck Gun Club, held on Memorial Day, was characterized by a large and enthusiastic attendance, and, excepting the high wind, fair weather conditions prevailed. The attendance was nearly double that of the first shoot, given last year.

Rhode Island and southern Massachusetts were well represented by members of the clubs of Boston, Providence, Fall River, New Bedford, Pawtuxet, Narragansett Pier, and other nearby cities and towns. The trade was represented by J. A. R. Elliott and Haze Keller, Jr.

In all, forty-three shooters faced the traps, averaging a little over thirty-two to an event, a capital showing for a holiday shoot.

The targets, of which upward of 4,000 were trapped, were thrown low and hard, few going under 70yds. This fact, together with the fresh breeze prevailing and the deceptive slope of the land on which the club has its habitation, made a combination of conditions extremely hard.

Out of the forty-three contestants facing the traps, twenty shot through the programme of 150 targets.

Average prizes were won by the following: First, $20, McArdle; second, $10, Griffith; third, $5, Manchester; fourth, case of shells, Griffin. The rifle offered for the longest run was also won by McArdle, with 22 straight breaks.

The perambulating hot dog dispensary was by no means the least feature of the shoot, and did a land office business.

Elliott arrived on the scene on Friday, and in a practice programme that afternoon dropped so few targets that the boys entertained a serious idea that he might just eat 'em all up on Saturday; but Jim took his fall with the rest.

How about that concert for the benefit of Bob Root?

Bob didn't miss many targets—sometimes. One of the trap boys evidently corralled all the souvenir buttons in sight, for when he emerged from the pit for lunch he was covered with them, some of Keller's work, likely.

The scores:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Targets:	15	10	15	20	15	10	15	20	15	15

Interstate at Williamsport.

WILLIAMSPORT, Pa., May 30.—The third tournament of the Interstate Association's series for 1903 was given at Williamsport, Pa., May 27, 28 and 29, under the auspices of the West Branch Rod and Gun Club.

The attendance during the opening day was very disappointing. The local club expected that the tournament would attract a much larger number of contestants. In the opinion of Manager Shaner, of the Interstate Association, it suffered from two causes. The State tournament at Philadelphia last week drew all the amateur shooters in the State to that city, and the Williamsport tournament suffered because they cannot spare the time to spend all of their days at the traps. The other reason was the tournament of the Western Pennsylvania Trapshooters' League, at Brownsville, Pa., which prevented a number of contestants from that section who usually come here to all tournaments from being on hand.

There were seven manufacturers' agents present and participating. These gentlemen shot for targets only. They were Neaf Apgar, Luther Squier, J. T. Skelly, J. R. Hull, Frank Butler, E. D. Fulford and Frank Lawrence, he of the genial countenance and expansive smile. Out of 185 targets shot at the manufacturers' agents broke as follows: Apgar 171, Squier 165, Skelly 162, Hull 155, Butler 134, and Fulford 165.

The conditions were much against good shooting. The threatening weather and heavy clouds made it difficult to see the targets when they were thrown into the air.

High gun for the day was held by Apgar, of the manufacturers' agents, with 171. High gun among the amateurs was held by Huiner, of Carlisle, Pa., with 159. There were few straight scores made because of the unfavorable conditions.

The second day of the tournament drew nearly double the number of contestants that participated the first day, and still the numbers were not what they should have been. The damage done by following so closely upon the heels of the State tournament was beyond repair.

The conditions were much better than on the previous day. The light was good and there was nothing except a high wind to affect the shooting. This, however, had the effect of keeping down the averages, and the high gun was not as good as on the first day.

All of the manufacturers' agents shot out the full programme. Squier was high gun with 168 out of 185 shot at. Among the amateurs high gun was held by Fen Cooper, of Mahanoy City, Pa., with 163 broke.

A peculiar feature of the day's shooting is the fact that only four straight scores were made.

The attendance the third day of the tournament was very light, and the programme was finished shortly before 1 o'clock, in ample time for the boys to attend the ball game.

First average for the entire tournament was won by Squier; Apgar second, and Fulford third.

The scores of the three days follow:

First Day, May 27.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.

Bonesteel Gun Club.

BONESTEEL, S. D.—The second annual tournament of the Bonesteel Gun Club was run off on schedule time on May 26. The weather was perfect and the attendance, considering the fact that there was no added money or other attractions other than sweeps and the championship of Gregory county to be decided, was good; in fact, better than was expected.

The sliding handicap, shooters getting into money back one yard each time, and step up one yard when out of money, was tried with a view of encouraging weaker shooters, but proved a failure. Like all handicaps, it works well under some circumstances, but is subject to abuses.

The day was perfect, and the entire programme was disposed of before 6 o'clock P. M. This consisted of nine 15-target events, $1 entrance each, and the Individual Championship of Gregory county, for the Peters Cartridge Company's emblem. This emblem was held by Spatz, of the Bonesteel Gun Club, but on this occasion he very kindly consented to waive his rights in the matter and put it up in open competition.

Interest in this event of course overshadowed everything else, and when the event was called at 4 o'clock, there was a craning of necks and a settling down on the seats to see the race; and I want to say right here that if all crowds that attend shoots would behave themselves as the crowd did at this shoot, it would be a pleasure to run a tournament. Not a demonstration of any kind marred the sport until the winner in the championship race, a dark horse, went down the line on the last 25 to victory, and then there was a cheer that made up for all day, and it came in good time and was in excellent taste, for the winner shot a grand race against as hard a run of luck as it was ever my good or bad fortune to witness.

It was thought that Spatz, Thompson, Leach or one of the Porter boys, would be the winner, and Carl Porter did put up his usual fine score for the trophy; but aside from this the probable winners showed up in very poor form. It was left to Elmer Jones, a young farmer, who shoots but little at the trap, though a grand field shot, to uphold the honor of Bonesteel, and he did it in as grand a race as it has ever been my lot to witness.

When he went to the score to shoot his last string of 25 he had to break 21 to tie Porter or 22 to win, as his opponent had gone out with 42. As the wind had come up and a dark cloud was hovering in the east for a background, it was thought it was a cinch that he would lose out; but he went down the line without a skip until he lost his tenth bird; and his friends said ah! But he broke the next one, and the next and the next. He was shooting high ones, low ones, left screamers, right screamer—all kinds, and breaking them all into bits, but shooting slow and methodically, and when he broke his 47th bird, which gave him the trophy, there was a wild cheer; but it did not bother him, and he broke the last three for good measure, going out with 45.

Shooting from the 16yd. mark and going back one yard each event and winding up on the 24yd. mark, W. A. Leach took high average, and J. F. Spatz second high average, and J. J. Thompson third high average, shooting in all programme events.

Mr. Le Roy Leach, of Wood Lake, Neb., was a guest of the club, and shot a few events, but could hardly do himself justice, as he was suffering from a very sore shoulder.

The following gentlemen were in attendance: Carl Porter, Orion Porter and J. E. Beagle, of the Fairfax Gun Club; Le Roy Leach, of Wood Lake, Neb.; J. F. Spatz, W. A. Leach, T. J. Thompson, S. F. Lucas, S. M. Lindley, Elmer Jones, Cliff Law, A. C. Blanchard, of the Bonesteel Gun Club, and all of them shot through all the principal events. W. A. LEACH, Sec'y.

Dubuque Tournament.

DUBUQUE, Ia., May 27.—The fourth annual amateur tournament of the Dubuque Gun Club closed to-day. The attendance was good and the shoot a success. The programme had twelve 15-targets events each day, with $5 added to each event. Ten averages of $5 each were given to the ten high scores of both days.

W. H. Heer, of Concordia, Kans., was high man with 339 out of a possible 360.

The trade was represented by S. A. Tucker, F. C. Whitney, Fred Gilbert, T. A. Marshall, F. C. Riehl, C. B. Adams, Fred Lord and C. W. Budd.

Quite a number of the boys go to Central City to attend a tournament to-morrow and Friday.

First Day, May 26.

Olney—Clay City.

OLNEY, Ill., May 25.—The Olney and Clay City gun clubs had a match shoot at the Olney City Park Tuesday afternoon which resulted in a victory for the visitors by the close margin of two targets. The totals were: Clay City 103, Olney 101, out of a possible 200. Following are the scores, each shooting at 25 targets:

Clay City Gun Club.		Olney Gun Club.	
O R Badger	9	S Butler	16
C W Tollires	12	W J Cummings	11
A Evans	15	T H Elliott	13
J C Mower	9	J Marks	8
F M Blessing	13	W Horrall	10
C Veneble	22	W Mather	11
L Borne	11	D P Moore	18
Dr Akester	12—103	M L Tippett	14—101

A high wind was responsible for the low scores.

Trapshooting is just now becoming a fad in southern Illinois, and tournaments are being held all over this part of the State and southern Indiana.

The Olney and Clay City clubs will try their luck over the traps of the latter club at Clay City next Tuesday, June 2.

D. P. MOORE.

Boston Gun Club.

BOSTON, Mass., May 27.—The third weekly shoot of the Boston Gun Club was held at Wellington to-day, eighteen shooters toeing the mark, for their regular weekly outing with all sorts of combinations.

It is really surprising to see the different ideas of eighteen or twenty shooters, all with some distinct preference, and invariably ready to defend it with all the powers of a Henry Clay. One with a double-jointed, knock-kneed weapon for shooting left eye from right, seemed to find considerable difficulty in hitting anything but his nose, stock of gun being too short, and not quite the proper dimensions, and 20 shots with this killing both ends weapon settled it for once and for all.

Charlie Kneil's single trigger also was out of kilter, and acted at times like a balky automobile; but that did not bother him in his afternoon's sport.

Individual honors in the prize match were taken care of by the worthy president of the Watertown Gun Club, at the present time one of the liveliest clubs in the State, and everything points to it being one of the leading clubs, some 100 names being on its membership list.

Kirkwood, of the home club, was second, pairs being his Waterloo. Andres third with 18. Other scores as follows:

Topeka Gun Club.

TOPEKA, Kans.—Tuesday, May 26, was a sort of field day for the Topeka Gun Club. It was the date of the match between the two teams composed of Dr. F. C. Burkett and C. H. Morton, and J. J. Gorman and Chas. Kleinhans. The two last named challenged Burkett and Morton to shoot a team race at 50 bluerocks each—100 to the team—and in spite of the threatening weather the match was shot to a finish before an interested and enthusiastic audience. A hard south wind prevailed; rain fell all morning, ceasing about noon. A dark, lowering sky made a miserable background, against which it was almost impossible to see the fast-flying clay birds, which were thrown from three expert traps screwed up to the last notch. With good weather conditions, much better scores would have been made, and as it was, the shooting was of a very high grade, considering all the drawbacks.

Gorman and Kleinhans have attended many large tournaments, and are considered crackerjacks. In fact, the odds seemed all in their favor, and it was thought presumptuous on the part of the other two shooters to engage in a match with them. But Burkett and Morton had a shot or two coming, and worked in a surprise party, winning the match by a close margin and by hard and excellent shooting. So close were the scores that near the end, with but 10 more birds to shoot, the teams were tied. Gorman and Kleinhans each lost one bird, and Burkett and Morton finished out with straight kills, which gave them the match.

Following are the scores, 50 bluerocks per man, 100 birds to the team. Referee, L. Biscoe:

Dr F C Burkett	11110010111011100111111110101001110011110010011111	—35
C H Morton	01111111110111111011111101101110101110111111111111	—42
		77
J J Gorman	00111110110110101010010010101100100111110111111101	—31
C Kleinhans	11111111011101111010111111111111111111111111010111	—44
		75

The feature of the shooting was the remarkable work of Charlie Kleinhans, who was high man with but 6 misses. Morton was next with 8 misses, while Burkett and Gorman shot away below their usual average. This was mainly due to the high wind, which made the flight of the birds so uneven.

Grantville, seven miles east of Topeka, where Charlie Kleinhans lives, has quite a flourishing gun club. Three of the members, Geo. Zarns, Dick Burrows and Chas. Cox, came down through the mud to witness the match and participated in the usual club event at 25 bluerocks. In this match the following scores were made: L. Biscoe 18, D. Burrows 17, Geo. Zarns 17, J. C. Elliott 17, O. E. Hungate 17, J. J. Gorman 21, H. H. Potter 15, C. Kleinhans 20, C. H. Morton 20, F. O. Burkett 18, C. Cox 16, D. Williams 19.

CHAS. H. MORTON.

Cincinnati Gun Club.

MAY 23.—The Cincinnati Gun Club cash prize contest to-day resulted as follows: Barker (19) 48, See (18) 48, Kaintuck (19) 47, Ahlers (18) 46, Medico (19) 43, Block (18) 43, Willie (17) 42, Maynard (18) 41, Miles (16) 41, Gambell (21) 40, Harris (18) 40, Corry (17) 39, Falk (16) 39, Linn (17) 37, Ackley (16) 37, Herman (18) 36, Nye (17) 36, Capt. (18) 35, Sunderbruch (16) 34, Jack (16) 34, Krohn (16) 34, Shattuc (16) 33, McB. (17) 32, Trohliger (16) 31, Williams (18) 30, Faran (19) 28, Lindsley (18) 26, A. J. (16) 19.

One hundred targets, three moneys, 16yds.:

Targets:	15	15	20	15	15	20	Broke.
Gambell	13	15	20	14	15	19	96
Van Ness	15	13	19	14	13	19	93
Faran	15	14	18	14	13	18	92
Ahlers	13	12	18	15	15	19	92
Barker	13	11	18	13	14	18	87
Medico	12	11	18	12	14	16	83
Williams	12	13	15	14	14	18	83

Van Ness had 60 straight; Ahlers 56.

Team race, 25 targets:

Herman's Team—Kaintuck 24, Maynard 24, Gambell 23, Faran 22, Corry 21, Herman 20, See 20, Ackley 18, Willie 15, Krohn 15, A. J. 9; total 211.

Nye's Team—Medico 23, Nye 21, Barker 21, Block 21, Jack 21, Miles 18, Capt. 17, Linn 16, McB. 15, Williams 13, Lindsley 13; total 199.

No. 1 squad in the State shoot is entered—Gambell, Squier, Alkire, Rhoads, Young.

IN NEW JERSEY.

North River Gun Club.

Edgewater, N. J., May 30.—The holiday shoot of the North River Gun Club had fourteen contestants on Saturday of last week. A programme of thirteen events was shot. The weather was far from pleasant. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	15	10	15	15	15	25	25	10	20	10	10	10	10

Event No. 6, handicap shoot for 100 loaded shells, won by Mr. C. E. Eickhoff. Event No. 8, 5 pairs.

JAS. R. MERRILL, Sec'y.

Franklin Gun Club.

Franklin Furnace, N. J., June 1.—The scores made by the contestants at the shoot of the Franklin Gun Club follow: Harry Pope 13 out of 25, A. Right 17 out of 30, and 13 out of 25, Hishpaugh 12 out of 26, J. Williams 13 out of 25, W. J. Pope 7 out of 20.

Hell Gate Gun Club.

Carlstadt, N. J.—Little Johnny Schlicht was very much in evidence on Tuesday of last week at the monthly club shoot of the Hell Gate Gun Club, which was held at Outwater's ground, Hackensack River Bridge, N. J. Thirty members faced the score, out of which Treasurer Schlicht was the only one to kill 10 straight, thereby making four points that count on the yearly average, and it was a case of an apple on Johnny.

Pierce, Brennen and Foster had the misfortune to lose their ninth bird, while Billy Sands' fourth dropped dead out of bounds. Louis Muench, Lang, Little Pete scored 8 kills each.

The birds were a very fast lot, especially the first 60, out of which only 31 were retrieved. W. G. Wilson, a former member, shot along as a guest, while J. Hughes, scorer, failed to count, as the time limit is 3:30.

Refreshments were in order, as usual. Scores, with handicaps, follow:

	Yards.	Points.	Score.
Schorty	30	7	0022022021— 6
J A Belden	28	6	20**201022— 5

* Guest. J. Hughes' score does not count in yearly averages.

Hudson Gun Club.

Jersey City, N. J., May 31.—The attendance at this shoot of the Hudson Gun Club was good considering Decoration Day had just passed. The day was fine. The traps worked perfectly. The club held three shoots in May.

J. H.

Trap at Lakewood.

Lakewood, N. J., May 30.—The shoot on the Lakewood shooting grounds this afternoon had twelve contestants for the silver loving cup. The result was a tie on 23 between Messrs. Crowdic and Tilton. In the shoot-off Mr. Tilton won the cup, scoring 24 to Mr. Crowdic's 21. Scores as follows: R. Parker 21, H. Crowdic 23, B. Tilton 23, E. Westhall 19, W. Elmer 22, E. Gant 15, Gifford 19, Waters 12, J. Lee 14, F. Morris 20, H. Norcross 20, S. Grover 8, H. Crowdic 21, B. Tilton 24.

Chesapeake Gun Club.

NEWPORT NEWS, Va., May 28.—The Chesapeake Gun Club pulled off the biggest shoot of the season at the park at Riverview yesterday afternoon. A live-bird shoot was scheduled, but the club was unable to get the birds, and the shooters had to content themselves with clay-targets.

Mr. A. W. Du Bray, of Cincinnati, representative of a large wholesale gun company, and a well-known crack field shot, and Mr. P. J. Gallagher, of the Portsmouth Club, were the guests of the club.

Mr. Gallagher led the field, making 90 out of 100. Mr. T. F. Stearnes followed him closely with 89, and good scores were made by nearly all of the shooters. Messrs. Westacott and Robinson made especially good scores considering that they are comparatively "green" at trap shooting. The scores follow:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	25	25	25	25	Targets:	25	25	25	25
P J Gallagher	22	22	24	22	J Robinson	16	21	22	..

WESTERN TRAP.

West Baden Shoot.

CHICAGO, May 28.—The West Baden Gun Club, of Indiana, claims dates of Oct. 14 to 17 inclusive, for the grand tournament of the West Baden Handicap at targets, $500 added money. The West Baden Hotel management, very well known in the resort world, is putting up this added money, and will take the greatest interest in making the shoot a success. Any one familiar with the lines upon which this company generally acts will understand the significance of this. The management confidently expect one of the biggest shoots of the season, and certainly the biggest shoot given in Indiana this year. The location, surroundings and conditions for handling a big crowd are ideal. The grounds will be located on the lawn directly in front of the hotel. As this tournament will come in the fall, after the heat and burden of the regular summer trapshooting season, when all good trapshooters may naturally be expected to be somewhat weary, the event ought to appeal to the fraternity at large. It is interesting to note that that old-time shooting enigma, Jack Winston, is secretary and manager. It will be worth the trip to witness Jack's old and newly acquired curves. It is believed that this will be one of the biggest of the fall events.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Portland Gun Club.

PORTLAND, Me.—E. Randall and W. B. Darton have a great race for high gun.

The Memorial Day tournament of the Portland Gun Club was a decided success in every way. While there were only twenty-five entries, the interest was at concert pitch throughout the entire programme.

The race for high gun rested with Randall and Darton, the former landing by one target. Below we give the tabulated scores:

Events:	1	2	3	4	5	6	7	8	9	10	Shot		
Targets:	10	15	15	20	25	25	20	20	20	20	at.	Broke.	Av.

PUBLISHERS' DEPARTMENT.

Fred Coleman, of Hegins, Pa., at the Pennsylvania State shoot, Wissinoming, Pa., May 19 to 23, won, first day, high average with 97 per cent. On the second day he won the Individual State championship at targets. At pigeons, on the last two days, he won the Williamsport trophy, emblematic of the individual championship of the State at pigeons, and the Denny-Wilson trophy. He was one of the three-man team which won the L. C. Smith trophy, emblematic of the State team championship at live birds. He always uses New Schultze. R. E. Parker, of Carlisle, Pa., won high amateur average at targets on the third day with 96 per cent. He used 3 drams of New E. C.

At the Cedar Lake, Ind., shoot, May 17 and 18, first general average for the two days was won by John S. Boa. At the Lebanon, Ind., shoot, May 15, first general average was won by C. O. Lecompt. At the Trenton, N. J., shoot, May 16, first general average was won by L. J. Squier, and first general amateur average was won by C. W. Feigenspan. Each of the foregoing used Winchester factory loaded shells and Winchester Repeating shotgun. At the Sheffield, Ala., shoot, May 14 and 15, the highest score was made by C. H. Ingram, an amateur, who shot Winchester factory loaded shells. The second day he broke 170 out of 180.

Mr. A. H. Funke, 325 Broadway, New York, calls attention, in our advertising columns, to his new line of shotguns, price $40. These guns are equipped with the Bittiner & Jaeger single trigger, besides nearly all the useful devices and good material of a high-priced gun, such as fluid steel barrels, matted extension rib, Grecner cross bolt, Deely & Edge patent fore end, pistol grip, case-hardened frame, automatic safety, etc. Mr. Funke will send to all applicants a special circular descriptive of this gun. This places an excellent gun equipped with the single trigger within the reach of all.

W. R. Crosby, at Paducah, Ky., on April 28 and 29 last, in the two days' programme shot at 350 targets, breaking 342. At Union City, Ind., May 6 and 7, he broke 387 out of 400. On May 11 and 12, at Crawfordsville, Ind., he eclipsed everything previously recorded by breaking 398 out of 400. Thus in three consecutive tournaments he broke 1,127 out of 1,150, averaging for six days 98 per cent. Mr. Crosby's load was, as usual, 44 grains of E. C. No. 1.

The J. Stevens Arms and Tool Co., Chicopee Falls, Mass., advise us that their new double guns, No. 260, $27.50 list, and No. 270, $30, will be ready for shipment in about thirty days; also single guns will be furnished in twist barrels in about thirty days on special order. Abridged catalogue, on how to operate the Stevens-Duryea, will be sent to applicants.

It can be counted nothing less than a serious misfortune to Von Lengerke & Detmold and their friends—the burning of the entire plant of the Racine Company's works at Racine, Wis., on Sunday, May 31. Many unfinished orders were being executed and were near completion. Von Lengerke & Detmold regret the disappointment forced upon their customers.

The Mullins galvanized steel pleasure boats have been before the public now for a number of years, and have won a permanent place in the popular favor. The handsome illustrated catalogue issued by Mr. Mullins is of interest to every one who uses the boat, and will be sent on application by W. H. Mullins, 216 Depot street, Salem, Mass.

The U. M. C. Co. advises us that Mr. Fred Coleman won both the clay-bird and the live-bird championships of Pennsylvania at the recent State shoot. At the Brownwood Gun Club, Brownwood, Tex., Turner E. Hubby scored 94 per cent., winning first place. Each shot U. M. C. factory loaded Arrow Shells.

OFFICE OF NEW YORK AMERICAN, New York, May 26.—Business Manager Forest and Stream: Will you kindly discontinue my advertisement in the FOREST AND STREAM, offering salmon fishing, and send me the bill. I have sold the fishing through the advertisement.

RUDOLPH BLOCK.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903 BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 13, 1903.

VOL. LX.—No. 24. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1903.—No. V.

FLORIDA.

Act of June, 1903—Sec. 2.—That no person or persons, firm or corporation, shall sell, expose for sale, or have in his, her, their or its possession for sale at any time any wild deer, venison or deer hide.

Sec. 3.—And no person or persons, firm, corporation, association or company shall sell, expose for sale, or have in his, her, or their possession for sale in this State, any wild turkey, quail or partridge.

THE TRAP, PRESENT AND FUTURE.

THE present extraordinary activity in the sport of target shooting at the traps throughout the United States has a felicitous significance for its permanency and broader growth. It is a situation specially gratifying to two classes in a manner distinct from each other, namely, those who are interested in trapshooting as a matter of sport, and those who are interested in it as a matter of business. On the one side are all the target shooters; on the other side are all the manufacturers, while a third indeterminate class, by no means small, may be said to be related to both classes.

The general activity augurs well for this form of competition, as it pertains to the future. Therefore it must possess all the essentials of a true and beneficent sport for the public, else it would not evoke such general enthusiasm, or so firmly hold the constant interest and participation of its devotees.

At a time, now some months ago, when the daily press, the humane societies, the Legislatures of some of the States, and a part of the general public, were more or less hostile in their attitude toward live bird shooting at the traps, there were many sportsmen who held the opinion that such hostility would have a harmful, deterrent effect on trapshooting in general. While it may have done so in the localities where the hostility was most active and forceful, it had no material effect on the general whole.

It is doubtful whether target shooting has ever been so general in the United States, considering the activity of the clubs of the small towns as well as those of the great cities, and the unusually great number of tournaments held and to be held in every section.

The trapshooting leagues and State associations have been particularly successful. The Pennsylvania State shoot, recently held, was a record breaker of its kind, and, indeed, ranked equal with the great national trapshooting events. Of the leagues, the Western Pennsylvania Trap Shooters' League, the Mississippi Valley Trap Shooters' and Game Protective Association, the Michigan and Indiana and other State leagues and associations are examples of eminent success. They have afforded broad competition and stimulated activity and enthusiasm in great sections of territory.

A few State associations, on the other hand, appear to be lethargic or somnolent, although having abundance of good material wherewith to achieve success equally with the most successful. It is, however, a noticeable feature that, in all sections conspicuous by successful effort, the leaders are skillful, energetic and persistent workers. Great deeds are not accomplished by indolent meditation or inaction of the officers.

New trapshooters are engaging in the sport in great numbers, and but few are retiring from it.

Turning now to a consideration of the trade interests, it has been a great season for each branch catering to trapshooting. Most of the target manufacturers have done a great season's business, and at least one of the largest has had record breaking sales. The great ammunition factories are taxed to their utmost manufacturing capacity to meet the needs of the great army of trapshooters. The gun manufacturers, in many instances, are far behind their orders. Thus sport and business are both flourishing in a sound, broad manner.

The success of the great leagues, whether State or interstate, should engage the earnest attention of trapshooting promoters, as a feature to be specially encouraged and imitated in other sections. There are great areas containing numerous gun clubs yet unorganized into leagues, and in this matter of organization and general impetus to competition, no body of men can accomplish more as educators than can the trade missionaries and professional shooters.

THE PALMA.

THE announcement that the American rifle team will sail on Saturday of this week on the Cunard liner, Lucania, is very gratifying. The National Rifle Association, during several weeks past, has been devoting its influence and energies to raise the required sum, $10,000, but considering the history, associations and international interest attached to the Palma Trophy, subscriptions have been both slow and, except in a few instances, meagre. The sum early this week was about $3,000 short of the amount needed to defray the expenses of the trip. However, before the team sails, there is a hope that some gentlemen who are patriotic and wealthy will come to the front with the required subscriptions.

The team personnel is excellent. The members have practiced industriously, and in their practice have shown steady, consistent skill of a high order. Compared with the scores of prior teams, both American and British, the practice work of this American team is good warrant for a reasonable faith in their victory and the return of the Palma to America, where it remained undisturbed so many decades. The contest for it at Bisley will not be weak by any means. Word has been received from the N. R. A. of Great Britain that France, Switzerland, Australia, Austria and Canada will also contest with the holders for possession of the coveted trophy, so that the competition, thus broadened, is correspondingly more difficult. Seven countries will thus be represented.

Great interest attaches to the event in England. Many Americans, traveling abroad, will be present, and it is stated that the King will honor the victors by presenting in person the trophy at the Mansion House, London. Undoubtedly it will be the greatest contest for the Palma which has ever taken place, and should the American team fail to win it in this attempt, the difficulties in after years will be much more numerous and formidable, inasmuch as if it remains in Europe more interest in it will be evoked, more teams will contest for it; in consequence, and the greater the number of teams in a contest, the greater are the odds against any one team's success.

The American team is fortunate in having a captain who is a veteran, Mr. Leslie C. Bruce, *au fait* in all the details of the competition at home and abroad, he having been a member of the original team which first made the Palma Trophy a testimonial to the superior skill of American riflemen.

However, the more contestants and the keener the competition for it at the coming contest, the greater will be the honors and the glory of the victors. Our best wishes go forth for the success of the American team, and with them our hopes for rejoicing later over their victory; but, in good wishes fair to all, may the best team win.

COL. SAMUEL WEBBER and Mrs. Webber, of Charlestown, N. H., have recently celebrated their golden wedding; and the item of social news has appropriate place here because, as Von W., Col. Webber is one of the veteran contributors to FOREST AND STREAM. Born in 1823, and a sportsman from his youth up, he was in the early days a reader of the Spirit of the Times, the "Old Spirit," as the veterans refer to it, and when some forty years later the FOREST AND STREAM came to take its place as the representative of the interests of the field sportsman and the angler, Col. Webber naturally found his way into its columns, where his prose and verse have afforded instruction, amusement and philosophy. Of the Von W. of today it is written in the local paper's report of the anniversary: "Physically, Colonel Webber is still an imposing figure, tall and erect, his step is firm and he bears the silver crown of his nearly eighty years with gracious, kindly dignity, an inheritance both of gentle blood and of that older school which marked the gentlemen of his youth. Mentally he is in his prime, and he is still a student, keeping abreast of current events and their application to the future with the refined wisdom of a long life of study and observation."

And now that we are gossiping of men who are old in years but young in heart, we may note that George B. Eaton, the Jacobstaff of FOREST AND STREAM, on Wednesday of this week celebrated his seventy-first birthday.

GRANVILLE HILLS, of Hudson, N. Y., died on Friday, June 5, aged 59. Mr. Hills was assistant cashier and paying teller of the Farmers' National Bank, an institution with which he had been associated for many years. He was widely known and is as widely mourned. To many a reader of FOREST AND STREAM the intelligence of his passing away will bring a deep sense of personal loss. His was a nature essentially frank and sunny; he had a cheeriness which was contagious; it was wholesome to be in contact with him. In more than an ordinary degree he was thoughtful and considerate of others, concerned for their good, and active in every movement for the social betterment; he was "the most generous of men," says one who knew him at home and in the field for twenty years. Mr. Hills was an enthusiastic sportsman and a great lover of dogs; some of the best English and Irish setters in the State were of his breeding. He was deeply interested in game protection; he not only professed but practiced a high code of sportsmanship; he carried his conscience into the field with him. A reader of this journal from the first number, he was an occasional and ever welcome contributor to its columns; his stories of experiences in the home fields or in the Maine woods were alike pleasing, because in them was reflected the attractive charm of his personality.

THE Protective League of Salt Water Fishermen, whose aim is the protection of the local fishing waters about New York city, may accomplish much, but cannot hope to restore the fishing to what it was in the good old days. The story of Hudson's discovery of the harbor in 1609, as related in "Purchas his Pilgrimmes," records as one incident of the eventful day: "Then our boats went on Land with our Net to Fish and caught ten great Mullets of a foote and a halfe long a piece, and a Ray as great as four men could hale into the ship."

THAT illustration of Delaware River algæ was engraved directly from the original specimen, without the intervention of photographic print; and it thus represents the original with very close fidelity. An old angler to whom the picture was shown, commented: "I have seen sea algæ, but I never knew there were such beautiful things in fresh waters." There must be many others to whom it will come as a revelation of the unseen world which lies about us in our outings.

MEN may come and men may go, likewise game protectors, but the netting in Onondaga Lake goes on forever. A member of the Anglers' Association of Onondaga with headquarters at Syracuse, reports that the local protector destroyed during the month of May illicit nets to the value of $225; but like diligence during this current month of June may be counted on to yield a like return.

THE forest fires of Canada, New England and New York have been appalling in their extent and the completeness of the ruin wrought. The woods have been destroyed, the game and fish killed; and what is worst of all, the forest floor consumed. It is the annihilation of a natural condition of things which has been centuries in the making, and which only centuries can restore.

IN his chapter of "Canoe and Camp Life Along the Delaware River" this week, Mr. L. F. Brown gives an extremely interesting record of observations of the female whippoorwill as the one which sounds the nocturnal cry; and we cordially second his invitation to others, who may have had opportunities of observation, to contribute their information on the subject.

Growing Old.

IT is only ten o'clock of a fresh June morning, yet I am lying on a lounge under an open window, listening dreamily to the merry jingle of the bobolinks in the meadow and the broken song of a robin "singin' for rain," as our country folks say. As the sailor whistles for a breeze to fill his flagging sail, so robin whistles for rain that shall bring up worms to fill his own crop and that of his brooding mate. I am reminded of my neighbor's remark yesterday: "The' haint only oncte in a while a robin 'at sings naowerdays, an' the bobolinks don't sing a mite as they uster. The' uster be oncte in a while one 'at sung diff'rent from t'others, an' we uster call 'em Frenchmen, but naow they all sing that way!"

It is true there is only one robin singing now; but it is late in the season for them to be singing at all, except in the early morning, and surely this one sings the old cheery song—"Europe! Europe! Europe!"—just as robins sang when I was a boy, which was not so many years ago, though. As for the bobolinks, their blythe melody jingles to the same medley of words we set it to when we were as care-free as the pied revellers themselves that flitted and hovered over us and the daisies and buttercups where their nests were hid that we never could find.

"Colink, coler! Old England, New England! Tackle me, tackle me, kiss me sweet—sweet—sweetly!" It is no more the patois of Canadian habitants now than it was then. Whatever the invasion of these northern aliens may have done to us, it has not changed the English of our bobolinks.

I begin to suspect that my neighbor is arriving at that stage of his journey wherein nothing of the present or the future seems so good as what lies in the past. Yet that can hardly be, for he is not a year older than I am.

There is a sound of approaching footsteps, heavy and deliberate, recognized at once as those of the hired man, which are moderate but at meal time or when the chores are overtaken by sundown. There is a clink of a hoe on the stones, the tap of the handle on the well curb, the creak of wheel and axle, the hollow thump and final splash of the bucket's descent, then its dripping ascent, a period of silence followed by a long, gusty sigh of satisfaction. Then he addresses the hired girl, whose noisy work ceases while she feeds her eyes upon him from the kitchen door or pantry window. There is a growing tenderness between them, fostered by frequent whispered interviews wherein our interests languish. I noticed last night a protracted sorting of beans for to-day's dinner as I passed through the "wash room," that lasted until good beans were not to be distinguished from bad ones in the deepening twilight, and I could hear, as I sat in the kitchen with my pipe, much stirring and groping in the pan by hands that are not mates, and the patter and rattle of beans slacken between intervals of mumbled words that disguised speech more effectively than whispering.

"Wal," he now drawls in a tone indicative of weariness of well-doing, "I got his sweet cawn all hoed, I wonduh what he wants me tuh fly to next?" You might know he came from "over the mountain" by his treatment of the letter R, as no born western Vermonter uses it. "I wonduh wheuh the ol' man is, anyway?"

What old man, I wonder. I have not heard of any aged person about the place to-day. Suddenly it dawns upon me that from his point of view I may be considered worthy of this disrespectfully venerable title.

Can it be possible that I really am so? It was such a little while ago that my mates and I were boys at play beneath the rollicking bobolinks. Only a little while ago. Let me count the years. Nigh on to fifty! How many of my playmates are left? Of the boys who can answer to roll call? Here there is only my old neighbor who criticises the songs of the bobolinks. Some are gone quite out of the world, almost out of the memory of living men, and some the great cities and the great West have taken almost as completely beyond our ken. So, too, the girls have drifted out of our knowledge, all but two or three, and they gather no more buttercups and daisies, and all the roses of youth have faded out of their cheeks. It is but a little while since they were blooming.

Yet in that time how many things have happened! What strange things, grown familiar—the shriek of the locomotive, contact with the busy outer world, the hum of the electric wire, news but a day old from the furthermost parts of the earth! It is as new and strange as were all these to be called an old man.

I shall become accustomed to it, even in my own speech. As I con in memory the old song of the bobolinks, I do miss something in this later melody, and must confess there are not so many robins singing, as in myself I miss the joyousness of youth and its delight in mere existence. It is pleasanter to look backward than forward, for nothing is quite so good as it once was, nor ever will be again.

Yes, the hired man was quite right in asking for the old man, and I must accept the title with all that it implies as gracefully as possible. At least I can have the consolation of bragging about things of the past to the young fellows, and among many doubters find few who, out of their own experience, can dispute my assertions concerning, for instance, the partridges that once thronged the now barren woods; the ducks that swarmed in the deserted marshes, or the big fish that crowded each other in streams in whose shrunken waters the minnows are lonely.

Better than this, I may be sure that for many a one the bobolinks are singing as blythely as ever they did for me, and for them there are as many robins as ever there were.

ROWLAND E. ROBINSON.

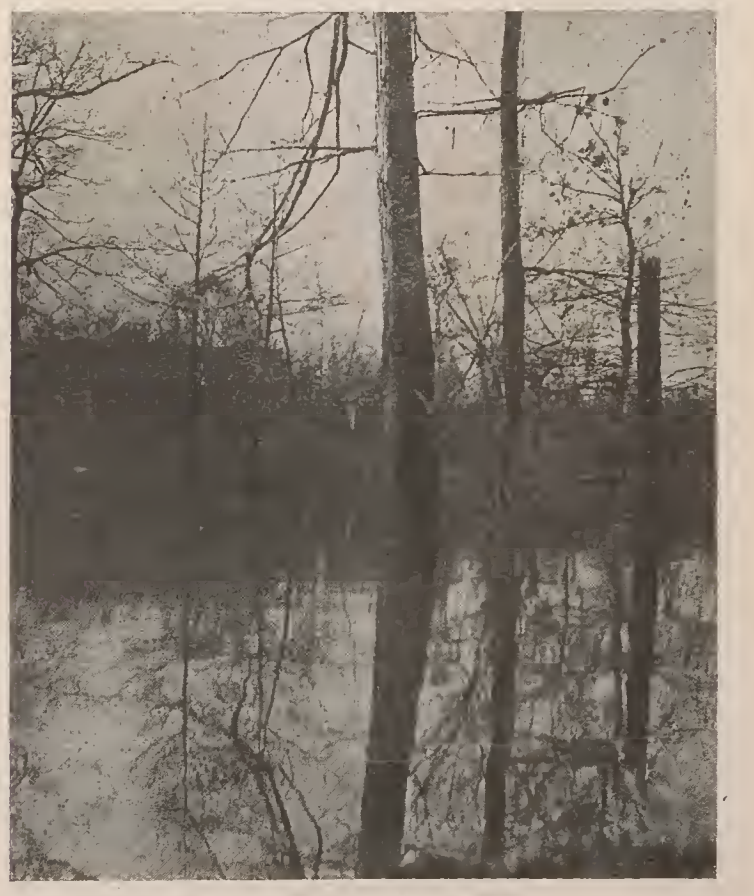
The Sportsman Tourist.

Down in Mississippi.

"NIGGER—Hey, you nigger!" It was a white man's voice and the target for it was shambling along the muddy street in that shaky, pottering fashion, that marks the plantation negro of medium age from every other variety of the genus Homo yet discovered. To Northern ears this abrupt and rather vigorous salutation carried with it visions of flying brick bats and a general session of "rough house," but the meek and gentle rejoinder, "What yo' want, boss?" set at rest all thoughts of trouble, and convinced one quicker than would an atlas and a railroad guide that we were in the land of the "Cotton and the Cane," well to the south of "Mason and Dixon's line." Yes, we were in Mississippi at last and waiting impatiently about the village for the arrival of the team that was to haul our party of Ohioans, bag and baggage, out to "the plantation," on the far bank of the "Tippo." We had been three nights and as many days on the road, had crossed the State of Ohio from Toledo (our home) to Cincinnati, and the States of Kentucky and Tennessee to Chattanooga, and after a night's rest in the latter city, had bowled along the rails to Greenwood, Miss., and then eighteen miles further next day, over a little "jerk water" line to the town of Phillip, Tallahatchie county.

Our party of three consisted of tried and time-tested companions, who had shared the pleasures and privations of other lands together. The Patriarch, whose flowing white beard marked his eightieth year, had lashed the mules down in Arkansas a few seasons before and furnished expletives meantime, while the Judge and the Yachtsman—standing in mud to their knees, pried up the rear wheels of the wagon with a fence rail (used as a lever of the second kind), and all three had dipped cornmush out of the same pot and taken turns at building camp-fire on the frosty mornings down in the cypress swamps of the White River country. We had come down to "Ole Mississippi" to try for "big game," and the slow progress made in getting to our chosen location was rather trying.

Reader, were you ever hung up in a Southern lumber hamlet with a contract on your hands to kill time till further orders? No? Well, don't undertake such a deal if it can be avoided. A sawmill and cotton press both asleep—a hotel that is closed for want of business, some piles of railroad ties along the track, a straggling row of small frame houses and a bunch of idle, noisy negroes constitute the points of interest in the dull winter season, and time hangs on one's hands like the old man of the sea to the back of Sinbad, and 'tis scarcely safe to rely on Sinbad's remedy either, for the liquor down this way is wild, woolly and raw, and there's no particular point in pouring it down the other



MYSTERY AND MIRROR EFFECT.

fellow (old Sinbad) when you have the blues yourself.

A few hours of waiting sufficed for the Judge and the Yachtsman. 'Twas three or four miles out to "the plantation," and a sea of mud and the "Tippo" were between, but they set out afoot about an hour before dark and soon disappeared up the muddy road, wading through the semi-liquid alluvium knee deep here and there.

Along about dark there came a team of mules hitched to a farm wagon and driven by a negro, who announced that the outfit belonged to Massa F——, and that he would be ready to start as soon as the wagon was loaded. The loading process accomplished, a man and woman appeared (relations of the planter), and with four people and a wagon box full of baggage the trip began. Darkness settled down over the scene ere the lights of the town were left behind, and stillness reigned supreme, broken only by the splash of the animals' hoofs and the creaking of the wagon as it groaned its way slowly over hummocks of partly dried mud, or plunged forward into a 'chuck hole, shifting the cargo in sudden fashion and threatening the passengers with a plunge into the mud. The Patriarch is not much given to expostulations, and is, indeed, an exceedingly quiet personage (save when engaged in starting a pair of obstreperous mules in a mud hole), but when the good ship of the prairie, with a mighty lurch to starboard, went over on her beam ends almost, all but carrying away the deck load and allowing a wash of Mississippi mud to come in over the leeward rail, mid

DOWN ON THE TIPPO FAR AWAY.

the screams of the lady passenger, the hoarse shouts of the negro driver and the cracking of his whip, the Patriarch mildly declared that the passage reminded him of Maumee Bay in a nor-easter.

A short distance out the darkness became absolutely impenetrable, and the driver had his hands full at keeping the team in the road. In spite of his efforts the mules would stagger out of the beaten track, causing much annoyance, but no particular damage, for the road itself was neither better nor worse for traction purposes than the surrounding country. However, the road led to an intended destination, and the surrounding country might lead most anywhere, so it was deemed best to keep in the road if possible. A flickering light ahead indicated a habitation, and upon arriving in front of it, the driver pulled up and prevailed upon the occupant to lend him a lantern, and with this in hand one of the party led the way on foot, and thus guided, Sambo and the pair of illegitimate members of the genus Equus made much better work of it, and slowly tolled off the three miles and more that lie between Philipp and the "Tippo."

The soil of this region is something never to be forgotten once you make its acquaintance in the wet season. Black as Erebus, sticky as shoemaker's wax and deep as the bottomless pit—yet drying out and becoming even dusty in season and yielding fine crops of cotton and corn—when nature smiles. The whole neighborhood is of alluvial structure, and in its time composed the bed of the mighty Mississippi before that great artery had shrunk to its present proportions, and as the shrinking process developed, vast areas of silt and clay were deposited in rather uneven fashion, forming ridges and hollows for us mortals to climb over and wallow through in these later days. The ridges nature has taken possession of for the purpose of fish-pole culture, and thus it is that "cane brakes" cover much of the land lying above high-water mark, forcing the woodsman to take to the bottom lands when moving about the country. This is all simple enough in dry weather, but when the bottom lands are several feet under water it is a different matter.

Much has been written and related about the "Impassable Cane Brakes," but no one ever appreciated the full meaning of the word impassable, until he has tried to force his way along or through a "brake." A hatchet or stout sharp knife and time are the only antidotes, and even these give little satisfaction to the person making the application. "Go way around," never through, is the maxim one soon learns to remember.

The "cane" is, however, the Southern planter's close friend, for it furnishes his live stock with fodder during the long fall and winter months. The leaves remain green the year through, and must contain a great deal of nutriment, for the mules looked sleek and trim, and the cows, who have nothing else given them, came up to the house each night during our stay with udders well filled with milk. Their young calves tied to the fence all day, were sure of an evening meal, and while the calf, occupying one side of its mother, proceeded to extract its food supply from that side, the young lady of the household, tin cup in hand, made strenuous and successful efforts to extract on the other sufficient trimmings for our coffee. The flavor of the milk, while not equal to that produced from clover and timothy, is a decided improvement over the wild flavored article evolved from the mesquite chapparal of West Texas, or the bitter almond kind given up by the goats of old Mexico after a day's browse on maguey stems, sage brush and prickly pear.

But the "Tippo" can't be far away now, for the road

has been in the bottoms for quite a way back. What's that shimmering in the lantern light? another pond that the road passes through? No! by George! Here is the ferry sure enough—that rope tied to that white ash slab and running out over the water from tree to tree until lost in the darkness, is the "transmission"; human hands and muscles are the "power," and the "load" will soon be in evidence on the deck of the old flat-bottom scow, if we can but make the owner hear us and bring her over. "Whoa, Micodermus! Whoa, dar; ain' yo' don tired 'nuf toe stan' still while I's onhitchin' yuh?" Thump goes the wagon tongue into the mud.

The country is wild for the most part, and is still well stocked with deer, wild turkeys and squirrels, and throughout the winter season is the resort of myriads of wildfowl, largely mallard ducks, who wax fat on the acorns of the bottom lands. Deer are hunted almost entirely with dogs, and these are started by a hunter on horseback, after first stationing the other members, each on his respective runway.

Twice this method was successfully used by the party, and on an equal number of occasions still-hunting yielded venison to their ready rifles.

As a matter of course the former method is by far the more picturesque and thrilling. The deep sounding horn echoing through the forest and answered in refrain by the silver-throated hounds—the watcher on the runway, tense-muscled and alert, waiting with cocked gun to hear the first sound of crackling brush. How his heart thumps against his ribs as the voice of the hound turns in his direction. The deep bass of the old dog speaks volumes to the trained ear of the hunter. Its long tremulous vibration, with rising inflection slowly repeated at intervals, tells more plainly than words that the trail is old and uncertain. Now the old fellow has evidently turned about, following the track in the opposite direction, for when he gives tongue the sound comes with a far-away effect, growing fainter at each repetition. Hark! Hear that high treble off to the right? There it goes again! Yes, and now in quick succession, again and again, always with shorter intervals between. The bitch has struck a warm trail, sure; and now, in grand and growing chorus, come the voices of the whole pack, until the very air blossoms with their music; and what music it is! What comparison can the artificial kind offer? Where are the creations of Meyerbeer and Wagner, the rollicking, crashing intonations of Remenyi, or the flute-voiced vocalizations of our theatres and cathedrals? Can any or all combined make the heart beat and the blood leap and throb, and the nerves tingle like unto the duet of Nellie and Dick, chorused by the pack of black and white songsters on the trail of the red deer? Never! Now they are coming nearer—nearer—they're headed straight for here, sure! Now, look out! Once the game bounds into that open space there in front, the shooting has got to be done mighty quick. He'll be in the brush again in another jump! Better cover the spot with your rifle now—he's bound to cross there inside of another minute. There! Hear that brush crack? There he is now! Bang! Pump your gun quick and be ready for another shot; but you don't need it this time. There he lies in a heap, and here come the dogs, all in a bunch, too. They rush up to their prey pell-mell, following in unison. They sniff the dead animal again and again; then, gradually quieting down, indicate that they are satisfied. So bleed the game, sling it over the mule, and away for the ferry. There'll be venison in place of tough "razor-back" pork to-morrow, and to-night by the bright fire light of white ash logs (which, though green cut, burn almost equal to other woods when dry) we will listen to the fiddle scraping against the horse-hair bow, and between tunes each hunter will recount his experiences of the day.

New Year's Day, 1903, was a wet one on the banks of the "Tippo." Rain, rain, rain, next day and the next, and the next. Will it never let up? And now the bottom lands are flooded and little land save the canebrakes are dry. The rain time is a sorry time for the hunters. Card playing has become monotonous, and it's all we can do, too. There's an end to everything, and so there was to the rain, but it quit with a veritable grouch on, and without the cheer and promise of bright sunshine. Cold gray clouds obscured the blue sky, and mist and chill were ever near, and now and then, just to keep one in suspense, the floodgates of heaven opened up and sprinkled down the mist and fog once more. Duck hunting in the dugout now took the place of other occupations, and served to pass away the time pleasantly. There was venison enough in the larder and mallard ducks and gray squirrels on the side, which, with boiled rice and sorghum molasses, kept the wolf from gnawing at one's vitals, but the wet, cold, raw season was on in good

AT THE RUNWAY.

IN AT THE DEATH.

Swish; bang goes the sharness on top of it, and the mules, freed from their late burden, go cantering off in the darkness, headed straight for the nearest canebrake, where they will obtain their supper. Isn't that easy money? The ridge for a stable, the cane-brake for a hay stack, the river bank for wagon shed and harness room combined! It's harder on the leather harness than on the live stock, for the latter seem to thrive well enough but for comfort to the hostler! Immense! Well, lend a hand here and yank out those trunks and telescopes. Hollo-o-o over there! Hoop-la! Whoope-e! Can't they hear? Yes, there is a lantern moving about among the trees and here comes the ferry—hand-over-hand—along the rope. Soon the luggage is aboard and shortly afterward the crossing is accomplished and the hungry, weary travelers are once more united under one hospitable roof. A hasty lunch and then good night, for all can find sleep without wooing it after the wearying events of the day. The air is chilly this December night, and the southern house is not built to exclude the night wind which rolls up through the cracks in the floor as the Ohio contingent pulls off its stockings in the "spare room." The chickens roosting along the footboards of the bed cackle in subdued chorus at the intrusion, and an occasional basso grunt from somewhere under the floor, answered by the staccato pipings of a litter of young porkers, tells a tale of domestic felicity blow decks.

But these little interruptions cut small figure that first night in the calculations of the Ohio sportsmen. Sleep—balmy, dreamless sleep—ended their first day's experience on the banks of the "Tippo."

The "Tippo" belongs to the Yazoo River system, but is scarcely a river in the proper sense. It is a succession of pools of dead water connected by narrower stretches of channel. Ordinarily there is no perceptible current, and the water level varies with the season, backing up and overflowing the bottom lands on the slightest provocation, or drying up until little water is left, save in the largest pools.

AFTER DUCKS WITH THE DUGOUT IN THE GLOAMING.

FULLER'S FERRY—BRINGING IN THE DEER.

In grand and earnest, and thus it was, after a couple of weeks had slipped away, that three Buckeyes from Northwestern Ohio concluded they would migrate back to their home again.

A month or more earlier, say during November and the early part of December, would doubtless prove extremely pleasant in Mississippi. The weather is then usually dry and fine, the game equally plenty, and the wagon roads much better to travel over, and should this trio decide to try the vicinity again, November and December will be the months selected.

At Chattanooga, on the return trip, the party stopped off to visit Lookout Mountain and the National Military Cemetery, where lie sleeping so many thousands of our sons and brothers from the North who gave up their lives for the flag.

This picturesque vicinity, with its historic treasures and battle grounds is well worth a visit alone, and in conjunction with the sport of the wilderness beyond is tempting enough to call for a second trip.

May all have the opportunity another year to view with quickened eyes the scenes—now but a memory— down on the "Tippo" far away.

The President's Park Trip.

THESE notes of President Roosevelt's excursion in the Yellowstone National Park are sent by Mr. E. Hofer, who accompanied the party, and whose familiarity with the Park contributed in no small measure to the successful pleasure and execution of the itinerary:

YELLOWSTONE NATIONAL PARK, May 14.—*Editor Forest and Stream:* Since my last notes about the game here we have had two distinguished visitors, as all the world knows, President Roosevelt and Mr. John Burroughs. I had the pleasure of being one of the party while on their camping trip. Our first camp was on the Yellowstone, a little over a mile above Crevace Gulch; from here excursions were made sightseeing. Within ten minutes after reaching camp, Major John Pitcher called the President's attention to a mule deer swimming across the Yellowstone, and in a few moments two more deer walked down to the river and crossed at the same place. They appeared to swim straight across; the current did not carry them down any to speak of. This first sight of game was a foretaste of the whole trip. The view up the river with the cañon walls, timbered gulches, open meadows along the stream, boulder-strewn shore, winding river in the foreground, with snow mountains for a background, and the swimming deer, made a beautiful picture that impressed everyone who saw it.

After Mr. Burroughs joined us here, we moved camp to Slough Creek. On the way there we saw over a thousand elk, many mule deer and other animals. Both the President and Mr. Burroughs were interested in all the small animals and birds. It was a little early for the birds; still they saw a goodly number and heard many sing. The little water wren did his best to entertain the party. Once when the President and Mr. Burroughs were watching a family of woodchucks, they were stampeded by the song of a Townsend's solitaire. Mr. Burroughs made a run over rocks and downtimber to the edge of a cañon and part way down the cañon to hear the full song. The bird did not do its best, having a bit of a cold, I suppose.

Our ride was over some rough trail, snow fields, through fallen timber, mud and rocks, with some good trail. Hell-roaring Creek was crossed on ice. Still Mr. B., who had not been on a horse for forty years, made the trip very comfortably. The party had a bit of fun with a "picket pin" squirrel. Some were sure it was a picket pin and not an animal, until it got down from its upright position. Our camp at Slough Creek was beautifully situated, but in a place where there was no fishing so early in the season. Most of the creek was covered with ice strong enough for our horses to cross on. Several trout had been caught at our first camp, enough to supply the table.

Leaving Slough Creek camp, a ride was made up East Fork—Lamar River—a short distance on to a high ridge overlooking East Fork Valley. Here we spent some time looking at and counting elk. From this hill over 3,000 elk were in sight. On our hill, high up above the bands of cows, 53 large bulls were seen, and on the shoulder of the next hill a band of 14 more. These all had horns; they were carrying them unusually late. From this hill we rode down and crossed at the Cedar Ford, then along the wagon road. From the road great bands of elk were seen, other than those we had seen from the hill. Birds and small things were noticed, but made no notes as to kinds or number. It's such an old story with us here that I only call people's attention to them when I know they care to see them.

We reached our camp near Tower Falls early. The camp was close to the edge of the cañon, and it was the most interesting camp we had. Soon after reaching camp a band of mountain sheep were shown to us; the sheep had been there all winter, in sight and sound of the road camp, where a crew of men have been blasting rock and working all winter. The evening of the next day the sheep gave an exhibition of rock climbing. That startled and excited the whole party, and concluded by going to the bottom of the cañon to the river to drink. They did such incredible stunts that I cautioned Mr. Burroughs not to tell of it in the East if he cared for his reputation for veracity. Several photographs were taken of them, but I think the distance was too great for them to be of value for publication. The walls of the cañon are very steep, in many places perpendicular; yet these sheep would run around perfectly at home.

Several hours had been spent on a fishing trip, and enough fish were taken to supply the party. The President did not go with us, but took a trip alone and afoot; he went across the river and to the other side of the cañon from our camp to where he got within a few feet of the band of sheep. Other bands of sheep were seen, besides mule deer and elk.

The next day we rode into Fort Yellowstone, stopping at Uncle John Yancey's long enough for the President and all hands to say "Howdy!" to Mr. Yancey. The fort was reached in time for luncheon. Mr. Burroughs making part of the trip in a surrey—the twenty-five mile ride at a trot being a little too hard on him.

Next day a party consisting of the President, Mr. Burroughs, Major John Pitcher and Mr. Childs, of the Transportation Company, started out for a Geyserland trip. This trip was made with teams, and has been told of often in the papers. On the President's return a day was taken for rest and seeing the sights around the Springs, receiving calls from the people on the Formation. Mr. Burroughs, who had not seen the antelope as yet, took a ride up on to McMinn's Bench, where he saw all the antelope he wanted to, besides riding within a few yards of a large band of mountain sheep and seeing a lot of elk. Mule deer were very plenty, so many that no attempt was made to count them. They were all along the trail and road. Mr. Burroughs made a trip over the Formation looking at the birds and small animals. Later we hope to hear from him about them.

On Friday arrangements were made for the President to lay the corner stone of the arch for the Park gate. A troop of cavalry went down to Gardiner an hour ahead of the President, to where there were at least 2,500 people waiting. At 4 P. M. the President and Major Pitcher, with no escort except two orderlies, rode down to Gardiner across country. The President wanted to put in every moment of his vacation sightseeing, and on this, his last ride for the trip, saw elk, deer and antelope. He mentioned the antelope when he reached the stand and was particular to thank the people of Gardiner, Cinnabar and those living along the line of the Yellowstone Park for the assistance they had given Major Pitcher in the protection of the game; and as a testimony to it he mentioned the fact of the tameness of the game he had seen.

There has been completed a wire fence—not barbed—that runs from the mouth of Gardiner River, in front of the town of Gardiner, over the hills to the west for several miles. This is expected to be strong and high enough to protect the ranches from the elk, and to keep the domestic stock out of the Park, so that during the coming winter deer and antelope can be fed hay, even in part of the town of Gardiner, as they were fed last winter in front of the post. Gates in the fence at two places, will protect the hay from loose stock and at the same time admit all teams to the roads. Another winter will see much more game in sight of the town of Gardiner. It will be a common thing to see antelope, deer, elk and sheep from the streets of the town, as it has been for years.

E. HOFER.

A Pleasing Picture.

RIVERSIDE FARM, Byron, Ill., Decoration Day.—*Editor Forest and Stream:* In the "Signs and Seasons" of John Burroughs the keenly beautiful essay, "A Sharp Lookout," closes with this paragraph:

"Man can have but one interest in nature, namely, to see himself reflected or interpreted there, and we quickly neglect both poet and philosopher who fail to satisfy, in some measure, this feeling."

The photograph (see FOREST AND STREAM for May 16) of John Burroughs in the National Park, standing on the boulder bed of a mountain lake, a string of trout in his hand, himself lost to all save the glories of that immediate part of creation which surrounds and enthralls him, and of which both trout and man are such a pleasing part, the while he is being furtively eyed by E. Hofer in the background, a philosopher of the Daniel Boone type, as he casts his fly (in truth it might be bait), is a perfect example of the proposition laid down.

How that picture thrilled the hearts of mountain-loving people the wide world over. To see so much pleasure given to one who for more than the third of a century has contributed so steadily and with such prodigality to the pleasures of his fellow men, the writer takes to be the greatest of all pleasure. DR. A. J. WOODCOCK.

Natural History.

The Rooster's Crow.

Editor Forest and Stream:

I perceive in a late issue that your contributor Hermit is in receipt of a number of things in the way of comments upon his observations concerning the intelligence of wild things. I assume that he is the same Hermit who several years ago inspired me with energy to gather some wild bees from the forest tree. As you know, I got the bees—but if this Hermit is the same, he that told how nice and easy it is to gather honey and bees, I am very courteously pleased that it now seems possible that his gleanings of natural history are not absolutely infallible. I have thought at times, heretofore, that he omitted some things in his screed about bees, and I am now almost assured that the time I had with the bee-tree was not altogether of my own arrangement.

I have lived adjacent to intelligent wild things and to natural doings in the woods and mountains for a goodly number of years, and in this combat of naturalists of various degree I wish to remark that with a few facts to rely upon many of them contribute too much conjecture, and this they do without sufficient deference to general intelligence.

The subject is too ponderous to be settled by any individual. Most naturalists are too ambitious. Ambition may be a splendid thing under careful control, and it may cause wisdom to gambol sadly. A man is fairly wise with a modest fund of accurate information. If he thinks he knows everything about anything, he is really incompetent to deal with that thing. Wisdom seems progressive, not absolute.

But I desire merely to drive a few tacks into Hermit. He says in his version "Does the rooster teach its young to crow? Certainly it does. I am surprised that Mr. Burroughs should express a doubt upon the subject."

Now, know all men by these presents that I, Ransacker, of the Mountains of Shasta, State of California, did during the past year come into possession of one hen, a female fowl, and the aforesaid hen had with her four chicks, two days of age. That this hen and her said progeny the chicks were the sole domestic fowls upon my premises for four months. That there were no other fowls nearer than one mile. That four months the chicks grew, and one only thereof proved to be a white rooster: That about the fourth month of his age the said white rooster attempted to and he did crow lustily, very much like many other roosters I have known. Furthermore the rooster still lives and crows as much or more like other roosters than ever. His mother, the hen, doth not crow. She hath not even attempted to crow. If she crew I would know it. If the aforesaid white fowl, known to me to be a rooster, was taught to crow by his father, or other adult relative, Marconi did it.

(Signed) RANSACKER. [SEAL]

SHASTA MOUNTAINS, May.

Editor Forest and Stream:

There has been considerable controversy lately as to whether birds have to be taught to fly or not. My experience is that their instinct teaches them to fly; they need no other teaching, else how is it that if a young half fledged bird is taken and put in a cage to raise it will fly as soon as it is able, and has been given its liberty?

I once raised a robin that way which flew off as soon as it was able to fly. It came back to me, though. Its mother had not taught it to fly, unless she did it through the bars of its cage, and I do not think she did.

At another time I found some boys who had robbed a native sparrow (chippy) of her three young; I got the young ones from them for a cent each, raised them in a cage, and as soon as they were large enough to fly let them go. They seemed to have no trouble in going, and did not come back, either.

All dogs can swim; some seem to be as much at home in the water as they are on land; a young puppy of one of those breeds will swim if thrown into the water when he is only a few weeks old; he does not need to be taught.

I have thrown a spaniel pup which had never before seen water into it just to see if he could swim; if he could not I would not let him drown, of course. He would paddle out, then wait for me to throw him in again. He seemed to like it. CABIA BLANCO.

[So will the human baby swim if put into the water where it has the chance.]

Senses of the Antelope.

Editor Forest and Stream:

The proposition that prong-horned antelopes depend more upon the eye than upon nose or ear to detect danger is quite as new to me as it is to yourself.

Indeed, I should express an exactly opposite opinion. I suspect that a wrong inference has been drawn from the conspicuons and even laborious use which the antelope does make of its eyes. But it has always been my belief that he does so because his sight is so far from keen that a careful examination is needed before that particular sense conveys a definite confirmation of the warning first gained through other sources. Hence the so-called "curiosity" of the species. I do not profess any exact information as to the quality of their hearing, for the other protective senses, be they what they may, usually put the animal on guard long before the ear could come into use.

As two cases on the affirmative side for smell, I cite these: Long ago, when antelope were more plentiful and less wary than now, I, being down in an arroyo on soft earth where I made no sound that could have been heard twenty feet off, and whose banks were everywhere much above my head, was discovered by a band of antelope at least eight hundred yards away and directly down wind; a careful study of the situation afterward being enough to entirely eliminate the possibility of either sight or hearing being involved.

Again, in October, 1895, with three mounted men and five pack animals behind me, I rode up the trail from the ford across the Yellowstone near the mouth of Blacktail Creek, to strike the road from Uncle John Yancey's—peace to his ashes!—to the Mammoth Hot Springs, and up on the open rolling country we rode on to two buck and three doe antelope, within thirty yards before they found us out. A strong wind was blowing right in our faces, which of necessity would carry both scent and sound away from them and leave them largely dependent upon their eyes. It is true that these antelope were in the Park and had some idea of safety, but even in that secure haven give the nose a chance and a pack outfit will not ride within short pistol range of the prong-horn before discovery. ARTHUR ERWIN BROWN.

ZOOLOGICAL GARDENS, Philadelphia, June 4.

ELIZABETHPORT, New Jersey, June 6.—*Editor Forest and Stream:* In your issue of June 6 Mr. Emerson Carney calls for instances which have come under the observation of your readers respecting the antelope's scent. In 1877, in Kansas, my father built his house just south of a ridge, which people told us afterward was a favorite runway for antelope, and, indeed, we saw many of them on the ridge the next year, although we killed none, as there was no rifle on the place, and I never could get near enough with a shotgun.

In the summer of 1879 we had three cows at pasture, which were picketed on ropes about 250 yards south and in plain sight of the house. These cows were brought in each night, stabled, and milked and put out on the grass in the morning. One afternoon I stood in front of the house door looking southward, and saw a bunch of six antelope coming from the southeast. They seemed to have no fear of anything, stopped to graze at times, and steadily coming nearer. They finally approached within less than 50 yards of one of the cows, and one of the antelope came closer and closer until it actually appeared to rub noses with the cow, and I have always believed that it did. It then turned and left in the same leisurely way, and the whole bunch departed toward the southwest.

Did the antelope fail to see the house? Was it accustomed to cows and not afraid of the scent? Or was its curiosity stronger than any fear it might have had of man and his dependents? I do not know. BUD.

Adirondack Beaver.

HOLLAND PATENT, June 2.—*Editor Forest and Stream:* Mr. Ira Park, of this place, has just returned out of the woods from the Indian River, which runs two or three miles from Horn Lake and empties into Moose River. He brings with him a handful of chips unmistakably made by beaver.

He was fishing down the river and when casting his line diagonally down stream something white on the shore he was on caught his eye. When his line landed he looked closer and said: "What the deuce! Has somebody been cutting way back in here. Someone must have a camp." He went over to the tree and then saw at once what it was. "Beaver!"

The tree, a poplar about seven inches in diameter, was gnawed on the side toward the water and about two-

thirds around, but not enough to fell the tree. There was a pile of chips at the foot of the tree and they were perfectly fresh. He says they were surely made within twenty-four hours. The tree was cut into about eighteen inches from the ground.

On looking around for more trees thus worked, Mr. Park saw a balsam stump on the other side of the river which leaned toward the water. He was not able to get across, but the stump looked to be "fourteen inches in diameter, if it was an inch." The tree itself was entirely gone. It had been cut on the under side, and when the tree broke it left a long splinter on the upper side of the stump. The weight of the leaning tree had helped considerably in its breaking off.

He picked up a handful of chips from the little heap where he stood and now has them carefully preserved. Some of them are close to three inches long. Most of them are about two inches in length. They are about a quarter of an inch in thickness.

Mr. Park thinks the fact that trees are being cut indicates there must be more than one beaver. He further believes that they have started to build because of the low water, and that they lived in the still water without the need of a dam until the river became so low and the banks so dry.

E. A. SPEARS.

Nebraska in Bird Nest Time.

WYMORE, Nebraska, June 3.—*Editor Forest and Stream:* The robins, and some of the other birds, seem to be nesting late this year. On last Sunday we noticed a robin tugging at some old strings that were hanging to a sweet pea rack, and watching her for a few minutes we discovered that she was building a nest in an elm tree close by. We got some old rope and cut it into pieces seven or eight inches long, and then untwisted or unravelled it, and, adding a few pieces of pink and white wool yarn, distributed it over the limbs of some small walnut trees near by, and then stepped away about twenty feet. The old robin, who had been watching us all the time, made a dart for the walnuts, and at once began carrying the fuzzy strands of rope, and the yarn to her nest.

Up to this time she was the only bird we had noticed, but she had hardly left the tree with her load until a thrush came, then a catbird, then an oriole, and a little wild canary, and each seemed to be striving to see which one would get the most of the rope and yarn, and the supply was soon exhausted.

A. D. MCCANDLESS.

Dovekie in North Carolina.

FOR many years there has stood in the sitting room of the Narrows Island club house in Currituck county, N. C., a specimen of the dovekie, a little auk from the far North, which breeds well within the Arctic circle and in winter is found rarely as far south as New England and New York. This specimen was captured years ago by John Doxey, a local gunner, was seen by an ornithologist and secured for the club.

Up to within a short time it has been the only specimen ever taken in North Carolina, so far as we know. Recently, however, Mr. T. Gilbert Pearson, of Greensboro, N. C., who is the secretary of the Audubon Society of North Carolina, writes us that on the 31st day of December, 1902, he picked up a dovekie on the beach, about twenty-five miles north of Cape Hatteras.

If other specimens of the dovekie are known to have been taken in North Carolina, we should be glad to hear of them.

Several weeks ago Messrs. Henry Gaston and Joe Butler were bobbing on Pine Lake in the Hamburg neighborhood. A small trout of about one pound weight struck the patent bob and carried it away. The fish was seen to rise several times by the gentlemen, and attempted to shake the hook out of its jaw. About a week after this a negro man fishing in the same lake caught a fine blackfish which, when dressed, weighed nine pounds. In the stomach of the blackfish was found a trout and in its jaw was the bob lost by Mr. Gaston. The bob was restored to its owner, and he is now using it to capture more fish. This is a true story.—Madison (Florida) New Enterprise.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Adirondack Ruin.

Editor Forest and Stream:

Under this heading, on June 17, 1899, I wrote for you about the condition of affairs in these woods, dwelling on two things that I heard there: woodsmen were threatening to set fire to the woods because of the preserves from which they were being excluded by men of wealth, and of the "scientific culling" of the forests, which means getting out every last inch of timber that it would be profitable to cut down.

The opoprtunity has come for the woodsmen who have only one way in which to reach the preserve owners, and they are taking advantage of it. For six weeks the region has been almost without rain. The woods are as dry as tinder—a shovelful of the surface soil thrown on a fire flashes like so much powder in its eagerness to burn. And the fires have been started. I was told today of how the fighters on Webb's game preserve at Ne-ha-se-ne wrestled with the flames for days in an effort to save the closest preserve in the Adirondacks. Thousands of acres of land were burned over, and there is every reason to believe that the end in that locality is not yet reached, so far as fires are concerned. The gang was fighting one bad blaze and they had it surrounded. Then the men sat down to rest. After a few minutes they noticed another fire not far away, and when they got to that one, it was seen to be a small one, creeping away from a center; and beyond that a few rods was seen another fire, and so several fires were found recently set along a line. There is no doubt in this whole region that men are seeking revenge for being excluded from the scores of square miles comprising the game preserves of Dr. Webb and others.

It is a most deplorable condition of affairs, and the men who own these preserves are realizing this fact to the extent of many thousands of dollars. I read just the other day that Webb's park keeper thinks $150,000 will scarcely cover the damage to that one preserve alone.

To-day (Thursday) I saw a telegram that had been sent from Big Moose by the fire warden there saying to the chief warden at Albany that the fire was beyond his control at Big Moose, although he had every available man out, and asking for help, for the need was most urgent. At Raquette Lake fires were only got under control just in time to save the town, and a mile from the Fulton Chain railroad station the woods were all ablaze. Northwood is in a dense cloud of smoke, and north of the place thousands of acres have been burned over. I think that more than twenty thousand acres have been burned over within eighteen miles of this place.

Webb's railroad trains are complained against as being one of the reasons why fires are burning along it. There is no sympathy expressed for Webb, who has lost thousands of acres of fine wood land. It was he who took the railroad into the heart of the Adirondack forests. Perhaps he will sue the State for the damage done to his preserves by fire. But the railroad has "paid." If one considers the money it has paid in dividends to the stockholders, it has "paid" them. But what of the people in the State—who pays them? There was no need of taking a railroad into the heart of the wilderness. Saranac Lake could have been reached from some other direction than by way of Big Moose, Beaver River, and the thousand other places which few of the motley summer crowd appreciate because they don't have to work to get to them.

It is said that 1,000,000 acres of land have been burned over in the Adirondacks this year—one-fifth of the woodland area. More than a third of the woods for fifteen miles north and east of Northwood have been burned over. In North Wilmurt some men have been fighting fire for a month.

And all this is due to just two causes throughout the whole mountain country—carelessness and unfair play.

Take the case of Webb's park. Part of it was fenced in. The rest of it was carefully "preserved." No one was allowed to cross the land. Deer multiplied, trout multiplied. The woods and streams teemed with game animals. The woodsmen did not see that the overflow from this park would keep the surrounding region everlastingly stocked with game. The one thing that the woodsman saw and knew was that some men, no better than himself, exercised the right to take him by the collar and march him to a point beyond the borders of the "preserve." It is alleged that the park keepers did just that—took men by the collar and marched them off the land. One case is told of a man who shot a deer on State land which ran on to the preserve and it there fell dead, well within the line. While the hunter was dressing out the animal a game keeper came along and ordered him to leave the preserve, and leave the deer, too. And before the game keeper would leave the hunter alone, a rifle had to be leveled at him. At that the keeper hunted his employer. the employer, with great indignation, got a warrant, and the hunter was arrested, and finally the hunter received common justice. He was justified, in the eyes of the law, in taking his game even by force. There is no doubt among the woodsmen, however, but what the same course would again be pursued by the preserve owners on occasion. It has been the bulldozing tactics which many of the preserve owners have shown toward their neighbors, the woodsmen, that has brought on the condition of affairs in which men will go through the woods, fire in hand, and spread it broadcast where it will do the most damage.

The law does not prevent the game park crowd from trying to keep people off more than their own land. They try to keep them off public highways—though ready enough on occasion to sneak highways across the land of the State, or private property.

Right here at Northwood, W. T. Finch has posted hundreds of acres of wood land and built many dams for fish ponds. A wood alcohol factory which Finch owns is polluting the West Canada Creek at this very moment with the offal from the factory. This man is a member of the Adirondack Sportsmen's League, and it is natural to judge the other members by the specimen before one's eyes, especially as the Adirondack League has Canachagala Lake posted, this lake being a reservoir used to feed the Black River Canal.

A brook at this place which was stocked with trout from the Fulton Chain hatchery three years ago has been dammed, and the public warned against trespassing, and another dam is to be built on it, one of the papers says.

But one lesson which the fires have given to this region is a most hard one. The lumber jobbers and pulp "cullers" have sworn for years that there was no way of getting rid of the tops of the trees which they cut down. These tops are nowadays spruce and hemlock, spruce predominating. Much of the fire has been in the choppings, and here the fires have been simply invincible. It was useless, even dangerous, to fight them there, for the dry, gummy spruce made a blaze that leaped a hundred feet in the air, and none could approach the heaps within rods. Here in these choppings everything has been killed. The bark of beech, birch and maple trees has been burned off and the forest totally killed. In the virgin timber only the smaller trees have been destroyed completely, but of course no trees can escape completely where the very loam itself has burned away. The stay of the pulp and saw mill people—the wholesale ones—has been shortened in these forests by the fires by long years. In their "scientific culling" business they made no account of the dry tops. Perhaps now they will burn them on purpose at seasons when it can be done in safety.

There are a good many lessons in recent Adirondack events which will not be totally lost. The sight of deer and other wild game leaping through holes in the fences of preserves from which it was possible to exclude men, may teach the owners of these preserves something. Wires and insolent game keepers were not enough to keep fire from trespassing in the forests. It was a sight, the fire fighters say, to see the snakes, in myriads, crawling along the ground, and deer, squirrels, bears, foxes, what not, running and the birds flying among the trees, with the fire coursing along after them. When the fire had gone by fawns and other creatures were found dead. One buck was found in Webb's park with its hoofs burned off and legs worn, showing how long and frantically the bewildered creature had tried to run away from the fires around its feet. Perhaps this feature of the Adirondack fires is the worst of all.

Of course, my personal feelings in this matter are very strong, as are the feelings of all the other backwoodsmen, in fact. And I don't want anyone to think that I mean by "woodsmen" the guides and game keepers. They are just guides and just game keepers who regard the woods as so much cash a year. By woodsmen I mean the farmers and other dwellers around the borders of the woods who think of the woods as a place in which to play in the fall when the crops have been gathered. It was for these people and the appreciative "summer people" that these mountain forests were grown, and it is to their loss that the woods are now at this moment being destroyed by fire. But I guess that several people have learned another wrinkle in the universal law of compensation.

Doubtless Charles Day will come forth to say that complaints against the preserve-makers are the vaporings of men who are actuated by the feelings of swine—who want something for nothing—as he did some time ago. But Mr. Day has not seen the best spawning bed of his favorite trout stream "preserved" in such a manner as to permit all the big trout to go into the little lake and keep them there, as I have in the case of the West Canada. Nor has he, in common with his neighbors, been subject to the studied insolence of game preservers and their hirelings, not only so far as the lawful preserves are concerned, but beyond that into the unlawful depriving people of their rights. But some few equally lawless characters have taken the matter in their own hands, and in some measure the great pall of smoke hanging over the Adirondacks at the present time is due to these lawless men.

RAYMOND S. SPEARS.

NORTHWOOD, N. Y., June 5.

CHICAGO AND THE WEST.

Mr. Egan's Body Discovered.

CHICAGO, June 5.—A dispatch from Bolton, Montana, dated June 1, states that on that day the remains of Superintendent B. F. Egan, of the Great Northern Railroad, were discovered near Lake Five, a short distance from the point where Mr. Egan was last seen alive on his hunt, November 4 of last year. It will be remembered that diligent hunt was made for Mr. Egan at the time of his disapeparance, a special train leaving Kalispell on November 6, with a large party of men, who searched the shores of the lake near which Mr. Egan and his friend, Dr. Houston, separated. A great snow storm came on at that time, obliterating all trails, so that finally, with the greatest reluctance, all search had to be abandoned. At the first time possible this spring the hunt was resumed with the result mentioned. It is thought that had the search party started from Kalispell on the day following Mr. Egan's disappearance, instead of two day's therafter, they would have gotten in ahead of the big storm and hence have been able to find the missing man. It is not known what caused the wanderer's death, but the chances are that he simply died of exposure and cold, combined with starvation. It seems almost incredible that a man could really be lost in any part of the Rocky Mountains to-day, and I own I could not believe that such was the case for Mr. Egan. The sad sequel, however, shows that the wilderness in winter can, on occasion, prove dangerous. The locality in which Mr. Egan was lost is said to be a very wild one, covered with heavy timber and very much broken up by precipitous mountains. The dispatch in question states vaguely that many other hunters and prospectors have been lost there, no trace of them ever having been discovered. Had Mr. Egan stopped and built a fire he would probably have been rescued on the second day. Had he gone to a willow patch and built himself a pair of snowshoes he could perhaps have traveled much more easily, had he felt it necessary to do so. Or had he taken his ax and gone to a pine tree and made himself some sort of a pair of skis, he could in this way have gotten along over the deep soft snow, which sometimes comes so rapidly in these mountain storms. Of these alternatives the best one for him would probably have been to stay still and keep up a signal smoke, taking only exercise enough to keep himself alive.

Protective Work in Michigan.

Mr. Charles H. Chatman, State Game and Fish Warden for Michigan, is good enough to hand in the following statement showing the number of arrests, convictions, etc., which would certainly seem to prove that the hand of the new warden is not weary in well doing. There were 197 complaints investigated; 139 arrests, 121 convictions, one acquittal, and six cases dismissed. Fines and costs amounted to $1,933, and $294.47 was turned into the treasury. There were 22 seizures; eleven cases are pending.

The total amount of fines and costs collected for the month is nearly twice greater than the amount of fines and costs collected for any other month in the history of the game and fish warden department. The number of seizures was not great. The wild ducks seized and confiscated were sent to the Little Sisters of the Poor in Detroit. The fish seized and confiscated were sent to the Traverse City Asylum for the Insane.

All of the fines and costs imposed for the month have been paid, except in one instance, and in this case the violator, who is the owner of considerable real estate, and who also owns a trading schooner on the Great Lakes, was fined $21.90, or thirty days in jail, and the defendant is now serving his jail sentence.

The following amounts have been turned into the State Treasury by this department for the month: May 9, pro-

ceeds of sale 650 pounds confiscated fish, $6.50; May 25, proceeds of sale 14 confiscated beaver skins, $112; May 30, proceeds of sale 140 confiscated deer hides, $175.97; total, $294.47. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Game Notes on Varietal Species.

PLAINFIELD, Mass., June 1.—The increase of game in this northwestern section of Massachusetts is notable from year to year. The center of the accretion seems to be in Worthington township, fifteen miles away, where two deer, a bear, a black fox, and a cross fox are reported as having been seen last week. Woodchucks are numerous. One dog in Plainfield has an annual score of 25 or more to his credit. Red foxes are common in this township, with now and then a 'coon. Trout of larger size than usual have been caught this spring, and more of them. The deer law is perplexing. Last summer and fall a deer ran with the cattle of one of our farmers located between here and Hawley until cold weather came. Then the winds blew and the snow flew and the kind-hearted farmer would fain have taken the poor creature in out of the cold and given him shelter with its bovine associates. But the law forbade the having of deer in possession, and no motives of humanity could condone such offense; so the barn door was shut! But care was taken to leave the door of a shed open, and in that the forlorn animal took refuge on occasion. Had that door blown shut by any chance and the deer been found within, a fine of $25 would have been impending. As we can neither protect nor kill our deer, nor have them in possession, nor ward off their ravages when they become too numerous, we are in a dilemma. and begin to wonder what game laws are really for. In many of our States they are principally used by protectors, wardens, and informers to levy blackmail and exploit their vigilance, especially in respect to strangers and sportsmen of means who trespass unadvisedly. In Plainfield we have no known spies or sneaks, officials or volunteers; but there may be such in perdu. Our townsmen are too busy to do much fishing, though they show up to advantage in the shooting season.

But we have queer animals which are not wild. This town has been a nursery for Manx and Angora cats for seventy years past, and the crosses which have resulted astonish the naturalists. For example, we have Maltese brown, mottled, striped and dark colored cats with long hair on body and tail, but seldom a pure white one. There are smooth coated cats with broad shaggy tails, and rough coated cats with no tails at all. The latest freak is a Maltese no-tail mongrel which comes from a shaggy "tiger cat" mother; four crosses in one, each distinctly thrown out by heredity. It would be interesting to know how far back its Manx progenitor lived.

By the way, on page 103 of Paul du Challu's "Land of the Long Night," he mentions a strain of tailless dogs which are used for draft purposes by the nomadic Lapps, who herd reindeer. They have the color of a brown bear. Perhaps a mixture of dog, bear and hyena. *Qui sait?*

An animal has been seen in a clover field here which looks like a woodchuck with the bushy tail of a fox! When surprised at its feeding place it makes for a scrubby knoll where there are several woodchuck burrows. The boys are planning to trap it, but the farmer's wife fears it may prove to be one of her stray bushy-tailed long-haired cats. These varietal freaks offer a fine field for those who have wrought themselves into a fever over the sea trout problem! Let's change the subject.

C. H.

The Strong Arm of the Law.

FROM Newburgh, N. Y., come these records of recent game law cases brought by Protector Kidd: Geo. Lounsberry, of Newburgh, pleaded guilty before Justice Fowler to the charge of having quail during the close season. He paid a fine of $10.

The case of the People vs. Richard Franks, of Tuxedo Park, was to have been tried in the Supreme Court. The defendant was charged with killing deer during the close season. Before it came to trial, Mr. Franks settled by paying to the Game Commission $143.50.

O. S. Faulkner, of New Kingston, Delaware county, paid a fine of $50 for having trout in his possession during the close season. There are others implicated in this case, and they will be prosecuted later. Taking game out of season is becoming a pretty expensive pastime in this vicinity.

Modern Rifle Shooting.

"MODERN Rifle Shooting from the American Standpoint," by W. G. Hudson, M.D., is the latest and soundest contribution to the literature of the rifle, both concerning its theory and practice, which has appeared in many months.

Considering that Dr. Hudson has been a successful investigator on original lines both scientific and empirical; that his researches have produced many valuable results; and that he is in the front rank of practical riflemen, as is in conspicuous evidence in the records, his introductory paragraph in the preface is too modest, when he writes as follows: "It is not without some misgiving that I venture on this, my first attempt to write a book on rifle shooting." That is the modesty of true genius.

The title does not contain the true idea. Instead of "from the American standpoint," it should have been from the universal standpoint, because its theory is from universal natural laws.

The work in question contains 154 pages, divided into thirteen chapters and an appendix, which treats of rifles, bullets, selecting a rifle, equipment of a rifleman, sights, sighting and aiming, adjusting sights, aiming, helps to good aiming, positions, targets, ammunition, personal as to the rifleman himself, National Rifle Association, and an appendix which gives a comprehensive lot of information on incidental practical accessories to shooting, such as cleaning shells, lubricants, anti-rust grease, nitro cleaner, measures, appliances, tools, ranges, etc. The work is copyrighted by Laflin & Rand Powder Co., New York, and in it is contained more accurate knowledge than the unassisted rifleman could acquire in a lifetime.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Canoe and Camp Life Along the Delaware River.

XI.—Stalking Whippoorwills, Algae, Mosses, Ferns and Lichens at Delaware Water Gap.

"The air o' the woods tastes good tu me, fer 't hain't been breathed by nothin' but wild creeturs. The smell o' the woods smells good tu me, dead leaves 'n' spruce boughs, 'n' rotten wood, 'n' it don't hurt none if it 's spiced up a leetle bit with skunk an' mink, an' weasel an' fox p'fum'ry. An' I luffter see trees 'at's older'n any men, an' graound 't wa'n't never ploawed er hoed, a-growin' nat'ral crops. 'N' I luffter hear the stillness of the woods, fer 't is still there. Wind a-sythin', leaves a-rustlin', brooks a-runnin', birds a-singin', even a bluejay a-squallin', hain't noises."—Sam Lovel in Rowland E. Robinson's "Uncle Lisha's Shop."

Water algæ, moss and fern,
Greet us now at every turn,
And rocks whose faces gray and hoary,
Guard the secrets of their story;
While o'er them tiny lichens strew
Tenderest thoughts of shape and hue!

"THE finest bass yet!" cries my chum, as he helps an urchin pull in a fish that "tips the scale" at nearly four pounds. He was taken in the deep water by the rocks, crowned with woods, above the Susquehanna bridge on the Jersey side at the Water Gap.

We are using a new boat, just a dory; for the canoe and tent are stored on the upper river; and we are at the Glenwood House at the Gap—temporary quarters, chosen because our families will not tent with us (more's the pity), and because the unmolested squirrels, robins, chipmunks and blackbirds live in and around the trees that hide the hotel, giving remarkable chances for observing wild life from its porches. I have heard a guest imitate the call of the female quail, and seen three of the birds flying into the trees, as they answered with their "up all night!" not a hundred feet away from the house.

It is remarkable how wild life fringes even the busiest centers of civilization. I have stood on the Battery wall at the lower end of Manhattan Island, one of over

JUST TO MAKE AN ISLAND.

a thousand interested watchers of two boats fastened with ropes to rings in the wall, and not forty feet away, while four anglers in them landed large flounders —thirty-seven for the four rods in the twenty minutes that I counted and timed them. There are two sea gulls among the hundreds that love and haunt the East River many months of the year, with whom a certain Brooklyn man has a personal acquaintance. He calls them "Blue Mary" and "White Jim;" they know on what ferry boat he will leave the Brooklyn side, and will follow the boat even into the New York slip, until he throws them the two biscuits taken for them from his breakfast table.

Kindness, long and patiently offered, will win enough confidence of even a partridge, to reap the rich reward of seeing him perch himself on a log, and drum his love-call of the spring. Buckwheat kernels spread for him there during two winters, and crumbs and popcorn kernels during the summer, will result in his permission that you lie behind some log a hundred feet distant, peer over it at this wild elf of the wilderness and his mate; and hear their love-notes, "k-e-e-t! k-w-e-e-t! If you persist in this kindness, and place food near the discovered nest, the couple will even linger around its site after their brood is hatched, and will visit you as you walk along fence or hedgerow, just to see what you are about, the fledglings following them, half-grown. Before me is a photograph of about a hundred feet of the White Horse trail in Alaska, showing a grouse, which had become almost the friend of the angler who lingered long beside that nameless trout-brook, which crossed the road where so much of hope, ambition, tragedy and wealth had passed, before the railroad was constructed.

This is digression; yet it leads to the incident of the whippoorwills at the Gap. One of the birds had been singing in the woods along the rocks below which the bass was secured. A quiet watch for her just before sunset, located one of her nightly perches—an upturned tree root beside a thicket. The next evening I hid in that clump of brush. Just after sundown came the low swish of her almost silent wings, right beside me. There was Mrs. Whippoorwill, not six feet distant—a gray, ghostly, somber bird!

She spread her feet far apart, and began to rock her body sidewise, this motion increasing as her head was tilted far back; and then came the familiar cry!

I say familiar. But it sounded far different when I could almost extend my hand and secure the bird. We hear the call of the whippoorwill, perhaps two miles distant, and when we are on porches, riding along country roads, or from boats that we ply on lakes or rivers. Then the sound seems plaintive to many listeners—passionate, melancholy. The song has been called the Miserere Hymn of the Night, expressing grief, longing, heart-broken weariness. To nearly all, this song is sad. But to me the cry of this bird has always seemed assertive, strident, brave, and as full of life and health as the crow of a rooster.

And the cry was deafening as I heard it scarcely an arm's length distant. It was continued about ten minutes, when the bird flew way, and I heard its call from some dark perch in the woods on the island a mile above. Presently the song ceased, and was renewed still farther away. In about thirty minutes came the swish and moonlight shadow, and right beside me was the bird again, renewing that love-call—the note cast out into the night for the male bird! Having confirmed this by observations elsewhere, I state that a female whippoorwill has three calling perches, on each of which she sings about fifteen minutes, and then renews the perch cycle, singing until weary, or until the male bird comes.

There, again, I saw their meeting—the two birds side by side, after a chase and coquettish exchange of the indescribably soft, low and quick love-notes.

Their "nest" is sure to be hidden away in some thicket or tuft of grass on a hillside, not far distant from one of these perches; and nothing could be more ghostly and weird than the female bird, clad seemingly in sackcloth and ashes. If she is scared off her "nest," she tumbles and glides slowly along and among the plants and grass, leading you away.

There is an all but universal conviction that the sound of the whippoorwill's song is mournful—sad. This belief is due to the fact that the song is so often heard far away, and during the sentimental hours of morning or evening twilight, or at night. Besides, the self-deception is facilitated by the fancied words in the bird's cry of "poor Will," who must be "whipped." Yet the marvelous looker and listener, Audubon, writes of his memories of the song as he lay in his sleeping-blanket in the woods, alone:

"Only think, kind reader, how grateful to me must have been the *cheering* voice of this, my only companion."

It is another almost universal belief that only the male bird sings the "whippoorwill!" The main object of this special article is to confirm, or help to dissipate, this belief. Its statements that only the female so sings will probably be challenged; and to assist those who may contradict, the following facts in support of this contention are given now. There will be no further discussion by me.

Only two ornithologists should be allowed to speak with authority here. Audubon dodges the matter, only referring to "its" song and "their" song. See American Birds, Vol. I., p. 155, *et seq.* So do the encyclopedias.

Wilson (American Ornithology, Vol. II., p. 176), shows how the naturalists themselves confounded the whippoorwill with the chuck-will's widow, night hawk, and goatsucker. In attempting to settle those differences of opinion, and errors in the pictured birds, he cites a magazine, the "Portfolio," wherein it is alleged that the author of "American Ornithology" stated that a male whippoorwill was shot (note that such author does not say *he* shot the bird; and it was probably by an attendant who killed the wrong mate of a pair of birds that were together) while in actual song, and that the shot bird was found to be a male. This is the real and totally insufficient source of the statements by subsequent writers that the singer is the male.

Many of the books about birds in the Astor Library have been consulted in this connection. I do not find in them any positive assertion of personal knowledge that the male bird sings. Indeed, the "question" is of little practical moment. But it is singular that so general a belief rests on such slender actual observation. The New York Museum of Natural History did not express an opinion, but referred me to the well-known nature-student, Mr. Ernest Ingersoll, who states that his studies of the song have been mainly by ear in the woods of Ulster county, New York, where he could *see* (the italics are his) very little, owing to the dense forest and shadows. Of course FOREST AND STREAM will invite and welcome communications from those who have *actually seen* a singing *male* whippoorwill, or better still, who have shot and can produce a male observed to be singing when killed. It should be remembered that the sex of the bird is easily told by the markings of plumage across the throat, which are a white semi-circle on the male, and smaller and of a cream or buff color on the female, whose general size is also slightly smaller. The female is lighter on the upper parts, and her three lateral tail feathers are tipped for about three-fourths of an inch with cream color. Both birds have a comb on the central, longest claw of one foot to assist in ridding the plumage of vermin.

Here is my own experience:

Location, just after sunset, of one of the three perches of song. Concealment the next and following nights, sometimes within six feet, and the birds seen so plainly that the hairs around their bills could be noted in detail. Notation of the buff markings across the throat of twelve different *female* birds while actually singing. These stalkings were at intervals during thirty years, and in five States.

In addition, three females were shot (they are excellent eating) while actually singing, and their sex verified by the most careful demonstration. The first bird was shot on the Slagle trout stream in Michigan; another in Butler, Branch county, Michigan, and a third on Saw Creek, in Pennsylvania. In 1870 a female was watched as she nested in an unused shanty of a sugar-bush, right on the leaves of its floor, where they had been blown the previous autumn. Four persons saw and heard her sing while beside the nest. Finally, on Saw Creek, in May, 1900, a *pair* of the birds flew right across the porch of the Decker cottage, the male pursuing and uttering his low love-notes very rapidly. These birds perched right on

the fence and were not thirty feet away, and distinctly seen in the afterglow of sunset by three persons, trout fishermen, whose special attention was called to the fact that the *female* was calling, and that the *male* did *not* call. No male bird, while actually seen by me, has sung the "whippoorwill."

Yet nearly all the poets attribute the song to the male bird. Thus, Bliss Carman:

"And the lone wood-bird, hark!
The whippoorwill, night long,
Threshing the sylvan dark
With his dim flail of song."

He mistakes the songster's sex, but avoids the error that the song is sad. And here is a double error in two consecutive words of a couplet by T. B. Read:

"And there the whippoorwill recites
The ballad of his grief."

* * * * * * *

In the forest high up on Mount Minsi, four boys from the Glenwood House spend their mornings, looking! In the afternoons they read to each other what they have placed in their note-books, and exhibit their gathered specimens of mosses, ferns and lichens. This is good cultivation of sight. I was directed by them to one spot in that wood during the spring, before the present trip. Readers are warned that I shall attempt to describe it, and can skip the next paragraphs if desired. But I ask the earnest readers to go in there alone.

