Considering everything, our large game is doing nicely and with continued rigid enforcement of the laws will propagate and multiply. The laws relating to large game are very good, but can be improved upon greatly by a few slight alterations. I would suggest that the open season begin one month later, namely, October 1st; and, in regard to elk, if it be deemed necessary, continued one month longer, namely, until December 1st. These suggestions are made for the reason that the weather in September is usually so warm that it is impossible to keep the meat, and in most cases it spoils and no good use can be made of it. I would also recommend that the limit on deer and goat killed be made three instead of six, as the law now stands.

Our game birds, grouse, pheasants, prairie chickens and sage hens, have been very numerous this year. Not only is this true of sections, but seems to have been universal all over the State. Many reports have been received that grouse, pheasant and prairie chickens were being hunted and killed during the month of August, and on September 1st they were wild and unapproachable. This is due greatly to the fact that the open season for sage hens and turtle doves begins on the first day of August, one month earlier than for grouse, pheasant and prairie chickens. Thus a man who is seeking to break the laws can go out in August with his dog and gun without fear or suspicion, for he is always hunting "sage hens or doves." The man who is really and honestly hunting for sage hens or doves will often run into a flock or covey of the others, and, not being able in his excitement to control himself, will take a chance and kill them. Thus it is well to "lead us not into temptation," and this would be remedied to a great extent if the open season for sage hens and doves was fixed at September first, which would then make the open season for all birds and fowl open at the same time, greatly aiding in keeping the law-breaker in check, and giving the law-abiding hunter more consideration, and at the same time lessening the burdens of this office materially.

We are not so fortunate in regard to aquatic fowl, such as ducks, geese and brant. These are migratory birds, and as our State has a very small water area as compared with other States, the breeding grounds are less and inducements fewer for them to remain and rear their young. I believe even with these conditions that our duck shooting would be much better if the ducks and geese were not molested in the spring. As it is now, they are continually shot at from the time they first show themselves until they are driven out of the State. They are given no opportunity to remain and breed, even though they were so inclined. As an article of food they are not at all palatable. They arrive here after their long flight, poor, scrawny and tough, being nothing more than muscle and stringy sinews, good only for the purpose of being slaughtered for amusement, when, if allowed to remain, had they been so inclined, we would have a goodly number of native ducks in the fall. Who would not rather have one young, fat and tender native duck for eating than a dozen of those thin and emaciated creatures that come in the spring. A great many of the States have closed out spring shooting. Maine, Vermont, New Hampshire, Ohio, Michigan, Wisconsin, Minnesota, California and Utah are among the States that have done so, and they report great results. I would be glad to see this tried in our State, as I am sure it would result in giving us thousands of native ducks, where, under present conditions, we have practically none.

Fish.

While we have many laws for the protection of game, we have little or no protection for fish, and especially for our mountain trout. Farming is one of our greatest industries and resources, and its success is wholly dependent upon irrigation. The problem of fish protection is a hard one to solve satisfactorily to everybody. It is a matter of serious regret that no practical method has been adopted to prevent the great loss of trout which escape through the irrigating canals and ditches out on to the land, and perish, during irrigating season, other than the common wire mesh screen which clogs up and retards the flow of water in the spring and autumn when drift matter and leaves are brought down by the current of the stream.

It is to be hoped that in the near future some satisfactory contrivance may be invented which will not injure or work a hardship on the farmer, and at the same time put an end to this widespread destruction.

I have received hundreds of letters from all over the State on this subject, and have personally seen many examples of it.

Many people are under the erroneous impression that the old screen law is still in effect, but this was repealed by the Legislature of 1897. This law was of no practical value, as it required screens to be placed in the ditches from September 1 to March 1, at which time the fish were not running.

The law requiring fishways to be placed over all dams was passed in 1897, but was given little or no prominence until I came into office. There were few people who had any idea what one looked like, much less how one was made. After considering the merits of several kinds, I decided that the "Buck Fishway," adopted by the State of Minnesota, was the most simple and effective. I had printed copies of plans and specifications made for the construction, giving scaled drawings and cuts of the exterior and interior, and plain directions for making, so that any person, without being a carpenter, could construct one in a short time. These were made a part of the notices served on the owners of dams, and as a consequence practical fishways are now constructed over nearly every dam in the State.

The sawmills have been forced to desist from their old-time practice of dumping sawdust into the streams, and the waters are now clear of such debris.

Numerous complaints have been received by this office regarding pollution of streams with coal dust, washings, and other debris coming from coal mines. The situation is most serious on the upper Yellowstone River below Horr, and on Rocky Fork Creek below Red Lodge. There is no question that this practice has totally destroyed the fishing in these sections, and where the water has to be used for domestic purposes it is very disagreeable if not unhealthy, to say the least. Senate Bill No. 56 of the session of 1901 was no doubt intended to cover such cases as these, but it is so constructed that one section absolutely repealed the other, thus annulling the bill. It is to be hoped that this session of the Legislature will take some action in the matter that will remedy this state of affairs.

The most contemptible and despised violator with which we have to deal is the "dynamiter." I am sorry to say that many reports of this character have been received, and that while many of them no doubt are imaginary, nevertheless some of this work has been going on. We have been unable to convict the parties arrested, although in every instance we had a good case. As the offense is a felony, you must, to satisfy a jury, have an eye-witness, and in cases of this kind this is almost impossible. In committing this offense the person not only ruins the majority of the fish that he gets so that they are unfit for use, but he kills all the small fry, and destroys all the feed in the hole, so that the fish will seldom return to the place for years.

I took up the matter this fall of stocking the Missouri dam (Lake Sewell) with black bass. The yellow perch which were planted there a few years ago have thrived so marvelously that the bass, which usually prosper under the same conditions will, I am sure, do well in this place. Geo. H. Bowers, U. S. Commissioner of Fish and Fisheries, assures me that I will get a liberal allowance of bass for this purpose next year. These fish will not be fry, but fish from three to five inches in length. The U. S. fish hatchery at Bozeman, under the able supervision of Dr. Jas. A. Henshall, is accomplishing much toward the restocking of our streams, but as the station must supply several States, the demand made upon it is much greater than the output, consequently only a limited amount of its product can be used for this State. Three thousand fry from there were planted in the North Fork of the Sun River above the falls last month by the Augusta Chapter of the League of American Sportsmen. These fish were packed in forty miles on horseback and placed in waters where a fish was never known to exist, they having been unable to scale the falls. This is but a small number of fish, but it is expected that they will stock the hundreds of miles of beautiful waters in this section.

Much other planting has been done this and other years past in different sections of the State, and the fishing that we have to-day is principally due to this.

Montana with its thousands of miles of the very finest streams is greatly in need of a State hatchery. Most of the States have one or more such institutions. Of the Northwestern States, Washington has 15, Wyoming 2, Wisconsin 2, Minnesota 1. I am sure that a suitable site for such an institution would be donated by some public spirited sportsman; the cost of constructing the building would not be great, and only a small appropriation would be necessary for its maintenance.

The non-resident license law has been very generally obeyed, as near as I can ascertain, and in cases where it has not, we have had good success in apprehending the violators.

Many people seem to think this law unjust, but I believe it fair in every way. If the non-resident wishes to come here and hunt, and enjoy the privileges of killing our game, he should be made to contribute to the support of its protection and propagation. As the resident is taxed for this purpose, the visitor, who has no interest in the State other than hunting, should be made to pay also.

I regret to have to call your attention to the many accidents while hunting, caused by careless hunters. Montana has been very fortunate in the past in this regard, but this year we are not so lucky. So far this season four persons have been shot, being mistaken for game. So much of this criminal carelessness has happened in the last few years that Maine, Wisconsin and other States have passed laws making the shooting of human beings while hunting a penitentiary offence. I believe this a wise idea, as it would have the tendency to make the hunter be certain at what he is shooting. It would be well to have a law of this kind in our State.

Among the many hard propositions with which we have to deal is the "Indian question." I have made mention of this in my previous reports. They give us more trouble than any other class of people, and we are almost helpless in the matter. We receive hundreds of reports and letters about Indians killing game, many people thinking that our resident Indians have no right to hunt even in the open season; but in this idea they are wrong, as the Indian living upon a reservation in this State has just as much right to hunt at such times as a white man. In the case of the foreign or non-resident Indian we can convict him under the non-resident license law if we can catch him; this is very hard to do, for they are just sharp enough, if Crees, Piegans, Kootenais or other foreign Indians, to always be "Flatheads or Crows," when asked to what tribe they belong, and as they "are not branded" they all look alike.

I am glad to report that their depredations are becoming fewer each year. This is due to some extent to the influence of the different Indian Agents, who do all in their power to educate and inform their Indians in regard to the game laws, and make every effort to have them obeyed. The agents are many times blamed for the acts of the Indians under their charge when in fact they are powerless to prevent them in most cases. The Indian Agent has a few troubles of his own, of which the ordinary citizen has no conception, and it is well to take these things into consideration first before criticising the agent too severely.

It is to be hoped that in the near future some united action may be taken by all the States having Indians within their borders, whereby some solution may be had, and the Indian compelled to obey the game laws the same as other laws. The Government is spending millions of dollars to clothe and feed them, and there is no good excuse for the Indian to go out and slaughter the game as well as everything he finds running wild.

We have many "wild goose" chases that are the cause of a deputy making many long and expensive trips, only to find when he arrives at the place that the report is without foundation. Many people do not realize that the report they bring in is liable to send a man on a fruitless chase of a hundred miles and cause him a great deal of unnecessary expense. They are thoughtless in this respect, and do not stop to think before making these reports, whether there is any ground for making them; and in a great many cases they jump at conclusions that because there were depredations being committed last year, or year before, that it is going on now.

It is to be hoped that people will in the future be more careful in this respect. They should be sure that there is some evidence before being so positive when reporting these matters.

The man with a "grievance against his neighbor" is still in the land. We get letters from him each week, in which he wants us to arrest the man at once and put him in jail. When we sift the matter down we usually find that there has been trouble between them, and that he wants this department to help him get even.

It is well to mention here that on July 20 of this year there met with Major John Pitcher at Mammoth Hot Springs eight representatives of the Northwestern States, and organized the "National Association of Game and Fish Wardens and Commissioners," of which the following officers were elected: President, W. F. Scott, Montana; First Vice-President, Chas. W. Harris, Colorado; Second Vice-President, John Sharp, Utah; Secretary, H. G. Smith, Minnesota; member of Executive Board, Sam F. Fullerton, Minnesota.

The purpose of this organization is to promote co-operation between States, thereby assisting each other in the enforcement of the laws. A meeting will be held annually at Mammoth Hot Springs, the next meeting being June 20, 1903.

Through the courtesy of Major Pitcher the representatives were given a trip through the Park.

Deer Hounding.

Editor Forest and Stream:

With all that has been said against hounding deer, and I appreciate that the weight of reason and evidence is against such a practice, my personal observation in many trips to the Maine woods has made me believe that if dogging could be properly controlled (which would be a mighty hard thing to do, I admit) it is unquestionably the must humane way in which to secure venison. Years ago, although the law against dogging deer was on Maine's statute books, it was not enforced, and was practically a dead letter. I venture to assert that in those days fewer wounded deer roamed the woods and suffered, often dying finally in secluded thickets and swamps—than do in these later days when the laws are more thoroughly administered. Many people claim that dogging deer is unsportsmanlike. For myself, I would much prefer to never hunt a deer rather than to wound one, even slightly, and have him escape to suffer and perhaps die. Although deer are game animals and run wild, when it comes to hurting them we ought to minimize their suffering, and if they must be killed, do it in the surest and most expeditious manner possible. Under the present laws, which are doubtless the most expedient in many ways, I know, for a fact, that many deer are wounded and suffer for hours and days before they finally die, after having escaped the hunters who inflicted their injuries. In my life I have seen something of dogging deer, and among the quite large number I have seen so hunted in days gone by I never knew of but one escaping after being first wounded, and that one was driven to water again within ten minutes and killed. Possibly the people I have seen dog deer were of a better stamp than the average sportsman, but I am certain those men were more than satisfied with one deer to a man, and never thought of trying to get all the game they possibly could during their stay in the woods. Indeed, these same men now visit the Maine woods annually, and are perfectly satisfied if they have one or two saddles of venison hanging up in camp, enough to supply the table for the party during their stay. These men have visited Maine annually for many years, and have perhaps got over the first enthusiasm which makes the average hunter want to shoot everything within a radius of fifty miles of his camp. But I venture to say that a large share of city sportsmen, who are regular visitants of the game regions, feel and act in much the same way. This dissertation is not made in the hope of influencing sentiment in favor of a law for dogging deer at all, but simply in the way of reminiscence and information. Doubtless a statute allowing the dogging of deer in Maine would be unwise, especially in relation to a large part of her own inhabitants, who have always, and do to this day, break the game laws of their own domain flagrantly and principally for the sake of pecuniary gain, selling most of their game to the market men of their cities. CHICAGO AND THE WEST.

Texas Edging Toward the Plank.

Jan. 30.—Texas is edging toward the Forest and Stream plank, and if she is not ready to stop the sale of game, is at least going to try to qualify its sale, and to limit the legal bag. The inordinate greed of market shooters and game hogs has caused the introduction of a very interesting game bill, which was offered yesterday at Austin by representatives Hudspeth, Sevier, Gray and Timon, and which stands a fair show of passage at this session. Barring a too liberal application of the old and pestiferous county exemption plea, this bill, if it should become a law, would do much toward regulating the practice which now threatens to destroy the game of the Lone Star State. It would be a rare vindication of this great commonwealth could she thus rebuke the carping and somewhat unrighteous North, which does not like to see a Texas man kill a duck, since that removes the duck from calculations of the Northern spring shooter. The text of the bill is as follows:

Be it enacted by the Legislature of the State of Texas, that Sections 2, 5 and 6 of Chapter 149 of the general laws of Texas, passed by the twenty-fifth Legislature, approved May 27, 1897, be, and the same are, hereby amended so as to hereafter read as follows, to-wit:

Section 2. Whoever sells or offers for sale, or has in his possession for the purpose of sale, or whoever shall purchase or have in his possession after purchase, any wild deer or antelope killed in this State, or the carcass thereof, or the hide thereof, or the antlers thereof, or whoever shall sell or offer for sale, or have in his possession for the purpose of sale, or whoever shall or have in his possession after purchase, any of the game mentioned in Section 1 of this act, killed or taken within this State, shall be guilty of a misdemeanor, and upon conviction thereof, shall be fined in any sum, not less than $10 nor more than $100. Provided, That the sale and purchase of the game birds mentioned in Sec. 1 of this act, shall not be unlawful when such sale or purchase is made in the county where such game birds were taken or killed. Provided, That any person who shall kill more than twenty-five wild ducks, or twenty-five wild geese, or thirty quail, or thirty partridges in one day, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than $10 nor more than $100.

Sec. 5. It shall be unlawful for any person to kill, take or destroy any wild Mongolian or English pheasants, or antelope, or Rocky Mountain sheep, for the space of five years, next after this act takes effect, and any person violating the provisions hereof shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than $10, nor more than $100.

Sec. 6. It shall be unlawful for any person to kill, ensnare or entrap, or in any way to destroy any wild deer in the period of time embraced between the 1st day of January and the 1st day of November in each year; Provided, That no one shall kill more than six wild deer in the period of time embraced between the 1st day of November and the 1st day of January of each year, or any wild turkeys in the period of time embraced between the 1st day of April and the 1st day of September in each year, or any prairie chickens (pinnated grouse) in the period of time embraced between the 1st day of February and the 1st day of August of each year, or any quail or partridges within the period of time embraced between the 15th day of March and the 1st day of October in each year; and it shall be unlawful for any person at any time to hunt deer or any game by the aid of what is commonly known as a hunting lamp or lantern, or any other light used for the purpose of hunting at night; and after the lapse of five years next after this act takes effect, it shall be unlawful for any person to kill, ensnare, entrap or in any way destroy any wild antelope in the period of time embraced between the 1st day of January and the 1st day of November in each year, or any Mongolian or English pheasants in the period of time embraced between the 1st day of February and the 1st day of August in each year, and the violation of any provision of this section shall be considered a misdemeanor, and upon conviction thereof, the person offending shall be fined in any sum not less than $10 nor more than $100.

Market Shooting and the Law in Texas.

Mention has already been made in these columns of the movement on the part of Texas sportsmen to cut off altogether or to greatly limit the sale of ducks, and it has been explained that this movement is in part due to the feeling of resentment which exists regarding the big Moody canvasback reserve near Galveston. Additional facts in relation to this action, and new details regarding the history and operation of this now famous shooting preserve are to be found in a private letter received in San Antonio, and from an able and conservative sportsman resident in another Texas city, who has been instrumental in the inauguration of the Texas campaign, whose motto is "Stop the sale of game." If this motto shall finally prevail in Texas, the wisdom of the once derided slogan of the Forest and Stream will indeed be more than vindicated, and it will have carned a place among those examples of foresight which border upon prophecy. The letter of the gentleman mentioned follows in part below:

"There is one feature about the Moody Lake business which possibly is not generally known. When he got his patent he was one of a number who were endeavoring to get a patent for the purpose of making a game preserve in the strictest sense. Such men as E. S. Flint and N. Weekes were at the head of it, who would no more sell a duck than they would steal a hog. I say, upon the authority of these gentlemen Col. Moody was deputized to attend to the details about getting the patent. He did get it, through Gov. Hogg, who used to be a frequent visitor at the lake; and when he got the patent he repudiated the agreement with the gentlemen sportsmen, and at once added the pot-hunting industry to his various cotton and banking enterprises, excluding true sportsmen, and shipping such an amount of wild game every season as is almost incredible. Nobody knows exactly how much he ships, because the doings at Lake Surprise are kept as secret as possible.

"I hunted there late in the '70s, before Moody knew there was such a place, and know every foot of that country. The bottom of the lake is below the level of the bay near by, and of course it was the baldest falsehood to say that the lake could be drained; in fact, it was never the intention to drain it, or to do anything else with it than put it to its present uses, namely, to turn it into a slaughter pen for the destruction of game, nominally the property of the State.

"I was informed that in 1897, when the game law was passed, the proviso permitting Moody to kill and ship ducks North was inserted by means of his influence; in fact, the amount such influence cost was freely discussed on the streets here. I trust the Legislature this time can not be so influenced. He can well afford, however, to pay many thousands of dollars to keep the game laws in shape for him to destroy the wild

game of Texas. His son, W. L. Moody, Jr., is said to have stated that one year his income from the sale of ducks alone was over $6,000. I do not doubt it.

"Thinking you may have overlooked the notice of the late duck hunt of the John W. Gates party, I inclose clipping from a newspaper. You will bear in mind that the weather was not propitious at that time, consequently the slaughter was not as great as usual.

"The simple repeal of the proviso exempting ducks and geese from shipment and sale, putting them on the footing with other game, will destroy this pot-hunting industry. If the Legislature will do its duty this term and strike out that proviso from the game law, not only will it have a tendency to preserve the wild game, but one branch of industry of the millionaire pot-hunter and duck peddler will be cut off, and he will be obliged to seek a scanty livelihood hereafter by means of his experimental rice culture, his bank, his cotton press, his cotton factory business and his cotton dealings with country clients.

"I cannot directly prove the fact that 1,500 ducks were killed at one time and 1,756 at another. The evidence comes to me by hearsay. It was told on the streets that a member of his party reported the first number, namely 1,500, and an employe of his at the lake told me, in the presence of two others, that 1,756 ducks had been shipped from there the day previous. The newspaper report about the 400 killed by the Gates party speaks for itself. Judge Williams, of the Supreme Court, was a guest at the lake, and if report speaks truly was disappointed in not bringing away the ducks he killed, they being needed for export to the Northern markets. This, of course, I do not vouch for on personal knowledge."

It seems to be the unwritten law at Lake Surprise that any guest shooting there shall leave all his game. One Texas sportsman of considerable prominence, owner of his own yacht and proprietor of a considerable business at Houston, was once a guest at this place, and killed three or four dozen ducks to his own gun. He was stopping on his own boat, and asked one of the Moody hunters to send out to the boat a pair of canvasbacks. The birds did not come as specified, but in their stead a pair of inferior ducks, which did not please the gentleman. Complaining to the market hunter, he was advised by the latter that Mr. Moody had stated that he wanted the marketable birds left at the club house, since he thought that any man who had enjoyed the sport at Lake Surprise ought to be willing to let the owner have the products of his gun.

There is always more than one side to almost any question, and I do not doubt that there is some personal animus in much that has been written regarding this sequestration of the best ducking grounds of Texas. It is no doubt true that Col. Moody is hospitable and generous, and that he does not wholly entertain the attitude of a curmudgeon or cynic in regard to the privileges of this prolific shooting ground. Perhaps he acts according to his lights, and his lights may cause him to believe that the boundless killing and shipping of ducks is a commendable procedure upon his part. Perhaps he is one of those, and they are not a few, who think that the wild game of this great country is something which can never be exhausted, in short, that there will always be enough for all. Yet, after every excuse has been made for him, there seems no reason to doubt the truth of all these incidents related regarding him, or the accuracy of the figures given as to the extent of his market shooting operations. It is to be added also that there is an undoubted sentiment in Texas, and one rapidly growing, against him and his duck preserve. It is something more than mere personal pique which protests at high-handed appropriation of benefits which ought to belong to all, and at the persistent and unlimited violation of all those laws of restraint and moderation upon which the future of our American game depends. There are very many unpleasant details which might be made public regarding incidents at Lake Surprise, incidents of violence and lawlessness, of which, perhaps, the less said the better. All in all, the situation is one which is not pleasant to a large part of the sportsmanship of this State, and which may eventually be thought intolerable. It will be a matter very fortunately settled on all acounts if the Legislature of Texas shall cut this Gordian knot by shutting off the sale of ducks, and so leaving the millionaire market hunter high and dry on the banks of Lake Surprise.

Mr. John W. Gates, of Chicago, offered to buy Lake Surprise of Col. Moody during his visit the other week, but Col. Moody declined to entertain any sort of proposition. Mr. Gates has large business interests at Port Arthur, in eastern Texas.

San Antonio, Texas.

Michigan Game Laws.

Chicago, Ill., Feb. 6.—The general stir up in the game laws of the State of Michigan goes merrily forward. It is singularly unfortunate that this grand State, so full of good shooting and fishing, should be so continually at the mercy of this juggling in the game laws. No sooner does Michigan get a good practical game law than there arises some element or other to break it down. No sooner does she get a good warden than there arises the political machine to oust him and put in his place someone else.

Much of this state of affairs can be gathered from comment in Michigan newspapers. A journal of Saginaw, Mich., contains the following communication from Mr. W. B. Mershon, who has always been very prominent in the work for good game laws and good protective principles in the State of Michigan. In his statement he makes the following remarks regarding politics in sport, remarks fully in line with the often expressed and concurrent belief of the Forest and Stream:

"I see by the Courier-Herald that the Game and Fish Protective Association indorsed Chas. L. Benjamin for State Game and Fish Warden. Now, I am a great admirer of Mr. Benjamin, and I think he is a clever and able fellow, but I want to strongly protest against the Association lending itself to politics in game protection. If the indorsement had been made with the provision that if a politician or someone without any experience is to be selected, then I would have heartily favored Mr. Benjamin, but I do think, as a game protective club, if it intends to be such, it ought to protest against making the office of game warden part of the political machine. It has been the custom for some time to use the office of State Game and Fish Warden as a reward for some political worker, without considering for one minute whether he is a naturalist or a sportsman, or knows anything about the habits of birds and animals of the fields and forests and fishes of the lakes and streams. I have done my utmost, and I believe it is the duty of every game protective enthusiast and true sportsman to use every effort to divorce the protection of game from politics and have it done on its merits and in a practical and thorough way. There is nothing the matter with our game and fish laws, but there is a lot the matter with the enforcement of them. You never will stop the violations of these laws as long as the State Game and Fish Warden is given to understand that he and his deputies owe their first duty to the party, to the Governor who made the appointment, and to see that his political fences are mended and that the machine is kept up in every county, village and hamlet where they can use their influence and then if they have any spare time devote it to game and fish protection.

"I say, if a thoroughly experienced man is not to be appointed, and if the Governor wants to recognize his political friends, then there is no one I would rather see have the office than Mr. Benjamin; but I do not believe our Fish and Game Protective Club should be made the tool of the politicians. The meeting was held at an unfortunate time, owing to so many other engagements of the members. I hope another meeting will be held soon, at which time the commercial fishermen will be present and state their wants, and see if the sportsmen cannot work together and help one another, and each be reasonable in their demands and work with the sole idea of prolonging the supply of game and fish."

Mr. Mershon also advances in proper circles the following suggestions as to a game law:

"I should like to see an open season made for rail, beginning September 20, letting it include plover. These birds all go at the first frost. I should like to see the 15 days they propose in December stricken out. More birds can be killed in December than in all the other time together, and we have got to protect and restrict the killing more and more every year, for our supply is diminishing.

"I approve of making the limit on trout 7 inches and not over 50 being taken in any one day, nor over 75 away from any one stream, though the Fish Commission advocate making that limit 50.

"Anything our legislators can do toward the enforcement of the law so as to make the game warden's office more effective will be a step in the right direction. I think we should co-operate with the commercial fishermen here as far as we can consistently do so and get their support, so as to do away with spring shooting entirely.

"A non-resident coming here and shooting deer, if he pays a license, should be allowed to take one deer home with him. If they come here to shoot our birds, they should take out a license, not less than $10 nor over $25, for the season, though probably $10 or $15 would be enough, and they should be allowed to take home with them when they go not to exceed one-half dozen partridges or 20 quail. I should like to see a license on non-resident fishermen and allow them to take out of the State not to exceed 25 or 30 brook trout, all properly taken, if it can be legally done.

"Above all things, I am opposed to the marketing of game. If the farmer will compare the prices of poultry now with what they were when game was in market, he will see his poultry brings him more money. The cry that the game is protected for a favored few is nonsense, for everyone has a right to take game legally and also a right to give it away to friends. Throw it open to market hunters, and there would be no game in a couple of years, and no one excepting the residents of large cities, who could pay a fancy price for it, would get it, and it would largely be smuggled out of the State for the New York and other high-priced markets. Detroit would get a share of it, and farmers would get no more, if as much, as they do now, and in two years no one would have any."

There is good sound sense in those closing words.

It is very much to be hoped that something will be done toward restricting the catches of trout on the upper Michigan streams. Some of these streams are wonderfully prolific and are beautiful angling streams as well. But neither they nor any other water of any size can withstand such drains as catches of 1,000, 1,500 or 2,000 trout to the party. The best posted anglers and guides along the Au Sable river admit that the salvation of the Au Sable and its tributaries is the 50-fish, 8-inch limit. This same law extended to every stream in Michigan would work wholly for the good of the best interests of angling.

A THANKSGIVING BAG.

A Thanksgiving Bag.

To those of us who are not too old or too young to recall our boyhood days, the accompanying illustration will appeal with a peculiar warmth, carrying us back to the long single-barrel of grandpap's, the first cotton-tail, gray squirrel or chipmunk, to frosty mornings down along the "spring" back of the old crib house with Neezer—him of no breed at all, just a dog, one that would go under the ice after a muskrat, run a rabbit, tree a squirrel, help find a dead bird or mind cows—just a dog—just a boy, both full of the love of hunt, when we, too, could pose in pride oblivious to the camera and the world, only looking for more.

Many of us come by our love for nature and those things which a modern ingenuity has contrived to simplify the taking of game by inheritance to a degree that, should we have had the "selection of an ancestry" we couldn't have done better. I have heard it said "that the sportsman is born, not made," and surely observation would indicate that this well worn saying is largely true.

By comparison, those days that are gone, but not beyond recall, look as though they might have been dull, but they were not. The boy of then and the boy of now are the same. Fred's sensations as he sits beneath that string of brant and ducks, are sweetly natural and true to nature, and "he looks the part."

It happened at Chadwick's, on Barnegat Bay, on Thanksgiving Day, that Mr. W. E. Ross and his son Fred, of Elizabeth, N. J., accompanied by Mr. E. W. Brown, endured the hardships of a genuine fireside (only) weather in their sharpies, waiting for a flight that it seemed never would come. Even the guide had retired from on watch, when the welcome honk, honk, honk of the goose broke upon the ears of the watchers in broken snatches, wind tossed and discordant, and a flock of geese decoyed. To six barrels five geese fell, and to this youth of seventeen belongs the credit of a pair. With Fourth of July weather now in their hearts they still watched and bagged thirteen ducks ere the sun had kissed the west.

Fred comes by his gun instincts by absolute inheritance. What he has to learn about the use of the gun can easily be taught him by his father, and what is lacking there can be found just around the corner at his Uncle Charlie's. These five geese weighed 68 pounds.

T. E. Batten.

Paris Green and Game Birds.

Orient Point, N. Y., Feb. 6.—*Editor Forest and Stream:* Last week Dr. Morton Grinnell stated that a dead quail's stomach had been found to contain "101 potato bugs" by Prof. Atwater. No wonder that quail died. Ten years ago I found a dead partridge lying in the grass within a few feet of a potato field which had been thoroughly sprinkled with paris green a few days before. This is the only partridge I ever saw in this village (dead or alive), with the exception of those brought here by our hunters who have visited and hunted outside of our village limits. I have no doubt that the partridge I found dead gorged itself with bugs which had previously gorged themselves with paris green.

Uncle Dan.

Staten Island Enlisted for the War.

PORT RICHMOND, Feb. 5.—*Editor Forest and Stream:* When I returned from a trip "up the State" and took up FOREST AND STREAM I was pained to see that a mildly satirical finger had been pointed at some of my metaphors contained in a "War-Cry" against game legislation—of a kind.

Phosphorescent fossils have been remarked and "coruscate" is "to shine."

Pshaw! Why stick on a mixed metaphor or two?

Don't try to turn our gaze away from the main point by carping at a little cross-eyed diction.

Take your eyes for a moment from your study of "The Perfect Letter-Writer" and look at little old Staten Island. With little game and less incentive to protect it than any county in the State, it has a live protective association, and our Assemblyman will present for passage eight bills which will secure protection for our game.

We pay our money and we give our time, and that means something when quail for propagating are forty cents apiece and a buckwheat crop has to be raised specially for their sustenance.

No, my dear Mr. Editor, you cannot distract our attention by criticising the lameness of our diction, when our discourse is otherwise sound.

We are for Game Protection and Game—and mighty little of the latter do we see either afield or on platters at national, State, local or private protective association dinners.

It is seldom that Staten Island howls for herself, but once in a while she has just got to, and she deserves the chance and an audience, for while others are "going through the motions" we are working. WAR-CRY.

Ticonderoga Gun Club.

Editor Forest and Stream:

The Third Annual Planked Shad Dinner of the Ticonderoga Gun Club, Incorporated, K. W. Y. A. A., will be held in the Colonial Banquet Hall of the Yale Club, No. 30 West Forty-fourth street, New York City, at 7:30 sharp on the evening of March 6, Friday, the last week of the Sportsmen's Show. This active organization of city and country sportsmen residing at Ticonderoga and in the large cities, and having grounds at Eagle Lake, in the land of Cooper's Natty Bumpo and Uncas, as well as Israel Putnam, Rogers and other sportsmen and soldiers, will discuss some needed legislation relative to hunting and game preservation based upon the recent experiences of various of its members who have hunted in Essex county. All of the twelve hundred or so enrolled members of the K. W. Y. A. A. (Know What You Aim At), a voluntary association composed of very many hunters, guides and city sportsmen, will be welcome, and several guides have promised to be present at the dinner and give their views. The dinner will cost $1.25 without wine. A good time is expected. Further particulars and tickets from Peter Flint, Secretary, 150 Nassau street, Room 2012, New York City; or Paris Scott Russell, Treasurer, Hanover Bank Building, Nassau and Pine streets, New York City.

We are pretty glad that owing to the steady words of caution reiterated by the press and by the work of our Association the number of persons who lost their lives in the Adirondacks while hunting deer last season was only three, and of these two were woodsmen or farmers. Only one death resulted from city carelessness. This is comforting and true. PETER FLINT.

New Brunswick Visitors Get their Game.

CHATHAM, New Brunswick. — *Editor Forest and Stream:* I was reported by quite a number of prominent newspapers of both the Upper and Maritime Provinces of Canada as having said at the meeting of the North American Fish and Game Protective Association in Ottawa, when referring to this Province: "The game and fish laws of that Province are holding their own; big game are decidedly increasing, although sportsmen seldom secure the coveted moose and caribou heads."

What I really said was this: "There is an undoubted increase of big game animals—particularly of moose and caribou. The sportsmen of both the United States and Great Britain are finding their way into our Province in larger numbers each succeeding season, and it is a rare thing for any hunter to fail in securing the coveted heads. If he does so, it is, in nine cases out of ten, not the fault of his guide, or of the game he fails to bring down."

You will perceive that the synopsis of what I said, as it appeared in the papers referred to, did New Brunswick a great injustice, to say nothing of the awkward position in which it placed me, as speaking for it at the time in regard to its wonderful game attractions, in which it is our pride that we stand second to no other part of Canada.

If you will assist in correcting the error to which I refer I will be grateful.

D. G. SMITH,
Fishery Commissioner of the Province of New Brunswick.

A Cougar Fight.

THE Northwest has probably furnished more cougar fights and encounters with wild animals than any other part of the United States. A successful cougar fight is never a dull reminiscence, particularly when a human being gets his cougar. James McGinnis, who came from the Red River in northwest Canada, to the wilds of Cow Creek in southern Oregon, a few years back, had a very interesting cougar fight in the Cascade Mountains. McGinnis was an experienced hunter. He is of Scotch and Canadian stock and raised on the frontier and is now living on the south half of the Colville Indian Reservation in Washington. In his days of vigorous manhood he was a large, muscular, powerful man about six feet tall and weighed about 175 pounds, without carrying much fatty tissue.

Shortly before his encounter with this cougar he had been thrown from a wild horse that he was breaking and received some injuries which required some medical treatment. To secure his medicine, he had to travel perhaps five or six miles to the doctor. On his first trip he noticed many cougar signs along the trail which he had to travel. On his second visit to the drug store he concluded to carry his rifle, and, well for him that he did, or he should not now be living to tell about his cougar battle, nor would he be able to show in evidence the four long cougar teeth taken from the mouth of his vanquished wild antagonist. McGinnis' faithful old dog also was along and was no small factor in the final struggle. The cougar first attacked the dog, which made its escape in considerable terror. The savage brute then jumped at McGinnis, whose big rifle was rather heavy and his aim was rather hurried. In this way the bullet only grazed the cougar's head and intensified its rage. While McGinnis was endeavoring to eject the spent cartridge, the mechanism of the rifle failed to work and before he could get it out the big cougar was at close quarters with him, tearing his clothes and clawing away at him. By a well directed blow of his fist under the jaw of the cougar he succeeded in turning the animal away from him a little way, and at this juncture of affairs the old dog, which Mac was lustily calling, had recovered his courage and got a hold of the cougar by the ear, and then they had some diversion of their own. While the dog and cougar were engaged the hunter managed to get another cartridge in his rifle, and by the time the beast had disposed of the faithful old dog he again attacked McGinnis. So enraged was the cougar that it came right up with its mouth open and so closely that McGinnis shoved the rifle barrel into its mouth and blew its head off. The cougar, in biting the rifle, took the silver bead off the barrel. The animal was an old female and measured eight feet from tip to tip. Mac has the four cougar tearing teeth as trophies of his very serious but victorious encounter with a bad and hungry cougar. A. M.

MYERS FALLS, N. W.

Detroit Sportsmen's Show.

AMONG the prominent exhibitors at the Sportsman's Show now being held here are the following firms: Winchester Repeating Arms Co., Parker Bros., Savage Arms Co., Lefever Arms Co., Fletcher Hardware Co., Peters Cartridge Co., W. L. Marble, Truscott Launch Co., Hartford Rubber Co., Fisk Rubber Co., Michigan Steel Boat Co., Twentieth Century Co., U. M. C. Co., Detroit Canoe & Oar Works, B. F. Goodrich Co., Diamond Rubber Co., A. J. Reach & Co., Smith Trading Post Co., Veeder Manufacturing Co., Bridgeport Gun Implement Co., New Departure Bell Co., R. & F. Corbin, Farrand Organ Co., Grinnell Bros.

The gallery is reserved for the use of the first annual bench show to be given in connection with the sportsmen's exhibition. T. E. B.

DETROIT, Feb. 8.

A Large Adirondack Buck.

FOREST, FISH AND GAME COMMISSION.—Albany, N. Y., Feb. 3.—*Editor Forest and Stream:* Your readers may be interested in a report which has come to this office relative to the killing of an unusually large deer. The animal, which weighed 415 pounds, was shot by William Coulter at Johnsburg, N. Y. Inquiries made by this office have resulted in letters from several reputable residents of the locality who will attest the fact that the deer weighed as stated, and further say that it was the largest they have ever seen.

JOHN D. WHISH, Secretary.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The Stocking of Inland Waters with Black Bass.

BY S. T. BASTEDO.

A paper read before the North American Fish and Game Protective Association.

THIS is a subject which I must treat chiefly by the aid of such light as I have obtained in the discharge of my official duties, rather than as the result of special observation and investigation otherwise; and my paper will therefore of necessity be more a relation of the work as it has been conducted in this Province than a treatment of the question from a technical or scientific standpoint.

The work of re-stocking the inland waters of Ontario with black bass on an extensive scale is of but recent origin. It is recorded that bass were transplanted by the Dominion Government as long ago as 1873, and have been transplanted at irregular intervals since; but the instances are few, and the work does not seem to have been prosecuted to any considerable extent or with any special vigor, for only incidental references are made to it in the official reports. It appears to have been treated merely as an incident of what presumably was considered more important, or at least more necessary, work, the propagation of the greater food fishes—the trout and whitefish. The Provincial Government, while the dispute with the Dominion Government as to the ownership of the fisheries remained unsettled, probably felt a difficulty in doing more than grant pecuniary aid to localities which were undertaking a little stocking on their own account. But, be this as it may, no systematized or organized plan was inaugurated or carried into execution by the Province until the Judicial Committee of the Privy Council of England had decided that the fisheries were the property of the Province, and the Province had assumed the duties which the committee determined belonged to it, and had organized a department. The fact was at once appreciated by the Ontario Government that our inland waters could be made a fruitful and lasting source of profit and pleasure to our people if good fishing could be established and maintained therein, and that it was manifestly a public duty to put forth every effort for the accomplishment of that great end, and as speedily as possible. Most, if not all, of the inland lakes and rivers of Ontario are well adapted to the black bass. It is well known that, given a fair chance, a few pair will in a short time populate the waters in which they are placed, their fecundity being great, and their habit of protecting their young insuring them immunity to a great extent from the depredations of other fish; consequently a relatively large number reach maturity; they will thrive under conditions where the brook trout could not exist, and in water of a much higher temperature; and they can be successfully introduced into waters in which they are not indigenous. These, and other reasons, seemed to indicate the black bass to be the ideal fish with which to re-stock our waters; and the most practical, successful and speedy means of accomplishing this, having regard to the success which had signalized the work already referred to, to transplant the parent fish. Many lakes in the sparsely settled districts are already naturally well stocked, and it was suggested that these waters migh be drawn upon for stocking waters which had become more or less depleted in the older and settled portions. But such a policy was open to objection, because these lakes would in turn, it might reasonably be expected, soon themselves become popular as a resort for anglers and tourists. Besides, they were so difficult of access, and so far from railway communication that the primitive means of transportation which would have to be adopted would be tedious and expensive, and accompanied by so much loss as to make it impossible to enter upon the work as extensively and as economically as would be desirable and necessary to meet the demand which was known to exist. The department therefore felt that such a plan could not be entertained—that the fish would have to be obtained from waters where a minimum of opposition would be raised to their removal, where they could be obtained in large numbers, and convenient to railway points. Such points having been located upon one or more of our great lakes, the next matter to be considered was that of rapid transportation. The Province was not yet prepared to build a car for the purpose, and therefore the Government approached the railways, which it was thought would be interested in the work, with a view to obtaining their active co-operation to the extent of fitting up and placing at the disposal of the department a car for the purpose of carrying the fish, bearing in mind that in some of the States the railways had co-operated in that way. A well-known passenger agent has observed: "What would the interior travel amount to if no effort was made to keep up the supply of fish and game? It is not to be supposed for an instant that persons are going to our interior just to see what the rivers and lakes look like. It is, of course, for the pleasure derived in the way of sport incident to the catching of fish and the hunting of game." It was not suggested that a car on anything like so elaborate a scale as some of the United States fish cars should be provided, but merely that a superannuated passenger or express coach should be adapted for the purpose. Ultimately it was found that a greater part of the work, or that which, in the opinion of the department, should first be done, was at points to be reached by the Grand Trunk Railway, and therefore the matter of the construction of the car was thoroughly gone into with representatives of that road. Their willingness to co-operate was graciously and readily expressed, a plan was prepared, and the car was equipped. Originally a first-class passenger coach, it is divided into sections, with a passageway down the middle. A double door in the center on either side is provided for convenience in loading and unloading, taking on ice, etc. There are ten tanks, besides two compartments for ice. The tanks are lined with heavy galvanized iron, and are so constructed that the water may freely circulate from one tank to the other. The car is charged from a railway hydrant or tank en route. At one end of the car is a double lower and upper berth, a lavatory and a compartment for storing the various utensils in use. The fish are taken by seines and in pound nets under contract, which provides that they be delivered on the car. The Government pays for the catching and loading of the fish, the railway company furnish the car and practically free transportation, and the fish are distributed at the point of destination by interested parties under the supervision of the Government overseers. During the first season (1901) in a few weeks' time nearly 10,000 adult bass ranging from 12 to 20 inches in length were deposited in some 18 different lakes and rivers, a greater number than had theretofore been introduced in the Province's whole history. The bulk of these fish were deposited before they had spawned that year.

The main essentials to successful transportation are (1) healthy and vigorous stock, and (2) unceasing attention while in transit. The water should be changed as often as possible, kept at a proper temperature, and frequently oxygenated. The latter is done by means of a hand pump. Our attendant in charge of the car has been much interested in and most devoted to the work. The success of our operations so far may be characterized as almost phenomenal. The fish have been transported in some cases nearly 400 miles; 850 was the largest number carried at any one time, with a loss of only ten per cent; 720 were carried 225 miles with a loss of not more than two per cent. Of course, without the car we should have been unable to pursue the work with anything like the success that has attended it. Where the car has been hauled over other systems than the G. T. R., this has been done gratuitously, and at times special service has been furnished.

The most convenient way to distribute the fish where there is a steamboat plying on the lake or waters to be stocked we have found to be from a scow towed alongside the steamboat. Upon the scow are placed a sufficient number of tanks or barrels to conveniently hold the fish without crowding. Flat bottomed boats, where these can be obtained, answer admirably. For carrying fish ordinary washtubs (new of course) are considered much better than cans or pails, as more can be carried at a time. A few inches of water should be placed in the tub. In transferring the bass to the water, we place a dozen or so, as may be desired, in the tub and dump them quickly but carefully at suitable spots. This plan we find preferable to depositing with dip nets, as the fish are not so likely to become separated. We know the parental instinct is very strongly developed in the bass, and why not the social habit and other domestic qualities also?

Discretion is of course exercised in regard to the waters which are being stocked. The department has been criticised somewhat for placing bass in a certain lake which

at one time had been inhabited by speckled trout, on the ground that it should have been re-stocked with trout instead of bass, or the trout remaining therein given the protection which would have resulted in their increase in due time. The waters referred to are waters which are being extensively visited by holiday makers. They are clamoring for fish. The residents desired that we stock with fish that would re-establish themselves in the shortest possible time, and afford sport during July and August. They said: "There may be trout in the lake, but we cannot get them; we want a fish that will bite during July and August, otherwise people will not come here; let us have bass." The council of the municipality unanimously appropriated a sum to assist in the work, realizing its importance; and bass were accordingly put in.

Of course we do not approve of putting bass into streams or small bodies of water which are inhabited by brook trout, or into waters where there would be a possibility, however remote, of restoring the trout fishing; but in large bodies of water several hundred acres in extent, in which the trout are practically exterminated, and which we wish to stock with the greatest possible expedition, I claim that bass are the proper fish. The opponents of bass may also be too apprehensive with regard to the effect on trout which the stocking of large bodies of water with bass will have. Henshall, in his "More About the Black Bass," says: "The black bass gets the best of other game fish, not by devouring the fishes themselves, but by devouring their food. For this reason, more than any other, they should not be introduced into the same waters with brook trout." On this point I should like to mention that I am acquainted with a gentleman who has a fishing preserve in Muskoka, in which he tells me he has trout and bass, and that they are thriving equally well; that the trout are not holding their own, but are increasing rapidly. He showed me last season three trout taken in his preserve which measured 19¾, 19½ and 18¾ inches respectively, the largest of which weighed three pounds. He had frequently, he said, opened bass to ascertain upon what they were feeding, and had never in a single instance found a trout. The food consisted principally of crawfish, minnows and perch, which abound in these waters. The preserve comprises 500 acres. There are no screens to prevent the trout and bass from intermingling. I have also been told that in some of the lakes along the St. John Railway in Quebec bass and brook trout have naturally and always co-existed.

There are some who look with contempt upon the black bass as a game fish. Indeed, I remember hearing a delegate at the Montreal meeting say that a man would not be seen going up a back street in his country with a string of bass. There are many, however, who consider the bass quite the peer of the brook trout. Henshall speaks of the salmon as a king, the brook trout as a courtier, and the black bass "in his wirescent cuirass and spring crest as a doughty warrior whose prowess none can gainsay. He is plucky, game, brave and unyielding to the last when hooked. He has the arrowy rush and vigor of the trout, the untiring strength and bold leap of the salmon, while he has a system of fighting tactics peculiarly his own. He will rise to the artificial fly as readily as the salmon or the brook trout under the same conditions. I consider him, inch for inch and pound for pound, the gamiest fish that swims. The royal salmon and the lordly trout must yield the palm to a black bass of equal weight."

Parker Gilmore, an English authority, whose writings appear over the nom de plume of "Ubique," and whose statements on sporting subjects are received everywhere without question, has this to say of the black bass: "I fear it will be almost heresy to place the black bass on a par with the trout, but I am bold and will go further. I consider he is the superior of the two. He is equally good as an article of food, is much stronger, and is untiring in his efforts to escape when hooked." Many other recognized authorities might be quoted to the same effect.

It is not, however, the purpose of this paper to discuss the relative merits of the trout and bass as game fish. I have myself been a bass fisherman for many years, and I have enjoyed to the full the exciting sport it has always afforded, for in our cold waters the bass are most active and vigorous. I have also whipped the far-famed Nepigon, which many have declared, and properly so, to be the finest trout stream in the world; and I should not like to say that the black blass is the peer of the trout as found in the Nepigon. But I think I have supplied testimony sufficient to satisfy the most exacting sportsman that if the waters of Ontario are not being stocked with the gamiest of fresh water fishes, we are introducing the next best, and certainly one which none can honestly despise; and the only one, I may say, which under existing conditions we are able to utilize, as the Government has at present no brook trout hatcheries and no resources upon which we can draw for trout.

I shall not attempt either to discuss in detail what appear to me to be the relative advantages and disadvantages of stocking in the manner which we have been adopting and that of pond culture and the introduction of the fry. Each no doubt has its advantages in some respects, and each its drawbacks. Indeed, I think that better results could be attained where practicable by a combination of the two. Especially would this be so in the case of small lakes and rivers where a full carload would not be required, and to which a can of fry could be readily dispatched, and there are a great many such places in this Province. The work could probably also be carried on to a later period. But it is gratifying to us to know that the success of transplanting the parent fish has been demonstrated wherever they have been introduced. As I have already intimated, lakes which were stocked some few years before a department was established, now afford excellent fishing; and those into which bass have since been introduced are said by our officers to be literally swarming with the young of these fish. But pond culture would appear to be yet in the experimental stage, judging by the reports of States which are propagating in that way, and I have therefore refrained from recommending any appropriation for the construction of ponds until the results of pond culture appear more certain. Michigan, I suppose, has more nearly solved the difficulty than any other State. But even from that State I have a communication in which the writer says he has for 20 years or more given the black bass considerable attention, and that the result of his own experiment, and what he can learn from others, is that he is "not enthusiastic on the subject of raising black bass for stocking other waters for many reasons, one of them being that a given number of adult fish will not produce one half as many fry in artificial ponds as in the wild state. They spawn too late in season in the artificial ponds to be of any use. The fry must be planted before they are properly weaned, or as soon as they begin to eat, as the young bass do not take kindly to liver or other artificial food, as in the case of brook trout. There are many other reasons equally good on which to base the statement that all that has been accomplished in the experiments is to demonstrate the necessity of giving the black bass the necessary protection during the spawning season. I firmly believe that Dame Nature has done about everything that can be done for them."

In lieu of the construction of ponds, I have thought of recommending the experiment of screening off small areas at appropriate points on the shores of lakes which we are desirous of stocking, and placing therein a few breeders. The fish would then spawn naturally and without disturbance, the parent fish could be removed when desired, and the fry when old enough could swim out into the lake. The mesh of the screen could be fine enough to prevent the encroachment of other fish, and strong enough to withstand the force of the sea. The cost would be a mere bagatelle. At the end of the season the screens could be packed away for use again. An almost unlimited number of pens could be so erected. I have never heard of the experiment being tried, and I should like to hear an expression of opinion as to the idea.

I do not know that I need relate to a gathering such as this the manifest benefits which will accrue to the whole community from having our inland waters well stocked with fish. It goes without saying that every dollar spent in the work will be returned to the people manifold by the thousands of persons whom good fishing will attract.

The recently inaugurated work has been confined to those waters where tourists have congregated in largest numbers, and where the drain has been heaviest, but it may be extended until all our suitable waters are in a condition to afford the greatest amount of pleasure to the angler. This, of course, cannot be accomplished without an active public sentiment to uphold the department in requiring a strict observance of our laws. To promote the creation of such a sentiment, we have encouraged the formation of anglers' associations, as it is believed that these may exercise a potent influence in that direction. But our legislation prohibiting the taking of bass with nets, and their sale, will no doubt prove the most effective safeguard for their preservation. It has greatly removed the incentive to take the fish illegally.

Caviar.

Editor Forest and Stream:

The suggestion contained in your editorial of January 24, that our declining caviar industry may, in a measure, be revived by a resort to fish roes other than the sturgeon's, impresses me as being of such value that I am impelled to crave space for its fuller discussion. The third volume of a publication entitled "Industries of Russia," printed and published at St. Petersburg, states that the total exports of Russian caviar for 1891 were 208,865 pouds, of which only 29,699 were of sturgeon caviar. In the Ural fishery the amounts of sturgeon caviar and that of other fish produced in 1890 were nearly the same, but in 1900 were greatly disproportioned, the sturgeon output being but six per cent. of the whole, or 6,060 pouds out of 100,309, the poud being 36¼ pounds. The Baltic product in 1891 was 750 pouds, of which 500 was salmon caviar. It will be conceded that what the Russians accomplish we can, also; but their creation of a highly profitable industry out of what we discard as offal is a manifestation of superior enterprise not complimentary to our people.

The greater portion of the Russian product of caviar is from a miscellaneous variety of fish, that from the perch, roach, chub, etc., being red; that from the bream, yellow; while that from the sturgeon is generally dark, sometimes black. In the Kouban district of the Azoff Sea fishery, from 500,000 to 700,000 pounds of perch caviar is made annually, the miscellaneous fish caviars, which, besides those mentioned, are inclusive of the carp, kefali or mullet, etc., being marketed largely in Turkey, Greece and other countries of the eastern Mediterranean. There are two methods of preparing the sturgeon caviar, both initiated by forcing the roe through a sieve whereby the encompassing egg membranes are separated from their contents; in short, the eggs are shelled. In the choice or so-called fresh variety, the resulting material is slightly salted and put in tin cans in which it will not keep long save at a low temperature. The other kind, or pressed caviar, is preserved in strong brine, then put in bags and subjected for a number of days to extreme pressure, much of the moisture being by such means eliminated. This inferior caviar is put up in cans by London dealers and labeled "Russian Caviar." The American product, likewise assuming to be Russian, is prepared differently from either of the foregoing methods. About 1875 a New York dealer initiated the domestic caviar preserving industry by canning the roe and subjecting it to the same cooking process by which all tinned fruits, vegetables and meats are preserved, great heat being necessary to destroy the germs of decomposition, and such method has since been followed. As a necessary result the flavor differs from the foreign, and our product so canned would meet with scant recognition abroad, our caviar exports being salted and shipped in kegs with German salt imported for that purpose. It will thus be seen that the American palate has been educated to the appreciation of a peculiar preparation, one that is not acceptable to the lovers of true caviar, which article it nevertheless assumes to be.

Russia's chief delicacy, the supreme delight of her epicures, is the caviar of the white sturgeon in its freshest possible state. The cold storage preparation first alluded to cannot be retailed in New York at a reasonable profit except at rate of five dollars a pound, and bears the same relation to the genuinely fresh product that cold storage eggs bear to those newly laid. From the time of Queen Catherine each successive occupant of the imperial palace has been the earliest possible recipient of the first fruits of the caviar fishery; it is the Czar's perquisite, and the tribute is gladly paid. For the general marketing of this tidbit the Cossacks of the Don keep in readiness their fastest horses and speed them, burdened with the precious roe, to the nearest railway station. Tank cars are also in use which convey the fish alive to St. Petersburg and Moscow, where they are killed, and thus the dawning life they bear may reach the consumer ere its palpitations cease. Taxed with the charges of over a thousand miles of expensive transportation, the cost, except to the wealthy, is prohibitive, and this superlative quality of caviar is necessarily obtainable, outside of its district of production, only in the large cities of the empire. The other form of fresh caviar is extensively exported to Germany and elsewhere on the continent, the perversion of the American palate rendering its appreciation difficult, some of our countrymen expressing a preference for their accustomed hard grained, cooked and canned product. Such instances of palatal education are upon every hand; indeed, it has been plausibly maintained that every alimentary substance, apart from the infant's maternal nourishment, is at first accepted with indifference or repelled with aversion. It is, therefore, idle to say that the public cannot be induced to eat caviar prepared from miscellaneous fish; given time, its favor can certainly be won, for many years elapsed before the cooked caviar approved itself. If, from out the hundreds of tons of salmon roe that are annually thrown away at the Pacific Coast canneries, there was put upon the market a product labeled "Salmon Caviar," there can be no reasonable doubt that its ultimate popularity would be established. The caviar that the Russians make from the Baltic salmon is locally consumed; but if for centuries its earliest product had been annually hurried to the imperial table its fame would have greatly extended its vogue. Perhaps it would be too much to assume that the superiority of the salmon's flesh over that of the sturgeon extends also to its roe. Sturgeon meat has little of the fishy taste common to the finny tribe, and there may be some peculiarity of the creature that gives its roe a distinctive excellence. Again, it may be largely an habituation of the public palate to its accustomed delicacy that bars the adoption of a similar product. Not improbably the sturgeon caviar was the first made by reason of the great size of the fish (individuals occasionally reaching 1,200 pounds) insuring the most abundant supply, the largeness of the grains also facilitating the preparation and improving the appearance of the product. Having intrenched itself in popular favor, it is only the exhaustion of the supply that will insure the adoption of a substitute. Time was when the sturgeon of the Volga were captured for their roe and isinglass alone, the remainder of the carcass being discarded as offal, for the meat was lightly valued. Now it is otherwise, the fish has become a valuable prize, and a large roe-laden individual a veritable bonanza. While the continued observance of the admirable regulations restricting the fishery may indefinitely prolong its life, it cannot supply an ever increasing demand. As the figures herein quoted show, it is the caviar output from other fishes than the sturgeon that maintains the volume of Russian production, and but for such substitution a famine would be at hand. Such a famine now confronts us at home, for the exhaustion of the fishery is nigh, its reconstitution hopeless, and the sole alternative therefore the adoption of an analogous preparation.

The best American caviar is from the lake sturgeon (*A. rubicundus*), the next is that from the common Atlantic sturgeon (*A. sturio*), then follows that from the Pacific sturgeon (*A. transmontanus*). The extreme scarcity of roe has of late years impelled a resort to another species, the shovel nose sturgeon of the Mississippi (*A. scaphirhyncus*); its caviar is the poorest of all, being objectionable in taste and odor, and the grains small, but nevertheless has commanded recently 75 to 80 cents a pound. As the price rises the hunt for the few remaining fish becomes keener, for the reward is ample, the product of a single Delaware fish may net, at present prices, $70. Less than a score of years ago the sturgeon fishery was initiated upon the Columbia River, immense numbers of the fish being captured with great revolving wheels, the destructive engines, actuated by the current, flinging them out of the water. Many tons of fish weighing less than fifty pounds were thrown back into the stream, their bodies serving only to contaminate its waters. The story of one ravaged river may be said to be the story of all, for ere the utilization of the roe the fish, in eastern rivers, as well as the great lakes, were regarded more or less as a nuisance.

When the first shipment of American caviar was made in the late 60's to Europe, where it brought but 2 cents a pound, the delicacy was unknown and unappreciated at home. For some years the price remained at from 10 to 15 cents a pound, and the cheapness of the product tended to popularize it in Germany among people to whom the price of the superior Russian article was prohibitive. It became also a frequent feature of the free lunch counters in New York saloons, the cheaper resorts being often supplied with spoiled caviar unfit for shipment abroad. In this way the delicacy became known to the American public, and the free lunch counter should render equal introductory service with the fish caviars the manufacture of which is herein advocated.

Some effort has been made in this direction; garfish eggs have been tried, and, though of good size, are insipid and of objectionable odor. The most successful substitute yet found seems to be shad eggs, which have been mixed with the sturgeon's, but with an obvious impairment of the quality of the caviar so formed. The product of sturgeon caviar in the United States and Canada in 1898 was 2,800 kegs of from 125 to 160 pounds each. Of these, 500 kegs entered into domestic consumption, the remainder being exported, but the diminution of the product, the higher cost, threatens to extinguish next year's foreign demand.

Norwegians make cod caviar by subjecting the roe to a slight fermentation and then placing the product in tightly sealed one pound glass jars. In Germany caviar is made from the pike, pickled with salt and citric acid, then flavored with lemon and tightly sealed. Norway's development of her fish delicacy trade was well demonstrated by her exhibit at the great International Fishery Exposition at St. Petersburg last year. A tempting array of preserved preparations was displayed, crab soups as well as those of various fishes, hashed fish in thick soup, divers fish sauces, Gabelbissen (bits of a species of gurnard), smoked sprats, herrings in oil or tomato sauce,

cooked herring, fish puddings, fish cakes in wine sauce, cooked halibut, smoked and canned salmon, mackerel, baked and smoked, ditto hashed in oil, mackerel roe, fish hash with crab sauce, etc.

The variety of the foregoing preparations is sufficient evidence of the progress of this branch of fish industry; but with the view of insuring its utmost development, the Government has established a school at Bodo, a town opposite the Lofoden Islands, the center of the Norwegian fisheries. At this institution experiments are constantly under way, involving new methods of preserving fish and fish products, or of the manufacture of new compounds, the pupils being instructed as to the accepted processes, and taking part in those that are purely experimental. Some of these latter are curious; for instance, the preparation of cod heads as a simulation of canned lobster, and of cod livers as a suggestion of goose-liver paste, or *pâté de foie gras*. Neither article is as yet sufficiently tested, and, therefore, is not on the market. Cod heads have long been utilized in Norway as cattle fodder; indeed, there was formerly a herd of cows upon Cape Cod that subsisted upon fish refuse. Both instances afford evidence that the bovine, as well as the human palate, is susceptible of education, and it is to be hoped that the latter, in view of the lobster's threatened extinction, may be tickled into an acceptance of cod heads. Other preparations are fish meal from haddock, clean and white, fish tripe (stomachs) in brine, also the same smoked or dried.

This institution promises excellent results, not only from the general training of its pupils, but also in devising uses of waste products as well as improvements in existing methods of fish utilization. The question of the profitable disposition of the myriad roes, livers, etc., now wasted in American fisheries would probably be solved by the establishment of a similar experimental station upon our coast. In its absence we may trust that our manufacturers will assume its functions, the path is revealed to them, they have only to master the processes so profitably employed abroad.

A. H. Gouraud.

In Southern Waters.

The channel bass had been biting but indifferently for a week past, and with little hopes for any luck I took my rod, cast-net and tackle box and made my way to the pier. This is constructed solely for the benefit of anglers (and incidentally the profit of the owners). It runs out 200 feet into the ocean, and at high tide has seven or eight feet of water beneath it.

When half way to the end I stopped and reconnoitered for bait. Directly below me, and in about a foot of water, I saw a school of small mullet. A quick estimate of the distance, a bit too quick it proved to be, and out went the net. A "water haul," as the natives say. Imprecations and preparations for another cast. This time I was more successful, for on shaking out the net I found a dozen or so of the little fellows, averaging four or five inches in length. This size I have found by experience to be the best lure for the channel bass. Other and far better fishermen claim that a piece of full grown mullet, cut crossways and about two inches in length, is more apt to tempt the epicurean tastes of the bass; but to be expressive, if not elegant, "you must show me." Satisfied with my bait I continued my walk to the end of the pier.

As you may know to your sorrow and expense, salt water is most destructive to all articles not impervious to rust, so the first thing that I do in making my preparations is to oil all rod joints and exposed nickel parts with some good gun oil to keep them from corroding and later prevent them from being taken apart. After seating my reel and running the line through the guides, I attach the sinker, a patent diamond-shaped one weighing about five ounces. Here again do many anglers differ from me, preferring the round shape, as it allows the bait to roll with the surf, and hence, they claim, attracting the fish more than it would were it to remain stationary. This advantage is more than offset, to my mind, by the frequent recasting necessitated, which is so annoying and requires so much time. There is a swivel at the top of the sinker, and through this I run my line, without trying it, for when a big fish is hooked he can make his rushes without having to drag the heavy sinker through the water.

Next the hook. Here I pause and ask myself whether I want to take the time to land the sharks which one is almost sure to hook if fishing for bass, or let them go on their way with hook and a fond farewell. If I decide upon the former course, as I did the day I write of, I attach an O'Shaughnessy hook, called by them "tarpon," and as large as many anglers use when fishing for the "silver king." This hook has a three foot wire snell connected at both ends with a swivel to keep the line from untwisting. If a wire snell be not used the chances are ten to one that the shark, if hooked, will never be seen, for unless hooked in the corner of the mouth their teeth will instantly cut the heaviest line. The last move before making the preliminary cast is to attach the bait. The mullet, which has been kept alive in a bait pail, is hooked through the skin, just above the dorsal fin. The skin is very tough and will not tear unless roughly handled.

A cast of 100 feet, and I sat down to await developments. Hardly had the bait touched the bottom when a gentle, steady pull warned me to be up and doing. I gave him an answering pull and the sport began. The barb went deep, for as mad a rush I never saw a bass make; 100, 150 yards of line, and still he kept going. Only the high places were touched on that first rush. I had begun to fear for my rod, when as suddenly as he started he stopped. Thinking that he had expended his strength, I commenced to work him in. About 25 feet of the way were traversed, and then that heart damaging experience—slack. I thought he had left for parts unknown, and was giving him a fitting send-off, when a little jerk told me he was still there. Straight toward me he came, and as fast as he had gone out. My wrist ached from the exertion of turning that reel crank. He was almost to the pilings before he turned, and then another dash of 40 or 50 yards. His stopping place seemed to please him, for there he stayed. I could not induce him to go another foot, and so had to resort to that process known as "pumping." It would of course be impossible to reel a fish of that weight toward one, so the only alternative is to drop the point of the rod directly toward the fish, press on the leather thumb brake, and lift the point in the air; then by again dropping the point of the rod, and reeling in the slack, it is comparatively easy, by often repating this method of procedure, to work a very large fish toward the boat or pier.

Little by little I "pumped" him in, every foot of the way contested, until I could see him almost directly below me. One more wild rush and the fight was practically over, for an occasional little jerk was all the resistance offered until I had him beached high and dry. It is necessary to beach a fish of more than ten or twelve pounds, for the pier, even at high tide, is ten feet above the water. This requires the use of a gaff with a 14 foot handle, and correspondingly awkward to manipulate. If fishing alone, as was the case on this occasion, I have found it almost impossible to hold a large fish against the force of the breakers with one hand and wield a long heavy gaff with the other.

After extracting the hook, I weighed my fish. An even 35 pounds, and as he lay there in the sun he would have made a beautiful photograph. Unfortunately I have no camera with me on this trip, and so have missed many opportunities of taking good subjects that I will always regret.

The channel bass resembles in shape his fresh water cousin. He is of a reddish gold color, white belly, and has a black spot the size of a dime just above the tail. Certainly a most beautiful fish.

But there were more like him in the surf, so I hastened back to the pier.

A new bait was attached and I cast again. A very few minutes and another strike was telegraphed up the line, but different from the former. A sharp, quick jerk, the butt from me, and then a rush to the top. Clear out of the water jumped a shark, shaking his head as he broke. He looked a good bit larger than I cared to see, for I pictured myself gazing at a shattered rod minus some 200 yards of line. Contrary to my expectations he did not offer as strong a fight as the bass I had just landed. His one airing seemed to satisfy him, for down to the bottom he went, and there he stayed for some minutes, despite my efforts to raise him. Time after time I used as much strength as I thought the rod could stand, but all to no purpose. After satisfying myself that I was playing a losing game, I sat down and awaited developments that the shark should make. Eventually he started off, but very slowly. Ten yards of this and he stopped again. For over half an hour he kept these tactics up, until my patience was completely exhausted. I decided to force the fighting, even at cost of rod, reel and line; so bracing the butt of the rod under a convenient railing, and using every particle of strength at my command, I lifted. Up to the surface he came, but the second I relaxed down he went. Time after time I brought him up, but each time he went down again. Eventually it told on him, and 45 minutes from the time he was hooked he lay exhausted on the top of the water.

There was no manner of weighing so large a fish, and I was forced to be satisfied with measurements: 7½ feet from tip to tip. I had great difficulty in extracting the hook, for he had swallowed it with eight inches of the snell.

After completing this most disagreeable task, I returned once more to the end of the pier. Again I cast, and again a strike; this time a bass. And so it went for four or five hours, until I was completely exhausted, and only too glad to answer the summons to luncheon. I had taken nine bass, the smallest weighing 12 pounds and the largest 35; five sharks ranging in length from 3½ to 7½ feet.

When I remember that this was done with a six foot steel rod, and of the entire number of fish hooked only three were lost, I shall always think of it as one of the finest half day's sport with salt water fish that I have ever experienced.

It may seem to some that I have stretched a point when I relate of landing a 7½ foot shark with a No. 22 Bristol steel rod. But there were many witnesses who will verify these statements. And then again it must be remembered that all fish are not as lively at this time of year in these waters as their weight would seem to warrant.

I know of no fish as variable in their struggles against the angler as the channel bass. I have caught one of 12 pounds and from the manner he made my reel sing have estimated him at 35 or 40 pounds, and the same day have caught a 30-pounder and would have said that 15 pounds was an overestimate as to his weight. No other fish that I have ever caught, in fresh or salt water, are as deceptive as to weight, while fighting, and none of salt water so satisfying, both as to catching and eating, as the channel bass.

E. H. Moulton, Jr.

Seabreeze, Fla.

An Angling Souvenir.

Asbury Park, N. J., Feb. 2.—Leisure incident to convalescence from a tedious illness permits me once again to say a word in "our journal." The many good things which have appeared in each issue during the winter have been a perpetual feast. In truth be it said that but little of interest to the angling fraternity can be told. Our fall fishing, which we always look forward to with such interest, was nil; and so far the winter fishing follows suit. We had a few days of good whiting fishing in December; but the fish soon disappeared. Cod have been extremely scarce, and it is almost impossible to get a fresh fish; a few ling are being offered, and I was informed this morning were bringing 7 cents a pound.

I have received from my old fishing friend, Robert Large, now of Dawson City, Alaska, a most beautiful and valuable souvenir of his success in the icy regions. He left here three years ago and struck it rich and is investing his money in Vancouver, B. C., real estate. The present is a most unique thing, a large scarf pin representing a "miner's pan" crossed by a mountain trout, the whole surrounded by nuggets of gold just as taken from one of his claims. He also inclosed in his letter a leader and hook, on which he had taken a 9-pound trout. He hooked the fish while casting from a rock, and his description of the battle is most graphic. To paraphrase him: "I ran and slid over rocks and boulders, lost my hat, skinned my shins, my face and hands; was twice in water up to my armpits—but I got my fish; and the court plaster and arnica only cost me $1.10."

Leonard Hulit.

Fly-Casting at New York.

On Friday evening, Feb. 20, the Canadian Camp Fire Club will give a banquet in the Garden to some two hundred or more of its members and their invited guests. The dinner will be in strict accordance with the tenets of the club, in that it will be a camp dinner pure and simple, the only departure from the ethics of wood life being in the serving of wine and other beverages. The Canadian Club is a representative sportsmen's organization composed of campers, hunters and fishermen of this country and Canada, camp experience in the Dominion being one of the conditions of eligibility to membership. Following the dinner, the club members and guests will witness a full-dress rehearsal of the cantata of Hiawatha, and will enjoy a private inspection of the exhibits and scenic effects and features of the show.

The Anglers' Tournament programme has been prepared, starting with the black bass casting contest, on the opening night, Feb. 21, and continuing through the two weeks of the show.

Anglers' Casting Tournament—General Rules Governing all Contests.

Rule 1. All contests shall be governed by two judges and a referee. In case of disagreement the referee shall decide.

Rule 2. No one shall be permitted to enter any contest, except those "open to all," who has ever fished for a living; who has ever been a guide; or who has been engaged in either the manufacture or sale of fishing tackle.

Rule 3. All persons competing shall pay an entrance fee of $1 for each event. No entrance fee will be required in the women's contest.

Rule 4. The order in which the contestants shall cast shall be determined by the judges. The contestants must be ready to cast when called upon by the judges.

Rule 5. The leader and fly or lure in each contest must be intact at the time of record by the judges, and the length and weight of the rod must be recorded.

Rule 6. Arrangements shall be made by the judges to accurately determine the point at which the fly or lure falls.

Rule 7. Contests shall be called promptly at 2:30 P. M., and 7:30 P. M., and closed at 4:30 P. M., and 9:30 P. M.

Rule 8. After the contestant has taken his place on the stand, which is a platform not more than 18 inches above the surface of the water, his time shall be counted from the moment he says, "Ready," and the first cast thereafter shall count. The longest cast during the five minutes succeeding the word, "Ready" shall be taken as his record for distance.

Rule 9. The rod must be held in one hand, and no rod shall exceed 11½ feet in length, except when otherwise specified. The line must not be weighted.

Rule 10. The barb and point must be removed from all hooks.

Rule 11. Trout flies on hooks not smaller than No. 12 shall be used unless otherwise specified. Leaders which must be of single gut, shall not exceed the length of the rod by more than 2 feet unless otherwise specified.

Rule 12. Time will be allowed, in case of accident, to make repairs, at the discretion of the judges.

Rule 13. The switch style of casting will not be allowed except in the class devoted to that method of casting.

Rule 14. All difficulties or disputes arising and not provided for in these rules or the rules governing each contest shall be referred to the judges, whose decision shall be final.

Rule 15. When the method of casting to be employed is specified in the rules governing an event, no other style than that designated will be allowed.

In each contest there will be three prizes, gold, silver and bronze medals.

Saturday, Feb. 21, 7:30 P. M.—Class A, black bass fly-casting contest. Distance only to count. At the discretion of the contestant a fly on No. 4 or larger hook may be used, to be furnished by the committee. Open only to those who have never cast more than 75 feet in any similar contest in either club or open tournament. Weight of rod and length of leader unrestricted.

Monday, Feb. 23, 2:30 P. M.—Class B, trout fly-casting for distance only. Open to youths not over twenty years of age. Weight of rod and length of leader unrestricted.

Monday, Feb. 23, 7:30 P. M.—Class C, switch trout fly-casting contest. Distance only. Open to all excepting those who have cast more than 75 feet in any similar club or tournament contest. An obstacle will be placed 15 feet back of the contestant. Weight of rod and length of leader unrestricted.

Tuesday, Feb. 24, 2:30 P. M.—Class D, trout fly-casting contest for distance only. Open only to those who have never cast more than 60 feet in any similar club or tournament contest. Weight of rod and length of leader unrestricted.

Tuesday, Feb. 24, 7:30 P. M.—Class E, light trout fly-rod contest. Distance only. Rod must not weigh more than 5 ounces, with an allowance of three-quarters of an ounce for solid reel seat. Open only to those who have never cast more than 60 feet in any similar contest in either club or open tournaments.

Wednesday, Feb. 25, 2:30 P. M.—Class, women's trout fly-casting contest for distance only. Open only to those who have never taken a first prize in any similar club or tournament event in which there has been competition. Weight of rod and length of leader unrestricted.

In case there shall be no more than two entries for the women's contest, an additional event may be announced to take place at the time.

Wednesday, Feb. 25, 7:30 P. M.—Class G, light trout fly-casting. Distance only. Rod must not weigh more than 5 ounces, with an allowance of three-quarters of an ounce for solid reel seat. Open only to those who have never cast more than 75 feet in any similar contest in either club or open tournament.

Thursday, Feb. 26, 2:30 P. M.—Class H., switch trout fly-casting contest. Distance only. Open to all. Weight of rod and length of leader unrestricted. An obstacle will be placed 15 feet back of the contestant.

Thursday, Feb. 26, 7:30 P. M.—Class I, trout fly-casting contest. Forward obstacle. Distance only. Open to all. A horizontal bar or tape, under which the cast must be made, will be placed in front of the contestant at a distance of 30 feet, and 6 feet above the water level. Weight of rod and length of leader unrestricted.

Friday, Feb. 27, 2:30 P. M.—Class J, light rod trout fly-casting contest. Distance only. Rod must not weigh more than four ounces, with an allowance of three-quarters of an ounce for solid reel seat. Open only to those who have never cast more than 75 feet in any similar club or open tournament contest. Length of leader unrestricted.

Friday, Feb. 27, 7:30 P. M.—Class K, black bass fly-casting contest. Distance only. Open to all excepting those who have cast 85 feet in any similar contest in either club or open tournament. At the discretion of the contestant a fly on No. 4 or larger hook may be used, to be furnished by the committee. Weight of rod and length of leader unrestricted.

Saturday, Feb. 28, 2:30 P. M.—Class L, bait-casting contest. Distance only. Open to all. Stripping the line, "Greenwood Lake style," with half-ounce rubber frog, to be furnished by the committee. No limit to rod or line or reel, but cast must not be made from the reel. The longest cast forward, made within the five minutes succeeding the time the contestant announces "Ready" to count. Unless the frog falls within the side boundaries of the tank the cast shall not score.

Saturday, Feb. 28, 7:30 P. M.—Class M, contest for accuracy. Open to all. No restrictions as to weight of rod and line. The contest is to be conducted as follows: When the contestant has taken his place on the platform and has said, "Ready," he shall begin to cast, at a buoy, and after saying, "Count," or after having made five casts, the subsequent five shall be noted for record. The buoy shall be placed against the bank of the stream and 30 feet from contestant under an overhanging bush, which shall extend 3 feet over and be 3 feet above the water. The score shall be kept as follows: The buoy at which the casts are made is a semi-circular disk 6 feet in diameter. It is level with the surface of the water and marked by concentric circles 6 inches apart. The fly landing in the center counts 10, in the next space 9, in the next space 8, and so on down to 5. The highest score wins the contest.

Monday, March 2, 2:30 P. M.—Class N, trout fly-casting contest. For accuracy only. Open to all. Distance at buoys 50, 55 and 60 feet. Weight of rod and length of leader unrestricted. There shall be five casts at each buoy. If the fly falls within one foot of the buoy cast at, the cast shall be considered perfect; for each foot or fraction of a foot in excess of one foot from such a buoy

a demerit of one shall be counted. The sum total of such demerits divided by 15 shall be considered the demerit per cent. The demerit per cent. deducted from 100 shall be the accuracy per cent., and the highest score wins. Should the fly be whipped off, time will be allowed to replace it and one minute allowed to extend line to buoy then to be cast at.

Monday, March 2, 7:30 P. M.—Class O, light trout fly-casting contest. Distance only. Rod must not weigh more than four ounces, with an allowance of three-quarters of an ounce for solid reel seat. Open to all who have never cast more than 80 feet in any similar club or tournament contest. Length of leader unrestricted.

Tuesday, March 3, 2:30 P. M.—Class P, dry fly-casting for accuracy. Open to all. The flies to be used in this event will be furnished by the committee. At buoys 35 and 45 feet. Five casts at each buoy; 30 seconds allowed to extend line. Thereafter each time fly falls on water it will be scored. Not to exceed five dry casts allowed between casts to score. Should the fly be whipped off time will be allowed to attach a new one, when 30 seconds will again be allowed to extend line.

Loose line on platform or coil in hand will not be permitted in this event.

If fly falls within one foot of buoy cast at, accuracy shall be considered perfect. For each foot or fraction of a foot in excess of one foot from such buoy a demerit of one shall be counted, the sum total of such demerits divided by 10 shall be considered the demerit per cent. The demerit per cent. deducted from 100 shall be the accuracy per cent. To the accuracy per cent. shall be added the average number of seconds the fly may float each time cast on the water, and the total shall be the score.

Tuesday, March 3, 7:30 P. M.—Class Q, light rod trout fly-casting contest. Distance only. Open to all. Rod must not weigh more than four ounces, with an allowance of three-quarters of an ounce for solid reel seat. Length of leader unrestricted.

Wednesday, March 4, 2:30 P. M.—Class R, light trout fly-rod contest. Distance only. Open to all. Rod must not weigh more than five ounces, with an allowance of three-quarters of an ounce for solid reel seat.

Wednesday, March 4, 7:30 P. M.—Class S, single-handed bait-casting contest for distance and accuracy. Open to all. Five casts shall be made for distance with half-ounce rubber frog, to be furnished by the committee. Ten casts shall be made for accuracy—five at each of two buoys—60 and 80 feet distance from casting point.

These casts to be made with half-ounce rubber frog, and for each foot or fraction of a foot that the frog falls from the buoy cast at a demerit of one shall be counted, the sum total of such demerits, divided by 10, shall be considered the demerit per cent. The demerit per cent. deducted from 100 shall be the accuracy per cent.

For distance, five casts shall be made and the average added to the percentage of accuracy shall constitute the score. Highest wins.

No limit to rod or line or method of casting, but all casts must be made from a free running reel.

Should frog fall outside the side boundaries of the tank, the cast shall count, but will not be scored.

Two trial casts for distance and one trial cast at each buoy may be made by each contestant before casting to score.

Thursday, March 5, 2:30 P. M.—Class T, trout fly-casting contest. Distance only. Weight of rod and length of leader unrestricted. Open to all who have not cast over 90 feet in any similar club or tournament event.

Thursday, March 5, 7:30 P. M.—Class U, single-handed trout fly-casting contest. Distance only. Open to all who have never cast over 100 feet. Weight of rod and length of leader unrestricted.

Friday, March 6, 2:30 P. M.—Class V, single-handed bait-casting. For distance only. Open to all. Five casts shall be made overhead for distance with a quarter-ounce lure, to be furnished by the committee. Each contestant may make not more than three trial casts before casting to score. No limit to weight of rod or line, but cast must be made from free running reel. Should the frog fall outside the side boundaries of the tank the cast shall count, but will not be scored. The sum total of casts scored divided by 5 shall be the average score. Highest average wins.

Friday, March 6, 7:30 P. M.—Class W, black bass fly-casting contest. Distance only. Open to all. At the discretion of the contestant a fly on a No. 4 hook or larger to be used; these to be furnished by the committee. Weight of rod and length of leader unrestricted.

Saturday, March 7, 2:30 P. M.—Class X, single-handed bait-casting contest. Distance only. Open to all. Five casts shall be made overhead with half-ounce rubber frog, to be furnished by the committee. The longest cast to count. Each contestant may make not more than three trial casts before casting to score. No limit to weight of rod or line, but cast must be made from free running reel. Should the frog fall outside the side boundaries of the tank the cast shall count, but will not be scored.

Saturday, March 7, 7:30 P. M.—Class Y, single-handed trout fly-casting contest. Distance only. Open to all. Weight of rod and length of leader unrestricted.

Mr. Cristadoro's Tame Bass.

SENATOR CLAPP, of Minnesota, has a constituent in town, Mr. Charles Christadoro, who stirs the imagination with great fish stories. Mr. Christadoro is very familiar with the vicinity of Cass Lake, where Senator Clapp goes fishing nearly every summer and has been trying to have a national park located up there somewhere in the neighborhood of the Lake of the Woods, but without much success.

"The wall-eyed bass are so numerous in Cass Lake that they are tame," said Mr. Christadoro. "They come up out of the water and we give them names to which they answer."

Senator Clapp will not dispute the accuracy of his constituent's story.—Washington Post.

April 8-11.—Atlantic City, N. J.—Show of Atlantic City Kennel Club.
May 29-30.—Hempstead, L. I.—Open air show of Ladies' Kennel Association of America.
Nov. 3-6.—New York.—Annual show of Ladies' Kennel Association of America.

Massachusetts Kennel Club.

WORCESTER, Mass.—The Massachusetts Kennel Club held its adjourned annual meeting at 476 Main street, Feb. 4, at Worcester, and the nominating committee reported a full list of officers for the ensuing year. The new membership committee reported thirty new members for the club. Last year the club held its first show in conjunction with the Worcester Agricultural Fair, but at this meeting they voted not to have a show this season, but to have one in February or March, 1904, to be held just before or after the Boston Show, so that the dogs on the circuit would be entered in Worcester.

The club seemed to think that a city of 130,000 people ought to support a good show.

Tri-State Automobile and Sporting Goods Association Show.

DETROIT, Mich., Feb. 3.—The entries for the show to be given in connection with the Sporting Goods Association has closed with 225 entries, all classes being well represented, especially setters and pointers; English setters being 45, Irish 13, pointers 32, collies 13, bull terriers 17.

Mr. John Davidson will judge all classes. There is great interest being taken in this show, and it is assured a great success, which will be a great help for a larger one next year. THOMAS BLAKE.

Points and Flushes.

A meeting of the Great Dane Club of America will be held in the Ashland House, New York, on February 12, at 8 P. M. Mr. C. H. Mantler is the secretary.

Canoeing.

Prizes or Canoeists.

IN order to encourage canoeists and small boat sailors, who do their knocking about on inland waters, to keep a record of their trips and experiences, the publishers of FOREST AND STREAM offer cash prizes for the best accounts of cruises taken during the season of 1903. As few restrictions as possible will be imposed, and those given are made only with the view of securing some uniformity among the competitors' stories, so that the judges will be able to make a fair award.

The prizes will be as follows:

First, $50.00.
Second, $25.00.
Third, $15.00.
Fourth and Fifth, $10.00 each.
Sixth to Eighth, $5.00 each.

I. The cruise must be actually taken between May 1 and November 1, 1903.

II. The cruise must be made on the (fresh water) inland streams and lakes of the United States or Canada.

III. The canoe or boat in which the cruise is made must not be more than 18ft. long over all.

IV. An accurate log of the trip must be kept and all incidents and information that would be of value to other canoeists covering the same route should be carefully recorded.

V. A description of the boat in which the cruise is made should preface the story, and a list of outfit and supplies.

VI. Photographs of the boat and of the country passed through, not smaller than 4x5, should, if possible, accompany each story, and they will be considered in making the awards.

VII. Stories should contain not less than five thousand words, written on one side of the paper only.

VIII. An outline chart of the trip drawn on white paper in black ink (no coloring pigment to be used) should also be sent in.

Each manuscript to which a prize is awarded shall become the property of the Forest and Stream Publishing Company. All manuscript should reach the office of the Forest and Stream Publishing Company, 346 Broadway, New York, N. Y., on or before December 1, 1903.

American Canoe Association.

Amendments to the Constitution.

AMEND Article V., Sec. 1, by striking out "Librarian Custodian" from the third line.

Amend Sec. 2, by striking out all after the word "The" in the ninth line, all relating to the Librarian Custodian.

Amend Article VI., Sec. 5, by adding after the word "Appropriated" in the sixth line the words, "They shall receive and hold in trust all moneys received from Life Memberships, which shall be known as 'Life Membership Permanent Fund,' deposit, invest, or make such other disposition of the same as they shall deem best and pay the interest or earnings thereof over to the Secretary-Treasurer of the Association on or before August 1, in each year. The principal of the "Life Membership Permanent Fund" shall not be expended except by a four-fifths vote of the Executive Committe concurred in by a like vote of the Board of Governors." (The rest of the section to remain as it is.)

Amend Article IX., Sec. 2, by adding after the eighth line, "They shall also forward the Board of Governors immediately on its receipt, the amount of any money received in payment for a Life Membership." (The rest of the section to remain as it is.)

Amend Article VI., of the Constitution by adding the following:

"Section 9. Racing Board.—Each Division in its proper turn at its annual meeting shall elect in the same manner as its regular officers, one member of the Division to serve on the Racing Board of the Association for a term of three years, or until his successor is elected. The Commodore shall be a member ex-officio, but in case of a tie, he shall not vote.

"Section 10. Duties.—It shall be the duty of the Racing Board to hold a stated meeting during the annual meeting of the Association in August, and at the annual meeting of the Executive Committee in October, but special meetings may be held at any other times and places at the call of the Chairman, to select at the annual stated meeting in October a Chairman and Clerk, whose duties shall be as in other organizations. They shall revise and amend the present racing regulations of the Association and shall from time to time make such changes therein as they shall deem best for the interest of the Association, but no amendments to the racing regulations shall be valid unless such amendments in general terms have been published in one of the official organs of the Association for at least two weeks prior to any stated meeting of the Racing Board.

"At all meetings of the Racing Board three shall be necessary to make a quorum, but in the event of the absence of any member, the Executive Committee of the same Division from which he comes, may select any other of the Association to represent him during his disability only, and in the event of a vacancy occurring the same shall be filled for the unexpired term in the same manner as the full term."

Amendment Chapter I, Sec. 2: After the second line on page 22, add, "An Active member in good standing may commute his annual dues for life by paying to the Purser of his Division the sum of fifteen dollars ($15)" (the rest of the section to remain as it is).

Amend Chapter 9, by substituting "Three" for "Two" in sub-division 8.

In accordance with Rule 23 of the Racing Regulations the following was offered:

Amend Rule 23, so as to read: "These rules may be amended by a vote of the majority of the Racing Board of the Association; notice of such change having been given in the official organs at least two weeks before the vote of the Racing Board is taken thereon."

All of the aforesaid amendments were officially adopted by the Executive Committee.

NATHANIEL S. HYATT, Commodore.

CANOEING NEWS NOTES.

The annual election of officers of the Yonkers Canoe Club took place Feb. 5. The following were elected: J. Burton Allan, Commodore; E. M. Underhill, Vice Commodore; U. M. Van Varick, Secretary and Treasurer; Norman Taylor, Captain; W. R. Simpson, Custodian; Robert Edgar and H. Lansing Quick, Trustees.

Yachting.

Boston Letter.

BOSTON, Feb. 9.—With the announcement of the approximate measurements of the new cup defender, the yachtsmen and designers of Boston are once more found ready to pay compliment to that great designer, Herreshoff. But, while the reported dimensions may have called forth sentiments of praise, it may also be taken for granted that there are few eastern yachtsmen who have not felt from the beginning that the Bristol designer would turn out something faster than he has ever produced before. It may be believed that the public has got hold of something tangible regarding the new boat's construction and dimensions, although it is not to be expected that all of the dimensions given are absolutely correct. For instance, there is probably nobody who did not believe that Herreshoff would go to greater length over all, on about the same waterline, but the question has been raised concerning the advisability of only going six feet farther than in Columbia and Constitution. It is generally assumed that when a designer increases the waterline of a yacht, he does it to increase the yacht's waterline length when under sail. Even with no increase in sail area, the longer waterline tends to make the boat faster. But, according to the revelations, not only has the over all length been increased, but the sail area has been treated in the same manner, while the displacement has been reduced. With a reduced displacement and increased sail area, it would seem that the logic should be carried out by giving greater natural stability to the form of the hull, and so, it would seem, that the report that the new yacht has less deadrise and sharper bilges may be correct. If there should have been an error in computing the frame spaces, it would account for a difference in over all length. If the actual frame spacing is 21in. instead of 20in., it would make the over all length about 45ft. instead of 138ft. At all events, Herreshoff's prowess is appreciated, and there is even more the feeling of confidence in the new boat than there was before any announcements of her dimensions had been made.