You will see the brilliant May sunshine flooding the open spaces, the gray haze and tangle of wildwood, and the leaf-shadows dancing over the profusion of mosses, ferns and flowers.

Seat yourself on this knoll that is matted over with red and brown moss, and sandaled with the fast-fading flowers of the adder-tongue. You are with perennial nature, among the mottled patches of shadow and sunlight, under the great trees where, last night, the whippoorwills sang their "amorous descant." Distant drumming of a partridge, scolding disapproval of squirrels, chirp of the curious chickadees, call of robins and bluebirds! Below you, not a hundred feet away, is the river whose voice comes to you, while its unseen presence is hinted at by the dancing reflections in a dozen places, of the light from its waters on the beech leafage.

And now, look more closely. It is a veritable floral paradise, loveliest realism, something to be rapturously studied and earnestly loved!

The base of this knoll is wreathed by a dark green cushion of wild strawberry leaves, thickly starred with their own white blossoms. Joined to them is the brown, far-spreading carpet of fallen autumn leaves that are a bed for the uprearing blossoms. A few of the pale-blue flowers of the forget-me-not, emblem of fidelity! To the right, becoming lost in the mystery of shadows and green confusion, are thousands of wild violets, their blue and yellow flowrets full of intense color and life. That little ridge to the left is matted with wintergreens, their scarlet berries peeping out from the emerald leaves. In front, wild lilies lift their flowered heads. The hill above you is white and pink with laurel blooms, and the great flowers of the rhododendron.

"Their sides embroidered boast the rich array
Of flowering shrubs in all the pride of May."

And yonder are two slopes exquisite with fragrant blossoms of wild honeysuckle and trailing arbutus. Beautiful? The separate parts of this little landscape are delightful; the whole is entrancing! The perfumes, colors and sounds are indescribably joyous and grateful to one who sees and lovingly appreciates them in their own spring home; and to the worn worker from the city, they are ineffable in the beneficence of their delights and memories. You will actually find all these beauties there; but remember, they must be sought and admired in May. Other beauties demand our attention when summer broods over the Delaware at the Gap.

He who in humble sincerity attempts to tell of such scenes, is no longer styled a rhapsodist; and one who "sloshes 'round i' the woods" is not presumably a "no 'caount chap." Our publishers and librarians say that the demand for nature books is multiplying, and now stands next to that for fiction.

It is a temptation, as I look at mounted specimens of mosses, ferns and lichens, to furnish pictures here of some of them, with extended mention in the text. But these beautiful nature-forms belong far more to the domain of the naturalist than of the sportsman. Besides, real opportunity to study them has been well-nigh drowned in an ocean of almost meaningless Latin terminology—the "scientific" dead-language nomenclature of the dry-rot specialists. Almost all the books about ferns, lichens and mosses, are little more than lists and plates, works by mere cataloguers, and not by the real lover of nature. This is also largely true of the books about butterflies and bugs.

There is a low reach of gravelly stones and marine plants just where the Analomink stream flows into the Delaware, about a mile above the Gap. There the angler searches for helgramites for bait. There, and especially in the sideflow of a portion of the river to form the island above, are very numerous examples of marine vegetation and water algæ. Here is a picture of one I took from that stretch of water along the island where shoals swarm with these plants. It is just natural size, photographed from the mounted specimen. Observe its exquisite fineness and minute ramification, and remember that this is only one of a thousand well-known marine growths along the Delaware. Waving plumes, trailing locks of green from submerged log and brown rock! Leaves happy below the surface of the water! Spires of green, pink, yellow and golden red, gleaming and oscillating in the water-breeze, just as their air-cousins flutter and oscillate in the air-breeze. Forms like jeweled necklaces, sunbursts and butterflies spring into being under the microscope. We become so interested that we obtain and search the books, notably Wolle's "Fresh-Water Algæ," and we find and recognize the growth shown in the picture herewith (Plate 66, figs. 1 and 2), and learn that this lovely and almost unknown and wild growth is called *Tuomeya fluviatilis*. Horrors!

Not content with merely building these Latin fences around our innocent water-growths, the "writers" about them proceed to discourage the student with intensely technical descriptions. For example, we find, by use of the water-net and microscope, that a certain lovely specimen of the water-algæ, starred with exquisite colors and topaz-like ellipses, is called the *Oedogonium hystix*. (See the 2,300 colored pictures of American Fresh-Water Algæ, as given by Wolle, and the picture of this one, plates, Vol. 2, page 84, fig. 8.)

Now, observe how this poor little thing has been abused and crucified in its description:

"Gynandrosporous, or idio-androsporous; Oogonia-single, ellipsed to globous ellipsoid, opening by a pore in the middle; Oospore, same form as oogonium, nearly filling it, coated with sublulated spines; androsporangia, 2-3 celled; terminal cell obtuse, dwarf male stipe, 2-celled, moderately curved, seated on the supporting cell, spermogomum, 1-celled."

This seems to be the result of following the pedantry of the Russian and German writers on the subject. Wolle cites over two hundred authors. It is pitiful that this most interesting nature-world has been shut away from popular interest and study by writers incapable of doing more than making examination of the specimens, microscopic and otherwise. Their names for these children of the fresh water are hideous. Here are two more:

Chroococcaceæ.
Chlorophyllophyceæ.

Meaningless, except to the "expert," jumbles of orthography, a lock and bar to the student who cannot

DELAWARE RIVER ALGÆ.

spend years in mastering the outlandish technical terms, and learning the by-ways of their labyrinths!

When I come to write, in this series, of the Indian history and legend of the Delaware, I shall give some of the words of the Lenape language, and among them their word for marriage, viz:

"Witachpungkewiwuladtpoagan."

Marriage was, of course, of tremendous import to them; and they can hardly be laughed at for using a long word for it. But suppose they had, instead, seen fit to name marriage with a word four times longer yet, and in a language known to them as "dead." Would we not have smiled at their terms still more? Yet we find in a glass of Delaware River water, as we hold it up in the sunlight for observation, some organism so minute as to be practically invisible until we put it under the microscope; and instead of naming it in our good English, and describing it in terms to be understood by the masses, we choose to label it with a name in a dead language, and two thousand times longer than the atom it is supposed to describe.

L. F. BROWN.

Trout in Forest Fires.

ELIZABETHTOWN, N. Y., June 6.—*Editor Forest and Stream:* Wednesday afternoon, June 3, forest fire swept over the Euba Mills or southern section of this town with the besom of destruction, destroying the old saw mill, the mill house and J. F. Burres' farm-house and contents. Henry Proctor and family lived in the old mill house, and lost practically all their belongings. John B. Burnham, a well-known FOREST AND STREAM contributor, had some hunting utensils stored at Mr. Proctor's that were destroyed. The fire raged so fiercely that it burned the heavy timbers in the mill dam and drained the water out of the mill pond.

Friday after the fire hundreds of brown trout were found dead along the Boquet River between the site of the mill dam and Hunter's Home, a distance of two miles. These trout would weigh from 2 ounces up to 2 pounds apiece; 95 dead trout were brought to this village and weighed, tipping the scales at 40 pounds. Curiously enough, only four speckled trout were found dead, while hundreds of the brown ones were easily located and picked up. A 2-pound brown trout was brought to this village. Another 2-pound trout, not quite dead when picked up, was put into a spring at Hunter's Home and revived. Query: What killed the trout—extreme heat, lye, oil, lime or fright?

THE new Florida Fish Commission consists of John Y. Detwiler, John G. Ruge and C. R. Walker.

Fishing Memories.

"I jes set here a-dreamin'—
A-dreamin' every day—
Of the sunshine that's a-gleamin'
On the rivers far away.

"An' I kinder fall to wishin'
I was where the waters swish,
Fer if the Lord made fishin',
Why, a feller orter fish."

HUMMING the last stanza, the afternoon of the 14th of May, found me alone, taking a hot dusty ride of twelve miles for Marshall, where I took the train for Riverton.

The open season in the Shenandoah is the 15th of May, and I have made it a rule for years past to break the business chain for a day or two, at least, and be there on the evening of the 14th for a try at the fighters (and the bass in that stream deserve the name) on the 15th. My engagements were made or broken, accordingly, and my experience is that for a busy man who especially wants to go fishing or hunting, one always has to break more engagements than he can make. I had the promise of a fishing companion—but then John Keith could not get a diploma for always keeping an engagement—so on the day I was to start he disappointed me. Well, in this case there may have been a valid excuse, for it is said that before the month is out he proposes to consummate an "engagement" far more important than going a-fishing—and but few things can be more important to a true fisherman. My first impulse was to "rule" him and follow this with an "attachment," calling for the production of his body, but rumor has it that one of Warrenton's fairest belles had preceded me, and that that "attachment" took precedence over any that I might have issued, so I could do nothing but forgive him. I hope, however, he will not disappoint me again.

The morning before I started, I had sent two men out with my seine for "mad-toms," and my disgust can be imagined when, after four hours, they returned with six minnows, only four of which were alive. I have wondered what those fellows were doing all that time.

Disappointed as I was, fish I must, and take chances of getting bait at Riverton. I reached Riverton in good time, where I was welcomed by my friends, Wilkins, the agent of the Southern at that point, and Sam Duncan, a genial fellow, who is not only running the principal store and livery in that town, but is also the present proprietor of the hotel at that point, ably assisted by his sisters.

The waters in the two rivers—the North and South Branches fork here—were very clear, but from all I could learn, the indications for good fishing were better than usual. My boatman, Frank, while fishing for minnows that evening, had forced the season by catching seven. I found side-tracked at that point the private car of Superintendent Choate, of the Southern, a relative of your distinguished townsman by that name, who was stopping over for a few hours' fishing the next morning, having brought with him his wife, mother and some other ladies. While I was informed that he had had no experience in that line, yet I knew that as Wilkins had him in charge he would have luck, even if his time was limited, if any bass were in the river. He did get eight that morning, and I am told was well pleased with his new experience—and who isn't, I would like to know? For if there is anything that will make one feel young again—that he is "glad he is living"—that thing is to hear the click of the reel, to feel that you have him when at the proper time you put the hook home, see the bass as he leaps from the water, then his mad rushes for liberty and—but why enumerate? You all know how it is—that is, those who have "been there," and if you have not, my advice is to go and try for yourself as soon as you possibly can.

But I wonder what grudge friend Wilkins has against his superintendent, for he had him up and out about three o'clock that morning. I have gotten to that age and stage where I am not a great believer in too early fishing for bass; but I couldn't sleep; in fact, I believe I dreamed of bass; so at four I was out and calling for Duncan, who had promised to go out with me. I have fished all these waters time and again, and my first try in the morning is usually from the abutment of Kenner's mill, just below the dam on the North Fork, less than 200 yards from the hotel; so there we went. But while we fished industriously till breakfast, four fish—two apiece—were all we had to show. Getting breakfast and getting some minnows from the boatman, we took a boat and had fair luck until dinner, when Duncan was called away by business. After dinner I went with the boatman alone.

I remembered having seen several nice bass in the clear water just opposite the limekiln, which would not bite, as I took it, because they saw us too plainly as we cast toward them. So I told Frank to put the end of the boat on a jutting rock which showed in the river just above where I had seen these fish, and he did so. My minnow had hardly touched the water before I had a strike and landed a nice fish. Stringing him alongside of the boat, I remarked that perhaps I could do the same thing again, and, quicker than it takes to tell, another made a rush for my bait, and soon he kept company with the first.

All my fishing was done between Kenner's dam and the junction of the two rivers, possibly three-fourths of a mile, and at night I had thirteen, Duncan five. No big catch, you will say, but for all that the day was a most enjoyable one; the weather fine, all the surroundings pleasant, business forgotten, every now and then a bass—what more could one wish for or ask? Hard, indeed, must one be to be pleased if he would not have been satisfied on such a day, in such a place, and with the music of the reel combined with the singing of the birds and the falling waters to keep him company.

But what of to-morrow? I did not intend to leave until the evening train on Saturday, yet bait was scarce. Early the next morning the boatman and I were again at Kenner's dam, and as I failed to get a strike, I rigged up a minnow line from my fishing grip, using for a line a portion of No. 40 Barbour's thread, a spool of which I always carry along with me, and, pray, what is it that a fisherman won't collect among his fishing things after a good many years' experience?—and it was not long before Frank, to my surprise and gratification, caught some twenty odd minnows. Getting breakfast we again started,

and following my directions he poled his boat—they do more poling than rowing in this section—some ten or fifteen yards from the bank so that I could cast my minnow close into the bank, and it was not long before I had a strike. Suffice it to say, I wound up the day with a good size string, none large, but all of good size, well content with my trip, myself and the world generally. Content with myself, did I say? Let's see. I had begun to think that I was a pretty good fisherman—some have been known to stretch the facts by saying I was an expert—but I missed more strikes on that day than I ever did before on any half dozen trips. Why, I cannot say. Whether it was because I began on Friday, or that I caught thirteen fish on that day, or the combination of both, or, and possibly the true solution, that the fish were spawning and only killing minnows and not taking them as at other times, I do not know. I was shown one spawn bed on the South Branch, but lately hatched, by Wilkins, and was told that he had seen the pair from the bridge when they had first made their appearance, and had been watching them daily, till now the male having left, the female was keeping watch over the small black objects which were destined later on, should they escape the many enemies lying in wait, to grow to goodly size, perhaps, and delight some eager angler. I was told that I could catch the mother if I would cast my minnow in a certain spot, and when I demurred, the reply was that it would not be long before someone would, and therefore I might as well. But to this I stated I did not propose, knowingly, to be that one. I heard next morning that someone had caught that fish—more the pity!

But with it all, how often my eyes cease roaming from the beautiful scenery and my thoughts turned from the fish that I was expecting to catch to some of my former fishing companions.

Poor Markham Payne—as good a fellow as ever lived—passed beyond. How often have we not fished that stream together? I think it was next to the last time we were there, when we were coming down the stream from the "Irish Hole," tired, luck poor and about ready to cuss and quit. Passing a log in the water, near the bank, we both must have concluded that it was a likely place for a bass, for at the same moment we cast our "toms" near that log and not more than six inches apart, when, with a rush that was almost startling, a bass that proved to be nearly a four-pounder, made a break for the minnow, and for a moment or two the question was which of our minnows he had chosen. We were not long in doubt, however, and Markham had him good and fast. The water was swift, and seeing the size of the fish, I was afraid he was trying to land him too quickly. He afterward often teased me, saying that during the day when he was catching small ones and asked of me some directions, I would say, "I never tell a fisherman how to fish," but just then I had forgotten how tired I was, and the directions that I was so willing then to volunteer would have been sufficient for the whole day, if not the whole trip. And wasn't he proud of him! And well he might have been; it was worth a trip to see that rush, that fight for liberty, and that beautiful fish. Poor old Mark! Many a happy day have we spent together.

And there is W. H. Haynes, of Baltimore, one of the family of FOREST AND STREAM, a more congenial companion one could not find; ill, too ill to fish. I hope it may not be for long. He spent many weeks at Riverton last summer with his wife, trying to get back health, but failed. I saw him there for the last time soon after his arrival. Many a fine bass have we taken from those waters in days gone by; and how pleasant it is to recall those trips. On one of them, some years ago, there were three of us. In two and one half days we got seventy-six of the finest bass that I have ever seen caught. The third man was a "grayheaded old sinner," as he would often call himself, so I am taking no liberties in so designating him, nor will I call his name. He was very fond of fishing, but was very sure to fall far behind in the number caught. How often, especially when the boat was moving, have I heard him exclaim, "Hold on, I've got a bite." When, if the water was swift, the anchor would be put out, or if not too swift, the boat would be held until he ascertained, as he invariably did, that his "bite" was the bottom. I might write pages about what Haynes did and didn't do for me on some of these trips, but I have already made this far too long. Old man, whether you are with me or not, you are not forgotten.

C. M. WHITE.

WARRENTON, Va.

Dynamiting Lake Hopatcong Bass.

NEW YORK, June 8.—*Editor Forest and Stream:* Charles W. Levering (only son of the Doctor we have so often mentioned in your paper as a hunting and fishing friend for more than thirty years) is a chip off the old block, and inherits the enthusiasm in field sports from his father. He has just returned with his charming wife (who, by the way, outclasses her husband in luck with the big fish) from a ten days' vacation at Lake Hopatcong. Mr. Levering is just boiling over with righteous indignation, and his language is vehement. He reports an outrageous state of affairs at that magnificent watering place. The dynamite fiend is largely in evidence. The open season for bass will not be on until the 15th inst, Mr. Levering reports, and will make affidavit to it, vouched for by many other reputable citizens, that one day last week along the shore between John Ingram's Coxe and Sharps Rock, something like three-fourths of a mile, he counted 102 dead pickerel and bass. Opposite the residence of Prof. Alexander Lambert, he discovered eighteen large fish of four or five pounds weight that must have been dynamited during the night, as several of the fish were still breathing, though their air bladders were burst. It is well known that many fish when their bladders are broken by the concussion sink to the bottom, while others rise to the surface, and more than half are never gathered by the scoundrels.

Cannot something be done to stop this infamous business? The penalty on dynamiting should be severe and imposed at once. It is earnestly hoped that the fish warden stationed at the lake will leave no stone unturned to bring these miscreants to justice.

Mr. L. says he can get all the data needed in regard to these facts. JACOBSTAFF.

Massachusetts Fishermen.

BOSTON, June 6.—*Editor Forest and Stream:* The secretary of the Old Colony Club, Mr. Charles H. Taylor, Sr., announces that the annual dinner will take place at some point on the shores of Buzzard's Bay in August. This is one of the numerous clubs that have been identified with the work of the Massachusetts Central Committee for Protection of Fish and Game since its formation three years ago. The club had as its representative on the executive committee at that time Mr. John S. Bleakie, of Boston and Falmouth. In the guarding of the interests of hook-and-line fishermen and in efforts to preserve forest trees the club appeals to sportsmen, and the names of many of its members are enrolled upon the list of the State Association. Its president is Joseph Jefferson; vice-presidents, Hon. C. S. Hamlin, Henry R. Reed and Gerard C. Yobey; and on its executive committee are the names of some of the leading citizens of Boston, as well as of the Cape towns. In the very stubborn fight made last year by the American Fisheries Company to regain the right of seining in the Bay, this club had the laboring oar, although aided materially by the Southeastern Massachusetts League of New Bedford, the State Association, and sportsmen generally throughout the Commonwealth. The club has an interesting history, and now that it is likely to have a respite, for a time, from its struggle against seiners would it not find work for the immediate future of equal importance in saving some of the beautiful forests of the Cape from the woodman's ax and from the devouring flames? We have no hesitation in suggesting this for their consideration, but unless abundant rain shall come soon it may be too late. The fate of the Chatham woods is already scaled.

Deputy Thomas Stackhouse, of Marshfield Hills, reports that a fawn came upon his premises very near his house a few days since. A deer was seen on the Carlisle road about a mile from Bedford by Mr. Wm. Parker Jones and wife. He reports that it did not seem much frightened, and trotted off quite leisurely toward the Concord River near by. Within a year several deer have been seen about Bedford, and it is thought there are a good many of them living in the thick woods along the river and to the east of the village. There is evidence that there are now more or less of these animals in every county of the State. The close time of five years more should enable them to become quite numerous if they are able to find sufficient food.

Capt. Hahn, of the United States Fish Commission schooner Grampus, recently shipped from Portland 300 seed lobsters to the Gloucester Hatchery, and he reports the season has been excellent for gathering and that each lobster averages a yield of 20,000 eggs, which is much above the usual number.

Chairman Collins informs me that he has given instructions to the deputies to make an example of all culprits who fail to observe the new law against the use of explosives in fishing waters, and he would not be surprised any day at having a case in court.

Only a few of the Massachushetts anglers who went to Maine for the early fishing have returned yet, for although there have been fires to interfere with fishing in some places, they have not interrupted those on the large lakes, and those who went for the trolling are many of them getting sport with the fly, or will very soon.

A recent issue of the Portland Advertiser contains an interesting account of a trip to Moosehead from Mr. Frank L. Shaw, president of Shaw's Business College, Portland, who is one of the best known of Maine's fishermen and hunters. His trip occupied ten days, and his time was spent chiefly at Northeast Carry. On the afternoon of his arrival in two hours he took 7 square-tail trout averaging nearly 2 pounds; others took larger ones and the fish are running larger than ever before—more fish over two pounds are caught than of those less than a pound. He has a camp sixteen miles from the Carry, and here one morning, he tells us, "looking out of the window I saw thirty-three deer feeding in the fields not 200 yards away. I counted them several times, and am sure of the number."

Secretary Phippen, of the Megantic Club, left Boston to-day with several friends for the preserve. "Stephie" Johnson showed me a letter from Mr. G. M. Kirkner, of New York, written at the club house telling of fires not far from the club limits. Mr. Kirkner is accompanied by several friends and will go to his camp on Arnold Pond. Mr. Johnson is going with his family on Tuesday for a long stay on the preserve.

The first fish of the season caught at Upper Dam was taken by a well-known Boston angler, a regular visitor to the Rangeleys for many years, Mr. Eugene Lynch, weight 9 pounds. Good catches continue to be made at Clearwater, and a 4-pound salmon has been taken from Tuft's Pond, Kingfield; and it is reported that 780 trout were taken from Carrabassett River last week. No doubt the condition of the water, owing to the drought, is conducive to good fishing there.

The reports which have appeared in Boston daily papers several times of late that Barker's camps at Bemis were in danger from the fires that have been raging in the vicinity are contradicted by later news, and fishermen on the lakes are keeping right on with the sport and with good results. Venders of large angle worms are making it easy for bait-fishermen to follow ex-President Cleveland's advice to use good bait. The experienced angler is never stingy with his bait, knowing well that a good big mouthful is what tempts the big fish. Mr. A. A. Sargent, of Haverhill, is at Rangeley Lake, this being his forty-fifth season at the lakes. One of the most enthusiastic fishermen here is Dr. F. W. Palfrey, of Boston, this being his first visit. Mr. S. W. Foye, of Worcester, is happy over his capture of an 8-pound salmon. Mr. Fletcher Pope, manager of the Phillips & Rangeley Railroad, has several guests at his cottage at Gull Pond.

The first to win success in fly-casting at Bemis is an old-timer, Mr. E. F. Coburn, of Lawrence.

At Pond-in-River an 8½-pound salmon was taken by an expert lady angler, Mrs. Harry Dutton, of Boston. Hon. F. W. Rollins, ex-Governor of New Hampshire, and his companion, a Boston angler, have taken several good fish, making the Birches his headquarters. Col. R. A. Tuttle, of Boston, Col. C. F. Hutchins and others, of New York, are located in their cottage at Lake Point.

Hon. George E. Smith, ex-president of the Massachusetts Senate, with two well-known members of the Megantic Club, is at Haines Landing.

A Record Salmon.

To a Bostonian, who is a Pullman conductor, belongs the honor of taking a salmon larger than any ever before taken in the Rangeleys. His name is George T. McNeil, and the fish caught last Tuesday weighed 16½ pounds. The fight lasted a good hour.

The largest trout of the season, weighing 7½ pounds, was taken by the wife of Hon. Seth L. Carrabee, of Portland. CENTRAL.

Maine Fishing Waters.

BANGOR, Me., June 6.—*Editor Forest and Stream:* With the passing of the cold spring days and the approach of the hot weather, the fish in Maine waters are beginning to lose somewhat their appetite for the live bait and the worm, and exeecpt in those varieties which never raise to the artificial lure, to come up with a rush when the proper fly is presented to them. Still, in some of the colder waters, which rarely get warm because of very high altitude and correspondingly low temperature, the fish will take bait, particularly the earth worms, throughout the season.

Although there have not been quite as many fishermen at Moosehead the past week as during the preceding weeks, still there have been enough to make it very interesting for the fish, and there has been some splendid sport, the square-tails predominating at some localities in the big lake, while in others the results were confined almost exclusively to the less aristocratic togue or, as the residents say, laker. And a good many of these have furnished nearly as good sport as their red-spotted cousins, since they grow to immense size, and, caught in very deep water, always come to the hook with a strong determination to take everything in sight and get away with it.

Probably no one party has had greater success than the Camp Comfort Club, which occupies the delightfully located club camp on the west shore, near Sand Bar, where some of the great records of Moosehead have been made in past years by the members, who are largely Rhode Islanders. In the party this year were Commodore D. L. Fales, C. Fred Crawford, J. W. Freeman, A. G. Hazard, John Booth, Dr. Charles F. Sweet, George Sweet, Charles S. Foster, of Central Falls; C. E. Harrison, J. Milton Payne, Charles Payne, of Pawtucket; Hon. Fred Parker, of Providence, and Wm. P. McKinney, of Boston.

The best fishing they enjoyed in any one day was when they safely landed a total of 156 fish, which included 148 square tails, 7 togue and a landlocked salmon. But that was not the only day for records, as on some others, when they did not take nearly as many fish, they took some record breakers for size. Charles Payne led the party on salmon, his big one weighing plump 6½ pounds, while the largest trout, a 5½-pounder, rose to the occasion when Mr. Parker came along, and Mr. Hazard had no other record left to him but the togue, which he made in fine style, landing a 15-pound fish after a hard struggle—on the fish's part. Such big fish are an old story to Mr. Hazard, who has been coming to Moosehead for so many years that the big ones naturally go his way to see if he can fish as well as ever. Other fish worthy of mention were: Mr. Parker, 4, 4½-pound trout and 6¼-pound salmon; Mr. Booth, 3, 3, 3½, 4¼-pound trout, and 5½-pound salmon; Mr. Crawford, 4, 4½ and 4¾-pound trout.

Another club, which had a most delightful outing, is the Mohawk Club, of Haverhill and Boston, a list of which was given in last week's letter. Seen on their way home by your correspondent, they went into ecstacies over Maine's great inland sea, and said that, although they had fished Maine waters every year for twelve or fourteen years and tried many reputed to be the best, they invariably returned to old Moosehead as the best of them all. They, too, had all the fish the law would allow them to carry home, and delightful memories of those eaten in camp, fresh from the water and cooked as only a Maine guide, in the Maine woods and aided by the fresh, appetite-giving air of Maine, can cook them for hungry men. Mr. Traiser had the sport of his life one day, when he landed 14 trout on a fly in just three-quarters of an hour, while Mr. Heintz added to Boston's reputation by taking into camp 2 togue that weighed 9½ and 7½ pounds, and a 5½-pound trout. Mr. Davis caught a 10½-pound togue, and President Arnold was obliged to content himself with a 3½-pound trout.

W. W. Doane, of Brewer, and N. E. Bragg, of Bangor, have returned from two weeks at Deer Island, where they had some great sport, catching some very large square tails and some extra good togue.

Henry E. Capen, of Augusta, whose boyhood was spent on Deer Island, has to catch fish there every spring or part of his life's gone. This year he was there as usual, occupying his camp on the point, and took all the fish he wanted to catch, carrying home his full limit, all trout and weighing up to 3½ pounds.

Messrs. Archer, Evans and Smith, of Salem, Mass., who have been staying at the Crow's Nest, Sandy Bay, had some magnificent sport there among the big fish, catching square tails up to 4½ pounds, and some large togue. A. B. Seelye, of Boston, went to the same place for a week's stay, but had such good luck that he decided to go home, and left in three days with his limit, with a large proportion of square tails.

Dr. W. James Starbuck and wife, of Boston, have returned home from their private camp on Lake Onawa, with 41 pounds of salmon and trout. During their stay they entertained Hon. J. Frank Lawrence, of Chicago, who took on the troll 10 salmon.

Dr. Frederick Freeman, Dr. George H. Earle, Dr. J. J. Loizeaux and Frank D. Wilde, of Boston, have gone home after a delightful trip through the Fish River system of lakes, starting at Portage. They were in ten days and enjoyed some great fishing.

The Richards party, just out from a stay at the Richards camp on Foster Knowlton Pond, reports a splendid time and all the trout fishing they could stand,

at the delightful little trout ponds that are so abundant in the lower Penobscot, West Branch region, Rainbow, Daisey and Kidney furnish some especially fine strings. In the party were Wm. W. White, of Lowell; Peter Allison, of Bristol, England, who crosses the Atlantic each year to go on this fishing trip with this same party; Wm. J. Leckie, George W. Brown, Wm. Follett, Charles P. Hall and J. L. Richards, of Newton, Mass.

Among the successful parties to visit outlying ponds and streams from this city was the Kimball party, arranged by R. S. Kimball, and including John Webster and American Express Agent D. W. Webber, besides a fourth angler. They went to the Passadumkeag, going to the stream via Enfield and fishing up, instead of down, as many parties do. They caught 250 trout, which satisfied them all that the Passadumkeag was what its admirers claim, the finest trout stream in the country.

A nearer stream, but not, perhaps, quite as easily reached, is Leighton Brook, 33 miles from this city by team. Elmer Archer and Galen Kingsbury, and John H. Piper and F. C. Ball made up two parties that fished that brook Memorial Day, and between them they took out 425 trout during their stay, the first-named couple catching 220 of them.

Already canoeing parties are venturing upon the waters of the great north country to get the advantages of the outing before the flies and mosquitoes get too numerous, and while the early fishing is at its best. Walter T. De Haven, M. D. Boyne, and H. P. Wallis, of Brooklyn, N. Y., are on a quite extended trip down the Allegash.

Senator Quay arrived at Greenville this week in the Pullman car "Rambler," accompanied by a party of friends, and was joined there by his five guides from the Ox Bow region, who were with him last year when he made the same trip. They took the steamer to the head of the lake, and at the other end of the carry put their canoes into the Penobscot for one of the finest canoe trips in the northern country. They will go down the Penobscot and through the Allegash to Churchill Lake, where the Allegash waters will be left and, by brook and carry, Spider Lake will be made, and this will be headquarters, whence, when the outing is about over, the canoe trip down the Aroostook will be made, leaving the canoe for the last time at either Ox Bow or Masardis. Senator Quay's guests included State Senator Walter Merrick, of Philadelphia; Stephen P. Stone, of Pittsburg, and Capt. Ben Sooey, of Atlantic City.

Secretary E. C. Farrington, of Augusta, has made a partial announcement of the plans for the annual gathering of the Maine Sportsmen's Fish and Game Association and friends at Kineo, July 6 to 8, inclusive. The principal topics announced for discussion are whether summer campers and others, going into the woods in close season, shall be permitted to carry rifles with them; whether there shall be further restrictions on the killing of deer by permitting the killing of one doe only, and the killing of fawns prohibited. It has also been intimated that the question of setting aside a tract of land for a State game preserve, in which no fish or game shall be permitted killed at any time, would be talked over at this gathering of sportsmen, but it was not included in the announcement.

There is quite a long list of sports, including a bateau race, double and single canoe races, portage canoe race, log rolling and greased pole contests, tilting contest and a special guides' rifle contest. Prizes will be awarded to the person who catches the largest fish; who catches the largest and second largest square-tailed trout on the fly, casting; the woman who catches the largest square-tailed trout; all the fish to be caught and presented to President Judkins or one of his clerks during the three programme days of the outing.

Salmon fishing at the Bangor Pool, where there ought to be more fish to catch, has not been as brisk as the habitues of that pool would like. Three have been taken there during the week, the largest being landed this afternoon by J. H. Peavey. It weighed just 20 pounds. When one knows that hundreds have been taken during the season in the weirs, and that of that number at least 400 have been purchased by the United States Government for propagative purposes at the Craig's Brook hatchery, it seems as if the weirs must have absolute control of the river, or nearly that, and that the river will soon be empty of its salmon, the greatest game fish caught in fresh water. Between the weirs which catch the great majority of the fish entering the river and the pulp mills which have a decidedly bad influence on those few which are permitted to try and pass them to the spawning beds, the *Salmo salar* of the Penobscot seems doomed to extinction.

HERBERT W. ROWE.

Food of the Whitefish.

IN the Bulletin of the American Museum of Natural History for 1897, and again in my Catalogue of the Fishes of New York, 1903, page 228, I mentioned a female of the common whitefish which was sent from Canandaigua Lake, New York, June 17, 1896, by Mr. James Annin, Jr. The fish had in its stomach numerous small shells of several genera. These shells have been identified for me by Prof. W. M. Rankin, of Princeton University, as representing the following species:

Amnicola limosa (Say.)
Valvata tricarinata (Say.)
Pisidium abditum (?)

Of these three genera *Amnicola* was taken in abundance, while the specimens of the other two were present in small numbers only.

The largest of these *Pisidium* shells are scarcely more than one-eighth of an inch in length, while the *Amnicola* are very much smaller.

The common whitefish above referred to belongs to the same species which developed a singular habit of feeding upon live killifish in the New York Aquarium in 1896. It was considered a remarkable change of habit at the time, for the fish has a stomach specially adapted for disintegrating small shells, its walls in the individual sent by Mr. Annin having been more than one-fourth inch thick. In natural surroundings the fish is a bottom feeder; but in the aquarium it learned to catch live minnows in any part of the tank.

TARLETON H. BEAN.

Fish and Fishing.

Opening of the Salmon Season.

SALMON have made their appearance for some weeks past in the Baie des Chaleurs and also in the estuaries of some of the rivers flowing into the Gulf of St. Lawrence. At first they were taken for a few days very freely by the net fishermen, though for some time past, to the despair of these latter and to the delight of the anglers, the weather has proved very unfavorable to netting, and it is probable, therefore, that rather more fish than usual will enter the rivers on their way to their spawning grounds. A number of members of the Restigouche Salmon Club were expected at the club house at Metapedia about the 8th or 10th of June, and from the fact that a carload of fish boxes have already been prepared for the club this spring, I imagine that the members are anticipating a good season's catch.

The amount of unleased salmon water in this country is growing less every year, and now another north shore river has been disposed of by the Government. This is the Olomonasheebou, a distant stream, wide and shallow, and in the early part of the season affording excellent sport, containing, as it does, large numbers of both salmon and sea trout. It has been leased by Sir Charles Ross, the manufacturer of the Ross rifle, for $350 a year. Only for being so comparatively difficult of access it would doubtless lease for three or four times as much.

Mr. Ivers W. Adams, with his two sons and Mr. Henry Sampson, of Boston, left here last Thursday by steamer for their fishing camp on the far-famed Moisie, and Mr. Walter Brackett reached here on Saturday on his way to his salmon pools and summer studio on the Ste. Marguerite. Among the earliest salmon fishermen to arrive on their river were Messrs. Stikeman, I. H. Stearns, and Dr. F. W. Campbell, all of Montreal, who fish Chamberlain Shoals on the Restigouche. The streams are all so low for want of water that unless we soon have rain the salmon fishing season will be a very short one, especially upon the North Shore streams. The short and rapid course of the streams, as compared with those upon the south shore of the St. Lawrence, is responsible for the shorter season of fishing in these rivers, except in very rainy seasons. They rise tremendously in times of flood, but fall very rapidly after their ordinary level is reached again.

I have reason to hope that friends who are about to fish some of the North Shore rivers will take the trouble this season to experiment with night fishing for salmon that will not rise during the day. I know that some of the fishermen on the Grand Cascapedia have had good success with night fishing, and friends of mine in Scotland claim to have done the same. On one of the Scotch rivers Mr. W. P. Campbell recently killed two good fish at midnight on a large black-dose. Here in Canada the night flies which have met with any reported success have been light in color. Dark flies are considered the best at night for salmon fishing in parts of Scotland. They can scarcely be too large, nor need the tackle to be at all fine.

Fishermen and Fires.

At present writing forest fires are ravaging the whole of Quebec's north country. No living man remembers to have seen them so severe before or to have covered so large an extent of country. As scarcely a drop of rain has fallen here for the last nine weeks, everything is exceptionally dry. Many of the rivers are unusually low. Scores of fishermen have been driven out of the Canadian woods during the last three weeks, either by the existence of forest fires or by the dread of them. Many of them were burned out of their fishing camps, and in some cases had to take to the water to escape the flames. The pretty railway station of Triton, on the line of the Quebec and Lake St. John Railway, has been destroyed, though the beautiful club house near by was fortunately saved. The Press Fish and Game Club of Quebec, the Stadacona and the Iroquois Clubs have been less fortunate. All the main club houses of these clubs have fallen victims to the devouring element, and so have a number of camps on the Jacques Cartier Club's limits and others on the shore of Lake Edward, including that of Mr. Odell. The hotel at Lake Edward has been fortunately saved, and so have been the buildings of the Metabetchouan and Tourilli Clubs. In many other parts of the country, too, where extensive bush fires have recently raged, fishermen who were in camp had a narrow escape for their lives, having had to take to their canoes and to paddle out on to the lake. One of the results of these fires has undoubtedly been to drive numbers of wild animals out of the woods. The fishermen who were burnt out of the club house of the Iroquois Fish and Game Club, as just related, saw hundreds of rabbits racing down the railway track some distance in advance of the fire, and bears, moose and red deer, and even a Canadian lynx have made their appearance quite close to the city of Quebec. Edgar W. Anthony, a thirteen-year-old angler of Boston, was crossing a portage in advance of his father and other friends, when he came suddenly upon a bear, which hurried off ahead of the party and took to the water at the end of the portage. This was on the territory of the Laurentian Fish and Game Club in the St. Maurice district. Young Anthony had the good luck the same day to hook and land a gray or lake trout weighing 21 pounds, on a troll.

Ouananiche are Plentiful.

Owing probably to the absence of rain, the fishing for ouananiche opened earlier than usual this year. Ever since about the 15th of May the fish have been rising very freely to the fly in the mouths of some of the rivers, and also about the southern shore of Lake St. John. Several fish weighing between four and five pounds each were taken in one day from the Metabetchouan, and eighteen or twenty fish have been killed to a single rod in one morning in the pool at the mouth of the Ouiachouan, while a dozen farmers were making good catches with bait at the same time from the railway bridge at the mouth of the stream. It is a rather remarkable fact, however, that as soon as the wind veers around to the east, the fish cease to rise. The fishing ought to be good, however, by the 15th inst. in the Grand Discharge.

Some very large catches of trout have been made during the last few days in Lake Edward by bait-fishermen, but the best of the fly-fishing is only commencing, because of the continuance of the cold weather. The members of the Metabetchouan Fish and Game Club have made good catches with the fly, however, Mr. Bishop taking nearly forty pounds' weight in one morning's fishing. Dr. Porter and his party from Bridgeport, Conn., have also had excellent sport, and so has Dr. Zimmerman, of Philadelphia. The Laurentide Club lakes are furnishing capital fly-fishing just now to a number of Quebecers, and among American sportsmen who have recently shared in it are Messrs. Curtis, of Round Lake, N. Y.; Boynton and Hayes, of New York, and H. Veeder, of Hartford, Conn.

E. T. D. CHAMBERS.

QUEBEC, Canada, June 6.

CHICAGO AND THE WEST.

Sparta District.

Mr. D. J. Hotchkiss, editor of the Fox Lake Representative, Fox Lake, Wisconsin, writes the following regarding the recently mentioned Sparta trout district of Wisconsin:

"Your little pointer on the LaCrosse River and Sparta a week ago touched me in a tender spot, and it made me homesick. I used to live at Sparta several years ago, and have fished all those creeks and streams there. It set me off so much that I just had to dig out Saturday night and go up there for a day with the trout. I went out with Capt. Frank French, an old time friend, and, by the way, a boy who made a great record in the Philippine war, whose company rescued Gilmore, and who has many other daring deeds and several medals of honor to his credit. We drove up some eight miles above Sparta and put in the LaCrosse River with a boat, fishing down stream. We got into the water about 10 A. M., my train being delayed in reaching the city, and we fished hard and faithfully until about 7 o'clock at night, but were only successful in getting nine trout, running from six to ten inches long. The water was very high and somewhat roily, and the day was decidedly cold, with a strong east wind which you know is a hoodoo for fishing, which accounts in part for our poor luck. We tried the fly first, as we wished to be sporty and fish right, but could not get a raise. Then we tried grasshoppers, dead ones, but the trout did not fancy that feed, not being fresh enough, probably, and would have none of it. Then we got down to the plebian angleworm and caught every trout we got on that bait, but they did not care particularly for them, and it was only after hard fishing and tantalizing work in running the bait over and over the holes that we could get them to touch it at all. There is lots of feed coming in with the high water, and they are not hustling much for feed. Before the cold wet weather set in the boys were getting a few nice trout, and several handsome strings have been taken, but for the past two or three weeks the fishing was poor. I wanted to remain and try them again, but was very busy at home and the weather was still unfavorable Monday, so I returned home. However, I got a taste of the sport and felt much relieved in my longing for the old sport in the Sparta country caused by your little item. Perhaps later on, when the weather gets settled again, I may run up and try them again, but at present I shall have to be satisfied with our own fishing here.

"By the way, isn't it about time you paid me that promised visit when you were going to come up and help me harvest my bass crop? They are biting fairly well now, and several nice ones have been caught, though I haven't been able to get out among them myself yet. I shall be over my rush in a week or so, and then, if the weather gets favorable, I shall try and have some sport with the bass and pipke, and would be glad to have you drop up and help me out. Can give you some good sport with the big-mouths."

The Trout and the Goat.

A gentleman who has recently been fishing the Pigeon River, out of Wolverine, Wis., writes me to-day, inclosing a bit of pebble which would weigh perhaps three-fourths of an ounce and which measures three-fourths of an inch over its greatest diameter and half an inch in width. He says: "Inclosed find a small pebble stone, which I found in the stomach of a twelve-inch speckled trout which I caught in the Sturgeon River yesterday. It was a female fish, quite fat and in good condition. I broke a small piece off one corner of the stone. I have sometimes found sticks, weeds and grass in the stomachs of trout, but never before found a pebble stone."

Close examination would seem to prove that the trout at times somewhat resembles the North American billy-goat in his habits. I have often found them with their stomachs literally distended with what appeared to be black mud. This I think they take while feeding upon the larvæ of the different caddis flies. The other day when Mr. Harris and I were fishing together over in Michigan, we paused for a time in the heat of the day to rest ourselves on certain inviting rocks. Looking into the water at our feet, we noticed what seemed to be pieces of black, water-soaked sticks, each from an inch to two inches in length. Examination proved these to be the cases of the caddis grub. They were apparently fabricated out of black and almost rotten wood or bark, but attached to them were small pieces of sand and tiny pebbles. Breaking open these cases we found ensconced in each a grub about an inch in length. Any trout fisherman is familiar with this sort of thing, and knows that when bottom food of this kind is abundant trout are not so apt to rise. Of course the trout has his mind set on the worm inside of the case, and if he has to swallow the case to get at the worm, very well. I imagine that my informant's trout was going after a certain fat tidbit of this sort and regarded the pebble simply as an incident in the operation.

For any fisher who is not familiar with the appearance of these caddis cases, I may say that he is apt to pass them over without careful examination, as they seem to be simply bits of the flotsam of the stream. Yet if he will watch closely along the bottom, he may see one of these black looking "stick baits" begin to crawl, even up stream against the current. The head end of the case is

always open, and close examination will show the grub sticking out his head and a couple of sets of short and sturdy legs, by means of which he is able to accomplish locomotion. Putting some of these apparently inanimate bits on top of a rock, where the sun would strike them, we could see the little fellows stick out their legs and finally wriggle and squirm until they turned the whole case over and so got back into the water.

Down in New Mexico, where I used to fish, we often used as bait the grub of what we called the willow fly. These cases seemed to be made of a sort of glue, with fine sand and very small pebbles. One would sometimes find a handful of them attached to the bottom of a rock which he turned over in the stream. This form of "stick bait" was entirely different from the wood cases which we find in Michigan and Wisconsin. My recollection is that the grub of the willow fly was a little bit paler in color and rather larger than these Michigan larvæ.

For Wisconsin.

Messrs. John Bates and Henry Wagner, of Chicago, this week left for a trout fishing trip of some extent out of Ellis Junction, Wisconsin. They expect also to take a few bass.

Back from Washington.

Mr. W. S. Phillips, of Chicago, this week returned from a hurried trip to Washington and the Puget Sound country. He found time to do some fishing and took one trout, which I suppose was likely a sturgeon, and which weighed fifteen pounds. We in this country know nothing but baby fishes.

Luck at Lauderdale.

Members of the Chicago Fly-Casting Club who made the trip to Lauderdale Chain had fair fishing, but nothing very startling. It need not be said that they had a grand good time.

The Pere Marquette Trip.

The Père Marquette trip of the Chicago anglers will probably be deferred until July, until the weather conditions are more favorable. So far the weather has been exceedingly bad for anglers of the middle West.

Kalamazoo.

I have at different times noticed with interest the beautiful Kalamazoo River, more especially in its course between Battle Creek and Kalamazoo towns. I am told that this is a very prolific bass stream, the fish being smallmouths, and that the Battle Creek and Kalamazoo boys frequently make boating trips between the two towns. One or two friends here wish to make this trip, and the only cloud I can cast upon their prospects is the commonly believed information that in the summer months the fish of this stream are wormy and not fit to eat. Some of the Battle Creek anglers bring them home alive and turn them loose in cold water for a while, after which time they are said to assume good condition. I am sorry these fish are not good to eat, for the stream seems ideal for fly-fishing, and I believe a boat trip with a fly-rod on that water would be a pleasant experience.

The Wautoma District.

Mr. C. P. McAvoy, of this city, came in the other day to ask for a good vacation country for himself and wife. He wants some bass fishing, but would not balk at a trout now and then. He had in mind some point on the Mississippi River, where he intended doing some fly-fishing for the famous small-mouths of that stream. The exceedingly high waters on the great river, however, would seem to put it out of an angler's plans. I advised Mr. McAvoy to go up to some nice farm-house near Neshkoro, or to drop in at Bean's hotel at Wautoma, or to try Benjamin's place near the White River. There are very many little trout streams near this place, and west of Wautoma there are a couple of lakes known as Silver-Crest. It is still a trifle too early for fly-fishing for bass along the lower White, but still one might catch an occasional bass even now. The beauty, restfulness and healthfulness of this district give it considerable attraction, and Mr. McAvoy, who already was somewhat familiar with the streams of that neighborhood, took counsel to go in there for his vacation. He will probably do considerable exploration, in company with either Art Bean, of Wautoma, or Carl Bartl, of Princeton, both of whom know that country thoroughly well.

About Hooks.

A friend of mine down in Kentucky sent me a nice bunch of round-bend Carlisle hooks, which he had specially imported at considerable expense of time and cash. He is very fond of this pattern of hook and thought he had the real thing. Now he writes me from Michigan that he tried them and had all kinds of trouble. He says: "I broke ten of them yesterday while fishing, and they all broke at the same place, seeming to be very brittle. I send you one, to show you just where they broke." The hook inclosed is broken just at the thin place under the barb. I should think a hook which would break ten in one day's fishing was a good thing to leave at home, or in England, whence they originally came.

A good many of my friends are very fond of the Pennell bronzed hook, more especially that with the up-turned eye. This is a strong, keen hook with deep barb, and has great holding powers. It is said that under a fair driving test this hook will penetrate pine wood further than any other to which equal power is applied. I noticed a good many of the Saginaw crowd used Sneck side-bends. I believe this is a good catching hook, though hardly think it has the power in holding the very heavy fish which would be gained by the thicker wire of the bronzed Pennell. The Sproat hook has the best reputation for striking quality, as it is thought to be of ideal central draft. There are, however, Sproats and Sproats. I had a bunch of queen-of-the-water flies, or a sort of Sproat, which patterns seemed to be very attractive over in Michigan this week, yet I never missed so many fish in my life as I did on this particular fly. The point of the hook recurved in so far toward the shank that in very many cases it not only failed to catch but failed to hold. I presume every angler has his favorite pattern. Just at present the bronzed hook is having a big run in this part of the angling world. As a matter of fact, almost any hook will do when the trout are well on the feed and are not coming short. It should not be forgotten, however, that one of the great functions of a hook is to come intact out of a tree or a log, when perchance it is fastened there instead of in the anatomy of a fish.

Record Rainbow.

Mr. John Bain, of Grand Rapids, Mich., last week, according to advice just at hand from John Waddell, of the latter city, was so fortunate as to capture an eight-pound rainbow trout. I have no details as to the incident, but that weight is record for the Père Marquette.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Another Tame Trout.

Editor Forest and Stream:

In FOREST AND STREAM of May 23 I read with much interest an article by Mr. Chas. Cristadoro, "Wild Trout I have Met."

I note, with sympathy, for this gentleman, his remarks about the big trout which made goo-goo eyes at him from the depths of a clear pool, for this experience has tried the patience of more than one fisherman, who, after repeated efforts with various kinds of bait, has gone home wondering why these big trout failed to take the least notice of the many good things offered. I have heard many theories advanced why, at times, trout will not respond to the most urgent dinner call. But no matter about the real reason. The fact remains. I will say to Mr. Cristadoro, if at some future time he finds a pool where he sees the goo-goo eyes and hears the hearty trout laugh come bubbling up to the surface, "Go home; get your supper; and when the shades of night have fallen over that charming pool, add to your fishing kit a bulls-eye electric light and try them again. Flash that light over the pool, and drop your wriggling worm within its circle. You may not enjoy midnight angling, but if trout are necessary for breakfast you will have them."

Now, a word about that tame trout which came to such an untimely death at Duluth. The world is wide, but printer's ink spatters over a vast territory; and should a copy of the Tribune containing that story fall into the hands of Mr. Ed. Grant, of the Rangeley Lakes region, I fear he would at once drop his rod and go gunning for his namesake in Minnesota. That story, with slight variations, was told years ago by Ed. Grant; only his tame trout did not slip from a log, but dropped through a bridge and was drowned. Now, Ed. is original. He enjoys a good story and knows how to tell one. The tame trout story is his pet piece of fiction, told in such a positive manner that no one but a fisherman could doubt it. And were he to know that some other Grant had been fooling with his little fish I fear he would be justly angry.

ROXBURY.

[The tale of a fish caught, tamed and taught to live on dry land, has been told of many different fish by many different fish story builders in many places; but the claim is made that the original story as told in this country was the FOREST AND STREAM translation from the Swedish of a story of a herring which followed its master about on dry land and eventually fell from a bridge and was drowned. This was printed, it must have been, ten years ago.]

Fishing Temperance.

CONSISTENCY requires those of us who are right minded fishermen to reasonably limit ourselves as to the number of fish we should take on favorable days. On no account should edible fish be caught in such quantities as to be wasted. By restraining ourselves in this matter we discourage in our own natures the growth of greed, we prevent wicked waste, we make it easier for us to bear the fall between what we may determine upon as decent good luck and bad luck, or no luck, and make ourselves at all points better men and better fishermen.—Grover Cleveland in the Independent.

A Tagged Jewfish Heard From.

TARPON, Texas, May 30.—*Editor Forest and Stream:* On the 27th inst. Mr. C. E. Gast, of Pueblo, Colo., landed a jewfish bearing a tag inscribed as follows: "Aransas Pass, 1903. Report to FOREST AND STREAM. W. B. Young, New York." This fish was tagged by Mr. Young about April 10.

W. A. FARLEY.

Fixtures.

Oct. 6-9.—Danbury, Conn., Agricultural Society's show.
Nov. 3-6.—New York.—Annual show of Ladies' Kennel Association of America.
Nov. 9.—Fourteenth annual beagle trials of the National Beagle Club of America. Charles R. Stevenson, Sec'y.

Kennel Diseases.

AFTER an interval of some months, "Kennel Diseases, their Symptoms, Nature, Causes and Treatment," by Ashmont, has superseded "Dogs, their Management and Treatment in Disease." Excellent as was his first work, "Ashmont" (Dr. J. Frank Perry) has placed it under a total eclipse by the scope, profound, yet concise, information contained in his later work, "Kennel Diseases." His first work contained 208 pages; his later work contains 424 pages. The whole work, aside from the author's comprehensive technical knowledge of diseases and their treatment, is markedly sterling good sense. The work is for the information of the layman, and therefore, as near as may be, it is written in language easily understood by all. In his preface the learned author gives the keynote to his theme, as follows: "In attempting to popularize medicine—for the guidance of non-professionals—a common fault seems to be failure to particularize, and thus leave far too much to conjecture. In endeavoring to obviate this I may have gone over the line and indulged in what might seem to some to be needless repetition. But if so no real harm can have been done; and in the matter of doses, especially, my readers can scarcely go wrong. There are no specifics in canine practice. That is, no medicines which are sure cures always for the same diseases. Indeed, in many instances, a medicine which has cured a large number of cases may prove valueless in the next case, although it might seem precisely like the others. Again, cures can be effected only in stages, as it were. That is, one class of drugs will accomplish a certain amount of good and no more, and another class must be employed to secure greater gain." This will commend itself to all serious thinkers for its soundness. The work is divided into three parts, "The Sick Quarters," "Principles of Medicine," and "The Practice of Medicine," the latter including every disease to which the dog is subject. Published by Little, Brown & Co. For sale by Forest and Stream Publishing Company. Price, $3.00.

Yachting.

Yachting Fixtures for 1903.

Members of race committee will confer a favor by sending notice of errors or omissions in the following list, and also changes which may be made in the future.

JUNE.

10. Atlantic, 90-footers, Sandy Hook.
10. South Boston, club, City Point.
10-12-13-15-16. Manchester, trial races for selection of challenger for Seawanhaka cup, Manchester Harbor.
11. New York, fifty-seventh annual, all classes, off Sandy Hook.
13. Chicago, special, Lake Michigan.
13. Boston, club, South Boston.
13. Royal Canadian, club, Toronto.
13. Seawanhaka Corinthian, club, Oyster Bay.
13. Larchmont, spring regatta, Larchmont.
13. Beverly, club, Monument Beach.
14. Jamaica Bay, club, Jamaica Bay.
15. New York, Glen Cove cups, Glen Cove.
17. Beverly, open sweepstake, Monument Beach.
17. Larchmont, races for 90-footers, Larchmont.
17. Boston, Y. R. A., off Point Allerton, open.
17. Dorchester, open, Dorchester Bay.
18-19. New Rochelle, club, New Rochelle.
19. Eastern, special, open, Marblehead.
19. Indian Harbor, 90-footers, Greenwich.
20. Southern, Baldwin and Walker cups, New Orleans.
20. Beverly, club, Monument Beach.
20. Keystone, club, Woodmere, L. I.
20. Brooklyn, Y. R. A. of Gravesend Bay.
20. Corinthian, first championship, Marblehead.
20. Seawanhaka Corinthian, 90-footers, Oyster Bay.
20. Atlantic, club, Sea Gate.
20. Columbia, motor boat race, Am. P. B. A., Hudson River.
20. New Rochelle, Y. R. A. of L. I. Sound, annual.
20. Chicago, handicap, Lake Michigan.
20. Royal Canadian, club, Toronto.
21. Old Mill, club, Jamaica Bay.
21. Gloucester, N. J., annual, Delaware River.
25-26-27. Seawanhaka Corinthian, Y. R. A. of L. I. Sound, annual and specials.
27. South Boston, club, City Point.
27. New York, special race for 90-footers, Newport.
27. Boston, club, Marblehead.
27. Beverly, club, Monument Beach.
27. St. Paul, cruise, rendezvous St. Paul, Minn.
27. Chicago, special. Lake Michigan.
27. Royal Canadian, club, Toronto.
27. New York C. C., Y. R. A. of Gravesend Bay.
30. New York, special race for 90-footers, Newport.
30. Royal Canadian, L. S. S. A. regatta, Oakville.
29-July 2. Manhasset Bay cup races, L. I. Sound.

CONSTITUTION was put in the dry dock at Erie Basin on last Saturday in order that she might be measured. The yacht was measured with fifty-eight men on board. Mr. Charles D. Mower, the measurer for the New York Y. C. did not give out the results of his calculations.

OWING to the thick fog that hung over the lower bay on Monday, June 8, the race between Columbia, Constitution and Reliance was abandoned. The three boats lay in the Horseshoe and made sail during the morning, but the fog rolled in so thick that it was impossible to start. As there was a fresh southeast breeze blowing and quite a steep sea running outside, it would have been a good test for the boats, and it was a source of great disappointment to all interested that the fog prevented what might have been a very exciting race.

Atlantic Y. C. Ocean Race.

June 1 to 3.

The first of three ocean races to be held by the Atlantic Y. C. this year, was started on the morning of Monday, June 1, and finished in the early hours of Wednesday, June 3. Six schooners started and finished the 248 mile event, which was won on corrected time by the smallest of the lot, Kiwassa, owned by Messrs. H. B. Shaen and H. A. Rusch, of the Atlantic Y. C.

By winning the event Kiwassa gets a beautiful trophy presented by Com. Frederick Adams, of the Larchmont Y. C. Mr. J. G. N. Whittaker's schooner Iroquois secured second prize and George Lauder, Jr.'s Endymion third. Both the latter trophies were offered by the Atlantic Y. C.

The course selected was a long one, calculated to try out the craft in every way. It led from Sea Gate to the Fire Island Lightship, thence to Northeast End Lightship, off Cape May, and from there to the finish, off Scotland Lightship.

But conditions on the first ocean race were exceptional. It was like sailing on a summer sea with hardly enough wind or wave to make the trip exciting. These conditions, of course, handicapped boats like Endymion, Iroquois, Fleur de Lys and Thistle, distinctly at best in real ocean-going conditions.

A gratifying feature about the event was that every craft finished the contest, and during the progress a majority of the contenders were in sight of one another. The courses and distances covered by the racers are approximately represented as follows:

	Nautical Miles.
Craven Shoal Buoy to Swash Channel Bell Buoy, S ¼ W.....	4¼
Swash Channel to Black and Red Buoy, S.E. by S.....	2¼
Black and Red Buoy to Red Buoy No. 2, S.E. by E. ½ E....	1
Buoy No. 2 to Fire Island L. V., E. by S.....	36½
Fire Island L. V. to N. E. end L. V., S.W. ¼ S.....	100
N. E. end L. V. to Barnegat Bell Buoy, N.N.E. ¾ E.....	53
Barnegat Bell Buoy to Scotland L. V., N. by E. ½ E.....	42
Total distance.....	248

The event was scheduled to start June 1 at 10:15 A. M. Fifteen minutes before that time the preparatory signal was fired from the regatta committee boat, the power yacht Agnes, kindly loaned by Mr. T. C. Treadwell. The tide was on the last of the flood, and there was about a 7-knot breeze blowing S. E. by S.

The starting line was between the stake boat and Craven Shoal bell buoy. The six contenders, which came to the line, were as follows:

	Net Tonnage.	Over All Length.	Racing Length.
Thistle, Com. Robert E. Tod	235	150	110
Endymion, George Lauder, Jr.	116	126	100
Iroquois, J. G. N. Whitaker	86.16	96.3	82.3
Fleur de Lys, Dr. L. M. Stimson	86.29	108	90
Estelle, L. J. Callanan	59.99	91.2	78.5
Kiwassa, H. B. Shaen	45.90	79	78.5

The starting gun at 10:15 sent the craft away. Estelle led. On her decks was L. J. Callanan and several guests. Fleur de Lys was next over. Miss Stimson represented her father, and was the only passenger aboard. Iroquois was the next craft over the line. Her owner was not present. The party to take the long trip consisted of men from the Quaker city, including Prof. Albert H. Smith, Benjamin Hawley, the artist, and Howard E. Myers.

Fourth boat over was Endymion. George Lauder, Jr., was on board and has as his guests Andrew Carnegie, Jr., Richard Sheldon, the Yale athlete, and Jasper Rowland. On Kiwassa, the next craft to get away, were the owners, H. B. Shaen and H. A. Rusch, E. A. Ericson, Thomas L. Arnold and L. S. Baylies. Thistle was the last to cross. On board Commodore Tod had as guests Frederick Vilmar and Charles E. Schuyler of the Regatta Committee.

In the journey to Swash Channel bell buoy, the boats, which had all started close hauled on the port tack, made a number of short boards to get the best of the tide, which was running with great strength in the channel.

Going about the buoy, Endymion led, followed by Iroquois. Fleur de Lys and Estelle stood further into Sandy Hook Bay than the rest of the fleet, got out of the tide and gained perceptibly thereby, at one time being well ahead of Iroquois and very nearly on even terms with Endymion. When the boats got straightened out for the course to Fire Island Lightship, they had a fair tide. At this early stage of the contest it was noticeable that whenever the breeze lightened Endymion, Fleur de Lys, Iroquois and Kiwassa would draw away from Estelle and Thistle. A freshening breeze, however, would enable the flagship to pick up materially.

At a bit after 3 o'clock the breeze hauled into the S. W., making eased sheets possible and with ballooners set, all stood for the first turning point, some 20 miles away. Endymion slowly drew away from the other boats. At 4:45 the lightship was made out. When within 5 miles of the lightship the wind flattened to about 5 knots. The boats were slow in rounding, were timed as follows:

Endymion	5 36 20	Fleur de Lys	5 58 27
Iroquois	5 45 37	Kiwassa	6 05 28
Estelle	5 51 33	Thistle	6 07 00

For the first 44 miles of the course Endymion had averaged a bit over 6 miles an hour. She had gained 9 min. 42 sec. on Iroquois, 16 min. and 23 sec. on Estelle, 22 min. 37 sec. on Fleur de Lys, 27 min. 38 sec. on Kiwassa, and 27 min. and 23 sec. on Thistle. The boats were close hauled on the port tack, standing for Northeast End Lightship, 109 miles away.

Some of them took short tacks out to sea. At sunset Endymion was well ahead of Iroquois, which was some distance astern and to windward. A half mile to leeward and astern was Estelle. Abreast of her was Fleur de Lys a quarter mile to leeward. Kiwassa came next and then Thistle, all about a quarter of a mile apart. Up to this time of the contest all of the competing yachts had been in full view of one another. As the sun retired over the starboard in favor of a most beautiful moon, the individual contestants lost sight of one another, not to see a welcome sail again and learn their relative positions until the next day.

At 9:30 P. M. the breeze went into the W. N. W. and headed the six schooners way off their course. This took the boats directly back in range of Navesink Light, which could be distinguished on the horizon miles away.

At midnight the wind again made a shift, this time into the west, and finally landed in W. N. W. This enabled the boats to retrace their course parallel to the Jersey shore, about 4 miles away. They all were about to starboard and moving through the water at a good clip.

At quarter after twelve the next morning the haze, which had been over the sea most of the day, cleared so that all the competitors were in sight and Northeast End Lightship could be distinguished some 4 miles ahead.

Endymion was seen to have rounded and was beating the beach for home. Fleur de Lys and Iroquois were nearly abreast. Estelle was a quarter of a mile astern, separated by about the same distance from Thistle. Kiwassa was bowling along finely with ballooner and spinnaker set, with some three miles distance to make up. Times taken at the second mark were as follows:

Endymion	11 35 00	Estelle	12 38 42
Fleur de Lys	12 33 26	Thistle	12 50 05
Iroquois	12 37 10	Kiwassa	1 28 48

In the 109-mile leg, Endymion had gained 13 min. 22 sec. on Fleur de Lys, 43 min. 21 sec. on Iroquois, 32 min. 6 sec. on Estelle, 24 min. 47 sec. on Thistle and 57 min. 7 sec. on Kiwassa.

There was some windward work after rounding the lightship. At sunset the breeze had increased to a 9-knot clip from E. S. E. Endymion could be just distinguished some 4 miles ahead. Fleur de Lys and Iroquois were having it out astern. Thistle was leading Kiwassa and Estelle by 3 miles. The latter had difficulty with her centerboard on the way home and was rounded into the wind several times in an endeavor to fix it. The boats were within 2 miles of Barnegat at 9:30 o'clock P. M.

At midnight the wind worked around into the westward and freshened. This gave the boats a starboard reach and the fastest sailing of the race. Again the breeze shifted and worked into the W. N. W. Sea Girt was abreast at 1:30 A. M. At the same time Navesink's flash could be distinguished. Scotland Lightship was picked up at 2:30 A. M. The finish was when this beacon bore due east, magnetic. Daylight came at 3:45. At that time all but Kiwassa and Estelle had finished the long journey.

Endymion was first to end the long race. Then came Iroquois, Fleur de Lys, Thistle, Kiwassa and Estelle in the order named. Times taken at the finish were as follows:

Endymion	1 36 00	Thistle	3 23 30
Fleur de Lys	2 54 34	Kiwassa	4 57 27
Iroquois	3 04 00	Estelle	6 05 00

Kiwassa had beaten Iroquois on corrected time, 11 min. 48 sec.; Endymion, 15 min. 23 sec.; Fleur de Lys, 46 min. 37 sec.; Thistle, 2 hrs. 41 min.; Estelle, 2 hrs. 59 min. 33 sec.

The next ocean race of the Atlantic Y. C. will be started on Monday, July 27, at the end of the New York Y. C. cruise, when a number of the Sea Gate fleet are expected to be at Newport. The course will be from Brenton's Reef Lightship to Nantucket Shoal Lightship, and thence to Sea Gate, an estimated distance of 297 miles. A complete summary of the first ocean race follows:

Atlantic Y. C. Ocean race for Schooners—June 1 to 3—248 Miles.

	Start.	Finish.	Elapsed.	Corrected.
Kiwassa	10 18 35	4 57 27	42 38 52	38 22 52
Iroquois	10 16 20	3 04 00	40 47 40	38 34 40
Endymion	10 16 45	1 36 00	39 19 15	38 38 15
Fleur de Lys	10 16 05	2 54 34	40 38 29	39 09 29
Thistle	10 19 38	3 23 30	41 03 52	41 03 52
Estelle	10 15 35	6 05 00	43 49 25	41 22 25

Marine and Field Club.

Y. R. A. OF GRAVESEND BAY,

Saturday, June 6.

The third season of the Yacht Racing Association of Gravesend Bay was opened on the afternoon of Saturday, June 6, with a regatta under the auspices of the Marine and Field Club. The event was greatly marred by a heavy fog, which hung over the lower bay all day.

Despite the unfavorable conditions, nineteen boats of all classes came to the line, all but three of which finished. Two were disqualified. It was the first race held since the withdrawal of the Atlantic Y. C. from the Association, and the showing of nearly a score of boats for the initial regatta of this season against an entry of twenty-five in 1902 for the opening event, is most encouraging to the clubs that now make up the organization.

The start of the race was scheduled for three o'clock. A postponement of 15 minutes, however, was taken in hopes the fog would lift. Three minutes after the preparatory gun at 3:15 classes M and N were sent away. The other classes were started on 3-minute intervals.

The course for classes above P has been slightly changed this year. Instead of going from the starting line to West Bank Light and return, the boats now sail a four-sided course, going, when covered in regular order, first to the red can buoys off Coney Island Point, then to Craven Shoal buoy, from there to a stake boat off Fort Hamilton, and home to the starting line.

The breeze at the start of the race was S. S. E., blowing at about a 7-knot clip. This gave the larger craft a long, close-hauled board out with booms to starboard. A few windward hitches were necessary to make the can buoy. From there it was a reach and then a run to the mark off Fort Hamilton and a close-hauled leg home.

Bonito and the yawl Ionta were the only boats to cover the longer course twice, which constituted the prescribed distance. The others did not care to risk the fog outside and withdrew.

Boats in classes P or under went from the starting line to a mark off Ulmer Park, thence to a stake boat off Sea Gate, from there to the Fort Hamilton mark and home. The first leg was to windward, the next close hauled, the third a spinnaker run and the last a close-hauled board home.

From the beginning all had difficulty in locating the marks. W. H. Child's class Q boat Trouble, was well sailed, and led the fleet home on the first round by a good margin. Times taken at this stage of the race follow:

Trouble	4 10 55	Boozie	4 22 50
Spots	4 13 50	Kelpie	4 28 10
Streak	4 15 10	Jig-a-Jig.	4 30 10
Ogeemah	4 15 35	Esperance	4 31 05
Flying Fish	4 19 00	Stinger	4 31 12
Quinque	4 21 30	Vixen	4 33 05
Martha M.	4 21 45	Bonito	4 53 00
Rascal	4 22 10	Ionta	5 21 45

There was little change in positions during the second round. Boozie was disqualified for fouling the mark off Fort Hamilton, although she led her class home. Quinque was also disqualified for not covering the proper course. Ogeemah passed Streak, while Stinger passed both Esperance and Vixen.

At the finish Trouble led Spots by 5 min. 45 sec. Flying Fish, by 11 min. 40 sec. Ogeemah beat Streak by 1 min. 30 sec. Martha beat Rascal by 2min. 9 sec. Kelpie led Jig-a-Jig by 2 min. 10 sec., Stinger by 4 min. 22 sec., Esperance by 7 min. and 27 sec., and Vixen by 11 min. and 35 sec.

The next regatta of the Y. C. A. of Gravesend Bay will be held on Saturday, June 20, under the auspices of the Brooklyn Y. C. The summaries follow:

Sloops—Class M—Special—Start, 3:18.

	Finish.	Elapsed.
Bonito, Haviland Bros.	6 23 10	3 05 10
Kangaroo, C. H. Humphreys	Withdrew.	

Sloops—Class N—Start, 3:18.

Squaw, H. J. Heath	Withdrew.
Indian, Menton Bros.	Withdrew.

Auxiliary Yawls—Class N—Special—Start, 3:18.

Ionta, M. W. Torrey	Not timed.

Sloops—Class P—Start, 3:21.

Ogeemah, Brophy & Mackay	5 03 30	1 42 30
Streak, Speidel Brothers	5 05 00	1 44 00

Sloops—Class Q—Start, 3:24.

Trouble, W. H. Childs	4 56 00	1 32 00
Spots, D. D. Allerton	5 01 45	1 37 45
Flying Fish, L. M. Dean	5 07 40	1 43 40

Catboats—Class V—Start, 3:30.

Martha M., Richard Moore	5 11 46	1 41 46
Rascal, D. G. Whitlock	5 13 55	1 43 55
Boozie, C. D. Durkee	Disqualified.	

Marine and Field Class—Start, 3:33.

Kelpie, W. K. Brown	5 21 20	1 48 20
Jig-a-Jig, Ferguson & Hutcheson	5 23 30	1 50 30
Stinger, A. P. Clapp	5 25 42	1 52 42
Esperance, T. A. Hamilton	5 28 47	1 55 47
Vixen, J. J. Mahoney	5 32 45	1 59 45
Quinque, W. J. Spence	Disqualified.	

The winners were Bonito, Ogeemah, Trouble, Martha M. and Kelpie.

Knickerbocker Y. C.

COLLEGE POINT, LONG ISLAND SOUND,

Saturday, June 6.

The annual regatta of the Knickerbocker Y. C. was sailed on Saturday, June 6. The event was marked by a good list of entries, but the racing was unsatisfactory owing to the lack of breeze. The regatta committee of the club sent the towboat Glen Cove to Larchmont, New Rochelle, Manhasset Bay and City Island to tow any yachts that wanted to race down to the starting line.

The larger boats started off the clubhouse at College Point and sailed around Gangway Buoy, then back to the starting line, a distance of 14½ miles. The small boats also started off the clubhouse and rounded Big Tom Buoy, off Belden's Point, City Island, then back to the starting line, a distance of 10½ miles.

The steamer Favorite, with the members and their friends on board, followed the boats over the course.

The start was scheduled for twelve o'clock, but there was no wind at that time, so it was postponed an hour. Just before one o'clock a little E. N. E. breeze sprung up, and the preparatory was given at that hour.

Effort had no competitor in the 43ft. class, so Mr. William Gardner, who designed the Canada's Cup challenger Irondequoit, very kindly entered that boat in order to give Effort a race. It was not expected that Irondequoit would beat Effort, as she was designed under an entirely different rule, and is a big powerful boat, and Effort carried an enormous club topsail, which was of great benefit to her, as nearly all the breeze was aloft.

Effort and Irondequoit were sent away at 1:05, Effort being sailed by Mr. Addison Hanan, and the Rochester boat by her skipper, James Barr. Irondequoit crossed at the windward end of the line on the starboard tack, with Effort well to leeward. The two boats held together pretty well until off Clausen's Point, when Irondequoit ran out of the wind and Effort was able to hold a favorable puff that put her well ahead. Effort being the leading boat, caught all of the puffs first and got a good lead on Irondequoit. At Gangway Buoy she was over five minutes ahead. It was a spinnaker run home, and Irondequoit seemed to pick up a little on the Herreshoff boat. When off City Island the wind dropped out, and Irondequoit withdrew and ran back to her anchorage in Manhasset Bay.

Next to the 43ft. class, the most interesting racing was in the 30ft. class. Alert, sailed by Mr. Edward M. MacLellan, had things her own way, and beat Flosshide by over 7 min.

In the raceabout class Jolly Tar won with Grasshopper second.

During the latter part of the afternoon a little breeze came out of the S. W., which enabled the boats to finish.

The Regatta Committee was made up of O. H. Chellborg, Chairman; Harry Stephenson, C. W. Schlesinger, L. C. Berrian, F. H. Stillman, J. O. Sinkinson.

The summary follows:

Sloops—43ft. Class—Start, 1:05.

Effort, F. M. Smith	4 31 55	3 26 55
Irondequoit, Thomas B. Pritchard	Withdrew.	

Sloops—43ft. Class—Cruising Trim—Start, 1:00.

White Wing, Louis C. Berrian	6 02 57	4 52 57
Nautilus, J. J. McCue	5 48 45	4 38 45

Sloops, 36ft. Class—Start, 1:50.

Leda, S. H. Mason, Jr.	5 21 38	4 06 38

Sloops—30ft. Class—Start, 1:25.

Alert, J. W. Alker	5 20 42	3 48 42
Flosshilde, W. D. Hennen	5 20 50	3 55 50
Little Peter, F. M. Wecks	5 25 05	4 00 05
Curlew, H. Ashmore	Withdrew	

Raceabouts—Start, 1:30.

Rogue, A. B. Alley	5 29 17	3 59 17
Mavis, G. L. Pirie	5 29 45	3 59 45
Jully Tar, Slocum Howland	5 26 07	3 56 07
Grasshopper, H. C. Pryer	5 28 10	3 58 10

Sloops—25ft. Class—Start, 1:35.

Firefly, D. P. Granberry	5 35 07	4 00 07
Snapper, A. B. Alley	5 32 45	3 57 35
Lucille, C. L. Weyand	5 43 40	4 08 40
Bonita, W. H. Peer	Withdrew.	

Yawls—Start, 1:15.

Irene, Daniels & Allen	6 04 12	4 49 12

Cabin Catboats—25ft. Class—Start, 1:35.

Ripple, Kraemer & Miller	6 10 27	4 35 27
Annie C., Jas. Custance	5 26 40	3 51 40

Open Sloops—21ft. Class—Start, 1:40.

Jeebi, A. D. R. Brown	4 40 53	3 00 53
Gazabo, H. T. Vulte	Withdrew.	
Phidias, C. Kirchhof	Withdrew.	

New Rochelle One-Design Class—Start, 1:40.

Caper, P. L. Howard	4 43 16	3 03 16
Knave, R. N. Bavier	4 45 30	3 05 30
Ace, Miss A. Bavier	4 45 47	3 05 47
Alga, A. Mestre	4 54 36	3 14 36

Manhasset Bay One-Design Class—Start, 1:40.

Lambkin, W. W. Swan	4 47 52	3 07 52
Falcon, Stevens & Cole	4 55 35	3 15 35
Arizona, G. A. Corry	4 49 14	3 09 14

One-Design Catboats—Start, 1:45.

Shovonne, George J. Stelz	5 11 55	4 26 55
Copperhead, R. Brandt	Withdrew.	

The winners were Effort, Nautilus, Leda, Alert, Grasshopper, Snapper, Irene, Ripple, Jeebi, Caper, Lambkin and Shovonne.

The following sales have been made by Mr. Stanley M. Seaman: 41-footer launch Ted, for Mr. Charles Longstreth, of Philadelphia, to Mr. F. B. Van Doorn, of New York city; 47ft. launch hull for the Marine Construction & Dry Dock Co., to Mr. Robert C. Fisher, of Larchmont; sloop Oriole for Mr. C. E. Pinckney, of New Rochele to Mr. Geo. C. Pease, of New York city, and the sloop Nan for Prof. H. E. Northup to Mr. R. M. McBride, of New York city.

Annual Cruise of the Goodenough.

Story Submitted in "Forest and Stream" Cruising Competition.

BY FRANK F. FRISBEE, DETROIT, MICH.

With watching the now dimly seen shore line of Batchewana Island and keeping our sails drawing well, time flies rapidly, and before we know it we glide into Batchewana Bay and round the Fishhouse Point, and soon are on our anchorage. It is eleven o'clock before our hook is down, and our sails furled. Taps are sounded and all turn in, with our riding light in the rigging we feel safe.

Batchewana Bay is only about 45 miles from the Soo, but beyond the fact that it is aecessible, might as well be as many hundred, for it is away from the immediate vicinity of the fishing station in the wilderness. It is probably 15 to 18 miles in extreme depth, by 12 or 15 wide, but it is cut in two parts by Batchewana Island, which lies practically in its center. There are numerous small islands and eountless bays and coves. There are five first-class trout streams, some of which are large rivers, with several smaller creeks running into the bay. Back of it are high hills or mountains covered by the dark green forests of the north. Outside of the bay are numerous reefs and shoals where the trout congregate. By referring to the chart accompanying this article and the descriptions of our various trips, the above deseription will enable one to have a fair idea of our eruising grounds.

The bay is a beautiful spot in this beautiful world, and happy is he who cruises on Batchewana's crystal waters.

If any one still questions the eharms of the Bay, they will find in the lines beneath a few of the reasons why it is charming:

WHERE IS BATCHEWANA BAY?

Where the gentle zephyrs play,
Where the rushes bend and sway
O'er the wavelets clear and blue,
Where there's rest and peace for you.

Where the forest, dark and green,
On the distant hills are seen;
Where the crystal rivers flow,
Down to join the lake below.

Where beneath the crystal tide,
The "speckled crimson beauties" hide;
And in waters dark and deep,
The gamy bass 'neath rock doth sleep.

Where darkest night is turned to day,
By bright Aurora's radiant play,
And the stars in sky so blue and clear,
Seem to earth to be quite near.

Where upon the rugged shore,
The wild waves dash with mighty roar,
When the Storm King cometh forth
From his home in distant north.

Where still the caribou and deer,
Roam the forest without fear,
And man's desecrating hand has not been laid,
On forest deep and grassy glade.

Where mountains raise toward the sky,
Their fir-clad peaks and summits high;
Where mighty waterfalls with crested wave,
The cañon's deep, dark side do lave.

Where far from the crowd and push and strife,
He who will, may live a peaceful life,
And live not for the morrow, but to-day,
That, my friend, is Batchewana Bay.

The sun does not always shine even in Batchewana Bay, and the next morning when the Professor turned out, he found it had rained hard during the night. The wind had gotten to the north, a little west (which means eold up there), and there was a nasty sea rolling outside, which did not bother us, excepting to make the yacht tug on her chain, so we payed out plenty, so she would ride more easily.

After breakfast we went ashore and renewed our pleasant aequaintance with the foreman of the fish gang. For here is a commercial fishing station. We replenished our iee chest and sent our mail ashore for the down boat, which was due the next day. This is an advantage along the north shore, the faet that it is possible to send and receive mail from the fishing stations. So that while in a measure we are isolated, we still keep in toueh with the outer world.

LOWER FALLS AND POOL OF CHIPPAWA RIVER.

About noon the Skipper took a vote on where we would sail to, and it was decided that we would go up the bay to the mouth of the Chippewa River. So the Skipper and Ed went forward and tackled the anchor, while the Professor took the stops off of the mainsail and stood by the wheel. On board the Goodenough each man does his share, and we take much pleasure in handling our craft. We have tried taking a sailor man, but find we can get more real sport by handling her ourselves, and while it is sometimes hard work, it gives us a good appetite. In getting under way we always followed a certain system, and it may please brother yachtsmen to know how we work it. The Goodenough carries two large anchors (100 pounds), a patent and old style, also a kedge. We sometimes need 'em all, but generally one large anchor will hold her. We never try to haul our anchors with the windlass, but enough of the erew take hold of the chain to ride her slowly up to the anchor; when apeak we make on to the windlass and pump her up. Sometimes it is hard to break, and then we get the canvas on and break the hook loose that way. By the time our anchor is a weigh stops are off of sails, mainsail is up and then head sails go up. The Professor takes the wheel and brings her into the wind. The anchor is fished and catted, and we are off.

The wind was very fresh when we started, and we were just able to lay our course for the cut (see diagram), between mainland and Batchewana Island. The wind held, so that by one o'clock, after a fine sail, we neared the Chippewa. Our anchorage here is just off the deep water near a bank, which is a great lurking place for bass. It is claimed that there are only two places where bass can be caught on the north shore of Lake Superior—Goulais Bay and Batchewana Bay. But you do not always get them there. Sometimes. We have had fair luck, as the photographs will show. Fishing for bass we put in the rest of the day, and when evening came enjoyed the beautiful scene and the echo, which came back to us from high mountains and hills. To the left of the Chippewa River the hills rise nearly precipitous from the shore of the bay, and in one place the huge rocks are like palisades, and they look like the walls of some old castle or fortress perched upon the mountain top, the highest point being 1,040 feet above the sea, or over 400 feet above lake level.

When the bugle was sounded the high hills would send the sound waves rolling along, and echo on echo would come back, until the sound would die away in a ringing note like that of a bell, and which we never tired of hearing. During the night a cold north wind eame up, so double blankets were very necessary, as we always open windows and the companionway at night.

No one was in a hurry the next morning to turn out, but the Skipper sounded the reveille at seven, and it was not long before Percy's kerosene burner was puffing. Not that we burned oil in our cook stove, but Percy had a way of hurrying things up by pouring coal oil into his stove, and then things hummed. The yacht has only been on fire three or four times, but that don't eount with Percy, when he is in a hurry, and we looked pleasant and put our trust in Providence. We can excuse much in Perey, for he soon calls us to a very fine breakfast, for if we do not do anything else, we live well on the Goodenough, and fresh air appetites are generally with the crew.

WATCHING THE WAVES ROLL IN—NORTH SHORE LAKE SUPERIOR.

It was decided that the Skipper, Ed and the Prof. should put in a day on the Chippewa. So one of the small boats is dropped into the water and waders are donned, lunch put up and we pull from the yacht, leaving Percy and his burner in the hands of Providence, hoping to find all there when we return. It is only a short row into the mouth of the river and then up the winding, beautiful stream for a mile and a half. All north shore rivers are like the Kentucky Colonel's description of whisky—good—but, of course, some are more beautiful than others. The Chippewa is one of the prettiest and we always enjoy the pull up to the first rapids, or low falls, where we leave our boat. It would be hard to describe the beauties of the falls and rapids of the Chippewa. In about one-quarter of a mile the river descends at least two hundred feet, and this fall consists of sheer descent, broken cascades, tumbling rapids and deep, but swift flowing basins or pools. On one side the huge rocks and hills rise direct from the flowing water, and the dense forest crowns the summit with an ever-lasting green. Huge rocks with gray and barren sides, are piled in chaotic masses in the center of what, in the season of high water, is a thundering torrent and a mighty waterfall. Great boulders worn smooth by the friction of years are piled up in masses, and deep potholes worn by stones, whirled about by the rushing waters abound. The seene about the falls is wildly beautiful, and the immensity of the power that has cut its way through these granite bluffs is overpowering. Pen pictures fail in eonveying any adequate idea of such scenes as we here behold, and the photographs aecompanying this artiele are like all photographs, tame to look at, when compared with the original.

The trout fishing below, in and above the falls, is generally good. We always get all we want, and that is sufficient. Our day's catch will be a fair sample, fishing only about four hours. Sixteen fish—ten pounds. Largest one and one-half pounds. These trout are the genuine fontinalis, or, as commonly called, speckled brook trout, the largest taken from the Chippewa by our party weighed over three pounds. Our first day on the "Chip," as we have abbreviated the name, was one of pleasure. We were not out to make a record, and wanted other things as well as fish. We knew what we could do, as we had been there before. Much time was spent with the camera, and a few huckleberries were picked. Ed, who had never been up before, spent most of his time sitting on the rocks admiring the seenery. The Skipper likes to wade out waist deep into some favorite pool and east a skillful fly for the big fellows that lurk in deep water, while the Prof. kept busy with rod and camera, even after the rest said quit. The pest of black flies and skeeters are here in season, but August has not proved to be a bad month and we dope freely. We find that the Col. Fox receipt given in the FOREST AND STREAM, is as good as any, but the great secret of any fly dope being successful is to use it freely and often.

As we rowed down the river the glassy surface shone like a mirror and reflected back with added splendor the drooping bush, stately fir and shining white birch, while the blue sky with its fleecy white clouds was beneath us instead of over. One who has never seen the startling effects of the shadows on these rivers would hardly credit the wonderfully beautiful reflections, if told how they look. The water in most of the larger streams is dark and of a peculiar clear color, that seems to be capable of reflecting objects above with great distinctness. Slowly we pull back admirng the seene, and at six reach the mouth of the river. The Skipper looks over his shoulder and says, "Thank Neptune, the yacht still floats." He always expects the burner will get in its work.

Trout for supper, and then an hour on deck with the new moon, and bugle echoes. Then some games of crib before the crew retire to sleep the sleep of the north shore, which is a very refreshing and exceedingly delightful variety of slumber.

A day spent in loafing, bass fishing, just a little, and roaming about, soon passes, and it may be some of the erew did not get enough of that fine artiele of slumber. At any rate, no one wanted to sail away from the Chippewa, until the next day, then a fine breeze tempted us to get sail on, and as it was favorable we headed up the bay for the extreme southeastern portion. We had a great wind, and though it was squally, we earried all sail. In fact, it has to blow mighty hard to make the Goodenough say enough, as she is under, rather than over eanvassed—a good fault in a eruiser. The wind eame over our quarter and off shore, so we could, sailing the course necessary, start our sheets and let her go. We heeled a little, but there was no sea to speak of, and as the Skipper said, "She went some."

The ten or twelve miles we had to go were too short, as we would have enjoyed more of the exhilarating sail.

We dropped anchor in what is known as Stoppel's or Cady's Cove, a beautiful little harbor at the extremity of the bay. Here rise some very high hills and bluffs, and emptying into the eastern side of the small bay, or eove, is a small ereek—Stoppel's Creek. Now, we knew Stoppel's Creek, and visions of the past, where we had taken two and one-half pound trout out of its deep holes, made us quite desirous of trying it again.

The Skipper cleeted not to go up the creek, as he said we would have trout enough and he wanted to do some botanizing. So Ed and the Prof. took a small boat and started alone. Stoppel's Creek differs from the other streams that flow into Batchewana Bay, as it is smaller and comes out of a lower country, there being no high falls upon it. The smallest boat can only be taken up about a half mile, and then one has to wade. It has, of course, been lumbered, that is, timber has been cut on its banks and driven down with the spring freshets. At an old dam, about a mile from the mouth of the river, which was built by the Lumber Jacks, and which has partly been destroyed, we found some fine trout lurking under the logs and in the pools. We fished a short time and then decided to walk up the creek to discover the falls if possible, but after a hard tramp of two hours, gave it up, as we had gotten

RAPIDS AND ROCKS ON THE BATCHEWANA BELOW THE FALLS.

out of the hills and into what looked like a cedar swamp. We were informed afterward that the ereek headed in a lake. It was after six P. M. when two

very tired individuals got back to the yacht, as an eight or nine miles tramp in waders is not easy. We had thirty-one trout, some of which would weigh three-quarters of a pound. But the lumbering operations had spoiled the fishing, as far as large trout were concerned.

[TO BE CONTINUED.]

The Canada's Cup Challenger.

ON Wednesday, June 3, Irondequoit, the cutter built to challenge for the Canada's cup was launched from the yard of the builder, B. F. Wood, at City Island. She was designed by Mr. William Gardner, of the firm of Messrs. Gardner & Cox, for a syndicate of Rochester yachtsmen, headed by Mr. Thomas B. Pritchard.

Irondequoit is a fine vessel, and rather more of a ship than one expects to see in the modern racing boat, and if she is a fair example of the type of craft that is to be produced by the present rule of the Y. R. U. of the Great Lakes it is indeed a good one.

The boat is devoid of any extreme features, and is a very wholesome craft in every particular. In this boat Mr. Gardner has abandoned the balance rudder hung on a short vertical stern post and has returned to the usual raking sternpost with the rudder hung on it in the conventional way.

In design the yacht shows a very clean and well modeled form with a midship section of good area. The overhangs are comparatively short and well balanced. She floated just to her lines after her spars were put in place and her high freeboard, moderate overhangs and short bowsprit gave her a very snug and substantial appearance. The topsides are painted white and the bottom is treated with a green composition that has great anti-fouling qualities, both in salt and fresh water.

Mr. Wood, who perhaps turns out the best work in the country, produced a superior boat in Irondequoit, and she is a model of fine construction and workmanship. The keel, deadwood, stem, sternpost, frames and deck beams are of white oak. The planking is double, the inner skin being made of white cedar 5/8in. thick and the outer of 7/8in. mahogany. The floor plates are of steel, and diagonal bronze straps add strength to the construction. The construction has been made as light as was compatible with necessary strength and also to conform to the scantling restrictions of the Y. R. U. of the Great Lakes.

The boat is very roomy on deck and the arrangement of the cabin trunk is the same as Mr. Gardner originally put in the yawl Albicore, and last season in Rosalie.

The cabin house, which is quite narrow, is of mahogany, and at the after end of it two heavy deck beams run across the boat, giving great transverse strength. Then there is a square house, also of mahogany; aft of this house is the water-tight cockpit. The deck is laid in white pine and the rail, waterways, hatch coamings, skylights, companionways, etc., are of mahogany. With the exception of the bowsprit the spars are hollow and the yacht has a very superior suit of American-made sails turned out by Messrs. Wilson & Griffin, the duck of which they were made being woven according to Mr. Gardner's own ideas. All the deck and spar fittings were also made according to the designer's plans. The yacht steers with a tiller.

The dimensions and particulars follow:

Length—	
Over all	64ft.
L.W.L	39ft. 6in.
Breadth extreme	13ft.
Draft extreme	9ft.
Freeboard least	2ft. 10in.
Overhang—	
Forward	11ft.
Aft	13ft. 6in.
Displacement	22 tons.
Lead on keel	10 tons.
Area midship section	35 sq. ft.
Sail area, total	2,600 sq. ft.

Below the yacht has a vast amount of room. The companionway leads to a large saloon. On either side are wide transoms and back of these are berths. At the forward end on each side are sideboards. At the after end are large lockers for linen, clothes and general storage. A passage leads into the ladies' cabin aft which extends the full width of the boat. There are transoms on either side with berths in behind. The large square house overhead gives full headroom and splendid ventilation. Over the main saloon is a large skylight. Forward of the saloon on the port side is a roomy lavatory with patent closet and folding basin with a half skylight above. Opposite on the starboard side is the galley, which is also ventilated and lighted by a half skylight. The forecastle is large and affords unusually good accommodation for the four men carried. In the lazarette under the cockpit there is ample room for spare gear and sails.

The writer was aboard Irondequoit on her initial spin on Saturday last, when she tried conclusions against Effort in the Knickerbocker Y. C. race. The boat handled perfectly, and while Effort beat her, yet the test could hardly be called conclusive. Effort carried a big jack yard topsail much larger than the one used on Irondequoit and she seemed to have all the luck. The breeze was very light and fluky. The test was hardly a race, and in reality was only a sail-stretching spin. As Irondequoit was a "green" boat, the trial was very satisfactory, both to her designer and her skipper, Mr. James Barr.

"Jimmie" Barr comes from a famous family of boat sailors, and is a brother of John Barr and a nephew of Charles Barr. A word about him may be of interest. He has been brought up in racing boats and has all the essentials that make up a successful racing skipper. Barr was six years in Musmee, the Newport 30-footer, and he also had the 43-footer Hebe the year she came out. He was also in the schooner Clorita and the famous 25-footer Cartoon, and these boats never lost a race while they were under his command. He is rated as one of the cleverest and ablest boat sailers in the country, and he will get the best there is out of Irondequoit.

Irondequoit will be taken out daily in order to get the crew and sails in the best possible shape. She will also be raced occasionally until the end of the month, when she will start for Rochester.

The Canada's Cup Defender.

TORONTO, Ont., May 30.—Strathcona, the cutter which will defend the Canada's Cup against Irondequoit, the Rochester, N. Y., challenger, was launched on Thursday, May 28, and will be ready for her trial races in ten days.

The new boat is not a syndicate craft, her owner being Mr. Norman Macrae, of Toronto. He has gone to an expense of some $8,000 to provide a worthy defender for the historic trophy, and at the same time a staunch, thorough-going craft that will be a source of pride and comfort, whether she is a successful racer or not.

Lord Strathcona, the Canadian High Commissioner, was pleased to express his consent to the use of the name and his best wishes for the yacht's success; and Strathcona she was christened, in orthodox style, by Mrs. R. S. Smellie, at Oakville, taking her first dip into the same old river that has floated all the Canadian defenders and challengers for the trophy. Commodore Æmilius Jarvis was among those present at the launching and was highly pleased with the new craft. It is probable that he will sail her, as he has sailed all the previous Canada's cup racers and is the best-known Canadian skipper.

Strathcona looks chunky, compared with such "long, low raking craft" as the original Canada, Beaver, or Invader, whose names have become famous in connection with the Canada's Cup. But she is a graceful boat, and a pleasing product of the new rule. She has not much sheer, but sufficient for good looks. Her counter is long and fine, and her forward overhang rather short. She is painted white, with a broad silver band at the waterline, and glittering black underbody. Her deck is finished in mahogany and brasswork, and is flush, without a cabin trunk, but the usual breaks, such as hatchcoamings, skylights, companionways and cockpit.

In sail plan the defender differs largely from the challenger Irondequoit. The base of her triangle of canvas is at least 8ft. longer. The height is some 4ft. less. This has caused some criticism, as the second week in August is usually the time for star-tickling club topsails on Lake Ontario, and while the broad-based triangle is a good sail plan to lug in a smashing breeze, the high and narrow one may be the kind that is needed. There is never any question of one of Payne's designs being able to carry sail; the query is, has the English designer fully estimated the possibilities of Lake Ontario light weather? Beaver, the fastest boat of her size in a breeze Lake Ontario has ever seen, lost the Canada's Cup through a succession of light days. Two suits of canvas are being made for Strathcona, one by Ratsay and Lapthorne, in England, and one by a Toronto firm, and it has been suggested, whether wisely or not, that one or the other might be cut expressly for light weather. A higher peaked mainsail, allowing a larger and loftier club topsail, could be carried with the same set of spars, and would not take long to bend.

Strathcona is a deep-bodied boat, with easy bilges, hollow floors and more hull and less fin than former Canada's Cup craft. She has comparatively short overhangs—8ft. forward and 12ft. aft, leaving off the inches, and a fair, clean side that can be immersed to the rail without materially changing her lines. The lead is the biggest part of the fin, carried in a simple "U" shaped slab, 30in. deep at the after end and 15 forward. It does not quite reach to the sternpost aft, or to the forward end of the fin. The great rake of the sternpost, the simplicity of the slab of ballast, and the wide, deep wooden rudder are the features of her underbody.

In construction, the benefit of the doubt has always been given to strength in preference to lightness. The complete frame of the yacht was constructed and set up in Southampton, England, by Summers and Payne, and is of English oak. The planking is inch and a quarter Douglas fir, absolutely without a knot, in 40ft. lengths. There are no butts, the planks being scarfed where it is necessary. The fir is a third heavier than cedar, but is much stronger.

Accurate dimensions of the defender are:

Length over all, 59ft. 7in.; waterline, 40ft.; breadth, 13ft. 8in. on deck, 13ft. 3in. at the waterline; draft, 8ft. 3in.; lead ballast, 10½ tons; mainmast, cap to heel, 47ft.; main boom, 47ft. 6in.; main gaff, 28ft. 6in.; topmast, 20ft. 10in., from fid to sheave-hole, and 22ft. over all; bowsprit, outboard, 12ft.; mainsail hoist, 33ft.; sail area, 2,598 sq. ft., divided thus: Mainsail, 1,393; club topsail, 348; staysail, 315; jib, 281; total headsail triangle, 856.

For a trial boat Strathcona will have the benefit of Gloria, also designed by Payne, and of transatlantic fame. Gloria is a larger boat, 10ft. longer on the waterline, and of great capabilities as a racer and cruiser. She won the Coupe de France in the Mediterranean in 1898, and was subsequently purchased and brought out for Mr. H. C. McLeod, of this city, who generously places her at the disposal of the race committee as a trial boat, until June 20. On that date Gloria starts for a salt-water cruise, to last all summer, but there will be plenty of good material left behind in the local fleet to give Strathcona what further practice sailing she needs.

CHARLES H. SNIDER.

Conditions Governing Canada's Cup Matches.

CONDITIONS governing the match for Canada's Cup, to be sailed between yachts representing the Rochester Y. C. and the Royal Canadian Y. C:

RULES.

The racing rules shall be those of the Yacht Racing Union of the Great Lakes, as existing at this date, subject to such additions and variations as are herein provided, and in accordance with the deed of gift, dated January 16, 1897.

CONSTRUCTION.

The yachts shall be of wooden construction, in accordance with the scantling tables in the rules above-mentioned.

SIZE OF YACHT.

The competing yachts shall be in the 40ft. L. W. L. class.

NUMBER OF RACES.

The winner of three out of five races shall be declared the winner of the match.

DATE OF RACES.

The first race shall be sailed on Saturday, the 15th day of August, 1903, and the other races on consecutive days thereafter until completed. Sundays excepted.

COURSES.

The races shall be sailed on Lake Ontario, off Toronto Harbor, on courses to be hereafter agreed upon.

The first course shall be triangular.

The second course shall be windward or leeward and return. The tug bearing the buoy shall start at the time the preparatory gun is fired.

The third and fifth shall be similar to the first.

The fourth shall be similar to the second.

The triangular races shall be once around an equilateral triangle of twenty-one nautical miles.

The windward or leeward races shall be nine nautical miles to windward or leeward and return.

The triangular courses shall be so sailed that one side of the triangle shall be laid to windward (first, if possible).

In windward and leeward races all buoys shall be left to starboard, and in triangular races all buoys shall be left to starboard or port, as directed by the judges.

TIME.

All races shall be started at 11 o'clock A. M.

Any race not sailed in 5½ hours by the winning yacht shall be resailed.

The start may be postponed by the judges—

1. In case of fog.
2. If, in their opinion, the space around the starting line is not sufficiently clear at the time appointed for starting.
3. In case both yachts consent to a postponement.
4. In case of serious accidents to either yacht, as hereinafter provided.
5. Should such a course appear to them desirable.

And in case of postponement the judges shall determine the time for starting, but in no case shall a race be started later than 1 P. M.

A yacht crossing the line before the starting signal is given shall be recalled by five short blasts of the wistle and the hoisting of her national flag, and shall also be recalled by megaphone.

UNFINISHED RACES.

An unfinished race shall be resailed until completed.

ACCIDENTS.

In case of accident to either yacht prior to the preparatory signal, notice thereof shall immediately be signalled to the judges, who shall have power to postpone the race, if the accident, in their opinion, is sufficiently serious to warrant such a course; or if an accident occurs during a race, the yacht to which the accident has happened, shall have sufficient time to make repairs before being required to start in the next race.

SCRUTINEERS.

Each yacht shall have on board during the races a representative named by her competitor.

The names of the scrutineers shall be given to the judges not less than 24 hours before the first race, and the scrutineers shall report to the judges within six hours after the termination of each race.

MANAGEMENT.

The races shall be sailed under the management of three judges, none of them shall be interested in either yacht. One shall be appointed by each club, and the two so appointed shall select a third on or before the first day of July, 1903, and they shall act as judges and timekeepers and settle all disputes. The decision of a majority shall be final in all matters.

The judges shall be the Regatta Committee referred to in the rules of the Yacht Racing Union of the Great Lakes.

REFEREE ON CONSTRUCTION.

A referee on construction shall be appointed not later than December 1, 1902, to whom all construction plans may be submitted and all questions on construction referred, and his interpretations of the scantling table shall be final.

MEASUREMENTS.

The yachts shall be measured by the judges or by disinterested persons appointed by them, and each yacht shall be entitled to have a representative present when measurements are taken.

The yachts shall be measured not less than four days before the first race.

INSTRUCTIONS.

Charts of the course and instructions shall be furnished to the competing yachts not later than 7 o'clock on the morning of the race.

ALTERATIONS.

These conditions may be altered or amended by mutual agreement at any time.

(Signed)

Æmilius Jarvis, Commodore, on behalf of the Royal Canadian Y. C., Toronto, Ont.

(Signed)

C. E. A. Goldman, witness as to A. E. Jarvis signature.

(Signed)

Charles Van Voorhis, Commodore, on behalf of the Rochester Y. C., Rochester, N. Y.

(Signed)

Frank T. Christy, witness as to Chas. Van Voorhis signature.

Supplemental conditions governing the match for Canada's Cup, to be sailed between yachts representing the Rochester Y. C. and the Royal Canadian Y. C:

1. These supplemental conditions, in so far as they conflict with the conditions dated June 16, 1902, supersede and control those conditions.
2. The rig of both yachts shall be restricted and limited to what is generally known as "cutter rig," and shall consist of mainsail, topsail, staysail, jib, jib topsail and such other canvas as is usually set under such rig, topmast to be carried or mast extended to form topmast, it being the intention to prevent the rigs generally known as "jib and mainsail" and "jib, staysail, and mainsail rig."
3. The first race shall be sailed on Saturday, the 8th day of August, and the other races on consecutive days thereafter until completed, Sundays excepted.
4. It is stipulated that the year book of the Yacht Racing Union for 1902 contains a correct copy of the Yacht Racing Union rules.
5. Mr. W. P. Stephens, of Bayonne, New Jersey, is hereby appointed referee on construction.

Dated, Rochester, January 23, 1903.

(Signed)

Æmilius Jarvis, Commodore Royal Canadian Y. C.

The Rochester Y. C. by Charles Van Voorhis, Commodore.

Seawanhaka-Corinthian Y. C.

OYSTER BAY, LONG ISLAND SOUND,

Saturday, June 6.

The one-design 15-footers sailed their first race over the inside course on Saturday, June 6, for the Center Island cup. Seven boats started, and Sabrina, owned by Mr. C. W. Wetmore, won by nearly 3 min. The wind was light from the S. E. The race for the raceabouts was abandoned. The summary follows:

Start, 3:25:	Finish.	Elapsed.
Sabrina, C. W. Wetmore	6 28 35	3 03 35
Cayenne, C. F. Hoyt	6 31 25	3 06 25
Imp, H. H. Landon	6 33 41	3 08 41
Olita, H. C. Rouse	6 36 43	3 11 43
Kentenia, C. H. Davis	6 37 08	3 12 08
Fly, Emlen Roosevelt	6 37 47	3 12 47
Bairn, W. H. Matheson	6 38 30	3 13 20

OAKLAND, Cal., June 2.—*Editor Forest and Stream:* In view of the large but unavoidable element of chance which enters into a modern international yacht race, would it not be much better to start the three Shamrocks against Columbia, Constitution and Reliance? Never before in the history of the American Cup races has there been such an opportunity as is now presented, and probably another like it will not occur within this generation.

EDWARD MARSHALL.

Corinthian Y. C.

STAMFORD, LONG ISLAND SOUND,

Saturday, June 6.

The Corinthian Y. C. held a regatta for auxiliaries and launches off Stamford on Saturday, June 6. The course for the auxiliaries was off the clubhouse to and around Cow Buoy, thence to the finish line, a distance of four miles. The course for the launches was also from a starting line off the clubhouse to and around Gangway Buoy, thence back to the finish line, a distance of five miles.

The summary follows:

Auxiliary Power Yachts.

Vitesse, W. L. Bradley	1 02 15
St. Elmo, Thomas Pritchard	1 14 15
Mizpah, Mansfield Towns	1 15 01

Launches not over 26ft. and over 21ft.

Æolus, R. H. Gillespie	1 06 00
Palmer, Thomas Smith	1 07 30
Wasp, E. J. Trowbridge	1 09 30
Spray, M. O. Dibble	1 10 15
Pawnee, F. A. L. Snecker	1 10 45
Isabella, Fred S. Pitt	1 12 15
Hartford, W. P. Hatch	1 12 30
Chief, Wallace Brown	1 16 00

Launches not over 21ft. and over 17ft.

Dick, B. Goldfinger	1 16 15
May S., Joseph Hubert	1 19 15

Launches not over 17ft.

Katherine, William F. Gillespie	0 43 00
Bateau, W. Selleck	1 06 00

The winners were Vitesse, Æolus, Dick B. and Katherine.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

"The Yachtsman's Annual Guide for 1903," compiled by Mr. M. J. Kiley, has recently been issued. The book is larger and more complete than any of the previous issues, and contains a large fund of valuable and important matter.

The steam yacht Sagamore, owned by Mr. Edward Clinton, has been sold by Mr. B. B. Crowninshield to Mr. William H. Barnard, of New York.

The schooner Columbia, owned by Mr. Joseph De F. Junkin, of Philadelphia, has been chartered by Mr. W. Gould Brokaw.

Shamrock I. and Shamrock III. left Fayal, Azores, accompanied by the steam yacht Erin and the tug Cruiser on Thursday afternoon, June 4, for New York.

Messrs. Colven & Bickmann have sold the steam yacht Apache for Mr. Spencer Kellogg to Mr. Carl R. Schultz, and the steam yacht Rex for Mr. Alexander Stein to Mr. Geo. F. Benson, of Montreal. This firm has chartered the steam yacht Rival for Mr. T. A. Beall to Mr. H. H. Sands.

At the last meeting of the New York Y. C., the following were elected to membership: Frank C. Swan, Leonard Richards, T. C. Dunham, Daniel Cox, James D. Goin, Thomas H. Wheeler, Commander J. D. Adams, U. S. N.; J. B. Francis Herreshoff, Alex. H. Rutherford, Medical Director Dwight Dickinson, U. S. N.; William Andrews Clark, Merritt B. Mills, William Ruloff Kipp, Commander W. H. H. Southerland, U. S. N.; General Louis Fitzgerald, William H. Bromley, Edgar S. Turton, William M. Warren, Lieutenant-Colonel William P. Biddle, U. S. M. C.; C. H. R. Woodward, Lieutenant Stanford E. Moses, U. S. N.; Midshipman Isaac I. Yates, U. S. N.; Ensign C. H. Woodward, U. S. N.; Mefford Runyon, Otto G. Smith, Henry M. Wykes, Alexander M. Orr, Jr.; D. L. Clemson, Naval Constructor W. G. Groesbeck, U. S. N.; Frank H. Clark, Lieutenant-Commander W. L. Rodgers, Henry Howard, Benjamin T. Fairchild, Ralph A. Sturges, George A. Weber, Arthur W. Dennis, Charles F. Street, Frank A. Marsh, Captain A. Marix, U. S. N.; J. G. Neafie Whitaker, William May, Charles J. Follmer, W. Starling Burgess, Midshipman John Rodgers, U. S. N.; Heber R. Bishop, Samuel Dwight Brewster, Charles J. Harrah, Nelson Macy, John C. O'Conor, Herbert C. Leeds, F. L. Shippaid, Lieutenant Emory Winship, U. S. N.; Edward Bradford Dench, M.D., and James Kingan.

Owing to the lack of entries the annual regatta of the New York Y. C. that was to have been sailed on June 11, the event will be combined with races for the Glen Cove cups, which will take place on the Sound on June 15. The following notice has been issued by the Regatta Committee of the New York Y. C.:

NEW YORK Y. C., June 6, 1903.

There being no apparent prospect that any of the classes for the June regatta will be filled, the club steamer will not go down the bay on June 11.

The steamer Cepheus will be placed at the disposal of the members and the ladies accompanying them on the occasion of the Glen Cove cups, June 15. Lunch will be provided as is customary at the June regattas. The 90-footers will be entered for this event.

The Cepheus will leave the foot of East Thirty-first street at ten o'clock in the morning and will touch at this pier on her return.

Tickets issued for the regatta on June 11 will be accepted on the Cepheus.

S. NICHOLSON KANE,
NEWBURY D. LAWTON,
EDWARD H. WALES,
Regatta Committee.

Mr. Lewis Cass Ledyard is the new owner of Dreamer, the steamer recently sold by Mr. Thomas W. Lawson. Mr. Lawson retained the name Dreamer when he sold the boat, and Mr. Ledyard will call her Roamer.

"Manning's Yacht Register for 1903" has been issued. It is divided into two volumes: Part one contains a list of all recognized yacht clubs in North and South America, and also a register of all steam and sail yachts enrolled in these clubs. Part two contains records of yacht club races sailed during 1902. The books are well gotten up and are substantially bound in white canvas.

The Regatta Committee of the Sippican Y. C., Marion, Mass., have arranged the following races for this season:

Friday, June 19—Open race.
Friday, June 26.—First open Corinthian.
Friday, July 3.—First club Corinthian.
Friday, July 10.—First open ladies.
Friday, July 17.—Second club Corinthian.
Friday, July 24.—Second open Corinthian.
Saturday, July 25.—Second open.
Friday, July 31.—Third club Corinthian.
Saturday, August 8.—Sports—illumination.
Friday, August 14.—Fourth club Corinthian.
Friday, August 21.—Second open ladies.
Saturday, August 22.—Van Rensselaer cup.
Friday, August 28.—Fifth club Corinthian.
Friday, September 4.—Third open Corinthian.

The plant of the Racine Boat Mfg. Co., Racine, Wis., was totally destroyed by fire on May 31. New buildings will be built at once and the business will be conducted on a larger scale than ever before.

Captain Howard Blackburn left Gloucester, Mass., for Havre, France, in a 15ft. dory on June 7. Captain Blackburn is well known as a lone voyager, this being his third trip across the Atlantic in a small craft.

Rifle Range and Gallery.

Fixtures.

June 15-16.—Union Hill Schuetzen Corps twenty-fifth anniversary shoot. P. Stumpf, Capt.
June 18-20.—St. Louis, Mo.—Tournament under auspices of Central Shooting Bund. Horace Kephardt, Sec'y.
July 6-7.—New Haven, Conn.—South New England Schuetzen Bund annual schuetzenfest, under the auspices of the Independent German Rifle Company. H. C. Young, Sec'y.

The United States Revolver Association.

NEW YORK, N. Y., June 2.—I inclose herewith a communication in regard to the 50-shot revolver record by J. E. Gorman, of San Francisco. I also inclose a circular letter which has been sent out to a number of the principal revolver and pistol shots of the United States. This letter embraces about all the information that we have up to the present time in regard to the proposed international matches. The exact dates and other details will be arranged as soon as possible:

A. L. A. HIMMELWRIGHT.

The communication above referred to follows:

On April 26, 1903, Mr. J. E. Gorman, of the Golden Gate Rifle and Pistol Club, San Francisco, announced his intention to shoot for the 50-shot revolver record under the any revolver rules of the U. S. R. A., at 50yds. The score was begun at 4:15 P. M. and finished at 4:53 P. M. Mr. Gorman shot a Smith & Wesson revolver, with a 6½in. barrel, 2lb. trigger pull, open target sights. The weather conditions were fair. The score follows:

J. E. Gorman	10	10	8	9	10	9	10	10	9	9—94
	10	8	10	9	10	8	10	10	9	7—91
	9	10	10	9	8	7	8	10	8	9—88
	7	9	9	10	8	10	10	8	10	9—90
	10	10	8	10	10	10	9	8	10	10—95—458

The above score complies strictly with the rules and regulations of the U. S. R. A., and is recognized as the 50-shot revolver record under the conditions named.

A. L. A. HIMMELWRIGHT, Sec'y-Treas.

The circular letter follows:

Dear Sir—As you probably have seen in the shooting papers and other publications we are now negotiating for two international matches, one with France and one with Great Britain, both to be shot with revolvers. In the match with France there will be fifteen men on a side, 60 shots per man, at 50yds. on the Standard American target, any revolver and any ammunition; trigger pull 2½lbs. The time limit in which the scores must be completed has not yet been decided. In the match with Great Britain there will be eight men on a side, 12 or 30 shots at 20yds, and 12 or 30 shots at 50yds. The conditions of this match have not yet been decided, but they will probably be a plain 2in. bullseye used at 20yds., and the Standard American target at 50yds. The English suggest 12 shots at each distance. We suggest 30 shots at each distance. The complete details of this match will be decided later.

The object of this letter is to urge you to begin systematic and regular practice, and get yourself in as good condition as you possibly can by the end of June; also to request that you use your influence to have any other good shots in your vicinity practice with you under the conditions of the matches and report to me what progress is made about once a week. The matches will probably be shot between the end of June and the beginning of July. The range at Walnut Hill, Mass., has been offered to the Association free of expense. This is the finest equipped range in the East, and the Americans will probably shoot both matches at this range. We expect to arrange for free transportation for as many candidates for the team as possible, and it is the hope of the Executive Committee that we may be able to assemble twenty-five or thirty of the best shots in the United States at the Walnut Hill range several days before the match. The team will then be selected from the men who make the highest scores in preliminary practice. We are trying to make arrangements so that 2in. bullseye for 20yd. shooting in the English match can be obtained for the asking. Definite information in regard to this will be given later.

We have just published a new booklet, giving the revised constitution, championship matches, rules and regulations, and list of members, bringing the latter up to date. This is going forward to you under separate cover.

As you know, the revenue of this Association is obtained solely by the yearly dues of the members and such voluntary contributions as individuals choose to make. You could aid very materially if you could induce several new men to join the Association. Will you not try to do this? I am inclosing application blanks herewith for thus purpose, and will fordward reading matter to any address that you may furnish me.

A. L. A. HIMMELWRIGHT,
Sec'y-Treas. U. S. Revolver Association.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

*June 10-11.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.
June 16-19.—Warm Springs, Ga.—The Interstate Association's tournament, under the auspices of the Meriwether Gun Club. Chas. L. Davis, Sec'y.
June 16-18.—New London, Ia.—Seventh annual midsummer target tournament of the New London Gun Club.
June 16-18.—Grand Western Handicap Target tournament of the Denver, Col., Trap Club.
*June 17-18.—McKeesport, Pa., tournament.
June 17-18.—Wilkes-Barre, Pa,—E. L. Klipple tournament.
June 18.—West Chester, Pa., Gun Club's all-day target shoot.
June 23-25.—Grand Rapids, Mich.—Consolidated Sportsmen's Association's second annual target tournament; $1,000 added. A. B. Richmond, Sec'y.
June 24-25.—Rutherford, N. J.—Interstate Association tournament under the auspices of the Union Gun Club.
*June 24-25.—New Castle, Pa., Gun Club's tournament. James Atkinson, Sec'y.
June 25-26.—Indianapolis, Ind.—Two days' target tournament of the Limited Gun Club. Bert B. Adams, Sec'y-Treas.
July 3-4.—Memphis, Tenn., Gun Club's two days' shoot. A. H. Frank, Sec'y.
July 4.—Towanda, Pa., Gun Club's annual tournament. W. F. Dittrich, Sec'y.
July 4.—Concord, Staten Island.—All-day target shoot of the Richmond Gun Club. Special handicap, 100 targets, for $10 in gold. Albert A. Schoverling, Sec'y.
July 4.—Altoona Rod and Gun Club. Targets. G. G. Zeth, secretary, Altoona, Pa.
July 4.—All-day shoot of the Haverhill (Mass.) Gun Club. S. G. Miller, secretary.

Saturdays.—Chicago.—Garfield Gun Club; grounds W Fifty-second avenue and Monroe street. Dr. J. W. Meek, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.
**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J. Bradfield, Sec'y, Vicksburg, Miss.

DRIVERS AND TWISTERS.

The Dover (N. H.) Sportsman's Association have announced a shoot for July 4.

The next regular shoot of the Mississippi Valley Trapshooters' Association will be held at Memphis, Tenn., in July.

The University shoot will take place this year on July 15, at Charlottesville, Va., Mr. G. L. Bruffey is the secretary.

Mr. Ernest F. Scott, captain of the Dalton, Ohio, Gun Club, informs us that his club will hold its fifth annual tournament on Oct. 8 and 9. Mr. H. Santmyer is manager.

Mr. Henry H. Stevens, of Rahway, N. J., an expert shooter and gentleman of broad, accurate knowledge in tourament matters, has joined the professional ranks of trapshooters.

At the shoot of the Interstate Association, at Boston, Mass., June 3 and 4, Mr. J. A. R. Elliott was high in the averages, with 184 and 186 out of 200, a total of 370 out of 400 for the two days, 92.5 per cent.

The shoots of the Poughkeepsie (N. Y.) Gun Club are held on Thursday. Elsewhere in our trap columns this week, in the report of their last weekly shoot, a cordial invitation is extended to visiting sportsmen.

The Wanderers, a trapshooting organization, were invited by the North River Gun Club to participate in its shoot at Edgewater, N. J., on Saturday of this week, but owing to the New York State shoot this week, probably the visit will be postponed to June 20.

At the opening shoot of the Delaware County, Pa., Gun Club a team contest was a feature. There were three teams, six men to a team, 25 targets per man, and they scored as follows: Delaware Country Club 133, S. S. White Club 130, Century Gun Club 123.

It is a pleasure to mention that Mr. Harold Money is recovering surely but slowly from his recent severe illness. He has been recuperating for some weeks in Colorado. His mother, who has been nursing him through it all, will return to her home in Oakland, N. J., soon.

The secretary, Mr. Albert A. Schoverling, 302-304 Broadway, informs us that the Richmond Gun Club will hold an all-day target shoot on July 4, on the club grounds at Concord, Staten Island. There will be a special handicap at 100 targets for a **ten dollar gold** piece. Entrance $2. Refreshments will be served on the grounds.

In an eleven-man team match between teams of the Dalton Rod and Gun Club and the Pittsfield (Mass.) Rod and Gun Club, June 6, 25 targets per man, Pittsfield won with a score of 167 to 153. Mr. H. S. Sidway was high on the Pittsfield team, with 24. Mr. Flansburgh was high on the Dalton team, with 18. The Dalton Club was recently organized.

Mr. E. E. Shaner, secretary-manager, writes us as follows: "The Interstate Association tournament scheduled for Viroqua, Wis., July 30 to Aug. 1, will be held on the grounds of the La Crosse Gun Club, La Crosse, Wis., under the auspices of both the Viroqua and La Crosse gun clubs, the same dates holding good. John M. Moore, La Crosse, Wis., will furnish information relating to the tournament.

The secretary of the Haverhill (Mass.) Gun Club writes us as follows: "Our club will celebrate the "ever glorious 4th" by holding an all-day shoot, to which all our old friends are cordially invited. We would like all lovers of the scatter gun to come and spend the day with us, so that we can call them all old friends. They can make all the noise they wish, and we will help them do it."

At the Budd-Burmister tournament, Arnold's Park, Iowa, June 2-4, Messrs. F. Gilbert and F. Riehl were the only manufacturers' agents who shot through the entire programme. Gilbert broke 579 out of a possible 600, an average of 96.5 per cent., truly an excellent performance. Mr. W. H. Heer won high average in the amateur class, with 566, about 94.4 average. The recent floods in the West caused a smaller attendance than was anticipated.

The programme of the Haverhill, Mass., Gun Club, provides fourteen events for July 4, 10, 15 and 20 targets, $1.15, $1.25 and $1.30 entrance. Events 9, 10 and 11, inclusive, are the prize handicap match, 50 targets, regular, unknown and reversed angles. Targets included in entrance at 1½ cents. Sweepstakes optional. Lunch served free. Total number of targets, 190; total entrance, $17. Mr. C. A. Griggs is president. Mr. S. G. Miller is secretary.

The secretary-treasurer, Mr. Bert B. Adams, writes us as follows: "The Limited Gun Club, of Indianapolis, will hold a two days' target tournament on June 25 and 26. Mr. Hugh Clark, of Wabash, Ind., has challenged Mr. C. O. Le Compte, of Eminence, Ky., for the possession of the Grand Hotel cup, and the match will be held during the tournament. Programmes for the shoot are now in the hands of the printers, and will be mailed in a few days."

The Interstate Association tournament, to be given at Rutherford, N. J., on June 24 and 25, is within convenient reach of southern New York, New Jersey and Pennsylvania trapshooters, and is not incouvenient for others living at greater distances. The programme is an attractive one, there is a comfortable clubhouse and traps perfectly installed. The transportation facilities are first-class. Keep the dates posted in your hat and shoes.

Mr. Ernest Detmold, of the firm of Von Lengerke & Detmold, suffered a serious accident on Wednesday of last week. His horse became unmanageable under the elevated road in Harlem, owing to fright, caused by a passing train, and collided with another horse, throwing Mr. Detmold from his carriage to the pavement. Mr. Detmold's scalp was severely cut, and required several stitches, but we are greatly pleased to add that his injuries are not dangerous, and that he is rapidly recovering.

The Grand Western Handicap tournament at targets, June 16-18, given by the Denver, Col., Trap Club, has $625 added money. On the first two days there are ten 20-target events each day, $2 entrance, $15 high average, one money, each day. On the third day there are five 20-target events, and the Grand Western Handicap, for the Denver Post Trophy, emblematic of the Western championship, 100 targets, $10 entrance, $100 added; two moneys for every ten entries. Shooting commences at 9:30. Practice day on the grounds, June 15. Reduced railroad fares. Mr. Fred C. Whitney will act as cashier. Mr. Frank B. Cunningham, of St. Joseph, Mo., will act as manager. Guns, ammunition, etc., sent by express, should be addressed to Chas. E. Younkman, secretary, 1537 Arapahoe Street, Denver. The competition is open to all, distance handicap.

The programme of the eleventh amateur target tournament of the Mississippi Valley Trapshooters' Association, to be held under the auspices of the Caddo Gun Club, at Shreveport, La., June 16 and 17, may be obtained by applying to Mr. V. L. Fulton, secretary of the Caddo Gun Club. Added money, $1,100. The events are alike each day, seven at 20, two at 25 and one at 10 targets, entrance based on ten cents per target; 20 events all told, $40 total entry, and $500 added each day. Rose system. On June 15 there is a special 100-target event, $10 entrance, $100 added money, high guns, three moueys for every ten entries. On the first day, events 5 and 6 (50 targets), are for the Labacher medal, for league members only. On the second day, event 5 is the 3-man team race for Peters team trophy. No. 6 is for $80 gun, donated by the Peters Cartridge Co. Sweepstakes are open to all amateurs. To high average for the two days, Hunter Arms Co. gold medal.

Mr. Edgar L. Klipple, Wilkes-Barre, Pa., informs us that he will give a two days' shooting tournament, June 17 and 18, live birds and targets, at Hanover Park, a few miles from his city. He assures us that the tournament promises to eclipse the successful tournaments previously given by him at the same place. The programme of each day has ten events. These are 120 bluerocks and 12 live birds on the first day; total entrance $18.70. On the second day there are 145 bluerocks and 20 live birds; total entrance $30.15. Nos. 6 and 7 on the first day are at 5 and 7 live birds, $4 and $5 entrance. No. 6 on the second day is the Hanover Park Handicap, 28 to 33yds., $15 entrance; 15 birds; ties shot off; open to all. Targets thrown from magautrap at 2 cents. Live birds, included in entrance, 25 cents. Moneys divided in ratios of 50, 30 and 20 per cent. To amateur making high average in target events, $3. Shooting commences at 9 o'clock. For further information address the manager.

BERNARD WATERS.

Wapsie Gun Club.

CRESCENT CITY, Ia., May 27.—The Wapsie Gun Club, of Central City, Ia., held its annual shoot on May 27. It was intended to have a two days' tournament, and the club had provided an excellent programme, with $50 offered for average money. But the fact that they immediately followed the Dubuque meet, and that the weather had been very unsettled, caused the attendance to fall far below the number expected. Fifteen men faced the traps and shot the first day's events; but it was decided not to carry out the latter half of the programme. Fred Gilbert and W. H. Heer tied for high average, losing only six targets each. Taylor had second and Linell third place. The Wapsie Gun Club gold medal was won by O. N. Ford, with a perfect score, and Johu Brookman duplicated the performance in a 25-bird race for the Linn county silver cup. Trade representatives shot for targets only, except in a special event at 10 doubles, which was won by Riehl with a score of 19.

The Wapsie Club has nice grounds on the banks of the pretty little river of that name, and it is to be hoped that they will not be discouraged over the combination of circumstances that counted against them on this occasion. Scores are subjoined:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	
Targets:	15	15	20	15	15	20	15	15	20	15	15	20	Broke.
Marshall	14	15	18	13	12	14	11	14	19	12	14	17	173

Hocken	..	13	17	10	..	..	..	..	..	..	..	..	...

Open sweep, 10 pairs: Riehl 19, Gilbert 18, Heer 18, Linell 18, Budd 17, Ford 17, Marshall 16, Ellett 16, Burnside 15, Lord 11, Brookman 11.

The Linn county cup: Brookman 25, Ford 23, Cleveland 23, H. Brookman 21, Warner 20.

Gold medal event: Ford 25, Brookman 23, Linell 23.

HAWKEYE.

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., June 4.—The regular monthly shoot of this club to-day was well attended, there being two handsome cups to attract the boys—the Club Cup, which is shot for monthly, aud the Marshall Cup, which is being shot for weekly, both of which must be won six times by one party to become personal property. To-day there were three scratch men—Tallman, Traver and Russell—and all three put up a good article of shooting, Tallman and Russell tying for the Marshall Cup on 24, Tallman breaking that number straight. In the club cup event (No. 8) Mr. F. I. Fenn, with three misses allowed as breaks, scored 24, thereby winning this trophy. Owing to Mr. Tallman's time being limited—he, in fact, having left the grounds before Mr. Russell had shot—the tie was not shot off. It is expected, however, that the tie will be decided next Thursday.

The Poughkeepsie Gun Club is now in a flourishing condition. We have one of the best grounds and finest appointments in the State. Regular weekly shoot is held every Thursday, and we would be pleased to have visiting sportsmen join us at any time. To all such our latch string is ever hanging outward. Scores:

SNANIWEH.

Dover Sportsmen's Association.

DOVER, N. H., June 6.—We, the Dover Sportsman's Association, held our usual weekly practice shoot at our grounds, and had quite an enjoyable time. The presence of the ladies made it more enjoyable still.

Our scores were not very creditable, and I think the gentlemen who took part would not care to see their names in print.

We have had quite a number of forest fires in our vicinity, and the atmosphere was full of smoke, and the targets disappeared almost before we could shoot. I inclose a clipping from the Somersworth Free Press, a local paper, that I think is worthy of republication:

"On holidays, when young men may be seen around in baseball clothes with bats slung over their shoulders, there may be seen in this city men, young and old, with gun cases, all moving as though by a common impulse. They are going to the grounds of one of the gun clubs to try their hands at shooting. Now shooting with the shotgun or rifle is excellent sport. It calls for a clear hed, steady nerves and good vision. One who would be a good shot must be a careful, systematic man, who takes time to learn all about his weapons and his ammunition. The hit-or-miss, happy-go-lucky sort of a fellow never can make an expert user of the gun or rifle. The qualities of mind and body which go to make a man a good shot, make him also a good, orderly citizen. Dover has some good gun clubs, and some experts, who can be always relied upon to render a good account of themselves."

D. W. HALLAM, Sec'y.

Pittsfield vs. Dalton.

MOUNTAIN VIEW, Pittsfield, Mass., June 6.—Dalton Rod and Gun Club vs. Pittsfield Rod and Gun Club match, held on Saturday, June 6, at Dalton, eleven men on a team, 25 blue rocks to each man.

The Dalton men made a very good showing, considering the fact that they have been organized but a short time. H. S. Sidway was high gun for the day and broke 24 out of 25 in the match.

Pittsfield (25)—J. H. Wood 13, Dr. Hubbell 12, Tracy 17, Joe Shearer 17, Sidway 24, Henry 18, Graves 17, A. Wood 8, Ben Smith 14, Dr. Treasdo 13, Dr. Woodruff 14; total 167.

Dalton (25)—Flansburgh 18, Bartlett 13, Claressy 13, Groesbeck 14, R. Silvernail 10, Messinger 16, Martin 17, Shedd 17, Pierce 10, A. Silvernail 17, Veats 8; total 153. Pittsfield won by 14.

Trap at Milwaukee.

MILWAUKEE, Wis., has any number of good gun clubs, both rifle and shotgun, and the weekly meetings are well attended, yet of late years those who shoot at regular tournaments do not compare with former years. Being a holiday (Decoration Day) there should have been more than fourteen men out to encourage the south side boys in their attempt to give a tournament. The following day more shooters came, both from the city and throughout the State. Dering and Kaufman, two well-known rivals, were present the second day, neither shooting up to form. But the wind does have a sweep on the hill, where the boys shoot. The scores:

First Day.

Events:	1	2	3	4	5	6	7	8	9	10	Shot

Memphis Gun Club.

MEMPHIS, Tenn., may be safely put down now as gaining ground as a shooting city; whether the high price of cotton makes prosperous times I will not here say, yet the latest big gathering of shooters would indicate same.

The Lucy Gun Club held their opening shoot May 27, and as they were in for a good time, a barbecue was added. They were sociably inclined, and members of other clubs, viz., the Memphis, Bluff City and Shelby, turned out and assisted in the shooting and eating.

Abe Frank was the handicapper, and did his work well. He shot well himself, and was high gun. How the good things did disappear when dinner was announced. All present voted the Lacy Club the prince of entertainers. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	Shot	
Targets:	15	15	15	15	15	24	15	14	14	13	12	13	14	9	at.	Broke.

WESTERN TRAP.

CHICAGO, Ill., June 6.—Mr. Max Hensler, runner-up in the Grand American Handicap, is in town to-day, after an extended trip through the West. Mr. Hensler thinks that the Cincinnati shoot next week ought to run 150 entries, and believes that the open conditions, everybody 16 yards, will bring out nearly everybody in the country. In the past the experts believed in anything but handicaps, but so great is the number of first-raters among the amateurs to-day that the professionals need about as much protection as anyone else.

Mr. Hensler was down at San Antonio last winter, and tells me that since he has talked with Col. Guessaz and others about the possibilities of a big open-for-all shoot at San Antnio next winter, everybody to go on the 16-yard line. There seems to be an impression that a big event of this kind could be made a success in the South. Times are still good, money fairly plenty, and travel, therefore, easy and general. San Antonio could easily take care of a large number of shooters.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Trap at Colorado Springs.

COLORADO SPRINGS, Col.—John W. Garrett has not shot much since he returned from St. Joseph and Kansas City, but on Friday, May 29, he got up a crowd. Though the wind was blowing very strong, he fired his usual string of 400 and over. Shooters East read of so many good scores made out here that they will be surprised at the 85 per cent. one inclosed, viz:

	Shot. at.	Broke.	Av.		at. Shot.	Broke.	Av.
Garrett	425	364	85.6	Nicolai	100	71	71.
Sanderson	250	168	67.2	Murray	50	23	46.
Lawton	250	208	83.2	Watson	50	31	62.
Rimmer	175	104	59.4	Gadsby	50	34	68.
McFarland	175	93	53.1	T Rich	25	12	48.
Seybert	150	93	62.	Tiger	24	18	72.
Rich	125	63	50.4	Monroe	25	2	4.
Meredith	100	73	73.				

A Challenge.

WINCHESTER, N. H., June 1.—I should like to shoot a match at 100 blue rock targets, thrown from magautrap, with any man that is a resident of the State of New Hampshire, for a sum that will cover the expense of such shoot. I am shooting for the sport of the game. I would be glad to meet some of my State shots in a friendly shoot.

L. R. NELSON.

IN NEW JERSEY.

Rahway Gun Club.

Rahway, N. J., May 30.—The Rahway Gun Club had a very fine shoot at the opening of their new grounds, situated on Westfield avenue, on the line of the Elizabeth, Westfield & Rahway trolley. The grounds are very fine. Great interest is taken in the club, and the boys can be found at the traps every Saturday.

No. 1, handicap, 25 targets, three prizes:

JAS. R. MERRILL, Sec'y.

Emerald Gun Club.

AFTER many years of shooting at "Old Dexter Park," the Emerald Gun Club moved to new shooting grounds, a short distance from Newark, where they held forth until Tuesday last, when it was decided at a meeting of the board of directors to hold all future club contests on the grounds of John H. Outwater, Hackensack River Bridge, Carlstadt, N. J.

Owing to the change the attendance was not up to the general average, although sixteen members faced the score.

Dr. Hudson was the lucky one in the club contest, and the only one to kill ten straight, although hard pushed by Billy Sands. Treasurer John Moore, Snipe Shooter Short and Black Powder Corbett, who scored nine each; Schorty, Commodore Karl, Catton, Colquitt, the Orange man Fischer and Capt. Dryer trailed in third place, with eight kills. The birds were a fast lot, especially Corbett's fifth, on which he made a grandstand second. Following the club event, a five-bird sweep, club handicap, was won by Catton, Voetringer and Short shooting along for birds only. The scores:

	Pts.	Hcp.	
Schorty	7	33	02222121*2— 8
M. Reierson	7	28	0112212100— 7
W Sands	6½	28	2222222012— 9
Dr Hudson	7	28	1111121122—10
F J Ball	6	25	1*2112222*— 8
J Moore	6½	28	0221111111.. 9
J S Henry	6	25	1111022010.. 7
T Short	7	28	1210112121— 9

Carteret Gun Club.

GEORGE S. MCALPIN was in rare form on Decoration Day, and did some remarkable shooting at the Carteret Gun Club grounds, Westfield, N. J., the occasion being the closing shoot of the season. The shooting started with a handicap, miss and out, which he won on the fifth round. McAlpin's first miss was his sixty-third bird, and the only one out of the 127 shot at during the day, killing the next sixty-five straight. The first cup was won by McAlpin in a miss and out on the fourteenth round. The next event was at ten birds, then miss and out handicap, in which Norton won out on the thirtieth bird, Hall missing his twenty-third and McAlpin losing his thirtieth. J. S. S. Remsen, of Babylon, L. I., retired in the ninth round.

In the next event, a miss and out, all at 32 yards, McAlpin won from Hall on the twenty-second bird. The Decoration Day Cup came next, at 10 birds, then miss and out, which was also won by McAlpin on the thirteenth bird. The closing event of the day was for a special cup, miss and out, in which Hall and McAlpin shot to the thirtieth round, Hall losing his last bird. McAlpin's record for the day was three cups and six out of seven events. Scores follow:

No. 1, handicap, miss and out; No. 2, 5 birds, then miss and out; No. 3, cup event, 10 birds, then miss and out, 25 yards, 1 miss as a kill, 26, 27 and 28 yards, one no bird; No. 4, all at 32 yards; No. 5, Decoration Day cup, 10 birds, and miss and out, 27-yard men or less, one no bird; No. 6, special cup, handicap, miss and out.

*Five pairs.

A. A. SCHOVERLING.

Freeport Gun Club.

Freeport, L. I., June 5.—The medal shoot of the Freeport Gun Club was won by Mr. T. Rider. The conditions were 25 targets, class shooting. The scores: T. Rider, 25; C. T. Sprague, 16; F. C. Willis, 23; F. Egner, 16; T. Bedell, 13; F. Gildersleeve, 23; R. Conklin, 13; B. Lott, 21; Paterson, 19; E. Vreelin, 12. Two sweeps and a miss and out were also shot.

Trap at Kansas City.

Blue River Shooting Park will for all time have the record of the greatest live-bird tournament ever known. So far it has the largest target tournament also, to its credit, but will possibly be overtopped. Since there are two shooting parks adjoining each other, there has been considerably more target shooting than usual. The reason: Something in sight to shoot for. Bob Elliott knows what the boys like—the real stuff, the stuff that buys breadstuff. One hundred plunks was very generous on his part. So the shoot has been going on since May 12, the conditions being that each man could shoot at six strings of 25 targets and then select the four best to make up a total. Each shooter could shoot as many strings as he desired.

The scores made are not so large as you would expect them to be. The reason is, Elliott throws a hard target, at least 60yds. or better. Dr. Plank, W. H. McGee and Ed O'Brien had a score of 88 and looked good to win, but a young man who comes from the Dixon shooting family got his ginger up and went them all two better. The weather conditions were such that neither of the others could even duplicate their former scores. Considering the conditions under which Dixon shot, seldom has his 22, 22, 23, 23 been beaten. The following is a partial list of the scores made during this prize shoot, each event being at 25 targets:

Events:	1	2	3	4	5	6	7	8	9
Dr Plank	23	24	22	21	23	21	21	19	18
McGee	23	22	21	22	17	22	20	19	18
O'Brien	24	20	23	21	18	22	19	14	19

Live Birds.

Decoration Day brought out a delegation of the Kansas City boys, which was augmented by the addition of Hodges, of Olathe, Kans.; Ed O'Brien, from the same, now flooded country; Cunningham, of St. Joe, Mo., and Dixon, of Joplin, Mo. In all there were fourteen men who essayed to slay 15 birds straight. When you read the scores you will see who killed them all and who did not get in the money. So much for Bob's Kansas City drivers. Some of them are going yet no doubt. The scores:

Fifteen live birds, $7.50 entrance, four moneys:

Cockrell .....221122222222022—14 Norton .....120100121110111—11

Gallatin Gun Club.

GALLATIN, Tenn.—A rain which fell steadily for three days before our shoot cut the attendance down very much lower than we had reason to expect it. We had promises of some forty out of town shooters that they would be with us, but the rain kept all but a dozen of them away. Under the circumstances, we feel that we have reason to rejoice in any of them coming, and feel very grateful toward all who did so.

The first five events were shot in a rain, but in the afternoon the sun came out. Five events at 15, 5 at 20, and a novelty match at 25 targets made up the regular programme of 200 targets, and after that an extra event at 25 targets made 225 for the day.

Green with 162 out of 175 was high gun for the day on the programme. Lyles and Legler with 151 each were tied for second. Nashville team No. 1 won the cup given to three-man team, the 175 targets of the regular programme going to the make up of this event.

The following out-of-town shooters were on hand: Messrs. Fite, Lyles, Legler, and Carter, of Nashville, Tenn.; Mr. Gordon, of Mobile, Ala.; Mr. Polk, of Franklin, Ten.; Messrs. Babb and McMinn, of Spring Hill, Tenn.; Mr. Fletcher, of New York; Messrs. Martin and Harris, of Nashville, and Mr. Crockett.

The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	
Targets:	15	20	15	20	15	20	15	20	15	20	25	Broke.

Shoot for cup:

Nashville No. 1—Fite 139, Lyles 151, Legler 151; total 441.

Gallatin No. 1—Green 162, Bright 134, Carr 141; total 437.

Nashville No. 2—Carter 123, Polk 128, Martin 124; total 375.

Gallatin No. 2—Murphree 120, Brown 118, Hickman 127; total 365.

WILL G. HARRIS, Sec'y.

The Establishment of Government Proof House.

FROM a correspondent we have received the following sound and pertinent communication:

The discussion of government testing of firearms in various publications has brought before the people a subject that has not heretofore been given the serious consideration it deserves.

Foreign nations have enacted laws for the protection of their people against the sale of unsafe firearms, the United Kingdom of Great Britain being among the first to provide this safeguard against careless or unscrupulous manufacturers, they insisting that all firearms offered for sale must bear the government proof house test stamp, or the stamp of some other government proof house, whose testing has been approved by the British Government, and thus our English cousins guarantee that all firearms offered for sale are safe.

This is not done at the expense of the government, but a charge is made for each arm tested, and they require two tests; one very severe for the unfinished arm, and the second for the finished product. This costs about 12 cents per arm, and is borne by the manufacturer, or must be added to the cost of the goods.

On firearms imported into Great Britain, which are subject to two tests, the strain is severe, especially on shotguns, as the first test given the English guns in the rough is given the American finished product, and after the barrel is turned down many of the finished guns will not stand the test, neither would the finished English guns stand this first test.

American rifles invariably stand both tests, but it adds materially to the cost to be obliged to have all firearms, after being received by the English dealer, unpacked, tested and then repacked and returned. This could be done much cheaper at home, besides it would give the American product a reputation abroad that could not otherwise be obtained.

But the greatest benefit would be to the users of the firearms in our own country. They would be protected against defective goods sent into this country by foreign manufacturers, which will not stand the proof house test, also be insured against inferior goods of home manufacture, and this applies especially to the lower priced goods that reach a class of people that are not expert or competent to judge of quality.

There is now at the United States Armory at Springfield, Mass., a proof house for the testing of government rifles made there, and this could be enlarged and used as the Birmingham Proof House, and by making a cost charge for the testing it would not be an expense to this government, and at the same time would be a protection to the people of the United States, the same as established by other governments, and this government will establish sooner or later.

If every user of firearms will take this subject up with the senators, representatives or army officers of his acquaintance, it would result in the prompt enactment of laws for the protection of the American people and the American manufacturer.

Trap in Mississippi.

VICKSBURG, Miss., May 31.—Shooting matters in our city have been rather quiet, as is usually the case after our tournaments, but all of our local shots are looking forward with pleasure to the tournament to be given by the Caddo Gun Club at Shreveport, La., June 15, 16 and 17, under the auspices of the Mississippi Valley Trapshooters' Association. This club gives $1,100 added money—first day 100 targets, $10 entrance, $100 added, and $500 added each day, June 16 and 17. I predict that this tournament will equal, if not surpass, the Grand American.

Our shooters will begin to get in line next week, and we expect to send the following delegation to the Shreveport shoot: Miller, Hayes, Pinkston, Fletcher, Adams, Dinkins, Cameron, Henry, Robertson, Kent and Bradfield. While we are not top-notchers, I think some of us will be heard from at Shreveport. Anyway, if we cannot shoot we will take pleasure in paying the Queen City a visit, and help along the poor ammunition companies—they need it.

Uncle Tommy Devine and Maurice Kaufman have started the ball rolling in our sister city, Jackson, Miss., having succeeded in having a gun club organized there. That clever shot and excellent entertainer, Abe Frank, of Memphis, Tenn., the man who trained Brady, writes me that Memphis will hold their tournament July 3 and 4, under the auspices of the Mississippi Valley Trapshooters' Association. Abe promises all who visit them a fine time in July. The Memphis tournament should be a corker, as the dates are well selected, just preceding the Arkansas State shoot.

J. J. BRADFIELD,
Sec'y Miss. Valley Trapshooters' Ass'n.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 20, 1903.

VOL. LX.—No. 25. No. 346 BROADWAY, NEW YORK.

We, who were with blessed Francis, and have written these things, bear testimony that many times we have heard him say: "If I were to speak to the Emperor, I would, supplicating and persuading him, tell him for the love of God and me to make a special law that no man should take or kill sister Larks, nor do them any harm. Likewise, that all the Podestas of the towns, and the Lords of castles and villages, should be bound every year on Christmas day to compel men to throw wheat and other grains outside the cities and castles, that our sister Larks may have something to eat, and also the other birds, on a day of such solemnity."—The Mirror of Perfection.

A BLOODHOUND EPISODE.

THE current discussion of the use of bloodhounds as man-trackers recalls a bloodhound episode of American history, which at the time commanded wide attention and aroused intense feeling. This was the employment of bloodhounds for trailing Indians in the Seminole War.

It was in July of 1838, when the war had been in progress for four years, and to the baffled troops appeared likely to continue along the same lines for 400 years longer. Gen. Zachary Taylor, in command of the army, wrote to the Secretary of War a letter favoring the use of bloodhounds. The dogs, he said, would afford "the only means of ridding the country of the Indians, who are now broken up into small parties that take shelter in swamp and hammocks as the army approaches, making it impossible for us to follow or overtake them without the aid of such auxiliaries. I wish it distinctly understood," he added, "that my object in employing dogs is only to ascertain where the Indians can be found, not to worry them."

Secretary Poinsett approved the plan, saying in his indorsement: "I have always been of opinion that dogs ought to be employed in this warfare to protect the army from surprises and ambuscades and to track the Indian to his lurking place; but supposed if the General believed them to be necessary he would not hesitate to take measures to procure them. The cold-blooded and inhuman murders lately perpetrated upon helpless men and children by these ruthless savages render it expedient that every possible means should be resorted to in order to protect the people of Florida, and to enable the United States forces to follow and capture or destroy the savage and unrelenting foe." Gen. Taylor was therefore authorized to procure such numbers of dogs as he might judge necessary, it being expressly understood that they were to be "employed to track and discover the Indians, not to worry or destroy them."

Action on the part of the Government went no further than this. Gen. Taylor took no steps to provide himself with the dogs. In the meanwhile, however, the people of Florida had determined to make use of bloodhounds. The popular feeling of the Territory was that the Indians were deserving of extermination, and any possible means to achieve this end might be legitimately employed. The Florida Legislature authorized the importation of a pack of bloodhounds from Cuba. In such a resort to the Spaniard for man-tracking dogs, history was repeating itself. A half century before, in 1795, the British authorities in Jamaica had introduced from Cuba into that island a large number of these dogs to hunt down the Maroons, who for a century and a half had been carrying on a guerilla warfare. The Spanish dogs had a reputation for ferocity all through the West Indian islands, and the Maroons were so terrified by the menace of them that they lost no time in coming to terms. The Cuban dogs had promptly ended the war in Jamaica, but this was a part of history which was not to repeat itself in Florida.

Col. Fitzpatrick, of the Florida militia, was dispatched to Havana and thence returned to St. Augustine, in January of 1840, bringing a kennel of thirty-three bloodhounds which he had procured at a cost of $5,226.76, or $151.72 for each dog. These certainly were war prices for hounds. With the dogs came five experienced Spaniards engaged to handle them in the field, for they did not understand commands given in the English language. Upon their arrival the dogs were divided into smaller packs and assigned to various army posts. Calves were procured and driven along on the scouting expeditions, to be slaughtered on the spot in order that the dogs might have the fresh blood and meat which were as essential to their interior economy as is water to the boiler of a locomotive.

The employment of the dogs aroused intense excitement, and the Northern and Southern papers alike were filled with denunciations of the Government. The matter was brought before Congress and the Hon. Henry A. Wise, then a Representative from Virginia (afterward Governor), introduced a resolution in Congress demanding to know whether "the general Government had been a participator in so infamous a mode of exterminating human creatures."

In response, Secretary Poinsett transmitted the correspondence with Gen. Taylor already quoted, and stated that the General had taken no measures to carry into effect his own recommendation, and the department had never since renewed the subject. Shortly afterward he wrote to General Taylor noting the importation of the bloodhounds by the Florida authorities, and again enjoining: "In the event of these dogs being employed by any officer under your command that their use be confined altogether to tracking the Indians; and in order to insure this and to prevent the possibility of their injuring any person whatever, that they be muzzled when in the field and held with a leash while following the track of the enemy."

Any solicitude as to the safety of the Seminoles at the fangs of the bloodhounds appears to have been uncalled for. The late Major Merrill, who served in the Seminole War, has more than once told us that while the Cuban dogs were valiant trencher-hounds and performed a useful service as camp scavengers, they were entirely useless as Seminole trackers. They had been trained to trail negroes in Cuba, but refused to take any notice of the tracks of the Indians; and the fugitive negroes, who constituted so large a part of the people the troops were hunting, having been apprised of the use of the hounds, took good care to keep out of that part of Florida.

There were, it is true, various newspaper items which, by mention of the dogs, fomented the popular clamor against them as allies in war. It was reported, for instance, that Lieut. Sanderson's scouting party had been surrounded and among the killed were three of the dogs and their trainer. Then the New York Herald reported "the bloodhounds lately received from Cuba have been subjected to many experiments, the results of which have been very satisfactory. They follow a trail twenty-four hours old with rapidity and accuracy." Despite this the dogs were useless; the sole authentic record of their having accomplished anything being contained in a report by Maj. Bailey, who, with a party of dragoons and one bloodhound "scented out forty Indians" and killed six of them. The contingents of Cuban bloodhounds, Spanish dog trainers and commissary calves accomplished nothing; the Cuban man-tracker episode ended in a fiasco. The Seminole War went on for years afterward; when it was eventually brought to a close the bloodhounds had no part in the result.

A HUNDRED YEARS.

THE Hundred Year Club of this city held its annual dinner last week. The club's purpose is to devise ways and means by which its members may live to the ripe old age of one hundred years. Among the speakers at the dinner who celebrated the therapeutic value and the delight of vacations as elements of modern life, Mr. L. F. Brown discoursed of vacations in a tent. From the standpoint of a long and rich experience as a nature lover and practical camper, he spoke so pleasingly and eloquently as to carry the conviction that if tent life by the rivers and in the mountains may not insure the extreme longevity desired by the club, it is yet certain to enhance the joy of living for whatever term of life each one may be allotted. And to live happily while we do live is much more to be desired than to achieve the centenarian mark. Many men, perhaps most men, would not wish to live one hundred years. The impressions gathered from observation of the extremely aged are not as a rule cheerful nor alluring. It was only a day or two after the Hundred Year Club's banquet that a feeble and tottering old man, brought before one of the city magistrates on a charge of vagraney, declared to the judge that he was 106 years old, and had no home nor anyone to care for him, and could only beg to be committed to the workhouse, where he had already spent many terms. We do not suppose that the average valetudinarian, in the Hundred Year Club or out of it, is apprehensive that a hundred years of life may bring to him any such measure of deprivation and helplessness. Most men who are ambitious to live one hundred years have no thought of poverty to terrify them; but there are other features of the centenarian's lot against which the most ample means and the most careful forethought cannot make provision. As the span of human life is now measured, he who attains a hundred years is an exception to the rule and long outlives his fellows. Old age means isolation, and isolation means loneliness. Relatives, friends, associates have passed on. The relationships which make life worth living have been sundered by the inexorable hand of time.

The mossy marbles rest
On the lips that he has prest
In their bloom,
And the names he loved to hear
Have been carved for many a year
On the tomb.

The prospect is not alluring. Much more sensible than striving for the attainment of the hundredth year is to make our own the old motto *Dum vivimus vivamus*—to live while we live; and to get the most of life as we go along, doing the work at hand, meeting the duties of the hour and not neglecting Mr. Brown's injunction to get our share of the joys of vacations in a tent.

SNAP SHOTS.

THE notes by Coahoma on the use of man-tracking dogs, the memory of "A Day at Waverly," signed Hie-on, and the record of "Three Hunts" by Tripod, are three papers in this number which have added interest because of a circumstance of their authorship. Coahoma, it need not be said, is one of our oldest contributors, and the other writers are his sons. This representation of two generations of a family of sportsmen in a single number of a sportsmen's journal is a happy conjunction well deserving of note. It illustrates not only the enduring qualities of those field recreations which are shared by generation after generation, but as well the continued favor in which the FOREST AND STREAM is held, and the secure place it holds.

The American team to compete for the Palma trophy at Bisley sailed for England last week. Capt. Bruce reports that the marksmen are in much better form than the team of last year, who were defeated by a narrow margin, and he expresses confidence that the United States may receive back again the coveted emblem. The contest will take place at Bisley on July 11, and so many competitors will participate that the winning of the trophy will mean an extremely creditable performance.

THE death of Salem George Le Valley, of Buffalo, removes one of the best known and most highly regarded business men in western New York, and one who for nearly a quarter century had held a popular place among sportsmen. Mr. Le Valley's sporting goods store in Buffalo was a favorite gathering place for shooters and fishermen, and Mr. Le Valley's winning personality won for him the close friendship of an ever-widening circle.

THE imported Adirondack moose are showing a quite unexpected tameness and confidence in the midst of the encroaching civilization of the North Woods. The moose, in fact, are not nearly so particular as were the conventional pioneers of Davy Crockett and Daniel Boone type, who moved on when other settlers trespassed within ten miles of them. This tameness is an admirable quality of moose in the Adirondacks, where the race is destined not to afford sport for the hunter, but interest and entertainment for the summer visitor. The North Woods moose, as an ornamental adjunct of the forest, will fill a sphere in life entirely different from that of its fellows in Maine and Canada.

THE report of the Rensselaer County Rod and Gun Club, on another page, is an admirable demonstration of the benefits to the community which may be secured by an association of sportsmen who are in earnest. President McLaren and his fellow members have taken practical steps to better the local fish and game conditions, and the results are substantial. Hardly second in importance to the actual restocking of fields and waters is the improved public sentiment in support of the right use of game and fish resources. The Rensselaer Club manifestly has the merited support of the community. It is a pleasure to print such a showing.

The Sportsman Tourist.

Across Cibiria.

(*Continued.*)

So many have been the Polish exiles to Cibiria, that they have succeeded in perpetuating the name of their country and applying it to almost half the Asiatic continent. For from the Pacific Ocean to the Ural mountains, you will hear of Greater Poland—an eloquent tribute to the "efficacy" of the Czar—who didn't prove bomb-proof—who issued an ukase in the '60's, "blotting forever the name of Polska from the map of Europe!"

As an illustration of the evil influence of the church in Cibiria, the following will suffice: I often heard the poor benighted mujiks referring to exiles as "socialistas"—just as if the latter were so many desperate criminals. Now, as the peasants cannot read—scarce one of them! such is the illiteracy—they had learnt all they knew about socialism from their village priests, who (neither understanding anything about socialism) had been instructed by their "metropolitan" to inveigh against the "something called socialism" as a sort of "frightful ogre" threatening the peace of the land. In vain I would tell, briefly, some of the tenets of socialism: as public ownership, direct production and consumption, a single tax, etc., etc.; and that many of its aims had nothing to do with politics. But it was no use trying to enlighten, except among some of the politicals.

Every village has its mir (Asiatic, meaning elder or chief), who is seconded by a kandikat. There is an annual voting election by the shock-headed mujiks—the only golos (lit., voicing), they do in their lives. The results of this communal administration are apparently nil—since the mujiks have no ambition to better themselves or their villages; in fact, usually the annual election is an excuse for a drunken bout.

Here is an example of the depraved military system of Russia, and how it has become engrafted on the people's mind: If a woman can give birth, during her married life, to twelve sons, and show that they have all "done time" as soldiers (five years' compulsory military service, of course), she receives the "Czar's gold medal."

Just think of it—a woman aspiring to receive a luker-medal for having had twelve sons brought up as "murder-machines!" And there are quite a number of peasant women who, in years gone by, have actually gotten out the "round dozen," seen them conscripted, and received "distinction's worthless badge" (as Ingersoll was wont to have it) in the shape of an ill-gained gold medal.

Poor benighted human rabbit-warren breeders!

The lot of exiles has improved greatly in Cibiria during the last dozen years (except, apparently, in the extreme northeast). The Kennan-Century exposures did a deal of good, as I have pointed out at length in previous travel articles.

The whole of Russiadom, from the Pacific to the Baltic, is the "best" example extant of the curse of protection. The Russian manufacturers clamor for a high tariff, not with a view of monopolizing home markets, but so as to force their dear and shoddily-made goods on the consumers. The poorer classes prefer foreign-made goods, because they know them to be superior, and are willing to pay more for the inoçtrani articles; so the only way to "correct" the consumers is to pile on a tariff which will make the ultra-frontier goods prohibitable.

All working classes in Russia are probably the worst paid in Europe, and this is true also of the professions. Here are some instances: Printer, 8 rubles weekly; mechanical engineer, 20 rubles; shoemaker, 6 rubles; baker, 7 rubles; roadmaster, 8 rubles; railroad navvy, 3 rubles; tailor, 6 rubles; apothecary, 10 rubles; newspaper reporter, 10 rubles; woman stenographer, 5 to 6 rubles; physician, 25 rubles; rubber factory employe, 7 rubles, and so on through all the callings at similar poverty-stricken wages. An agricultural laborer would receive, at most, 1 ruble weekly, with free pigsty and feed.

Now, as the purchasing power of a ruble is but equal to what half a dollar will buy in America, it follows the Russ only earns just enough to live on. The official classes have "troubles of their own" in the problem of existence; but the poor classes! These poorer folk constitute the mass of the Slaf nation, and their lot is a dog's struggle for existence. Things are bad enough in Italy's sunny south, but then the dago has a genial climate, cheap wine and luscious fruits galore for a song. In Slafdom, the mujik scarce knows wine or fruit or things sweet; while his climate is for six months a Dante's frigic inferno.

Poor byrreps!—(a Slaf slang word introduced from the southern Bulgars and meaning a "singularly unfortunate person"). As you travel over the country for two years, you see the reign of hopeless poverty and the curse of protection on every hand. It is an empire of poverty!

What will the end be? A repeat of the Gallic days of 1793!

I naturally took care, during two years of touring over Russian territory, not to criticise too keenly matters political Russian. I was not afraid of my opinions, nor afraid to express them, but I did fear being misrepresented. That is where the chief danger lies—in being misrepresented, and having your own well-defined and well-expressed views distorted when repeated by an ignorant or corrupt official "on the make." So, when asked a pointed question like, "Which do you consider the best government for this country—a republic or an autocracy?"—my guarded reply was: "I have an opinion, but not being a Russian grazdanin (citizen), do not care to express it. It is none of my business."

The man who ought to have an opinion, but says he has none, is either a fool, a liar, or a coward.

In a vast country like Cibiria, in which you could sink about three of our United States, there are less than a score of newspapers. Only the exiles and high official and well-to-do merchant classes know how to read. Every paper is ridiculously censored: the censor considers himself a somebody of great importance in Cibiria, and does not fail to show his hand. But, he has got to earn his salary (which is about 50 rubles monthly), and must, of course, show that he is doing "something." Of course his wage is insufficient: it is equivalent to $25 of our money, but will only purchase what $18 or $15 will with us. So the censor makes a little honest money "on the quiet" by informing the redaktors or publishers he will be less capricious with his forbidding blue pencil if he is placated with a stipulated monthly allowance. So the redaktor or izdatel will allow him all or part of what it would cost per month to re-arrange or re-set matter that would otherwise have been blue-penciled.

The news printed is always belated. Thus, I was at the town of Nijni-Ydinck, Central Cibiria, when, on a Monday evening, the Boctochnoe Obozpenie, a semi-weekly of Irkutsk, came with the news of McKinley's election. Of course the result was known in America on the previous Tuesday night—so the news had taken six days for the cable and telegram to reach the heart of Cibiria.

Just think of it—in the whole of Cibiria (about three times bigger than our own republic) there is not a single outing publication of the type in which these lines appear!

Concentrated Provisions for Sportsmen.

It may easily be conceived that "roughing it" in Cibiria with concentrated or condensed provisions, would put the same to a very severe test. Here are a few results: There is scarce any nutrition in extract of beef—consider it only as a stimulant. Calves' foot jelly is neither a stimulant nor nutritious. Beans are not worth carrying: they are just good enough to keep off starvation, and even then care must be taken to previously mash or bite through each bean. Potatoes, also, are scarce worth carrying: they may give a sensation of fullness, but that is not the kind of "nutrition" you want. Porridges are scarce worth the making: they will give you a blown-out feeling, quickly followed by so dissatisfied a sensation, you come to pronounce porridges, gruels, and the like a disgusting diet. Still, they are better than starvation.

Nothing like, in place of the above, beefsteak and onions, ham and eggs, liver and bacon. Nothing like living well and comfortably when traveling. It is silly to impose on yourself polar-circle discomforts.

The concentrated soups are worth little—too much of the element of mystery in them (like in German sausage)! The best plan is to carry along the material for your own soups. Commensurate with weight, evaporated turtle (unsalted) will enable you to make your own turtle soup; sun-dried evaporated oysters (50 cents per pound) will yield a good oyster stew, but require half a dozen hours' soaking in pretty warm water before cooking, to soften them.

Dried cream is most useful for reconstituting into liquid cream; dried eggs should not be subjected to a heat, in cooking, exceeding 140 deg. Fahr., or they coagulate.

Crackers or biscuits are an unsatisfactory, indigestible, too-dry diet. Take along your own flour and have your own hot rolls daily.

Beware of coffee essences! Take along your own ground coffee, properly tinned. No correct coffee essence has yet been produced: they all have the dissatisfying, "washed-out" flat taste.

Avoid canned, bottled and jarred goods. They all represent idle weight to 75 to 85 per cent. of water.

Saccharin is a most unsatisfactory substitute for sugar—yet a couple of ounces of the crystal (not powder) will be useful.

A Visit to Tolstoi.

I made a visit to Tolstoi, at his domain at Iasnianoliana, south of Mockba. The sojourn lasted three days, and the mornings were devoted to short walks over his estate, and the discussion of topics, abstract and general.

Being assigned a room entirely to myself, next to that occupied by citizen Thick (for in the Russian language, Tolstoi means thick), I naturally saw a good deal of him, and the many aspects of his character. This also furnished the writer with copy for his "Tolstoi Among His Books," which appeared in the Manhattan Bookseller for June, '99—an article that was widely credited in both hemispheres.

"You ought to write the account of your visit to Tolstoi for one of the Sunday papers," said my old friend Munro, the elocutionist, at his Brooklyn home. "Try the Journal or the World. They'll only be too glad to get it! Try it!"

So I did try. The Journal said no. The World also said no. "But who is this Tolstoi, anyway?" said the World reader—"Prize fighter?"

How's that for the "latest" in jaundice journalism?

It appears that many Sunday papers employ what are termed "readers," who, at $5 to $7.50 per week, read over and decide on the "merits" of copy sent in. It stands to reason that in such "illumined minds" articles of the "secret doings of the divorce court" and "mysteries of the matrimonial agency" stand a much better chance of acceptance than would an epoch-making brief from Herbert Spencer or a brainy sociologic study from Krapotkin.

Tolstoi a Sportsman of the Old School.

Tolstoi is an old soldier and an old sportsman. He has no martial scars; but he has a serious one received in the domain of sport (?). He showed me the cicatrix on his scalp, inflicted by a bruin. He had tripped in backing from and after having wounded the bear; instantly the enraged animal was upon him, paws on breast, and evidently determined to chew up the prostrate hunter's face. Tolstoi vividly related to me how he instinctively tried to force his chin on to his breast, so as to prevent the bear getting much hold-surface on his face, and the bear's teeth sloughed over the forehead and got a grip on the scalp, tearing it, and making work for a life-long scar. At this critical moment Tolstoi's companion had come up and plugged bruin for good.

Even in Cibiria it is an open question among sportsmen whether it is best to go off alone or in pairs. The more successful trappers and Indians almost invariably go to hunt alone—one of their arguments being, that two are liable to get in each other's way. One noted Russian sportsman—Prince Obolenski—who invited me to stay in his big white house a couple of days, said one thing he disliked in life was to go off with a whole crowd of people composing the average "shooting party."

A Ventriloquial Sportsman.

I possess the faculty of ventriloquism to a remarkable degree, but never cultivated it publicly, which would be entirely incompatible with a professional career; so confined myself to developing the gift into ventriloquizing my favorite instrumental music—the violin family. This, for my own diversion "at home and abroad." But it has often proved "an introduction sweet and gentle" when among family circles in distant climes, like Cibiria and Russia. I would accompany Tolstoi as he played the piano, but the ventriloquial tuning-up would convulse him with laughter—as it has many another private little audience. For it is as necessary for me to briefly "tune up" (ventriloquially), to get into pitch or trim, as it is with a regularly appointed orchestra. The ventriloquial effect is ridiculously, provokingly, an effective take-off of the orchestral violin tuning-up.

L. LODIAN.

Three Hunts.

I.

"WHAT'S that about a moose?"

"Williams shot another one to-night, but he denies it!"

"Kill him any deader than he did that one last night?"

"Now, who told you I shot that dog last night?" put in Mr. W. "I asked Young not to tell you fellows about that!"

"Who said anything about shooting a dog?" asked another.

Young, Hewitt, Owens and Williams had come from several corners of the earth, and met at Mr. Buford's place in the Mississippi Bottom country. Here Mr. Collier joined the party, and they pitched camp on the bank of a lake several miles within the forest on the edge of which Buford lives. Another lake, a mile from camp, was wider and had banks less steep. On this one the boys had launched two dugouts and head-lighted for 'coons.

Now a 'coon's eye is different from a moose's eye, and if what Williams saw from under his lamp didn't look like a 'coon, perhaps he took it to be a moose. In any event, he fired, and the pair of eyes faded from

IN THE MISSISSIPPI COON COUNTRY.

his vision, while plaintive yelps and fleeting footsteps proclaimed to the ears of Young, well versed in art of woodcraft, the fact that Williams had shot something—not a 'coon nor a moose!

"No, he didn't kill him dead. This one yelped, too!"

The next night on the lake was uneventful. The writer had joined the party, and was given a place in the boat with Young and Collier. From half a mile away Williams could be heard explaining to the occupants of the other boat how it was that what he shot was not a 'coon. As a result of the efforts of both boats' parties, several 'coons were taken to camp, and their pelts saved by the gentleman with an automobile, to make into a robe. Thus do automobiles not only accomplish death by accident for their operators, but tempt them to the killing of even many unobtrusive and harmless raccoons, to insure the area of pelt needed for an auto robe. It is thought by some sportsmen to be wrong to kill many 'coons and throw their carcasses away, for a frivolous conceit.

Rain the following morning spoiled the deer drive.

Dinner was Brunswick stew, well peppered. With the warmth thereof to cheer me, an afternoon's turn was

CAMP LIFE IN MISSISSIPPI.

taken through a well recommended turkey range. But the rain came down briskly, and the low hanging clouds made a gloom under the foliage that it was hard to see turkeys in. The lone turkey that was encountered had seen me first, and was slinking off with dripping feathers, a picture of humility, when discovered. He was too quick for a shot. The party had killed five or six deer before the last one was brought in by Anderson, the negro, who owns the hounds, on the day following the rain. You can see Anderson in the picture, standing triumphantly over his buck. The head and horns look heavy, and proved to be so, on a five-mile portage. They were sent to the taxidermist.

All of the pictures are of this hunt. The big fish is an "alligator gar" shot in the lake.

II.

The night train west put me at the "Hotel Town" by 10 P. M., and an east bound train was taken next morning, to retrace the last four miles traveled. I reached Purnell Switch by an hour before daylight, trudged down the track to the turning-off place, and there built a fire and made bacon and coffee. Breakfast over, the coffee pot and grub were put into a hollow log, and a start was made, taking a course east of north through the wet, open woods. It was now full light and nature was astir.

A violent altercation in a distant treetop indicated "varmints" fighting. Hastening that way I was in time to see a ball of fur-coated matter fall through space and strike the ground with the prehistoric thud. Waiting quietly a short time, a 'coon was discovered coming almost directly toward me, with his thoughts on the past. He passed within ten feet, when I wheeled and gave chase, nudging him on the back with my gun muzzle before he got into a brier thicket. Turning to resume my tramp, the enemy was seen in pursuit—another large 'coon on the trail of the first. This one, also, was given a foot race and his tail brushed with the gun barrel.

A few minutes later the squirrels came out to breakfast, and there was much loud discussion among them. Your squirrel is a very positive and incontrovertible debater. Fresh deer tracks were here and there, and gave promise of a possible shot, but the deer was not seen, although the forenoon was spent in a cautious vigil. The deer was either too early for me, or I was too late for him—which means "six of one and half a dozen of the other." At noon the camp had been reached, namely, the hollow log where the coffee pot was stored. Culinary operations again set in, and after dinner the squirrels were resorted to. Five were killed, three being with successive hits. The gun was a .38 carbine, of short bore for close shooting, and some of the squirrels were not hit in the head.

Nightfall found me back at the railroad, and the four miles back to the hotel town were soon walked on the cross-ties.

Next morning the early train was again taken back to the hunting grounds, breakfast cooked and another still-hunt made for the deer. The sign was plentiful over the ground covered, and under an oak tree was evidence that a buck had breakfasted within an hour or two past; but again he was too early. During the afternoon two squirrels were added to yesterday's bunch, and soon the train came that goes back from the big trees to the other world.

III.

Quite early in the morning Dr. Burkhalter was at the engine and I at the wheel of Doc's 16-foot gasoline launch. Right good speed was made up the Yazoo, thence up Yalobusha to Dodd's Ferry. Provisions and bedding were in the little skiff towed alongside, excepting that the cooked bread and meat were in a tin box, which had been set on the muffler. Of a sudden, there was an explosion, followed by escaping steam. Doc jumped to the engine and I stood alert to dodge flying pieces of gasoline launch, because it was evident that she had "blown up." The trouble was only that the stopper had blown out of the coffee bottle, from the heat of the muffler.

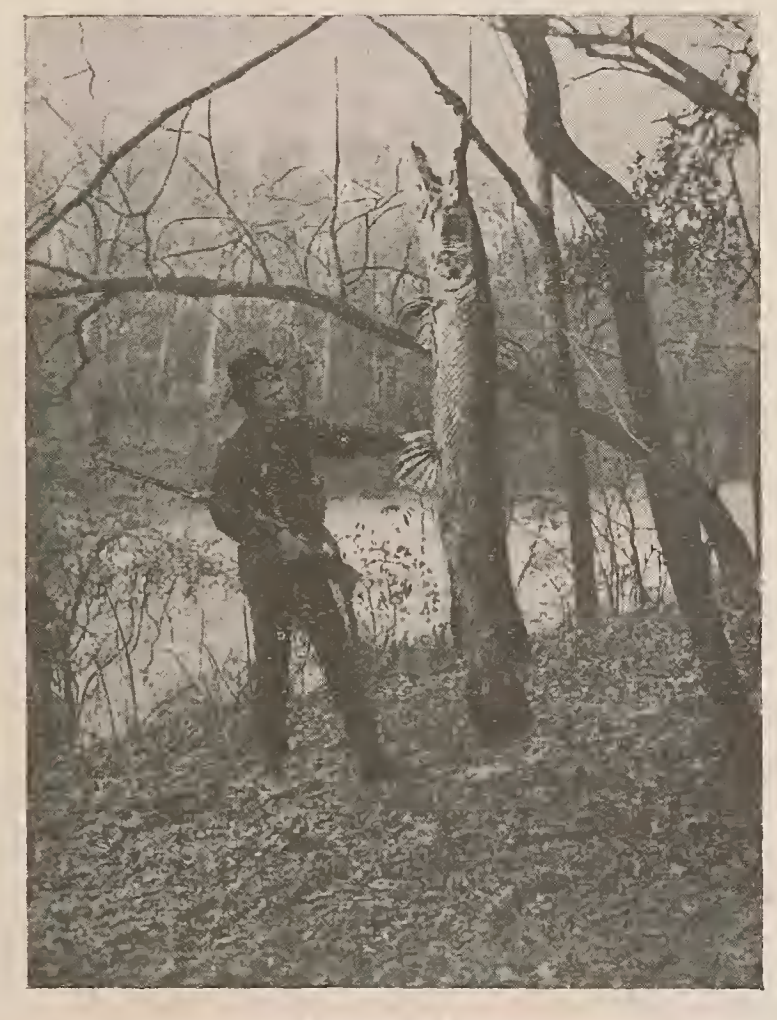
At Dodd's Mr. Allen joined us, and his skiff also was taken in tow.

As a sharp bend was turned, a flock of geese were met, flying low, and a scuffle after guns followed by a volley, brought down two geese. Each man killed both geese. That is the only way it could be settled.

Late in the afternoon as deer was startled from ambush as we ran close in shore, but was missed by a rifle bullet and a load of duck shot. At sundown we unloaded the plunder at a vacant cabin in the little clearing at Pugh's, bargained with the good "old timey" negro woman, "Aunt Nancy," in a nearby cabin, to cook for us, and ran on up stream a mile, and out through a bayou into the "back water." Here were some squirrels, and mallards in plenty, but the ducks were impossible to be reached. A wood duck, a teal and some squirrels were bagged.

After Aunt Nancy's sumptuous supper the bed was made down on the floor of our cabin and the big wood fire roared and crackled.

At this hour the hunter taught of Mitchell and Hough, sees many pictures through the smoke wreaths and in the firelight. The Great Spirit has painted them there in successive array—the pictures of happy hunting grounds of the past and future. There are those where is set in hallowed tints every chase of the past, some with good reward, others with toil and hardship followed by failure. But in those of the future, there are no failures painted. Set over against each past disappointment is brought out clear and surely a trail that leads over rugged and broken ground, and at its end is a reward of success full worth the toiling.



THE ALLIGATOR GAR.

These things are only given by the Great Spirit to his forest children, who know the hunting grounds and have wandered upon them tirelessly and seen what he has painted on lake and woodland for those who will look. They are not for the children of books and cities.

The bed that we slept upon would not have been soft at places where the Spirit of the Woods is not known to be.

It was sunrise of a day that had been made by the Spirit of the Woods, and there was sign of deer and turkeys to gladden the hunter's heart. A strange chattering noise could not easily be distinguished at a distance as proceeding from a turkey fight, but they were in plain view after a cautious detour was made of half an hour's duration. Several gobblers were making life uncomfortable for a weak brother—a strange contradiction to the brave and lordly bearing of the gobbler when on dress parade—but the germ of the "all bark and no bite" man probably evoluted through turkey and all. These fellows were making a very successful fight. The other one was getting entirely the worst of it. There was a log located just right for an ambush shot, with a possibility of killing all of the victors and missing the vanquished. Good progress had been made toward it, when a small and intrusive turkey saw a twig moved by me, and tripped back nearly half of the intervening distance from the flock to gaze at the spot where I was. I waited some time for this turkey to move away, until finally it got to seeing too much, and I had to abandon the idea of a shot at the bunch of gobblers, and fired the buckshot (a great mistake) at the intruder. He was wounded, but escaped.

While trying to yelp one of the scattered flock out of a distant treetop an hour later, I heard a deer whistle, to windward, beyond a thicket. Later still, when I moved for a better view of the turkey, there came that light sound of the hoof strokes of running deer, and a glimpse was caught of three, as they passed a distant opening in the brush. A snap shot at the last was a miss.

Soon afterward Mr. Allen joined me, and a turkey fell before his gun.

The noon hour was spent at camp, and the afternoon in the same ground as the morning. One turkey was added to the bag.

Next day the start homeward was made. Two "drives" were made of long, narrow peninsulas in the river bank, by one of the party getting ashore and waiting until the boat had run down to the lower end of the "drive," then walking noisily down toward them. On one of these a deer was jumped, when the driver had come even with him on the opposite side of the peninsula, giving him an opportunity to run back the wrong way. Only a glimpse of him was had through the thick brush.

A few more squirrels were killed. Doc's launch is a beauty, and he promised to take me again.

TRIPOD.

MISSISSIPPI.

A Day at Waverly.

SHE was visiting her old Southern home again, after a residence of several years in the East. I had known her for only a short while, when, one night, I remarked to my room-mate: "G. B., she likes to hunt, and we are going out together some day to try the quail." "Ah!" he responded, warmly, "she's a girl after my own heart!" And I echoed the sentiment.

Waverly is a typical ante-bellum Southern home, of which few are left in this section. It is still beautiful to him of an æsthetic temperament, but there are many signs of a pristine glory now existing only in the history of our "before-the war" South—a South the splendor and the hospitality of whose homes will be sung as long as poet wields pen. The hospitality is still there, but where are the deer parks and fish ponds? Where the magnificent libraries and paintings? Where the dashing steeds and yelping packs? Where the luxurious ease of living? The answer is too well known.

Pre-eminent among these was Waverly, now almost the only ante-bellum home left in the county, the others having yielded, one by one, to the fire demon. But the glory of Waverly has not entirely passed, for, in the cosy sitting room, upon the broad, vine-covered verandas or beneath the shade of the live oaks and pines upon the spacious lawn, it is still the delight of the family to entertain their friends, and still the delight of those fortunate enough to be so regarded to enjoy their bounteous hospitality.

The train was slightly belated, but I reached Waverly in time to join the family at breakfast. My time had been so taken up throughout the season that I had found only one opportunity of testing my new Remington ejector, and while I was eager to do some execution with it, I was inclined to think that the time would be more profitably spent in shooting robins and waxwings about the hills than in the pursuit of the wary Bob White with a member of the gentler sex who was more accustomed to ballroom floors than to water-soaked corn and cotton fields; but she said "the quail first," and ever woman has her way.

Although we were some eight or nine miles from the nearest point on the Mississippi River, yet the water was at a high stage, and had backed up into the fields until there was only a strip about a quarter of a mile wide between it and the foot of the hills, there being no levees along this part of the river on the Mississippi side. We had left Prince, the young dog, at home, taking with us Beulah, an old stager, but before we turned off from the railroad Prince came bounding up, having "broken jail," so we had to include him in our outfit. Near the water's edge the dogs nosed a covey, but got jealous of each other and crowded them so closely that they flushed before we were within good range. My companion was always on deck and needed no instruction as to when to shoot, but there was little hope of stopping one of this covey, on account of the long range at which she had to take them. One bird came closer, giving me a cross shot, and I brought him down in the overflow water and he was retrieved by Beulah. It was impossible to follow up this covey, as they crossed the intervening water and entered the woods.

The second covey were feeding in the corn stubble and somewhat scattered. Again the dogs got excited and we had only chance shots. I bagged a bird, but the other gun only feathered one, which was good, for who would expect an inexperienced girl to kill quail on the wing? But wait. The third covey was roaded beautifully by Beulah, and Prince backed her up, the two making a picture that would delight the heart of any sportsman. But when they arose all we got was feathers and the painful knowledge that a broken leg was dangling from one poor bird. This was bad. Could it be that I was rattled by the feminine presence? Perhaps. But one wary old fellow who had thought to evade us, being a little apart from the main bunch, had stuck to his cover and "laid low." Alas for him that he did not take wing with the others, for Beulah's excellent nose told her that there was more in that little clump of weeds than the spirit of the departed. I waited for Miss B. to shoot, and as the bird kept on, let him have my long-range barrel with good effect. "See, I have wiped your eye." But I

felt ashamed for even the suggestion of a boast. I walked up another stray bird from this covey that the dogs had overlooked, and he was added to our bag.

Down below the gin, by the long wagon bridge, Beulah came to a beautiful point on the edge of the cotton field. Her nose was toward a bunch of broom-sedge, and she was in the open field as rigid and motionless as an image of stone, her left fore foot gracefully uplifted. We stood for a moment contemplating the picture in admiration, then hastened to her. When the birds arose, two guns spoke. Each said only one word, and two Bob Whites lay on their backs in the cotton. She would not believe that she had a hand in the execution, but I had shot only once, so there was no doubt. Soon we saw a dove alight between the cotton rows, and walked him up. This time only one gun was fired. It was not mine. The dove was brought in by Prince. Another covey was found in a switch cane brake on the hillside, a hard place in which to shoot. After they were scattered one flushed in front of her and flew over her head. She wheeled and fired just as he was about to disappear over a knoll, changing his horizontal to a downward course. "Bully for you!" I shouted. I hope she will forgive me; I could not help it.

Prince came to a stand in the switch cane, examined something and then went on. I could see that it had speckles on it, and thought it was either a dead sapsucker or a king snake. The latter it proved, only there were two of them. It was quite a warm day for early March, but they seemed to have little energy, and let me pick them up without making much resistance. Each was about three feet long. We were nearing the house and our hunt was about over, so I concluded to take them up and let the ladies have a look at them, after which they were liberated. (I am a son of Coahoma.) On our way to the house a rabbit and a robin were added to our bag, the latter by my companion's gun. When our pockets were emptied there were seven quail, a dove, a rabbit and a robin, and what an appetite we had for dinner!

HIE-ON.

MISSISSIPPI.

The Fire Fiend in Maine.

NEVER, since the terrible fire of Miramichi, nearly eighty years ago, has Maine experienced so terrible a scene of devastation as the past two weeks has witnessed. All over the State the conflagration has raged, from northern Aroostook to Washington county, southward to Castine, and westward from northern Somerset and Franklin counties to the very outermost boundaries of the State. Immense tracts of fine standing timber have been destroyed, farm buildings, and in several sections whole villages have gone down before the fiery tempest that no human power could quell.

The causes for this wholesale destruction are not hard to find. For fifty-one days we have had no rain whatever, unless we except a few light local showers that scarcely wet the surface of the ground. An unheard of thing at this season, when our rivers are usually swollen to overflowing, and our special danger is from possible freshets, while a drouth in spring is something unheard of before in our well watered State.

Every one at all familiar with our Maine woods knows that the soil in its dusky recesses where the sun never shines, is composed of layer upon layer of decomposed pine needles, the deposit of uncounted centuries, sometimes two or three feet in depth, and when dry making a perfect fire-trap. The few unquenched coals of a deserted camp-fire, even the unburned end of a cigar carelessly flung upon the ground during a dry season will keep alight, and burn underground sometimes for weeks unseen and unsuspected, feeling its evil way in the darkness until some chance opening gives it the opportunity to spring forth, full armed, like some devouring monster, upon the helpless growth above.

In the spring this "duff," as it is called, is usually so saturated with the rains and melting snows that there is little chance for fire to run in it to any distance, but now, under the influence of the dry, warm atmosphere, it has become like tinder, ready to catch and carry the smallest spark, whether from the farmer's burning brush pile or from a passing locomotive. With the discarded tops of trees left by lumbermen, and themselves extremely dry and resinous, it only needed the high winds of the last week to fan the fires here and there into a conflagration that for extent and fierceness has no parallel in the experience of the oldest inhabitant of the State.

Here in the vicinity of Moosehead Lake the fires, while close at our doors, have, by almost superhuman exertions on the part of the inhabitants, been kept at bay, so that no buildings have been destroyed, but in some of the adjoining towns many have been made homeless in a few hours by its furious assaults. In Shirley, a small village a few miles below us on the B. & A. road, the fire approached so near that the inhabitants fled for their lives, with the burning breath of the tempest scorching their very faces. But when all hope of saving the town was over, suddenly the wind changed, the flames leaped to the right and were off in another direction, leaving the astonished people to return to the smoke-blackened but unburned homes that they had never expected again to enter.

Dreadful and widespreal is the devastation of the forests, which it will take a century's growth to restore, but the timber lands of our State are owned largely by rich corporations to whom the loss, great as it is, will not in most cases spell ruin. It is the individual mill owner and his employes thus thrown out of work, and the homeless farmers, who have seen the patient toil of years go up in smoke and flame, upon whom this blow will fall most heavily. It is pitiful to see old men and women, worn with the cares and burdens of a life of hard work and pinching economy, who, in the morning sat in cheerful contentment beneath the roof that they had spent so many toilsome years to rear as a home for their old age, find themselves at night homeless, shelterless, and stripped of everything but the bare acres that even the fire was powerless to destroy.

"Nothing but rain, a steady, soaking rain of several days can save us!"

That was the cry upon every lip, and anxious eyes watched day and night for some sign of that longed-for friend. But the June skies were cloudless, and the sun shone down pitilessly upon those scenes of desolation until on Monday night, the 8th, the clouds that had been all day long tantalizing us with alternate promises and disappointments, really began to pour their hoarded treasures upon the scorched bosom of the earth.

Never was there sweeter music than the patter of those blessed drops upon the shingled roofs of those who, for days, had lived in constant peril from the fires upon either hand, and far and wide, in city home and outlying farmhouse, went up one glad united cry of thanksgiving for this priceless gift from the very hand of God Himself. It seemed as if the dumb earth itself sent up its wordless thanks for this great deliverance, as every blade of grass and humble herb lifted up its head and looked heavenward as it drank in the grateful moisture.

It had been a race, men said, between the wind and the rain for the life of the State, and, thank God! the rain had won. It will take many years to heal the wounds that we have received in this terrible encounter with the fiercest of all the elements, but it has taught us a lesson in regard to the importance of strangling a forest fire at its birth, before it grows a giant that no human power can wrestle with. And hereafter, it is safe to say that not a voice in all the State, from the northern boundary of Aroostook to Casco Bay, will be raised in protest against the appropriation made by our Legislature of 1903 to provide fire wardens to protect those forest lands that are at once our pride and one of the chief sources of our prosperity as a people.

H. G. ROWE.

GREENVILLE, Moosehead Lake, Me., June 9.

Shooting and Fishing on the Hudson

THE Hudson River, several hundred years ago, must have been an ideal hunting ground for the sportsman, and an enticing and beautiful resort for the angler. Deer and bear were undoubtedly plentiful in the forests bordering its shores, and the drumming of the old cock partridge on the mountain sides was a sound as familiar then as the blasting in a rock quarry is to-day.

Many ducks fed and bred in the marshes and creeks extending up the river from Croton to Albany, while the water probably teemed with that gamiest of fish, the striped bass. But as civilization gradually spread itself along the beautiful shores of the noble river, and as men with rods and guns increased, the game and fish commenced rapidly to disappear, until now only the faintest remnant remains.

Although both ducks and bass are far from numerous, we have spent many a pleasant day on the broad bosom of the Hudson; Croton Point Cove and Haverstraw Bay more than once have been the scene of an exciting scull after a flock of "coot," ruddy, or black ducks.

With our 37-foot steam launch and duck boat towing astern, guns, ammunition and fishing tackle on board, we would sally forth bright October mornings, the Veteran, myself, Al and Ben, for a good day's outing on the river. The latter was our engineer, and always proved a constant source of fun and amusement. He was a small man, bent and shriveled by age, for he had seen seventy summers or more, yet a better engineer never pulled open the throttle of an engine. He was clean, neat and careful about all his work, and ever ready to go out for a cruise at any time of day. Poor old Ben, he has now passed over a river greater and broader than the one on which he spent so many of his last days doing the two things he loved best to do on earth: run an engine and fish.

When we went ducking we took the fishing tackle with us, so that if luck was not in our favor we could try our hand at the bass, perch and porgies. When we went fishing we took our guns and cartridges and towed the duck boat, in case we should come upon a flock of wild fowl, and so we were always prepared for anything that would turn up.

One clear, mellow morning in the fall we started out with lunch basket added to the outfit and ready to make a day of it on the river.

"Everything on board, Al?" asked the Veteran, when our belongings had been stowed away in the easy little Buttercup.

"All right, go ahead, Ben." The bells jingled and churning the water into foam, we backed out from the dock and turning around, headed for the reef off Croton Point. The river was calm and mirror-like, except where, here and there, a gentle breeze stirred the smooth surface. The mountains colored in rich brown, red and yellow, sent long, deep reflections into the water, and distant sounds came distinctly to the ear, as on one of those clear, transparent March days. The air was fresh and cool while we were in motion, but come to a standstill, and the warm breath of summer could yet be felt. About half way over to the reef we espied a lonely sea-crow some distance ahead of the boat. "You might as well go after him," said the Veteran, "seeing you have never shot a specimen of this beautiful chicken-billed water fowl. Come, come, Al, he'll be half a mile down the river if you don't hurry up a little." Al nervously pulled the duck boat alongside as we came to a stop, while I got in and crouched behind the screen. Swiftly we sped toward the unsuspecting old "mud hen," for Al was a good sculler and soon had me within easy range of our prospective quarry.

"Look out, Al," I said, as we approached nearer and nearer. "In another minute we'll run him down and I want to have the fun of shooting him."

"Scare him," answered Al; "maybe he'll fly."

"Shoo!" I cried, waving my arms, for we were right on top of the senseless creature. I knew the Veteran was laughing over the performance, and I was bound to get even with the sea-crow. Finally he arose from the water and flew and half flapped off, until about thirty yards away he was met by a charge of No. 7 shot, which abruptly ended his career.

The launch steamed down, picked us up, and we steered for the reef. Picking out a good place near the lower end, we let go anchor, set the camp stools in the stern and commenced to bait up our bass rods. This task was one I far from relished, for we used great big sand worms that were wiggling, squirming creatures, not very pleasant to put on a hook. However, it had to be done, so here goes, and after several struggles I fastened a nice fat one on securely and cast the tempting lure over the stern.

Ben was roosting on a camp stool, busily engaged in casting out his line and hauling it in again. Suddenly he gave a jerk, and swearing softly to himself, reeled in a plump sea porgy. Whenever Ben fished and was especially pleased or displeased with his catch, he would give vent to his feelings with a low, muttered oath, much to our amusement.