The first general meeting of the Eastern Y. C. will be held Tuesday evening at the St. Botolph Club, at which the following officers will be elected for the year: Com., Laurence Minot; Vice-Com., C. H. W. Foster; Rear-Com., W. O. Gay; Sec'y, George Atkinson, Jr.; Treas., Patrick T. Jackson; Meas., Henry Taggard; Council at Large, George A. Goddard and F. B. McQuesten; Regatta Committee, Henry Howard, O. B. Roberts, H. P. Benson and L. M. Clark; Committee on Admissions, Theophilus Parsons, James S. Colt, Charles S. Rackemann and Robert Saltonstall; House Committee, Harry K. White, F. O. North, Parkman Dexter, John A. Jennings and William B. Revere. It is expected that the proposed amendments to the racing rules, making them uniform with the rules of the New York Y. C., will be adopted.

Hollis Burgess has sold the Filibuster, which was one of the competitors at the trial races of the Bridgeport Y. C. last season, to L. G. Brandege, of Bridgeport, Conn.

H. H. Linnell, of Savin Hill, is building two power launches from the designs of Isaac B. Mills. One of these is for Mr. J. P. Eustes and the other for Mr. Fred S. Smith. Both are 30ft. in length and 7ft. beam. The

Eustes launch will have a 9 horse-power engine and the engine of the Smith launch will be 8 horse-power.

The sale of the 70ft. schooner Amorita last week to Richard Mansfield by Hollis Burgess was one of the most important made during the winter. The yacht is to be delivered to Mr. Mansfield at New London and it is expected that he will race her throughout the coming season.

The O. Sheldon Company is building a 25ft. speed launch from designs by Fred S. Nock, of West Mystic, Conn., for Mr. Paul N. Goodrich. She will have a 14 horse-power motor.

MacConnell Bros. have sold the 21ft. knockabout, Friendship, to Mr. E. B. Curtiss, of the Indian Harbor Y. C.; the 30ft. auxiliary yawl, Akista, to Mr. John N. McCrae, of New York; 48ft. cabin launch, Water Witch, to Dr. Wallace C. Clark, of Philadelphia, and the gasolene launch, Stellar, to Mr. Guy C. Hardy, of Hope Sound, Fla.

Arthur Binney has turned out the lines of a fast steam yacht for Mr. Fred Wells. She will be used on Lake Champlain.

JOHN B. KILLEEN.

Design for a Swedish 5-Tonner.

MR. B. B. CROWNINSHIELD'S success in designing racing yachts has given him a world wide reputation, and in consequence he is constantly getting orders from yachtsmen who live in remote corners of the globe. His productions have been successful in Germany and Australia, and a boat built from his designs last season for a syndicate of San Francisco yachtsmen met all comers on the Pacific Coast and did not suffer defeat.

The design we publish this week is the smaller of two boats that Mr. Crowninshield designed for racing in Swedish waters next summer. The boat is designed under the Royal Swedish Y. C. rule, which is as follows: Length (in meters) times the sail area (in square meters) divided by 131. Mr. Crowninshield believes that a narrow scow of the general type of Independence will do best under this rule. The boat is being built for Mr. A. Plym, of Stockholm, Sweden. The particulars of the design follow:

Length—		
Over all	12.85	meters
Waterline	7.3	meters
Overhang—		
Forward	2.89	meters

Origin of the Centerboard.

Editor Forest and Stream:

It appears odd that after corrections have so frequently been made as to the origin of the centerboard, new claims for its invention, as of comparatively modern date, should be made so frequently. In October, 1893, in the columns of The Sun, it was claimed to be a "Cherry street device" of 1820. A letter in reference to this, written by myself, appeared in that paper and was copied into FOREST AND STREAM of October 28, 1893. Other references to the subject were made in your journal November 4 and December 23 of that year. The Field also about this time, and indeed previously, supplied very interesting data in reference to the subject. These different accounts have not, so far as I have seen, had their correctness questioned, and they will make interesting reading to any persons who can refer to them. I may say briefly that they show the centerboard, in some form, to have been in use over 360 years since. That Captain Schank of the British Navy built a vessel with a centerboard in Boston in 1771; that Captain Shuldham of the British Navy exhibited and lodged in the Ipswich Museum a

model with a board pivoted in modern fashion in 1809. It is shown that in Prescott's "History of the Conquest of Peru," mention is made of centerboard craft having been seen by Pizarro in 1535, and that again they are described in Ulloa's Voyage, 1735.

In these accounts that which seems to have been essentially a centerboard of the dagger kind, is described as a sliding keel thrust through the bottom of the vessel or raft. It appears quite reasonable to suppose that a traveled seaman like Captain Schank may have been acquainted with the methods of the primitive races, and may have borrowed his conception from them. Be this as it may, his use of the centerboard seems to have been the earliest in the United States of which there is any current knowledge, and Boston, not Cherry street, Cape May county, or Nyack, appears to have been the locality of its inception. JOHN HYSLOP.

NEW YORK CITY, Feb. 7.

YACHT CLUB NOTES.

The annual meeting of the Riverside Y. C. was held at the Arena, West 30th street, New York City, on Friday evening, Feb. 6, and the following officers were elected: Commodore, George G. Tyson; Vice Commodore, William A. Hamilton; Rear Commodore, Geo. J. Bascom; Treasurer, George T. Higgons; Secretary, John G. Porter; Measurer, T. E. Ferris; Trustees for term ending February, 1906, Frederick Beltz and W. A. Hamilton; Trustee for unexpired term ending February, 1905, W. J. L. Davids; Regatta Committee, Charles P. Tower, George T. Higgons and Edwin Binney; Membership Committee, Robert Rutter, J. H. McKenna and George E. Marks; Entertainment Committee, Frederick Beltz, George E. Williams and Dr. H. H. Tyson, Jr.; Fleet Surgeon, Dr. H. H. Tyson, Jr.; Chaplains, the Rev. George C. Houghton, D. D., and the Rev. Charles F. Boylston.

At the annual meeting of the New Rochelle Y. C., held at the Hotel Manhattan on Saturday night, Feb. 7, the following officers were elected: Commodore, Charles Pryor; Vice Commodore, Evans Rogers Dick; Rear Commodore, J. C. Donovan; Secretary, William E. Moore; Treasurer, John A. Van Zelm; Measurer, F. R. Farrington; Regatta Committee, O. H. Chellborg, J. E. Stockman, L. D. Huntington, Jr., D. W. Thomas, S. M. Seaman; Trustees for three years, W. A. Stapleman, C. T. Pierson and W. M. Bazier; Law Committee, Charles F. Lambden and S. H. Seacord.

Members of the Stamford Y. C. elected the following officers at their annual meeting, held at the Suburban Club, Stamford, on Tuesday evening, Feb. 3: Commodore, James D. Smith; Vice Commodore, Walton Ferguson; Rear Commodore, James S. Herman; Treasurer, Charles H. Leeds; Secretary and Assistant Treasurer, Herbert Lawton; Fleet Surgeon, Dr. Samuel Pierson; Measurer, L. Franklin Wardwell; Chaplain, Rev. C. M. Addison; Board of Directors, H. P. Bartlett, Albert C. Hall, George H. Hoyt, Schuyler Merritt, A. H. Scofield, E. E. Bruggerhoff, Edward C. Hoyt, Walter S. Hoyt, Alfred S. Pitt, Wallace D. Barclay.

The Nominating Committee of the Larchmont Y. C. has decided on the following ticket to be voted upon by the members at the annual meeting to be held at Delmonico's on Wednesday evening, Feb. 18: Commodore, Frederick T. Adams; Rear Commodore, Frederick M. Hoyt; Secretary, A. Bryan Alley; Treasurer, William Murray; Measurer, John Hyslop; Trustees (to serve three years), Augustin Monroe and Edward S. Hatch.

At the annual meeting of the Milwaukee Y. C., held on Jan. 3, 1903, the following officers were elected: Commodore, Edward P. Vilas; Vice Commodore, Joseph E. Uihelin; Rear Commodore, Albert J. Richter; Secretary-Treasurer, Dr. Charles R. Enos; Fleet Captain, Adam Strachan; Fleet Surgeon, Charles D. Collins, M. D.; Board of Directors, A. J. Richter, C. D. Collins, Harry Landauer, C. W. Beemer, Chas. R. Enos.

The annual meeting of the Atlantic Y. C. was held at the Waldorf-Astoria, New York City, on the evening of Feb. 9. Over one hundred members were present. The by-laws were amended, making the annual dues $50 instead of $40. The constitution was also amended in regard to the election of trustees. Three classes of two each are provided for, the first class to serve one year, the second class to serve two years and the third class three years. Commodore Tod announced that he would again offer prizes for ocean races, which proved such a successful feature in the club's racing last year.

The first race to be from Sea Gate to and around Fire Island Lightship, thence to and around North East End Lightship, and back to Sea Gate, 253 miles; the second, from Newport, at the end of the New York Y. C. cruise, starting at Brenton's Reef Lightship to and around Nantucket Shoals Lightship, and thence to Sea Gate, 297 miles; the third to be from Sea Gate to and around Nantucket Shoal Lightship, thence to and around North East End Lightship, off Cape May and return to Sea Gate, 552 miles.

The annual cruise will be given up this year and instead a week's racing will be held at Sea Gate.

The following officers and committees were elected: Commodore, Robert E. Tod, schooner Thistle; Vice Commodore, Edwin Gould, steamer Aileen; Rear Commodore, J. H. Flagler, steamer Alita; Trustees, J. Rogers Maxwell, Frederick T. Adams, Alfred W. Booth, J. Fred Ackerman, Spencer Swain, Robert P. Doremus; Secretary, Louis F. Jackson; Treasurer, Charles T. Pierce; Measurer, George Hill; Regatta Committee, Henry J. Gielow, Charles E. Schuyler, Frederick Vilmar; Membership Committee, William E. Sperling, George D. Provost, T. Alfred Vernon; Entertainment Committee, Edwin Hollis Low, Clarence H. Eagle, William A. Barstow; Library Committee, S. L. Blood, Walter H. Nelson, Franklin D. L. Prentiss; Nominating Committee, Spencer Swain, Benjamin M. Whitlock, Henry J. Robert. Charles J. McDermott, S. Edward Vernon, Walter Nelson; Chaplain, Rev. George Weed Barhydt.

Mr. W. H. Ketcham, chairman of the Regatta Committee of the Columbia Y. C., has sent a letter to the secretaries of all the yacht clubs in this vicinity urging them to co-operate with the Columbia Y. C. in forming a national motor boat racing association. The letter reads as follows:

At a meeting held on Jan. 20, at the Columbia Y. C., to which were invited representatives of a number of nearby yacht clubs for the purpose of discussing motor boat racing, time allowances and governing rules, it was the unanimous opinion of those present that a national boat racing association should be formed.

A committee was appointed to draft a constitution and set of by-laws; another committee was appointed to draw up a table of time allowances and set of rules to govern motor boat races, and a committee was also appointed to place the matter before all available yacht clubs, these committees to report at the next meeting.

The object of this association is to promote the racing of power yachts and launches, and it is hoped that the co-operation of many clubs will develop the interest in and holding of interclub races, thereby bringing together many yachtsmen interested in this sport. It was also the unanimous opinion of those present that the association should be composed of the membership of yacht clubs through regularly appointed representatives.

The hearty co-operation of your club is desired, and we beg to ask that you bring the matter before your Board of Trustees or other proper authorities, with a view of having appointed a committee which will have power to act and which will attend the next meeting to be held at the Columbia Y. C. on Wednesday evening, Feb. 25, at eight o'clock.

Mr. J. K. Dering, of Chicago, is having a stern paddle wheel launch built by the Palmer Boat Company, of Highland Park, Ill. The boat is 31ft. 9in. over all and 6ft. 3in. breadth. She will be driven by a 7 horse-power Sargent engine.

A Pleasant Three Days' Cruise.

With holidays over and the days growing longer, we yearners for the sea take heart and feel we are on the downward track to the pleasures of another yachting season. Your true yachting crank *lives* only in the season; in winter he exists. Many pleasant evenings are to be had at this time of year thinking of your good little ship and planning numerous cruises for the coming summer. Seated before the cheerful fire with his favorite pipe drawing well, the skipper's thoughts go back to last season's final cruise, and he wonders if an account of that delightful trip may not be of some interest to a few of the "fiends."

The S—— and his friend, who we will call the crew, having sent their respective families to the mountains, determined to take advantage of Labor Day coming so conveniently on Monday and go off for a three days' cruise. You all know the preliminary pleasure of getting ready for such a trip; the making lists of things eatable, drinkable, wearable, etc., the discussing of new harbors to put in at, and the final arranging of last details connected with the starting. After a long week, Saturday finally arrived and the S—— and crew met at the Grand Central Station and boarded the one o'clock train bound for New Rochelle.

The day was ideal for our use. To be sure, it had been hot and sticky in town during the morning, but those conditions only whetted our appetites the more for what was before us.

As the train left the smoky, dusty, altogether objectionable city and got out where a decent breath of air was to be had and glimpses of trees, the S—— anxiously scanned

MARGUERITE.

the sky for signs of thunder heads and tried to determine from the trees as they flew past what breeze there was and from what quarter. He finally settled to his great satisfaction that the wind was southwest and there appeared to be a decent air stirring. At New Rochelle we boarded an electric car and were whisked down to the Huguenot Club in short order.

What an expectant thrill came to us with the first glimpse of the blue water, stirred by a splendid southwest breeze and sparkling in the hot afternoon sun. Into the dinghey we tumbled, eager as two boys, and rowed with enthusiasm to the good little ship Marguerite swinging at her mooring on the channel's edge.

She is a compromise cutter, rigged jib and mainsail, 30 feet on top, 10 feet beam, with a comfortable cabin and good big cockpit to stretch out in. We had put our dunnage aboard the night before, so after hastily chucking things below, the mainsail was quickly hoisted, club flag run aloft, jib and main sheets overhauled, the S—— at the wheel and crew ready to cast off the mooring and run up jib. Getting under way from our mooring in a southwester is somewhat of an undertaking. In the prevailing summer breeze such as blew that day, our boats lie headed to the westward, while the channel runs about northeast for a short distance. To your right, 50 feet away, stretches the mud bank edge of channel, while just across it to the left a few boat lengths are moored yachts as thick as they can swing safely, so it is a case of slack main sheet well off, draw jib to windward and make her swing square around in almost her length. This manœuver was carried out and after getting by the Glen Island steamers, launches, rowboats, chain ferry, etc., we finally luffed round the red buoy outside and eased sheets for a run east'ard.

The crew took the wheel here and the S—— went below to get off the store clothes. Oh, the joy of undress, as expounded and experienced on our boat! Our full dress is a pair of old breeches and swimming shirt. Hats are discarded as soon as we get aboard, and the skipper's and crew's luxuriant locks establish the truth of the saying that the sun and air on one's head are good for the hair.

The afternoon was perfect. A glorious breeze; air clear and the Sound covered as far as one could see with yachts of every description. Passing Huckleberry Island and laying our course for Mattinicock Point, we soon met a large number of boats racing in Larchmont Yacht Club regatta, and it was splendid sport watching one after another as we ran under their lea (they were going in an opposite direction), tearing along with every rag on and all with a big bone under the bow. Where could one find a prettier sheet of salt water than the western end of Long Island Sound? To the north, rocky shores backed by the beautiful lawns surrounding magnificent summer homes, while on the south stretch Long Island's glorious beaches, with the tree-covered Wheatley hills rising to the highest land on the island. The skipper feels almost poetic over his dear Sound. We pass class after class of racing yachts, the last of which are two sloops some fifty feet on deck, which pass very close to windward of us and a beautiful picture they make. We note the helmsman of the first sitting bareheaded and attentive to leeward of the stick, carefully watching his jibs and luffing her out to every puff, while on the second boat the young fellow steering was busily talking to a group of "swells" grouped in picturesque array on the quarter, and failing to work out his craft in the constantly coming squalls that darkened the water toward Hempstead Harbor.

How discouraging this must have been to the captain and crew working for their "prize" money.

We had been boiling along in grand style since leaving Huckleberry, and were now abreast of Mattinicock and had to decide whether to square broad off for Greenwich or make the Seawanhaka Y. C. anchorage our port for the night, and as we had never put up at the latter, we determined to go there, and laid course for buoy off Center Island. Marguerite draws 5ft. with board up, and we thought best not to try "skinning" the mark, though the S—— knew there was good water nearer shore, but had forgotten the range. After rounding, we trimmed flat for beat in to the anchorage, and had as guide a large sloop, evidently making for the club. Ahead of us stretched the broad expanse of Cold Spring Harbor, to the skipper's mind one of the most beautiful indentations of the Sound. Before the hotel and Casino at Cold Spring were closed this harbor was very popular with yachtsmen, and some of our red letter days have been passed in that lovely spot. Many mornings we have watched the sun rise over the Long Island hills while anchored there. Passing through a fleet of Seawanhaka knockabouts racing off Buglight, we stood on till under Cooper's Bluff and then came about for the last board in to the club anchorage. From mooring to anchorage had taken about two hours and twenty minutes and had been a sail we will long recall with pleasantest recollections. How delightful the good pipe after a stirring run, when sails are furled, ropes coiled down and everything snugged for the night.

To us it is part of the sport to put our ship up in good fashion. All sheets, halyards, etc., stayed to a hair; pennant halyards overhauled to see the flag is properly on end; awning set firm, ready for a night squall; anchor light filled and a last try of the cable to make sure she has enough. Queer how many times a man will go through this last performance.

After everything was overhauled to the skipper's satisfaction, we dove below, put on trunks and hustled overboard and both came to the surface with surprised faces, each exclaiming over the pricky feeling we experienced as soon as striking the water. At first we thought it must be from currents possibly caused by springs, but on climbing aboard and looking in the water discovered myriads of small jelly fish that had given us little stings or shocks as we touched them. For a quarter of an hour we swam and dived, thoroughly enjoying the clear (aside from the jelly fish), invigorating water, and afterwards stretched out in the sunny waterway for a sun bath. The swimming feature is a very large and important part of our sailing and cruising. No opportunity to get overboard is ever neglected, as fortunately all of our "crowd" are equally enthusiastic about it. It is always a matter of wonder to us that so comparatively little of this splendid exercise is done by the average yachtsmen. What can give one such an appetite for breakfast as a plunge in the cool, invigorating water, and how deliciously refreshing to repeat it in the midday heat?

Putting on shore togs, we went ashore and were most courteously received by the steward of the club. After partaking of a good dinner, we listened to the music and looked at the fine pictures, books, etc. This club house is a beautiful building and grandly situated. After going aboard chairs were brought out in the cockpit and the usual last pipe indulged in. Understand, our cockpit at night is perfectly dry in any weather short of a pour. Our awning is a treasure, keeping cockpit free from dew and extending forward to mast, so slide and skylight can be open in anything but heavy rains. It is rigged with strong, light poles permanently fastened and rolls up, poles and all, in a bundle that is shoved in the lazarette out of the way.

Sunday morning found the S—— on deck by 6:30, wrapped in a bath robe and enjoying the lovely picture spread on every hand. It is his custom to always tumble out early on pleasant mornings, wrap up in blanket or robe and lie on deck in the warmest spot and revel in the pure air. This particular morning promised another fine day. The same southwest breeze had apparently continued through the night and was now sending little puffs skylarking across the harbor. There were several fine yachts close to us and a half hour was spent in the warm sun looking them over, noting each perfection of rig and hull. What a restful, peaceful scene it was, and how at such times one pities the poor unfortunates who dwell inland, or in the detestable cities.

As soon as the crew poked his sleepy head through the companionway, we jumped in swimming and floundered and splashed about like two boys.

What, indeed, keeps one young like this sport? From the moment of stepping aboard business and other cares vanish and you feel a boy again.

After a brisk rub down, we put on our sailing clothes and prepared breakfast. We like dinner ashore, when possible, but breakfast always aboard, and the first course is an orange just off the ice. By nine we were under way and decided on running round to Lloyd's Harbor. The U. S. ship "Sylph" passed close aboard on her way out and her trim man-of-war appearance excited our admiration. With the good breeze astern we soon entered Huntington Harbor and enjoyed its beauties.

Running down wind had made the sun assert himself and we brought up close to the fine beach near Lloyd's Harbor light house for another swim, as the water looked too cool and tempting to keep out of. One of the special attractions of these shores is the fine beaches. Where on our shores it is either creek-mud or rocks, here all is sand, and the water clear and uncontaminated.

What a pity the towns on the Westchester and Connecticut side are allowed to sewer in the Sound. This is doubtless the cause of changes in fish life hereabouts.

The S—— remembers an old inhabitant of Mamaroneck telling him of days when scallops were as plentiful in the harbor there as mussels are now.

After a fine swim we started for Greenwich and were able to lay our course direct, close hauled on port tack. The day, while perfect, was different from Saturday, in there being that summer haze so prevalent on the Sound. How thoroughly enjoyable was that long, lazy board, made doubly interesting to us by a brush with a sloop that had started just ahead.

She finally left us, but we felt satisfied, as she was larger and carried topsail. For over two hourse we kept on same tack, S—— and crew taking a short nap at different times. Shortly after three o'clock we passed Stamford Point, and easing sheet ran into the yacht anchorage at Indian Harbor, but the breeze was so good we decided to run out to Captain's Island before putting up for the night. Reaching there the swimming instinct again asserted itself, and taking in jib we dropped the hook and dove in. That swim will live in our memories always. We went in, came out and repeated it many times till finally the fast dropping sun warned us to be off for the anchorage. After making all shipshape, we regretfully donned shore clothes, went ashore and enjoyed a good dinner at the club. Putting on stiff shirts and collars after a day in bathing suit is a fearful grind, but we considered it a shade preferable to washing the many dishes necessitated by a dinner. Going aboard about ten o'clock we had our last pipe and turned in, soothed to sleep by the hum of the evening breeze through the rigging.

Waking at six o'clock the next morning the S—— stuck his head out of the companionway and found a

MARGUERITE.

brisk breeze stirring from same quarter and signs of a blowy day. Anchored alongside was a beautiful yawl some 70ft. on top that had come in during the evening, and for half an hour we lay on top of the cabin wrapped in blankets looking her over and enjoying the pretty scene spread on every hand. After that our usual plunge overboard and then breakfast followed by that first good pipe. The wind had been steadily increasing since sunrise, and as a long thrash to wind'ard was in store, we put two reefs in mainsail and bent our No. 2 jib. Working down the shore inside Captain's Island we found this rather short canvas, but on getting outside it began to come down in little chunks and we went along most comfortably. Made a long hitch over to the island and just before going about to the east of Mattinicock met several New Rochelle yachts bound west. By this time it was blowing fresh, with good, hard, black chunks coming off the Long Island shore; but with our reduced canvas the little hooker was banging through it in easy fashion. The New Rochelle boats all crossed our bow as we approached them, but they were lugging full sail and making poor weather of the squalls, having to continually luff out. Standing well to wind'ard of their wakes we came about and put after them, and in a short time had the satisfaction of crossing *their* bows as we split tacks working down the beach. In fact, after two hours they were miles behind us; another case of lugging sail instead of carrying it. The skipper is a firm believer in too little canvas (of course aside from racing, and sometimes then) rather than too much, and our performance that morning against larger boats carrying too much sail made him doubly satisfied with that opinion. Give him easy canvas rather than staggering along with boat on side, everything sliding down and the constant expectation of something giving way. The Sound was another picture this day. Scores of yachts were about, participating in or watching the fall regatta of Larchmont Y. C., and class after class of racing machines went by us, among them two of the 70-footers. A great sight it was to see the latter keeled over to apparently the last degree and going at steamer speed. After several hours of exhilarating windward work, we dropped our hook near one of the course marks off Howard Gould's place, and after a fine swim ate lunch and watched the big yachts turn the mark. Soon after three o'clock we got under way and headed for home, getting in in time to put things up in good shape, pack our duds and then sit down for a final smoke and talk before going ashore. In every particular this little cruise had been most delightful, and one long to be remembered.

Skipper.

"Small Yacht Construction and Rigging."

MR. LINTON HOPE'S book, "Small Yacht Construction and Rigging," which has been in preparation for some time past is now ready for delivery. The matter appeared originally in the columns of FOREST AND STREAM, but before putting it in book form it has been carefully revised and added to by the author.

For years past there has been a great demand for a really good and up-to-date book on this subject, and it is with considerable satisfaction that we are able to call attention to so splendid a work. In these days nearly every yachtsman takes great interest in the building and rigging of boats, and many have actually built and rigged their own craft. In many cases, however, the amateur has no practical knowledge of what is needed, and lacking knowledge to review the work, it has been done in an improper and unsystematic manner. Mr. Hope's book, however, gives to the yachtsman just the information about building which he needs, and it will be found indispensable to the amateur. The work is written so clearly that a man having no knowledge of the use of tools or of boat building can, with its aid and a little practice, do very creditable work.

The author has taken two designs for practical demonstration, one of a centerboard boat 19ft. waterline and the other a cruising cutter of 22ft. waterline. Both designs show fine little boats which are fully adapted to American requirements. Full instructions, even to the minutest detail, is given for the building of both these boats. The information is not confined to these yachts alone; they are merely taken as examples, but what is said applies to all wooden yacht building according to the best and most approved methods.

The book is divided into two parts. Part I. treats of the building of the boats and Part II. covers the rigging. In Part I., Mr. Hope first goes into the matter of tools and then devotes a chapter to the best materials to use. In Chapter III. full instructions are given for laying off, making the molds and setting up the frames. Chapter IV. discusses the difficulties of cutting the rabbet and fairing the molds. Chapter V. is given over to timbering and planking, and in the next chapter is told how to place the floors, shelf and deck beams. The other eight chapters being devoted to the making of centerboard trunks and rudder cases, laying decks and placing coamings, caulking, stopping and painting, lead keels and centerboards, rudders, spars, deck fittings, iron work and cabin fittings, and equipment. The matter of rigging and sails is thoroughly dealt with in Part II.

The book, which is bound in tan buckram, contains nearly two hundred pages and sixty illustrations. In addition are the four large plates of designs which are printed on strong linen paper and which will stand considerable handling without injury. These are placed in a pocket in the back cover so that they can be removed whenever needed. The drawings are well executed and are very comprehensive.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Mr. William H. Hand, of New Bedford, Mass., has completed plans for a one-design knockabout class for members of a Buzzard's Bay club. These boats, which are being built at the Newport Shipyard, Newport, R. I., are 25ft. over all, 15ft. waterline, 6ft. 7in. breadth and 3ft. 9in. draft. There are 820 pounds of lead on the keel and they will carry 316 square feet of sail. There is also building at the Newport Shipyard, from Mr. Hand's design, a 46ft. waterline sea-going launch for Mr. Reginald Norman, of Newport, R. I. Among the other boats Mr. Hand has designed this winter is a 40ft. cruising yawl for the Rev. William A. Patrick, of Cleveland, O., and a 30ft. double end yawl for Mr. Frank E. Wood, of Buffalo, N. Y. This boat resembles in design the old Block Island "Pinky," a class of boat famous for their sea-going qualities.

Mr. Hollis Burgess has sold through his agency the schooner Amorita, owned by Mr. Thomas M. McKee, of Pittsburg, Pa., to Mr. Richard Mansfield.

Messrs. Gardner & Cox have chartered the English-built steam yacht Fauvette, owned by Professor J. Harvard Biles, of Glasgow, Scotland, to Mr. W. B. Bacon, of Boston. Fauvette was designed by the late Dixon Kemp and built by Messrs. Ramage & Ferguson, Ltd., at Leith, in 1892. She is 190ft. over all, 160ft. waterline, 22.7ft. breadth and 15ft. depth. The yacht has been lying at South Brooklyn since her arrival here last fall, and she will now be taken to Hoboken, where she will be refitted and overhauled.

Mr. Charles D. Mower is to have a 27ft. speed launch built at Huntington's yard, New Rochelle, from his own design. The boat will be fitted with an 8 horse-power Buffalo motor.

Messrs. Tuthill & Highby, of Greenport, L. I., are building for Mr. Oscar B. Webber a racing sloop from designs made by Mr. B. B. Crowninshield. She is 44ft. over all, 30ft. waterline, 9ft. 6in. breadth and 6ft. 9in. draft.

On the afternoon of February 4 there was launched from the Herreshoff shops at Bristol the steam yacht built by that firm for Mr. S. R. Van Duser, of New York City. The yacht, which was named Wana, is 132ft. long over all and 12ft. breadth. The hull, which is built of wood, is completed, but the deck and cabin fittings have yet to be put in place.

The Electric Launch Company, Bayonne, N. J., is building a cruising launch for Mr. W. F. Morgan, of Brooklyn, N. Y. The boat is 60ft. over all, 57ft. waterline, 9ft. 9in. breadth and 3ft. draft. Her power will be furnished by two 25 horse-power gasoline engines and it is expected she will develop a speed of 14 miles. The boat will be very comfortably fitted below and she will be lighted by electricity. This firm is also building an electric launch for Mr. A. J. Cassatt for use at Bar Harbor. She is to be an open boat and the hull will be planked with mahogany.

The Marine Construction and Dry Dock Company, Mariners Harbor, S. I., is building a 36ft. launch for Mr. F. G. Mead. The boat, which was designed by Mr. R. N. Haddock, of Ossining, N. Y., will be equipped with a 12 horse-power 4-cycle Howard motor.

Mr. E. O. Mapes, of Minneapolis, Minn., has purchased the famous old schooner Fleetwing. The boat will receive a new main mast and a general overhauling preparatory to a southern cruise.

The auxiliary cruising yawl designed by Mr. Charles G. Davis for Dr. Richard J. Scofield, of New York City, is being built at Hanson's yard, City Island. She will be 37ft. over all, 27ft. waterline, 9ft. 6in. breadth and 3ft. 6in. draft, and will carry just over 800 square feet of sail.

In addition to the large auxiliary cruising schooner that Messrs. Gardner & Cox have designed for Mr. Wilson Marshall, they have orders for a Canada cup challenger for a syndicate of Rochester yachtsmen and a steam yacht for Mr. Evans R. Dick, of Philadelphia. The work of the yawl building from this firm's designs by Wood at City Island for Mr. Noble is well advanced. The Canada cup challenger will be built at Wood's yard and she will be raced on the Sound against Effort, Dorwina, Challenge, Mira and Mr. T. L. Park's new boat. It is very probable that she will be handled by Mr. Addison Hanan; if this proves to be the case the boat will be in good hands.

The steam yacht for Mr. Dick will be 108ft. over all, 97ft. waterline, 18ft. 9in. breadth and 5ft. 6in. draft. She will be built by James Bayles & Son, Port Jefferson, L. I.

The schooner Muriel, owned by Mr. Charles Smithers, arrived at Bermuda on February 7, eighty-four hours out from New York.

Rifle Range and Gallery.

The English dispatches announce that the National Rifle Association of Great Britain have fixed upon July 11 for the Palma trophy. The interest taken in this trophy on this side of the ocean indicates that a most resolute effort will be made to take it back to America, where it rested so cosily during many years.

Trapshooting.

Fixtures.

If you want your shoot to be announced here send a notice like the following:

Feb. 12.—Brooklyn, L. I.—All-day shoot of the Fulton Gun Club. A. A. Schoverling, Sec'y.
Feb. 12.—Rutherford, N. J.—All-day target shoot of the Boiling Springs Gun Club on Lincoln's Birthday. C. B. Axford, Sec'y.
Feb. 18.—Allentown, Pa.—Two days' target tournament at Duck Farm Hotel. Alfred Griesemer, Prop.
Feb. 20.—South Bethlehem, Pa.—Live-bird shoot of the Lehigh Rod and Gun Club, of The Bethlehems. D. S. Daudt, Manager.
Feb. 20.—Rittersville, Pa.—Morfey-Daudt match, 100 live birds, $100 a side.
Feb. 20-21.—New Orleans, La.—First tournament of the Mississippi Valley Trapshooters' and Game Protective Association; Carnival Week, under auspices of the City Park Gun Club; $500 added. Percy S. Benedict, Sec'y.
Feb. 22.—Louisville, Ky.—Tournament of the Jefferson County Gun Club.
Feb. 23.—Wellington, Mass.—Shoot of the Boston Shooting Association. O. R. Dickey, Manager.
Feb. 23.—Trenton, N. J.—E. C. cup contest for target championship of New Jersey between Neaf Apgar, holder, and Chas. P. Cole, challenger.
Feb. 23.—Orange, N. J.—Open shoot of the Nishoyne Gun Club.
Feb. 23.—Paterson, N. J.—Washington's Birthday shoot of the Jackson Park Gun Club; first of three-man team series of contests, 45 birds per team. Garry A. Hopper, Sec'y.
Feb. 23.—Ossining, N. Y.—Ossining Gun Club's Washington's Birthday shoot. C. G. Blandford, Capt.
Feb. 23.—Lynn, Mass.—Holiday shoot of the Birch Brook Gun Club.
April 1-3.—Grand Island, Neb.—Consolidated tournament of the Buffalo Bill Gun Club, of North Platte, and the Grand Island Gun Club; two days targets, one day live birds. Managers, Geo. L. Carter, North Platte, and Gus Sievers, Grand Island.
April 7-10.—St. Joseph, Mo.—Tournament of the Missouri State Game and Fish Protective Association. F. B. Cunningham, Secretary-Manager.
*April 8.—Allegheny, Pa.—North Side Gun Club. L. B. Fleming, Sec'y.
April 14-17.—Kansas City, Mo.—The Interstate Association's fourth Grand American Handicap at targets, at Blue River Shooting Park. One thousand dollars added to the purses. Elmer E. Shaner, Secretary-Manager, 111 Fourth avenue, Pittsburg, Pa.
April 20.—Springfield, Mass.—Spring tournament of the Springfield Gun Club. C. L. Kites, Sec'y.
*April 22-23.—Pittsburg, Pa.—Herron Hill Gun Club. Harry Vandergrift, Sec'y.
April 28-May 1.—Lincoln, Neb.—Nebraska State Sportsmen's Association's twenty-seventh annual tournament, under the auspices of the Lincoln Gun Club. F. E. Mockett, Sec'y.
May 6-7.—Union City, Ind.—Parent Gun Club's tournament.
May 6-7.—Lafayette, Ind.—Lafayette Gun Club's tournament.
May 9-10.—Chicago, Ill.—Spring tournament of the Grand Crescent Gun Club.
May 12-15.—Interstate Park, L. I.—The Interstate Association's fifth Grand American Handicap at targets; $1,000 added to the purses. Elmer E. Shaner, Secretary-Manager, 111 Fourth avenue, Pittsburg, Pa.
May 13-14.—Crawfordsville, Ind., Gun Club's tournament.
May 19-22.—Wissinoming, Philadelphia.—Thirteenth annual tournament of the Pennsylvania State Sportsmen's Association, under auspices of the Florists' Gun Club of Philadelphia. V. V. Dorp, Sec'y.
May 21-22.—Kenton, O.—Shoot of the Kenton Gun Club. A. G. Merriman, Sec'y-Treas.
*May 26-27.—Brownsville, Pa.—Brownsville Gun Club tournament. W. T. Doherty, Sec'y.
May 30.—Tournament of the East Harrisburg, Pa., Shooting Association.
May 27-29.—Fort Wayne, Ind.—Three-day live-bird and target tournament of the Corner Rod and Gun Club. John V. Linker, Sec'y.
May 27-29.—Williamsport, Pa.—The Interstate Association's tournament, under the auspices of the West Branch Rod and Gun Club. H. A. Dimick, Sec'y.
May 29-30.—Union City, Ind.—Spring tournament of the Parent Grove Gun Club.
May 30.—Detroit, Mich.—Winchester Gun Club's Decoration Day third annual tournament; all day. Rose system and average prizes. Sliding handicap, 16, 18 and 20yds., D. A. Hitchcock, Sec'y-Treas.
June 3-4.—Boston, Mass.—The Interstate Association's tournament, under the auspices of the Boston Shooting Association. O. R. Dickey, Sec'y.
June 3-5.—Parkersburg, W. Va.—Sixth annual tournament of the West Virginia Sportsmen's Association, under auspices of Ohio Valley Shooting Association.
June 4-5.—Greenville, O.—Spring tournament of the Greenville Gun Club.
June 7-8.—Ligonier, Pa., Gun Club's tournament.
June 9-11.—Sioux City, Ia.—Ninth annual amateur tournament of the Soo Gun Club. B. F. Duncan, Sec'y.
June 9-11.—Cincinnati, O.—Seventeenth annual target tournament of the Ohio Trapshooters' League. Chas. T. Dreihs, Sec'y.
*June 10-11.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.
June 16-19.—Warm Springs, Ga.—The Interstate Association's tournament, under the auspices of the Meriwether Gun Club. Chas. L. Davis, Sec'y.
June 16-18.—New London, Ia.—Seventh annual midsummer target tournament of the New London Gun Club.
*June 24-25.—New Castle, Pa., Gun Club's tournament. James Atkinson, Sec'y.
*July 7-8.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.
July 8-9.—Huntsville, Ala.—The Interstate Association's tournament, under the auspices of the Huntsville Gun Club. E. R. Matthews, Sec'y.
*July 21-22.—Beaver Falls, Pa., Gun Club's tournament. W. R. Keefer, Sec'y.
July 30-Aug. 1.—Viroqua, Wis.—The Interstate Association's tournament, under the auspices of the Viroqua Rod and Gun Club. Dr. R. W. Baldwin, Sec'y.
Aug. 19-20.—Ottawa, Ill.—The Interstate Association's tournament, under the auspices of the Rainmakers' Gun Club. Paul A. Selember, Sec'y.
*Aug. 19-20.—Millvale, Pa., Gun Club's tournament. Wm. Bussler, Sec'y.
*Sept. 1-2.—Irwin Pa., Gun Club's tournament. John Withero, Sec'y.
*Sept. 23-24.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.
Sept, 23-24.—Ruffsdale, Pa., Gun Club's tournament.
*Oct. 6-7.—Allegheny, Pa.—North Side Gun Club's tournament. L. B. Fleming, Sec'y.
*Oct. 20-21.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

The following is taken from the New York Times of Feb. 6: "Philadelphia, Feb. 6.—At a meeting in this city, attended by a number of capitalists of New York, Baltimore, and Philadelphia, the American Explosive Manufacturing Company was formed, having for its purpose the combination of all the manufacturers in this country, of dynamite, powder, and other explosives. The authorized capital of the company is $1,000,000, which, it, is stated, will be increased to $5,000,000. Samuel W. Regester, of Baltimore, is the president of the company. Other officers are: Olin Bryan and John C. Tolson, of Baltimore, and Dr. Henry D. Heller, of Philadelphia. The company is said to have obtained control of a number of plants."

Mr. Sellier Johnson, an Englishman, who, though famous as a shot, shot at Monte Carlo this year for the first time, won the Grand Prix on Feb. 2. The dispatches state that there were eleven men with a clean score after the tenth round. Mr. Mackintosh was the favorite. Mr. Robinson missed his twelfth bird. The eighteenth round ended the competition. Count Zichy and Mr. Thompson and Mr. Mackintosh missed a fair bird. Mr. Johnson killed his bird brilliantly with the first barrel, and was proclaimed the winner. He received 18,400 f. ($3,680). Mr. Mackintosh took 12,500f. ($2,500), and Count Zichy and Mr. Thompson agreed to divide 14,000f. ($2,800).

Mr. Valentine Wallburg, president of the Schenectady, N. Y., Gun Club, writes us as follows, under date of Feb. 9: "Please discontinue the announcement that the Schenectady Gun Club will hold the State shoot here in June next. We are obliged to give up the arrangements on account of being deprived of the use of the ball grounds, where we proposed to have the shoot. The grounds are on an island, and the bridge connecting the mainland and all buildings thereon are to be sold for the lumber value, and the lease and franchise given up. As there is no other suitable place that can be obtained, we are obliged to give up the tournament."

We are indebted to Mr. T. L. Andrews, secretary of the Titusville, Pa., Gun Club, for a photograph of Mr. E. W. Jordan, who at the annual meeting of the club, held Jan. 26, was unanimously elected president. He states: "Our club feels justly proud of its new executive, as, beside being possessor of the club medal for high scores during the past season, Mr. Jordan shows neat balances accrued from his attendance at sweepstake shoots of both local and national importance. Our only fear is that we may lose Will, as he has had tempting offers to go on the road in the interest of houses in the sporting goods trade."

Dr. Wm. Wynn's army of friends will rejoice to learn that he is convalescing rapidly from the severe attack of pneumonia which he suffered. He was expected at his place of business on Saturday of last week, and he contemplates a visit to Palm Beach as soon as his strength will warrant taking the long journey between here and Florida. His physicians stated that when he was suffering the worst, there was about one chance in five hundred for his recovery, which expresses how close he was to the shore of the dark river.

A letter to us from Mr. R. S. Waddell, under date of Feb. 2 informs us that he has resigned his position as general sales agent of the Dupont, Hazard and other companies. He further states, "I have organized the Buckeye Powder Co. to build mills in the West, probably in Illinois. I have served twenty-one years to a day, beginning Feb. 1, 1882. I am leaving because I desire some business of my own, and not be dependent on a salary. I shall expect to keep in touch with sportsmen." We heartily wish Mr. Waddell every success.

The Boston Shooting Association will hold a shoot on the grounds at Wellington, Mass., on Feb. 23. There are nine events on the programme, four at 10, four at 15, and one at 50 targets; entrance to the latter $3.50; money divided Rose system, 8, 5, 3 and 2; sweepstakes optional. Targets 1½ cents. Lunch free. Loaded shells obtainable at the office. Mr. O. R. Dickey is the manager.

At the special shoot of the Brooklyn Gun Club, held on Wednesday of last week, an event at 100 targets, $10 entrance, proved a special attraction. There were six entries. All the contestants were eminently skillful. The contest was close. Mr. Harold Money scored 99 out of the 100. Mr. J. Skelley was second with the excellent score of 96. Wash was third with 94. There was $51 in the purse. Mr. Money in the afternoon shot at 190 targets and scored 187 of them, making a percentage of .985.

Mr. Carl Von Lengerke, of New York, was a visitor in Des Moines, Ia., last week, and was the recipient of much hospitality from the trapshooters. He had journeyed from Kansas City, where he had a reception which popular men in the West receive when they visit their friends. The days were of twenty-four hours' duration. Mr. Von Lengerke reports eminent success in his business.

Mr. Elmer E. Shaner, secretary-manager of the Interstate Association, left for Pittsburg on Thursday of last week, fully prepared to proceed with the season's tournament series of the Association. He had every detail so carefully prepared and accurately thought out, that at the meeting of the Association on Wednesday all his plans were fully indorsed.

An interesting ten-man team contest took place at Blue River Park, Kansas City, Mo., on Jan. 31, Kansas City against the Stock Yards, the former winning by a score of 65 to 58. Each man shot at 10 birds, a total of 100 per team. The birds were good and there was a high wind, conditions which adversely affected the scores.

Col. A. G. Courtney is convalescing from a severe three weeks' attack of illness, which confined him to his home up to last Saturday. His physician has advised him that it will be fully three weeks more before he will be sufficiently recovered to stir actively about. We sincerely hope that good health speedily returns to him.

Mr. Chris. Gottlieb, of Kansas City, Mo., writes us as follows: "I desire to say that, having received so many compliments on the souvenir published in connection with the last Grand American Handicap at live birds, I have concluded to issue another for the coming event that will surpass anything in this line ever attempted."

The secretary, Mr. Charles G. Grubb, writes us that "the Western Pennsylvania Trapshooters' League wishes to thank Miss Annie Oakley through the columns of Forest and Stream; for the handsome prize presented to them, and trusts that they may have the pleasure of her company at some of the League tournaments.

We learn with much gratification that Mr. Arthur Gambell, superintendent of the Cincinnati Gun Club, is recovering nicely from the accident which he suffered a few weeks ago, aud is able to be up and about at present. It is hard to down a good man.

Mr. Chas. B. Cole, of the Trenton Shooting Association, Trenton, N. J., has challenged Mr. Neaf Apgar for the E. C. cup. Mr. Apgar has accepted the challenge. The match will be shot at the Interstate Fair grounds, Trenton, N. J., on Feb. 23 next.

In the return match between the Baltimore Shooting Association and the Keystone League, shot on the grounds of the former at Baltimore, on Feb. 5, nine men on a side, 25 birds per man, Baltimore won by a score of 159 to 152.

The secretary-manager, Mr. Elmer E. Shaner, informs us that "the Interstate Association bas made arrangements to give a tournament at Huntsville, Ala., July 8, under the auspices of the Huntsville Gun Club."

Capt. A. W. Money and Messrs. J. A. R. Elliott and Harold Money left New York last Saturday for Detroit, Mich., where they will participate in the tournament fixed to be held there this week.

Mr. Wm. Dutcher, Paterson, N. J., informs us that the shoot of the Jackson Park Gun Club, fixed to be held on Feb. 12, has been declared off as a consequence of the scarcity of pigeons.

At B. S. Binn's tournament, Redfield, Ia., Feb. 4, Mr. Fred Gilbert was high average with 925 per cent., the first day, and 956 the second day. The weather conditions were very unfavorable.

Last Saturday there were fourteen contestants in the first contest of the Crescent Athletic Club shooters for the February cup, and of these Mr. Henry C. Werleman was the victor.

The Oceanic Rod and Gun Club will hold a regular contest at Rockaway Park, L. I., on Feb. 15. Targets, $1.50 per hundred.

Bernard Waters.

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, L. I., Feb. 4.—The extra shoot given by the Brooklyn Gun Club to-day was notable for the closeness of the competition and the high scores made in it. The main event was at 100 targets, $10 entrance; and this as an inducement attracted the support of the noted crackerjacks Messrs. Money, Skelley, Apgar, Glover, Welles and Floyd (Wash). The excellence of the shooting is in evidence when it is mentioned that all shot 90 per cent. or better, the winner of first, Mr. Harold Money, scoring 99 out of 100. He broke straight in several sweepstake events. Out of a total of 190 targets shot at he missed but 3, making a score of about .985 per cent. Skelley was second with 96. The shoot was a success. Mr. Wright contemplates an active season at the traps, his grounds now being quite popular. The moneys were won as follows: First, Money, $24; second, Skelley, $17.50; third, Floyd, $9.25. The scores:

New York County Gun Club.

Rockaway Beach, L. 1., Feb. 2.—There was a slight rain and a temperature of 40 degrees for weather conditions at the shoot of the New York County Gun Club to-day. A south wind added to the speed of the targets. Mr. H. P. Fessenden acted as referee. The scores:

IN NEW JERSEY.

Jackson Park Gun Club.

Paterson, N. J., Feb. 7.—The shoot of the Jackson Park Gun Club to-day was a very pleasant affair while it lasted. The birds furnished by G. A. Hopper to-day were great birds. He had gathered them since Friday around the country about Paterson, and they taxed the skill of the shooters taking part this afternoon. The 150 birds were shot off inside of two hours. A group picture was taken which we hope will turn out all right. Several other individual pictures were also taken.

The club made every endeavor to get 300 or 400 birds for to-day's shoot, but could not get one in New York city or Philadelphia. We will have men out in the country districts gathering them up for the 23d, and will have plenty for that occasion, which we expect to be a great affair, as we are getting communications every day from different clubs around the country inquiring about that part of my announcement referring to organized and incorporated gun clubs. Please change that to regularly organized or incorporated gun clubs, and the members to be bona fide members during at least three months previous to Feb. 1, 1903.

Harold Money paid us a visit to-day, and was in great form, getting here just as we were starting the 10-bird event. Mr. Edgar came along with him, but was short of practice on live birds. Capt. A. Money and Garry Hopper were in hard luck in drawing fast birds. Bunn was in fine shape. Wright, in good form, drew out on account of birds running short, to let the visitors shoot and hustle things along. Morgan is getting in shape. All are tuning up for the 23d. Keep your eye on them.

	No. 1, $3.	No. 2, $5.

Feb. 8.—Owing to the scarcity of pigeons, the Jackson Park Gun Club has declared off the shoot of Feb. 12. Mr. Bunn will have a shoot at targets, and if possible to get live birds, they also will be provided, Feb. 12.

Dutcher.

North River Gun Club.

Edgewater, N. J., Feb. 7.—There was a good attendance of shooters at the weekly meeting of the North River Gun Club to-day. The shooting was hard, the targets taking very irregular flights. Mr. Bittiner had, as a guest, Mr. Bert Waters, a young New Yorker who had shot but once before at the traps. He used a strange gun, which was a handicap in itself. He shot in excellent time for a beginner. With practice he will quickly develop high skill. Mr. Merrill broke 10 in the seventh event, a straight score and the best of the day. The scores follow:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	10	15	15	10	10	15	10

Jas. R. Merrill, Sec'y N. R. G. C.

Jeannette Gun Club.

Guttenberg, N. J., Feb. 6.—The day was fine and the birds were good ones. The event was the semi-annual prize shoot given by the club, and also a ladies' day. In former years it was held in conjunction with the Columbia Fishing Club on the grounds at Eltingville, S. 1., but the law about pigeons in New York State has changed matters.

The prizes were toilet sets, which exceeded $100 in value, donated by the club.

Dinner was served in the large club house. Good dining is always in evidence at a Jeannette entertainment.

Mr. H. Wohlcib was the winner of first prize, he making a straight score:

J Bohling, Jr, 28	22*2021*00— 5	H Debacker, 28	0000010110— 3
W Sanders, 28	001*220210— 5	C Steffens, 30	1222222021— 9

Baltimore vs. Keystone.

Baltimore, Md., Feb. 5.—The return team match between the Baltimore Shooting Association and the Keystone Shooting League was held here to-day on the grounds of the former. There were nine men to each team, and 25 live birds to each man. The contestants stood at the 29yd. mark.

As a team contest it was not notable for any shooting of special excellence. Of the eighteen contestants, Mr. Budd, of the Keystones, was high with 21.

The contest began shortly after 12 M., and continued all the afternoon. A strong wind blew steadily. It carried the birds to a right quarter and partly in an outgoing direction. Many fell dead outside of the boundary line, where they were blown by the storm.

The men shot in pairs, a Baltimore Shooting Association man and a Keystone shooter going to the traps alternately, though the total score counted in the match.

The team winning two of the three contests in the series is to be the champion of the States of Maryland and Pennsylvania. The first of this season's races was shot on the Keystone's grounds at Holmesburg Junction, Pa., on Jan. 15. Ten men were on each team, and the shoot resulted in a tie, each team killing 211 birds out of 250, from the 29yd. mark.

Several miss-and-outs were shot as preliminaries.

The match at several stages see-sawed and seemed lost in turn to each. After the first three of each team had shot, Philadelphia was 6 in the lead. Dunn, of the Baltimores, killed 17 to Johnson's 16, and this cut down the lead to 5. Ridge, of the Keystones, led Hobbs by 2 birds, and this raised Philadelphia's lead to 7. Hood Waters scored 20 to Eames' 15, which cut down the lead to 2. The seventh pair up changed the tide. Dupont killed 20 to Schwartz's 16, which put Baltimore 2 in the lead. The race was still far from being won, the conditions being so uncertain.

Old Reliable Jim Malone, captain of the Baltimore Shooting Association, shot in such style that he thoroughly defeated his opponent, Dr. Darby. The result was that Malone got 20 and Dr. Darby 12. This clinched the contest. Hicks, of the Baltimores, and Budd were the last pair to face the traps. Budd beat Hicks by a score of 21 to 18, but the Baltimore Shooting Association still led by 7 birds.

The visitors took their defeat philosophically.

The clubs agreed to hold the second shoot of the series at Holmesburg Junction, on Feb. 18.

The conditions of the next race are to be the same, excepting that the Keystone League is to have as many shooters as the Baltimore Shooting Association brings over to compete. If a fourth shoot becomes necessary by the winning of the Keystone League next time, it will be shot at the Baltimore Shooting Association grounds on a date to be agreed upon.

The scores:

Baltimore Shooting Association.

Forest City Gun Club.

Savannah, Ga., Feb. 6.—The shoot of the Forest City Gun Club, held in this city on Feb. 3 and 4, had some famous trapshooters as contestants.

On the first day the scores were as follows:

Event No. 1, even distance, all stand at 30yds., 10 birds, $10 entrance: Smith 10, Bradley 10, Welch 7, Du Bray 7, Wilson 10.

Smith and Bradley divided the purse of $70.

Event No. 2, cup added, allowances, handicaps 25 to 31yds., 10 birds, entrance $10: Smith (31) 9, Bradley (31) 10, Welch (31) 7, Day (25) 10, Du Bray (29) 9, Anthony (29) 7, Wilson (31) 10, Holley (25) 10.

Bradley, Day, Wilson and Holley shot the tie off, miss-and-out for the cup. Day and Holley missed their third bird, while Wilson and Bradley killed. Dr. Wilson then retired, and presented the cup to Mr. Bradley.

Event No. 3, handicap, 25 to 31yds., 10 birds, $10. The gentlemen shot from the same distances as in the sevond event: Smith 10, Bradley 10, Welch 10, Day 9, Du Bray 2, Anthony 10, Wilson 10, Holley 10.

There being six ties for first place, the shoot was continued into the next event, Smith, Anthony and Holley missing one each out of the next five birds and dropping out, thus leaving Wilson, Bradley and Welch still tied. They divided the purse of $80.

The fourth event was for the Forest City cup, allowances, handicaps 25 to 31yds., 20 birds, $20 entrance: Smith 10, Bradley 24, Welch 20, Day 14, Du Bray 12, Anthony 4, Wilson 9, Holley 25.

Holley was credited with the full number owing to being a 25yd. handicap man. He missed his first bird of the first five for event No. 3 tie. He won both the purse and the beautiful silver cup.

The fifth event was not shot owing to the lateness of the hour.

The scores of the second day's shoot were an improvement on those of the first day. The first event was the fifth on the schedule of the first day, but had to be carried over owing to the weather not permitting it to be shot, and was made a handicap match instead of at even distance, 10 birds, $10 entrance. The scores: Smith 8, Bradley 10, Welch 10, Day 7, Du Bray 10, Anthony 9, Wilson 4, Holley 10.

Event No. 6, even distance, 30yds., 10 birds, $10 entrance: Smith 10, Bradley 5, Welch 8, Du Bray 1, Anthony 5, Wilson 10, Holley 0.

Event No. 8, Sunny South cup, allowances, handicaps, 25 to 31yds., 20 birds, $20 entrance: Smith (30) 17, Bradley (31) 20, Welch (31) 19, Day (26) 15, Anthony (28) 20, Wilson (31) 20, Holley (29) 20.

Smith was allowed one miss as no bird; Holley one miss as no bird, and Day allowed two misses as one kill. Bradley, Anthony, Wilson and Holley having tied, shot off. Bradley killed his fifth bird out of bounds, Wilson withdrew without shooting and Holley killed his sixth bird out of bounds, while Anthony kept up his clean score and won the beautiful silver fruit dish offered as the extra prize.

This ended the regular schedule, and several special matches were then shot. The first was at 20 birds, $20 entrance, and had as competitors Smith, Bradley, Welch and Wilson. Smith retired on his tenth shot with two birds dead out of bounds and one miss; Bradley followed with two misses out of ten, and Wilson and Welch shot it out, the former winning with 20 clean kills.

Welch and Smith then shot a match at 25 birds, $25 each. Welch won with 25 straight to Smith's 24. A return match was won by Smith on the fifteenth bird, Welch having lost four out of bounds.

Rocky Mount Gun Club.

Rocky Mount, N. C., Feb. 3.—The Rocky Mount Gun Club held a very enjoyable and successful shoot at their grounds, near the city, last week. One of the main features of the day was a roast pig, what we Southerners call "barbecue." The shoot and dinner was given complimentary to Messrs. E. G. and John M. Ford, of Philadelphia, Pa., and Mr. C. F. Seltzer, of Pottsville, Pa., who were visiting here on a ten days' quail hunt. The first event of the day was a match at 10 live birds each. The following is the score:

D D Daughtridge	1111111111—10	E G Ford	1111110111— 9
C F Seltzer	1101011111— 8	C H Harris	1111111111—10
W E Long	0111110110— 7	J M Ford	1111101110— 8

At the ending of the live-bird event, the entire party repaired to the club house and filled up on roast pig and turkey and a great many other good things, too numerous to mention, after which the event of the day, a match at 25 bluerocks, thrown from expert traps, unknown angles, was shot, with the following result:

C H Harris	0111111101111001111010011—18
C F Seltzer	1111111111111011111111111—24
W E Long	1001111111111111111010110—20
D D Daughtridge	1000011101000111101100110—13
E G Ford	1111111111101111111011111—23
J M Ford	0111111011111111110111101—21
S Robbins	1000010100011000000001000— 6
W A May	0110000000000001111111100—10
M F Parham	0100111010000111110110110—14

This ended the day's shoot, and Mr. C. F. Seltzer, of Pottsville, Pa., having broken 24 out of 25, was declared the winner, and he was heartily congratulated by all present.

The Messrs. Ford and Seltzer had some fine sport shooting quail, while in North Carolina. They all expressed themselves as being well pleased with their trip, and when they come again next winter they will be heartily welcomed by the boys in Dixie.

C. H. Harris.

Pigeon Shooting.

Argument Before the Fish and Game Committee of the Legislature of New Jersey at the State House, Trenton, N. J., Feb. 2, 1903, by J. W. Hamer, of the Riverton Gun Club.

Mr. Chairman and Members of the Committee:

Gentlemen—I receive no fee on this occasion. One of my friends has just said—jestingly, I hope—that this probably represents the value of my services before this committee. However this may be, I appear before you because I am interested in the subject and because I believe the weight of the argument will be found to favor our side of the question. I am an all-the-year-round resident, a voter and tax-payer of this State, and am therefore vitally interested with you, gentlemen, in the work of our Legislature. I am also here, as you know, to speak for this delegation of men who protest against the passage of any act which will prohibit pigeon shooting in this State, but who will gladly welcome any reasonably restrictive measure looking toward its legislative control.

Mr. Chairman, I ask you to look into the faces of this delegation of gentlemen—representative business men—and tell me if you discover there any startling evidence of brutality. They may not all be handsome, I do not claim this; but I am permitted to assure you, sir, there is not a wife-beater in the party, nor a man who would be guilty of needless cruelty under any circumstances.

For the people who are agitatiug this subject, who desire to prohibit pigeon shooting, we have the greatest respect. I do not suppose there is a man in this delegation who has not, at one time or another, been a liberal contributor to their various funds for the prevention of cruelty; indeed, I feel sure there is not a man here who would not do his utmost for the proper advancement of their most worthy cause, but—and there is a but, Mr. Chairman—there is room for a wide difference of opinion as to what constitutes actual cruelty. In my judgment there should be a broad line of demarcation between moderation and fanaticism, and I still have hopes that these antagonists may come together with some reasonable compromise measure which will enable you to properly draw that line.

As long as there is life on this planet there will be suffering, there will be cruelty. It is a part of the general plan, in the adoption of which we had no voice. There is a certain amount of suffering we must all endure, men, birds and animals alike, if we are permitted to live. To live is to suffer.

Until we become vegetarians we must take the lives of the lower animals that we ourselves may live.

The gentle housewife, who, in the performance of her duty, chops off the chicken's head, or the butcher who kills the beef to provide your dinner, is guilty of an act of cruelty; but it is the sort of cruelty, gentlemen, which was foreordained when the world began.

Whenever I have criticised another man for doing something which he thoroughly understood, but which I did not, I have found there is nothing quite so embarrassing as an ultimate ascertainment of the facts. Our friends, the enemy, have, as yet, no reason for any such embarrassment, for they have absolutely no knowledge of the facts, and I beg they will understand that I intend no discourtesy by this remark.

As an illustration of how little they know—how little they have investigated, allow me to draw your attention to this point. Almost every speaker upon their side of the question, every publication upon this subject they have ever issued, has condemned pigeon shooting for its alleged brutality, and praised field shooting as a fair and manly, humane sport.

The very bill you are now asked to consider exposes the broad and deep foundation of misinformation upon which it is constructed, for it draws the same distinction, and in express terms states that "nothing in this act shall be held to apply to the shooting of game."

Now what are the conditions surrounding these two forms of sport? I have been a devotee of both for more years than it is pleasant for me to admit. I am what our opponents would doubtless consider a hardened sinner; but upon this subject, at least, Mr. Chairman, I think I speak from actual knowledge, and I know I speak from long experience.

My estimate of pigeon shooting as conducted at the clubs—and I assure you, sir, it is a most careful one—my estimate is that about 90 per cent. of the birds are painlessly killed and quickly gathered; not within the boundary, it is true, but within 100 yards of the trap—90 per cent. These birds are dead, and unless it is a crime to kill for food, domestic birds raised for that purpose, no charge of cruelty can attach to that 90 per cent. About 5 per cent. of the birds are missed and fly away totally unharmed. Now, whatever may have been the intent, even the most violent of our opponents will not claim that an act of cruelty has been actually committed by the man who has shot at a pigeon which he has failed to hit. This, then, disposes of 95 per cent. of the birds without cruelty, and leaves still unaccounted for about 5 per cent. These are the birds which are hit, but which, being still able to fly, are not instantly gathered. Now at all properly equipped clubs there are flocks of pigeons flying around the barns; four-fifths of this remaining 5 per cent. of birds—the injured—are promptly decoyed by these flocks back to the barns, there to be instantly dispatched by attendants employed for this purpose. This accounts for 99 per cent. of the birds without cruelty, and brings us, gentlemen, to the unavoidable conclusion that there is but one per cent. of cruelty in trapshooting, the sport which our opponents condemn for its alleged brutality.

Now let us turn for a moment to the subject of field shooting, which these gentlemen praise as a fair and manly, humane sport. In the field we all know that the poor shot kills and gets very few birds, but cripples and injures a large proportion. He inflicts the maximum of cruelty by reason of his lack of skill. But let us not take the poor shot—let us instance the fairly good quail shot. The fairly good shot will kill and gather about 50 per cent. of the quail at which he shoots, he will miss about 10 per cent., but he will cripple and injure about 40 per cent. These are the birds which show little sign of injury, but which fly away to suffer and recover, or to suffer and to die, as the case may be. Forty per cent., gentlemen. Forty per cent. of cruelty in field shooting, which our friends describe as a fair and humane sport, one per cent. in trapshooting, which they arraign for its brutality. Forty to one, gentlemen; but let us not stop here. The generality of men will have ten to twenty days of field shooting as against one day of trapshooting, and in order to reach a fair comparison, you must therefore multiply this forty by ten or twenty, but what's the use? There is no comparison. The one sport is humanity itself compared with the other. Indeed, Mr. Chairman, I have for years been so impressed with the cruelty of field shooting that I have many times thought I must eventually be driven to abandon it altogether and confine myself to shooting pigeons at the trap, where I can be surrounded by all the modern appliances for the prevention of cruelty.

The attitude of these self-confessed game shooters toward pigeon shooting reminds me of the couplet regarding those who—

"Compound for sins they are inclined to
By damning those they have no mind to."

Let us suppose, Mr. Chairman, that a poor shot, by practicing at the trap, where there is the minimum of cruelty—about one per cent.—so perfects himself as to become an expert in the field that he is thus able to reduce his field shooting cruelty from 40 per cent. to say 30 or 20 per cent. Has not his trapshooting experience served a good and useful purpose? Has it not in his case greatly reduced the sum total of cruelty inflicted?

These figures, gentlemen, are not mere phantoms of my brain. They are susceptible of proof, and will be corroborated by any man who will investigate. They have been confirmed by legal decision.

The celebrated case of the Commonwealth vs. Lewis in the Pennsylvania State Supreme Court (Pennsylvania State Reports, No. 140, page 265), was decided substantially upon these lines. The learned Chief Justice (Paxson) not only held in substance that there was no appreciable cruelty in trapshooting, but that the sum total of cruelty inflicted was greatly diminished by reason of the skill acquired at the trap. This decision has been looked upon as so conclusive and so fair that there appears in the thirty-third annual report of the Pennsylvania Society for the Prevention of Cruelty to Animals (1900, page 17) the following words:

"Two men were arrested in the spring for shooting and wounding pigeons, and the question is often asked why we do not stop the shooting of pigeons for sport? The answer to that question is that the Supreme Court of this State has decided that shooting pigeons by authorized gun clubs is lawful, and our experience is that no reputable gun club will permit an injured bird to suffer."

There can be no harm in the killing for food of domestic birds and animals raised for the purpose.

Let me repeat this point, for it is the meat of our argument in more ways than one:

There can be no harm in the killing for food of domestic birds and animals raised for that purpose.

Every pigeon shot in a match serves a useful purpose—the killing—the sport is merely incidental. The club of which I am a member has for many years had a regular contract for the sale of all its dead birds. The flesh is used for human food, the feathers are an article of commerce.

There is one firm in this country which uses, I am informed, for millinery decorations alone, the feathers from upward of 1,000 pigeons every day in addition to an enormous quantity of those of other domestic fowl. This is a point for the Audubon Society, whose excellent object is the preservation of our feathered songsters. This enormous quantity of feathers, furnished by the pigeon shooters of this country, does more to preserve the lives of our song birds than all the members of all the societies put together. To be consistent, to carry out its stated object, gentlemen, the Audubon Society should be represented here as the champion rather than as the opponent of pigeon shooting. But, to return to our pigeons. These pigeons so killed and so used fulfill the object of their existence. They die that the scheme of life may go on. There is no waste, and where there is no waste, where is the needless cruelty?

Mr. Chairman, it has been gravely charged here to-day that pigeons are tortured in order to make them fly faster. Whatever may have been the custom in the past, allow me to assure you this custom does not now prevail at any of the clubs, and during my long recollection it never has prevailed there; and there are two conclusive reasons why it should not.

The first reason is that sportsmen, as a class, are kind-hearted men, devoted to the freedom of outdoor life—men whose blood is red, whose lungs contain oxygen—lovers of nature, worshippers of sunshine, and withal, so gentle and so kindly; so fond of domestic animals that they would not permit needless cruelty in any form. But the second reason is, after all, the material one, and the one which will commend itself to your cooler judgment.

It is that cruelty to the birds would lessen their value by diminishing their strength. Pigeon shooters want none but the best, the strongest, the healthiest birds that can be procured, and these cannot be obtained if cruelty is permitted. They therefore require that the birds shall be well fed, well housed and receive in all cases the most careful attention.

As has been brought out by the questions of Mr. Samuel P. Rotan, the gentlemen on the other side admit that the present laws provide adequate punishment for cruelty, that a pigeon shooter can be stopped if he oversteps the line. This being so, is it not rather a singular proposition to ask legislative action in such sweeping form to furnish that which is already at their hands?

In refutation of the claim that crippled birds severely suffer, it has been stated here that such birds frequently begin to eat immediately upon falling to the ground, thus showing them to be more intent upon their food than upon their suffering. Time does not permit me to cover this point further than to say that I have personal knowledge that, strange as is this statement, it is absolutely true.

I will not consume your time by repeating what has been so forcibly said by my Newark friend, Mr. J. Seaver Page, upon the subject of stealing upon deer and shooting them down, as was admitted to have been done by one of the speakers upon the other side, or of luring the bull moose by an imitation of the female's cry. No trapshooting can approach this in cruelty. Neither have I time to enlarge upon the playing of fish with rod and line, the using of live bait, or the keeping of fish alive as long as possible for the market. Field shooting and all these things, it seems to me, should be attacked before approaching a sport containing so small a percentage of cruelty as is to be found in pigeon shooting properly conducted.

Mr. Chairman, I am aware that I am talking too long, but there are one or two thoughts upon this question still in my mind which I want to transfer to yours; I hope, therefore, you will bear with me a few moments longer. I have said nothing regarding the industry which you would destroy if you were to prohibit this sport—the industry of raising and selling pigeons. There are others here who will cover this branch of the subject, and doubtless prove to you by statistics that this industry is of such importance to the State as to demand your fostering care rather than your antagonism. True, it is not a multi-millioned trust, having wealthy and influential officers, a powerful and persistent lobby and talented and expensive counsel. It is simply an humble industry conducted by the plain people—the farmers of this State—but, notwithstanding its poverty and its apparent lack of potential influence, I believe, gentlemen, you will wisely conclude that it is entitled at your hands to protection, not destruction. To prohibit this sport is to destroy this industry.

Furthermore and finally, gentlemen, and I am sure you will be glad to hear that word finally—furthermore and finally, pigeon shooting is now chiefly done under the auspices of clubs formed for this specific purpose. The club for which I speak has complied with all the provisions of the law. It has become a lawfully incorporated body of law-abiding citizens, banded together for a lawful purpose. The State in granting their charter has in effect said to them, "Gentlemen, you may do this thing; it is right; it is just; it is proper." Acting under this lawful authority, thus lawfully obtained, this club has expended over $30,000 in a property and plant for the lawful pursuit of this lawful sport. This property—this industry—this corporation of the State of New Jersey, will become absolutely valueless in the event of the prohibition of this sport. I do not believe popular clamor can have obtained any such hold. I do not believe this legislative body can be induced to take any such unfair and unwise action.

This sport has been followed without restriction up to the present time. I believe our lawmakers agree that it is a serious question to pass laws in prohibition of long-established customs of the people. The delegation I represent, as has previously been stated, will gladly welcome any movement toward a proper regulation of the sport, and are prepared to unite with their friends of the other side in endeavoring to present a bill which shall meet the objections made and yet not cause the grievous damage which would result from the total prohibition of this sport.

Mr. Chairman and gentlemen, I thank you for your very patient and courteous attention.

Ossining Gun Club.

OSSINING, N. Y.—The inclosed scores were made at the regular shoot of the Ossining Gun Club, Feb. 7. The main events to-day were 25-target affairs, for silver cups, one a handicap cup to be won three times to retain, and the other a scratch cup to be won a like number of times. There were altogether fourteen participants in the first event, five of whom, with their handicaps of misses as breaks, made clean scores. In the second event, C. G. Blandford got one win with a score of 23, Kromer being second with 20. Scores as follows:

In extra events, Nos. 3, 4, 5 and 6 were made Jan. 31:

Twenty-five-target handicap event:

	Brk.	Hdcp.	Tot'l.		Brk.	Hdcp.	Tot'l.
D Brandreth	18	4	22	W Coleman	22	2	24

Next cup shoot Lincoln's Day, 12th inst. C. G. B.

Cincinnati Gun Club.

CINCINNATI, O., Jan. 31.—The second contest of the C. G. C. cash prize series had contestants, handicaps and scores as follows: Squier (20) 44, R. Trimble (21) 43, Ahlers (20) 43, Randall (18) 43, Harris (18) 42, Faran (18) 42, Van Ness (18) 42, Steinman (17) 40, Medico (16) 40, E. A. Randall (15) 39, Dreihs (16) 38, Osterfeld (18) 37, Barker (18) 36, Coleman (18) 35, J. B. (16) 35, Parker (18) 34, Corry (17) 34, Willoughby (15) 34, McB. (16) 33, Falk (17) 32, Ackley (14) 32, Block (18) 31, Roll (17) 31, Jack (15) 31, Herman (16) 30, Boch (14) 24, Watterson (14) 23.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Trap Around Reading.

READING, Pa., Feb. 7.—Harry W. Weidner and Harry E. Saylor, two well-known trapshooters of this city, met in a 25-target match at the Reading Base Ball grounds to-day. Saylor won the match, breaking 23 to Weidner's 22. A very large crowd of sportsmen witnessed the match, and a considerable amount of money changed hands on the result.

York, Pa., Jan. 29.—An all-day shoot was held at the grounds of the York City Gun Club to-day. There was a good attendance, and notwithstanding the fog and gloom, some good marksmanship was displayed. The principal events were as follows:

Live-bird contest for championship trophy of York county between Michael Lauber, holder, and Mac Miller, challenger, was won by Miller killing 22 out of 25 birds. Lauber killed 10 out of the 25.

Target contest for championship target trophy of York county, 100 targets, between Allen M. Seitz, holder, and Eli Spangler, challenger. Spangler broke 70, Seitz broke 40.

Target contest for the club championship target trophy, 50 targets; open only to members of the club. Nelson McSherry won, breaking 38 and missing 12. The others in this event scored as follows: Spangler 34, Morningstar 31, Sweigert 33, Alvin Reist 29, Grove 30, Miller 30, Bush 24, Seitz 24, Deardorff 21, Lauber 19.

During the afternoon a series of target events were held.

West Chester, Pa., Jan. 29.—At Plumsock to-day Daniel Regester gave a big shoot with poultry as prizes. The following well-known marksmen were present: Daniel Regester, Taylor Sellers, Clyde Rogers, W. D. Biddison, Eugene Hickman, George Baldwin, Arthur Rogers, J. G. Riggs, Taylor Biddison, John Sill, Samuel Kirk, Benjamin Holland, Clifford Thomas, Howard Green and others.

Targets were used, and the rules of the matches were miss-and-out.

The leading contest was between Clyde Rogers and George Baldwin. Each broke 12 targets in succession. Both missed the next target. The seventeenth target Rogers missed, and Baldwin was the winner. Rogers won in another contest from Eugene Hickman.

Carlisle, Pa., Feb. 5.—The Carlisle Gun Club will give an all-day shoot on the grounds, Carlisle, Pa., Feb. 23. The programme has thirteen events at targets, a total of 200 shots, at a cost of $13, two events at live birds, one at 10 birds, $5, and one at 8 birds, $4, will be shot; $5 to high average, and $3 to low average should fifteen shoot through target programme. All targets from a magautrap. Paid experts for price of targets only. Dr. J. G. Fickel, R. E. Shearer, C. F. Dinkle, committee.

Lansdale, Pa., Jan. 27.—An interesting match at 50 live birds each for $100 was shot on the grounds of the Flourtown Gun Club, Flourtown, this afternoon. It was won by Henry Hart, of Flourtown, R. Blank, of Norristown, being defeated by only 2 birds. The shooting was remarkable. Several handicap shoots were decided, with E. P. Rotzell as high gun, he killing 18 straight birds.

The scores of the match shoot follow:

H Hart.....2222022220222222222202211210222211211220022222222—44
R Blank.....2220021211222*2222202212222002111220022111111111—42

Sweepstakes: Rotzell 20, Hart 18, Green 18, West 16.

Pottstown, Pa., Feb. 2.—One hundred live birds were shot on the Shuler Shooting Club grounds this afternoon between two teams, Joe Nettles and his sixteen-year-old son, Roy Nettles, on one side, and Joe Keen and H. Seidel on the other. Each man shot at 25 birds. The score: Joe Nettles 22, Roy Nettles 24; total 46; Joe Keen 24, H. Seidel 20; total 44.

The Nettles won the $50 stake. Young Nettles killed all his birds with one barrel. DUSTER.

Dallas Tournament.

DALLAS, Pa., Feb. 6.—The tournament of the Dallas Gun Club, held to-day, was a success. No. 1 event had twenty-one entries.

The main event, a live-bird handicap, was the third of the programme. Thomas Elcy, from 32yds.; Charles Webber, 30yds., and W. P. Thompson, 28yds., tied for first with 5 straight. Dr. Weida, Norris, Pettebone, Raub and Shultz tied for second, all 30yds, with 4 out of 5, and Eley, 32yds., and Booth, Hart, Wendel, Conrad and Mason, all 27yds., tied for third with 3 each.

In the fifth event, a trap-and-handle match, each shooter stood at 21yds., gun below the elbow. There were sixteen entries at $3.75 each; four live birds per man. This event was won by Thos. Eley and Charles Webber, each killing 4 straight; second prize was divided by Schultz, Allen, Norris and Reese, with 3 kills each; third money was won by Wendel, with 2 kills out of the 4.

Nonpareil Gun Club.

Watson's Park, Burnside Crossing, Ill., Feb. 7.—Following are the scores made at the shoot of the Nonpareil Gun Club to-day:

Club shoot, 50 targets: Barto 39, Young 30.

Troisdorf trophy, 25 targets: Barto 17, Young 16.

Sweepstake, 25 targets: Barto 14, Young 17. WATSON.

The programme of the Grand Carnival shoot, under the auspices of the Mississippi Valley Trapshooters' and Game Protective Association, to be held by the City Park Gun Club, at New Orleans, La., Feb. 20, 21 and 22, provides ten events; two at 15, six at 20, and two at 25; entrance based on 10 cents per target. Added money in each event corresponds with the number of targets, $15, $20 and $25. Five hundred dollars will be added to the purses, divided Rose system. The following is taken from the programme: "First day, event 7, individual trophy shoot, open to any member of the Mississippi Valley Trapshooters' and Game Protective Association. Second day, event 7, Three-man team from any one gun club, members of the Association. Event 8, Schmelzer Arms Company's loving cup trophy, open to all participants. Third day, five-man team race, no entrance, open to any five participants actually resident in one place, $50 to winning team, with optional sweepstake. Average prizes, $25, $15 and $10. Even events will be shot over expert system of traps; odd events over magazine trap. A handsome silver trophy will be awarded the expert making high average. Lunch on grounds each day. Grounds open for practice Thursday, Feb. 19. Mardi Gras or Carnival rates will prevail on all railroads entering New Orleans, so be sure to ask for them. Standard loads will be for sale on the grounds. Ship guns or ammunition to L. Gerteis, captain, 719 Perdido street, and apply for any information to Percy S. Benedict, Secretary City Park Gun Club, New Orleans, La.; or J. J. Bradfield, Secretary of the Mississippi Valley Trapshooters' and Game Protective Association, Vicksburg, Miss."

Boston Gun Club.

BOSTON, Feb. 4.—The second serial prize shoot of the Boston Gun Club was held on their grounds at Wellington to-day, and fifteen shooters were on hand to enjoy the afternoon's shoot. Many good scores were made, though the fog was very thick all the afternoon, completely obliterating target 20yds. from trap, and necessitated snap-shooting, which some got along well with and others did not. Andrews again held the honors, though pushed quite hard by Prior, one target less to his credit. Other scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	15	5p	10	15	15	5p	10	15	25	20

Feb. 7.—The regular weekly shoot of the Boston Gun Club was held on their Wellington grounds to-day, and though the conditions were anything but favorable, as far as weather was concerned, fifteen shooters toed the mark.

Straight scores were quite a part of the programme, Leroy securing two, both of them from the 21yd. mark; Prior one, and Kirkwood two.

Prior was high in the prize match with 26, closely followed by Kirkwood with 25. Other scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10	
Targets:	10	15	10	10	15	15	10	10	15	10	Av.

The Interstate Association Meetings.

A MEETING of the tournament committee, a special meeting of the stockholders, and a meeting of the board of directors of the Interstate Association were all held on the afternoon of Feb. 4 last in the offices of the Laflin & Rand Powder Co., 99 Cedar street, New York city.

The tournament committee went into session promptly at 2 P. M., with Mr. Irby Bennett in the chair. Secretary-Manager Shaner stated that he had made arrangements to hold the fourth Grand American Handicap at targets at Blue River Shooting Park, Kansas City, Mo., April 14 to 17 inclusive, and also to hold the fifth Grand American Handicap at targets at Interstate Park, L. I., May 12 to 15 inclusive. This met with the approval of the committee. Mr. Shaner also stated that he had prepared a new division of moneys for use at Grand American Handicap target tournaments. The new division of money provides two places for each ten entries, or fraction thereof, up to and including 250 entries. The manager was instructed to use the new division of money at both of the coming Grand American Handicap target tournaments. The outlook being very promising for an exceptionally large entry list at the Kansas City Grand American Handicap at targets, the manager stated that some very radical changes from the present manner of conducting tournaments would have to be put in force in order to keep this particular tournament working smoothly. The changes in question were explained at length to the committee, and they received its hearty approval. These matters will be fully covered and explained in the Association programme of the tournament.

The special rule of the Interstate Association relating to "manufacturers' representatives" was so amended that such representatives are now not eligible to compete for a division of the purses at Interstate Association tournaments other than Grand American Handicaps.

After Manager Shaner was empowered with authority to make all other arrangements necessary to the success of the Grand American Handicaps, and there being no further business before the meeting, on motion, it adjourned.

Immediately after the tournament committee had held its meeting, the stockholders went into session, Mr. Bennett in the chair. The stockholders represented at the meeting were the Le Roy Shot and Lead Works, by Mr. O. D. Delano; Winchester Repeating Arms Co., by Mr. Irby Bennett; American E. C. & Schultze Gunpowder Co., Ltd., by Mr. Edward Banks; Union Metallic Cartridge Co., and Remington Arms Co., by Mr. W. J. Bruff; Laflin & Rand Powder Co., by Mr. A. W. Higgins. Messrs. E. I. Dupont de Nemours & Co., the Hazard Powder Co. and the Peters Cartridge Co. were all represented by proxy. Mr. Edward S. Lentilhon, Mr. B. Waters, of FOREST AND STREAM; Mr. W. K. Park, of Sporting Life; Mr. D. Fred Pride, of Field and Fancy, and Mr. Rider Walker, of the Sportsmen's Review, honorary members of the Association, were also present, as was Mr. Elmer E. Shaner, secretary-manager of the Association.

The resignation of Mr. J. A. H. Dressel as president, and also as a director, was read and accepted, the thanks of the Association being given Mr. Dressel for the faithful and energetic service he rendered the Association during his many years' connection with it.

Mr. John L. Lequin's resignation as a representative of the Hazard Powder Co., and also as a member of the tournament and cup committees, was read and accepted. Mr. Lequin in severing his connection with the Association stated that "it was with a sense of deep regret, and full appreciation of the kindness and courtesy extended him during the many years he had the honor to attend its meetings."

The action taken by the tournament committee at its meetings held on Dec. 11, 1902, and Feb. 4, 1903, was approved by the stockholders, and after some routine business, the meeting, on motion, adjourned.

The board of directors' meeting was called to order at 3:15, with Mr. Irby Bennett in the chair. On motion of Mr. Lentilhon, seconded by Mr. Higgins, Mr. W. J. Bruff was elected a director. On motion of Mr. Bruff, seconded by Mr. Higgins, Mr. Irby Bennett was elected president. On motion of Mr. Higgins, seconded by Mr. Lentilhon, Mr. W. J. Bruff was elected vice-president. President Bennett appointed Mr. T. H. Keller a member of the tournament committee, and there being no further business before the meeting, on motion, meeting adjourned.

Wabash Tournament.

WABASH, Ind., Feb. 4.—The one-day tournament announced by our club for Feb. 4 demonstrated one of two things. Either this year will be a banner year in the Hoosier State, or else we have a most popular town in which to attend tournaments. Of course, we will just claim a little of the latter reason, for this is where Hugh Clark lives, and the shooter of Indiana or surrounding States who does not know Hugh has missed something. At any rate nothing but a bunch of enthusiasts would have stayed together and shot out a programme of 210 targets in such weather as was dished out to us here to-day. However, a perusal of the scores will show that the bunch of enthusiasas were here.

Had we consulted the ground hog a little more confidingly, it is barely possible we might have changed our date, for this morning broke upon about as unfavorable a day as any man ever saw for trapshooting. The wind was blowing a gait ranging anywhere from 25 to 75 miles an hour, and was never blowing at the same gait more than a second at a time. Then the air was filled with particles of fine snow, and the sky was as dark as some of the faces of some of the cracks after they had vainly tried to break a straight. The temperature was away below the freezing point, too; but the boys had a big fire in a stove in the club house, and this, with the range that Henry Beik had set up in the same house to get the lunch, managed to keep the boys comfortable between events. Good scores? Well, I should say not, under the conditions, and the wonder is that three straights were made, Keller, Shepardson and Lamme being the only ones fortunate enough to accomplish this feat. Lamme's was a 20.

There were present from out the city Shepardson, of La Grange; L. J. Squier, of Wilmington, Del.; L. R. Keller, Max Witzencreuder, John Madden and Sam Minor, of Ft. Wayne; Chas. Lamme, of Attica, Ind.; J. L. Head, Peru, Ind.; Joseph Smiley and Joseph Littler, of Mathews, Ind.; Dr. McKay, Mr. Heintsman, Dr. Gregg and A. F. Atkinson, of Marion, Ind. These, with the home contingent, consisting of Hugh Clark, Elijah Aukerman, Otto Flynn and Chas. S. Rose, comprised the contestants who braved the weather for a day's sport on the banks of the Wabash, and the most of them shot the programme through. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	
Targets:	10	15	15	15	20	15	15	25	15	20	15	15	15	
Squier	9	13	13	10	15	14	13	18	13	18	12	14	12	174
Shepardson	5	11	13	14	16	14	9	20	14	16	15	14	14	173
Witzencreuder	8	12	12	14	12	12	13	22	13	18	12	12	12	172
Head	8	10	10	11	14	13	13	22	13	13	13	12	10	162
Flynn	8	11	13	12	15	13	11	16	14	16	12	10	11	162
Keller	5	13	15	10	15	13	10	21	11	15	10	13	9	160
Clark	9	14	12	12	15	13	8	19	11	11	11	10	12	157
Lamme	6	11	13	10	12	11	8	21	13	20	14	13	6	157
Aukerman	7	10	11	..	..	11	..	..	..	..	..	..	..	...
Rose	7	12	..	..	..	..	9	..	..	..	..	..	..	...
Smiley	5	9	11	11	..	11	9	14	6	10	..	..	..	...
Littler	6	9	13	..	17	..	11	18	9	12	..	..	..	...
McKay	..	9	8	8	..	8	7	..	..	..	..	..	..	...
Heintsman	..	11	11	11	..	..	..	..	..	..	..	..	..	...
Dr. Gregg	..	8	8	..	..	..	9	..	6	15	..	10	10	...
Atkinson	..	..	7	..	..	..	10	..	9	14	..	..	9	...

As will be seen by the above, Luther Squier was high, Shepardson a close second, Witzencreuder third, with Head and Flynn tied for fourth.

WABASH.

Binn's Tournament.

REDFIELD, Ia., Feb. 4.—Owing to bad weather the attendance at Binn's tournament was light, eleven entries on the first and ten on the second day. The ground was covered with about one foot of snow, and a strong wind blew the snow so at times the shooters could not see 10yds. beyond the traps. A large tent with a stove kept the shooters and spectators comfortable. Fred Gilbert won high average each day.

First Day.

Events:	1	2	3	4	5	6	7	8	9	10	11	12

HAWKEYE.

Winchester Gun Club.

DETROIT, Mich.—The regular shoot, Feb. 7, was quite a successful affair, despite some of the regulars being absent. Mr. R. L. Whitton, after some eleven years, has again taken up the sport, and shows he has not forgotten entirely how to shoot. The club congratulates itself on his membership. Shiell 18, Hitchcock 19, and Whitton 13, carried off the new 1903 medals in classes A, B and C respectively, and Hitchcock will shoot next time at 20yds. for breaking 21 in the trophy handicap event.

Following are the scores, and note a straight in the 7th, being doubles at 16yds. The eighth event was at 20yds., and the ninth and tenth the trophy handicap and club event respectively:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	15	10	15	25	25	10	15	25	25
Reid	6	8	1	5	..	..	..	..	15	14

Ballistite winning more than twice as much as all other smokeless powders combined.

Mr. S. A. Tucker, famous as a shooter and successful salesman, left New York on Saturday of last week, after a stay of a few days in that effete Metropolis of America. He is westward bound, attending to business interests en route.

Rules Governing the Western Pennsylvania Trapshooters' League.

MR. J. O'H. DENNY was elected chairman; Charles G. Grubb secretary.

Moved and seconded a club be formed to be called The Western Pennsylvania Trapshooters' League.

Object of this meeting is to encourage trapshooting and fix such dates to hold shoots, so that clubs will not conflict; to have a regular programme; to divide the money by the Rose system, so that each man having the required average can share in the money; and to encourage young shooters, so that they can have a good chance. By using the inclosed table you will readily see all have a fair show, and each tournament should be largely attended by young shooters.

The Clubs comprising this Association are as follows:

North Side Gun Club, Allegheny, Pa., Louis B. Bleming, Sec'y, 702 Summerlea street; Brownsville, Pa., Gun Club, W. T. Doherty, Sec'y; Irwin, Pa., Gun Club, John Withero, Sec'y; Beaver Falls, Pa., Gun Club, W. R. Keefer, Sec'y; New Castle, Pa., Gun Club, James Atkinson, Sec'y; Ruffsdale, Pa., Gun Club, R. S. Deniker, Sec'y; Ligonier, Pa., Gun Club, J. O'H. Denny, Sec'y; Herron Hill Gun Club, Harry Vandergrift, Sec'y; Millvale, Pa., Gun Club, Wm. Bussler, Sec'y.