The perch and porgies bit well, but no bass had taken hold as yet. A pair of either of the former put up a good fight and often deceives the angler, who thinks he has a bass. After we had been here a couple of hours, the fish stopped biting and the Veteran ordered a move. We pulled up the anchor and started for the Farms, in Haverstraw Bay, which was another good fishing ground.

The Hudson is certainly a beautiful river, and in many parts retains something of its old wildness. One of the most picturesque stretches is Haverstraw Bay, bordered on the east by Croton Point and low, rolling hills, and on the west by high, rugged mountains.

Reaching the Farms, which, by the way, is the name given to a large oyster bed situated near the center of the bay, we let go the anchor and brought out our fishing tackle again.

"'Here goes for a bass," said the Veteran, putting a dainty morsel of shedder crab on his hook, and throwing out a long cast. "That ought to fetch one," he added. And so it did, for a few minutes later, instead of reeling in the old-timed porgy or perch, a brilliant, silvery pound bass came swinging into the boat.

"That's a fine one," said Ben. "Mebbe there's more around. Al, hand me them sand worms; I guess I'll try both kinds o' bait ter once."

To watch Ben fish was as good as a play, and this time, after arranging his tackle with the utmost care, he stood up on the seat and gave a terrific cast, sending the bait flying through the air. Plunk! it struck the water. "Now I'm ready fer ye," he said, pulling up the camp stool and sitting down with a grunt of contentment.

Watching out of the corner of my eye, I suddenly saw his line jerked sharply, and then Ben commenced reeling in at a great rate. "I got ye this time," he muttered, betwen soft curses of excitement. "Al, let's have the net," he continued. "Oh, pshaw! Ben," said Al, disparagingly, "that's no bass." And to the former's discomfort and my disgust, Al's statement proved true, for instead of a bright, shining bass he brought in a huge, wriggling eel. Ben turned to Al as he pulled the squirming, yellow creature over the gunwale of the launch.

"Hand me them pipe tongs, Al, please," he said to that worthy, who promptly fished out a pair of villainous-looking iron tongs. "This is the rig for these fellers," he said, making a fruitless grab at his unwelcome catch. "I'll squeeze ye," he muttered, and opening the tongs wider, snatched again for the wily eel's head. Finally, after several unsuccessful attempts and a good deal of quiet swearing to himself, Ben managed to seize him firmly, and soon gave him the coup de grace.

It was now nearly noon, but still the fish kept on biting, and now and again some one would catch a small bass. Something tugged at my line and then commenced shaking it like a dog shakes a stick. I knew what this meant, and after reeling in the big two-pound eel I turned him over to Ben for further care.

Lunch time at hand, we made a good meal of boiled hard-shelled crabs, and five or six of these sweet and delicious shellfish combined with fresh home-made bread and butter, greatly relieves the hungry angler's appetite.

Toward the middle of the afternoon we put the fishing tackle away and steamed down the river. Half way between the Farms and the Point the Veteran discovered a flock of ducks ahead, and with the aid of the glasses distinguished them to be nine fat little ruddies dancing and bobbing on the water. "We'll both go after these," he said to me, as the launch stopped, and Al pulled the duck boat alongside. "You sit well forward and I'll get in behind you." When we were all arranged in the boat we slipped under the stern of the Buttercup and made for the unsuspecting flock.

"My goodness!" said Al suddenly. "Here comes a steamboat up behind us and there's a rowboat ahead that's going to get right between us and those ducks," he continued excitedly.

"Well, get to work, Al, and scull harder," answered the Veteran. "Maybe we can beat them yet." Al puffed and panted as he sent the duck boat surging along, but we crossed the rowboat's bow, and the steamer was still a good distance behind. "You take a sitting shot," whispered the Veteran, "and then we'll give them three barrels when they get up." About forty yards from the ducks he said, "Now give it to them," and raising up I fired, knocking two over, while the remaining seven arose with a whirr from the water. Bang, bang! and five came tumbling out of the air to the Veteran's right and left, while I managed to bring one down with my left barrel. Eight ruddy ducks lay floating on the water, but the ninth eluded our parting salute and skimmed away.

"Those are the first good ducks we have killed in some time," said the Veteran, and we were all very much elated over our success, for such an opportunity was a rare one. The launch came along and we continued on our way. Beyond the Point Al, who had been keeping a lookout for ducks, pointed to the left and said, "Just look at that for a bunch of ducks!" And there appeared what looked like a flock of twenty or thirty big coot.

"Hush!" said Al nervously, "they'll hear that bell sure if you ring it."

"Well," answered the Veteran, laughing at Al's extreme caution in not frightening the flock, "Ducks as wild as that had better get up and clear out, for nobody will get near them. You go after these," he said, turning to me, and needless to say I promptly obeyed the order.

Al kept telling me not to get excited as we neared the ducks, and when my heart was fairly thumping with that malady, I heard him say in the most disgusted voice behind me, "Oh, pshaw! they ain't any ducks at all, only net corks."

"What?" I said, raising up and peering over the screen. Sure enough there was a large bunch of corks

bobbing serenely on the water. The net had parted somewhere, and they all had drifted together, so at a distance they represented exactly a flock of ducks.

How the Veteran laughed over the joke when the Buttercup steamed up and how mortified and chagrined Al and I felt over the whole performance.

"But I was sure they were ducks myself," said the Veteran, after guying Al on the bell-ringing episode, "and until we came closer they looked just like a bunch of coot. Anyway, we'll take a sail down the river and maybe you'll get another chance at some real ducks."

For a couple of miles we continued south, and then turning, came up the river near the east shore.

"What are those?" asked Al, all at once.

"Three black ducks," answered the Veteran promptly, for he can always tell what species a duck is, even if half a mile distant. "Now is your chance," he said, turning to me, "so go ahead."

Pushing off the duck boat, we were soon moving up quickly with the tide on the "duskies," who all appeared asleep; very different from their usual wide awake mood. About thirty or forty yards distant I kneeled up in the boat and gave them the right-hand barrel in the water. Only one succumbed to the shot, but I was lucky in knocking down a second bird out of the air as he jumped, while the third, unscathed, sped off like a bullet.

They were a nice, plump pair, and the first black ducks, excepting one, I had ever killed. Boarding the launch, we headed toward shore, for it was growing late and the air chilly. Our bag consisted of eight ruddy ducks, a pair of black ducks, one sea-crow and a pail full of perch, porgies, small bass, eels and crabs.

Such little trips on the river are very pleasant, and, although this day was an especially lucky one, the fascination of cruising about in search of game and fish never decreases. And then, October is the sportsman's month, and whether it be fruitful or not, I am sure is always looked forward to and enjoyed by those who love to fish and shoot.

CAMILLA.

Adirondack Notes.

THE forest fires have not been overstated in the daily papers I have seen. Smoke like a pall of darkness has many days overhung the lakes so that one could not see a half mile distinctly—sometimes not a quarter. Sometimes a yellow cast was given to everything, as though all nature had a bad attack of jaundice. One day last week burned leaves filled the air and fell like snowflakes. They were crisped, not crumbled, and had come for miles upon the wind. Yesterday as people returned from church they noticed that the air was delightfully clear; all felt that the long-wished-for change had come, and toward night a little rain fell; several showers came during the night; more this morning, and glad thankfulness seems written on every face one meets.

Many believe that a large number of the fires have been accidental, but that another large number have been purposely set. One case was stated to the writer as a sample and as follows: The poor people of a certain community cut wood on State land last winter and were fined for it. Partly to "get even" and partly to earn money to make up the fines by fighting fire, the poachers were believed to have set the fires. I have heard men say, "Fighting fire is good business. It is twenty cents an hour and found from the time you leave home till you get back again." It is an observed fact that some sets of men work hard and earnestly while other sets "sojer" as if to keep up the job. One such set was promptly discharged by the fire warden when he learned the facts.

A gentleman reported to me the following which came under his observation in the vicinity of North Creek. A preserve and club house being in danger, a man was sent to hire help and fight the fire. Next day a hotel lounger was heard to say: "I would have gone with that man if I had known it, but I would have wanted $5 a day in advance. And when I got there, do you know what I would have done? I would not have fought the fires, but set more." He explained his position by finding fault with "the rich men who buy up our lands and then won't let us hunt on them." This is the spirit of ignorant prejudice akin to that governing so many strikes. I cannot believe it is so widespread here as among the labor unions, for many of the Adirondackers share the nobility of their native hills. Where the spirit described is found it is most likely to be—as among the labor unions—in a foreign importation.

Fishing has been unusually good, I am told, in both lake and stream. Poor places have so improved that one can scarcely go amiss for a fair day's sport. Cedar River, in particular, has afforded many good catches of trout. Game is said to have wintered well. The elk given by Mr. Whitney have been seen frequently, and deer are said to be abundant. Some fishermen are already planning to return for the fall hunting. A recent tour of inspection showed much more "sign" than previous years on the same ground.

An Old Trick Well Done.

Recently when driving along a mountain road a brood of ducklings were surprised in the ditch by the road. The mother, a sheldrake, immediately took the road ahead of the team, and so thoroughly simulated a broken leg that at first I thought it was reality. A broken wing also seemed in evidence. I was familiar with the partridge trick, but did not know ducks were up to the same one; hence I was more easily deceived. After leading us, as she supposed, a dozen rods or more and around a turn in the road away from her brood, the old duck suddenly recovered, took wing, and describing a wide circle, returned to her little ones. It was certainly well done and worthy the mother instinct which prompted it. Speaking of the occurrence to a Utica gentleman one day, he said he once had a similar experience. Coming suddenly on a brood of sheldrakes in a pond hole the mother skittered as if with broken wing all over the surface of the water, making a great splashing until her ducklings were hidden, and then, calmly perching in full view, looked around as if to say: "I haven't any ducks." The Utica man had never heard anything like it till I told him my experience. Is such practice common among ducks? I am not a duck hunter, but would like to know.

Please give my compliments to Mr. Emerson Carney, whose articles I enjoy, and thank him for his explanation (in your last issue) about the absence of deciduous trees from his hunting grounds. My observations of deer have been in the Adirondacks, where deciduous trees abound, also undergrowth of many kinds. No doubt this largely accounts for the difference in our experience.

Natural History.

Experiments with Chickens.

Editor Forest and Stream:

I take it that your esteemed correspondent Hermit is desirous of the fullest light upon the subject that he has agitated in your columns, and it is, therefore, with no intention of baiting him that I indulge in further criticism of his outgivings. In your issue of June 6 he extends ironical congratulations to Mr. E. P. Jaques "because of his peculiar breed of chicks that will pick up crumbs as soon as they are out of the shell," and intimates further that they are the only chicks in the world that do so. I admit that these Kansas chicks are marvels of precocity, but I am sensible that young America is little trammeled by tradition, that it is disposed to hold itself independent of precedent, and chicks as well as children, in the invigorating air of the Western prairie, may be stimulated into an exceptional forwardness of development. Be that as it may, the evidence is conclusive that the young of the feathered tribe possess, upon their entry into the world, a stock of inherited instincts amply qualifying them for the battle of life.

Nigh half a century ago Douglas Spalding, an English investigator, subjected the young of various creatures to a minute and painstaking course of observation and experiment, the results of which he subsequently published. Prior to such exposition it was a belief current among intelligent people that chicks picked up crumbs and followed the call of the mother immediately upon their leaving the shell. He experimented with over fifty chicks, "but he states not one upon emergence was in a condition to manifest an acquaintance with the qualities of the outer world. On leaving the shell they are wet and helpless, they struggle with their legs, wings and necks, but are unable to stand or hold up their heads. Soon, however, they may be distinctly seen and felt pressing against and endeavoring to keep in contact with any warm object. They advance very rapidly. I have seen them hold up their heads well, pick at objects and attempt to dress their wings when only four or five hours old." To determine that the chicks acquire their power of interpreting instinctively what they see and hear, Spalding states "as soon as the little prisoners had begun to break their way out I removed a piece of the shell, and before they had opened their eyes, drew over their heads little hoods, which, being furnished with an elastic thread at the lower end, fitted close around their necks." In some cases the material was thick enough to impose total darkness upon the wearers; in other instances it was semi-transparent. In this state of obvious blindness they were kept from one to three days. When unhooded the chicks' behavior was conclusive against the theory that the perception of distance and direction by the eye are the result of experience or of associations formed in the outset of each individual life. Often the chicks, at the end of two minutes, followed with their eyes the movements of crawling insects. In from two to fifteen minutes they would peck at some minute speck, and appeared to possess an innate perception of distance, for, as a rule, they seemed to hit the object, however small, at which they struck. Without any opportunity of imitation, when kept quite isolated from their kind, chicks began to scrape when from two to six days old. In view of Hermit's adverse contention, I submit the following account of one of Spalding's experiments:

A chick that was unhooded when three days old remained for six minutes chirping and looking about, at the end of that time it followed with its head and eyes the movements of a fly twelve inches distant, at ten minutes it made a peck at its toes, and the next instant it made a vigorous dash at the fly, which had come within reach of its neck, and seized and swallowed it at the first stroke. For seven minutes more it sat calling and looking about it, when a hive bee coming sufficiently near, was seized at a dart, and thrown some distance much disabled. For twenty minuates it sat upon the spot where its eyes had been unveiled, without attempting to walk a step. It was then placed on rough ground within sight and call of a hen caring for a brood of its own age. After standing chirping for about a minute, it started off for the hen, displaying as keen a perception of the nature and qualities of the outer world as it was ever likely to possess in after life. It never required to knock its head against a stone to discover that there was no road that way. It leaped over the smaller obstacles that lay in its path and ran around the larger, reaching the mother in as nearly a straight line as the nature of the ground would permit. This, let it be remembered, was the first time that it had ever walked by sight.

Hermit should not shut his eyes to the undeniable fact that the young of all animal kind begin life fully equipped to cope with its exigencies. Nature and care are, of course, essential, but the appearance of maternal instruction proves nothing, it affords no evidence that a subsequent behavior of the young conforming to such teaching is a result thereof. So long as similar manifestations are spontaneously evolved, it must be conceded that the so-called schooling is a mere stimulation of dormant faculties into active being. For instance, Hermit entertains the readers of FOREST AND STREAM with a graphic recital of his boyish observation of a mother cat's apparently sedulous effort to teach her kittens how to catch and kill mice, and assumes that such instruction is a necessary feature of feline training. No weightier authority on this point can be adduced than Darwin, who says: "Let any one * * * give a mouse to a kitten taken early from its mother and which has never seen one and observe how soon the kitten growls with hair erect." Anyone can make this conclusive experiment, bearing in mind that the kitten chosen should be of proper stock. Some cats eagerly take to mousing, others manifest entire indifference to the sport. Of course, in a wild state, the latter would be speedily eliminated, but they exist because man's arbitrary selection is not that of nature.

A. H. GOURAUD.

BROOKLYN, N. Y.

The Whippoorwill's Cry.

WILLIAMSPORT, Pa., June 12.—*Editor Forest and Stream:* Though Mr. L. F. Brown appears to be certain that only the female whippoorwill, and not the male, is the singer of the night, I will state my own experience to the contrary.

For fifty years I have lived in a locality which, within a few hundred yards, is bordered by mountainous woods. In these woods we can hear this bird from May to August, and occasionally to September, and not only a few at a time, but hundreds of them during warm nights.

Many were the whippoorwills I collected during a number of years as specimens for ornithological friends, who would exchange with me for other desirable specimens.

My method to secure the bird has always been to follow up the bird, guided by its song, and though it was generally too dark in the woods to see the bird on a log, low limb, stone or on the ground, the white markings on throat and tail of the male singer made it possible for me to see the rising bird, which my quick snapshot generally brought to the ground. A small piece of sperm candle helped me to find the bird with the white markings and prevented me from reaching into the ready fangs of a possible rattlesnake.

In every instance the rising bird was a male, as a female could not be seen, except when it appeared on a limb outlined against the sky and near the place where the male was in song; it then uttered a short call, but one at a time.

The above statement is my experience, but I would not say that the female does not sing, or cannot sing. The female oriole will answer the call of the male with notes often nearly as full of music as those of its mate. The female of the hooded warbler will answer the song of the male almost constantly, except when sitting on its nest, but the song consists of a few notes only.

AUGUST KOCH.

What Beavers Can Do.

CAPT. GEORGE VAN FELSON, secretary of the Tourilli Fish and Game Club, whose territory lies in the Lake St. John country, Saguenay, Quebec, makes a remarkable statement about the ravages of beavers in his annual report for 1903. Speaking of the unprecedented increase of these animals on the club property, he says:

"This year the increase has become alarming, and today innumerable lakes, streams, and rivers have been dammed by these hard-working and interesting animals. I may note a few remarkable cases, such as the damming of Lake George. This large sheet of water, twelve miles in circumference, has been raised four feet above its ordinary level. Tourilli River has been dammed at three different points, at one place over 120 feet wide. On the west branch and many other points small streams have been dammed and our trails swamped. A large number of small lakes heretofore offering excellent feeding grounds for caribou now present glistening sheets of water in lieu of long grass."

The editors of FOREST AND STREAM beg to acknowledge in behalf of Mr. Charles Hallock, and at his request, a repeated invitation from the honorary president (Com. G. U. Gregory) and Secretary Van Felson, to be the club's guest this season. From all accounts the fishing and shooting on this exceptional preserve is not surpassed on earth, and only equaled in the mystical happy hunting grounds.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Take the Boy Along.

Editor Forest and Stream:

It is raining. Six days ago occurred the most disastrous flood that was ever known on the upper Cottonwood. Bridges are torn out and none of the roads are passable more than a mile or so in any direction. Railroads are at a standstill with no mails or news from anywhere. It has rained all spring to that extent that farmers could do little toward putting in crops, and that little is now washed away. Since the flood it has rained six solid days and nights a cold drizzle, with the temperature at 44 above zero.

We have a vague suspicion that other parts of the world are more or less afflicted, but we have not heard from our nearest neighbor for four days. Put to our utmost for something to do, we decided to write FOREST AND STREAM of an event in the hunting line that occurred some months ago.

We had heard grass plover were ripe, and had been threatening them for some time. The extreme northwest corner of Marion county runs into the high, rocky and rough divide between the headwaters of the Cottonwood River and the Smoky Hill River. These hilly lands are reserved for cattle ranges and are fenced into very large pastures and are otherwise as nature left them. In these pastures the grass plover come in spring and fall as of old. Wolves congregate here in increased numbers following the herds. But to the grass plover.

Lee is my boy, now fifteen years old. It has been my fortune to be among the wild game more than most men, not to shoot—for it has been years since I have shot to amount to anything, and years have intervened between

each of my grand shooting festivals—but I have been among the game more and on more different fields than most men. Since Lee has been big enough to be interested in wild game I have regretted very much that I could not have him with me, but it never happened that way until a short time ago. We had been noticing and watching for the plover, and when rumors of them began to be heard we were on the alert. Driving to one of the largest pastures in the raggedest part of the hills we had a fine ride amid splendid and far extended views; but, contrary to our expectations, we found no plover. It was very pleasant, though, and we felt no keen disappointment. Cattle were grazing on a thousand hills with far reaching levels between. With only a slight change in color and form it would have been the scene of forty-five years ago over again. At last we came to one of the water holes made by damming a ravine and catching the rain. While we sat looking a pair of bluewing teal dropped into the pond. Directing Lee how to proceed to get under the dam, where he could walk within fair range without being seen, I sat in the wagon and watched the game. The ducks that stop long in Kansas learn to watch the dam and at the first appearance of a hat above the bank they are off. This pair were on the alert, and they were off at the first glint of white felt above the level. They are too late, though; two puffs of smoke and they are both down as neatly as if a veteran had wielded the gun.

Lee was very proud, and seemed to rate the hunt a great success. It was his first pair and fourth and fifth wild duck. Some years earlier he had spent a good deal of his time in drawing, being almost self-taught, having taken only a few lessons from a country teacher. For the last few years he has done but little at it. When we got home he overhauled his effects for crayon paper, but found none except such as had been used. Selecting a piece of this and turning the blank side he hung up the pair of teal and drew them on it, natural size. We think the effort very creditable, and as soon as the mail opens will send you the original along with this letter. Yes, take the boy along if circumstances are favorable.

Since writing the above we have learned that the flood was indeed of wide extent, and has left its hundreds homeless, which you had doubtless learned long before.

E. P. JAQUES.

DURHAM, Kansas, June 2.

The "Platform Plank" in the Field.

LOOKING backward over lengthening years no friendships are recalled that are warmer, more firmly cemented, nor more highly prized than those formed and shared in the brotherhood of sportsmen.

A day beside the rippling trout brook with rod and creel in early springtime, a day upon the distant salmon river beneath northern skies, a day afield with bird dog and gun in autumn, a day in the wilderness in the deep snows of winter after big game—these are the tests of manhood, the furnace that separates the dross of appearance and pretense from the real gold of sterling worth.

Friendships begotten of such conditions are true and lasting, an unending fund of pride and delight, and they are not the exclusive possession of millionaires and those of classical education and unlimited opportunities, as too many are apt to think.

Many there are in the humbler walks of life whose ears are attuned to the grand Te Deum of Nature, who square their conduct by the Golden Rule, and whose quiet lives and unpretentious influence for good are the salvation and uplifting of society and the country.

The great army of sportsmen numbers recruits from all classes and walks of life, and worthiness is the only test and password. Sportsmen's literature, their periodical publications and helpful legislation for the protection and propagation of game—fur, fin and feather—wrought by their instrumentaliy will attest their present high ideals and irresistible influence and strength.

The leaves in the diary of Time need be turned backward but a few short years before the enunciation and promulgation of the Platform Plank is discovered—that startling innovation in the ethics of sportsmanship—and the pessimism with which it was greeted and discussed.

That it was necessary and timely now goes without saying; and that it has been crystallized into law in so many States is a compliment to its authors and to the great body of sportsmen of our country who so quickly apprehended its wisdom and benefit, and who were so instrumental in the halls of legislation as to place it upon the statute books and give it all the force and effect of salutary law.

This, with the further upbuilding of healthy public sentiment and helpful legislation, promises much for the future for the preservation and propagation of well nigh extinct species as well as teaching lessons of manliness and forbearance in destruction and slaughter.

Even though it were practical, selfishness is still too dominant in the world to warrant an appeal to sportsmen to individually apply, in an accentuated form, the principle of the Platform Plank to themselves by accepting and being faithful to another, viz., killing fish and game for sport shall be prohibited at all times. Nevertheless, the tendency of the times is in this direction, and a little later it may seem no more revolutionary nor restrictive of individual rights than much that preceded it.

May the day not come when greater zest and higher pleasure will follow from observation and study and be more alluring and satisfying than now reward the strength to endure and the skill to destroy, even though a plethoric game bag attests both?

Such was the result of a day's outing during the open season of last autumn which I will briefly relate, hoping that others may be induced to follow our example with the same or greater measure of benefit and pleasure. It is my good fortune to number among my friends a man who enjoyed excellent early opportunities which he turned to good account—a man grown old and honored in prominent public station and civic life—a man whose love for outdoor life has grown and strengthened with his years. We had planned with pleasant anticipations based upon many former experiences along the hillsides and in the runs of central Massachusetts, for a day with the lordly grouse.

The day arrived, the air was tempered by the frosts of autumn, the haze of the Indian summer was in the air, all nature was arrayed in her most gorgeous hues. Our route lay northward from the heart of the Commonwealth toward the historic Ransom Rock near Wachusett Mountain, where captives were ransomed from the Indians in colonial days. Arrived at a farm-house we were warmly welcomed and our team cared for. Massachusetts for the most part is rolling land, hill and valley breaking the monotony and adding a charm to the landscape. Where we had chosen to spend our day a hill of considerable height lifts its summit high above the surrounding country, and its top is crowned by naked rock and a few pine trees which grow out of the crevasses, where they seem like giant sentinels on guard. Stretching away to the eastward were the gently sloping and well tilled acres of the farmer whose courtesy we were enjoying. Near the base of the hill on this side were a few acres in a basin-shaped depression forming a kind of bog, which was overgrown with a dense growth of scrub pine, white birches, wild apple trees, and grape vines—an ideal place for the king of game birds which we sought. Between this and the summit and extending around its base half way on either side was cleared mowing and pasture land. On the opposite or western slope of the hill, and extending for miles beyond, there is a tumbling, foaming trout brook and abundant good covert for birds extending away in every direction beyond.

Years of experience had taught us how to work the covert with greatest success. To shoot in the dense growth of the marshy basin on the eastern slope is next to impossible, and the birds when started always fly out over the cleared land around the base of the hill, affording an excellent shot for a man properly stationed. Working the covert from north to south the birds fly around the southern base of the hill, and vice versa, the gunner having choice of an incomer or tail shot, when only a tyro need score a miss.

For a time it was a debated question who would beat the covert and who would do the shooting. My friend at last was prevailed to go to the accustomed place on the southern slope directly in the line of flight, and when he had done so I started in with the dog. I had advanced but a few yards when a beautiful point greeted my sight. I was so enmeshed that it was impossible to shoot, and calling out "Point" to my friend, I ordered the dog on. A sound as of muffled thunder broke the stillness, and stooping to the earth I saw a magnificent cock bird making a bee-line toward my friend, as if to enter the muzzle of his gun. In a moment he had passed as swift as a flash, when the gunner wheeled around, apparently keeping the bird covered with his gun, as if he preferred a tail shot. Another moment and the bird had vanished, and there was no sound of gun to destroy his life or salute his passage!

What could be the matter?

He soon called for and asked me to come to him. I was soon at his side, and in answer to my inquiry as to what was the matter, with impressive earnestness he made this paradoxical reply:

"I could—and I couldn't!"

I noticed that he was deeply moved and I made no further inquiry.

A few moments passed and then these words of Shakespeare fell from his lips:

"Like a dull actor now
I have forgot my part; and I am out."

Addressing me by name he continued:

"How could I? That innocent bird that never knew human care! That innocent bird that never did me or any other person harm! That innocent bird for whom the heavenly Father provides! * * * From this eminence just look around! Feast your eyes upon this wreath of gorgeous coloring that Rembrandt never equaled! What a panorama in the mellow autumn sunshine! Where all is beautiful, stillness and peace shall man alone mar and do the deed of destruction? * * * I could—and I couldn't!"

For a time there was nothing said; conversation was out of place and words would be but discord. The moments were impressive.

"I hope you will pardon me and not think me over sentimental or childish," he finally said. "I have enjoyed my days in the field for many years, and, as you know, have killed a reasonable number of birds, but it don't seem as if I would ever want to kill another. But don't let my feelings interfere with your pleasure. I will take the dog and beat the covert and send the birds to you."

To this I demurred, when it was mutually agreed that we should withdraw the cartridges from our guns and continue our day's pleasure, enjoy the outing, and see how many birds we could put up and get a fair shot at with a fair probability that we might reduce them to possession did we choose to.

With this understanding I returned to the covert and soon after sent seven other birds within easy range of my friend's gun. We then climbed to the rocky summit where for a time, seated upon the craggy rocks, we enjoyed the tempered sunshine, the exhilarating air, and the wealth of coloring which extended away in all directions until lost in the dim distance, where the faint undulating outline of the hills touched the horizon. The time and place were more suggestive of silence and musing than conversation, and recalled these lines of Emerson, the sage of Concord:

"Hast thou named all the birds without a gun?
Loved the wood rose and left it on the stalk?
At rich men's tables eaten bread and pulse?
Unarmed, faced danger with a heart of trust?

"And loved so well a high behavior,
In man or maid, that thou, from speech refrained,
Nobility more nobly to repay?
Oh, be my friend and teach me to be thine!"

The noon hour was drawing nigh and we returned to the farm-house to eat our lunch. Here we were ushered into the old-fashioned dining room with its great fireplace and brass-topped andirons, and the hospitality of a thrifty New England farmer was urged upon us and it was thankfully accepted and highly appreciated.

We returned to the covert beyond the hill in the afternoon, where we espied a wily fox nosing along the ground in a small cleared space, evidently in search of mice. For some time we enjoyed his graceful movements, his attitudinizing and posing, when, alarmed by a whistle, he vanished as if shot from a gun into the covert beyond. Gray squirrels dodged about to opposite sides of trees, and when one of us remained behind they soon sought safety in the top of some projecting limb or in a sudden dash to adjacent trees.

During the afternoon our dog did good work and made staunch point on eight birds which would have given us fair shots, but we did not trouble them.

Beside the trout brook wild clematis grew in riotous profusion, and the blue-fringed gentian and the cardinal flower appeared more beautiful in contrast, but mindful of Emerson's lines we did not disturb them in their environment. The hours of the shortened day were soon numbered, and we returned to our homes; and the day spent when we could and didn't, remains a delightful reminiscence.

GEO. MCALEER.

WORCESTER, Mass.

Massachusetts Fish and Game.

BOSTON, June 13.—*Editor Forest and Stream:* The clouds of smoke and dust which have hung like a pall over New England for many weeks have been dissipated, and in their stead the mists and rains have come, reviving vegetation, bringing smiles to nature's face and gladness to the hearts of men.

Anglers have special reason to share in the universal rejoicing; for not only were the streams drying up, but many ponds and small lakes were becoming so low as to forebode bad luck to fishermen. Our friends in the hill and mountain towns of the western counties, who had abandoned their favorite pastime, have again taken down their rods and report some very good catches, especially in Berkshire, where, they tell us, they are getting better sport than at any time this season. Probably some of the stream fish have been caught in shoal places and have lacked sufficient water to sustain life, but when a drought is not continued long enough to destroy trout and is followed by a good rain, then is just the time to get full creels. The experience of our friends in western Massachusetts will have a counterpart in other sections of our State and in other States. Some of your readers will be glad to learn that Lake Onota, Pittsfield, is now open to fishing three days of each week, Mondays, Wednesdays and Saturdays.

The executive committee of the Massachusetts Central Committee has just issued a report on the legislative work of the past winter, in which they characterize the making permanent the anti-sale law on partridge and woodcock as "the most important piece of legislation in the interest of the protection of birds ever enacted in the history of game legislation in Massachusetts." Your readers will recall the fact, as set forth in the columns of FOREST AND STREAM, while the fight was on three years ago, that a permanent enactment was urged then, but that it was fought desperately in the committee; also, that even with the three years' limitation it had to be fought at every stage of its progress and came quite near being lost in the Senate. This year the committee on fish and game reported unanimously in its favor, and in its progress through the two houses there was not once a call for a yea and nay vote. So much for the change in public sentiment as reflected in the action of our Legislature. No one knows better than you, Mr. Editor, the influence which the Boston market has wielded on legislation in years gone by. In the FOREST AND STREAM platform of 1894, which the writer has had in his possession these nine years, you say, "That which stands in the way of the present prohibition of the sale of game in the larger cities is the magnitude of the commercial interests involved."

The "Campaign of Education," to which you refer in that document, has been effectively conducted in our State, and the community is learning "the true place of wild game in the economy of the civilization of the present."

In my humble opinion no one agency has done more in developing this public sentiment than your paper, which, as just compensation for its courageous and intelligent advocacy of right principles, should be found in the household of every true sportsman. But with all the assistance we have received from your columns, it has been a long and an up-hill struggle, so long and so arduous as to discourage utterly some of the soldiers that enlisted under the banner of protection in days gone by.

Others have kept their faces ever to the front, and are now reaping the rewards of a well-earned victory in seeing the principles they have advocated triumphant in many States of the Union, and so generally approved that the might of the general Government may now be invoked in their defense.

Three events in the memorable struggle in behalf of the birds in Massachusetts, briefly stated, are as follows:

1. The meeting in 1898, when J. M. Stevenson, of Pittsfield, as a member of the Legislative Committee, said the first thing for sportsmen to do was to get together and harmonize their differences.

2. The convention of sportsmen's and farmers' clubs called the same year by the Massachusetts Fish and Game Protective Association.

3. The convention of Dec. 14, 1899, in which 60 different organizations were represented, and which declared in opposition to the sale of game and proceeded to form a central committee of clubs, with an executive committee to attend to legislative work. The prime mover in securing the different meetings, which have been of so much advantage to the cause of protection, was the State Association, but the numerous clubs and societies scattered over the State that have "put a shoulder to the wheel," have like reason to be proud of the results which have been achieved by sportsmen "getting together and harmonizing their differences." We have a right to hope that the unanimity of sentiment which now exists among the sportsmen of Massachusetts, will be of long continuance.

E. S. Beach, Esq., Boston, who has just returned from Mooseluckmeguntic, tells me he saw there thirteen 9-pound salmon at one time that had been taken from the lake, which goes to show that fishermen continue to be well rewarded for their efforts. A 7-pound salmon is credited to ex-Gov. Rollins—known the country over as New Hampshire's "Home Week" governor—and Miss Mary Skillings, of the Governor's party, captured one of 5 pounds.

Mr. H. C. Kennedy, Brooklyn, is arranging Camp Bijou for the arrival of Mrs. Kennedy and their two daughters. Mr. Henry H. Roeloffs, of Philadelphia, with a party of five, is in his camp, Flosroe, at the Narrows above Haines Landing. Several old-timers yet remain and are getting a good number of fish on Rangeley Lake.

Writing to the Boston Herald of to-day regarding fires, Capt. F. C. Barker says: "It is to be regretted that erroneous reports should have been sent from this vicinity, for while the forests have suffered, it was not any of the woods sections frequented by the summer visitor to the lakes, except the near vicinity of Camp Bemis, and above this point the forest is not marred." The Round Mountain Lake camps that were burned (three of them) early in the spring, have been rebuilt and have a good number of guests, among them Mr. and Mrs. E. M. Messenger, son and others from Winchester, Mass. This lake is at a high altitude, and as the writer can testify from personal acquaintance, the camps are delightfully situated. I passed a few days there very pleasantly in the days of the man who built them, that veteran woodsman (once at Tim Pond), Kennedy Smith. They are twelve miles by buckboard road from Eustis. Twenty years ago the writer went from Eustis, 17 miles, to King and Bartlett lakes, which were opened this year, May 20. They can be reached now from Atteau Lake. Mr. Henry Seymour, with several friends from New York, is getting good luck on the lakes and on Spencer stream. If the fishing on the stream is what it used to be one can get the limit in an hour's fishing in a certain pool I know.

I am in receipt of a letter to-day from Mr. A. B. F. Kinney, written from Greenville Junction, Me., in which he writes: "The fire stories from here have been very much exaggerated. At all events they are all out now. I have been coming here for 25 years and never saw the fishing any better than it is now. Speckled trout are taking the fly fine, and to catch all the lakers by trolling is no trick at all. * * * I have not seen the sun for two days."

Grand Lake stream is now open to fly-fishing, and is furnishing good sport to a good number of anglers, who average from 6 to 12 daily, from 2½ to 3½ pounds in weight. The burning of the fine club house of the Englewood Club, with the surrounding forests, is greatly regretted by the members, and they have the sympathy of all Boston sportsmen. Ex-Mayor Henry E. Cobb, of Newton, one of the members, lost his fine summer home at Musquash, N. B., and he has gone there to do what he can to relieve the distress of the inhabitants of that vicinity.

Mr. Danforth informs me that Warren I. Hixon, of Lynn, recently took from Dan Hole Pond, N. H., a 13-pound and an 8½-pound salmon, and his companion, Mr. George E. Hanscom, of Malden, took one of 7 and one of 5 pounds. Mr. Frank B. Moore, of Newton Highlands, has taken from Newfound Lake salmon of 5 and 6 pounds, and a 4-pound trout.

CENTRAL.

Fire Made with a Gun.

Editor Forest and Stream:

Mr. Hough, in the current number, gives me the first information of the fate of Mr. Egan, the railroad officer, who was lost in Montana last November; since he was first reported to be lost. I have often thought that when the snow had left this spring his body would be found at the bottom of one of those ravines that cross that country in every direction. I have been in the country and I cannot call to mind now any place in the West, and I know the whole of the West pretty well, where a worse place could be found to get lost in.

Had Mr. Egan, when he found himself lost, got up on as high a point as he could find and then started a fire, one that would give plenty of smoke, he no doubt would be alive to-day. Some of the parties who were out looking for him probably passed within a mile of where his body lay frozen under the snow, for he no doubt froze to death.

I remember a similar case that happened many years ago: A party of us mounted men were out in what is now Stonewall county, Texas, on a hunt and scout; and while we were lying over a day in camp a number of men went off in different directions on foot to hunt. A norther came up late in the afternoon, and at dark when all the men should have been back, one of them was still missing.

It began to snow; but only enough snow fell to whiten the ground; but it would be of no use for us to try to find that man after night. We kept up a good signal fire all night, but he did not come in, and early the next morning four of us, all that in our lieutenant's opinion could be sent without any danger of us getting lost in our turn, were sent out, each man by himself, to hunt up the missing man, we going mounted.

I had gone nearly six miles from camp directly toward the Double Mountains, when just ahead of me, up on the top of a rocky ridge, I noticed a gray wolf acting rather curiously. He seemed to be interested in something down on the other side of the ridge. I sent a shot at him, but missed him, and he left. Climbing up to where the wolf had been, I found my man. He lay just below me and between this ridge and a higher one. He had fallen down off from where I stood now late the last night, he told me; then had laid here ever since. He was not hurt much when I came to examine him. He had found himself lost late the evening before, then had wandered around until he had fallen here. He was still half frozen and did not have energy enough left to get up and hunt the camp.

"Why did you not start a fire last night?" I asked. "Had you put one on the side of that hill up there, we could have seen it and then found you. The camp is in sight of this hill."

He had no matches, he said.

"You did not need any; you had a gun and pistol. Now let me start one for you."

I had matches, but did not use them. I took the greasy rag I used for a gun stopper, then taking a small piece of paper folded both and thrust them in under a small log; then holding my pistol with the muzzle a few inches away from this stuff, I fired into it just once, then blew on it, and had a fire without matches.

After I had got the man warmed up a little, I put him on my horse, and we went home.

Mr. Egan may not have had any matches, either, but he was too old a hunter to need them; he no doubt knew of this trick, and had he not been stunned from a fall, could have used it. I had not supposed that there was a man living who was in the habit of using a gun, but would know how to start a fire this way. I found men right in that camp, though, who did not know it, or at least had never thought of it.

CABIA BLANCO.

A Close Time Incident.

RICHFORD, Vt., May 26.—*Editor Forest and Stream:* Recently while out for a constitutional stroll over the hills near this village, accompanied by a couple of young setters, Bruce and Grouse, and our irrepressible fox terrier, Bob, I passed through a small piece of woods with all of the dogs close in-to-heel when a hen partridge (ruffed grouse) jumped up from almost under my feet with a great whir-r-r and boom, at the same time scattering in all directions her numerous brood of young chicks. Bob immediately gave chase after the fluttering mother bird, while the chicks (some of them had landed on their backs) picked themselves up, and, instead of trying to hide, young partridge fashion, they ran up to my feet as for protection. I picked one of them up and it nestled itself in a confiding way in my hand and looked up to my face with a fearless bright little eye. After holding it for a moment, I replaced it on the ground and turned my head to look at the dogs. Bruce, who is field broken, had dropped to flush when the old bird rose, and Grouse, a litter brother of Bruce (unbroken and having had no field work) was giving an object lesson of what hereditary instinct will teach a well bred setter to do under such circumstances. He was standing at a stanch point, with his nose down within a foot of one of the chicks, which was sitting quietly on a large dead leaf. After watching them for a few moments, I backed away from the spot and called to the dogs to come-to-heel. Bruce obeyed, but Grouse held his point immovable. After calling to him several times I walked up to him and placed my hand on his back. He was as rigid as a piece of marble. I rubbed him down a few times and calling him a good fellow, took him up in my arms and moved away from the spot. As soon as he was away from the scent he relaxed, and as I dropped him to the ground he showed by his actions that he knew that he had done a good thing, and that he had discovered a new source of pleasure—hitherto an unknown pleasure.

There were a dozen or more of those chicks and there can be no doubt that the nest where they were hatched was under a small evergreen bush from under which the old bird jumped. The chicks must have been newly hatched or they would not have been so tame and unsophisticated, as my former experience has been that when young grouse are disturbed, they will quickly secrete themselves under the dead leaves or some other convenient cover.

I went on in the direction taken by the old bird and soon found Bob under some second growth hemlocks, where he seemed to think that his game had treed. Calling him to heel, we went out into the cleared pasture, so as to not further disturb that interesting family, though we may soon pay them another visit with a camera.

STANSTEAD.

Sport's Fatal Point.

JEFFERSON BARRACKS, Mo., June 11.—*Editor Forest and Stream:* Observing the inclosed article in my St. Louis Republic of a day or two since, and thinking you might find something of interest therein, I take the liberty of forwarding it. Please be careful to keep it separate from articles discussing the "Intelligence of Wild Animals," as I do not wish to complicate that discussion by furnishing a basis to the possible theory that the quail lured this setter to his destruction by giving scent at the instant he was on the track and the car in sight.

WM. F. FLYNN.

Because Sport, an Irish setter dog, belonging to M. A. Klein, of No. 2807 Accomac street, was too tenacious on a point, he lost his life, and judgment for $200 was entered yesterday in Judge Taylor's division of the Circuit Court against the St. Louis Transit Company for the dog's death.

On May 23, 1902, Sport discovered some birds on the street near his master's home, and imemdiately assumed the attitude taken by hunting dogs when they discover game. When a bird is sighted the dog stops, and remains standing with one of his fore paws raised and his eyes fixed on the bird. This is called pointing. Sport, like many other hunting dogs, was very stanch on point, or hard to be made to leave his position until the game had been disposed of.

Unfortunately for Sport, two things occurred in his case. One was that when he sighted the birds he was on the car track. The other was that a California avenue car was bearing down upon him.

Sport either did not see the car, or, seeing it, heeded it not.

The remainder of Sport's life was contained in the following questions put by Attorney J. Carter Carstens to the motorman:

"Did you not hear a grinding and breaking of bones?"

Klein brought suit in Justice Hanley's court for damages about two months after Sport's remains had been laid to rest. A change of venue was taken to Justice Walker's court, which is now presided over by Justice Griffin. From there it was taken to Justice Billhartz's court and back to Justice Griffin's court and then back to Justice Spaulding's court, where it was tried.

Klein placed Sport's value at $300 and asked for $200 punitive damages in addition. The evidence did not warrant punitive damages, and Attorney Carstens amended by eliminating the claim for punitive compensation. The jury, however, returned a verdict for $450 and the Transit Company appealed.

The evidence showed that Sport possessed other admirable qualities beside being a stanch pointer. One of these was his ability to play on the piano.

At the behest of his master's wife he would take a position before the instrument and pound on the keys with his paws and howl in accompaniment. He appeared to enjoy the melody or medley, and there was no doubt but that it was enjoyed by the children of the neighborhood, who would gather on the pavement to hear him.

A Moose Transaction.

JAMES MCQUARTERS, a constable at Glasston, was arrested several days ago on a warrant charging him with having protected game in his possession, and before Justice Ball, at St. Thomas, was fined $50.

The arrest of McQuarters is a sequel to the moose killing episode at Glasston some time ago, when Farmer Raedel was arrested on a charge of killing a moose. Raedel lives some distance from Glasston, and it appears that before the moose was killed McQuarters and a party of four Glasston men started in pursuit of the animal, which had been discovered in a grove near Glasston. Before they reached the Raedel place, his mooseship had been killed. McQuarters is charged with representing to the farmer that he represented the game warden and had authority from him to take the carcass of the moose or to collect $50 from him. Farmer Raedel did not feel like giving up the money, so decided to give McQuarters the hide, the head and part of the meat. Naturally the party returned to Glasston well satisfied with the trip, even if Farmer Raedel had got the shot at the moose. Mr. Raedel was not entirely satisfied, and he took a statement in writing from McQuarters in which it was stated that he, McQuarters, represented the game warden and that Raedel was exonerated from all blame in connection with the killing. When he was arrested later for killing the moose he showed this document, and it was on his statement that Game Warden C. A. Hale swore out the warrant for the arrest of McQuarters on a charge of having portions of the moose in his possession. Violators of the State game laws have begun to realize that the law is to be observed in the northern district of the State, and in his efforts to enforce the laws Mr. Hale will have the assistance of every true sportsman in the State.—Grand Forks (N. D.) Herald.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Canoe and Camp Life Along the Delaware River.

XII.—The Two Harps.

"He has discovered beneath him the wonderfullest Earth, with her winter snowstorms and her summer spice-airs, and himself, most wonderful of all, standing there."—Carlyle.

"Nature ceases to be the mirror of man, only to make man its mirror."—Article on Landscape, Edinburgh Review, January, 1901.

THE seven disciples who went a-fishing and cast their nets all night without success, found their Master when morning came; and then obtained over one hundred and fifty large fish. There is a vital sense in which like experiences may be had by the true angler, right along the Delaware. We have taken five large bass this morning in the Benekill channel of the river at the Water Gap, and from near the submerged log at the foot of the island just above Susquehanna Bridge. The sport was very fine; but as we smoke after noon-day luncheon beside the shore spring, and note all the views of clouds and hills, water, foliage and wild roses, we realize anew that our greatest pleasure springs from contemplation of the novel and attractive environment. This feeling leads to a long conversation, which I submit without giving its actual dialogue.

There is a "fine and beautiful alliance" between the scale and variation of thought, feeling and emotion which dwell and reign in the hearts and souls of men, and the change, fantasy, grace and mystery of the moods and aspects in Nature. Life as mystic as the spirit man feels within himself, dwells in the leaf he may pluck and crush; and departs when death broods over and claims it as its green changes to gold, and the gold changes to brown of vegetable mould.

This truth is carried out into the whole world. There was gladness and laughter in the landscape here at sunrise. Now, at noon-day, happiness, contentment, satisfied being, are well defined by nature's aspects as we smoke on the shore. And it is *eye-music!*

The harmonies waked by a really great orchestra, as they rise, die away, float and live softly in unexpected strains and phrases, now straying in rills apart, then gathering volume until the stormy melody pulsates through and shatters all the air, have countless moods in them—the glee of dancers, the calm fire of golden sunsets, the joy of bridals, the madness and lust of conquest—myriads of mystic impressions and feelings of which the soul is capable, yet which were never expressed in words, and never can be! Yet they are summoned when the baton of Thomas or Gericke, wand-like, directs the action of a hundred skilled performers, and uses their power in unity. Tinkling lyres as of underground rivulets; bellowing of storms! From the magic realms of harmony, unseen sound-birds soar, circle, beat their wings on anvil and drum, and hover like butterflies over violins, flutes and oboes! Calls of cornets, boom of artillery, fainting flutter of foliage, music of flowing water, lark-calls so far away that their cadences seem delicate and fine as the breath you breathe! The little human brain directing the hand that wields the baton, summons at will the whole forces of Nature—the rivers, the mountains, the winds!

It is really the playing of a giant harp.

Now, if an unplayed harp, tuned in proper chords, is set amid the musicians, the harp-strings will vibrate and sound in sympathy with the general being of the harmonies from all the instruments. Its soul, waked to life, is being played upon, and gives glad, loving answer

to the concourse of sweet sounds. It is the divinity in harmonies trembling along the harp-wires, and through all the air.

It ceases; the performers stand motionless, while the master soloist now sweeps the harp-strings; and they give back their loving answer to violin, drum, oboe, cymbal, cornet, flute and clarionet—all having waked in them the faint, trembling, echoing vibrations of the harp-song.

We say "Fine music is very sweet and beautiful." Why?

Because the human soul is not only endowed with a sense of beauty of sound, but is itself a harp tuned more or less perfectly—sometimes dulled and apathetic, sometimes exquisitely sensitive. The music borne through the mere instruments beats upon and wakes to life countless mystic strings in the soul-harp, blessing with their harmonics, refining, ennobling, purifying in proportion as man knows and is swayed! I repeat, many and many of these soul-notes can never be described in words; yet they sing, regnant, swaying, with sure control, in our inmost souls, when finest music not only floods our ears, but our hearts.

Quite as powerful, mystic and exquisite, is the music of the eye, or as Wordsworth calls it, the eye-harvest. Here on the Delaware we are with a sight orchestra, forever playing lovely symphonies. Infinite change and gradation in mysteries of distance, fantasy and grace of varied and divided motion, enchantments of hues that change, blend and part again! Exquisite lines of curvature, and tenderest finish on rocks and hills! Clouds, crests, pinnacles, leafage and its shadows, boughs, "weeds," flowers; glories of sunlight, dreamy landscapes asleep under afternoon sunshine, fairy glints from stars where water flows or falls in showers of tossed pearls—these are some of the "moods" and "effects," interwoven, divine, which are forever summoned in sight-harmonies by the baton of creative intelligence—the Master of the Looms.

Vital thoughts, but not new ones! Others have often stated them far better than the writer, and freed from turgid dross and all offensive grandiloquence.

And far more powerfully and in richer measure than the sound-harmonies waked by human players upon instruments that, at best, are not perfect, the perpetual sight-harmonies play upon the soul-harp, especially when its owner stands where they may beat upon it in rich abundance. More, nature forever adds harmonies of sound in woods, waters, skies, birds, winds!

This brings us to the curious fact that none know the absolute verity of all this better than those who are disposed to call such thoughts mere rhapsody, and that such critics are usually the work-weary, office-burned, practical men who are forced to starve the soul in business slavery and chase of the elusive dollar, and yet who flee during vacations to freedom, outdoor life, leisure, recreation, and the novelty of wild and sylvan environment. But I have yet to see one of these critics who will scoff at such thoughts as he actually listens to and sees Nature's orchestras, and as their harmonies wake the soul-harp to sympathetic response.

But there is a sense in which the soul-harp is never still. After all, the strings must often vibrate to chords waked by itself. Hate, love, jealousy, revenge, pique, melancholy, triumph, admiration, ecstasy, and a hundred other moods, and still a thousand nameless others that are often scarcely recognized or traceable by one's self, forever sway us; although often lying dormant until roused; and there is not one of these moods and feelings, however mystic or inexpressible in words, that nature cannot show in synonym and duplicate through her infinite manifestations.

Tempests rage, rills sing with baby murmurings, lightning blasts, the hawk swoops upon the thrush in full song, and cruel claws end the singer's life even while blue sky smiles and sunshine blesses the thorn-blossoms, below which the fledglings of that thrush are doomed to wail, hunger, starve and die. Fidelity in the forget-me-not blooms, love in violets looking up to their sister blue of the sky; joyousness of the robin's chirp, sure self-poise of the soaring eagle, swift cruelty as he drops upon and bears away the rabbit to feed his brats in some cairn along a cliff! And the sadness of gray landscape, heart-broken sorrow as in the night-notes of the mourning dove: strength and loveliness of wide summer fields and forest astir under brisk winds, *dolce far niente* of sunny afternoons brooding over all, mystic ecstasy of dreaming as of moonlit waves and sleeping forests; hints from the unknowable, as of starbeams softly falling into the eye after a pure, steadfast, inconceivably swift journey of thousands of years; and reaching out for help in difficulty and intense desire that has transformed itself into possibility; as of elm and hemlock roots winding far over and between crevices of rocks to reach earth and water!

In all this nature has a soul! She gathers the sunbeams out of the east and brings sweetness of light. She glories in majestic tyranny of waves, pathos of still, white mountain peaks, says her vesper prayers in her own summoned evening twilight, rejoices in the rosy tints of hollows beneath the curved crests of her snow-drifts, upholds, sways, and bends with grace in wind-tried boughs, and symbolizes destruction in the conflagration and dying glories of sunset clouds!

Again I insist, all this is sternest fact. No wonder that the Psalmist declared: "Day unto day uttereth speech, and night unto night showeth knowledge."

But there is a further and curious truth. Man is the glass of nature, and, by inversion, nature is the glass of man. It is not always true, as Bryant states, that nature steals into man's "darker musings with a mild and healing sympathy that takes away their sharpness ere he is aware." Note the sadness in the "Ode to the Nightingale" by Keats, and "In a Drear-nighted December" by Shelley. Men often find their depression deepened by contemplation of nature. "Over her face their own shadows fall—grass, thicket, white hawthorn, fading violets and frozen tree, ice-bound stream, sea-wave and weed and sand are interpenetrated with the lassitude, the melancholy and the fevered exhaustion of life, where hope, passion, and the desire of the heart, soul and mind are sinking on the ebb-tide of the ocean whose further shores are the land of the unknown."

Sight to behold and know something of all this will come to the angler as the years pass, and more quickly if he also camps. His tent is his tabernacle. The paddle is his sail, the dimples waked by its gashes are smiles to him from the water, and its drops are dew to his heart. The lancewood or bamboo rod is not merely an instrument to be used in landing a black bass, salmon or trout. Used rightly, it is, far more, the wand by which he unfolds nature's scrolls, and reveals "the boundless store of charms" which she yields to her votary. Tent, paddle, canoe, rods and reels, the far-reaching views and hills, the song of flowing water and novel sequence and current of events, compel and bless change of thought, with their endless new topics for contemplation and perception.

I am aware that, to some, this will seem like an attempt to be abstruse and mere weak analysis—lacking interest, and out of place in these columns. But the subject itself is of vital import to every sportsman. Alas, my feeble, perhaps self-conscious pen, may have chosen words for it that seem to strut and pose. May far better writers deal with this subject. My only excuse for it here is love, and sincere wish to make others love.

We get practical proof of the truth of much of what has preceded in the simple happenings of the morning. Last night my chum yielded to temptation and "went bull poutin'" with some young men who live at the Gap. He was on the river until after midnight, and then helped to

SLEEPING LATE.

fry the bullheads in the kitchen of the station hotel. Pie, cheese, doughnuts, hot biscuits, coffee; then a cigar, and finally a pipe in his room here at the Glenwood. This morning he is "a wreck"—bilious, moody, silent, "wuss'n' snappin' turtle!" as his repulsed boy friend complains.

"How d'ye feel?" I ask him, as he sits on the front porch.

"Like that," he replies, waving his hand toward the rain-sodden meadows and dripping trees and the dun, weeping clouds, a sadness of dreary landscape full of moaning gusts and depression.

"Jes' like that!" he repeats. "It's a sombre morning inside o' me, too. An' don't you come round lecturin' me. Let me alone!"

Moods of a bilious soul and a dark wet day in unison. Comedy!

But at the other end of the porch sits a man on whom a dread disease has settled. A hunted, hopeless, resigned

DELAWARE RIVER BASS.

look in his hollow eyes! It is a sombre day indeed with him, and the landscape typifies his darkness. Tragedy!

An hour later! Bursts of sunshine, great patches of blue sky, glorious colors on and through driving clouds; drying foliage, renewing bird songs! A mile away the long line of maples that edge a forest change from green to gray, and affect the whole aspect of the landscape as the wind lifts the leaves and shows their silvery under sides. Nature is "cheering up!" So are my two friends.

After dinner! Silver palaces upreared in the blue abyss along the horizons! Dry leafage, almost clear sky; and quails and robins are calling. My chum sits in the same porch chair, admiring the wide view.

"How d' ye feel now?" I ask again.

"Like that landscape! Git on yer old rig and come on. Bass'll bite good after the rain!" Comedy again!

At the other end of the porch the slow pathos of a life ebbing away continues; but the stricken man's face has brightened. Hope has returned to those eyes, shining through resigned acceptance. His voice is cheery. "How beautiful the world is! The doctor just tells me I am better. If I do go, maybe I shall live in palaces something like those silver ones in the sky beyond that mountain."

And so the days and nights pass along the Delaware, full of incident. A moonlight row by our whole party of five, the college boy and his best girl especially hypnotized, for they are in "that new world which is the old." The inevitable river angling, with its lunch at noonday at the Benekill spring, and a long hour with our cigars as we lie on the grass with our coats for pillows, and the pale moon of full daylight swings westward! My comrade mourns over his nearing departure, but begins to long for the strenuous city life.

"D'ye see that mountain over there?"

"Do I? It fills all that part of the sky."

"Well, it's not a real mountain, but a mighty big hill. I've got courage like that to draw on now! Let's steal some blankets, pack 'em on a horse, an' go up there an' sleep on the ground."

"Done!"

And so in the next number I shall try to tell of hills; but the constant and crushing sense of impotence to really describe is very disheartening. Only sincere desire to induce others to go a-fishing and a-camping and see the actual nature-beauties, prompts a continuance of this series.

No words, especially my poor words, can do more than hint at their loveliness and grace. The eye should *look for itself*, not merely through foggy, pitifully inadequate word-pictures by another. How poor a substitute for the actual scenes is this spreading of black ink on white paper! For "the smell of flowering clover, the sounds of winds in poplar boughs, the touch of sun-warm turf as we lie on it, bring us nearer far to Earth than all the mental images of the blurred pink and gray-green summer meadows behind high-hedged lanes—nearer than any verse which tells of the rustle and stir of leaves, or of the sheep-cropped downs."

Go yourself! See the moss-tapestried nooks, hear the voices of the river, and witness at first hand and not by proxy "the infinite gradations of daylight and twilight and darkness, the countless variations of cloud-forms and cloud-colors, the tinted outlines of hills and mountains, the lights and shadows that wing their way over plains and fields, the phantom and fleeting panoramas of water reflections." For these cannot be really translated (not even impressions of them) by the deftest painters with pigments or with words. Before the actual scenes, out with the wide world of nature, you will vividly see not only her loveliness, but, far more vital, you will behold the loveliness in these visible *thoughts* of the Supreme Artist who planned and brought them into being. You will learn to know the infinite *divinity* in nature, as well as her infinite *beauties* of hue, motion, sound, form, life and mystery, and love her more and more.

It would seem that representative nature-lovers and sportsmen would not be ashamed of that love, nor of stating it as the principal well-spring of their enjoyments while angling or camping. Yet at a recent meeting and banquet of many hundreds of American nature-lovers and sportsmen, presided over and managed by men of wide reputation, the most successful speaker was a minister and doctor of divinity. It was a great occasion, and a great opportunity; but it was not utilized by any speaker. How Burroughs (our only John!), Thoreau, Emerson, Hamerton, Ruskin, Jordan or Lowell would have pictured in earnest, loving words, the nobility and refining influences of the camp, and the delights of the pastime loved by Izaak Walton! But this speaker's most successful passage was a story about a fisherman who said that whisky was a sure specific for snake-bite, but that it was necessary for an angler to have the whisky in him "before he was bit!"

L. F. BROWN.

Fifteen Hours with a Salmon.

GUERETTE, Me., June 7.—*Editor Forest and Stream:* Up here, where 5-pound trout come in every day, where a lake trout has to touch 10 pounds to be a "big un," there was something doing yesterday. Mr. Edward Spaeth hooked a landlocked salmon, and from that time until the fish was in the net, was just fifteen hours and five minutes. Out all night till broad daylight; got home with the fish in the morning. At 3:15 P. M. he struck, and all night that 7½-pound devil jumped, ran, sulked, got under the boat, jumped clean and clear over the paddles, and jumped out of water twenty-six times. The guide said he traveled twenty-five miles during the night. The tackle was an A-1 6½-ounce split bamboo and all else in proportion.

Another fish in the same lake jumped squarely into the boat, caught the hook on a coat and fell off in the boat. The record for weight for this lake is: rod and line, 19½ pounds; net (by fish commission), 23½. A 7-pound square tail was taken the same day by another of the same party, Judge Coult, Newark, N. J. These are facts; I will swear to them.

PINK EDGE.

HARTFORD, Conn., June 9.—*Editor Forest and Stream:* Have just returned from Cumming's camps, Cross Lake, Maine. On Sunday Dr. French sent you an account of how Edward Spaeth, of Newark, held on to a landlocked salmon for over fifteen hours before landing him. Dr. French wrote out the account Sunday night, and then read it to our party. I told him that I thought his story was a little too short, and that a fuller account would be more interesting to fishermen and perhaps give credence to an almost improbable story.

Mr. Spaeth, Mr. Coult and myself were trolling with live bait at the upper end of Salmon Lake (Mud Lake). I noticed that Mr. Spaeth had hooked something, and a moment later saw a salmon go up into the air. I told my guide that it looked like a big one, fully 15 or 20 pounds. I then looked at my watch and noted that the time was 3:15. I kept on trolling near Mr. Spaeth until about 6:30, when I went down to the lower end of the lake, and then returned to the camp. After supper Dr. French, Mr. Coult and myself played dummy whist until about midnight, expecting that Mr. Spaeth would come in almost any moment. At last we became alarmed, and about one sent two guides up to the lake. They got back about half past two, reported that Mr. Spaeth was still holding his fish and that it had leaped three times while they were there.

I left the camp the following morning shortly before six, and a half hour later met Mr. Spaeth and his guide coming into the thoroughfare between Salmon and Cross lakes. I asked him when he had taken in the fish, and he said only a mew minutes before. He opened his box and showed me the salmon. It was an unusually long and clipper-built fish, fully as long as an ordinary 15-pound salmon. The hook was still in

his mouth, and I noticed that he had been struck in the hinge of the jaw. Mr. Spaeth and his guide told me that the fish had leaped twenty-seven times, and during the night they had had their hands full at times to keep him under control. I attribute the length of time taken to land the fish to the early darkness brought about by the smoke-laden air, the manner in which the salmon was hooked, which prevented drowning, his wiry build and a very natural anxiety on Mr. Spaeth's part not to lose what was apparently an unusually fine specimen. My guide referred to the salmon as "one of those devil salmon," and I fancy he belonged to that variety.

It was not Mr. Spaeth's first salmon. Last year, while I was at Moosehead, I saw him bring in two weighing about 5 pounds each, and this year he had caught one before he hooked into the above fish. He is a splendid fisherman, keeps his head and knows what he is about, and I fancy that even if darkness had not come upon him, he would probably have had his work cut out for him. It is somewhat unusual to stay up all night to take in a salmon weighing 7½ pounds, but I think that if you were to include the midnight trip of the guides, the manner in which the fish was hooked and state that Mr. Spaeth is not a tyro in handling landlocked salmon, that a good many fishermen would know that he had had an unusual proposition on his hands.

At the request of Dr. French, Mr. Coult and I certified to the length of time it took Mr. Spaeth to get his fish in the net, and as I am already accused of bringing back some rather unusual fish stories from the State of Maine, I am more than anxious to have the facts correctly stated.

It is also worth knowing that Mr. Coult, of our party, caught a 7½-pound square tail in Square Lake, and also brought in a 10-pound landlocked salmon from Salmon Lake. It took him a little over an hour and forty-five minutes to land the salmon.

JOHN B. LUNGER.

CHICAGO AND THE WEST.

The Saginaw Crowd in Camp.

CHICAGO, June 5.—The Saginaw Crowd had the prettiest camp last week which they have ever made on any fishing trip, and perhaps a prettier was never pitched on any stream. The three big house tents belonging to Mr. Davis, Mr. Mershon and Mr. Harvey were in line, close up to the bank of a great pool on as lovely a little trout river as ever rippled out of doors. On another corner of a big quadrangle the camp men had their wall tent. In the center stood the dining hall, made with a big canvas fly for roof and wattled evergreen boughs for sides. Add to this the cook's shelter, not to mention two admirable fires, one for cooking and one for lounging, and you have a camp which, as typical of modern angling at its best, could hardly be surpassed. Had the weather been as decent as everything and everybody else, the week of the Saginaw Crowd in camp would have been ideal. Even in spite of the weather, these doughty fishermen prevailed, as I am sure many of their friends in Saginaw will testify after receiving some of their baskets of fish.

The personnel of the party this trip was good, of course, but above all things transient and uncertain. Mr. C. H. Davis, as owner of this wilderness preserve, was commander-in-chief, as was the case last year. He went early and stayed late, and so did George Morley, who was not of the party last year. Mr. Mershon was in at the beginning of the camp, but was obliged to leave a day before it broke. Mr. James Peter, of Saginaw, another Crowdite, and a member of the first fishing trip last year, went home with Mr. Mershon a day early. Mr. Thomas Harvey, a new member for a trout trip, went home on Sunday, after three days in camp. Mr. Graham H. Harris, of Chicago, and myself, after considerable telegraphing, managed to get into camp by Sunday noon, but were obliged to leave on Wednesday morning. In spite of all this confusion, the Saginaw machine ran as smoothly as ever. Martin, the camp cook, was most excellent good. We had George King and George Higgins and little Harry King and another teamster or so to help keep things moving, and lastly, Harry, the long-time camp man of the Saginaw Crowd, was on hand once more, in spite of his late threats to desert civic life altogether and go to a university. Out of the whole force present there was not one who could not cast a fly upon occasion or eat a dozen trout at a sitting, should necessity demand it of him.

As to the trout, they were there, any quantity of them, thousands and hundreds of thousands of them. In my two days' fishing I suppose I took something like 300 trout. Mr. Davis, in one day, put 39 in his basket, and threw away 115. Of course I can't say that nearly all of these trout were real trout. They were little fellows of the 6-inch class, just below the State limit of seven inches, and in some cases not more than 4 inches long. The stream was literally swarming with them, and they constituted themselves an angling nuisance. It was actually wearying to be releasing these little fellows from the hooks all the time. We resorted to big flies and to different styles of fishing, but the little ones would not be denied. Unless some cataclysm of nature or pot-fishing ensues, this stream ought to be in splendid shape for next year.

This is not to say that there were no big trout taken on the trip. On the contrary, we caught larger fish this time than we ever did before. Mr. Mershon had one trout which went over 15 inches, the largest we had ever yet taken on any of these wild Michigan streams. Not to be outdone, Mr. Davis, on the very day that Mr. Mershon started away, came into camp with a still larger trout, one measuring 16½ inches. Of 12 and 13-inch trout we had any number. Our total number of fish for the trip, all rods combined, was about 400, nothing very extraordinary in the way of fishing, but quite enough for comfort and sport. The showing was some 50 fish behind that of last year, when not quite so much total time was put in at fishing. This discrepancy, which was not regretted by any one in particular, was no doubt due to the unfavorable weather conditions of the past week. The wind was northeast and east every day, while the boys were in camp, while part of the time it was so cold that ice froze more than half an inch thick in the water pail at night.

After a short experience with Mr. Harris, to show him something of the stream, my first day was put in with Mr. Mershon on the wildest and most inaccessible part of the river, where it runs through a very heavy and inaccessible swamp. We drove up the river more than eight miles from camp, skirted a heavy virgin hemlock forest and at last found the cache, where two little boats were hidden. One of these, a canvas craft, we put together, and Mr. Mershon and I started down stream through the wilderness, taking turns in the boat, on the ride-and-tie principle. In this way, since we were able to travel much more rapidly in the boat, we managed to get through the eight miles or so of inaccessible country in time to get to the team before dark, George King having meantime driven back and touched the stream at the other end of the cedar swamp. Even with the boat we found it a full day's fishing, and toward the close we were obliged to hurry over some of the best water at a time when the trout were rising fairly well. Earlier in the day we did not do much, for the wind was from the east and so high that one could hardly keep a fly out of the treetops.

There are times when the trout are coming fairly well, when I conceive the notion that I am quite a fly-fisherman, then again there are times when the trout are not disposed to rise, more especially times when I am out with Mr. Mershon, that I revise my opinion of my own prowess. The first time we ever went through this wamp together, my companion gave me a good trimming up, and he repeated this dose upon the present occasion. His basket had something like a dozen splendid fish when we came to check up, and all I could claim was five. We had, however, almost without exception, beautiful fish, and I shall remember for a long time the battles I had with some of my biggest ones. Twelve, thirteen, fourteen, fifteen inches—these are all good measurements for Michigan wild streams, and the fish were beautiful, clean specimens, dark-backed and highly colored. I have never seen fishing any more interesting than we had in this swamp, and regret that I could not have just one more go at them, as I think now I have mastered my more expert companion's secret. I would slip down on him quietly with the boat, when it was my turn to drop down stream, and catch him standing up to his waist in the water, with not a ripple about him, his arm close at his side and his line ridiculously short. We fished together for a while, and I was laying out a line shorter than I thought necessary. "You can't catch a trout on that long a line," said Mr. Mershon, and I presume he was right.

My whole experience on this trip was that if you want to catch trout you don't want to try any long distance casting. It is more in the wading than in the casting, very much more indeed. The man who wades down stream and casts as he walks is not going to get very many trout. His fly lights just before or just after the edge of the wide series of ripples, and no big trout is going to take it. I got nearly a couple of dozen nice trout on my last day's fishing and did it on a line not much more than twenty feet in extent. I made it a rule in going into any likely water, to stop perfectly still and to wait until the ripples had all subsided and until the water was clear of all discoloration; then I would begin my casting. If I raised a good trout and did not hook him, I was careful not to slap back in again in the same place, but would cast somewhere else for a minute or two, and then try him again, endeavoring to place the fly gently just above the place where I had seen him rise. This method I found successful. The short line allows one to keep his tip well up and makes him far more certain of hooking a rising fish. The line is always straight, and a fly can be handled very much more delicately than it can on a long line by any fisherman, no matter how expert. It was the short line and the light fly and the careful wading which got the big trout for the lucky ones in the cedar swamp.

Mr. Mershon was not alone in this art, for Mr. Davis, who spied out a hidden path along the stream and fished lower reaches on the same day that Mr. Mershon and I were higher up, came out with a simply splendid basket of fish, some seventeen in all, not a baby in the lot, and every one of them more like Quebec and Michigan in size. Mr. Davis said that he caught nearly all of his trout, either while crouching down on his knees or while getting as low down as he could into the water. Yet these big trout, according to my companions, are not really very wild, which is contrary to the supposition of most folk. The truth is, no man can understand the brook trout, which is the most mysterious being in the waters under the earth. For instance, Mr. Mershon caught his biggest trout in less than three minutes after I had dropped down across a deep hole in the boat. He says that a trout is easily frightened, but that he does not remember it very long. The results of our fishing seem to bear out these conclusions. At any rate, we certainly got trout, and big ones and plenty of them.

Every night, when the different parties came into camp, the catches were laid out on a board, so that all might have a look, and it was agreed that in size the take this year surpassed anything which the Saginaw Crowd had hitherto had in any of their Michigan trips. It may be seen that the occasion was one of great rejoicing, therefore, and the only regrets were those occasioned by the weather and by the broken nature of the companionship in camp.

There were two species of flies very abundant on the river, one the large, gray drake, similar to what we call the sand fly here in Chicago, or the shad fly or soldier fly of other parts of the country—the fellow with the upright wings and the long up-curved tail and soft body. Another species was a small four-winged fellow, which hatched out in countless thousands of an evening or early in the day, if the water continued cool. We found a large queen-of-the-waters the best duplicate for the big gray drake, and the Cahill tied on No. 10 almost a perfect imitation of the smaller fly. Queen-of-the-waters and Cahill were perhaps the best killing flies used on the trip. McGinty did not seem to do so well as usual, although it killed a great many handsome fish. Silver-bodied Montreal, the Alexandria, even silver-doctor and other gaudy flies sometimes raised fish, and these patterns were usually fished in large hooks, it being the universal desire to get rid of the small fry. In my own last day's fishing, in which I killed a nice basket within the space of an hour and a half, I found queen and Cahill to be the favorites, the latter, perhaps, taking three-fourths of the honors over the next best fly, a slate-winged professor. The stream seemed to demand a fly with some yellow in it, most of the time. Green was no good. Indeed, I never have found green to be a very serviceable color in a trout fly, although many scoff at this proposition, citing the grizzly-king as a pronounced example to the contrary. We didn't find grizzly-king of any use on this trip. Queen, McGinty, professor and Cahill probably did most of the business, although hat-bands at night time showed that many scores of other flies had been diligently employed. What a sight, by the way, is an angler's hat, bristling with its many-colored flies. I came home in such a hurry that I hadn't time to remove my own "discards" from my hat band, and when I came to unpacking the hat at home it seemed so pleasantly reminiscent that I just hung it up the way it was, ready to begin all over again.

A review of the doings of the Saginaw Crowd on this trip seemed to show that Mr. Davis was consistent high hook. On the different days that he fished he took, according to my notes, 23, 42, 27, 22, 15, and 12. His last basket of 15 was a very fine one indeed, and that on the day previous, 22, was the best basket of the trip, his fish being splendid ones on that occasion. Mr. Mershon fished one day less than Mr. Davis, taking, respectively, 9, 20, 40 and 13 fish. Mr. Morley came next with 12, 15, 21, 8 and 8. Mr. Harvey fished two days, his basket being 7 and 5. Mr. Peter fished four days and took 7, 3, 5, and 7 fish. Mr. Harris, fishing two and a half days, took 11, 9, 19 fish. To my own rod I had 11, 8 and 21 on the different fishings. George King, head guide, took 13 handsome fish one day, and Harry, the camp major domo, broke away one evening long enough to catch 17 beauties, and I think had some trout the evening previous. The totals to the different rods foot up, as Mr. Davis' accurate records show: Mr. Davis 138, Mr. Mershon 82, Mr. Morley 69, Mr. Harvey 12, M. Peter 22, Mr. Harris 39, myself 40; George King 13, Harry 17.

It should be remembered that the different rods fished different lengths of time, and it should always, of course, be noted that no one in the Saginaw Crowd was ever known to care whether the next fellow caught more fish than himself or not, although each may be counted upon to do his best throughout the day. As to the little fish, the sentiment was altogether against crowding the limit. The Saginaw Crowd needs no game warden, for, as one of their members remarked, "I expect any one of us is a better game warden than the State could hire to watch us."

It was a great pleasure to be with these gentlemen once more in what I take to be the wildest portion left of this southern peninsula of Michigan, and on one of the best streams now remaining. I do not think a pleasanter angling trip could have been enjoyed by any man, no matter how fortunate or happily situated.

Trolley to Fox Lake.

Mention is frequently made in these columns of the Fox Lake chain, much patronized by the Chicago angling public. Good railroad access is had to-day at several different points on the Fox Lake waters, but the question is now on the establishment of a trolley line, which shall extend out Milwaukee Avenue, this city, and run clear through to a point on Fox Lake, not yet determined. In order to obtain this it is necessary to get a franchise from the Chicago City Council, but this once granted the enterprise itself in all reasonable likelihood is destined to be completed within the next year or so.

Some Tarpon.

Mr. Oswald Von Lengerke writes this week that he had landed one tarpon of 140 pounds at Aransas Pass and that the sport was good.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Acid Killing Trout in Sullivan County.

NEW YORK, April 27.—There is on a Sullivan county creek with which I am familiar, a means of depopulating the stream of which the law should take cognizance and stop. I refer to the practice of the acetate factories discharging their sludge or waste fluids into it, thereby killing thousands of trout. It is a common occurrence to see fine trout and even eels floating on the surface of the water, poisoned by the sludge.

During the past few years numerous cans of fry and yearlings have been emptied into the creek, but this restocking cannot counteract the effect of the wholesale poisoning. Can it not be stopped?

FLY-FISHER.

A Beaverkill Trout.

A BROWN trout weighing five pounds and four ounces was caught on the Beaverkill fishing preserve near Beaverkill, N. Y., recently by Alex Voorhees. For an hour Mr. Voorhees fought the fish, which resisted all his efforts to land it and he was finally forced to kill it by striking it across the back with a club. This is probably the largest trout ever caught on the Beaverkill, with one exception, which was captured by E. F. Davidson several years ago and weighed five pounds and seven ounces. The trout was taken to Binghamton by W. S. Van Ostrom.—Ensign.

The Florida season for turtle-egg hunting is now at hand. The Florida Times-Union reports that two hunters patrolled the North Beach at St. Augustine the other night and found ten nests, taking from them nearly a thousand eggs. They were disposed of readily this morning, the hunters realizing ten cents a dozen for them.

Maine Fishing.

BANGOR, Me., June 13.—*Editor Forest and Stream:* Early in the present week there were several smart showers, in some cases amounting to storms almost, so that the fires were subdued and put out on the surface, although without a good downpour the flames might readily be fanned into activity by a good wind; but here in Bangor it began to rain last night and, at this writing, is coming down in a good, steady, wholesome drenching that is welcomed by everybody.

It is very interesting to note that not a single sportsmen's resort has been burned out during all these disastrous fires, although hundreds of thousands of dollars' worth of valuable timber has been burned. Some private camps, situated in isolated localities, with no persons at hand to watch for fire and extinguish it befor it gained great headway, have been burned; but the presence on timberland of a registered sportsmen's camp, under the direction of a man whose whole living was tied up there, and who had agreed in his lease to look out for fires on the tract under his care, had a very important bearing on the lack of loss to those townships and section so occupied; and in the camp-owner the landowners had on the spot, all the time, one who would look faithfully after their mutual interests, and not only warn his guests against carelessness in fires, but put out any blaze that might start.

Among the queer things to be recorded against the last Legislature, was not only the taking away of all protection from the big game of the State—so far as appropriating money for its protection goes—but the establishing of a bounty on hedge hogs, or as the statute has it, "porcupines, so-called." This bounty, although small, being, in fact, only 25 cents, has proved a stimulus to a great number of young fellows not yet arrived at years of discretion, and a swarm of those improvident, impecunious, careless and reckless men, who have for generations formed the bulk of the army of pot-hunters against whom game protective legislation has been aimed.

Too poor or unwilling to spend a cent for non-inflammable wadding for their guns, they have used cotton batting, old wasps' nests and other wadding equally combustible, and the result has been a fire, starting after they passed that way, and, of course, not their fault, for they didn't set it and knew nothing of it. Could it be brought home to them there is no law that defines the kind of wadding to be used in hunting, and the stimulus of 25 cents encourages them to keep on.

Hedge hogs may be clubbed by an active man, and it is reported that one man, during the worst of the drought, actually set fire to a tree to burn out two hedge hogs in its branches, and caused one of the most extensive of the fires. And then some of those unfortunate landowners, robbed of the profits of years of investment, turn around and lay the blame on fishermen, who "must have been careless about their fires." It is estimated that it will cost Maine this year from $40,000 to $50,000 in bounties on these little animals—and she couldn't afford to pay $25,000 to keep wardens patrolling the game regions to protect the game, and incidentally to protect the forests. It has been a costly lesson; it is to be hoped it has been learned so well that another session will see proper protection given to Maine's big game.

One of the successful trips reported lately was that of James A. Boardman and Everett C. Rich, of this city, who were stopping at the former's camp at Schoodic Lake, a few miles above Brownville. They went to Camp Moosehorns on Northwest Pond, where they spent the night, and started in good season the next morning for Cedar Pond, a little trout pond lying among the hills, but literally alive with trout. That afternoon they caught enough for supper, and later went out upon the pond and fished, catching 110 in what time remained; although when they stopped fishing it was so dark they could not see the tips of their rods—and the trout were biting as freely as ever. It was great sport, such as they seldom enjoy. On their way home they took in Little Jo Mary Lake, staying there over night, and saw a whole family of moose and more deer than they managed to keep a record of. The bull was an enormous fellow, and Mr. Boardman stood and watched him for 25 minues by his watch before he moved away.

The writer had the pleasaure of meeting, at the station in this city Thursday evening, Edward Spaeth, of Newark, N. J., who had such a remarkable fight with a landlocked salmon in the Fish River system of lakes. Mr. Spaeth and Judge Coult, of Newark, went to Square Lake in a party, arranged by President Cram, of the Bangor & Aroostook, and all the members of the party vouch for the truth of the story, which has been sent in detail to FOREST AND STREAM by another correspondent. Mr. Spaeth does admit, however, that if he knew that fish was going to fight from 3:10 P. M. to 6:15 A. M., he doubts if he would have been willing to see the fight out—"but," he concluded, "it does very well for once, just for a novelty." And, by the way, Judge Coult carried off Aroostook county records when he landed a big 7½-pound square-tailed trout, which, if it had been fat instead of almost a racer, would have weighed 10 pounds. This trout and his 10-pound salmon he is having mounted, so that doubters may see the proof.

Judge L. B. Coult, Judge Brown, Edward A. Barrows and Samuel P. Colt, of Providence, have returned from Hunt's Kidney Pond camps, where they had grand fishing in Kidney and adjacent ponds for ten days. A Mr. Parsons and two friends from Boston came out at the same time from the same place, and reported an abundance of success, never having enjoyed better fishing.

E. B. Burgess, of Somerville, and C. H. Smith, of Cambridge, have just gone home after a great outing of three weeks in the St. Croix system, going and returning by way of Grand Lake stream. They enjoyed their trip immensely and had great sport in all the various lakes they visited. At Grand Lake they caught fish on the troll, and going up the system found splendid sport with the fly in Dobsis Lake, where they took 8 salmon in an afternoon off the boat landing at Pine Point. One day they went to Fifth Lake stream, on the Machias system, and caught all the trout they wanted. In Pleasant Lake they cornered several deer swimming in the water, and had a lot of fun with them, making them tow them about, heading them off and otherwise amusing themselves with two old bucks that, they say, were perfectly immense. It was a great trip.

O. H. Pfersdorf and P. J. Claussen, of Chicago, and E. D. and G. S. Pettengill, of Portland, returned yesterday from Long Pond in the Katahdin Iron Works region, where they had put in several days of fun. Trout were plenty, salmon, too, bit well in Long Pond, and they simply caught all they wanted to.

W. R. Hunnewell, of Pittsfield, is a good deal of a pioneer, and is ever trying some new place where he won't have to contend with the "other fellow." This week he took a couple of days off, joined Ed. Duplisse, of Kingman, and G. R. Weatherbee, of Lee, and the three went to Madagascal Lake, a small lake that empties into the famous Passadumkeag stream. In the lake are some big trout, as well as perch and pickerel, for they caught some there; but when one can secure, in such a small stream, trout weighing 2½ pounds, the possibilities of the lake proper make one want to stay and see what he can do. They took 14 trout in one day's fishing, all good size.

Swan Lake every year furnishes some splendid fishing, particularly since it was stocked with salmon by the State and supplied with smelts for their food. The first of this week there were several anglers on the lake and a lot of fish taken, the number being estimated at between 50 and 75 salmon during Sunday and Monday. Augustin Colburne, of Belfast, is said to be high line, having caught 8.

Fred LeFrancis and wife, of Cambridge, Mass., have returned from a trip to Deer Island, Moosehead Lake, where they had the best fishing of their lives. Mr. LeFrancis says that he never saw such fly-fishing at Moosehead as he enjoyed during stay of almost three weeks. Big fish and lots of them was the rule, the June weather bringing them right up. E. M. Hersey, of this city; J. R. Glover, C. O. Montgomery and W. G. Alden, of Camden, are others who have lately returned from Deer Island after successful visits.

J. K. Manning, of Medford, Mass., one of the most enthusiastic members of the club, owning Castle Harmony on the shore of Moose Pond, has been at the Castle for a visit, entertaining George B. Warren and wife, of San Francisco, Cal. Mr. Warren was for over twenty years the manager of the Palace Hotel, and is spending the season at Intervale. He caught two salmon of good size, while Mr. Manning established a new record, taking a 6½ pounder, the largest salmon ever caught in Moose Pond. Mr. Manning immediately forwarded the fish to his brother in Boston, who is president of the Union Club.

F. M. Montell and F. M. Montell, Jr., of Montclair, N. J., were in the city to-day on their way home from Chairback Mt. camps, from which point they visited West Chairback, the Wilders and other ponds, besides fishing on Long Pond, where they took some very nice fish. They fished only with the fly, and caught some splendid strings, running in weight to 2 pounds.

J. W. Whelpley, of Washington, D. C., John F. Russell, of New York City, and C. P. Russell, of Greenfield, Mass., have returned from an outing at Kineo, where they had a fine time and caught a lot of trout. Several of their trout were large ones, some running as high as 3½ pounds, while the togue they captured looked very large to them; but they observed that the fishermen there thought they were not so big after all. Such things go by comparisons, and when fishermen have been bringing in great numbers of fish weighing from 10 to 20 pounds, some about every day, anything under the lesser weight seems small.

Reports from Kineo are that Thomas J. ODonohue, Jr., who is there with his father for the summer, is making that expert angler hustle to keep ahead of "Tommie," as he has been called by Kineo visitors for so many years. The other day he brought in a 4¾-pound square tail trout, and is looking for a bigger one before he goes back to his desk in New York.

George H. Rimbach, W. H. Mitchell, Albert D. and R. R. Rogers, of Boston, are out from Moosehead Lake, where they caught in their week's stay 125 pounds of fish, including a silver laker that weighed 9 pounds and 4 ounces. They caught several that weighed between 4 and 6 pounds, and trout as large as 4 pounds.

Fred S. Parker, of Bedford, Mass., and family, accompanied by his partner, S. F. Hanson, and his wife, have been doing some great fishing on the Kineo, which Mr. Parker has chartered for his entire stay. One day they were fishing, Mr. Parker being off with the fly rod and the others using bait, and at noon it developed that just 84 trout and togue had been taken, an enormous catch for so short a time. When he learned the true state of affairs Mr. Parker forbade anyone from leaving the steamer again that day with a baited hook, but told them they might cast with the fly all they wanted to. Their forenoon's catch was the biggest of the week by any party for an entire day.

W. H. Wesson and party, of Springfield, Mass., the members of which were given in a previous letter, have left the Moodies for home, after a delightful outing of between two and three weeks. Not the least of their fun was, when, with excitement at fever heat, they cast off from the Greenville wharf the lines of the steamer Eulalia, Mr. Wesson's new boat, and starting several rods behind the Rebecca, beat her a half mile to Deer Island. Talk is still "cheap" betwen the rival crews, and a hot race is looked for before the summer is over.

Charles C. Emerson, of Bangor, had a successful, although brief visit, to Kineo, fishing one day and catching some nice ones, including a 3¼-pound trout and a 7-pound togue.

Arthur J. Bigelow, of Worcester, Mass., who is at the Outlet, and who is one of the most successful anglers coming to that resort, is taking all he cares to each day, of good size, saving only for the table the large fish and returning to the water those he cannot use.

James S. Murphy, Benjamin F. Wild and William W. Spring have gone home to Boston after a successful visit at Kineo, taking in the week over 80 trout and togue of good size, over half being at least up to the 3-pound notch.

E. S. Farmer, of Arlington, Mass., came down from Moosehead the other evening, after such a trip as would make some anglers green with envy. He went to Pittston Farms, and beginning his trip in a canoe, ended it on a tote sled. The fishing was so good that he simply got sick of catching trout, as he told the writer, and when all under a fair size were thrown back, he was forced to stop, because they could not use any more.

HERBERT W. ROWE.

Rensselaer County Rod and Gun Club.

THE president's report of the work of the Rensselaer County Rod and Gun Club runs as follows:

As president, I wish to report the following work accomplished by the various committees during the year ending May 31:

At the request of the Legislative Committee, Assemblyman Reynolds introduced a bill making the close season on woodcock, grouse and quail in this county from December 1 to September 30, which was passed and signed by the Governor. This law, with the squirrel law passed at the previous session of the Legislature, makes the season for fall shooting (squirrel, grouse, woodcock and quail) uniform throughout the county.

During the last open season several wild deer were shot in the county and it was deemed advisable to protect them for a term of years if possible. State Protector Pond, at the request of the club, had the Dennison bill amended so as to include Rensselaer county, which was also passed and signed, and prohibits the killing of deer for five years.

Through the efforts of Special Protector Ferguson and members of the club, the following convictions were made and fines collected for violations of the game laws:

J. Carroll, catching bass during close season, $20; Emerson Holsapple, illegal shooting of squirrels, $18.90; Christian Lapp, snaring grouse, $43.40.

Efforts were made last October to prevent the snaring of grouse. Protector Ferguson and two other members were sent through the county. While but one conviction was made, numerous illegal devices were destroyed.

Eighteen shipments of fish have been received and planted during the past year from the State and United States Commissions:

	Fry.	Fingerlings.	Yearlings.
Black bass		500	
Perch-pike	300,000		
Rainbow trout		4,500	4,000
Brook trout		18,000	
	300,000	23,000	4,000

Since the opening of the season this year brown trout have been caught weighing over a pound each, and rainbow trout of three-quarters of a pound weight from streams stocked two years ago.

Catches of brook trout which have never been known to have been equalled in the history of the streams have been made from waters stocked with these fish by the club.

Fish have been planted near the following localities during the past year: Petersburg, Berlin, Center Berlin, South Berlin, East Nassau, North and East Greenbush, Poestenkill, Grafton and Sand Lake.

Four pairs more of Mongolian pheasants were received from the State Commission in March of this year. The pheasants liberated last year are known to have wintered well and to have hatched young last season.

Applications have been granted for a large number of fingerling fish to be received this fall and for a goodly number of pheasants for next season.

The thanks of the club are due the State and United States Commissions for their help in the work, State Protector Pond for his assistance, and to Senator Barnes, Assemblymen Reynolds, Chambers and McCarthy for their work in behalf of fish and game legislation.

J. R. MCLAREN, President.

Fish Killed by Lightning.

ALBANY, N. Y., June 15.—*Editor Forest and Stream:* The foreman of the Caledonia hatchery reports to the Commission that during a storm which prevailed on the afternoon of the 8th inst., lightning struck in one of the large rearing ponds on the hatchery premises and destroyed a number of the fish. The pond contained brown trout, and a number of the hatchery employes who were loading the State fish car at the time witnessed the incident. They examined the pond at once and found eight of the fish, ranging from one to six pounds in weight, lying on their sides in the water, apparently stunned. The foreman, in his report, says: "I found the fish turned on their sides and apparently unable to right themselves. It did not kill them outright, as some of them are alive to-day (June 11), but they lay on their sides in the bottom of the pond. I opened some of them and found the air bladder burst as the result of the shock. * * * A number of years ago the same thing happened to a pond of brook trout here, and affected most all of them the same way. At that time I opened about thirty of the fish and found the same condition as in the present case."

This brief account of an actual occurrence at one of the State hatcheries may be of interest to some of your readers.

JOHN D. WHISH, Secretary,
Forest, Fish and Game Commission.

A Greenwood Lake Muscalonge.

THE statement made in a local paper some days ago to the effect that a fish had been caught at Greenwood Lake, the head of which weighs six pounds, was received with incredulity by local anglers. None of the fish known to inhabit Greenwood Lake attain such a size, but nevertheless the story is true. The fish was a muscallonge and was caught by Julius Munsch who was for a long time in the employ of the Arnold Brothers dye works. The head of the fish, which is at present being mounted by Mr. Andrew Booth, the well-known taxidermist, of Marshall street, weighed six pounds; the fish itself weighed twenty-eight pounds and in length it measured fifty-eight inches.

For a fish of that size and species it put up very little fight. Mr. Munsch says it took the hook ravenously, but after two or three strong pulls came in very quietly.

As far as is known only two muscallonge were ever put into Greenwood Lake. About four years ago Fish and Game Protector Riley on one of his trips to Lake Erie for fish, brought back two muscallonge, each weighing about ten pounds. One of them died on the way, but the other was lively enough when he reached Greenwood Lake and made a dash for deep water as soon as released. On one of his subsequent trips, Mr. Riley brought another muscallonge, this one weighing eight pounds; this fish was also put into Greenwood Lake. It is evident that Mr. Munsch caught one of these fish, but the other is probably still in the lake. The fish that was caught had evidently increased its weight from eight or ten pounds to twenty-eight in four years, which seems to indicate that muscallonge would do well in Greenwood Lake as far as growing qualities are concerned, being just the reverse of pike and pickerel, which have been aggravatingly small in the lake for a number of years. Mr. Munsch's catch might serve as a hint for the Fish and Game Commission, for if muscallonge will thrive in Greenwood Lake they ought to be put there next fall, so that by spring they will be ready to spawn. The muscallonge belongs to the same species as the pickerel, looks very much like a pickerel, only that its sides are not barred and it has no scales on its gill-covers. Its addition to the fauna of New Jersey would be enthusiastically welcomed by every angler here. —Paterson (N. J.) Chronicle, June 14.

The Canadian Forest Fires.

The heavy rains of the past week have drowned out all the smouldering embers of the forest fires, and it is gratifying to know that the damage caused by them, so far as northern Canada is concerned, is much less than at first reported. Some valuable timber lands were burned, in addition to the fishing camps already mentioned, but much of the land over which the flames swept had been previously burned, and the beauty of Lake Edward and the Jeannotte and of the lakes of the Laurentide Club has not been marred by the destroying element. The rain, which lasted for several days, and has been quite heavy, was warmly welcomed by anglers, especially those upon the salmon streams, which, on account of the long drought, were becoming too low for good fishing even before some of the fishermen reached their preserves. Most of the North Shore fishermen who had not previously left for their salmon rivers took passage on the 13th inst. from Quebec.

Anglers who were prevented by the fires from reaching their camps in the Ottawa, Gatineau, St. Maurice and Lake St. John districts are now passing through here almost daily, the rush being almost all on at once. There has been but very little spring fishing done here this year, but, fortunately for devotees of the sport, the trout waters of the north are getting into fine shape after the recent rains, and reports of good catches may be looked for during the next two or three weeks.

The first ouananiche of the season to rise to the fly in the Grand Discharge of Lake St. John were taken last Saturday. This is about the usual time. I have but little information as to the condition of the water, but do not expect the fishing there to be at its best until about the 20th or 25th of the month. In my next letter I hope to be able to speak definitely of the character of the sport furnished by the waters of the Discharge. From the reports which have already reached me of the catches made by the bait fishermen, it would appear as if the ouananiche were particularly plentiful this year. Friends of the fish will be glad to hear that another large lot of fry has been successfully hatched this season in the Roberval hatchery and will be planted in the fall. E. T. D. C.

The Kennel.

Fixtures.

Oct. 6-9.—Danbury, Conn., Agricultural Society's show.
Nov. 3-6.—New York.—Annual show of Ladies' Kennel Association of America.
Nov. 9.—Fourteenth annual beagle trials of the National Beagle Club of America. Charles R. Stevenson, Sec'y.

Man-Tracking Dogs.

Editor Forest and Stream:

The inquiries of M. de Varigny in your issue of June 6 will, I fancy, find few answers, if the information required must be with bloodhounds as a breed. The bloodhound, unless I am mistaken, is numerically weaker than almost any other breed of dogs. But as M. de Varigny doubtless wishes information of the practical use of dogs in tracking men, I gladly give the facts of my own experience. In many of the Southern States there are packs of foxhounds which have been trained to follow human scent only. The Tennessee Coal, Iron and Railroad Company, with which I was connected in 1889 and 1890, leased from the State of Alabama most of its convicts and worked them in its mines. One of the provisions of the lease was that for every convict that got away a cash penalty was to be paid the State. As these convicts were housed in wooden buildings and went to and from their work in a wooden alleyway connecting their quarters with the mine, escape was not impossible, and was sometimes tried. To lessen the chance of escape, however, the company kept a pack of hounds—foxhounds in reality, but bloodhounds according to the newspaper headlines. Should a prisoner succeed in breaking out the hounds were put on his trail, and generally the man was retaken.

It was not always so, however. One hot July day I remember receiving a telephone message that six of the most desperate men, two of them murderers, had escaped, and that if I wished to join in the chase to come at once. In the time it took to notify the proper mine officials, find the handler of the hounds, and all get together a couple of hours had gone by.

The day was exceedingly hot and the hounds out of condition from lack of work. For fifteen miles or so we followed up hill and down dale, through woods and across clearings. The heat told. One by one the dogs gave out, and crawled into the shade or lay down in a brook; the horses were spent, one had dropped dead, the others stood panting and trembling on their legs, their hearts thumping loudly. We had captured one man, but it was impossible to keep on after the others, for neither hounds nor horses had it in them. Within a few months the remaining five had been retaken near their old haunts. One of them said that when we gave up the chase they were all lying in a clump of trees on a hillside not over a quarter of a mile away, themselves exhausted, watching us.

Once a daring robbery took place in the city of Birmingham in the early morning. Our hounds were taken to the spot shortly afterward and followed the scent down a street and up a back alley to a house. A negro came out, surrendered himself, and confessed the crime.

Upon another occasion these keen-nosed dogs led to a capture which had a bloody climax. A deputy sheriff attempted to arrest a negro between the mines and Birmingham. Drawing his revolver he ordered the negro to throw up his hands. In reply the negro fired two barrels of buckshot into the deputy's breast, killing him instantly. It took some time for the news to reach Birmingham. When it did, the sheriff and a dozen of his deputies repaired to the scene of the murder, each armed with a Winchester rifle. They borrowed our hounds and put them on the track of the fugitive. He was run down, and when the posse arrived they found that he had taken refuge from the hounds by climbing a tree. To quote from the paper of the following morning, "He refused to surrender and was riddled with bullets."

Once or twice a week, except in the very hot weather, the hounds were put through a practice run. For this purpose a "trusty" was given a start of an hour or two, and then the hounds were put on his trail. Preferring this sort of thing to mining coal, the man generally did his best, so that some of these practice runs were both far and fast. At the finish the man would be found up a tree, for the hounds, with heated blood and under the excitement of the chase, would have attacked him. After they had rested and cooled off he could come down with impunity.

With what I have seen of man-hunting with hounds, I am very much impressed, and the wonder to me is that they are not more generally used in the running down and detection of criminals.

Their training should be similar to that of fox or drag hounds, only they should never be trained on any track but that of a man. MARSHALL BOND.

NEW YORK CITY.

Editor Forest and Stream:

In your June 6 number I notice a letter from Henry de Varigny asking for information about the use of "bloodhounds" in the pursuit of criminals in the United States. I believe I can say with confidence that there has never been a single "bloodhound" used for such a purpose in this country.

The sheriff of the adjoining county purchased several years ago a "bloodhound" puppy, a photograph of which I saw, but I did not see the dog. It was entirely unlike any other hound I ever saw, and was regarded as a great curiosity. I do not know what became of the puppy, but suppose it died, or was disposed of. I presume there have been very few specimens of "bloodhounds" in the United States at any time, notwithstanding the everyday use of that term by newspaper reporters.

In ante-bellum times it was the custom to have in many neighborhoods in the Southern States a pack of "nigger dogs," usually owned by some man of low social standing, that were used to pursue negro slaves who ran away from the plantations and took refuge in the woods for a season. These packs were always composed of the common foxhounds of the country, that were specially trained to trail negroes. These dogs had very little viciousness in their disposition, and the pursuers usually found the pack baying the fugitive, he, perhaps, sitting on a fence or stump.

At the present time there are similar packs, usually of a few dogs only, in most of the counties in this part of Mississippi that are used in the pursuit of fugitive criminals.

The Mississippi State convicts are employed in the cultivation of cotton plantations, most of which are now owned by the State. On these plantations are maintained packs of hounds—by State authority, I suppose—to pursue fugitive convicts; and it may be presumed that systematic attention is given to selecting and training the dogs.

A letter addressed to Penitentiary Warden J. J. Henry, Jackson, Mississippi, should procure the information sought by M. de Varigny. COAHOMA.

MYERS FALLS, Wash., June 12.—*Editor Forest and Stream:* In your issue of June 6, Mr. Henry de Varigny wishes to be informed relative to bloodhounds. In Washington I do not believe there is any law authorizing or prohibiting the use of bloodhounds. In the State penitentiary near Walla Walla, bloodhounds are kept for the purpose of following runaway prisoners, and have been successfully used in overtaking prisoners in some instances. The bloodhounds of the institution were utilized in the pursuit of Merrill and Tracy, the noted Oregon outlaws, about a year ago, and did some effective stunts in following these two desperadoes. To baffle the hounds Tracy secured a quantiy of pepper with which he peppered his tracks and thus temporarily prevented the successful working of these intelligent canines.

If Mr. Henry de Varigny will address the superintendent of that institution, I am satisfied he will be given all the information of which the officers are in possession. A. MEACHEN.

Among the recent additions to the mammal collection of the Biological Survey are a cougar from the desert region bordering the Lower Colorado, below Yuma, Arizona, presented by Herbert Brown; and a large gray fox from New Hampshire, presented by Abbott H. Thayer. Both of these animals appear to be new.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Yachting.

Yachting Fixtures for 1903.

Members of race committee will confer a favor by sending notice of errors or omissions in the following list, and also changes which may be made in the future.

JUNE.

17. Beverly, open sweepstake, Monument Beach.
17. Larchmont, races for 90-footers, Larchmont.
17. Boston, Y. R. A., off Point Allerton, open.
17. Dorchester, open, Dorchester Bay.
18-19. New Rochelle, club, New Rochelle.
19. Eastern, special, open, Marblehead.
19. Indian Harbor, 90-footers, Greenwich.
20. Southern, Baldwin and Walker cups, New Orleans.
20. Beverly, club, Monument Beach.
20. Keystone, club, Woodmere, L. I.
20. Brooklyn, Y. R. A. of Gravesend Bay.
20. Corinthian, first championship, Marblehead.
20. Seawanhaka Corinthian, 90-footers, Oyster Bay.
20. Atlantic, club, Sea Gate.
20 Columbia, motor boat race, Am. P. B. A., Hudson River.
20. New Rochelle, Y. R. A. of L. I. Sound, annual.
20. Chicago, handicap, Lake Michigan.
20. Royal Canadian, club, Toronto.
21. Old Mill, club, Jamaica Bay.
21. Gloucester, N. J., annual, Delaware River.
25-26-27. Seawanhaka Corinthian, Y. R. A. of L. I. Sound, annual and specials.
27 South Boston, club, City Point.
27 New York, special race for 90-footers, Newport.
27 Boston, club, Marblehead.
27. Beverly, club, Monument Beach.
27. St. Paul, cruise, rendezvous St. Paul, Minn.
27 Chicago, special. Lake Michigan.
27. Royal Canadian, club, Toronto.
27. New York C. C., Y. R. A. of Gravesend Bay.
30. New York, special race for 90-footers, Newport.
30. Royal Canadian, L. S. S. A. regatta, Oakville.
29-July 2. Manhasset Bay cup races, L. I. Sound.

For Cruising Yachtsmen.

WITH the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1903, the publishers of FOREST AND STREAM offer prizes for the best stories of cruises submitted to be published in FOREST AND STREAM. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $75.00.
Second prize, $50.00.
Third prize, $25.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1903.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. Photographs of the boat and of the country passed through, not smaller than 4x5, should, if possible, accompany each story, and they will be considered in making the awards.

5. An outline chart of the trip drawn on white paper in black ink (no coloring pigment to be used) should also be sent in.

6. Competitors should avoid the use of slang or incorrect nautical expressions in their stories, as it will count against them in awarding the prizes.

7. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York City, on or before Nov. 15, 1903.

THE two Shamrocks, the steam yacht Erin and the tug Cruiser, making up Sir Thomas Lipton's fleet, arrived in New York early on Sunday morning, June 14, fifteen days and twenty-three hours out from Gourock. The fleet presented quite a formidable array as it moved slowly up the harbor, and it was given a noisy welcome by all the craft it passed. Quarantine was reached before ten o'clock, and after presenting a clean bill of health the boats moved on to Tompkinsville, where they came to anchor.

The fleet covered 3,644 miles from Gourock to Sandy Hook, via the Azores, in 15 days 23 hours. Some rough weather was experienced off the coast of Ireland and on the Friday before arrival encountered a severe southeasterly gale. The following was taken from Erin's log:

May 28—Left Gourock, 1 P. M.						...
May 29—52deg.	54min.	N. Lat...	5deg.	48min.	W. Long.....	200
May 30—50deg.	13min.	N. Lat...	10deg.	35min.	W. Long.....	200
May 31—47deg.	1min.	N. Lat...	15deg.	55min.	W. Long.....	285
June 1—43deg.	59min.	N. Lat...	21deg.		W. Long.....	280
June 2—40deg.	48min.	N. Lat...	25deg.	21min.	W. Long.....	284
June 3—Arrived Fayal, 7 A. M.						236
June 4—Sailed, 4 P. M.						...
June 5—38deg.	25min.	N. Lat...	32deg.	40min.	W. Long.....	194
June 6—38deg.	18min.	N. Lat...	37deg.	37min.	W. Long.....	234
June 7—38deg.	10min.	N. Lat...	42deg.	39min.	W. Long.....	238
June 8—38deg.	02min.	N. Lat—47deg.		21min.	W. Long.....	233
June 9—37deg.	50min.	N. Lat...	52deg.	16min.	W. Long.....	229
June 10—38deg.	02min.	N. Lat...	57deg.	06min.	W. Long.....	233
June 11—38deg.	20min.	N. Lat...	61deg.	09min.	W. Long.....	193
June 12—39deg.	02min.	N. Lat...	65deg.	54min.	W. Long.....	225
June 13—40deg.	03min.	N. Lat...	69deg.	59min.	W. Long.....	195
June 14—Arrived Sandy Hook, 6 A. M.						185

On all four boats there are 156 men, 59 on Erin, 41 on each of the Shamrocks, and 15 on the Cruiser.

Monday morning Shamrock I. and Shamrock III. were taken to Erin Basin, where they will be overhauled and put in racing condition. Their steel spars, which arrived some days ago, are now at the basin.

Mr. L. J. Callanan's centerboard schooner Estelle capsized on Long Island Sound on Monday, June 15. The owner was on board with several friends, and they were watching the yachts racing in the New York Y. C. re-

gatta. Estelle had been entered for the race, but did not start. The racing yachts had turned the mark off Great Captain's Island and were headed for the mark off Lloyd's Neck. It was blowing fresh at the time from the northeast, and Estelle had working topsails set and a jib topsail. An extra heavy puff laid the boat out and her main sheet was eased off to relieve her; the sail got in the water, however, and the weight rolled her over. All hands were on deck at the time of the accident, and they crawled up on the port side as she went over. Mr. Callanan, his guests and the crew were taken off the yacht by a steam yacht that was in the vicinity. Estelle was towed into Cold Spring Harbor and moored off Abram's yard. She will be raised and refitted.

Estelle is an old-fashioned craft of a type that was common in this country thirty years ago. She was built at South Norwalk in 1874 by Mr. J. Richards. She is a centerboard boat with a cabin house. The yacht is 91.2ft. over all, 78.5ft. waterline, 22.8ft. breadth and 7ft. draft.

Atlantic Y. C.

SEA GATE, NEW YORK BAY,
Tuesday, June 9.

The thirty-seventh annual regatta of the Atlantic Y. C. was scheduled to take place on Tuesday, June 9, over courses in the lower bay. A thick fog made it inadvisable to send the yachts over the outside courses, and reduced the list of starters from upwards of thirty, which had entered, down to ten of all classes.

The start was scheduled for 11 A. M. Chairman Henry J. Gielow, of the Regatta Committee, waited until 2 P. M. in hopes that conditions might improve. The heavy haze cleared from Gravesend Bay enough to allow the race to be begun, but new courses had to be decided upon.

Yachts of all classes were sent from the start off Sea Gate to a stake boat anchored off Fort Hamilton, thence to Craven Shoal buoy, and home. This distance of approximately 4 miles, was covered three times by boats in classes above P and twice by all others.

Mr. W. H. Childs' sloop Umbrina made a good impression on her initial appearance. She went up a class and beat Ondawa and Nymph handily. Umbrina led the fleet of larger boats at the finish of the contest.

Bagheera had no competitor and scored a sailover. The raceabout Vagabond defeated Corona, and Pickaninny scored a victory over Scalawag (ex-Budget). The latter fouled the stake boat at the finish, and was disqualified.

The preparatory signal was sounded at 2 P. M. from the Regatta Committee tug. Five minutes later the first division was sent away. The others followed at 5m. intervals. The wind was blowing E. by S. This gave the boats a run to the mark off Fort Hamilton, a close-hauled board to the Craven Shoal buoy and another windward leg home. All marks were left to port.

The next event of the Atlantic Y. C. will be held on Saturday, June 20. It will be a regatta for classes M and below, over the shorter courses. The start will be at 3 P. M. Summaries of the annual regatta follow:

	Finish.	Elapsed.
Schooners—Class C—Start 2:05.		
Estelle, L. J. Callanan	5 00 45	2 55 45
Schooners—Class F—Start 2:05.		
Kiwassa, Shaen & Rusch	4 42 55	2 37 55
Sloops—Class K—Start 2:10.		
Umbrina, W. H. Childs	4 38 03	2 28 03
Ondawa, H. J. Roberts	4 43 10	2 33 10
Nymph, W. H. Towen	5 08 50	2 58 50
Sloops—Class M—Start 2:15.		
Bagheera, Hendon Chubb	4 07 10	1 52 10
Sloops—Class P—Start 2:20.		
Vagabond, T. A. Vernon	4 12 28	1 52 28
Corona, J. E. Beggs	4 15 33	1 55 33
Sloops—Class R—Start 2:25.		
Pickaninny, E. H. Low	4 25 00	2 00 00
Scalawag, E. S. Ludlow	Disqualified.	

The winners were Kiwassa, Umbrina, Vagabond, Pickininny and Bagheera.

Brooklyn Y. C.

BENSONHURST, GRAVESEND BAY,
Saturday, June 13.

The forty-sixth annual regatta of the Brooklyn Y. C. was held on Saturday, June 13, over the regular courses of the Y. R. A. of Gravesend Bay. Nineteen craft entered the event, all but three of which finished. A succession of thunder and hailstorms caused the start to be postponed from 12 M., the time originally scheduled, to 3:15 in the afternoon.

A good breeze was blowing at noon time. The thunder soon disposed of this, however, and the regatta was started in a wind of about 4-knot strength, which fell to a flat calm when one round of the courses had been completed. It returned from a new direction, and with freshening force after craft had been in the doldrums about half an hour.

The feature of the day was the struggle between the 30-footers Bagheera and Boptain. Bagheera is the Atlantic Y. C. challenger for the Manhasset Bay cup for 30-footers. Boptail is a Herreshoff creation, and made her initial appearance in the Brooklyn Y. C. regatta. After a close race Bobtail won by 35s. She is a centerboard boat, while the Chubb craft has a keel.

The special class M boats Surprise, Kangaroo and Bess thought the race had been called off after the first round and withdrew. Bonito was the only one of the class to sail the full course.

The breeze was blowing from the S. E. at the start. This gave the smaller craft, which twice covered an inside triangular course of 4 miles, a reach to the mark off Fort Hamilton, a long windward leg to a stake boat off Coney Island Point, and a broad reach home to the start off the Brooklyn Y. C. The starters above class P went twice over a triangle of 6 miles. The breeze at the start gave them a reach to Craven Shoal buoy, a close hauled leg to buoy No. 12 off Coney Island Point, and a reach home. All marks were left to port.

The calm caught most of the racers just after the first round had been completed. The new wind came out of the southwest. This gave the smaller boats a reach from Fort Hamilton to Coney Island Point and a run home. The larger starters had a reach to buoy No. 12 and a run home.

The Regatta Committee of the Brooklyn Y. C. consists of Messrs. George E. Reiners, Chairman; Robert P. Orr and Arthur T. Wells. Vice-Com. Fontaine placed his schooner Sunshine at the disposal of the committee as judges' boat. The summary follows:

	Finish.	Elapsed.
Sloops—Class M—Start 3:20.		
Bobtail, E. F. Luckenbach	5 52 46	2 32 46
Bagheera, Hendon Chubb	5 23 21	2 33 21
Class M—Special—Start 3:20.		
Bonito, Haviland Bros	6 16 49	2 56 49
Surprise, L. D. Martens	Did not finish.	
Kangaroo, C. H. Humphreys	Did not finish.	
Bess, Sydney Grant	Did not finish.	
Sloops—Class P—Start 3:25.		
Vagabond, T. A. Vernon	5 23 45	1 58 45
Ogeemah, Brophy & Mackay	5 21 41	2 04 41
Karma, J. C. Erskine	5 29 55	2 04 55
Cockatoo, W. A. Barstow	5 30 08	2 05 08
Sloops—Class R—Start, 3:40.		
Scalawag, E. S. Ludlow	5 32 19	1 52 19
Pickaninny, E. H. Low	5 34 53	1 54 53
Catboats—Class V—Start 3:45.		
Martha M., Richard Moore	5 30 08	1 45 08
Boozie, C. D. Durkee	5 36 46	1 45 46
Rascal, D. G. Whitlock	5 31 51	1 46 51
Delede, A. E. Hotson	5 32 52	1 47 52
Millie, E. A. Bogert	5 37 51	1 52 51
Marine and Field Class—Start 3:50.		
Stinger, A. P. Clapp	5 36 32	1 46 32
Kelpie, W. K. Brown	5 37 06	1 47 06

The winners were: Bobtail, Bonito, Vagabond, Scalawag, Martha M. and Stinger.

Larchmont Y. C.

LARCHMONT, LONG ISLAND SOUND,
Saturday, June 13.

The spring regatta of the Larchmont Y. C. was sailed on Saturday, June 13. The large boats were conspicuous by their absence. There were no schooners on hand, and the three English cutters in class I were the biggest boats in the race. A nice breeze that held all day made the contests most interesting. At the start the wind was S. W., but when the boats were on the second round it worked around to S. by E. All the boats sailed twice over triangular courses, with the first mark due E. from the starting line. This made the first leg a broad reach, the second leg a close fetch and the third leg a run.

The Regatta Committee, which consisted of Messrs. Charles P. Tower, Chairman; Frank Hardy and Howell C. Perrin, were on the towboat Unique. The preparatory signal was given at 11:30, and the boats in class I started five minutes after. Eelin was first away well in the lead with Isolde second and Hester last. All three carried club topsails, and Eelin set her balloon jib topsail, while Isolde and Hester stuck to reaching jib topsails, and balloon staysails. On the first leg Isolde and Hester got in a luffing match, and Eelin secured a good lead, while this was going on. Hester got a little the best of the luffing match. At the end of the first round the boats were timed as follows: Eelin 1:41:12; Hester 1:41:35; Isolde 1:44:20. Hester crossed the line first, but Eelin gets the race on time allowance and Isolde comes in for second place.

The 43-footers were the next boats to start, Effort and Challenge being regularly entered in this class, but the Canada's Cup challenger Irondequoit also sailed over the course with them. Effort was splendidly sailed by Messrs. Addison and Wilmer Hanan, and she won handily, beating Irondequoit about 7m. Effort got the best start, and from that time on kept increasing her lead. Challenge met with a slight accident before the start, and she withdrew on the second leg of the second round.

Leda got away in lead in her class. She was sailed by her owner, Mr. Stephen H. Mason, Jr., and she gave Spasm a bad beating. Anoatok was so far behind at the end of the first round that she withdrew.

In the yawl class Tern was first away and had matters her own way all through the race. Although she allowed her competitors, Escape and Sakana, quite a little time, she won the race easily.

The three boats in the 30ft. class put up a pretty race. Alert, smartly sailed by Mr. James Alker, won by over 4m. For Alert to beat Oiseau by such a wide margin caused considerable surprise, for it was generally believed the racing between these two boats would be very close, and the difference would be a matter of seconds rather than minutes.

Hope and Haze, the one-design 25-footers designed by Mr. C. F. Herreshoff, met in their first race. Hope won and Haze withdrew.

There were three starters in class P, Snapper winning by over 2m. from Firefly, after a good race.

Five raceabouts started, and Jolly Tar won by 1s.—a very close decision—Jolly Tar protested Mavis for fouling her near the finish line.

There was another close race in the Larchmont 21ft. class, Adelaide winning by 35s.

Four of the New Rochelle one-design boats started, and Mr. Philip Howard's Caper won out with Ace second. In the Manhasset Bay one-design class, Lambkin beat the other three boats badly.

Gosling had no competitor in class W. Skidoo beat Gloria in the Lark class by over 5m. Gazabo took a walkover in class Q.

	Finish.	Elapsed.
Sloops—Class I—60 to 70 Feet Racing Length—Course 30 Miles—Start 11:35.		
Hester, Cleveland H. Dodge	3 23 11	3 48 11
Eelin, F. L. Rodewald	3 24 58	3 49 58
Isolde, F. M. Hoyt	3 27 16	3 52 16
Corrected time: Isolde, 3.46.19; Eelin, not measured.		
Sloops—Class L—36 to 43 Feet Racing Length—Course 22 Miles—Start 11:40.		
Effort, F. M. Smith	2 35 57	2 55 57
Challenge, W. T. Foote	Disabled.	
Irondequoit, Thomas B. Pritchard	Time not taken.	
Sloops—Class M—30 to 36 Feet Racing Length—Course 22 Miles—Start 11:45.		
Spasm, E. D. King	3 16 41	3 31 41
Leda, S. H. Mason	3 01 55	3 16 55
Anoatok, W. G. Brokaw	Did not finish.	
Yawls—Class M—30 to 36 Feet Racing Length—Course 23 Miles—Start 11:45.		
Tern, John Hyslop	3 18 40	3 33 40
Escape, George Matthews	3 41 36	3 56 36
Sakana, A. H. McCreery	3 38 31	3 53 31
Corrected time: Escape 3.45.51; Sakana, 3.49.14.		
Sloops—Class N—25 to 30 Feet Racing Length—Course 22 Miles—Start 11:50.		
Alert, A. H. Alker	3 11 15	3 21 15
Oiseau, H. L. Maxwell	3 15 57	3 25 57
Flosshilde, W. D. Hennen	3 38 28	3 48 28
25-Foot One-Design Class—Course 22 Miles—Start 11:50.		
Hope, Adrian Iselin	3 46 50	3 56 50
Haze, Anderson Dana	Did not finish.	
Sloops—Class P—21 to 25 Feet Racing Length—Course 11 Miles—Start 11:55.		
Lucille, P. Williams	2 06 30	2 11 30
Snapper, A. B. Alley	2 02 19	2 07 19
Firefly, S. P. Granberry	2 04 00	2 09 00
Raceabouts—21-foot Class—Course 11 Miles—Start 11:55.		
Rogue, A. B. Alley	2 03 49	2 08 49
Mavis, G. L. Pirie	2 01 00	2 06 00
Jolly Tar, S. Howland	2 00 59	2 05 59
Rascal, S. C. Hopkins	2 01 01	2 06 01
Grasshopper, H. Pryor	2 03 59	2 08 59
Larchmont 21-foot Class—Course 11 Miles—Start 11:55.		
Adelaide, J. J. Dwyer	2 06 09	2 11 09
Dorothy, L. G. Spence	2 06 44	2 11 44
New Rochelle 18-footers—Course 11 Miles— Start, 12:00.		
Caper, P. L. Howard	2 22 11	2 22 11
Knave, R. N. Bavier	2 24 25	2 24 25
Ace, A. Bavier	2 24 19	2 24 19
Alga, A. Merstre	2 29 39	2 29 39
Manhasset Bay 18-footers—Course 11 Miles—Start 12:00.		
Bab, J. R. Hoyt	2 30 19	2 30 19
Falcon, E. B. Cole	2 30 59	2 30 59
Arizona, G. A. Corry	2 28 49	2 28 49
Lambkin, S. W. Roach	2 22 27	2 22 27
Catboats—Class W—18 Feet Racing Length—Course 11 Miles—Start, 12:05.		
Gosling, M. Pratt	Did not finish.	
Lark Class—Course 5½ Miles—Start, 12:05.		
Gloria	1 42 39	1 37 39
Skidoo	1 37 19	1 32 19
Yellow Jacket	1 45 19	1 40 19
Class O—Sloops—18 to 21 Feet—Course 11 Miles—Start 12:00.		
Gazabo, H. T. Vulte	2 41 37	2 41 37

The winners were: Eelin, Effort, Leda, Tern, Alert, Hope, Snapper, Jolly Tar, Adelaide, Caper, Lambkin, Skidoo and Gazabo.

New York Y. C.

NEW YORK LOWER BAY,
Thursday, June 11.

The three 90-footers—Columbia, Constitution and Reliance—were able to get a race on Thursday, June 11, after three postponements. The wind was light and the sea was very smooth except for a gentle swell. The course was fifteen miles to windward and return.

The start was scheduled for 11:30, and the steam yacht Privateer, with the Regatta Committee on board, was on hand at that hour. Postponement signals were hoisted on the committee boat and the start was set for 12 o'clock. Promptly at noon the preparatory signal was made. All the yachts carried the same canvas—club topsails set over mainsails and baby jib topsails over the headsails. Constitution's club topsail was much smaller than the ones carried on the other two boats, and she would, in all probability, have done better with a larger sail. In the maneuvering for the start, Rhodes and Barr stuck together as in the earlier races, while Columbia kept away and was well out of the trouble. The start was a fine one, all three of the boats crossing within half a minute. Constitution crossed in the weather berth, but not far enough in the lead to cut Reliance's wind. Columbia crossed to leeward of both the other boats. The boats were timed as follows at the start: Constitution, 12:16:01; Reliance, 12:16:18, and Columbia, 12:16:32.

Columbia was giving Reliance her back wind, and Reliance was in turn doing the same to Constitution, and as a result Columbia drew ahead a little. Constitution was put on the port tack first, in order to get away from Reliance, but the new boat also took the port tack and a few seconds later Columbia followed them. After holding the port tack for some twenty minutes, Columbia was again put on the starboard tack. Columbia had not been able to point with Reliance, and that boat had in the meantime worked out ahead and to windward of Constitution, as she was pointing better and footing faster. Reliance and Constitution held the port tack and held a southerly course while Columbia on the starboard tack stood to the east.

When Reliance and Constitution did take the starboard tack they were favored by having the wind shift a bit to the south. This shift placed Columbia at a disadvantage, and she had to make a longer hitch to make the mark. Reliance gained on Constitution steadily, and she had a big jump on her when they were nearing the mark. Reliance doused her baby jib topsail and set her ballooner as she came up to the mark. The boats were timed at the mark as follows: Reliance, 2:26:07; Constitution, 2:31:01; Columbia, 2:37:05. On the 15-mile beat to windward, Reliance had beaten Constitution 5m. 11s., and Columbia 10m. 44s.

After rounding, spinnakers were set and guyed well forward, but the boats had to keep well to the north of their true course in order to keep them drawing, as the wind had gone to S. S. E. Reliance's big spinnaker was taken in when about one-third the way to the finish line and set a smaller one in place of it. When Reliance was about half way to the finish line she took in her spinnaker and headed for the lightship. Constitution took in her spinnaker also, and soon after Columbia did the same thing. While spinnakers were being carried, Reliance seemed to get away from Constitution a little, but as soon as they were taken in Constitution came up on the new boat again. The times taken as the boats finished were: Reliance, 4:06:01; Constitution, 4:11:36; Columbia, 4:19:09. On the 15-mile run Reliance had beaten Constitution 41s. and Columbia 2m. 10s.

The summary follows:

	Start.	Finish.	Elapsed.
Reliance	12 16 18	4 06 01	3 49 43
Constitution	12 16 01	4 11 36	3 55 35
Columbia	12 16 32	4 19 09	4 02 37

Reliance beat Constitution 5m. 52s. and Columbia 12m. 54s.

GLEN COVE, LONG ISLAND SOUND,
Monday, June 15.

There were only six starters in the Glen Cove races of the New York Y. C. that were sailed on Monday, June 15. Not many boats were entered for the race, and the bad weather kept some who were present from starting.

The three 90-footers stayed at their moorings all day. It was the frequent rain squalls and not the wind that kept them from going out, for they did not want to get their sails wet.

Club members saw the race from the steamer Cepheus, and the Regatta Committee were on board the steam yacht Privateer. At half-past twelve, course signals were displayed from the committee boat. The short course had been selected, the first leg of which is 4½ miles, N. E. by N., the second leg 4½ miles S. E., and the third leg 6 miles W. half S. The wind was strong from the N. N. E. At 12:45 the preparatory signal was given, and the sloops were started ten minutes later. Isolde was first over the line, but to leeward, and Eelin crossed in the weather berth. It was a beat to the first mark, a reach to the second mark, and a broad reach to the finish line. Effort was first away, in her class and won the race easily. Ariel and Katrina met in the schooner class, and the former boat won. She was sailed by Captain Hank Haff, and after getting the best of the start led all over the course. The summary:

	Start.	Finish.	Elapsed.
Sloops—Class I.			
Isolde	12 55 04	3 02 26	2 07 22
Eelin	12 55 36	2 59 12	2 03 36
Sloops—Class L.			
Effort	12 55 45	3 12 34	2 16 49
Surprise	12 56 13	3 41 31	2 45 18
Schooners.			
Ariel	1 05 32	3 06 13	2 00 41
Katrina	1 05 19	3 10 34	2 04 15

The winners were Eelin, Effort and Ariel.

Effort is the only one of the boats that has been measured, and so the allowance cannot be figured out until this is done.

Annual Cruise of the Goodenough.

Story Submitted in "Forest and Stream" Cruising Competition.

BY FRANK F. FRISBEE, DETROIT, MICH.

Though we felt very tired, the reveille was enough to rouse us the next morning, and we got out on deck to find a beautiful morning. There is one charm of cruising in these waters, you are absolutely away from people and free to appear in any old deshabille, so our attire in the early morning was convenient for a tub, you know, as the Englishman would say, and while the water of Lake Superior is a little cool for bathing, that in the bay was not bad.

The morning breeze came from the south and was fair for us to sail back down the bay, retracing in part our course. Sail was got on the yacht, and we glided away toward the Harmony River. The wind veered more to the west and freshened, then lulled, but the Skipper had his weather eye open and said that it would blow fresh in the afternoon, so if we left the yacht we must make sure that she would not go ashore. So we got out our extra big anchor, buoyed it and putting it in the small boat led it off to the windward, making up our minds that it was better to be sure than sorry. The holding ground was none too good, and our Skipper is careful.

After some discussion, Ed decided he would go up the Harmony with the Skipper and Prof. The small boat took us ashore and up the river a good half-mile, and then we had to leave it. The Harmony is a beautiful trout stream, being deep enough to insure good fishing, but not too deep for wading in most places. It runs through a dense forest, but is not as rough and rocky as the Chippewa, or as large, but is more of a river than Stoppel's Creek.

The Harmony had not been run for some time, and therefore there were a good many nice pools and hiding places for trout. We did not have to go far to catch all the trout we wanted, and we took plenty of time to enjoy the beautiful stream.

Our creels held twenty-eight trout, when we returned to the yacht, and several two-pound trout were in the catch. We had seen plenty of signs of deer, moose and caribou, up all the rivers, but had not seen any game but ruffed grouse (partridge). We never molested anything in the way of game, it being the close season. When we returned to the yacht Percy had quite a tale to relate about a fine buck some Indians had driven into the lake and which he had chased with a small boat.

A TYPICAL LAKE SCHOONER.

"If it had not been the close season we would have had venison a-plenty," quoth Percy.

The Indians do not have to observe the laws in regard to game, and they often kill deer and caribou near us. They offered us fine caribou antlers in the velvet at low prices.

We were back at the yacht early, and as a light breeze was blowing our way, we got up both hooks and sailed away for the fish station, as we needed ice, and having plenty of trout, we wanted to send some to friends at the Soo.

After we got sail on, our breeze freshened and we made fine time. The Professor tried to make a photograph of the catch of the day, but the yacht heeled so, it was hard work; however, the result showed well enough to give an idea of the catch. We had wind enough to enable us to make the station by eight P. M., sailing nearly six miles per hour.

The next day we had a change in the weather, which had been perfect and a cold rain accompanied by high northwest winds, made us stick very close to the yacht's cabin. A good fire in the galley stove made us very comfortable and cards and magazines made the time pass quickly. The wind howled when we put our heads out of the companionway in the morning, and we could see the sea tumbling high outside. It was very cool and little flurries of snow came early in the day. Not bad for the eleventh of August.

When the steamer Dixon came in we received an addition to our crew. Doctor D., of Cincinnati, who had made a cruise with us before, came up. The Doctor reported a heavy sea and a good many seasick passengers. Doc. had not gotten his sea-legs and looked a little pale about the gills. We joked him about it, but he thought some of the rest of the crew might have yielded tribute to Neptune, had we been outside instead of in our snug berth. As we had had considerable river fishing, we decided to try the reefs the next day, the storm having subsided. The reefs can only be fished when there is no wind, or wind from off shore, as a little wind from off the lake soon kicks up a sea that makes it impossible to stay on the reefs. If it blows hard and we get caught out, it means go ashore and take to the beach, which is not easy, to say the least. We seldom take the yacht out of the harbor, but go to the reefs in the small boats. If we anchor off the reefs, it means that we must stand watch at night, as it would not do to be caught napping out there on a lee shore.

We took two small boats and rowed the six miles out to Pancake Shoals, which are celebrated for the great trout fishing to be found there. All days are not great days on the reefs, but if one keeps going, they are bound to get them some time. The signs will come right at last. We generally stick to it and our cruise of '02 gave us several fine days on the shoals. We had to go ashore two days and spend the day in watching the waves roll in on the rocky shore, and the surf break over the flat rocks, which in places are within a few inches of the surface and extend for rods. We fished another day in a driving rain storm and another day had to beach one of the boats and take to the woods to get back to the harbor, but these are only incidents and in detail would not interest the general reader. We always take our camera out on the reefs and when the sea drives us ashore, we get snaps that show better than we can write what the shore looks like and the trout we catch. We took plenty of fish and were able to remember our friends below when the Dixon called for the fish cars on her trip down.

SHIP CANAL FROM DECK OF YACHT, SAULT STE. MARIE.

About eight miles from the fish station there is a narrow channel between the main land and Batchewana Island (see chart). There is a spot that the crew of the Goodenough call the Bosshole. Here the water is 40 to 50 feet deep and a huge clay bank drops off from eight feet of water, with nearly, if not quite vertical sides. Here the bass congregate and swim along seeking food. Toward this channel one afternoon the Goodenough was sailing, but the wind failed just before we got to our anchorage and as a rocky reef juts out from the island, we had to get out the sweeps to get away from it, as a very strong current sets out, or in, from the upper to lower bay. By dint of hard work we managed to sweep the yacht through the cut, and getting her just over the clay bank, let go our hook. Here we can fish right from the deck, as the bass will come up and get under the yacht, evidently seeking the shade. We find the bass very capricious here and at times they will not be tempted to bite, though we can see them plainly in the crystal waters. Large northern pike are also taken here, but we do not usually fish for them, however. They sometimes take our bass bait. Then we hang them up. They are very gamey and on a light rod give fairly good sport.

After a day or two of loafing and easy fishing, we decided we wanted something more strenuous, and as from this anchorage we generally fish the Batchewana river, which is only a mile or so away, we decided to put in a day up the stream. The row from the yacht to the end of easy boat navigation, on the Batchewana, is about six miles. We could take the yacht up the river if it was not for a bar that extends from the mouth of the river out a considerable distance, but we find it better to anchor where we do than to try to hang on where we would get the full force of any wind blowing up the bay.

Four of the crew took two small boats and made an early start for the Batchewana. We did not attempt to take both small boats very far beyond the point we can row to, but pulled one up some of the lower rapid water. The Skipper sought one of his pet pools and proceeded to whip it in his usual successful manner. Ed. fished up the stream and Doc. and the Professor flew up the creek, bound for the falls.

Batchewana is the chief river that flows into the bay and is a noble stream. A boat can be taken right to the falls, by poling and towing over some of the riffles.

Flowing into the Batchewana is a very pretty little trout stream where one can always get a good catch of small trout, and where the Professor generally takes some photographs of some very picturesque little falls.

About four miles above the small boat landing are the first falls of the Batchewana. These falls are of more volume than those of the Chippewa, but the height of land is less. Above these falls some miles is a deep cañon and the main falls of the river, which are much more grand and rugged. It is a little too much of a trip to try to make the upper falls and back in one day, so if one wishes to visit them, the way is to camp at the first falls and make the trip to the second falls the next day. We did not go above the first falls on this cruise. There are numerous deep pools, fed by cold springs below the first falls, where lurk very large trout. We have taken them up to four pounds, but this year the Skipper could not beat three and one-half pounds, and he was high rod.

WHALEBACKS LOCKING THROUGH POE LOCK "SOO"—LETTING IN THE WATER.

The trip up the Batchewana is a beautiful one, as the river in places flows through rocky walls that are nearly precipitous. Then again it rushes over the rocks with foam-crested waves, and anon descends into deep, black, silent pools, shaded at the edges by the dark fir and spruce of the north woods, flecked there and there by bright dashes of color made by the mountain ash and the turning leaves of the maple. The silvery sheen of the white birch streaks the dark-green here and there, while in the damp shade, where some spring gushes forth, great beds of ferns are seen.

[TO BE CONTINUED.]

Columbia Y. C.

CHICAGO TO INDIAN HARBOR,
Saturday, June 6.

Iroquois, designed, owned and built by Mr. Henry R. Davies, a member of the Columbia Y. C., defeated the crack fin Vencedor, by 6m. 39s. on the run from Chicago to Indian Harbor. The race was the first of a series of three from Chicago to Indiana Harbor, a 15-knot course. Wind was due north—making race a spinnaker and balloon jib run. The fleet presented a fine sight for those on guest boat.

There are two time prizes for the series—to be awarded to yachts in A and B classes—that have the greatest number of points in its class. The points on today's race follow:

Time Prize—A Classes.

	Points.		Points.
Iroquois	100	Neva	42.9
Vencedor	85.7	Privateer	28.6
Vision	71.4	Iris	14.3
Columbia	57.1		

Time Prize—B Classes.

	Points.		Points.
Wizard	100	Jeannettie	50
Toxteth	75	Nomad	25

A CLASSES.

	Finish.	Elapsed.	Corrected.
Class 1A.			
Neva	4 30 00	2 25 00	2 25 00

The schedule of races of the Quantuck Y. C., of Suffolk county, has been arranged by the Regatta Committee and is as follows: First challenge race, Saturday, July 11; second challenge race, Saturday, August 1; third challenge race, Saturday, August 22. There are also to be ladies' regattas, the first to be held on Friday, July 24, and the second on Friday, August 28.

The racing dates of the Associated Clubs are as follows: Westhampton Country Club, July 18, August 15; asssociation race, and September 5; Shinnecock Y. C., July regatta, and August 29; Moriches Y. C., July 11, August 1, August 22, and September 7, association race.

Morrisania Y. C.

The eighth annual open regatta was sailed on June 14 in a good southeast wind varied with hard rain squalls toward the finish. The steamer Mount Morris was chartered by the club to carry its members and guests over the course, which was off South Brother Island. The judges were: Mr. C. S. Ogden, Stuyvesant Y. C.; Mr. L. Sands, Knickerbocker Y. C.; Mr. Geo. R. Schroeder, Sr., Morrisania Y. C.

Class A—Cabin Sloops—30ft. and over—Start, 12:10.

	Finish.	Corrected.
Cornelia, J. F. Lalor	3 04 25	2 54 25
Musidore, John Lalor	3 15 10	3 03 06

Class B—Cabin Sloops—Over 25ft. and under 30.

Water Lily, F. Dama	5 29 30	5 19 30
Lou, G. J. Oakes	Withdrew.	
Pinochle, J. Babst	2 58 55	2 46 04
Connie, G. Olweiler	Did not finish.	
Saracen, F. Kloepper	Did not finish.	
Susie J., Bartro Bros	5 18 30	4 59 21

Class C—Cabin Sloops—25ft. and under.

Pearl, W. C. Long	2 40 10	2 25 10
Anita, C. Loock	2 47 16	2 35 30
Mamie, E. Kiel	3 00 55	2 43 33
Gertrude, Curtis and Morstadt	2 39 10	2 18 10
Ida, P. G. Schumacher	Did not finish.	

Class D—Open Sloops—20ft. and over.

*Pearl Louise, T. A. Goodenough	1 57 20	1 37 20
Eleanor, J. McGregor	1 59 45	1 37 52
Exile, E. J. Sauce	2 03 10	1 40 38
Zetes, R. C. Ten Eyck	2 02 00	1 39 01

*Protested.

Class E—Open Sloops—Under 20ft.

Dottie Dean, Geo. H. Lansing	2 06 07	1 40 20
Phidias, C. Kirchoff	1 58 55	1 32 53
Sea Gull, G. Grassely	2 03 00	1 33 35
Imp, D. J. Reynolds	1 54 30	1 29 30

Class F—Cabin Cats—25ft. and over.

Katrina, T. F. Tully	Did not finish.	
†Carnation, P. Hamburger	5 34 50	. .. ..
Whileaway, W. Cartwright	4 05 10	3 55 10

Class G—Cabin Cats—Under 25ft. and over 20.

Wave, E. Delamater	2 51 40	2 29 40
Degnus, J. Symmers	2 44 45	2 29 40
Yankee Girl, Chapman Bros	Did not finish.	
Annie C., J. Constance	2 49 00	2 31 45

Class I—Open Cats—Over 20ft.

†W. H. Gill, C. Hogan	2 01 15	. .. ..
Ping Pong, V. E. Bauer	2 05 55	1 42 57
Paula, E. Butler	Did not finish.	
Marguerite, W. D. Robinson	2 04 10	1 40 36
Mavis, W. Ridley	2 05 45	1 44 48

Class K—Open Cats—20ft. and under.

Loyal Josie, H. Howard	1 54 00	1 29 00
Only Daughter, W. Lynch	Capsized.	
Willie B., H. McGray	1 56 17	1 26 56
Hobo, J. M. McAllister	1 58 10	1 27 22
†Gertrude, G. J. Larkin	. .. ..	. .. ..
Mistry, C. Reutermann	2 27 40	1 55 51
†Frank, A. Marshall	1 51 00	. .. ..

Class L—Special Racing Class—Cabin Sloops—26ft. and under.

Firefly, G. P. Granberry	2 14 35	1 53 28
Bride, W. Dent	Withdrew.	
Surprise, F. Fath	2 37 30	2 22 20
Elsket, J. Berrian	2 43 25	2.25 39

†Disqualified.

Winners: Class A, Cornelia; Class B, Pinochle; Class C, Gertrude; Class D, Zetes; Class E, Imp (subject to remeasurement); Class F, Whileaway; Class G, Wave; Class I, Marguerite; Class K, Willie B.; Class L, Firefly.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Commodore J. F. McGuire, of the Columbia Y. C., of Chicago, has had a boat built by the Kehoe Boat and Motor Company, of Fort Wayne, Indiana, for the defense of the Lipton cup. She is 35ft. 11½in. over all, 20ft. 9in. waterline, 10ft. 6in. breadth, and 2ft. 2in. draft. She will carry 969 square feet of sail. The yacht will be known as the Hoosier.

Mr. Hollis Burgess, in conjunction with Messrs. Gardner & Cox, has chartered the schooner Mayflower, owned by Mr. William Amory Gardner, of Groton, Mass., to Mr. Ernest B. Dahlgren, of New York.

The steam yacht built by the Geo. Lawley & Son Corp., South Boston, from designs by Mr. A. S. Chesebrough for Mr. Charles G. Emery, was launched on Thursday, June 11. She is 145ft. over all, 117ft. waterline, 17ft. breadth and 7ft. draft. The yacht has been named Calumet. She will be used mainly on the St. Lawrence River and will have a speed of 18½ miles.

The schooner built by the Geo. Lawley & Son Corp. from designs made by Mr. Fred Lawley for Mr. John M. Richmond, of Providence, R. I., was launched on June 2. She will be known as Velmore. The yacht is 83ft. over all, 51ft. waterline, 16ft. breadth and 10ft. 6in. draft. Her sail area is about 3,300 square feet.

The American-built schooner Lasca arrived at New York on June 10, thirty-two days out from Southampton. The run from Southampton to the Azores was made in five days, and from that time on bad weather was encountered.

Mr. Frank Bowne Jones has chartered the steam yacht Reba for Mr. Nathaniel Witherell to Mr. William R. Proctor and the steam yacht Viking for the month of July for Mr. Franklin Haines to Mr. Henry S. Jeanes. Mr. Jones has made the following sales: Sloop Onward sold by Mr. A. S. Chesebrough to Mr. S. E. Vernon; sloop Mary Jane sold by Mr. Wm. B. Lloyd to Mr. M. S. Bentham; raceabout Scamp sold by Mr. Allan H. Pirie to Mr. Henry L. Maxwell; raceabout Indian sold by Mr. Henry L. Maxwell to Mr. Allan H. Pirie; raceabout Viper sold by Mr. Andrew B. Newcombe to Mr. Wm. R. Thorsen, and the knockabout Lucille sold by Mr. H. H. Landon to Mr. Leonard L. Weyand.

Secretary George A. Cormack, of the New York Y. C., has announced that Mr. James Gordon Bennett presented the club with a challenge cup valued at $2,500 for competition between steam yachts. Mr. Bennett offers a cash prize of $2,500 in addition to the cup to go to the winner of the first race. The trophy is to be known as the Lysestrata cup. The following conditions govern the races held for the cup:

This cup is open to the competition of steam yachts belonging to the New York Y. C. and to steam yachts properly enrolled in any foreign yacht club.

The winning yacht shall hold the cup as a challenge cup, to become the property of an owner of a winning yacht in two contests, to be held in successive years at New York a week before or after the June regatta, or when the America's Cup is sailed for; at Newport, R. I., U. S. A., during the squadron cruise of the New York Y. C.; at Nice, France, in the month of April, or at Cowes, England, during the regatta week. In these competitions there shall be no handicap or time allowance.

The entrance is limited to yachts above 150 net tons in size, American yacht measurement. The course is to be not less than fifty nautical miles in length and in water of a depth that will not impair the speed of vessels, the selection of this course to be left with the Regatta Committee of the club actually in possession of the cup. The yacht holding the cup shall decide the place where the next competition is to be held.

Challengers shall give six months' notice, in writing, to the owner of the yacht and the secretary of the club holding the cup. The yachts are to steam in ordinary cruising trim, with the actual amount of coal and stores, and all boats must be carried except power launches, which may be omitted at the discretion of the owners.

The Regatta Committee shall have power to postpone a race if the weather conditions be, in its opinion, unsuitable, and in case of all protests its decision shall be final.

The officers and committees of the newly organized Bay Side Y. C. are as follows: Com., G. Waldo Smith; Vice-Com., Charles M. Gould; Rear-Com., W. W. Cole; Treas., Hugh L. Weber; Sec'y, William H. Johns; Fleet Surgeon, Dr. C. B. Story; Legal Adviser, Elmer G. Story; Meas., George H. Petit. Board of Governors—Judge Cornell, W. W. Cole, John Taylor, Howland Leavitt, Charles L. Willard and Fleet Captain Bayard Foulke. Racing Committee—Harry T. Weeks, Theodosius Foulke and Otto Muller. House Committee—Charles K. Sayer, Charles E. Colman, Brion Foulke, Wilfred Scott, William H. Johns, Charles F. Smith. The burgee of the club is a blue ground, with a chevron of white and a crimson ball. The club is to build a house on the shore of Little Neck Bay. Some thirty boats are enrolled in the fleet.

The officers of the Westhampton Country Club Yacht Squadron are as follows: Com., Foster Crampton; Vice-Com., Walter H. Martin; Fleet Captain, Philip L. Gill; Meas., Griswold Dunson, 2d. The club's racing schedule follows:

Saturday, July 18—Club Regatta.
Saturday, August 15—Association regatta.
Saturday, September 5—Open regatta.

Canoeing.

Red Dragon C. C.

Editor Forest and Stream:

The spring regatta of the Red Dragon C. C. took place over the club paddling course on Saturday, June 13. The Delaware River at this point runs nearly northeast, and the wind on Saturday afternoon was strong and squally from the southeast. The club house is on the west bank of the river, with the finish line immediately in front. The racing conditions may therefore be better imagined than described, especially as the tide started to run down before the races were half over.

The races and their results were as follows:

Event No. 1—Half mile tandem, double blades: J. C. Maclister and Paul S. McMichael (Red Dragon C. C.), first; Jno. Conrad (Lakanoo Boat Club, Burlington, N. J.), and C. S. Osmond (Yapewi Aquatic Club, Bordentown, N. J.), second; T. W. Cook and H. E. Davis (Red Dragon C. C.), third; W. H. Logan, Jr., and M. D. Wilt (Red Dragon C. C.), fourth; E. D. Hill and E. D. Hemingway (Red Dragon C. C.), fifth.

Event No. 2—Hand Paddling, 100 yards: First heat—C. S. Osmond, Y. A. C., first; E. D. Hemingway, R. D. C. C., second; W. H. Logan, Jr., R. D. C. C., third; H. E. Davis, R. D. C. C., fourth. Second heat—John Conard, L. B. C., first; J. C. Maclister, R. D. C. C., second; P. S. McMichael, R. D. C. C., third. Final heat—John Conard, L. B. C., first; E. D. Hemingway, R. D. C. C., second; C. S. Osmond, Y. A. C., third; J. C. Maclister, R. D. C. C., fourth.

Event No. 3—Tail-end race, single blades: This race, contrary to the usual custom, was paddled against the wind, as the wind was so strong that none of the canoes would go in any direction but round and round, when headed down the wind. T. W. Cook, R. D. C. C., first; H. E. Davis, R. D. C. C., second; J. C. Maclister, R. D. C. C., third; Jno. Conard, L. B. C., fourth; M. D. Wilt, R. D. C. C., fifth; E. D. Hemingway, R. D. C. C., sixth.

Event No. 4—One man, half mile, double blades: M. D. Wilt, R. D. C. C., first; T. Rice Davis, L. B. C., second; J. C. Maclister, R. D. C. C., third.

Event No. 5—One man, single blade, quarter mile—Open to R. D. C. C. members only: H. E. Davis, first; P. S. McMichael, second; W. H. Logan, Jr., third.

Event No. 6—Tilting tournament: H. E. Davis, lancer, and E. D. Hemingway, paddler (R. D. C. C.), won; against P. S. McMichael, lancer, and H. E. Blumner, paddler (R. D. C. C.).

Event No. 7—Swimming 100 yards: C. S. Osmond, Y. A. C., first; Newlin D. Davis, second; H. E. Davis did not finish.

There was to have been a mixed tandem double-blade race, but on account of the weather conditions and the scarcity of women's bathing suits, it was called off.

The officials were: Joseph Edward Murray, Judge at Finish; H. W. Fleischman, Starter; Omar Shallcross, Timer and Clerk of the Course.

The duties of Mr. Shallcross as timer were discontinued after the first race, as the high wind and rough sea would have made the results absolutely valueless for comparison. He was therefore appointed a life-saving crew, and did good service in that capacity.

There have been canoe races paddled in worse weather, but only once, and that was at the Stave Island meet of the A. C. A. in '98, when the Regatta Committee waited two days for decent weather to run off the paddling trophy race, and then put it on probably because it was too rough to run off sailing races.

On Saturday afternoon all the Red Dragons used the big open canvas-covered cruising canoes, except in the half-mile double-blade race, in which regular 16ft. by 30in. fifty-pound racers were used.

This was perhaps the most exciting race of the day. There was enough tide running against the wind to kick up a nasty sea for the light racers, and when they started down the wind it was more like a sleigh hide or a coast on a toboggan than anything else. They would be caught by a big wave, and with the forward half of the boats clean out of water would shoot ahead yards at a time, and when the wave dropped from under would be almost out of sight in the trough until picked up by another wave to repeat the performance.

It was sport, but it wasn't exactly racing, and there was no time to bail until the finish.

After the races supper was served, and most of the hundred or more guests stayed for a dance or two in the evening, and thus finished out one of the best regattas the Red Dragons ever had. M. D. WILT.

New York C. C.

BENSONHURST, GRAVESEND BAY,
Saturday, June 13.

The thirty-third annual spring regatta of the New York C. C. was held on the afternoon of Saturday, June 13, over courses in front of the club anchorage on Gravesend Bay. The events were open to members of the A. C. A.

The light wind that prevailed in the late afternoon was exactly suited to canoe races, and each contest was well waged. A large number of ladies were in attendance viewing the sports in the afternoon and later dinner at the club house. In the evening prizes won during the day were presented. The summary and winners of the different events follows:

Record Sailing—Decked Canoes—Start 3:45.

G. W. McTaggart	4 24 15	H Kennard	4 27 00

Record Sailing—Open Canoes—Start 3:55.

B. D. Foster	4 21 10	A. M. Poole	4 24 50
H. H. Morton	4 24 30	William Yelland, Jr.	4 28 00

Special Class—Open Canoes—Start 3:55.

H. S. Steven	4 21 30	W. Carmalt	4 25 15

Open Canoe Paddling—Double Blades—Start 4:47.

G. W. McTaggart	4 49 00	W. V. Robinson	4 49 30
George Morrisey	4 49 20	H. L. Pollard	4 50 15

Open Canoe Paddling—Single Blades—Start 4:58.

William Inslee	5 00 00	A. M. Poole	5 00 40
George Morrisey	5 00 02	W. Carmalt	5 00 50

Open Canoe Paddling—Single Blades—Tandem—Start 5:12.

McTaggart and Kennard	5 13 00	Pollard and Morrisey	5 13 12
Boell & Roberts, K.C.C.	5 13 03	Carmalt and Poole	5 13 15
Robinson and Jennings	5 13 07		

Tail End Race.

A. M. Poole	Not timed.	William Inslee	Not timed.
C. F. Boell, K. C. C.	Not timed.	L. B. Jennings	Not timed.

The A. C. A. Meet.

To the Members of the A. C. A.

The affairs of the present administration pertaining to the annual meet at Sugar Island, August 7 to 21, inclusive, are rapidly progressing, the outlook is very encouraging for a large attendance and a successful meet.

The "Year Book and Camp Circular" will be forwarded to members sometime between July 1 and 15.

The administration is in need of a camp bugler, and it is desirous to obtain one from our members; volunteers are herewith petitioned. I will be gratified to receive word from any of our members to the effect that we will not find it necessary to go outside of our Association for a bugler.

NATHANIEL S. HYATT,
Commodore.

A. C. A. Membership.

Mr. Edwin Lemoine Somerville has been proposed for membership to the Atlantic Division of the A. C. A.

Messrs. Ralph C. Porter, Frederick Leonard Adams and John Neilson have been proposed for membership to the Atlantic Division of the A. C. A.

Rifle Range and Gallery.

Fixtures.

June 18-20.—St. Louis, Mo.—Tournament under auspices of Central Shooting Bund. Horace Kephardt, Sec'y.

July 6-7.—New Haven, Conn.—South New England Schuetzen Bund annual schuetzenfest, under the auspices of the Independent German Rifle Company. H. C. Young, Sec'y.

The United States Revolver Association.

NEW YORK, N. Y., June 15.—The date of the international match between France and America has now been definitely fixed for the latter part of June, the Frenchmen proposing the 27th or the 29th inst. On account of not being able to use the Walnut Hill range on Sunday for preliminary shooting, the Executive Committee of the U. S. R. A. has proposed the 30th as the date of the match. This, no doubt, will be acceptable to the French committee. If so, the candidates for the American team are requested to assemble at the Walnut Hill range of the Massachusetts Rifle Association, near Woburn, Boston, Mass., on June 26, for preliminary practice and to accustom themselves to the range.

There will be three days of preliminary shooting, June 26, 27 and 29. The team will be selected from the candidates on the evening of June 29. All the first-class revolver and pistol shots in the United States who can possibly arrange to be present, are invited and urged to participate in the preliminary shooting and be available for the American team on the days named. Special arrangements will be made in Boston for the accommodation of visiting marksmen on this occasion.

The conditions of the match are as follows: Fifteen men on a side; 60 shots per man at 50 yards, on the Standard American

target, 8-inch bullseye; any six-shot revolver; maximum length of barrel, 12½ inches; maximum weight of barrel, 2¾ pounds; minimum trigger pull, 2½ pounds; any open sights; any ammunition. The scores to be shot between 8 A. M. and 6 P. M. Sighting shots allowed before beginning the score.

A. L. A. HIMMELWRIGHT.

The American Palma Team.

THE American team, to compete for the Palma trophy at Bisley, sailed last week on the Cunarder Lucania. The party of Americans was made up of Col. L. C. Bruce, Old Guard, New York, who will act as captain; Adjutant-Col. J. H. Wells, Seventy-first Regiment, New York; Lieut. Albert S. Jones, secretary New Jersey Rifle Association; Quartermaster-Lieut. J. G. Ewing, National Guard, South Carolina; Capt. H. M. Bell, Second Regiment, New Jersey; Lieut. E. Y. Breeze, Lieut. Kellogg, K. V. V. Casey, Seventy-first Regiment, New York; Private George Cook, First Regiment, District of Columbia; Sergt. George Doyle, Seventy-first Regiment, New York; Lieut. Thomas Holcomb, Jr., United States Marine Corps; Sergt. J. H. Keough, Sixth Regiment, Massachusetts; Private H. H. Leizear, Sixth Regiment, Pennsylvania; Private Daniel C. Meyer and Corporal W. B. Short, Seventh Regiment, New York; Capt. W. B. Martin, Second Regiment, New Jersey; Private S. B. Wetherald, First Regiment, District of Columbia; Corporal C. B. Winder, Sixth Regiment, Ohio; Lieut. A. E. Wells and Lieut.-Col. J. H. Wells, Seventy-first Regiment, New York. Private Meyer failed to make a place on the team during the competitions, but during the spring and winter did some very fine shooting, and on the strength of this was taken along.

The competition at Bisley will be held on July 11. Six men teams will compete, representing France, Austria, Switzerland, Great Britain, Australia and the United States.

Cincinnati Rifle Association.

CINCINNATI, O.—At our regular meeting on June 7 the following scores were made. The conditions were good, except a tricky fish-tail wind from 5 to 7 o'clock. Shooting 200yds., offhand, 25-ring target:

Gindele	224	217	216	215	208	Bruns	213	203	201	201	188
Odell	223	220	219	209	205	Hofman	211	211	205	196	192
Payne	223	219	218	216	216	Hofer	208	203	203	198	188
Nestler	221	216	216	211	208	Lux	202	198	189	181	179
Strickmeier	221	213	208	208	206	Freitag	195	195	193	191	188
Trounstine	220	212	202	191	177	Drube	194	193	181	178	176
Roberts	215	208	208	207	204	Uckotter	185	181	176	174	174

Honor target: Gindele 65, Odell 69, Payne 67, Nestler 69, Strickmeier 60, Trounstine 67, Roberts 68, Bruns 56, Hofman 67, Hofer 65, Lux 52, Freitag 53, Drube 57, Uckotter 67.

THE British American states that "the Austrian minister in Washington announces that in May an international shooting match for young men employing army rifles and ammunition will be held under the auspices of the Egyetemi Athbetikai Club at Budapest. This is to be the first competition of the kind ever held. The first prize will be 5,000 kroner and a gold medal. There will also be second and third prizes of less value. Any young man born since Jan. 1, 1880, will be eligible. It is announced that any person wishing to take part is to communicate with the committee in charge of the competition at Budapest, inclosing a certificate of his birth."

The name of the club is very significant, and will bear a lot of earnest study, and 5,000 kroner, though vague, is interesting. The experts, born in 1800 will have difficulty to qualify.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

*June 17-18.—McKeesport, Pa., tournament.
June 17-18.—Wilkes-Barre, Pa.—E. L. Klipple tournament.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

Keep in mind that the Interstate Association will give a tournament for the Union Gun Club on June 24 and 25.

The secretary, Mr. A. Bradley, Jr., informs us that the Napoleon, Ohio, Sportsmen's Association will hold an all-day shoot on July 4.

Dr. R. E. Dinger, the manager, informs us that the annual tournament of the Creseent Gun Club will be held at New Bethlehem, Pa., on Aug. 26-27.

The Trenton, N. J., Shooting Association will hold a shoot on July 4, commencing at 10 o'clock. A merchandise event will be a feature of the competition.

We are informed that Messrs. H. M. Clark and Max Witz, of Indiana, made a match at Cincinnati last week, to be shot at Fort Wayne, Ind., the side bet being $100.

Mr. Bert B. Adams, Sec'y-Treas. of the Limited Gun Club, Indianapolis, Ind., informs us that the tournament fixed to take place June 25-26 by his club, has been postponed, and that the new dates have not yet been determined.

Mr. S. M. Van Allen cleared up nearly all the prizes of a special nature in the New York State event last week. He won the championship medal of the Association, high average in the State events, and the New York City cup.

On June 10, the second day of the Soo Gun Club tournament, in the main event, the Interstate Championship trophy, Mr. R. R. Barber, of Paullina, Ia., proved victorious. There were nine ties, the final being miss-and-out, Mr. Barber winning at the 17th target.

Mr. Chas. G. Grubb, of Pittsburg, Pa., writes us as follows: "The Ruffsdale Rod and Gun Club, Ruffsdale, Pa., have transferred their September date to the Seottdale Gun Club, of Scottdale, Pa., and tournament will be held Sept. 23 and 24 at the latter place."

The Mount Kisco, N. Y., Gun Club will hold a two days' shooting tournament on July 3 and 4. The programme will be issued about June 20. Guns and ammunition sent care of the manager, Mr. A. Betti, will be delivered on the grounds free of charge.

Mr. A. A. Schoverling, 302-304 Broadway, New York, writes us as follows: "The team race, Fulton Gun Club vs. the North River Gun Club, will be held on the grounds of the Fulton Club, commencing at 1 o'clock. There also will be some special prize contests. Every shooter welcome."

Last week at Batavia, N. Y., the Holland Gun Club was organized at the office of Sheriff Clark, the following officers being chosen: President, Sheriff Clark; First Vice-President, F. M. Farwell; Second Vice-President, Albert J. Squires; Secretary, Albert M. Steele; Treasurer, H. M. Johnson; Field Captain, Harry L. Ames.

At the sixth tournament of the Western Pennsylvania Trapshooters' League, held at Ruffsdale, Pa., June 10 and 11, R. S. Deniker was high average for the two days with a total of 333 out of 350, a 95 per cent. performance. In the four-man team race, 50 targets per man, five teams contested, with scores as follows: Millvale 183, North Side and Ruffsdale 179, Ligonier 155, Irwin 147.

Mr. A. A. Schoverling, the club manager, writes us as follows: "The Richmond Gun Club will hold a live-bird shoot on June 20 at 2 P. M. A special match, three men of the Aquehonga Gun Club, of Tottenville, S. I., against three men of the Richmond Gun Club. Conditions, 25 birds per man, 75 to each team. Sweepstakes to follow if time permits. To be held on the East Side Gun Club grounds in Newark."

Only two teams contested for the famous Dean Richmond trophy at Ossining on Friday of last week, the Baldwinsville and Ossining teams, the former winning by a score of 125 to 123. The four-man team race had four entries, two of Ossining, one professional team, and a team of the Brooklyn Gun Club, the members of which were Banks, 24, Brigham (Dr. Martin) 23, Floyd 22, and Hopkins 22. This team won with the excellent total of 91. The Baldwinsville team duly solemnized the win by moistening the cup.

In the competition for high averages at the New York State shoot at Ossining, last week, in the open events the first five were: J. Mowell Hawkins 440 out of 480; J. T. Skelly 434; H. Stewart 433; N. Apgar 430; Mr. Byer 427. In the State events S. M. Van Allen was high with 184 out of 200. He won the amateur championship of the Association, first tying with F. Kelsey with a score of 93 out of 100, then winning in the shoot-off with a score of 24 to 21.

The Altoona, Pa., Rod and Gun Club's programme for July 4, provides ten events at 15 and 20 targets alternately, $1.50 and $2 entrance, $17.50 for the programme. Purses will be divided according to the Rose system. Targets, 2 cents. Practice events, July 3. Lunch served in the club house. High gun, $7; low gun $3. Guns shipped prepaid to the secretary, Mr. G. G. Zeth, will be delivered on the grounds free. Messrs. Crosby, Elliott, Banks, Fulford, Keller and other famous experts will attend; they will shoot for targets only.

July 1 has been fixed upon for the annual tournament of the Sherbrooke, Que., Gun Club. The programme provides twelve events at 15 and 20 targets, $1.50 and $2 entrance, and No. 6, a five-man team race, $10 per team. The Rose system will govern the division of the moneys. Merchandise prizes will be offered. Shooting commences at 8:30. Free lunch will be served. Guns and ammunition shipped to the secretary, C. H. Foss, will be delivered on the grounds. There are three special prizes, one for high average, one for lowest average and one for longest run.

BERNARD WATERS.

Northumberland Tournament.

THE annual spring tournament of the Northumberland County Sportsmen's Association was held on June 9, 10 and 11, at Sunbury, Pa. A contest between five-man teams of the Sunbury Gun Club, and the West Branch Rod and Gun Club, of Williamsport, was the opening event. The West Branch Club won by a score of 102 to 100.

The trade was represented by Messrs. Frank Lawrence and Frank Butler. The local paper has this to say:

"Genial Frank Lawrence is the life of the shoot, and takes especial interest in making it pleasant for all spectators, never forgetting to give them a pretty souvenir on behalf of the company he represents."

The scores of the first day follow:

First Day, June 9.

Third Day, June 11.

The competition to-day was at live birds. The scores:

Event No. 1, 10 birds, entrance $10:

Savidge	2102220220—7	Troxell	0*20221122—7
Vanhorn	222*22*202—7	Spicer	2222222220—9
Hawley	2222222022—9	Howell	0220121122—8

Event No. 2, miss-and-out race, entrance $1: Derk 0, Howell 5, Savidge 11, Troxell 1, Spicer 7, Jones 0, Hawley 8, Rogers 12. The match was won by Rogers, who shot 12 without missing.

Event No. 3, 7 birds, entrance $5: Howell 7, Savidge 6, Jones 6, Hawley 2.

The Sportsmen's Association cleared about one hundred dollars from the three days' tournament, which was a success in every way. Much enthusiasm was shown and arrangements are being made to hold a tournament in the fall, at which there will be a still larger crowd of shooters. The Association hopes to build a club house in the future.

Colt Gun Club.

HARTFORD, Conn.—The seventh medal shoot of the Colt Gun Club was held Saturday afternoon, fourteen shooters participating. Messrs. J. A. Miller, W. J. Dunbar and A. H. Haist were elected members of the club. Saturday's scores were:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	25	25	25	25	Targets:	25	25	25	25
Hermann	20	23	18	21	Kiersted	18	13	..	..

Haist	19	14	14	16	Stone	13	12	..	..

No. 1 was medal event.

R. MCFETRIDGE, Sec'y.

Gallatin Gun Club.

GALLATIN, Tenn.—Below are the scores made at the regular weekly shoot held on Friday, the 12th inst. The Peters Cartridge Company medal was won by Green with 48 out of 50:

Murphee 49, Hickman 39, Brown 40, Seay 24, Green 48, Franklin 8.

WILL G. HARRIS, Sec'y.

Ohio Trapshooters' League.

THE seventeenth annual tournament of the Ohio Trapshooters' League was held under the auspices of the Cincinnati, O., Gun Club, on June 9 to 11. While there was not the record-breaking attendance anticipated by some of the management, there yet was enough to make it one of the greatest target tournaments ever held. The competition is remarkable also for the persistent manner in which a majority of the shooters contested in all the events.

Five sets of traps, Sergeant system, furnished the motor power. Messrs. Schwegman, Brown and Mills acted as squad hustlers. The referees were Messrs. Trimble, McBern, Due, Dwire and Sunderbruch. The scorers were Messrs. Barnes, Rice, Smith, Shepherd and Muscroft. The pullers were Messrs. Drusty, Gold, Robb, Braenegall and Frank.

The annual meeting, June 9, was at the Palace Hotel. A large number of the Ohio gun clubs were represented. The meeting voted unanimously to hold the next tournament at Akron. The League elected officers as follows: President, J. O. Bradley, of Akron; Vice-President, R. J. Dobson, Akron; Secretary and Treasurer, George T. Wagner, Akron. Executive Committee: C. W. Phellis, Mechanicsburg; H. G. Hogen, Cleveland; K. P. Johnson, Kenton; Dr. A. B. Heyl, Cincinnati, and G. T. Wagner, Akron. A resolution prohibiting the awarding of money prizes to professional shots at the tournaments was passed. The professionals will be allowed to participate in the various contests for trophies from the 16yd. line without a handicap, but will receive no cash prizes in trophy events or special purses. The League adjourned, to meet at Akron the first Tuesday in June, 1904.

All paid representatives and manufacturers' agents paid $2 per day extra; every other shooter paid $1 per day extra, as a fund to be divided among all amateurs shooting through all the regular events, and who did not win their entrance fees. Ties on moneys were divided. Ties on trophies were shot off. In each of the 15-target events, $5 was added. For the five high guns, open to all, $15, $12, $10, $8 and $5; to the ten low guns shooting through the regular events, $5 each. To the gun making the longest run, $25. To the gun making the greatest number of straight scores, $20—both of the foregoing conditioned on shooting through the regular events. In all 15-target events, four moneys, Rose system, 6, 5, 4 and 3 points.

Superintendent Arthur Gambell, who managed the great tournament, was the recipient of many hearty congratulations over the successful manner in which he conducted the details from beginning to end.

June 9, First Day.

About 150 shooters participated in the different events of the first day. Crosby was high gun of the day with 150 out of 160. Rhoads and Gilbert was next with 151 each.

The events at 15 targets were $1.50 entrance, $5 added.

Event 6 was the Press-Post trophy, entrance $3.50 for a guaranteed purse of $25 and all surplus added. This trophy was for the high gun, which can hold it only from year to year. Provision was made for 42 high guns, scaled down from $25 to first to $3.75 for 42d. Mr. C. A. Young won it. Quite a number broke 24 and were close after the winner.

Nos. 7 and 8, at 30 targets, were for the State Journal cup, $3 entrance, class shooting, 30, 25, 20, 15 and 10 per cent. This was won by Mr. R. S. Rhoads, of Columbus, with 29 and 25 in the shoot-off.

A special event at 25 targets, $1 entrance, for a Mullins bustle boat, donated by W. H. Mullins, resulted in a tie between Le Compte, of Paducah, Ky., and Boa, of Cincinnati. Each scored straight.

The weather, calm and pleasant in the morning, changed about midday, when a stiff wind set in and a light shower fell. About 4 o'clock a heavy rain fell, interrupting the shooting for about an hour.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.

June 10, Second Day.

The special events were two in number, the L. C. Smith trophy, which comprised events 6, 7 and 8—20, 15 and 15 targets, respectively—$7 entrance, for a guaranteed purse of $500; all surplus added. Provision was made for 42 high guns, scaled from $50 to first to $7.50 to last. The first $7 to $70 surplus was used to create from one to ten moneys for low guns at $7 each. Messrs. R. Trimble, C. A. Young and C. W. Phellis tied on 48, though Trimble, being a non-resident, was ineligible. In the shoot-off at 25 targets, Young won with a score of 24. Phellis was 23.

The Sportsman's Review trophy was for two-man teams, 25 targets per man, $1 per team entrance, optional sweep, $2.50 per man, 40, 30, 20 and 10 per cent.; trophy went to the member of the O. T. S. L. making the highest score. The Columbus Rod and Gun Club, represented by Messrs. Young and Rhoads proved to be the victor with a team total of 47. The scores in this event follow::

Rhoads	24	A H Russel	16
Young	23—47	J K Williams	18—34
Kaintuck	23	Dreihs	24
T H Clay	23—46	Faran	17—41

W. P. T. S. L.

RUFFS DALE, Pa., June 12.—The sixth tournament of the Western Pennsylvania Trap Shooters' League was held here under the auspices of the Ruffs Dale Rod and Gun Club. The attendance was good, about seventy-five shooters faced the traps and 10,000 targets were thrown in the two days.

Bessemer, of Millvale, and Deniker, of Ruffs Dale, tied for high gun for the first day, with but 8 misses out of 175 targets. Deniker, however, pulled ahead the second day, and finished high for the two days, with 333 out of 350, or 95 per cent. through the tournament.

Interest the second day centered in the four-man team race, 50 targets to a man. It was a good, hot race from start to finish. Five teams were entered in the contest, first honor going to the Millvale team, with the score of 183; North Side and Ruffs Dale tied for second place, with 179; Ligonier third, with 155, and Irwin fourth, with 147. Deniker, of Ruffs Dale, made the highest individual score in the race, with 49 out of 50.

Lewis Lautenslager, of Pittsburg, acted as referee, and every one was well satisfied with his usual prompt, positive decisions. Chas. G. Grubb, of Pittsburg, secretary of the League, was on hand bright and early with his famous "Grubb Score Cards." Just a word should be said here concerning the desirability of a correct and indisputable record, such as is given by these cards. They are being rapidly adopted by all the clubs of the League. H. D. Hasson, secretary of the club, ran the "sheet," and James Stickle looked after the refreshments. Following are the scores:

First Day, June 10.

H. D. HASSON, Sec'y.

WESTERN TRAP.

Kentucky Gun Club Shoot Postponed.

CHICAGO, Ill., June 10.—Advice just at hand from Mr. J. S. Phelps, Jr., secretary of the Kentucky Gun Club, of Louisville, Ky., gives notice of the postponement of the State championship target shoot as below:

"LOUISVILLE, Ky., June 8.—At a meeting of the governors of the Kentucky Gun Club, it was decided not to hold their championship shoot at targets on the Fourth of July, as has been the custom heretofore, but to hold a two days' tournament on Sept. 28 and 29, the first day to be devoted to the championship of the State at targets; the second day for the State championship at live birds. It was thought best to have these two championships decided at one meeting, thus making it more convenient for the visiting shooters from throughout the State. It was further decided this year to make the championship at live birds, 50 birds per man; the championship at targets, 100 birds per man, believing this to be a better and more satisfactory test in events of this importance. Very handsome sterling silver cups will be presented to the winner of each of these championships without conditions.

"We take this means of advising the shooters throughout the State of this change in date. A full programme will be mailed to each later. Cheap railroad rates will prevail at this time, it being the week of the horse show."

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

CHICAGO, Ill., June 6.—The appended scores were made on our grounds to-day on the occasion of the seventh and last trophy shoot of the first series. The entire club will be reclassified before next shoot. Pollard won Class A trophy on 24; Barnard won Class B on 22, and Wilson won Class C on 18.

The day was a fine one for target shooting, and the attendance was fair, twenty-four shooters putting in an appearance for the afternoon's sport:

Seventh trophy shoot, 25 targets:

No. 4 was 15 targets and 5 pairs.

June 13.—The appended scores were made on our grounds to-day on the occasion of the first shoot, second series. Pollard won Class A trophy on 24; Stone Class B, on 21, and Hathaway Class C, on 16. The trophy shoot was followed by the cup shoot, which was also won by Pollard on 21. The day was a delightful one to shoot, so far as temperature was concerned, but a stiff breeze on the back of the shooters caused the targets to beat down so quickly as to make the shooting at times very difficult. Score:

JAS. R. MERRILL, Sec'y.

Thornburg Rod and Gun Club.

PITTSBURG, Pa., June 7.—Herewith are the scores of the Thornburg Rod and Gun Club's merchandise shoot, held May 30. The club was only organized this spring, with twelve members. The club put in a Sergeant system of traps. Following is a list of the club's officers: Mr. S. T. McClaren (Hypo), President and Field Captain; Dr. W. Ross Foster, Vice-President; Mr. D. C. Thornburg, Secretary and Treasurer.

The club's summer programme will be as follows: Practice shooting every Saturday, commencing at 3 P. M., and will hold an all-day target tournament and a handicap shoot at English sparrows; handicaps 21 to 25yds. On Sept. 1 the club will hold an invitation bait-casting tournament for the following prizes: First, bass rod; second, trout rod; third, trolling rod; fourth, one dozen assorted salmon, bass and trout flies.

The worthy president shoots a Lefever, steel barrel, one trigger gun and Peters Cartridge Co. Ideal shells. Mr. Geo. Gundy acted as referee, Mr. Chas. O. Treat as official scorer, and Master L. Carl Thornburg as trap puller.

Club's merchandise shoot:

Targets:	15	15	20	15	15	20	
S T McClaren	11	14	19	15	13	20	92
Dr W R Foster	10	12	17	13	15	18	85
Jas Munnell	12	10	16	11	12	19	80
D C Thornburg	11	9	15	14	10	16	75
Geo F Brown	10	12	14	12	12	15	75

First prize, gun case; second, cleaning rod; third, recoil pad; fourth, 100 Ideal shells.

W. J. MCCRICKART.

Buffalo Audubon Gun Club.

BUFFALO, N. Y.—The first shoot of the Buffalo Audubon Club for June, came off on the sixth inst. and was well attended. Class A badge was won by C. S. Burkhardt, with 20; Class B, by Capt. Foster, with 24; Class C, by James Savage, with 19.

In the last five badge shoots, Capt. Foster has shot at 15 targets, breaking 115, pretty good shooting for a Class B man. Our club year begins July 1, and it is easy to see what class the captain will be in.

Not a great many of the Audubons will go to the State shoot this week, as the distance is a little too far for most of the boys. We hope to see it a little nearer to our end of the State in 1904. We hope that this year's shoot will be a success in every way, and we are sorry we cannot send more members down to Ossining.

The scores of Saturday's shoot follow:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	15	25	15			Targets:	15	25	15		
Foster	14	24	12	8	4	McLeod	8	16	9	6	4
Reed	8	10	5	7	4	Savage	9	19	12	8	9
Hammond	12	18	9	..	..	Keener	12	18	..	..	..
Chapman	13	15	9	6	4	Sinclair	10	15	11	..	..
McCormack	11	21	12	..	..	Woolton	9	20	11	4	8
Burnhardt	11	20	13	..	..	Reynolds	10	22	13	5	6
Forrester	14	23	..	..	..	Smith	13	19	13	7	..
McArthur	..	18	..	..	..	Burke	12	17	13	3	4

No. 4, was at 21yds. rise. No. 5, 10 walk ups.

Mr, Forrester was the guest of the club. He shot for birds only.

E. P. R.

Remington Gun Club.

ILION, N. Y., June 11.—The third regular shoot of the Remington Gun Club was held at their grounds Saturday afternoon, June 6, with a large attendance.

New York State Shoot.

THE forty-fifth annual convention of the New York State Association for the Protection of Fish and Game was held under the auspices of the Ossining Gun Club, June 9 to 12, inclusive. Considering that the Ossining Club took up the matter of the State tournament on March 7, after the Schenectady Gun Club was forced to abandon it, due to inability to secure new grounds after losing the old grounds, the Ossining Club did remarkably well, and the members deserve much praise for their industrious efforts and material influence which brought forth such good results. The list of merchandise prizes which they secured was long and valuable, and the club itself presented a beautiful medal, valued at $100, for the winner of the Association championship. In short, no effort was spared to promote the interest of the shooters in any particular of the programme. Mr. C. G. Blandford, captain of the Ossining Gun Club, devoted much personal attention, time and effort to the preliminaries, as well as assisting in the management of the tournament. All the members endeavored to make the visitors welcome and comfortable.

Mr. Charles A. North was manager, besides having expert supervision of the three magautraps which furnished the target throwing plant. Mr. Amos Bedell acted as cashier. Mr. John J. Terwillinger acted as compiler of scores. The referees were Messrs. N. Tuttle, Frank Burdick and Wm. Smith. Scorers, Messrs. H. Lawson, G. Billington and Wm. Lawrence.

The manufacturers' representatives contributed much to the success of the tournament, both in numbers, participation and good fellowship. There were the following named representatives: Capt. A. W. Money, A. H. Durston, W. Parker, T. H. Keller, Harvey McMurchy, J. T. Skelly, J. Mowell Hawkins, J. Cameron, G. R. Ginn, E. Banks, H. H. Stevens, T. E. Doremus, E. D. Fulford, Neaf Apgar, Gus Greiff, G. R. Schneider, Sim Glover, H. S. Welles, Ben Norton and J. R. Hull.

The magautraps were set quite wide apart, one in front of the club house, and one respectively to the right and left of it. The ground sloped from left to right, and a wealth of trees in the middle distance made a trying background. This, combined with swift targets, made difficult conditions.

While it was a good tournament, it had only a remote State significance. The really State events, the ones with traditions and associations, evoked but little interest. The Dean Richmond trophy, valuable in itself, doubly valuable from its associations, had the least possibly entry that would constitute a competition, namely, two teams. That which should in fact have been the star feature of the competition was the weakest. The loss of interest in this one-time great event is not to be looked for in any lack of appreciation of the trophy itself or of its significance in the matter of competition. The real cause is to be looked for in the decay of the Association itself. The Dead Richmond trophy is now a mere cup, uncared for officially, stripped of all prestige since the Association has become a convenient fiction, and even its conditions unknown and forgotten.

The four-man team championship had only four entries, two of which were of the local club, and the other two were formed on the spur of the moment. There was no organized, premeditated designs upon the team championship of the State of New York.

The annual meeting was called for Monday afternoon, but was postponed till the following evening. The vice-president, Dr. E. B. Sherwood, presided. Twenty-two clubs were represented, ten of which were new members. When the minutes of the previous meeting were read, Mr. E. Banks objected to them on the ground that they did not contain Mr. L. H. Schortemeier's notice that he would ask to have New York city considered as one county by the State Association. This was brought up later by Mr. Brigham in the form of a motion that New York be considered as one county. Inasmuch as there were no records of the Association present showing the conditions governing the trophy, no action was taken. Mr. Harvey McMurchy was appointed a committee of one to rediscover the conditions governing the trophy, and report thereon at the next meeting.

Mr. Fred D. Kelsey put in an application on behalf of the Buffalo Audubon Gun Club for the next State shoot. The meeting unanimously consented to it.

A few remarks now concerning the inefficient manner in which the Association affairs are conducted are pertinent. At Interstate Park, L. I., at the annual meeting of 1901, held Sept. 10, Judge C. Ferguson presided. Attention then was called to the fact, both by Judge Ferguson and Mr. H. L. Gates, that the New York State Association existed in name only. A committee was appointed to draft a new constitution and by-laws, and to report thereon at an adjourned meeting on the following Friday, at which meeting the new constitution and by-laws were formally approved and adopted. The new constitution gave the club an actual existence.

Notwithstanding that the State Association had a new constitution and by-laws, when the meeting of the next year took place no one knew where a copy of the new constitution and by-laws could be obtained or what they were. The delegates were groping officially in the dark. No minutes of the previous meeting were in evidence, and there were no reports of officers. The meeting as an Association meeting, was entirely inoperative. The delegates then accepted the constitution of 1898 as it appeared in the programme of that year as their authority. This was clearly arbitrary and illegal; but what could they do else? Men who were never elected as officers were accepted and fulfilled the functions of officers. At that meeting Mr. L. Schortemeier gave notice, and it was stated to be a notice a year in advance, according to the constitution, that he would bring up the matter of considering New York city as one county. Now, at the meeting at Ossining there is the same absence of responsibility, the same absence of records, the same absence of knowledge concerning the affairs of the State Association, and the same contempt for a body which has an existence in name only. This year there was the same old uncertainty concerning the conditions governing the Dean Richmond trophy, and the competition for it may have been right or wrong, no one knows definitely.

The records of the State Association are year by year becoming more uncertain, more imperfect through a combination of loss and negligence, so that in the near future the Association will not have even the dignity of being a good supposition.

The State Association, to have any force, prestige and identity, should have an individual existence of its own. It should have its own independent officers. In short, some remarks made in FOREST AND STREAM apropos of the meeting of 1901 are equally pertinent now, and are herewith presented:

"The new constitution and by-laws were much needed, for as theretofore conducted the New York State Association had a vague identity. The officers of the club which gave the shoot were the officers of the State Association, so that as the shoot changed from place to place year by year, and as local officers, more or less unfamiliar with State interests, were in authority, the Association rapidly lost all State significance. The only link which held the present to the past was the Dean Richmond trophy, and even concerning that fine trophy, valuable in itself, its traditions and its associations, there were many differences of opinion concerning the conditions which govern the competition for it. The new constitution and by-laws are not yet so broad, nor the legislative machinery so complete as the needs of the Association demand.

"First of all, the State Association must have some State interests; it must have the power to safeguard its interests, and it must have its legislative and executive machinery so complete that it has an actual existence always. The State Association has but one event at present which has either dignity or interest, the Dean Richmond trophy. The Association should add to this an individual live-bird championship, an individual target championship, and a team target championship. There is a so-called team target championship at present, but there is no trophy to commemorate a victory of it, and while in theory it is a team championship, in practice it is merely a team sweepstake, in which the moneys are divided much as in other sweepstakes, with such prizes as the local club chooses to offer. The State Association should provide a trophy for each championship, to be contested year after year much after the manner of the Dean Richmond trophy, thereby giving itself some good reason for being in existence at all. To keep a proper supervision over its own affairs, the Association should add a programme committee to its other officers, whose duty would be to supervise the programme of the State events, and require the club holding the shoot to live up to the constitution and by-laws of the Association. Furthermore, the by-laws of the Association and the conditions governing the State trophy or trophies should be published in full in the programme of every Association tournament, so that they might be a matter of common knowledge, instead of being, as at present, a matter of vague tradition."

The Baldwinsville Gun Club, the winner of the Dean Richmond trophy this year won under the conditions prescribed by the management, and are in no wise included in these remarks on the trophy. Nor is the club involved in them, for these uncertain conditions have existed for years, and that fiction of trapshooting, the New York State Association for the Protection of Fish and Game—a glaring misnomer in itself—has done nothing to settle the uncertainty. Rather it has made a tangled matter still more tangled.

Paid representatives and professionals shot for targets only, or could enter regularly in the open events, figuring in the division of first money only or programme average money. Five per cent. was deducted from events 1 the first day, Nos. 1 and 10 the third day, and No. 1 the fourth day for five highest averages in the State events, exclusive of merchandise and handicap events. The Rose system governed. Five ten-dollar gold pieces were given to the five shooters making the five highest averages in the open events of the programme.

Dinner each day was served in a tent on the grounds. A silver cup, presented by Robt. T. Dennis, was given to the professional who made high average in the open events, and a $40 gold medal presented by F. Potter, was given to the shooter making the highest average in the State events, merchandise and handicaps excepted.

June 9, First Day.

There were fifty-seven shooters in the different sweepstake events. No. 1 was at 25 targets, $3 entrance. All the other sweepstake events were at 20 targets, $2 entrance. The Rose system governed the division of the moneys.

No. 10 was the State event, 25 bluerocks, handicaps 14 to 22yds., entrance $2.50, for a silver cup presented by Jacob Ruppert. Dr. J. L. Weller, of Rochester, won it with a perfect score. Mr. Charles G. Blandford made a run of 62 on this day. Mr. J. Mowell Hawkins was high average in the expert class. Mr. Edward Banks was second. Mr. R. J. Borden, of Schoharie, was high man in the amateur class.

June 10, Second Day.

The weather was warm and pleasant. Straight scores were not numerous. The list of entries was noticeably larger than on the first day. About seventy-four contestants participated in the different sweepstakes.

As on the first day, there were eight open events, besides the No. 1, merchandise shoot.

Events:	1	2	3	4	5	6	7	8	9

The merchandise event, at 25 bluerocks, entrance $5, 50 cents extra to those who shot off in the ties; ties miss-and-out. Five classes of ties were provided. In the 24 class, L. C. Palmiter won the Parker gun. In the 23 class, C. G. Blandford won the Remington gun. In the 22 class L. V. Byer won the Lefever gun. In the 21 class, F. B. Stephenson won the Syracuse gun. In the 20 class, Travers was first. In the 19 class, Bissett was first. The scores in the shoot-off follow:

Ties on 24: Palmiter 14, Christian 13, Knowlton 3, Tallman 2, Floyd 2, Smull 1.

Ties on 23: Blandford 3, Hopkins 2, Dr. Martin 0.

Ties on 22: Byer 13, Bidell 12, Morris 5, Washburn 5, Schorty 3, Tompkins 2, Stewart 1, John Henry 0, Marvin 0.

Ties on 21: F. Stephenson 15, Kirkover 14, Mayhew 10, Kelsey 5, Borden 3, Bradley 2, Clark 2, Weller 1, Gardner 1, Rider 0.

Ties on 20: Travers 7, Piercy 6, Kromer 2, Dalley 0, Burns 0.

Ties on 19: Bissett 4, J. Hyland 3.

In the expert merchandise class Mr. Edward Banks won the L. C. Smith gun, as follows: E. Banks 24, E. D. Fulford 23, J. T. Skelly 23, N. Apgar 23, J. M. Hawkins 23, H. Stevens 22, H. McMurchy 20, S. Glover 20.

June 11, Third Day.

The weather was clear and warm. There was a sultriness in the temperature which made much discomfort to the contestants.

There were ten events on the day's programme. No. 1 was a State event at 25 bluerocks, $3 entrance, six moneys, all ties divided. Nos. 2 to 9 were each at 20 bluerocks, $2 entrance. No. 10 was a State event at 25 bluerocks, $3 entrance, six moneys:

June 12, Fourth Day.

A heavy downpour of rain fell during the morning. The heavy wind which accompanied it created much havoc with the dining

tent. The start was delayed a short time later than usual, but as there were many less contestants, the delay caused no inconvenience as it concerned the programme.

The special events were weakly patronized. The four-man team event had four entries, while the famous Dean Richmond trophy had only two.

The opening event, No. 1, was at 25 bluerocks, entrance $3, all ties divided.

No. 4 at 100 targets, was for the individual amateur championship of the New York State Association for 1903; entrance $6, all at 16yds., winner received a diamond medal which cost $100, presented by the Ossining Gun Club. This medal became the absolute property of the winner. Professionals were barred. For this, Messrs. Van Allen and Kelsey tied on 93, and in the shoot-off at 25 targets, Van Allen won with a score of 24 to 21.

Following are the scores made in events Nos. 1 and 4:

Events:	1	4	Events:	1	4
Apgar	22	91	Fulford	22	86
Stevens	22	83	Morris	22	88
Hawkins	22	91	Dalley	24	83
Doremus	21	72	Marvin	17	83
Welles	21	80	Meagher	18	..
Blandford	24	88	Kelsey	21	93
Floyd	24	89	Washburn	20	78
Dr Martin	23	91	Banks	22	90
Kirkover	22	84	Hopkins	21	85
Tallman	22	79	Van Allen	23	93
Stewart	23	84	Ball	17	..
Weller	20	..	Smull	18	..
Byer	23	89	Bradley	16	..
Glover	24	84			

Shoot-off, 25 targets: Van Allen 24, Kelsey 21.

The four-man team championship of the State of New York, 25 bluerocks per man, $2.50 entrance, had four entries. The money was divided 40, 30, 20 and 10 per cent. Mr. I. T. Washburn presented to each of the members of the winning team a pair of gold cuff buttons. The Brooklyn Gun Club team made a runaway race of it, scoring 91 out of a possible 100. The scores:

Ossining Gun Club No. 1.		Brooklyn Gun Club.	
Blandford	20	Dr Martin	23
Bedell	18	Hopkins	22
Washburn	16	Floyd	22
Betti	20—74	Banks	24—91
Ossining Gun Club No. 2.		**Professional Team.**	
Kromer	18	Apgar	21
Barlow	16	Stevens	22
Clark	14	Hawkins	21
Hyland	17—65	H Welles	13—77

The Dean Richmond Trophy.

Only two entries were made for this valuable trophy, the Dean Richmond cup. The competition for it was under unfavorable weather conditions, the light being dark and heavy, owing to a heavily overcast sky and a drizzling rain. The conditions were 50 bluerocks, team entrance, $10; three men to a team. The competition was close, the victors scoring 125 to their opponents' 123. The scores:

Ossining Gun Club.		Baldwinsville Gun Club.	
Bedell	19 17—36	Morris	22 19—41
Betti	22 21—43	Dalley	21 20—41
Blandford	22 22—44—123	Marvin	21 22—43—125

Averages, State Events.

The averages in the State and open events follow. In the State events for the New York city cup, Van Allen and Glover tied on 91, as will be noted on referring to the summary below. They agreed to let the result in the 100-target race decide the tie, and Van Allen won. Five per cent. was deducted from events 1 of the first, third and fourth days, and No. 10 of the third day, for five highest averages in the State events, exclusive of handicap and merchandise events. Five 10-dollar gold pieces were given to the five highest averages. In addition to first money, a $40 gold medal, presented by Frederick Potter, was given to the amateur, a member of the Association, who made the highest general average in the State events, not counting the merchandise or handicap events.