The secretary of each club must send the names of the members of each club to the secretary of the League not later than March 15, 1903.

Each shooter will represent one club the entire season.

Board of governors, consisting of three, to settle all disputes, and their decision to be final: R. S. Deniker, John Withero, L. B. Fleming.

Four men comprise a team to shoot for trophy and prizes. L. B. Fleming and Harry Vandergrift were elected to buy trophy.

Each club to pay $5 as dues, and money to go for trophy and expenses.

Prizes: Annie Oakley, sterling silver military brushes; the Sportsmen's Supply Co., Charles G. Grubb, Agt., 1,000 loaded shells; W. S. Brown, Smith gun; J. A. Johnston, Winchester gun; Shaner, Jim Crow, Old Hoss, shooting jacket.

Tournament: North Side, April 8-9; Oct. 6-7; Herron Hill, April 22-23; Brownsville, May 26-27; Irwin, May 5-6; Sept. 1-2; Ruffsdale, June 10-11; Sept. 23-24; New Castle, June 24-25; Ligonier, July 7-8; Oct. 20-21; Beaver Falls, July 21-22; Millvale, Aug. 19-20.

Every club to have the same programme, 175 targets at 2 cents each. Money to be divided Rose system: 15 targets, 6, 5, 4, 3; 20 targets, 7, 6, 5, 4, 3.

One-half cent will be deducted from every target trapped and added to each event. Any club which desires to increase the amount of added money can do so.

Two shoots for each club during the year, or less if the club so desires. Each club must be represented by four men, and have to be represented at seven tournaments to qualify for trophy.

Events Nos. 5, 6 and 7 of 15, 20 and 15 targets, is for the team shoot for trophy and prizes. Team shoot first day, 50 targets per man.

Optional with the club holding tournament as to number of days shoot is to be held.

Any further information will be cheerfully given by the secretary, Charles G. Grubb, 507 Wood street, Pittsburg, Pa.

Kansas City vs. Stock Yards.

KANSAS CITY, Mo., Jan. 31.—At Blue River Shooting Park today a ten-man team match took place between Kansas City and the Stock Yards, 10 birds per man, a total of 100 birds per team. The scores were: Kansas City 65, Stock Yords 58. There was a gale of wind, and the birds were a good lot. Following are the scores:

PUBLISHERS' DEPARTMENT.

A Strange Sight.

TRAVELING south, one notices the lack of neatness around the homes and on the streets of the villages, and begins to wonder if it is possible to keep things in the order that they are seen in the North. The writer was on the Seaboard Air Line Railway train going south last winter, and asked the question of a Southerner, "Can a town be kept neat and clean? I have noticed today that the towns on this road are better kept than on any line South I have traveled, but still the houses need paint and the sidewalks to be paved." We were then entering the sandy region of North Carolina, where things looked very discouraging. His reply was, "You wait a half an hour, and you will see a real New England town, with painted houses, nicely kept yards, and streets in the best of order. Electric cars, electric lights, water-works, and every modern convenience. John T. Patrick, the hustling native North Carolinian whom they call the Southern Yankee because he is eternally at work and never gives up when once he undertakes it, conceived the idea that he could induce Northerners to come down to these sandhills, which we Southerners thought were worthless. We thought Patrick wanted to get even with the Yankees for getting the best of us in 1895, and was bringing them down here to starve them; but he has succeeded, with their help, in building up the prettiest town in North Carolina, calling it Southern Pines." And when the darky porter called Southern Pines we looked out, and the sight was so inviting we grabbed our grips and said to our chance acquaintance, "You are right. I want to stop and see the town and that hustling Southern Patriek."—*Adv.*

Tour to California.

UNDER THE PERSONALLY-CONDUCTED SYSTEM OF THE PENNSYLVANIA RAILROAD.

THE second Pennsylvania Railroad personally conducted tour to California for the present season will leave New York and Philadelphia on the Golden Gate Special, Feb. 19, going via Cincinnati, New Orleans, San Antonio and El Paso to Los Angeles and San Diego. Three days will be spent in New Orleans, during the Mardi Gras festivities. Should a sufficient number of passengers desire to travel under the care of a touist agent and chaperon, a delightful month's itinerary in California has been outlined; and a returning itinerary to leave San Francisco March 28, visiting Salt Lake City, Glenwood and Colorado Springs and Denver, arriving in New York April 6. Rate, $275 from all points on the Pennsylvania Railroad east of Pittsburg, covering all expenses of railroad transportation, side trips in California, and berth and meals going on the special train. No hotel expenses in California are included. Tickets are good for return within nine months, but returning cover transportation only. For detailed itinerary apply to Ticket Agents, or address Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia, Pa.—*Adv.*

Salmon anglers and trout fishermen who are preparing for the spring and summer campaign will be interested in the special product of gut and gut casts advertised by R. Ramsbottom of 81 Market street, Manchester, England. This gut is said to be of special quality and evenness, and all anglers know how important it is to have the best possible material in their leaders. Mr. Ramsbottom will send a special gut list on application.

The canoes, boats and yacht tenders, made by the Old Town Canoe Company, of Old Town, Maine, have long enjoyed an excellent reputation. They are built of cedar, covered with canvas, and are light, and so, easily handled. They are made in a great variety of models, which can be seen in the illustrated catalogue which the company sends free.

All anglers are familiar with the name of the Kentucky reel, and most of them have used these reels. B. C. Milam & Son, of Frankfort, Ky., who have been making them for sixty-four years, state that three years of litigation has established the fact that the genuine Kentucky reel is the Milam.

In the contest with Mr. F. Miller, of the Point Breeze Gun Club, Philadelphia, 100 birds and $100 a side, Jan. 29, Mr. Howard Ridge scored 93 to 91. He used 26 grains of Infallible powder.

THE COLD STORAGE CASE.

THE New York Court of Appeals rendered on February 11 its long looked for finding in the famous cold storage case, and the decision goes to sustain the lower court on all the general counts. The case is familiar, but we may outline the main features to make intelligible the decision just rendered.

The action was brought in August, 1901, by the Chief Game Protector against Jacob V. Bootman and Howard R. Robinson, constituting the Arctic Freezer Company, to recover penalties for the illegal possession of a prodigious quantity of game found in their vaults in a cold storage warehouse in New York City by Protector J. E. Overton. The cause of action was based on nineteen separate and distinct counts for unlawfully and knowingly possessing game out of season, as follows: (1) 496 grouse and 236 quail, entailing a penalty of $18,360; (2) 371 grouse and 741 quail, penalty $27,860; (3) 491 grouse and 37 quail, penalty $13,260; (4) 96 woodcock, 1,168 grouse, 1,030 quail, penalty $57,410; (5) 1,563 grouse, 425 quail, penalty $47,260; (6) 3,040 grouse, 1,318 quail, penalty $84,225; (7) 422 grouse, 1,048 quail, penalty $36,810; (8) 4 ducks, penalty $160; (9) 441 ducks, penalty $11,085; (10) 432 ducks, penalty $10,860; (11) 400 ducks, penalty $10,060; (12) 338 ducks, penalty $9,010; (13) 141 ducks, penalty $3,585; (14) 808 plover, penalty $20,260; (15) 876 English snipe, 602 plover, 1,416 snow buntings, 96 snipe, penalty $74,810; (16) 288 reed birds, 3,630 plover, 1,152 snow buntings, penalty $126,935; (17) 1,336 snipe, 3,168 sandpipers, penalty $112,660; (18) 720 reed birds, 5,760 snow buntings, 1,439 sandpipers, 488 yellow legs, 150 plover, penalty $217,085; (19) 3,658 plover, 3,000 sandpipers, 4,800 snipe, 300 yellow legs, penalty $294,110. Judgment was demanded on the several counts against the defendant in the sum of $1,168,315 and costs.

The State was represented by the firm of Black, Olcott, Gruber and Bonynge, and the cold storage company by Julius Offenbach and Louis Marsh.

The attorneys for the accused demurred on the ground that the complaint did not state a cause of action, and also that the court had no jurisdiction. The case was tried before Mr. Justice O'Gorman in the Supreme Court of New York County, who held in favor of the accused on the counts from 14 to 19 inclusive on the ground that Sections 30 and 33 of the game law could not be reconciled. This, if sustained, released the plover, snow bunting, reed birds and snipe as factors in the case. He decided also that the game law extends over the entire State; that an offender against the law is liable both criminally and civilly, and that possession during the forbidden season is *prima facie* evidence of violation of the law. Both the State and the defendant thereupon appealed to the Appellate Division of the Supreme Court, which affirmed Justice O'Gorman's decision. An appeal was then taken by both parties to the Court of Appeals; the attorneys for the people against the findings of the Court as to the interpretation of Sections 30 and 33, and the attorneys for the accused against those portions of the decision which found the cold storage company guilty of violations of the law, the questions referred for determination being these:

First. Do counts I. to XIII., both inclusive, of the amended complaint state facts sufficient to constitute a cause of action?

Second. Is the plaintiff entitled to maintain a civil action for the recovery of penalties under Section 39 of the Forest, Fish and Game Law, constituting Chapter 31 of the General Laws of the State of New York, for the violation of any of the provisions of Article II. of said Act?

Third. Is the amended complaint defective because it is not therein alleged that the various birds for the possession of which the defendants are sought to be charged with penalties were taken or killed within the boundaries of the State of New York?

Fourth. Are facts sufficient to constitute a cause of action stated in counts numbered from XIV. to XIX., both inclusive, of the amended complaint, or in either of said counts?

Fifth. Can the defendants be made liable in this action under Section 33 of the Forest, Fish and Game Law, as amended by Chapter 91 of the Laws of 1901, and Section 39 of said Act, by reason of the possession by them, as alleged in counts XIV. to XIX., both inclusive, of the amended complaint, of the birds described in said several counts?

The Court of Appeals has affirmed the judgment of the lower courts, answering the questions first and second affirmatively, and third, fourth and fifth negatively. It is held:

1. That the State is entitled to maintain an action for the recovery of the penalties embraced in counts I. to XIII., inclusive; that is to say, for the unlawful possession of the game birds specified in these counts.

2. That the defendants are not liable for possession of the birds named in counts XIV. to XIX.; that is to say, for the snipe and plover (the possession of which the law did not forbid), and for the snow buntings, sandpipers and birds of other species for which the law prescribed no open season.

3. The game law is not a private statute.

4. It was not necessary for the People to allege and prove that the game was killed within the State.

These questions of law now having been disposed of, the case may now be tried on its merits. The effect of throwing out the action for the recovery of the penalties embraced in counts I. to XIII., reduces the total of the penalties sued for from $1,168,315 to $318,518; but even this shrunken figure is of such magnitude as to give the case an unique place in the history of game law actions.

We print elsewhere the salient points of the plaintiff's brief as presented by Messrs. Frank S. Black and Henderson Peck of counsel.

A PERSISTENT BLUNDER.

A BLUNDER in phraseology in the New York game law has thrown out of court the cold storage case to the extent of $849,797 of the penalties sued for. This is an exceedingly large sum to be eliminated by a blunder of phraseology. It is altogether too large to leave ground for any patience with the blunderer.

The blunder was contained in Section 33 of the law as amended in 1901 and in force when the suit was brought. It read as follows:

> Wild birds other than the English sparrow, crow, hawk, crane, raven, crow-blackbird, common blackbird, kingfisher, and birds for which there is no open season shall not be taken or possessed at any time, dead or alive, except under the authority of a certificate issued under this act. No part of the plumage, skin or body of any bird protected by this section shall be sold or had in possession for sale.

There are two ways in which this may be construed. The counsel for the State contended that it should be interpreted to mean that two classes of birds were protected, viz, (1) wild birds other than English sparrow, crow, hawk, etc.; (2) birds for which there is no open season.

Counsel for the cold storage defendants, on the contrary, argued in their brief:

"Plaintiff's counsel seeks to construe the act under consideration as though it expressly prohibited two classes of birds, (a) wild birds; and (b) birds for which there is no open season.

"But this ignores the plain and unambiguous language of the act and the history of its evolution. In general terms the act prohibits the taking or possession of 'wild birds.' But that general prohibition is immediately followed by two exceptions which relate to the antecedent 'wild birds.' These exceptions are, (1) certain enumerated birds, to wit, the English sparrow, crow, hawk, crane, raven, crow-blackbird, common blackbird, kingfisher; and (2) birds for which there is no open season."

Whatever may have been the intention of the drafters of the section, it is quite clear that the construction of the text urged by the defendants' counsel is the only one admissible. Under this section, then, there could be no penalty for the possession of any birds for which there was an open season. For the snipe and plover and certain other birds designated the law specifically provided an open season; and as to the snow buntings and reed birds, counsel contended that as the law did not prescribe that these should not have an open season it must be assumed that they did have one. Whatever the merits of this reasoning, the Court of Appeals has sustained the contention.

Had the argument of the counsel for the State prevailed—that "wild birds other than the English sparrow, crow, hawk, crane, raven, crow-blackbird, common blackbird, kingfisher" constituted one class of protected birds, this class would have included game birds also. For woodcock, grouse and quail are "wild birds other than the English sparrow, crow, hawk, etc." Hence we would have had a law forbidding the taking or possession of game birds at any time "except under the authority of a certificate issued under this act." That would have been a ridiculous law, because it would have made every person who killed a game bird at any time guilty of a misdemeanor. The section did not do this then, but it does precisely this now. The blunderers are still blundering and their blunders persist. The text of the section now reads:

> Birds for which there is no open season and wild birds other than the English sparrow, crow, hawk, crow-blackbird, snow owl and great horned owl shall not be taken or possessed at any time dead or alive, except under the authority of a certificate issued under this act.

Under this section every person who in the autumn of 1902 killed or possessed a game bird was a game law violator quite as much as was the killer or possessor of song birds. So long as this law remains as it is, the authorities may not consistently prosecute the song bird killers unless they shall prosecute also the game bird killers. There are fifty-one States and Territories in the Union. Most of them have a sane, clearly expressed, explicit and definite law for the protection of wild birds other than game birds. There should be some member of the New York Legislature capable of drafting such a law for this State.

WHAT CANADA MIGHT DO.

WHEN America was discovered, the elk existed all over the continent from ocean to ocean, and almost from the Gulf of Mexico to the parallel of 54 degrees. Four hundred years later it had been practically exterminated, except in the range of the Rocky Mountains and in a few localities on the north Pacific Coast. In the Yellowstone Park, where protection is found, and it is exposed only to the attacks of its natural enemies, the mountain lion, the lynx and the wolf, the elk still exists in great numbers—so great, indeed, that in hard winters many of them starve to death.

In the Olympic Peninsula there are still many elk, but the country is being settled up and is being run over by prospectors who travel up each stream and cross every range of mountains and kill the game and keep what they do not kill stirred up, uneasy and continually wandering from place to place. Not so very many years ago there were elk over the whole length of Vancouver Island and on other islands in the Gulf of Georgia. The Indians killed them for food, used the skins for clothing and in the manufacture of armor, and fashioned tools and household implements from their antlers. Even within the last forty years it has been possible to gather shed elk horns in localities where there remains to-day not even a tradition of the elk's existence. Nevertheless over the northern part of the central portion of the island, elk are still to be found, though just how numerous they are no one seems to know. The country which they inhabit is rugged, unfit for cultivation, and while overgrown with timber, this timber cannot be brought out to a market. Besides the elk, the more important wild animals of this region are deer and bear. The country has been little explored, although already the trophy hunters, eager to secure elk heads and skins, are making incursions there and finding game in large numbers, which they destroy without the slightest thought of those who are to come after them.

On more than one occasion the Government of Canada has shown great and admirable wisdom and forethought in setting aside certain regions as game preserves. There is an opportunity to make in the central mountain region of Vancouver Island a great game preserve which should stand for all time as a monument to the wisdom of the Canadian Government. It is believed that the elk found on Vancouver Island are not the same species as that found in the Rocky Mountains, and if this is true and the species is unique, it certainly is worth preserving.

The far greater interest constantly taken in game protection by English-speaking races is evidenced by the recent movement to protect South African game, and to establish in the forest reserves of the United States game refuges where no hunting shall be done; and it is highly desirable that the Canadian Government should continue the wise action begun long ago in the establishment of the Banff National Park and the Laurentian National Reserve, by establishing on Vancouver Island a preserve such as we have suggested. We may feel sure that the intelligent and enlightened residents of British Columbia would hail with joy a movement such as this, which would be likely to make the rich and beautiful Vancouver Island more than ever attractive to strangers from afar.

The Sportsman Tourist.

A Night with River Pirates.

The Pittsburg coal that is sent to New Orleans now is all towed there by steamers, but years ago it was all floated there. The first steamers to take coal below Louisville began towing it only about the time I made this trip, and more or less of it was still floated until the war put a stop to it. These coal boats were very flimsy affairs, being nothing more than large boxes made of inch and a half hemlock lumber. They had square ends with no overhang, and when loaded had only one foot of a freeboard. A high wind would be likely to sink one of them. The barges that part of this coal is taken in now are quite different affairs; they are built stouter, but they only hold half as much as a coal boat does.

When we floated the coal two of these boats that held about 25,000 bushels each were lashed together and a crew of eight or ten men were assigned to each pair. The boats were moved into the current and kept there by several long sweeps that were hung on pins in the sides and ends of each boat; and when once in the channel two or three men did the steering, letting the boats move with the current, but never tried to move faster than the current did.

Each pair of boats was under charge of a captain who was the pilot; he knew every sandbar, island, riffle and towhead, and knew just where the channel ran long before getting to it.

I started on a pair of these boats in April of 1859 from Pittsburg, the boats being consigned to a coal dealer who had his landing at Bayou Sara, above New Orleans.

We had a good coal boat stage of water to start in. These boats cannot be taken down under a stage of 11 feet of water, they draw 9 feet and the river at Pittsburg is only high enough to float them when a "coal boat rise" comes. Going down on the crest of this rise we went over the falls at Louisville, then on down to Cairo, and getting into the Mississippi here steered south. Our troubles should be all over now, all we had to do now would be to keep the channel, take the right one when passing one of these islands and keep out of the swell of passing steamboats. Should a windstorm rise we would "go to the bank," tie up there and wait for the wind to fall, then go on again; but kept on in good weather day and night.

Our captain was Pinky Morrison. I had known him for years and never knew his first name; he and everyone else called him Pinky. He was a tall, rough man who stood over six feet high and had red hair. He was one of the best tempered men I have ever seen. His friends might say or do what they pleased to him, but among strangers he was ready to fight at the drop of a hat; no one who knew him, though, cared to do any fighting with Pinky.

He was a good poker player and on our way home from New Orleans by steamboat he would often get in a fight with one of the tin horn gamblers who traveled up and down the river to fleece passengers. Pinky would only use his fists; the gamblers would want to use a knife, but not on us—there were too many of us there and the boat's jackstaff stood out in the bow quite handy with its halliards all ready to be decorated with one of the gamblers when we caught him stealing cards.

I once saw one of these men with the rope around his neck ready to be sent up, when the captain begged us to let the man go; we did it out of respect for this captain. Had he tried to use force with us we would have taken him and his boat in less than five minutes; he knew that.

We had got below Natchez and were somewhere between it and the mouth of the Red River, when one morning, soon after sunrise, the wind came up strong and Morrison steered for the bank and tied up on the right or Louisiana side. The banks of the river here are low and a levee is built here to keep the river out, though just where we now were there was plenty of water behind it, the country back here being all a swamp or bayou; there was no plantation here in sight nor any signs of a house in any direction.

These bayous extended for hundreds of miles back here in some places; the ducks, alligators and a few bears had them all to themselves, it seemed. Just after dinner that day, seeing that there were no signs of the wind going down soon, I got permission to go hunting. I had seen several flocks of ducks fly over the tree tops in there and wanted to go after them.

I had an old muzzleloading double gun that had been a fine one in its day; it had lost most of its beauty now, but was a good gun yet.

I picked it up in a lot of old junk in an auction room and had got it for a song. Since then I had been offered all sorts of trades for it. New guns and five times what I had paid for it in money, but I wanted this gun myself.

I had read of English guns and their makers and this one of mine had the name of one of the most noted gun makers in England on its lock plate. It is going to have a prominent place in this narrative or else I should not take up so much time telling about it. I had brought the gun with me on this trip, thinking that I might find a chance to use it. I did.

Climbing down behind the levee I struck out across the swamp. There were strips of dry ground here now that at times would be under water, and I could only travel by following these dry strips, all else was mud or water. Between these dry places were arms of the bayou, black and silent, except where an alligator stuck his head out of the water to watch me or plunged off the log he had been lying on into the water as I came in sight of him. I knew that these fellows were in here and kept a good lookout for them, a shotgun would not be of much use to me among them; they, however, were as much afraid of me as I was of them.

I could find no ducks, they must have seen the alligators before I did and then had gone on; if they did not I would not get many of them with these fellows here as thick as they were, and after I had gone several miles back in this swamp, nearly west all the time, I thought it about time to return, and started back, but had not gone far before I found that I was lost, or at least was not going back the way I had come in. This part of the swamp was different from the part of it I had gone through coming in. It would be only a waste of time to hunt for the paths I had used before. I wanted to get out of this before dark. The trees in here, those of them that were not dead, were hung thickly with Spanish moss; the dead trees stood in the water, their naked branches hanging over it and it was impossible to see far in any direction. The river should be east of me; I wanted to get to it somewhere, then I could travel on the levee until I found the boats, if they were not in sight when I came out on the river.

Getting into a clear place I at last got a sight of the sun, then placing my back to it started to go east now in as direct a line as these swamps would allow me to go, but every once in a while I would have to go clear out of my way to get across one of them.

I had been going over an hour on my way back and thought that I must be near the river now, when, on coming around some bushes on the bank of one of these arms of the bayou I saw a cabin just across the end of the slough I was on now, and following around the bank went up to it. The cabin stood just back from the arm of the bayou in among some large trees; it stood on posts that raised it two feet above the ground, and it was about 30 feet long and half as wide. It was built of rough cypress boards and had a roof of them, out of which, at one end of it, a stovepipe stuck. There was smoke coming out of the pipe, the only sign that the cabin was occupied or that it had been used for a year. It had only one door, as far as I could see, and I afterwards found that this was all it had.

Two square holes in the wall did duty as windows, and some short logs piled on top of each other answered for doorsteps.

Going up I rapped on the door that stood partly open. A young woman dressed rather poorly in a calico wrapper and who was barefooted, came to the door. She was chewing on a snuff stick she held in her mouth. Jerking it out she began to smile and asked: "Are you lost, stranger?"

"Yes, Miss," I told her, lifting my hat. "I came in here hunting and somehow have missed my way. Would you be kind enough to direct me to the river?"

"Why, of course; it is only a mile and a half from here. Come, and I'll show you how to go to it."

"Martha!" a voice in the cabin called out, "Who is that?"

"A stranger, pap; he wants to go to the river. I'll show him."

"No, bring him in here."

I followed the young woman into the cabin and found myself in front of a man about 60 years old; his hair, which he had closely cropped, was partly gray, as were his whiskers; he wore a full beard. He was dressed in a not bad looking suit of "store clothes;" he had stolen them, probably. He was on the sick list now, being laid up with a crippled leg, his left one was in bandages from the knee down; he had shot himself when hunting, he told me. He may have mistaken himself for a deer; some steamboat watchman may have mistaken him for a burglar, though; that may have been how he got shot. From what I saw of this old gentleman later on I formed the opinion that he would rather lie than tell the truth, even if he were paid to tell it. But I have no right to criticise him for that: I told him a few lies myself.

"Sit down, stranger," he told me, pointing to an old armchair. There were a number of them, no two of them alike; they had all been broken and rudely mended again; they were of the kind that is found on steamboats; these had been thrown away, most likely, and had been picked up along shore.

I glanced around the room; the cabin had two. This one, the living room, had an old broken cook stove in one end of it, and a rude couch with a single mattress off some boat stood near it. In another corner next to the back room stood two old Yager or Mississippi rifles; their powder horns and pouches hung on the wall above them.

Half a dozen of these single mattresses off boats lay in a pile; they had probably been thrown off some steamer after someone had died on each one of them with the yellow fever. I came within an inch of dying with it myself the following year just below here; an old doctor and the Sisters of Mercy pulled me through it, though.

About everything here had come off a steamboat at some time or other; even the water buckets, and there were half a dozen of them, were marked S. B.—steamboat this or that; Martha's kitchen table had at one time done duty in a steamer's saloon as a card table.

The old man began to question me, and I told him how I came to be here.

"Well, you can't find the river yourself; it is all of four miles from here, through swamps all the way; there is no path to it from here."

"The young lady told me it was only a mile and a half, sir."

"Oh, what the devil does a woman know about it? Get us that supper, Martha. What in —— are you standing around here for? I ain't going to hurt your young man. You will be clawing around him and kissing him next. Get to —— out of this."

Martha had been standing looking on, with her hand on the arm of my chair ever since I had come. She walked off to her stove now, and I felt like knocking this old father of hers half-way over after her, but did not.

"How many men are there in your crew?" he asked.

I told him—ten men.

"Have they all got guns like yours?"

"Some of them have, some have rifles and some of us have both. I have."

So I had, but my rifle was at home in Allegheny; I did not tell him so, though.

"And the most of us have Colt's pistols, too," I added. I may as well spread it on thick while I am at it. You seem to be a past master at lying; I can do something in that line myself, I said to myself.

"What did we want with all those arms?"

"Well, I use mine to hunt with; that, I suppose, is what most of us carry them for; we are never disturbed by anyone down here." This gun of mine was the only one on the boats, and it was not there now.

"Well, when my son gets home I'll send him with you to the boats; he knows just where your boats lie; he saw them there to-day he told me."

"I hardly care to wait for him, sir. This wind may go down and if it does they will want to go on."

"Well, they won't go on and leave you here, will they?"

"Oh, no, sir; the captain would lie here and hunt for me, but I don't want to put him to that trouble. We want to get down as soon as we can. We get paid by the trip, you know, and any time that is lost we lose."

"Well, he could not go on to-day is he had you. This wind is not going down in a hurry; you will be lucky if you leave here in a week."

He did not intend that we should leave here at all. I did not know that then.

"Put your gun over yonder," he told me, pointing to where the rifles stood, and I put it along with them. Then he told me to get a flask that stood on a shelf and take a drink.

"No, sir, thank you, I do not use it."

I could use it, but I had begun to think that there was something wrong here. I might need to have all my wits about me. I might have to defend myself when his son came.

"Most boys down here drink all the whisky they can get, but you are as well off without it."

So would you be, I thought. He was half drunk now, and Martha had to get him another drink soon after this.

I had been here nearly an hour when a young man came in carrying a gallon jug. Only one look at him was needed to tell that he and Martha were brother and sister. He was about my age, 20, while she looked to be 25, but these southern women often look to be older than they really are.

"Did you get it?" his father asked the young man.

"Only half a gallon; he only had about a gallon and he would not let me have any more."

"Did I not tell you to get me a gallon?"

"Yes, you told me to get you a gallon. I have just got through telling you that he would not give it to me. Now what in the devil are you growling about? How in —— do you expect me to get what a man does not have?"

Good enough for you, I thought; you are not afraid of the old man if your sister is.

"If I were not crippled you would not give me that slack before strangers."

"Well, use common sense, then, and you won't get any slack from me," his son told him.

"Let us get supper," the old man said, and taking a pair of home-made crutches he hobbled across to the table then ready. "Come on, stranger, make yourself at home here; sit up and eat."

Martha had hot corn bread, fried bacon, boiled sweet potatoes and black coffee. I complimented her on her cooking.

"Yes, sir," she said, "I can cook if I get any thing to cook, but we don't get much here; we people in among these swamps don't live very well."

"You don't?" her father asked. "What the devil is there wrong with what you have got just now?"

"There is nothing wrong with it, sir," I told him. "I had far rather have her hot corn bread than the bread I do get every day."

"Yes, sir, and so would most of us; but if you give a woman the earth she will want the moon. Next, the devil himself could not please them. I don't try."

"You seem to have a poor opinion of them, sir. I don't know much about them."

"Well, when you get to be as old as I am, if you live that long, you will know more about them." The old gentleman probably thought then that there was no danger of my getting to be as old as he was, not if he could help it, but he "missed stays." I am still living. He is not to blame for it, though.

After supper the old man hobbled outside of the cabin; then calling his son out the two held a long talk. The young man seemed not to want to go or do whatever his father wanted done. I could not hear what it was, of course, though I could see them through the doorway, but at last the son went off, not coming into the cabin again; then his father came in.

"How soon can your son start to the river with me, sir?" I asked.

"Not before morning, now. I had to send him about some business of mine that must be attended to. This —— leg of mine prevents me from doing anything myself. You will get to your boats in plenty of time, sir. This wind is higher now than it has been to-day; it is not going down in a hurry."

It was blowing hard, that was true enough; but I wanted to get to the boats. Morrison would send the crew all over the country to hunt me if I did not get back by morning.

"Fix a bed for the stranger, Martha," he told his daughter. "Let him lie down; I am going to do it; there is nothing in this God-forsaken country to keep a man up after night here."

Then he took another drink, out of the jug this time, and while Martha was fixing my bed he shoved his rough couch that stood here over across the door, then threw himself on it. He was doorkeeper to-night.

I would not get out through that door, and there was no other one.

Martha spread down one of the single mattresses on the floor close to where my gun stood, then going into her room brought a pillow and blanket; she may have taken them off her own bed to make me comfortable. Taking off my coat and boots I lay down—but not to sleep. I did not mean to do any sleeping here to-night. I was busy thinking.

What was this old fellow's object in keeping me here? He had asked me if my boats would go on without me. It was the boats he wanted, not me. He had me—that is, if I chose to stay here. I didn't have to, though, I told myself. The door is not the only means of egress here. Do you think we Yankees, as you call us, are fools? But what do you want with those boats? These boats would be of no use to him and their crew would not have twenty dollars among them, if he meant to rob them.

This class of men made a trip; then, coming home, turned the money they had left, after paying half of it for their fare home, over to their families, if they had a family; then, if there was a "coal boat stage of water," they went again.

I only made these trips once in a while when Morrison was going down in charge; the men who had this coal were friends of my mother and they let me take a man's place in this crew and paid me his wages. I earned them. Pinky would want me with him every trip, if I would go.

But the money a gang of river pirates would get out of that crew would not pay for the powder they would burn in getting it; they ought to know that; everyone else on the river knew it. We had never been afraid of being robbed by these men. We knew they were here some where; it was talked of then everywhere on the river.

I'll get out of this as soon as things are quiet here, I told myself, the woman has told the truth, the river is not two miles off. Why that old fellow lied about it I don't know, I may find out later.

I noticed that the floor was made of loose boards. The most of them were slabs with the round side laid next to the stringers, and they were not nailed down. I can lift one of them, I thought, then drop through and go, as soon as Martha goes to bed.

Martha had been working about her stove; she now went to her father and looked at him, then coming to where I lay placed her hand on my face, then asked "Are you still awake, stranger?"

"Yes."

She looked at her father again, then sitting down on the edge of my cot; I had risen partly up now; she said, "Don't go to sleep here. You are in danger. Go to your boats. Get out of this as soon as you can. The river is less than a mile and a half from here; a path back of the house goes part way to it; follow it to the turn, then go straight ahead. Don't turn there. Leave the path at the turn. Your boats are up at the bend; go up, not down. This floor is loose, raise a board when I tell you and go; go soon. Don't forget your gun; take it."

"I am going right now, Martha. Good-by, now." And I took her hand.

She looked toward her father again, he had not moved. "He won't miss you," she said. She still held my hand. "Good-by," she said again, and in reply I drew her head toward me and kissed her. Then she got up, and taking her lamp, opened her store door to give me liquor; then going to her room door raised her hand to me and disappeared through it, closing it after her.

I pulled on my coat and boots in a hurry; then moving my bed to one side, raising up the plank next to the wall, resting it on edge, my bed held it there; then got my gun, powder flask and shot pouch; and was going to take both of their rifles and drop them into the bayou, when the thought struck me that if I did any damage here this woman might have to suffer for it, so left the guns where they were.

I dropped through the floor; then letting the plank down in its place again carefully. I crawled out from under the cabin and ran into the timber back of it, and by good luck struck the path here; it was plain enough. Bringing my gun to a trail arms—I had not been drilled to do it then "in one time and two motions at the last part of the command, which is 'Arms,'" as I used to tell my "rookies" (regular army recruits), when I put them through this very movement years after that, but I knew how to do it even then—I started off down the path on a dead run and kept it up for a few hundred yards; then stopped. Who was I running from now? A cripple who was dead drunk and could not follow me, and a woman who would not. I only wish she would, I would try to get her among decent people, I thought; she was never meant for a river pirate; their women would sooner shoot me than help me off. I examined my gun now; that young man had been working at it and he might have drawn the charges; he had taken the caps off and had let the hammers down.

No, the charges were in it yet; I had it loaded with heavy charges of powder and BB shot. I put caps on again, then throwing it over my shoulder kept on at a walk, keeping a good look out to the front now; the young man was out here somewhere, I might meet him, if I did I would not want him to see me.

Just before coming to the turn, where Martha had told men to leave the path, I heard voices off to my right. A fallen tree lay parallel with the path just at the turn; the roots were still in the ground and it was green yet; I got behind the trunk close up to the branches; then cocking both hammers, lay down. Three men came down the path and stopped just at the turn; the log lay between them and me.

It was partly light here; I could just see them. Two had guns; the third was Martha's brother, he had none; one of those rifles at the cabin was his probably; he may have been counting on having a double gun; it was here now.

I stuck my head up above the log to get a good look at them, but it was almost too dark to see them. It may have been lucky for me that it was. I would not stick my head up that way now under the same circumstances; I have followed too many Indian trails since then and know better now.

The two men seemed to be rather poorly dressed. One of them I noticed wore a high soft hat that had the crown run up to a peak a foot high, this was a popular style of hat then with river men. I saw that hat again a few hours later, and its wearer heard from me. I was not in hiding then.

One of the men asked, "Will we wait here or go on to the cabin?"

"Go on, of course," the other told him. "We won't sit here all night. Lige and Reddy won't get here before midnight. They won't look for us here. Let us go to the cabin and get a few hours' sleep."

"Yes." the young boy spoke up now, "go to the cabin, the old man has some orders he wants to give you."

"He is out of the game just now," the man with the high hat said. "He can't go, so we need none of his orders; you, of course, get your share."

"Oh, I'll attend to that," the boy told him, "don't worry about my share. The old man may be out of it, I ain't, don't forget that, will you?"

It won't need a steamboat to carry off any of your shares if you don't mean to raid us before morning, I thought; I'll try and take a hand in those shares myself.

"Well, let us go on, then," the man in the high hat said. "We can get a few hours' sleep before 4 o'clock."

That sets the time now, I thought. We are not going to be favored with your company before morning; go and get your few hours' sleep now and let me get out of this; I am in luck, I'll try and give some of you several hours in a hospital when you do come.

"That man off the boats will be there, won't he?" one of the men asked.

"Yes, the old man has him a prisoner, but the —— fool don't know it," the boy told him.

Neither do you now, I thought.

"Well, then, he may be in the road there."

"Oh, he won't," the boy told them. "He is asleep by now unless Martha has kept him up chinning to him; he is not a regular coal boater, anyhow; he is a boy from the city up there, he told us he only came on the boats for amusement; he gets a lot of it on a pair of coal boats, don't he?"

"Yes, and we will give him all the amusement he can take care of before we get through with him. Just let me amuse him; I am a first-rate hand at it," the man in the steeple crown hat said, while the others roared and laughed.

When the amusement began later on it was my turn to laugh, though.

"He has a first-rate double barrel scatter gun with him. He told us he had been out in the swamp hunting, but could find nothing but alligators," the boy says; "he is not dangerous."

"If one of them bears out there had found him he would have got all the hunting he wanted," my friend in the high hat thought. This furnished a subject for another laugh, and my friend of the altitudinal headgear added, "I only asked about him because the old man might not want him to see us; he might know us again; that is, if the old man let's him go."

"The old man ain't likely to let anyone go who finds his cabin. "Don't worry about the old man, he knows his business."

I was beginning to get uneasy here. These fellows seemed to want to stand here all night chinning, as the boy called it. Though they had been here only a few minutes yet, these minutes seemed hours to me. I never gave a thought to the danger of my being found here by them, but I wanted to get to the boats and warn Morrison. They did start, though; and as soon as they had been gone long enough to get far enough away so that there was no danger of them hearing me, I crawled over the log and standing in the path, just short of the turn, I looked up to see if I could see a star exactly in front of me that I could use as a guide; but as I did so I heard a sound that put all thoughts of the stars out of my head; I did not need them now. A steamboat directly in front of me sounded her whistle. The sound seemed not to be half a mile away.

I started now plunging through swamps and over fallen logs, not trying to get around any obstacle, but bent on going exactly straight ahead. I did not want to lose any time in here now. The men, as soon as they had got to the cabin, would find me gone, of course.

They might come back hunting me; I had no time to hunt trails now. In less than ten minutes I came out in sight of the river, and running over to the levee climbed up on it. The light of the steamer still showed far up the river, and I now saw why she had sounded her whistle. She had only given a single blast, that would mean a warning to a boat coming in the opposite direction to tell it on which side of it this one meant to pass. The other one then would answer with its whistle; but had not done so. This signal was not for a landing; the boat would have blown her private signal then, so many long and so many short whistles. Ever since I had heard the boat I found myself wondering why it had been blown. Now I knew.

Up to my left, in a small bend here, I saw my own signal. The boats lay here, and Morrison had taken one of our oars (they were timbers 15 feet long with a 10-foot plank pinned on the end of them for a blade), and had set it up with a lantern hung to the top to guide me should I come out on the levee anywhere in sight of it. I was on board of the boats in five minutes, and lost no time in telling Morrison what he might expect at 4 o'clock in the morning.

There had been nothing said by the men to indicate that we would be the object of their raid, but there were no others in this neighborhood for them to raid; it was us, of course.

"Well, we have a few hours yet to live," Morrison says; "get to bed now, all of you. I will call all hands at 3 o'clock."

It was only 10 o'clock. I was surprised at it being so early yet. I had no watch and had supposed from the adventures I had gone through to-night that it must be after midnight.

We always kept one man on watch when tied up this way, an anchor watch, though Morrison did not call it that, but that is what it was. Years after this I saw it stood many thousand miles from here, in the South Pacific. I did not have any of them to stand there then, I was a "Mister" with that even then, and my watches were all below at the engine. Morrison told the watch man to keep a good lookout to-night.

"Let him have your gun," he told me, "and I want you men when on watch to fire at anything you see moving. Shoot first; then see who it is afterwards. You need not stand a watch to-night," he told me, "you have stood yours already; I'll stand your watch myself."

I drew my BB shot, replaced it with buck shot, then handed the gun to the watch man. Our quarters on these boats were at the stern. A bulkhead ran across each end of the boat 10 feet from the end. The space at the bow was filled with coal; we used those at the stern for a "forecastle."

At 3 o'clock Morrison called all hands; and while the cook went about getting breakfast the same as if there might not be any of us left to eat it, the rest of us lay on our arms—one shotgun and a lot of "twisters." The twisters are hand spikes that are used to tighten lines with; I would sooner face a shotgun than one of them wielded by one of these men.

One man was sent up on the levee on picket to let us know when to clear the decks for action, then Morrison says:

"You had better let me have that gun to-day."

"No, I want to keep it, Pinky; I can shoot as close as you can."

"You can shoot all around me; I would be glad to let you run it; none of us here know more about it than you do, but you may get hurt."

"I'll risk that, if I get half a show at those fellows it will be some one else who will get hurt; and, anyhow, I am in no more danger with the gun than without it. I am not as good at swinging a club as the rest of you are; I can do better with the gun."

I had a reason for wanting to keep my gun, but I did not tell Morrison what it was. I had made up my mind that this brother of Martha's would not get shot with this gun to-day. If he should come over that levee, I would not fire at him; we would have him then between it and the boats and could take him and not hurt him. I meant to claim him as my prisoner; then after the fuss was over I would have Morrison let him go. But the next man who crossed that levee would get all the buckshot that was coming to him.

This was the least I could do in return for what Martha had done for me. Had it not been for her I would not be here now. True, I meant to go just as she afterward told me to go, through the floor; but had she stayed in that room another hour I would not have had a chance to go; I did not suppose I was in enough danger there to use force with her in order to leave, and had she not told me about this path, when I did find it, I should have gone over it at a run instead of at a walk, and would have taken the turn and kept on thinking, of course, that it led to the river, when it really did lead to another of these hangouts back somewhere. Then I should have walked on top of those men, and if they did not shoot me they would have brought me back to where I had left. I would have no trouble then in finding out that I was a prisoner, if I was a condemned fool.

Four o'clock came, but no pirates.

"I don't expect them much before 5 o'clock," Morrison said. "Let us get breakfast; I would as soon die on a full stomach as on an empty one, and I am not just now anxious to die on either."

We had just sat down to breakfast when the picket up on the levee gave a whistle, then ran down and came on board.

Picking up my gun I climbed out on deck just in time to see my friend of the sky-scraper hat. The hat was all of him that was in sight yet; he stood just behind the levee, which was about six feet high here, but now he raised up his head and shoulders slowly; and as he did so I sent him his share of buckshot out of the right barrel. He got it. I had not been wing shooting for the past few years for nothing; and my friend of the church steeple headgear gave a yell that might have been heard up at Natchez, then pitched backward down to where he had come from.

"Take it all," I yelled; "I am not charging you a cent for it; amuse yourself with that." Then proceeded to load again in a hurry, while Pinky yelled at the top of his voice, "Pile out here, you men; bring them rifles; get on the levee; be in a hurry, now."

This was meant for a bluff, of course, "them rifles" would not be brought on that levee in a hurry. I was wishing now that I had mine; but the "scatter gun" had done well enough so far.

I ran across the gang plank and climbed the levee. Not a soul was in sight. I had given my "master hand at amusements" too much time; I had no business to stop and load or I might have got up here in time to amuse him with the left barrel.

The brush in this swamp began about 10 yards back of the levee. I could not see behind it, but bringing the gun up I let go both barrels into it at a venture, and was answered by a single rifle shot that was fired only a short distance behind the brush, as I could see by the smoke.

I ran down and loaded again; and was in such a hurry that, as I afterwards found, I put a full double charge of powder in my left barrel. It was lucky I did not have to fire it here, the barrel would have stood it, but I doubt if my cheek would, when that butt came back on it. I drew the charge later on.

We saw these fellows no more. The knight of the sugar loaf hat had been sent on a scout to see if we were awake, while his friends had remained under cover waiting for his report. That fairy story that I had given the old man about the fabulous number of shotguns, rifles and Colt's pistols, that we had, had caused them to be cautious; they did not want to "meet up" with a coal boat crew that was armed with more deadly "weapons" than clubs. I had seen the clubs make havoc among these down river men when one of our crews had broken loose.

Morrison had the lines cast off now, and we worked out into the stream and went on; he might have gone on hours ago, the wind had gone down then, but I always thought he stayed here just to give these men a chance to attack him; they wanted a fight, he thought; he was willing to accommodate them. It turned out to be no fight at all; I did all of it myself and my share of it had not hurt me any. After we had got well under way and were out of range of their rifles, should they come back, we finished our interrupted breakfast.

"Are you going to report this, Pinky?" I asked.

"No, not to-day. What is the use of me telling a man what he knows already? The authorities know that these men are there; they can't help knowing it; I am not going to waste any time telling them."

"I am glad of that, I don't want to be tried, if that man should die."

"Well, you won't be if you wait for me to report you. And now, men, see that you never mention this affair. This is an order, remember, and you know me. I tell you now that the man who disobeys that order would have better been asleep when he did it. That boy and his gun have saved some of yous wives from

being widows to-day, always remember that."

I was not as much of a lawyer then as I am now, or think I am, and did not know but what if that man should die I might be tried and hung for this affair.

We met with no more trouble, and when we were just above Bayou Sara, our owner boarded us and told us to go on to New Orleans; he had sold the coal there. The market there happened to be bare of coal then; he had got nearly two prices for this and was in a good humor.

He paid us off now, paying us $5 extra for taking the boats to New Orleans; he need not have done it, though; we would have had to land them where he ordered.

We tied them up at the coal landing above the city; went to town and found that we were still in luck. A Pittsburg steamer lay here ready to pull out this afternoon, and we got passage on her right away. I was at home on this boat. A little more than four years before this I had shipped on her as cabin boy. I was going West to fight Indians then. I had stayed on the boat then all that summer, only to be stranded at St. Paul, when the boat lay up for the winter. The old captain and clerk were on the boat yet; they owned it between them.

An hour after I had paid my fare I was passing the office, when the clerk said, "Johnnie, I have been told that you have quit hunting Indians and have gone to hunting river pirates, how is that?"

"The pirates began it, sir; they started to hunt me; I had to shoot one of them."

"I wish it had been one dozen."

Then opening his drawer he took out the $20 I had paid him—half fare—and handing it to me, said, "You travel free on this boat, Johnnie; it is the captain's orders."

"I think I know whose orders it is, Captain Mason; I thank you for it, sir."

The clerk had done this himself. Morrison and he were old friends, and Morrison had told him about the fight.

When I and Morrison were talking about this affair the day after the fight, I asked him what he imagined these men expected to get out of us, for there was not $20 among the whole of us.

"Is there not?" he asked; "let me tell you something. I have nearly $500 right here. I brought it down to clean out a gambler, and I'll do it, too. You watch me."

He did, but that is another story, and this one is too long already. Six of them were playing, four of them passed out on the first raise and left the gambler and Morrison to fight it out. The gambler had been calling for new decks of cards every few deals to-day, paying for them, then throwing the discarded deck on the floor, and we were watching him. Morrison called him, and the gambler had four aces. This was before General Schenck invented his straight flush to fill a long-felt want; and four aces beat the deck then. That is, they generally did; but not to-day. Morrison had five more of these aces and also had fifty coal boat men at his back. He took down the money, and the gambler went ashore at the next wood yard. He had gone broke on four aces. CABIA BLANCO.

The Crowing of the Cock.

IT is said that our common barnyard "rooster" is descended from the *Gallus bandiva,* or jungle fowl of India. This is probable enough, seeing the resemblance between them. The jungle fowl (of which there are many specimens now in this country; some of them being at the "Zoo" in the Bronx, if I am not mistaken) is much smaller, but otherwise has all the general characteristics of the "rooster"—the plumage, the strut and the crow.

I have sometimes asked myself what was the origin of the habit of crowing, especially in the early morning. The popular answer to this question is, to salute the dawn, or express joy at the birth of a new day. But I suspect there was reason more than this for it. Perhaps, in addition, it was intended as a rallying call to the hens scattered among the brush, or as a challenge or defiance to another feathered knight of the spur.

Whatever may have been the origin of the habit, it is, in my opinion, at least, a matter for sincere regret that it was not left in its native jungle. There are not a few complimentary references among the poets to the "song" of chanticleer, and I will admit that on a fine clear day, in the depths of the country, it is really poetical and charming to hear it echoing from some distant hillside. But—well, I would like to ask a poet what he thought of it at 3 or 4 A. M.

I contend that as a murderer of repose there is nothing can compare with the "song" of chanticleer—not bells, not steam whistles, not the rumble of wagons, not the sound of revelry, not the cry of the milkman, nor yet of Thomas cat. Country ears, of course, are impervious to it, but to the average city ear it is a very sword.

I have had some tragical experiences of it, the which if I attempted to record, I might, I fear, fall into the use of language that would certainly bar my article from FOREST AND STREAM. But my last experience was so thrilling that I cannot resist the temptation of recording it, even at the risk of forgetting myself. Being on an outing not a hundred miles from New York, but in a section which has remained primitive in spite of the surrounding march of civilization (that is the way they express it, I believe), I put up at a little hostelry, half hotel and half farm house. It was evening when I arrived, and to amuse myself before dinner (or supper, as they called it there), I went for a stroll about the premises. Among other things, I observed that the hen-house was a considerable distance in the rear of the dwelling house. This afforded me the liveliest satisfaction, which was not diminished by the appearance of the "roosters"—great lusty looking fellows, suggesting a calliope—who with their harem began to seek the seclusion of the hen-house. If I hear them at all in the morning, I told myself, it will be only faintly, so I shall not be seriously disturbed. I took the precaution, however, to inform my landlord that if he enlarged the bipeds before 7 o'clock I would leave without paying my bill. At any rate, I thought, they will be kept prisoners.

Well, I got to bed, though not until decidedly late for those parts (having sat up over an old local history which smelt of Indians—figuratively speaking, let me hasten to add), and immediately fell asleep, lulled by the solemn sough of the elms above the roof. I could not have been asleep more than a couple of hours when I started up with fear and amaze. "Cock-a-doodle-do!" had sounded so close to my ears that it seemed the author of it must have roosted on the top of the old canopied bedstead. I listened intently for a few minutes and then the reveille was repeated, but this time it seemed a little more remote. I got up and struck a light and proceeded to investigate. Presently I found that my enemy (I use the term advisedly and not with especial reference to the present occasion) had posted himself on the branch of a tree directly outside my window. I looked at my watch. It was exactly 2:30 A. M.!

If the reader please, I will leave to his imagination the rest of the history of that eventful night, and return to the question of the origin of the habit of crowing.

Now, if chanticleer did not awake the echoes until day had dawned, it would be quite clear that his crowing was a salutation to the new day. But as I have shown, and as is a matter of common knowledge, he crows hours before dawn and sometimes, indeed, the whole night long. Has not Shakespeare, who noted everything, noted this?

"The bird of dawning singeth all night long."

A plausible theory of the origin of the habit, it appears to me, is this: Before the domestication of *Gallus bandiva*, or in his primitive state in India, he was wont with his harem to pass the night among the brush. To arouse the luxuriously disposed dames now and then or keep them on their guard against prowling enemies, is it not probable that their watchful lord and master had recourse to this habit of crowing? Of course, the habit has clung to him in domestication, but that it is dying out to a certain extent at least there appears reason to believe. Some "roosters," I am told, never crow until dawn. (I wish this kind were more popular with the farmers.) At all events let us hope that my theory is correct, and that the day will come (though, alas, we may not hope to see it) when the denizen of the city, inevitably fated to "nerves," may retire to the country without fear of having his early morning slumbers murdered by this aërial dagger from the hen-house. FRANCIS MOONAN.

Recollections of Antler.

TRENTON, Georgia, Feb. 10.—*Editor Forest and Stream*: My eyes have been in better condition for reading than for some time past, and I have been interested in the reminiscences of your correspondents, notably those of Mr. Venning and Mr. Roosevelt.

My own recollections reach pretty far back—in fact, to the time when flint-locks were very often seen and used, and the most of my shooting has been done with the old-fashioned muzzleloader.

Less than two years ago I saw for the first time clay pigeons launched from a trap, and being invited to join the gun club at Central Lake, where I chanced to pass the summer, I took a little old rusty muzzleloader which I had owned for near forty years, and beat the whole crowd. This I mention as showing that one who has been a fair shot at game needs not to worry much about new-fangled appliances.

And I may add that late in the 60's I looked on at a live bird match, and never wanted to attend another.

I have often been interested by the singular (to me) lack of information displayed by intelligent persons on what used to be matters of general knowledge to ordinary sportsmen. Some years ago, somebody wrote to FOREST AND STREAM asking for a description of a bullet-mold! His idea was that it was somewhat like a pair of nut-crackers. Well, perhaps some of them are, or were. But long before I learned to use a rifle, one of the favorite amusements of "us boys" was to mold bullets in the old-fashioned way. They looked so bright and pretty. And just here I can see a shadow of doubt pass over the face of my reader when I mention that I have seen a hunter mold his bullets from lead melted in a wooden ladle.

I have also known the bar lead to be cut in cubes, as near the size of the rifle-bore as possible, and then rounded with a more or less globular pebble on the heated bottom of a "Dutch oven."

Speaking of bullet molds, I recall the fact mentioned by Fred Mather in his book concerning the many men he had fished with, that he once pulled a tooth for an old French trapper with a pair of these implements. I saw the same thing done at Grand View, Tennessee. The subject was an old friend, "Antler," at that time eighty-five years old, and the opeartor a stalwart son-in-law of the old gentleman.

I had a little Lefevre gun at Grand View, and as the people thereabout didn't know much about wing-shooting, I asked one of the boys to throw up a tin tomato can. This he did, but quite too near the gun, so I threw it up myself and riddled it. After this, he was very anxious that I should do more shooting, but there was little game about. Rabbits there were, and also hollow logs in plenty, so that I think I shot but two during the five months I passed on that mountain. They were usually hunted with one or two dogs and an ax, and this boy, having in vain attempted to induce me to shoot at woodpeckers, etc., brought over one day a live rabbit for me to pop at. I was away at the time, and when I returned I promptly released it, unhurt. The boy expressed his disgust to his grandfather, but Antler said: "The fact is that Mr. T. and I are such old hunters that we'd about as lief see the game as to shoot it."

While I was at Antler's I broke the wiping stick of my rifle at about three-eighths to five-eighths inch from the muzzle. The rod had a cross-grained spot at the point of fracture, and a damp swab at the other end. It was several miles to a blacksmith's shop, and even had one been near, I should have feared to put the end of the rod in the jaws of a vise. Antler was a pretty good "gun doctor," but this state of things fairly posed him. We could not stir it that day, and the damp swab made things worse. The next morning, after breakfast, I proceeded to prepare a piece of hickory wood, about one foot long, one and one-half inches wide and five-eighths of an inch thick. Near the middle of this stick I bored a hole of somewhat less diameter than the rod, then with a saw split it lengthwise through the hole. Then I placed the end of the rod inside the hole and firmly clamped the hickory around the rod by means of screws.

Being now ready for business, I betook me to Antler's old log barn, and selecting a place where the chinking was gone from above the ground log, I poked the muzzle through, turned the hickory stick in a vertical direction, sat down on the ground and, taking a firm hold of the rifle, began to straighten myself out. Something had to come, and to my great joy it was the wiping stick. I drew the swab through the barrel, removed the hickory attachment from the rod, and went back to the house, where I found Antler sitting as usual by his big stone fireplace. And he was surprised. "Well," said he, "I'd just like to know how you got the rod out of that rifle?"

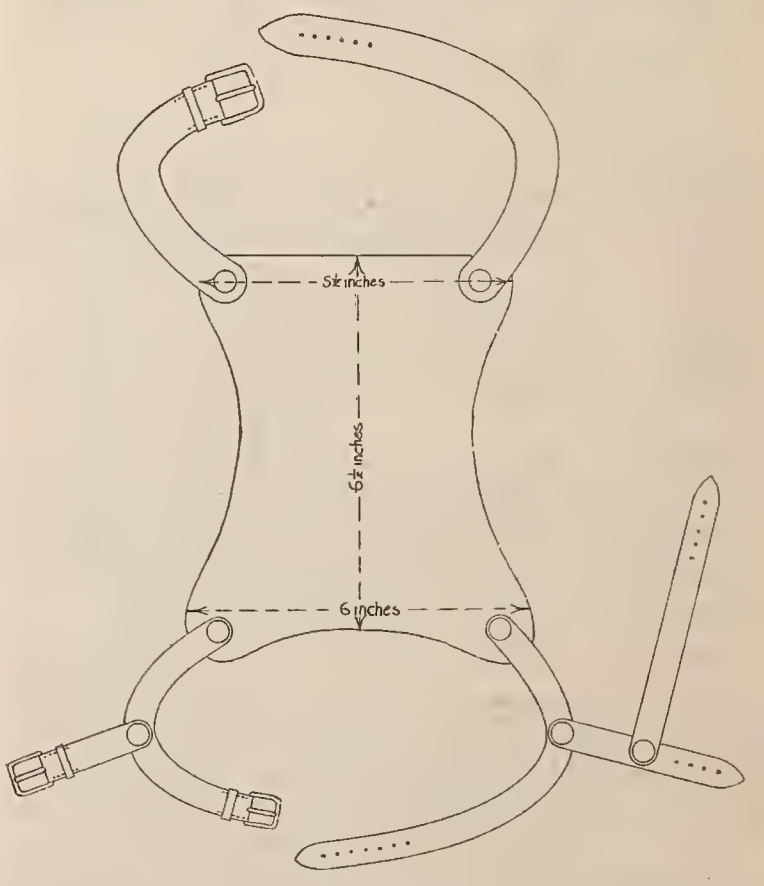
Just here I am reminded of an article in your paper not long ago entitled, I think, "How Not to Burst a Gun." I will offer a suggestion. It is well in a wild region to guard against accidents, and if the writer of that article had made fast his swab to the middle instead of the end of the cleaning line (or strap), he might have hauled it down as well as up. KELPIE.

Snowshoes.

THERE are plenty of snowshoes in the market. About every gun and hardware dealer carries a supply, and they all seem to be of one pattern. They are rather pretty to look at and on hard, dry snow they work well. My objections to them are that over rough ground they do not last. The filling is too fine and the mesh too small. The toes turn up a little, but after the frames get wet a few times they straighten. As to the filling, some dealers call it caribou and others the hide of a steer.

I have two pairs of snowshoes, one I just bought (and they are of the kind you can buy almost anywhere), I did not get them to use ,but to lend occasionally. The other pair were made by a neighbor who has experimented somewhat on such work. They are four feet and six inches long by one foot in width. The frames are made of two pieces each and turn up at point of toe about three inches, and they retain this shape. I have given them some pretty hard usage during the past six winters and they look to be good for some time to come. A day or two since I took a tramp of a few miles, using the old pair. On the same afternoon I tried the new pair for the first time, walking about one hundred yards. Both pairs were left on my piazza during the night, and as it rained the filling in both got wet. The filling in the old pair remained quite tight while in the new it was loose and saggy.

Some years ago I was talking with a Maine guide about snowshoes. This man made those he used and he said:



"The trouble with the snowshoes you buy is that the stretch is not taken out of the filling as it should be." His method of stretching was to take the hide to be used, cut it in strips and soak well in water. He then took a piece of horn (he preferred part of the blade of a moose horn), bored a small hole through it and pulled each strip of the filling through the hole. It was then fastened together and he selected three trees standing a few yards apart in the shape of a triangle. One end of the filling was fastened to one of the trees and he then walked around the others, stretching the filling as much as possible; he then cut some suitable logs and laid them across the filling, letting it dry with considerable weight on it. After drying, it was taken from the trees and soaked and the frames of the shoes filled. He said that filling, stretched in that manner, would always keep quite tight, no matter how wet it might get. I am told that the hide of a three years' old steer makes the best snowshoe filling. In such a hide there is considerable glue and a greater part of the glue should be removed by either steaming or sweating. If too much is left the filling will be brittle and liable to break when using in cold, dry weather.

As to fastening the foot to the snowshoe, I have tried various methods, and what I find most satisfactory is a rigging as follows: I use harness leather of about one-eighth inch thickness, and the buckles and straps are fastened with copper rivets. The proportions I give are for a number eight shoe, with corresponding arctic overshoe. Over toe I use a three-fourths inch strap; heel and instep strap of one-half inch. The fastening should be firmly laced with a strip of rawhide to back edge of toe opening in mesh of snowshoe. The buckles on toe and heel straps allow of the gear being adjusted to any size of foot. This rig is easily and quickly fastened to the foot. After toe and heel straps are adjusted, all there is to do is to buckle the strap over instep and the snowshoe is on and will stay on over any sort of ground. I inclose a rough drawing of this foot gear.

I have never been able so far to get just such a pair of snowshoes as I would like, and I have never tried to make a pair. I do not know where to get the material for the filling. Should any of the readers of FOREST AND STREAM know where it can be bought I would be glad to hear. I should prefer it in one piece and I would cut it up and do the stretching. C. M. STARK.

Natural History.

Squirrel Migrations.

MONTREAL, Quebec, Feb. 14.—*Editor Forest and Stream:* Early in the autumn of 1856 or 1857 a migration of gray squirrels passed through North Fairfield, Vt. For several years there had been but a very few gray squirrels in that vicinity, and I don't expect to live long enough to forget this migration. This day I started with a small rifle that needed repairing to take a cross cut over to the local gunsmith, who resided in an adjoining neighborhood. The route took me through a large body of woods which was alternately maple ridge, then a swamp with a trout brook running through it, then another maple ridge with a large number of butternut trees along its edge. As I entered the woods I saw that it was literally alive with gray squirrels. They were running on the ground, up trees and jumping from tree to tree, and moving in a northeast direction. As I passed down into the evergreen swamp they were there also, and all seemed to be in a hurry, with one exception. On a short knot that stuck out from a hemlock stub that stood on the banks of the brook sat a squirrel which had evidently decided to make that its future home.

After I passed out from the large woods I crossed a strip of pasture land and then into a small sugar bush; everything was quiet there, the migration had not reached there, as it was out of the general course that the migration was moving.

I rushed into Uncle Len's shop and wanted my gun fixed at once, as the big woods were alive with gray squirrels. The old gentleman laughed at me and said that there were not a dozen squirrels in the whole township. He, however, soon put a spring into the lock of my gun, and as he had a new gun that he wished to try, he went back with me to see this wonderful sight—a litter of perhaps a half dozen young squirrels in the butternuts which my youthful imagination had magnified into an army of thousands.

I shall never forget the look on the old man's face as we apporached the butternuts. There was a pole and brush fence that came up out from the woods and ran across the pasture to a wooded ridge of hills. This fence was covered with squirrels, and they were on the ground and in the butternuts, and all on the keen jump. Uncle Len stood leaning on his gun speechless, while I began shooting, and kept it up as long as my bullets lasted, and when I left him he had not fired a shot.

This migratory horde was about two miles across, and as I have before stated was moving in a northeasterly direction. Within a few days gray squirrels were to be found all over that part of the country, and no satisfactory explanations could be given for their sudden appearance, and we accepted Uncle Len's theory "That they must have got starved out over in York State."

STANSTEAD.

ST. AUGUSTINE, Fla., Feb. 14.—*Editor Forest and Stream:* I hereby offer a hatful of apologies to the parties who have been put to the trouble of hunting up proof to set me right on a question where I never have been wrong.

Imprimis then—I have no more reason to doubt the migration of squirrels than I have that quail migrate; which is generally admitted to be true.

When the original Bobo scrap appeared it struck me as being inimitably funny: not especially the swimming feat, but the way the business part was managed by the men. If the animals were swimming toward the shore why couldn't they have waited till they crawled out on dry land and then have knocked them on the head instead of rowing out to pick them up *by the tail* and drop them, alive, into bags and baskets. If they would quietly lie there and submit to being carried home to be skinned and cooked, then I do not know the lively little animal. Nothing was said about their being killed in the water; and if they had been quieted in that way why should they all have been picked up *by the tail?* About this tomfoolery is where my doubts came in—so there!

DIDYMUS.

An Epidemic Among Crows.

LANSINGBURGH, N. Y., Feb. 12.—*Editor Forest and Stream:* I would like to ask through FOREST AND STREAM if any of its readers have ever noticed any disease in the American crow which affects its eyesight?

Last winter a great many crows stayed here from early in December, 1901, to about the middle of March.

I had shot several during the winter and found that several of them had some disease of the eye. In some cases the eyes were swollen as large as hickory nuts; sometimes the trouble was in one eye only, but occasionally in both.

Along in the latter part of February I came across several crows in the woods that could easily be caught with the hand, and on examination found that they were almost totally blind. I also found several dead in the woods which had, apparently, died of starvation, their eyesight being completely destroyed.

From December 2 to December 9 of the past year the crows came here in hundreds to feed on some dead horses that were in a field about a quarter of a mile away. I shot several to see if they were blind again this year. I found that about twenty per cent. were blind in one eye, although their eyes were not swollen like last year.

Can any of your readers tell me the cause of this?

Although the crow does considerable damage to our young corn every year, I am convinced that they are one of the most beneficial birds to our agriculturists.

I am convinced also of the utility of the skunk and the fox, the skunk through the fall months destroying countless numbers of insects.

While out goose shooting last November I found where a skunk had scratched out and partly devoured a nest of snake eggs. I had never known that snake eggs were a part of their food.

The fox, although he occasionally takes our poultry, does good in the destruction of mice and other vermin that cannot be computed.

The same is true also of some of our hawks and owls, and though all the birds and animals mentioned destroy our young game birds and sometimes the old birds and their eggs, on the whole the good they do more than offsets the damage. HARRY C. CAMPBELL.

[The disease spoken of by our correspondent is not novel. It is called roup, and has been reported at several points along our Atlantic Coast; if we remember rightly, from Arlington, D. C., from New Jersey, and from points in New York State.

One of the earliest, if not the very first, to call attention to this disease was Mr. Robert Ridgway, of Washington, while the latest is Mr. Elon Howard Eaton, who tells of an epidemic of roup in the Canandaigua crow roost.

In this disease the eyeballs frequently swell to large proportions, and it is commonly said by people who find the dead birds that they have died because their eyeballs have frozen. An examination of the sick birds shows that they suffer from an acute inflammation of the pharynx and the anterior portion of the head, including nostrils and eyes. There is frequently a discharge from the nostrils, and the eyes are often blinded by a membrane extending over the cornea. Sometimes one eye is affected, but often both.

It is usually supposed that, since birds so affected lose their eyesight, they die from starvation. Mr. Eaton, however, shows that this is not the fact, for he cared for a number of sick birds and forced food down their throats, yet in almost every instance the sick birds died. Birds which survived the disease were usually those blind in one eye only, but this is believed merely to indicate that in these cases the roup was less severe, affecting the eyes in a less degree and at the same time admitting of the bird's recovery. The disease disappeared with the coming of warmer weather, and about the last of March not a single sick bird could be found in the roost. Mr. Eaton estimates that one thousand crows died of this disease in Ontario county.

How general this epidemic was in Rensselaer county in the following year we do not know, nor do we know the cause of the disease. Certainly the subject is one of very considerable interest to ornithologists.]

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

The Maine License.

BANGOR, Maine, Feb. 10.—*Editor Forest and Stream:* I do not know whether you care for the inclosed or not, but I was so misquoted in the daily press reports of the hearing, or else not quoted at all, that I have written a partial report of what was said. This was by no means all, but all that I could find room for in my February edition, which was already overcrowded. I am also sending you a copy of the Lewiston (Me.) Journal, containing references to the hearing.

Since the hearing I have secured some important legal briefs bearing on the question, and submitted them to the committee this afternoon. How they can call the law constitutional after what I have sent them I fail to understand. H. W. ROWE.

From the Maine Sportsman, February.

Elsewhere in this issue will be found a brief report of the annual meeting of the M. S. F. & G. A. The important discussion of the gathering was anent the proposition to tax non-resident hunters for hunting big game in Maine. There was the usual amount of argument in favor and but one speech against, Hon. Chas. E. Oak once more going on record as emphatically opposed to the scheme. He did not vote on the question, however, and the idea was indorsed. Had it not been for the error of the editor of this magazine in regard to the date of this meeting, the press would most certainly have been unable to report the vote as unanimously for the measure.

Later, to be exact, on the fourth of February, the Legislative committee on Inland Fisheries and Game held a public meeting in the Hall of Representatives, with a very large number present and the keenest interest manifest.

Chairman Carleton, of the Commission, flanked by his associates on the board, the veteran and beloved Nestor of Maine's piscatorial interests, Hon. H. O. Stanley, and Forestry Commissioner Ring, was present in force and with the happy confidence of sure victory. He conducted the case of the petitioners for the bill, presenting a long line of witnesses as to the need and value of such a tax upon visitors, including business and professional men and wardens, nearly all of whom replied to a list of set questions. The uniformity and similarity of most of their testimony was almost enough to make an impartial observer think some of them might have received inspiration, and from the same source.

When the remonstrants were given an opportunity the editor of this magazine waited almost till his chance was gone, hoping that some more eloquent and better informed leader would take the floor. Mr. Oak, knowing how futile opposition would be, remained in his seat, and it was left for the inexperienced journalist to enter, alone and without support, a protest against this unjust, unwise and inhospitable measure.

As briefly as possible he told the committee why he was against the tax: That it was un-American because in the nature of taxation without representation; that it was inhospitable, and would work grievous harm to Maine's fair name as a host annually of thousands of visitors; that it was unjust, because the price already paid was even more than the game itself was worth, intrinsically; it made the State a game aristocracy so far as it barred out the poor man, and such action, driving away many visitors, would work loss and hardship to those whose livelihood depended on this business; that it was further unfair, because, according to the statements and figures of the commissioners themselves, a part of the revenue so derived would undoubtedly be diverted to fish propagation; that it was unnecessary, since, if the money already at their disposal were used by the Commission wisely and judiciously, Maine would be able to sustain her glorious reputation of being the best protected game preserve in the United States; it was further unnecessary because less hunters (in the B. & A. territory, with which he was more familiar), hunting under less favorable conditions than in 1901, killed far more deer, proving them more numerous; that to tax hunters one must have the hunters to tax, and that he had found a strong antipathy among the many hundreds of visitors met during the season, who said they had rather pay an increased tax and hunt in Canada, than to submit to such an imposition in Maine. He also entered a protest against branding all western hunters as hogs and butchers, as he had met even some parties so specifically branded, and from a member of one of them he read a letter saying that their trip cost them (20 members) $2,600, of which $1,150 was spent in Maine; also suggesting that he did not mean to defend or uphold the many undesirable parties who come some from out West, some from New York and Massachusetts, and some even from Maine. Mr. Carleton conducted a sort of cross-examination, but did not succeed in shaking very materially the points made. He called up some of his paid wardens to refute some of the statements of the remonstrants, and in some instances they testified exactly contrary to what they told the remonstrant in the midst of the last hunting season.

Having the hearing well in hand, Mr. Carleton then occupied the remaining hour of the afternoon in an argument for the bill, and in denying most of what had been claimed by the opposition. He had traveled widely and had met no true sportsmen who objected—they were all "crying for it," as the Castoria advertisements say; he knew that guides and camp and hotel owners wanted it, for the man from Bangor was the only remonstrant; he referred to elaborate notes purporting to make such discrimination constitutional, and very frequently to the mass of letters for the committee to read, indorsing the plan; he called attention to the other States that have hunters' licenses, and urged that Maine was too liberal and in danger of losing its big game entirely; he called attention to the numerous petitions at hand for the law, although he didn't say much about how many wardens it took to circulate same and get the signatures; he emphasized the great need of the poor unprotected game in the North Woods, and eloquently called the committee's attention to the "only six guides the commission has been able to employ the past year to protect the game in the great North Woods," who had thus left the defenseless game without protection and traveled far (at $2 per and expenses, paid by the State) to help enlighten the committee. In short, with organization, funds, eloquence and sarcasm at his command, he proceeded to demolish the remonstrants. The committee then announced the hearing at an end, no others appearing.

The editor regrets having to give so much space to his own remarks, but has been so frequently misquoted by the press reports that he takes this opportunity to tell what he did say at the hearing, so far as he can remember.

Massachusetts Fish and Game.

BOSTON, Feb. 16.—*Editor Forest and Stream:* Last Tuesday the Committee on Fish and Game gave a hearing on a bill to make the fishing season for trout in Hampden County the same as in the eastern part of the State, instead of grouping that county with the three other western counties, Franklin, Hampshire and Berkshire.

Former Commissioner Lathrop and one or two representatives from Springfield, spoke in favor of the bill, while Representative Garrett, of Greenfield, opposed the change in behalf of the anglers of his section. Dr. J. T. Herrick, of Springfield, who was not able to be present, sent word to the committee that he and many other sportsmen of his city were opposed to the bill, not wishing the month of August to be made part of the open season. As there are other bills affecting fishing in the western counties, the committee postponed action until hearings are held on those bills.

On house bill 39, the bill of the central committee to make permanent the present anti-sale law on woodcock and partridge, a hearing is to be held on Thursday, March 26, at 10:30 A. M. All sportsmen who favor the re-enactment of the present law, which will expire by limitation in July, should attend this hearing.

That the law has done much to increase the number of partridges in the covers of the State and has been highly beneficial in protecting our quail, as well, is the almost unanimous opinion of those best informed in such matters. Many of the sportsmen's clubs are already actively working for the bill.

An article in the Greenfield Gazette and Courier of Feb. 7, in regard to this and other protective measures, I believe voices the sentiment of sportsmen generally throughout the State, and will interest many of your readers:

"At the meeting of the Sportsmen's Club Tuesday evening, several matters of interest to the members pertaining to the game and fish laws came up. A vote was passed expressing the sentiment of the club that the anti-sale law, making it illegal to sell partridge and woodcock, should be permanently in force. It also voted to favor the extension of the closed season on deer in Massachusetts five years more. On the proposed change in the law in regard to trout fishing the club voted to favor a short, early season from April 1 to July 1 in preference to the proposed change to make the open season from April 1 to Aug. 1. It is generally conceded by fishermen that late fishing cleans out practically all the small trout, while early in the season only the larger ones are caught.

"On the proposed measure to allow the game commissioners and their deputies to search without a warrant any building not a dwelling house, where it is

suspected game is kept illegally, a vote showed that the club favored such a measure. If the anti-sale law becomes permanent this right to search cold-storage warehouses is an obvious necessity. It is said the principal violation of the anti-sale law is by the cold-storage people in the cities. The anti-sale law is one of the wisest measures the Legislature has ever taken toward the replenishing of game, and it is the wish of all sportsmen that it be continued and enforced.

"Two petitions were drawn up and signed by all the members present, showing the sentiment of the club in regard to the above measure, one of which will be sent to the Massachusctts Game Protective Association along with a check to help defray the expense of securing such legislation. The other petition will be sent to Senator Newell. Representative Garrett will also be informed of the club's action. The club voted to petition for a fish and game warden for the coming year.

"The Greenfield Sportsman's Club, consisting of over 100 members, has always been found on the right side of all legislation tending to propagate and replenish the fish and game of the State. A consignment of trout fingerlings and fry and Belgian hares and pheasants is expected in the spring. The question in regard to buying quail for stocking local covers was discussed, but it was the general opinion that quail do not survive our winters well enough to warrant such action, and it was decided to direct the efforts of the club toward propagating trout and pheasants in preference to quail.

"If all the organizations throughout the State would take such action as the Greenfield Sportsman's Club has, both in petitioning the Legislature for wise game laws and contributing funds it would be of great assistance to the Massachusetts Game Protective associations in their good work and encourage them to do their best. It is for the interest of all sportsmen to assist in this manner as far as possible."

Mr. Frank M. Chapman's lectures on birds, given under the auspices of the Massachusetts Audubon Society in the Walker building of the Institute of Technology, are drawing large audiences, testing to the utmost the capacity of the hall.

The Megantic annual dinner is regarded by sportsmen as one of the great events of the winter season in Boston, and such it proved to be on Saturday. I append the excellent report of it contained in the Sunday Herald:

It would be a cold winter, indeed, when the Megantic Fish and Game Club did not have one rousing banquet, one idealized campfire, one gathering of congenial spirits, where a judicious mixture of "grub," other things, a little seriousness and a lot of funny stories relieved the monotony of the huntless season. They had it last night at the Copley Square Hotel, and as usual enjoyed a fine old time.

Some 150 members assembled for the feast. The menu had as gamey a tinge as the laws of the State permitted, and the banquet hall was decorated with trophies of the chase and paintings of game subjects, among which were some fine examples from the brush of T. S. Steele. As is the unbroken custom, the members were furnished with the words of several topical songs of the day and sung in unison by the company. An orchestra and the Elmwood quartette furnished the music.

Parodies played a large part in this connection, one of the most successful being a version of "Mr. Dooley," wherein President A. W. Gleason of the club, filled the part of the philosophic Chicagoan, immortalized by Mr. Dunne. Another, entitled "On the Bowery—Nit," caught on, in which the beauties of Big Island and the Booming, places of renown in the Megantic Preserve, were contrasted with the famous New York avenue. "Sweet Rosie O'Grady" and the "Good Old Summer Time" furnished themes that could be twisted into hunting or fishing measures.

Henry O. Stanley, of the Maine Fish and Game Commission, was the serious visitor. His topic was presented in a sad, almost apologetic vein, but urged on the ground of necessity—that of non-resident hunting licenses in Maine, which the Legislature of that State is about to impose as a tax on sport. The proposed tax is a license costing $5 for the hunting of birds, $10 for birds and deer, $25 for birds, deer and moose. It was regrettable, but Mr. Stanley urged that the time had come to do something to conserve the game life of the State. The proceeds, which were expected to be large, would be devoted to the protection of game, so that the money could not be said to be thrown away. The licenses issued would have coupons, which when attached to game, would insure the shipping of it out of the State, a privilege now denied. Among the things instanced by Mr. Stanley as compelling this move was a growing custom among some hunters of "driving" the game; the shooters placing themselves at advantageous points and having the game of a large district driven past them by hired beaters. His remarks were greeted with approving applause by the club members.

James Russell Reed, president of the Massachusetts Fish and Game Protective Association; Dr. F. N. Johnson and D. J. Flanders, spoke briefly, extolling the hunting or the true sportsman, who, mindful of the rights, not only of other sportsmen, but of the community in general, was able to restrain his zeal in the forest or on the moor, deriving the higher rewards in health and renewed energy, while getting also a reasonable share of the trophies. A long line of the tried story-tellers of the club had their innings throughout the evening, and at the conclusion President A. W. Gleason, who is about to close a three-year term in office, delivered a sort of valedictory, in which he spoke of the pleasant recollections he would always cherish of his service as president of the Megantic fellowship.

One of the interesting incidents of the evening was a valentine delivered for L. O. Crane, one of the directors. Mr. Crane is a worker in club affairs, popular and something of a wag also. He sent a letter of suggestion to the dinner committee that was read, in which he urged the necessity of including pork and beans in the menu. His letter was a philological marvel that defied verbatim reporting, the choice of words being from the long-winded columns of the dictionary. As a response came the valentine—a bag of four little black pigs, that were allowed to scamper around on the banquet table for awhile and squeak a protest, and then were handed over solemnly by President Gleason to the recipient, amid shouts of laughter from his associates.

CENTRAL.

Pictures No Artist Can Paint.

THERE are many pictures no artist can paint upon which the mind dwells with never ceasing interest. In retrospection the sky is filled with countless wild pigeons, and as we stand and gaze at the rapid flight, thousands more show above the tall timber beyond the clearing, and we wonder in our boyish way where they are all bound for, and why—and we wonder still.

Then we see a sunbonnet bobbing up and down in the corner of the wood lot hard by the old log barn, and closer observation brings to view our little sister gathering nuts that a couple of frisky gray squirrels are shaking from the branches of a shellbark hickory in their efforts to gather the ripe fruit. Where are the gray squirrels? Now we are following the trail of a small nocturnal animal down through the big slash for a mile until, without warning, it disappears between the roots of the old stump and burrows beneath the sunken end of a large sycamore. Our boyish fancy paints him in inky blackness, and our spirits rise as we think of a great silver dollar, only to fall with a sickening thud when a stick twisted into his tail brings from his cozy bed of leaves a white skunk worth 15 cents.

Then again we hear, in fancy, the familiar voice of old Piper, the big black good natured brute that loves to have us stroke his head and pull his long velvety ears, and we know from the long drawn musical note that comes winding up the lane that he has struck a cold scent that will lead in all probability to a den tree, where brother 'coon is snoozing away the day after a night's ramble among the standing corn.

Then memory carries us to Nature's broad meadows, where wild ducks rise from nearby pools and, circling overhead, dive into the tree tops bedecked in variegated colors, and are lost to view in the deep recesses that border the river, and as we follow the trail that winds downward along the side of a ravine, then through bottom land to the river's brink, we are again reminded by the flapping of wings that we are not alone in our travels.

Back again to the wooded land of childhood, the carrying home of the first wild turkey; then with skips and bounds to the deer trails in the tall cane of the swamp land at the source of the Wabash, and the ride homeward with the first buck. Then time grows apace, and we are drinking deep draughts of the perfumed air of the northern pine woods, thankful there are yet quiet nooks, shady dells and unpolluted streams where Nature untrammeled reveals God's handiwork. Where the moving pictures are of flesh and blood, the background the walls of "God's first temples" and the scenery painted by His hand. Life unbounded, free, swims the placid waters, wings the pure air and skips on nimble feet. The noble buck scents danger from afar, turns like a flash and darts into cover.

Pictures on memory's pages—blessed ties that bind the present with the past.

Paint me a picture, artist!
Of scenes where memory dwells,
Of tarns and fells,
Of shady dells,
And the wild life sheltered there.

Paint me a picture, artist!
A copy from Nature's mold,
Of heat and cold,
Of heath and wold,
And the soughing sounds I hear.

Paint me a picture, artist!
A copy from Nature's art,
Of the look and start,
The plunge and dart,
Of the wily white-tail deer.

Paint me a picture, artist!
Of tracks in yielding sand.
With a master brand,
On barren land,
Paint the trail of a white-tail deer.

Paint me a picture, artist!
Of the trail through rain and fog;
Where he leaped this log,
And crossed that bog,
Paint the trail of this white-tail deer.

Paint me a picture, artist!
Of a tangle of birch and thorn,
Which, rent and torn
By his massive horn,
Marks the trail of a white-tail deer.

Paint me a picture, artist!
Of a tramp in the falling snow;
As with cheeks aglow
I pant and blow
On the trail of a white-tail deer.

Paint me a picture, artist!
As he ever onward flees;
With his nose to the breeze
Till lost mid the trees,
Paint the trail of this white-tail deer.

Paint me a picture, artist!
Of a long and wearisome tramp
Back to the camp
Through the cold and damp,
From the trail of a white-tail deer.

Paint me a picture, artist!
Of the moments as they fly,
While with beck and sigh
I bid good-by
To the woods and the white-tail deer.

G. W. CUNNINGHAM.

Game Parks and Other Things.

Editor Forest and Stream:

I am an admirer of the literary products of Didymus. He writes with much elegance and is always sound; that is, most always.

His communication under the caption of "Game Parks and Other Things" in FOREST AND STREAM of February 7, is the exception, and a robust, well developed exception it is. It has in it a mild smattering of socialistic and anarchistic principles, interwoven with a false scream of the national bird, the American eagle, all as premises for his conclusions, which really are a protest against American liberty and the sacred rights of titles in property—that is, other people's property.

Let us investigate his points more particularly, if your patience will permit of it, Mr. Editor. He begins thus: "We Americans used to think the common people of England were trampled down to the condition of slaves by the lordly landed aristocracy, but what are we Americans coming to in these days of selfish millionaires?"

Bless us, isn't that comprehensive?"

"We Americans!"

Who are "we Americans" but the same "common people" of England, and several other common peoples from several other countries other than England, who ceased being "common people" just as soon as the opportunity presented itself to attain that distinction? Even common people are unlike in thought and property. I have never observed any passionate ambition on the part of the common people of England or America, be they common people high or low, to remain common a moment longer than the exigencies of the case imposed.

However, I feel certain that the common people of England used to think we had some actual slaves in this country. They were right. We had them. A distinction and a difference.

"We Americans!" How "we Americans" abhor the thought of becoming millionaires! Aye, "selfish millionaires," for they are the only people who are selfish! How Didymus and I would spurn a million, or the opportunity to acquire it! Yes, we would.

"We Americans," lovers of the common people a long distance away in England or other foreign clime, bitter haters of millionaires who buy more land than we own, admirers of common people who sell land for many times its value to the despised millionaire, do we not detest land owners after we have sold our lands and thereby abetted a "landed aristocracy?" Ahem! Certainly! Certainly! Our detestation is hereditary.

Our sires and our grandsires also had that hereditary abhorrence of other people owning too much land and other things. When the Pilgrims landed on American soil, purposing to escape the tyranny of the "lordly landed aristocracy" of England, they had within their breasts the noble, white-hot and sacred principles so ably set forth by Didymus, friend of the downtrodden.

On American soil the Pilgrims found the same abhorrent conditions which they had suffered from in England. The selfish other fellow, a red man, owned the land. What rank injustice! Alas, is not the other fellow always selfish? Gracious, yes!

The Indian, the noble red man, was quite common people, with a tendency to selfishness withal in titles pertaining to land; indeed, he was quite as offensive on this point as the "lordly landed aristocracy" of England, inasmuch as, notwithstanding his commonness, he held a monopoly of the land to the exclusion of the landless Pilgrim people recently arrived. This was, to people of acute sense of equity, an intolerable condition of affairs. It was contrary to the way "we Americans," in the persons of the Pilgrims, were trained to think, so "we Americans" forthwith took steps to remedy the evil which had grown to such direful dimensions before our arrival.

A "lordly landed aristocracy" when red in color is quite as oppressive as when it is white, but it is far less dangerout to rob it, it being both ignorant and defenseless. The common people, distinguished by owning no land, have then a much better chance to convince the unarmed other fellow, who owns the land, that his selfishness is a public calamity, and therefore must be abated. Can you guess how to do it?

Yes, "we Americans" stole the Indians' corn, killed them off in various ways, direct and indirect, and took their land to the extent of what now constitutes the United States, excepting the vast southwestern area taken from an empire called Mexico, which had become too lordly and selfish, yet too weak to remain intact in matters of real estate. That area is now known as the Mexican cession and the Texas annexation territory, in the acquisition of which rifles and knives were not unimportant factors. "We Americans" own it all now.

Our school histories deal with much length, unction and figurative rolling of eyes concerning the treachery and badness of the Indian, for he was so selfish as to fight for his home and country; but he used bow and arrow while "we Americans" used rifle and bullet, and that difference made the Indian a savage, fighting for land which "we Americans" wanted unselfishly; fighting for a fireside which could have no tender ties because the owner of it had a red skin!

It may be mentioned that to reduce the offensiveness of landed aristocracy still further, "we Americans" in 1803 acquired possession of a vast area west of the Mississippi River, called the Louisiana Purchase, for $15,000,000. We did not inquire much into the matter of title, and the Indians who inhabited that area now inhabit it no more to any great extent. "We Americans" own all that land now.

"We Americans" set some strange examples of unselfishness as common people ourselves and for other common people, also, if we accept the views of Didymus on the subject as correct.

I desire to ask Didymus, humbly and respectfully, by what right or by what authority he arrogates to himself the position to speak publicly as "we Americans?" Does he imagine that when he says "we Americans" it is really America which speaks?

Does he realize that the institutions against which he so vehemently inveighs are American which "we Americans" have built up so quickly and so grandly that they are a world wonder? Does he realize that millionaires are a product of America's unlimited resources governed by American ideas? Does he realize that millionaires are "we Americans," too, and that they have done much

to make America a world power? Does he realize how many thousands of men have profitable employment and maintain happy homes because of the millionaires?

The men who became millionaires did not attain that dreadful state by idly railing at those who possessed a greater quantity of this world's goods than themselves.

"We Americans" said to them and all others, "You are in a land of liberty. You are free to become millionaires if you have the talent, the industry and the good fortune to attain that state of prosperity."

Your millionairehood is a product of Americanism. The true Americans do not say: "We will accept all the vast benefits which you must necessarily confer on us in your long struggle to become millionaires; but after you reach that stage we will revile you as un-American, and despoil you if we safely can."

Is not the following regrettable, coming as it does from a writer so well known, so esteemed and almost always so just?

"'The public be d——d' is evidently their motto, and they seem to delight in depriving others of everything in the way of recreation. The people of North Hempstead prove that they have too much self respect and common sense to place themselves in the position of serfs for the paltry sum of $50,000, knowing that if the New York man could get control of the lake no man would dare to catch a fish, or sail a boat, or even take a bath in its waters. They are wise in holding it, for as the millionaires improve their suburban property their own will be increased in value greatly."

How does he know that $50,000 is a paltry sum for the property in question? In what way would the people be in the position of serfs if the little lake was sold? Holding property that it may increase in value by the labors of others was what the late Henry George denounced as a gross injustice, and he termed such gain "the unearned increment."

But suppose the said suburban property should increase in value till all the different owners became millionaires, what would Didymus do with the monster product of his own advice? Millionaires have been made in that very manner. Is a millionaire a public enemy?

I do not think that "the public be d——d" is the millionaire's motto, and furthermore, I question the right and the justice of Didymus in assuming to force that motto upon them. He assumes to speak for "we Americans" and also for the millionaires who have inferentially become un-American; it is, in most issues, considered unfair to be judge, jury, plaintiff and defendant. Is it not so?

Now, referring to the sale of the lake in question, the people of North Hempstead were not coy from any motive of self-respect or common sense; they simply had something to sell and wanted more money for it than was offered. It was, in its essentials, a matter of buying and selling. It was not a matter of Americanism at all.

Those who objected to the sale of it on the ground that if it became private property they could not fish in it or sail a boat on it, or bathe in it free of cost, are the people who are to be found everywhere; the people who complain loudly because they cannot get something for nothing.

There are some of "we Americans" who think they have a right to camp in Didymus's front yard, to sleep in his guests' chamber uninvited, to dig his potatoes and to reap his corn, all for their own behoof; but I dare say that, if one of we-Americans were to approach Didymus, even in the name of "we Americans," and tell him that, by owning any land at all he, Didymus, was in a way countenancing and abetting a "lordly landed aristocracy," and that he, Didymus, should immediately strip himself of his belongings and be a socialist, or otherwise to be in contempt of "we Americans," there would be something happening. He, first of all, would ask how one American was "we Americans."

I emphatically deny that the motto of the millionaires is even apparently as set forth by Didymus. Many of them have conferred great public benefits. Many are public spirited. Many are good men. They give occupation to thousands of other men. They do not rail at their neighbors.

Many men who are not millionaires confer no public benefit whatever, even to the value of their mite.

It is true that the millionaires have bought up vast areas for preserves; it is equally true that much of those vast areas were of the rugged, barren wilderness, utterly worthless and unproductive, of no value to their owners if that direful millionaire had not happened along, fancied them, and, becoming their owner, paid the prices of good land for them. Are the millionaires under obligations to outsiders for it?

That every Tom, Dick and Harry cannot then fish and shoot on preserved private lands gratis is no more pertinent to the question than that the home now owned or occupied by Didymus does not afford free domicile to every Tom, Dick and Harry who drifts aimlessly in; and yet the land was free to all once when it was the property of the lordly Indian aristocrat. The Indian was selfish.

I suppose that Didymus owns some guns and fishing tackle which he uses for pleasure. If some idler came along and rebuked him for investing in property solely for purposes of pleasure, he would sharply tell the idler the whole matter was none of his business, or some similar phrase. The millionaire has equal rights.

I think Didymus will concede that his view is a dangerous doctrine to advance, namely, that the fellow who has more land and money than we have is a bad citizen, un-American, a lordly landed aristocrat, or what you please —for then the other fellow, who has less than we have, may oust us from our belongings on precisely the same plea and justify himself therefor from our own teachings.

Touchin' on and appertainin' to the matter of a deer park, inclosed by an eastern man, he says "He has to be always on his guard, but some of his enemies say they are bound to 'git him' some day." Anarchy, bad anarchy!

Do "we Americans" approve of that? There is an implied threat of murder in the foregoing. And Didymus does not raise his voice in denunciation against the malice or the murderous threat.

I, as one of "we Americans," know very well what I would do with some of the eastern man's enemies who succeeded "to 'git him'" if I was on their jury. I thank this great American nation that the Americans have good laws governing such cases, and know what to do with men who commit cowardly murder or wanton mischief.

Isolated instances of malice or crime may succeed betimes, but only betimes, for the great progress in common sense, law and order and general goodness is constant, and life and property are more secure with the passing of the months and the years.

The great American nation was not built up by the anarchist, the murmurers, the obstructionists, the idle, the ones who seek to reap the fruits of others' labors or to destroy what others build; those who denounce because, forsooth, the world's institutions in fact do not chime with their ideas *in vacuo*.

As to millionaires pretending to be Christians, I maintain that the matter in this connection is irrelevant. There are some poor men who are religious, and yet I wouldn't care to take their notes of hand without some millionaire's indorsement. Didymus might take a similar precaution under similar circumstances. It is not nice to pose in a holier-than-thou attitude concerning millionaires. The needle and camel matter is one on which many excellent people take long chances. And the Golden Rule was not for millionaires alone.

In conclusion I will say I am not a millionaire. I would feel rich if I possessed a few hundred dollars in cash. My views therefore are unprejudiced. But I recognize that the road is as free and clear for me to become a millionaire as it is and has been for others, and if I have not the talent, self-denial and industry necessary to become one, I should at least have the good grace to be passive if I envy those who have succeeded.

The matter of what constitutes wealth is relative, not absolute. Every cross roads, village, town and city has its wealthy class and poor class, its wealthiest man and poorest man. The wealthy Indian had more horses than his horseless neighbor. It is relative everywhere.

If Didymus and I were living among the Bushmen of Australia, we, relatively, would be offensively wealthy. We would be paraded as haughty upstarts, purse-proud, and a menace to Bushmen society. On the other hand, Didymus and I would complacently view the Bushmen from our pedestal of wealth and charitably excuse them because of their excess of human nature, unless some one of them should address us as "we Bushmen" who used to pity us downtrodden Americans unasked. CHAS. DAY.

CHICAGO AND THE WEST.

The Dog and the Nickel.

SAN ANTONIO, Tex., Jan. 29.—This morning as a friend and I were walking down one of the main streets of the city, we noticed a dog, a large, Doric, massive sort of dog, which might have been called a pointer had it not seemed to be so much something else, walking gravely and sedately down the center of the sidewalk. My friend accosted the old fellow, who seriously stopped and allowed himself to be patted on the head, retaining meanwhile all his gravity of countenance. The dog then moved on, stopping to pass the time of day with others along the street who seemed to know him. "He's going after his breakfast," said my friend. "He has a nickel in his mouth, and if you will watch him you will see him go into that butcher shop on the corner and buy five cents' worth of breakfast food of his own choosing." We turned to watch him, and sure enough, he turned into the shop, where, I presume, he got his breakfast according to schedule. They tell me this is one of the features on that part of the street every morning.

There seems something about Texas soil which tends toward the production of large pointer dogs. At least the largest pointers I ever saw were in this vicinity. For instance, there was Col. Guessaz's pointer Gess, which we used to hunt with down here five years ago. I think Gess weighed fully as much as a yearling steer, and his foot dented the earth like the tread of a mammoth. His owner once sent Gess to retrieve a jacksnipe, which apparently was done at least in regard to the initial stages of the operation, though when the dog came in there was no visible token of any existing jacksnipe. "He's swallowed the bird," said one of the party, which statement was indignantly denied by Guessaz. "Here's your jacksnipe," said the latter, and sure enough, as he opened Gess' mouth, there lay the bird within, entirely unharmed, although not even the tip of a wing or leg had been visible. I think our friendly dog this morning could almost have duplicated this feat, and surely he could have rivalled the street car conductor and handed out two dollars in change, if he had been given the chance.

So Different.

It is very pleasant here in old Santone, so pleasant and so different that one does not feel like hustling back to the dirt and cold and confusion of the North. These long, low, quiet curves of the valley of the San Antonio River, the high, sun-reached ridges which slope away from it, the gentle eminences, barely indented with wide curves, which mark the distant line of the horizon, are all so soft and easy and mild, so much in keeping with the mellow, golden light and the brooding warmth of the kindly air. It seems a country of peace and quiet, as indeed it is to-day. Yet once it was the fiercest and most turbulent of lands, from the time the Spaniards first set the "Indios reducidos" to work at building these endless serpentine ditches which wind for miles along the countryside, lined now with pecan trees thicker than a man's body. After the Spaniards had come the Indians fought them, from the Arkansas to the Sierra Madres; and then came the Americanos and fought both Indians and Spaniards, and made the land still redder with human blood. Never was a more warlike land than this which looks so sleepy now, never a soil that drank braver blood. The battered walls of the Alamo, defaced with scores of vandal's names, misused, unappreciated, sacred but so long defamed, what a hero story is theirs, here in this lazy sunlight! And after the heroes and the day of restless, individual man, came the time of "law and order," and the day of the "bad man," lapping well on to the present time. I saw a well-dressed and pleasant gentleman here the other day on the street talking with a smaller comrade. "Those two men killed Ben Thompson," said my companion. They did so because Ben Thompson, celebrated bad man, had served notice by telegraph that he was coming down to do a little personal killing on his own account. The story of how he and his friend King Fisher were killed in their little theater party here that night, by these certain citizens of sleepy old Santone, is too well known to need repetition.

You would not guess of violence to look at these hazy hills trembling in the warm sunlight, to feel the breath of the gentle airs which move so slowly and kindly across the face of the world, yet it is a bloody, fierce, volcanic little valley, this of the crooked San Antonio River. It is full of history, every foot of it, full of big associations, and full of big possibilities as well. It is the land of America to-day, and the next generation will see its final conquest, when the cactus is gone and the peach trees line the slopes, instead of the tortured mesquite and the gnarled pecan.

Never was a more anguished tree growth on earth than this of lower Texas. The shapes are always those of torture. It is the soul of the land crying out, the dumb language of the soil begging for the one boon of nature, water! All this land seems underlaid with water, too, as many artesian wells show more and more. Put water on this soil and it no longer cries out, its tree growth no longer exclaims in agony. The productive quality of this soil, when once it has the water upon it, is wonderful. A man of this town, at the edge of the corporation limits, has sunk one artesian well, which flows a vast stream of pure bluish-colored water. He has built a couple of big tanks, and has changed 250 acres of cactus into 250 acres of garden. He rents it at $23 per acre, and it cost him less than Illinois farm lands which bring $3 an acre. More and more men are sinking artesian wells at different points here and there, and a great many men are planting rice under the ditch system in eastern Texas. I notice a tremendous change in the landscape along the railways of the Southern Pacific system, all of which has taken place within the last five years, when I last saw this country. The wide, gray plains are becoming black and green under the plow.

Fortunes are being made quietly by a few of the big operators who planted ditch systems like that now going near Brownsville, under the scheme of a rice syndicate, but so far as northern standards are concerned, the face of the territory has not yet been more than touched. Chance friends along the railroad told me that the rice farmers clean up about $90 an acre, and they only work a little part of the year. Yesterday my friends began to plow their farm lands along the San Antonio Valley—in January, while all the North is shivering. Next month they will seed the ground, while Northern farmers are hauling sled loads of wood from the snow-laden forests. When the fields are being sown in the North, and the birds just beginning to sing in the trees and hedges, my friends will be cutting their first crops, and getting ready for two, three, four or five more in quick succession. I saw a man yesterday who last year raised forty tons of stock beets on one acre of irrigated ground. He fed all the beets to hogs. This man came from England four years ago. He is comfortable to-day. He had a thousand dollars capital, and no experience. He has bought his land, fenced it, put up a big pumping plant, made his living, bought more land and has $6,000 in bank to-day with which to buy some more hogs. Truck farmers sometimes take a little matter of four or five or six hundred dollars off of one acre of ground during a season, here under the sleepy sun of old Santone! It sounds like an emigration bureau, doesn't it? It is not. It is only comment on this wonderful land of American West, which seems ever ready with some new and startling sort of story.

Yesterday we saw, out in the country, a couple of Mexican families moving. Their squalor was unbelievable. Two rickety carts held their belongings, and some emaciated burros furnished the transportation. The families were afoot, and all had the silent look of patient poverty. They were moving across the face of a West that was. A bit farther on we saw some cowpunchers, or what seemed such, for they sat in cow saddles and wore chaparejos. Alas! they also wore blue jumpers, sign of a passing type; for one day the cowpuncher would have scorned a canvas jumper, even as he knew naught of wire. We drove on, and presently saw some barefoot children walking by the roadside, wearing the gay Mexican blanket about the shoulders. One or two of these children seem incongruously clad in this gaudy gear, since they were light-haired and blue-eyed, apparently of American breeding, although their little companions showed the brown blood of the Indian intermixture. "Those white ones are Castilians," said my friends. "They are poor as church mice, the proudest human beings alive." A half mile further and we saw a couple of Mexican men of the more common type, brown of skin, lean of figure, each staggering along under a back load of crooked mesquite firewood, and a head load of wide brimmed black hat with heavy corded band. It was perhaps the hat which made the heavier burden. Such a hat would cost its owner about ten dollars. It is to be doubted whether all the assets of both, outside the hat, would total so much as ten dollars.

So much for old associations in the valley of the sleepy San Antonio, where the Indios reducidos began the holy work of civilization. A half hour's ride brought us within sight of the yellow stucco walls of the new Carnegie library, sign manual of a swifter and yet more tawdry civilization. You have your choice, in this sleepy and sunny, mysterious and magical land of the sunshine. It is so different.

Lazy Days.

In such lazy days one does not care to go out and kill certain thousands of the wild creatures of the world. It is enough to watch, to ponder and to speculate. There are two classes of Northern folk who come here for the most part, the first made of persons who expect to kill a lot of game, the second of those who want to see something, they do not know exactly what. The former can, or could, easily be accommodated, the latter usually go away disappointed. San Antonio does not disclose all her charms at first de-

mand. You must wait, you must beseech, you must perchance implore. A great many tourists go away disgusted because the buildings here are of but one story, instead of twenty stories, as they are in Chicago. "Are not Arbana and Pharphar, rivers of Damascus, greater than this of San Antonio?" they say. Perhaps they are. Personally speaking, for this particular stage of the history of the world, all of our party seem content to let it go at that. As for the hunting, I must confess that, barring an innocent mudhen, which was easy, I have not shot a duck since I came here, and even refused to take a gun out for quail yesterday, when we went out to a ranch where those birds abound. The fields are alive with animal life, doves, larks, all manner of little singing, hopping, flying things, but we let them fly or sing or hop. The spell of sleep and sloth is too strong for us. Even Billy Kemp, down on the coast, writes that the duck flight has been very good, and that the first norther will probably mean big sport, does not seduce us to run down the road and investigate. Our trip to the coast, which was to have been to-morrow, is now to be next year. Let the ducks go this time. Perhaps, in another to-morrow, it may be otherwise.

The Moody Preserve.

I presume everybody has at one time or another heard of the famous canvasback farm of Mr. Moody, the Galveston banker, who runs an ostensible rice farm at Lake Surprise, 25 miles from Galveston. Attention is called anew to this prolific duck region by the doings there last week of a Chicago man, Mr. John W. Gates, and his friends. Mr. Gates was the guest of Mr. Moody on the preserve, and helped kill 400 ducks one day. One of Mr. Moody's market shooters —for it is well understood that he hires men to shoot ducks for the market for him—lately stated that one day not long ago 1,756 ducks were killed and shipped from this preserve, and that upon one other day 1,500 were killed and shipped. These are very large figures, but no doubt accurate. The rice farm is a myth, for Lake Surprise was never dry in the history of Texas, but the duck shooting is no myth. When I shot there with Stephenson and Griggs, before Mr. Moody took hold of the lake, only canvasbacks were killed. I do not know whether these large shipments were solely canvasbacks or not, but in any case the totals are very large.

Would Stop Duck Selling.

Lake Surprise and the Moody farm are not far from the city of Houston, and the doings on this water continue to excite the ire of many men of Houston. It is a secret, by this time more or less open, that a large petition has been raised in Houston, asking the State Legislature to stop the sale of ducks in Texas. This petition will be passed among many other cities of the State, and something definite may come of it. The recent heavy bags made by these Northern men has had much to do with this immediate action, which began within the past week.

Texas Invention.

We are accustomed to credit the ingenious Yankee with most of the inventive quality which has made America famous, but it is not well to overlook the South in certain lines. It was a Southern man, a generation ago, who began to make our first bait-casting reels. Now comes Dr. Coles, a man of Waco, with an invention in firearms which may startle the world of sport before long. In brief the Waco man has perfected an oval bore, small-bore rifle which is said to have about double the velocity of the Krag-Jorgensen. The inventor, in a personal letter received in this city, says that his invention covers a smooth bore, oval, with a greater diameter of about .35, and a lesser diameter ob about .31 The U. S. military experts are now experimenting with this arm, and until these tests are completed the inventor will not make fully public all the details.

Saving the Deer's Life.

I believe I have mentioned the pet deer Jerry, which is one of the prides of Col. O. Guessaz's household. Jerry is a tame deer, very tame, and as I have said, very omnivorous. Yesterday morning, as my friend and I sat on the gallery, we saw Jerry running about at the end of his rope, in evident distress. He was panting, choking and very much frightened, and it needed no veterinary's eye to discern that he was suffering from want of air. Running to him we cast loose his collar and sought to give him relief, all to no avail. He continued to pant and choke distressingly, and we did not expect to see him live more than a moment or so. I recalled seeing, a few moments before, a large raw potato lying on the lawn, and it occurred to me that perhaps Jerry had tried to swallow this and failed. I suggested this to Guessaz. "That's so," said that energetic individual, "that's what's the matter with him. Look here, I can feel it in his throat right now!" Sure enough, there did seem to be a sort of lump in the deer's neck, and we set to work to remove it soon as might be. Col. Guessaz tried to push the lump down, but it wouldn't go. "No use," said he; "it won't go. Now what'll I do? What'll my wife say to this? If Jerry dies I'll have to make the talk of my life to square things in this family, now you hear me. We got to get that lump out, that's all." So saying, he tried once more, the deer all the time trying to get away from the medical treatment. I suggested that if we couldn't get the lump down, we would better get it up. No use, none of us had a hand small enough to go far enough down the deer's throat, though we did our best. "I can almost reach it," said Guessaz, "but I'm shy about three inches. Now what'll we do?" There seemed nothing left to but crush the potato by the Lorenz process, from the outside, so that the deer could swallow the obstruction. Guessaz did his best, and he is not altogether weak in the hands, but at length was obliged to desist. "No use," he said, "that's the toughest potato I ever did see. I can't do a thing with it."

About this time Henry, the stable boy, a twelve-year-old, who was standing by during our operations, remarked casually and with apparent disinterestedness, "If you're trying to smash that little lump in Jerry's throat, I don't believe you kin do it. I b'lieve that lump's allus there."

It had not occurred to us that the epiglottis of a member of the deer family might be of use in its breathing operations. "That's his Adam's apple, I reckon," said Henry, calmly. I reckon it was, too. We didn't succeed in extracting the trachea of Jerry, or in getting him to swallow the same, perhaps; indeed, as I hope, did not even crush it up very much. A deer is built strange, if you are not used to such things. I am glad that we did not get Jerry's windpipe out, for like enough he needed it. In some strange way he managed to get well again, and we all concluded that he was just seized by some sudden deer panic, and had started to run without any special reason. "He often gits thataway," said Henry, the stable kid. "He pants mighty hard then." All of which is respectfully submitted for the benefit of those amateur veterinarians who may be called upon to operate upon tame deer which probably have not swallowed potatoes.

Speaking of Deer.

Speaking of deer, this region is still full of them. Our friend, Mr. Conrad Goeth, killed three fine bucks in one morning this fall, and then went home. He and a dozen others have a lease on a tract of land out at Government Cañon, some twenty miles away, where they get all the deer they want without much trouble. Old Captain Dosch, whose famous collection of deer antlers is known the country over, says that deer are not nearly so abundant as in his day, yet one should be able to kill a deer within 25 miles of town in season. Over at Uvalde, or at Cotulla, or on the head of the Guadalupe, one can get deer, turkeys, once in a while a javelina, and all the small birds he wants, not to mention the finest of bass fishing, on streams as clear and beautiful as any of our Northern trout streams. All this within 75 to 150 miles of this place. The Northern sportsman should not expect to get big shooting now right at San Antonio, but there is no better place as a headquarters point for a winter trip. If asked what is the proper outfit to bring along, I should answer, very little else than plenty of time. It is a peerless country for loafing, and the time does slip away so fast! To come here one should have a month in the clear. Then let him get a wagon and tram and start overland for the Guadalupe or the Nueces. He can have splendid sport in that way, and there is no healthier country in the world than this.

Mitchell's Lake.

A great deal of the duck shooting of the San Antonio men is done at Mitchell's Lake, about ten miles down the valley below the city. Mitchell's Lake is not a lake, but a wide and shallow surface pond, made by damming up the stream known as the Sewer Ditch, which originates in artesian wells in town. The title to this body of water seems always more or less in question, but there is no question as to the ducks, and after the happy fashion of this country, there is nearly always some sort of club which claims the lake and which is elastic as to shooting privileges. The present club does not know just how long its tenure will last, but hopes nothing serious may occur, and meantime goes on shooting. The daily limit is 30 birds to the gun, and usually there is no trouble in getting it. Mr. Goeth, one of the party who went down a few days ago, killed 16 ducks in a part of the day's shooting. Most of the birds are gadwalls, with a good sprinkling of sprigs, and a few bluewing teal. The customary method of shooting is to put on breast-high waders and wade out into the cover where the birds feed, the water there being just too deep for hip boots. Decoys are not necessary, and the only blind possible is a small and inconspicuous one, wherein the shooter, protected by his waders, sits down on a board or box submerged in the water, which thus comes up about his waist, and leaves little of his person visible to the passing fowl. Other shooters keep the ducks stirred up, and sometimes a Mexican is hired to ride about in the lake and fire a six shooter to keep the birds moving.

Blackbirds.

All the blackbirds in the world seem to have come to Texas this winter. They call them rice birds here, but they are really the crow blackbird. There seem to be millions of them. Last evening, as we drove near Mitchell's Lake toward sundown, we saw a continuous string of these birds more than two miles long, flying steadily in toward the marsh. They roost there every night, and there is no computing their numbers. The meadow larks go in flocks here, also, perhaps a couple of hundred in a flock sometimes, and the doves fly in big droves. There are two species of the dove, one our common mourning dove of the North, the other the Mexican dove or tortillita, a much smaller bird.

Michigan Wardens.

ONE phase of the discussion of the game laws in Michigan is brought to a close by the appointment of Charles H. Chapman, of Sault Ste. Marie, as game and fish warden of the State of Michigan. Mr. Chapman has been for some time Deputy Commisisoner of Railroads. Chase S. Osborne, the former effective game warden, as will be remembered, was a Sault Ste. Marie man and left the position of game warden to take that of Commissioner of Railroads. It is therefore obvious that Mr. Osborne and Mr. Chapman were personal friends, and it is much to be hoped that Mr. Chapman will share the enthusiasm of Mr. Osborne in game protection matters, and will make every use of the valuable information gained by Mr. Osborne in his long term of office as State warden. Mr. Charles E. Brewster, the able deputy under the Osborne and Morse administrations, remains in that capacity, and will, of course, be able to carry forward promptly all matters while the new warden is getting himself fully broken into the harness. It is to be hoped that Michigan will get a feasible set of fish and game laws and that the new administration will enforce them.

E. HOUGH.

HARPER BUILDING, Chicago, Ill.

The Plank for New York.

THERE is before the New York Legislature a bill to prohibit the sale of game birds. It was introduced into the Assembly by Mr. Ruehl, and provides a new section as follows:

Sec. 38a. Game Not to be Taken for Sale.—The birds mentioned in or specified in this article shall not be taken at any time within this State for the purpose of selling or offering the same for sale; nor shall a person sell or offer for sale any such birds taken within the State by him or any other person with his knowledge.

The birds embraced in the article include all the game species.

We ought to have in New York a law forbidding the sale of game birds wherever taken. If we cannot at this time have such a statute, by all means adopt this one. A similar law has worked with most gratifying results in Massachusetts and other States. The Ruehle measure will do the same for New York. It should have the support of every citizen who can make his influence felt at Albany.

THE COLD STORAGE CASE.

COURT OF APPEALS OF THE STATE OF NEW YORK.

The People of the State of New York, Plaintiff-Appellant-Respondent, against Jacob V. Bootman and Howard R. Robinson, Defendants-Appellants-Respondents.

Brief and Points for Plaintiff—Statement.

This action was commenced, by the service of a summons and complaint, on or about the 18th day of August, 1901, to recover penalties for the violation of certain provisions of the Forest, Fish and Game Law. The defendants demurred to the complaint and to each count of it. An amended complaint was served November 25, 1901, and to which the defendants demurred December 16, 1901. The grounds of demurrer is to the effect (fol. 70). 1. That the amended complaint, or any count of it, does not state facts sufficient to constitute a cause of action. 2. That the court has not jurisdiction of the subject of the action.

The issues of law thus raised were tried at a Special Term of the Supreme Court, First Department, and resulted in an interlocutory judgment, dated March 4, 1902 (fol. 85), overruling the demurrer as to counts from I. to XIII., both inclusive, and sustaining it as to the remaining six counts, from XIV. to XIX., both inclusive. Both parties appealed from this judgment to the Appellate Division, First Department (fols. 4-8), and the judgment was there affirmed (fol. 190). Both parties thereupon applied for and obtained leave to appeal to this court from that determination, and also for the certification of certain questions of law for review. And the following are the questions certified:

First. Do counts I. to XIII., both inclusive, of the amended complaint state facts sufficient to constitute a cause of action?

Second. Is the plaintiff entitled to maintain a civil action for the recovery of penalties under Section 39 of the Forest, Fish and Game Law, constituting Chapter 31 of the general laws of the State of New York, for the violation of any of the provisions of Article II. of said Act?

Third. Is the amended complaint defective because it is not therein alleged that the various birds for the possession of which the defendants are sought to be charged with penalties were taken or killed within the boundaries of the State of New York?

Fourth. Are facts sufficient to constitute a cause of action stated in counts numbered from XIV., to XIX., both inclusive, of the amended complaint, or in either of said counts?

Fifth. Can the defendants be made liable in this action under Section 33 of the Forest, Fish and Game Law, as amended by Chapter 91 of the laws of 1901, and Section 39 of said Act, by reason of the possession by them, as alleged in counts XIV. to XIX., both inclusive, of the amended complaint, of the birds described in said several counts?

Both parties have appealed to this Court from the determination of the questions so certified, and the appeals bring up for review these questions and no other. Code Civ. Proc., Sec. 190.

It is apparent that the principal if not the only question for determination is whether or not a civil action lies for the recovery of these penalties.

Point I.

The plaintiff is entitled to maintain a civil action for the recovery of penalties specified in Sec. 39, Article II. of the Forest, Fish and Game Law, for a violation of any of the provisions of that article. And counts I. to XIII., both inclusive, of the amended complaint are respectively sufficient in law.

This proposition is denied by the defendants, their contention being that no right of civil action is conferred by the statute for the recovery of such penalties. And that neither of these counts, therefore, contain a statement of facts sufficient to constitute a cause of action.

This Article II. (Sec. 20 to 39, both inclusive, of Chapter 20 of the laws of 1900, as amended by Chapter 91 of the laws of 1901) is devoted entirely to the protection of birds. So much of it as is applicable to the first 13 counts of the amended complaint reads as follows:

Sec. 20. Wildfowl, Close Season.—Ducks, geese, brant and swan shall not be taken or possessed from April thirteenth to August thirty-first, both inclusive; or taken in the night from an hour after sunset until an hour before sunrise. Ch. 91, L. 1901.

Sec. 22. Quail, Close Season.—The close season for quail shall be from December sixteenth to October thirty-first, both inclusive. There shall be no open season for quail in the counties of Genesee and Montgomery prior to the year 1903. Ch. 20, L. 1900.

Sec. 23. Woodcock, Close Season.—Woodcock shall not be taken from December sixteenth to August thirty-first, both inclusive. No person shall take more than thirty-six woodcock in an open season. *Id.*

Sec. 25. Grouse, Close Season.—The close season for grouse shall be from December sixteenth to August thirty-first, both inclusive. No person shall take more than sixty-six grouse in an open season. *Id.*

Sec. 28.—Woodcock, Grouse and Quail; not to be Possessed.—Woodcock, grouse and quail shall not be sold or possessed during the close season, except in the month of December, and possession or sale thereof during the last fifteen days of December shall be presumptive evidence that they were unlawfully taken by the possessor. *Id.*

Sec. 39. Penalties.—A person who violates any provision of this article is guilty of a misdemeanor, and is liable to a penalty of sixty dollars and to an additional penalty of twenty-five dollars for each bird taken or possessed in violation thereof. *Id.* Sec. 39.

Sec. 185. Actions for Penalties by the People.—Actions for penalties under this act shall be in the name of "the People of the State of New York"; and must be brought on the order of the chief game protector or of a commissioner. Special counsel may be employed and their compensation fixed by the commission. * * * *Id.*

The first thirteen counts of the amended complaint charged as many violations of the same provisions of the statute, Sec. 28, by the possession of grouse and quail. The IV. Count, however, charges a violation of Section 20 by the possession of ducks. They are the same in form, differing only as to the number and kind of birds possessed, and as to the time they were possessed. If any one of these counts be sufficient, therefore, the other twelve are sufficient also, and this discussion may be confined to the first count.

It is therein alleged, omitting the formal parts, "That heretofore, to wit, on the 23d day of May, 1901, at the said City and County of New York, the defendants, partners as aforesaid, unlawfully, willfully and knowingly possessed four hundred and ninety-six (496) grouse and two hundred and thirty-six (236) quail during the close season for said grouse and quail respectively, contrary to the form of the statute in such case made and provided. That by reason of the premises, the defendants then and there became liable to a penalty of Sixty dollars ($60), and to an additional penalty of Twenty-five dollars ($25) for each bird, grouse and quail, so possessed, to wit, the sum of eighteen thousand three hundred dollars ($18,300), and amounting in all to the sum of eighteen thousand three hundred and sixty dollars ($18,360). That thereafter, to wit, on the 6th day of July, 1901, at the State aforesaid, the chief game protector of the State of New York, duly ordered that this action be brought, and the same was and is brought on said order by the undersigned attorneys and counsellors at law, then duly retained and employed therefor."

It is thus seen that the cause of action is stated in the language of the statute. This is all that is necessary.

Cole vs. Jessup, 10 N. Y., 104.

It is believed that the amended complaint and each count of it is entirely sufficient in this respect. There has not hitherto been any contention to the contrary. The claim being, as to the first thirteen counts, that a criminal liability only is incurred by a violation of the provisions of article II.; that a civil action will not lie. This contention arises out of the defendants' construction of Section 39, the last section of that article, already quoted above, and repeated here as follows:

A person who violates any provision of this article is guilty of a misdemeanor, and is liable to a penalty of sixty dollars and to an additional penalty of twenty-five dollars for each bird or part of bird taken or possessed in violation thereof.

From this it is claimed that the penalties prescribed by this section are intended as punishment for the misdemeanor, and not to be recovered in a civil action. The language of this section does not suggest that construction, but the contrary. The intention of the Legislature is, of course, controlling.

"The intention, however, is to be sought for *in the language used.*"

Hudson Iron Co. Alger, 54 N. Y., 175.

The question arises, therefore, whether the Legislature intended, when it used the language *"is guilty of a misdemeanor, and is liable to a penalty,"* to impose both a criminal and civil liability, or the former only, for a violation of this law.

We take it that it was intended to make the offender liable to both forms of action, because:

1. This is the clear, literal import and meaning of the language used. The words, "a person who violates any provision of this article is guilty of a misdemeanor," prescribes in the shortest possible form and in the most explicit manner, that a specified act, the violation of any provision of this article, shall constitute a crime, a misdemeanor. And Section 192 of the same act prescribes that "A person convicted of a misdemeanor under this act shall, except as otherwise provided, be punished by a fine of not less than ten dollars or more than the amount of penalty recoverable in a civil action for the offence committed; or by imprisonment," etc. The criminal liability and the punishment are thus completely prescribed. But the Legislature did not stop here. To the words "is guilty of a misdemeanor" are added the other words *"and is liable to a penalty* of sixty dollars and to an additional penalty of twenty-five dollars for each bird taken or possessed in violation thereof." And whereby *another,* additional and civil liability is as clearly imposed as is the criminal. Or, as was stated by Mr. Justice O'Gorman, in passing upon this question at Special Term (fol. 73), "The expression *and is liable to a penalty,* etc., in Section 39 of the act, clearly means that, *in addition* to the criminal liability, the offender subjects himself to a civil action for the recovery of the penalty prescribed."

2. The language used in this section is rarely, if ever, used in prescribing the punishment for a misdemeanor or for any crime. Not a single statute is found in which the pecuniary punishment imposed for the commission of a crime is termed "a penalty," the word *"fine"* being invariably used, so far as we have been able to discover. While, on the other hand, the word *"penalty"* has been used with equal uniformity in statutes to denote the pecuniary liability recoverable in a civil action for their violation. . . .

And the Legislature that passed the act in question here was acquainted with this use of these words in imposing a criminal, as well as a civil liability, and employed them in the same way as every Legislature before it had done. For instance, it is provided by Section 16 of Article I., for the protection of deer, etc., that a person who violates that article is guilty of a misdemeanor, and in addition thereto is liable to a *penalty.* . . .

It cannot be said that the word *"fine"* has been so uniformly used to denote the punishment in a criminal action, and *"penalty"* the forfeiture recoverable in a civil action by mere chance or accident. Nor that the invariable use of these words in that connection has no significance. The use of either of them plainly signifies, points out and determines the character of the action, whether civil or criminal, in the absence, at least, of an expressed intention to the contrary. And such intention is not indicated here. It is therefore plainly apparent from the foregoing, only a comparatively few instances which might be cited, that the language *"is liable to a penalty,"* used in Section 39 in question is not the language of a criminal statute. *"Is guilty"* and *"shall be punished"* or *"is punishable by a fine,"* etc., being the language employed in such statutes.

It is, therefore, plain that the Legislature, when it prescribed by Section 39 in question, that a person who violates any provision of this article "is guilty of a misdemeanor, *and is liable to a penalty,"* intended that the offender should be punished as for a misdemeanor, and liable to a civil action also for the penalties therein prescribed.

3. The use of different language in other Sections of the Statute, constitutes the chief ground relied upon by the demurrants to show that a right of civil action is not conferred by Section 39.

Sec. 16, Art. I., for the protection of deer, etc., provides that a person who violates the provisions of that article "is guilty of a misdemeanor, *and in addition thereto* is liable as follows:" (specifying the penalties). . . .

The use of the words *in addition thereto* in the foregoing sections, and their omission from section 39 have given rise to the contention involved here.

While the words "in addition thereto" are used in Sections 16, 69 and 99, *supra,* the other form "is guilty of a misdemeanor, *and is liable to a penalty"* is employed in Sections 39, 119 and 139 of this same act.

But this proves nothing. It indicates nothing.

It merely shows that there are two ways at least of expressing the same thing or idea. The words "is guilty of a misdemeanor, *and is liable to a penalty"* express an intent as clearly to subject the offender to both forms of action as do the words "is guilty of a misdemeanor *and in addition thereto* is liable as follows," etc. . . .

Point II.

It is not necessary to allege in the complaint in an action under this statute that the birds were taken or killed within the boundaries of the State.

Further objection was taken to the amended complaint at Special Term on the ground that it does not appear that the birds mentioned therein were taken or killed within this State. The very recent decision of the Court of Appeals in the case of The People vs. Buffalo Fish Co., 164 N. Y., 93, brought under this same act, is conclusive upon this point, if indeed there was any ground for such a contention before that decision. O'Brien, J., rendering the opinion of the Court, said at page 99:

"The possession of the fish or game at the forbidden season, within this State, is *prima facie* evidence that the possessor has violated the law, and the burden is then cast upon him of proving facts to show that the possession is lawful."

There is no ground whatever for the contention upon demurrer that the plaintiffs should allege that the birds were taken or killed within the State. It cannot be claimed that the statute contains any proviso or exception to that effect. The simple statement of the fact that the defendants possessed the birds at a time when the statute prescribes that they shall not be possessed constitutes a violation of Article II. and a cause of action under sections 20 and 28 of that article. . . .

Point III.

This act is a general law, constituting Chapter 31 of the General Laws of this State, and it need not therefore be pleaded in the manner prescribed by Section 530 of the Code of Civil Procedure.

It was claimed also that the amended complaint is defective for failure to make specific reference to the statute. But this is not a local statute and no reference need be made to it in such case. . . .

Point IV.

Counts XIV. to XIX., both inclusive, respectfully state facts sufficient to constitute a cause of action. And the Court erred in sustaining the demurrer thereto.

These counts are based on Section 33 of the act in question, and which reads as follows:

Certain Wild Birds Protected.—Wild birds other than the English sparrow, crow, hawk, crane, raven, crow-blackbird, common blackbird, kingfisher, and birds for which there is no open season, shall not be taken or possessed at any time, dead or alive, except under the authority of a certificate issued under this act. No part of the plumage, skin or body of any bird protected by this section shall be sold or had in possession for sale.

These counts are the same in form, differing only as to the kind and number of birds possessed, and as to the time when they were possessed. Reference is, therefore, made to the fifteenth count as an example of all. And wherein it is alleged, omitting the formal parts, that the defendants on the 25th day of May, 1901, at the City and County of New York, "unlawfully, wilfully and knowingly possessed certain wild birds other than the English sparrow, crow, hawk, crane, raven, crow-blackbird, common blackbird, kingfisher, and birds for which there is no open season, to wit, 876 English snipe, 602 plover, 1,416 snow bunting and 96 snipe, contrary to the form of the statute in such case made and provided and without and not under the authority of any certificate issued under this act. . . . That by reason of the premises, the defendants then and there became liable to a penalty of $60 and to an additional penalty of $25 for each bird so possessed, to wit, the sum of $74,750, and amounting in all to the sum of $74,810. . . ."

No objection was taken to the amended complaint on this ground, or for its omission in any respect to follow the language of the statute. The ground urged against the sufficiency of these counts, and the one adopted by the Court at Special Term, and affirmed by the Appellate Division, is an alleged conflict between this section 33, quoted above, and section 30 of the same act which reads as follows:

Plover and Other Birds, Close Season.—The close season for Wilson (called English) snipe, yellow legs, plover, rail, mud-hen, gallinule, surf-birds, curlew, water-chicken, jack-snipe, bay-snipe or shore birds, shall be from May first to August thirty-first, both inclusive. (As amended by Ch. 91, of the Laws of 1901.)

From this it is claimed that *plover* and *snipe,* two of the species of birds mentioned in each of the last six counts of the amended complaint, have an open season. Or rather, that they have a close season, from May first to August thirty-first, and from which it is implied that they have an *open season* the remainder of the year. This section, as seen, does not in terms provide that these birds shall not be taken or possessed.

While Section 33 prescribes that "Wild birds other than the English sparrow * * * and birds for which there is *no open season,* shall not be taken or possessed at any time, * * *."

And it is, therefore, claimed that possession of plover and snipe having an *open season,* does not give rise to any cause of action under Section 33, which prohibits the possession of "birds for which there is *no open season* * * *." But this construction of the statute is too narrow.

1. The possession of two classes of birds is expressly prohibited by Sec. 33, to wit, (a) *wild birds;* and (b) *birds for which there is no open season.* It may be conceded, for the purpose of this argument, that plover and snipe, having an *open season,* are not protected by the clause prohibiting the possession of birds for which there is *no open season.* But it is prescribed that "WILD BIRDS" (other than certain birds excepted in Sec. 33) shall not be possessed. . . .

The only questions, therefore, are whether (1) plover and snipe are *wild birds;* and (2) other than those excepted by Sec. 33. And these questions are answered by a mere reference to the amended complaint. Both facts are distinctly alleged in each of these counts and admitted by the demurrer, to wit, that they are *wild birds,* and *"other than* English sparrow, etc." those excepted by Sec. 33. And the demurrer should be overruled as to this ground. . . .

Point V.

It being the paramount intention of the Legislature, as appears by both Sections 30 and 33, to protect the birds mentioned in Section 30, these sections should be reconciled so as to give effect to that intention.

It is not deemed necessary, as stated above, to reconcile the alleged inconsistency in this statute; and yet this may be done within settled rules of law. . . .

It is perfectly apparent [from authorities cited], and many others to the same effect which might be cited, that the alleged inconsistency between these sections can be and should be reconciled within settled principles of law. Thus, Section 30, which merely provides that *"the close season,"* for the birds therein mentioned, *"shall be from May first to August thirty-first,"* may be rejected altogether. Or the words *"and birds for which there is no open season"* may be stricken from Section 33. In either case the defendants would be liable under Section 39 for the possession of plover and snipe without the authority of a certificate, as *"wild birds"* other than those excepted by Section 33. . . .

Point VI.

Moreover the Court erred in sustaining the demurrer to counts XV. to XIX., both inclusive, of the amended complaint, independent of what may be said of the alleged conflict in the Statute as to plover and snipe.

Each of these counts, except the XIV., charge that the defendants possessed other *wild birds,* not mentioned in Section 30, and other than those excepted from Section 33. That is to say, it is alleged in the XIV. count that they possessed 1,416 snow buntings on the 25th day of May, 1901; in the XVI. count, 288 reed birds, and 1,152 snow buntings on the 28th day of May; in the XVII. count, 3,168 sand pipers on the 30th day of May; in the XVIII. count, 720 reed birds, 5,760 snow buntings and 1,439 sand pipers on the 31st day of May; and in the XIX. count that they possessed 3,000 sand pipers on the 1st day of June, all in that year.

There is no tenable ground upon which to claim any conflict between these sections as to birds mentioned in each of these five counts. They are neither mentioned in Section 30 nor specified by name in any other section of the act. They are, therefore, merely wild birds, other than the English sparrow, crow, hawk, etc., according to the allegations of the amended complaint, and which shall not be taken or possessed at any time, except under the authority of a certificate, as prescribed by Section 33. And it is alleged that the defendants possessed them without such authority. And these counts are therefore plainly sufficient without reference to the question as to plover and snipe.

It may be said, however, without reason, that a bird, in order to be protected by this section, must be both a *wild bird and a bird for which there is no open season.* And that since there is no other expressed provision of the statute that *wild birds* shall have no open season, snow bunting, reed birds and sand piper are not within both conditions of the statute. But the statute will not bear any such construction. . . .

It is therefore respectfully submitted:

(1) That a civil action lies to recover the penalties specified in Section 39 for a violation of any provision of Article II., Chapter 20, of the Laws of 1900 as amended for the possession by the defendants of grouse and quail and ducks as alleged in the first XIII. counts of the amended complaint.

(2) That plover and snipe (two of the kinds of birds mentioned in each of the other six counts) are *wild birds* within the letter, meaning and protection of Section 33, and that their possession by the defendants as alleged in the amended complaint was a violation of this article.

(3) That snow buntings, reed birds and sand pipers are *wild birds* within this section and that the last five counts of the complaint are good as to these birds whether plover and snipe are protected or not.

(4) That the several causes of action being stated in the language of the statute are respectively sufficient in law.

(5) That this is a general public statute, and no reference need be made to it in a pleading under it.

The Detroit Show.

This has been a gala week in Detroit for all lovers of outdoor life, be it afloat or ashore, speeding the highways or lazily reclining in a boat; for the hunter and angler alike. Nor have the men proven themselves the whole thing in the adaptation of the auto, gun, rifle or rod; the interest manifested in all these things by the gentle sex of Detroit proves only more conclusively than ever that the sweet environment of home can be taken with us afield, afloat or awheel. This, the second annual show of its kind here, was a success from the start. Each afternoon and evening increasing numbers of patrons appeared and reappeared until it became a fad. Tuesday night was "Society Night." That is, it was one of them. Society began doing the show Tuesday night and was still doing it when I left, notwithstanding the fact that each day and each night provided a different variety of indecent weather, and the streets a different hue of mud and slush.

Of automobiles a lot were shown under the management of Wm. E. Metzgar. All the way from "999," the fastest thing in the word, down to the pretty little fellow that you would like to keep in your den.

Under the management of Mr. Seneca G. Lewis, of The Fletcher Hardware Company, were gathered together many exhibits of the requisites for the forest and stream. As you entered the door you came face to face with a booth of Savage rifles under the guardianship of Mr. J. E. French, who at all waking hours worked his "demonstrator" to the 'coon-capped Canuck and Jefferson avenue resident alike, and a range of samples all the way from the squatter to the parlor ornament. Mr. French and the Savage rifle both made many new friends here.

Across the aisle to the left, Missionary Caldwell held matinees and evening performances with a handsome case of Winchesters. The popularity of the rifle and Mr. Caldwell in Detroit made it a busy corner. Then came representative William C. Beers on the scene, and the receptions increased. Many of Mr. Beers' old friends will miss him in his usual haunts, inasmuch as the Winchester Company have changed his territory somewhat, giving him Western Pennsylvania, Ohio, Michigan and Indiana, with headquarters and *heartfelt* interests at Erie.

Pushing through a well groomed crowd a bit further and becoming one of them yourself, you brought up at the Marlin stand, and the word passed through the group, "Why, there stands 'Buffalo Bill!'" The urchin at your elbow says: "Naw, you geezer! Bill haint never cut his hair that bad." The gentleman proved to be Mr. John D. Bethel, talking Marlin rifles as though he were a part of them. There were not chairs enough to go round at this exhibit.

In dodging past "999" when it was snorting and passing through tires of the great and little kind, a place of refuge was found at the headquarters of the U. M. C. Company's generous space. Here stood four pretty white columns ten feet apart, forming a square, and looped together at the top by a bunch of electric lights. These columns contained beautifully arranged samples of the U. M. C. output in the American trade line. This was presided over by Mr. John S. Cole, Jr., at all times, and Mr. Jim Head in the evenings. Everybody in Detroit is now wearing the U. M. C. button.

And then one came to the Hunter Arms Co.'s popular gun exhibit, under the supervision of Mr. Jos. Marks, whose able assistants explained to all comers the virtues of the L. C. Smith gun.

There was no busier man in Michigan than Capt. Jack Parker, between the management of the "big shoot at Grosse Point and the handling of the Peters Cartridge end at the show, besides caring for the Parker guns there. He must have needed the "rest cure" when it was all over. The Peters exhibit was very attractive and two assistants needed their eagle eye at all times to keep many pieces of this display in the building. The Parker guns attracted much attention; the quality shown warranted it. Then one came to the Lefever Arms Co.'s stand, and stood still in admiration. This attraction was in good hands; one could hear Lefever and get gun fever easily.

Drifting about among the launches and engines and boats and seeing the Hendrix reel and tackle exhibit, a wholesome desire to go fishing possessed one and a longing for the mild days of May and June stole over one, only to be chilled by an atmosphere outdoors that made one still willing to pay two prices for coal.

At this show were seen many new devices for speed on the road and on the water—electric, steam, gas, naphtha—to be applied to anything that will go. Boats of wood and boats of steel; big ones and little ones; canoes and paddles. Of the latter class The Detroit Boat and Oar Works, under the personal direction of Mr. J. N. Dodge himself, made the finest showing. The $100 gasoline launch also excited much interest.

In the office of Mr. Champion, the head of the dog show, was shown a collection of skins from Alaska, including a monster bear skin. Here Mr. Champion also showed his collection of skins, heads and birds. Under the galleries, all around the big armory, were tastefully displayed private collections of trophies of the hunt, Indian relics and blankets. Their art in basket weaving, looms, etc., was in evidence. Everybody helped everybody else in making the whole show a whole success. Under the inspiring guidance of Mr. Lewis, what at first was looked upon with doubt, has bloomed forth an exhibition for sportsmen worth much travel and money to see; and all lovers of the automobile are under obligations to Mr. Metzgar for getting together enough attractions to suit any hobby and contract many purses and speed one on through life at almost any old gait.

And then one came to the dogs—that is, if one didn't go there first—they were heard first, that's sure. While this bench show was not held under the auspices of the American Kennel Club, it lacked nothing in the way of quality or quantity, particularly in hunting dogs. The setter class was a very wholesome lot, with the pointers a close second. In Michigan and Canada they have raised the standard of the breeding of these dogs to a high degree, and many a family pet could go away and get honors if they could be spared long enough, or if their indulgent owners knew their excellent type, as was shown by Jessie W. winning. It was only by the earnest persuasion of Mr. James Glenn, of Grosse Point, that Mr. Webber, of Ionia, could be induced to let Jessie stop following his buggy long enough to take a bath and come to Detroit and secure first in everything. She reminds one of Prima Donna, only she is better, being better in a shorter coupling. A. J. Smith, of Detroit, showed seven youngsters of one litter and secured a first, second, third and a first with them, beside the combination prize.

W. B. Wells's Selkirk Simon deserved all he got and would have had more if it had been there to get. Geo. B. Abel's Nellie would show well in any company. Among the Irish setters there were many good ones, and taxed the judge to place them right.

Mr. John Davidson, that able veteran known to our own and an older generation, held court in the ring. No one questioned this sage's decisions or advised this lover of dogs and manly men, this breeder and handler of years agone, this Scotchman who is recalled by all the old ones, including Lewis, Titus, Avent and Waters. I found him in a reminiscent mood and after he had dealt kindly with these boys, he praised the dogs he had just judged and he proclaimed them a "bonnie lot."

On Thursday night was held what is termed the Annual "Convulsion" of the Exhibitors. It consists of chartering a big electric car with a seating capacity of fifty people and with a refrigerating plant in one end. They leave Detroit at the close of the show and go north thirty miles with the right of way and fair wind to a hotel, when a meal is served that can hardly be called dinner and neither can it lay claim to breakfast, the hour being inappropriate for either. However, it is a sumptuous meal at which the Jones gun man says the Brown gun is the best in the world, and the Brown rifle man says there is no rifle like the Jones. The rivalry of trade is forgotten, and every fellow wants to take care of the other fellow's work next day, while the other fellow gets some deserved rest. At two A. M. the toastmaster calls the full ones to order (the meal having been eaten), and the speeches begin—"The great and glorious city of Detroit, from its geographical location on this vast and wondrous continet of ours, stands in the fore rank of cities, as an industrial center reaching out by railroad and steamboat to the South and West and East and North, like arteries from a pulsating heart, gleams under a sun in its architectural beauty, a gateway to the Great Lakes and all the Canadas; its vast boulevards of magnificent residences, its fine public buildings and electric railroad lines, an incomparable summer atmosphere (in summer), the home of Pingree, Maybury and Gillman" and then—"We have been welcomed to this beautiful city of yours like the return of the prodigal son; you have done everything to please us and gratify us and all that belong to us; the spirit of you Detroiters to welcome us strangers is everywhere manifest—in the hotels and in electric lights on your buildings; bootblacks and white-winged waiters smile on us and we are at home;" and then—"Over this festive board of ours now cleaned down to the ribs, the sweetmeats of eloquence all devoured by those whose exhibit is bigger than mine, I want to say a word of my neighbor over there. Of this vast gathering of selected men from the centers of industries of our country, it is fair to presume that not all who are gathered here to-night will be here next year. Some may be gathered together elsewhere; others may become presidents of their concerns and hire someone else to sit up for them, but there is one among us who will retire to fields of clover by the commands of her who rules in a greater or less degree all our destinies. Will we miss him? Ah, yes. As I feel now the tears sneaking down my nose, we will miss him. Yes—Hello! No. 1313 Main. Are you on that wire yet?" "Yes; don't disturb me now. Mark Anthony is handling a friend of mine, and I want to hear the finish." "Can't help it. Your two hours are more than up and there is a call up there for a doctor." "Hello! Central, can't I get that wire for another hour? Hello!" "Hello! No. Wire's engaged."

By noon all were in their accustomed places of business, glad discoverers of the other fellow's eloquence and thankful that he was one of the bunch.

I was informed that more people attended the show the first two nights this week than during the whole week last year. This means that in another year the Light Guard Armory won't be big enough.

Detroit, Mich., Feb. 13. T. E. Batten.

Call Ducks.

New York, Feb. 11.—*Editor Forest and Stream:* I noticed in your issue of February 7, under heading "Call Ducks," an inquiry from M. T. where eggs of such ducks can be purchased. I asked an old duck hunter whether he had ever heard of such ducks, and he informed me that Mr. Elmer Austin—stationed in winter at Zachs Inlet Life Saving Station, Long Island, or at his residence, Amityville, L. I.—has such ducks, a cross between the mallard and black. By writing to him M. T. will likely get necessary information. G. A. Orth.

Waterlily, N. C., Feb. 10.—*Editor Forest and Stream:* I notice in your issue of the 7th, M. T. wishes to procure some call ducks—gray quackers I call them. I am glad to say I can furnish a limited number of eggs or the ducks and drakes if preferred. They are a cross between the mallard and ordinary mud duck, and almost a perfect imitation of the mallard. For mallard, black duck, widgeon and sprigtail shooting they are the best decoys I ever used. When "tied out" as decoys they are constantly calling at everything in sight—even to blackbirds.

R. B. White.

Wildfowl.

Stockton, Md., Feb. 3.—I have watched the movements of our wildfowl for years, and I often think that I have it down pretty close, yet every now and then they break away and do something very different to the law that I have laid down. The first week in January, with the weather moderate and plenty of feed, the fowl suddenly left, and that, too, in one day. There was no apparent cause for this, as the bay did not freeze over for at least ten days later. After it set in cold, a few ducks and brant stayed with us among the drifting ice. Now, last week it was as warm as spring, and up to Saturday hardly a duck to be seen. Monday the whole bay was alive with them, thousands and thousands, more than I have ever seen here at one time, and, something unusual with us, lots of canvasbacks among them. This week the shooting is fine, the fowl decoying well like fall birds. Now, where all these birds come from I cannot say. It is too early for the northern flight to move in such numbers, and there has been no storm below to drive them up, or if they were north of us there has been no storm to the north to drive them back. The movement is a mystery to me, as we never look for the biggest flight until the latter part of February. It may be we will have a warm spring, and the fowl are moving earlier; yet, even then, why should they come suddenly in such numbers?

O. D. Foulks.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in Forest and Stream.

Trolling for Bass.

Kalkaska, Mich., Feb. 11.—*Editor Forest and Stream:* The article "Trolling for Bass" in the last Forest and Stream fits me exactly; that I mention a few remarks.

Mr. Crugar is right in his conclusions about bait-casting for bass. I find, however, that it is a form of sport not generally understood. This part of the State boasts of excellent fishing of all kinds, yet in a town of 1,400 I am the only bait-caster. My method caused considerable excitement a few years ago, when I caught large bass from a lake close to town that was supposed to have been fished (or speared) dry.

As I have done as much "thumbing the line" as the average enthusiast I am firmly of the opinion that this method of fishing for bass cannot be beaten. For speckled trout, of course, flies should be used, and often bass, especially the small mouth variety, may be taken with flies. For the following reasons I prefer casting for bass with artificial baits:

1. It is more sportsmanlike to deftly cast a spoon or frog fifty to seventy feet and hook your fish in some out-of-the-way corner than it is to impale a minnow on a hook and wait for a bite. The modern sportsman uses skill in fishing or shooting and has no dealings with the game or fish hog.

2. It is more economical; especially if one has to buy minnows and frogs of the small boy or dealer. The caster's outfit of rod, reel, line, net and a few baits will cost less than all the paraphernalia of the bait fisherman.

3. It is more successful; your fish will average larger, and although at times you will not get a long string, you will get sufficient to reward your patience and skill. The big fish is what we are all after, and the caster gets them if anyone does.

4. You are always ready for the lake or river. There is no searching here, there and everywhere for hooks and sinkers and buckets and anchors. You take your rod and tackle box from your cabinet and you are ready for the companion—that *sine qua non* for a good outing.

5. It lessens the tendency to pot-fishing. You get interested in the art of casting, such fishing requires skill and practice; soon half your pleasure is in putting the baits, and you are content to leave a few fish for another day.

A few hints to those who may wish to try this method of fishing for bass may be useful. Get the best outfit your purse allows, and it is cheaper in the end and more satisfactory. A rod need not be over six feet in length; this is the best average length; the weight about six ounces; a good quadruple, free running reel made especially for casting and holding 60 or 80 yards of line; the line should be of silk and made expressly for this kind of work; a landing net and a few good baits will complete the outfit. My own favorite baits are a bucktail with one 4/0 hook attached to small spoon, an artificial frog with two good hooks, a Payson weedless casting hook. There are hundreds of other baits on the market, but they are not necessary. Wm. Childs.

Artificial Salmon Culture in America

Editor Forest and Stream:

In your issue for 7th inst., Mr. R. B. Marston, editor of the Fishing Gazette, of London, England, asks for some authentic information as to the results of artificial Salmon culture in America. He states that certain Scientific gentlemen in England deny that Salmon culture, by means of Hatching-houses, has been a success anywhere, so far as stocking rivers with fish or increasing the catch is concerned. These scientific gentlemen, he informs us, being convinced that the only success achieved in America, as in Europe, has been in collecting ova, hatching out fry, and planting millions of young Salmon at enormous expense, from which no practical results have been obtained, are using their influence to prevent any more of the public funds being wasted in chasing rainbows, and he wants some authentic information that will enable him to combat the statements of these gentlemen who have looked for fish and found only oodles of ova and figures of fry. If Mr. Marston will take the trouble to examine the words and figures found in the Government Reports of Canada since Fish-culture was made a Public Work—which Reports he will find in the Canadian High Commissioner's office in London—he will, if an honest man, side with the Scientific gentlemen and lend them his aid to prevent any further waste of public money.

In his Report on Salmon-culture for the year 1881, after 13 years' costly experiments with Government money, Mr. Samuel Wilmot, late Superintendent of Fish-culture in Canada, confessed to total failure, so far as Ontario was concerned, and gave up hatching any more Salmon or Trout ova in the Ontario house. His words are given *verbatim et literatim* in your last issue in Part VII. of my Reminiscences. After eight years' costly operations in the Hatching-houce on Dunk River, P. E. Island, in the Gulf of St. Lawrence, and the planting of over 6,000,000 young Salmon in the rivers of that island, the result was total failure and the house has rotted down since it was abandoned in 1887. Salmon are no longer quoted in the fisheries statistics of the island.

The Departmental Report for 1874 (the year the Hatching-houses were built) shows that the Salmon catch in New Brunswick waters was 3,214,182 pounds. In 1901, the last year for which the figures are given, the catch had fallen to 1,235,350 pounds, and yet in the years between

1874 and 1901 there were planted in New Brunswick waters 120,578,000 young Salmon, the result of which was 45 per cent. less fish caught.

The catch in Nova Scotia in the year the Hatching-houses were built was 1,758,818 pounds. In 1901 the catch had fallen to 557,802 pounds, and yet, in the intervening years, 80,827,500 young Salmon were planted in Nova Scotia waters, with the result that 55 per cent. less fish were caught. This has been the result of 30 years' culture of *Salmo salar* in Canada, where the "Science" has been pursued as a Government Work. I think Mr. Marston will admit that the authorized Reports of the Department of Fisheries give "authentic information."

Let us now see, from the same authentic sources, what results have attended the artificial culture of *Salmo coregonus*. In the year 1875, when the Sandwich Whitefish Hatchery was built, the catch of Whitefish is given in the Report of that year as 5,114,600 pounds. The Report for 1901 gives the catch as 2,711,258 pounds—but little more than one-half, after 26 years' artificial culture on a gigantic scale and at enormous expense, with Steam Engines and "Glass Incubators." In the interim between 1875 and 1901 the Report tells us that 1,282,500,000 young Whitefish have been planted in Ontario waters. The hatching of *fontinalis* has virtually been abandoned in all the hatcheries—only 35,000 having been hatched in 1901.

Not having the Reports of the United States Fish Commission to quote from, the writer can only state that, as far as he has been able to learn, not a single adult Pacific Salmon has been taken from any waters in which millions have been planted since 1872, when Mr. Livingston Stone sent his first shipment of eyed-ova from McCloud River to the United States Fish Commission. Nor has he ever read or heard of an adult Atlantic Salmon having been taken from any deserted river in which the Commissioners have planted thousands of young fish in the hope of restoring it to its former opulence as a Salmon river. He is credibly informed by those best qualified to know, that not a single Salmon has ever been taken from any water in which Seth Green planted all the hundreds of thousands of fry which he hatched out. He has read, however, and conversed with American gentlemen, and the sum of his information at present is that every pound of Trout taken from streams and lakes in which they were not indigenous, has cost the planter from $2 to $5. He reads, also, that Black Bass have been a grand success in clearing Brook trout out of all waters in which they have been planted, and he reads, in your columns, that the nasty German Carp, for which there was a craze among fish-culturists 15 or 20 years ago, has proved an intolerable nuisance in all waters where better fish have their habitat.

If the writer has made any misstatement regarding Salmon Culture in the United States, he will be much indebted for any authenticated correction. As to Canada, his facts and figures rest on the Public Records.

THE OLD ANGLER.

Anglers' Tournament.

THE Anglers' Casting Tournament to be held during the Sportsmen's Exposition at the Madison Square Garden is of great interest to all anglers.

The rules governing the contest, which we printed last week, have been drawn with great care, and seem to provide for all contingencies. A provision which will do much to protect American records is found in Rule 8, where it is stated in substance that the stand for the caster shall be a platform not more than 18 inches above the surface of the water. The best of the American casting was done from a platform far above the water's surface, which, of course, would give the angler a greater range.

It has no doubt been noticed that the names of two well-known fly-casters, the Messrs. Hewitt, are absent from the list of the tournament committee. This absence is due to the death of their father, the late Abram S. Hewitt, one of the greatest men this city has ever given birth to, and one whose place cannot be filled.

Most of the twenty-five events which are to occupy the two weeks of the contests are ordinary fly and bait casting for a distance or accuracy. Class P., however, dry fly-catsing for accuracy, is new to this country, although more or less popular on the other side of the ocean. The flies to be used in this event are to be furnished by the committee. Dry fly-fishing, although more or less has been heard about it, is still little practiced in this country, and many anglers will be interested to see the work done at the tournament with dry flies.

Class V, single handed bait-casting for distance only, is to be made with a particularly light lure, weighing only one quarter of an ounce, which will be furnished by the committee. This will be interesting on account of the very unusual lightness of the lure to be cast. It is to be noticed that the announcement of Class V closes with a line and a half of type apparently referring to accuracy. This should be omitted, and the announcement should end with the words "will not be scored."

It is hoped that a number of fly-casters from Chicago and at least one from San Francisco may be present, to take part in the tournament.

A Big Muscallonge.

UNDER date of Feb. 11, a Jamestown (N. Y.) correspondent writes to the Erie Times: All local records were broken Monday evening when A. A. Walker, a well-known business man of this city, who is also one of the most enthusiastic fishermen around Chautauqua Lake, brought home with him a muscallonge which tipped the scales at 51 pounds.

The fish is undoubtedly the largest one ever taken from Chautauqua Lake, and if the records show any larger muscallonge—that is of the thoroughbred type, such as the Chautauqua Lake fish are universally acknowledged to be—caught in any waters, the fact is not known in this city.

Mr. Walker's fish has attracted universal attention in this city, where it has been on exhibition, and every fisherman, everyone here who is familiar with the fish and the fish history of Chautauqua Lake, acknowledges it to be the largest of its kind ever taken from these waters.

This one was captured near Bemus Point, late in the afternoon. Mr. Walker had sat in his fish coop from early morning until nearly four o'clock without seeing a fin. He had used all the arts of the skilled fishermen in handling decoys in hopes of attracting a fish without avail until that time, and was about to give up the effort for the day when suddenly a dark object appeared in the muddy water below. The water was so roily that it looked like a large piece of log slowly floating past. Hardly knowing whether it was really a fish or not, Mr. Walker threw his spear; it struck the monster fair in the center of the back; there was a splashing and churning of the water. The gaff hook followed quickly after the spear and within 60 seconds the largest fish ever taken from Lake Chautauqua alive was floundering on the ice beside the lucky fisherman's coop.

When the big fish was opened there was found in its stomach another muscallonge, which had just begun to digest, that when weighed tipped the scales at 5 pounds.

The Kennel.

Fixtures.

Feb. 18-21.—Newark, N. J.—Show of New Jersey Kennel Association. C. G. Hopton, See'y.
Feb. 20-21.—Denver, Colo.—Bench show of Colorado Kennel Club.
Feb. 23-26.—Boston, Mass.—New England Kennel Club's nineteenth annual show. W. B. Emery, Sec'y.
March 4-7.—Pittsburg, Pa.—Show of Duquesne Kennel Club, of Western Pennsylvania.
March 10-13.—Rochester, N. Y.—Show of Rochester Kennel Club.
March 12-14.—Coshocton, O.—Show of Coshocton Kennel Club.
March 17-20.—Uhrichsville, O.—Show of Twin City Kennel Club.
March 25-28.—Chicago.—Show of Chicago Kennel Club.
March 30-31.—St. Louis.—Show of St. Louis Collie Club.
March 31-April 3.—Buffalo, N. Y.—Show of Buffalo Kennel Club.
April 1-4.—New Orleans, La.—Show of Southwestern Kennel Club.
April 1-4.—Victoria, B. C.—Show of Victoria Kennel Club.
April 8-11.—Atlantic City, N. J.—Show of Atlantic City Kennel Club.
May 29-30.—Hempstead, L. I.—Open air show of Ladies' Kennel Association of America.
Nov. 3-6.—New York.—Annual show of Ladies' Kennel Association of America.

New York Dog Show.

THE New York dog show this year was great of its kind, as are all New York dog shows of the Westminster Kennel Club. It had a large number of entries, 1,650, as shown by the catalogue. The quality of the dogs was of a high order. Mr. James Mortimer superintended the show, which is equivalent to saying that everything was managed to perfection. Mr. William Tallman, Brooklyn, judged all setters. Mr. G. Muss-Arnolt, Tuckahoe, N. Y., judged pointers.

Pointers were quite a good lot, as a whole. There was a prevalent opinion among sportsmen that they were much better in quality than those exhibited in previous New York shows for many years past. There were three dog puppies, of which Yankee Banner won first prize. Novice dogs was a large class, 28 in all. First went to Westlake Chancellor, a good dog, but not in the first class, being rather heavy in head and shoulders, and he was not free from throatiness. Spunk's Duke, second, was faulty in head, being wide in skull. He showed some throatiness and was narrow in muzzle. Top Notch Staghorn, third, is a well made pointer, though he has thin feet. Limit dogs under 55 pounds numbered six. Young Lynn, first, is a substantially built dog, possessing a well shaped head, a well-ribbed body, and good legs. Second was won by Mason King, well made in body, quarters, legs; muzzle sharp. In limit dogs, 55 pounds and over, first was won by Mark's Rush, a well made pointer, though he was flatter in ribs than was desirable. Second went to Fair Acre Standard, a muscular dog of good form. In open dogs under 55 pounds, Duke of York was first. He is a large dog, and was shown in the pink of condition. He is well built, and possesses a deal of good pointer quality. Mark's Rush was second, and Fair Acre Standard was third. Both were winners in other classes. The winners' class for dogs was won by Duke of York and Mark's Rush. Mason's Luciel, quite a good bitch, was first in bitch puppies. There were thirteen novice bitches. Vesta of Kent was first. She is a very fine bitch, but was heavy in whelp and did not show in her best form as a consequence. Fair Acre Duchess was second. She is a symmetrical, well made bitch. King's Daughter II. won third. She is somewhat light in head; good otherwise. Limit bitches, under 50 pounds, six contestants, was won by Fair Acre Lucill. Second went to Fair Acre Pauline, light in muzzle; substantially built, and fairly symmetrical. Miss Westlake won third. Limit bitches, 50 pounds and over, was won by Westlake Surprise, a symmetrical, well made bitch, a shade light in bone. Bitches under 50 pounds, open class, was won by Westlake Ornament, an excellent, all-round bitch, symmetrical and substantial form. Open class, under 50 pounds, bitches, had four entries. First was won by Princess Alice, well shaped in head and neck, sound and well made generally. Winners' bitches was won by Westlake Surprise. Princess Alice, reserve. There were seven in the field trial class. Top Notch Launcelot was first; excepting a slight coarseness in head, he is fairly well made. Of the 77 entries, of which a few were absent, nearly every one received a prize or letters. Vhc.'s, hc.'s and c.'s were never shovelled out more bounteously, nor did they ever seem to be cheaper.

English setters were an excellent exhibit, taken as a whole. There were 29 novice dogs. Mallwyd Joe, first, is symmetrical and well made. Leather Breeches, second, is flat in ribs. Limit dogs was a good class, 16 in all. Ruinney Racket, first, is strong and well made, though not so finely turned as his kennel companion, Sirdar. Bracken O'Leck was second. He is quite a well built dog. Third went to Leather Breeches. Open dogs had 11 entries. Mallwyd Sirdar, first, is a dog of rare excellence. He is an up-standing, muscular and symmetrical fellow, and can successfully stand the most minute and critical scrutiny. Ruinney Racket was second. Ulverstone Rap, third, is about ordinary in quality. Sirdar and Ruinney Racket were first and second in the winners' class. Novice bitches numbered 13, and Kalmia Doll, first, Cole's Fairy Queen and Mac's True Blue were the winners. There were ten limit bitches, and first was won by Mallwyd Meg; second by Madcap, and third by Fan O'Leck, the latter trimly and symmetrically built. Open class bitches had eight entries. Mallwyd Queen, rather narrow in head, otherwise very sound and well built, was easily first. Mallwyd Meg and Madcap were second and third. Nellie Byers, Sport Solomon and Albert's Patch were one, two, three in the field trial class.

Irish setters were a good lot. Lord Rutland and Tim M. were first and second in puppies, and were the only contestants in the class. Novice dogs had six. MacLaren was first, Dandy Rockwood was second; he is coarse in head; is fairly well made. Shandon Tim, third, is throaty, fair in head, yet is about an average bench show winner of third. Limit dogs was won by St. Elvan, flat in ribs; head good, but not clean cut, not first rate in pasterns; head ordinarily good. Royal Grand, second, excelled the winner in every way, as did Duke of Gloucester, third. The latter is quite a good dog. In open dogs, Rockwood, Jr., was first, Longwood Link second and St. Elvan third. Rockwood was also first in winners' class; Link, reserve. Shandon Rose and Jessamine were first and second in novice bitches. There were four in the limit class for bitches, and Goldreme, a bitch light in build and badly out of coat, won first. St. Lambert Kathleen and St. Lambert Mollie were second and third. Open class bitches was won by Goldreme; Sig's Girl, second; St. Lambert Kathleen, third. Goldreme and Sig's Girl were first and reserve in the winners' class.

Gordon setters were few in number, fourteen in all. In novice dogs and bitches Ned S., coarse, yet having a certain symmetry, was first; Peter A., slack in loin, coarse head, light barrel, was second. There were five limit dogs and bitches. Elcho Clinton II. first, was a fairly good specimen; Heather Crack, second, was bad in shoulders and elbows; Florence, third, was not in good condition. There were three in the open dog class, Teddy A., Heather Crack, and Rex V., first, second and third. Teddy was throaty, straight in shoulders and stifles; ordinary generally. In the open bitch class, Lansdowne Nellie was first. She is cow-hocked, and ordinary. Winona Clinton, plain in head, surpassed the winner in many qualities. Florence, already mentioned, was third. In the winners' class Elcho Clinton II. was first; Ned S. was reserve.

Yachting.

Prize Winners in Cruising Competition.

WE are able this week to announce the winners in the cruising competition. Mr. Theodore C. Zerega, who judged the contest, spent much time in going over the stories submitted, and as all of them are to be published, those who competed will have a chance to decide for themselves how fairly the awards were made.

The list of prize winners follows:

First prize, $50, "The Cruise of the Tainui," by L. E. Marsh, Toronto, Canada.

Second prize, $30, "The Cruise of the Rambler," by William B. Cook, Denver, Colorado.

Third prize, $20, "A Charity Cruise," by William Lambert Barnard, Boston, Mass.

Special prize offered by Mr. T. C. Zerega, $10, "The Cruise of the Yacht Delight," by H. P. Vicborn, Wyandotte, Michigan.

When Mr. Zerega returned the cruises to us they were accompanied by a very interesting letter, which contains several good suggestions, and we take the liberty of publishing it in full. It reads as follows:

Editor Forest and Stream:

The stories have been awarded points in the following manner:

First for Seamanship.

Second for Pilotage (that is, for knowledge shown of waters sailed in and information given that would assist others when sailing over the same waters).

Third for Diction.

Fourth for Interest.

Fifth for Chart.

Sixth for Photographs.

Each of these qualities have been marked from 10 to 1 points, according to excellence and the total carried out. "The Cruise of the Tainui," by L. E. Marsh, having the largest total points, has been awarded First Prize.

The "Cruise of the Rambler," by William B. Cook, has been awarded Second Prize.

"A Charity Cruise," by William Lambert Barnard, has been awarded Third Prize.

"The Cruise of the Yacht Delight" is such a very plucky one, particularly the long sail from Mackinac to Port Huron, that in addition to Honorable Mention, I beg you will permit me to present a judge's prize of ten dollars to the writer.

"Some Cruises in the Lapwing" are very interestingly described and deserve Honorable Mention, also. The vessel is a very small one to have successfully covered the coast from Peniquid, Maine, to New Haven, Conn., and the pilotage hints given will be valuable to other owners of small yachts who are hardy enough to follow in her wake.

Among the other cruises submitted, "The Annual Cruise of the Goodenough," may be mentioned. It is accompanied by a very large number (97 in all) of photographs mainly of fishing incidents on the eastern shore of Lake Superior, which would doubtless interest many of your readers.

The stories with few exceptions are disfigured by the too free use of slang, and coined or local, but not correct nautical expressions. Slang when spoken may be expressive, but when seen in print reads very flat and spoils what might be in other respects a well written article.

There are also correct orders for the performance of every evolution connected with the handling of a yacht or vessel. These orders and no others should be used.

The writer has had the good fortune to sail on many yachts and has been very much struck by the great difference in the discipline on board of them. On some, where the orders were given in a careless manner, almost never twice in the same words for a given evolution, the discipline was lax and a certain slackness about the whole vessel was very much in evidence. On others, one in particular, a well-known schooner of the New York Y. C., the orders are given in correct nautical terms. The discipline is perfect, the work quickly and smoothly done, and the vessel is known as a happy ship. This is no doubt due in part, at least, to the early training as a naval officer of the owner, who is also the captain.

I therefore suggest that in future contests you make it known to the competitors that the use of slang or incorrect nautical expressions will count against them in the marking. There are various nautical dictionaries that may be consulted, or, better still, there are many naval and ex-naval men in most localities who would be glad to coach the young sailors in the use of proper nautical terms.

THEODORE C. ZEREGA.

NICE, France, Jan. 28.

We regret that Mr. Zerega's letter was received after we had announced the cruising competition for canoeists, otherwise we would have incorporated in the conditions the suggestion he makes about the use of slang and incorrect nautical expressions. We hope, however, that all our subscribers will read Mr. Zerega's letter with care, for there are few yachtsmen who cannot profit by his valuable suggestions.

The steam yacht Noma, designed by Messrs. Tams, Lemoine and Crane, and built by the Burlee Dry Dock Company, Port Richmond, Staten Island, for Mr. William B. Leeds, was given her official trial trip on February 12. The course was from Scotland Lightship to Fire Island and return. Her contract called for a speed of 18 knots, but on the trial she developed 20½ knots. The owner, his wife and some guests will leave New York in Noma about March 15 for a nine months' cruise around the world.

Figureheads and Quarterboards.

BY CHARLES G. DAVIS.

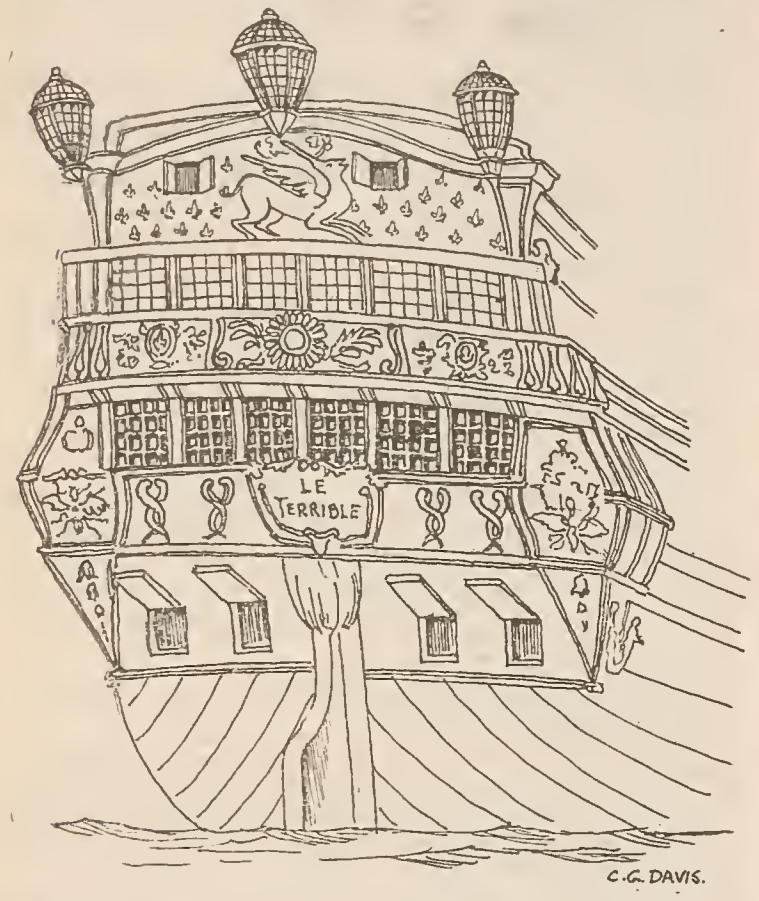
In ancient times sailors used to paint eyes on the bows of their boats, being superstitious enough to believe that the boat could then see her way safely home when storms drove them off shore out of sight of land or when night prevented human eyes from seeing the land.

Some put images of the saints on the stem or head, as the forward part of the boats were called, and imagined to that little wooden saint was due all the credit of safely arriving in their home port when storms beset them.

In times of real peril they would fall on their knees and pray to the little wooden god, whose painted eyes stared steadily ahead, no matter how fierce the storm, to bring them safely home.

Through ages the idea that the bow of a vessel is the head and entitled to due respect has survived, and while no modern sailor would think of praying to the wooden images of Stonewall Jackson or like figures that adorned the stems of modern clippers named after such notorious men as Jackson and others, yet the shipbuilder, up to a few years ago, would not think of sending out a ship without this eye-pleasing relic of barbarism.

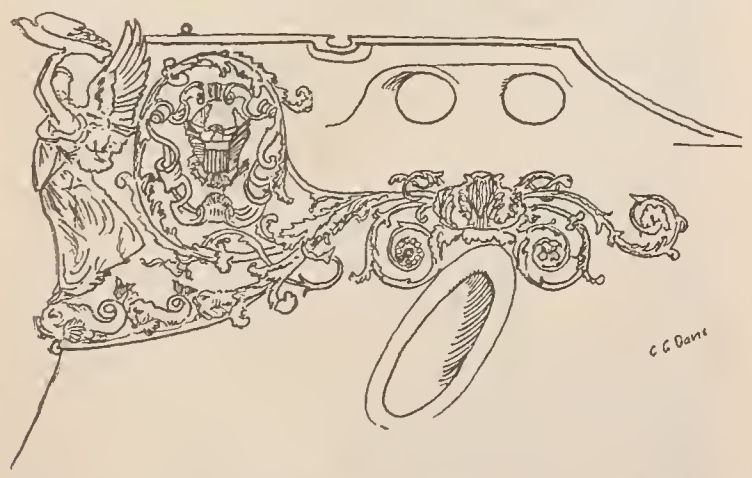
Styles of ornaments changed with the times, and while ships, like the Great Harry and La Terrible had frills



and scrollwork enough around the bow to load a sloop with and three or four balconies and rows of glass windows with coats of arms and gilt scrolls galore around the stern, we now have four-masted steel ships with practically no scroll work or anything to relieve the barren black sides but a small name and hailing port in white or gold.

Foreign shipbuilders clung to the carved images of women, cherubs and men as a figurehead long after the American builders discarded all but floral scrolls.

A number of years ago I made quite a study of the figureheads on ships, and it was then I noticed that American ships used but few images, while I got many a good



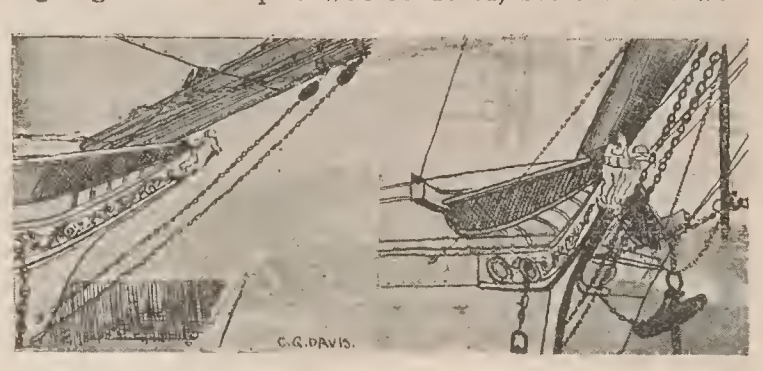
photograph of English, Danish, Spanish and Norwegian ships with figures of women, etc. One old Danish bark in particular I remember had the images of Raphael's cherubs with their elbows leaning on the stock of an anchor.

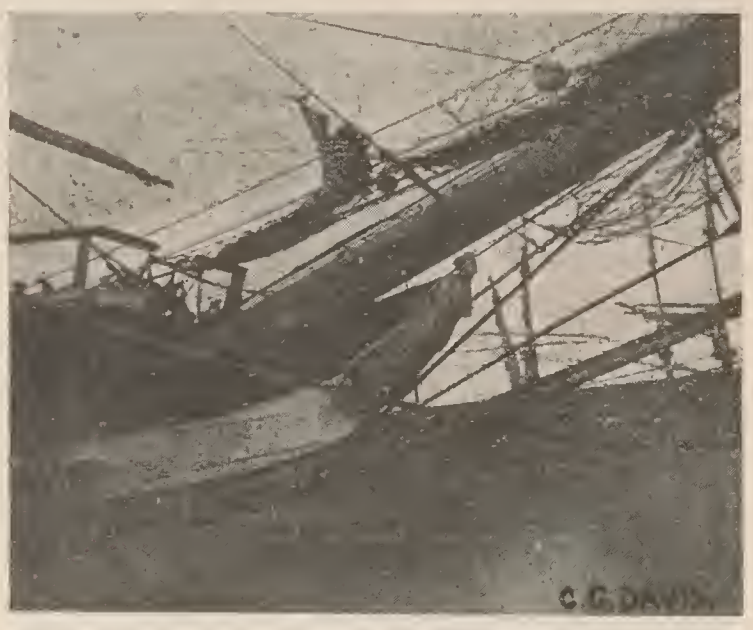
With yachts the ornamenting of the bows in an appropriate and at the same time artistic manner is a much more difficult problem.

The Aphrodite, for instance, a photo of whose head

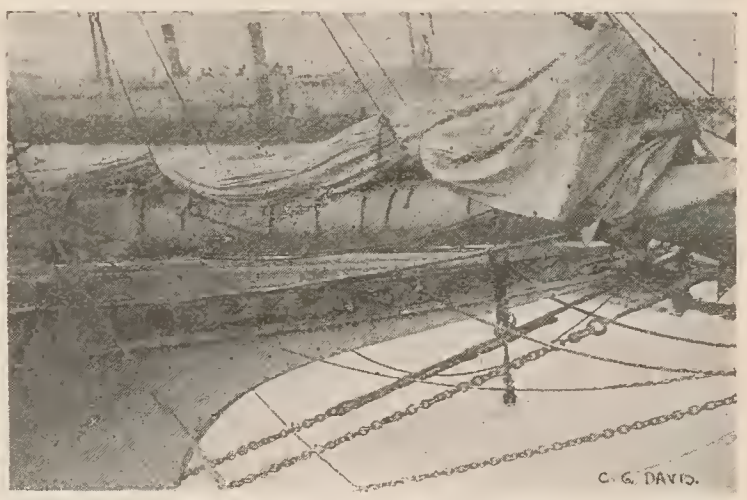
is reproduced here, seems to be rather overdone. The figure of the woman is too far out on the stem and the pose is not as graceful as the women shown on the ships' bows in the smaller photos.

The other photo shows the stem of a Chesapeake Bucky eye yacht that I ran across at South Brooklyn. The flying eagle on the tip is well rendered, but the vine work





following should trail as if flowing from the for'd end; as they are they appear curling up against the wind.



The three flying ducks, portrait of the owner and his private signal are a bit of personal conceit, yet the whole is so well rendered as to leave a pleasing impression after all. The page of numbered sketches are part of a collection extending over some twelve years. I have in my possession a box nick-named my bank that I have had since I was a school boy, and that contains hundreds of little sketches, nine-tenths of which pertain to boats and yachts. These scrolls are culled from the bank:

No. 1. Is the trail boards on the bow of the schooner yacht Shamrock. We were on the old cutter Pelican on a cruise to Marion, Mass., from City Island and stopped for a few days at New London, when the schooner came in and anchored near us. The Shamrock originally was a sloop designed by J. Rogers Maxwell with some assistance from Mr. H. C. Wintringham, naval architect, and built by Mumm at Bay Ridge in 1887. She was altered to a schooner in 1892.

The scroll is symbolic of her name, with its Irish harp surrounded with sprays of shamrock forming the main ornament in the scroll.

No. 2. Is a chance sketch that I ran across on City Island of an old delapidated smack, whose head, however, has been preserved, though the rest of the hull is badly stove up.

There is no gilded scroll work here; the chicken's head was sawed out of an inch plank and two big white eyes with black dots in the center gave sight and therefore intelligence to this homely craft.

No. 3. Is the bow of the steel American-built steam yacht El Reba, designed by the firm of Tams & Lemoine, yacht designers and brokers. The shield and tip end make a very pretty profile followed by a trailing scroll that harmonizes nicely.

No. 4. Her stern only has a dolphin to relieve the plain ribband line. Her stern is principally remarkable for the double cheek appearance caused by the outer buttock lines being lower than the center line of the stern.

No. 5. I sketched at the yard of Frank Wood, on City Island, and shows some of "Charlie" Brown's famous carving. Figurehead carving is his business. This specimen was carved on the bow of the sloop yacht Manito, designed by Wm. Gardner for Mr. Charlie Loundes, of Charleston, S. C., who died, poor fellow, soon after the yacht was taken south. Her gold stripe line ended forward in a spear head. It illustrates cutting its way ahead, while aft No. 6 trailed out in a series of leaves.

The sterns in nearly all of these sketches were drawn as I stood below them looking up, which will explain the shape in which they appear to the eye.

No. 7. Is a very simple scroll that was on a model in a designer's office where I once worked.