	Cup Shoot.	Amateur Championship.	Total.
Van Allen	91	93	184
Glover	91	84	175
Blandford	89	86	175
Dalley	89	83	172

Weller	78	..	...
Hawkins	92	..	...
Apgar	89	..	...
Hopkins	81	..	...
Meagher	72	..	...
Marvin	72	..	...
Doremus	76	..	...

Averages, Open Events.

In the open events, paid representatives and professionals could shoot for targets only, or might enter regularly, figuring in division of first money only and weekly high average. A silver cup, presented by R. T. Dennis, was given to the highest general average in the open events during the week. This average was won by Mr. J. Mowell Hawkins, with a total of 440. The averages in the open events at a total of 480 targets, follow:

	1st day.	2d day.	3d day.	Total.
*Hawkins	146	143	151	440
*Skelly	139	148	147	434

Weller	131	121	119	371
Meagher	117	129	121	367
*Doremus	108	90	111	309

* Professionals.

The York County target shoot under the auspices of the Glen Rock, Pa., Gun Club, June 25, is open only to the shooters of York county. There were twelve events on the programme, at 10 and 15 targets, 50 and 75 cents entrance, a total of 150 targets, with a total of $7.50 entrance. Extra events will be arranged to suit the contestants.

South Dakota State Tournament.

VERMILLION, S. D., June 5.—The sixteenth annual tournament of the South Dakota State Sportsmen's Association, held at Vermillion under the auspices of the Vermillion Gun Club, was the largest and most successful tournament ever held in this State. To Mr. H. G. Taylor, manager and president of the association, and Mr. C. B. Adams, who kindly offered his services as secretary, is largely due the credit for the success of the tournament.

There also were present Max Hensler, the young man who won second place at the G. A. H., and M. F. Sharp, who arrived a little late, having been water bound at Kansas City by the flood.

Thursday evening, June 4, the association held their annual meeting in the parlors of the Waldorf, and elected the following officers: H. G. Taylor, president; A. L. Johnson, vice-president; John Corey, secretary; L. F. Drey, treasurer. The next annual tournament and meeting will be held at Watertown, S. D.

Mr. H. G. Taylor won general high average for the two days' shoot, Mr. A. L. Shaw won the C. H. Arland silver cup trophy in a 25-bird event.

The following are the scores for the tournament:

June 4, First Day.

KILLMORE.

Rochester Rod and Gun Club.

ROCHESTER, June 6.—Herewith scores of Rochester Rod and Gun Club shoot:

The Bonbright cup series is finished. This series started on April 1, with the other handicap shoot for club prizes (Winchester repeating shotgun, etc.), and ended June 3.

I won the cup with a total score of 223 out of a possible 250, shooting as scratch man, at fifteen singles and five pairs. Each man shot at five pairs and had his extra allowance or handicap on the singles.

The club prize handicap series will continue until September 1, and the contestant winning most points to take first prize, a Winchester repeating shotgun. Shoots are held each Wednesday and the winner scores one point; handicaps range from scratch, which is twenty-five targets up to thirty-five, if any one breaks more than twenty-five out of his allowance it counts as a tie with any one breaking just twenty-five, in other words, a shooter having thirty-five to shoot at, and breaking twenty-seven or twenty-eight, can only tie with a scratch man who has only twenty-five to shoot at, should he break them all.

On May 21 we had an interesting team race with Messrs. Morris, Dalley, Marvin, of Baldwinsville, and Meagher, of Syracuse, a four man team. One-hundred targets per man. Syracuse: Marvin 86, Morris 92, Dalley, 85, Meagher 90, Team total 353; Rochester: Keishner 93, Bonbright 89, Stewart 97, Newton 88, Team total 367.

A silver cup was donated by Mr. G. D. Bonbright. The handicaps ranged from fifteen singles to five pairs up to twenty-five singles and five pairs. Total scores on series to win cup. Scores of cup shoot, June 5:

Stewart	24 24 23 25—96	White	22 21 19 23—85
Bonbright	23 24 24 23—94	Newton	22 23 20 19—84
Byer	25 22 24 21—92	Adkin	22 22 22 22—88
Kershner	24 25 25 22—96	Clark	19 18 23 12—72
Shoot-off:			
Stewart	24 25 24 25—98	Bonbright	24 22 25 24—95
Kershner	24 23 23 25—95		

Bonbright shot in the squad for company.

Conditions require that Stewart be called upon to again defend his medal, should any challenges be received.

Bonbright Cup. Scores of June 3:

	Allowed. S'gles.	Allowed. Doub.	Scored. S'gles.	Scored. Doub.	T'l.
Bonbright	16	5	14	9	23
Adkin	18	5	15	6	21
Clark	22	5	16	6	22
Rickman	19	5	13	7	20
Snow	16	5	15	6	21
*Stewart	15	5	15	7	22
Shoemaker	25	5	10	4	14

*Stewart wins cup.

Club prizes:

	Allowed.	Scored.		Allowed.	Scored.
Bonbright	25	24	Rickman	28	22
Adkin	27	23	Gardner	29	20
*Clark	32	25	Shoemaker	25	16
Borst	28	12	Stewart	25	23
Cutting	26	22			

*Clark wins point.

STEWART.

Boston Gun Club.

BOSTON, Mass., June 10.—The regular Wednesday matinee of the Boston Gun Club was held at Wellington to-day, a chilly and misty day doing its best to dampen the enthuiasm of every one present. It could not however, and as the events passed off each one seemed to add in interest over the previous one.

Many outside visitors were present, Mr. Tisdale, of St. Louis, taking a hand in the game, and while not up to usual standard, made very creditable scores. The club also had for guests a few ladies not yet quite enthusiastic enough to shoot, but later, when the proper time comes, will no doubt take a hand in the sport, and secure all the pleasures that can be derived from this pastime.

Gleason's 24, in the prize match, shows that the Doctor is getting used to his 18-yard mark, and present indications point to a longer distance mark in the near future. What he will do when the new gun comes along no one can guess. Spencer and Barry also made very creditable scores, the former shooting from the 18-yard mark, and the latter from 16 yards.

Other scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Louisville (Ky.) Shooting Items.

HEREWITH are scores made at a little shoot held on the Jefferson County Gun Club grounds. We now have at least two good clubs, and have room for more. You will notice that Mr. Le Compte is the boss of us all with the scatter gun. His 95 is hard to excel. Mr. Miller made 92 and Bingham 91. There was a challenge cup connected with this shoot, and Mr. Le Compte will be required to defend same, as Mr. C. B. Sample will shoot him a match at 50 targets June 20. The score:

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.
Targets:	10	15	10	15	10	15	10	15		
Bingham	9	15	9	13	10	13	9	13	100	91

Birch Brook Gun Club.

LYNN, Mass., June 8.—The Birch Brook Gun Club held its regular shoot Saturday, June 6, but owing to delays in the running of cars, some of the shooters did not arrive till late, so that there was not so much shooting done as common. Hilliard was high man, making two straight 10s in practice and 27 out of 30 in the merchandise event. Riley was close to the leaders.

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	30	50	15	10	10	10	15	Targets:	30	50	15	10	10	10	15
Hilliard	27	42	12	10	9	10	14	Straw	21	36	9	9	..	6	11
Yelmah	13	21	9	4	3	..	..	Rowe	24	39	..	8	5	..	11
Rand	20	34	..	9	..	6	..	Healey	12	..	..	7	5	..	..
Riley	23	40	13	8	..	8	11	Hibbard	27	..	..	9	7	7	8

No. 1 was the merchandise event; No. 2, medal.

HENRY ROOD, Sec'y.

Soo Gun Club.

SIOUX CITY, Ia., June 11.—The ninth annual tournament of the Soo Gun Club, held at their beautiful grounds in Sioux City, on June 9, 10 and 11, was one that every shooter who attended will long remember with pleasure. The management extended every courtesy to the shooters, and there was no hitch to mar the events. The events were shot over three sets of expert traps, using the famous Soo trap pull. All expressed themselves as well pleased with the thorough, businesslike way in which the tournament was managed.

The Soo Gun Club has a large handsome club house, with a dining room on the second floor, in which excellent meals were served at noon. Numerous visitors from the city attended, and from the veranda of the club house watched the events with interest.

Field Captain H. H. Hawman kept things moving lively at the traps, while J. W. Gray, president; W. F. Duncan, secretary; C. E. Ellis, treasurer, were also busy extending the "glad hand" to all visiting shooters. Mr. Larson, cashier of the shoot, is to be congratulated on the quickness in which he settled up with those lucky enough to be in the money.

Aside from Fred Lord, no other professional shooter attended, though the trade was also represented by Fred Whitney, A. S. Carter, C. B Adams and M. F. Sharp.

The weather on the first day was fair, with a slight breeze blowing, which did not materially bother the shooters. The programme had a total of 200 targets. Following are the scores of the first day:

June 9, First Day.

Events:	1	2	3	4	5	6	7	8	9	10	11	12

June 10, Second Day.

The principal event of the day was for the Interstate champion trophy, a fine silver cup for high gun, the winner to hold it until the next tournament, when he will receive 50 per cent. of the purse in the Interstate champion event, 50 per cent. of the purse to the winner of the trophy last year, and balance divided 35, 30, 20 and 15 per cent. to second, third, fourth and fifth high guns. Guy Burnside, the present holder of the cup, was laid up sick in a hotel at Spirit Lake, and was unable to be on hand to defend the trophy.

In this event there were nine ties, and in the shoot-off, miss-and-out, R. R. Barber, of Paulina, Ia., won on his seventeenth target. The weather was gusty, with slight showers. Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	
Targets:	15	15	20	15	15	20	15	15	20	15	15	20	Broke.

June 11, Third Day.

The third and last day broke bright and clear, and the scores were better than on the two previous days. Several of the shooters left after the events of yesterday, but there was still a sufficient number present to make things interesting. It looked for a while as though H. C. Taylor, of Meckling, S. D., was going to equal Fred Gilbert's record on these traps of 104 straight, but missed his 95th bird. Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	
Targets:	15	15	20	15	15	20	15	15	20	15	15	20	Broke.
Chingren	13	15	19	13	15	17	13	13	17	14	14	18	181
Hunter	14	15	16	11	12	20	12	12	18	14	14	18	176

Rochester is Defiant.

THE following is taken from the Rochester (N. Y.) Express, of June 6. The editor undoubtedly meant well, but on some points he is inaccurate. For instance, there was no championship of the United States last year. Performances on certain grounds under certain weather conditions, are not to be justly compared to performances on other grounds under certain other weather conditions, differences of backgrounds, target flights, etc:

"In its arguments for the bill preventing the use of live birds in gun club tournaments, the Post-Express has insisted that quite as much pleasure was to be obtained from the use of clay pigeons, and that there was opportunity for a still greater display of skill—with no cruelty, no useless slaughter of God's creatures, and no demoralizing influence upon the community. It is a pleasure to record the fact that the sportsmen of Rochester have fallen in cordially with the new order of things, that they are not using live birds, and that their tournaments with clay pigeons as the targets have been in the highest degree enjoyable and successful. The amount of skill that has been developed here is really remarkable. There was a contest yesterday for the championship of the county, Harry M. Stewart being required to defend the trophy recently won. He broke 96 birds out of 100, and Kershner tied him, while another competitor broke 94, and a fourth 92. In the shoot-off Stewart won with 98 out of 100. This was most extraordinary; out of 200 targets, thrown at unknown angles, he broke 194. Few men ever lived who could do as well as this. Last year the championship of the United States was won with a score of 94 out of 100, which was beaten six times on the Rochester grounds yesterday. This year, at the Grand American, after a whole week of shooting, the best record was 95 out of 100. The Rochester gunners, therefore, are to be congratulated upon the remarkable skill they have developed. If there are gunners in other cities who think they can shoot, let them come on; Rochester is ready for them! The city now stands, in the trap-shooting world, where it stood years ago, in the days of live-bird contests, practically in a class by itself."

Bemidji Tournament.

BEMIDJI, Minn.—The Bemidji tournament, held June 5 and 6, had pleasant weather conditions.

June 5, First Day.

The day was favorable for big scores. Hirschy was high with 171 out of 175, breaking the last 107 straight from the 16, 18 and 20yd. marks. The last 70 were from 20yds. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11

June 6, Second Day.

There was harder shooting on the second day, owing to a strong wind. Mr. B. O. Seymour, of Grand Forks, was high for the two days in the amateur contingent. He made a run of 64 from the 16, 18 and 20yd. marks. H. C. Hirschy was high for both days, losing but 9 targets.

The attendance was disappointing as to numbers. The visitors were all pleased with the kind of hospitable treatment they received from the members of the local club, and next year's shoot will be much more largely attended.

Total for two days: Story 284, J. W. Dewey 297, Ballock 278, Rhoda 283, McTaggart 279, Duncalf 267, Hirschy 316, Seymour 305, Hale 275, Ferguson 290, Duis 264, Russel 253.

The general manager, Mr. F. W. Heubach, writes us as follows: "Will you kindly give notice in your trapshooting tournament fixtures of our seventh annual tournament, to be held Monday, Tuesday and Wednesday, July 20, 21 and 22, in Exhibition grounds at Winnipeg. We hope you will again, as you did last year, arrange to cover our tournament, for I think I may say that it is the most important meet of trap shots in the West. The management will again be in the hands of our Mr. Holland, who has successfully conducted our last five tournaments. H. C. Hirschy, so well and favorably known among all trap shots, will manage the office."

PUBLISHERS' DEPARTMENT.

Reduced Rates to Atlanta.

Pennsylvania Railroad will sell account of the national convention Baptist Young People's Union of America at Atlanta, Ga., July 9 to 12, round trip tickets on July 6, 7, 8 and 9, good to return until July 15 at rate of single fare for the round trip, plus $1.

By depositing tickets with special agent at Atlanta, Ga., on or before July 15 and payment of fee of 50 cents, extension of final limit may be obtained to reach original starting point not later than Aug. 15.—*Adv.*

New Brunswick Guide.

The writer would be glad to recommend his guide to one of the best sections for moose in New Brunswick, who will be at liberty about Oct. 15, to any one who is looking for a first-class chance to get a big set of antlers this fall.

This is the place where our party saw twenty moose last season, and where the writer is returning thereto in September.

Any information desired will be given by addressing Box 970, Pittsfield, Mass.

Newfoundland.

Newfoundland scenery, fishing, hunting and other attractions for sportsman and tourist are set forth in a special page advertisement this week. Mr. Morine will send on request specific information about the country and the means of getting there.

Messrs. J. H. Lau & Co., New York, inform us that all the following won with Ballistite: Mr. S. M. Van Allen at New York State shoot, Ossining, N. Y., June 8 to 11, inclusive, won the New York State Championship, the Individual Championship, the diamond medal, and the Frederick Potter amateur gold medal. First average, June 9, won by Mr. Borden. The Jacob Ruppert silver cup, won by Dr. Weller, using his Reblé ejector hammerless gun, on 25 straight. Mr. Glover finished second in State Championship races. At Owensburg, Ky., May 29 and 30, Mr. R. W. Bingham won first high average; De Long Miller won second, both amateurs. At Louisville, Ky., June 6, first, second, third, fourth and fifth at the Jefferson County Gun Club, in the open to all challenge cup, 100-bird race. Mr. Le Compte, first with 95 out of the 100, eighteen entries.

High general average at the Cincinnati shoot June 9 to 11 was won by W. R. Crosby. He also won the 50-target race, with 50 straight, alone, in addition to which he made the longest straight run recorded during the entire tournament. Mr. Crosby, as usual, used 44 grains of E. C. No. 1.

The Stevens Arms Company, of Chicopee Falls, have sent us a handsome catalogue of the Stevens-Duryea

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903 BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 27, 1903.

VOL. LX.—No. 26. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

SOME CAMP-FIRE RULES.

WITH the coming of the camping season and the building of camp-fires throughout the land, it is not untimely to repeat certain cautionary rules given before in these columns as a code of conduct with respect to the camp-fire:

Never build a fire where its flame can communicate to grass or brush or branches of trees.

Never build a fire where the sparks can be carried to brush or trees, or leaves or grass.

Never build a fire without first noting the lay of the land with respect to controlling it after it is kindled.

Never leave camp for the day with the fire to burn unattended. Extinguish it thoroughly.

Under no circumstances, when moving camp, leave the fire to burn or smoulder. Put it out.

To extinguish a fire built upon the ground where there is turf, the roots of trees or other vegetable matter in the soil, pour water upon it until the ground is thoroughly soaked; then dig around about and well outside the circumference, throwing the earth in toward the center, and then wet it down again.

THE STATE COLLEGE OF FORESTRY.

GOV. ODELL having vetoed the appropriation for the support of the State College of Forestry, the Trustees of Cornell University have of necessity suspended the college work. The Governor's action is assumed to have been based upon an adverse report made by a special committee of the Legislature, which visited the college forests last year and inspected the experimental work there conducted. The suspension is greatly to be deplored, and intelligent persons who are cognizant of the nature of the work Cornell was accomplishing will hope for its early resumption. The Governor's action was most ill advised. The State College of Forestry was performing service of incalculable value for the future, of such importance, indeed, that the State could not afford to save the $10,000 concerned in this item of the appropriation bill. The citizens of New York will not forever pursue the present policy with respect to the State forests. They will not content themselves with the simple constitutional prohibition of hands off. The State will some time practice forestry. Before that time can come there must be men trained in forestry and there must be knowledge of forestry principles and methods as applied to the conditions existing in the Adirondacks and the Catskills. The foresters may be educated only at such schools as that of Cornell, and the knowledge can be acquired only by such experimental work as that which has been begun at the State experimental forest in the Adirondacks. To cut off summarily State support from these institutions which had been established by the State is a most inexpedient and unbusiness-like step. It also amounts to a breach of good faith on the part of the State with Cornell University and the instructors and students of the State College of Forestry.

THE principle of responsibility for the wrong use of sporting firearms is gaining recognition. Michigan has come into line with a measure to punish the negligent or careless shooting of human beings by persons in pursuit of game. The new law declares that whoever "while hunting shall negligently or carelessly shoot or wound or kill a human being shall be punished by imprisonment for a term of not more than ten years or by a fine not exceeding $1,000; and it is made the duty of the prosecuting officer and sheriff in the county where the shooting takes place forthwith to investigate and prosecute. When it is considered that within the past few years the shooting casualties in this country have run into the hundreds, the marvel is that a law like that of Michigan does not prevail in every State wherein hunting is practiced. Other Legislatures may well follow the example thus set and put the seal of public condemnation on this "careless" and "accidental" shooting, by characterizing it properly as of criminal nature. Rifles and shotguns are instruments of death; that every Tom, Dick or Harry should have free license to get out with these implements and disport himself to the undoing of his fellow men, and should be let off only with condolences and regrets, will one of these days be recognized in its true light as the grotesque complaisance of a thoughtless age. When we begin to think, we shall devise some way to put a limit to the roll of maimings and deaths in the woods.

THIS is an era of New Thought, with capital N and capital T. News stands display magazines devoted to its promulgation and temples are dedicated to its teachings. In its printed expositions the New Thought is expressed in smoothly flowing diction, which is yet most deceptive; for while upon not too attentive reading it appears to be full of significance, its meaning grows dubious and elusive and baffling the more carefully it is studied. Take, for example, a paragraph in a current New Thought periodical which seems to have a bearing on certain phases of natural history:

> "He who is true to the law of his being is inspired. . . . His utterances find wings, and favoring currents, and sustenance, and breath in the Omnipresence, so that their mission is accomplished, and their work sure, and their life sustained; and they set up a vibrating response in the element or substance of Being, which goes on forever and forever. No life is quite so dark, no animal quite so ferocious, no serpent quite so venomous, no weed quite so poisonous, after a true word has been sent forth to create the attuning influence in the Essence of Being, as it would have been without it. Thus is the gospel preached to every creature."

Applying this specifically and practically to the amelioration of the ferocity of the grizzly, the venom of the rattlesnake and the poison of the poison ivy, what does it mean? And can pages and volumes of "true words sent forth" ever take the place of a magazine rifle for the grizzly, a club for the rattler and an ax for the ivy? The truth is that the New Thought is neither new nor thought; and it exercises as much influence upon brute and human as does the Aurora Borealis at which men marvel and of which they wonder what and why.

AMONG the curiosities of the game laws as they come to us from the several Legislatures of 1903 is an extraordinary promulgation by Arkansas. Most States are content to concern themselves only with the regulation of things within their own borders. But Arkansas is ambitious to give law to the entire Union. She has adopted a drastic measure, which is nothing less than the following section contained in the new game law:

"Section 4. It shall be unlawful for any person who is a non-resident of the State of Arkansas to shoot, hunt, fish or trap at any season of the year."

The application of the law, it will be observed, is not limited to the State of Arkansas; it is general, comprehensive and all-embracing. It applies to the Quatawamkedgwick and the Kalamazoo as well as to the White and the Washita. In the name of several millions of people outside the bounds of Arkansas, and hitherto believing themselves beyond its jurisdiction, we protest, flout the authorities of Arkansas to their face, and declare that we shall still hunt and fish, subject only to the laws of the several States wherein we live or pay non-resident license fees.

WHEN some members of the Crescent Athletic Club of Brooklyn were playing golf the other Sunday afternoon they missed a golf ball, and called in a policeman to seize and search a small boy suspected of having stolen it. The policeman did not find the ball, but did bring out a bean-shooter and a dead robin; and he was moved to say: "A boy who would rob the nest and kill the birds with a bean-shooter ought to have his damned head shot off." This so shocked one of the Sunday golf players that he set off post haste and with what appears to have been malignant officiousness, to inform the Police Commissioner of the offense; and in the course of time the officer was put on trial and reprimanded for the extra-official characterization of the nest-robber's head. His plea in extenuation was that the robin killer needed a vigorous rebuke for his lasting admonition, and the language employed was not stronger than the peculiar exigency of the case demanded. His notion appears to have been that there are circumstances which warrant the use of the word even by officials on duty. In this he unquestionably had for authority and examplar the revered Father of His Country, who, despite his solemn injunction to the Continental Army not to swear, did himself not hesitate to vent his feeling in the word "damn" when occasion wrung it from him. This is not to say that Washington was profane. For while the courts have held diversely on the subject—one of the District of Columbia deciding that "damn" was not profanity if provoked by the local street car service, the Supreme Court of Massachusetts, on the other hand, having sustained the lower courts in their decisions that the word "damned," applied to a rascal, was profane language under the law of Mississippi—the general consensus of judicial opinion is that there is no profanity in the use of the word unless the name of the Deity is involved. Nevertheless the expression is not nice, is certainly unbecoming in a policeman, and officers who so forget themselves in the presence of Sunday golf players must expect to be reprimanded.

AMONG the curiosities which come to us from Albany this year is this new clause in the minnow law: "Minnows shall not be taken within one hundred feet of any dock, pier, or boat landing structure along the Saint Lawrence River without the consent of the owner on which the same is built."

The intent of the regulation is to free the owners of docks and landings from annoyance by minnow netters in their close proximity. The peculiar wording implies that it is the custom on the St. Lawrence to sink the owner and make a caisson of him for supporting his dam, pier or boat landing; and to secure evidence under this law it would doubtless be necessary to dig up the sunken owner and produce him in evidence to prove that the structure came within the protection of the statute as one having an owner on which the same it was built. This aside, however, the dock minnow regulation is one which has no place in the fish law. The purpose of the fish law is to protect fish, and it may regulate their taking only with reference to such protection. The St. Lawrence dock regulations belong properly to the local town authorities, and should be left to them.

"BY nature we nearly resemble one another; condition separates us very far." Thus Confucius; and he might have been writing about men and men in their relation to the robin. If we of this vast country differ in our attitude toward the bird it is in large measure because conditions separate us very far. If the Northern man had been born and raised in the South he would have acquired views which are diametrically opposed to those his Northern environment has given him; and so with the Southerner had he been of the North. Those diverse sentiments, the criticisms, protests, defenses and discussions which are colored and determined in large measure by the geographical and sectional conditions which separate the participants so "very far," have ever a welcome place in our columns; and they are sometimes all the more interesting because they illustrate so well the common proneness to judge from one's own personal standpoint, without making allowance for that of the other party to the discussion.

FOREST COMMISSIONER RING, of Maine, says that no sporting camp was destroyed by the forest fires in that State, and that not a single deer has been reported killed by the conflagrations. The New York Commissioners report that the extent of devastation by fire in the Adirondacks has been exaggerated. The eighth annual report of the Chief Fire Warden of Minnesota shows that out of twenty-eight forest and prairie fires which occurred in that State in 1903, only one was ascribed to the carelessness of a fisherman and two to that of hunters.

Now that the mosquito has been revealed by science as the purveyor in ordinary of malaria to the human race, the term fly medicine as descriptive of insect repellant takes on a new and vastly more significant meaning. It is, in fact, a medicine of far greater usefulness than simply to avert the transitory irritation and smart of the sting; it means the prevention of malaria poisoning and deserves recognition in the pharmacopœia.

The Sportsman Tourist.

An Ascent of Mount Aetna.

[We are indebted to Dr. A. J. Woodcock, of Byron, Ill., for the following letter describing Maj. Woodcock's second ascent of Ætna. The account of the first ascent was published in our issue of May 30. A third ascent will be related in an issue to follow.]

UNITED STATES CONSULATE, Catania, Sicily, July 14, 1884.—*Dr. A. J. Woodcock, Byron, Illinois.*—My Dear Son: There is much to see and learn in this island. Every foot of it is interesting with story, romance and history. The cities of Syracuse, Terranova and Lecata are in my district, which comprises the southwest third of the island. I have been to the top of Mt. Ætna. A young German, Augustus Melhop, came to me with a letter of recommend from the U. S. Consul at Palermo. He was engaged by the China Government to contract for warships with Germany for the war with France. His home is in Pekin, China, where he has lived for 14 years. Thus employed by China, he became very wealthy. He urged me to go with him to Ætna. With reluctance I consented. It was yet too early in the season to make the trip. The best time is in August or September. I induced Charley Worthington (an English friend) to accompany us.

We set out on the 27th of May at 5 P. M., going by carriage from Catania to Nicolosi, a place of some 4,000 inhabitants. It was a delightful ride of 10 miles. The town is situated at the base of Mount Rossi, an ancient crater. In 1669 these same red mountains vomited forth a river of lava that flooded the country, swept over Catania (nearly destroying it) and rolled into the sea near the lighthouse. The people were greatly alarmed. The lava gradually approached the town. Slight shocks of earthquake were frequent. Black cinders rained down. Many of the inhabitants fled with their household goods. Terror was depicted in every face. A company of men passing up and down through the streets of the city bearing upon their shoulders large, heavy statues of Saints Antonio and Michael, the patron saints of the town. A crowd followed them, shouting "Vivas" to the saints (Life! Life!!). Images of the Madonna were placed in the doorways of the churches surrounded by burning tapers, and men, women and children upon their knees, implored the mother of Jesus to importune her Son to stretch forth his hand and save their town from the fiery flood.

The road wound upward through groves of orange, lemon, olive and fig. Rich vineyards clothed the hillsides with green. Pretty villas, peasant cottages, shrines, old churches and two villages dotted the wayside. After the eruption this stretch of country was a desolate waste. The industry of the past 200 years has removed much of the lava, piling it up into walls and terraces and with it paving streets and building houses and cities. Much of it remains, blackened, corrugated, ragged, thrown into all conceivable shapes and as hard as granite. The soil formed from its disintegrated particles is the richest in the world. Mosses and lichens creep over this lava and paint upon it glowing colors, and this makes picturesque its otherwise unsightly hideousness. The prickly pear springs up everywhere among the lava wastes, attaining a height of 4 to 10 feet. Their broad, green leaves (like the shields of a Roman phalanx) guard from view much that is desolate and sunseemly. The cacti were in bloom at the time of our visit, their bright green, fleshy leaves being covered with large yellow blossoms. Their luscious fruit forms an important part of the food of the people.

We reached Nicolosi at 8 P. M., had a dish of maccaroni, made up a party of 14 (guides included) for the ascent, and were ready for the road in an hour. I, being a colonel, was given my choice of the mules. I took the plump, coal black one that had fire in his eyes. It took two men to hold him while I mounted. He then reared, bucked, jumped and struck the ground stiff-legged (changing ends as he did so), but did not faze my seat in the saddle. He finally acknowledged me his master, and away we went through the town on the run, the troop following, dogs barking, boys shouting and the whole populace out with craning necks watching the departure of the wild foreigners.

It was 9 o'clock when we left Nicolosi. There was no moon. The milky way, in silver luster, streaked its broad band across the heavens. We traveled by the light of the stars. Lava, contorted, twisted, splintered, was piled up everywhere, and in all manner of fantastic shapes. Our guides had lighted their lanterns to insure our following the serpentine path over the rugged rocks. Silvatore, a six-footer, approached too near my mule's rear guns. He kicked out with both feet, giving the guide, Antonio Mazzalio, a center shot in the breast. A fall and a groan told the result. The little party for a moment seemed paralyzed with horror. I dismounted, ran to the fallen man and found him insensible and bleeding. On examination I found the blood came from a lava cut on the head. I poured a generous horn of brandy down his throat. This revived him, and he commenced to groan furiously and swear dire vengeance in choice Italian against the mule. We bathed his rapidly swelling breast with brandy, lifted him on the mlue that we called Snail, and resumed our upward march, the accident having detained us about half an hour. I had been calling my mount *Bucephalus, but after this performance I borrowed the name which your inventive genius originated for one of your horses, and called him Satan.

After a time we reached the lower edge of the temperate zone of the mountain. Trees began to appear, soon we were in the midst of a chestnut forest. Here and there was a field of wheat or rye. Though lava was everywhere prevalent, its horrid desolation had been broken into by the leveling hand of time and by the industrious peasantry. About midnight we reached Casa del Bosco (the house of the forest). The guide sounded a blast upon his Alpine horn, which set the dogs baying within. Soon we heard the bolt of the door slide back, and a man half dressed appeared and gave us welcome. By this time we had got into a colder climate. A fine fire was soon roaring in the huge fireplace. I think that I never enjoyed anything more than its bright, genial warmth. After an hour's rest we left our disabled guide, and resumed the ascent. The black mule was full of pluck and energy. He led the van. The rest of the troop gave us a wide berth.

In an hour we reached the frigid zone. No shrub or tree was visible. The most intense sterility prevailed. Patches of snow began to appear, and it soon became intensely cold. About 3 o'clock the snow became so piled up our mules could not advance. We left them with the muleteers and commenced the climb on foot. Now came the tug of war. The snow during the day had thawed somewhat, and a thin crust had formed, but not sufficiently strong to bear us. About every step we would break through, sinking above our knees. Thus we wallowed upward for two mortal hours. My lungs could hardly pump enough of the rarified air to oxygenize my blood. I have seldom experienced such fatigue. We finally reached Casa del Inglese (English House), where I sank down completely exhausted. This house is situated at the foot of the cone (or crater). It was built about 100 years ago. It has since been repaired and a main building added by the Government. It has a dome, and at certain times is used as an observatory. After a few moments' rest we were up to witness the effects of sunrise. Long flashes of rosy light from the Calabrian Mountains were burnishing the eastern heavens. Soon the golden chariot of the day king became visible above the snowclad peaks. The whole eastern coast of the island was visible. Taormina, Aci Reale, Catania and Syracuse and the other sea towns were spots on the shore far below. The sea of a purple hue changed to rose color as the sun ascended. The rose-colored hues fled before the rising sun, and a sea of emerald remained flashing and sparkling in the morning light. The southern portion of the peninsula of Italy, ridged with the variegated peaks of the Calabrian range, was a beautiful picture with the sea on either side. We glanced up through the Strait of Messina, past Scylla and Charybdis, to the blue sea beyond. After a time spent in wonder and admiration of that beautiful panorama, we retired to the English House to cold fowl and almost frozen soup and coffee. The guide had started a small fire of charcoal in the grate, but this was only an aggravation. Our teeth rattled time to the music of Jack Frost.

The cone still towered above us a thousand feet. With our sharp-pointed alpenstocks we commenced the ascent. We passed a huge cavern, from which steam was rushing in clouds. We kept our eyes upon the summit, bearing down with our sticks and resting after each two or three steps. We encountered wet cinders, patches of snow melting upon the heated soil and slipped back almost as fast as we climbed. We finally reached the top. The wind was blowing furiously and freezingly cold. We had been one and one-half hours in our struggle up this monster crater. I threw myself flat upon the ground with my head over the rim, and took a look down into what the Sicilians call the mouth of hell. A vast column of steam was shooting up into the heavens. This was so impregnated with sulphurous fumes I was obliged to keep several thicknesses of my shawl over my mouth and nose to prevent strangulation. Occasionally a blast of wind would drive back the steam, allowing me to see far down into this horrid inferno. The crater itself is three miles in circumference. The inner side of the rim was variegated with colors of red, orange and yellow from the sulphur fumes. A Milton or a Dante could not do justice to the terrific grandeur of the scene. According to the ancient Greeks and Romans this is the workshop of Vulcan, where he forges his thunderbolts for Jove. I could not see the old fellow, but the rumbling sound I heard far down in those black depths must have been he grumbling at his work. We had grand views to the northwest. We looked down upon Stromboli. This little giant seemed to be in angry mood. He was blowing off his wrath in huge columns of smoke that rolled heavenward, like an immense tree with branching top. We saw the whole of the Lipari group of islands. Three or four other craters were in eruption, but were pigmies by the side of Stromboli. We looked far away upon the sea to the southwest toward Africa. Had the skies been clear we would have seen Malta in the distance, and viewed the sea laving the entire coast of this triangular island. The rim upon which we stood is over two miles high. We were above the clouds. A thunderstorm gathered below us. We looked down upon the inky black clouds charged with electricity, upon the lightning flashing in chains of livid light, and heard the crashing peals away below us. This sight alone paid for all fatigue and exposure undergone.

After our descent of the crater we stopped for an hour in Casa Inglese. Our beds were straw and hard, but our sleep was sound though not satisfying. We had been 24 hours without rest. After this short nap we again commenced the descent. The afternoon sun had warmed the air. The snow was thawing, and we no longer suffered with the cold. We found our mules where we had left them. By the help of three men I got upon the back of the black one, and away he trotted down over the most terrible break-neck places. Putnam's ride down the stone steps at Horsenesk was nothing compared to mine. He had his enemy in his rear, I had mine under me. Of course I beat the other fellows to Casa del Rossi. We rested and slept there for two hours, Charley upon the ground under a chestnut tree, I upon the cot of a mountaineer. Again we were off, the black mule trotting into Nicolosi long before the rest. I announced their coming and ordered supper. We found the guide better, but very sore. In our descent we saw the River Simeta glittering a silver thread from its source many miles to its exit into the sea. We reached Catania at 8 P. M., a used-up set of fellows. As ever I am

Your affectionate father,

ALBERT WOODCOCK.

* The horse that Alexander the Great rode; no other than he could ride him.

Trailing the Summer Trout.

IN the heart of the New Brunswick wilderness, on the northern branch of the Little Southwest Miramichi River, lies Miramichi Lake. Nearly forty miles as the crow flies from Boiestown, the nearest lumbering settlement, and more than thirty miles from the nearest farm, it lies in the midst of a region known only to the lumberman, the trapper, and the sportsman. This vast woodland, like a rich fabric, is spangled with countless lakes and shot with the silver thread of streams in many of which no line has ever been wet. It is an ideal angler's country; and it was this feature above all others that made this land of the Miramichi the goal of our annual piscatorial pilgrimage.

The ceremony of "going in" is much the same in all the wild regions of eastern North America. You go by rail as far as you can and then possibly you may postpone for a brief space the inevitable by the use of horses. But if you are bound for the heart of things, you must resort at last to one of two modes of conveyance, the canoe or your two feet. To reach the Miramichi country from the south, one must tramp; and tramp we did for over forty miles of trail and tote road, stumbling over windfalls, slipping about in mud holes, bitten by gnats and mosquitoes, but happy, for we tasted trout the first night, and after the evening pipe and camp-fire chat we turned in to sleep on beds redolent of balsam. We were in the woods.

The next morning is memorable because it brought us the sight of our first deer. We had just mounted a steep hill beyond the camp, when Harry, our chief guide, whose eyes were everywhere, exclaimed: "Look!" About twenty yards from the trail stood a young buck, with horns in the velvet, gazing at us curiously. For several minutes he stood there, motionless, except for an occasional nervous twitch of the tail. He seemed to know that it was the close season, for when at last he decided to leave us, he did so with long, slow bounds, in unhurried grace.

All along the trail we continued to see numerous tracks of moose and deer, crossed here and there by those of caribou or bears. The moose tracks were far the most numerous, for this is first and foremost a fine moose country. Harry said that they seem to like the old tote roads, where the ground is comparatively smooth and the brush does not interfere with their progress. The softer ground was always stamped deep with the imprint of their sharp hoofs. Thus has man's highway become a game trail.

Our course was northerly, closely paralleling the boundary line between the counties of Northumberland and York. Our progress was slow, never over fifteen miles a day, for we varied the portaging, as they call it in that country, by fishing here and there, or by such little diversions as the chase of a porcupine or the inspection of a flock of wild ducklings, and we never failed to see a deer or a moose every day.

Three days of such tramping brought us to Harry's home camp, which was to be our headquarters for the better part of our stay. This home camp, situated near the west end of Miramichi Lake, is ensconced in a long deserted lumber camp, or rather in the only remaining building; for the rest have fallen to ruin. It consists of two large log cabins, one for habitation and the other for storage, separated by a narrow passage, which is, however, roofed over, so that even a heavy fall of snow cannot obstruct communication. Each cabin is about twenty-five feet square, and they are almost wholly the work of the ax—the roof, the floors, even the doors and tables being made of planks of balsam fir hewn or split from the log. Here Harry has collected all the articles an angler or hunter can possibly need. Besides the inevitable ax, there are saws, hammers, tools of all sorts, a veritable battery of rifles and shotguns, a large number of traps (for Harry turns trapper in the winter months), snowshoes, sledges, blankets, a large iron cooking stove, and a plentiful supply of the woodsman's food staples—flour, pork, beans, tea and sugar. There is even a shelf loaded with light literature brought in by successive parties of sportsmen and another of medicines from the same source. Altogether it is the most completely appointed camp I have ever seen. Primarily a hunter's camp, it is intended for cold weather, and is perfectly adapted to this purpose, but in summer I prefer to sleep out in the air, and therefore I like some of Harry's smaller open camps better. For Harry is a sort of camping trust. According to the etiquette of New Brunswick guides, each man has a territory which he regards as his own, and, if he deserves it, this claim is respected. Harry's particular territory is a district about twenty miles square, within which he has a score of camps ranging in size from this central hostelry, in which a dozen men could be comfortably accommodated, to a mere open lean-to for four men. Each is always supplied with a few cooking utensils, some food, and often with blankets. If a lake or river is near, there is usually a canoe within easy reach. It is evident that much toil and no small expense have been lavished on all this equipment, which is so complete that, should the visiting sportsman prove unsuccessful in one locality (which is unlikely), or should he be of a roving disposition, he has but to move on to new scenes, where he will find his house always ready. Such is this little kingdom of four hundred square miles, and over all the inhabitants of its woods and waters Harry is undisputed lord.

We lost no time in setting about our quest for the summer trout. For the summer trout cannot be taken, like his relative of the spring months, from any and every part of lake or stream. When the heat of July comes, he withdraws, if he is more than a fingerling, to some spot of coolness, and he must be trailed hither as truly as four-footed game is trailed on land, and the task is the more difficult and exciting because he leaves no hoof marks printed in the soft ground. But even though it was July, and a superheated July at that, we had some hope that a few of the big fellows might still be found lingering in their spring haunts, and so the next morning after our arrival at the home camp we took the large canoe and headed down the lake for the mouth of Pocket Lake Stream. Pushing out from the mouth of the little spring brook near camp we came suddenly upon the home of Mother Loon, who was engaged in keeping her eggs as warm as their resting place of water-soaked moss would allow. She was taken wholly by surprise, and with a locomotive-

like hoot she went rushing away across the lake, half swimming, half flying, and leaving a wake like that of a steamboat. After we had examined her brownish eggs and the island nest, which was a curiosity, for these birds do not often build so pretentious a structure, I photographed the whole from the bow of the canoe.

We could now see a wide stretch of the lake, which is seven or eight miles long, from one to two miles wide, and full of islands. It is absolutely surrounded by forests whose trees, often "bearded with moss," gnarled and twisted by myriads of winter storms, presented on all sides that ragged outline seen only in the undefiled wilderness. The wildness of the scene was enhanced by the sight of a moose far away on the opposite shore and the cries of the loons weirdly in keeping with the spirit of those lovely lakes. Long reaches of the shore are rendered hideous by the dead trees standing like exhumed skeletons, a perpetual reproach to the lumbermen whose dam at the outlet of the lake has caused all this destruction.

As we lolled back easily in the canoe, drinking in the wild beauty of the scene, while the guides sent our little craft swiftly along, Harry's sudden low exclamation, "Moose!" directed our eyes toward the neighboring shore, near which, in the shallow water, stood a young cow feeding with such relish on the lily stems that she did not perceive our noiseless approach. The wind was in our favor, and Harry whispered:

"Get out your camera. I'll see if we can get near enough for a picture."

Thereupon, camera in hand, I stood up behind Tom in the bow, while Harry's absolutely noiseless paddle sent us nearer and nearer to the moose. A hundred yards, fifty yards, seventy-five feet, and still she did not see us.

THE HOME OF THE LOON.

Then suddenly divining our approach, she lifted her head, a long lily stem hanging from one corner of her mouth to the water, her ears cocked up in surprise rather than terror. At the same moment Harry, who is a famous moose caller, began to talk to her in her own language, uttering an indescribale grunting whine, the cry of the baby moose. This was too much for her, and there she sat on her haunches in three feet of water, motionless as a statue, a victim of feminine curiosity, until we were within twenty-five feet of her. And in this attitude I should have caught her with the camera, but——. I was standing up in a tottlish canoe, holding the camera with one hand and trying simultaneously to manage focus and bulb with the other; the sun was bright, and, try as I would, I could not see her image in the finder until she had turned and was plunging for the shore. Then, calling to Tom to lean back out of range, I pressed the bulb with the partial results you see. The rifle is a far easier weapon to handle successfully than the camera.

But I was nearly forgetting our trout. Pocket Lake Stream yielded us a few and Squaw Barren Pool a score or more, but not one would have weighed more than half a pound. It was clear that we must trail the big fellows in earnest. And so, waiting until evening, we glided stealthily into the channel by which a spring brook found its way through the marsh grass into the lake and cast our flies gently upon the surface of the black water. Presto! we were both fast to pound trout in a twinkling. The result of an hour's sport in the darkness, amid the buzz of countless mosquitoes, was a string of fourteen nice fish, six or eight of which weighed well over a pound apiece. We had received our cue—springholes and evening fishing, and thereafter, although we caught none of the three and four-pounders for which the region is famous, we never failed of good sport.

* * * * * * * *

"How tame everything is!"

So spoke Charlie one evening as we sat about the fire smoking the postprandial pipe, and, although perhaps a trifle ambiguous, the remark was literally true in the sense intended. The rabbits, oblivious of our presence, calmly munched their food within a dozen yards of the cabin. A woodchuck lived under the floor and was at no pains to conceal his exits and entrances from us. The grouse were so tame that they merely walked away when we tried to touch them. Moose birds or "gorbies" (Canada jays) would almost alight upon our hands, although Harry contended with considerable probability that in their case this total lack of fear was not the result of unsuspecting gentleness, but of impudent curiosity. So it was with the red squirrels, the chipmunks, and even with the deer and young moose. None of these have learned to dread the man with the gun, for the few men with guns who enter that country are in search of larger game. It is this fearlessness which constitutes a chief pleasure of the genuine wilderness; you touch elbows, so to speak, with the woods folk.

I must hasten over most of the events of our week at the home camp—how I photographed a beaver's house (but forgot to draw the slide), and a caribou (but took another picture on the same plate); how we made a trip of two days to the forks of the Miramichi in quest of salmon, but were disappointed because all the salmon had gone down to the North Pole Branch in quest of cool water. Even our sojourn on the Crooked Deadwater, where we saw eight moose in one evening, and *almost* saw a bear, are, in Kiplingian phrase, "another story." But I must tell, albeit briefly, of the last expedition before our enforced departure from the woods.

The trail to Moose Lake leads through miles of forest never touched by the ax. The lake itself, nearly round and about a mile in diameter, is walled in by lofty forested hills. No unsightly dead wood mars the beauty of its shores, and the mirror-like surface gives back the perfect image of spruce and pine and hemlock, with here and there the softer outline and brighter colors of the birches and maples that have crowded among their pointed-crowned sisters. Our little picture affords but a faint idea of the perfect beauty of this lonely tarn.

Trouting on Moose Lake in the early evening is the reverse of effort. You paddle where you will, cast your flies, and the trout come up by twos and threes at every cast. A half hour's sport brought us all the fish we needed for breakfast, but we were not fated to enjoy them, for when Tom went to the canoe next morning to get them, not a fish was to be found. We soon saw the thief eying us triumphantly from behind a log—a mink, who had spent all his working hours during the night storing away our trout in nooks and crannies along the shore. So for once we had a troutless breakfast.

Thus we lived for twenty happy days, absorbing health from the balsam-scented air, growing sturdy with healthful tramping and paddling, and eating with enormous appetites. Trout and game were everywhere, and it is significant of the country that, on our way to Fredericton, almost the last thing we saw before our train entered the city was a deer leaping from a field into the neighboring woods.

A. W.

Foods.

OSSINING, N. Y., June 19.—*Editor Forest and Stream:* In the article, by L. Lodian, entitled "Across Cibiria," appearing in your issue of June 20, the writer gives the results of his experience with concentrated and other foods.

My experience during two winters in Alaska, where I traveled some 2,000 miles on foot, packing my outfit on my back or hauling it on a sled, confirms the opinions expressed by Mr. Lodian with the exception of the values of beans, potatoes and fresh meat.

When engaged in hard labor, such as packing or hauling a sled in a temperature of from 30 to 50 degrees Fahrenheit below zero, animal heat is the first consideration in food.

Let an inexperienced person start out in the morning after a hearty breakfast, and in four or four and a half hours he will commence to feel cold and weak, but not necessarily hungry. By five hours he will sometimes scarcely have sufficient strength to carry his pack or haul his load, and still not feel the need of food by means of his appetite, and in whatever portion of his body the circulation of the blood is defective that portion will become chilled to the bone. With the majority of persons the feet suffer first. With others the circulation in the feet is good, but that in the hands and fore arms is defective, and if such a person continues to work much longer without food, the chances are that his hands will become so benumbed that he will have great difficulty in starting a fire.

If, however, after four or four and a half hours' work the traveler stops, builds a fire, warms up some beans and flapjacks, fries a few slices of bacon and boils some tea or coffee (yes, they boil tea in that climate) and eats the same standing or crouching over his fire, it will put new life in him, and he will feel almost as strong as at the beginning of the day. He will have no trouble in eating all he cooks, even though the sensation of hunger is scarcely apparent to him.

Where such an amount of food is necessary in order to sustain heat and strength, the subject of eating becomes as important as firing a locomotive. After the day's work is done there is a tendency to devour an enormous quantity of food at the evening meal. This sometimes induces nausea or indigestion through overloading the stomach. In such cases the remedy is to divide the evening meal into two—a fairly plentiful dinner at the usual time, and a warm lunch before retiring. In this manner sufficient food can be digested each day to supply the waste of heat and tissue due to the extreme cold and hard work.

Regarding the value of beans as an article of diet, the pioneers of Alaska considered them as possessing the greatest nourishment per pound of any article obtainable in that country. Dried king salmon, perhaps, is superior, but it is scarce and not relished by white men as a steady diet.

My own experience with various foods is as follows:

Beans, with plenty of grease or a little bacon or pork, and flapjacks cooked in bacon fat, will sustain warmth and vigor for four or four and a half hours while working in a temperature of 25 to 35 degrees Fahrenheit below zero.

Evaporated potatoes, with a liberal allowance of butter or bacon fat, are nearly as sustaining as beans. Beefsteak, moose and caribou meat, etc. (the etc. includes horse meat), will not sustain heat for much more than two and a half or three hours.

Soups and oatmeal digest quickly, and are only to be recommended for an evening meal.

Extract of beef makes an appetizing drink and good stock for soups and stews. Do not try to eat it spread on bread like butter—it will induce thirst and perhaps cause illness.

Flapjacks and crullers are nutritious and lasting. Cornmeal mush fried in slices, with lard or bacon fat, is also good.

Among drinks chocolate or cocoa is the most stimulating and invigorating.

Alcoholic liquors are worse than useless, except to relieve stiffness of the muscles after the day's work is done.

With the limited menu obtainable in such a country scurvy frequently makes its appearance. As a preventive, some make a strong infusion of spruce leaves and cottonwood (poplar) bark and take a good drink thereof twice a week. While this may be beneficial as a preventive, it is not considered of much value as a remedy after the disease has obtained a hold. Fresh meat, fruit and vegetables are all good preventives or remedies, but the article in which the inhabitants of Alaska have the most confidence is fresh potatoes. In the early days the commercial companies retained a small supply of these during the winter and sold them only on presentation of a physician's prescription or other good evidence that they were required as medicine.

Natural History.

Horse Hair and Glass Snakes.

Editor Forest and Stream:

I was much interested in the article entitled, "Erroneous Beliefs" which appeared some time ago; but it contained two statements which I beg permission to revise.

First. "How prevalent is the belief that horse hairs turn to snakes! There is no other foundation for this error than the resemblance of the so-called hairsnake (*gordius*) to a common horse hair."

I do not believe in horse hairs metamorphosing into snakes (no true naturalist could be so absurd) and I also am acquainted with the wonderful *gordius;* but there is another, commoner, and much more pardonable cause of the popular superstition mentioned: Certain waters swarm with invisible but very active living creatures, and if a horsehair be placed upon the surface of such water, floating, and left there undisturbed a number of hours, in calm weather, it will soon be found wriggling about, and exhibiting every appearance of a live snake—a snake in misery at that. It may actually show a head at one end—or even at each end! The reason is that the hair possesses a sort of magnetic power, and attracts the tiny creatures to it in great numbers, and securely retains them. They may slip along its sides, in either direction, with ease, but cannot break away, until a great knot of them collect at either or both ends. It is very difficult for those at the ends to get back to the sides, consequently the "heads" are quite likely to keep growing larger! They are amazingly powerful creatures, and exceedingly voracious and restless, and their furious efforts to regain their liberty causes the compound "snake" to writhe and squirm constantly—sometimes actually moving endwise, as if possessing a real intelligent head of its own!

To insure the success of the experiment, better have the water in a tub, and allow no frogs or other visible creatures to enter; but do not cover (unless with screen), as a lack of air sometimes engenders a chemical change in the water, producing a new and very different set of animalcules (which, of course, were there before, but undeveloped).

Second. "Many persons believe that there is a glass snake, or joint snake, which may be broken to fragments when struck but can rejoint itself and live. This may come from the fact that a certain lizard (*Ophiosaurus ventralis*) readily loses its tail, and while the body escapes the caudal member wriggles and attracts the attention of the pursuer."

There are several varieties of lizards that do as described. Nevertheless the joint snake is a reality, and, though not common, is still so plentiful (here, for instance, in the mountain region of Arkansas) that I wonder how any naturalist can doubt its very existence!

I have seen several, each three feet or more in length (saw two or three in one year). They are striped in light colors, such as so blend together at a distance as to produce the general effect of a yellowish gray; are glossy, shiny, hard and stiff looking (yet very swift in a plunge for liberty), and feel cold, hard, metallic to the touch. When frightened in a place where they cannot escape and struck carefully, so as not to kill or wound, they begin to unjoint. And if you keep whipping them they do not stop at one or two sections, but may continue until only the head and neck (has a snake a neck?) are left at the intelligent end.

Now, "here comes" the part of their description that seems almost incredible, even after you have seen it yourself—*there is no real breakage,* but each section is jointed on to its mate by a sort of knob-and-socket arrangement (the socket having apparently the power to expand and contract) that is too wonderful for this pen to describe at present. I hope to discover the mystery hereafter. And although the snake can easily "flop off" his joints himself, he is not a tender creature like the lizard, but is very strong, and you would be astonished at the strength required to forcibly pull him apart.

Now, as he is neatly jointed, the sections coming apart clean, hard and bloodlessly, and "Nature makes no mistakes," if philosophers are to be believed, a man may be excused for believing the jointing is for an important purpose. The question is—What purpose? This, I admit, I am unable to answer, even to my own satisfaction. That the snake can and does unjoint I know. That he can rejoint I doubt—but I am not at all certain—even after two separate experiments. In the first case I left the pieces in a field. Next morning they had mysteriously disappeared. "Oh, that's nothing—eaten by buzzard or something!" But another snake (a common sort), killed about the same time the glass snake was unjointed, had not yet been disturbed. In the second trial I turned a tub over the joints on a tight floor. The succeeding day the joints were still apart, lifeless, and covered with ants. Perhaps I had allowed the dogs to fatally wound the reptile before unjointing it.

I dislike to kill or injure this variety of snake, as it is harmless, timid, and lives upon insects and mice, seldom coming out into the light of day.

I believe this is the first careful description of the joint snake ever written, so I hope FOREST AND STREAM will find space for at least this portion of my communication.

D. R. MORPHEW.

[In this connection see on this page Mr. Hay's notes on the glass snake.]

Our Batrachians and Reptiles.—IV.

BOTH the batrachians and reptiles, being cold-blooded animals, avoid the colder regions of the earth, but while the former begin their existence in the water, and, as a class, prefer the cool shadows and darkness, the latter come into being on land and love the light and warmth of sunshine. While it is true that the crocodiles and turtles return to the water and pass the greater portion of their lives in it, the other, and by far the largest, group of reptiles, to which belong the lizards and the snakes, with but few exceptions find the conditions necessary for their existence on dry land. In this great group the lizards are the lowest, in that they are most like the earliest reptiles, and with them we can best begin the consideration of the class.

Taking such a species as the little *Anolis,* or so-called chameleon of the Southern States, we will find it to fit very well our ideas of what a lizard should be. Its body, which reaches a length of about six inches, is cylindrical and provided with a slender tail and two pairs of legs. The conical head is borne on a distinct neck. The skin is covered everywhere, except on the crown and sides of the head, with small overlapping scales, and the toes end in sharp claws. The eyes are furnished with eyelids, the ears are discernible as small holes just at the back of the head, and the tip of the tongue is only slightly notched in front. In short, it may be taken, so far as its external characteristics go, as a typical lizard.

The habits of this little creature are most interesting, and have been made the subject of some study. In the South, where they abound, they are to be seen throughout the day running with almost lightning-like swiftness among the vegetation in search of food. When on such

Fig. 1.—Anolis, the so-called Chameleon of the Southern States (after Lutkin).

a quest they do not hesitate to enter human habitations, and in the houses of lighter construction a number may be seen at a time darting about over the walls, for, by a peculiar construction of their feet, they can adhere to a perpendicular surface. Anyone who would watch such an assemblage would at once be amazed by the wonderful control exercised by the *Anolis* over its personal appearance. The same individual would often be seen to change its color, varying from light pea-green through dark olive to a lustrous bronzy brown. These changes may be effected as the animal moves from place to place to more perfectly harmonize it with its surroundings, or they may reflect the feelings and desires of their owner. The food of this creature consists of insects, among which flies seem to be the favorite. Eggs are laid during the early summer in some crevice and from these, in a short time, the young emerge and enter at once into the activities of life. The parents bestow no care upon them, and they must shift for themselves.

It is the exception among the lower vertebrates to find a species which possesses even the rudiments of parental affection, but certain observers have testified that the common brown or pine-tree lizard *Sceloporus undulatus*) is such an animal. It is distributed from New Jersey to Oregon and south to Texas, and is represented, therefore, over the greater portion of the United States. It differs considerably from the *Anolis* in form, although it still retains the lizard shape. The head is rather broad and flat, and the nose is rounded. The body is covered with coarse scales, each of which has an elevated ridge down its center, and is prolonged into a point behind. The color is olive or brownish, sometimes almost black, and is variegated by undulating cross bands of darker color, so as to cause it to resemble very closely the bark of the trees or the stones on which it lives. The under surface is whitish, but on the throat of the adult there is usually a large patch of metallic blue or green. It is most common in situations where pine trees abound and for this reason has been given its common name. Its food consists of insects, in search of which it diligently explores the surface of the ground and clambers about among the branches of the smaller trees. In the latter place it also seeks security when pursued. The capture of one of these creatures in good condition is no very easy matter, for, added to its swift movements, it has developed to a marked degree the habit which many other lizards possess of snapping off its tail when closely pursued. This appendage is broken off, not between two of the vertebræ, but directly across the middle of one of the bones, and, when severed, thrashes about among the leaves so as to distract the pursuer while its former owner makes an escape. The tailless lizard quickly recovers from its self-inflicted injury and proceeds to grow a new tail, a process which may be repeated several times. The eggs of the pine-tree lizard are said to be laid in the sand, probably in little groups. They are deposited about June 1 and hatch in about ten days. They are long and narrow and covered with a white, tough, leathery skin. The parent makes no attempt to incubate them, but when the young emerge they are treated with the utmost gentleness by the adults, and may often be seen in company with them.

Fig. 2.—The Pine Tree Lizard.

Among the uninformed people of country districts this lizard, and most others as well, is supposed to be venomous, but the idea is entirely erroneous. Even when captured it seldom makes an attempt at defense, and when it does, its bite cannot break even the most tender skin. It quickly becomes tame and makes a most interesting pet.

While speaking of this subject it would not be amiss to mention our common blue-tailed lizard, or skink, which is well known to most lovers of the woods. In rural districts it is known as the "scorpion," a name which is inapplicable in every way, and which has doubtless done much to give to the animal its reputation of being very

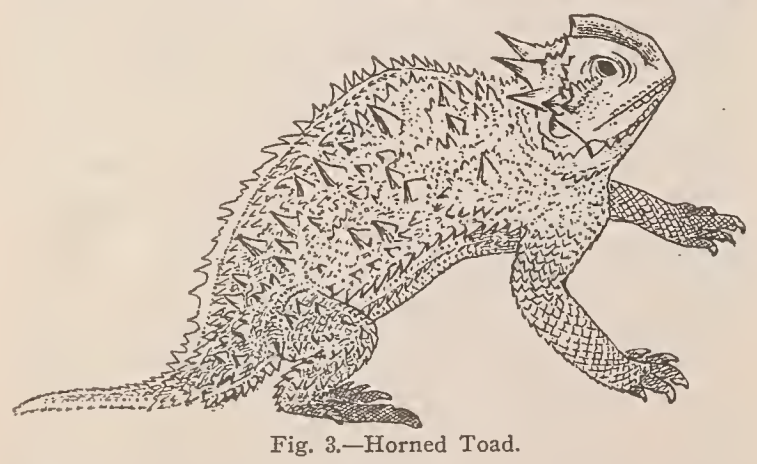

Fig. 3.—Horned Toad.

venomous. It is perfectly harmless, and instead of being in any way injurious, is an efficient aid to man in removing large numbers of disagreeable insects.

On the hot plains and in the desert regions of the West and South are found numerous species of lizards which represent the extreme development of the pine-tree lizard type. These are the horned toads, so called from their flat, toad-like bodies and the more or less perfect armature of large pointed scales and spines which are scattered over the back or arranged in rows on the sides and top of the head. Their odd appearance at once attracts attention, and, as they are not capable of running with speed, they are often captured and kept as pets. In confinement, however, they often refuse to eat, and slowly starve to death, but if by gentle treatment they can once be induced to take food they devour large numbers of flies and other small insects, and may occasionally drink a little milk. When teased or suddenly frightened they flatten their bodies, arch their backs, and turn their horns forward like a horned mammal at bay and await the attack. This mode of defense is the one which they probably adopt in nature when no safe retreat is at hand, and one can imagine that it is very effective, not only from the ugly appearance which they present, but from the fact that the horns would offer a very serious obstacle in swallowing the animal. Professor Cope mentions finding a dead rattlesnake which had been killed by attempting to swallow one of these lizards, whose sharp horns had penetrated the œsophagus and were sticking out on each side of the snake's neck. Another curious action on the part of some horned toads is that of squirting out a slender stream of blood when they are roughly handled. It is popularly supposed that this red fluid comes from the animal's mouth, but recent observations have shown that the jet springs from the corner of the eye. No explanation of this fact can be given, for the blood is not in any way disagreeable, and it is not known whether it is a means of defense or simply an involuntary bursting of a blood vessel due to fright or anger. Neither is it known how generally the habit prevails. It is said that in its natural haunts the horned toad brings forth its young alive, some three or four at a time. In captivity, however, eggs are frequently laid, but, so far as the writer is aware, these do not hatch.

Living in the territory inhabited by the horned toad are many other kinds of lizards, but these we must pass by without mention, excepting only the large, uncouth *Heloderma,* or Gila monster, a species noteworthy as being the only lizard in the world which seems to deserve its reputation of being venomous. It occurs from southern Utah through New Mexico and Arizona to a point well within Mexico. Further to the south and west there is a second species, but of its habits we can say nothing. The *Heloderma* is a large, thick-bodied, short-legged animal, slow of motion, and of a most repulsive appearance. In length it may exceed eighteen inches, but specimens are usually a foot or less in length. The head is nearly flat above and somewhat triangular in outline, the sides gradually sloping to the rounded nose. Its color is black with large cross bands or blotches of yellow, and the scales which cover the back and sides are coarse and rounded, so as to give the animal something of the appearance of a piece of bead work.

Very little is known about the habits of this ungainly lizard, for its reputation is such that those who most often see it think of nothing but how to exterminate it. For years it has been regarded as a most deadly reptile, but there is now good reason to believe that the facts are not quite as bad as has been supposed. A great many living specimens have been sent to investigators in various parts of the world, who, after having made careful experiments with the *Heloderma's* saliva, report, some, to the effect that it contains a violent poison, and others that it is perfectly harmless. It is quite possible that this difference of opinion is due to the fact that, as the lizard has no specialized poison fangs, it sometimes fails to introduce its venom into the wound, which in such a case would be no more dangerous than a bad scratch. There is, however, an abundance of proof to the effect that, under some conditions, at least, this lizard can inflict a dangerous bite, and on this account it should be handled with great care or avoided altogether.

Another type of lizard which occurs in many parts of the old and new worlds but is represented in our country only by five or six species are the Geckos, so called from the noise made by some of the species. In the United States one species is found in Florida and the others in Texas, New Mexico and southern California. In general form and appearance they bear a rather close resemblance to the *Anolis,* but there are no large plates on the top of the head and the eyelids are rudimentary or altogether absent. In most of the Geckos the pupil of the eye is a narrow vertical slit, a character which points strongly to nocturnal habits. Most species, also, have the ends of the toes provided with peculiar adhesive pads, by means of which they are able to run up such perpendicular surfaces as the trunks of trees, brick walls, or even the plastered wall of a room. Next to nothing is known of the life history of any American Gecko, although they are very attractive little lizards, well worthy of the naturalist's attention.

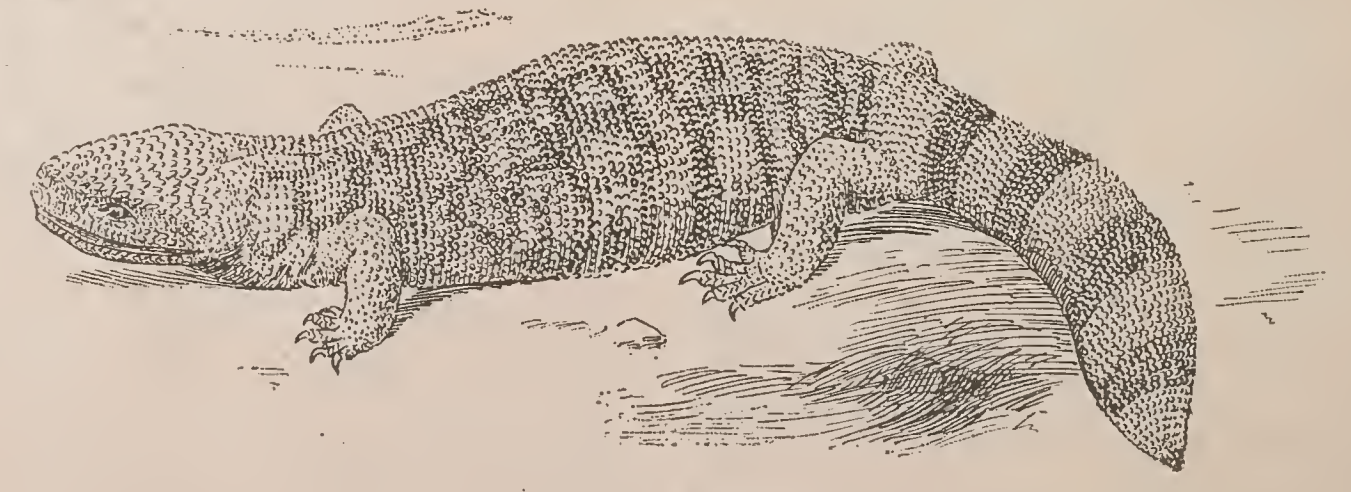

Fig. 4.—The Heloderma.

Turning now from the typical lizards to forms which might easily be mistaken for serpents, and which are commonly known as such, we will consider first the *Ophisaurus,* or glass snake. This animal is found more or less abundantly in the southeastern United States from Virginia to Indiana, and south to Florida and Texas. In form it is decidedly like a snake; the body is long and slender, sometimes reaching a length of three feet, and there is no trace of limbs. It may at once be recognized as a lizard, however, by the lower jaw, the eyelids and the

external ear opening, and if the observer feels inclined to do a little dissecting a rudimentary set of shoulder bones will be found a short distance behind the head. In color it is yellowish, with brown longitudinal lines. Wherever it is found it has attracted a great deal of attention from the fact that when pursued or struck with a stick the whole animal appears to break up into short pieces. Along with this knowledge, which has given it the name of glass snake or joint snake, there goes the idea that these pieces have the power of reuniting themselves, so that the reptile can crawl away as sound as ever. Dr.

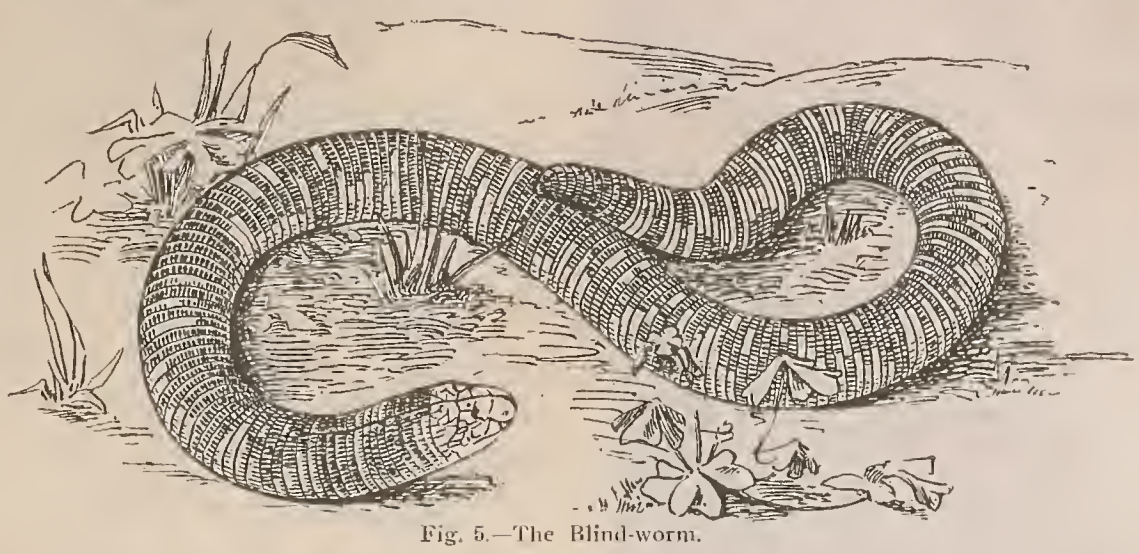

Fig. 5.—The Blind-worm.

O. P. Hay, who has written of this species, says: "As regards the liability of the animal to break into pieces on being struck or handled, there can be no doubt. Two-thirds or more of the glass snake is tail. It is a well known fact that many lizards on being seized drop their tail in order to free themselves or to deceive the pursuer. The tail thus lost may be reproduced. When occasion appears to demand the sacrifice, the glass snake sunders its tail into a number of wriggling pieces, and while the astonished observer stands viewing the wreck, the head and body hastens to a place of safety. In order that all these pieces might unite again to form a sound lizard, they would have to be fitted together in the proper order and with the ends turned in the right direction; the half dozen or more conical muscular masses which project from the ends of the pieces would have to be interdigitated accurately; the nerves and blood vessels would need to come into juxtaposition; and then all the torn surfaces unite by 'immediate union' so quickly and effectively that the animal can betake itself to its business. Some observers say they have seen the thing done, but before scientific men will believe the assertion, it will have to be well corroborated."

The glass snake is said to live in dry, rather than damp, situations, and spends a great deal of its time below the surface of the ground and about the roots of trees. It is sometimes plowed up by the farmer, but is most often seen as it crawls about in grassy places in search of food. It appears very early in the spring and remains until late in autumn. Its diet is apparently quite varied, as Prof. Cope mentions taking from the stomach of a specimen from Florida "three ground spiders, a grasshopper, a cricket, a cockroach, a beetle and a lepidopterous larva, and a small snail. Its intestine was packed with the remains of beetles." Nothing definite is known about its breeding habit, but like most other lizards it probably lays its eggs in the ground.

Even more unlike the typical lizards than the glass snake is the so-called blind worm, or *Rhineura,* of Florida. This creature is adapted for a subterranean life, and passes practically its whole existence under ground. In appearance it resembles a large earthworm, being white in color and with the thin scales arranged in rings encircling the body. Like the earthworm, also, it is able to progress with facility backward as well as forward. Its eyes are concealed beneath the skin, the mouth is small, and there is no external trace of ears. The limbs have entirely disappeared, and even the shoulder bones are very rudimentary. When thrown out of its burrow, the blind worm is said to progress by undulating its body vertically instead of horizontally. Its food probably consists of small insects and worms, but of this we know little, and about its reproductive habits we have no information whatever.

The blind worm is especially interesting to the zoologist because it is, of all our lizards, the most snake-like in its skeleton, and from it we can pass easily to that more dreaded but nevertheless interesting group.

W. P. HAY.

A Motherly Mallard.

My friend Nolan, down from Gull Lake, tells the following: We were out on the lake rowing, when from the rushes emerged a mallard surrounded by a brood of tiny balls of feather, heading the way the mother headed across an arm of the lake. When they were too far away from their hiding place to turn back we closed in upon them, drawing closer and closer; and with every stroke of our oars the mother bird quacked encouragingly to her brood to hurry along, the little ones giving out plaintive peeps that no doubt went deep into the heart of the mother bird.

Wondering whether on close approach the mother bird would abandon her brood, we rowed until alongside of her, when she could easily have been dispatched with an oar, but with one eye upon us and the other upon her brood, she swam along in the lead, simply unmindful of the danger to herself.

By this time the little ones began to string out until they formed a thin, feathery peeping line behind the mother. There was one little fellow who could not keep up and who was a yard or more behind the end of the line, and who struggled and peeped bravely but slowly and weakly along. Upon him was the attention of the mother engaged. Her voice seemed directed toward him and her gaze, as she turned her head, concentrated upon him. Her eyes showed just such love and solicitude as one could see in the face of a young mother watching her child in a trying illness. It was such a sight as one but seldom has the opportunity to witness.

Allowing our boat to rest quiet we kept close watch on the mother, who took the opportunity to spring clear of the water and fly to the little one. In a moment the feeble and tired duckling was snugly ensconced upon its mother's back, and with a gladsome quacking, faintly answered by the peeping of the rest of the brood, she once more led the aquatic procession, and in a few moments was within the welcome rushes and we saw them no more.

It certainly was an impressive sight, the devotion of that wild bird to its young, facing what would at other times have meant death to it, for the sake of its little ones.

I don't know just where this may fit in in "The Intelligence of Wild Things," but it certainly does come in under the head of maternal solicitude and devotion even unto death.

CHARLES CRISTADORO.

ST. PAUL, Minn.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

The Fire-Bug.

Editor Forest and Stream:

There are few beings more despicable than the fire-bug. The fire-bug, the poisoner, the anarchist—the anarchist a gentleman compared with the other two! He strikes openly, and sacrifices life and liberty in the act. The fire-bug is a lower criminal than the poisoner, because the latter usually makes sure of his victim. The fire-bug creeps silently forth and strikes secretly at a whole community. Not only does he destroy the woods and wild animal life therein, but homes, towns and human life as well. Who is there that breathes, with one atom of honor, manliness or humanity in his heart, can applaud the hellish work of the fire-bug?

"The opportunity has come for the woodsmen who have only one way in which to reach the preserve owners, and they are taking advantage of it." If these words amount to anything, they mean that beings in human shape have committed arson, and perhaps murder. If Mr. Spears personally knows of a single instance where the woods have been fired, has he done his duty as a law-abiding American citizen and reported the same to the criminal authorities? If not, I, as a law-abiding American citizen, wish to call the attention of those authorities to Mr. Spears' article, "Adirondack Ruin," in FOREST AND STREAM issue of June 13. It is their duty to inquire into what Mr. Spears intimates in that article.

"At Raquette Lake fires were only got under control just in time to save the town." How many human lives might have been lost but for this fact! The opinion of every man worthy of the name can be only honest and indignant condemnation of "men" who "will go through the woods, fire in hand, and spread it broadcast where it will do the most damage."

Thank God, the great and important State of New York has no law on its statute books which permits an act so despicably villainous and cowardly! Beasts of this stripe should be condemned to instantaneous oblivion. The lives of innocent men, women and children must not be put in jeopardy because some degenerate wishes to pay an unlawful grudge.

Preserve owners legitimately acquire land and strive to perpetuate the forests and the game. And every sane man knows that this can only be done lawfully. The "woodsman" who criminally burns the forests and game simply perpetuates crime. Outside his own worthless mind he is worse than good for nothing!

"Of course my personal feelings in this matter are very strong, as are the feelings of all the other backwoodsmen, in fact." Mr. Spears does not state positively in what way his "feelings" "are very strong." According to the daily papers human lives were sacrificed in some of the forest fires. Not the lives of millionaire preserve owners, mind you. Not a preserve owner has perished that I have read of. If one single life has been lost in the Adirondacks in flames started by depraved fire-fiends, let us hope that the criminal authorities of New York State will leave no stone unturned until the guilty perpetrators of the deed are at rest—in the electric chair. There should be no room in this broad land for the assassin, be he millionaire or pauper, who silently skulks forth with fire and murder in his heart to scatter broadcast conflagration, desolation and death.

The right to buy and sell land has been lawfully recognized by civilized communities for centuries. It will continue to be so recognized, despite the criminal actions of an insignificant minority of squatters, tramps and fire-bugs. These are simply allowed to roam over other people's property by the unwritten law of courtesy, and have not the morality, modesty nor decency to appreciate the favor.

It is a blessed satisfaction to know that in our good land the inhuman monsters who go silently forth "fire in hand and spread it broadcast where it will do the most damage," are but a small per cent. even of our criminal element. I do not believe that the population of our prisons and jails would tolerate, without protest, such a fiend in their midst!

But, candidly, the majority of people will not give these fire-setting yarns credence. The fires have been too general and far-reaching to have been started with criminal intent. Not only have they burned in the Adirondacks, but in every State in New England, as well as in Canada, and in New Jersey, Pennsylvania and on Long Island. In many cases they undoubtedly originated from locomotives. In other cases carelessness was the cause. But the principal cause of their fierceness was the extreme drought. There are few people with one iota of reason will believe they were the work of the criminal fire-bug.

WILLIAM H. AVIS.

HIGHWOOD, Conn., June 17.

CHICAGO AND THE WEST.

Full Particulars of Mr. Egan's Death.

CHICAGO, Ill., June 13.—Last week mention was made of the finding of the body of Mr. B. F. Egan, the Great Northern R.R. official, who was lost below Kalispell, Mont., last winter. Since the time of the above writing I have received a letter from Mr. H. W. Osborn, of St. Paul, a friend and associate of Mr. Egan, and what Mr. Osborn says, together with the useful warning to all other hunters who may perhaps find themselves in circumstances similar to those which proved fatal to Mr. Egan, seems to warrant further mention of this noted Western incident, so deplorable in all its features. Mr. Osborn sends a newspaper clipping, taken from a local paper, which, with his letter, follows:

"I write particularly to-day to enclose you an article from one of the Kalispell papers, concerning the finding of the remains of my old friend, Ben Egan, who was lost last November. It was a very distressing and pathetic affair, and I have watched for this all winter long. I did not know but that you would like the item, which I enclose, as it has its moral, never to get excited when you are lost, but to sit down and build a fire and by all means hang on to your rifle.

"I cannot understand how a man of Mr. Egan's experience and nerve could lose his compass and his rifle and meet with such a dreary and unfortunate end, with everything on his person to take care of himself."

The article, from the Kalispell Inter-Lake, says:

"The body was found about a mile from the railroad, and something less than two miles from Belton. The place was about a mile and a half from where Mr. Egan was last seen by Dr. H. E. Houston. The body was face downward, lying at full length under a fir tree, some of the lower branches of which had been pressed down. One arm was extended along the body and the other was partly under it. The head was lying on a small log, and the temple had struck on a small projection made by a broken limb. Everything indicated that the unfortunate man had fallen, completely exhausted, and stunned by the fall against the log, had been rendered unconscious, freezing to death where he lay.

"When the special reached Belton the party went to the spot where the body was found, and a coroner's jury was empaneled from those present. A careful examination of the body was made by Drs. MacDonald and Lamb, and no sign of wound or bruise, other than that on the head caused by the fall upon the log, was to be discovered. It was the more carefully made for the reason that many people had held the belief that he had been accidentally killed by some other hunter, or possibly by the accidental discharge of his own rifle.

"His rifle and compass were both missing. The compass, it is thought, he may have dropped in the snow and was unable to find it, and finding the rifle a burden, threw it away. The face of his watch had been removed, and placed in his vest pocket, presumably that he might know what time it was by feeling the hands. In his pockets were found two or three dozen matches, and he was carrying a full box of shells for his rifle and a number of loose ones.

"Mr. Doody and others familiar with the ground, think it is beyond question that death came to Mr. Egan the first night he was missing. The morning after his disappearance Mr. Doody had gone through the woods, making a circle around the place where the body was found Monday, and at that time not a foot-print or trace was discovered, showing that he had not been moving toward morning. It is supposed that he became bewildered, and lost control of himself, as men often do when lost in the woods, and instead of stopping at one place until morning kept going until completely exhausted. Then when he fell he was rendered unconscious and never recovered. It is possible, however, that he was trying to reach the railroad, the general direction of which he could have known from the fact that an engine was kept running up and down the track all the night of his disappearance, sounding the whistle to guide him, if he was within hearing distance, and uninjured.

"The body was brought to Kalispell Monday night. The verdict of the coroner's jury was as above.

"On the afternoon of November 4 last, Mr. Egan and Drs. H. E. and R. Houston left Kalispell in Mr. Egan's car to hunt deer between Coram and Belton. They stopped near Lake Five, intending to hunt until evening, and then reach the car at Belton. They planned to meet at a bridge on the track, deciding on a sign that would tell any of the party whether any of them had gone on to Belton, and how many. After going into the woods a short distance Dr. H. E. Houston and Mr. Egan separated, and the latter was seen no more. The Houstons hunted until dark and then left the signs agreed on on the bridge and went on to Belton. A blinding snowstorm started in, making the darkness more intense. When Egan did not come to Belton there was some uneasiness, but no great anxiety, as it was thought the worst that could happen would be that he would have to stay out all night. As he

was an experienced man in the woods it was not thought for a moment that he would undertake to travel if he was uncertain of his directions. An engine was sent out along the track, and kept up a whistling all night at intervals. The next morning a party was out early looking for him, and when no trace was found word was sent to Kalispell, and in a day or two a large number of men were in the woods, and the search was kept up until the great depth of snow made it necessary to abandon all search until spring.

"Following his disappearance, many theories were advanced to account for it. The one most generally accepted was that he had either accidentally shot himself, or that he had met with an accident by falling over a cliff, or into the water. Many believed, however, that he had been shot by some careless hunter mistaking him for a deer, and that no report had been made. The discovery of the body, with no sign of accident upon it, ends all such ideas, and is a great relief to all his friends, and especially to the Drs. Houston, who have felt that some unjust suspicion was directed toward them."

One Bear.

Under date of June 14, J. W. Schultz writes from St. Mary's Lake, Montana, that the Pulitzer party have gotten one bear and expect to get two or three more. They had not visited their baits for some time, on account of a strong north wind. I get no word from Jack Monroe, who is out with Mr. Pinchot.

Raising Quail.

Mr. John J. Swoboda, well known in Chicago as a practicer of the art of strong-arm, writes: "I would like information on quail raising. Do you know of any book which contains this information? Anything you can tell me will be much appreciated."

I don't know of anything which is devoted exclusively to this one topic, but perhaps something in the FOREST AND STREAM lists may be of service. Can any reader answer Mr. Swoboda specifically?

Wild Turkeys Come High.

There was a time soon after the opening of Oklahoma and adjoining districts of the Indian Nations when wild turkeys were a drug in the Chicago market. That such is no longer the case, and that, indeed, the wild turkey is practically out of the question on a market basis in these days, may be witnessed by the experience of a Chicago lady, who last winter wanted to surprise her husband on his birthday, and who thought it would be a good thing to serve a wild turkey on the table. Diligent inquiry in the market disclosed the fact that she could get one wild turkey at the tidy price of $27. As this turkey was not purchased, it may still be subject to proposals from those anxious to surprise a husband. I think the latter gentleman would most likely be surprised if he had to pay the bill. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The Gun and the Geese.

"CAP" wanted to kill a goose—a real Canada honker—as he lived in a locality where this noble bird was the largest game in the sportsman's list. He had dallied with all the smaller game and was acknowledged to be the best shot in town at the traps, either live birds or targets. He talked the matter over during the winter with his friends at sporting headquarters in one of the village stores, and finally, when March rolled around, he was quite ready to accept an invitation to accompany a friend, who is an "expert amateur" wildfowler, on a trip to Pelican Point. Years ago this had been a noted place for geese, and it was thought "Cap" might realize his dreams of slaying a goose.

On their arrival at the beach they were met by friends from the life-saving stations, themselves old gunners, and one of them, noting the gun carried by "Cap," made sport of the 8-pound weapon as an instrument for acquiring possession of honkers. "Well, well, 'Cap!' You don't mean to say you expect to kill a goose with that popgun?" said one old bayman, whose early education on geese began with a gun weighing fully twenty-five pounds. "Why didn't ye bring an air rifle or a beanshooter?" he continued. "Cap," thinking of the many pigeons that had succumbed to the "popgun" when well on their way to the boundary line, laughed and said he only wanted a chance to show them what it could do.

In due time "Cap" found himself in a comfortable blind of heaped-up seaweed and reeds, with a nice flock of decoys placed at his suggestion rather closer than the judgment of his companion would dictate. Geese in fair numbers were in the bay, but none would come near the point, and finally his companion left the blind, saying he would take a cruise around the marsh and try to get a duck from some pond hole. Left to himself, with the warm sun shining down in his face and no signs of the coveted game coming his way, he first grew drowsy and then——.

His companion, who was now vigorously tramping the meadow and keeping a watchful eye on the open bay and the point he had left, finally saw seven geese swing in and set their wings for the decoys. He flattened himself down, saw the geese light, and waited to hear the crack of the two heavy loads of nitro, meanwhile calling himself pet names for having left the blind. Minute after minute passed, and still nothing happened, and the geese finally were seen to rise and wing their way slowly up the bay. Hastening back to the blind, he asked, in rather vigorous language, what was wrong. With a somewhat hysterical laugh, "Cap" explained matters. "I was asleep, and I dreamed I heard geese a-honkin'. I woke up and poked my head over the top of the blind, and, by darn! there they were, right in among the stools. Well, ha! ha! first I looked at the geese and then at the gun, then at the geese and again at the gun, and each time I looked at the gun it seemed to get smaller and smaller and the geese, ha! ha! seemed to be getting larger and larger; so I thought it was no use to shoot. Ha! ha!"

On their return they were met by the old bayman. "No luck, eh? Didn't I tell ye that gun was too small for such work?" said he. To this day if you wish to see a broad and rather sheepish grin illumine "Cap's" face, you have only to ask him what size gun he prefers for bagging geese. OCEAN.

Massachusetts Game.

BOSTON, June 20.—*Editor Forest and Stream:* Ignorance of the law is never recognized in court as a valid excuse for its infraction. The kind-hearted Judge Pettengill, of Malden, recently deceased, felt obliged to impose on Collins, who ignorantly shot a doe, the fine expressly provided by the statute, $100. The judge sympathized with the culprit to such an extent as to start a contribution for payment of the fine, and thus got him out of jail. Collins claimed that he was not aware that the killing was illegal, and yet he was not an illiterate man. The State Association had for many years sought to make such an occurrence impossible, by sending out copies of game and fish laws printed on cloth for posting in conspicuous places, postoffices, railroad stations, stores, factories, etc. These are sent out free of expense to all who apply to the secretary for them, and he has just received the posters for 1903, which he will be glad to send to all persons willing to take the trouble to see them put up.

He has also had the bird laws printed in the Italian language. These will be particularly useful in the neighborhoods where Italian laborers are employed in work on railroads, highways, in factories, etc. Many of these men know no language but their native tongue, and they are very destructive to bird life. In addition to the work done in informing the public by the association, the commissioners have done a similar work for several years past. The newspapers have frequently given timely notice of the dates when close time begins or ends. But in spite of all that has been done by associations, commissioners, game wardens and the press there are persons now and then found violating game laws through ignorance. Every sportsman, all lovers of birds and believers in protective laws, can do something for the cause by extending a knowledge of the laws. The pocket manual, or "abstracts" of the laws, is in course of preparation and will be ready for free distribution in a few days. CENTRAL.

Vermont Notes.

BURLINGTON, Vt., June 20.—*Editor Forest and Stream:* Once more the residents of the Champlain Valley can fill their lungs with pure air, thanks to the late rains that have put out the fires all around and dispelled the pall of smoke that hung over them like a fog for the past month. Fires were on every hand, and the damage done to standing timber and to the sugar bushes that the Vermont farmer depends so much upon for his income, was enormous.

Shooting promises to be of the best this fall. Partridges are numerous, and so far the season has been very favorable to their breeding. Deer are seen in this section frequently, and seem to be increasing in numbers. Recently a large buck came into the city, and after traversing several of the principal streets, narrowly escaped a collision with a trolley car, to the great wonderment of the passengers. Two small fawns with a doe were seen last week within two miles of the city limits. What Burlington people consider to be one of the city's chief attractions are the large number of gray squirrels that abound there. The city is abundantly supplied with trees, and in the residential section there are few trees that do not contain one or more grays for tenants. So tame are they that they will take food from the hand of the passerby.

In 1902 the State Legislature enacted a bounty of 30 cents on each hedgehog killed, as they were considered a serious menace to growing timber. Evidently a crusade against the "porky" has begun, for over 6,000 bounties have been paid since the law was enacted. In some sections of the State they are found in abundance, and now the farmer's boy and the up-country trapper find the heretofore worthless animal a ready source of pin money. The State Auditor also reported that there have been killed within the State during the past year 49 bears, 74 lynx and 5,015 foxes. The last few years has witnessed a change for the good in Vermont game conditions. VERMONTER.

Meadow Larks and Robins.

BUFFALO, N. Y., June 20.—*Editor Forest and Stream:* In FOREST AND STREAM of June 6, Coahoma defends the Reverend Craig for shooting meadow larks on the ground that they are considered legitimate sport in the South, and in the June 20 number Hie-on says, in speaking of shooting, "that the time would be more profitably spent in shooting robins and waxwings about the hills," etc. Is this the sentiment of FOREST AND STREAM readers and sportsmen? I am glad I have received a different education from its valuable columns, and am sorry that in this late date that any degree whatever of sportsmanship should attach to the shooting of these birds. It seems like a crime against nature to kill a robin, at least—although it may be from the different point of view. We in the North have a deep-seated affection for them, and I had rather never use a gun again than to kill such harmless birds—especially for the sake of practice and just to be killing something—for dead they are useless.

DIXMONT.

Wild Pigeons Reported.

GREEN BAY, Wis., June 20.—*Editor Forest and Stream:* The other morning when coming in from a drive in the country I saw a male wild pigeon. I made absolutely sure that there was no mistake, as I got within thirty-five or forty feet of the bird and noted him carefully, and when I got home I took a good look at a mounted wild pigeon again to assure myself, and I can take an oath that the bird was a genuine wild pigeon.

I also was told by a friend, who is an old sportsman, that he saw three wild pigeons near this same place a few weeks ago, and a single bird directly across the bay at Oak Point. I reported seeing a flock of pigeons a few years ago and at that time several other parties reported them. I trust they will increase so we can see a few flocks again. A. G. HOLMES.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Canoe and Camp Life Along the Delaware River.

XIII.—On the Hills at the Water Gap.—Stones, Rocks and Mosses.

"No human capacity ever saw the whole of a thing; but we may see more and more of it the longer we look."—Ruskin.

"Then, tired to watch the current play,
He turned his weary eyes away
To where the bank opposing showed
Its huge square cliffs through shaggy wood.
One, prominent above the rest,
Reared to the sun its pale gray breast.
Around its broken summit grew
The hazel rude and sable yew;
A thousand varied lichens dyed
Its waste and weather-beaten side;
And round its rugged basis lay,
By time and thunder rent away,
Fragments that from its frontlet torn,
Were mantled now by verdant thorn."

—Scott.

THE best pleasures of the sportsman are not found in the actual catching and killing of fish, and shooting and killing game. The last few drops of wild, aboriginal blood can never be taken from him by civilized life; but he will learn to joy, more and more, in camping and canoeing, as well as fishing and shooting. Few sportsmen are now willing to be known as mere catchers of fish or killers of wild animals and birds. Their outdoor life is the real attraction. The time is near when the sporting publication will be quite as much an authority on landscape and water views, foliage, clouds, mosses, birds and flowers, as it is on angling or hunting. Even now our foremost sportsmen, to whom we look as best exponents of sport, are the nature-lovers, the "rhapsodists" who see and humbly confess that there is more in even a blade of grass than they can ever know, and who pity the "realism" that can only see a tree with the eye of the lumberman, and a rock merely from the standpoint of the stone-mason or quarry-owner.

Doctor Johnson declared that nothing could be written about the sea except the tale of some fisherman whose "haul" had been disregarded, and that of his neighbor had been sold. Carlyle detested word-pictures. "Every puny whipster insists on drawing forth his pencil and painting you a scene." Yet Hamerton's "Landscape" and Ruskin's "Modern Painters" are more worthy of being prized than Walton's "Compleat Angler;" and the nature ballads and poems of Wordsworth, Keats, Shelley and Tennyson are as precious as catalogues of animals. Practical "realism," and nature beauty quite as real, cannot be separated. The devotees of each will be ridiculous if they scoff at the other.

This statement is forced on the "fools" that are so often laughed at as Christopher North was, by men who cannot really see or hear—who are mere shooters or fishermen, and not blessed with sight. I had rather see a sportsman watching the split back of the grub and the emergence and immediate flight of the dragon fly, than to witness the joy of some mere fisherman whose delight comes solely from his new-found possession of a five-pound bass.

These words do not apply to the critics who berate those false and blind pretenders to sight who call nature beautiful when they really cannot see. This whole subject will clarify, for nature and sport have always been and will remain inseparable; and the world will continue to welcome any writer who tries, in a proper spirit, to tell of what nature has revealed to him.

These thoughts come as I hesitate to write further about the Delaware and its fair landscapes here at the Gap. To the summer angler few scenes could be more attractive. Take the view from the porch of the Gap House or the Glenwood, stretching far over the island formed by the main stream and the Benekill, to the hills leagues away. It is superb.

Another very fine view can be had from the Far-View House on the Jersey side. Its interest increases as we go down the path to the river, and over the spot where stamping on the grass brings hollow answers which show the existence there of a cave of unknown size, that an hour's work with a spade would open. And it is finer yet from the boat as we anchor a thousand feet above the ferry landing, and admire the colors of the lichens on that high, steep incline of rocks crowned with forest.

All this is accessible without effort, and can be enjoyed by the invalid and dawdler as well as the camper and climber.

But when, tired with the fishing, the angler and canoeist chooses to become a climber, and especially if he walks over the roughest places to look, he will find dozens of spots where not a half dozen people go during a summer.

The hills at the Gap are not real mountains. Mount Minsi, on the Pennsylvania side, is only 1,400 feet high; yet the view down the valley, while different, is quite as attractive as the Grindelwald, Mt. Blanc, or our own Marshall Pass. Besides, it is near, and can be reached without the week-long, exhausting effort which, in the case of the amateur climber of the Matterhorn, will probably put him in bed a couple of days, and make his muscles roar their sore protest for a week.

Even the exertion of traversing the hill paths at the Gap is avoided by nearly all the summer "birds of passage." Yet the view of Eureka Creek, the shelf of rock known as Lover's Leap, the forest along Moss Ledge, and the features known as Caldeno Fall, Lake Lenape, Hunters' Spring, Moss Cascade, Diana's Bath and Council Rock, will richly repay careful study. And when, after a forenoon's effort, the climber reaches the summit, and sees the silent Delaware so far below that it seems a thing apart, he will be glad he has taken that hard walk.