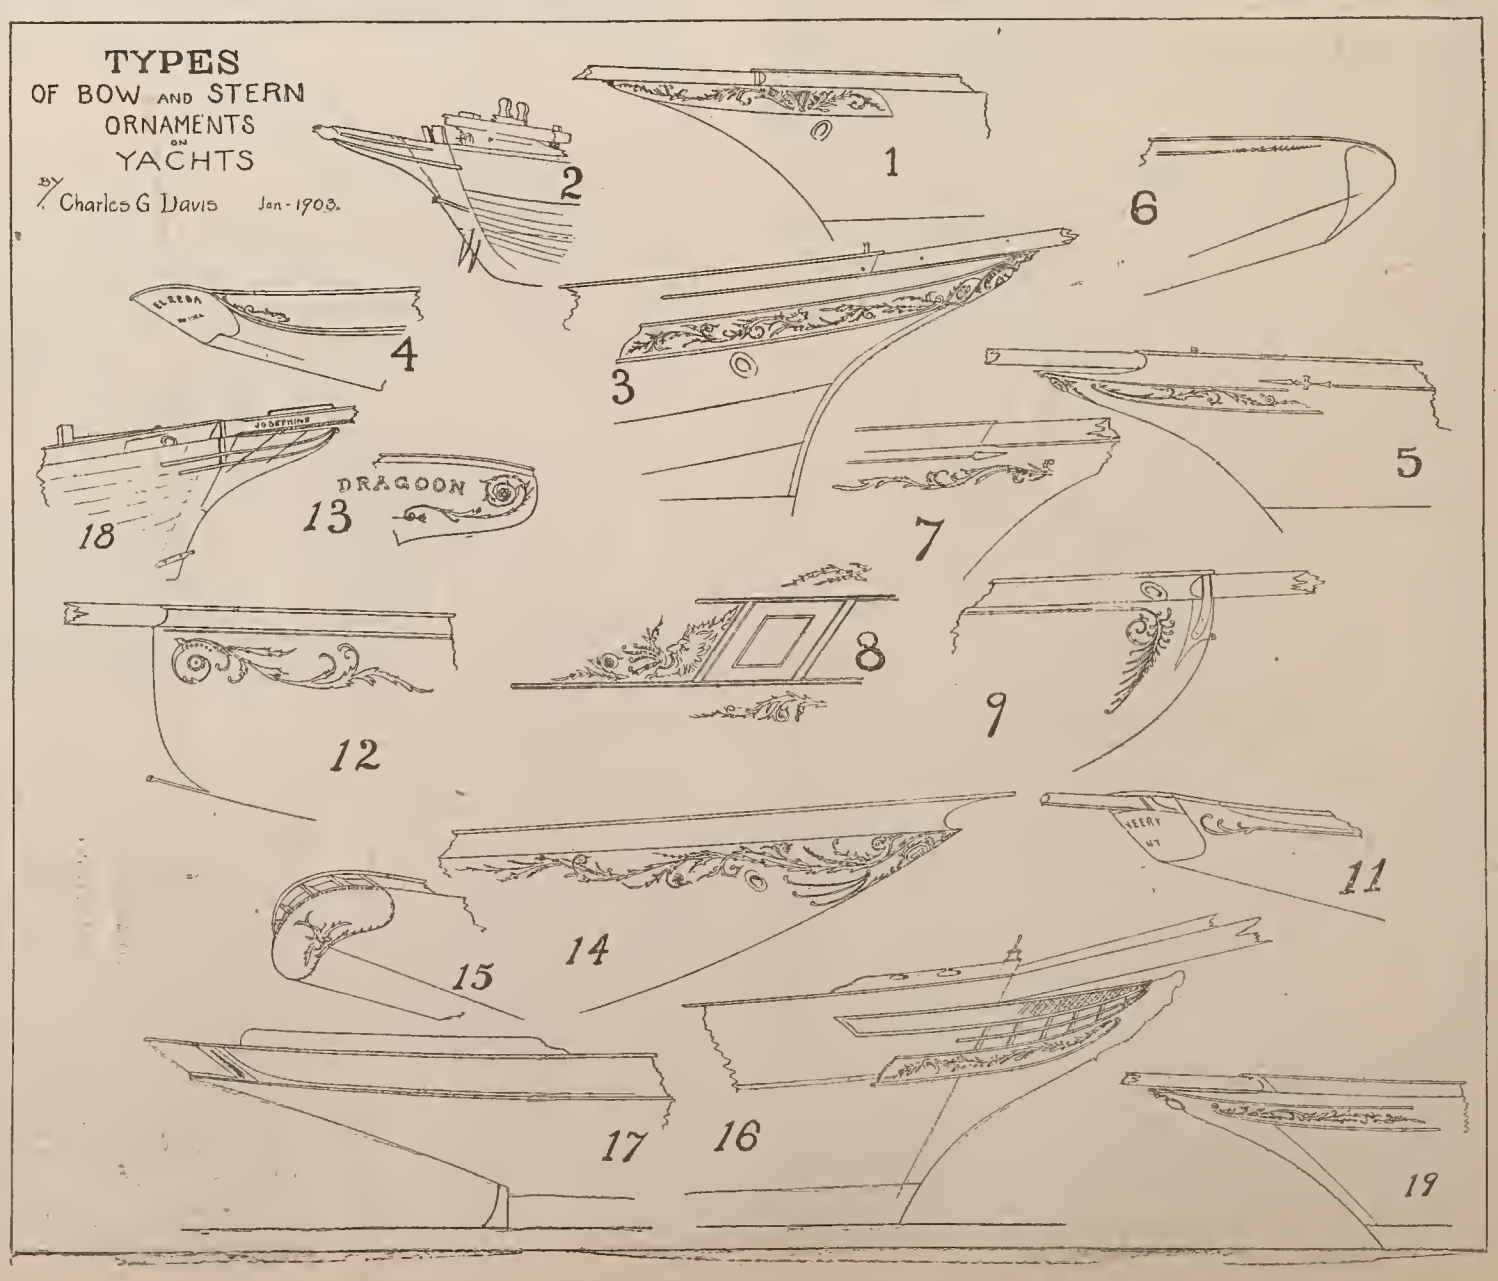
No. 8. I was struck by the fierce looking face that was worked into the ornamentation at the forward end of the scroll forming a series of imitation windows around the box-like stern of the high speed steam launch Feiseen, designed by Gardner & Mosher and built by Frank Wood at City Island. She was an extreme racing model very lightly built, double planked with mahogany outer sheathing and full of light, powerful machinery. She was sold to Mexico for a dispatch and torpedo boat, and they say the natives down there started her up one day and she got running so fast the engineers lost their heads and bolted from the engine room, where the light but powerful engines were fairly humming, they were revolving so fast, and all hands hung on to the railing on deck shouting through the megaphone as they dashed about the harbor among the shipping, to the various ships they passed: "Send a boat! Send a boat and stop us!" and that, when the Feiseen was shooting half her length nearly out of water and going 26 knots an hour, "Send a boat and stop us!" No wonder the seaman remarked, "Crazy niggers," for who could catch such a whirlwind to stop her. All they had to do was turn off the steam, but this there wasn't a man aboard would dare to do. So, in sheer desperation, they headed her straight for the shelving beach. They say she slid her whole length out of water and stayed there, a haunted monster, while the "niggers" took to their heels. Such is the story that I was told.

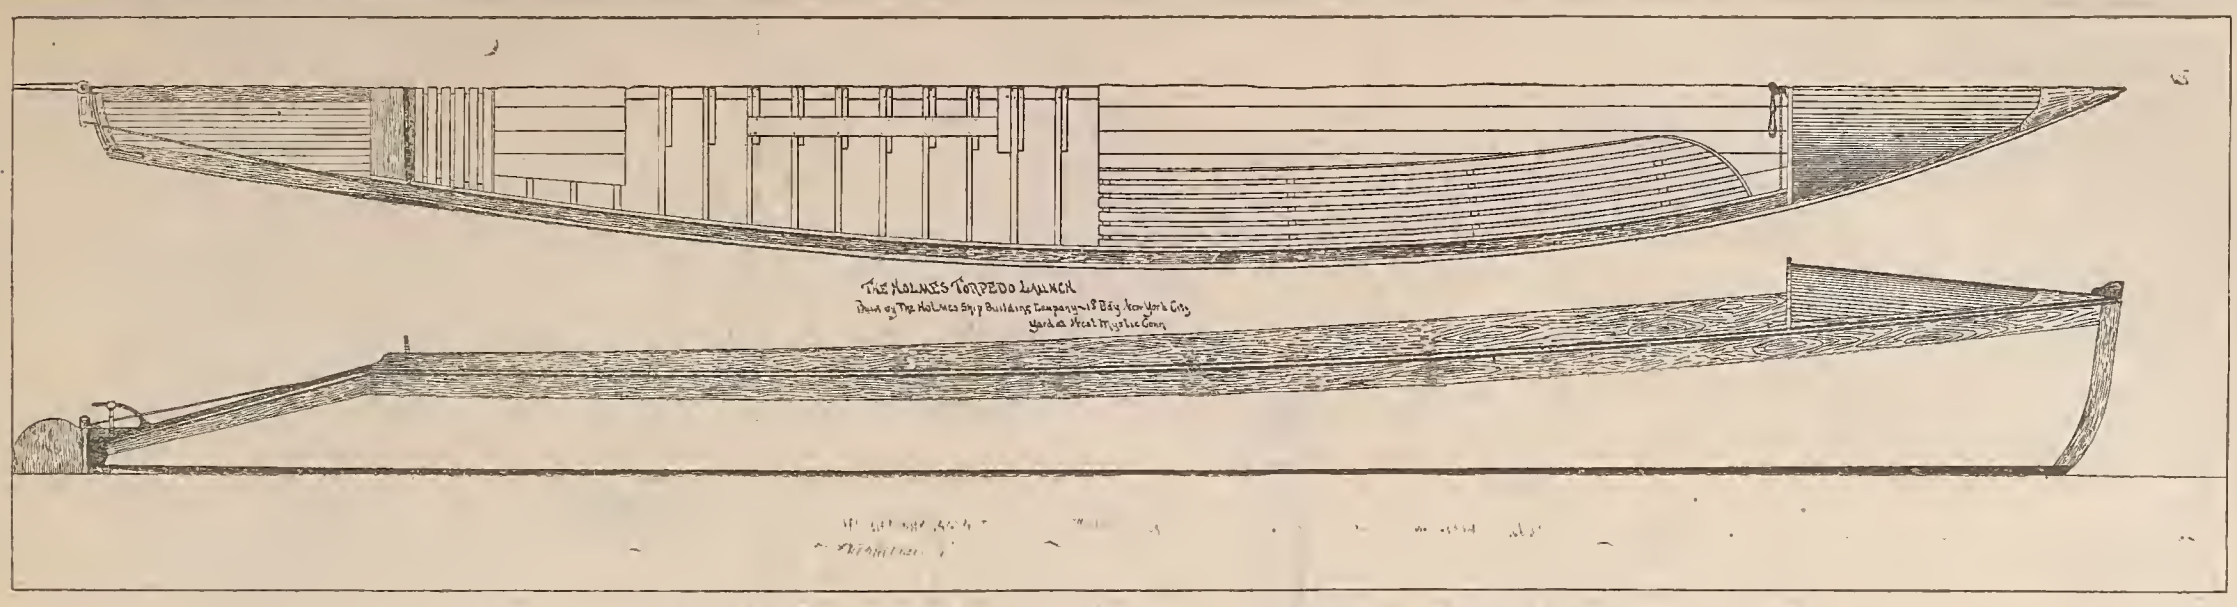
No. 9. Is a decided departure from the conventional rules for bow ornamentation. Baylies, of City Island, built this yawl, named the Veery, from the designs of Mr. Henry Gielow, naval architect. She had considerable freeboard, and it may be this scroll was introduced to try and reduce the apparent height.

No. 11. Shows the Veery's stern ornament, as odd in its design as the bow.

No. 12. Is the bow scroll of the 34 rater Dragoon, owned by Mr. F. M. Freeman. Capt. T .R. Webber, of New Rochelle, designed and built the Dragoon and also carved the ornamentation on her. This scroll is full of pleasant memories to me, as I used to race the old Dragoon, and as an ending to her eventful career I sailed her from New York to Savannah.

No. 13. Is the scroll on her transom which I sketched when she was laid up one winter. Her competitors will





27-FOOT SPEED LAUNCH—DESIGNED AND BUILT BY THE HOLMES SHIPBUILDING CO., 1902.

recognize this, to them, familiar sight.

No. 14. Is another one of the Larchmont Y. C.'s 34 rating class, a boat called the Vorant II., designed by Mr. Charles Olmsted, of Brooklyn, and built by him at Bay Ridge for Mr. George Tyson. She was an elaborately built craft double planked. Mahogany outside, finished in its natural red color and varnished. Her scroll work is just as elaborate as her construction. and illustrates another specimen of Charlie Brown's work.

No. 15. Is the ornament on Vorant II.'s transom; the mass of gilding in yellow, red and silver gold leaf enhanced the beauty of the mahogany planking.

No. 16 and 17 is a reproduction from a sketch made by Mr. John Harvey for me to illustrate the beauties of the English butterman schooners of the year 1850, many of which Mr. Harvey turned out at his "Sainty Shipyard," Wyvenhoe, England, before he came to America.

No. 18. Is a relative of No. 2, showing a popular style of figurehead on the small American working craft.

No. 19. Is the figurehead of the 25 rater Nameless, designed by Wm. Gardner and built by Frank Wood at City Island for Mr. C. W. Wetmore, and shows a very shippy-looking little craft.

Boston Letter.

BOSTON, Feb. 16.—A meeting of the Boston Y. C. will be held at the American House Wednesday, Feb. 25, at which final action is expected to be taken upon the question of amalgamating with the Hull-Massachusetts Y. C. The committee appointed to investigate as to the advisability of such a move has reported favorably, and has recommended that the Boston Y. C. assume the liabilities of the Hull-Massachusetts Y. C., taking in its present membership, and that the Boston Y. C. accept a conveyance of all of the property of the Hull-Massachusetts Y. C. to it.

This is by long odds the most important yachting deal that has been proposed in Massachusetts for many years. It means that the consolidated club will start in with a membership of 721, a gross property asset of $73,370.14 and a net property asset of $44,369.32. With the advantages to be offered in the five stations of the consolidated club, it is the belief of the committee that fully 10 members will be added to the list before the opening of the season.

A new possible Seawanhaka cup challenger has been heard from. W. W. Meek will design this boat and she will be built for him by Mr. F. A. Peacock, of New York. She will be built to fit all the requirements of boats racing for the Seawanhaka cup and, if the Manchester Y. C. will allow her to compete in the trial races upon conditions that will be satisfactory to Mr. Peacock, he will enter her. If not, he will take her to Canada and race her there throughout the season. Mr. Peacock resides in Canada during the summer months and he is anxious to get a crack at the Canadians in a cup race. Mr. Meek is laying down the new 25-footer for Mr. J. E. Doherty, and has a 35-footer hunting launch in the mold.

Burgess and Packard have an order for an 18-footer for W. Caleb Loring, Jr., and a cruising 21-footer for C. W. Talbot, of Osterville, Mass. Mr. Packard has just received the appointment of Professor of Naval Architecture at the Institute of Technology. Mr. Packard's career as a student was very brilliant, and since he has been engaged at his profession he has applied his knowledge in a practical manner with much honor to himself. He has been with the Herreshoff Company and with the New York Shipbuilding Company. He looked after the construction plans of the Columbia and superintended her construction. He also worked on the construction plans of the new cup defender. He is in every way deserving of the new honors he has received.

Small Bros. have an order for a 25ft. auxiliary yawl for W. Mosely Swain, of Philadelphia, to be supplied with an 8 horse-power engine. They have an order for a 30ft. hunting launch for Mr. F. C. Plaisted, of Bangor, Me. She will have a 9 horse-power engine. A 30ft. speed launch for Mr. G. T. Sperry, of Springfield, will have an 8 horse-power engine.

E. A. Boardman has an order for a 22-footer for Mr. C. W. Whittier, a cruising 21-footer for Mr. T. W. Watson and an 18-footer for Mr. T. W. Malcolmson, of Providence.

Hollis Burgess has sold the houseboat Clarina to a corporation, which will use her for a floating hospital.

The John Stuart Company, of Wollaston, is building a 45ft. cruising launch for a member of the Hull-Massachusetts Y. C. She will have a 25 horse-power engine, which is expected to give her a speed of about 11 miles. Her planking will be white cedar and her cabin will be finished in mahogany. Two 25ft. launches are being built for Boston parties. A 21ft. speed launch is being built for Mr. A. G. Yongquist, of the Wollaston Y. C.

Mr. B. B. Crowninshield has designed a new 18-footer for Mr. B. S. Permar, to take the place of last year's champion, Malillian. The new boat is now being built by Graves, of Marblehead.

At Lawley's the 36-footer for W. B. Rogers is practically finished. C. H. Clark's 60ft. schooner is finished and will be launched the first of the week. Maj. Bent's 50ft. schooner is planked and the deck is being laid. A 25-footer for John Swift, Jr., is partly planked. Trenor L. Park's 43-rater is partly in frame. A cruising 21-footer for L. H. Spaulding is planked and the cabin trunk is being planked. Francis Adriance's 34ft. yawl is finished and has been hauled out of the shop. The 40-rater for R. H. Morgan is being laid down. The steam yacht for C. A. Fletcher is nearing completion. The plating is being put on the steam yacht for C. G. Emery. In the boat shop the Hull-Massachusetts Y. C. launch is all planked. A 45ft. launch for W. F. Dreer is being laid down.

Isaac B. Mills has turned out the lines of a 28ft. waterline cruising yawl for B. D. Amsden, of the Boston Y. C., which is now being built at Hanley's. The 35ft. launch, which is being built from his design by Meek, is for Mr. George H. Street. Linnell, of Savin Hill, is building two 30ft. launches of his design. One of these is for Mr. Fred S. Smith and the other for Mr. J. P. Eustis. Sheldon is building a 27ft. speed launch from designs by Mr. Mills, for Col. Sidney M. Hedges.

At the annual meeting of the Quincy Y. C. it was proposed to take measures to have restrictions of some sort put upon the boats competing for the Quincy Cup, or have the Y. R. A. 21-footers eligible. For that purpose a committee was apopinted, to act with a like committee from the Manchester Y. C. While restrictions might be a good thing in this case, there might be some difficulty in having them adopted. A member of the Manchester Y. C., one of the owners of Lookout, said last week that there would be no restrictions, if he could help it. He is not over fond of the types of boats that have been competing for the cup, but he thinks that the cup should be taken from the Manchester Y. C. if it is to be taken, under the same conditions that it was won. He says that the Quincy Y. C. should win the cup under those conditions and then it can supply any restrictions it may think necessary.

JOHN B. KILLEEN.

Round the Horn Before the Mast.

ROUND the Horn Before the Mast, is the title of a new sea story recently published by E. P. Dutton & Co. The author of the yarn is a young Englishman named A. Basil Lubbock, a man of wide experience, who has knocked around the world a good bit and one who has tried his hand at many things. Mr. Lubbock returns to San Francisco from the Klondike and there ships before the mast on the four-masted English bark Royalshire. From the time the vessel left 'Frisco until she reached Liverpool bad weather was experienced, and the foremast hands suffered considerably from exposure and lack of proper nourishment.

The author is a man of education and refinement, but was not lacking in courage and grit, as was shown by the way he stood the hardships of the voyage. The story is very well and interestingly told, and a record of each day's happenings was kept throughout the trip. The working of the ship, the life of the men, their trials and amusements are all combined in the story; in fact, the book gives a better idea of the life on a "lime juicer" than any previous work we have seen.

War broke out between England and the Boers during the voyage, and when they learned of it from the pilot, which they picked up off the English coast, the astonishment of those on board was very great. Mr. Lublock, after leaving the ship, served in the English army in South Africa.

The story is true, and in consequence, is doubly interesting, and the author has been very modest and reticent when speaking of himself. Several splendid photographs and a number of clever sketches made by the author serve to make the book, which contains nearly four hundred pages, more attractive.

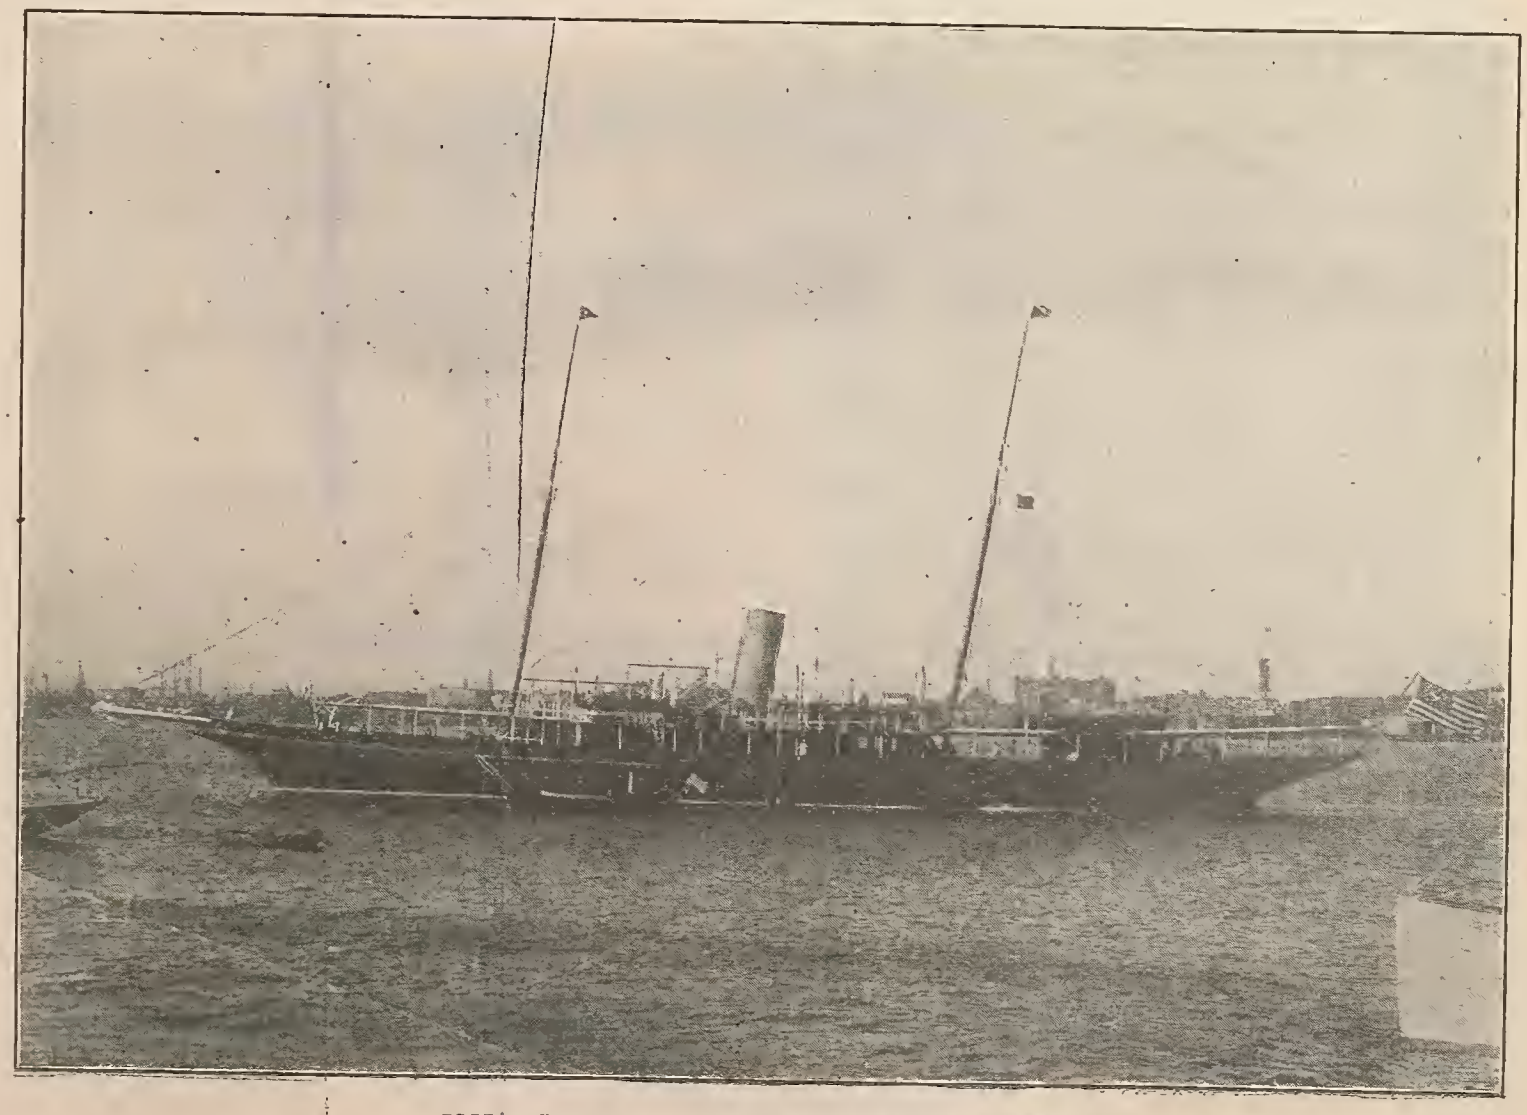
Twenty-seven Foot Speed Launch.

WE publish herewith the outboard profile and half deck plan of a 27ft. speed launch designed and built by the Holmes Shipbuilding Company, of West Mystic, Conn. The boat is 22ft. over all, 4ft. 8in. breadth and 10in. draft.

She is built to go over the water, with a stern that cannot squat or drag water. She will be equipped with two 4½ H. P. Lathrop motors coupled together on one shaft, making 9 H. P. in all. The engines will be arranged to operate separate if desired. These engines will turn up to 450 under ordinary conditions; however, in this boat we shall run them up to 600 or 650. Owing to the bad weather and the ice in the river at Mystic, the builders have not been able to complete the trials with the boat, although she has been given several tests with a 4½ horse-power Lathrop motor of the two cycle type, which is just one-half the power that will eventually be used. The first trial with the 4½ horse-power motor was made with an 18in. 3 bladed propeller, which test resulted in about a 10-mile speed—a 22in. 2 bladed wheel was then tried, and the boat developed a speed of nearly 11 miles. Running at a speed of 11 miles, the boat makes very little disturbance and she leaves the water very clean. The builders expect to get 15 miles out of the boat when she is tried with the two 4½ horse-power motors.

The Steam Yacht Isis.

ISIS was designed by Mr. J. Beavor Webb and built by T. S. Marvel & Co., Newburgh, N. Y., in 1902, for Messrs. W. S. and J. T. Spaulding, of Boston. She is of steel throughout, and has twin screws. She is 200ft. over all, 164ft. waterline, 24ft. 6in. breadth and 11ft. 6in. draft.



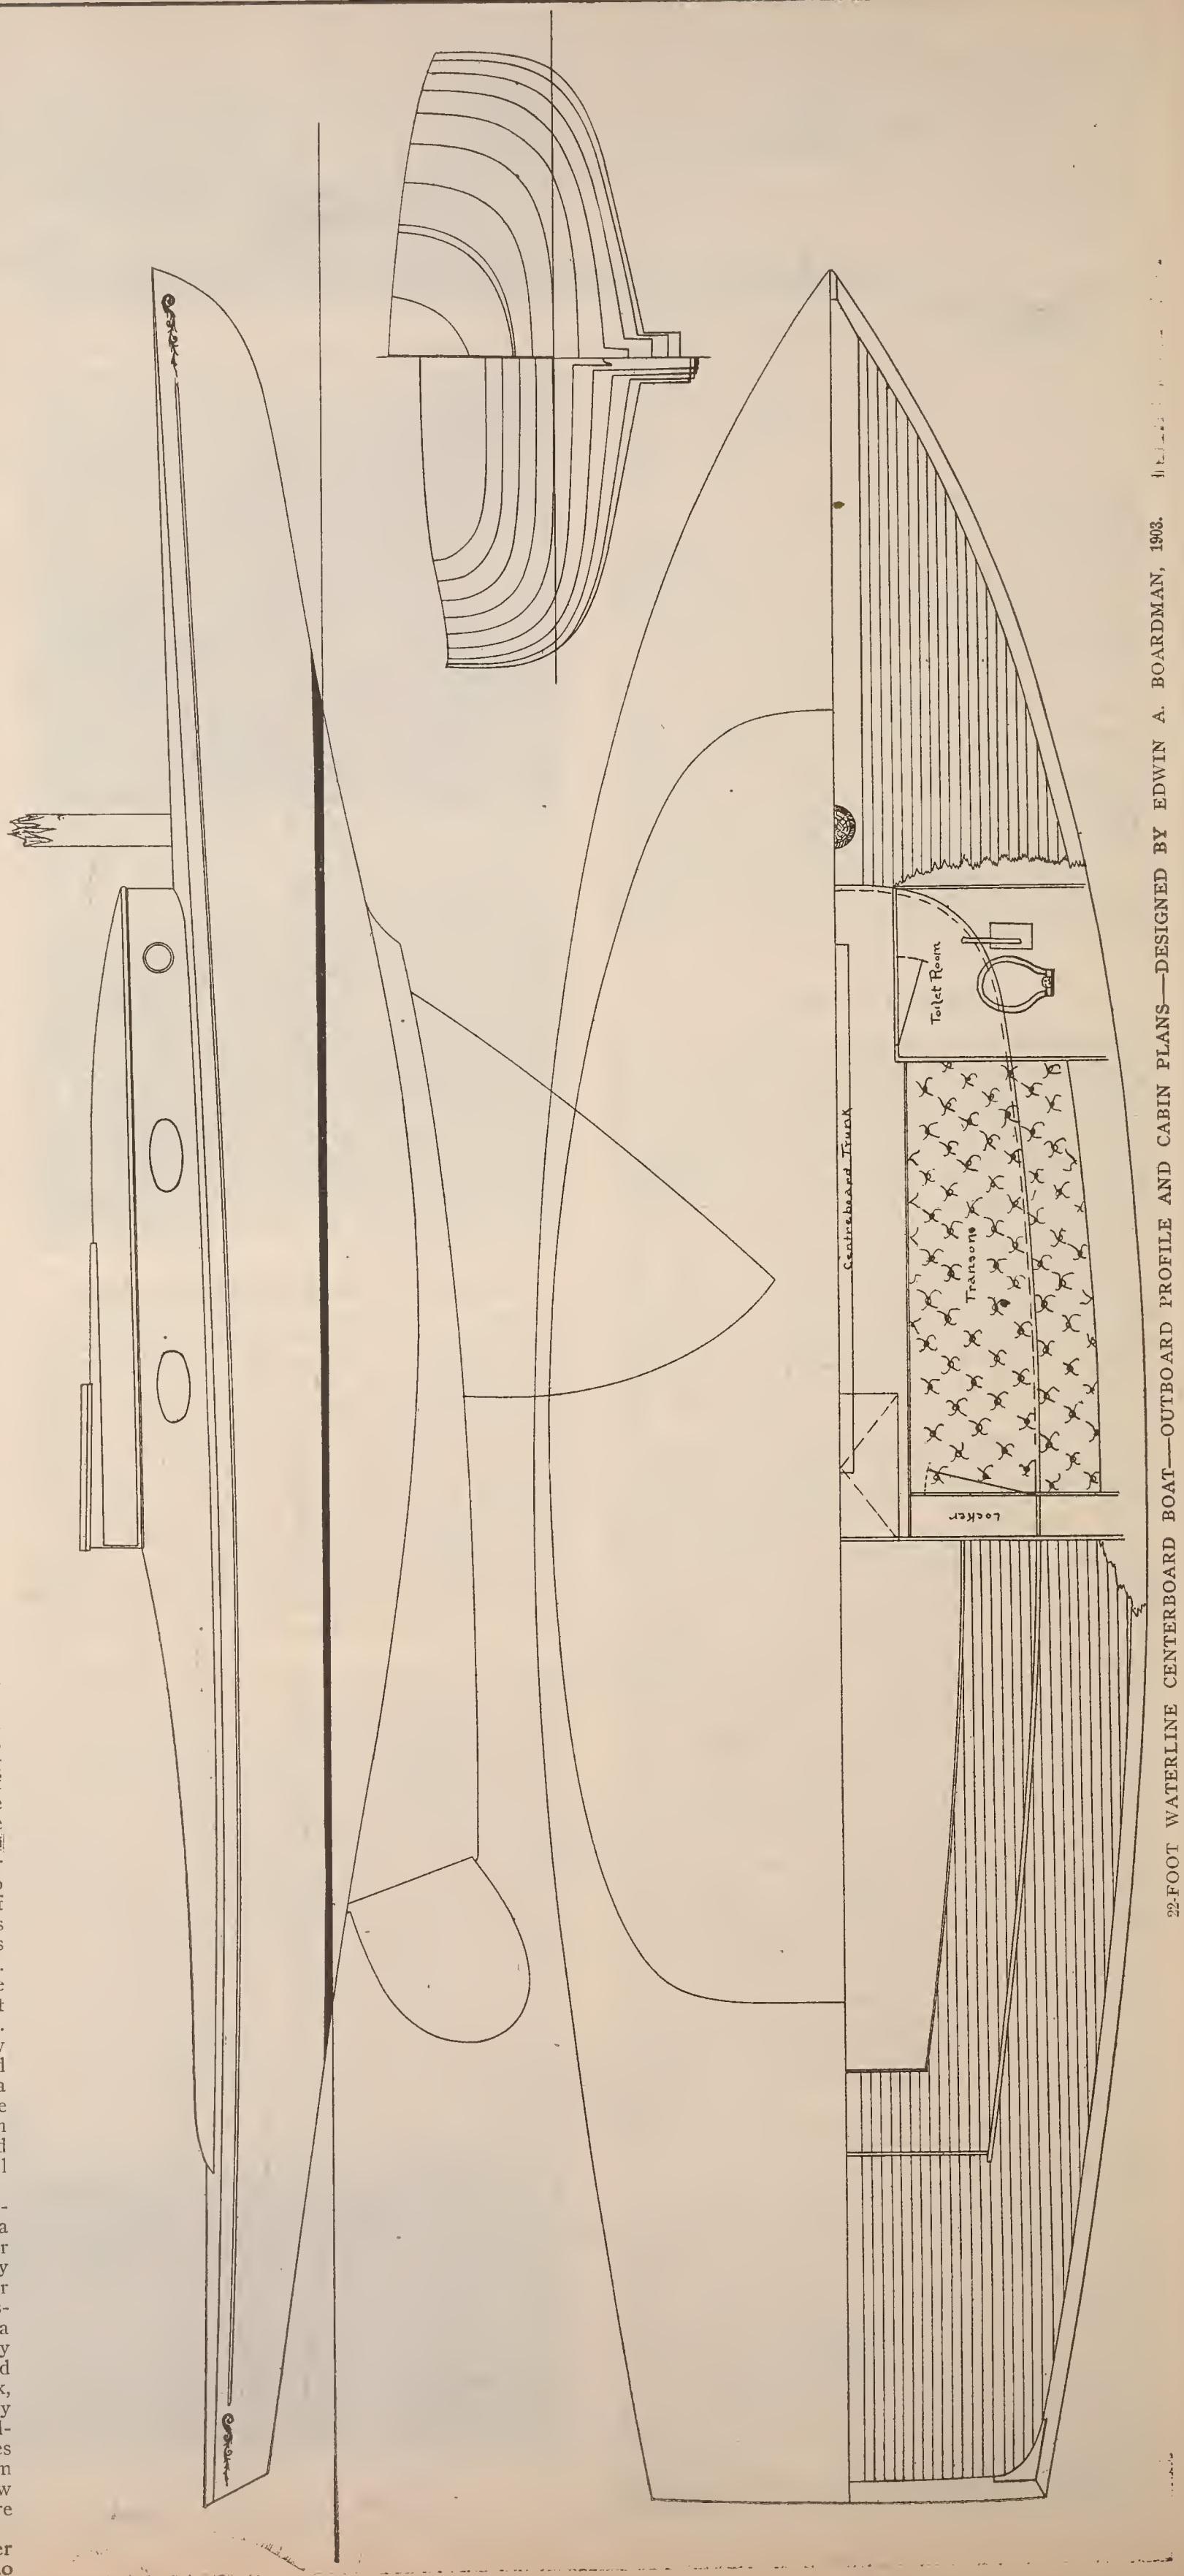
ISIS—DESIGNED BY J. BEAVOR-WEBB, 1902.
Photo by N. L. Stebbins, Boston.

Design for a 22ft. Centerboard Boat.

Through the courtesy of Mr. Edwin A. Boardman, the Boston naval architect, we publish the plans of a centerboard boat which was designed by him to show what could be done with a centerboard boat under the restriction of the new 22ft. class organized last year in Boston. Five yachts are now building for this class, but all are keel boats.

The design shows a large shoal draft boat with good cabin room. There is nearly 5ft. headroom under a cabin house 11ft. long. The cockpit is 10ft. 6in. long and watertight. There is a waterway 2ft. wide around the cockpit and cabin house. The boat would undoubtedly be fast, particularly in fresh to strong winds. The dimensions follow:

Length—	
Over all	38ft.
L. W. L.	22ft.
Overhang—	
Forward	7ft. 6 in.
Aft	8ft. 6 in.
Breadth—	
Extreme	10ft. 6 in.
L. W. L.	10ft.
Draft—	
To rabbet	1ft. 6½in.
Board down	7ft. 8 in.
Extreme	2ft. 6 in.
Freeboard—	
Forward	2ft. 10 in.
Aft	2ft. 1 in.
Least	1ft. 10 in.
Sail area	900 sq. ft.
Lead on keel	3,000lbs.



22-FOOT WATERLINE CENTERBOARD BOAT—OUTBOARD PROFILE AND CABIN PLANS—DESIGNED BY EDWIN A. BOARDMAN, 1903.

Origin of the Centerboard.

Editor Forest and Stream:

In your issue of January 17 I gave you what might be termed the first chapter relating to the centerboard. Since then I have received additional data. There appears to have been a certain boy who was afterwards known as Capt. John W. Meickle, who spent the summer seasons as farm boy under Judge Wilkins. His father had been a sea captain, and an elder brother, Isaac, was then in the same business. This tended to cultivate in John a relish for maritime pursuits which resulted in his entering therein.

In after years the captain obtained command of a vessel that traded between Philadelphia and Mediterranean ports. This caused him to be engaged by Count Survilliers, better known as Joseph Bonaparte, then residing in Philadelphia, to bring from Italy his youngest daughter, Charlotte. The authorities of Naples, whether state, municipal or church, I cannot say, as in that city they are generally cooked in the same pot, were opposed to her leaving to join her father and her sister Zeniade; therefore stratagem was what the captain was instructed to resort to. In accomplishing this the knowledge that he acquired while with the Wilkins family served a useful purpose.

The plan adopted was carried out by the assistance of the mother and her chamber maid. The captain ordered his sailors to attend church well dressed on Sundays and escort home from there any female who might accept their company. He did the same and escorted home the maid of Madame Bonaparte. For two succeeding Sundays this sailor church going and Neapolitan beaux catching worked well. On the third the maid and daughter exchanged dresses. The females of Italy wear thick veils when attending church and are therefore recognizable only by other portions of their dress. The daughter was now escorted from church by the captain, the maid acting the daughter's part by demurely returning home with the mother. At a suitable time and place haste was made towards the ship which was hastily got under way. When out in the bay he encountered an almost dead calm. In the afternoon he saw the state, the city and the church pursuing him (we will suppose) each in their vessel and only about a league distant. But he had on board a Wilkins boat. He launched the favorite skiff and put two men into it; then doing the same with the yawl his vessel was towed as speedily as his pursuers could sail. This kept up until darkness set in, when a good breeze sprang up. He then took in his boats and carried every inch of sail through the night. In the morning his pursuers were all out of sight and he was nearing the birthplace of Uncle Napoleon.

In the autumn of 1823 Charles Wilkins and a neighbor concluded to take the Lawrence and make a voyage to Kent County, Delaware, there to purchase a load of peaches and take them to Philadelphia market. This was the first distant voyage of a sliding keeler for business purposes and of course causing its character to be known.

The voyagers having proceeded to the mouth of the creek named by the Swedish settlers Murder Kill met with what might be called an ocean beach experience. The channel leading into it from deep water is narrow and crooked and unmarked, therefore difficult to be found by strangers. The boat bumped on the sandy bottom half a mile out. However, three successive waves would come and float them forward a hundred feet or more and then another bump; in this way three successive waves would carry them forward and let them down alternately until the creek's mouth was reached.

The great fun of the trip compensated for future disappointment. To say that they astonished the natives is a mild expression. From every farmhouse in sight of their sails all the negroes ran toward them. They evidently believed the strange craft to be the Flying Dutchman or some other wizard and having come to plague their masters for holding them in slavery, as never before had a boat been known to sail continuously up the creek, to say nothing of the great speed. The shores were almost lined with them, and their bare heads, glaring eyes and thick, red lips were such a novel sight to our voyagers that they never forgot it. When asked about the white race, Wilkins said that their boys started also, but the negroes ran so fast that when it came to a long run after them they were nowhere. On stopping at a landing below Frederika, they learned that peaches in that vicinity were not yet ripe.

Therefore, they started home the next day, after having received a kind welcome of the farmers, who

22-FOOT WATERLINE CENTERBOARD BOAT—SAIL PLAN—DESIGNED BY EDWIN A. BOARDMAN, 1903.

had examined their boat with deep interest. This time it was the white man's turn to view the novel craft as it passed down, while the slaves were compelled to stay back and attend to their work. This circumstance shows that the centerboard was unknown in Delaware previous to this voyage. We have shown that it was not invented in Chesapeake waters, while Chapter I. disposes of the claim of New York and New England.

H. L. SHAW.

PHILADELPHIA, Feb. 16.

New York Y. C.

THE annual meeting of the New York Y. C. was held at the club house, West Forty-fourth street, New York City, on the evening of Thursday, February 12. Commodore Lewis Cass Ledyard presided and a large number of members were present. The various officers and committees submitted their reports and some were read. The secretary's report showed the club now had 2,054 members and 520 boats in the fleet, making a total tonnage of 66,000.

After the reports were read several amendments to the constitution were passed for the first time; before they become operative they will have to be passed again at another meeting. One of these was to make the fleet surgeon an appointive instead of an elective office, and a committee of measurers instead of a single measurer as in the past. Dr. John McGaw Woodbury is the candidate for fleet surgeon and Mr. Charles D. Mower for measurer. Both these gentlemen will be appointed as soon as the amendment is finally passed. The following officers were unanimously elected: Com., Frederick G. Bourne; Vice-Com., Henry Walters; Rear-Com., Cornelius Vanderbilt; Sec'y, G. A. Cormack; Treas., Tarrant Putnam. Regatta Committee: S. Nicholson Kane, Newbury D. Lawton and E. H. Wales. Committee on Admissions: Henry C. Ward, Frederic Gallatin, Cornelius Vanderbilt, Henry S. Redmond and James A. Wright. House Committee: Thomas A. Bronson, Commander J. D. Jerrold Kelley, U. S. N., and Henry Sampson, Jr. Library Committee: Lewis A. Stimson, Thomas A. Bronson and Albert Bradlee Hunt. Committee on Club Stations: William H. Thomas, Henry H. Rogers, F. Aug. Schermerhorn, Augustus C. Tyler, Charles Lane Poor, C. L. F. Robinson, Harrison B. Moore, Henry C. Ward, William Lanman Bull and J. Rogers Maxwell.

The following members were elected: George A. H. Churchill, George Elder Adams, Lieutenant Commander George H. Peters, U. S. N.; James Averill Lawrence, James King Clark, Lieutenant Henry T. Baker, U. S. N.; Lindley Murray Roe, Paymaster A. F. Huntington, U. S. N.; Albert V. de Goicouria, Horace Gallatin, Commander Charles A. Adams, U. S. N.; Thomas E. Hardenbergh, Granville W. Garth, Cyrus Edson, M.D.; Frank Merrill, Charles Henry Butler, Rear Admiral Charles S. Cotten, U. S. N.; Edward L. Ryerson, Rennie Pierre Schwerin, William B. Davenport, John Howard McFadden, Ryley Miles Gilbert, John G. A. Leishman, Jr.; Percival C. Smith, R. M. S. Putnam, Naval Commander David W. Taylor, U. S. N.; Albert Gallatin, Herbert Noble, Richard Mortimer, Lieutenant John S. Bates, U. S. M. C.; Herbert H. White, H. Hayden Sands, Paymaster Henry T. Skelding, U. S. N.; Frederick Hegel, Alfred C. Chapin, W. Frazier Harrison, George L. Duval, Charles H. Thorne, William F. Wall, Edward S. Isham, Lieutenant John M. Hudgins, U. S. N.; Gustav H. Schwab, John B. Trevor, S. B. Stevens, Lieutenant Alfred A. Kethan, U. S. N.; Lieutenant Albert W. Marshall, U. S. N.; Arthur Keeler Bourne, Frederick E. Ballard, Howland Pell-Haggerty, Charles M. Billings, Franklin A. Batcheller, W. J. Gordon, B. Drake-Smith, Edmund L. Baylies, Alexander R. Peacock, Timothy L. Woodruff and Commander Robert E. Peary, U. S. N.

Flag members: Miss Atala W. Thayer and Mrs. Henry de Blois Gibson.

Honorary members: His Imperial Higness the German Emperor and His Royal Highness Prince Henry of Prussia.

A portrait of the late F. W. J. Hurst, who was fourteen years the treasurer of the club, has been given to the club by his daughter. A committee was appointed to frame resolutions regarding the death of Dr. Morris J. Asch, for many years fleet surgeon.

House-Boating on Lake Worth.

From the Florida Times-Union, Feb. 11.

PALM BEACH, Feb. 10.—Beautiful Lake Worth at any moment during the day presents a pretty sight with the many electric launches swiftly sailing in all directions, and with a half dozen houseboats moored along the channel of the lake. At night these boats, with their electric lights and the distant lights of West Palm Beach add greatly to the charms of a walk along the lake front avenue. Surf bathing, fishing, golf, tennis, boating, hunting and the other many diversions attract with increased enthusiasm on the part of the devotees of these various forms of amusement.

T. A. Snider's big houseboat, Buckeye, which has been swinging at her cable for a week or two, near the Hotel Royal Poinciana wharf, has been chartered until the first of May by Col. Robert M. Thompson, of New York, who has for some time been a guest at the Hotel Royal Poinciana. The houseboat was tied up at the Florida East Coast Railway dock at West Palm Beach, laying aboard supplies for the trip. Colonel Thompson left with the Buckeye Sunday night for the foot of the lake, from which an early start was made

OUTBOARD AND INBOARD PROFILES, CABIN AND SECTIONAL PLANS OF 50-FOOT CRUISING LAUNCH—DESIGEED AND BUILT BY THE GRAND RAPIDS GAS ENGINE AND YACHT CO.

yesterday morning southward from Miami, among the reefs and keys of lower Florida. Other members of the party will join the boat at New River or Miami.

The Buckeye will be in charge of Capt. R. D. Hoke and Engineer Frank McCurdy, both of whom are experienced navigators and cruisers, thoroughly familiar with Southern waters. She is an ideal boat for use in the shallow waters of the southern coast, and is designed and equipped for comfort and convenience. She was first built in 1893 and remodeled in 1899; is 80ft. over all, by 24 beam, and furnished with a 42 horsepower Norman engine and rear wheel. There are five staterooms, with two deck iron beds, lavatory and all appointments; the coziest little saloon imaginable, forward; dining-room and galley aft, and ample accommodations for the captain and crew.

The Buckeye carries two boats and a launch; the tanks will hold over 2,000 gallons of fresh water; and the beveled gear of the crank shaft is so arranged that by a lever forward the steersman can reverse the paddle wheel while the engines are running at full speed.

Quite the most remarkable feature of this handsome boat is the roof garden on the upper deck. It is inclosed by a neat iron and wire railing, is roofed with a tight deck, and furnished with canvas curtains for bad weather. Forward is the wheel and reversing device. This deck is furnished with attractive rugs and comfortable wicker furniture, and ornamented by potted palms and bright foliage plants, and the brilliant orchid-like "air plants" in hanging baskets.

Altogether, Colonel Thompson has a comfortable, attractive and completely furnished floating house, in which life on the water with a jolly party comes very near to the ideal. Among the party will be Mr. and Mrs. William Allen Butletr, Miss Butler and Dr. Ely.

"Yeho for the houseboat," is undoubtedly one of the most popular expressions of the day. Everybody goes to the houseboat, and those who have been, and who tarry there, are sure to follow their first visit with many others.

A great many have discovered that to enjoy life is to take a trip to the houseboat, and the social gatherings there are many. There is every facility for the accommodation of those who call from shortly before the noon hour until after sunset, and until late at night, when the moon shines bright, it is very gay aboard the houseboat at the inlet.

After a delightful sail late Sunday afternoon on Lake Worth, the Countess Boni de Castellane was entertained aboard the houseboat at a "sunset tea," given by Mrs. Frederic Sterry. The event was most charming in all its details, as Mrs. Sterry's entertainments are always complete and enjoyable.

Mrs. J. F. Zimmerman, of Philadelphia, while trolling on the lake, was successful in landing a twenty-pound sergeant fish. She also had excellent luck while fishing at the inlet. The sergeant fish was still alive when the party reached the houseboat, and Mrs. Zimmerman presented the specimen to Mr. Pagan, who now has it in the improvised aquarium at the houseboat, where it is being viewed by all of the visitors.

Mr. and Mrs. J. M. Elliott, of Gadsden, Ala., who are staying at Palm Beach, and who are accompanied by their son, made a visit to the houseboat. Following their name is the notation: "If you would catch fish, be a fisherman.' 'We enjoy the 'houseboat fish.'"

A 50ft. Cruising Launch.

THE drawings of the 50ft. cruising launch, which we reproduce herewith, shows one of the recent productions of the Grand Rapids Gas Engine & Yacht Co., Grand Rapids, Mich. The yacht was designed and built by this firm, and she makes a fast and comfortable cruising boat. She is 50ft. long and 10ft. breadth. The boat is well put together, only the best material being used in her construction. The trim on deck and below is of hard wood; in fact, the boat is well finished throughout.

The pilot house floor is raised so that the helmsman has an unobstructed view on all sides. Aft of the pilot house is the forward or main saloon. On each side are transoms, which extend and make wide berths for sleeping. Aft, on the port side, is the toilet room fitted with a folding basin and a patent closet. On the starboard side is the engine room. From the engine room a door leads to the after cabin, which is fitted with a folding berth. On the port side, forward, ie a large wardrobe. From the after saloon a companionway runs to the after deck, which is quite roomy. On the port side of the companionway is the ice box, and on the starboard side is the store. There is ample storage space under the after deck, and the gasoline tank is located under the forward deck.

A small power boat or dinghy is carried on davits, and when under way rests securely on chocks on the cabin house. A searchlight is carried on the top of the pilot house.

YACHT CLUB NOTES.

Commodore Arthur Curtiss James, of the Seawanhaka-Corinthian Y. C., has appointed Mr. Franklin A. Plummer fleet captain.

* * *

The annual meeting of the Brooklyn Y. C. was held at the Clarendon Hotel, Brooklyn, on Tuesday evening, Feb. 11. There were two tickets in the field, and the independent one received the most votes. The following officers and committees were elected. Commodore, Henry R. M. Cook; Vice Commodore, S. S. Montaine; Rear Commodore, John C. Abbey; Secretary, Charles A. Kelly; Treasurer, William Graham; Measurer, G. Ashton Kay; Race Committee, Alfred Mackay, G. Curtis Gillespie, Robert P. Orr; Membership Committee, N. T. Corey, George E. Raines, E. T. Hatch; Nominating Committee, Walter D. Haviland, A. B. Voorhees, Jr., M. J. Hanley; Trustees for three years, John E. De Mund, M. D., J. A. Voorhees, M. D., William A. Maxwell; to fill vacancies, John E. Haviland, Cornelius Fergueson, Edward Sault; Delegates to the Yacht Racing Association of Gravesend Bay, Alfred Mackey, G. B. Waters.

* * *

The annual meeting of the Canarsie Y. C. was held on Feb. 8 and the following were elected: Commodore, Dr. T. H. Northridge; Vice Commodore, F. F. Matthaci; Recording Secretary, Walter W. Tamlyn; Financial Secretary, George E. Winters; Treasurer, J. K. Alexander; Board of Trustees, F. G. Kalkhoff, Chairman; William G. Herx, John C. Heinemann, Charles J. Neilsen and Thomas M. Mannion; Delegates to the Jamaica Bay Yacht Racing Association, Commodore T. H. Northridge, Walter W. Tamlyn and W. C. Macy; Chairman Regatta Committee, W. C. Macy; Nominating Committee, William G. Herx, Charles B. Fitzmaurice, F. P. Mapes, W. H. Decker, E. X. Karr.

* * *

The twenty-seventh annual meeting and dinner of the Philadelphia Y. C. was held at the Bellevue Hotel, Philadelphia, on the evening of February 12. Commodore English was re-elected for the fourth time. Admirals Schley and Clark were present at the dinner. The following officers were unanimously elected: Com., Abraham L. English, yacht Giralda; Vice-Com., William H. Bromly, yacht Lesbia; Rear-Com., Philip H. Johnson, yacht Margaret; Fleet Surgeon, Frank I. Hearer, M.D.; Fleet Captain, Slyvanus W. Bookhamer; Harbor Master, Charles S. Warfield; Measurer, George T. Gwilliam, and Trustees, Robert P. Thompson, Colonel J. Lewis Good, J. Horace Cook, S. W. Bookhamer and Charles H. Bond, Jr., and Treas., Samuel B. S. Barth.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Mr. Seymour J. Hyde, who recently sold his yawl Albicore, has purchased from Mr. James Knott, of Glasgow, Scotland, the racing cutter Khama. The sale was made through Manning's Yacht Agency. Khama was designed by William Fife, Jr., and built by William Fife & Son at Fairlie, Scotland, in 1900. She is 58ft. 9in. waterline, 15ft. 9in. breadth and 10ft. draft. The yacht is of composite construction, having nickel steel frames and wooden planking. She carries 4,515 sq. ft. of sail under her present rig. Mr. Hyde intends leaving for England the latter part of this month, and on his arrival there will see that the yacht is put in shape for the ocean voyage. Khama will be brought across in the early summer, and on her arrival here will be rerigged as a yawl, as Mr. Hyde will probably use the boat for cruising.

* * *

Mr. William Boyce has purchased the schooner Fenella from Mr. E. J. Bergen.

* * *

Mr. W. C. Trageser is having an 85 ft. gasoline launch built by John Smith, at Nyack, N. Y.

* * *

The partnership of Messrs. Herreshoff & Wells, naval architects, has been dissolved, and the business is now being conducted by Mr. Herreshoff.

* * *

Mr. Robert W. Rathborne has purchased the 30ft. waterline cutter Saladin from Commodore F. T. Adams, Larchmont Y. C., through the agency of Macconell Bros.

* * *

The steamer Anstice that was built last year by Mr. Lewis Nixon, Elizabethport, N. J., for the Gulf Fisheries Company, of Galveston, Texas, has been purchased by Mr. R. A. C. Smith. She is 168ft. 6in. over all, 24ft. 4in. breadth and 12ft. 6in. depth. Anstice will be entirely overhauled, and is to be converted into a yacht.

* * *

Diamond State, the steamer purchased by Mr. August Belmont, as a tender to the cup trial boat Constitution, is to be renamed Satellite.

Canoeing.

Prizes for Canoeists.

IN order to encourage canoeists and small boat sailors, who do their knocking about on inland waters, to keep a record of their trips and experiences, the publishers of FOREST AND STREAM offer cash prizes for the best accounts of cruises taken during the season of 1903. As few restrictions as possible will be imposed, and those given are made only with the view of securing some uniformity among the competitors' stories, so that the judges will be able to make a fair award.

The prizes will be as follows:

First, $50.00.

Second, $25.00.

Third, $15.00.

Fourth and Fifth, $10.00 each.

Sixth to Eighth, $5.00 each.

I. The cruise must be actually taken between May 1 and November 1, 1903.

II. The cruise must be made on the (fresh water) inland streams and lakes of the United States or Canada.

III. The canoe or boat in which the cruise is made must not be more than 18ft. long over all.

IV. An accurate log of the trip must be kept and all incidents and information that would be of value to other canoeists covering the same route should be carefully recorded.

V. A description of the boat in which the cruise is made should preface the story, and a list of outfit and supplies.

VI. Photographs of the boat and of the country passed through, not smaller than 4x5, should, if possible, accompany each story, and they will be considered in making the awards.

VII. Stories should contain not less than five thousand words, written on one side of the paper only.

VIII. An outline chart of the trip drawn on white paper in black ink (no coloring pigment to be used) should also be sent in.

Each manuscript to which a prize is awarded shall become the property of the Forest and Stream Publishing Company. All manuscript should reach the office of the Forest and Stream Publishing Company, 346 Broadway, New York, N. Y., on or before December 1, 1903.

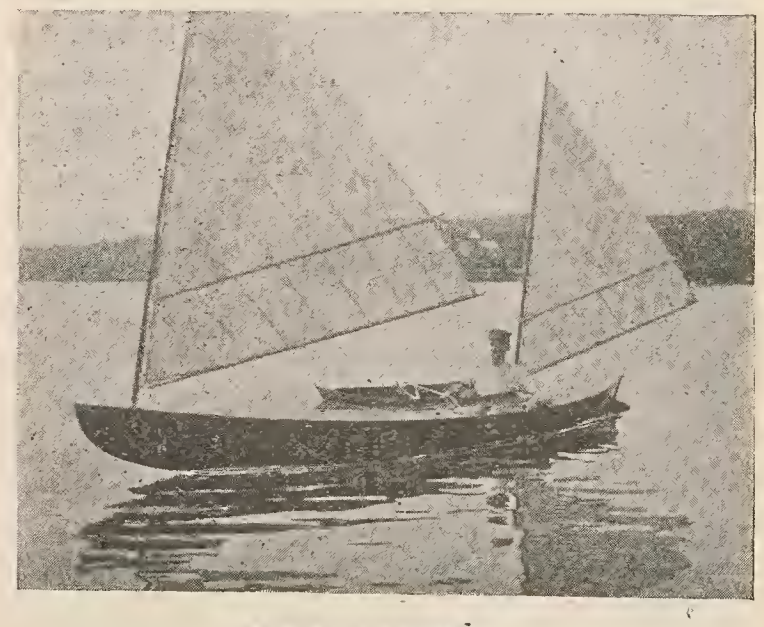
Canoe Yawl Veery.

THE accompanying photographs are of the canoe yawl Veery, built by Mr. A. A. Coburn, Worcester, Mass., for Mr. H. A. Whitney, from plans published in FOREST AND STREAM, March 30 and April 6, 1895, of a 15ft., 36in. beam one-design canoe yawl. In order to

CANOE YAWL VEERY.

afford room for two persons while cruising, the length was increased to 17ft., with a beam of nearly 40in. The moderate sail spread, a 15-pound Radix centerboard, together with the high freeboard and narrow cockpit, make the canoe practically non-capsizable with her skipper on deck to windward. The canoe is fitted with drop rudder, thwartship tiller and quick-reefing gear. Below decks there is ample room for two persons to sleep, besides stowage space for camp kit, camera and sketching materials, which make up the outfit invariably carried on board.

Veery has met her owner's desire for a safe and comparatively fast canoe, in which he and his wife,



CANOE YAWL VEERY.

also an enthusiastic canoeist, can cruise comfortably or make short excursions. The canoe is not too heavy to be hauled into the boathouse by one man or portaged by means of a roller over the low dams separating Lake Quinsigamond from a series of smaller lakes and ponds. Although primarily a cruising canoe, Veery has repeatedly beaten a so-called "Lark" skimming-dish model and a sloop yacht of about the same length, while her staunchness and ability to go to windward in a "blow" have been demonstrated on several occasions during the past two seasons.

Racing in the A. C. A.

Editor Forest and Stream:

I am glad to see that you have become again the "official organ" of the American Canoe Association (whatever that means), for perhaps now we may be able to get some information about what the association is doing instead of being left in the dark to guess what is going on and to guess again where we

may get any information about the officers, committees, meets, etc. It certainly seems now that since the association has tried the number of "catch penny monthlies" issued under various guises and names, and found them all equally useless, that it should settle itself down, and with the F. and S. try to improve canoeing and canoe racing.

I am glad to see we have a good commodore this year, although I suppose the racing element in the "sailors' union" will have a kick that he is not a racing man, and therefore they will not get fair treatment. That reminds me that I have not heard yet that Commodore Hyatt has been able to get any one to act for him as chairman of the Regatta Committee for 1903. What is the matter with the racing men? I think I heard them clamoring last summer at Cape Cod that they wanted on the committee two racing men from each division, one for paddlers' and one for sailors' interests. Five divisions, that would make ten men on the regatta committee. Go to, sailors, what is the matter with you? Ten men! Why the commodore cannot get even one to serve, as things look. Come, stir yourselves, get to work and do more than talk. What is to become of the Racing Board, the newly devised nurse for racing? Who will go from the divisions in November to legislate for us if we cannot get anyone to serve on the race committee for one year, and you expect the racing board to serve for three years?

It is getting late in the season; the committee should have been appointed in November last, but still everything is sleeping. International racing we may have, but if the racing men here and the commodore of the A. C. A. do not do something, we will be caught napping, and it will serve us right if we should lose all we raced for. ILKA.

Trapshooting.

Fixtures.

Feb. 18.—Allentown, Pa.—Two days' target tournament at Duck Farm Hotel. Alfred Griesemer, Prop.
Feb. 20.—South Bethlehem, Pa.—Live-bird shoot of the Lehigh Rod and Gun Club, of The Bethlehems. D. S. Daudt, Manager.

Sept, 23-24.—Ruffsdale, Pa., Gun Club's tournament.
*Oct. 6-7.—Allegheny, Pa.—North Side Gun Club's tournament. L. B. Fleming, Sec'y.
*Oct. 20-21.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.

DRIVERS AND TWISTERS.

Mr. Wm. Dutcher, of Paterson, N. J., writes us concerning the live-bird shoot on Feb. 23, as follows: "The Jackson Park Gun Club will guarantee $175, provided that fifteen or more teams enter. The prizes: First, $100; second, $50; third, $25. Entrance $12 per team. Birds extra. Rise, 28yds. Clubs should send in their applications at the earliest possible moment, and not later than Feb. 21. None but bona fide members of at least three months standing will be permitted to shoot on the teams. Sweepstake shooting will be also on the programme."

The programme of the State championship shoot, to be held on the grounds of the Trenton Shooting Association, Interstate Fair grounds, Feb. 23, provides six events, four of which are at 15 targets, $1.30 entrance; one at 25 targets, $2.50 entrance. No. 4 is for the E. C. cup and New Jersey State championship between Mr. Neaf Apgar, holder, and Chas. B. Cole. Shooting begins at 1 o'clock. Class shooting, moneys divided, 50, 30 and 20 per cent. Shells may be obtained on the grounds. Mr. J. R. Taylor is the general manager.

Mr. H. W. Brown, the secretary, writes us as follows: "We have just organized the Binghamton, N. Y., Gun Club for the protection of fish and game. To show you the interest taken, I will say that we have two hundred members, with no signs of abatement. The club intends to employ a special game protector, also to own their shooting grounds, and to put up a substantial club house. The club will be a candidate for the 1904 shoot.

The New Haven Gun Club, through its secretary, Mr. John E. Bassett, announces a Washington's Birthday shoot for Feb. 23. There are fourteen events, 10, 15, 20 and 25 targets, a total of 210, with a total entrance of $15.63. There is $25 added money. Refreshments free to shooters. Loaded shells for sale. Targets, 1½ cents.

The Boiling Springs Fishing and Gun Club, Rutherford, N. J., announce a holiday shoot for Feb. 23. Shooting commenees at 1 o'clock. In informing us of the foregoing, the secretary, Mr. C. B. Axford adds: "All shooters are welcome, as a meeting of same will be held at 3 P. M. to further the trapshooting interests."

Mr. James Hughes, secretary, Jersey City, N. J., writes us that "the Hudson Gun Club will hold an all-day shoot on Feb. 22. We will try to give everybody a good time. There will be two sets of traps. The handicapping will be distance, and will be done by the shooters."

We are indebted to Mr. Frank E. Butler for an excellent photograph of himself. Mr. Butler is one of the most popular professiona. shooters. Mrs. Butler (Annie Oakley), now the star lady in the Western Girl, is now en route with that company to California.

The North River Gun Club, Edgewater, N. J., announce a shoot on their grounds, to be held Feb. 23, commencing at 1:30 P. M. Also an all-day shoot for March 4, the principal event of which will be 100 targets, handicap, $5 entrance, targets included.

Secretary-Manager Elmer E. Shaner, of Pittsburg, Pa., under date of Feb. 12, writes us that "the Interstate Association will give a tournament at Akron, O., on Sept. 2 and 3, under the auspices of the Akron Gun Club."

The Freeport, L. I., Gun Club, on Feb. 12, defeated the Mineola Gun Club in the final contest for the team trapshooting championship of Nassau county. The scores were: Freeport 115, Mineola, 95.

Seeretary S. J. Smith, writes us that the Houston, Tex., Gun Club "has arranged for an all-week shoot commencing March 16; $500 added money for three days targets, and balance of time for sweepstakes."

Elsewhere in our trap columns this week we publish a communication from Mr. Paul Litzke conecrning date and plaee, etc., of the Arkansas championship, to be shot at Stuttgart, Ark., Feb. 26.

At Bay Ridge, L. I., in the contest for the February cup, at the shoot of the Crescent Athletic Club on Feb. 14, Mr. F. T. Bedford, Jr., scored a win with a total of 48 out of a possible 50.

Mr. Howard Ridge, of Philadelphia, defeated Mr. James Cowan at Narberth, Pa., on Thursday of last week, in a match at 100 live birds, 30yds. rise, $100 a side. The score was 89 to 88.

Mr. E. D. Fulford, we are informed, has accepted a position with the Remington and U. M. C. companies, for which he will travel after March 1.

Mr. Harry Kirkover, of Fredonia, N. Y., famous as an expert amateur trapshooter, was a visitor in New York last week.

Mr. John S. Wright will hold an all-day shoot at J. H. Outwater's shooting grounds, Carlstadt, N. J., on March 12.

The Florists' Gun Club, of Philadelphia, will hold an open team shoot on their grounds, Saturday of this week.

BERNARD WATERS.

Ridge—Cowan.

PHILADELPHIA, Pa., Feb. 12.—At Narberth, Pa., to-day, Mr. Howard Ridge defeated Mr. James Cowan. The conditions were 100 birds per man, $100 a side, 30yds. rise. The scores follow:

West—Conway.

Mt. Freedom, N. J., Feb. 14.—In a match at 25 live birds, $25 a side, between Messrs. West and Conway, both of Dover, N. J., the former won by a score of 20 to 17. The scores:

West .....020122*2222220212222022221—20
Conway .....2201000222100122220202212—17

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., Feb. 14.—The regular weekly shoot of this club to-day was attended by ten men. The scores are low—with one or two exeeptions—which is partially due to the fact that for several weeks past the targets have been in such a frozen condition that to break them at all it was neeessary to shoot very quick. The targets to-day, however, were a fresh lot, but some of the boys found it difficult to slow down again, and as a result the scores are not up to their average.

Mr. Marshall is a new man at the game, this being his first experience in trapshooting. He did as well as the average beginner, as his scores will show. Dr. Nesbit, too, did very well, considering that he has not shot until to-day for about two years.

Events:	1	2	3	4	5	Shot at.	Broke.
Targets:	25	25	25	25	25

SNANIWEH.

Rockland Military Academy.

NYACK, N. Y., Feb. 12.—The first spring shoot of the Rockland Military Academy Club occurred to-day before a large number of spectators, with the results given below. Although this was the first time the members have been together since the hunting season closed, good scores were made in both preliminary and regular matches.

The next meet will be on the afternoon of Feb. 23.

First event, 10 targets:

Ray	0001011011— 5	D Lydecker	1011101010— 6
Frost	1111010010— 7	Creighton	111111011— 9
French	1111011110— 8		

Second event, 15 targets:

French	101110111101111—12	D Lydecker	000011100010011— 6
Frost	110100111010001— 8	Ray	011111111110010—11
Creighton	101111011111111—13		

Third event, 25 targets:

Creighton .....0111111110111111111111111—23
Frost .....1111001001111110111111111—20
Ray .....1111111110110111101111111—22
French .....1111111001101111001110111—19

E. E. FRENCH.

Keystone Shooting League.

PHILADELPHIA, Feb. 12.—The Keystone Shooting League had a light attendance at the holiday shoot to-day at Holmesburg Junction. There were two sweepstake events on the programme. In the first event Coffin and Daudt made straight scores.

First event, sweepstake, 10 birds, handicap:

Budd	2102111112— 9	Daudt	2222222222—10
Coffin	2122212111—10	Jacobs	1011110222— 8
Hothersol	0210222011— 7	Williams	22201*2002— 6

Second event:

Budd	1121212212—10	Daudt	2222222202— 9
Coffin	1111201122— 9	Jacobs	2111111001— 8
Hothersol	21*01w		

Mr. E. A. Mulliken, of Boston, in the contest for the president's cup, at the shoot of the Florida Gun Club, Palm Beach, scored 10 straight.

Detroit Tournament.

BEGINNING on Saturday night and ending Tuesday morning incoming trains bore evidence in the way of gun cases that trapshooting at both live and inanimate targets is as popular as ever. Shooters came from all directions, north, east, south, and west, and in many cases from afar. While Detroit is reckoned a Western city, the East was well represented, and it was pleasant indeed to note that as live pigeon shooting each year seems to be contracted to a more circumscribed territory, the interest in target shooting events is as manifest as in the live-bird contests.

Capt. Jack Parker and his associates, Messrs. J. L. Head and A. D. Caldwell, deserve great credit for bringing together such an aggregation of talent as was here present. From what could be learned from the results of this meeting, all were glad they came, and went home satisfied, though in some cases wiser and a few dollars to the bad. This, however, is an old-time sort of a result; in lots of cases it was looked for, though never expected. Any attempt at thrashing out the merits and demerits of this roster of gun graduates would be unfair at best. The various scores tell the tale—results, cold, remorseful and warm, delightful results are what go on the books.

Tuesday and Wednesday were target days, and it would have been hard indeed to bunch into forty-eight hours more thorough disagreeableness in the line of weather. La grippe immunes were the only ones safe abroad; yet all took chances.

On Wednesday the weather went Tuesday one better, and it rained on seven inches of melting snow. By Thursday, the opening day of the live bird events, a series of snowbanks, lakes and mud heaps confronted the shooters, and in arranging the necessary three sets of traps at the safe distance from each other it was necessary to place one set in a plowed field—that field will not need to be plowed again.

At the center traps a substantial building stands, made comfortable inside by the presence of a stove. Tents were provided for comfort at the other two sets of traps, but it would have taken a lot of civil engineers and bridge builders to have made the walking good between them.

Conditions made high scores nearly impossible. A white bird crossing a snow bank is hard to see, but a dark bird scudding along over mud that matched its color to a nicety, under the murky heavens, was a corker. I think Fred Gilbert got one of them, and he knows.

Capt. Money's suspicions of his own prowess under these conditions caused him to wade near the dead line on his twenty-sixth bird to determine whether or not he had made a kill, and then he needed assistance to find a stone-dead bird.

Then, too, they were a freaky lot of birds. Four out of five of them needed the scare lines to make them move; then would come one than would fool the amateur and made wise the "old ones."

Griffith was there, and "quietly" performed his able part.

Gilbert was always in evidence, but much concerned as to whether or not his broken gun stock would hold together.

Tom Marshall appeared with a smooth face and suave manner. Tom's friends best showed their affection for him by prodding him when he was "up."

Harold Money was out of form. His "governor," Capt. Money, however, showed form enough for a whole family, and displayed at the traps an ease and grace difficult to imitate by those many years his junior.

J. A. R. Elliott played his usual rag-time with his gun, nine out of ten times using only one load.

Mr. Werk's doings with a gun show him still a fighting factor at the traps.

Young, of Columbus, showed that he is always to be reckoned with in a shooting match.

Alex. Tolsma's one year in the shooting ring has made the handicapper do some gerrimandering in order to produce good returns for all.

Methodical Bill Crosby was there, and every body that had any money up knew of his presence before and after; and he didn't soil a collar either.

Jim Head looked nice in his new jacket, but his gun stock would slip on it.

Watson, the "little and mighty," played a leading role at one time handsomely.

Roll shot in good form, as did many others, and I think everybody voted this meeting a full-fledged success.

Under all the trying weather conditions and slow birds, harmony and good fellowship existed. Repartee was rampant at times, and in this none would have been more missed than Tom Marshall and Harold Money.

First Day, Feb. 10.

The Grand Sportsmen's Expert Championship contest was the main event of to-day. It was won by the expert, Mr. W. R. Crosby, with a score of 44 out of 50. Mr. J. A. R. Elliott was second with 43, while Harold Money was close up to the leaders with 42. Watson, of Pittsburg, was high average for the day with 148. The programme was eight target events, entrance $2 and $2.50; $10 added to 20-target and $15 added to 25-target events. The scores follow:

Events:	1	2	3	4	5	6	7	8

Championship event: Crosby 44, Gilbert 38, H. Money 42, Squires 41, Griffiths 40, Head 34, H. M. Clark 33, Burnside 41, Marshall 39, Young 41, Rhoades 40, Wiggins 41, Caleb 42, Tripp 38, Bates 32, Weatherhead 39, Voris 38, G. P. Wilson 36, Le Campte 41, Simmonds 36, Bahney 32, Toll 40, Jarvis 36, Burmeister 28, Barto 37, Chapman 33, Vermylea 35, McMackon 39, Watson 37, E. C. Clark 40, Dreihs 40, G. Stanley 32, Parker 41, Elliott 43.

Second Day, Feb. 12.

Mr. Tom Marshall, famous for success in the annals of the Grand American Handicap and other great contests, was high for the day with a total of 141 out of 160. The scores in the eight programme events, 20 targets each, $2 entrance, $20 added, follow:

Events:	1	2	3	4	5	6	7	8	
Targets:	20	20	20	20	20	20	20	20	Broke.
Gilbert, 21	18	18	20	18	18	14	16	16	138
Crosby, 21	17	19	18	14	16	15	15	16	130
Watson, 20	16	13	15	19	18	15	17	17	130
Elliott, 20	17	18	17	18	16	15	12	20	133

Third Day, Feb. 12.

The third day had a programme of live bird competition. The birds were not a good lot, and the scores were high.

The first event was at 6 birds, $6, high guns, moneys divided 30, 25, 20, 15 and 10 per cent. The scores follow:

Stroud .....212212—6
McCall .....222202—5
Reardon .....112112—6
Morris .....100121—4
Robbins .....222220—5
Wiggins 02212
Voris 12101
Clark .....221222—6
H Bates .....222222—6
Young .....122221—6
Hicks .....200202—3
Griffith .....122212—6

Crosby .....121121111—9

The Gilman & Barnes International Live-bird Trophy contest was an event which excited the keenest of interest. Bates had two wins on it, and Gilbert was the holder, so that much depended on the performances of these two great artists of the scatter gun. Bates missed his seventh, Gilbert his tenth, over which there was some rejoicing. The conditions were 15 birds, $15; $50 added; high guns; three moneys for every ten entries. The ties were shot the next day. F. Weatherhead, of Red Oak, Ia., won it. The scores:

Elliott, 32.....112101112221012—13

Weatherhead, Griffith and Voris were tied for first honors at the end of the shoot, and after the contest had narrowed down to them the work of deciding the winner of the cup was begun. Both Voris and Weatherhead missed the forty-first bird, and when Griffith scored the forty-second he was awarded the trophy. The three men divided the first money.

Unique Live Bird Shoot.

ST. LOUIS, MO.—An interesting and novel tournament at live birds was held at Dupont Park, St. Louis, Feb. 8. It was a continuous match, representing two-man teams, in which eighteen men started, the survivors each time repeating the original race until but one was left. The races were each at 10 birds per man, there being three of these, and finally a miss-and-out between the last two men up. It proved an event of much interest, which brought out the best crowd of the winter, and was not decided until the firing of the last gun. C. W. Scudder had donated a sterling silver loving cup as the reward of the race, which finally went to Mr. F. C. Riehl. The ground was covered with snow, and the birds were unusually good, which made shooting difficult in the bad light, and many good shots did not average up to their accustomed form.

A miss-and-out was also shot at live birds, and during the day others shot at targets from the magautrap. Scores:

First race:

Orvis .....22222222220 —10
Mermod .....2222221222 —11
Spencer .....11220*0120 — 7

GEO. L. CARTER, Sec'y.

Sunny South Handicap.

Brenham, Tex.—The Sunny South Handicap, which began Jan. 26, closed Jan. 31, after a week's run. The attendance was not as large as was expected; but, with the local gun club, there were rarely less than twenty men at the traps in any event, either during the live-bird part of the programme, or the bluerock events.

There were many extra events both at live birds and at bluerocks; in fact, so many that you would scarcely accord space for the scores, and we shall confine our report to the official programme, except in one or two instances of special interest:

Following is a list of those in attendance, with their address: Chas. B. Spicer, St. Louis; O. C. Bottger, Ollie, Ia.; J. T. Rosser, Fayetteville, Ark.; R. O. Heikes, Dayton, O.; J. H. Bottger, Ollie, Ia.; Max E. Hensley, Battle Creek, Mich.; F. G. Weatherhead, Red Oak, Ia.; R. F. Weatherhead, Tabor, Ia.; H. E. Bonebrake, Weatherford, Oklahoma; E. Howard, F. M. Faurote, Dallas; L. I. Wade, Nacogdoches, Tex.; C. D. Ellison, Paris, Tex.; J. M. Hughes, St. Louis; Maurice Kaufman, New Orleans; Adolph Topperwein, San Antonio; M. E. Atchison, Giddings; W. R. Crosby, O'Fallon, Ill.; Geo. W. Bancroft, Orange, Tex.; H. M. Jackson, and J. A. Jackson, Dr. Hill, Austin, Tex.; F. A. Black, Cameron, Tex.; Dave Curran, Enuis, Tex.; Bryan Heard, Theo. Behring, Cleveland and Cadwell, of Houston, Tex.

The programme was open to the world, and the Sunny South Handicap shoot opened Monday morning with four target events aggregating 80 bluerocks—which were not a part of the programme—and resulted in the following scores of those who shot the entire 80: Heikes 66, Faurote 69, Howard 52, Hughes 70, Crosby 75, Weatherhead 73, Bottger 65, Heard 71, Gardiner 55, Spicer 67, Graber 53 out of 70, Lockett 62.

Live Bird Events.

Eight live birds, $5 entrance, 30yds. rise, four moneys, high guns: Weatherhead, Crosby, Heikes, Gardiner and Wade, 8 each; Tucker and Bottger, 7; Howard and Hughes, 6; Graber and Spicer, 5.

After this event, a race was shot at 25 bluerocks, $2.50 entrance: Heikes scored 24, Faurote 22, Howard 16, Hughes 24, Crosby 22, Weatherhead 23, Bottger 15, Heard 21, Gardiner 11, Spicer 18, Wade 23, Mittendorf 15.

A hard shower drove the shooters into the club house, and shooting was suspended for the day.

Tuesday's Shoot.

The second day of the shoot opened with a 12-bird event, $8 entrance, four moneys, high guns. Scores: Faurote 11, Bottger 11, Heikes 11, Heard 8, Howard 8, Crosby 12, Hughes 10, Weatherhead 12, Wade 10, Gardiner 11, Graber 10, Spicer 12.

The next was the preliminary handicap, 16 live birds, $10 entrance, class shooting. Scores: Weatherhead and Wade 16 each; Howard, Heikes, Hughes, Bottger, Spicer, 15; Heard, Faurote, Graber and Kaufman, 14; Gardiner, 13; Tucker, 12.

After this event Adolph Topperwein, the world's champion with a rifle, gave an exhibition, breaking hazelnuts, oranges, Irish potatoes, shooting coins thrown in the air, killing a live bird released from the trap, with a .22cal. Winchester, snuffing a cigar in Faurote's mouth, shooting shells off his fingers and drawing a picture on a piece of tin of an Indian head.

Sunny South Handicap Event, Wednesday.

Sunny South Handicap, 25 live birds, $20 entrance, 26 to 31yds., four moneys, class shooting. There were twenty-two entries in this event, and in addition to first money the winner received a handsome silver trophy, valued at $100: Heard (27yds.) 24, Heikes (30) 22, Hughes (28) 22, Weatherhead (27) 23, Tucker (27) 22, Whitmore (26) withdrew, Faurote (29) 22, Crosby (30) 22, Wade (28) 23, Howard (27) 22, Bottger (27) 24, Spicer (28) 19, Gardiner (30) 21, Mittendorf (26) 21, Graber (27) 22, Lockett (26) 20, Hill (27) 23, Bancroft (26) 18, Kaufmann (28) 22, Atchison (27) 23.

This event was not concluded Wednesday afternoon, and on the twentieth round, Heikes, Atchison, Bottger each had a chance to tie Heard, who had finished with 24, but Thursday morning the birds were hard, and Heikes and Atchison each missed a bird, and Bottger and Heard tied for the cup. In the shoot-off, miss-and-out, Heard lost his eleventh bird, giving the cup to Mr. O. C. Bottger, of Ollie, Ia.

Thursday night Mr. J. S. Williams, caterer to the shooters at the grounds, and saloon and restaurant keeper uptown, gave the shooters a banquet, which included all kinds of edibles, and Champion Bottger furnished the champagne for the occasion, which cost more than the purse that went with the cup. Hon. Ben S. Rogers made the presentation speech. The cup, surmounted with two American flags, occupied the center of the long table, and it was long past midnight when the crowd dispersed.

Thursday's shoot closed with a 10-bird extra and a miss-and-out extra, $5 and $2.50 entrance respectively.

In the 10-bird event Wade, Kaufman, Atchison, Spicer and Curran each made a straight, Faurote, Heard and Tucker each scoring 9; the others withdrew, as it was high guns.

Heikes Wins a Handsome Trophy.

In a miss-and-out match for a handsome silver cigar case trophy, surmounted by two bird dogs and a match holder, worth close to $50, Mr. R. O. Heikes, of Dayton, O., won it on a score of 10 straight at 30yds.

Friday's Shoot.

Friday's programme included nine events, $18 entrance, 180 bluerocks, and of those who shot through this programme, following are the scores. In this event the professionals shot from the 19yd. mark, the amateurs from the 16yd. mark: Heikes 151, Faurote 151, Wade 151, Hughes 140, Crosby 146, J. A. Jackson 154, Behring 145, Curran 145, Cleveland 122, Gardiner 112, Weatherhead 146, Heard 124, Hill 129, Atchison 158, Black 148, Kaufman 159. E. Howard (Bonebrake) 143.

In a match between Heard and Curran for $20, 50 birds, Heard won on a score of 43 to Curran's 42.

Saturday's Scores.

The last day of the shoot, Saturday, opened with the preliminary handicap at bluerocks, 25 birds, $2.50 entrance. Scores: Heikes 22, Crosby 19, Faurote 22, Wade 21, Hughes 21, Jackson 23, Atchison 21, Curran 16, Kaufmann 18, Gardiner 15, Weatherhead 20, Heard 20, Bering 19, Lockett 16, E. Howard 21, Cleveland 17, Spicer 16, Bottger 17.

The Sunny South Handicap, bluerocks.

The Sunny South Handicap at 100 bluerocks, $10 entrance, handicaps 14 to 20yds., five moneys, class shooting, with a handsome $75 silver cup to winner, was won by W. R. Crosby, of O'Fallon, Ill., on a score of 96. The birds were very erratic, and a strong wind blew across the traps. Following are the scores: Heikes 77, Crosby 96, Faurote 81, Wade 73, Hughes 91, Jackson 82, Atchison 87, Curran 73, Kaufmann, 81. Gardiner 65, Weatherhead 85, Heard 79, Bering 80, Lockett 77, Howard 79, Cleveland 73, Spicer 57, Bottger 70, Tucker 68, Graber 75.

The shoot closed with a 10 live-bird event, extra, $5 entrance, three moneys, class shooting, the scores being as follows: Cleveland 10, Atchison 9, Heard 8, Weatherhead 8, Wade 10, Heikes 9, Kauffmann 10, Smith 7, Gardiner 9, Tucker 8, Bering 7, Crosby 10, Graber 10.

Manager Alf Gardiner and President Fred Martin, who were running the shoot, did it in a satisfactory manner.

Weatherhead killed 59 out of 61 live birds, and won high average.

Geo. Tucker.

Cincinnati Gun Club.

Cincinnati, O., Feb. 7.—The fifteenth contest for Troisdorf medals resulted in a win for Maynard, who was carried into the club house on the shoulders of some of the members after making his good score. He is one of our oldest members, and is severely handicapped by having crippled hands. Le Compte, one of Kentucky's crack shots, was a visitor, but could do nothing at 18yds. Gambell hobbled out to the score to-day and managed to break 43, his last string of 20 being straight. Maynard was winner in Class A, Watterson and Falk tied in Class B: Scores: Maynard (18) 46; R. Trimble (21) 44, Gambell (19) 43, Ahlers (21) 42, J. B. (17) 42, Falk (17) 41, Watterson (15) 41, Block (17) 41, Coleman (20) 39, Medico (18) 38, Le Compte (18) 38, Ackley (15) 37, Barker (18) 37, Harris (19) 36, McB. (17) 35, Nye (18) 34, Roll (18) 34, Corry (16) 33, Faran (19) 33, Randall (20) 32, Steinman (19) 31, Herman (16) 31.

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, L. I., Feb. 12.—The prize shoot of the Brooklyn Gun Club, held on Lincoln's Birthday, was well attended considering the number of other shoots held about New York on that day. The main event was at 25 targets for a carving set, handicap allowance added to the scores. The result was as follows:

Borland, 9	1111011101100011101111111—25
Hopkins, 1	1111111111011111111111011—24

Crescent Athletic Club.

Bay Ridge, L. I., Feb. 12.—The Holiday shoot of the Crescent Athletic Club was one of the largest held by that organization. The holiday cup and a trophy were won by Mr. W. W. Marshall with a score of 49. Messrs. T. W. Stake, A. W. Palmer, Edward Banks, R. E. Wigham and Henry Kryn also won trophies. The scores:

Holiday cup, 50 targets, handicap:

	Hdcp.	Brk.	Total.		Hdcp.	Brk.	Total.
W W Marshall	7	42	49	A W Palmer	3	38	41
Dr Raynor	10	39	49	L C Hopkins	4	36	40
F T Bedford, Jr.	2	47	49	E Banks	0	40	40
L M Palmer, Jr.	3	45	48	F D Mead	7	32	39
R E Wigham	6	40	46	H M Brigham	0	38	38
T W Stake	5	40	45	C J McDermott	6	32	38
D V Hegeman	3	41	44	H C Werleman	10	27	37
J C Faulkner	6	38	44	A B Rhett	8	27	35
Dr Pool	3	39	42	E H Lott	2	32	34
H Kryn	4	37	41	C A Sykes	4	30	34
H Vanderveer	3	38	41				

Shoot-off, 25 targets: Marshall 25, Raynor 25.

Second shoot-off, 25 targets: Marshall 25, Raynor 20.

Chapman trophy, 25 targets, handicap: Hopkins (4) 25, Marshall (7) 25, L. M. Palmer, Jr. (3) 25, Wigham (6) 25, Hegeman (3) 25, Kryn (4) 23, Brigham (0) 23, Faulkner (6) 23, A. B. Rhett (8) 23, Werleman (10) 22, Bedford (2) 22, Sykes (4) 22, Dr. O'Brien (5) 21, A. W. Palmer (3) 21, Lott (2) 21, Pool (3) 20, J. Rhett (10) 20, Stake (5) 20, Vanderveer (3) 20, E. L. Rhett (5) 20, McDermott (6) 20, Mead (7) 20, Raynor (10) 19, Banks (0) 18, Marshall won in the shoot-off.

Marshall trophy, 25 targets, handicap: Pool (3) 25, Werleman (10) 25, Palmer Jr. (3) 25, Wigham (6) 25, McDermott (6) 25, A. B. Rhett (8) 25, Stake (5) 24, Bedford (2) 24, Keyes (1) 24, Sykes (4) 24, Mead (7) 24, Lott (2) 22, Hopkins (4) 22, Banks (0) 22, Brigham (0) 22, Hegeman (3) 22, Kryn (4) 21, Meeker (5) 21, Faulkner (6) 21, O'Brien (5) 21, A. W. Palmer (3) 20, Vanderveer (3) 19, E. L. Rhett (5) 17.

Shoot-off, 25 targets: Pool 25, Werleman 25, Wigham 25, McDermott 25, Rhett 25, Palmer Jr. 25

Second shoot-off, 25 targets: Palmer Jr. 25, Wigham 25, Rhett 25, Werleman 20, Pool 19, McDermott, withdrew.

Third shoot-off, 25 targets: Palmer Jr. 24, Wigham 23, Rhett 23.

Trophy, 25 targets, handicap: Stake (5) 25, Kryn (4) 23, Wigham (6) 22, Bedford (3) 21, Lott (2) 21, Sykes (4) 21, Banks (0) 19, Faulkner (6) 15, Vanderveer (3) 14, McDermott (6) 14.

Trophy, 15 targets, handicap: A. W. Palmer (2) 15, Meeker (3) 13, Brigham (0) 12, Kryn (2) 11, Stake (3) 11, Banks (0) 9, Notman (2) 9.

Trophy, 15 targets, handicap: Banks (0) 15, Meeker (3) 15, O'Brien (3) 14, A. W. Palmer (2) 14, Notman (2) 13, Keyes (1) 13, Bedford (1) 12, Kryn (2) 12, Hopkins (2) 10.

Shoot-off, 15 targets: Banks 13, Meeker 10.

Trophy, 15 targets, handicap: Wigham (3) 14, Bedford (1) 14, Kryn (2) 13, Stake (2) 13, McDermott (3) 13, Vanderveer (2) 13, Banks (0) 12, Faulkner (3) 11, Sykes (2) 11, Lott (1) 10.

Shoot-off, 15 targets: Wigham 12, Bedford 12.

Second shoot-off, 15 targets: Wigham 15, Bedford 14.

Trophy, 15 targets, handicap: Banks (0) 15, Kryn (2) 15, Vanderveer (2) 13, Lott (1) 12, Bedford (1) 12, Wigham (3) 12, Sykes (2) 10.

Shoot-off, 15 targets: Kryn 14, Banks 15.

Trophy, 15 targets, handicap: Wigham (3) 15, Bedford (1) 13, Kryn (2) 13, Banks (0) 12, Lott (1) 11, Vanderveer (2) 10.

Feb. 14.—The attendance was about average. Mr. F. T. Bedford, Jr., scored a win on the February cup to-day:

	Brk.	Hdcp.	To'l.		Brk.	Hdcp.	To'l.
F T Bedford	44	4	48	C Sykes	34	8	42
W Marshall	37	10	47	A Palmer	37	4	41
L Hopkins	38	8	46	H Werleman	24	16	40
H Vanderveer	38	8	46	D C Bennett	28	10	38

Trophy, 15 targets, handicap: W. W. Marshall (3) 14, A. W. Palmer (1) 14, F. T. Bedford, Jr. (1) 14, H. B. Vanderveer (2) 14, F. B. Stephenson (0) 13, L. C. Hopkins (2) 12, G. G. Stephenson, Jr. (1) 11, H. C. Werleman (5) 10.

Shoot-off, same conditions: Bedford (1) 14, Vanderveer (2) 12, Marshall (3) 11, Palmer (1) 10.

Trophy, 15 targets: Vanderveer (2) 15, Bedford (1) 14, Sykes (2) 13, , Palmer (1) 12, Hopkins (2) 12, F. B. Stephenson (0) 11, Werleman (5) 10.

Trophy, 15 targets: F. B. Stephenson (0) 14, Marshall (3) 14, Bedford (1) 14, Palmer (1) 14, Hopkins (2) 14, G. G. Stephenson (1) 12, Vanderveer (2) 12, Sykes (2) 11, Bennett (3) 10.

Shoot-off, 15 targets: Marshall (3) 15, Palmer (1) 14, Hopkins (2) 13, Bedford (1) 12, F. B. Stephenson (0) 10.

Fulton Gun Club.

Brooklyn, L. I., Feb. 12.—There were a total of thirty shooters at the shoot of the Fulton Gun Club to-day. In the 100-target event, June was high with 89, this including an allowance of 4. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Ossining Gun Club.

Ossining, N. Y.—The appended scores were made at the Lincoln's Day club shoot of the Ossining Gun Club, Feb. 12. The scores made were excellent. The first main event was for the handicap cup, which must be won three times to hold. Five were tied for this cup from the shoot held on Saturday, Feb. 7—Hans, A. Rohr, Bruin, J. Keenan and R. Kromer, Jr. It was decided that the shoot-off would be under original conditions governing the handicap. Only Hans and Rohr were present to shoot off, and Rohr won out by going straight again, with his handicap. Later Bruin put in an appearance and made a straight also, so he is elected to shoot off against Rohr's straight score for the first winning for the next shoot, Feb. 21.

Ties to-day with straight scores for the handicap cup: A. Rohr, G. D. Hubbell, P. B., D. Brandreth and I. T. Washburn. On the shoot-off, original conditions, Washburn and Hubbell again tied, agreeing to shoot off on the 21st inst.

Mr. Washburn, or rather, Ike, has been in Virginia for the past few months, shooting quail, the shooting at which has kept him in good clay bird form. In the event for the scratch cup he broke 24 out of 25, finishing the day with an average of 92 per cent. Ike is running for president of the village this spring, and we, as fellow club members, hope his winning streak will continue through the month of March.

Everything points to a good big shoot here on Washington's Birthday. Our shoot was the first one advertised for the 23d, whether or not that will influence any shooters to come here.

The new upper part of the magautrap is installed and works fine.

We shoot rain or shine.

Handicap cup, 25 targets: E. Bell (1) 22, J. C. Barlow (3) 19, I. Washburn (3) 25, A. Rohr (13) 25, Hans (3) 23, C. Washburn (13) 17, D. Brandreth (4) 25, G. Hubbell (6) 25, W. Coleman (2) 21, P. B., (5) 25, *Bruin (8) 25.

Shoot-off for 7th inst.

Shoot-off: I. Washburn (3) 25, G. Hubbell (6) 25.

Scratch cup, 25 targets: E. Bell 22, J. C. Barlow 19, I. Washburn 24, A. Rohr 7, Hans 20, D. Brandreth 14, G. Hubbell 21, W. Coleman 20, P. B. 18, C. Blandford 22.

Arkansas Championship.

Fort Smith, Ark., Feb. 13.—The members of the Arkansas State Sportsmen's Association are to be given an opportunity to test their championship ability at both live birds and targets at Stuttgart, Ark., Feb. 26. On this date there will be an open contest for the Peters Cartridge Co. trophy, emblematic of the live-bird championship, at 25 live birds, and an open contest for the Association target trophy at 50 targets per man. In each instance the entrance will simply be price of birds, but an optional sweep will doubtless be run in connection with each event. The contest will be conducted under the auspices of the Stuttgart Gun Club, and visiting shooters are assured of courteous treatment, as this club never does anything by halves. Aside from this, their equipments are first class in every respect, as the shooting grounds are located on the open prairie, so that the pigeons are sure to get the benefit of any wind that may prevail, and in target shooting a sky background is assured—both very desirable features.

Those desiring to participate in the live bird event must send a forfeit of $5 to C. D. Conroy, Stuttgart, Ark.

Paul R. Litzke.

PUBLISHERS' DEPARTMENT.

A Letter from an Old New England Gentleman (72 Years Old) to a Person Inquiring About the South.

Pinebluff, N. C., May 19, 1902.—Mr. Allen Tibbit, Manager of the Industrial Oil Co.: Dear Sir—I have a copy of your letter that you sent to J. T. Patrick. I thought I would like to write you a few lines and let you know what I think of the place. I think we have the finest spot on earth for the use that you want to put it to for fruit and chickens. I have just started me a little place to do a little in that line for my own use. I have a hundred fig trees and about the same in peaches. I am going to put out a few grapes. I have got now a lot of cuttings that are coming along well. We have the best water in the world, clear as crystal, right out of the sand. I have fifteen hens and a rooster, and they drink a two-quart pail full of it every day. That speaks well for the water. Twenty-three chickens, all smart and healthy. Do not forget to come and see us. I am in the new part of the city. I will send you a plan that I made fifteen years ago, and I would like to see a company that would take hold and carry out the plan. We have the oak land, with the pine—that is what we want for shade for the hens and chickens. I let my hens and chickens go out all around where they are a mind to. From our brook we can run water anywhere with little cost. I came here one year ago the 25th of this month from Revere, Mass., and I brought money enough to come and carry me back, but I liked it so well I did not go back. I have put me up a small house. I have the land paid for, and do not owe but $4.75 on house, and I am an old man, seventy-two years of age. I have earned my own living, and when I get my place all done, it will be a pretty place. I picked strawberries this morning to give me good breakfast and dinner, and also lettuce that I raised this spring.

Let us see or hear from you again. Yours with respect, E. Pike, Pinebluff, N. C.—*Adv.*

Three-Day Tour to Washington.

UNDER THE PERSONALLY-CONDUCTED SYSTEM OF THE PENNSYLVANIA RAILROAD.

The next Pennsylvania Railroad Personally Conducted Tour to Washington leaves Thursday, Feb. 26. Rate, covering railroad transportation for the round trip, hotel accommodations and transfer of passenger and baggage, station to hotel in Washington, $14.50 from New York, $13 from Trenton, and $11.50 from Philadelphia. These rates cover accommodations for two days at the Arlington, Normandie, Riggs, Ebbitt, Shoreham, Cochran, Gordon, Barton or Hamilton Hotels. For accommodations at Regent, Metropolitan, National or Colonial hotels, $2.50 less. Special side trip to Mt. Vernon.

All tickets good for ten days, with special hotel rates after expiration of hotel coupons.

For itineraries and full information apply to ticket agents; Tourist Agent, 263 Fifth avenue, New York; 4 Court street, Brooklyn; 789 Broad street, Newark, N. J.; or address Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—*Adv.*

Florida—Thomasville—Augusta.

Atlantic Coast Line's famous trains, 8:55 A. M. daily. "New York & Florida Special," 2:10 P. M. week days. Apply at office, 1161 Broadway, New York.—*Adv.*

If you want to know all about pheasants, quail and game birds write to the Hub Poultry Co., Boston, Mass.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, FEBRUARY 28, 1903. | VOL. LX.—No. 9. No. 346 BROADWAY, NEW YORK

THE MASSACHUSETTS COMMISSION.

IF we were asked to point to a State in which the protection of game and fish had in marked measure popular indorsement and appreciation, we would without hesitation name Massachusetts. The protective work of the Commission and its agents is there conducted not as in some cases in opposition to a public sentiment, but with the intelligent support of the community. When such a condition prevails half the battle has been won.

This is not to say that the game and fish laws are universally lived up to. On the contrary, there are frequent violations. But the violations serve to demonstrate the condition of public feeling; since, instead of being condoned by indifference or shielded by sympathy, such offenses are reprobated by the sentiment of the community, and are put on a plane with the infractions of other statutes. It is in the nature of this public attitude toward the enforcement of the laws that we may look for a true indication of the actual condition of game protection in Massachusetts as administered by the present commissioners of fisheries and game.

Of not less importance in estimating the character and service of the Commission is the relation existing between it and those individual sportsmen and organizations of sportsmen most concerned for protection and most active in the work of keeping up the game supply. The fact is highly significant that we find a hearty cooperation with the Commission on the part of such men —to name only a few—as Mr. A. B. F. Kinney, of Worcester; Mr. Paul Butler, of Lowell, and Mr. Chas. Dimick, of Cambridge; and such organizations as the powerful Massachusetts Fish and Game Protective Association and the clubs throughout the Commonwealth which are associated with it, and the Rod and Gun Club of Boston, one of the simplest, most direct and business-like game protective clubs in the country. That these, and in fact all who are sincerely interested in the cause and honestly laboring for it, are working hand in hand with the Commission and gratefully acknowledge the cooperation received from the Commission and its agents, is the strongest possible evidence that the Commission is serving its purpose.

In view of these facts it is difficult to account for the measure which has been introduced into the Massachusetts Legislature to abolish the present Commission of Fisheries and Game and to substitute in the place of it a new commission of six members, who shall meet once in three months, and shall serve without compensation, except that the chairman and secretary and a superintendent, who may be members of the board, shall receive such compensation as the Governor and counsel may determine.

The abolition of the board and the substitution of a new one are extremely radical measures, and such as should not be resorted to unless some sufficient reason demands them. The only reasons we have heard advanced by the promoters of the movement for a change is that the present commission knows only about lobsters and concerns itself with the protection only of lobsters, neglecting the general fish and game interests of the Commonwealth.

It would be difficult to devise a charge more preposterous than this. The Commission, it is true, is engaged in the enforcement of the short lobster law, and has done excellent work in this field. But that is only a part, and comparatively a minor part, of the service. Of the 156 arrests made last year, 57 were for Sunday shooting, 34 for illegal fishing, 10 for shooting song and insectivorous birds, 8 for using ferrets, 15 for illegal shooting, 4 for snaring, 5 for selling game and 1 for killing a deer, while 20 were for violation of the lobster laws. As a matter of fact, never before the coming into office of the present Commission was the game of Massachusetts protected so thoroughly and efficiently in all parts of the Commonwealth as it has been by them in the past and is to-day. Measured by actual results, the service is most commendable, and Commissioner Collins and his associates have fairly won and should be given a vote of confidence. We believe that they do enjoy the confidence of all who are cognizant of their official record; and we cannot believe it possible that the Legislature will consider such an unwise measure as is this scheme of dispensing with public officials who have so conspicuously demonstrated the value of their services. The interests of game and fish protection in Massachusetts can best be advanced by keeping them in the same experienced and capable hands.

ABOLISH SPRING SHOOTING.

IT is well recognized that two causes exist for the extraordinary diminution of our wildfowl during the last few years. The chief of these is unquestionably overshooting. The other is the settling up of the country and the consequent contraction of their breeding grounds east and west. Yet the wildfowl, being gregarious, congregate—when found at all—in great numbers, and people now say of the ducks that they can never be exterminated, just as they used to say that there would be wild pigeons, or that there would be buffalo, in the time of our children's children. But within the recollection of many men both buffalo and wild pigeon have been exterminated, as has also one species of duck; while another, the wood duck, is growing so scarce that serious alarm is felt for its continuation as a species.

A bill has been introduced in the New York Legislature by Senator E. R. Brown amending certain sections of the game law so as to provide that wildfowl shall not be taken in the State from January 1 to September 15, both inclusive.

Senator Brown has more than once before introduced bills to the same general effect, and while there seems little doubt that the State, as a whole, is in favor of a law prohibiting the spring shooting of wildfowl, it is nevertheless the fact that the residents of one section of the State—Suffolk county—have been able to stave off the greatly to be desired action by the Legislature.

That spring shooting should be forbidden is quite generally acknowledged; and the reason for forbidding it is merely that the season for the shooting of wildfowl is too long and that under present conditions so great a number of birds are killed each year that the supply of fowl is constantly being reduced, and there seems a prospect that before long some species of our ducks will be exterminated. The question is one of public policy. Wildfowl are a valuable possession to the State, and it is desirable to keep up the supply. The State passes laws forbidding the dynamiting and the netting of trout in brooks and rivers, for the reason that these methods destroy more fish than the supply will stand, and therefore are injurious to the public. The same reasoning applies to spring shooting.

As things stand at present, wildfowl are shot from the last of August to the first of May, or during eight months of the year; in other words, during the whole time that these migratory birds are with us. Over all the southern States the shooting goes on through all these months, and except when the birds are absent from the northern States, it is continuous there as well.

The wildfowl which pass through the State are more valuable to it alive than dead. At certain seasons many men earn a living by means of these birds, and they afford sport to a far greater number. To have them still further reduced in number would be a misfortune. They should be protected, in order that as many of them as possible may return to their northern home to reproduce their kind, to return in the fall accompanied by hordes of young birds.

If spring shooting were abolished many of these wildfowl would breed within the State. Remaining undisturbed through the summer, they and their broods would act as decoys in the autumn to bring down great numbers of migrating fowl, and would give to sportsmen and professional gunners far better autumn shooting than is had at present. The experience of Jefferson county—where the shooting of fowl in the spring has been forbidden—offers an object lesson to the rest of the State which we may well heed.

We continue to shoot ducks in the spring largely because we always have shot them at that season, yet there is a growing sentiment in favor of shortening the shooting season, and the proper way to shorten it is to cut off two or three months from the end of the winter and the spring. It is generally recognized that by the month of February the birds soon to start on their northward journey toward their breeding grounds are mated, and it is obvious—for reasons of sentiment if for no others—that birds which are mated and about to breed ought not to be shot.

The growth of the feeling against spring shooting has been continuous within the past few years. One or two of the Canadian Provinces prohibit the practice, while two of the New England States also forbid it, and there is a strong feeling in at least two others that it should be stopped. Several of the western States protect ducks and geese in the spring, and others while protecting ducks permit the shooting of geese.

It is recognized that the inhabitants of Suffolk county, a large number of whom depend to a greater or less extent on the duck shooting through the winter and spring, will feel themselves to some extent injured by the abolition of spring shooting. But, on the other hand, the inhabitants of all the rest of the State have for many years been injured by this practice. We believe that the abolition of spring shooting throughout the whole State will prove to the Long Islanders a blessing in disguise, and that after the law shall have been in force for a few years they will be among its strongest advocates. It cannot fail to greatly increase their supply of wildfowl, and will give them such shooting as they used to have in the good old times.

ADIRONDACK PRESERVES.

THERE are in the Adirondacks sixty hunting and fishing preserves, aggregating 789,993 acres. They are for the most part well wooded areas, and included within their boundaries are many of the choicest waters of the North Woods. So far as the protection of the forests is concerned, Superintendent Fox points out, the preserve lands are in good hands. In the very nature of the case, the owners find it to their interest to preserve the woods, and under private control these hundreds of thousands of acres are administered as wisely, and will be preserved as long and as carefully and advantageously with respect to the conservation of the water supply, as they would be if the State owned and cared for them. In fact, experience has demonstrated that the preserved lands are protected far more efficiently, as to immunity from fires, than are the State lands. "In 1899," says Col. Fox, "the dry season in which forest fires were raging in the Adirondacks to an unusual extent, it was noticed that there were no fires on the private preserves, aside from incipient ones that were extinguished before any serious danger was incurred."

This is an illustration of the familiar rule that the individual owner will care for his property while the people will let the public possessions go to destruction. It is not an argument for giving over the North Woods into private control; it is a teaching that forest fires and the consequent destruction of public property may be reduced by the adoption for public lands of the system which has been efficacious for the preservation of private woodlands.

THE APPALACHIAN PARK.

IT is announced in the press dispatches from Washington that there is little prospect that the Appalachian Park bill will pass the House at this session of Congress. This will be a severe disappointment to the very large number of friends of this bill who had hoped that the Fifty-seventh Congress would surely establish this Park and appropriate the money for the purchase of the lands for it.

The Appalachian Park has many friends and no enemies; but, though a measure which all acknowledge to be excellent, it still has in Congress no active enthusiasm behind it. As a result, it has been put aside in favor of measures in which there are more or less politics, and for the present will fail.

The bill is of great interest to all residents of the Southern Atlantic seaboard, is warmly advocated by the President, the Secretary of Agriculture and the United States Forester, and has the support of the best people everywhere, but it is not backed up by public sentiment so strongly as it should be, and a further campaign of education is required to bring about its passage by Congress.

Reports of phenomenal scores of wildfowl come to us from Rhode Island, where the shooting has been done at night. That State is one of the few in which night shooting is not under the ban of the law, as it is almost universally condemned by the sentiment of sportsmen.

The Sportsman Tourist.

Camping Near a Minnesota Lake.

The place where we made our camp was on a ledge of the steep bluff that led down to the lake. There was a great deal of underbrush that we had to clear away, but when at last we set up our tent poles and stretched the brown canvas over them, we were sheltered from the wind and driving rain that we knew was sure to come. Our camp furniture consisted of five fur rugs, half a dozen blankets, two cots, two big army chests, and an oil stove.

When our things were dumped from the baggage car on to the platform of the little station a good two miles from our camping ground we tried everywhere to get a wagon of some kind to haul our stuff, but without success. There was nothing left for us but to pack the things ourselves. We were all of the morning and part of the afternoon doing this, but at last the bundles and boxes were all carried to the place we had selected as a camping ground. But Heard and I were nearly exhausted from the work, so we dropped upon the long grass beside our camp equipage and ate the lunch we had brought along. Then we turned over on our backs and enjoyed a pipe in solid comfort. When the muscles are tired from good healthy outdoor work, and you lie on your back looking up at a blue sky with a pipe between your teeth and a cool lake spread out at your feet, the world does not seem such a bad place, after all.

"I don't think we damaged the canoe any when we dropped it," said Heard. Getting up he looked over the canvas canoe. "No," he added, contentedly, "she's all right."

We knocked out our pipes and went to work clearing away underbrush, and in two hours had our camp pitched and were getting supper. We found two boxes that would just do for chairs, and we made some backs and nailed them on. One of the army chests we used as a table and the other as a storing place for provisions. It was a very home-like looking camp, indeed, and things looked neat and clean. A cool, fresh breeze was sweeping across the lake into our faces, and the little American flag we had run up was snapping like a pistol as it tossed and unfurled.

"Don't think it's likely any microbes will collect into a disorderly mob around here," said Heard, as he looked things over with complete satisfaction.

The June day was drawing to a close by the time we had finished supper and washed up the dishes. The sun had sank so low that the island west of us nearly hid his kindly old face from view, and the long, dark green shadows of the bluffs were reflected in the water. The face of the waters commenced to take on the colors of the sunset sky, and these were most beautiful indeed. The breeze had quite died away and it became so calm that the little flag hung limp and lifeless from its staff. We lit our pipes and smoked in silence as we watched the dusk gather upon the further shore. We could hear the distant quacking of ducks from the direction of the railroad bridge. This bridge cuts across a corner of the lake to the west, and near it grows wild rice in abundance.

"Let's take the canoe and go over and see the feast," said Heard, starting down the hill. I followed him down and we untied the canoe and paddled until we got within cover of some tall reeds. Then we waited. Suddenly we heard the "quack, quack" quite plainly. It came from somewhere about two hundred yards to our left. We paddled ahead slowly. I peered between the reeds and could just see the railroad bridge not far in front. We were going very slowly now, and the water slid noiselessly under us and a reed would scrape upon the canvas side of the canoe. We stopped paddling and let the canoe drift. I looked at Heard and he silently shook his head. We were both looking carefully for ducks, but not a duck could either of us see. I gave a little push with my paddle. The canoe moved softly ahead into a little open place among the reeds. We could see three fat ducks diving for wild rice just in front of us, and several on each side of us had their heads under water or were holding their bills in the air. Heard and I sat like statues, and the canoe drifted quietly toward the ducks. For a full second nothing moved, not even a reed. Then suddenly there was a startled "Quack, quack-k-k!" This was quickly followed by a great whirr of wings and over a hundred ducks rose from the water and into the air and went sailing away into the invisible distance.

"We're Indians," said Heard, as he commenced filling his pipe. And so with our pipes burning a cheerful glow we rowed back to camp. It was quite dark by the time we secured the canoe and climbed the hill to camp. Bright stars were shining and whip-poor-wills were calling in the woods.

That night when we turned in we fell asleep almost before our heads touched the pillows. But we sank to peaceful slumber with a fine sense of knowing that our hard work of establishing a camp and packing huge bundles of canvas and boxes of provisions for two miles was a thing of the past.

When I awoke the next morning, Heard was still sleeping quietly. Golden sunlight was stealing in through the flaps of the tent and a beam was playing across the foot of my cot. I dressed without waking my campmate and ran down the hill and jumped into the canoe and pushed off. It was a most beautiful morning, with a fresh wind sweeping across the great lake and clear skies overhead. I paddled over to a point of reeds near the island and there threw in my hook and line. How the fish bit that morning! And how I pulled them in; small mouth bass, and sunfish, and pike! The green tree line on the shore sparkled with dew as the bright sun touched it, and the reeds looked dusky golden. In the bottom of my canoe lay a dozen sparkling beauties. It was all so beautiful and so real that I was lost in a day-dream when I heard a shout from the shore, and looking back toward the camp I saw Heard running up the little flag. "Bang!" went his revolver in a morning salute to our colors.

"Get anything?" he called.

"No," I shouted back. "Haven't had a bite even."

"Come back," he called.

Slowly I paddled back to shore. Heard met me at the water's edge.

"Strange you didn't get anything," he commenced quite seriously. "What kind of bait did you use?"

"Worms," I replied, holding up my string of beauties.

Heard gave a warwhoop and danced up and down the shore in joy.

"I'll fry some for breakfast," he said, "while you go over to the farmer's and get some cream for the coffee."

The day before we had noticed a farmer's place a mile from our camping ground and just across the railroad track. So I started off with a glass jar to bring some cream. When I looked back I saw Heard busy cleaning my fish. It was a fine walk through the woods, and it was still early, not later than six o'clock. Birds were flitting about among the trees and sending call after call to their mates, and a gray squirrel went clattering up a tree beside the path. When I climbed over the farmer's fence I saw him just going into his barn. He was rather surprised to find that anyone was camping on his side of the lake, as he said that most of the campers used the other side, as it was more populous, and they liked the presence of neighbors. But I told him that this was just what we didn't want. He gave me the cream, but refused to take any money for it, and made me promise to come over and get some every morning as long as we stayed in camp. I told him I would do so if he would promise to let us take him out fishing in our canoe and so allow us to return the kindness. He seemed very much pleased with this and said he would come over that afternoon if we didn't mind. He showed me around his place and gave me some radishes to take back with me for breakfast. Before I left I made him promise to keep our camping place a secret, and this he said he would do.

When I reached camp Heard had a fine breakfast all cooked and on the table. I have eaten many a breakfast that I consider good, on dining cars and steamships, in great country houses in old Maryland, and in famous eating houses in Washington, where Senators and Cabinet officers smacked their lips in appreciation, but none of these, I think, could compare with our first breakfast in camp.

"Where did you learn to cook, Heard?" I asked.

"I never learned," said Heard, innocently.

"Indeed," I said. But the breakfast was too good and I was too hungry to talk, so we ate in silence, and when at last we could eat no more I went over and laid down upon the rugs and rolled a cigarette. Heard did the same, and we smoked in silence and looked out over the water below. Only the day before we had left behind us the vast city, with its hustle and roar and crowding life; its smoke and grime, and its narrow, dark streets. This morning we were in the boundless wilds, with God's illimitable skies over us and the clean, pure soil under us; taking our breakfast from the clear lake and eating it out in the open air and sunshine. We were indeed Nature's children, and Mother Nature was showing us her most beautiful side; the one all her town children love best but which so many of them never see.

It is not every year that one can spend two months camping upon the shore of a fresh water lake. But each of the sixty days was a golden one, even when the sky was gray and there was no sun. One morning we awoke to find the sky overcast with black clouds edged with light brown. However, there was no wind, and the lake was quite smooth, so we pushed off in our canoe for the island to fish. It was cool and the fish bit fast. We caught several bass and a pike, when the sun burst through the clouds and it looked as though it was going to clear up and be a fine day. But the fish didn't seem to bite at all in the sun, and Heard said that we had better paddle to a new place. We both took the paddles and sent the canoe along the edge of the island until we had circled around to the other side. We found a place where the trees overshadowed the water, and by the time we had dropped in our hooks the sun again disappeared and a light wind sprang up from out of the west. Almost as quick as our hooks entered the water we each had a bite and when we hauled them in we found we had hooked two beautiful bass three or four pounds in size. While we were admiring their beauty as they lay gasping their life out in the bottom of our canoe, a sudden gust of wind whirled us half around and whipped the water into spray about us. Great round drops of rain splashed against the sides of the canoe and plowed up the water. It had suddenly become quite dark. The lake turned into huge waves and our light canoe was tossed about like an eggshell and nearly swamped.

"Shall we land on the island?" cried Heard. "Or shall we head for camp?"

"Head for camp," I answered, doing my best to keep the wind and waves from beating us against the rocky edge of the island. We both worked with the paddle, and the great waves rocked us up and down and the wind drove the spray into our faces. By the time we rounded the island and started across the lake toward camp the rain was falling in torrents and the waves were so high that our canoe was in danger of filling every minute. The white spray was flying from the paddles every time we lifted them in the air, and the wind caught off my hat and blew it half way across the lake. That was the last I ever saw of it. Half a mile in front we could see the dark green bank with the woods behind it. A vivid flash of blue lightning showed along the edge of the shore and then seemed to leap toward us. Simultaneously came a loud peal of thunder. The wind and rain seemed to increase tenfold there, and the waves tossed our little canoe from one to the other, as though they were playing ball with us.

"Do you think we can make shore?" asked Heard.

"God knows," I answered him. "Do your best."

Heard shook his head and smiled.

"Rough water," he said.

We were both doing our very best, but we could make very little headway. But at last the tree line in the distance seemed to come nearer, and we could see our tent and the little American flag tossing and struggling in the wind. Just then a big wave broke over us and left three inches of water in the bottom of the canoe.

"One more like that and I see our finish," said Heard, as he bent grimly to the paddle.

Ten minutes later we ran the canoe ashore and carried it to a safe place. We were so exhausted by the struggle with the storm that we could hardly drag ourselves up the steep bluff to camp. When we reached the tent we found it open in front as we had left it. The wind and rain had beat in through the open flaps and drenched everything in the front of the tent. I hauled down the flag and carried it in with me, and Heard lit the oil stove and closed and fastened the flaps. The wind howled and roared around the tent, and outside the vivid flashes of lightning were glaring on the face of the waters and showing along the edge of the island. The rain came against the roof of our tent with a noise like a waterfall, and the flame in the oil stove would flicker suddenly and go nearly out. It was the worst storm of the year, and it lasted until nearly night. In the meantime, Heard and I prepared and ate a good dinner and smoked many pipes.

"Got anything to read?" asked Heard.

I went over to a pile of books and papers and found "Little Rivers," by Henry Van Dyke. So all that afternoon Heard and I lay upon our warm rugs, and smoked many pipes, and fished the streams of faraway Scotland with Mr. Van Dyke, while outside the wind and rain beat against the canvas walls of our tent.

That gray solitude of the far North, where the woodland caribou has his home, could not have been more lonely than our lakeside camp. No one ever found us out; and we enjoyed the quiet life, and the fish, and the living things of nature undisturbed. One day was much like another, and yet we found that time did not hang heavy upon our hands, and that each day came to an end hours too soon. One day toward the end of our stay Heard and I paddled up the eastern channel between the island and the mainland. As we drifted slowly along I saw something red among the green of the bushes on the island.

"What is that, Heard?" I asked, pointing.

Heard looked hard at the island. Then he shook his head sadly.

"It means," he said, "that our stay here is nearly over."

"What do you call them?" I asked. "You know—the leaves that turn red first?"

"I forget," said Heard, sullenly. "Besides," he added, "I don't want to remember. I wish leaves never turned red."

In spite of the loveliness of autumn I, too, felt like Heard in regard to the leaves turning. If one stays in the city all the long hot summer one is glad to see the leaves commence to turn red and gold and brown, because then he knows that soon the days will become cooler and life more pleasant. But if one has spent the summer upon the shores of a fresh water lake in a tent and a canoe, he will regret to see the summer slipping away and the bright coat of fall announcing the approach of winter.

We stopped paddling and let ourselves drift and dream. It was cool enough for the fish to bite well, but we had not brought the rods along and we didn't feel like doing anything but dream. The woods along shore seemed to be cleaner than they had been earlier in the season, and the skies were so clear and the water so smooth and deep and also clear that we seemed to be floating in midair.

"Shake it off," said Heard. "What's the good of sitting here like two fools because summer's gone? Anyhow, we've got to go back to the city to-morrow. Let's go over in the reeds and look for ducks. I saw a flock fly over in that direction this morning. We'll try to come back here and do some shooting in a few weeks."

Heard dipped his paddle into the water so vigorously that he splashed me from head to foot. Then I came to life and splashed him, and we both felt better. In a few minutes we were among the reeds, just as we had been the first evening we set up our tent. We stopped and listened. Again we heard the "Quack, quack, quack" of the ducks. It was a very satisfied sound that came to our ears, and we knew that they were having a grand banquet off the wild rice. Heard stopped paddling and held up his hand. I looked in the direction in which he was staring and saw a wonderful sight. Among the reeds and in the open water between were hundreds of ducks; the place was black with them, and as many more must have been hidden from sight.

"I don't believe anyone ever shoots here," said Heard, suddenly. "Let's go away."

So back we paddled to camp.

"Never saw anything like it," said Heard. "Great Scott! man, we'll get hundreds of them. How I wish it was the middle of September!"

Why," I said, "I thought you were wishing a little while ago that September would never come."

"Was I?" said Heard, innocently. And then he commenced getting dinner and refused to say anything further upon the subject. All the same he looked very eager about something.

That evening we sat up until after midnight because we fully realized that this was our last night in camp. We talked of all the things that had happened since we had first stretched our canvas over the tent poles, and of the many things we had left undone. We planned to come back every year and camp in the same old place; but we never did. We went to sleep without saying "Good night."

The next morning we dropped our tent and made it into a large square bundle. A wagon came to carry our stuff to the railroad station and we helped the man to load it. The little flag was still flying, and when I lowered it Heard fired all seven chambers of his revolver in a last salute. The sky and water were as blue as blue could be, and the little island was still green, and everything was so fresh and beautiful that I hated to look at Heard and give the word to start. When I did look at him he was frowning and blowing the smoke out of the empty chambers of his revolver.

Robertson Howard, Jr.

Coahoma's Lament.

Editor Forest and Stream:

Being in a meditative mood to-day, I feel an impulse to commit to paper some of my philosophical reflections. Whether they shall ever challenge the attention of your readers is a possibility that at present must linger in the "womb of time."

I have been thinking of the passing of the forests. In the older States of the Union this is a *fait accompli*, and has long since ceased to be a subject for philosophizing, where the great majority of the inhabitants have never seen a real forest and have no idea what it is. But in those regions that are still in a transformation stage from a partial wilderness condition, the rapid strides that the transformation process has been making during the past few years is a subject for painful reflection by those to whom a love of the woods has become a "second (or first) nature."

This state of things in this "neck of the woods" has become painfully evident to the writer. With every succeeding year a change in the stage settings discloses additional wide expanses of ugly "deadenings" and "new grounds," inclosed in wire fences, where formerly one could roam unimpeded in the "forest primeval."

A dozen years ago one could find unbroken forests within a dozen miles of this place wide enough and deep enough to get lost in if so disposed; and to-day I might try in vain to lose myself in a circuit of fifty miles or so. Even Bob Bobo's famous bear grounds are being intersected by railroads and desecrated by timbermen and sawmills. And of all the incongruous mixups that the devilish ingenuity of the Moloch of commerce has devised to grieve the souls of nature lovers and banish the genius of the ancient woods, the modern sawmill, with its scattering village of ugly and vulgar board shanties, its piles of sawdust, its ox teams and log wagons, its hideous noises and its barbarous mutilations of dame Nature's dearest children, the trees—all of this impudently squatted down in her very lap, is the most devilish and exasperating.

Very soon Bre'r B'ar will be elbowed out of his ancient heritage, and must forever depart hence to join poor Bob in the "happy hunting grounds" of the "great beyond." It seems in accord with "the eternal fitness of things" that they should all depart together.

To those of us who have spent the greater part of our lives in the woods or immediate proximity thereto; whose earliest childhood reminiscences of keen delight are associated with the woods; who, when yet too young to handle a gun, toddled at the heels of father or elder brother, to "turn the squirrels" and pick them up in glowing triumph when they fell out of the treetops and came rattling down through the branches with a lound thump on the ground; who have gone step by step through all the gradations of the long single barrel, the first bird, the first squirrel, the first wild duck, etc., to the full maturity of sportsmanship and the modern breechloader—to us whose souls are saturated with a love of the woods, their rapid recession beyond the horizon of our lives leaves a vacuity behind that nothing can fill, a hunger that nothing can satisfy.

It was the fortune of this writer during last summer to revisit the home of his childhood, after an absence of thirty-four years; and amid all the changes that had occurred he found the little patch of woods still remaining in the corner of a field, and went to the spot where, more than fifty years ago, he killed his first bird. Under the guidance of an elder brother the long single barrel shotgun was laid over a big stump and a little pewit flycatcher fell before the trigger pulled with trembling hand.

In looking back through memory's store house, over all the more prominent incidents of game killed through a somewhat lengthened career as a nimrod, that little "peewee" towers up above everything else ever killed by the same hand, as the largest figure in the picture. But this is "by the way."

When this writer has occasionally visited the East, he has beheld with sensations of pleasure the highly cultivated farming country, with its well kept fields, trim looking farm houses, neat barns, and everything tidy and well ordered; also the beautiful city parks, with their broad smooth driveways and commodious walks, their fountains and flower beds, etc.; all of this has had a very pleasing effect for a while; but when the novelty wore off the all-pervading sense of artificiality has palled upon the appetite, and there has been a longing for a touch of nature in these pretty scenes, a yearning to get away from these fine pictures of man's most finished handiwork, and once more plunge into the inmost recesses of a southern canebrake, where, as Horace Kephart once felicitously remarked, "When a man enters he is alone with his Maker."

It is related of General Grant that once when he was sojourning for some weeks in a Chicago hotel, and was fed upon all the delicacies that the market afforded, one day he strolled into the kitchen and asked the chef if he could give him a plain dish of pork and beans; which being supplied with, he sat down at a kitchen table and ate with much satisfaction. And so it is with those accustomed to the woods as their daily fare; the fine parks, etc., do well enough for holiday occasions, but let us get back to the woods as soon as the holiday is over.

But alas and alack! Where shall we find any more woods in reach?

Mr. Hough's account of his tramps through the forests of New Brunswick carries at least the gratifying assurance that such forests do really still exist. And while we may never expect to go there, and if we should do so, there is the prospect that we might have to sleep in the snow and live on moose tracks, yet the possibility of being able to find a forest where one can get lost—"Some vast wilderness of boundless contiguity of shade"—which is still accessible to the enterprising spirits, carries a certain measure of comfort to the heart of forest lovers in its bare contemplation.

But how long will the forests of New Brunswick last, and even those of Labrador, before the devouring march of greedy "Industrial Progress?" In England there are extensive tracts that are still denominated "forests," whereon not a tree is now growing. How long before the United States will be thus denuded, and our forests become merely a reminiscence?

With the strides we are now making in that direction the goal will soon be reached unless a remedy is found.

With the slow-moving methods of past generations, and the abundance of leisure incident to redundant populations, in the countries of Europe tree planting became a custom that is still kept up, accentuated by the prevailing laws of primogeniture by which the same estates remain in the same families for indefinite generations. Likewise the governments, being long admonished by the necessity of such action, have done a great deal for the preservation of their remaining forests, and the rehabilitation of their denuded lands with new forest growths.

We Americans have paid little heed to these lessons so dearly learned in the countries of our forefathers. Possessing a land so lavishly endowed by nature with all good things, we have acted as if nature's storehouses were inexhaustible, by inordinate and irrational prodigality in the use and abuse of her gifts. America has astonished the world by her giant strides in industrial progress. Her citizens have developed a degree of energy finding expression in audacious enterprises that has caused the older countries to stand aghast and "view with alarm" our threatened mastery of the industrial world. All of this flatters our vanity as a nation, and prompts us to a disregard of all conservatism as being "old fogy."

But when we come to look down beneath the surface, to search out the underlying principle that is the proximate cause and generator of all this demonstration of vigor, what do we find? Do we find the actuating motive power something to be proud of, something that carries conviction to sober minds of a long continuance of our vaunted "prosperity" by well ordered conservation of our resources, to be transmitted to our sons unimpaired?

We find nothing of the kind. What we do find as the all-impelling motive of our wonderful activities may be summed up in the one odious word—"greed."

If there is one trait that characterizes modern Americanism in its industrial aspect, it is that which manifests itself in the restless impatience to realize immediate profits; to absorb everything in sight before it can be appreciated by our neighbor; to rush headlong in this scramble of getting, regardless of to-morrow, regardless of any consideration for others' claims upon nature, regardless of everything except gratifying this all-pervading, all-dominating, insatiable and brutalizing spirit of greed.

Witness the buffalo that have been swept off the face of the earth to put a few transitory dollars in a few transitory pockets; the wild pigeons that have gone the same way, and all other game that is fast going the same road; the milliners' shops that have become charnel houses of our pretty and innocent birds, while our women heedlessly decorate themselves with their mutilated remains, as tokens of an unholy alliance of greed and silly vanity; and finally the forests, the remnants of which having taxed nature's energies for centuries to build up, are falling before the axes of greed in a few decades—axes, by the way, that were ground in legislative halls for the most part.

Let some public spirited individuals move for a forest reserve to be established somewhere and enlist the sympathies of some Congressman or legislator with a soul above mere expediency and an insight into the future needs of the country, and straightway there are arrayed against it the lumber "interest," the pulp mill "interest," the logging "interest," the railroad "interest," and the Lord knows what other "interests," all bent on satisfying a present appetite of greed. Powerful lobbies are formed; "log rolling" is resorted to; the friendly legislators grow lukewarm, and the measure quietly sleeps "in committee," while the Moloch of greed is devouring the last remnants of our forests, unrestrained by God or man.

What is it all coming to? Is there "salt" enough left to save the nation from this universal efflorescence of greed?

I believe it rests with the women of the land to stay the march of destruction. They are the "salt of the earth," and it is a truth that amounts to a truism that "The hand that rocks the cradle rules the world."

If the women of the land can be aroused to a sense of the appalling evil to be combatted and made to realize that it is work for them to do—the men are too busy "grinding axes" and cutting down trees. The women can do the work if they will. But first of all let them heed the Scriptural admonition—"If thy bonnet offend thee (or thy neighbor) pluck it off and cast it from thee."

COAHOMA.

An Indian Chief.

BROWNING, Mt., Feb. 14.—*Editor Forest and Stream:* I have read the biography of the White Calf in a recent issue of FOREST AND STREAM, and heartily indorse the same. I am grateful to the FOREST AND STREAM for its kind words on the departure of my old time Indian friend to the land of his belief, where it is to be hoped there are no scheming officials to torment him in the hereafter.

It seems but a span of time, now over thirty years ago, when I was a young man, that I met the White Calf while I was on a buffalo hunt with the Cut Hands hunting party. The White Calf—then a middle aged man—ran and killed three cows with bow and arrows while I ran and killed five cows—of which I gave him three—with the old cap and ball six shooter. Since then we have always been friends, and through all those long years we have had much to do with one another in a business way, and, to his credit be it said, a cross word has never passed between us.

In later years, when he began to have talks with the Indian agents, he became interested along those lines in the behalf of all the Indian people, seeking justice in the light in which he understood it himself, and always in behalf of the white man as well as the red man. He always counselled patience, peace, law and order. He really was an ideal leader, giving his whole time and thought to his people. He was a good judge of human nature, and many times have I sought his opinion and asked his impressions of the new agent to his people, in which he rarely failed to be correct. Time proved to me his rare judgment of character. Perhaps there is no white man that was as well acquainted with the White Calf as I, except H. A. Kennerly. In sorrow or happiness he always came to see me. Sometimes he would sit about and smoke all day, saying nothing. I would tell my wife to say nothing to him, as he was like a white man, thinking. Then he would tell me of his people's troubles, or sometimes of his fears and hopes for the far away future; for when the buffalo had gone he could see no future for his people. One day he came to me in much trouble and begged me to go to the land of the Flatheads with him and that we both select there a piece of land for a home, saying that with the cold winds of this prairie country it was useless to try to make a living by farming and stock raising, as he and his boys had tried hard to do it and had failed. For a long time after this he was not satisfied with me for not going there with him. Our talk began as soon as my work was done, and it was 2 o'clock that night before it ended, my wife, who was interpreting, having got so sleepy I had to stop.

One would have thought the White Calf would have been very bitter toward the white people, as I remember a good many years ago Baptiste Champine told me the story of his brother being killed by the whites in or near Fort Benton, and his son, the Crossed Gun, was killed at Cut-bank by a white man.

It never seems to occur to the average Indian agent that to do good work he must become a student of Indian human nature. It is needful that an agent understand the Indian along the lines that the old southern white man understood the negro, and he could handle him, much to the mystification of the average northern white man.

CHAS. AUBREY.

Dad's Vacation.

GEORGE BATTEN IN "BATTEN'S WEDGE."

HARVARD COLLEGE, Cambridge, Mass., June — Dear Dad:—College closes to-morrow. I think that I have passed all my exams, and that I shall start from here to-morrow night a Harvard Senior. I am going to join the house party at the lake. Am looking for a great time and a rest, which I feel I so sadly need.

By the way, won't you kindly add—say fifty—to my allowance this month.

You should take a good, long vacation. Say what you will, when I get into business, I do not propose to work so hard as you have and do.

Your affectionate son,

NEW YORK, June — My Dear Son:—Home again and glad to be here. Say what you will, home is best, after all.

Vacations are needful; as necessary to the busy man as food or sleep. They freshen one up and get him close to nature.

The birds sing, the trees sough and whisper to the passing breeze. Mother Earth gives out her daily exhalations, views from mountain tops are inspiring, and the air, laden with the odor of the pine, makes one feel that his breathing capacity is entirely too limited.

Brooks sparkle and glisten and ramble through thickets of rhododendrons or by banks of azaleas. The sportive trout lugs and pulls, cuts and dashes hither and yon, whilst the saucy jay seems to be laughing at your efforts to get that little fish out of the water, and the catbird meows and scolds at your intrusion into the secluded green depths where he has chosen to make his home, or the sunlight dances over the lake where little waves dance and gleam like myriads of stars. Your fight here with a four-pound bass starts the perspiration from every pore, and sends your pulses up several beats to the minute. When at last he is actually in the boat, you feel as though you had really accomplished something.

Perhaps on mountainside, through broken and twisted forest, giant trees hurled to earth by the angry winds, with straining nerves and tendons, and aching muscles and joints, climbing over rocks, up glens and gorges, tempted at times to use your rifle for an alpenstock, or to throw it away and return, suddenly, as you round the shoulder of some peak, your guide whispers—rather hisses — "There!" and there, sure enough, across that apparently uncrossable chasm, a little higher up, are the sheep that you have toiled so hard to get within sight and range.

Now, steady, thumping heart; keep out of my throat, and give me a chance to breathe. Curse my hand; it shakes! You feel almost faint, but with a supreme clutch at your nerves, bracing feet and arms, you slowly raise your rifle until the sights are in range. Never before did rifle crack so loud and its pealing report go echoing over hill and across valley and back again, until

it seems as though your shot had awakened an army. See that beautiful creature start, making two or three convulsive leaps, then give up, stagger, and tumble down into that awful chasm at your feet.

A sickening feeling comes as you feel sure that, after all your toil and good shot, your specimen will be torn and knocked to shreds before the carcass finds a resting place somewhere amongst the jagged rocks below.

The climb down, your joy at the discovery that, after all, your fears were groundless, the supper at the camp fire; the contemplative pipe, as you review the incidents of the day, and in vision see that superb head and horns mounted and in the library at home.

Home? Yes, home. Home is best. I love the children's good-night kiss, the books, the cheerful fire, the evening talk with wife and grown sons; that old chair in which grandfather sat when I was a boy, and father when I was a young man; this old room with all its memories, sad and sweet—every object in it seems to have a personality and to be a personal friend.

My poor old dog—you are glad to see me home. Companion of so many walks and wanderings over fields and through woods and meadows. You recall early mornings in stubble fields, whirring wings and quick, double reports of shotgun, and "good shots," and dinners with boon companions, where Mr. "Bob White" was the *pièce de résistance*, with a glass of Burgundy, old and red and mellow—the only wine worthy to accompany you.

Yes, son, I have had my vacation. I am glad that I had it, and I am still more glad to be at home.

More Frills and Further Furbelows

Without the tabu life in Samoa would have been far less tolerable. I used to sit on my veranda and look at my own and personal tabu with unflagging interest, for it was as easy to see as though it were built of rock and rough-cast and existed as a solid physical entity. It was only a moral obligation, but it was there none the less positively for all that, and the eye could see it distinctly. Physically the Consulate and its compound were marked off by a fence and hedges which cut it out from the town green or malae of Vaiala. Outside these physical obstacles, and far more potent, was drawn my tabu at such a distance (the measure of the longest reach of a single arm), as would prevent any acquisitive hand from reaching through the slats of the picket fence and plucking any blossom from the few straggling plants which were able to maintain some sort of growth in the salty gusts of the never-ending trade wind.

I had seen the tabu drawn about the premises and I never failed to admire and at the same time appreciate its force. It had been set about me by Le Patu, the chief of Vailala, who had the power to make such a proceeding efficacious upon any piece of ground, on any movable property, even on any person found and being within the well-marked confines of his chiefly sway. It was simple in the extreme. In the first days of my residence, through a talking man, I called the chief into conference. The proceedings were conducted in strict accordance with the Samoan etiquette belonging to such conventions of the truly great. The resources of my household were drawn upon to prepare the bowl of kava for the chief to drink, and after the formal quaffing of the beverage the further rites of hospitality involved the presentation from my larder of a tin of corned beef and four hard tack. When Le Patu had unhesitatingly incorporated unto himself this slight two-pound snack, we were ready for business, just as formally as in our legislative bodies business may proceed after the chaplain has done his little stunt. I told the chief that it was essential to my comfort that my island neighbors should keep off the premises except upon invitation. I went on, and it was really unnecessary under the circumstances, to explain that I was not in fear of having things stolen or that I doubted the probity of his people; my sole object, as I informed him, was to secure privacy. All the apology for my request was in truth immaterial, for my experience with the Samoans convinced me that they do not steal, not at least in relation to such movables as are regarded by them as having the nature of property. The distinction is a very valid one in Samoan custom. A single instance will serve to elucidate it. Any Samoan visitor to my cook-house would feel entitled to eat as much as he pleased out of an open tin of beef or salmon, for it is food and not subject to individual ownership. My experience is consistent that the amount which any Samoan, high or low, old or young, might be pleased to eat out any such food within his reach would be bounded by the well scraped sides of the tin. Yet if there were such a tin of food on the shelves, but unopened, it would be recognized as property, my property until I had had it opened, and therefore not to be touched.

At any rate Le Patu took it all in good part. He could recognize, even if he could not sympathize with my desire to have my real estate to myself. It was all perfectly simple. "E lelei," he said; "'tis well; I shall place upon thee the tabu of the sea and the tabu of the shore and the tabu of the thunder." It was really most terrifying, this invocation of the powers, the majesty and might—and all the hoodoos—of earth, air, fire and water to serve the purposes of a "Keep Off the Grass" sign. Indeed, I almost felt like a lamb led to the sacrifice, and could sympathize with a burnt offering. "Thou shalt be Sā," he concluded. Sā means holy, and so far as the jurisdiction of Le Patu extended I must be considered holy from that time forth. From the brook of the Fu'esā to the fence which divided Litia Coe's premises from the British Consulate at Matautu Point my holiness extended. Even that limited holiness is something in these days of carelessness.

Having settled my personal holiness and the comprehensiveness of the tabu, the rest was easy. Within a few minutes of the departure of the complaisant chief there appeared upon the malae the figure of Manongiamanu, whose name being translated means the Perfume of Birds, the head tulafale and chief orator of not only Vaiala but he whole Vaimaunga district as well. He wore his stiffest and showiest lavalava of tapa; he carried the six-foot rod of his office and the flyflapper, which was an equal part of his professional regalia. Out in the broad sunlight he stood and emitted one long and not unmusical cry. Tanoa in my cook-house shoved his frying pan over to a cold lid of the stove, caught up his rod and flyflapper and took the attitude of a corresponding statue in the middle of the bed of radishes behind the Consulate and separated from the malae by a low hedge. There they stood in a sun glare hot enough to curl their skin up at the edges and kept the proper poise of high officials who weigh well their words. This long wait is a strict requirement of Samoan etiquette. From the houses the people strolled out with floor mats and found seats upon the ground under the shade of the fringe of trees. Talolo, most irresponsible and carefree of mortals, accommodated himself with a seat straddlewise on the monument of his great-grandfather under the big mango tree. Then Manongiamanu made his set speech, declaring the tabu on all my belongings; Tanoa made the formal reply; the deed was done and Tanoa could return to the cook-house and pick up the interrupted preparations for dinner. After that the compound was free of visitors except those of such high degree as to be above all plain ordinary tabus, a rank which Talolo claimed for his own at once. But the others felt the sacredness of the inhibition. They might troop over the green or along the beach road laughing and chattering, but the moment they struck the outer edge of the tabu they sobered down and went along as demure as so many sheep. Indeed, it turned out to be a little too comprehensive, for I had to have an amendment expressly lifting the tabu from the wreck relic of the Trenton's mast that lay at the foot of the flagpole on the beach side of the road. This was the favorite seat of the Vaiala children, and I did not wish to forego their songs and merriment in the brilliant moonlight evenings.

It was this tabu that kept little Fuatino sitting in the road an hour or more one morning. Long before I had seen the child come gaily skipping across the green turf behind the house and out into the roadway. When she suddenly checked her happy pace and plumped herself down in the centre of the road exactly in front of the gate, I gave it no attention, for there was always much in the doings of the island folk that seemed utterly irreducible to standards of impulse with which I was familiar. Samoans who passed along the road gave her room, riders turned out for her, a procession going up the coast to Matafangatele escorting another new wife for Asi made a detour about the little figure in the sand. Finally the feeling of that sportive mite of a child sitting out there in the torrid sunlight got on my nerves. I woke Tanoa up, for when there was nothing in the way of domestic duties to busy himself with Tanoa would sleep on the veranda close alongside where I might be at work, always waiting for the occasion to arise for him to make a few more speeches on my account. Oh, we lived in a flood of oratory!

"Tanoa e!" I asked the ever faithful attendant as soon as he got his eyes open, "why is that child sitting there so forever in the road under the sun and the wind blowing on her?"

"Tama'ita'i e!" he replied. "The child is the girl Fuatino of the Vaenga Family, and forever she sits in the road under the sun and the wind blowing on her; I know not why."

Then to the forlorn little figure:

"Fuatino e! It is forever thou art sitting in our road under our sun and our trade wind blowing on thee. Now therefore the Tama'ita'i has the will to know why it is."

"Sefe'au," piped the childish treble.

"Tama'ita'i e!" said Tanoa in his deeper voice; "it is an errand."

"Then do, for goodness sake, find out what it is," I replied, for it nettled me that my inattention had subjected the child to so long a baking.

With his rod and flyflapper Tanoa went out to the little slip of a girl with all the demeanor of one performing a solemn rite. For two or three minutes they spoke together, and then Fuatino scampered off, no doubt glad to be released at last from her long wait. Then Tanoa in her place leaned upon his staff until I happened to think that I should give him leave to address me. Divested of his oratorical trimmings the errand was that the tutunga bark had already been soaking long enough in the fresh water and in the salt and back again in the sweetwater pool, and that Fa'afili and Salatemu had sent Fuatino to tell me that it was now time to begin the making of cloth.

All this delay had been due to the tabu, which I had forgotten; thus it will be seen that there were some disadvantages of a close season on one. That child on a perfectly legitimate errand had to wait my pleasure before she could deliver her message under penalty of the fierce moray in the lagoon, the swarms of aitu in the woods and the deadly thunder.

In the press of other cares the cloth making had slipped my mind. But Tanoa's announcement of the message which Fuatino brought from the woman of Vaiala reminded me that so far my explorations of the art and mystery of dressmaking in the jungle had come to a stop with no more accomplished than the securing of the raw material. The implements of the Samoan dressmaker are the axe, the club and the pot of paint. So far my investigations had led me no more than past the axe stage. With more to see I started off for the village, and Tanoa lent his escort to give the procedure the official character with which he clothed every act of mine.

Across the malae and beyond the fence, in war a rampart and in peace a check on pigs, we found a path that wound in and out on slippery causeways between luxuriant beds of broad-leaved taro, now overhung with the dripping sheen of the banana leaves and now a tangle for the feet with prickles of the fleshy leaves of the pineapple. After many twists and turns of this going we came out upon a grassy spot surrounding the principal pool which, with its tributary bogs, has given to the Vaiala malae the name Lelepa, or "The Ponds." There was found assembled the womankind of Vaiala sitting at ease under the grateful shade of a mighty talie tree. Then it dawned on me that while Fuatino had been sitting in the road awaiting my pleasure every wheel of Vaiala progress had rested at a standstill pending the expression of my august pleasure. But when my arrival had been welcomed, and a clean mat had been found on which I might sit with the chief women of the town under the talie, Fa'afili lost no time in setting industry into action.

At a word from the women and girls, even such a wee infant as my bullet headed doll Apikali, plunged into the water, wading or swimming according to the measure of their stature, and the waters of the pool were stirred into a merry froth. From the bottom were brought up mushy masses of pulp which, after a vigorous squeeze, were tossed from hand to hand shoreward and deposited in a heap on a mat upon the bank. All this wading and grubbing of the bottom had roiled the water and made it more and more difficult to find and fish up the pulp rolls. Finally the last girl had made her last plunge under the surface for one of those long stays under water which cause the onlooker to fear that it is a case of drowning. When she emerged to shake the water from her eyes and reported that the bottom was clear, Tofi had finished her reckoning and found that every roll of bark that had been sunk in the pool had been accounted for by its corresponding mass of pulp upon the bank. This sum total she announced in a set speech addressed to Fa'afili, Salatemu and myself, who alone sat dry upon the mats beneath the talie tree. The rest of the women had sought out convenient places to drain and were busy wringing the water out of their hair and dripping garments.

This brought it around to Tanoa to make a speech, that being the rank and station in life to which he had been born. In my name he dealt out praise in some cases and in others reproof for the manner in which the work had been done. During this outpouring of oratory Tofi was sorting over the lumps of pulp and holding each in turn up to sight. Then in obedience to directions from Tanoa she passed the lump to one or another of the women who were helping her, and several piles were made. When all had been passed upon there was one heap which was composed of about half the lumps of pulp and included all the best. The other heaps were smaller and of inferior grades. When this assortment had been made Tanoa made yet a further speech, in which he said that out of my loving disposition and from a desire to reward merit I was graciously pleased to give to Fa'afili a heap of pulp containing ten rolls of bark; to Salatemu nine, and so on down the scale, making some appropriation for each of the Vaiala families. This I regarded as only one more instance of the ornateness of Samoan speech making until I was made aware that so far as Tanoa and the women of Vaiala were concerned it was all taken in earnest, for at the end of his speech Tofi ordered four of the girls to pick up by its corners the mat which held the largest pile of all and carry it at once to my house.

All at once I became aware of the situation. Because I had gone to the forest with the party that collected the bark, although simply as an inquisitive outsider, the women of Vaiala had regarded the results as my personal property, had done all the work for me alone and were now going to be quite grateful to me for taking to myself rather more than half of what they had gathered and were accepting as a bounty from me the piles of inferior bark which I had assigned to them through my agent, Tanoa. He was right in what he did, they were acting quite in accordance with the etiquette to which they were born, it was I myself who was out of harmony with the situation.

Tanoa was peculiarly destitute of any sense of humor which might have saved him from these predicaments into which he was forever leading me. He piously conducted all my affairs with the most scrupulous regard for every last nicety of Samoan etiquette. Then when he had landed me in some situation which was an utterly impossible one for me, no matter however feasible for a Samoan woman, the look of pained surprise that came over his face was indescribably killing (yet his heart would have been broken if I had so much as smiled) when I had to undo his best efforts. His heart was too entirely dog-like—and that is the highest degree of faithfulness—ever to permit me to hurt his feelings, yet his situations were often positively ludicrous. I wonder now what he thought I was going to do with all that mess of pulp dumped into my house! He ought to know that I knew nothing of the art which should transform it into the light and snowy tapa, yet that made no difference to him. I was entitled to precisely so much of it and he looked upon it as his bounden duty to see in this, as in everything, that all that was coming to me came.

This tender regard for the prerogatives of the rank to which the Samoans agreed I was entitled was most amusingly exhibited by Tanoa on another occasion, and it was not until some time later that I became aware of just what he had done. One day the Queen, Tui Masiofo, came to pay a call in such solemn state as was thrown about her by driving up in the royal rockaway with its Fiji boy driver. Wishing to offer the lady's Majesty the honors due the precarious throne on which the United States were agents in keeping her unwilling husband, I sent Tanoa for the box of cigars. From the box he laid the first cigar on my work table, handed the second to his Queen and the third to my good Tonga. Her Majesty bit off the end of the cigar and I sent Tanoa for a light. After an interval he returned to his place behind my chair, and in the conversation I failed to notice that Queen Tui was having no better than a dry smoke. It was only when her call was finished and I saw her take a light from her Fijian before getting into the Rockaway that I recalled that Tanoa had brought no matches when I had dispatched him for a light. Tonga was convulsed with an unholy glee and it was not easy to get from her the explanation. Tanoa, it seemed, stuck on a point of etiquette. He knew that I would not dream of lighting the cigar which he set before me; in fact, he would have thought it a distinct loss of "mamalu" or the dignity of the position if I should by such an act put myself on the plane of the Samoan women in the use of tobacco. Such being the case he was not going to allow Tui, Masiofo and, queen though she was, to seem to outrank me on my own veranda. Therefore the queen had to postpone the smoke. Tonga's glee arose from the fact that she was a Mata'afa partisan anyway, was in Apia more as a hostage than anything else, and was tickled over the joke on the queen. While Tanoa was a Malietoa man to the core, yet he had been one of the party when Tui had gone to her own home in Rarotonga to show off her royal relatives and had failed so conspicuously to deliver the goods.

But this is wide enough of the Vaiala dressmaking. As soon as I saw what was intended, I called back the girls who were carrying off my share of the pulp and instructed Tanoa in the main outlines of another speech for him to make. The sum and gist of it all was that I gave up all my share to the women of Vaiala who had done the work. He could do all the oratorical stunt about it that he wanted, but in the course of his remarks he was to make that idea plain. The upshot was that Tofi made a speech of unbounded gratitude in acceptance of my munificence and said further that in recognition of my desire to know more of their arts Fa'afili would pick out the best of the bark and under my superivsion make me a piece of tapa with explanations and illustrations of how it was done.

I could have had no better preceptor, for Fa'afili was a very keen woman, quick to understand what was wanted and simple in her way of making it plain. This is not merely my own judgment of the woman, for it is a matter of history that it was the shrewdness of Fa'afili and no other that saved to her countrymen a large amount of valuable land in and about Apia when the Land Commission was investigating titles.

In the great house on the malae behind the Consulate my instructor installed the implements of her dressmaking craft, the log and the club, and invited me to see how she went about the work. Here we spent several busy days in a sort of manual training school of savage arts in which I was the pupil.

When last I had seen the rolls of bark they were neat bundles coiled upon themselves like a watchspring and held in place by lashings of fibre. Since then they had been put to soak in fresh water, in salt and back again in fresh, until they had lost all resemblance to their former state. Now each lump was a mushy, pasty, sticky mass. Yet Fa'afili showed me that in the agglutination of decomposed vegetable tissue there was something that was not altogether slime, that it had consistency and that it could be pulled out by washing away the debris in a bowl of water. This proved to be the lace-like bast or inner bark which remained intact, despite its delicacy, through the whole operation or wetting which had set it free from the layers of the coarser and older outside bark. The first thing to do was to wash out this bast and to rid it of every trace of the rotted tissue. As soon as each piece of bast had been cleaned it was put to soak in a bowl with the steadily increasing supply of material until the last lump of pulp had been worked over.

Fa'afili next took a handful of this bast, still mucilaginous with the sap despite the long soaking and the several washings. Before her was a large log with a smooth surface, one that had evidently been prepared with great care and had been long in use, for the timber was thoroughly seasoned and the surfaced side bore a high polish. Her lump of bast she squeezed as dry as was possible without applying a twist; that, she explained, should never be done, for it would break the fibre. When she felt that she could squeeze out no more of the water, she patted the lump evenly upon her surfaced log and went to work with the club. This beater is one of the treasured possessions of every housewife and one that she will rarely consent to part with, for it represents long and patient toil to make, and each person has her own set of opinions as to just what kind of scoring makes an efficient tapa beater. They are all made of ironwood, a timber dense enough to turn an axe; they are a little more than a foot in length, have a rounded handle and a square section through the part with which the beating is done, each side of the square being about two inches. Each of these beating surfaces is scored with lines of cross-hatchelling which ranges from very coarse on the first face to very fine on the last, or according to the individual fancy of some women the last or finishing face is marked with a series of very fine parallel lines running the length of the instrument. Patting the lump of bast with her right hand and clubbing it with the beater in her left, Fa'afili hammered it out into a long strip with the coarse face of the beater, making it cover a space about a foot square. I have neglected to ascertain whether the left hand is regarded as the better in this work, yet my observation went that most women employed the left. When the bast had been beaten long enough with the coarse face of the beater, Fa'afili folded it up square as one would a pocket handkerchief and beat it all over again with the next face of the beater. It is the merriest sound in the South Seas, this clatter of the beater on the log when the women are beating tapa. Fa'afili and I were not the only ones thus engaged, all Vaiala was making its new gown for the approaching wedding and we were all at work together. Insensibly the strokes of the beaters fell into unison, unconsciously the tempo would be increased until the clatter would become a din and then break off in unrhythmical confusion to the accompaniment of peals of laughter from every house. Sometimes all hands would set out to beat some rude sort of tune. I added to the orchestration the "Anvil Chorus," to them a novelty and well appreciated. The sound of the tapa beating the Samoans call "tutu." The name suggests itself the moment one hears the sound.

With each beating the film of cloth was seen to grow longer under our hands, longer and finer and more lacy as the finer faces of the beater were used. After coming out from under the fourth beating the web that Fa'afili, with the not unpardonable, certainly not unwomanly, pride of one who has done well a good thing, held up to my view was a strip about a foot wide by rather more than a yard in length. It was as fine as a very sheer cambric and very filmy. More than anything else it resembled a lace scarf, but the mesh was irregular, devoid of pattern, and interrupted here, there and everywhere by gaps and interstices.

Before so dainty a tissue could be used for clothing, even in the South Sea where the garb is above all things airy, it was clear that there must be several further operations. The first of these is bleaching.

As the film comes from the beating it is generally yellowish in streaks and patches. The Samoan women have not been behind the women of other lands who spin flax and are therefore spinsters; they, too, have discovered the sovereign properties of the grass for bleaching. When each film had received its beating it was taken in hand by Apikali, tiny though she was, yet none too young to help her elders, and with great care the small damsel spread the delicate tissue over smooth grass, weighting its edges with chunks of stone to prevent the eager wind from carrying it away to some other village down to leeward where less thrifty housewives might reap the fruit of our labor.

There proved to be bast enough for several days' beating. After it was all beaten out it took at least a week to bleach it to the snowy whiteness which it must possess and then yet more days of hanging under cover in the full wind in order to supply a much desired blue or skimmed milk hue to the white. Fa'afili had a reputation as a cloth maker that must be sustained, and in addition she had the desire to set a high standard for me in case I should ever feel called upon to make cloth after I had left my ready friends in Vaiala. For these reasons we took no short cuts and skimped none of the work.

While the cloth is bleaching itself white and airing itself blue this is a natural chapter division in the history of how Vaiala got its wedding gowns. They have been advanced a long stage from their place on the spindling saplings in the forest, they have passed largely out of the stage of the raw material, but there is a good deal yet to do before those new gowns are made. Still, the delay will do no harm, it will but serve to call attention to the fact that even among the savages a new gown is no light and trifling procedure; above all things it demands ample consideration.

LLEWELLA PIERCE CHURCHILL.

Natural History.

Our Wood Inhabiters in Winter.

II.—The Ruffed Grouse.

VIGOR, strength, alertness, the power to withstand the rigors of our northern winters, which, with their snows and sleets, bury the ordinary supply of food beyond his reach, all these qualities the ruffed grouse possesses. They are qualities which have been transmitted through a long line of ancestors, and have, perhaps, been accentuated by continued residence amid inclement surroundings; but he has them all in a high degree; he *must* possess them in order that he may exist, for if he were not always wary to avoid, and quick and strong and crafty to escape the enemies which encompass him on every side, he would be destroyed, and what a calamity his extirpation would be!

I venture to make the assertion that not one of all our wood inhabiters, not one of all our other birds, if they were to pass away, would be so greatly missed.

The ruffed grouse occupies an unique position among our birds, in that it is a permanent resident in the coverts in which it was born, for it rarely wanders far from them, and when it does it is usually in search of food, and it returns to them when proper conditions prevail.

Like many other species it is known in different sections by a variety of names, and most of them are absurd misnomers. For instance, it is called in some portions of New England the birch partridge and gray partridge; in Massachusetts it is simply called partridge; in New York, grouse, or wood fowl, or pheasant; and in Pennsylvania the pheasant, grouse and ruffed grouse, the latter of which appellations is the only proper one.

While in Ohio a number of years ago I found a nest of this species beneath an old fallen trunk of a tree, the bark of which I was for at least fifteen minutes knocking off in searching for beetles and other insects, during which time the old bird remained on her nest without moving, and only left it when my foot almost touched her. As she was the first I had seen in that section, I inquired, when I returned to the farm house where I was stopping, if there were many grouse in that neighborhood.

"Grouse?" repeated my host, arching his eyebrows with surprise. "Why, sir, we don't have any grouse at all here; none nearer than the prairies out west." I have always noticed that western people speak of localities as being "out west," and have wondered what they do in California and Oregon.

Knowing that he meant the pinnated grouse or prairie chicken, I replied that I did not mean prairie hens, but partridges as we call them in New England.

"Partridges, certainly," he replied. "We have heaps of them. Don't you hear them whistling in the fields?"

"Whistling! Partridges do not whistle," said I. But instantly remembering that the "quail" of New England is properly enough in the west called "partridge," I hastily contined: "That is, the partridges I mean, which live in deep woods, have a ruff of black feathers about the throat, and the male stands on old logs, and drums."

"Ah, you mean the 'pheasant,'" replied the man, recognizing the bird from my description. "Nothing like calling things by their proper names. Yes, there are a right smart lot here some seasons; in others they are scarcer."

I have stated that the ordinary supply of food of the ruffed grouse, such as the checkerberries and their leaves, the partridge or eye berries, various seeds, acorns and beech nuts, is often buried deep in the snow and the bird is occasionally forced to go on "short commons" in consequence, but he is not obliged to starve so long as there are any yellow birches or other deciduous trees to bud, or if there is an apple orchard accessible.

The grouse, on flying into a tree, alights on a limb close to the trunk, where for a short time it stands upright and perfectly motionless; this, apparently, is owing to its habits of caution, for until it has thoroughly reconnoitred its surroundings, until it is certain it is not pursued by one or more of its many enemies, it does not change its position in the slightest degree.

In ascending into the tree from the ground, the bird makes but little noise, the thundering whirr with which it flushes before the sportsman being entirely absent. I have repeatedly seen them fly into trees, they having come perhaps from a considerable distance, but their flight was almost perfectly noiseless, and for the time being I could hardly realize they were the grouse whose flush-flight I knew so well.

When they are satisfied that there is no danger of being molested, they begin to move about on the branches, and the rapidity and ease with which they climb about on the bud-bearing twigs is astonishing; one would hardly believe that birds of their build could move about on the limbs so freely.

The buds are picked off by the bird seizing them in its beak and twisting the head sideways; the celerity with which they obtain a satisfactory supply is remarkable, their crops being filled in a short quarter of an hour.

The yellow birch seems to be a favorite tree with them, but if an apple orchard is to be reached, they quickly find the fruit buds and regale themselves greedily.

So destructive have they been in some localities that farmers and orchardists have raised vehement protests against their being protected by law. I have heard a great many complaints from Nova Scotia farmers, whose orchards are often near the forests in which the grouse make their homes, at the havoc worked by these birds, and dire threats uttered for their destruction.

In other sections also the bird seems to be disapproved of by orchard growers. A correspondent of a New Hampshire agricultural paper says: "Mr. George T. Patch, of Hollis, recently informed me that he examined the stomachs of two partridges shot in his orchard and found in one 636 apple buds, and in the other over 500. At that rate, how long would it take even one partridge to destroy the prospect of fruit in an orchard of ordinary size.

"There is a small orchard of young trees near my residence, protected by a forest on the west side, some ten rods distant, from which the partridges make their evening visits at this season of the year, and they are so shy it is next to impossible to get a shot at them. What is to be done? If there is a law protecting partridges, I move it be repealed."

The number of instances in which any considerable injury has been done by these birds is so small that there is no danger of their being by public opinion generally threatened with destruction; in fact, there is a question that the bird does any injury to the fruit trees by removing some of their buds, the opinion held by some fruit-growers being that the trees are benefitted by losing a share of their superfluous buds, the crop on the following year being composed of better, larger and more perfect fruit.

In traveling over the snow the grouse moves rapidly and with ease. All who have seen its tracks have noticed that the toe prints are very broad, and that if the tracks are in damp snow there are impressions of something resembling comb-teeth on each side of the toes.

These marks are caused by the strong, horny scales which in winter are much broadened and elongated; these pectinations seem to have been furnished by nature to facilitate the movement of the bird over the snow: by their aid he walks on snowshoes, as it were, and we can readily see what an assistance they are to him. We may follow these tracks readily, confident that there can be no question as to their identity. I have often trailed the bird for long distances and almost invariably flushed him, unless a hungry fox had followed him before me, in which case a mass of draggled feathers and blood stains on the snow told too well the story of the tragedy that had been enacted. Generally, however, the sharp lookout that the grouse keeps enables him to foil the designs of crafty Reynard, and one may readily see that the escape has been made by the print of the wings in the snow as the bird sprang into the air and flew away to a safer retreat.

The habit of the ruffed grouse of diving into the deep snow is well known; this is done as a protection against the severe cold which often prevails in our northern forests, the fleecy covering affording a warm and effectual place of refuge.

After entering the snow the bird tunnels through it a short distance, and we may never expect to find it at the point where it makes an entrance. I have followed the general direction that was taken by the bird when it entered the snow and have found its point of exit to be several rods distant, the melted snow of the walls of its lodging place showing the effects of the heat of the bird very plainly.

The "drumming" habit of this species has been described by many ornithologists and in a variety of ways. By most writers the habit is supposed to be followed only during the mating season, but it is not so restricted, for I have heard the tattoo in about every month of the year, even at night and in the coldest weather of winter. On one occasion, as I was camping in the wilds of Nova Scotia in December, when the weather was so cold that my mustache was filled with frost as I lay on my couch of balsam boughs, and the water in the bucket in the tent was thickly skimmed with ice, I heard at daybreak one morning the rolling beat of a grouse within ten rods of our camp, and so unsuspicious was he that he kept on his drumming log for several hours, although my two guides and I were noisily moving about the camp-fire, chopping wood and preparing breakfast. In fact, he even drew near and wandered about the vicinity of the tent during the day, seemingly glad to have our companionship.

On another occasion as I was tenting on one of the tributaries of the Miramichi River in New Brunswick, an old male grouse that we had heard drumming near by, after a short time became aware that we were friendly, upon which discovery he became a daily visitor at our camping place and even ate pieces of biscuit that we threw on the ground before him. This was not an altogether novel experience to me, for I have found that, although after the grouse has been hunted, it is one of the wildest and most difficult of approach of any of our game birds, if unmolested it is unsuspicious to a remarkable degree, and will often permit a person to approach it as unconcernedly as would a domestic fowl. It is often seen in small bevies about the old farms and pastures, and in Nova Scotia I have actually found them gleaning buckwheat and rye fields. Although, as a rule, the ruffed grouse can seldom be relied on to fill the game bag alone, there are exceptional occasions when a good bag may be made; if unbroken broods of well grown birds are found in suitable covers, particularly, large patches of berry bushes in the fall in which the grouse luxuriate on the ripened fruit, very satisfactory shooting may be obtained. The best work in grouse shooting that

I ever witnessed was done by a sportsman who shot seven birds successively without a miss. The cover was located on a hillside and consisted of a low growth of birches, blackberry bushes and a few small scrub oaks and alders. The sportsman stood in one spot and the birds, when flushed, flew down the hillside toward a thick swamp at the bottom. Of course, it was an exceptionally good position that he occupied and his shooting was beyond compare, but even at that one cannot expect to see twice in a lifetime so many of these swift-flying birds fall to a single gun without a miss.

The Little Blue Snow Bird.

As we pass from the heavier timbered woods out into one of the open stretches which frequently occur in all our northern forest lands, we come upon a scattered flock of these lively, nervous little birds, the junco or blue snow bird. Busily engaged they always are, for the seeds of wild weeds and other plants upon which they subsist at this season of the year are not over-abundant, and to obtain enough food to support life they must always be industrious.

Notwithstanding that they do not in winter fare very sumptuously, they are always bright and seemingly cheerful and contented.

Their song is not at all presumptuous, consisting, as it does, of a twittering chirp similar to the sound that may be produced by striking together a couple of small pebbles in the hand, but it is uttered frequently, and often by a half dozen birds at a time, and a flock of these little sparrows in consequence give a life and animation to our woods in winter that is excelled by no other species. They do not confine themselves to the woods, however, and we find them fluttering about the fields and pastures in the search for food, and when the weather becomes more rigorous they become so familiar that they visit the gardens and farm yards, where they share with the poultry the cracked corn and wheat screenings that may be thrown out to them.

Although the snow bird is a northern species, it finds congenial conditions in high altitudes, nesting in the mountainous regions as far south as Virginia. I have met with specimens in the White Mountains in New Hampshire in the summer months, and have found its nests in the Berkshire Hills in Massachusetts. In New Brunswick and Nova Scotia it is a common species in the summer, breeding freely about the farm houses and among the scattered settlements. It nests on the ground, but sometimes departs from this habit, for, according to Dr. Brewer, it has been observed in repeated instances to nidificate within outhouses. In a woodshed connected with a dwelling house he saw several nests built within reach of the hand, and in "places where the family were passing and repassing throughout the day." The nest of the little junco is often despoiled by a variety of depredators. In Nova Scotia I have frequently found its nest in the grassy bank around a farm house, where only by the greatest of good fortune the eggs are hatched and the young are reared, for the domestic cat has no hesitation in rifling the neat little structure, the callow young of the snow birds constituting a welcome *bonne bouche* for the feline marauder.

I was once quite interested in watching the growth of a nestful of these little birds, visiting it sometimes two or three times a day. The nest was built in the turf of the bank which surrounded the wood yard, and was not two rods from the door of the farm house at which I was stopping. Near the bank was an enormous pile of cordwood, beneath which I one day discovered that an enormous spotted adder had its home. It was the largest one of its kinds that I had ever seen, and I tried in every possible way to capture it, but it had all the cunning that is attributed to the species, and it always escaped me.

One morning as I was standing in the doorway I heard the twittering expostulations of the parent birds, and hastening to the nest I found that the young birds had disappeared, the last one probably being in the mouth of the adder that glided under the wood pile as I approached.

The birds were well avenged a short time after; for by rare good fortune I caught the snake one day in the orchard a safe distance from his usual lurking place, and with a club I quickly put an end to his bird-destroying proclivities.

The juncoes, like other ground nesters, also suffer from the depredations of marauding birds. On one occasion I found the nests of four pairs of this species, all of which contained young. They were built in the sides of an old abandoned lumber road which ran from, or to, the Magalloway River in Maine. I discovered them in the morning, and in the afternoon when I returned through the same path every nest was depopulated, and near by a pair of Canada jays were lurking in the trees, shouting defiance at us, while surrounding them were the afflicted snow birds, which were uttering their cries of complaint and sorrow. I emptied both barrels of my gun in the direction of the jays, and I think they have eaten no young birds since that time.

EDWARD A. SAMUELS.

(TO BE CONTINUED.)

Migration.

WHAT is the total significance of the migratory instinct?

If its manifestations were known to be confined to periodical and systematic movement, following the procession of seasons or crops, there would be little to wonder about. But there is a migratory instinct which is manifested at but rare and irregular intervals. Moreover, it is not confined to beasts and birds, but from time to time it actuates men and tribes of men. The Israelites were not all oppressed, since after they left Egypt many of them longed for its fleshpots; but when one started the rest followed. The Crusaders were not all animated by perfervid religious zeal, the spirit of adventure, or other motives of sufficient strength to carry them across Europe; but the spirit seized them all and held them to the enterprise. And the children Crusaders were animated by no motive whatever, and yet the spirit seized them and was stronger in them than in the grown people, since, when their parents sought to stop them, they drooped and died. And in the case of animals it has more than once been observed that irregular migrations were not occasioned by any natural circumstance, such as famine or other calamity. I remember a very interesting article on the subject which appeared in FOREST AND STREAM some years ago, by a man who evidently had given considerable attention to it, and who described among other occurrences of like character a striking migration, upon a day certain, of the bears from the State of Maine. The story makes one think of the journey in the wilderness. The same thought comes to me when I recall the story of the Gadites, which my stepmother told me a few years ago upon her return from a trip to Jerusalem, and which was told to her by members of the European colony there, missionaries, visionaries, etc.

It will be remembered by the Bible-reading FOREST AND STREAM family that the Gadites were a tribe of Israel who were carried into captivity by Tigloth-pileser II. into Assyria, some of them as far as beyond Nineveh, and to what is now the eastern boundary of Kurdestan, and were not heard from again. A short while before my parents were at Jerusalem, a remnant of the descendants of these very Gadites straggled back to Jerusalem, possibly over the trail their ancient ancestors had traveled 2,750 years before, a journey of about a thousand miles. Their account ran that one day the men working in the fields, certain of them, felt the irresistible impulse to go back to Jerusalem. They went into the towns and found the same feeling existing there; and off they started, those among them who were most influenced, without much provision for the journey, and, after a great many privations, those who survived and persisted came back "to their own land," as they expressed it, footsore and weary; just, I imagine, as Colonel Bobo's squirrels were footsore and weary when they had harkened to "the Voice" and accomplished their journey. And they were a queer lot of Jews, too, for the Gadites were warriors and shepherds and nomads from the beginning, and had so remained throughout, and had no trace of the typical mercantile countenance which has belonged to their brethren since the time of the crucifixion and before. They were workers, farmers, artisans, one being a stone mason.

It is curious to observe that in considering the subject the mind contemplates men and animals indiscriminately, as though, as to this matter, there is no distinction worth while the making.

The question is, is this an extra or super-sense, or is it merely a sporadic throwing back to a rudimentary periodic migratory instinct?

If it is bottomed on the *periodic* instinct, that which, at certain times, says "Go north" and, at certain times, "Go south," then it is a latent tendency (such, for instance, as is my tendency to kill, which breaks out under certain exciting conditions). And yet there are some manifestations of even that instinct, systematic though it be, which may seem to point to the existence of a sense above our perceptions and beyond our ken. Take the case of the seals. Each year a certain spot is appointed, somehow, for their breeding ground, and from all over the Arctic Ocean the seals will be found moving toward that point. Sealers carefully observe the direction in which they are traveling at a certain point and sail onward a number of miles and take another observation, and where the two lines of direction converge, up there in the north, in due time will the seals and their breeding ground be found.

Is there an annual seal congress which picks out the next breeding ground, and is the latitude and longitude thereof then sent around to the constituents by pelagic telepathy?

Or is it that there is a sense we do not know about yet; for the most part inert, yet manifesting its power at either frequent and regular periods or at infrequent and irregular periods, according to the needs of life, of preservation, of species preservation? And that, sometimes, this sense works the destruction of species?

Once a mania, a perverted instinct, took possession of the virgins in Venice. They began committing suicide. There would soon have been none left but for the Doge, who issued the Draconian decree that thereafter the bodies of all suicides were to be dragged naked through the city. The poor girls could not stand that, and so gave up the practice. But suppose the impulse had been too strong for that or any other remedy. Suppose all the children again started off on a crusade, this time for Nova Zembla. And that they kept on.

How was it with the wild pigeons? Does anyone believe that they were all killed and eaten? Or that they were exterminated by disease, or holocaust, or cataclysm? The last place I heard of them, in any numbers, was in Canada. Suppose the Voice called them away from the 32-at-one-shot creatures, and the netters, further and further into the frozen North. May they not have flown, gathered together in one old-time cloud, in all their pristine innocence and gentleness into the hereafter—into the limbo of extinct species?

GEORGE KENNEDY.

FEEDING THE GULLS, OSWEGO RIVER, OSWEGO, N. Y.

Crossbills at Work.

IN the low trees among which the crossbills spent their day it was possible to see at close quarters their method of dealing with the fir-cones and extracting the seed. Many of the cones had fallen and were lying on the ground. These the birds carefully searched for. Half-a-dozen, both red and green birds, would descend on to the bed of pine needles and inspect the cones. We do not remember to have read any account of crossbills working on the ground. They are less parrotlike than when in the branches, for they hop instead of creeping like a parrot. But if a cone is searched where it lies, the bird throws one foot over it just as a parrot does, rests its breast across it, and thrusts its mandibles very deliberately into the interstices, just like a parrot feeding.

Often the bird picks up a cone in its beak and flies into a low branch of a pine to extract the seeds there. When feeding on the tree itself, the bird holds the cone firmly in one foot, trying not to detach it from the bough, and tries every side, sometimes hanging head downwards, sometimes tail downwards, and, if the cone becomes detached, keeping its grasp and fluttering down through the pine tufts till it can catch hold of one with its disengaged foot. This constant fluttering and falling would break stiffer and closer feathers than those of the crossbill. As it is, the looser ones give way, while the stiff tail and wing feathers do become ragged and broken. While the flock are at work the grove is quite silent except for the constant fluttering and the falling of the cones which they have detached by accident or finished searching. So close were the birds that they could be seen "husking" the seeds when extracted, and it was noticed that their beaks showed various degrees of length and crossing of the mandible. In more than one the tips did not project beyond the depth of the other mandible, and it was only when the bird looked "full face" at its visitors that the crossing was visible. About one-sixteenth of an inch was the average overlap.

The difficulty of extracting the seed by any other means than those provided by the peculiar bill of these birds must be very great. So tough and rigid are the *louvres* of the cone that, unless they gape from ripeness, the seed cannot be extracted without the greatest difficulty even with a strong knife. Beyond the fortification of these rigid *louvres* of wood, the seed itself lies in a special little socket, in the very core of the cone. According to Yarrell, the bird first opens its beak until the points do not cross, this being possible because the mandibles have some lateral play. It then pushes this in like a wedge, wrenches the mandibles crosswise again, and so prying open the crack, extracts the seed. The seed itself lies at the base of a little wing, like that of a small dragon-fly, and the birds manage to extract this without breaking it, or the light husk which envelops the kernel. They could be seen "husking" this, and pushing the "wing" and the husk out of their mouths with their tongues, just as a parrot does. The kernel, when extracted, is no larger than a mustard seed, and tastes like a morsel of Brazil nut flavored with turpentine. The crossbills evidently consider it very delicious, and would not taste buckwheat seeds, which were inserted into cones as an experiment. The resinous dainty had more attention than the peaches ripening in numbers on walls close by.—London Spectator.

Pheasants, Ducks, Migrating Squirrels.

Editor Forest and Stream:

The FOREST AND STREAM copies from the Utica Observer a complaint of, let us hope the editor, and not the former, of the damage that is being done by the English pheasant; they are stealing all the chicken feed. This is a terrible state of affairs—for the chickens. Some farmers I have in mind would get around this trouble by feeding both pheasants and chickens. The average farmer where I was raised did not begrudge a little chicken feed, even if the birds and not the chickens got it. I have seen one of these farmers carry out feed or send me out with it to leave it where Bob White could get it. Let those New York farmers feed their pheasants until the law is off on them a year or two from now; then they will have them to shoot if they want them, if not some of their friends will no doubt be glad to do the shooting for them. What those pheasants have eaten will never be missed, when the farmer comes to balance his books at the end of the year. It may happen that the birds may repay that farmer next summer for their feed; they may clean up a lot of insects for him that otherwise would destroy something for him that is of more value than chicken feed.

It is curious how soon these birds find out that we are not going to shoot them. Our ducks here furnish a good example of that; a week before the season closes it is almost impossible to get within gun shot of them; a few weeks after the law is on they could be killed with a club.

A good many of them nest on the peninsula across the harbor from Erie, and come out on the bay to feed in shallow water. I have often paddled a small boat almost on top of a flock of them before they would fly, and if I lay down in the boat and let it drift down to them I could get close enough to throw water on them.

That squirrel migration across the Mississippi River actually took place. I was on the river at the time coming up from New Orleans on a boat; and although I did not see it I was told all about it. Whether any one caught them by the tails or not I do not know. They would have to be pretty well water soaked before I would catch any of them now. I once took a contract to get a lady a pair of young red squirrels; she wanted a male and a female; I got her four of them, but they left my hands in the hospital for a week afterwards.

CABIA BLANCO.

ERIE, Pa.

[Cabia Blanco tells us that this is Comanche for "White Pony."]

The Flying Squirrel.

THIS beautiful species is extremely variable; and several species are recognized by most writers on natural history. Mr. J. A. Allen, in "Monograph of North American Rodentia," recognizes one species with two varieties. "There is," says Mr. Allen, "no break in the sequence from north southward, either in size, color, or other characters, by which the group can be subdivided either specifically or varietally."

As the flying squirrel is nocturnal in its habits, there are many gaps in our knowledge of its ways and methods of life.

On the evening of January 28, 1903, while observing the gambols of two flying squirrels kept for exhibition in the front portion of Mr. Carl Merkel's drug store at Charles City, Iowa, I observed an attribute of this species which I had never known before, and which I am not sure has ever before been published.

The two little animals were exceedingly playful, one of them especially. This one often amused itself in various ways, and would glide over the surface of the smooth polished *perpendicular glass* of the large show windows (perhaps 6x12 feet in size), and again would stop and remain stationary for a little while on the glass. At other times it would move slowly and leisurely. At all times, however, it lifted each foot from the polished surface by a quick, jerky motion, as though attached to it by suction, which it doubtless was.

It would be interesting to hear, through the pages of FOREST AND STREAM, from others having personally observed the habits and ways of this beautiful little animal.

CLEMENT S. WEBSTER.

CHARLES CITY, Ia.

Purple Sandpipers?

PRINCE'S BAY, Staten Island, N. Y., Feb. 20.—On the 18th, when the thermometer was 12 degrees above zero, about 100 snipe were seen in a bunch trying to feed along the beach. The birds were short necked, very dark backs and short bill. They uttered a sort of tweet, tweet, as they ran around on the icy beach It was a very unusual sight at this time of year. I would like to know what kind of snipe they were. A.

[The description is, of course, too vague for us to identify the birds. We suggest that these may have been purple sandpipers (*Tringa maritima*), a seacoast species of north distribution found only very rarely as far south as New York.]

The Ohio Wild Bird Law.

From the Cincinnati Enquirer, Feb. 1.

BENJAMIN NELSON, a well-known Fifth street merchant was found guilty by a jury in Squire McElfresh's court at Winton Place yesterday of exposing for sale an American "wild bird other than a game bird," and was fined $50 and costs.

This is the first trial and conviction under the new law, which was passed by the last Legislature forbidding the sale of American birds of song and plumage for millinery purposes.