When we cross the river and climb Mount Tammany, on the Jersey side, the visitors are fewer yet. During a whole season scarcely a dozen people clamber over the rock-falls that lie below the face of its precipice; and not a hundred care to reach its crest.

Only some of the attractive features of that hill which may interest casual readers will be mentioned here. Recreation, not study, is what they seek. One glance at such terms as "old red sandstone formation" or "rock-period," and the reader here would skip, or shut the book.

A long, hard climb up to and over the rock-falls below the face of Mt. Tammany, with their purple and ashy gray, the edges of the dislodged, broken fragments choked in weeds or painted with countless lichens. Here the stones are newly fractured; their hue is different from the pale brown and white of the boulders that fringe the shores of the river, and are full of water-made curves. These cliff stones are sections of parallel strata, split, then broken, and seem like thick blocks of irregularly sawed planks. These strata can be seen all over the face of the cliff, and running parallel to the slope of the hill's river side, every fissure steeply inclined; and over all this slow disintegration fall sharp-edged shadows from sections not dislodged, but will be made more insecure by the wedge of frost and ice—solemn, impending, iron-spirited, distinct, yet with strange, untraceable harmonies of color, and all looking down on the thousands of tons of sister parts already lying prone, two hundred feet and more below. Not one horizontal line of rock or shadow or color, but knife-like cleavage! My comrade calls it a "melancholy of ruin."

When the night-cap mists are being shaken from its head, that peak is full of aerial perspective, and can seem more unsubstantial than the cloud-domes a mile above it. How many centuries ago did the river force its way through the now vanished wall that must have been a thousand feet high, and left these headlands, like crouching lions, overlooking the valley below? How many sunrises has this cliff witnessed; how long has its lengthened shadow been cast eastward at each clear sunset?

If we so admire, write about and paint the unsubstantial mist, mocking clouds and odors, and gloom and moving foliage of a forest, why not pick up one of the stones and see whether the old bard was right in saying there are "sermons" in it? It is just a "darnick," a mere rock. We observe its curved, rounded outlines and surfaces, and realize that it is a tiny hill. The mosses that have gathered in a "patch" on its upper surface are really a tiny forest. The silvery excrescences are lichens. It has been rounded through centuries by the action of water-flow, or by ice under which it has been tortured, clasped and beaten. Think of the influences that have placed it here—what flowers must have blossomed beside it, and the ferns, noble trees, shadows, animal and bird life around it, all "in league with the stones of the field!" Steadfastness of strength, wild, rigid, silent, powerful!

Now fracture it with the hammer. In its inmost being slept exquisite lines of curvature. Just an adamantine, obscure pariah of the earth; yet see how, through all its stubbornness of strength, the colors and lines undulate in ripples and waves—not simply on its substance as in lake waves, but through its fibers! This is at once the fact and the poetry of the rocks, and their pathos! "They which at first seemed strengthened beyond the dread of any violence or change, are yet also ordained to bear upon them the symbol of a perpetual fear: the tremor which fades from the soft lake and glistening river, is sealed to all eternity upon the rock; and while things that pass visibly from birth to death may sometimes forget their feebleness, the mountains are made to possess a perpetual memorial of their infancy." Storm-beaten, lichen-adorned, with creeping stains in exudations of mineral ingredients, it lies unnoticed, interesting, a mountain in miniature.

Another laborious ascent of the hill to its crest at the precipice, where we eat our sandwich luncheon and "settle down" on convenient spots to smoke and watch the league on league of panorama to the east—fields and woods in patches, dots of white houses, dim mystery of distance, and the river lost far this side of the sky-line. Back of us, the abruptly terminated ridge guides the river in an adamantine channel. No transient, downfalling wave as of water, but the fixed, upreared rock-wave and elevation of land ordained to give motion to water. For "the sweet winding valley with peeping cliffs on either side, the light, irregular wandering of broken streamlets, the knolls and slopes covered with rounded woods, and the narrow ravines, carpeted with green sward," all "owe whatever they have of simple beauty" to the sturdy, upheaved rocks.

Unique redundance of happy vegetable life over all the slopes whose trees and brush guard and retain the moisture which feeds their mosses. And such mosses! Wildernesses of them on the rocks! They do not change the rock-form, but gather in little forests "like small cushions of velvet made of mixed threads of dark ruby silk and gold rounded over more subdued films of white and gray, with lightly crisped and curled edges like hoar frost on fallen leaves; and minute clusters of upright orange stalks with pointed caps, and fibers of dark green and gold; and faint purple passing into black, all woven together and following with unimaginable fineness of gentle growth, the undulation of the stone they cherish, until it is charged with color so that it can receive no more; and instead of looking rugged or cold or stern, or anything that a rock is held to be at heart, it seems to be clothed with a soft, dark leopard skin embroidered with arabesque of purple and silver." And there the chipmunk adds his own soft markings of yellow and brown and black as he fills the wild air with his scolding, jerky "*chickarecece!*" scoffing at you while his very body joins in lithe, quick protest at your presence in his domain. And there the mountain lilies nod, and violets cling to fern-haunted banks below umbers in decaying logs. Over all the repose and spell of sweet daylight, and the security and seclusion of wild birds building in the boughs. All probably to pass unnoticed, yet certainly not "wasting its sweetness." There is no little nook in all Europe whose glamour of wild beauty can be a greater joy to the thousands who scamper through the lower Alps. Loveliest beneficences and refinements in tenderest colors, ordained decoration, foreseen harmonies, manifestly for our discovery and delight as unintruding guests! Seemingly all wild chance, full of such marvelous details as would torment and humiliate any painter—filled with creative thought, governed by tenderest yet most inexorable law!

And as one gives it long, concentrated attention, there come crowding upon him strange recognitions of newly seen excellence—quickening pleasures of present-born insight. Its hypnotism makes my comrade throw away his cigar—the air is too pure to be polluted by tobacco smoke. He looks far down at the new aspects of the river from this vantage point, and growls:

"There's where I lost my big fish. Wonder where he is now."

Curious! Hooking a big fish makes an angler feel a sense of ownership, even though the fish gets away.

Then he looks up and down the valley and gives me a lecture on banks and mysteries of near and distant masses of thick foliage—on leaf monuments, leaves motionless, leaves a-flutter in gales. I grow tired of these terms of

FINISH OF ROCKS BY NATURE.

"grave tenderness" of color in distant blue and purple of fields and rock upheavals, the "peace" that broods over Pocono Mountain, twenty miles distant, and the changing hues along its slopes and plateau.

"How frosty it must be up here on a blue winter ni—"

I stop him. "Enough, and more than enough." He persists:

"And what a revelation when these hills flame in scarlet and gold of autumn colors, and shower down a yellow storm of scurrying leaves into the river!"

I start down the steep path, surfeited. A man can only hold "so much." But I cannot too strongly recommend the reader to visit those hills—to climb and study them—their clothed heights, their falls of waste rock, their unredeemed decay, the clear distances, the clouds that coil and die along them, and the low voice of the river below, over which come the faint, sleepy tinklings of the cowbells, and the hoots of locomotives winding along cliffs and sending up their lazy columns of thin, blue smoke.

L. F. BROWN.

Angling in Newfoundland.

THE regular angling season in St. John's opened on Empire Day, May 24. On that day hundreds of trouters availed themselves of the excursion rates offered by the railway company. Although the season was backward, and the day not best suited for fishing, yet various parties reported for ten dozen and upward as the result of their day's take. These trout of course are our native brown or mud trout, and are taken in the lakes and ponds near the railway line. The sea trout and salmon do not run till later.

The number of American sportsmen who visit us has increased largely of late, and the outlook is that the numbers this season will be greater than ever. This would be a drawback if the number of fish and salmon rivers were small, but from the peculiar formation of the island the lakes, ponds and rivers form a large part of its surface, and thousands upon thousands of anglers can get good fishing streams without interfering with each other. In fact, there are thousands of lakes and rivers in the island that have never yet wet a hook, and have yielded fish to no man since the last of the Beothic aborigines camped beside them and levied their toll. With the increasing numbers of British and American sportsmen the traveling facilities are being brought up to date. Good guides, comfortable boarding houses, and luxurious railway accommodation are further inducements to visitors. All these may now be had at very reasonable rates. The principal salmon and sea trout rivers are being looked after by wardens more carefully now than ever, as the Fisheries Department is beginning to realize that it is profitable to encourage the ever-increasing numbers of visitors. Another great advantage offered to British and American sportsmen is that the salmon and sea trout fishing is absolutely free from all restrictions. There are no preserves and no fee or license is necessary for the visitor to fish in any lake or stream in the island. The climate in July, August and September is ideal—mild, bracing and health-giving. The Fisheries Department have reorganized the fishery wardens, and the rivers are now in better condition than ever. In the official reports sent in to the department by the wardens the number and weight of fish caught are recorded. The warden's report for last year for one stream, the Grand River, Codroy, contains, among thirty others, the following record of salmon caught:

	Number.	Weight. Pounds.	Average. Pounds.	Total. Pounds.
H. E. Sir Cavendish Boyle, Governor of Newfoundland	20	8 to 12	10	142
Dr. Gage	16	7 to 30	12	192
F. Donway	17	8 to 14	11	187
M Keattle	14	7 to 18	11	154
A. T. Winter	18	8 to 12	10	180
M. Hayward	25	8 to 12	10	250

Total number of salmon taken, 420; weight, 2,889 pounds; average weight, 7 pounds. About thirty salmon taken by others, names unknown, also a large number of grilse and sea trout, numbers and weight not recorded. Hon. Gathorne Hardy, from June 18 to July 7, 1900, caught 58 salmon, including 34 grilse, ranging from 8 to 22 pounds. These are only random cullings from the official reports of Grand River; other rivers show like good fishing. There are larger salmon caught than the average in the foregoing tables. Major Yardly, an officer in the British army, who spent some time here last year, writing in the London Field of April 4, tells in a graphic description of the fishing and shooting enjoyed by him during his sojourn in Newfoundland. As usual he lost "the big fellow," but nevertheless had royal sport. He says:

"My record last summer on Harry's Brook, which I made my headquarters, was, from the end of June to second week in August, sixty salmon, total weight about 300 pounds; the majority of these were grilse, my largest fish being 14 pounds. Nearly all the fish that I caught over ten pounds were marked by the nets. Undoubtedly there are bigger fish, but they are the exception. One day I played a fish for forty minutes that I saw a good deal of and estimated at thirty pounds, but the hook giving I lost it. A neighboring rod landed a salmon that was three ounces only under thirty pounds; other rods also killed fish over twenty pounds. My friend fishing with me made a bag very similar to my own. In addition we caught many white trout up to four pounds and brown trout up to three pounds, although Harry's Brook is not a good trout river; also we did not specially fish for trout, and these were by chance caught on our salmon flies. Some of my best days would consist of six salmon and many trout. This is a fair example of the sport that is to be had, and I was certainly unlucky not to get bigger fish. Knowing this river I should be sure of a larger bag on it another year."

The flies appear to have tormented the Major, as the remedies he brought were not of much avail. Local anglers use a simple mixture of oil tinctured with carbolic acid; sixteen parts sweet or olive oil and one part carbolic acid. This makes a good remedy for flies. The acid is a little disagreeable in odor, but it consoles the victim to know that distasteful as it is to him, it is more so to the flies. The oil soothes the skin and keeps it from burning and cracking in the sun. Enough mixture to last the trip may be procured from any druggist for a few cents.

C.

CHICAGO AND THE WEST.

Chicago Fly-Casting Club.

CHICAGO, June 16, 1903.—The following are records made at the last meet of the Chicago Fly-Casting Club:

	May 23. Acc'y & Del'cy, Per Cent.	May 23. Bait Casting, Per Cent.	June 6. Delicacy, Bait, Per Cent.

Bass.

The bass fishers are still going out, patiently and faithfully, but they are not doing very much business. The truth seems to be that this is a poor season for bass so far. The best reports have come in from Lauderdale Lake, Wis., where, I hear, that last week three anglers in parts of three days took 153 fish. This story, however, is so lacking in confirmation that I do not offer it as authentic.

Mr. Byron E. Veatch, of Chicago, starts to-day for Prescott, Minnesota, from which point he has received advices that the small-mouths are running on the rip raps and that fair sport is likely to be had. I should think that the water was entirely too high for good fishing on the Mississippi River, but perhaps it may have fallen at this time at points so high up as Prescott, which is only about thirty miles below St. Paul. Mr. Veatch says he got his information from a former boatman who knows what he is talking about. He was outfitting for fly-fishing to-day.

Reports from Fifield Chain, Wis., on the Wisconsin Central Railroad, run to the effect that very good bass fishing has been the rule for the past ten days.

Muscallunge.

The biggest muscallunge of which I have heard in the month of June was taken on the Mason Chain, out of Fifield, and weighed 25 pounds. A number of smaller 'lunge have been taken there.

Trout.

I heard to-day that they are having a big run of luck on the Prairie River again this week, some beautiful trout being taken by the parties at Dudley's, Miller's and Bates'. This stream seems to be unusually freakish this year and would seem to be losing its reputation as an early water.

Pickerel.

One gentleman who went bass fishing on the Kankakee River, out of Shelby, on the Monon, did not meet with very good success with the bass, but caught twenty-six pickerel, all of them small, most of them about 1½ pounds apiece.

Cooking Pickerel.

A friend writes me from Lake Minnetonka:

"When I was in Chicago I forgot the object of my visit to you, and that was to thank you for putting the ignorant public on to the proper method of dressing a pickerel. I read your article a couple of years ago, and have profited by it greatly. We never knew that the despised pickerel was worth skinning before, but since I learned your methods we have never thrown one of them away, and have had the best fish dinners and breakfasts we ever had at Minnetonka. It is surely the only proper way to handle those fish."

As this refers to matter printed some time ago, I might add that our correspondent probably has in mind

the method of preparing a pickerel practiced by Mr. Carrington Phelps, of Lake Minnetonka. This is to take a pickerel, preferably one of 5 or 6 pounds, and to skin the fish, then removing the flesh from the backbone and ribs in the form of two long steaks, which are nearly boneless. These pickerel tenderloins are then broiled after proper seasoning. If the cooking is done out of doors, the fire employed should be made of sound, dry ironwood, burned down to a bed of glowing coals from which no smoke issues.

Summer Fly-Fishing for Trout.

Last week some comment was made upon the grub or larvæ of some of the caddis flies, which latter are familiar to all fly-fishermen for trout. Germane to this is the following comment by Mr. H. G. Cutliffe, who writes in the Fishing Gazette of London, and whose hints may perhaps be of service in summer fly-fishing for trout as practiced by American anglers under conditions practically simlar to those of the Old World:

"I find much spoken about the natural fly and its imitation, but little about the insect before arrived at its maturity. How seldom does one imitate the larva or pupa of the several insects! Many of them must necessarily be often washed into the water and devoured by the trout; and if looked into, these will be found more like some of the hackle flies I use than are any flies in their perfect state. I never have attempted to imitate them, trusting to my stretcher simply as something to rouse the fish and attract him, with some idea of its being eatable. I never use a winged fly on a rapid stream for a bob, excepting the March-brown, and this only in March. A winged fly washed by the water looks more like a little roll of the dung of a rat than a fly—for the force of the current washes the wings close round the hook. For a stretcher, as I have said, always select a smart, gaudy hackle fly. The brighter the weather the more gaudy the stretcher fly; and in June or July, sometimes I use a fly made with a body of orange-colored worsted, ribbed down with yellow silk, to make it last the longer, and a hackle of a light yellow red, such as one can only get from a smart little bantam cock. This fly I have found very destructive. In low and bright water, with these bright, gaudy flies, I find one need be very quick with the rod in fishing; the sport becomes dashing, one must work the flies quickly in the water, for from their greater conspicuity they are the more quickly seen, and will be the more quickly refused if one let them be still in the water. The instant they pitch they will be darted at, and as quickly must the fish be struck. It is just this dash that I so much like in bright water fishing—one never sees the trout so lively or quick or agile as they are on a hot bright day in July; and though this quickness or vivacity may be by some considered an obstacle to sport, it is, in truth, a very incentive to it."

It is quite probable that the dark flies, black hackle, etc., are taken in the spring by trout as the larvæ, and not the winged form of the fly on which they feed, the wet fly looking like the black case or "stick bait."

Good Bass.

CHICAGO, Ill., June 16.—A 5¼-pound black bass is reported from Fox Lake, Wisconsin, this week. The deputy game wardens from Madison who have been undertaking to seine out the worthless fishes, dog fish, gars, etc., from Fox Lake waters, seem to have got about everything there was going except the fish they wanted. The dog fish and gars took to the weeds, but large quantities of black bass, pike, etc., were dug out by the wardens, of course to be returned to the water. The sight was very encouraging to local anglers, who have been having rather bad luck the last few weeks during the cold weather. Mr. Hotchkiss renews his invitation to come up and help him destroy these black bass, which make life in that neighborhood dangerous when they go strictly on the feed. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Massachusetts Fishermen.

Your correspondent yesterday received a call from Mr. E. H. Richards, of Woburn, who reports a very pleasant fishing vacation at Bemis. He was away for two weeks and says he got about 100 trout and salmon. He found the "Archer" (?) spinner a favorite lure, and says it is the same device as the so-called New York spinner, which is reported to have been a favorite at Lake Auburn this year. Mr. Richards says he observed while at Bemis that there seemed to be fewer anglers remaining there than heretofore, more of them going further. The extension of the rails to Oquossoc has no doubt some tendency to make that the objective point for many. He went on an exploring tour to the new Barker and other points on the lake, but said he found the sport at Bemis "good enough" for him.

Mr. W. H. Maxwell, an Eliot street merchant, gave me to-day a glowing account of his recent trip to Lake Cabbossecontee, Me. There were five in the party, and he says they caught chiefly bass. In one day the catch ran as high as 120 fish. They drove in from Hallowell by team, six miles, and fished at the "Outlet" chiefly.

I hear that Col. C. E. Billings, of Hartford, has gone to Billy Soule's again this year, and has taken along a hunting knife of his own make—the handle made of a buck's foot of a deer shot by Billy. On the blade is the inscription: "Designed by C. E. Billings, of Hartford, Conn., for Captain Billy Soule, the mighty hunter of Cupsuptic Lake, Me."

Dr. G. W. Field, of the Institute of Technology and the Sharon Biological Farm, Sharon, Mass., tells me the brook running through the farm has yielded some good trout this spring, and while no shooting is allowed, the brook is not posted. The doctor is enthusiastic in promoting a knowledge of both plant and animal life. The farm contains 300 acres and is about 22 miles from Boston. The town is noted for its wonderfully salubrious climate.

The Pittsburg Eagle, June 10, under the heading of Gt. Barrington items, says: "Dr. Stockwell, of New Marlboro, took a 3½-pound trout in Konkapot River on Monday, and it is to be mounted by Henry Rudge, taxidermist." This is a wonderful fish for Massachusetts waters. The writer has no knowledge of one larger having been caught in our State. The largest square-tailed brook trout taken in Massachusetts that I have seen was taken in the Frog-foot Reservoir, Wareham, by the late Dr. J. T. Stetson, of Boston, a few years ago, and weighed 2¾ pounds.

Representative Knight, of Townsend, Mass, tells me that within a week he has seen seven deer together at one time in his town. I have not the slightest doubt of what he says, although it seems almost incredible. I am personally acquainted with that section of the State and know there are large tracts of woods, both pine and hard wood, and there are several fine trout brooks which Mr. Knight proposes to have stocked by the State.

If they can raise 3½-pound trout in Berkshire, there is no reason why they should not in other counties. A reliable friend of mine said he saw a 2½-pound salter or sea trout caught in a Gloucester pond, on exhibition in a Boston fish market Thursday.

During the dry period as well as since, there have been many fine strings of trout taken from Maine streams, in the Rangeley country, Dead River region; in fact, we may say all over the State where anglers go.

Commissioner Wentworth has recently put three men into court for illegal fishing at Wyndham, Vt., for which they were convicted, and he is now on track of men who are not obeying the lobster law. Trout streams in the Pemigewasset Valley are reported at their best, but probably in Mad River, Compton, sport will be better in a couple of weeks. CENTRAL.

Mr. Spaeth's Pickerel.

JERSEY CITY, N. J., June 20.—*Editor Forest and Stream:* I note with much interest the contribution in last week's issue by Dr. French and Mr. John B. Lunger relative to the 7½-pound salmon landed by Mr. Edward Spaeth after fifteen hours of battle, beginning in the afternoon and ending in the morning of the day following.

I made the acquaintance of Mr. Spaeth last summer at Brown's Inn, Newfoundland, New Jersey, and since our meeting have awaited an opportunity to heap a few coals of fire on his head, for while at the place mentioned he captured a fish in which I thought I had even more than a qualified interest. The article by Mr. Lunger is indorsed by Mr. Spaeth and I write for the benefit of the last-named gentleman and primarily to add my testimony to his prowess on other fish besides the kingly salmon, and help him out among the few readers of FOREST AND STREAM who may be so ungracious as to take the salmon story *cum grano salis.*

A few miles from the hotel at Newfoundland lies a body of water known as Green Lake, which has long been a favorite stamping ground of the angler. On a certain day in mid-summer I had been fishing the lake industriously and had not been very well rewarded. There is one particular spot located near the boat landing where more fish have been taken than at any other point. It lies off the lily pads near the south side of the lake, and is marked by a large fence rail, to which the citizen first on the premises is wont to tie his boat.

On the day in question the lake was very calm and objects could be seen at the bottom. At mid-afternoon we came to anchor at this spot and had not been there very long before I observed a large pickerel at the bottom and started in to tempt him from the water. I played tag with all kinds of bait for an hour or more, but could not get a strike, and finally left the spot and started for the hotel.

As pickerel of late years have seldom been caught in the lake, I did not feel very well satisfied over the fact that this monster had gone unscathed, but found consolation in the thought that we would return later in the week and make a further effort to capture the fish.

On reaching the hotel that evening Mr. Spaeth and Judge Coult had arrived for a few days' fishing. In conversation with the first-named gentleman that evening, and in an unguarded moment, I told him about this pickerel and my qualified interest in it, and also told him that I expected soon to reduce it to possession. Mr. Spaeth seemed very much interested, and the next morning I found that the two gentlemen had made an early start for Green Lake and had taken with them an importation of shiners from a pond near the hotel. At that time I did not know the amount of pluck and endurance wrapped up in Mr. Spaeth, as exemplified by his fight with the salmon, and did not for a moment doubt that my pickerel would safely withstand all efforts to capture him.

In the evening, however, the gentlemen returned, and on inquiry as to the catch, they produced the identical pickerel which had fooled us the day previous. Now, I am sure it was the same pickerel, for it was caught at the spot I have mentioned, and the lake contains very few members of the *Esox* family; in fact, the number caught each season does not average over a dozen.

The superior skill of Mr. Spaeth, and that alone, brought about the capture, and I am sure the aforesaid importation of shiners had nothing to do with it. The fish had already been weighed and according to Mr. Spaeth tipped the scales at four pounds. It certainly was a splendid specimen and looked even larger as it lay in their basket garnished by some four or five infant small-mouth black bass, and as the little darlings of the bass family had hardly cut their fins, it reminded one very much of Gulliver and the Lilliputians.

Knowing that such a noble fish was not captured without incident, I finally drew out the story, Judge Coult assisting. If my memory serves me correctly it was practically as follows: At exactly 2:15 o'clock in the afternoon the pickerel took one of the imported shiners; precisely fifteen minutes was allowed in gorging the bait, and at 2:30 the fish was hooked and Mr. Spaeth began to play him. Just one and three-quarter hours later, at 4:15 P. M. by Judge Coult's watch, the fish was brought to the landing net. During this long interval, when fighting for his life, the imp of four pounds ran, dove, slid under the boat and sulked, made fourteen distinct and separate lunges toward the lily pads and nine desperate efforts to connect with the fence rail to which the boat was tied. Judge Coult estimated that the monster traveled at least four miles during the fight and regretted that he could not be more accurate in view of the fact that he had no cyclometer with him.

While weighing but four pounds the pickerel was more rakishly built than usual; in fact, was of the torpedo boat variety.

Mr. Spaeth has been singularly fortunate in hooking and landing within a year two such remarkable fish as the clipper-built salmon and the torpedo-boat pickerel, and should certainly be satisfied with these honors for some time to come.

It will be hoped that he will soon give us the story of the salmon from his own pen, and perchance get his comrade and whist partner, Judge Coult, to add a brief. If he should disclaim some of the facts that I have given, his action will be due to modesty alone, for I have endeavored to tell the truth.

KENNETH FOWLER.

Amphibious Trout.

IT is not safe at all times to tell another man's story—especially if it be a fish story. Some people do not know the meaning and import of quotation marks, and as my article in the FOREST AND STREAM on "Wild Trout I Have Met" has been freely copied in the public prints, I find I have established myself in the minds of my friends and the public generally as a man who intimately associates fish and mendacity.

And yet everything in that article beyond the pale of inverted commas was literally and absolutely truthful. Moral—Don't tell another man's fish story, no matter how good it may be.

As to Mr. Roxbury's suggestion of "jacking" the first big wary and flouting trout that I meet, I can hardly agree with him as to the propriety of such a course. It certainly would be a low down trick on that trout and would, if the fish were so captured, add but questionable laurels to the brow of the captor. Fool a trout, if you can, in open daylight, and when hooked and fairly fought and landed exclaim, "Old fellow, I fooled you that time." But in the darkness, after having landed a big fellow by means of bullseye lantern and worm, what answer could we make were the trout to exclaim: "You have me, I'll admit, but you couldn't do that in the day time."

To espy a floating clod of earth and grass coming gently down stream and to throw one's worm (let us be honest with ourselves—we all of us have descended to the lowly worm and agile hopper at times, let us roll our eyes in holy horror as we may when worm and trout are mentioned in the same breath) across the same, the wriggling bait showing just below the sod and thus tempt a post-graduate trout and land him, is simply a case of tact and strategy on the part of the fisherman. My friend Countryman played this trick on a two-pound brook trout, and Countryman is a sportsman in the cleanest acceptation of the term from the ground up. When Countryman gets full of rheumatism, wheezy from asthma and can fish no more, he'll smoke his pipe under his vine and fig tree and tell that story of how he fooled that trout to his grandchildren as one of the great feats of and during his long life. But I know if he had taken that hyper-educated trout by means of a bullseye lantern in the dead of night, when shadows and noise are swallowed in the darkness, he would not tell about it. CHARLES CRISTADORO.

ST. PAUL, June 12.

Trout Mortality in the Adirondacks.

Editor Forest and Stream:

Answering the interrogatories of Geo. L. Brown in a late issue of the FOREST AND STREAM, "what killed the brown trout in the Bouquet River at the burning of Euba Mills in the Adirondacks June 3, 1903, was it extreme heat, lye, lime, oil, or fright?" Three of the causes suggested can be eliminated with the stroke of a pen—"lime, oil and fright." What would produce "lime and oil" at a fire along a stream of pure, uncontaminated mountain water 1,000 feet above tide? And if fright would kill the trout, there would not one be living to-day in all the Adirondack lakes and rivers. They have heard blood-curdling fishing lies enough to exterminate the entire species. Then the cause must be looked for in the two other queries—"heat and lye." It is inferred that there was a pond of some capacity at the mill, and a dam, that the fire was so intense that it not only burned the mill and its accumulation of waste and debris, but also burned the dam and drained the pond. These dead fish found down the stream from the mill were at home at the dam, either just above it or just below and under the mill. They were probably partially landlocked in a shallow pool from natural causes, and partially from burning timbers of the mills falling into the stream, choking its flow. Thus the great quantities of ashes, coals and burning wood so suddenly precipitated into the water, accompanied by intense heat, generated the alkaline salts (lye) in such quantities as first to stupefy and then to kill the fish before they were able to reach fresh water. It was not heat, nor heated water that killed—heat was only an auxiliary in quickly producing the deadly alkaline salt that did kill. This seems to the writer the most reasonable explanation or cause that can be given for the killing of the brown trout at the burning of the Euba Mills.

American Fisheries Society.

APPLETON, Wis., June 4.—The annual meeting of the American Fisheries Societies will be held at the U. S. Fish Commission station, Wood's Hole, Mass., July 21, 22 and 23, 1903. The objects of this society are "to promote the cause of fishculture; to gather and diffuse information bearing upon its practical success, and upon all matters relating to the fisheries, the uniting and encouraging of all the interests of fishculture and the fisheries, and the treatment of all questions regarding fish, of a scientific and economic nature."

The opportunities for advancing these objects were never better than at the present time, and the place of the annual meeting presents unusual facilities for observing the practical work of marine fishculture and biological investigations. GEO. F. PEABODY,
Secretary.

The Greenwood Lake Muscalonge.

LOCKPORT, N. Y., June 19.—*Editor Forest and Stream:* The muscalonge reported in this week's issue of FOREST AND STREAM taken from Greenwood Lake must have been a monstrosity, or, in fishing parlance of fifty years ago, "a slinky." I remember more years ago than the above taking from the St. Lawrence River a "pickerel" (pike) with a large head and long lank body which the oarsman called a "slinky," and which came to boat more like a stick than a fish.

A fish of the species of *Esox nobilior* measuring fifty-eight inches should weigh at least fifty pounds.

In November, 1899, you published a picture from a photograph (I sent you) of a muscalonge measuring 49 inches in length and 23½ inches around the middle which weighed 42½ pounds. This was a fine proportioned specimen, the head, including the gill covers, was one-fourth the length of the fish.

I am not an angler, but am always interested in piscatorial matters. I have lived in Lockport nearly forty-one years, and never, until last Tuesday, June 16, the first day of the open season on black bass, put a line in Niagara county waters. I caught one fish, a rock bass, and that was taken on the Erie county side of Tonawanda Creek.

I did most of the rowing of the boat. I am too lazy to fish. J. L. DAVISON.

Time to go Fishing.

ENOUGH is more than a million, and the Floridian who cultivates contentment is richer than Pierpont Morgan, and happier than King Edward.

When the phosphate boom was in its infancy, the lamented John Dunn paid one of these home-loving people $16,000 for a tract he had tried in vain to sell for five hundred. The sum conveyed only a vague impression to the recipient—he wanted the cash in hand. "Don't do that," said Mr. Dunn; leave it in the bank and tell me what you want." He wanted another farm of sixty acres with a house on it—the whole to cost a few hundred. "What else?" "Can I have a horse and saddle and bridle?" "Certainly." "And a rifle?" "Yes." "And some provisions?" "Yes." His eyes began to bulge. "And a keg o' whiskey?" "Yes." There was a pause. "What else?" "Oh," said the rich, "give me $50 for the old woman to buy things for herself and the children." "All right." He turned to walk away.

"What else?" "Is there more yet?" "Yes." "Well, give me a plug o' tobacco and set me down where the fish will bite all day and you can have the rest."—Florida Times-Union.

Ouananiche at the Grand Discharge.

MR. W. M. DONALDSON, of Harrisburg, Pa., has the year's record fish for Lake St. John, a ouananiche weighing five pounds, length 28 inches. It is the largest taken in five years. The rod used weighed 5¾ ounces; it required forty-five minutes to land the fish, which jumped out of water eight times. It was caught below the Grand Discharge in Lake St. John.

Colorado Bass.

GREELEY, Colo., June 18.—Some good catches of large-mouthed black bass are being made at Windsor Lake, Windsor, Colo. This lake, which covers 240 acres, has been well stocked with black bass by Vernon McKelvey, of Greeley, Colo., and has already become quite a popular fishing resort of the West. X.

This was Different.

The shades of night were falling fast
When I hooked a noble fish at last.
My pliant rod had something to do,
As I played that "devil" the dark night through.
But when morning lit the eastern haze
And this noble salmon was exposed to my gaze,
I woke up.

Consul A. L. M. Gottschalk writes from San Juan del Norte, Nicaragua, in regard to the use of shark fins for industrial purposes in the United States. He says:

"Sharks exist in large numbers on this coast. The Nicaraguan fishery laws seem to permit of their being caught as vermin. A number of persons here believe that they could deal with the United States in shark fins or in shark backbones and skins. The former are used extensively in some countries in the making of walking canes; the latter are made into a leather employed for sword grips and fancy articles. Large quantities of these products could be sent to the United States were there a market for them."

Two bull buffalo calves have been caught out of the Yellowstone National Park wild herd on Pelican Creek and brought to the tame bunch at the Springs. There were three calves in the wild herd. Five calves have also been dropped in the Springs bunch, with more to come.

The Kennel.

Fixtures.

Oct. 6-9.—Danbury, Conn., Agricultural Society's show.
Nov. 3-6.—New York.—Annual show of Ladies' Kennel Association of America.
Nov. 9.—Fourteenth annual beagle trials of the National Beagle Club of America. Charles R. Stevenson, Sec'y.

Man-Trailing Dogs.

PORTLAND, Ind.,—*Editor Forest and Stream:* We have had bloodhounds in this town for some years, and my observations may answer in part the inquiries of your Paris correspondent. They are kept here solely for the purpose of trailing human beings, and are trained for the work while young. The dogs are of small build, somewhat larger than a water spaniel, with short hair and long ears. The resemble our oldtime 'coon hound in all particulars except stature. They were worked here in pairs, and when about half grown were trained by some one of their keepers sprinting off a short distance and hiding. Then they were put on the trail and encouraged by their trainer until they found the game. From play at first, the chase becomes to them a matter of business, as they grow in age and experience. Officially, I think the courts hold their evidence generally only circumstantial. Once they are put upon the right trail, it is necessary for the pursued to get off the earth, literally, and there is no question as to their value in furnishing clues under favorable circumstances.

The following is a brief account of an actual occurrence: A few years ago a widow living alone in the northeastern part of this city, was one day found murdered in her home. Before a couple of young bloodhounds, owned by members of the fire department, could be put on the trail, several hundred people had tramped in and out of the house. However, foot prints were found in a truck lot at the side of the house. The prints were those of a small man and of a large-footed man. The tracks had been made after a light shower that had fallen some time in the evening; and here the dogs gave tongue and trailed around the stave yards and out to North Meridian street a quarter of a mile, where they lost the scent in the street.

They ran the trail a second time with the same result, then were brought uptown, and while going toward the crossing of two railroads, gave tongue at the back of a brick block, where the weeds were trampled down under the shadow of a high board fence. From this point they ran south and west across the railroads into an old wooded brushy cemetery, then turned east, recrossing the Grand Rapids & Indiana Railroad, through a lumber yard, then south across a street, through a sawmill yard, through the backyard of a small residence, and right over a wood pile, then circling east, stopped at a dwelling for a moment, then took up the trail again, ran it to the coal sheds on the Lake Erie & Western Railroad, and lost the trail on the railroad track. Now for the sequel: Where the dogs stopped at a doorstep before proceeding to the railroad, where the trail ended, lived a small man, quiet in manner, plain in dress, with few if any associates. He was considered a cripple, as he carried his left arm in a sling, but was looked on with suspicion on account of certain petty thefts that were laid at his door. The police brought him to headquarters, but could get no evidence from him. However, they were not satisfied with his manner and his evasive answers and called again to see him. His aunt, who was mistress of the house, said in reply to their inquiry, that he was upstairs in his room, and she would go up and call him. The officers stepped inside as she started up the stairs. Hearing an unusual noise in his room, they hurried up, to find he had cut his throat with a razor, and was breathing his last.

A freight train had left the coal sheds about 11 P. M. the night of the murder, going west. A man was arrested in the central part of the State and tried for the murder. It was proven that he had told a friend the day before that there was an old lady living alone up the road and that he was going up to "pull a peach." He had no money before the murder, but quite a sum after. He was sent to the pen.

I went to the scene of the murder about 4 P. M., and to my eye a plain panorama opened before me. The old lady had brought kindling and laid it on her little box stove, then possibly had been attracted out of doors by some unusual noise. She had stepped on a narrow board walk that ran from the front around east and north of the house, and was standing on the bare, damp earth facing to the north, where the yard was covered with small fruit trees. A small man had slipped up to her right side or back of her, seized her by the throat and attempted to throw her backward. In his efforts to do so he had set his right foot out in front of her, pressing and twisting his shoe into the yielding earth, nearly an inch in depth. There was a smear on the ground between the walk and the house, and there was mud on the old lady's dress, where her hip struck the ground. She had then been taken into the house, either before or after she was dead. One carpet slipper was on a foot, I picked the other up from the ground in front of where she had stood in the soft earth.

A small man attacked her, a small man ran from the place. The dogs trailed him to where a small man lived. A small man cut his throat when the officers called. A large man was with a small man. The dogs trailed them together past where a small man lived and to where he could board a freight train. A large man was apprehended in another town, arrested, convicted and sent to State's prison. The dogs did not convict either, but they pointed the way.

G. W. CUNNINGHAM.

PORTLAND, Ind.

Editor Forest and Stream:

I have read with much interest the different accounts of man-tracking dogs in the current number, the more so as among the many different dogs that I have had from time to time I once owned a "bloodhound"—or at least a dog that came as near being one as do most of the dogs of the South pointed out to me as being bloodhounds. This dog of mine seemed to be a cross between a fox-hound and a bulldog. I got him from a Mexican who had been out west of Fort Chadbourne, Texas, on a prospecting trip, but had found no silver or any thing else.

He wanted five dollars for his dog, but I finally got the dog for a dollar, buying him probably just because he happened to be a dog. I had as much use for a dog of this kind just then as a wagon has for five wheels. The dog had never had a name, so I named him Jeff, and after he had killed all the cats he could find (I never knew him to hunt anything else but cats), he put in the most of his time eating and sleeping. He was about the laziest dog I have ever seen; but was a good watch dog at night, and in the field we used him on picket. He would lie at the sentry's feet at night and no Indian would be likely to crawl up and put a knife in that sentry, as I have known to be done more than once.

I had owned Jeff nearly two years when one night two general prisoners, who were serving out sentences in the guard house, made their escape, taking a carbine with them. The next morning I was sent for by the officer of the day and found him ready to hunt the men, but he was at a loss to know just where to begin, and asked if I thought Jeff could track them. "I can try him, sir," I said. "I have never known him to track anything except cats, though."

I called Jeff, then got a pair of red stockings that one of the men had left in the prison room, and, taking Jeff out on the prairie in the direction we thought the men had left, I gave the dog a smell of the stockings and told him to hunt them. He began running around in a circle, and soon struck their trail and went off on it. I followed Jeff at a gallop, the mounted men coming after me. The dog led us across the prairies parallel with the road but half a mile away from it, and after he had gone eight miles he turned to the left and led us into the road just where the men had taken it. We could see their tracks here in the dust.

He kept on down the road to where a creek crossed it, then turned down the creek, and, after he had gone a mile, stopped in front of a lot of bushes and began to bark. A shot was fired out of the bushes at us. Calling Jeff in I got ready to shoot if any more shots should come, but one of the men came out, and, holding up his hands, came down to me. Then the mounted party coming up (for Jeff and I had left them far in the rear), the other man who had the gun surrendered, and we took them home.

I was criticized afterwards by the men at the post for hunting white men with a dog; but these men were of the class who, had they been citizens instead of soldiers, would have put in the most of their time in some prison, so I did not lose any sleep on account of having hunted them with a dog. Had I refused to do it, I would have been tried for it myself.

I kept Jeff a few months after this, then gave him to two boys who were going to Utah. I had too many dogs just then, and Jeff was the one I could best spare.

CABIA BLANCO.

Yachting.

Yachting Fixtures for 1903.

Members of race committee will confer a favor by sending notice of errors or omissions in the following list, and also changes which may be made in the future.

JUNE.

25-26-27. Seawanhaka Corinthian, Y. R. A. of L. I. Sound, annual and specials.
27. South Boston, club, City Point.
27. New York, special race for 90-footers, Newport.
27. Boston, club, Marblehead.
27. Beverly, club, Monument Beach.
27. St. Paul, cruise, rendezvous St. Paul, Minn.
27. Chicago, special, Lake Michigan.
27. Royal Canadian, club, Toronto.
27. New York C. C., Y. R. A. of Gravesend Bay.
30. New York, special race for 90-footers, Newport.
30. Royal Canadian, L. S. S. A. regatta, Oakville.
29-July 2. Manhasset Bay cup races, L. I. Sound.

For Cruising Yachtsmen.

WITH the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1903, the publishers of FOREST AND STREAM offer prizes for the best stories of cruises submitted to be published in FOREST AND STREAM. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $75.00.
Second prize, $50.00.
Third prize, $25.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1903.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. Photographs of the boat and of the country passed through, not smaller than 4x5, should, if possible, accompany each story, and they will be considered in making the awards.

5. An outline chart of the trip drawn on white paper in black ink (no coloring pigment to be used) should also be sent in.

6. Competitors should avoid the use of slang or incorrect nautical expressions in their stories, as it will count against them in awarding the prizes.

7. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York City, on or before Nov. 15, 1903.

ON Wednesday of last week the two Shamrocks were warped into the big dock at Erie Basin. The new boat was blocked up in accordance with a plan furnished by Mr. William Fife, the designer, but as this was found to be incorrect, she was floated outside the pontoon and the mistake was corrected. Shamrock I. lies at the upper end of the dock, while Shamrock III. is at the lower end, near the pontoon. It took some time to readjust the keel blocks on which the third Shamrock was to rest, and in consequence the boats were not finally exposed to view until Thursday morning. Shamrock I.'s mast was stepped, and her other spars were put in place before she went into the dock. As soon as the water was pumped out of the dock the crews went to work on their respective boats. Staging was slung over the sides and the work of smoothing the bottoms preparatory to painting was begun. The old boat's bottom being of bronze, it was only necessary to rub it down. The new challenger's bottom is covered with a white enamel paint, and while it is difficult to apply it gives a very hard surface which is susceptible of a very fine finish. The wet weather has delayed the work somewhat, but nevertheless good progress has been made. Shamrock I.'s spars have been painted and her standing and running gear has been overhauled and set up. The bowsprit has been put in place on Shamrock III., and the mast will be stepped as soon as she goes out of the dock on Tuesday. All her spars and some spare gear came over on the Anchor Line steamer Columbia. The spars that arrived on Etruria some time ago are not the ones she will use over here, and are only for emergency. It is expected that both boats will have a trial off Sandy Hook on Saturday.

Shamrock III.

EVER since Sir Thomas Lipton's new challenger, Shamrock III., was launched, glowing accounts of her great beauty and wonderful speed have been published. On this side of the water there has been the delightful feeling of uncertainty as to the outcome of the races this year. While there is less real interest in the coming matches than in many years past, still there was a very general sentiment that the Cup was in great danger of being lost. Shamrock III. demonstrated her ability to defeat the first Shamrock in any kind of wind and weather in the trials on the other side, and it was conceded that the new boat was twelve minutes faster over the Cup course than the old. This in itself aroused our fears, and perhaps without reason, for this conveys but little, as it is not known whether Shamrock I. is faster or slower than she was when she met Columbia in 1899. In order to be in Columbia's class she would have to be quite a little smarter than she was four years ago. On the other hand, we are a little at sea as to Reliance's superiority over Columbia, for while the former boat has been able to beat Columbia with greatest ease in light and moderate winds, still it is certain that Columbia is not sailing as she did two years ago when she was in Barr's hands. Granting this to be the case, the fact remains that Reliance is a marvelous craft, and those who have followed the trials of the three boats up to the present time are satisfied that she is almost invincible.

The arrival of the new challenger was looked forward to with great interest, and even under her stumpy jury rig she won over all who saw her by her remarkably handsome and shippy appearance. The reports on this score which had seemed so extravagant were not exaggerated; still, on second look, there was nothing remarkable about the boat and nothing that would account for the amazing speed she had shown. Perhaps there might be something striking about the boat's underbody that would account for her splendid performances, and consequently everybody looked forward to seeing the boat in the dry dock. When the two Shamrocks did go into the big graving dock at Erie Basin and the water was slowly pumped out the new boat was watched with much curiosity.

Only a fair idea of the boat's underbody could be gained from the top of the dock (no one except those directly connected with the yard and the boats themselves was allowed to go down in the dock), but such as the view was, those who saw her were satisfied that, barring accidents, the Cup would remain another year in the States. Nevertheless, the new boat is far and away the handsomest and most formidable craft that has ever come after the Cup. We are still of the opinion, however, that Constitution could safely defend the Cup against Shamrock III.

Shamrock II. lay in a cradle hardly a stone's throw from the other two Shamrocks in the dry dock. Shamrock II. has been here ever since her defeat in 1901, and as the hull, with the exception of the lower part of the fin, was exposed to view, it offered an interesting opportunity for comparison.

It is quite apparent that Mr. Fife's idea as to what kind of a boat is best adapted to win races off Sandy Hook in our summer weather are wholly different from those held by Mr. Herreshoff, for Shamrock III. and Reliance are unlike in almost every particular. These two great designers have worked along opposite lines, and their latest productions are wider apart in design than any of the challengers and defenders have been of late years. This fact alone will add more interest to the races and should make them more conclusive.

In the main, Shamrock III. has longer overhangs, more beam and less freeboard than her two predecessors. She suggests Defender rather more than any of our Cup boats, for she seems to have all the good qualities of that fine vessel. Her displacement is heavy, and she has rather more than Reliance.

It is difficult to judge of these vessels' dimensions, but it is believed that she is about 140ft. long over all. Reports from the other side gave her breadth as 22ft., or thereabouts; in reality it is rather more than that, and it is nearly 25ft. and perhaps more. The draft is very close to 20ft.; while the overhangs are long they are well balanced and only serve to carry out the fore and aft lines of the boat fairly.

The stern post rakes rather more than Shamrock II.'s does, but it is not an immoderate rake for a Fife boat. The point of greatest draft is just at the heel of the stern post. The fin is a little shorter than Reliance's, if anything, and the bottom line of the lead shows a marked rise from the heel of the stern post to the point where it begins to sweep upward to where the fin joins the hull proper, which is just about under the mast step. The lead is bulbed out at the bottom in a very pronounced fashion, which gets the bulk of the weight down as low as possible. Aft the keel is only the thickness of the stern post, but it is wide and blunt at the forward end.

Her midship section is different from those seen in the earlier boats. It has considerable dead rise and a deep, easy bilge that is carried well forward and aft. The topside shows a slight flare and the garboards are fuller than would be expected. She has less lateral plane than Reliance, and should be very quick in stays. Owing to her deeper section, Shamrock III.'s bow and buttock lines will not be so flat as Reliance's, but, like the diagonals, are full easy curves. The sheer is quite marked, and is very graceful. The boat is strikingly fair and well modeled and precludes criticism and is the work of a great artist.

The construction of the boat is very fine. The frames and plating are of nickel steel and the hull has been worked down so smooth that not a rivet head or a mark of any description shows. The lead—and there must be nearly a hundred tons of it—is covered by the steel plating. The rudder is of wood, and in all probability makes the boat easier to steer than if it were of metal, as it is lighter and more buoyant. The boat steers with a wheel, which is small, and the gear controlling the rudder must be very powerful and compact, for the wheel box is small. There is no rail except for a small wooden strip some two feet in from the edge, which follows the contour of the deck line fore and aft just high enough to give a foothold to those moving about to leeward when the boat is heeled down.

From the size of the spars which the boat will carry, her rig will be a little larger than the first Shamrock's. The pole mast (for the mast and topmast are all in one) is constructed very much the same as the steel spars used on the American boats. Eight angle irons act as longitudinal stiffeners, and there are steel collars inside placed about ten feet apart. The plating on the mast is nine thirty seconds of an inch thick. From the partners to the step the mast buries less than ten feet.

Shamrock III. should heel easily and her flaring side ought to give her very fair sailing lines. Her overhangs are not so flat as Reliance's, and she will not gain length so quickly as that boat will. She should move through the water with very little fuss, and no doubt will prove an excellent sea boat. Her strongest point will be on windward work and she will be most dangerous in a light breeze and a jump of a sea. In all probability Reliance will have to allow her some time owing to her larger rig, but she can well afford to pay for that, as it will more than compensate for the time she will have to allow, particularly in light winds.

Shamrock III. is not only the best boat that has ever come after the Cup, but her early arrival on this side and the constant racing she will have with the first Shamrock, will put her in better condition to meet the defender than any of the other challengers have been. She is sure to make a good showing, and the races next August ought to be more interesting than they have been heretofore.

Seawanhaka Cup Trial Races.

BY A. HENRY HIGGINSON.

As is doubtless known to the readers of FOREST AND STREAM, the Royal St. Lawence Y. C. which has its home on the borders of Lake St. Louis, at Dorval, accepted this year the challenge of Manchester Y. C., of Manchester, Mass.

The agreement entered into by the two clubs has been given in full in this paper, and it only remains now for the Manchester Y. C. to send two or more boats to Canada, where their final representative will be decided upon. In their preliminary trials, which were held at Manchester, five boats competed: Frontenac, owned by Charles De Hart Brower; Atalanta, owned by Edgar F. Lynn; Dulce, owned by Egbert Moxham; Vampire, owned by H. D. Tudor, et al.; and Kolutoo, owned by A. Henry Higginson, et al.

Atalanta was designed and built by Wyckoff Bros., of Clinton, Conn. She is a heavily built, heavily rigged boat of moderate beam, with short high overhangs about equally divided between bow and stern. She has a heavy iron centerboard weighing 450 pounds. Everything about the boat is too heavy. Brass hand rails, brass bow chocks, heavy shrouds and heavy manilla halliards are not in place on a racing machine. The boat's model is a year or two behind the times and she has not the slightest trace of the scow about her. Her sails are by McClellan, of Fall River, and can only be said to set fairly. Atalanta was sailed in her races by her owner, E. F. Lynn, with C. Le M. Smith, Wm. Woods, and Schuyler Horn as his crew. Dulce, owned by Egbert Moxham, was designed by her owner. She is a heavy centerboard boat with very hard bilges and short overhangs. Unlike the other four, she is fitted with bilgeboards instead of a centerboard, and by means of a winch the weather one of these boards is always up, and the lee one down. Her sail plan shows a very short gaff and a rather long boom on the mainsail. The sails made by Wilson and Silsby are good as far as cut goes, although the Wilson fullness comes near to being baggy, but the material out of which they are made is so hopelessly heavy that the boat is very badly handicapped by them. She, too, is very heavily rigged, which handicaps her a good deal. She is the first effort of her young designer, and Mr. Moxham deserves great credit for the sportsmanlike manner in which he sails his boat. No matter how far behind he may be, he never withdraws, but keeps on pluckily to the finish line. It is the kind of spirit which wins in the end, and I expect some day to see Mr. Moxham in a faster boat of his own design which will sometimes at any rate get the gun. With him as his crew are Messrs. Chase, Ward and Burnham.

Frontenac is owned by Charles De Hart Brower, Jr., of New York, and was designed for him last year by Gus Amundson, of White Bear Lake, Minnesota. She is a scow of pronounced type and a moderate beam, which is carried far aft and forward. She has a fairly hard round bilge, and her bow is well rounded off. She is, to my mind, too heavily built to sail to best advantage, and her rigging and gear generally could be quite a bit lighter, but she is a good all round boat. Last year she was one of the aspirants to go to Canada, and this year she is a good bit faster. Mr. Brower has the great advantage of knowing his boat well, and of having had the experience of one year's racing in her. She has a low broad suit of excellent sails made by Wilson and Silsby. She is sailed in her races by Mr. Chas. De H. Brower, Jr., with Messrs. C. De H. Brower, Sr., Willis Putnam and Hadenburg as his crew.

The two Manchester boats were both designed by Burgess and Packard, and one of them, Vampire, was built by Elisha Hinds at Gloucester, and the other, Kolutoo, by The David Fenton Company, of Manchester. Vampire is a long, low-bowed scow with a very long forward and a very short after overhang. Her bilges at her entrance are very hard, flaring gradually more and more till amidships it is very pronounced. There is very little dead rise to this boat and her bow ends in two oblique transoms converging to a point. When under sail she uses almost every foot of her length, and on a reach is very fast. Kolutoo is a quite different boat, and is more like the Canadian boats than anything built in the United States during the past two years in many ways. She has fair easy lines and her sections show a good bit of dead rise, and considerable flare. She is drawn in at the bow to a fairly sharp entrance, and at the stern somewhat. Unlike any other boat in the fleet, her hull is covered with canvas, and in consequence her surface is somewhat the smoothest of the lot. Both boats have two peculiarities in common. The first one of them is that their stern transoms have been hollowed out, which makes the sterns look like the open part of a sugar scoop. The idea in this is to gain weight, and to make an easy exit in sailing. The other peculiarity is that the deck forward of the mast looks like a pitched roof, the ridge pole of which runs from the mast to the bow. The idea in this innovation is to gain strength, and to raise the area of the fore triangle, which is measured from the deck. Both boats are lightly rigged and both have excellent suits of sails made by Cousens & Pratt of lighter material than any in the fleet. The sail plans are identical, and are high and narrow. Vampire is sailed by her manager, Mr. Frank Burgess, with H. D. Tudor, Joseph Lovering, and G. D. Boardman for crew; while Kolutoo has Reginald Boardman at the stick, with A. Henry Higginson, R. D. Boardman, and James Jackson to help him. In one other respect these two boats differ from the others: Instead of having metal boards they have wooden ones, with 130 pounds of lead in the lower corner. I append a table of dimensions below for comparison:

	Over all. Ft.In.	L.W.L. Ft.In.	Ex. Beam. Ft.In.	Beam, L.W.L. Ft.In
Vampire	41 00	27 00	8 00	7 07
Kolutoo	39 00	26 06	8 04	7 08
Frontenac	38 02	25 05	8 03	7 06
Atalanta	36 00	25 06	7 03	7 00
Duke	36 00	24·04	9 00	8 11

First Race, Wednesday, June 10.

At noon the prospects for a successful race were very poor, and a thick fog hung over Salem Bay, while the wind was very light and fickle. About one o'clock, however, the fog lifted a little, and the wind came in from the southeast, and though very light, it held true throughout the race. At 1:15 Ventura, the steam yacht which was to act as judges' boat during the series, came out and took up her position off West Manchester. The mark boats were set out, and the signals displayed for course No. 12, which was a broad reach to Bowditch's Ledge, a beat to buoy No. 3, off the southwest end of Baker's Island and a fairly close reach in. Dulce, owned by Egbert Moxham, was the first of the quintette to poke her nose into the outer harbor, in tow of the launch Patrol. A few minutes later Vampire, Atalanta and Frontenac came out under their own sail. They carried full mainsails and No. 1 jibs. Dulce hoisted her mainsail and a No. 1 jib, and cast off from her launch about 1:25. Frontenac had on a new suit of sails, made for light weather, by Carpenter, of Chicago. They are higher and narrower than Wilson's suit, and though made of lighter material, do not seem to set well at all. Atalanta had on a suit of sails built by McClellan, of Fall River, and they did not seem to set over well. In marked contrast to these three suits of sails were those of Vampire, made by Cousens and Pratt, which set to perfection. At 1:35 Kolutoo came out of the harbor in tow of her steam tender. She had on sails which, like those of Vampire, were made by Cousens and Pratt, and which set equally well. All the boats except Dulce were black-leaded to the rail. The breeze was very, very light, and as the boats sailed about near the line, they seemed to move in a very listless fashion. However, at 1:55 the preparatory gun fired, and ten boats began maneuvering for the start. Kolutoo hung round the leeward end of the line, while Dulce, Atalanta and Frontenac remained near the middle. Vampire was on the extreme windward end of it. All the boats carried balloon jibs in stops, as the first leg was a very broad reach. When the starting gun went, Frontenac was first over, with Kolutoo, which had come up close-hauled along the line, on her weather quarter. To leeward Vampire was away in the lead of the other two. All except Kolutoo had broken out their balloon jibs, but she and Frontenac had a bit of a luffing match, while the other three were reaching off for the leeward mark. Kolutoo, after having luffed with Frontenac 300 yards out to windward, squared off, broke out her ballooner and set her spinnaker to port, and went through Frontenac's lee. It was so thick that all five boats soon found that they had got too far to windward, and all set their spinnakers for a few minutes. The boats passed the western end of Misery Island in the following order: Vampire, Kolutoo, Atalanta, Frontenac and Dulce. At 2:57:02 Vampire hauled around Bowditch's Ledge with Kolutoo 58s. astern. The other three turned in the same order in which they had passed Misery Island. Once in the wind the two Manchester boats dropped

the others very fast, and the fight was narrowed down to the two Burgess boats. Kolutoo had gained quite a bit during the last part of the first leg, and shortly after rounding Bowditch's Ledge she tacked to starboard. Vampire promptly followed, and the two stood to the westward for a few minutes. Kolutoo tacked to port again first, followed some minutes later by Vampire. Both boats stood on this tack for about fifteen minutes, and then Kolutoo tacked to starboard again, forcing Vampire to follow suit, when they came together. Vampire stood on this tack for some minutes, while Kolutoo tacked to port again almost immediately, and continued to stand in till she tacked for the mark off Baker's Island. This time she crossed Vampire's bow, and kept off round the mark at 2:59:06, followed by Vampire at 3:00:57. Once off for the mark, Vampire set her balloon jib, while Kolutoo remained content with her working jib. The reach was quite close, and I do not think Vampire's balloon jib did her any good. At any rate, Kolutoo drew gradually away and came across the line at 3:20:04. Vampire followed at 3:22:21, while Frontenac crossed at 3:28:00, and Atalanta at 3:30:32. Dulce finished 30m. astern. The course was to have been sailed twice round, but owing to the light air and thick fog, the judges called the race off for the day. It was a most unsatisfactory race, although it proved pretty conclusively the merits of the two Burgess boats in the extremely light air which existed.

No official times were given out.

Second and Third Races, Thursday, June 11.

About the same conditions existed early Thursday morning, and everyone despaired of getting a good race. But at 12 o'clock it began to rain, and the rain killed the fog. At 1 o'clock it was quite clear, and a light breeze was coming in from the southeast. At 1:30 the judges' boat took up her position off West Manchester. Dulce came out in tow of the launch Patrol, while Frontenac, Atalanta, Vampire and Kolutoo came out in tow of the latter's tender. At 1:45 the signal for course 12 was displayed, the same that was sailed on Wednesday, the wind being in just the same direction and of rather greater strength. At 1:55 the preparatory gun was fired, and at 2 o'clock the starting gun went. Kolutoo was first across the line, and broke out her ballooner at once. Atalanta came next with Dulce, Vampire and Frontenac in the order named. Kolutoo set her spinnaker to port soon after crossing the line, an example which was followed by Vampire and Atalanta. Frontenac and Dulce were content to use their balloon jibs only. Kolutoo held her lead over Vampire, and both dropped the two Long Island boats fast. Dulce was hopelessly out of it. Off the western end of Misery Island the spinnakers came in and both boats reached off to Bowditch's Ledge under ballooners. On this trial Vampire seemed to gain a bit, and when the boats hauled on the wind for the next mark, she was only a little astern of Kolutoo. Both boats stood on the port tack till Hardy's Rocks were reached, and then Kolutoo tacked to starboard, crossing Vampire's bow. She soon tacked to port again and stood on this way under Baker's Island, when she tacked for the mark and rounded it. Vampire had stood along on the starboard tack far longer than Kolutoo, and when she finally came about and stood for the mark, it could be seen that she had lost quite a bit. On the reach in no light sails were carried. The judges stopped the race at the end of the first round, but signaled to the boats to wait around to see if the breeze did not come up a little.

Start, 2:10.	Finish.	Elapsed.
Kolutoo	3 14 34	1 04 34
Vampire	3 18 34	1 08 34
Frontenac	3 24 40	1 14 40
Atalanta	3 22 41	1 12 41
Dulce	3 37 44	1 27 44

Half an hour after the judges signaled the boats to sail twice around a short course, i. e., to Prides Rock buoy, thence to Saul's Rock buoy, thence to finish line, and repeat; making a run, a beat and a reach, as the wind then held southeast. Mr. Boardman had Kolutoo first over the line, with Dulce, Vampire, Frontenac and Atalanta in the order named. All boats broke out spinnakers to port, and the crew of the Moxham boat dropped theirs in the water just after crossing the line, and let the other three by her. Kolutoo and Vampire had on their working jibs, while the others all had ballooners set. Off Beverly Farms a northeast breeze came off from the land, and all the spinnakers came in, and the boats gybed over to starboard, and reached for the mark, quite fast in the freshening breeze.

On the reach to Saul's, Vampire passed Atalanta and gained a great deal on Kolutoo. Frontenac, too, reached by Atalanta, and started after the leaders. Dulce was far behind the other four. On the beat in to the stake boat the order remained the same, and the boats finished the first round as follows: Kolutoo, Vampire, Frontenac, Atalanta. On the reach to Prides Rock no light sails were carried, and the order of turning was: Kolutoo, Vampire, Frontenac, Atalanta. On the reach to Saul's, Vampire almost caught Kolutoo, and Frontenac was very close on the leaders. Kolutoo hauled around the mark and stood for a few minutes on the port tack. The others did the same. Vampire was the first to tack to starboard, followed instantly by Kolutoo. Frontenac stood on till she was directly behind Kolutoo, and then tacked, but she could not point with the Manchester boat, and dropped gradually to leeward. Vampire was the first to tack for the mark, and she was followed almost at once by Kolutoo, while Frontenac kept on to windward of the two, and tacked on Vampire's weather quarter. The three boats were all fetching the line, and Vampire was given a rap full and sent through Kolutoo's lee. The latter was bothered somewhat by a sloop, which was anchored directly in her course, and she had to be pinched a bit in order to weather her, while Vampire, with a good move on, went to leeward; but Mr. Burgess, who was sailing Vampire, should have full credit for the manner in which he sailed his boat, and his good judgment in tacking when he did. Once by the sloop, Kolutoo was given a hard full again, and gained fast on Vampire, but it was too late, and the scow crossed some 5ft. in advance. Frontenac was about five lengths behind, and Atalanta quite a bit astern.

Start, 3:54:		
Vampire	5 04 15	1 10 15
Kolutoo	5 04 16	1 10 16
Frontenac	5 04 23	1 10 23
Atalanta	5 07 30	1 13 30
Dulce	5 33 05	1 39 05

So far the laurels have gone to the two Burgess boats, Kolutoo having two firsts and one second, Vampire two seconds and one first, Frontenac two thirds and one fourth, and Atalanta two fourths and one third to their credit.

Friday, June 12.

The prospects this morning were not much more encouraging than before; rain and half a gale from the S. E. are not conditions conducive to racing small racing machines. At 1 o'clock Messrs. Brower, Lynn and Moxham, the owners of Frontenac, Atalanta and Dulce, met Messrs. Burgess and Higginson, the managers of the two Manchester boats, and all five men agreed in thinking that the weather conditions made it unwise to go out. The committee were notified of this fact, and fully concurred in the decision of the yacht owners. I went out into the harbor myself in Kolutoo's launch, and the wind blew about as hard as I have ever seen it blow here in summer. The sea was so high that I was afraid the launch would have been swamped if we had staid out long. No Seawanhaka boat could ever have come to windward under the conditions.

Fourth Race, Saturday, June 13.

A heavy lump of a sea, left over from Friday's gale; a hazy, wet day, and a stiff southeast wind which came and went in puffs of varying strength, were the conditions which greeted us on Saturday morning. They looked so unfavorable that the crowd gathered at the boat yard, where the boats all lay, had pretty well given up the idea of racing, when the judges' boat came down the river at 10:30 A. M., and the committee in charge announced that a start would be made off Beverly Farms at 11:30. Accordingly, sails were hoisted on all the boats, and at 11 o'clock Vampire poked her sharp snout out of the harbor. She was under whole sail and seemed to travel very fast, although she lay over badly in the puffs. Frontenac was next out under a single reefed mainsail, and No. 2 jibs, and she was closely followed by Atalanta, with the same sails on, and Dulce with whole mainsail and No. 1 jib. Last of all came Kolutoo with two reefs in her mainsail and a No. 2 jib. All five boats jogged down to the starting lines off the western end of Misery Island, and a few minutes before the start, Vampire went up under the lee of the island and tucked in two reefs. To balance this she set a No. 3 jib. In this sail the boats began maneuvering for the start. Mr. Boardman sailing Kolutoo, got away in the lead just to windward of Frontenac, who was close behind. Both boats were on the starboard tack, while Vampire, Atalanta and Dulce crossed in the order named on the port. Kolutoo tacked to port within 2m. after crossing the line, and Frontenac fully aware that this was the boat she had to beat, tacked at once, on her. Kolutoo had just the right sail, and she seemed to take far more kindly to the rough sea than Frontenac. She pointed higher, footed faster and drew away from the Amundson scow, which did not seem to be making good weather of it. Ten minutes on this tack sufficed for her to gain a good lead, and then she came about again and started in toward Little Misery Island. Frontenac followed, and as the wind had lightened a bit, shook out her reef, and put on a No. 1 jib. But in spite of this, Kolutoo gained steadily on her, and when she gybed around the mark at Baker's Island had a lead of over a minute and a half. Frontenac followed with Dulce third, Vampire fourth and Atalanta last. The course was a windward and leeward one; a beat out and a run back, twice around. With booms to starboard and spinnakers to port, the boats ran back to the stake boat. Kolutoo had on her No. 2 spinnaker, and during the run down shook out one of her two reefs. She continued to gain steadily on Frontenac. Vampire had shaken to whole sail running to windward, and now with her No. 1 spinnaker on, caught up a bit on Frontenac, passing Dulce just after rounding the mark. Atalanta also shook out to whole sail, but was hopelessly out of it. The boats rounded the stake boat at the end of the first round as follows:

Kolutoo	12 24 30	Dulce	12 30 12
Frontenac	12 26 28	Atalanta	12 32 50
Vampire	12 28 25		

The thrash out to windward the second time was a repetition of the first. Kolutoo gained steadily, while Vampire picked up a bit on Frontenac. The sea was very lumpy, and the Burgess boat, under easy sail, made far the best weather of it. The times at Baker's Island the second time were:

Kolutoo	12 48 40	Dulce	1 00 30
Frontenac	12 51 30	Atalanta	1 01 50
Vampire	12 54 50		

Once round the mark, Kolutoo's crew cracked on their No. 1 spinnaker and lengthened out her lead on the field, while Vampire made a hard but futile effort to catch Frontenac. The boats were timed at the finish as follows:

Start, 11:45.		
Kolutoo	1 01 18	1 16 18
Frontenac	1 05 41	1 20 41
Vampire	1 07 40	1 22 40
Dulce	1 14 49	1 29 49
Atalanta	1 15 11	1 30 11

This victory stamps Kolutoo as being a very fast all-round boat. Her ability to make good time in a light to moderate wind had never been questioned, but this win in a reefing breeze and a sea, on a short course of only six miles, comes as a surprise even to her managers. It only goes to prove that a sharp bowed boat can be built which will get the best of the scows in most weathers. To-day's race was in conditions which gave the constructions and rigging of the boats a severe test, and also gave the crews a chance to show what they could do in handling them.

Fifth Race, Monday, June 15.

Gray days, damp days and foggy days seem to be the fate of the Manchester Y. C. Sometimes they get wind, but more often none. Monday, June 15, was no exception to the rule. It was a cold, raw day, and a north wind with an inclination toward the west, came in puffs across Cape Anne. Down at the yard of the David Fenton Co., where all the boats lie, there was work enough going on. The two Manchester boats were hauled up side by side, and each had a couple of men working on their bottoms. They are an interesting comparison, Vampire with her long, straight side and flat bottom, and Kolutoo with her fair, beautiful sections showing a good deal of dead rise and clean lines from stem to stern. About noon both boats were launched, and at one o'clock all went out under short sail. Frontenac was first out with three reefs in her low rig, which had been put on, and she seemed to have about sail enough. Mr. Burgess, however, thought differently, and Vampire went out with only two reefs in her mainsail and a No. 3 jib. Dulce went out with whole mainsail on and a No. 1 jib on her stem, while Kolutoo wore three reefs and carried a No. 3 jib. Outside it was blowing very hard from the northeast, the wind increasing with every puff. About 3 o'clock the committee decided to send the boats over a short course, merely to see what they would do under the conditions, which were harder than they are likely to meet with in Canada. Signals were accordingly set to send the boats on a reach to Saul's Rock, another reach to the northwestern end of Misery Island and a beat to the finish line. It was a very short course, only two miles, but it gave the committee a chance to see all they wanted to. At 3:15 the preparatory gun went, and at 3:20 the boats crossed the line in a bunch. Vampire was a length in the lead, with Dulce up on her weather quarter. Just astern was Kolutoo and Frontenac. No light sails were set, it was blowing too hard to set anything for so short a distance. Vampire, with her two reefs, held her lead over Dulce, while the latter with her whole sail on and standing up like a house, was going far better than heretofore. Kolutoo and Frontenac were just astern, and all four boats gybed round Saul's Rock within a few seconds of each other. Vampire came within an ace of capsizing as she gybed around the mark, and had it not been for the quick action taken by one of her crew, who stood on her centerboard, she would have done so. Of course this contretemps stopped her a bit, and Dulce made a little gain. But she had hard luck, for just before reaching the second mark the snap hook on her jib halliards broke, and the jib came down with a rush. This let Kolutoo and Frontenac by, and it was a good minute before the jib was drawing again. Once on the wind the four cockle shells felt its full force, and there were times when it seemed as if they would surely capsize. Vampire, in particular, had a good deal too much sail, and was badly knocked down. Kolutoo behaved better than the others, and came to windward fast and well. She went by Vampire with seeming ease and took the lead, which she held to the finish. Frontenac got by Vampire and into second place, but she never was near enough to Kolutoo to worry her. The times are as follows:

Start, 3:20.		
Kolutoo	3 44 23	0 24 23
Frontenac	3 44 38	0 24 38
Vampire	3 44 45	0 24 45
Dulce	3 44 46	0 24 46

On Tuesday morning the judges announced that there had been racing enough for them to make up their minds as to the qualities of the boats. Kolutoo had proven herself very fast in all kinds of weather and had clearly earned the right to go to Canada. The western boats had demonstrated their ability to go fast in a breeze, but Vampire, the other Burgess boat, had been far faster in light airs and almost as good in a breeze.

For these reasons Kolutoo and Vampire will go to Dorval together in July, and will tune up against each other there. Kolutoo is expected to be the boat to meet the Canadians, unless certain alterations now being made on Vampire improve her greatly. In any case, which ever boat goes in the crew will be that of Kolutoo with the exception of Frank Burgess, who fills Mr. Jackson's place on Kolutoo. The best of feeling existed between all the crews, and at a dinner given Tuesday night at the Essex Country Club to the losing crews by the Kolutoo's crew, everyone joined in singing the praises of Kolutoo and drank to her success. The final toast was given by Mr. Brower of the Frontenac, "To Kolutoo, and may she come back with a broom at her masthead and the cup in her cockpit."

The Canada's Cup Defender.

TORONTO, June 13.—Strathcona has been under canvas twice to date, and while her actual trial races have not yet commenced, yachtsmen are already beginning to form definite opinions of her. She was sailed down from her launching place, Oakville, Ont., on June 6, under a pair of jibs and a mainsail belonging to the Watson cutter Vivia. The total area of these three sails was less than that of her own proper mainsail, but she handled beautifully under the pocket handkerchiefs, picking up way at the slightest breath of air and threshing to windward in excellent style when the breeze freshened. She worked a full five miles to windward under her jury rig Sunday morning in one hour. She was quick in stays, coming from full to full in thirteen seconds and carrying her way well, with no perceptible diminution of speed either in luffing or paying off. She steered easily and made her turns in short compass.

Strathcona spent the week at the Royal Canadian Y. C. moorings, fitting out, but was not able to sail entirely under her own canvas on Saturday. The reason for this was that her Toronto suit, despite all promises and warnings, was not ready. Her English suit, manufactured by Lapthorne and Ratsey, had been ready for some time, but on the advice of her designer, A. E. Payne, it was decided to delay bending it until Mr. Ratsey himself arrived to superintend the job. He will visit Toronto the last week in June.

Strathcona accordingly took her promised trial spin under her own Toronto-made headsails and a cut-down mainsail of Gloria's, a well-made English sail, but one

which did not fit her well, being too low in the clew and having too much of a goosewing in the leach, as well as being 18in. short on the hoist, head, and foot. There was no racing, although Strathcona was in company with two of the R. C. Y. C. flyers for some time. The sail indicated nothing of speed, but a great deal as regards ability. The new boat stood up like the traditional church, and traveled like the traditional scared cat. She was stiffer than either of her companions. It was blowing fresh, but in comparatively smooth water she kept her lee rail out. She could easily have carried a working topsail, but contented herself with the three lower pieces, the sail the other boats were carrying. The way she parted the water was marvelous. While tearing along at ten miles an hour she plowed up a big feather under her bobstay, and carried a wisp of spray at her run; but there was no such thing as a quartering sea, with all its heavy drag of water, and more marvelous still, no wake. Once she parts the water she seems to be done with it.

Strathcona's companions were Vreda, a larger Watson-designed cutter of great speed, although built in 1888; and Gloria, the English racer, built for the Coupe de France, which she won in the Mediterranean five years ago. Gloria is ten feet longer on the waterline than Strathcona, and carries 1,100 feet more sail, and she is a thorough racer. Vreda is a smaller boat, but still longer on the waterline than Strathcona. While there was no racing the three sailed out of the Eastern Gap in succession, and their time negotiating the half mile stretch of pier was:

	Enter.	Leave.	Elapsed.
Vreda	2 44 20	2 50 40	0 06 20
Gloria	2 45 20	2 50 00	0 04 40
Strathcona	2 46 40	2 52 00	0 05 20

Which shows the new boat is no dead one, even when pitted against larger craft and under makeshift canvas

CHARLES H. SNIDER.

Corinthian Y. C.

STAMFORD, LONG ISLAND SOUND,

Saturday, June 13.

The second race given by the Corinthian Y. C., for auxiliaries and launches was held off Stamford on Saturday, June 13. Mr. W. P. Hatch, owner of Hartford, protested Sally. It is said the latter boat was not properly entered. The summary:

Auxiliary Power Yachts.

Vitesse, W. L. Bradley	0 52 40
Hiawatha, Brant & Dayton	0 53 30

Launches not over 21ft. and over 17ft.

Sally, F. Smith	0 59 50
Hartford, W. P. Hatch	1 00 00
Spray, M. O. Dibble	1 03 20
Pawnee, F. A. L. Sneckner	1 04 45
Stewart, H. L. Stewart	1 07 25

Launches, 17ft. and Under.

Bateau, W. Selleck	0 40 00
Katherine, W. F. Gillespie	0 40 07

The winners were Vitesse, Sally and Bateau.

Saturday, June 20.

The third of the series races for auxiliaries and launches was held on Saturday, June 20. Heavy rain made things wet and uncomfortable, but the unpleasant weather did not keep any of the boats entered from starting. Classes L and M sailed twice over the Gangway buoy course, while boats in Class N went around once, a distance of four and one-half miles. The summary:

Class L—Launches not over 26ft. and over 21ft.

Palmer, Thomas F. Smith	0 56 30
Æolus, R. H. Gillespie	0 56 45
Hartford, W. P. Hatch	0 57 37

Class N—Launches 17ft. and Under.

Bateau, W. Selleck	0 39 22
Katherine, W. F. Gillespie	0 39 35
Leslie, George Scrobogna	0 39 40

Class M—Special—Launches not over 26ft. and over 21ft.

Sovereign, James D. Smith	1 03 23
Spray, M. O. Dibble	1 06 20
Owl, McMunn & Seeley	1 12 10
Genevieve, John Wilson	1 18 10
Chief, Wallace Burr	Did not finish.

The winners were Palmer, Bateau and Sovereign.

On Saturday, June 27, a special race will be sailed between Palmer, Hartford and Æolus, as each of the boats has one of the three races in other classes.

The cup winners are Vitesse and Bateau.

Larchmont Y. C.

LARCHMONT, LONG ISLAND SOUND,

Wednesday, June 17.

Reliance met with her first accident when she lost her topmast, in the race given by the Larchmont Y. C. on Wednesday, June 17. The mishap occurred just after the start and, fortunately, no one was injured. There was a very light breeze at the time, and the accident was probably caused by the lowering of the jib when the balloon jib was drawing, thus allowing all the strain to come on the topmast. In these big boats great care has to be exercised in distributing the strain equally on the mast and not to allow any undue pressure to be brought to bear in any one place.

After Reliance withdrew the race was almost devoid of interest, for Constitution had matters all her own way and she beat Columbia handily.

In the morning there was no wind, and the prospects for a race were not good. All three boats, however, came to the starting line, and just after one o'clock the Regatta Committee signaled the course. The boats were to be sent twice around a fifteen- mile triangle. The first leg was six miles east, three-quarters north; the second leg six miles southwest, five-eighths west, and the third leg three miles north northwest.

At 1:30 the warning whistle was heard, and the preparatory was given at 1:40. The boats were sent away at 1:45. At this time there was a light S. W. breeze.

In the maneuvering before the start Reliance had gotten badly pocketed, but Capt. Barr was equal to the occasion, and luffed sharply across Columbia's stern and across Constitution into the weather berth. Balloon jib topsails and staysails were broken out, and the boats were headed for the first mark. Reliance lost her topmast just after the start, and her ballooner went into the water. The club of her jack yard topsail broke off at the end of the gaff, and that sail hung by some gear on the port side of the mainsail. Sunbeam ranged alongside and the boat was taken to City Island, where her spare topmast was put in place.

Constitution and Columbia ran out of the breeze soon after Reliance broke down, and they drifted along in the tide pretty close together. The boats began to feel a little S. E. breeze, and the balloon sails were doused, and small jib topsails and work staysails were set in their place. Another change was soon made on both boats, and small reaching jib topsails were set in place of the babies. Constitution caught some favorable puff, and had all the luck, but Columbia at last worked into some breeze and came up on the Belmont boat in good shape. First one boat worked into the lead and then the other. At last Constitution caught a fair southerly breeze, and sheets were promptly eased off, and she ran down for the mark, leaving Columbia, which had her sheets too flat, in a pronounced manner. Below are the times the boats rounded the first mark.

Constitution .....3 16 33 Columbia 3 17 56

Constitution gained 1m. 59s. on this leg.

The boats were able to lay their course for the second mark, and the southerly breeze had increased to about seven or eight knots in strength. Both boats carried baby jib topsails. At the second mark the times were:

Constitution .....3 54 51 Columbia 3 56 44

Constitution gained 30s. on this leg.

After rounding Constitution broke out her spinnaker and got away from Columbia a little. A balloon jib was set on Columbia, and her spinnaker was not set until it was found that her ballooner would not draw. The boats were timed at the end of the first round as follows:

Constitution .....4 14 45 Columbia 4 17 21

Constitution gained 43s. on this leg.

The first leg of the second round was a reach, with booms to port. Constitution set a reaching jib topsail, while a balloon jib was set on Columbia, which did her more harm than good. The times at the first mark were:

Constitution .....4 48 48 Columbia 4 53 28

Constitution gained 2m. 4s. on this leg.

Owing to a shift in the wind the second leg was mostly a beat. The breeze was very light, but Constitution continued to increase her lead. Before the second mark was reached the breeze picked up a little, and the boats rounded as follows:

Constitution .....5 48 56 Columbia 5 56 31

Constitution gained 2m. 55s. on this leg.

Spinnakers were set on both boats to port. after rounding, and they were timed at the finish as follows:

Constitution .....6 14 15 Columbia 6 23 53

Constitution gained 2m. 3s. on this leg.

The summary:

	Start.	Finish.	Elapsed.
Constitution	1 47 28	6 14 15	4 27 15
Columbia	1 46 52	6 23 53	4 37 01
Reliance	1 47 10	Disabled.	

Constitution and Reliance were handicapped. Constitution beat Columbia 9m. 46s., but as Constitution was handicapped 28s. at the start, she really beat Columbia 10m. 14s.

Indian Harbor Y. C.

GREENWICH, LONG ISLAND SOUND,

Friday, June 19.

Constitution made a splendid showing in the race held by the Indian Harbor Y. C., off Greenwich, on Friday, June 19. While Reliance beat Constitution 1m. and 50s. actual time, the result of the race is still in doubt, for the measurements of the two boats are not known, but it is believed that Reliance will have to allow Constitution about 2m. time in a thirty-mile race. Columbia was outclassed from the start and never figured in the race.

It was a most unsatisfactory day for a race, as the wind was light and fluky and heavy showers made matters more uncomfortable.

Mr. Frank Bowne Jones and the other members of the Regatta Committee were on the towboat E. S. Atwood. In the morning it rained hard, and when it did stop there was no breeze. About noon time a little breeze sprung up from the E. by S., and at 12:30 the course was signaled from the committee boat. This was from a mark off Great Captain's Island, ten miles E. by S. ¼ S. to a mark off Eaton's Neck; five miles N. to a mark off Green's Ledge Light and ten miles W. by S. ¾ S. to the mark off Great Captain's Island.

At 12:40 the warning signal was heard, and the boats were started five minutes later. Barr outjockeyed Rhodes at the start, and when Reliance was apparently in a bad place under Constitution's lee, the new boat was luffed across Constitution's stern, and, as she had good headway on, soon established an overlap, and was able to cross in the weather berth. The boats were timed as follows:

Reliance .....12 46 07 Columbia 12 46 52
Constitution 12 46 10

The first leg was a beat, and the boats broke out small jib topsails. Reliance had taken Constitution's wind and drew away from her at once. Columbia was put on the port tack just after she crossed, but the other two boats held on the starboard tack in toward the Connecticut shore. Reliance was the first to take the port tack, and Constitution followed soon after. About half an hour after the start Reliance was again put on the starboard tack, and she drew down on Constitution. When they were well together Constitution came about on the starboard tack, and as soon as she did so Reliance again took the port tack. After making a short hitch Constitution came about and followed Reliance. When the new boat tacked she was able to cross Constitution's bows. The two boats now worked along under the Long Island shore. About two o'clock the wind veered around to the north of east. On Reliance a larger jib topsail had been substituted for the smaller one, and the change in the wind allowed the boats to lay their course for the mark. Constitution was now in the lead, but the wind headed them, and they were forced to tack again. Reliance was favored by a nice S. E. slant that drew out of Huntington Bay, and she ran up on Constitution and overtook her before she lost the puff. As the boats came down on the weather mark Constitution was a little ahead, but Reliance was to windward. They were timed as follows:

Constitution .....2 44 07 Columbia 3 07 07
Reliance 2 44 12

Constitution beat Reliance 8s. and Columbia 22m. 18s. on this leg.

It was a broad reach to the second mark, and Constitution broke out her balloon jib topsail after rounding, while on Reliance a reaching jib topsail was set. Reliance bore down on Constitution, and killed her wind, and in this way she pulled ahead. After Reliance passed Constitution the latter boat began to luff, and Reliance followed suit. Constitution gybed over and so did Reliance, and then she had another luffing match to secure the weather berth agin. The wind had been hauling back and forth, and then a brisk shower came up. This took away what little breeze there was, and when the wind did come up it was from the south, and spinnakers were set to port and they were carried until the boats were a mile or so from the mark, when they were taken in on both boats. After taking in spinnakers the two boats again gybed and set balloon jib topsails. Constitution seemed to draw up on the new boat, and when well down on the mark they both gybed again and doused their big balloon jib topsails. Columbia made a big gain on this leg, as she kept right on her course, while the other boats were indulging in luffing matches. The following times were taken at the second mark:

Reliance .....3 50 41 Columbia 4 02 00
Constitution 3 52 14

Reliance beat Constitution 1m. 38s. and Columbia 11m. 36s. on this leg.

The last leg was a close fetch, as the wind was S. S. W. It was now blowing quite fresh and small jib topsails were carried. The boats made fast time up to the finish line, although the breeze let up a little toward the end. The boats finished as follows:

Constitution .....4 52 17 Columbia 5 03 46
Reliance 4 50 24

Reliance beat Constitution 20s. and Columbia 2m. 3s. on this leg.

Constitution flew a protest flag as she crossed the finish line. The summary follows:

	Start.	Finish.	Elapsed.
Reliance	12 46 07	4 50 24	4 04 17
Constitution	12 46 10	4 52 17	4 06 07
Columbia	12 46 52	5 03 46	4 16 54

Reliance beat Constitution 1m. 50s. and Columbia 12m. 37s. actual time.

New Rochelle Y. C.

NEW ROCHELLE, LONG ISLAND SOUND,

Saturday, June 20.

There were twenty-six starters in the annual regatta of the New Rochelle Y. C. that was held on Saturday, June 20. The boats encountered all sorts of wind and weather during the race, for the breeze chopped all around the compass, and two rain squalls were passed through.

The larger boats covered a nine-mile triangle twice. The start was made off Echo Bay, and it was a beat to the first mark off Scotch Caps, then a broad reach to a mark off Oak Point, and then a reach back to the starting line. The little boats covered a smaller triangle. They also started off Echo Bay, and then to and around the black buoy off Hen and Chickens, then to and around the striped buoy to the northeast of Execution Reef and thence to the starting line.

At the start the breeze was fresh from the N. N. E. The Regatta Committee was on the steamer Glen Cove, and the preparatory signal was given at twelve o'clock. Ten minutes later the boats in the 36ft. class were sent away. Leda was first over the line, with Flosshilde just on her weather quarter. Flosshilde ordinarily sails in the 30ft. class, but as Leda had no competitor, she went up a class to give her a race. Leda ran away from Flosshilde, and the boats were so far apart that the race was quite devoid of interest.

At 12:15 the 30-footers were started, and Mimosa got away in the lead, with Oiseau, Alerion, Alert and Hope following in the order named. Alert was cleverly sailed by Mr. Edward M. MacLellan, and at the end of the first round she was over a minute ahead of Oiseau, the second boat.

Hope had no competitor in the 25ft. waterline one-design class, and she took a sail over. She was badly beaten by the boats in the class above, although they are about the same waterline length.

Rogue got the start in the raceabout class, Mavis, Jolly Tar and Grasshopper following in the order named. Grasshopper was ahead at the end of the first round, but Jolly Tar won by over a minute.

Dorothy got the start in the Larchmont 21ft. one-design class, but at the end of the first round Adelaide was leading by nearly three minutes. On the second round she increased her lead and took the race by a substantial margin.

Firefly led the 25ft. sloops over the line, Wyntje being second. Lucille, Snapper and Arbeeka crossed in the order named. Snapper led at the end of the first round and won the race. Mr. P. Williams, owner of Lucille, protested Firefly, asking for a remeasurement. Snapper was also protested for fouling the mark at the start, but as she crossed the line after the foul was committed the protest was not allowed.

At 12:30 Gazabo and Jeebi started with the former in the lead. Gazabo was still ahead at the end of the first round, but Jeebi won out.

Boats in the New Rochelle and Manhasset Bay one-design classes were started at 12:35. They got away in the order named—Ace, Lambkin, Falcon, Caper, Knave and Arizona. Knave led the New Rochelle boats, and Lambkin the Manhasset Bay boats at the end of the first round. Caper made the best time over the short course, and Leda over the long one.

On the second time around the breeze shifted to the southward, and it was blowing quite hard at the finish.

The summaries follow:

Sloops—36ft. Class—Start, 12:10.

	Finish.	Elapsed.	Corrected.
Leda, S. H. Mason, Jr.	3 22 44	3 12 44	3 12 44
Flosshilde, W. D. Haven	3 37 37	3 27 37	3 26 43

Sloops—30ft. Class—Start, 12:15.

Oiseau, H. L. Maxwell	3 39 04	3 24 04	3 23 54
Alerion, A. H. Alker	3 37 55	3 22 55	3 22 08
Alert, J. W. Alker	3 34 01	3 19 01	3 19 01
Mimosa, T. L. Park	3 38 08	3 23 08	3 23 07

Special—25ft. Class—Start, 12:15.

Hope, C. O. Iselin	3 51 04	. .. ..	. .. ..

Raceabouts—Start, 12:20.

Grasshopper, H. L. Pryer	3 54 14	3 34 14	3 34 14
Rogue, A. B. Alley	3 56 06	3 36 06	3 36 06
Mavis, G. L. Pirie	3 53 04	3 33 04	3 33 04
Jolly Tar, S. Wainwright	3 51 47	3 31 47	3 31 47

Larchmont—21ft. Class—Start, 12:20.

Adelaide, J. J. Dwyer	3 55 42	3 35 42	3 35 42
Dorothy, L. G. Spence	4 01 41	3 41 41	3 41 41

Sloops—25ft. Class—Start, 12:25.

Sheila, J. C. Connolly	Disqualified.		
Arbeeka, J. B. Walker	Disabled.		
Wyntje, N. H. Clark	4 14 45	3 49 55	. .. ..
Lucille, P. Williams	4 14 21	3 49 41	. .. ..
Firefly, S. P. Granberry	4 11 51	3 46 51	. .. ..
Snapper, F. S. Page	3 59 48	3 25 12	. .. ..

Sloops—21ft. Class—Start, 12:30.

Gazabo, H. T. Vulte	2 15 03	1 45 03	1 45 03
Jeebi, A. D. R. Brown	2 14 54	1 44 21	1 35 21

New Rochelle—One-Design Class—Start, 12:35.

Caper, P. L. Howard	2 19 17	1 44 17	1 44 17
Knave, R. M. Bavier	2 19 54	1 44 54	1 44 54
Ace, Anna Bavier	2 20 07	1 45 07	1 45 07

Manhasset Bay—One-Design Class—Start, 12:35.

Lambkin, S. W. Roach	2 21 38	1 46 38	1 46 38
Falcon, Cole and Stevens	2 23 29	1 48 29	1 48 29
Arizona, G. A. Corry	2 23 54	1 48 54	1 48 54

The winners were Leda, Alert, Hope, Jolly Tar, Adelaide, Snapper, Jeebi, Caper and Lambkin.

Columbia Y. C.

AMERICAN POWER BOAT ASSOCIATION, HUDSON RIVER, N. Y.

Saturday, June 20.

The American Power Boat Association held its first open race under the auspices of the Columbia Y. C., on Saturday, June 20. The regatta was a success in every way, and five classes filled. Fifteen boats started and all finished.

The event was admirably managed by the officers of the Association, consisting of Messrs. W. H. Ketchum and J. H. McIntosh, Columbia Y. C.; Mr. A. B. Cole, Manhasset Bay Y. C.; Mr. Henry J. Gielow, of the Atlantic Y. C., being represented by Mr. C. C. Smith.

At 2:30 the preparatory signal was given. There was but little air at the time, and the water was smooth. The tide was running flood. The course was from an imaginary line, off the club house, West Eighty-sixth street, to a mark off One Hundred and Forty-fifth street, thence to another mark off Sixtieth street, then back to the finish line, off the club house, a distance of eight miles. The two outer marks were placed on the edge of the channel over on the Jersey shore.

Boats in class B started at 2:35. Gazelle was first over the line with Witaco just on her starboard quarter. Gazelle rounded the southerly mark, off Sixtieth street, several lengths in the lead, and crossed the finish line 3m. 12s. ahead of Witaco, but loses the race on corrected time, as she has to concede Witaco several minutes, owing to her greater length and more powerful motor.

At 2:40 the four starters in class C were sent away. Senta was a little ahead at the start, with Queen Bess, Isolde and Chic following in the order named. Queen Bess soon pulled into first place, and made a big gain on the second leg under the Jersey shore. She beat Senta, the second boat, by a good margin. Chic was a close third.

Gertrude had things her own way in class D, and finished over 5m. ahead of Lutuhezi, but the latter boat won the race easily on time allowance.

In class K Privateer finished 3m. ahead of Taurus, but being a larger boat with more power, was beaten on corrected time by Taurus.

A close race was seen in class L between Nepthus and Constant. These boats lost their competitors, Carmen and Anita, and had it neck and neck all over the course. Nepthus finished ahead by 8s., but Constant got the race on time.

There were many present at the club house, and the members and their guests were able to watch the races from the wide varandas without getting wet, for it rained at intervals during the afternoon.

The summary follows:

Class B—40 to 50ft.—Start, 2:35.

	Finish.	Elapsed.	Corrected.
Gazelle, W. G. McCrea	2 23 33	0 48 33	. .. ..
Witaco, W. T. Colbron	3 39 45	0 51 45	0 51 45

Class C—32 to 40ft.—Start, 2:40.

Senta, F. G. Meade	3 24 15	1 02 15	1 02 15
Queen Bess, Richard Stearns	3 35 50	0 54 10	0 54 58
Chic, Whitney Lyon	3 41 55	1 01 55	1 02 57
Isabelle, H. R. Haddock	3 43 32	1 03 32	1 07 40

Class D—26 to 32ft.—Start, 2:45.

Lutuhezi, W. Luttgen	3 56 00	1 11 00	1 11 00
Gertrude, G. R. Bronson	3 50 55	1 05 55	1 16 10

Class K—21 to 26ft—Start, 2:50.

Taurus, J. H. Hanan	3 57 40	1 07 00	1 07 40
Sagamore, H. B. Bonner	3 58 00	1 08 00	1 14 03
Privateer, R. A. C. Smith	3 54 00	1 04 00	1 12 05

Class L—Under 21ft.—Start, 2:55.

Nepthus, H. R. Sutphen	4 08 12	1 13 12	1 27 21
Carmen, C. A. Starbuck	4 20 15	1 25 15	1 34 27
Constant, R. P. Hart	4 08 20	1 13 20	1 25 12
Anita, Alfred Carr	4 22 20	1 37 20	1 37 20

The winners were Witaco, Queen Bess, Lutuhezi, Taurus and Constant.

Seawanhaka-Corinthian Y. C.

OYSTER BAY, LONG ISLAND SOUND,

Saturday, June 20.

On Saturday, June 20, the three big boats, Reliance, Constitution and Columbia, sailed a race off Oyster Bay for a prize, offered by the Seawanhaka-Corinthian Y. C.

The day broke cloudy and threatening and it rained off and on.