About two weeks ago the State Game Warden sent out orders to his deputies to seize all birds exposed for sale in millinery stores. Following this order, raids were made in Columbus, Toledo and this city.

About a dozen downtown millinery establishments in this city were visited by Deputy Game Warden Charles I. Ryan and his assistant, Mr. Hennessy, and in each of the places birds which were offered to them for sale were seized, to be held as evidence. Warrants were sworn out later before Squire McElfresh, at Winton Place, and all the defendants gave bonds for their appearance.

It was decided by Chas. J. Fitzgerald, attorney for the Cuvier Club, and the State Game Warden to try each case separately. Mr. Nelson's case was selected as the first case to be tried, and after several continuances, the case was definitely set for trial by jury yesterday.

Meanwhile the Toledo cases had been tried and disposed of in the Common Pleas Court of Lucas county. That court held that any birds seized under the new law could not be confiscated as are game birds when offered for sale out of season, though they might be held as evidence. The court also ruled that milliners who came into possession of birds before the law went into effect could not be held. Upon this latter ruling the Toledo defendants escaped punishment, each claiming that he had possession of the birds before the law went into effect.

The Cincinnati defendants placed considerable dependence and confidence in the finding of the Lucas county Common Pleas Court, but this finding was entirely upset by Squire McElfresh yesterday on his charge to the jury. As Squire McElfresh interprets the law the possession of or offering for sale of any American wild bird other than a game bird is a violation of the law, and this finding, if sustained by the upper courts, means that the sale of birds for any other than scientific purposes in Ohio must cease.

Nearly all the prominent downtown milliners were present at Mr. Nelson's trial yesterday. Attorney Nichols, for Mr. Nelson, sought to have the case dismissed on the ground that the affidavit upon which the defendant was arraigned was faulty. This motion was overruled, and Deputy Game Warden Ryan was called for the State.

He related how he and his assistant, Hennessy, had called at Mr. Nelson's store, and asked to be shown some birds for decorative purposes. He selected from a number of dead birds two birds dyed red, and one which proved to be a black tern, which he still held as evidence. He gave receipts for the birds he had seized, and told Mr. Nelson for what purpose he had seized them.

The cross-examination sought to show that the black tern, or what remained of it, was not in fact a bird, but the plumage of one. Assistant Deputy Warden Hennessy corroborated the testimony of his superior. Prof. Charles Dury, the naturalist and taxidermist, qualified as an expert, and pronounced the bird offered in evidence a black tern. The cross-examination was again directed to show that what was offered in evidence was not a bird, but the plumage of one. Answering the question of a juror, Prof. Dury testified that the plumage offered in evidence was what was once a live bird.

With this testimony the State closed its case. The defense then moved to instruct the jury to acquit on the grounds, first, that the bird submitted in evidence was not a bird, but only the part of one, which is not mentioned in the statute forbidding the sale of birds; second, that the State had failed to prove its case because the affidavit charged that the defendant had offered for sale three birds, while only one was offered in evidence; third, that the State had failed to show that the birds which were seized were in illegal possession of the defendant. This latter ground was the one upon which the Toledo defendants were dismissed, but Squire McElfresh overruled the motion to dismiss. The defense then raised the point that the bird tern is not mentioned by the statute in the list of wild birds which must not be offered for sale. Mr. Fitzgerald read the statute which, after naming a number of native wild birds, says, "or any other wild bird other than a game bird." He contended that this provision included the tern, and he sought to recall Prof. Dury to prove that the tern is "a wild bird other than a game bird." This was bitterly contested by the defense as unlawful, but Mr. Fitzgerald produced an authority allowing his motion, and it was granted. Prof. Dury then testified that the tern is "a wild bird other than a game bird," which brought it clearly within the meaning of the statute.

In his charge Squire McElfresh instructed the jurors, and cautioned them to bear in mind that the fact that the birds may have been in possession of the defendant before the law went into effect must cut no figure in the verdict. He told them that if they found that Mr. Nelson had offered for sale any "wild bird" or "the plumage of any wild bird other than a game bird," they must find the defendant guilty.

The jury was out about five minutes, and returned a verdict of guilty. Squire McElfresh read the statute, which fixes the punishment at not less than $25, nor more than $200. He then assessed a fine of $50 and costs, which will aggregate over $100. The defense fought for a stay of execution, which was protested against by the State on the ground that the Squire had no such power. Mr. Fitzgerald insisted upon execution being taken at once and sending the defendant to jail if the fine was not paid. The defense dared the State to go to such an extreme. Squire McElfresh finally allowed the defense ten days to prepare a bill of exceptions, and agreed to hear arguments on the motion Wednesday morning.

He allowed Mr. Nelson to go without requiring a new bond. This over, the defense demanded the birds which had been seized by Deputy Game Warden Ryan, but Attorney Fitzgerald refused to allow him to give them up, saying that they will be offered for evidence in the Common Pleas Court, to which the finding of the jury will be appealed. There were intimations of an action for damages by the defense.

Considerable bad feeling was shown on both sides, and the prosecution of the other cases that are pending may develop something more than warm words.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Ontario Fish and Game.

A paper read by Edwin Tinsley, Secretary and Chief Warden of the Ontario Game Commission, before the North American Fish and Game Protective Association.

SINCE our last meeting good progress has been made in the great public work in which our Association is actively engaged. It gives hope for the future for game protection, when so many States are abolishing the barbarous practice of spring shooting, and prohibiting the sale of many valuable and decreasing species of game. Recent action has been taken to procure concerted measures for the better protection of two of our most valuable and vanishing game birds, the woodcock and wood duck, so far, I regret to say, without any appreciable results. Sportsmen in general are interesting themselves in the most important matter. Any measures must be general to be effective in perpetuating these species. It would be of no avail to have close seasons for these grand birds in the northern portion of this continent for several years, and allow unrestricted slaughter in the South.

There has been considerable controversy during the past year as to the right or wisdom of the system of non-resident licenses. The license system is the only measure that will enable sportsmen of moderate means to indulge in field sports in the future. The acquisition, by wealthy men, of immense tracts of the best game lands of our respective countries proves how rapidly and dangerously we are approaching the undesirable systems of European countries, in which fish and game are exclusively for the favored few. Had more respect been paid to the laws of nature in the past there would have been far less of the public domain in private preserves, from which the general public are debarred. Vandals, who claim to be sportsmen, are largely responsible for the increase of private preserves, and also for the necessity of a stringent protective system. This class—I cannot truthfully call them men—who during the tourist season invade a neighboring country or State and form pools, the apology for a man catching the most fish during the day takes the results of such pooling, immense quantities of fish being daily left to rot on the shores or dumped into the waters. There are others who during the close seasons abuse the privileges accorded men, as tourists, by shooting everything in sight, from the poor little fawn to the lordly moose, in a spirit of sheer destructiveness, leaving the carcass to rot. Surely the State or Province would be more than justified in requiring a license fee from these characters to pay the costs of the espionage their wrong doing had necessitated. States or Provinces do not allow strangers to enter their respective timber lands and take their timber without paying an equivalent therefor. The same rule applies with equal force to game and fish, both being valuable assets of the States or Provinces, the same as timber.

The protection of fish and game should be self-sustaining. This can only be accomplished by those doing the hunting and fishing paying the cost of the sport provided for them. This, as a rule, would have the beneficial effect of keeping the public domain for the public, and make the task of buying or leasing large portions of public lands for private preserves more difficult. In justice to those hunting on non-resident licenses, they should certainly be allowed to take home at least part of the game killed by them. I am more than ever convinced that the general adoption of licenses for shooting game is the only means of insuring even a moderate supply of game in the future. Those who object to paying a reasonable license fee are not sportsmen, but belong to that numerous class who are always on the alert to procure something for nothing. If all hunters and tourists had in the past honestly obeyed the game and fish laws of our respective countries, the system of licenses would not have been necessary, and the expenses of espionage would not have to be provided for. All who have given the question of fish and game protection the consideration it deserves, will admit that the fish contained in our magnificent lakes and rivers, and the game of forest and field is a most valuable heritage left us by nature for the purpose of being used wisely and well for the benefit of all. Nature makes few mistakes and intended her laws to be observed, and exacts severe penalties for the violation of them.

It is well known that large portions of the United States and Canada are not adapted for agriculture, or even for grazing purposes. The rocks may be rich in mineral deposits that may in due season be discovered, the valuables extracted, the mines deserted and afterwards unproductive for all time. But, on the surface of these rocks, and in the lakes and rivers intervening there exists a perpetual and natural productive source of wealth in fish and game. We are told that good government consists in doing the greatest good to the greatest numbers. Then it is evidently the duty of our respective Governments to introduce measures to perpetuate a valuable heritage in the interest of the majority, and wisely prevent its total destruction in a few short years, to satisfy the greed and rapacity of a few.

If the wild lands composing the public domains are to remain open to the public in our respective countries and the game protected, an equitable system of hunting licenses has become an urgent necessity and will be found to be the only practicable solution of the problem of game protection. We who have enjoyed for many years the pleasures and healthful recreations in field, forest and streams should consider it an imperative duty to do all possible to enable posterity to have the benefit of such health-giving and manly recreations. It is the duty of the State to perpetuate all that has a tendency to make manly men of the rising generation, men who will uphold the honor and dignity of our respective countries.

I take the liberty of saying—without fear of contradiction—that the inherent love of field sports so long prevailing in Great Britain has been a powerful factor in creating that grand empire on which the sun never sets. No other country has produced such offshoots, with their glorious love of liberty, viz. your own United States, Australia, New Zealand and last, but not least, our own Dominion. We should endeavor to imbue our sons with the love of nature, educate them in nature's complete work, by taking them with us on our annual outings, teach them to do that which is just and right to God and their fellow men, and become the peer of any man on earth.

Open Season for Moose, Caribou and Virginia Deer in Ontario, 1902.

Previous to 1896 there was no resident license required from residents of the Province to legally enable them to hunt and kill deer, the law allowing each hunter to kill two deer. In the remote districts we had no means of knowing whether hunters killed two or twenty-two, so long as they were able to get the deer out of the woods to the respective shipping points. The Ontario Game Commission, perceiving the urgent necessity of restricting the shipping facilities, advised the Legislature to pass the present effective license and coupon system, making it illegal for common carriers to transport any deer, moose or caribou, or any portion of same, without having attached one of the two coupons issued with each license. This change has the twofold effect of affording more protection for the deer and has more than provided the cost of such protection. Notwithstanding the very large number of deer killed in the northern portion of the Province, we have good ground for believing that they are not decreasing. During the open season of 1901 the Canadian Express Company carried the large number of 2,372 deer, being an increase of 878 compared with open season of 1900. The number carried by the Dominion Express Company in open season of 1901 was 129, making a total of 2,501.

The Canadian Express Company during the open season of 1902 carried 2,286, 86 less than last year. The Dominion Express Company carried 240, being an increase of 1,111 compared with 1901, being a total of 2,526 an increase of 25 over season of 1901. The above figures convey an imperfect idea of the number of deer killed annually in the Province, full one-half of those procuring licenses having their deer conveyed from the woods to their respective homes by teams. There being nearly 10,000 hunters hunting under licenses and settlers' permits, each being allowed to kill two deer, it is safe to assume that at a very low computation 10,000 deer are killed in Ontario during the open season, in addition to those killed by Indians and settlers in unorganized districts, who are allowed to kill for their own use during the whole year. I feel justified in saying that not less

than 12,000 deer are annually killed in the Province. A few years will determine whether the natural increase of these beautiful animals will equal the demand, without further legislative restrictions. The past open season for moose and caribou, being the first open season—with one exception—for these animals for many years in the Province. I am glad to say that many of those taking advantage of the open season succeeded in securing very fine heads; the Dominion Express Company report having carried 40. Indians and settlers in unorganized districts being allowed to kill one moose each for their own use during the open season, would no doubt increase the number killed to at least 100. Many of those successful report killing moose in close proximity to railway or water transportation facilities, and with little work or trouble, nearly all of the moose hunting being done on the mere fringe of the moose grounds of the Province, few of the hunters going far enough back to caribou grounds. With the completion of the various railways under construction, in connection with the present facilities, moose can be procured with less expense and trouble in Ontario than in any other portion of the great American continent.

The Game Commission is badly handicapped in the protection of the king of all game animals, to which the following lines have been so aptly written:

TO HIS LORDSHIP.

Deep in the silent forest where oft I've chanced to roam,
The monarch moose inhabits, it is his woodland home;
By silent lake at morning, by calm at night,
Majestic stands his lordship, stands motionless in sight;
The north wind to him is music, the tall pines are his friends,
The rivers madly rushing o'er the rocks and round the bends,
Seem to him a heavenly blessing, seem to him the work above,
Of a kind and thoughtful father, and His beings He doth love.

The Government kindly allows Indians and settlers, as before stated, living in unorganized districts of territory, to kill game at all seasons, for their own use. Instead of this leniency having the desired and intended effect of benefitting their families, it has resulted, with few exceptions, in creating a worthless class of loafing poachers whose services are utilized by unscrupulous owners of timber camps, and hotel keepers, to supply them with illegal game. There is not much satisfaction in sending Indians and half-breeds to jail. The fines for illegal possession are so light that owners of camps can well afford to pay fines and continue to feed their men on moose meat instead of beef. While Northern Ontario, with its immense stretch of woods, lakes and rivers, its invigorating and bracing climate, seems to have been specially provided by an all-wise Creator to be a breathing place for the inhabitants of the pent up and overcrowded cities and towns of the United States and the Dominion, I regret to say that many of the so-called tourists to whom the privilege of enjoying this great health-giving country are so freely extended are a disgrace to the country from which they emanate. Several cases were reported to me by deputy wardens during the past tourist season of finding many carcasses of both moose and deer that had been shot in sheer wantonness and spirit of destruction, no portion of them being taken or utilized by those doing the miserable and illegal work. I allude to this matter at some length for the purpose of procuring the active assistance of all respectable tourists in suppressing such vandalism in the interests of all concerned. If in consequence of the abuse of these privileges more restrictive measures become necessary, those obeying the laws will be punished to the same extent as those causing further restrictions. The prohibiting of tourists and guides having firearms in the woods during close seasons and making it imperative for all guides to be licensed will be the most effective.

Wolves.

One hundred and eighty-one wolves were killed during the past year in Ontario at a cost to the Government and municipalities of $2.715. The $15 bounty, I trust, will be effective in the near future of ridding the Province of these destructive pests, with the exception of the extreme northern portion of it.

Acclimating Foreign Game Birds.

The more consideration I have given this matter the less sanguine I become. English and Mongolian pheasants may be well adapted for private preserves, where they can be fed during the winter. The fact of them being ground feeders, and to some extent semi-domesticated, makes it impossible for them to become a factor in the game supply on public lands. Pheasants would have a poor chance in farming districts depleted of woods; in fact, pheasants require similar grounds to those suitable for wild turkeys. Wild turkeys some years ago were found in large numbers in western Ontario. They have disappeared with the woods, and so would the pheasants.

The experiments with capercailzie and black game in Maine have not been successful. No other game birds can be introduced, suitable to our climate, that will compare with our ruffed grouse and quail, and certainly no other game birds so able to take care of themselves. But even these hardy birds cannot hold their own in the fight with nature in her angry moods. A severe winter with the snow crusted or an unusual wet and cold breeding season these plucky birds are unable to contend with. It seems to me we should pay more attention to the material we have suitable to our respective countries than to waste time and money on foreign birds.

I am not aware that the propagation in captivity of our native game birds has been undertaken to any large extent or in an intelligent way. I am not sure this can be done to any large extent, but feel convinced that the establishment of quail breeding farms on a large and intelligent plan would do much to insure a supply of breeding stock after bad breeding seasons, and be a prolific source of profit to those engaging therein. E. Tinsley.

Take inventory of the good things in this issue of Forest and Stream. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

CHICAGO AND THE WEST.

Horrible Destruction of Duck Egg.

Certain of the daily newspapers of Chicago were yesterday very much exercised over the story which comes from St. Paul, where some fifty earnest young men have been meeting with the purpose of saving the American game. The chief feature of this story, and that which most worked up the daily press of this city, was the report made by Dr. Harry Lee, of Chicago, to the effect that the destruction of the ducks of the entire Northwest was threatened by reason of certain nefarious practices of Chicago and other sportsmen who annually go into that country with the deliberate purpose of collecting duck eggs. The dispatch states that these gentlemen bring back duck eggs from the Northwest in all sorts of packages, it being even stated from one source that suit cases are sometimes used for this purpose. "These men, for the most part," states the dispatch, "are disguised as traveling photographers, and their camera cases are used for carrying the eggs. One of the gang, the smoothest and most successful, travels as an evangelist, and makes Devil's Lake and Sweetwater Lake his headquarters. He inquires solicitously after the spiritual welfare of the farmers, and, like his companions, is armed with a fake camera. This, when filled, he takes to the railroad depot, where the eggs are shipped to Chicago, labeled 'negatives, handle with care.'"

Methinks that not since the days of Chops and Tomato Sauce has anything so startling as this come to the notice of the public. It is to be regretted that we are not advised what use is made here in Chicago of these illicit duck eggs surreptitiously removed from the far Northwest. Are they perchance used for the purposes of albumen, or are they devoted to the ignoble function of the omelet in these days of high-priced hen products? We should be glad to have further information upon this head. I trust there is no truth in the report that Chicago sportsmen, evangelical or otherwise, are in the habit of carrying eggs in their suit cases, at least at the time said cases are occupied by their evening or other clothes. I am sure that the leaders of society in this city will indignantly repudiate this assertion.

Illinois Game Law.

Mention has been made of the different game law bills presented at the present session of the Illinois Legislature. Of these, that introduced by Mr. Wheeler on Jan. 21, has been printed and referred to committee, and seems as likely as any others to become a law in part or in whole. It is not known who framed this bill, but Representative Castle is represented to be in favor of it, and as Mr. Castle is known to be a sportsman, it is possible that he has had something to do with some of the suggestions. This bill, as one or more introduced earlier in the session, makes an open date on woodcock and doves on the first day of September. This means no woodcock for Illinois, and some shooters oppose it for this reason. The matter would seem unimportant, as that particular bird cuts small figure here. The chicken date, Sept. 1, nominated in this bill is the one which is apt to prevail in Illinois. The writer would be glad to see all upland shooting begin in this State on Oct. 1, but one is apt to be a good deal older before he does see this state of affairs.

A very bad feature of the Wheeler bill is that it offers one or two loopholes. For instance, Section 1, relative to wildfowl, says it shall be unlawful to hunt any wildfowl, "except coot or mud hen," between sunset and sunrise, or to hunt any wildfowl, "except coot or mud hen" at any time between the 15th day of April and the 1st day of September. Of course, to any thinking sportsman acquainted with the practical conditions of the country, it would be obvious that this means to have no duck law whatever. The man who will hunt coot or mud hen all through the summer and far into the night is apt to shoot almost anything else which comes his way. This is the worst feature of the Wheeler bill.

There is to offset this blunder the very wise provision of Section 2, which includes wild ducks and all other wildfowl in the clause which prohibits the sale of Illinois game. Of course this does not prohibit the sale of game from other States, and of course also a good deal of Illinois game will sneak in under cover of other States; yet we have never before stopped the sale of ducks in Illinois. So much for the outcry raised over the Powers boys' butchery on their private marsh. There is little doubt that they have done sportsmen a good turn in thus beginning the movement to stop the sale of ducks in this State.

The Wheeler bill advances some good law when it declares in Section 11 that the "ownership of and title to all wild game and birds in the State of Illinois is hereby declared to be in the State," etc. This may be hard doctrine for the gentleman who has been in the habit of believing that the wild game and birds belonged to himself whenever and however he could get them.

This bill provides for a State Game Commissioner under salary. It further provides for ten game wardens to be appointed by the commissioner, under approval of the Governor, who shall have no employment or business except that of their warden's duties, and who shall be appointed "for efficient service only, regardless of political influence." This sounds very ideal. In addition to this executive staff of the game warden, a deputy warden is to be appointed for each county. This part of the law is wise, practical and good. We need a bigger and stronger executive arm for the enforcement of our laws. A poor law well enforced, is better than a good law left unenforced.

Of course this system of paid wardens implies the principle of hunting licenses. Section 25 of this bill makes it obligatory for any resident of Illinois who shoots in the field to take out a shooting license which will cost him $1. All non-residents will pay a license of $10. This law appeals to some of those who consider it class legislation to charge a non-resident license unless a resident license is charged. The discrepancy between the prices of the two is something which we do not hear mentioned in this objection of discrimination. I think it hardly need be said that if the $1 shooting license clause remains in the bill, it will certainly fail of passage in the Illinois Legislature. Country members will hardly dare vote for that $1 shooting license. It would set too heavily on that well-known factor in game legislation known as the "poor country boy."

The quail season provided in this bill runs from Nov. 1 to Dec. 1, and I believe that it is wise in so far as it stops the quail season at Dec. 1, which is the closing date on other sorts of game. A more ideal quail law from the sportsman's standpoint would be one beginning Nov. 15 and ending Dec. 15. There is much virtue, however, in uniform shooting dates. If we cannot have a shooting season of thirty days in the fall, or sixty days, then let us confine it to ninety days; and I think a few years later we shall not regret having done so, even if we do curtail a few of the pleasures in one or other of our favorite forms of field shooting. Most of this comment has been advanced earlier in discussion of our outlook in legislation.

It is not known at this writing just what chance the Wheeler bill has of passage, but the impression here is that it is as well backed as any. I have written Mr. Castle, urging his immediate attention to the clause in regard to coots and mud hens, which surely ought not to be left in any game bill. In one or two particulars, as may be seen by reference to the above, this is a loophole law, and as such faulty and deplorable; but perhaps it is not yet too late to mend one or two of these loopholes. The measure repeals the game laws of 1889, 1885, 1891, 1899, and all amendments to these laws made at its date from 1885 to the present. It would therefore, if passed, represent the game law of this State. Upon the whole it would be a distinct advance over any game law we have ever yet had. It does not dare to come out and recommend the abolishment of spring shooting, but closes the season on wildfowl April 15, and on the plover family and snipe April 25.

Wisconsin Fish Laws.

Feb. 14.—Wisconsin is discussing all sorts of things in regard to the game and fish laws in the present session of the Legislature. The market fishing element is well represented. Another sort of fishing is also represented in a bill which would permit the use of nets for catching carp, suckers, etc. It is true that the net must be "used in the presence of a warden," and that, under the terms of the bill, any game fish found in the net would have to be "returned to the water." As it happens, I have in a late issue of the Forest and Stream mentioned one instance of how a precisely similar law would and did work in Illinois. The fine specimens of game fish do not always find their way back to the water, but to the table of certain interested parties of more or less political pull. I venture the assertion that this might be the case in Wisconsin. It would be impossible for all the wardens in the State of Wisconsin to watch one-tenth of the nets which would be put in operation under the terms of this law. It is a loophole law, the same as no law at all.

Another matter taken up in Wisconsin by this Legislature is the question of our friend the carp. It seems that Dr. Bartlett, Mr. Ravenal, of the U. S. Fish Commission; Mr. Lydell, of Michigan, and other experts are quoted in friendly terms as to this much-hated nuisance of our Western waters. Dr. Bartlett's warm personal friendship for the carp is too well known to need repetition, but these are his words, quoted to members of the Wisconsin Legislature: "Small sunfish and minnows I have found do more to destroy young bass than anything else in the world. I took occasion when carp were first brought upon the market to be present while hundreds of carp were opened, to see if I could find in their stomachs anything which would indicate that they took the fry or spawn of other fish. I cannot say that I have never found the spawn of other fish in their stomachs, but when I have found such spawn it has been of such nature as led me to believe that it was such as floated to the surface of the water, and that the carp took them in in that sucking motion that it has going around on the surface of the water. The voracious habits of the black bass requires a large quantity of coarse fish as food, and I believe as firmly as I am standing here that had the carp not been introduced in the State of Illinois that the bass would have been gradually taken out entirely from our list. As it is now, I want to repeat the statement that we have more black bass than ever, and our carp certainly have increased in a greater ratio than ever before."

The Wisconsin anglers will do well not to be misled by these enthusiastic and apparently well grounded statements of Dr. Bartlett. It is not the case that we have more bass all over the State of Illinois than we had before the introduction of the carp. The contrary is true. This fish has nearly ruined the bass fishing in such streams as the Kankakee and other tributaries. The black bass are perhaps more abundant than ever along the Illinois River, and some of the lakes and bayous of that district. This fact is due to the continual seining and planting of young bass, and not to the presence of the carp themselves, as can easily be seen, and as Dr. Bartlett ought to be shrewd enough to guess without aid or suggestion from an outsider. The simple truth is that this imported nuisance will ruin our streams and ruin the fishing unless eventually measures are taken to counteract the destruction which it creates. As to its eating spawn of game fish, that is not the charge laid against it. The charge is that it multiplies from its own spawn so rapidly that it practically takes possession of a stream. Swarms of these scavengers keep a bass stream continually stirred up, muddy, roily and distasteful, so that the game fish simply leave it as completely as though their spawn were eaten up. The habits of the carp are more like those of a hog than of a fish. We don't need him, and we don't want him, and Wisconsin will do mighty well to do everything to keep the carp out of her streams, and not to tolerate the thought of its ever being introduced

into them. In the name of all good angling, let us have at least a few Western waters left free from this absurd and pestiferous imported nuisance.

Other changes which are contemplated in the Wisconsin fish laws will prohibit ice fishing from shanties in the winter, will prohibit the use of set lines, will establish a close season on pike from the first of January to the first of June, and on bass from the first of January to the first of July. It is not known what outlook these different measures have for carrying.

During the past year there were confiscated in Lake Winnebago and the Fox River 250 nets which had been used by market fishers. Fifty of these nets were 300 feet long and 12 feet deep. Nothing less prolific than our friend the carp would serve to furnish continual food for these big engines of destruction.

Best Places for Ducks.

It seems that the new rice region in eastern Texas is attracting a great many ducks along the coast. There is a big club which shoots on the marsh about a dozen miles from Liberty, Tex. Further westward, Port Lavaca, is a capital place for a hunt, and I hear big reports of the shooting there this week. Perhaps the best points are on the big King's Ranch, toward Brownsville, or the live oak flats below Uvalde, where there are literally millions of ducks right now. This is getting toward the famous Laguana de los Patos, where not long ago one gun killed 325 redheads in one day. That ought to be enough. The great trouble about a trip down into that country is the difficulty of killing few enough ducks to sit well with one's conscience. I presume that is the best part of the sporting country of the Southwest to-day.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Maine's Plan to Tax Hunters.

From the Springfield Republican.

IN response to my request that Chairman L. T. Carleton of the Maine Fish and Game Commission furnish a concise statement of the principal arguments for the proposed taxing of non-resident hunters, he submitted the following, writing from Augusta, Me.:

In reply to your esteemed favor of the 18th relative to the proposed license law for hunting big game in Maine, I beg leave to say that "we are confronted by a condition, not a theory." It costs us to operate our fish hatcheries and feeding stations $23,000 a year, in round numbers, leaving us but about $2,000 out of our appropriation for warden service. It will cost as much in the future to operate these hatcheries as in the past. It is absolutely impossible to get a larger appropriation from the State of Maine for warden service. The condition is, that we can get no better protection unless we have this law, and that our game will rapidly disappear and soon become a thing of the past unless more money is had for warden service, just as surely as dead deer and dead moose bring forth no increase. The carcasses of 108 moose, mostly cows, which had been illegally killed, were found by wardens during the past year and reported to this office. Following the lead of about every other State and country that has big game to protect—in order to get better protection and save our game, I advocate a license law. The sentiment of the people of Maine is strongly in favor of such a law, and I have no doubt it will be passed by the incoming Legislature practically unanimously. Very sincerely yours, LEROY T. CARLETON, Chairman.

Mr. Carleton's ideas on this subject are, of course, entitled to respect and consideration, but there is naturally considerable objection to the proposed legislation from many of the non-residents who are accustomed to take their outing in the Maine woods. The writer has made many such trips, and is convinced from personal observation and investigation that the administration of the game laws of Maine, if not greatly improved, will be even more to blame for the expected decrease of deer and moose within her borders than the continued exemption from taxation of sportsmen from outside the State could possibly be.

Chairman Carleton asserts that the Maine Fish and Game Commission cannot secure an increase of the $25,000 allowance for fish and game protection which his State allows. This seems ridiculous, in view of the fact that several million dollars are left in the State of Maine every year by visiting sportsmen. There is no reason, in my opinion why the State should not furnish an appropriation of $100,000 at least, and it would thereby be a gainer in many ways. I believe that if Mr. Carleton and his adherents are truly anxious to save their game they should begin such preservation by enacting stringent laws and enforcing them upon the residents of Maine. They must know it to be a fact, as do all of us who visit the Maine woods, either frequently or infrequently, that the first thing nine men out of ten, residents of the State, think of after they have shot deer, is how many dollars they can get for them. Generally speaking, the people of Maine themselves do not appear to care a picayune for the preservation of game, from what is commonly called a sportsmanlike view. Many would probably be sorry to have the large game seriously depleted, because it would be harder for them to get fresh meat to eat, in season and out of season, and they would lose their present revenue from marketing the results of their hunting trips.

I think more deer are killed illegally and sold by Maine residents than are transported beyond the borders of that State by outsiders. It seems to me that one deer to each person, residents as well as non-residents of Maine, is ample, unless it is desired to encourage pot-hunting, and, moreover, if Commissioner Carleton and his associates desire to take measures which will retard the extinction of deer and moose they ought to secure the enactment of laws similar to those which the State of Massachusetts has regarding partridge. If the exposure of deer or moose for sale by the marketmen of the State and sale by all her residents were prohibited, and such measures strictly enforced, the large game of the State would be given a new and lasting lease of life. As it is now, the marketmen in Bangor and other large Maine cities often have more deer and moose offered them than they can accept.

If a tax is imposed on sportsmen from outside of the State, it seems entirely unreasonable that residents of Maine should not pay as well, and that all who enter the State should pay it. At least only those who secure game should be called on to add to the State's treasury. To an outsider it appears that the people of Maine are anxious to have sportsmen from outside the State pay not only for the game which said sportsmen go after, even if they do not secure it, but for all the game which the inhabitants of the State slaughter, in season and out of season. I say out of season advisedly, for I believe that many communities in the State know no game laws practically. That is, whenever wild meat is wanting it is secured, regardless of close or open season.

E. M. W.

Bear Bounties and Others.

DUNBARTON, N. H., Feb. 16.—*Editor Forest and Stream:* I inclose a clipping (editorial) from the Manchester (New Hampshire) Mirror of February 12, on the failure of a bear bounty bill in the New Hampshire Legislature:

"We are sorry to see among the measures killed in the House of Representatives our old friend Bear Bounty Bill, for if there is anything which this agricultural, mountainous, forest-bearing State that has just elected a granger Governor is in duty bound to do it is to encourage the cultivation of bears by paying a bounty on their ears. Theory and experience unite to show the wisdom of such a course. The bear is indigenous to New Hampshire. As we remember, natural history teaches that he originated here, near what is known as Bear Camp Station in the town of Ossipee. Be that as it may, this was his habitat long before we robbed the Indians of their fishing grounds and let loose among them Hannah Dustin and other strong-minded women of her day. At the least he is a time-honored institution and for that reason should be venerated and protected. He is more than that. He is useful, handsome and healthy. He feeds himself and chews his own food. He clothes himself and his coat is warm when he is done with it. He is entertaining and there is much chaw to his meat. He is sociable or savage as occasion requires, and the sportsman can tell as many lies about catching him as he can about the capture of any other beast on the farm. He never has the mouth disease. He never begets feeble-minded children for Billy Ahern to build asylums over. He never sells his vote.

PUTTING OUT DECOYS ON AN IOWA SLOUGH.
Photo by J. P. Bicknell.

He is a good citizen while he lives and when he dies his carcass is cheap at nine cents a pound and his hide brings big money. All this in his uncultivated state. And he yields to civilized treatment more readily than the best of Filipinos.

"At one time, for a series of years, the State encouraged him by paying a bounty of ten dollars on his ears, and with this inducement he multiplied himself rapidly, became domesticated and educated, raised six pairs of ears each season and went down from the mountains to show them to the selectmen of Carroll county, whose drafts upon the State treasury in his behalf or in behalf of his supposed captors amounted to thousands of dollars each year and steadily transformed the hunters of Albany and Bartlett into capitalists.

"It cannot be said with truth that under the bounty stimulus the bear became as multitudinous as the hawks, of which Natt Wentworth shot 4,789 in one day on his farm in Hudson in one day, or the woodchucks, which came over to the Haverhill intervales from Vermont in such hordes that Bill Whitcher's ancestors had to take him out of college to keep tabs on the animals and calculate the amount of the bounty at ten cents each; but, as we have said, he multiplied and prospered and populated many a deserted farm and put money in the purses of many an honest agriculturist, and was one of the best crops harvested.

"But the bounty was repealed and then he began to dwindle and diminish and disappear; to shed his ears down to a single pair, to lose his courage and slink away from the haunts of man and to cease to yield either fur or fat at a rate which if continued will soon extinguish him altogether.

"The bounty should be restored. It is good for the bear, for the hunter, for the farmer, for all concerned. The untimely fate of the bill is to be mourned."

This recalls a story told me recently by our State Treasurer. Some years since a stranger came into the office of the treasurer and stood for some time, then said: "Say, is this where you get the bounty on bears?" The official replied: "The selectmen of the town where the bears were killed will, on presentation of the ears and noses of the bears, pay the bounty." The visitor pondered for a while, and then said: "Say, I am the chairman of the selectmen in my town and I have four bears which I killed there. Can I pay myself?" He was told to make out a bill in proper form and hand it to the town treasurer. More pondering and then: "Say, I don't know how to make it out. Won't you do it for me?" This was done, but the visitor still lingered. After a time: "Say, Mister, you have used me first rate." And then another pause, and he dived into his pocket and pulled out a bottle. "Say, can't I sell you some bear's grease?"

We have had bounties on bears, foxes, woodchucks and hawks. One by one they have been repealed and none are now in force, unless it be a recent attempt to put one on hedgehogs.

There seems a difference of opinion as to the wisdom of bounties. For my part, I think it would have been well to let the law remain as it was on bears and hawks. The latter do a great deal of damage to both game and poultry. When such a bounty was in force the small boy and also some who had ceased to be boys, were much interested in the hawks. When a hawk's nest was located (and they worked hard to find them) perhaps they did wait until the eggs hatched. Then usually the whole of that hawk family was wiped out. As to foxes, the average farmer (unless he be a fox hunter) would be glad of a bounty on them. The fox hunters were generally opposed to such a bounty and by their efforts it was repealed.

As I understand an effort is now being made for more stringent laws as to trapping of foxes. There is a sort of a law to this effect now in force. It says: "No one shall set traps except on his own land or land he has leased." Practically no attention is paid to it. It is very easy to get permission from the average land owner and for no consideration whatever to set fox traps. The trapping goes on. Some foxes are caught and also dogs and other animals.

C. M. STARK.

A System of Game Protection.

A Letter to President Alex. Starbuck, of the Cuvier Club, Cincinnati.

DEAR SIR—I am honored by your invitation to submit an opinion as to the "best method of protecting game." The best method, I take it, would imply the least friction, the greatest gains, the widest privileges and the most satisfactory general results. Will say that modifications of my plan will apply to fish also.

In formulating governing rules, the several questions of sport, money profit, and food supply have to be considered, while landowners' rights have to be respected. Any encroachment upon inherited or vested rights, especially those of long standing, will naturally be resented. Preferred classes must not be recognized.

Laws governing trespass are as old as the hills. Under their operation a man's house becomes his castle, and his broad acres an eminent domain. Should he take life in their defense he is absolved. But it so happens that the farmers and foresters, who are, perhaps, the most of all interested in the whole subject of game and its protection, because it is on their premises where game is harbored and propagated, have been very little consulted hitherto either in framing the game laws or in the matter of taking game from their premises. Indeed, they have scarcely been regarded as a party to the arrangement.

My first move would be to place them where they belong, and where their fences and boundary lines show they belong, to the manor born and as lord proprietors in fee, recognizing their rights to exclude undesirable and unknown persons, as I do their rights to dispense or decline hospitality. As at present situated, when they are intruded upon, either by sportsmen or wardens, they are much in the same plight as the mine owners, mill operatives and storekeepers and contractors, who find themselves confronted and dictated to by walking delegates. They submit to pressure or to intrusion through undefined fear of reprisal or of some penalty for infraction of laws which they may know nothing about; or, if read in the law, they are ready to evade it when they can because they recognize its injustice. Such unwilling subjects can hardly be classed as earnest game protectors, especially as they do not see what there is in it for them.

Now, laws, for whatever purpose enacted, cannot remain effective unless they are backed by popular sentiment; they become a dead letter, and our game laws, as they stand, are not sensible. They are ambiguous, discriminating, defective and unsatisfactory. Hence, traversing the protective efforts of the past half century and penciling out their defects and shortcomings, as embodied in the formulating codes, I conclude that the best manner to guard, preserve and increase the game is:

1. To make every landowner the custodian of his own property, as far as may consist with the established common law, just as the Federal Government has assumed charge of vast tracts of wild land of late for the purpose of conservation.

2. To encourage him to enforce the law of trespass against persons entering his premises with firearms unless they have permits to shoot.

3. To make trespassers amenable to the nearest magistrate or court of justice.

4. To devise and grant such permits as will involve a contract between the landowner and the shooter for a stipulated sum per diem, or for a share of the game killed, on the same principle that parties cultivate crops on shares.

5. That there shall be a legal limit as to sex, size, age and the number of creatures killed, with heavy penalties for infraction.

6. That States shall waive their ownership of *feræ naturæ*.

7. That game killed or acquired by one's labor or effort is as much the property of the possessor as any other portable property or commodity acquired by one's own efforts, and may be sold, eaten or given away as he may elect.

8. That game may be shipped from place to place, in and out of the State, when suitably tagged with name of shooter, shipper and common carrier and a mention is made of the place where shot and the owner of the place.

9. That discrepancies between declarations and contents of packages shall be heavily penalized when evil intent is proven.

10. That shooting shall be suspended on Sundays and other designated weekly intervals.

11. That informers shall have one-half of all fines collected and paid into the county treasury.

12. That landowners shall be their own game wardens, and that every man shall be a legally constituted spy upon his neighbor to carry out the law, and that it shall be his duty, under penalty for neglect, to report delinquencies or infractions.

13. That no odium shall attach to informers as violating honor, friendship or etiquette of vicinage or of the woods.

On such basis, I believe a code of game laws would win the good will and energetic support of every loyal sportsman, guide, musket shooter, shipper, cold storage man, restaurant keeper and consumer, and that no code of laws formulated on any other substratum will. Had such a code been put into force a quarter of a century ago, with less in it for the sportsman and more for the rest of mankind, there would be few preserves under wire these days belonging to individuals whose wealth can command and insure what the laws have denied to them.

Yours very truly,

CHAS. HALLOCK, M.A.

The Adirondacks.

From the report of William F. Fox, Superintendent of New York State Forests.

Private Preserves.

In the Adirondack region there are sixty preserves, with an aggregate acreage of 780,993 acres held as private property by sportsmen's clubs or individuals. The boundaries of each preserve are posted at intervals of forty rods with printed notices warning people that it is private land on which no trespassing, fishing or hunting will be permitted, the posting of such notices being required by the law authorizing the establishment of private parks or preserves. The club or individual is not necessarily the owner of the property; in some instances the land thus occupied and posted is leased, the exclusive fishing, hunting and camping privilege having been obtained through some such arrangement with the lumber company or person in whom the title is vested. Some of these preserves are situated, partly or wholly, outside the Adirondack Park, and hence the acreage just mentioned exceeds that given in the table showing the classification of lands within the park.

Throughout all the private preserves the land is well wooded, and each contains some lake, pond or fishing stream. The forest on some of these holdings is a primeval one, untouched by axe or fire. On several of the larger preserves the owners are conducting lumbering operations; but as the cutting is done under a conservative, intelligent management, and is restricted to soft wood species of medium diameter, a large revenue is derived from the property without impairing its capacity for future production. Then again there are clubs which own large tracts that have been lumbered; but as the logging was done fifteen years or more, at a time when the lumbermen took the large timber of one species only, these forests retain much of their primitive condition.

The private preserves in the Adirondacks, with a slight exception, have been established within the last sixteen years—most of them within eleven years—and the comparatively sudden exclusion of the public from its old camping grounds has provoked a bitter hostility on the part of the hunters, fishermen and guides who formerly ranged over this territory. The sportsman who returns to some favorite haunt only to find himself confronted with the words "No Thoroughfare" turns back with a resentful feeling, while the guides, who were wont to conduct their patrons wherever game was plentiful, view with threatening looks the hired gamekeepers that guard the forbidden lands.

On the other hand, the owners of the preserves point to the protection of the forests, fish and game afforded by them, and to the large number of guides and woodsmen to whom they furnish constant and lucrative employment. In 1899, the dry season in which forest fires were raging in the Adirondacks to an unusual extent, it was noticed that there were no fires on the private preserves, aside from incipient ones that were extinguished before any serious danger was incurred. This was due to the large number of forest patrols employed by the owners of these tracts.

It is not necessary that the State should purchase these private holdings in order that the tree growth may be protected; for the owners can be relied upon to preserve the forest conditions that are so essential to the enjoyment of their property. The acquisition of these high-priced lands may be safely deferred until the rest of the Adirondack Park has been bought. But the tenure of title to these private preserves is not permanent like that of the State Preserve; these properties change hands frequently; public sentiment is always gratified when any of this territory is opened to the people; and so it would be well if the State kept a fund on hand, available at all times for the purchase of such tracts whenever any portion is thrown upon the market.

Adirondack Private Preserves.

The ownership and acreage of the various preserves is as follows:

Adirondack Club.—McIntyre Iron Co., owner, 59,300 acres.

Adirondack League Club.—Hon. Warren Higley, President, 79,172.

Adirondack Mountain Reserve.—William G. Neilson, President, 25,912.

Adirondack Forestry Association.—Gen. Hazard Stevens, Oscar B. Ireland and George E. Terry, trustees, 4,358.

Altamont Club.—Union Bag and Paper Co., owners, 4,595.

Ampersand Preserve.—Santa Clara Lumber Co., owners, 32,407.

Anthony Ponds.—Harper Brothers, owners, 7,221.

Bog Lake Camp.—Charles A. Tatum and Edmund C. Converse, owners, 5,618.

Brandreth Park.—Franklin Brandreth, Ralph Brandreth and Gen. E. A. McAlpin, owners, 27,298.

Camp Arbutus.—Archer M. Huntington, owner, 1,699.

Childwold Park.—Henry G. Dorr et al., owners, 13,090.

Caughnawaga Club.—William H. Clark, President, 8,838.

Cutting Preserve.—Frank A. Cutting, owner, 7,510.

De Bar Mountain Park.—William Rockefeller, owner, 11,675.

Deer Lick Rapids Club.—7,500.

Everton Park.—Wm. Rockefeller et al., owners, 20,000.

Fenton Game Preserve Association.—Leased land. Charles Fenton, Secretary, 60,000.

Follensby Pond Preserve.—Titus B. and Ferris J. Meigs, owners, 4,855.

Forest Park and Land Company.—Wm. W. Durant, President, 4,838.

"G" Lake Preserve.—E. Z. Wright and John D. Collins, owners, 480.

Granshue Club.—Charles R. Holmes, President, 8,752.

Grasse River Outing Club.—Charles E. Brown, President, 5,520.

Hamilton Park.—Hon. William C. Whitney, owner, 61,066.

Hamilton Lake Preserve.—John A. Starin, owner, 3,202.

Hollywood Club.—Dr. C. C. French, President, 2,360.

Horse Shoe Forestry Company.—Augustus A. Low, 27,431.

Inlet Club Preserve, 6,700.

Kamp Kill Kare.—Hon Timothy L. Woodruff, owner, 1,030.

Kildare Club.—Ehrich Brothers, owners, 8,536.

Knollwood Club.—Louis Marshall et al, directors, 450.

Lake Placid Club.—Melvil Dewey et al., owners, 2,148.

Lake Reserves.—Dr. William Seward Webb, owner, 8,470.

Litchfield Park.—Edward H. Litchfield, owner, 12,427.

Long Lake Preserve.—Raquette Falls Land Co., owners, 2,200.

Lloyd Triangle.—Theodore Page et al., owners, 3,600.

Massawepie Club.—Hon. A. P. Hepburn, owner, 1,720.

Mat-a-Mek Preserve.—Hon. Ashbel P. Fitch, owner, 1,854.

Meacham Lake Preserve, 5,580.

Mohegan Lake Camp.—J. Pierpont Morgan, owner, 1,551.

Moose Pond Preserve.—Hon. George R. Finch, owner, 800.

Morehouse Lake Club.—W. W. Mosher, President, 1,500.

Nehasane Park.—Dr. William Seward Webb, President, 42,848.

North Woods Club.—James Yalden, Secretary, 4,583.

Paul Smith's Preserve.—Paul Smith's Hotel Co., owners, 18,484.

Pine Lake Club.—Watson D. Dunmore, President, 987.

Pleasant Lake Club.—Thos. H. Wagstaff, President, 1,000.

Pleasant Lake Preserve, 8,750.

Putnam Preserve.—Dr. Charles P. Putnam, owner, 2,960.

Read and Strong Park, 7,375.

Rockefeller Preserve.—Wm. G. Rockefeller, owner, 52,335.

Sabattis Park.—Charles R. Christy, owner, 1,633.

Sagamore Park.—Alfred G. Vanderbilt, owner, 1,530.

Santanoni Park.—Hon. Robert C. Pruyn, owner, 11,205.

Saranac Club.—Jonathan J. Broome, President, 267.

Stillwater Club Preserve.—J. H. Rushton, Secretary, 20,000.

Upper Saranac Association.—Dr. Samuel B. Ward, President, 2,751.

Vilas Preserve.—E. A. Carpenter, owner. 18,075.

Wilderness Park.—W. S. DeCamp, owner, 29,567.

Wilmurt Club.—Hon. Titus Sheard, President, 1,655.

Zack Lake Preserve.—Raquette Falls Land Co., owners, 1,725.

Total acreage, 780,993.

The total area of the private preserves as given here is much less than that shown in the list published by the Forest Commission in its annual report for 1893. This decrease is due to large sales made to the State and to the lumber companies. Since 1896 the State has purchased 75,000 acres of the Nehasane Park Association, 35,932 acres of the Adirondack League Club, and 30,000 acres from the owners of the Santa Clara Preserve.

In addition to the preserves mentioned in the foregoing list there is a large amount of forest property in the Adirondacks composed of small holdings—from five to one hundred acres each—on which cottages, or "camps," as they are called, have been erected. These summer residences, with their pretty boat houses and other buildings, are often located at sightly points on the lakes—particularly the Raquette, Saranacs and St. Regis—where they form a never failing source of interest to the tourist, as they represent large expenditures of money, and are models of good taste combined with solid comfort. They furnish employment at high wages for a large number of people—"house guides," servants, and men on private launches—and contribute in various other ways to the prosperity of the region. Together with the "camps" on the larger private preserves there are at present 419 of these summer residences in the Adirondacks, costing from $5,000 to $100,000 each, in which the investment for buildings, exclusive of land, amounts in the aggregate to $3,846,500.

If there are any to whom these figures may appear unduly large, their attention is respectfully called to the beautiful and costly summer homes near Raquette Lake owned by Mr. J. Pierpont Morgan, Mr. Alfred G. Vanderbilt, Hon. Timothy Woodruff, and the late Collis P. Huntington; to the forest villas on the St. Regis Lakes of Hon. Whitelaw Reid, F. W. Vanderbilt and H. McK. Twombly; to the expensive, tasteful "camps" on Upper Saranac Lake belonging to Hon. Levi P. Morton, Isaac Seligman, the Messrs. Swenson, Mr. Julius S. Bache, Dr. L. E. Holt and Mr. D. H. Kahn; to the bulidings of the Knollwood Club on Lower Saranac; the numerous fine cottages of the Adirondack Club on Little Moose, Honnedaga, and the Bisby Lakes; the houses of the Saranac Club on the Bartlett Carry; the large number of beautiful cottages at Lake Placid and Keene Valley; and the extensive buildings on the private preserves of Hon. Robert C. Pruyn, Dr. William Seward Webb, Mr. William Rockefeller, Gen. E. A. McAlpin and Mr. A. A. Low.

Guides' Yarns.

How often during our hunting trips do we come across a guide who has a high sense of the ludicrous, and who will not hesitate, should a chance present itself, to test in many ways the hunting qualities of those who have hired him. One guide in particular with whom I have hunted on several occasions was chock full of yarns which he would spin in the evenings over the campfire, and always at the expense of some of his previous employers, who evidently had not been very well posted in hunting lore or woodcraft.

His pet joke, which he always told with the greatest gusto, knowing, I suppose, from past experience, that it would fetch down the house (or tent), was related of two young Englishmen who were just fresh from the old country and out for their first hunting trip in the Rockies. One of them, intending, I presume, to write up an account of their trip for some sporting magazine, kept a diary, and in it faithfully recorded the events of each day.

They had been out two days, and at nightfall arrived at the base of the mountain on which their guide (whose first name is Archie) intended they should do their hunting; the tent was pitched and everything put in order for the morrow. At daybreak next morning Archie was astir preparing breakfast, and happening outside the tent to wash out the frying pan he scanned the mountain for game, and in a few moments descried an animal which he knew to be a bear moving about on a bluff nearly three-fourths of a mile up the mountain. He re-entered the tent and to his two companions, who were still asleep, he broke the news as follows:

"Boys (sniff, sniff), I smell a bear. Boys (sniff, sniff), I smell a bear!"

At the mention of bear the two Englishmen, who had been partially aroused by Archie's call, tumbled out in a hurry, and, without waiting to don their clothes, rushed outside. The guide followed them and began sniffing in all directions. At last, turning his face toward the bluff on which he had seen the bear, he said: "He's up in this direction, gentlemen."

In a moment one of them had spotted him, and hastily dressing themselves they started with Archie in pursuit of the bear and eventually succeeded in killing it. They talked all day about the splendid nose their guide possessed and in the evening, when recording the events of the day, the following entry was made in the diary: "A most wonderful thing happened to-day; our guide positively smelt a bear over half a mile from camp." Then followed an account of the killing. FRANK RAMSEY.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Reminiscences of an Octogenarian.

Part VIII.

BY THE OLD ANGLER.

(*Continued from page* 111.)

"Though sluggards deem it but an idle chase,
And marvel much that men should quit their easy chair
The toilsome way and long, long leagues to trace;
Oh, there is sweetness in the mountain air,
And life that bloated Ease can never hope to share."

—Byron.

THERE may be some persons now living who remember the vast flights of wild pigeons that used annually to visit the New England States and the Canadian Provinces. Whence they came, whither they went, or where they lived, the Octogenarian does not know, nor is he aware of any *Savants* who explain these things satisfactorily. They tell us how many feathers there are in the tail, how many quills in each wing and descant learnedly on its head, bill and feet; some go so far as to assure us that all the numerous varieties of pigeons that are shown by fancy breeders are descended from the wild blue rock and wood pigeons; but about the immense flights that were common a century ago, whence they came or whither they went, the *Savants* are eloquently silent. The great American Ornithologist, J. J. Audubon, has described flights of wild pigeons he saw in the Western States that stagger the credulity of thoughtful readers. These flights, he tells us, often exceeded half a mile in width, and occupied hours in passing spectators, who noted and timed their passage. So compact were the masses that, during the time of their passing, the rays of the sun were intercepted and a partial darkness caused. Where such myriads found food on their passage; where they bred and found food for their nestlings and themselves, the writer has never been able to learn, and all the *Savants* he has consulted are as ignorant as himself. But there would seem to be a close connection between the food supply and their annual migrations; the failure of the former would seem to be the cause of the total cessation of the latter. Whether those migrations still continue in Kentucky and Louisiana, which States were formerly visited by them in such incredible myriads as Audubon describes, the writer does not know; but in the New England States, in Nova Scotia and New Brunswick, where they formerly came in vast numbers, a wild pigeon is now a curiosity.

The boyhood of the writer passed in what is now the considerable town of Sackville, but which was then a

wide expanse of scattered farms, extensive marshes and uncleared woodlands. One of his earliest memories is the immense flights of wild pigeons which annually visited the neighborhood. Though these came in immense compact masses, they soon broke up into numerous large clumps, which spread all over the surrounding country. These, again, divided into smaller flocks in search of food, until every county in the Province had its quota of wild pigeons in great numbers, as long as the wild berries, acorns and beech nuts supplied them with food. But, so far as the writer is aware, they never nested nor reared their young in New Brunswick, nor did they depart in flights large enough to attract attention. The number trapped, shot or otherwise killed in the Provinces was infinitesimal compared with the vast numbers that were scattered over every place where clearings and settlements had been made. In short, the wild pigeon was as great a puzzle and reproach to Ornithologists as the salmon family is to Icthyologists.

In his boyhood fowling-pieces were rare in agricultural regions. Old army muskets were almost the only fire-arms possessed by farmers. Double-barreled guns were shows and the percussion lock had not then evolved; old flint and steel locks were the only ones known among even the most advanced sportsmen of those days. The mode of taking wild pigeons was very primitive and economical; but, at the same time, very effectual. The haunts of the birds were always in woods near to cultivated fields, and the few trees left in these fields were generally crowded with birds. Passing flocks resorted to them as resting places, and large numbers were taken in the primitive traps that supplied the place of powder and shot. A square about ten feet long by eight wide, and fourteen inches deep, was dug in the neighborhood of these trees or of the bordering woodland, the bottom beaten hard and smooth. This excavation was covered by a light frame of four small, straight saplings of spruce or fir, halved at the corners and strongly nailed. A lighter pole stretched across the middle and strongly secured by nails, gave the strength required. This frame was made eight or ten inches longer and broader than the hole it covered, and stretched over it was a piece of netting; or sometimes light laths, about two inches apart, took the place of netting, if this last was not easily obtainable. Some wheat, oats, corn or buckwheat was then scattered liberally over the bottom of the excavation; one edge of the frame was raised about four feet by a light prop, to which was fastened a strong cord extending to a brush covert some 100 yards distant. The *Sportsman* had not long to wait before the hole was full of pigeons; a smart jerk released the prop, and the frame fell before the birds could escape. The meshes or slats were full of extruding necks; a slight twist of each caused a speedy and painless death. Though seemingly cruel, this mode of capture was really more humane than shooting among a flock, since only those killed could be secured, while all the wounded escaped to die a lingering and painful death. The netter pursued his game only when it was needed for food, and a single spring of his trap often procured more birds than he and his neighbors needed for the time.

* * * * * *

Not until his fourteenth year did the Octogenarian become the proud possessor of a single-barreled flint-lock gun. In the few years that had elapsed since his boyhood, the flights of pigeons had become much smaller and more scattered; but they were still numerous enough to offer fine shooting to the ambitious schoolboy, and were not beneath the attention of older sportsmen. Meantime, the Sackville home had been changed for one on the banks of the Miramichi. This bustling town was a great change from the quiet agricultural village; the numerous ships in the river, some discharging their coal ballast, others taking in cargoes of square timber to the chanties of the sailors with the chorus, "O, heave cheerily, men"; the busy shipyards lining the shores to Chatham; the sawmills that were just being introduced in the North; all combined to make Miramichi, next to St. John, the most stirring place in the Province. The lumbering business was then in its most prosperous days in the northern counties; sawmills and deals were then almost unknown. Square timber—pine and birch—was the great export, while shipbuilding was the great mechanical industry on the Miramichi. The three great commercial houses which controlled, if they did not monopolize, business in the northern counties, built their ships; loaded them with pine timber; sailed them to England and sold both ships and cargoes at a large profit. Then was seen what is now only a memory in the minds of the few Octogenarians still left in the United States and Canada—large rafts, often an acre in extent, of the finest "punkin pine," with small villages on them, floating their way down all the large rivers of North America. This side the Rocky Mountains such pine is now seldom seen; the supply, both in the United States and Canada grows less year by year, and the great steam sawmills will soon exhaust what little is left. None of the present generation and but few of the past, ever saw a "stick of square timber"; while the use of the broad-ax is a lost art among lumbermen. It was quite an art, which involved some science, to line out and hew a large pine tree so as to keep the most cubic feet possible in the square logs. The deft use of the broad-ax was not acquired without much practice, while some never could acquire the knack of "hewing to the line." When the pioneer steam sawmill was erected in Newcastle, the first use of it was to square the huge pine logs with saws instead of axes. With two saws in the gate the sides were dressed in less time than it took the hewer to place his log on skids, while the slabs furnished fuel which the axes wasted. This innovation and improvement aroused all the conservatism of beery-brained British prejudice. The first cargo of saw-dressed timber, both pine and birch, though of superior quality, depreciated in price, because the accustomed marks of the broad-ax were absent. The saving of labor was so great that the shipper was loath to revert to the ax, when the ingenious Yankee foreman of the mill passed the saw-dressed logs to another carriage and by means of a huge plane, worked by steam power, imitated on each of the four sides the marks of the broad-ax, and thus removed the stupid objection of the British purchaser. Unfortunately, this conservatism and senseless prejudice have since cost Great Britain her manufacturing supremacy. Instead of adopting the labor-saving machinery and machine tools which American ingenuity and enterprise have since invented and utilized, the British workman has shown the caliber of his beer-soaked brain by smashing the ingenious and beautiful automatic machines that have enabled American workmen to quadruple the output of their labor. Even now trades-union rules allow an English mechanic to operate only a single machine tool, while the American workman attends to three or four, according to the work he is doing. The consequence is that all those articles which, in the writer's boyhood, were staple manufactures of Great Britain, and for which she had then a virtual monopoly, are now made in the United States, and are underselling the English manufacturer in his home and Colonial markets.

But to return from this long digression. In this favored locality, on the banks of the Miramichi, there were great facilities for hunting, shooting and fishing. Moose and caribou were seldom disturbed, except by Indians, who were then more numerous than they are at present. The great river and its tributary streams and lakes were then full of the finest salmon, bass and trout, while extensive marshes, within easy walking distance of the town, abounded with ducks, curlew, plover and snipe. The coverts in the neighborhood of these marshes were alive with woodcock and the woods with ruffed grouse, still erroneously called partridge, both in Canada and the United States. The few sportsmen then in the town were merchants or professional men, whose youth had been passed in England, Ireland and Scotland, who brought with them to the wilds of New Brunswick that love of sport which distinguishes the Briton wherever he is found. The facilities offered by the numerous timber-ships, which generally made two round voyages during the season, enabled sportsmen to get good dogs, and the towns of Chatham and Newcastle had the best breeds of pointers and spaniels then in America. The marshes, with their plover and snipe, afforded fine ground for the former, while the coverts and woods amply repaid in woodcock and grouse, the active ranging of the busy spaniel.

With what pleasure does the writer recall his first exploits with his old single-barrel flint-lock gun! Within a mile of the town was a large extent of scrubby land on which the wild blueberry grew in profusion. From the time these ripened until frost set in, this "barren" was the feeding-place of the small flocks of wild pigeons which then annually visited the northern parts of the Province. A few dead trees, mementoes of the great fire, still stood scattered over this tract, offering good resting-places for the birds. Concealed within shooting distance of these trees, to bag a dozen or two of pigeons in an afternoon, was simply a matter of patience, and no better practice could a youthful gunner ask than these stupid birds afforded. Of the marshes, his recollections are not so satisfactory. Stands of Plover and whisps of Snipe were easily found, but shooting on the wing is an accomplishment not speedily acquired by schoolboys with single-barreled guns. With what admiration and envy did he see good Dr. Benson with his double-barreled "Joe Manton," send in his beautiful pointer to flush a whisp of snipe, knock down one with each barrel, and "hie on" the dog to find the stragglers, which his educated eye had marked down hundreds of yards up wind! Better success attended the writer's youthful efforts with a stand of plover; there is generally a considerable number and they offer a better mark to the novice than do the four or five snipe usually found in a whisp. After the pigeons had departed, the broods of grouse were well-grown in September, and as each brood generally keeps together until disturbed and scattered by the gunner, the novice can have no better sport; nor, indeed, can the veteran sportsman, who confines himself to shooting on the wing. But truth must be told! The ruffed grouse is too good a bird for the *cuisine* to be left behind when it can be bagged. The writer has yet to find the sportsman who turned his back on a brood of grouse because they were treed by his dog before he got in a shot. For himself, he freely confesses that if he ever left a grouse outside his bag, the reason was he failed in his efforts to get it inside.

Like all other things, this school-boy life came to an end. The pleasant pastimes of boyhood had to give place to the sterner duties of life, and so the scene changed from the banks of Miramichi to the busy and crowded streets of the city. The tastes for fishing and shooting still clung to the apprentice, whose greatest grief was that he had little time to indulge them. Still, all his holidays were spent in exploring the marshes and lakes within walking distance of the city of St. John. About two miles distant were the marshes of Little River and Red Head, which at that time were the resort of ducks, plover and snipe; while the bordering woods afforded fine coverts for hares, woodcock and grouse, and offered good sport to the few citizens who then sought their recreation with rod and gun. To my great surprise I found that the small towns of Chatham and New Castle had more sportsmen and better bred and trained Pointers and Spaniels than the Capital of the Province. The few that were owned in the city came from Halifax, or were brought from England by Officers of the Garrison, and no efforts seemed to be made to keep the breeds pure. An English setter was unknown in New Brunswick in those days, and the few owned in Halifax were kept more for show than for service. The absence of quail and partridge in the Maritime Provinces accounts in great measure for the neglect of this finest of field dogs. The stronger and more hardy Pointer was better fitted for the marshes and the Spaniel for the coverts of grouse and woodcock. Of late years a few dogs of undoubted good breeding have been brought from England and the United States; the late Bench Shows in the city had prize-winners in Pointers, Setters, Spaniels and Cockers. The abundance of quail on the stubble and of pinnated grouse on the prairies of the United States, and the recent importation and naturalization of the English pheasant and partridge in the public and private reserves of the Middle and Western States, have made English and Irish Setters favorite field-dogs in America. But the Octogenarian regrets to learn that, with English birds, has been imported the perverted English idea of Sport. If this vitiated taste spreads beyond the small circle of multi-millionaires to which, fortunately, it is at present confined, there will soon be no use for field-dogs in the States; nor, indeed, for the genuine Sportsman either. Since this deplorable change in the Englishman's idea of sport, an equally lamentable degeneration has taken place in English breeds of Sporting Dogs. Foxhounds, Greyhounds and Beagles are still carefully bred and trained, each for his particular work; but Pointers, Setters, Spaniels and Cockers are now bred more for show than for service. Every few years a new *fad* is started, and a new strain with a new color is the *sine que non* of dog-fanciers. Gordon Setters., Clumber Spaniels, Black Cockers, must now have "black and tan" markings or they are *taboo* at the bench shows. Even the old gray and rusty Scotch Collie has been made to take on the fashionable black and tan trimmings; but, with the change of his coat, the writer is credibly informed, he has lost much of that instinct and keen intelligence which made him invaluable as a sheep and cattle dog. Thank good St. Hubert, the old liver-hued Pointer has remained true to his colors, his instincts and his training; as has the Irish Setter, which, so far, absolutely refuses to be black'd and tan'd, and whose purest strain still shows the bright bay coat and feathers which mark the breed. But, alas! Even these fine dogs are now bred more for show than use, and their training is a matter of less importance than their marks and points, for which they take prizes at Bench Shows without the slightest regard to their usefulness in the field. Gillies on the moor have replaced the old Pointers; beaters at the battues now do the work of the old Spaniels; stalkers on the hills have banished the old Deerhounds, and only the Setter is now used by Sportsmen of the old school for Quail on the stubble and for Partridge among the turnips; and even he must be of the fashionable black and tan, or the still more recent Belton blue. The old strain of Spanish Pointer still resists all efforts to give him a black and tan or Belton blue coat, though he has been bred through all gradations of liver and white, brown and orange. But Setters and Spaniels have been *differentiated* into as many colors as there are strains. Among Setters at Bench Shows we now see the old English black and white Setter bred into all black, all white, black and tan, and blue Belton, and all these claim prizes, not for their qualities in the field, but simply for their "marks." But for the great triumph of *fin de siècle* fancy breeding we must look among the Spaniels. A description of the last Bench Show held in New York is now before the writer. Among the Spaniels shown were: "English Water Spaniels, Irish Water Spaniels, Clumber Spaniels, Sussex Spaniels, Norfolk Spaniels, Black Field Spaniels, Blenheim Spaniels and Cockers." Of all these Octogenarian has seen only the Old English, the Irish Water, and the Clumber Spaniels; the latter a short, thick, clumsy brute that showed his mongrel origin in every point. What he was ever bred for, or of what earthly use he can be, when the old, purely bred English dog can be had is, to quote Dundreary, "One of these things that no f'lah can understand." In this Show were entered Retrievers; Curley Coated Black Retrievers, Flat or Wavy-Coated Retrievers, Black-and-Tan Retrievers and Other Retrievers." Whether these were all distinct breeds from different stocks, or merely different strains from the same stocks, or from what stocks the race of Retrievers comes (if there really is such a race) the Octogenarian confesses his dense ignorance. But he begs leave of all and sundry to record his belief that, while Pointers, Setters and Spaniels can be as easily broken to retrieve as any other breed of Retrievers, the presence of the latter, either in the open or in covert, is only a useless nuisance to the gunner. But what may we not look for when the *fin de siècle* woman enters her horses for the blue ribbon of the turf; her dogs for the first prize at the bench show, and strives with male sportsmen (?) for the honor of being "first gun" at English and American battues, where the quality of the Sport is measured entirely by the weight of the Bag?

* * * * * *

When the writer was in Minnesota some 30 years ago, he had the pleasure, new to him, of shooting pinnated grouse (or prairie chickens, as they were there called) over a couple of finely bred and highly trained Pointers. If not the best part of this fine sport, to the writer a very large part of it, was to watch the natural sagacity of the dogs, improved by fine training. They showed almost human intelligence in their quartering of the ground and working in concert. To see one come to point as soon as the other found, and hold it until the birds were flushed, was, to this writer's notions, the highest kind of sport the gun can give its votary, and the Octogenarian recalls with delight the finest gunning he has ever had the good fortune to enjoy, since, in his early manhood, he tried to shoot Snipe over the best Setter that ever ranged the marshes of Hampton and Gagetown. The few gunners now living, who have seen the late Col. Otty's "Nell" at work in Red Head or Hampton Marshes, will appreciate the added sport a good dog gives to mere shooting. Nell was old, but her wonderful sense of smell had suffered no dullness from age. She was still strong and active and though totally deaf, her phenomenal sagacity made up for this loss, which she seemed perfectly to understand. She never ranged out of sight, and while her nose was for the birds, her eye was always on her master, whose every sign and gesture was watched for, understood, and instantly obeyed. She had been trained in England; her education was perfect and her almost human intelligence left little for her master to do but make two signals, one "to heel," the other "hie on." Her "down charge," her "point" and her "draw" were pictures. She would stand at point, rigid as stone, until waved on, and she seemed to regret a missed bird more than her master. Of the few who saw Nell at work, still fewer remain; of those who have shot over her, besides the writer, only Dr.

Langstroth and Joe Dalzell are left, and though both have owned good dogs since, they will readily admit that Nell's sagacity and fine action in the field could not be surpassed and have rarely been equalled. Good Old Nell! The fortunate man who owns your peer may well be a proud man! The Octogenarian has never seen field-dogs at work in England; but he is assured by those who have, that Setters there follow their instinct and training, and "set" close to the ground when game is winded. All those he has seen in America, even when trained in England, as Nell was, either stood rigid on all fours or raised one paw like the Pointer, as Nell did. He is credibly informed that this change of habit is almost universal in America, and that most American Setters "point." Any reason for this change of instinctive habit he has never heard.

The Octogenarian learns with grief that in the Western States *nous avons changé tout cela,* and that the *jeunesse doré* now use ponies and flunkies to shoot grouse. The *Sportsman* shoots from the pony's back, while his "guide," on another pony, hands him a loaded gun, taking the discharged one to reload. If this is true, there will soon be a "Shooting Trust," as there is an Angling Trust, and none but Millionaires can go-a-gunning, as none but they can go-a-fishing for salmon with rod and line. The writer recently read with pain in a periodical devoted to American Sport, unaccompanied by a single word of deprecation, a long description of a *battue à la English*, in the private preserves of an American Millionaire, which had been well stocked with imported and acclimatized English Pheasants and Partridges. In all particulars was the perverted English idea of sport followed with slavish accuracy, even to the flunkies in livery to carry and load the guns; the drivers with sticks to beat the coverts and drive the tame birds towards the Sportsmen and Sportsladies—to coin a word not yet, thank God, in the dictionaries—even the lunch *al fresco* and the "bags" made by the females of the party. The number of pheasants killed was given and the party had what the admiring editor of the Sporting Mag. called a "good time," and parted with lively anticipations of the same kind of sport next autumn. To the growing class of real sportsmen among Americans, this must be sad reading; but its saddest feature is that it is printed in an American Sporting Organ without a single word of deprecation or denunciation, and the whole disgraceful thing called a "good time!"

The word *battue*, adopted into English from the French tongue, has, unfortunately, the highest idea of sport the average Englishman can form. It is thus described in the dictionaries: "The surrounding of a preserve by a number of men, who, by cries and beating, drive the game towards the sportsmen." Whoever has seen an English battue can add to this correct general description the following details: In these preserves pheasants and partridges are bred as domestric fowls are on a poultry farm. They are regularly fed to keep them from straying out of bounds in search of food; they are carefully guarded by gamekeepers, who protect them from hawks and foxes, polecats and poachers, until they are full-grown and strong of wing. When the opening day comes—generally the first of October—the host and his guests who have been "invited for the shooting," sally forth, clad in the orthodox "shooting-coat and leathers," and are posted in places usually allotted by ballot, so that all may have a chance for the "hot corners" and best stands. An army of beaters with sticks now enters at one end of the preserve, and in a long line, drive the half-domesticated birds towards the concealed gunners, each of whom has his flunkey in livery to carry and load his guns. Neither the beaters nor the flunkeys show the intelligence of well-trained Pointers and Spaniels, and the crackest of the "crack shots" are far inferior to the ordinary expert at an American "pigeon shoot." They achieve the acme of skill, and the *ne plus ultra* of sport when they bring down a pheasant with each barrel; but he is a perfect Nimrod—a marvel of marksmanship—who can snatch the second gun and wound or knock some feathers from another "rocketer" before he has flown out of range. After a morning of this *sport*, with only the exercise necessary to move from one covert to another, the "shootists" adjourn to an elaborate lunch, at which the women (should those who take part in such *sport* be called ladies?) preside. The afternoon is spent as was the morning, in shooting half-tame birds again driven to the sportsman by beaters. Some thousands of birds are slain; the bulk of these are sold in the London markets to help defray the expenses of the battue. After the *sport* the flunkeys and beaters are sent over the ground to kill with their sticks and put out of pain the hundreds of wounded and maimed birds that the *muffs* have all but missed, among which are often found as many hens as cocks, and these go with the rest to swell the "bag" and the financial returns of the sport. This is a fair description of what is now considered sport in England; at which old gunners, who, in their youth, were accustomed to carry and load their own guns; to shoot over pointers or setters, and to walk miles after their game, look with a sorrowful shake of the head at changes which have left them so far behind the age.

That this description is not in any way exaggerated, will be shown by the following item from a late issue of the London Field: "A story which will go straight to the hearts of shooting men is told of a clerical gentleman who was invited to join a shooting party. In the course of the day the host felt himself prodded in the back, and turning round found the amiable cleric poking at him with the muzzle of his gun. His look of interrogation was met by the question, 'Can you tell me how to let down these beastly things?' pointing to the hammers of the gun, which were at full cock and loaded." How exquisite is the satirical humor of Sir Conan Doyle, which is doubtless pointed at this kind of sport, in his serial "The Adventures of Etienne Gerard," now appearing in the London Strand Magazine: "It was during this time that I hunted the fox in their company, and showed them that amidst all their sportsmen there was not one who could outride a Hussar of Conflans. When I galloped back into the French lines with the blood of the creature still moist upon my blade, the outposts, who had seen what I had done, raised a frenzied cry in my honor; whilst those English hunters still yelled behind me, so that I had the applause of both armies. It made the tears rise to my eyes to feel that I had won the admiration of so many brave men. That evening there came a packet under a white flag addressed 'To the Hussar Officer who cut down the fox.' Within I found the fox itself in two pieces as I had left it. There was a note, also; short but hearty, as the English fashion is, to say that as I had slaughtered the fox it only remained for me to eat it. They could not know that it was not our French custom to eat foxes, and it showed their desire that he who had won the honors of the chase should also partake of the game. It is not for a Frenchman to be outdone in politeness, and so I returned it to those brave hunters and begged them to accept it as a side-dish for their next *dejeuner de la chasse.*"

Deplorable as is this declension from the old ideas of sport on the part of Englishmen, it is much more lamentable that American millionaires have not only adopted the low and vulgar notion that the quality of sport is to be measured by the amount of slaughter accomplished; but have sought to improve on their English models and render the sport still more brutal by encouraging women to take part in the cold-blooded murder of half domesticated birds which these ladies (?) have probably fondled as nestlings and fed as chickens. *Chacun à son gout* should, perhaps, rule in sport as in food and wine; but the true sportsman will pity this depraved taste as the *gourmet* does that of the honest Scot who prefers brose and haggis to *dindon aux truffes* or *galantine aux béchamel* and small-still whisky with the reek of the peat, to Amontillado or Veuve Clicquot. Wherein lies the sport of the battue, in which stupid flunkeys and beaters take the place of finely-bred and highly-trained dogs, is hard for the Old-time Sportsman to understand. The brutal desire to kill in vast numbers, with the least trouble and without skill, must be the predominating feeling, since at the battue the quality of the sport is always measured by the quantity of the game killed. In point of excitement and skill there must be more of the former in watching a flock of wild pigeons settling under a trap, and more of the latter in jerking the prop clear of the frame, than in passively waiting for tame birds to be driven towards sportsmen concealed in "hot corners." In point of humanity the trap is infinitely beyond the battue, for no wounded and mangled birds escape from it to linger out a painful death, or to be brutally dispatched by the sticks of hired flunkeys and drivers, who, so far as excitement makes sport, have the cream of it at the end, in gratifying precisely the same vulgar and brutal sentiment. That women can not only take part in such demoralizing sport, but profess to enjoy it, is one of the strangest and most lamentable traits in the *fin de siècle* leaders of fashion; and, alas! the "girl of the period" is proving herself an apt pupil of this unfeminine taste. Strange indeed is it to find, in democratic America, that those who are loudest in expressing contempt for "an effete Aristocracy of Rank," should seek to introduce its worst traits into their own Aristocracy of Wealth. Well may the moralist exclaim, *O tempora, O mores!*

V.

[TO BE CONTINUED.]

Trouting in Northwestern Waters.

Some years ago I lived for a time in the extreme northern part of the British Columbia seaboard region, close against the Alaskan boundary, and when I first went there I was told by the old timers that if I would catch trout I must catch them with worm or beef or venison bait, and that I must discard and weed from my mind the memories of those pretty little feather lures so dear to the heart of the angler.

Being fresh, and tender-toed, I hearkened and said nothing, but pondered deeply on the ways of the fickle trout. Then, after a while, I, like Thomas of old, doubted; and the more I doubted the madder I got, for again and again, straight-laced Reason would whisper that the old-timers must be right; that they knew the ways of the far North trout; that the same tradition was told the length of the Alaskan coast, and that I, with an overweening sense of my skill as an angler, would get ignominiously skunked and put to shame the first time I tried to catch fish with feathered mockeries. Still, hoping against hope, I ever hoped I would yet succeed in refuting the tale, and covering myself with glory in defiance of the old-timers.

As the season was yet too early for fishing in that country, I had much time to think over all these matters, and to get a wholesome and most unholy hunger for trout; so that by the time June had arrived—which is as early as fishing can be done there—I was then to try conclusions with the trout.

Some time during that month, the United States Survey ship, C. P. Patterson, arrived at Fort Simpson, and a few days after her arrival, Lieut. C. C. Marsh, of that vessel, and I made up a trip to a small lake a few miles away. Choosing a fine day—when fine days do come in that North Coast country they are delightful—we took a boat and sailed down coast to where the stream flowed into a small bay of the sea. Here was erected a saw mill, operated by means of a large overshot, driven by water flumed from the stream. After a chat with the genial millman, we turned upstream and walked to the lake, about a mile from the mouth, and as soon as possible began operations. Soon we began to fear that the old-timers were right about the fly, and after a couple of hours' assiduous trial with all flies known to us, both as being good takers in the southern part of the Province and in the east, we dejectedly sat down in the shade of a tree to eat our lunches. After eating and smoking, and incidentally killing about a million black flies, we walked to the outlet and got a skiff which was tied there, owned and used by the mill owner about his work on the lake. Paddling in this to various parts of the little sheet of water, we again tried our skill, but to no purpose; so after two or three hours of disappointing work, we pulled into the landing and again rested.

Now up to this time we had tried principally light-colored and bright flies, such as coachman, post-boy, ibis, professor, etc., and as I lay there on my back dreamily smoking and perfunctorily killing an occasional insistent fly, I bethought myself that it would be well, before acknowledgment of defeat, to try something of a darker shade.

Ransacking my book, without a word to Marsh, I extracted a little fly which had been despised as utterly worthless in the past—a dark green body with dark turkey wing on No. 8 Sproat. This I tied on, and going to the edge of the swift water, where it broke away from the lake, I cast, at once hooked a fish, and set the pool alive with a score of others. They were not large, about half a pound, but gave us good sport for a while, Marsh hunting out and getting to work with a similar fly. Anything larger than No. 8 was worthless, and Nos. 9 or 10 hooks were better than No. 8. When we left for home we were happy, and vowed that now we had discovered the proper lure, and had annihilated the pet fiction of the old-timers. We would soon return for a happy day on the upper end of the lake. This second visit was destined never to be made together, bad weather, work and other things combining to interfere with our plans until the ship had departed.

During this interval I had made use of the knowledge gained on our first visit, to tie several flies of various patters, all of which turned out well, and which I describe here for the benefit of any brother angler anticipating a trip to Alaska or North British Columbia, so that he need not load his book up with useless creations which may be ever so good in other places.

No. 1. Body dark green, no hair, ginger hackle, wing, brown mallard wing covert. Nos. 2 and 3. Brown and ginger palmer, both with peacock body. No. 4. Green dragon. Body flat, silver tinsel, wound on bare shank, rib with dark green embroidery silk, followed with black hackle; partridge hackle under wing; wing brown mallard wing covert, with two strands of blue and yellow macaw. Tail three strands of same feather as mallard wing.

All should be tied on No. 9 or 10 Sproat. The last is a most effective fly, but is more expensive than the others. A few March-brown, blue-dun and hare's-ear may be added, and the bee fly. It will be noticed that there is an entire absence of red or white in the make-up of the list, but with the ones named the angler will be fit for any ordinary trout fishing in the North.

Some time after the outing I have just described I again visited the lake. This time alone. However, upon arriving at the mill, I found that institution idle, and the owner's brother ready to go with me for the fun of the outing. He took a rifle, but no rod, despising that sort of hunting. Well, that was a pleasurable day! And one that I shall long remember. First of all, the September sun was warm, not hot. The air was soft and balmy to a degree I have never experienced elsewhere. The lake was devoid of fishers other than ourselves, and its surface was just dappled with a soft, persistent breeze, while the clumps of willows and dark green firs cast patches of shadow in places for the delectation of ease-loving trout and ardent angler alike. On shore two fine dogs, part hound, sniffed each thicket as they lounged along in chance of scenting a stray deer, meanwhile keeping a watchful eye on their master of the mill, who idly pulled the boat just clear of the lilies. We had skirted one side of the lake, about one and one-half miles long, and were coming down the further side, catching trout at intervals, when a whimper from the dogs in the woods on the side we had just fished caused us to stop and listen. Then came another undecided sound, followed by a bay from both, a smashing of limbs and brush, and a beautiful buck deer sprang off the low bank into the lake. Then it was the fun began! Dropping the rod, I grabbed a rough paddle, and dug in for all I knew at the stern, while my companion strained at the oars. Crossing a quarter mile of water was soon accomplished, and a shot fired at the deer just as he was reaching shore again, he having turned upon seeing us. This shot missed, but a second, fired just as he reached cover, wounded him. In a few moments the dogs had again driven him into the water, and fearing he would sink if shot again, we pulled up alongside him and threw a rope over his horns; then, thinking to easily dispatch him, I reached down and tried to plunge a knife into his throat; but I found that, wounded as he was, he was quite as handy with those knife-like hindhoofs in the water as on shore, for at the first prick of the knife he reached up and cut the back of my hand severely. A shot then ended the argument, and we towed the animal ashore. Then I began to think of my tackle, and found that in the haste I had thrown the rod down, leaving the flies to trail in the water, and upon reeling in, we discovered a fine trout attached to the end fly. He had hooked himself firmly and remained so through the affray with the deer. It being now well on in the afternoon, and feeling satisfied with our fishing, to say nothing of the deer, we pulled the skiff to the landing, and an hour later were at the mill, where the deer was skinned and the fish divided. There were seventy-five nice fellows from one-half to one and one-quarter of a pound. After bidding good-by to my hospitable hosts, and taking a quarter of fat venison, I started for home in the little decked canoe with my plunder, there to further divide with neighbors the welcome fruits of a successful and delightful outing.

It was when on this fishing trip that I caught a trout which gave me a surprise. He was about a pound weight, and as I was taking him off the hook I noticed something which I took to be a bit of dead weed hanging from his mouth, but which, upon being pulled, proved to be the tail of a full-grown white-footed mouse, and attached to the body of the late lamented owner, which was firmly lodged in the fish's gullet, being too large to be entirely swallowed, the bulk of the body resting between the jaws of the fish, while the head had just begun to show signs of gastric action. Yet gorged as had been the fish, he had risen and taken the fly savagely. I dropped him overboard as a pirate, a criminal, and a glutton insatiate.

British Columbia. Mazama.

The Sportsmen's Show.

THE ninth annual Sportsmen's Show opened in Madison Square Garden, this city, February 21, and will continue until March 7. The dominating feature of the exposition this year is the Indian play Hiawatha, which is enacted by a troupe of Ojibways from the north shore of Lake Huron. The central portion of the immense floor space has been converted into a lake, containing in the center an island; and in the background, rising from the lake, there is a highly realistic wildwood with majestic mountains in the distance. The principal incidents of the play take place on the island. Hiawatha has been sung for several summers by these Indians in the open air on the shore of a lake near Desbarats, Ont., and as here presented it has the pleasing character of a finished performance.

The orchestra and chorus is large and magnificently trained, and is in itself a most important feature of the show. Several soloists, eminent as artists, have also been engaged to sing at the afternoon matinees and evening performances, so that in its musical features it has entertaining possibilities of a high and refined order.

The lake is also utilized afternoon and evening for fly-casting competitions, the programme of which has already been given in our columns.

The various game regions are well represented by the delegations of guides, whose characteristic cabins and accoutrements have unfailing attraction for all who have seen the real thing in the woods.

The districts represented are New Brunswick and the Canada-Pacific country, Maine, the Adirondacks, Virginia and Montana and Wyoming.

The trade exhibits are as follows:

Von Lengerke & Detmold occupy a big space on the main floor at the left of the main entrance. The exhibit of this firm consists principally of the Racine Boat Company's output, all in charge of Mr. Gus Grieff.

Another important exhibit is that of Abercrombie & Fitch, the makers of everything for camping and camp life.

Messrs. J. H. Lau & Co. are showing for the first time in this country the Rebla gun; also Empire powders and fencing swords of all nations.

Savage rifles are on exhibition in all grades, in charge of Messrs. French and Savage, Jr.

Mr. Paul North has a booth exhibiting Chamberlain Targets and a new hand device for throwing them.

A. H. Funke's exhibit of Mannlicher repeating rifles is a full and interesting one.

The Stevens Arms Company is showing complete samples of their entire output. The Hollenbeck guns can be seen there.

Siegel-Cooper Co. make a fine display of their sporting goods department.

The Pneumatic Mattress Company have on exhibition every device for comfort, afloat and ashore.

Mr. Marble himself is in charge of the Marble Safety Ax Company's exhibit; they have a big line of specialties for use in the forest.

Charles A. Strelinger & Co. make a good showing of their engines.

The Standard Marine Engine Company have three different designs and grades of power on the main floor.

The Lozier Motor Company's exhibit is an important feature of the show. This is true of the Western Gas Engine Company.

Among other important engine and motor companies represented are the Buffalo Gasoline Motor Company, the Eagle Gas Engine Company, the Toquet Launch and Motor Company and the Norwalk Motor Company.

The Old Town Canoe Company, of Maine, have a pretty exhibit. So have Palmer Brothers.

The well-known taxidermist, Mr. H. L. Rand, of Worcester, Mass., has on exhibition some beautiful specimens of his work.

At the space of the Canadian Pacific Railroad Company can be seen some particularly interesting pictures of game scenes in the west and northwest.

The Old Hickory Chair Company show some comfortable devices for camp life.

THE Canadian Camp-Fire Club's dinner, an event which was coincident with the opening of the Sportsmen's Show, was given in Madison Square Garden on Friday evening of last week, and it was a function of great magnitude. About 300 members and their friends, gentlemen and ladies, had a most enjoyable time. There was quite a bit of camp life realism in the surroundings. The great stage scene at the west end of the amphitheatre portrayed a section of the wilderness; canoes on the lake and the lake itself were something like a part of camp life conditions, and the crisp, cool air of the garden was a reality. The long table, horse shoe in shape, had its head at the Madison avenue entrance, the sides sweeping far down toward the other end on each side of the lake. Many distinguished members and guests were present. Dr. G. Lenox Gordon presided. Mr. Ernest Thompson Seton was tosatmaster. After dinner several speeches were made in felicitous vein, mostly of camp-fire themes. Rev. Leander T. Chamberlain, D.D., specially distinguished himself as an entertaining after dinner speaker.

Fly-Casting at the Sportsmen's Show.

The Anglers' Casting Tournament opened Saturday evening, February 21, at 7:30 o'clock, and will continue every afternoon and night until the Sportsmen's Show closes, on March 7. It is in charge of the following gentlemen, who compose the Tournament Committee: Charles A. Bryan, Charles R. Flint, Robert B. Lawrence, Frank Bailey, W. K. Park, N. S. Smith, D. T. Abercrombie, C. G. Levison, J. S. Parlee, W. D. Cloyes, G. H. Gerard, W. F. Kimber, G. B. Hayes, H. W. Van Wagenen, Robert Lefferts, Lody Smith, T. A. Knapp, Harry Palmer, H. L. Cadmus, and J. E. Bulwinkel.

The Opening Event, Feb. 21.

The first event was Class A, black bass fly-casting, distance only to count; flies on No. 4 or larger hook, at the discretion of the contestants; open only to those who had never cast more than 75 feet in any similar contest in either club or open tournament; weight of rod and length of leader unrestricted. Three prize medals, gold, silver and bronze. Harold G. Henderson won. The judges and referee were: A. B. Douglass, J. B. Carville and Milton H. Smith. The score, in feet and inches: Harold G. Henderson, 73 feet 4 inches; W. D. Cloyes, 70 feet; V. R. Greenwood, 68 feet 6 inches; W. K. Park, 67 feet 8 inches.

Monday Afternoon, Feb. 23.

Class B—Trout fly-casting for distance only. Open to youths not over twenty years of age. Weight of rod and length of leader unrestricted. Three prize medals, gold, silver and bronze. The score in feet and inches: J. H. Cruikshank, 76 feet 4 inches; R. F. Cruikshank, 69 feet; W. H. Cruikshank, 63 feet 3 inches. Carroll Henderson, Jr., cast 63 feet and B. C. Ritchie 44 feet.

Monday Night, Feb. 23.

Class C—Switch trout fly-casting contest. Distance only. Open to all excepting those who have cast more than 75 feet in any similar club or tournament contest. An obstacle was placed fifteen feet behind the contestants. Weight of rod and length of leader unrestricted. Three prize medals, gold, silver and bronze. The score, in feet and inches: C. G. Levison, 63 feet 6 inches; H. G. Henderson, Sr., 59 feet; E. J. Mills, 59 feet; D. T. Abercrombie, 49 feet 6 inches. Cast-off: Mills, 71 feet; Henderson, 59 feet.