Mr. Johnston de Forest, chairman of the Regatta Committee, was aboard the committee boat, E. S. Atwood, together with the other members of the committee. The starting line was about a mile east of the buoy, off Center Island Point, and the course was three miles N. N. W., thence four miles E. by N. ½ N. and thence four and three-quarter miles S. W. by S. This triangle of eleven and three-quarter miles was covered twice, making a total distance of twenty-three and one-half miles.

When the warning signal was given at 12:15, there was a five-knot N. E. breeze blowing. All three boats had been towed up to Oyster Bay. At 12:25 the warning signal was heard. There was less jockeying at the start than there has been in the previous races. All the boats had medium sized jack yard topsails set. Reliance crossed in the weather berth with Columbia under her lee, but ahead. A reaching jib topsail was broken out on Reliance and she soon took Columbia's wind and pulled ahead. Columbia was carrying only a small jib topsail. Constitution got a poor start, and had she gotten away better she would have been much nearer Reliance at the finish than she was. The following times were taken as the boats crossed:

Columbia .....12 30 21 Constitution 12 30 58
Reliance 12 30 22

It was a reach to the first mark, and booms were well off to port. Constitution, with a reaching jib topsail set, soon overhauled Columbia, but that boat kept luffing out and would not allow the Belmont boat to pass her. While the luffing match was going on between the two older boats, Reliance was fast getting away from them. When Columbia and Constitution squared away they had to ease sheets well off to run down to the mark. The boats were timed there as follows:

Reliance .....12 49 21 Constitution 12 51 36
Columbia 12 51 32

Reliance beat Constitution 1m. 59s. and Columbia 2m. 12s. on this leg.

The second leg was a beat, and after luffing around the mark Reliance and Constitution held the starboard tack in toward the Connecticut shore. About 5 minutes after rounding they were put on the port tack. This tack was held until Reliance could fetch the mark, and as soon as she tacked Constitution followed. Columbia had not done so well by holding the starboard tack, and the other two boats had been favored a little. At this mark the times were:

Reliance .....1 21 15 Columbia 1 28 35
Constitution 1 24 34

Reliance gained 44s. on Constitution and 5m. 9s. on Columbia on this leg.

It was another reach, with the wind abeam, back to the starting line. Reliance and Columbia set reaching jib topsails, while Constitution kept on under her baby for some time, when she took it in and set a reaching jib topsail. The breeze, which was working around to the south, increased in strength. Reliance caught the freshening breeze first, and heeled well down made good time and drew away from Constitution still further. At the home mark at the end of the first round, the boats were timed as follows:

Reliance .....1 48 09 Columbia 1 56 55
Constitution 1 52 38

Reliance had gained 1m. 10s. on Constitution and 1m. 26s. on Columbia on this leg.

The shift in the wind made the first leg of the second round a run, and after gybing over booms were eased off to port, and spinnakers were set to starboard. Columbia's crew handled their sails quicker than did the men on the other two boats, and Reliance's men were the slowest of the lot. When some distance from the mark spinnakers were taken in, and on Reliance and Columbia baby jib topsails were set in place of the reaching jib topsails. The breeze let up quite a bit on this leg, and Constitution had pulled up on Reliance. The times at the mark were:

Reliance .....2 16 54 Columbia 2 26 30
Constitution 2 20 02

Constitution had gained 1m. 2s. on Reliance and 1m. 52s. on Columbia on this leg.

The boats again had a beat to the second mark. Reliance and Constitution made the mark by a short leg to port and a long leg to starboard, while Columbia did just the opposite, and took a long leg to port and greatly benefited by so doing, for she struck a fresher and more favorable breeze.

The boats were timed as follows when rounding the second mark:

Reliance .....2 52 07 Columbia 2 58 44
Constitution 2 56 30

Columbia had gained 2m. 59s. on Reliance and 3m. 55s. on Constitution on this leg.

The boats now had a close reach on the port tack to the finish line. Reliance, under a baby jib topsail, made fast time in the freshening breeze. When a short distance from the finish line the wind again lightened up considerably. The times at the finish were:

Constitution .....3 21 27 Columbia 3 24 04
Reliance 3 16 34

The summary follows:

	Start.	Finish.	Elapsed.
Reliance	12 30 22	3 16 34	2 46 12
Constitution	12 30 58	3 21 27	2 50 29
Columbia	12 30 21	3 24 04	2 53 43

Reliance beat Constitution 4m. 17s. and Columbia 7m. 31s.

Atlantic Y. C.

SEA GATE, NEW YORK BAY,

Saturday, June 20.

The Atlantic Y. C. held races for classes M and under on the afternoon of Saturday, June 20, over the shorter courses. The feature of the event was the struggle among the 30-footers, in which were entered Bagheera and Bobtail, the craft which will represent Gravesend Bay in the races for the Manhasset Bay challenge cup, and the Herreshoff boat Vivian II. (ex-Onward), recently purchased by Mr. S. E. Vernon.

Onward arrived off the Atlantic Y. C. anchorage on Tuesday last from Bristol, R. I. She carries a double head rig, while Bagheera and Bobtail are provided with a single jib. The next day after reaching Sea Gate she was renamed Vivian II.

Vivian II. signalized her initial appearance by defeating Bagheera 43s., after twice covering a triangular course of 7⅜ nautical miles. Bobtail had difficulty with her rudder, and was forced to withdraw. The Vernon sloop has to give time to Bagheera, and the exact result of the race cannot be told until the craft are measured.

It was an exciting race from start to finish. At the end of the first round Bagheera led by 1m. 50s. The end of the first round Bagheera led by 1m. and 5s. The course was from the starting line off Sea Gate to West Bank Light, leaving the same on the starboard hand, thence to Craven Shoal bell buoy and home. The first two legs were broad reaches. The last one well tested the windward ability of the competitors.

In sloop class P, Vagabond sailed well and finished 3m. 5s. ahead of Cockatoo, and 5m. 58s. before the yawl Kate. By a common agreement among the owners, the yawl was to get an allowance of 6m. for the six-mile course. This enabled her to win out by 2s. Scalawag won in class R. Wraith, the only entry in class Q, had trouble with her centerboard, and had to be towed back to the club anchorage.

Boats under class M sailed the regular Atlantic Y. C. course, with the start off Sea Gate and marks at Fort Hamilton and Ulmer Park. It was covered twice. The first leg was a broad reach, the second full of windward work, and the third a reach to the home mark.

Rain fell in torrents throughout the race. A good breeze from E. S. E. blew steadily from start to finish and more than made up for the wet conditions.

The summaries follow:

Sloops—Class M—Start, 3:10.

	Finish.	Elapsed.
Vivian II., S. E. Vernon	5 35 20	2 25 20
Bagheera, Hendon Chubb	5 36 03	2 26 03
Bobtail, E. F. Luckenbach	Disabled.	

Boats subject to time allowance when measured.

Sloops—Class P—Start, 3:15.

Vagabond, T. A. Vernon	4 32 05	1 17 05
Cockatoo, W. A. Barstow	4 35 40	1 20 40
Kate, yawl, J. S. Negus	4 38 03	1 23 03

Other owners gave Kate 6m. time allowance. Her corrected time, 1.17.03.

Sloops—Class Q—Start, 3:20.

Wraith, Calvin Tompkins	Disabled.

Sloops—Class R—Start, 3:20.

Scalawag, E. S. Ludlow	4 46 48	1 26 48
Pickininny, E. H. Low	4 51 40	1 31 40
Constance, F. D. Prentice	Did not finish.	

The winners were: Vivian II., Kate and Scalawag.

Brooklyn Y. C.

Y. R. A. OF GRAVESEND BAY,

Saturday, June 20.

The second regatta of the Y. R. A. of Gravesend Bay was held on the afternoon of Saturday, June 20, under the auspices of the Brooklyn Y. C. The heavy rain that fell during the greater part of the contest kept the number of starters down to fifteen, all but three of which finished.

The wind held steady E. S. E. throughout the race. Boats sailing the inside courses had a broad reach from the start off the Brooklyn Y. C. to the stake boat, off Sea Gate. Another broad reach took them to the Fort Hamilton mark and several windward boards brought them home again. The course was covered twice.

Bonito and Kangaroo were the only craft going over the outside courses to finish the race. These boats had a reach out to Coney Island Point, some windward work to Red Can Buoy No. 2, a reach to Craven Shoal buoy and a close-hauled leg home.

In class P, Ogeemah had Karma for a competitor. The latter withdrew after the first round. Spots reversed the usual order of things and defeated Trouble. Class V, for open catboats, was very interesting, Boozie winning out after a close struggle. Kelpie and Esperance fought for honors in the Marine and Field one-design class. At the end of the first round the eventual winners led their respective classes.

Six members of the Atlantic Y. C., which withdrew from the Association early this year, have applied for membership in clubs now affiliated with the organization. This action will bring together all the best racing talent on Gravesend Bay and insure the best of competition.

An interesting working of the different measurement rules now in force is illustrated in comparing the sloops Ogeemah and Trouble. The former was designed by Mr. John R. Brophy this year under the restrictions in vogue on Long Island Sound. It also conforms well to the rule of the New York Y. C. Under both regulations Ogeemah would sail in class Q and Trouble (a class Q boat) would have to give it time allowance.

In the racing on Gravesend Bay, under the old rule (half the square root of the sail area plus the load waterline length), Ogeemah is obliged to go to the limit of class P, while Trouble competes with class Q craft.

The summaries follow:

Sloops—Class M—Special—Start, 3:18.

	Finish.	Elapsed.
Bonito, Haviland Bros.	5 17 25	1 59 25
Kangaroo, C. H. Humphreys	5 26 53	2 08 53

Auxiliary Yawl—Class N—Special—Start, 3:18.

Ionta, M. H. Torrey	Did not finish.

Sloops—Class P—Start, 3:21.

Ogeemah, Brophy & Mackay	4 50 04	1 29 04
Karma, J. C. Erskine	Did not finish.	

Sloops—Class Q—Start, 3:24.

Spots, D. D. Allerton	4 50 45	1 26 45
Trouble, W. H. Childs	4 51 30	1 27 30

Catboats—Class V—Start, 3:33.

Boozie, C. D. Durkee	5 08 00	1 35 00
Rascal, D. G. Whitlock	5 11 04	1 38 04
Martha M., Richard Moore	5 11 24	1 38 24

Corrected time, Boozie, 1.34.00; Martha M., 1.36.20.

Marine and Field Class—Start, 3:36.

Kelpie, W. K. Brown	5 15 30	1 39 30
Esperance, T. A. Hamilton	5 15 55	1 39 55
Quinque, W. J. Spence	5 21 22	1 45 22
Jig-a-Jig, Ferguson & Hutcheson	5 23 40	1 47 40
Stinger, A. P. Clapp	Did not finish.	

The winners were Bonito, Ogeemah, Spots, Boozie and Kelpie.

Boston Y. C.

HULL, MASS.,
Wednesday, June 17.

The Y. R. A. race of the Boston Y. C. was sailed off the Hull station on Wednesday, June 17, in a moderate breeze, E. S. W. In the 25ft. class there were two entries, Chewink III. and Calypso. Sally VII. was around, but entered the handicap class, while Great Haste was not ready to race and stayed out. Chewink III. and Calypso started together and the Calypso, sailing wide, appeared to pull ahead on the beat to windward, but Chewink III. was sailing much nearer the wind, and the consequence was that she turned the weather mark in the lead, and she kept it to the finish. Two boats showed up in the 22ft. class. Opitsah V. got the start and opened out a lead, which she kept to the finish. These two are practically one-design boats. The 18-footers had the greatest number of entries. They were all in a bunch at the start, and on the beat to the first mark the Domino opened up a lead. She held this until they had started on the second round of the course, when she overtook the mark, and Question went into first place, holding it to the finish. In the first handicap class Sally VII. had things all her own way, and this was the case with Darthea in the second handicap class. The summary:

Class D—25-Footers—Start, 2:30—Prizes, $20 and $10.

	Elapsed.
Chewink III., F. G. Macomber, Jr.	1 34 33
Calypso, A. W. Chesterton	1 36 04

Chewink wins by 1m. 31s.

Class E—22-Footers—Start, 2:35—Prizes, $18 and $9.

Opitsah V., S. H. and H. I. Foster	1 43 32
Medric, Herbert H. White	1 44 59

Opitsah V. wins by 1m. 27s.

Class I—18-Footers—Start, 2:45—Prizes, $12, $7, $5 and a cup to the winner.

Question, J. Henry Hunt	1 52 35
Domino, C. C. Clapp	1 52 50
Biza, Alfred Douglass	1 53 08
Milady, F. R. Adams	1 53 20
Mirage, J. W. Olmstead	1 54 36
Wink, L. D. Goodspead	1 57 02
Miss Modesty, B. S. Pernar	1 57 54
Patrice, A. W. Finlay	1 58 03
Crow, Lauriat & Hooper	1 58 15
Malilian II., F. L. Woods	2 00 26
Yo San, R. J. Randolph, Jr.	2 02 06

Question wins from Domino by 1m. 15s.

First Handicap Class—Start at 2:55.

	Elapsed.	Corrected.
Sally VII., L. F. Percival	1 36 37	1 36 37
Kiuna, W. A. Learned	1 51 19	1 41 37
Helen, F. R. Neal	1 49 11	1 44 20
Minerva, Walter Shaw	2 11 00	1 51 36

Sally VII. wins from Kiuna, yawl, by 5m.

Second Handicap Class—Start, 3:05.

Darthea, E. B. Lambert	1 51 35	1 51 35
Gobbo, L. P. Soule	2 14 02	2 00 36
Clarice, Walter Burgess	2 14 54	2 01 28

Darthea, wins from Gobbo by 9m. 1s.

Beverly Y. C.

BUZZARD'S BAY, MASS.,
Wednesday, June 17.

The open sweepstakes race of the Beverly Y. C. was sailed in a moderate N. E. breeze on Wednesday, June 17. In the 30-footers, Quakeress II. and Mashnee got away in the lead, but Pontiac worked the tide and wind and pulled out into first place, which she held to the finish. Pontiac and Quakeress were protested for not covering the whole course. In the 21ft. class, Barnacle went into the lead from the start and was never headed. In the fourth class, cats, Howard won a good race from the new Huckins 17-footer Sergius by 18 seconds. In the 15ft. class Peacock sailed a good race and won by 1m. 28s. The summary:

30-Footers.

	Elapsed.
Pontiac, Philip Beebe	2 53 53
Praxilla, John Parkinson, Jr.	2 53 54
Quakeress II., W. F. Harrison	2 54 36
Mashnee, R. W. Emmons, 2d	2 56 51
Young Miss, D. L. Whittemore	3 01 05
Natos, Chas. H. Taylor, Jr.	3 02 30
Evelyn, John Hitchcock	3 03 46
Gamecock, Louis Bacon	3 03 54
Zingara, E. M. Farnsworth	3 07 31

21-Footers.

Barnacle, W. E. C. Eustis	2 12 04
Terrapin, L. S. Dabney	2 17 28
Radiant, E. C. Baker	2 18 12
Quakeress, W. F. Harrison	2 23 31

Fourth Class Cats.

Howard, H. O. Miller	1 48 30
Sergius, W. F. Cox	1 48 48
Hod, H. B. Holmes	1 54 33

15-Footers.

Peacock, R. Winsor	1 47 19
Spider, H. M. Stone	1 48 47
Ranzo, M. H. Richardson, Jr.	1 48 55
Teazer, Mrs. R. W. Emmons, 2d	1 49 25
Jub Jub, H. Stockton	1 49 43
Flickamarro, the Misses Emmons	1 50 10
Fiddler, Miss C. M. Dabney	1 57 47

Saturday, June 20.

A club race of the Beverly Y. C. was sailed in Buzzards' Bay on Saturday, June 20, in a whole-sail S. E. breeze. In the one-design 30-footers Mashnee was away first at the start, and was never headed, winning by 1m. 16s. In the 21ft. class Barnacle won by 23s. from Jack Rabbit. Jack Rabbit is a new boat, not yet tuned, and may be looked for to give a good account of herself later. In the fourth class, cats, Alison II. won handily. Spider won by a safe margin in the 15ft. class. The summary:

Class A—30-footers.

Mashnee, R. W. Emmons, 2d	2 16 25
Quakeress II., W. F. Harrison	2 17 41
Notos, C. H. Taylor, Jr.	2 21 17
Young Miss, D. L. Whittemore	2 21 25
Pontiac, C. Philip Beebe	2 21 39
Arabian, Robert Winsor, Jr.	2 23 25
Evelyn, John Hitchcock	2 23 41

Class C—21-Footers.

Barnacle, W. E. C. Eustis	2 15 01
Jack Rabbit, Joshua Crane, Jr.	2 15 24
Terrapin, L. W. Dabney	2 15 29
Radiant, Mrs. E. C. Baker	2 16 30
Quakeress, W. F. Harrison	2 16 36

Fourth Class—Cats.

Alison II., S. B. McLeod	1 02 37
Sergius, W. F. Cox	1 04 12
Hod, H. B. Holmes	1 13 09
Howard, H. O. Miller	1 13 44

15ft. Class.

Spider, H. M. Stone	1 05 46
Teazer, Mrs. R. W. Emmons	1 07 29
Ranzo, M. H. Richardson, Jr.	1 09 02
Flickamarro, Misses Emmons	1 10 10
Fly, Miss C. M. Williams	1 10 37
Fiddler, Miss C. M. Dabney	1 10 38
Jub Jub, Misses Stockton	1 13 33

Corinthian Y. C.

MARBLEHEAD, MASS.,
Saturday, June 20.

The opening race of the Corinthian Y. C. was sailed off Marblehead Saturday afternoon, June 20, in a moderate S. E. wind, with a choppy sea. In the 25ft. class the three new boats, Chewink III., Sally VII. and Great Haste lined up at the start. Great Haste was first over, with Chewink III. on her weather quarter and Sally VII. astern of Chewink. Great Haste led to the first mark and hauled for the beat to windward, while Chewink III. and Sally VII. split. Chewink soon came around after Great Haste and the pair worked short tacks all the way out. Chewink got the best of this work and turned the windward mark in the lead and held it to the finish. Sally VII. and Great Haste had a scrap for second place. Sally VII. turned the second mark inside Great Haste and led her to the finish line. In the 22-footers, Opitsah V. was away first but in the leeward position, but she sailed fast enough to cross Medric at the first mark, and from that out she held the lead. Baggera was the only entry in the 21ft. class. In the 18-footers Arrow got the best of the start and led easily to the finish. In the handicap knockabouts Suzanne came in first but lost to Ruth on time allowance. The summary:

25ft.—Restricted.

	Elapsed.
Chewink III., F. G. Macomber, Jr.	1 14 21
Sally VII., L. F. Percival	1 14 50
Great Haste, T. K. Lothrop, Jr.	1 16 17

22ft.—Restricted.

Opitsah V., S. H. and H. J. Foster	1 21 53
Medric, Herbert White	1 23 22

Raceabouts.

Baggera, R. C. Robbins	1 25 27

18ft. Knockabouts.

Arrow, E. A. Boardman	1 06 50
Rattler, A. D. Irving	1 09 08
Malilian, F. L. Woods	1 09 55
Myrmidon, A. P. Loring	1 12 25
Savage, J. S. Lawrence	1 12 30

Handicap—Knockabouts.

	Elapsed.	Corrected.
Ruth, F. S. Wheelock	1 09 08	1 05 47
Susanne, F. Brewster	1 07 15	1 07 15
Dabster, F. Skinner, Jr.	Did not finish.	

Jamaica Bay Y. C.

Y. R. A. OF JAMAICA BAY,
Sunday, June 14.

The Jamaica Bay Y. C. held its first race on Sunday, June 14. A large number of boats had been entered, but the bad weather kept most of them from starting. There was a good sailing breeze from the S. by E., but it rained hard the greater part of the day.

A postponement was considered, but the owners of the boats that turned up voted to sail the race, so the preparatory signal was given at 3 o'clock. All the boats carried full sail, and the course was from a mark off the club dock to the red spar buoy off Blockhouse Point, thence to a stake boat in Broad Channel, and back to the starting line.

There were races for launches and they were sent away first, they went over the course twice, and of the seven starters only three finished, Osceola being disabled, while Ethel, Gussie and Lottie N. withdrew.

The knockabouts and sloops were started at 3:15. Kismet got the start and she was followed by Folly, Dolly and Jennie. It was a reach to the first mark, and all crossed on the port tack. Folly and Jennie passed Kismet, but she finally regained first place, only to lose it again to Jennie. Folly went aground and withdrew.

Diana got the start in her class and beat Klyo and Irene handily.

The summary follows:

Sloops or Knockabouts—Start, 3:15:00.

	Finish.	Elapsed.
Kismet	4 54 25	1 38 52
Dolly	5 11 55	1 56 55
Jennie	4 53 22	1 39 55
Folly	Disabled.	

Cabin Cats—Classes F, G and H—Start, 3:20:00.

Klyo	5 14 12	1 54 12
Irene	5 10 26	1 50 26
Diana	5 10 00	1 41 00

Open Cats—Over 22ft. and Under 25ft.—Class K—Start, 3:30:00.

Selfish	4 59 35	1 09 55
Meteor	5 17 15	1 47 15

Open Cats—Under 20ft. and Over 17ft.—Start, 3:35:00.

Lucy A.	5 19 10	1 44 10
Vision	5 15 05	1 44 05
Harry C. Miner	5 07 30	1 32 30
Amaranth	5 09 35	1 34 35
Pluck	Withdrew.	

Open Cats—Under 17ft.—Start, 3:35:00.

Lester	5 09 27	1 34 27
Free	5 04 35	1 29 35
Viola	Withdrew.	

The winners were: Jennie, Diana, Selfish, Harry C. Miner and Free.

Wollaston Y. C.

QUINCY, MASS.,
Wednesday, June 17.

A handicap race of the Wollaston Y. C. was sailed in Quincy Bay on Wednesday, June 17, in a moderate S. E. breeze. There were 14 starters, well bunched at the line. Wawenock went into the lead soon after the start, and held it to the finish, winning handily on both actual and corrected times. The summary:

Darthea wins from Gobbo by 9m. 1s.

	Elapsed.	Corrected.
Wawenock, Coombs & Seymour	1 14 00	0 54 57
Snohomis, C. C. Blake	1 20 53	0 59 42
Sheila, L. F. Hewitson	1 21 22	1 01 29
Pocahontas, F. C. Merrill	1 16 27	1 01 34
Theodora, F. Burgess	1 21 50	1 05 07

Premier, S. Hayden	1 36 52	1 19 12
Edith W., Fred Jacobs	1 56 00	1 23 23
Ituna, James Pitts	Withdrawn.	

Columbia Y. C.

CHICAGO TO MICHIGAN CITY.
Saturday, June 13.

The annual cruising race from Chicago to Michigan City was held by the Columbia Y. C. on Saturday, June 13.

Twenty-six boats started in the run and Vencedor finished first with the schooner Alice second. At the start the wind was fresh from the N. W., but lightened up toward the finish, so that the boats were nearly becalmed.

The different classes were sent away at five minute intervals between 12 and 1 o'clock, and for a time they were well bunched. Vencedor soon pulled into first place and was never headed.

Commodore McGuire's new 21-footer Hoosier showed up remarkably well and had no difficulty in beating La Rita.

The summaries follow:

Class 1A—Start, 1:00.

	Finish.	Elapsed.	Corrected.
Vencedor	5 56 05	4 56 05	4 50 15
Neva	6 45 00	5 45 00	5 45 00

Class 2A—Start, 12:40.

Eastern Y. C.

MARBLEHEAD, MASS.,
Saturday, June 20.

The opening special race of the Eastern Y. C. was sailed off Marblehead on Saturday, June 20, in a very light S. E. breeze. In the 25ft. class Chewink III. got the best of the start and led Great Haste all around the course. In the 22-footers, Opitsah V. went over the starting line in the weather berth and was never headed. In the 21ft. class Dabster sailed a walkover. In the 18-footers Question got the best of the start and led all around the course. The summary:

Class D—25-Footers—Start, 10:25—Course, 11½ Miles—Prize, $30.

	Elapsed.
Cheewink III., F. G. Macomber, Jr.	2 11 38
Great Haste, T. K. Lothrop, Jr.	2 16 39
Tiger	2 25 05

Chewink III. wins from Great Haste by 5m. 1s.

Class E—22-Footers—Start, 10:30—Course, 11½ Miles—Prize, $25.

Opitsah V., S. H. and H. I. Foster	2 22 18
Medric, Herbert White	2 23 33

Opitsah wins by 1m. 15s.

Class R—21-Footers—Start, 10:35—Course, 8¼ Miles—Prize for two starters only, $25.

Dabster, Francis Skinner, Jr.	1 58 22

Class I—18-Footers—Start, 10:40—Course, 8¼ Miles—Prizes, $20, $10 and $5.

Question, J. H. Hunt	1 51 26
Miss Modesty, B. S. Pernar	1 55 08
Miladi H., F. R. Adams	1 56 08
Myrmidon, Caleb Loring	1 58 50
Malilian, F. L. Woods	1 59 35
Crow, Lauriat and Hooper	2 01 50
Mirage	Withdraws.
Rattler	Disqualified.

Question wins from Miss Modesty by 3m. 42s.

Lynn Y. C.

LYNN, MASS.,
Wednesday, June 17.

A handicap race of the Lynn Y. C. was sailed in Lynn Harbor on Wednesday, June 17, in a light to moderate easterly breeze. The dory Louise and the 25-footer Luella sailed a dead heat, but Louise won on time allowance. The summary:

	Elapsed.	Corrected.
Louise, Hammond Brothers	1 04 20	1 01 30
Spurt, R. P. Badger	1 10 41	1 01 41
Isabelle, C. E. Hodgdon	1 12 31	1 02 31
Alice L., V. Horgan	1 13 19	1 03 19
Surge, D. A. Lannan	1 11 32	1 03 32
Odd Fellow, G. G. S. Buttrick	1 09 49	1 03 49
Luella, J. J. McGarry	1 04 20	1 04 20
Helen, Twombly Brothers	1 07 40	1 04 40

East Gloucester Y. C,

GLOUCESTER, MASS.,
Wednesday, June 17.

The opening race of the East Gloucester Y. C. was sailed on Wednesday, June 17, in a moderate S. E. breeze. In the first class the Herreshoff 25-footer, Onda, was first over the line, followed by Alethea and Seboomook. Onda found the breeze to her liking and was never headed. In the second class Celinda got the start and held the lead until the course was about half sailed, when the Hobgoblin went to the front and stayed there to the finish, winning by 30s. The summary:

First Class.

	Elapsed.
Onda, John Greenough	1 02 40
Seeboomook, B. A. Smith	1 03 20
Alethea, B. H. Colby	1 08 55

Second Class.

Hobgoblin, Oti Harney	1 18 30
Celinda, Scott Parker	1 19 00

Manhasset Bay Challenge Cup.

The sailing instructions covering the match races for the Manhasset Bay challenge cup are as follows:

Date of Races.—The races of the match will be sailed on Monday, June 29; Tuesday, June 30, and Wednesday, July 1.

In the event of failure to race on any of the dates scheduled, for any reason deemed sufficient by the committee, or in event of a tie, the series shall be continued daily thereafter, Saturday and Sunday excepted, until the match is won.

Starting Signals.—The starting signals shall be as follows: 1:00 P. M., preparatory, hoisting of the blue Peter on the committee boat; 1:05 P. M., warning, hoisting of a red ball; 1:10 P. M., start, dropping of the red ball.

Postponement.—Should it be deemed advisable to postpone the start, the giving of the above signals will be deferred for fifteen minute intervals.

Finish Signal.—The committee boat will carry a red ball when establishing the finish line.

Reversed Courses.—If deemed desirable to order any course sailed in a reverse direction, the code signal "B" will be hoisted on the committee boat, ten minutes before the giving of the preparatory signal and attention called thereto by three sharp blasts of the whistle. Where a course is reversed, all marks shall be left on the port hand.

Recall Signal.—If necessary to recall any yacht, the burgee of the club she represents will be displayed on the committee boat and attention called thereto by three sharp blasts of the whistle.

Special Signals.—"Race off for the day," code signal "M."

In case of fog the committee boat will give three sharp blasts of the whistle at intervals of not less than two minutes.

Attention will be called to all signals by the firing of a gun or the blowing of the whistle aboard the committee boat, but it should be borne in mind that the flags and balls constitute the signals, the gun or whistle being intended merely to call attention thereto.

Starts and Courses.—The first race of the match will be sailed over a windward and leeward course, the second over a triangular course, and the third over a windward and leeward course.

Each race shall be resailed until finished, over the course indicated.

The races will be started off the black and red buoy to the northward and eastward of Execution Light, except where the windward and leeward course cannot be laid from this point, in which event the committee will establish a starting point as near as possible to said buoy. The starting and finishing line will be between a white flag on the committee boat and a stake boat flying the club burgee.

The windward and leeward course, will be laid to a mark down the Sound, four nautical miles to windward or leeward of the starting point, and shall be sailed twice over, the marks to be left on the starboard hand. The compass bearings (magnetic) will be announced before the hoisting of the preparatory signal. The stakeboat at the turn on this course will display two blue balls.

The triangular course will be from the starting point to the red spar buoy off Scotch Caps, thence to the Larchmont Y. C. white spar buoy off Red Springs Point in Hempstead Bay thence to the starting point, the course to be sailed over twice. All marks to be left on the starboard hand.

Time Limit.—For a race of the match to count as such, one of the yachts competing must cross the finish line within five hours after starting signal is given for such race.

Rules.—The match will be sailed under the rules of the Yacht Racing Association of Long Island Sound, except as modified herein and in the Declaration of Trust governing matches for the cup. The representatives of clubs entered for the match are requested and expected to become fully conversant with the requirements set forth in the Declaration of Trust.

High Tide.—It will be high tide at Execution Rock on Monday, June 29, at 2:45 P. M.; Tuesday, June 30, at 3:28 P. M.; Wednesday, July 1, at 4:28 P. M.

STUYVESANT WAINWRIGHT,
Chairman.

LOUIS M. CLARK,
WALTER C. KERR,
Match Committee.

June 22, 1903.

The names of the boats, their owners and numbers, and the clubs that will be represented in the races are as follows:

Indian Harbor Y. C., Oiseau, N, 132; H. L. Maxwell.
Shelter Island Y. C., Marion, N, 10, C. P. and T. W. Brigham.
Atlantic Y. C., Bagherra, N, 42; Hendon Chubb.
New York A. C., Flosshilde, N, 60; W. D. Hennen.
Larchmont Y. C., Empronzi, N, 6; Roy A. Rainey.
American Y. C., Mimosa, N, 26; Trenor L. Park.
Bensonhurst Y. C., Bobtail, N, 45; E. F. Luckenback.
Manhasset Bay Y. C., Alert, N, 1; James W. Alker.

In order that the members of the Manhasset Bay Y. C. and the members of challenging clubs may witness the races for the cup, a steamer has been chartered. She will leave New Rochelle dock at 10 A. M. and club dock at Port Washington at 12:15 P. M. each race day.

The entertainment committee announces that many well known professionals having volunteered their services, an entertainment will be provided each evening after the race.

German Sailcloth in South America.

CONSUL B. H. WARNER, of Leipzig, May 26, 1903, says: "German sail and awning cloth manufacturers of this city are making strong efforts to secure South American trade. A prominent sail manufacturer has just informed me that he has succeeded in establishing regular traffic with South American countries, and that he hopes before long to do the same in Cuba."

Mr. Frank F. Stanley, of Boston, has sold the yawl Narkeeta, through the agency of Mr. Stanley M. Seaman, to Dr. H. A. Hare, of Philadelphia.

Quincy Y. C.

QUINCY, MASS.,
Wednesday, June 17.

The second handicap race of the Quincy Y. C. was sailed in Hull Bay on Wednesday, June 17, in a three-reef breeze, E. S. E. In the first class the old 21-footer Usona and Marvel sailed a very close race, Usona winning by 16s. In the second handicap Gaycap had the whole field to herself, Polaris withdrawing. A close race was sailed between the boats in the one-design class, Marjorie winning by less than a minute. The summary:

	Elapsed.
First Class.	
Usona, A. L. Lincoln	2 09 23
Marvel, A. A. Lincoln	2 09 39
Ida J., C. C. Collins	2 14 59

——, Sheldon Ripley	1 04 42
Undine, Gilbert Tower	1 05 54

Miniatuer Y. C.

EAST BOSTON, MASS.,
Wednesday, June 17.

A race of model yachts was given by the Miniature Y. C. on Wednesday, June 17, at Breed's Island Pond, East Boston, Mass. The summary:

Twenty-eight-inch class—Now Then, J. P. McLaren, first; Fern, J. H. Young, second; Bostonian, John Black, third.

Thirty-six-inch class—Dolphin, A. Sampson, first. The other six boats which started in this class were disqualified on account of not finishing within the time limit.

Forty-inch class—Crescent, B. C. Tedford, first; Post Boy, J. E. Wetmore, second; Eagle, J. H. Young, third.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Mr. Frank N. Tandy, the yacht broker, has given up his Boston office, and will now make his headquarters in New York, at 52 Broadway.

* * *

Mr. Charles W. Holtz has had a steam yacht built at A. Hansen's yard, City Island, from designs made by Mr. M. Hubbe. The yacht has been named Fulconis. She is 80ft. over all, 65ft. waterline, 14ft. 6in. breadth and 4ft. 6in. draft.

* * *

The officers of the Hempstead Bay Y. C., of Freeport, L. I., are as follows: Com., Charles H. Southard; Vice-Com., John H. Carl; Rear Com., Frederick K. Walsh; Regatta Com., Robert W. Nix, Chairman; Joseph Rollins and A. B. Wallace; House Com., William P. Miller, Chairman.

The events for the season will be the opening regatta on Saturday, July 11; the annual cruise, from Aug. 3 to Aug. 8; ladies' day, Wednesday, Aug. 19; the open regatta, Saturday, Sept. 5.

* * *

Khama, the British-built cutter owned by Mr. Seymour J. Hyde, arrived in New York on June 22 from Scotland. Khama had a crew of eight men and was commanded by Captain W. Cockburn. She started from Port Bannatyne, Scotland, on May 18 and for the first two days experienced very nasty weather and had to run for shelter to Porth Howth, Ireland. She stayed there two days, and on May 24 again started out and had calm weather until June 5, when she encountered showers which were followed by a light southwest gale. On June 9 she ran into an easterly gale and had her mainsail blown away. Calms and gales were experieced all the way over. The yacht will be towed to City Island, where she will be overhauled and put in racing shape. Khama will be run with an English crew.

* * *

Thorella II., the new Seawanhaka cup defender, which, there is very little doubt, will defend the cup this year, has something that no other boat which has competed for the big cup ever owned. She has two rudders.

Otherwise the new boat, Thorella II., as Mr. Finley has called her, in commemoration of Thorella I., which was also built for the defence of the cup, is built much upon the general lines of last year's boat.

The two rudder idea was about the limit of the ideas which Messrs. George Herrick Duggan and Fred. Shearwood have been able to conjure up in the attempt to improve upon their former Seawanhaka creations without resorting to revolutionary measures.

Mr. Duggan, now manager of the Dominion Iron and Steel Company, has been so busy, the designing and all the work in connection with Thorella II. has fallen upon the shoulders of Mr. Shearwood. The latter gentleman's illness prevented more than one boat from being built this season.

Vice-Com. Finley's boat was the first ordered, and, therefore, was the only one built. Mr. Finley has always shown such an active personal interest in the Seawanhaka cup races and has spent so much time and money in connection with them, that it is sincerely hoped Thorella II. will be found speedy enough to be selected as the defender this year. Her past work gives every hope that she will.

The appearance of the two rudders is extremely odd, and they are of bright brass. The posts above the deck are connected with bars and hinged crossbars, and from the center of the latter extends the real tiller.

The new boat was built for light winds, which is quite a departure from the boats of the past, while it is understood that Kolutoo and Vampire have been built for heavy winds.

Strange to say, in the past the United States boats have mostly been built for light weather and the Canadian boats for heavy weather.

Thorella II., which is now having preliminary trials with Trident and Osma and Blackbird, last year's boats, is of about the same dimensions as Trident.

She has bilge boards, and the principal difference between her and last year's boats are:

She has less freeboard.
She has less beam.
She weighs about 400 pounds less.

As to her sail area, it will be the same as last year, and her spars will be but very little different.—Montreal Star.

Canoeing.

A. C. A. Membership.

The following have applied for membership to the A. C. A:

Eastern Division.—W. W. Morrison, Wm. A. Phinney, W. R. Bliss, G. H. Abbott, H. M. Colby, H. W. Spaulding, Don W. Osgood, W. R. Wescott, W. C. Colby, R. D. Reed, Lester P. Horne, B. F. Welch, H. G. Clough, Clinton Phelps, F. L. Chase, Guy B. True, Manchester, N. H.; F. LeRoy Pratt, Winchester, Mass.; Harry Merriam, Edgar Frost, F. W. Biery, Jr., Wilfred Cyr, Joseph Prince, Earle Allen, Carl G. Weiss, H. L. Backus, E. A. Johnson, Wilbur Cross, Deane B. Small, Lawrence, Mass.; F. L. Angus, Alex. Ritchie, Andover, Mass.; Chas. G. Newcomb, Frank Gibbs, Ralph P. Hayes, E. L. Tufts, Jr., H. E. Boardman, Medford, Mass.; J. A. Garland, Somerville, Mass.; T. G. Beggs, Jr., F. J. Babcock, Woburn, Mass.; Harry L. Dadman, Worcester, Mass.; B. E. Phillips, Jr., Dedham, Mass.; Edwin T. Samuels, Hyde Park, Mass.; H. Willard Hiss, Baltimore, Md.; R. A. Garrison, Newton, Mass.

Atlantic Division.—Elmer B. Ayres.

Rifle Range and Gallery.

Fixtures.

July 6-7.—New Haven, Conn.—South New England Schuetzen Bund annual schuetzenfest, under the auspices of the Independent German Rifle Company. H. C. Young, Sec'y.

Ittel—Loder.

Concerning the match between Mr. Louis P. Ittel, of Allegheny, and Mr. John S. Loder, of Denver, Col., mention of which was made in FOREST AND STREAM of June 6, Mr. Charles G. Grubb, who had deposited $1,000 with Mr. W. S. Brown, of Pittsburg, for the match, received a reply from Mr. Loder, of which the following is a copy:

PITTSBURG, Pa., June 18.—Mr. Chas. Grubb, Dear Sir: I regret very much to inform you that opposition on the part of my business associates will prevent my meeting Mr. Ittel at the present time, and pulling off the shoot, which had been contemplated. Possibly within the next 60 days I can so shape my business as to permit of my meeting the gentleman, but at this juncture there is too much at stake to permit of the contest going on. I regret the situation more than I can say, but you can readily appreciate my position when I again assure you that my business interests would very materially suffer and my position be jeopardized.

Trusting this explanation may be satisfactory, and that I may have the pleasure of meeting the gentleman later on, I remain,

Yours truly,
(Signed) JOHN S. LODER.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

*June 24-25.—New Castle, Pa., Gun Club's tournament. James Atkinson, Sec'y.
June 25.—York County target shoot, under auspices of the Glen Rock, Pa., Gun Club. Allen M. Seitz, Sec'y.
July 1.—Annual tournament of the Sherbrooke, Que., Gun Club. C. H. Foss, Sec'y.
July 1.—Bolivar, N. Y., Gun Club's fourth annual tournament. J. F. Care, Sec'y.
July 2.—Rockville Conn., Gun Club tournament.
July 3-4.—Memphis, Tenn., Gun Club's two days' shoot. A. H. Frank, Sec'y.
July 4.—Napoleon, Ohio, Sportsmen's Association all-day shoot. A. Bradley, Jr., Sec'y.
July 4.—Ilion, N. Y.—All-day tournament of the Remington Gun Club.
July 4.—Poughkeepsie, N. Y., Gun Club shoot.
July 4.—Towanda, Pa., Gun Club's annual tournament. W. F. Dittrich, Sec'y.
July 4.—Concord, Staten Island.—All-day target shoot of the Richmond Gun Club. Special handicap, 100 targets, for $10 in gold. Albert A. Schoverling, Sec'y.
July 4.—Altoona Rod and Gun Club. Targets. G. G. Zeth, secretary, Altoona, Pa.
July 4.—All-day shoot of the Haverhill (Mass.) Gun Club. S. G. Miller, secretary.
July 4.—Analostan Gun Club's third annual merchandise prize tournament. W. H. Hunter, Sec'y, 1228 Twenty-ninth street, Washington, D. C.
July 4.—Dover, N. H., Sportsman's Association's Holiday shoot. D. W. Hallam, secretary.
July 4.—Topsham, Me.—All-day tournament of the Riverside Shooting Club. Fred W. Atkinson, Sec'y.
*July 7-8.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.

DRIVERS AND TWISTERS.

Mr. B. D. Nobles, the secretary, informs us that the Olean, N. Y., Gun Club will hold a sweepstake shoot on July 10.

Owing to pressure on our columns this week several important trap reports are necessarily postponed for publication in our next issue.

Mr. G. F. Brueker, of Omaha, Neb., celebrated as a trap shot of great skill, sailed for Europe on the Königin Luise on Thursday of last week.

The president, Mr. W. T. Nash, informs us that the Indianapolis, Ind., Gun Club will give its opening or dedication tournament on Sept. 15-17.

Mr. Elmer E. Shaner, secretary-manager of the Interstate Association, informs us that dates for the Ottawa, Ill., tournament have been changed to Aug. 12 and 13, in place of Aug. 19 and 20.

In the team race of the Fulton Gun Club and the North River Gun Club, held in Brooklyn recently, the Fulton club won by a score of 121 to 106. There were five men on a side, and each shot at 25 targets.

The prizes at the New London, Ia., tournament last week were numerous and valuable. The attendance was fair and industrious. The report of it is elsewhere in our trap columns. This club will hold another tournament on Oct. 23 and 24.

The Warm Springs handicap, 25 live birds, $25, was won by Mr. Joseph Hightower, after a shoot-off with Mr. H. C. Etheridge, each of whom killed 25 straight in the main event. In the shoot-off, miss-and-out, Etheridge missed his seventh.

At the tournament of the W. P. T. S. L., held at McKeesport, Pa., June 16-17, Mr. J. A. R. Elliott was high average for the two days, breaking 333 out of 350 in the professional class. In the amateur class Mr. James T. Atkinson, of New Castle, Pa., won high average with 326 out of 350.

Mr. John M. Lily, president of the National Gun Club, Indianapolis, Ind., tarried a few moments with his friends in the gun district, New York, on Wednesday of last week while en route with his wife and daughter to Europe. They sailed on the Königin Luise on Thursday, for a long stay abroad.

The all-day shoot of the Trenton Shooting Association, July 4, commences at 10 o'clock. The merchandise events, four in number, will be shot in the morning; entrance, price of targets only. There is a Remington hammerless gun, a Winchester rifle and other merchandise prizes for the afternoon competition.

Mr. E. H. Tripp, of Indianapolis, Ind., was a visitor in New York on Thursday of last week. His chief purpose was to see Mrs. Tripp safely on board the steamship Menominee for London. Notwithstanding his limited time, Mr. Tripp spared a few moments for a call on his many friends in the gun colony on Broadway.

Noted shooters in the gun district of New York this week were Messrs. W. R. Crosby, E. D. Fulford, Fred Quimby. Mr. Elmer E. Shaner, secretary-manager of the Interstate Association, arrived on Sunday evening last, and took up the matter of preliminary arrangements for the Interstate tournament at Rutherford, N. J.

At the tournament of the Denver, Colo., Trap Club, last week Mr. J. W. Garrett won the Great Western Handicap. He broke 94 out of 100 targets from the 21yd. mark in this event. The high averages were as follows: First, Hirschy, 455; second, D. Timberlake; third, Garrett and G. Timberlake; fourth, Hughes; fifth, McMillan; sixth, Riehl and Yonkman.

Mr. John S. Wright, the energetic manager of the Brooklyn Gun Club, informs us that he has changed the scene of club action to new grounds not far from the old grounds at the terminus of Kings County Elevated, Brooklyn. He will hold an informal shoot on Saturday of this week, and later will hold an old-fashioned house warming. He contemplates giving a tournament with a hard-boiled egg at every shot.

The Analostan Rod and Gun Club, of Washington, D. C., will hold its third annual prize tournament on Analostan Island, July 4. There are eight programme events: 10, 15, 20 and 25 targets. Shooting commences at 10 o'clock. In the merchandise events, the prizes go to the high guns. In the sweepstake events the moneys are divided 40, 30, 20 and 10 per cent. Lunch and refreshments served on the grounds. W. H. Hunter, Sec'y, 1228 Twenty-ninth street, N. W.

Mr. W. A. Baker, Griffin, Ga., won high average at the Interstate Association tournament, given for the Meriwether Gun Club, at Warm Springs, Ga., last week. He scored a total of 312 out of 350 shot at. He shot from the 20yd. mark. The trade representatives, excepting Mr. Lemcke, shot from the 16yd. mark for high average only. Mr. J. Mowell Hawkins was high for the two days with 324 out of 350.

Mr. Edward Banks has donated the L. C. Smith gun won by him at the recent New York State shoot to the Wanderers, under the conditions that it be contested for in a series of eight shoots on eight separate days, 25 targets, handicap allowance, four best scores to count. Entrance fees go to the club on whose grounds the shoot is held respectively. The first contest was scheduled to take place on the grounds of the North River Gun Club at Edgewater last Saturday.

Mr. Walter Willson Watrous died at Atlantic City, N. J., on June 21, from a complication of kidney diseases. He was forty-three years old. He was conspicuously identified with affairs of dog and gun. A few years ago he was a dog fancier and competed at the leading bench shows. He was an active, influential member of the Cartaret Gun Club, and the Metropolitan and Raquet Club of New York city. He was connected with the firm of Willson, Adams & Co., lumber dealers, of New York.

The Rockville, Conn., Gun Club, announces a tournament to be held on July 2. The committee of arrangements is composed of Messrs. F. E. Metcalf, F. M. Burke, H. C. Barstow and Edward White. Guns and ammunition shipped prepaid to Mr. White will be delivered on the grounds free of charge. Traps ready at 10 o'clock. Targets, 2 cents. The Rose system will govern. There are twelve events on the programme, 10, 15, 20 and 25 targets, a total of 200, with a total entrance of $20.10. A magautrap will throw the targets.

BERNARD WATERS.

Wilkes Barre Tournament.

WILKES BARRE, Pa.—The two days' tournament given by Mr. Edgar L. Klipple was well attended, and the consensus of opinion indicated its complete success.

Owing to darkness three events of the first day were postponed till the morning of the second day.

Mr. Edgar L. Klipple, the manager, writes us "that the thanks of the manager are due to Frank E. Butler for all the little and many kindnesses shown to him by the genial Frank; also to his wife, Mrs. Butler (Annie Oakley), whose presence was the chief attraction of the shoot. Mr. Butler did a lot of good hustling for his firm and made many friends.

"Also thanks to Mr. T. H. Keller for many valuable pointers given to the manager and for his genial manner and tact in keeping every one good-natured."

Mr. W. K. Park was in attendance both days. Geo. R. Benjamin gave eminent satisfaction to all in the position of referee in the target events. He was ably assisted by W. Fred Quimby. Thanks of the manager are extended to all these gentlemen for their valuable assistance and support.

"Capt. Money graced the gathering with his stately presence, and shot well in all the events.

"All the trade representatives said this shoot had the largest crowd of onlookers of any shoot they have attended anywhere, and were pleased that such conditions prevailed, as it repaid them for all their trouble and expense. E. D. Fulford had his case of fine guns on display. They were much admired by all; he shot through the entire programme in championship form. Gus Grieff had on exhibition a fine line of guns, and made many friends. He will come again to our next shoot. Sim Glover made friends, and his employers are to be congratulated on having such a hustling representative. Sim had high average for the two days. Neaf Apgar, by his gentlemanly behavior and good shooting during the two days, made many converts, and will always be remembered by the shooters of this city.

"Annie Oakley shot in her old-time form, breaking 95 per cent. of the targets shot at, and killing the live birds in fine style.

Nine thousand bluerocks were thrown in the two days, and 1,000 live birds were trapped and shot at.

"Enoch D. Miller covered himself will glory after an absence of eight years from the game. This was his first shoot in eight years."

Events 6 and 7 each day were at live birds. First day: 5 birds, $4, and 7 birds, $5; second day, 15 birds, $15, and 5 birds, $5:

Shreveport Tournament.

THE eleventh annual target tournament of the Mississippi Valley Trapshooters' Association opened at Shreveport, La., on Monday, June 15, under favorable conditions as to weather. The attendance was large. The first day was occupied with practice events and a special preliminary of 100 targets, with an entrance of $10, with $100 added by the Caddo Gun Club, of Shreveport.

The conditions that governed here were that traveling men should shoot for targets only. Revised Interstate rules governed. Regular events open to all amateurs, Rose system of money division; 10 targets, 5, 3; 15 targets, 5, 3, 2; 20 or more, 7, 5, 3, 2.

The Hunter Arms Co. gold medal went to the amateur making the highest average for the two days.

The Interstate rules were not strictly followed. Result of shooting at a piece was scored; then refusing of targets and balks were allowed. The trouble with all tournaments, especially where four sets of traps are used, is to get competent, experieneed men who are shooters and have had some experience, and who have seen or read the rules and then know how to enforce them, and will treat all alike. While the young men who did the calling here were fairly correct in calling the targets, I doubt if any one of them ever saw a book of Interstate rules, nor in fact, if there was a copy of same on the grounds which could have been referred to in case of a call for them to decide a question in dispute. The remarks will apply to all tournaments, and there should be an improvement with regard to enforcing rules to the letter. Another rule was continually broken: that of watching or calling for the trap.

The grounds used are only fair, being on top of a bluff, with level ground limited; targets thrown over a precipice that makes low targets hard to find. Three sets face almost north, but one set is into the sun, down hill and against trees, and here many a good score was spoiled. The day was mostly cloudy, and that was a blessing to the eyes. The weather was very pleasant, as a Northernman would expect to suffer very materially from heat; but the very cool weather of the Northern States has extended and continued this far south.

The 100-target race was an attraction that brought together seventy-five shooters, though but fifty-nine of these shot for the money. There were only three moneys for each ten entries, and possibly that deterred others from putting up the $10. But most of the Southern gentlemen are game, and they like to shoot best when there is something in sight worth contesting for.

The targets-only squad was composed of Heer, 86; Faurote, 93; Miller, 84; Hubby, 85, and Wade, 92. Others shooting also were Pat Henry, 79; French, 64; Fulton, 74, and Kauffman, 83.

The first squad showed one good man in line of amateurs in Mr. Skannale, of Shreveport, who made 93, while Mercer made 92. The next squad found the gentleman from Texas, known far and wide as Commodore Heard, setting a high pace of 94, having with him three other Lone Star men that were close up—V. C. 92, Atchison 92, and Tom Green 90. Then the best score shifted to Alabama and was made by Mr. Fletcher tying Mr. Heard with 94. Of the next sixteen men Breazele was the only man to make above 90, getting 93. Then came to the score one Chauncey M. Powers, from Illinois. He was looked upon as a winner; he lost two at one set and one at three and four, and then the best he did was 23, and tied the high men with 94; two of these targets were dusted and hit very hard. K. K. shot well, and landed in the 92, with Atkins 91.

The 89 score was in the division, and those below that got merely what the little boy shot at, ———. The scores:

Preliminary, 100 targets, $10:

Targets:	25	25	25	25

Tuesday, June 16.

The day opened up warm and for part of the day was warm, but white clouds and a variable wind, with the sun hidden, assisted the Northern men very materially, in that their shooting eye was not affected by the Southern climate.

The Southern men were comfortable in their shirt sleeves and shirt waists were the fashion. The handsome Southern ladies came out in all their splendor during the afternoon, and many of the boys began to show that they could appreciate the compliment and started in to make better scores.

The grounds are situated on the Park View Line, and close by the park and ball grounds, and are therefore easy of access.

Ninety-one men in all, hailing from all over the South and West, were present; and no wonder—$1,000 added money! This is not the first big tournament that Shreveport has held, but is equal to any ever held in the South. About 20,000 targets were thrown during the day, as after the 200 programme had been finished, there were several sweeps shot, two of them being of blooded order, and one the Northern men might well imitate—that of $5 entrance, 50 targets, two moneys.

In the programme events Frank Faurote, of Dallas, was long the best, breaking 191. Mr. J. C. Wade, also from Texas, made 180, while Heer came third with 175.

G. J. F. Fletcher, of Birmingham, Ala., scored 185; John Skannale, of Shreveport, 23; Atchison, of Texas, 183; A. Wileox, of Angelo, Tex., 182.

What especially interested the shooters was the Fabacher trophy, an elegant loving cup. This was to go to high score in events 5 and 6, 50 targets. John Skannale, of Shreveport; Elmer Coe, of Memphis, and J. G. Marston, of East Point, scored 47,

At the close of the regular programme the tie was shot off, and Coe and Marston did not get a look in, as Skannale made 24 to Coe's 20 and Marston's 17.

During the evening a meeting was called in the parlor of the Hotel Phœnix. President Pepper was not present, but John Jenkins, of Shreveport, was made chairman. Among other business transacted was that of changing the name to that of the Southern Trapshooters and Game and Fish Protective Association. The shooters interested in game protection as well as trapshooting are earnestly solicited to join, and aid in getting proper game legislation passed in the Southern States. The prevailing theme was to stop the sale of game. The chair appointed a committee consisting of V. L. Fulton and F. G. Shafer to draw up by-laws to be presented to the Memphis meeting. The scores:

Events:	1	2	3	4	5	6	7	8	9	10

June 17, Second Day.

The shooters felt the heat considerably to-day, and a few targets were lost, as the shooters got perspiration in the eye—"earning bread by the sweat of their brow," as it were. During the afternoon the clouds hung over the sun and a gentle breeze swept over the hill, making everything pleasant and agreeable save to the fellow at the score trying to make 25 straight, and thereby win the average for the two days. There were five men that came within one target of tying.

Mr. Skannale, of the home club, finished first and stood to win with 369; then came Chauncey Powers with a loss of only 10 for the day and tied him. All eyes were on the gentleman from Texas —"Tom Green"; he is not so big as Tom Green county, but he is a bad man with a shotgun. He stood to win by breaking his last 30 straight and he was closely watched. It was hoped he would drop and make a tie, as then the excitement of shooting a tie off would please the crowd. Mr. Green disappointed his many friends by dropping one below the others.

Toward the very last came on a squad composed of Missouri and Oklahoma boys, who had been overlooked in the betting, and when it had finished neither Skannale nor Mr. Powers had a look in, as Dixon and C. F. Reust had gone them one better by each losing but 11 for the day. They had tied with 370, and to do this Reust missed two and Dixon one out of their last 30.

They are such good friends and fellow shooters that they refused to shoot off the tie, and will hold the medal, which is one of the Hunter Arms Company's donations.

The shooting on the whole was much better to-day, as the best shots remained in the game, while others did not take part, there being but fourteen squads.

Mr. Faurote easily won the high average for the two days with 379, being followed by Wade with 370; Hubby 354, Heer 352 and Miller 327.

The amateurs showed up strong, thus: Reust and Dixon 370, Skannale and Powers 369, Tom Green 368, Mercer 367, Fletcher 365, Atchinson 362, Livingston 360, C. Dixon 359 and K. K. 358.

The traveling men were numerous. Mr. W. H. Heer, of Cincinnati, was here, and finding no shells suitable to his liking, did not make a good showing. He met here Mr. Hubby, of Texas, and they made a good team.

A strong quartette were Maurice Kaufman, of New Orleans; Wallace Miller, of Austin, Tex.; Luther I. Wade, Nacogdoches, Tex., and J. S. French, of Cincinnati, O. Other trade representatives were F. A. Faurote, of Dallas, Tex.; Louis Williams, Nashville, Tenn.; T. A. Divine, Memphis, Tenn., and Arthur Saucier, of New Orleans, La.; L. Z. Lawrence, of New York; J. E. Carroll and Charles Spicer. The boys all either shot well or talked well, and helped the management, and were a jolly lot of good fellows.

The interesting events for the day were the Peters cup for three-man teams and the 25 target event for the Peters gun. The cup was won by the Shreveport club with the fine score of 73 out of 75; and the high score for the gun by Mr. Mercer, 25.

During the evening there was a happy gathering at the hotel. The cups were presented and then filled with wine and passed around. Mr. Skannale made a speech, and thanked the Peters people for the donation. Mr. Kaufman was called and made his bow.

The next shoot will be at Memphis July 3 and 4. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	
Targets:	20	20	20	20	25	25	20	20	20	10	Broke.
Heer	17	19	19	16	19	24	18	16	19	10	177

The Denver Tournament.

THE second annual tournament of the Denver Trap Club was held here this week. The attendance, while not so large as last year, owing to weather conditions and recent floods, was quite satisfactory, and represents a compliment to the Denver sportsmen, since many of the boys made special efforts to be present. The club added in the aggregate $165 per day in cash and averages, and gave a total of 200 shots per day. The events were all at 20 targets, with four moneys and the Rose system of division. This, with the distance handicap system and good, strong targets thrown from expert traps, made a combination that one had to keep very wide awake to successfully cope with. None of the phenomenal scores of former days were made, and it was proven to be untrue that shooting is especially easy in Denver—as some Eastern shooters have been led to believe. Altogether over fifty shooters participated in the programme for the week, and a large proportion of all contestants shot through.

On the first day the points were won by Hirschy, McMillan, Garrett and Sprague, these being the only 90 per cent. scores.

The second day the points were filled by Waddington, D. Timberlake, Hirschy, G. Timberlake, Riehl and Planck. The total attendance was over fifty, and thirty-four shot through.

The average programme was finished Thursday forenoon with five events. The wind was rather stiff and scores erratic. The result of this competition gave the honors of the shoot for the six top places to Hirschy, D. Timberlake, Garrett, G. Timberlake, Hughes, McMillan, Riehl and Yonkman.

In the afternoon the Great Western Handicap was shot. This represented a race at 100 targets, for the Denver Post trophy. The latter is a magnificent sterling cup presented by an enterprising newspaper to the Denver Trap Club for continuous competition. It was won by J. W. Garrett, who scored 94 from the 21-yard handicap line. The cup is open to challenge.

June 16, First Day.

New London, Ia., Tournament.

NEW LONDON, Ia., June 18.—The New London Gun Club's three-day handicap tournament closed to-day.

The programme was liberal and the attendance should have been double what it was.

Dr. C. E. Cook spared no pains nor work to make all in attendance enjoy their visit in New London.

The grounds are as fine as any in the State. A good substantial club house has just been completed. A large sun-shade was put up just east of the club house, which gave the spectators protection from the sun and a good view of the shooting from both sets of traps. The programme called for eight 15 and four 20 target events each day, with $5 added to each event. Money was divided 40, 30, 20 and 10 per cent., beside a 50-target handicap each day divided Rose system, five moneys. A cup went to high man. In the regular events the sliding handicap was used, limit 14 to 22yds. Thus, each contestant when making a straight score shall be obliged to step back 1yd. Should he score straight in next event he shall still further handicap himself 1yd. Should he, after having made straight score, fail in next event, he shall step up 1yd., but at no time can he exceed his 3yd. limit.

A gold watch was given to first high average, and silver trophies to second, third and fourth high guns. To low man shooting entire programme, $60. A gold watch for longest run in regular events. A silver trophy to one making most consecutive misses in any event. A Schmelzer trophy to winner of invitation handicap; a gold watch to winner of grand target handicap, and a trophy to winner of sympathy handicap.

Marshall, Burmister and Burnside were the handicap committee.

Budd won high average, Gilbert second average. Long run and sympathy handicap, Budd, Gilbert, Klein, Kirby, Nichols and Marshall made 90 per cent. Budd and Gilbert withdrew, leaving the other four to shoot off at 25 targets, and Klein won with 23. John Burmister won first money and the cup in the invitation handicap. Burnside won the 80 per cent. cup in shoot-off, securing 25 straight. T. B. Nichols won fourth average, a nice trophy. Elliott won cup given for most consecutive misses. Dr. C. E. Cook won low average. Ellett, Burnside, Hale and Dr. Andrews tied on 47 in the grand target handicap, and in the shoot-off at 25 targets Burnside made a straight score and won the cup.

The New London Gun Club will hold another tournament Oct. 23 and 24. The programme will be a liberal one, and a good attendance assured. Dr. and Mrs. Cook entertained a number of visiting sportsmen at their home during the week, and the Doctor spent some time each day showing his guests how the game of croquet was played. Owing to a number of the shooters wanting to make an early train home the last six events on third day's programme were not shot.

June 16, First Day.

Events:	1	2	3	4	5	6	7	8	9	10	11	12

HAWKEYE.

West Chester Gun Club.

WEST CHESTER, Pa., June 18.—The West Chester Gun Club held, as previously advertised, its opening shoot on its new grounds, which proved a success. It was 11 A. M. when the ball was set rolling, and the crack of the guns did not cease until 6 P. M. In that time there were used 3,770 targets. The average entrance was about twenty-seven. The highest in any event was forty-four.

Fisher, of Philadelphia, had high score; Sanford, of the same place, next, with Bennett, of the home club, third.

We had visitors from Atlantic City, Pittsburg, Oxford, Wyoming, Del., and from nearly all the nearby places, and to them all we extend our thanks, for it is the shooters who stay that make a successful event. The programme provided a total of 135 targets. Appended find scores:

Events:	1	2	3	4	5	6	7	8	9	10

North River—Dudley 25, Glover 19, Allison 17, Morrison 16, Merrill 16, Vosselman 13; total 106.

A. A. SCHOVERLING.

Trap Around Reading.

READING, Pa., June 20.—The members of the South End Gun Club held their regular monthly target shoot on the club grounds to-day, and although it rained hard throughout the afternoon fully three hundred people stood in the rain to witness the different events. The club had as its guests W. F. Crosby and W. Fred Quimby, Frank Lawrence, J. R. Hull and E. D. Fulford, who all shot in the different events. A high wind from the river made the flights of the targets very irregular, and made shooting hard, and the bad background made the targets hard to see. Crosby made one run of 68 straight. There were representatives present from Birdsboro Gun Club, St. Lawrence; Shuler Shooting Club, Pottstown; Oakland Gun Club and all the local gun clubs, who were all entertained by the members of the South End Club. Arthur Fink, the local manager, had charge of the shoot, assisted by the club's tournament committee. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	
Targets:	15	20	25	15	15	15	15	15	15	15	Broke.

DUSTER.

IN NEW JERSEY.

Hudson Gun Club.

Jersey City, N. J., June 14.—This was the regular semi-monthly shoot. Drizzling rain most of the day. Nothing seems to stop members from shooting. The club is booming; the interest of old-time members being aroused. Will have an all-day shoot in the near future; notice will be given. Next shoot June 28. Everybody welcome. Take Turnpike trolley car from Jersey City. Time from ferry, twenty-five minutes.

Events:	1	2	3	4	5	6	7	8	9
Targets:	15	15	15	15	15	15	15	15	20

Franklin Gun Club.

Franklin Furnace, Pa., June 13.—The following scores were made at the shoot of the Franklin Gun Club to-day: W. Stephens 9, J. Williams 9, H. Pope 11, W. Pope 7, A. Wright 11, H. Corner 10, C. Ramage 4, E. Black 8, F. Suthren 12, F. Kishpaugh 11, C. Pollard 0, Alf. Wright 4.

Ossining Gun Club.

OSSINING, N. Y., June 20.—There was very little shooting on the grounds of the Ossining Gun Club to-day. The threatening weather kept many away, and those who took a chance at the elements had their choice between a good soaking at the regular 16yd. stand and a waste of good ammunition from the 22yd. mark, under the protection of the club house veranda. The latter was preferable, so a series of small sweeps were shot, divided in two moneys.

E. F. Ball negotiated 10 straight in one event, which put him head and shoulders ahead of all but A. Bedell, who got 9 in the same event. W. Root and A. V. Gallougly, of New York city, were visitors to-day, trying their hand for the first time at the clay saucers. They do not want their scores published, so we will place them as "also rans." The best J. Hyland could do in the rain from the 16yd. mark was 8 out of 10 to C. Blandford's 9 out of the same number.

A few prizes will be offered to the club members next Saturday to enliven the sport. The grounds looked lonely after the big shoot last week. There are still some pasters and placards left as reminders, but the headquarters flag is flying in Buffalo for 1904.

C. G. B.

Chesapeake Gun Club.

NEWPORT NEWS, Va., June 17.—Live bird and target events were shot at the Chesapeake Gun Club shoot to-day. The day was perfect for the sport. Some good scores were made.

In the live-bird shoot Mr. P. J. Gallagher, of the Portsmouth Gun Club, killed 15 straight. He was closely followed by Mr. E. C. Gunther, of the Norfolk Club, who killed 13 out of 15.

In the target shoot Mr. Thomas F. Stearnes easily led, breaking 71 out of 75 birds. The scores made in the two shoots follow:

Events:	1	2	3
Birds:	5	5	5
P J Gallagher	5	5	5
E C Gunther	4	5	4
B B Semmes	3	3	4
T F Stearnes	2	4	3

E C Gunther	24	20	..
H Westacott	20	21	..

G. B. J.

Winchester Gun Club.

DETROIT, Mich.—Like the day after the Derby, the shoot after the Decoration Day tournament was poorly attended. The weather was too wet for any out-door game, although the rain held off at the right time, and those present had an enjoyable shoot. Following are the scores, the fourth event being the postponed club event of Decoration Day, cut out of the tournament programme, as a purely club affair, to save time. Shiell was high in this with 23. The fifth event was the handicap, and the sixth the club event of this shoot, in which Hitchcock was high with 23.

Events:	1	2	3	4	5	6
Targets:	10	15	10	25	25	25
Shiell, 18	..	10	7	23	20	18
Brodie, 18	8	10	8	21	15	18
Ford, 18	..	..	..	18	17	18

Hitchcock, 18	7	13	..	16	19	23
Leggett, 16	7	5	..	14	15	14

D. A. H.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., June 18.—The scores made at the shoot of the Rochester Rod and Gun Club yesterday are appended. The rules and conditions of the new trophy have not yet been formulated. Mr. Adkin has been shooting less than six months and has developed into a wonderful shot. Yesterday, in addition to the regular event, he made two other 25-target straight scores. The handicap committee have been cutting a bird at a time from his allowance, until to-day he was only allowed 26 targets. He broke straight to-day, and hereafter will have to shoot at scratch, which is 25 targets.

Next Wednesday a special handicap contest will begin for a valuable trophy donated by Messrs. Adkin and Clark. The scores: Mosher (28) 21, Stone (28) 18, Newton (26) 20, Adkin (26) 26, Weller (28) 17, Gardner (29) 23, Cosman (25) 17.

Dover Sportsmen's Association.

DOVER, N. H., June 20.—We had our Saturday's practice shoot. While the day was not as favorable as we should have desired, yet the scores made by the contestants were unusually good, considering the conditions. Mr. Aldritch, from New Bedford, was our only visitor, and although out of practice, he did very well.

Corson made the best average, 86 per cent., but some of the others were not far behind. On the Fourth of July, when our next good shoot takes place, I hope to give you a detailed report.

D. W. HALLAM, Sec'y.

Cincinnati Gun Club.

CINCINNATI, June 13.—A strong wind had a harmful effect on the scores in the handicap contest for the Troisdorf medal shoot held by the Cincinnati Gun Club to-day. The scores:

Medico, 18yds., 40; Falk, 17yds., 40; Faran, 16yds., 40; Linn, 16yds., 38; Ahlers, 20yds., 37; Captain, 16yds., 36; Randall, 16yds., 35; Gambell, 20yds., 31; Block, 18yds., 30; Corry, 17yds., 29; Williams, 19yds., 29; Guess, 16yds., 29.

Interstate at Warm Springs.

WARM SPRINGS, Ga., June 20.—The tournament given by the Interstate Association for the Meriwether Gun Club at this point, came to a successful close last evening, after two days of shooting at targets and two days at live birds, and it was warmly supported, especially so by shooters from the State of Georgia. In fact, the attendance was much larger than we thought several months ago it would be. There were shooters present from Georgia, Alabama, North Carolina, South Carolina, Tennessee and as far North as Maryland. This was the first Interstate Association tournament ever held in this particular portion of Georgia, and, as all Interstate tournaments are, it was conducted in an up-to-date manner. The added money feature was an attractive "bait," which drew a large attendance, and if one could shoot a little bit there was no excuse for his walking home. Also, the handicap feature was, no doubt, a drawing card with a great many.

It is not the most agreeable duty in life, that of serving on a handicap committee, as it is a thankless task, and very frequently those who serve receive more condemnation than praise for the performance of a very disagreeable duty. This duty was acceptably performed by a committee composed of Col. J. T. Anthony, Dr. F. C. Wilson, Mr. O. E. Pooler, Mr. F. C. Etheridge and Mr. Geo. H. Walker. So far as the writer could learn, only one objection was registered, and results show that the judgment of the committee was pretty near right.

Warm Springs being the leading summer resort for southern and central Georgia, of course, there were a great many ladies stopping at the Springs, and they were generous in their attendance each day. This year our genial host, Mr. Chas. L. Davis, had erected for the use of the ladies a "grand stand," which is a decided improvement upon past arrangements for their accommodation and comfort. Ladies' presence always lends dignity and tone to a meeting of any kind, and as I have a wife myself, and don't think the best is any too good for her, I say have them with us whenever we can, and make them as comfortable as possible always.

Our good landlord provided a very substantial lunch each day right at the shooting ground. After the other guests and patrons had dined at the hotel the staff of waiters came on to the grounds and prepared tables, laid under spreading oak and bay trees, sweet with fragrance, just a few steps from the shooting score, which enabled a number of the contestants to lunch while others were finishing out an event; in this manner little time was lost.

Manager Shaner reached Warm Springs three days prior to the opening of the tournament, consequently the arrangements of the grounds, etc., were all that could be desired, and, therefore, there was no cause for complaint. The cashier's office was in charge of Mr. McRitchie, of Newnan, Ga., ably assisted by Mr. Harry Clark, of Columbus, Ga.

Weather conditions were everything that could be desired, of course a little warm in the middle of the day, but then we don't mind that, as it is to be expected at this time of the year.

Shooters came from different points. Atlanta was represented by Messrs. A. L. Dunn, J. D. Frazier, and two sons, Dr. W. T. Vincent, W. B. Cummings, B. H. Worthen, H. D. Freeman, W. O. Conway and John E. Avery. Americus, Ga., sent H. E. McCloskey, Geo. Nix and Robert E. Lee. Columbus, Ga., which has taken on a new lease of life in the shooting world and now has a good, live club, shooting every week, sent over Messrs. Daniel Joseph, H. McCormick, formerly of Tuscaloosa, Ala., Banks Yonge and C. H. Pierce. Frank Springer was missed, but as his gun was at the factory for repairs, he could not attend. Savannah was ably represented by Dr. F. C. Wilson, City Health Officer Dr. Bruner, Capt. W. J. Thompson and son Holly, Henry Woeltjen and H. B. Lemcke. Union Springs, Ala., sent over six men, consisting of Geo. H. Walker, Hugh Foster, E. H. Cope, Dr. S. C. Cowan, A. E. Singleton and J. B. Martin. This speaks remarkably well for Union Springs, a town of 3,500 people, while other cities in the State ten and fifteen times as large were not represented at all. Monroe, Ga., was represented this year by Messrs. C. E. Arnold, J. M. Day and R. L. Nowell. Jackson Arnold was too busy making money and looking after the store to get off. Dr. J. O. Tignor, of Greenville, Ga., president of the local club, just recovering from a severe spell of sickness, came in on the evening of the first day, along with Capt. A. W. du Bray, of Cincinnati. Macon sent us Messrs. F. C. Etheridge, J. B. Mills and Thos. Grier. W. A. Baker, of Griffin, Ga., and H. T. McIntosh, of Albany, Ga., had the honor of being the only representatives of their respective cities. From far off Chattanooga came "Dick" Pooler, A. L. O'Connell, W. M. Brown and O. F. Chichester. Thos. J. Aycock was all alone from Moultrie, Ga. Mr. Harry Hall, one of Albany's best field shots, came in in time for the live bird events.

The trade was represented by Col. J. T. Anthony, John E. Avery, J. W. Elgin, W. L. Lyons and J. S. Sanders; J. M. Hawkins, who came all the way from Baltimore for the occasion; Jos. Hightower and H. B. Lemcke; A. W. du Bray, Walter Huff, H. P. Collins. Mr. Geo. Hillman was also on hand to look after his company's interests, and rendered Manager Shaner valuable assistance in smoothly running the tournament.

Although the tournament did not commence until Tuesday morning, a great many arrived on Saturday in order to enjoy a delightful rest, in addition to pleasures of the warm baths, and they kept coming on every train on Sunday, and by that evening there were over thirty guns on hand.

The traps were located in a small semi-circular valley about 600 feet wide; immediately in front of this valley there arose a hill 75 or 100 feet high and quite heavily wooded with scrub and heavy pines, which necessarily made it difficult at times to locate the targets.

W. A. Baker, shooting from the 20-yard mark, won the trophy for high average under a handicap distance, with a score of 312 out of 350 shot at. The trade representatives, with the exception of Mr. Lemcke, decided they would not contest for the trophy, but would shoot for high average only—hence shot from the 16-yard mark. J. M. Hawkins was high for the two days, breaking 324 out of 350. Walter Huff was second high, with a score of 323.

During the two days at targets a total of 16,970 targets were thrown from two sets of traps, Sergeant system.

The live birds were a fair lot of flyers. In the Warm Springs handicap, at 25 birds, Mr. Jos. Hightower and Mr. F. C. Etheridge, both shooting from the 30-yard mark, tied with a straight score. In the shoot off, miss and out, for the trophy—a sterling silver berry bowl—Mr. Hightower won on the seventh bird.

The scores of the tournament follow:

June 16, First Day.

Miss-and-out, shoot-off of tie for trophy. Hightower won in the seventh round:

Etheridge, 30	2222220	Hightower, 30	2222222

PRYOR.

W. P. T. S. L. at McKeesport.

MCKEESPORT, Pa., June 17.—The sixth tournament of the Western Pennsylvania Trapshooters' League was held at McKeesport, Pa., on June 16 and 17, under the auspices of the Enterprise Rod and Gun Club, of McKeesport, Pa. The weather was unfavorable for high scores on account of fog and high winds.

Mr. J. A. R. Elliott, of Kansas City, made the highest score for the two days, breaking 333 out of 350. Mr. Elliott is in the professional class. James T. Atkinson, of New Castle, Pa., made the highest score in the amateur class, breaking 326 out of 350.

Secretary Mains, of the local club, acted as cashier, assisted by Wm. McCrickett, of Pittsburg.

Messrs. Charles G. Grubb and Louis Lautenslager, of Pittsburg, officiated as squad hustlers.

The new score sheet of Charles G. Grubb was used with success, giving perfect satisfaction.

Edward Gecting was official scorer, and Mr. Held acted as referee.

The trade was represented by J. A. R. Elliott, Luther J. Squier and Charles G. Grubb.

The tabulated scores for the two days follow:

June 16, First Day.

CHAS. G. GRUBB, Sec'y.

Brunswick Gun Club.

BRUNSWICK, Me., June 18.—The Brunswick Gun Club held another very successful afternoon shoot on their grounds at Merrymeeting Park, this afternoon. The programme called for five events of 20 targets each. Mr. S. C. Whitmore had offered the following cash prizes for the members of the Brunswick Club: $5 to first, $3 to second, and $2 to third. In addition the club offered $1 for lowest general average of any member.

Sam Whitmore, a nephew of the donor, won the $5; Maxwell, $3, and Fisher, $2. Dr. Curtis got the $1.

Three well-known shooters were present from the Portland Gun Club: Messrs. Wyman, Rich and Gray. The Auburn Gun Club was represented by Hunnewell, Conner, Snow, Childs and Day.

Herewith are the scores:

Events:	1	2	3	4	5		
Targets:	20	20	20	20	20	Broke.	Av.
S Whitmore	17	19	19	18	17	90	.90
Wyman	15	17	20	19	18	89	.89
Rich	19	19	14	19	16	87	.87
Hunnewell	19	18	16	15	16	84	.84
Maxwell	18	18	17	13	17	83	.83
Fisher	19	18	17	17	11	82	.82
Dunning	16	16	19	15	15	81	.81
Gray	20	13	15	15	17	80	.80
Conner	14	18	15	17	16	80	.80
Goud	17	15	17	17	14	80	.80
Scribner	13	17	15	14	18	77	.77
C Whitmore	18	13	14	15	16	76	.76
Andy	13	17	15	16	14	75	.75
Snow	15	12	14	17	14	72	.72
Childs	10	15	14	11	13	63	.63
Curtis	13	12	14	12	11	62	.62
Day	5	10	12	8	13	48	.48

Below are the scores of a 25-target handicap, 16, 19 and 22yds., with any angle possible to be thrown, shoot at everything: S. Whitmore, 19yds., 22; Fisher, 19yds., 21; Dunning, 16yds., 20; Gray, 19yds., 18; Andy, 19yds., 17; J. Goud, 16yds., 17; Maxwell, 19yds., 16; Hunnewell, 22yds., 16; C. Whitmore, 16yds., 16; Scribner, 16yds., 15; Rich, 22yds., 12; Conner, 22yds., 10; Snow, 19yds., 6; Childs, 16yds., 5.

Entrance $1, three moneys: S. Whitmore, first, $5.25; Fisher, second, $3.15; Dunning, third, $2.10.

Neponset Gun Club.

EAST WALPOLE, Mass., June 12.—At the regular monthly meeting of the Neponset Gun Club on June 2, the following officers were elected: President, Charles Flower, re-elected; First Vice-President, Ernest Ellis, of Norwood; Second Vice-President, Dr. Leonard Wolfe, of Norwood; Secretary, Marshall H. Grant; Treasurer, A. Cutter, re-elected; Captain, Joseph Fenton, of Norwood; Lieutenant, Harvey Blanchard; Trustees: Edgar Bills, Frank Bentley, John Maguire.

M. F. GRANT, Sec'y.

[Louisiana] Trapshooters' League.

NATCHITOCHES, La.—June 3 and 4 will ever remain memorable in the annals of the Louisiana Trapshooters' League. On these dates the Natchitoches Gun Club held its initial tournament as a member of this League. Here the cracks from the various clubs met and threw down the gage of battle. It was the first tilt of the season—the first meeting of the clans with poised lance and armored panoply. A jolly good-natured crowd it was, as is always the case with lovers of dog, rod and gun. Old friends met and renewed vows of fidelity, and with Southern hospitality fires were set burning on altars of new friendships. This organization consists of Natchitoches, Dixie, Arcadia, Robeline, Mansfield and Coushatta. Its objects are to protect game, to extend the influence of the true sportsman, and encourage the manly sport of trapshooting. From the enthusiasm and attendance at the first shoot continual growth and prosperity seems assured. Its officers are: J. F. Welch, President, and J. G. Marsten, Vice-President.

Natchitoches is one of the oldest towns in the State; in fact, in the United States. Its residents are descendants of the old pioneer families whose valor and hardihood created an empire out of a wilderness. Naturally, we find much culture, wealth and all that is good in civilization. Its people are neither zealous fanatics nor religious bigots; but possess in well rounded moderation all those qualities that go to make our most valued citizen. They are religious; they are zealous; they are enthusiastic; they enjoy life and revel in its beauties; they grasp in full the compass of existence, and rejoice in its duties; they shoot and hunt and fish and ride and walk and fast and pray. When the golden bowl is full they sip of its nectar; when it is dashed aside and death's black curtain hides for a time the stage of life, they are sad and with humility pass under the chastening rod. A people it is a pleasure to meet, and from whom it causes pain to part.

The town itself is fast becoming one of the most important in central Louisiana. It could not be more beautifully located. Business interests of various kinds are fast developing its natural resources, the State Normal is located here. This is one of the most important State institutions. It brings annually to the town hundreds of students, and numerous families move here to take advantage of its educational facilities. Its president, B. C. Caldwell, is the most widely known educator of the State, a man of fine parts, brilliant address and masterly executive qualities. You intuitively recognize power the moment he is met. Its talented and versatile young Congressman, Phanor Breazele, wields a vast influence for its good; the horizon of his influence is fast widening. He is even now being mentioned for Governor, after his next term. Here's to him. With such men as these and Judge Porter, Dan Scarbrough with their tact, push and industry, assisted by an intelligent community, the town's future is easily seen.

The tournament consisted of eight events each day. The first 25 the second day was for the cup given to the best team of three shooting at 25 targets per man. It was won by Marsten, Bosley and Picket, of East Point, on a score of 61. Then came Montgomery, Hill and Montgomery, of Natchitoches, with 59, and Mansfield with 58, Elam, Jenkins and Warren shooting; Conshatta, with John Marsten, Pierson and H. Marsten, took fourth. Six teams shot.

Mrs. Breazele, of Natchitoches, the talented editress of the enterprise, delivered the cup to the lucky winners in a few well chosen, eloquent sentences. Mr. J. G. Marsten responded in clever style, and the ceremony ended. All cheered their appreciation.

According to constitutional provision, 50 targets must be shot by each contestant for the individual match. These were placed in the programme as the last 25 each day.

First day: J. G. Marsten 25, Welch 23, Picket 22, R. Montgomery 22, Ventura 21, Breazele 21, Jenkins 21, Caldwell 20, Freeman 20, Elam 20, Sam Hill 20.

These were the only ones having any show to win on the following day unless something very unusual happened. Marsten, however, held his own and won easily, though Ferguson got the fine score of 24. Ross Montgomery repeated his score of 22; Elam, Bryan and Bosley also got 22, Picket 21, G. Montgomery, P. C. Rogers, John Warren, L. Ventura and Abbington got 20.

It was an exciting race, and created much enthusiasm, though all knew the winner would be Marsten.

After all had shot, President Welch called Mr. Marsten before the crowded grand stand, where probably at no shoot were ever gathered more beautiful ladies nor a finer array of men.

The cup, presented through the President by the Peters Cartridge Company, is a thing of beauty; solid silver, gold lined, tall, elegantly ornamented, having three ivory handles; is a gift worthy the most strenuous endeavor to win. Expressions of good will for the liberal donors were heard on all sides; and this company deserves all the praise it received for its liberal patronage and desire to further this most delightful sport. The cup hung both days before the grand stand, admired by all.

The Natchitoches Club will develop a number of good shots. The writer remembers a short time since that a number now good for 80 per cent. or more were then not capable of making 50 per cent. Count Ventura was always a good shot, and remains so. Messrs. R. L. and G. Montgomery, Jack Bryan, D. W. Breazele, J. W. Freeman, Sam Hill and P. C. Rogers will be first-class shots. At least three experts will develop from this bunch.

Had Judge C. V. Porter shot through he would have stood well toward the top.

Hon. Dan Scarbrough surprised everybody. When he first stepped out all got ready to laugh as he missed them. Much hilarity was not indulged in, however, as he broke them like a veteran, and will make a good shot if he so desires.

Hon. Phanor Breazele has not allowed his brilliant Congressional record to stay his appetite for sports. He shot, and shot well, as did Judge Samuel Henry. A special match between these two was much enjoyed. The match was won by the Congressman.

It is this getting out with the boys that makes these men so strong with the public. They do not do so for this purpose, but because they enjoy it; hence the warm friendship that springs up between true sportsmen (not sports, bear in mind).

Several squads composed entirely of men who had never shot targets were put out and caused much amusement.

The ladies of Natchitoches, on behalf of the M. E. Church, served refreshments. They left nothing to be desired, either in quality, quantity or service. It was good—yea, very good—and plentiful.

Dr. Nabors, John Warren (Big Nerve) and the writer were entertained at the beautiful and hospitable home of Sheriff J. W. Freeman. This trio will long remember the good things eaten, and never forget the kind treatment.

Dr. Nabors was the nerviest man at this tournament. There must be something in the air about Mansfield on which "such Cæsars feed" to make them great. Abbington and John Warren are both from there. The Doctor went nearly through without locating anything in the way of a prize. I presume Abbington would have been as guilty, but he was more lucky, landing just often enough to vary the monotony. These two fairly well fill the place once occupied by John Warren, but for diameter, circumference and general weight of nerve he will never be fully replaced. He has now been promoted.

There are two classes of prophecies the writer seldom fails to land a winner, viz., baseball and shooting. Last year, on their first appearance, it was predicted that Marsten and Picket would develop into great shots. In fact, Marsten was called the future great. This is being fast verified.

The East Point cup team—Picket, J. G. Marsten and Bosley—are good ones. It looks as if that cup had gone there to stay. Picket and Marsten shot entirely out of their class, no one being near enough to trouble them.

The targets, as at all similar tournaments, were thrown hard. But few straights were made: one each by Elam, Rogers and Welch, are all now recalled.

Mr. Elam's handsome figure and graceful position attracted the attention of the ladies. He also shot up to form. Messrs. Woodworth and Jenkins were both sick and could not do themselves justice; they are good when in form and will be heard from at Mansfield.

Mr. Lindsey seems to have lost "the know how" since he parted with his Greener two years ago. He was then equal to any in the State.

Hon. J. H. Caldwell quit his pump and took a double, with disastrous results. The Major can "heap shoot um" when everything is properly arranged, oiled and adjusted; but it must be as exact as watch works.

Mr. Ferguson, of Robeline, is a beginner, and bids fair to stay on the upper horizon, if not as a star of the first magnitude, he will always be plainly visible.

Mr. Arthur Pierson is a coming shot. Mr. John Marsten has already arrived.

Henry Marsten was sick, and has been for a month. We are sorry. Henry is a genial companion. Ill health has lowered the standard of a number of the boys. Welch, after a sick spell of twenty-one weeks, was out of form along with those mentioned. We hope all will soon regain their usual health and follow, with wonted skill, the elusive bluerocker Clevelandi.

Sheriff Freeman certainly showed nerve in going all the way through, both regular and extra events. Nothing was too big for him to tackle, nothing too small to overlook. Just mention, and with him it was, "Where is my gun?" with no query as to amount of entrance, number of targets or who were to shoot.

As a squad hustler R. Montgomery will fill the whole box. It was through him the regular events went off in such a hurry and so many extras shot. The club owes him at least 5,000 targets. A guest, remarking on his ubiquity, being here, there and yonder at the same time, was told by Mr. Freeman that movement with constant acceleration was his natural condition of life, and to-morrow he may be forty miles out in the piney woods conducting a camp meeting, and in the evening, after chicken, would insure the preachers for $2,000 each, then give his half of the premium to an old maid's home or anything else asking it. The writer heard him put down an extra and pay for it, then tell some fellow he did not know to go in and shoot it out, as he hadn't time.

Jack Bryan and Drew Breazele present an elegant appearance while shooting. They will fast develop into experts. Mark this.

If George Montgomery and Sam Hill are really as cool as they look when shooting, the proverbial cucumber is not to be counted.

The League passed a series of resolutions, thanking the Peters Cartridge Company for its donations of medal and cup, and authorized President Welch to mail them acknowledgment of this fact.

Our constitution, like that of the Valley League, provides for no handicaps. A number of members desire a change, so it will likely be amended another season. The result will be questionable.

A grand ball was given in honor of visiting shooters at the beautiful rooms of the Comus Club. All enjoyed themselves to the limit. R. Montgomery, unknown to themselves, had sent telegrams to the wives of the shooters saying they had each made such fine scores they must stay and celebrate. He then had the trains leave before schedule time, the telegraph wires cut, steamers embargoed, and the guests were at the mercy of their friends.

This, like all good things, must end, so farewell Natchitoches, with its brave men and fairest women. May all meet on your hospitable grounds again; may those whose hearts swell with nature's love again the wassail bowl pass round, and clasp hands in fraternal joy. May fullness of years be granted to enjoy the bird songs, the dancing leaves and merry music of the rills and woodland echoes, and the sublime symphoney of the winds and storms and rolling thunders. Here's to the sportsmen, nature's priest, who, like poor Lo, sees God in the storm and hears Him in the wind. With Rip Van Winkle, on behalf of fellow Leaguers, I will say, "May you live long un' been 'appy!"

Vale.

J. F. WELCH.

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., June 11.—In spite of the rain, the weekly shoot of this club to-day was fairly well attended, seven men facing the trap. Thirteen events were shot off, the most important of which was No. 8, for the Marshall cup, which was won by Claymark, who, with 4 misses allowed as breaks, scored 21. As there is no regular shoot advertised by any of the clubs in this vicinity to take place on July 4, the management of this club will hold a local shoot on that day. Shooting will begin at 1:30 P. M. It is not the intention of the club to try to make a barrel of money out of this little affair, social rather than financial gain being the object in view. The programme consists of five 15 bird events at 40 cents each—25 cents for the pot and 15 for the targets—and one 25-bird event at 75 cents, 50 cents of which goes in the pot. While this is not a "big affair," we expect to have a good attendance and a lot of sport. Bring your guns and your friends, and we'll help you enjoy yourself.

SNANIWEH.

PUBLISHERS' DEPARTMENT.

Low Rate to Denver.

VIA PENNSYLVANIA RAILROAD, ACCOUNT CHRISTIAN ENDEAVOR CONVENTION.

FOR the benefit of delegates and others desiring to attend the Twenty-first International Biennial Convention of the United Society of Christian Endeavor, to be held at Denver, Colo., July 9 to 13, the Pennsylvania Railroad Company will run a personally conducted tour to Denver and return, leaving New York, Brooklyn, Jersey City, Newark, Elizabeth, Rahway, New Brunswick, Trenton and intermediate stations, Monday July 6, going via Chicago and arriving Denver Thursday, July 9. Returning, the tour will leave Denver Thursday, July 16, arriving Trenton, New York and intermediate stations Saturday, July 18. Special trains of the highest grade of Pullman equipment will be run on a fast schedule. Each train will be in charge of a tourist agent, chaperon and a special uniformed baggage master. Round trip rate, covering transportation to Denver, Colorado Springs, or Pueblo and return, Pullman berth, and all necessary meals in dining car going and returning, will be as follows: New York, Brooklyn, Jersey City, Newark, Elizabeth and Rahway, $74.50, two in one berth, $63.50 each; New Brunswick, $74.35, two in one berth, $63.35 each; Trenton, $73.55, two in one berth, $62.55 each. Round trip rate, covering all necessary expenses on going trip and railroad transportation only returning, will be as follows: New York, Brooklyn, Jersey City, Newark, Elizabeth and Rahway, $60, two in one berth, $54.50 each; New Brunswick, $59.85, two in one berth, $54.35 each; Trenton, $59.05, two in one berth, $53.55 each. Proportionate rates from other points. Pullman accommodations and meals are included only while tourists are using special trains. Special side trips from Denver at reduced rates. For reservations of space, tickets and full information, apply to nearest Pennsylvania Railroad Ticket Agent, Tourist Agent, 263 Fifth Avenue, New York, or direct to Geo. W. Boyd, General Passenger Agent, Broad Street Station, Philadelphia, Pa. —*Adv.*

We are informed by the Dupont Company that at the Ohio State shoot, held in Cincinnati during the week of June 9 to 11, most of the trophies were won by sportsmen using Dupont Smokeless. Mr. C. A. Young won the Press-Post trophy with a straight score of 25. He also won the L. C. Smith trophy, defeating the runner-up, C. W. Phellis, who tied with Mr. Young on the 48 out of 50, and in the shoot-off Mr. Young broke 24 out of 25. The State Journal cup, emblematic of the amateur championship of Ohio, became the property of Mr. R. S. Rhoads, who tied with four others on a score of 29 out of 30, and in the shoot-off made 25 straight. Five-man team race, 30 singles and 10 pairs, was won by the Cincinnati team, Messrs. Gambell, Squier, Ahlers, Van Ness, and Neyl, all using Dupont Smokeless powder.

At the Sunbury, Pa., shoot, June 9 to 11, Geo. Howell and R. C. Dirk tied for first general average. At the Sioux City, Ia., shoot, June 10, first and second general averages were won by J. W. Brodrick, and R. Barber, using a Winchester Repeating shotgun. At the Hamilton, O., shoot, June 12-13, R. L. Trimble won first general average. All the above shooters used Winchester factory loaded shells. At the Shreveport, La., shoot, June 15, the first seven general high averages were won with Winchester factory loaded shells.

Messrs. Von Lengerke & Detmold, 318 Broadway, New York, have added an automatic dog exerciser to their line of sportsmen's goods. The man who wishes to prepare his dog for a bench or for field work should consult the aforementioned firm for particulars.

Mr. J. Mowell Hawkins, at the Interstate Association shoot, at Warm Springs, Ga., June 16-17, won high average for the two days with 324 out of 350. He used Dupont powder, Winchester gun and factory loaded shells.

New Advertisements

We believe it to be a fair assumption that nine out of every ten fishermen are smokers. Smoking seems to be a part of most every sort of an outing; but we know from experience that the same "weight" of cigar after dinner and in a boat is bad judgment, and that "cheap" cigars are worse. In the advertisement of Herbert D. Shivers, Inc., in this issue, they tell us some interesting facts about making cigars, selling cigars and profits on cigars that bear the stamp of reason. Their pamphlet "Concerning Cigars" is of interest to all smokers, both in and out of doors. An undefiled Havana "Panetella" of medium weight kills time very pleasantly "between the acts," be it while awaiting another rise or after the curtain has gone down.

In this week's issue Yawman & Erbe Mfg. Co., of Rochester, N. Y., advertise their famous automatic reel, accompanied by a record catch of rainbow trout. The interesting catalogue issued by this firm gives more details of work done by this reel and of the 1903 prize contest, open to all, fishermen using the Y. & E. automatic reel.

The Ducker portable houses are the standard. Two of them are offered at a bargain in our advertising columns by Brown Hoisting Machinery Company.