Winter Care of Tackle.

"IT'S a source of great surprise to me," said a veteran angler, "to find that some men have any tackle at all left over from the preceding year, when I see the careless way in which they treat it. Rods are dumped hastily into some garret corner, often dry and hot enough to warp a telegraph pole. Lines still wet from the last day's fishing are tossed into an envelope to mildew or are left to rot on the reels. The reels themselves, put away damp, uncleaned and without oil, are, of course, bound to rust and give poor service the following season. Hooks are tumbled in with the damp line, the steel to corrode, the gut to dry and crack and split. When the unfortunate, who thus leaves things to care for themselves, loses a big fish on the opening day of the next year's sport by the sudden parting of a rotten line, he breaks into a torrent of abuse directed against the innocent tackle maker, and goes straight to some shop to buy a complete new outfit, declaring that last year's stuff is never good any way.

"Now, all of this can be, and should be, avoided. An hour or so of care at the end of the season will insure the preservation of rod, hooks and lines. Every rod joint should be carefully straightened before it is put up for the winter. The tips, especially, are bound to be more or less set from the constant downward strain. The remedy for this is to lay them on a flat board and tack leather strips across, holding them down to the plane surface. By keeping them damp a few days you can readily warp them into proper shapes. Next give a good rubbing down with a mixture of powdered pumice and sweet oil to take off the cracked and broken surface of the old varnish, and then two thorough coats of thin varnish, allowing plenty of time for the first coat to dry before applying the second. You must always look to see that the guides and whipping are complete and in good order, and repair any frayed or loose ones before putting on the preservative. This dressing fills all the pores of the wood, and shuts out all decay. Then lay the rods and their cases on a shelf in some room of moderate temperature. Standing them against a wall is a bad practice, as it tends to bend and set the wood.

"Reels must be carefully taken apart, cleaned of all rust and grit and oiled. Lines should be removed from the reels, first wiped off with a damp cloth, and when dry with an oiled one, and then wound on a flat bit of board. Hooks should always be dipped in oil before being stored away, and grease will also keep the gut snells moist and pliable.

"Artificial flies require more care than all the rest of the output put together. A whole army of buffalo bugs, moths and shiners are on the lookout for the soft feathers and silks. Take every one out of the book, and after laying in the sun for a few hours to kill any chance germs or eggs, wrap in camphorated paper or in plain tissue paper and sift thoroughly with powdered camphor gum. Then pack them away in a red cedar chest if you have or can procure one, and no prowling vermin will destroy that outfit.

"With such care taken in time the angler will find at the opening of the next season that he has saved many a dollar, and all of his outfit is as good as ever, and some of it even better than when it was new, because of the seasoning."

A Fishing Rights Case.

UTICA, N. Y., Feb. 13.—A case which has attracted considerable attention among sportsmen in this vicinity was tried in county court here this week. In the town of Trenton, about 25 miles north of this city, are the summer homes of a large number of city people. Among them is one owned by C. A. Nicholson, of Utica. In proximity to the village of Trenton is a well-known trout brook, known as the Birdsall. Mr. Nicholson recently leased of the owner of a farm, Jerome B. Watkins, the right exclusively to fish in the brook where it traversed his farm. One evening last summer Mr. Watkins surprised a man named Lewis Pittock in the act of fishing on the preserve, and notified Mr. Nicholson, who eventually brought suit. Mr. Pittock did not catch a fish on the premises but he dropped in his hook and line several times. The jury in the case decided in favor of Mr. Nicholson, awarding him damages in the sum of $5. The case was brought largely as a test, and other owners of summer homes in Trenton and vicinity were much interested in the trial.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Didymus vs. Day.

Editor Forest and Stream:

I suppose I ought to feel as badly squelched as a mouse that an elephant has trod on, but I don't. My eloquent antagonist has his opinions, and in spite of his terrible sarcasm I still hold mine. He is so extravagant in assuming that I object to all land ownership that I consider it a waste of time to answer it. My text was the selfishness of multimillionaires who "want the earth" and are going to have it if money will do the business.

If my fierce opponent had eliminated "Didymus" and "we Americans" his tirade would have been nearly one-third shorter and that much valuable space have been saved for a better purpose. I must, however, admit that if "we Americans" had not occurred twenty-seven times and "Didymus" nearly as often, his arguments would have been quite weak.

If he will look up the Litearary Digest of February 27 he may see by the savage editorials of various papers that in my estimate of the selfishness of millionaires I do not stand alone. DIDYMUS.

ST. AUGUSTINE, Fla., Feb. 21.

Massachusetts Ice Fishing.

FOXBORO, Mass., Feb. 23.—*Editor Forest and Stream:* In many Massachusetts towns pickerel are the only game fish to be found. Many of our best pickerel ponds are almost depleted by the fish hog (usually from another town), who covers the ice with traps, and, with the help of hired men and boys, catch and carry away every fish, large and small, and feed them to their swine or sell them for any price they can get. Such practice must soon spoil the summer fishing in any pond.

A bill has been introduced in the Massachusetts Legislature to permit any town to restrict fishing through the ice, for such a term of years, not exceeding five, as the town may determine.

If enacted, this will give towns so troubled a chance to prevent the destruction of the pickerel fishing by its inhabitants.

Date of hearing before the committee has not yet been fixed, but if those interested will send a postal to the "Town Fish Committee, Foxboro, Mass.," notice will be given when the date is fixed. ROBERT W. CARPENTER.

The Kennel.

Fixtures.

Feb. 23-26.—Boston, Mass.—New England Kennel Club's nineteenth annual show. W. B. Emery, Sec'y.
March 4-7.—Pittsburg, Pa.—Show of Duquesne Kennel Club, of Western Pennsylvania.
March 10-13.—Rochester, N. Y.—Show of Rochester Kennel Club.
March 12-14.—Coshocton, O.—Show of Coshocton Kennel Club.
March 17-20.—Uhrichsville, O.—Show of Twin City Kennel Club.
March 25-28.—Chicago.—Show of Chicago Kennel Club.
March 30-31.—St. Louis.—Show of St. Louis Collie Club.
March 31-April 3.—Buffalo, N. Y.—Show of Buffalo Kennel Club.

Run to Cover.

The Closest Fox Hunt on Record.

BY CHARLES HALLOCK.

THE last week of January (holiday week, you know) was a great day for fox hunters in old Virginny, especially around Roxbury. All the old mawms and aunties of the households were glad to see the young folks home again from school and business, and they did enjoy to see them get together with the hounds, everyone mounted, and hear the old cow horn sound once more. Just listen to Lizzie Cross:

"Lor' sakes! de likes of dat don't happen ebery day, use me! I reckon ebery old fox on Peach Hill knowed he was in for a run dem days, and no gittin' around it. Seems like no mo' dan yis'day sence dem hunters follow dat far cry hereaway. Dem Batkins boys chase one old red more dan half a day and neber cotch him; had fine pack of hounds, too. Golly! how dem holumdays gone by! Kiah! Reckon ole fox lief as not dar wouldn't be no holumdays? Same time dem Quinton boys got brush O. K. Run him into brier patch down by de spring whar I libs. My eyes! dat was a fox. Neber saw old fox behave like dat ar one! No, sah! Not nohow. What you tell me? You all neber hyar 'bout dat finish? Neber hyar 'bout dat foolishness? Don't say a word, child. I'se movin' on ye!"

But Lizzie hadn't a word to say. The recital was too much for her modesty. She just led her interested listeners up to the climax of expectation and left them in suspense. It remains for a correspondent of the Richmond News-Leader to tell us all about it. He was an eye witness to the transaction:

It was all that old colored woman's own foolishness, he plead. She was standing in the door of her house when the fox, almost exhausted, ran into a thick brier patch close by. By this time the dogs had come to a loss. Mr. Bowles and several others were soon up with the pack. Then poor Lizzie Cross, who is one shade darker than charcoal, 4 feet 2 inches high, and about 9 feet around, came waddling out as nimbly as a Muscovy duck. She was clapping her hands and calling to the excited huntsmen, "Come here; come here; dar he, dar he!"

"Where?" was asked.

"In dem briers dar; I's dun seed him go in; he ain't dun come out."

Soon the place was crowded so thickly that the hounds could not get the fox out. Unexpectedly, Lizzie appeared on the scene. "Wait dar, gemmuns, I is comin' wid Bruiser (an old shaggy shepherd). Sic him dar; sic him dar!"

In went Bruiser! Out came the poor frightened fox

with his tongue hanging straight out, and ran directly to poor Lizzie. Her screams would have drowned the sounds of a fog horn. The terrified dame started to turn and run, but she fell. The fox, being closely pursued by old Stonewall, took refuge in the folds of Aunt Lizzie's dress. One of the huntsmen rode up quickly and reached the poor darkey before the pack of hounds did. This timely assistance alone saved her life.

"Boss, is you dun cotch him?" were the first words said after recovering from a cold shower bath, which had to be used to restore her to consciousness.

A Dog that Longed for His Old Home.

A FEW days ago a half-starved, exhausted setter dog strayed into West Springfield. His body was gaunt, his eyes glassy, his legs tottering. A man possessed of the innate necessary requirements for membership in the society with a long and much-abused name was attracted by the dog's appearance. He noticed on examination that the dog wore a collar bearing the name "Benjamin Pepper, Hartford, Ct." The man took the dog home and gave him a square meal and lodging, and in the meantime communicated with the man in Hartford whose name was on the dog's collar. A prompt reply came, and the following story was disclosed: "During the blizzard of 1888 the dog was given shelter in the home of Mr. Pepper, where he had been duly adopted. In time the creature became greatly attached to his new quarters. Last summer the owner of the dog gave him away to a man in New Hampshire, 200 miles distant from Hartford. His dogship, however, chafed under his new ownership. One day the animal, with a most determined air, left his new home and started southward. From that day until he appeared in West Springfield, the dog was heard of no more. At last faithfulness is to be rewarded, and the dog will doubtless live and die in the home of his former owner at Hartford.—Springfield Republican.

Canoeing.

Prizes for Canoeists.

IN order to encourage canoeists and small boat sailors, who do their knocking about on inland waters, to keep a record of their trips and experiences, the publishers of FOREST AND STREAM offer cash prizes for the best accounts of cruises taken during the season of 1903. As few restrictions as possible will be imposed, and those given are made only with the view of securing some uniformity among the competitors' stories, so that the judges will be able to make a fair award.

The prizes will be as follows:

First, $50.00.
Second, $25.00.
Third, $15.00.
Fourth and Fifth, $10.00 each.
Sixth to Eighth, $5.00 each.

I. The cruise must be actually taken between May 1 and November 1, 1903.

II. The cruise must be made on the (fresh water) inland streams and lakes of the United States or Canada.

III. The canoe or boat in which the cruise is made must not be more than 18ft. long over all.

IV. An accurate log of the trip must be kept and all incidents and information that would be of value to other canoeists covering the same route should be carefully recorded.

V. A description of the boat in which the cruise is made should preface the story, and a list of outfit and supplies.

VI. Photographs of the boat and of the country passed through, not smaller than 4x5, should, if possible, accompany each story, and they will be considered in making the awards.

VII. Stories should contain not less than five thousand words, written on one side of the paper only.

VIII. An outline chart of the trip drawn on white paper in black ink (no coloring pigment to be used) should also be sent in.

IX. Competitors should avoid the use of slang or incorrect nautical expressions in their stories, as it will count against them in awarding the prizes.

Each manuscript to which a prize is awarded shall become the property of the Forest and Stream Publishing Company. All manuscript should reach the office of the Forest and Stream Publishing Company, 346 Broadway, New York, N. Y., on or before December 1, 1903.

We wish to call attention to the insertion of condition IX. in the announcement of the Canoe Cruising Competition. The publishers of FOREST AND STREAM were prompted to make this addition at a suggestion made by Mr. Theodore C. Zerega (who judged the last cruising competition) in a letter which we published last week. In this communication, after criticising the stories submitted, he adds that almost all the articles were disfigured by the free use of slang and incorrect nautical expressions. To avoid any such unfortunate condition in the future the publishers felt justified in incorporating condition number nine in the prospectus, for it no way affects the fairness of the competition, as the cruise must be taken between May first and November first of this year.

The A. C. A. Committees.

Editor Forest and Stream:

I notice in the issue of FOREST AND STREAM February 21, 1903, an article pertaining to the affairs of the A. C. A. signed Ilka, and am pleased to see it published, and I assume that Ilka is a member of the A. C. A. I think it would vastly further our interest if our members took the same interest in affairs that Ilka does; at the same time I wish to criticise to a slight extent the article referred to.

Ilka is correct in his statement as to chairman of the "Regatta Committee." It seems most difficult to find an ex-racing man in the Atlantic Division who will carefully fulfil this position.

I am also informed that the chairman of the Camp Site Committee and the chairman of the Transportation Committee are having difficulties in filling these committees.

In regard to my not belonging to the racing element in the Sailors' Union, would say that this is true; but that I will endeavor to procure a "Regatta Committee" who will be absolutely fair with the racing men, and I promise to be fair also.

Other committees of the A. C. A. are at work, and it is time that a "Regatta Committee" is in action.

NATHANIEL S. HYATT,
Commodore A. C. A.

OSSINING, N. Y., Feb. 19.

The Cruise of the Mosquito.

BY HULBERT FOOTNER.

IT was Fourth of July morning; the Hudson lay like a sheet of dusty glass in the sun and the further shore was almost indistinguishable through the hot haze. The long, slim canoe, which we had dubbed Mosquito and painted a beautiful bottle-green, was cleaving the oily surface noiselessly, and the hearts of the crew were light with the prospect of two weeks' entire freedom and strange adventures to befall. The mate knelt in the bow, striving manfully to accustom his bones to the strange demands of his position, his bare arms pinking rapidly under the kiss of the sun; baggage was piled amidships, including many goodly things for the refreshment of the inner man, and the skipper sat upon the stern deck and surveyed the course.

We had left Coxsackie, whereto we had taken passage to avoid the tides and squalls and railroad trains of the Lower Hudson, a few hours before, feeling abundantly able to cover the twenty-five miles to Albany before night; but, alas! the humiliating confession must be made, we had done no more than ten before the sun and ebb tide (which he had not escaped after all) had taken all the steam out of our strokes, and we were even now thinking how pleasant it would be to have a tow through the heat of the day.

To that end, we hailed a couple of steamers from midstream, but they did not appear inclined to stop for us. Most inconsiderate, we thought, on a holiday, too, when good will should be in the air. But by and by we came upon a barge moored to a wharf, and about to return to Albany with a load of excursionists. We promptly made fast to the stern, and this was the beginning of our first adventure.

Now excursion barges are not remarkable for speed; I suppose this one made about eight miles an hour; it would have looked slow enough from the shore, but to us in a frail canoe dangling at the stern, with the wake of the clumsy vessel pounding our bows and threatening to capsize us momentarily, the rate was nothing less than terrific. If the barge was moving at eight miles an hour, the water was thrown back of her stern at about the same rate, making our gross progress through the water about sixteen miles an hour, which is pretty good for a canoe. Our line got jammed; and in order to be able to let go at a moment's notice, the mate had to unloose it and hang on by main strength. We determined not to let go the rope until we were actually in the water. The skipper balanced in the stern and tried to steer—tried, because the Mosquito acted exactly like a gamy fish with a hook in its gills, darting first to one side, then the other. Over and over we'd go, till just as we thought it was all up with us, off she'd shoot to the other side. Our tow line was not long enough, and it was impossible to keep her straight.

The barge was crowded as only excursion barges can be. Those hanging over the stern amused themselves by jeering us, and even peppering us with buns and bits of ice. We were much too busy to think of returning their fire, and it was hard to preserve our dignity. Others seemed to think we were there for the express purpose of filling their pitchers with water, and were quite indignant at our refusal. We would have liked to have had a drink ourselves. I suspected we worked harder for those two hours than if we had paddled, but the excitement of the strenuous ride was fine, and we were able to camp in sight of Albany after all.

On a trip like this there is generally a day when one thing after another goes amiss, and this is the time that proves the temper of the crew. Our run of hard luck struck us on the first night out. In the first place we delayed too long in choosing a camping ground, and darkness commencing to fall, we had to go ashore where we were, and it was the worst kind of a mudhole. Then when the fire was lit a swarm of gnats descended on us, and in combating them the skipper kicked over the soup. We had a miserable supper and a great struggle to put up the tent in the dark, and when we finally managed to turn in, dog-tired and cross, our troubles were not over even then.

Toward morning we were awakened by the steamer Adirondack passing up the river. It was raining hard, and our feet were in a pool of water. We swore at each other for pitching the tent over a hollow, and drawing up our knees prepared to go to sleep again, when suddenly the flaps parted inward and a wave which looked enormous to our dazed senses lifted up and fell on us, followed by half a dozen others. We leaped to our feet, and found that half the tent was pitched in the river; the waves were the rollers from the Adirondack. All the day before the tide had run strong against us, and when we had naturally come to the conclusion it never ran the other way, it had risen in the night and tried to drown us. We decided that tide had a personal spite against the crew of the Mosquito.

That was a miserable morning; everything was soaking wet, and after our sodden breakfast a heavier shower than ever came up. We embarked in the midst of it, and it was a notable sight to see the millions of fat drops plumping themselves all over the face of the river. But the cursed tide was now running out again like a mill-race, and mackintoshes hurt out sun-burned shoulders cruelly. With the greatest efforts we could scarcely make any headwy, and coming to a wharf presently, we hung on to rest for a while, almost ready to give up.

We enviously watched a launch breasting the current easily. "If we were only hitched on behind!" we exclaimed to each other, and at that very minute, as if in answer to our prayer, the launch ran smack aground. You may be sure we did not take long to go to her assistance. We found a crew of eight men on board and seven of them giving orders. It immediately became apparent that the gentlemen had been celebrating the holiday not wisely, but too well. The eighth was even now fortifying himself in the cabin against the horrors of a watery grave. Of course with our light craft we could do nothing to help them, but we hung around and added our voices to the seven already talking, and when the launch finally slid off the stones, the grateful gentlemen gave us all the credit for it and immediately offered to tow us up against the current.

The sun came out, and our troubles were over. One of the crew took up a position on the stern of the launch, and with the kindest intent bombarded us with bottles of beer. His aim was bad, and we nearly capsized trying to catch them; but fortunately some came fairly aboard. Whenever we became thirsty during the rest of the trip we always thought regretfully of those bottles of beer lying at the bottom of the Hudson. As it might be supposed, our friends steered as straight as they would have walked on land; zigzag is the word to describe our course. When the channel marks indicated the right bank we hugged the left; when we should have stayed on the left we straightway crossed to the right. However, the Providence who is supposed to look after jovial gentlemen brought us to Albany without further mishap.

The next three days were occupied in passing through the Hudson and Champlain canal. One might think that seventy miles of such a narrow, sluggish waterway would become monotonous, but such is by no means the case. There was more variety than on any part of our trip. You obtain an intimate personal view of the country from the canal; you have plenty of company, and may talk to passers-by on the banks. You look up and down the village streets and into the very doors of the houses, as it were, and all the time the banks are moving past at a most encouraging rate, whereas on a big piece of water you scarcely seem to progress at all. Lastly, as we told ourselves over and over, there was no tide with a grudge against us.

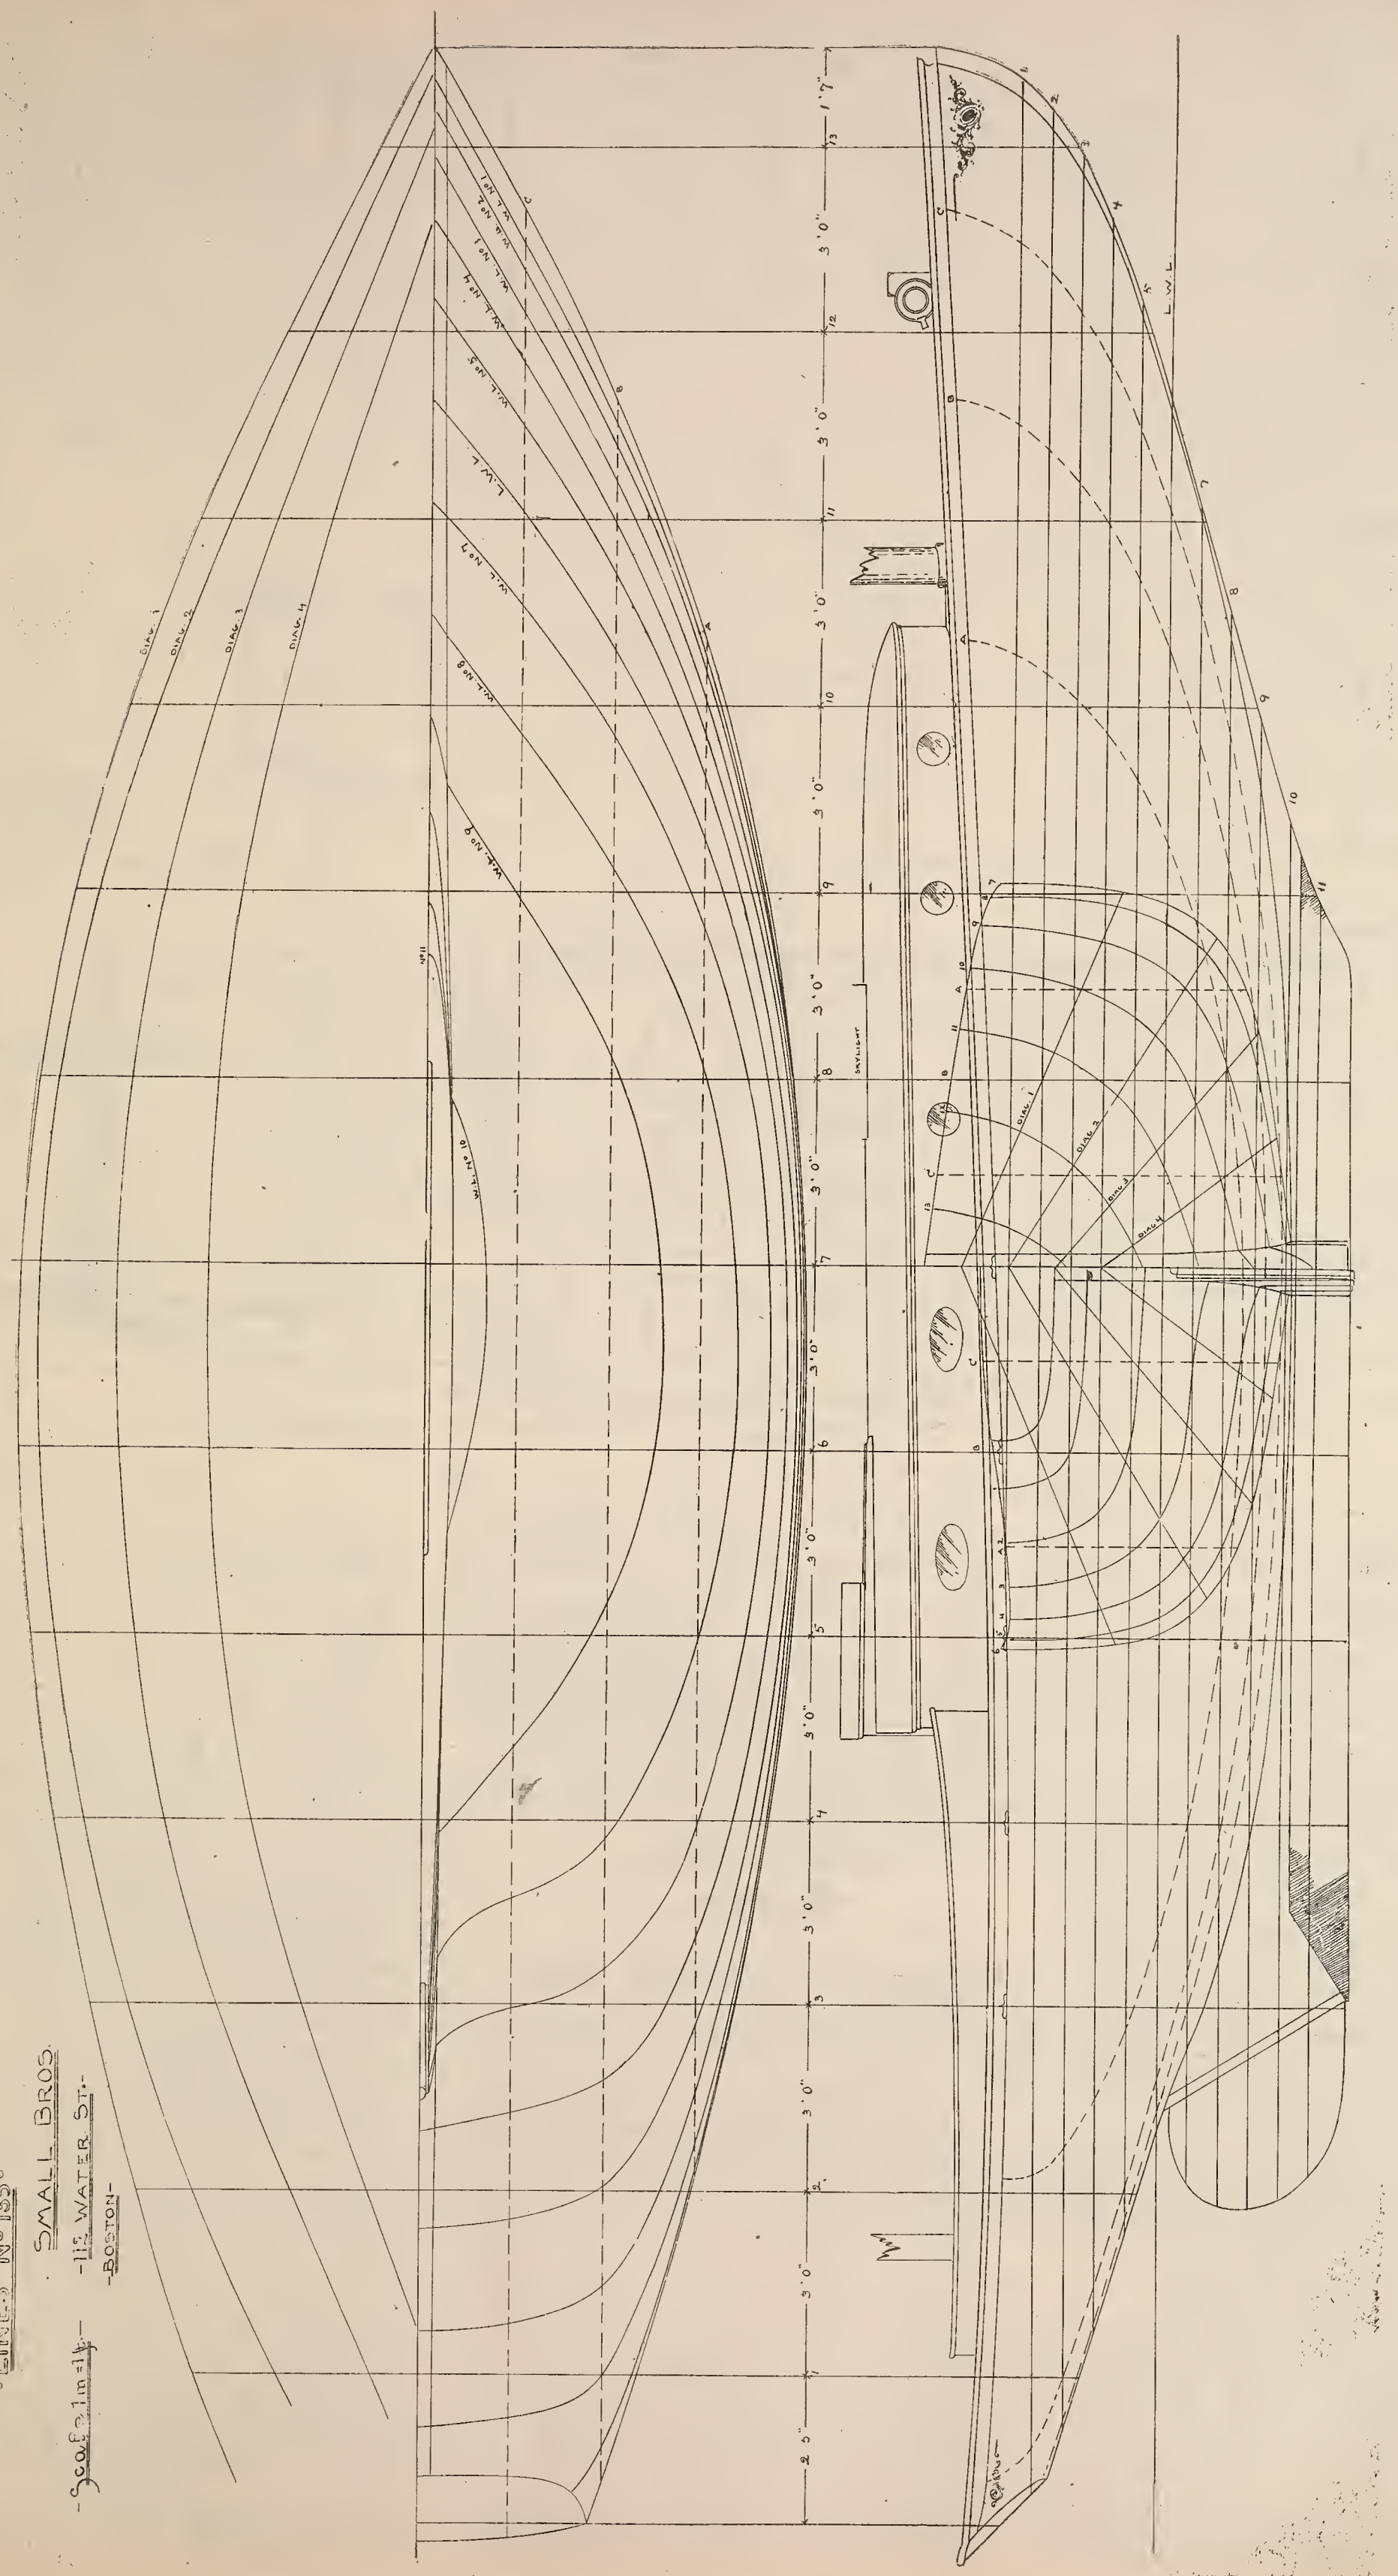
When we wanted a change of exercise we landed, lit our pipes and trudged along the tow-path towing the Mosquito. We could always find a good camping spot on the bream side (opposite the tow-path). In many places quantities of berries hung over the water waiting to be picked; the numerous locks provided a spice of excitement, especially when the lock tender proved ill-tempered at having to exert himself for so small a craft, and let the water in too fast; and altogether we enjoyed the canal mightily.

The population took the greatest interest in our progress. They could not understand why two fellows should work so hard just for fun, and when they saw us towing our boat they openly jeered. I suspect they thought it was like a man inviting his horse to sit in the buggy while he took the shafts. The same volley of questions was fired at us twenty times a day: "Where are you from?" "Where are you going?" "How long have you been?" "Do you camp out nights?" etc., etc. It became very difficult to answer the twentieth civilly. The children used to gather around us and ask if we didn't have any home.

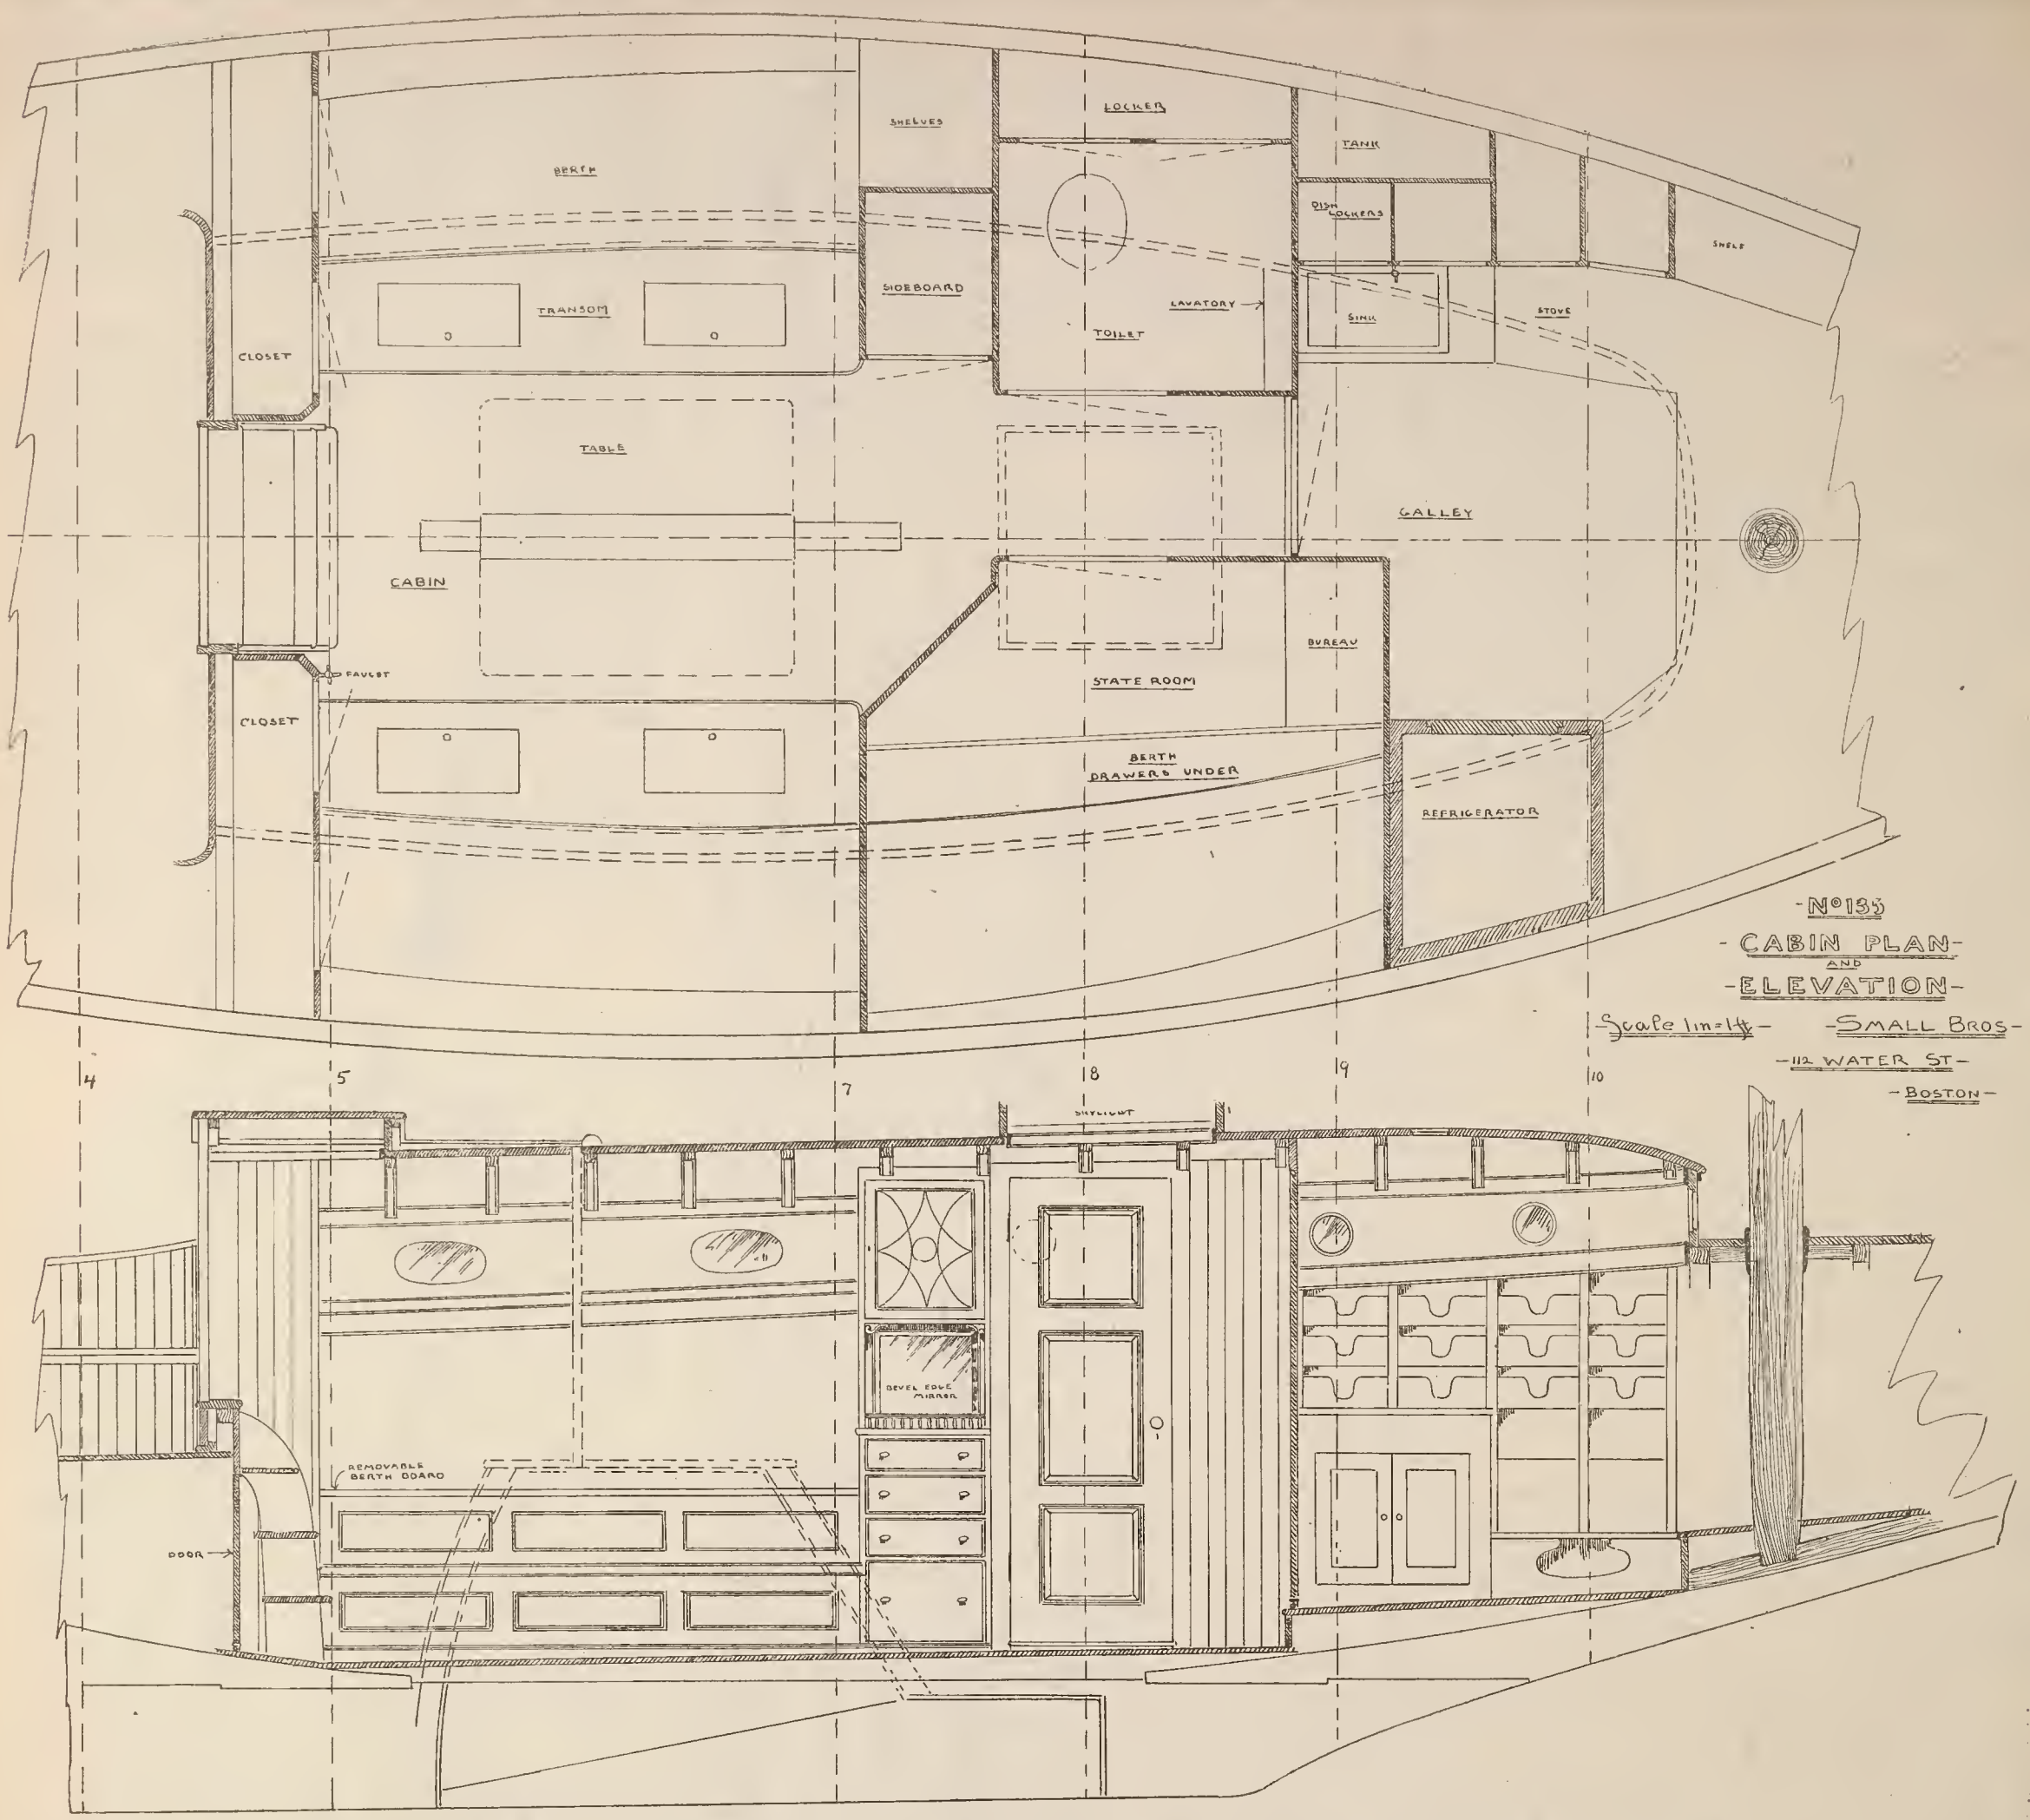
The last day on the canal was spent in the most luxurious pleasure. A litle steam yacht picked us up early in the morning, and all day we swept between the banks lying at our ease in the canoe smoking and watching the scenery, which was at this end of the canal very beautiful. The country was hilly and broken and quite unspoiled by ugly towns; the canal wound in and out like a river, and numbers of lofty pine and elm trees hung over the water. At noon we prepared quite an elaborate collation while still under way, and ate in style spread out on the suit case between us. People who witnessed these proceedings from the bank were greatly amused. Afterward we wrote postal cards to our friends, dating them "Canoe Mosquito, En Route," and when at last the owner's wife and her two pretty daughters brought their fancy work out on the after deck of the yacht and fell into conversation with us, our cup of happiness was full.

Forward in the little yacht things were not progressing so smoothly. The owner was engineer, his son pilot and there were frequent clashes of authority between the parent and the navigator. The old canalers who have a childish jealousy and fear of steam craft, would begin shouting to us to slow up while we were yet an eighth of a mile away, and as we passed their barges as like as not they would slyly try to shove us up on the bank. This led to frequent engine room signals, but the engineer was disposed to question the pilot's wisdom, and instead of obeying the signals, he would stick his head out of the engine room window and carry on an argument. Once right in the middle of such a discussion the yacht ran up on the bank, much to the delight of the passing canalers. The crew of the Mosquito earned their tow on this occasion by pulling the larger craft off the mud.

Next morning we proceeded up Lake Champlain under our own power. We were much disappointed with our first sight of that famous body of water; the lower end is no wider than a river, sluggish and foul with marshy banks. For mile after mile under a blazing sun we sought in vain for a place to go ashore; every



28-FOOT WATERLINE CRUISING YAWL—DESIGNED BY SMALL BROS. FOR STANLEY H. ELDRIDGE, 1903.



28-FOOT WATERLINE CRUISING YAWL—CABIN PLAN—DESIGNED BY SMALL BROS. FOR STANLEY H. ELDRIDGE, 1903.

likely spot was overshadowed by the sign of one Mr. Koch, forbidding us to land at the risk of terrible penalties. We began to wonder if Mr. Koch owned the whole lake shore, but at last, a fine breeze sprang up from astern, and under two umbrellas, which we had brought for the purpose, we soon left the inhospitable shores behind.

When the water became clear we refreshed ourselves with a swim, and later we paddled some miles further in the cool of the afternoon through the most beautiful scenes. Great rocky birch-covered heights now rose abruptly out of the water on either hand, and the narrow lake lay deep between under the sunset glow, all as bright and still as if an enchantment had been cast on the scene.

We met an ancient keeper making his rounds from light to light in the tortuous channel, rowed by his buxom, rosy daughter, and they were the only living things we saw. Presently we found an ideal camping spot on the Vermont shore, and neither the mate nor the skipper will be likely soon to forget the lingering beauty of that evening. We pitched our tent facing the west, and after supper as we smoked at the door the first crescent of the moon shone like a diadem on the brow of the hills across the shadowy lake.

Each day we saw Champlain under a new and lovelier aspect. Once it lay in light silvery mist under a cool sky, and we paddled thirty miles. The next two days, by which time we had entered on the widest part, the sun shone gloriously, and a spanking breeze came out of the north, kicking up a nasty head sea. At first we tried to face it, and the wind and sea were as exhilarating as champagne, but we were nearly swamped and just got ashore in a sinking condition. So we idled in our pine bush camp or explored the country for supplies while the wind blew, and then made a dash up the lake in the calm evenings. Another day it was squally and full of risks. Here the coast formed a succession of deep bays, and cutting across from point to point more than once a squall struck us in the middle several miles from land, and we passed an anxious ten minutes.

A volume could be written in enthusiastic praise of Lake Champlain without exhausting the subject. All the diverse beauties of the most famous spots are here gathered together; it is alternately a tortuous river, a deep-sunken mountain lake, a wide blue inland sea. In places lofty mountains rise sheer out of the water, then green and level farms stretch inland, then the shore line is broken by deep, mysterious, far-reaching bays, fringed with undisturbed pines. One picture that lingers in our memories is of a sheet of water sparkling in the sun, stretching fifteen miles across to Burlington and as far as the eye can see to the north, while on the further shore rise the Green Mountains, hazy in the distance, and on our left hand the Adirondacks lifting shoulder above shoulder.

[TO BE CONCLUDED.]

Yachting.

Design for a Cruising Yawl.

In this issue there appears the complete plans for a 28ft. waterline centerboard cruising yawl that was designed by Messrs. Small Brothers for Mr. Stanley H. Eldridge, of Boston.

The boat was designed for use on the Maine coast, and the owner specified that the boat should be able, roomy and comfortable, with a fair amount of speed. As Mr. Eldridge makes Yarmouth his home port, the draft of his boat was limited to 3ft.

The dimensions follow:

Length—		
Over all	40ft.	0in.
L.W.L.	28ft.	0in.
Overhang—		
Forward	5ft.	7in.
Aft	6ft.	5in.
Breadth—		
Extreme	12ft.	4in.
L.W.L.	11ft.	10in.
Draft—		
Extreme	3ft.	2in.
Board down	7ft.	0in.
To rabbet	2ft.	1in.
Freeboard—		
Forward	3ft.	10½in.
Aft	2ft.	9in.
Least	2ft.	5in.

Sail area—

Mizzen	207 sq. ft.
Main	667 sq. ft.
Jib	196 sq. ft.
Total	1070 sq. ft.

The cockpit is 10ft. long and water-tight. Below there is considerable room under a low cabin house, which is 18ft. in length. The companionway leads directly into the main saloon. Wide transoms extend along either side of the cabin and behind are berths. The board between the transoms and the berth is removable, and in this way two persons can comfortably sleep on each side. Aft on each side of the companionway are good sized clothes lockers. On the port side forward is a sideboard. The centerboard trunk only comes up about three feet above the cabin floor, and the cabin table is hinged to it.

Forward on the starboard side is a stateroom with a bureau on the forward end. A skylight gives ventilation to the stateroom and passage. Opposite the stateroom on the port side is the toilet room fitted with a patent closet and folding lavatory. There is also a locker for linen. In the galley, which is unusually large and well equipped, there is full headroom. On the port side is the store space, sink and lockers for stores, china and cooking utensils, and there is a large refrigerator on the starboard side. In the forecastle there are folding berths for two men.

The construction plan gives a good idea of the substantial way the boat is put together, and with reasonably good care she should last for an indefinite period. The sail plan is moderate and well distributed, and the boat should be easily handled by two men under ordinary conditions. The waterway around the cabin house is 2ft. 3in. wide, which gives ample room to move about. A boat will be carried on the davits when cruising.

The construction plan will be given next week.

The following sales have been made through Manning's Yacht Agency: Gasoline yacht Adrienne to Mr. John Hyslop; gasoline launch Emon to Mr. J. H. Robinson, and the gasoline launch Jo to Mr. George F. Robinson.

* * *

Mr. Gustav E. Kissel, of New York, has purchased the steam yacht Katrina.

SAIL PLAN N°135

MAST 39'7" above deck, 7⅞" diam.
MAIN BOOM, 25'9" long, 5" diam. tapered as figured
MAIN GAFF 19'4" long, egg shape 3"x4" tapered slightly each end
BOWSPRIT 11'0" long - 7'5" outboard, 5" diam. tapered each end
JIGGER MAST, 24'5" above deck, 5¼" diam.
" BOOM, 13'9" long - 3⅜" diam. tapered
" GAFF, 10'6" long, egg shape, 2⅛"x3" tapered slightly each end
JIB BOOM 11'10" long, 2½" diam. tapered
BOAT BOOM 13'8" long, 2¾" diam. tapered to 2" at ends
OUT RIGGER 3'10" outboard - oak 2½"x9" tapered to 4½" at outboard end
BLOCKS, 4" blocks for main halyards, jib halyards and main sheet
3½" blocks for jigger halyards, jigger sheet and back stay runners
HALYARDS, 18 thread Manilla for main halyards, jib halyards and main sheet, 15 thread for jigger halyards, jigger sheet, jib sheets and backstay runners SPINNAKER POLE 20'3" long - 2⅝" diam. tapered

28-FOOT WATERLINE CRUISING YAWL—SAIL PLAN—DESIGNED BY SMALL BROS. FOR STANLEY H. ELDRIDGE, 1903.

Boston Letter.

BOSTON, Feb. 22.—The 60ft. schooner Savonara, designed by Mr. Arthur Binney for Mr. C. H. H. Clarke, of Philadelphia, was launched at Lawley's last week. She was christened by Mrs. Clarke. As soon as the weather is more suitable the riggers will get to work on her, and she will be in readiness for an early trial. The Savonara is a fine, wholesome schooner and is in line with Mr. Binney's fine ideas in the design of cruising yachts. She has somewhat of a heavy appearance, although her lines cannot be said to be other than graceful. She has a good freeboard, which, with her fairly easy underbody, will make her a most comfortable craft in heavy weather. Below decks there is a great quantity of room, and, altogether, she looks the fine, sensible cruising yacht.

As was expected, both the Boston Y. C. and the Hull-Massachusetts Y. C. agreed upon consolidation at the meeting, which was held last Thursday evening. The meetings of each club were held in the American House, the Hull-Massachusetts Y. C. gathering in the big dining hall upon the first floor, and the Boston Y. C. meeting upon the second floor. Both meetings were called for the same hour. It took only five minutes for the members of the Hull-Massachusetts Y. C. to decide upon consolidation, but considerable more time was needed before the Boston Y. C. took the final vote. There was some opposition to the adoption of the flag of the Hull-Massachusetts Y. C., as agreed upon by the committees of both clubs. The majority of the members, however, believed that the matter of flag was only for agreement on amalgamation, and so the vote was passed.

When the vote had been passed, a committee of the Boston Y. C. was sent to inform the Hull-Massachusetts Y. C. of the action taken. This committee informed the Hull-Massachusetts Y. C. members that, under the terms of agreement they were now members of the Boston Y. C., and were requested to adjourn to the meeting room above to enter upon the business of the consolidated club. At the same time the committee was making its announcement in the lower hall, an envoy of the Hull-Massachusetts Y. C. informed the Boston Y. C. that the Hull club had agreed upon the terms of amalgamation. In each case the announcement was received with great applause. When the meeting of the Boston Y. C. was again called to order Vice Commodore welcomed the new members.. Louis M. Clark addressed the meeting upon the prospects of the new club and then the consolidated club proceeded to business. It was voted to appoint a committee to prepare a revision of the constitution, and it was also voted to appoint a committee to prepare a list of nominations for office. It is expected that the next meeting will be held very soon.

The agreement of consolidation is substantially contained in the following votes passed by the Boston Y. C., which coincided with those passed by the Hull-Massachusetts Y. C:

Section 5 of Chapter IV of the by-laws is hereby repealed, and in its place is substituted the following: "The distinguishing signal of the club shall be the present signal of the Hull-Massachusetts Y. C."

All the present members of the Hull-Massachusetts Y. C. (except the Dorchester division hereinafter mentioned) are hereby made members of the Boston Y. C., and shall be and are entitled to all the privileges of the club, at annual dues of $25 without the payment of any entrance fee, said members to rank in said Boston Y. C. according to their standing as to date of election in the Hull-Massachusetts Y. C.

Pending the adoption of a revised constitution and by-laws, to be reported by a committee, said committee to be duly appointed at this meeting, the following provisions as to members and classes thereof, annual dues and rights to vote are hereby established:

Regular Members—These shall be at present regular members of either of the consolidated clubs who shall pay annual dues of $25; also all life members of either of the consolidated clubs.

Class A—These shall be all those who were, prior to the consolidation, regular members of the Boston Y. C.. and who shall pay annual dues of $10. They shall be entitled to the general privileges of the club, but to the house privileges of the City Point and Marblehead club houses only.

Dorchester Division—These shall be all those who were, prior to the consolidation, members of the Dorchester division of the Hull-Massachusetts Y. C. They shall be entitled, on payment of annual dues of $8, to the same privileges heretofore enjoyed by them.

Honorary Members—These shall be all those who were, prior to the consolidation, honorary members of either club. They shall enjoy the privileges of the club, but shall have no interest in its property, and shall not be entitled to vote or to hold office.

Members of Class A may at any time become regular members upon certifying their intention to the secretary, and paying the full annual dues of $25.

Members of the Dorchester division may at any time, upon election, become regular members upon certifying their intention to the secretary, paying the initiation fee and the full annual dues of $25.

Only regular members, life members and Class A members shall be entitled to vote.

The Boston Y. C. hereby assumes and agrees to pay all debts and liabilities of the Hull-Massachusetts Y. C.

At Lawley's the 36-footer for Mr. W. B. Rogers has been finished and is ready for launching. Maj. L. S. Bent's 50ft. schooner is receiving the cabin work. The deck has been laid on the 25-footer for Mr. J. C. Swift and the cabin work is going in. The cabin work is being finished on the cruising 21-footer for Mr. L. H. Spalding. Mr. Trenor L. Park's 43-rater is in frame. The keel of the 63-rater schooner for Mr. John M. Richmond is being turned out. In the west shop the steam yacht for Mr. C. A. Fletcher is receiving her engines and the joiner work is being installed. The work of plating is still going on on Mr. C. G. Emery's steam yacht. In the boat shop the engine has been put in the new launch for the Boston Y. C. The 75ft. steam yacht which was designed by Mr. Arthur Binney for Mr. F. H. Wells for use on Lake Champlain is being laid down.

At Meek's yard, North Weymouth, the Y. R. A. 25-footer for Mr. J. E. Doherty is being set up.

Mr. Frank N. Tandy has sold the 21ft. knockabout Apache, owned by Mr. L. C. Wade, to Mr. J. Willis Martin, of Philadelphia.

At the Marblehead Yacht Yard the Elton 40-footer is planked and the deck laid. The engine has been installed and the interior joiner work is being finished. The keel of the new cruising 25-footer, designed by Mr. B. B. Crowninshield for Mr. L. C. Wade, will be run this week. A 25ft. speed launch is nearing completion and a mahogany launch for Mr. Joseph Battles has been started. Mr. Stearns has an order for a towing launch for Mr. Franklin Dexter. This yard, in connection with Messrs. Gardner and Cox, has sold the 60ft. steam yacht Rocket to Mr. F. W. Hoyt, of New York; and, in connection with Mr. Stanley M. Seaman, the 35-footer Umbrina to Mr. Childs, of New York. JOHN B. KILLEEN.

YACHT CLUB NOTES.

The annual meeting of the Larchmont Y. C. was held at Delmonico's, Fifth avenue and Forty-fourth street, New York City, on Wednesday evening, Feb. 18. The following officers were elected: Commodore, Frederick T. Adams, schooner Sachem; Vice-Commodore, Morton F. Plant, steamer Parthenia; Rear Commodore, Frederick M. Hoyt, cutter Isolde; Secretary, A. Bryan Alley; Treasurer, William Murray; Measurer, John Hyslop; Trustees, to serve three years, Augustin Monroe, Edward S. Hatch. A large number of the members were present, and some amendments to the racing rules were adopted.

KHAMA—ENGLISH RACING CUTTER RECENTLY PURCHASED BY SEYMOUR J. HYDE, NEW YORK Y. C.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Messrs. Gardner & Cox have a lot of work in their office. Among the new boats designed by them this winter are the following: A 75ft. waterline twin-screw launch for Mr. M. J. Foster; she is 91ft. over all and will be driven by two gas engines; a 55ft. waterline launch for Mr. George W. Childs Drexel; this boat is 63ft. over all and two Standard gasoline engines will furnish the power; a twin-screw steam yacht 108ft. over all for Mr. Evans R. Dick; a 35ft. waterline cruising yawl building by Wood at City Island for Mr. Noble; a trial boat for the Canada cup races for a Rochester syndicate; this boat will also be built at Wood's yard; a 35ft. waterline racing cutter for Messrs. Addison and Wilmer Hanan, and an auxiliary three-masted schooner for Mr. Wilson Marshall. She will be 187ft. over all and 135ft. waterline. They have also gotten out plans for two other launches, one steam and the other gasoline, for yachtsmen whose names cannot yet be given out. The steamer Anstice, which was designed by Messrs. Gardner & Cox for the Gulf Fisheries Co., has been sold through their brokerage department to Mr. R. A. Smith, who has had her sent to the Harlan & Hollingsworth Co. to be converted into a yacht from the designs of Messrs. Gardner & Cox. The brokerage department have chartered to Mr. Clarence Mackay the steam yacht Colonia for the season; the schooner yacht Kiwassa has been sold to Mr. Henry A. Rusch, N. Y. Y. C.; the steam launch Rocket, of Boston, to Mr. Frederick M. Hoyt, rear-commodore of the Larchmont Y. C. Messrs. Gardner & Cox have also sold two 15-footers—the Manhasset Bay raceabout Mist, which has been sent to Hong Kong, China, and the Atlantic Y. C. knockabout Pebble, sent to Santiago, Cuba.

Many new boats both large and small are building at the works of the Gas Engine and Power Company and Charles L. Seabury & Co., Morris Heights. Cherokee, the steam yacht built for Mr. S. H. Vandergrift, of Pittsburg, is completed. She is of composite construction and her owner will use her in the Thousand Islands. Inia, the 103 foot steam yacht, building for Mr. Henry F. S. Davis, is practically finished. Corinthia, Mr. J. A. Mollenhauer's new 100-foot twin screw steam yacht will be ready for launching early in the season. The finishing touches are being added to Aria the 165-foot steam yacht that was built for Mr. Edward H. Blake, of Bangor, Maine. Niagara IV, the high speed steam yacht for Mr. Howard Gould, will be launched early in April; she is 112 feet long over all. The work on Velthra, Mr. S. Parker Bremer's 110-foot twin screw steam yacht is well advanced. She will have a speed of twenty miles and will be used for daily trips between Boston and Manchester. Mr. Alfred Marshall's 100-foot high speed yacht will be ready for delivery early in the spring. The 65-foot steam yacht for Mr. Walter E. Duryea is nearly ready and will be turned over to her owner shortly. She will have a speed of 12 miles and is for use on the St. Lawrence River. Scioto, the steam launch building for Mr. R. H. Gilbert, is already planked; her owner will use her on Lake George. Work is well advanced on the 65-foot auxiliary cruising yawl building for Mr. J. H. Smedley, of Detroit. She will be equipped with a 25 horse power gasoline engine. Among the smaller boats building by this firm are the following: 40-foot launch for Mr. Walter Jennings; 35-foot cabin launch for Mr. Charles M. Morgan; two 30-foot hunting launches for Mr. John W. Gates; 30-foot launch for General J. A. Johnson; 21-foot launch for Mr. W. J. Gamble; ; two 24ft. tenders for Mr. W. R. Nelson; 30ft. launch for United States Engineers; 45ft. launch for Mr. V. M. Beolchi; 30ft. cabin yacht for Mr. Chas. G. Whitney; 25ft. launch for Mr. T. H. Meyers; auxiliary yacht for Mr. J. H. Ross; 25ft. launch for George Poppert; 16ft. launch for Mr. Kyrle Bellew; 28ft. launch for Mr. D. G. Reid; 33ft. launch for Mr. E. M. Hyde; 33ft. launch for Florida Quarantine service. In addition to these boats a number of yacht tenders are being built. Alterations are being made on Haida ex Elsa, the auxiliary steam yacht owned by Mr. Max C. Fleischmann.

The Electric Launch Company, Bayonne, N. J., is building a high speed gasolene yacht for Mr. F. G. Havens, of San Francisco, Cal., from designs made by Mr. Henry J. Gielow. She is 65ft. waterline, 10ft. breadth and 3ft. 6in. draft. Her speed will be fifteen miles an hour. This firm is also building an auxiliary cruising yawl for Mr. R. W. Smith. She is 60ft over all, 40 ft. waterline, 15ft. breadth and 3ft. draft. She will be fitted with a 14 horsepower 4 cylinder Globe motor. The electric launch building from designs by Mr. C. F. Herreshoff, for Mr. C. Oliver Iselin, is well along. She is 37ft. over all, 32ft. waterline, 6ft. 2in. breadth and 2ft. draft. She will have a speed of 13 miles. Mr. George Bullen, of Chicago, has ordered an electric launch for use on Oconomowoc Lake, and Mr. L. A. Parkhurst is having an electric launch built for use on the same lake.

The Marine Construction and Dry Dock Company, of Mariner's Harbor, S. I., is to build a 70ft. steam yacht for General B. M. Whitlock.

Dr. M. R. Peck is having a cruising launch built at Hanson's yard, City Island. She is 50ft. long, and will be driven by a 20 horsepower gasolene motor, and will be lighted by electricity.

Mr. Thomas A. St. Johnson, who has been the manager of Manning's Yacht Agency for several years past, has severed his connection with that firm and has now started in business for himself in the same line.

Messrs. Tams, Lemoine & Crane have sold the British-built steam yacht Wanderer, owned by Mr. C. F. L. Robinson to Mr. Henry A. C. Taylor. The same firm has chartered the steam yacht May, owned by Mr. Alexander Van Rensselaer to Mr. C. Ledyard Blair.

Capt. Tom Webber is building at his yard in New Rochelle a racing sloop from his own design, for Mr. James Baird, of Philadelphia.

Rifle Range and Gallery.

Rifle at Shell Mound.

San Francisco, Feb. 9.—The weather was good yesterday at Shell Mound Range. The Germania Club announced their programme for the year. Cash prizes to the amount of $435 have been offered. In addition, valuable prizes are offered by individuals. The proceeds of this shoot are to go toward the expense of the club's representatives in entertaining their fellow shooters and friends at the next National Bundes shoot in 1904. Scores of the day:

Golden Gate Rifle and Pistol Club, monthly medal shoot, re-entry match: A. Gehret 224, 223, 217, 223; Martin Blasse 225, 221, 207, 205; F. P. Schuster 219, 217; D. B. Faktor 219, 218, 224; Wm. F. Blasse 210.

Club trophy: F. E. Mason 227, G. Tammeyer 229, Martin Blasse 220, D. B. Faktor 218, A. Gehret 216, F. P. Schuster 209, G. Mitchell 203, Wm. F. Blasse 203.

Silver medal: G. Mitchell 203, 195.

Gold medal: F. P. Schuster 219, P. A. Becker 204, 201, 178.

Pistol and revolver, club trophy; pistol: W. F. Blasse 80, B. Jonas 74, J. Kullman 82. Revolver: J. W. Tompkins 75, J. R. Trego, J. Kullman 82.

Pistol re-entry: J. Kullman 83, Dr. D. Smith 80.

Revolver re-entry: J. W. Tompkins 80, 77, 76, 73; J. R. Trego 85, 85, 81; F. Kruckel 75, 65; P. A. Becker 90, 88, 84, 91, 86, 89, 90.

Germania Schuetzen Club, monthly medal shoot: First champion class, A. Gehret 225; second champion class, J. D. Heise 217; first class, John Gefken 211; second class, Wm. Morken 211; third class, A. Goetze 178; best first shot, A. Gehret 24; best last shot, F. E. Mason 25.

San Francisco Schuetzen Verein, monthly medal shoot: Champion medal and first class not filled; champion highest score class, D. B. Faktor 446; second class, S. Heino 430; third class, H. Bornholdt 355; fourth class, August Goetze 400; best first shot, John Lankenau 24; best last shot, D. B. Faktor 24.

Independent Rifles, monthly medal shoot: Sergt. C. Schneider 48, J. S. Jones 52, C. Schmidt 37, R. V. Bither 38, J. H. Kuhlke 45, F. Skowran 19, C. H. Kornbeck 53, H. Marzolf 43, C. Hering 39, W. Gaetjen 23, A. Dietrich 40, C. Schilling 45, Sergt. C. Andrews 55, J. Behlmer 34.

Norddeutscher Schuetzen Club monthly bullseye shoot: G. H. Bahrs 419, E. Thode 591, H. Huber 664, A. Hohmann 687, C. F. Rust 720, J. Woebcke 1051, F. P. Schuster 1060, J. D. Heise 1100, H. Huppert 1262, J. Gefken 1487, J. Lankenau 1548, D. Salfield 1554.

Roeel.

The Championship Hundred Shot Gallery Match for 1903, open to everybody, will be held under the auspices of the Zettler Rifle Club, Zettler Bros.' gallery, 159 W. 23d Street, New York. The shooting days are: Saturday, Feb. 28, from 10 A. M. until 11 P. M.; Monday, March 2, from 10 A. M. until 11 P. M.; Tuesday, March 3, from 10 A. M. until 11 P. M.; Wednesday, March 4, from 10 A. M. until 6 P. M.; Thursday, March 5, from 10 A. M. until 6 P. M.; Friday, March 6, from 10 A. M. until 11 P. M.; Saturday, March 7, from 10 A. M. until 10 P. M.

All shooting must be off-hand. The distribution of prizes will take place at the banquet on Saturday, March 7. In all cases of dispute the decision of the shooting committee shall be final. The well-known rules will govern this tournament.

100 Shot Gallery Match for 1903—Entrance fee $5; 100 shots to be fired in 20 scores of five shots at any time during the tournament; the regular twenty-five (¼-inch) ring target to be used. The shooter making the highest score will receive first prize at his option, and so on.

The Championship Match of 100 shots on the in-door range having been omitted from the programme of the National Sportsmen's Association's Exhibition, the Zettler club wishes to offer all rifle shooters a programme attractive, liberal and under good management. The programme gives a list of all conditions, events and prizes, and can be obtained of Zettler Bros.

The United States Revolver Associations' first match of the series of championship matches, will be held in New York. The competitions in New York City will be conducted under the auspices of the Manhattan Rifle and Revolver Association, 2628 Broadway, in the evenings of March 4 to 7, inclusive, when the gallery will be open from 7:30 to 11:30. For further information address the secretary-treasurer, A. L. A. Himmelwright, 121 Liberty Street, New York.

The revolver and rifle tournaments to be held in connection with the Sportsmen's show will be held from the opening to the closing, Feb. 21 to March 7, inclusive.

Trapshooting.

Fixtures.

If you want your shoot to be announced here send a notice like the following:

Feb. 26.—Stuttgart, Ark.—Arkansas State championship, under auspices of the Stuttgart Gun Club.

March 4.—Edgewater, N. J.—All-day shoot of the North River Gun Club. Jas. R. Merrill, Sec'y.

March 19.—Carlstadt, N. J.—John S. Wright's all-day shoot.

March 16-21.—Houston, Tex., Gun Club's all week shoot; $500 added money. S. J. Smith, Sec'y.

April 1-3.—Grand Island, Neb.—Consolidated tournament of the Buffalo Bill Gun Club, of North Platte, and the Grand Island Gun Club; two days targets, one day live birds. Managers, Geo. L. Carter, North Platte, and Gus Sievers, Grand Island.

April 7-10.—St. Joseph, Mo.—Tournament of the Missouri State Game and Fish Protective Association. F. B. Cunningham, Secretary-Manager.

*April 8.—Allegheny, Pa.—North Side Gun Club. L. B. Fleming, Sec'y.

April 14-17.—Kansas City, Mo.—The Interstate Association's fourth Grand American Handicap at targets, at Blue River Shooting Park. One thousand dollars added to the purses. Elmer E. Shaner, Secretary-Manager, 111 Fourth avenue, Pittsburg, Pa.

April 20.—Springfield, Mass.—Spring. tournament of the Springfield Gun Club. C. L. Kites, Sec'y.

*April 22-23.—Pittsburg, Pa.—Herron Hill Gun Club. Harry Vandergrift, Sec'y.

April 28-May 1.—Lincoln, Neb.—Nebraska State Sportsmen's Association's twenty-seventh annual tournament, under the auspices of the Lincoln Gun Club. F. E. Mockett, Sec'y.

*May 5-6.—Irwin, Pa., Gun Club's tournament. John Withers, Sec'y.

May 6-7.—Union City, Ind.—Parent Gun Club's tournament.

May 6-7.—Lafayette, Ind.—Lafayette Gun Club's tournament.

May 9-10.—Chicago, Ill.—Spring tournament of the Grand Crescent Gun Club.

May 12-15.—Interstate Park, L. I.—The Interstate Association's fifth Grand American Handicap at targets; $1,000 added to the purses. Elmer E. Shaner, Secretary-Manager, 111 Fourth avenue, Pittsburg, Pa.

June 3-5.—Parkersburg, W. Va.—Sixth annual tournament of the West Virginia Sportsmen's Association, under auspices of Ohio Valley Shooting Association.
June 4-5.—Greenville, O.—Spring tournament of the Greenville Gun Club.
June 7-8.—Ligonier, Pa., Gun Club's tournament.
June 9-11.—Sioux City, Ia.—Ninth annual amateur tournament of the Soo Gun Club. B. F. Duncan, Sec'y.
June 9-11.—Cincinnati, O.—Seventeenth annual target tournament of the Ohio Trapshooters' League. Chas. T. Dreihs, Sec'y.
*June 10-11.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.
June 16-19.—Warm Springs, Ga.—The Interstate Association's tournament, under the auspices of the Meriwether Gun Club. Chas. L. Davis. Sec'y.
June 16-18.—New London, Ia.—Seventh annual midsummer target tournament of the New London Gun Club.
*June 24-25.—New Castle, Pa., Gun Club's tournament. James Atkinson, Sec'y.
*July 7-8.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.
July 8-9.—Huntsville, Ala.—The Interstate Association's tournament, under the auspices of the Huntsville Gun Club. E. R. Matthews, Sec'y.
*July 21-22.—Beaver Falls, Pa., Gun Club's tournament. W. R. Keefer, Sec'y.
July 30-Aug. 1.—Viroqua, Wis.—The Interstate Association's tournament, under the auspices of the Viroqua Rod and Gun Club. Dr. R. W. Baldwin, Sec'y.
Aug. 19-20.—Ottawa, Ill.—The Interstate Association's tournament, under the auspices of the Rainmakers' Gun Club. Paul A. Selember, Sec'y.
*Aug. 19-20.—Millvale, Pa., Gun Club's tournament. Wm. Bussler, Sec'y.
*Sept. 1-2.—Irwin Pa., Gun Club's tournament. John Withero, Sec'y.
Sept. 2-3.—Akron, O.—The Interstate Association's tournament, under the auspices of the Akron Gun Club. G. E. Wagoner, Sec'y.
*Sept. 23-24.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.
Sept, 23-24.—Ruffsdale, Pa., Gun Club's tournament.
*Oct. 6-7.—Allegheny, Pa.—North Side Gun Club's tournament. L. B. Fleming, Sec'y.
*Oct. 20-21.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

Dr. Ashley A. Webber, whose fame as an expert with pistol and shotgun was international, died at his home, 168 North Sixth Street, Brooklyn, on Feb. 17. He was best known to fame as an expert revolver shot, excelling in skill at the long ranges of 50 and 100 yards. His home contains dozens of trophies won in competition with the most skillful contestants. He attained high skill with the shotgun. In the Grand American Handicap of 1900, shooting under the name of Dr. Casey, he was one of eight to kill 25 straight, and lost a bird in the shoot off through the oversight of using his gun unloaded. In the sweepstakes and trophy competitions about New York, he was a skillful and successful competitor. His fondness for field sports was as great as his fondness for trapshooting. He was quite an all round athlete, excelling as an oarsman, sprinter, jumper, etc. The exactions of his profession in the last two or three years were so great that they precluded participation in his favorite sports. He was a member of the dispensary staff of the Eastern District Hospital, Brooklyn. He also was a member of the Seawanhaka Boat Club and Hanover Club. Bright's disease was the cause of his death.

The following interesting clipping treats of a matter of more than passing importance. "Nebraska's crack shots are rejoiced to hear that Kansas City's team wants to try them on again. Chris Gottlieb, one of the best men on the Kansas City team, has been visiting Frank Parmelee, and he says that his team is anxious to come up here and try conclusions once more. Seven times now have teams from these two cities met, and the Omahans have won six of the seven shoots. All were fifty-bird races but the last two, which were twenty-five each. The local men have jumped at the offer of the Missourians, and the match will probably come off in March. It is remarkable how close the total scores have always been in these races. Of five races at Kansas City, Omaha has won by two birds twice, by five once, by seven once and by eleven once. That is a small number out of several hundred birds trapped."

The holiday shoot of the Crescent Athletic Club was well attended on Monday of this week. The shooting contingent was out in force, thirty shooters, all told. It was the largest ever held as to total amount of shooting. The Holiday Cup and three trophies donated by Messrs. T. A. Stake, L. C. Hopkins and F. C. Bedford, Jr., respectively, afforded ample incentive to compete. The Holiday Cup was won by Mr. A. R. Fish, with a straight score of 25. Dr. F. C. Raynor won the Stake trophy. Mr. G. G. Stephenson, Jr., won the Hopkins trophy after a long struggle in shoot offs; he made one straight score of 25 without any allowance.

A correspondent informs us that "The Aquidneck Gun Club, of Newport, R. I., is preparing to hold its second annual tournament on May 30 next. High average prizes in cash will be offered as well as other attractive features. No pains will be spared to make the shoot run as smoothly as possible. The fact that this shoot will occur just previous to the inter-State tournament at Wellington, Mass., should insure a good attendance. Programmes will be ready about April 15, and may be had by addressing J. S. Coggeshall, Secretary, Box 19."

On Saturday of last week in the inter-club 5-man team shoot, at Philadelphia, there were entries as follows: Delaware County Country Club, Frankford Gun Club, S. S. White Gun Club, Century Wheelmen, Highland Gun Club, Independent Gun Club and Florists' Gun Club. The conditions were 50 targets to a man, 16 yards' rise, 25 targets over the Sergeant system and 25 over the magautrap. The scores were: Florists, 195; Highland, 190; Independent, 182; Frankford, 178; Century, 169; Delaware, 166; S. S. White, 166.

An exchange states that "Carl Von Lengerke, for years one of the crack shotgun artists of the world, has been in Omaha during the last week and has been over at the cross-river grounds almost every day, startling the natives with his expertness at the trigger and traps. Von Lengerke has twice held the coveted honor of being runner-up in the Grand American Handicap events, though he has never succeeded in taking top honors."

From a local paper we take the following: "Because of the death of Max Condit the Poughkeepsie Gun Club, of which he was a member, will not take part in the shoot at Ossining Monday. The club will attend Mr. Condit's funeral in a body and will send a floral tribute in the shape of a large 'blue rock,' made from flowers of suitable colors."

In a team race at Kansas City, Mo., Feb. 14, four men to a team, 25 live birds per man, Elliott, Hearn, O'Brien and Cockrell against Gottlieb, Bramhall, Riehl and Smith, the result was a tie, each winning a race. The results were: First race, O'Brien's team, 82 to 83. Second race, O'Brien's team, 84 to 74. The tie was not shot off.

The grand averages for 4 days' targets and live birds, made at the Detroit tournament, Feb 10-14, are as follows: First, Griffith, 93 1-3 per cent.; 2d, Gilbert, 92 2-3 per cent.; 3d, Weatherhead, 91 2-3 per cent.; 4th, Simmonds, 91 per cent.; 5th, Bohncy, 87 1-3 per cent.

In the shoot of the Jeannette Gun Club, held at Guttenburg, N. J., on Feb. 20, Mr. D. Mohrmann, Class B, was the only contestant who made a straight score in the club event. Mr. G. Grieff won Class A, Mr. A. Schumacher won Class C, Mr. J. Hainhorst won the challenge medal contest.

The programme of the first annual tournament of the Houston (Tex.) Gun Club, to be held March 17 to 19, provides $500 added money. The grounds will be open on March 20 and 21, preliminary to the Texas State Sportsman's annual shoot, at Brenham, Tex., March 23-26.

In the team contest between the Keystone Shooting League and the Baltimore Shooting Association, at Holmesburg Junction, Pa., on Thursday of last week, Keystone won by a score of 164 to 150. There were eight men on a side, 25 birds per man, or 200 to each team.

In the match contest at Rittersville, Pa., Feb. 20, between Mr. T. W. Morfey, of Dover, N. J., and Mr. D. S. Doudt, champion wing shot of the Lehigh Valley, Morfey won by a score of 86 to 73, each contestant shooting at 100 live birds.

Mr. Isaac Budd, at the shoot of the Keystone Shooting League, Feb. 21, made straight scores in the club handicap and the officers' trophy contest, 25 in all, and then, by way of continuation, won a miss and out alone.

Elsewhere in our trap columns is a communication from the Oneida County Sportsman's Association, in which is set forth its willingness to undertake the responsibilities of the New York State shoot.

In a team contest, ten men on a side, All-Nebraska against Omaha, 25 birds per man, the former won by a score of 216 to 212. A return match may be shot in April.

The energetic and popular T. W. Keller, of New York, but of the world in regard to friends, was laid up from business last week, due to a severe attack of la grippe.

Mr. H. Justins, of San Francisco, Cal., where he is famous in sportsmen's affairs, arrived in New York on the Etruria from England on Monday of this week.

Mr. John Wright announces that he has found it desirable to change the date of his shoot from March 12 to March 19. It is to be held at Carlstadt, N. J.

Owing to the fact that Monday of this week was a holiday in New York, several communications are in consequence crowded over till next week.

Mr. Luther Squiers, of Cincinnati, and Mr. B. Leroy Woodard, Campello, Mass., were visitors in New York early this week.

The annual meeting of the Emerald Gun Club will be held on March 12, at 9 Madison Street, New York.

Omaha and Kansas City will try conclusions again in a team race, in April, at Grand Island, Neb.

The shoot of the Emerald Gun Club was postponed from Feb. 17 to Feb. 23.

BERNARD WATERS.

Ossining Gun Club.

OSSINING, N. Y.—The following scores were made at the regular weekly shoot of the Ossining Gun Club, Saturday, Feb. 21. In expectation of the shoot we are to hold on the 23d inst., there was not a very good attendance. A. Rohr and M. H. Dyckman, with their handicaps in the Handicap Cup event, made 25, Rohr getting 25 on the shoot off to Dyckman's 24; this gives Rohr two wins for the cup; he has to win it but once more to hold it permanently. In the Scratch Cup event, E. Ball got a win with 23 out of 25; this makes one win each for Ball, Washburn and Blandford. There is some talk of the gun club holding the State shoot for 1903, owing to the Schenectady Gun Club being unable to get suitable grounds. We will send a representative to the meeting of the N. Y. State Association at Rochester, March 7, and make a try for it anyway.

	Handicap Cup. Broke.	Missed.	Total.	Scratch Cup.
D Brandreth	16	4	20	22
Bruin	11	8	19	..
E Ball	17	1	18	23

Owing to the death of the captain of the Poughkeepsie Gun Club, Max Condit, the shoot for the Inter-county Cup, which was to be held here the 23d inst., will probably be postponed. The Poughkeepsie Club will please accept our sincere sympathy. We realize that they have lost a warm friend and thorough sportsman.

C. G. B.

New York State Shoot.

UTICA, N. Y., Feb. 22.—*Editor Forest and Stream:* Notices having been sent out to the effect that the Schenectady Gun Club cannot handle the New York State Shoot, the Oneida County Sportsman's Association will undertake the convention and guarantee a satisfactory shoot, trapping birds at one cent each.

Oneida County Sportsman's Association,
C. R. MIZNER, Secretary.

Boston Gun Club.

BOSTON, Mass., Feb. 11.—The regular weekly shoot of the Boston Gun Club was held on their Wellington grounds to-day, and 26 shooters kept scorers and trapper busy till darkness prevented target from being seen, and many of the attendants were compelled to go away kind of half filled as far as their trapshooting wants were concerned. Straight scores were at high rates, similar to shells and ammunition at present, though Perkins, Leroy and Dennison managed to secure one each, the former's being at 15 and the two latter's at 10.

Perkins led in the prize match with Dr. Gleason one target to rear, ready to take advantage of any slip and shooting a strong uphill race from the start. Leroy, Woodruff and John were next in line one target to the good, of another Brockton representative, Leonard, with 20. In the consecutive match Perkins came very near clipping the record to date, but grassed a nice 20, and still hopes for more. Other scores as follows:

Events:	1	2	3	4	5	6	Per
Targets:	10	10	15	15	15	10	Cent.
Howe, 19	6	6	10	10	9	8	.654

BOSTON, Feb. 18.—Cold weather and lots of it was what was most in view at the fifth serial prize shoot of the Boston Gun Club, held at Wellington to-day, and just 8 snooters braved the zero day to indulge in their favorite pastime of trap shooting. The consecutive break match was hardly worth calling one, Gleason being high with 8, which does not show any Fred Gilbert shooting, but then we had just as much fun, and all were more than satisfied with their afternoon's sport. Gleason was high in the prize match, closely followed by Kirkwood with 20, not a high score to look at, but circumstances alter cases. Other scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Frank, 18	4	6	3	7	3	3	7	6	5	7	4	..	..	..

Keystone—Baltimore.

PHILADELPHIA, Feb. 19.—The Keystone Shooting League administered a sharp defeat to the Baltimore Shooting Association on the grounds of the former, at Holmesburg Junction, to-day. The conditions under which the race was shot were eight men to each team, 25 live birds per man, thus making 200 birds per team. Keystone killed 164, Baltimore 150. This was a margin of 14 in favor of Keystone. Messrs. C. German, H. Ducker and E. Russell killed 23 each, high scores of the contest. This contest of the series establishes a tie. The shoot off is expected to take place some time next month. The scores:

Winchester Gun Club.

DETROIT, Mich.—After a let up in the zero weather and what looked like a fine day for shooting, a blizzard sneaked on Highland Park, and caught quite a bunch, but didn't stop them from shooting. Some good scores were made, but it was hard work to keep it up. Two tied in Class B and also in C, necessitating another 25 stunt in the cold.

Nearly everyone had trouble with their guns. The trap seemed to object to working on such a day, but it all only added to the big jolly time in the little club house.

Following are the scores, the 3d event at 20 yards, the 8th and 9th the trophy and club events respectively, and the 10th the shoot off:

Trap at Allentown.

ALLENTOWN, Pa.—The cold weather and stormy winds of the past two days interfered to a considerable extent with the shooters at the two days' tournament held at Griesemersville. The attendance of the second day was much larger, and the contests were livelier and more hotly contested. The local sportsmen entertained a number of visitors from New York, New Jersey and Philadelphia. The scores of Wednesday's events are as follows:

Wednesday, First Day.

Howard Schlicher, of Allentown, made the best average of the two days' shoot, and was awarded the first prize, a gun case.

Fred Coleman, of Heggins, Pa., made the second best average of the shoot and won a shell case.

C. F. KRAMLICH, Manager.

All-Nebraska vs. Omaha.

OMAHA, Neb., Feb. 14.—Nebraska at large proved too strong for Omaha at large, in a contest of skill at the traps on the grounds of the Omaha Gun Club, winning by a score of 216 to 212, only four birds in the lead, yet more than ample to decide the issue. This is the second victory of All-Nebraska over Omaha, the first one occurring in March last, and was close, though not so close as the last one, it being determined by a lead of seven birds.

The match to-day was close from start to finish, and the possibilities of winning or losing were not exhausted till the last pair had contested.

The return match is fixed for April 3, at Grand Island, and it is possible that targets instead of live birds will be used.

Dan Bray, of Syracuse, killed 25 straight, and held the individual honors for the highest score. Next came Sievers, of Grand Island, and Hindmarsh, of Lincoln, with 24 each. Frank Fogg of Omaha, and B-27, of Herman, tied on 22, each from ancient rivalry endeavoring to excel his opponent. C. Lewis, of Omaha, defeated Geo. Simpkins, of Lincoln, by a score of 21 to 19. The team captains, Townsend, of Omaha, and Carter, of North Platte, tied on 20. Loomis, of Omaha, and Linderman, of Weeping Water, tied on 23. Hindmarsh's opponent, Brewer, of Omaha, scored 19 to the former's 24. The others were: Sievers, of Grand Island against Burgess; Illian, of Albion, against Rogers; Schroeder, of Columbus, against Grant; Williams, of Lincoln, against Jones; Bray, of Syracuse, against Dick Kimball.

The birds used were unusually fast. There was not a single "no bird" in the lot. The day was a good one for shooting. Weather cold, but not punishing. Wind just strong enough to make it interesting; and the constant cloudiness prevented too much brightness.

Five hours were devoted to the live-bird race, commencing at 10:30. Afterward three target sweepstakes of 15 targets each (entrance $1.50 each) were shot. Carter, of North Platte, captured the first; B-27, of Herman, the second, and Townsend, of Omaha, divided the money with Carter in the third. The scores in the live-bird race were:

		All Omaha.	Nebraska.

Trap at Kansas City.

KANSAS CITY, Mo.—One of the many "get ready" shoots being held these days in Kansas City and vicinity, occurred Saturday, the 14th, at the Dickey Bird Park. A good deal of informal practice work was done, but the feature was a team series, in which the final and deciding heat was omitted for lack of time.

The event, therefore, was a pair of races between teams of four men to the side, each shooting at 25 birds. Each team got one heat, and the rubber was not shot. The top work was done by O'Brien and Riehl, who each scored 48. One team was captained by Ed O'Brien, and the other by J. W. Bramhall.

First Shoot—O'Brien's Team.

D Elliott	1111111111011111111010110—21
T Sims	0110110111111011000111111111—18
O'Brien	1111011111111111011111111111—23
F Cockrill	1111000010111111111111111111—20—82

Bramhall's Team.

F Smith	1100101011110110011101111111—17
F Reihl	1111111111111111111111111111—25
Gottlieb	0101110111111111111111111111—22
Bramhall	1101111110111100110101111—19—83

Second Shott—O'Brien's Team.

D Elliott	1111111010111101100111111—20
T Sims	0011101110110110111111111111—19

Bramhall	0111100111110011100101111O—16—74

Practice, 25 bird races: O'Brien 21, 23, 25, Reihl 19, 23, 21, Cockrill 19, 24, 22, Elliott 21, 20, 20, Bramhall 18, 22, Hearn 18, 20, Killey 21, 22, Gottlieb 21, 18, Smith 19, 18, Menona 20, 17.

KILLMORE.

IN NEW JERSEY.

Jeannette Gun Club.

GUTTENBURG, N. J., Feb. 20.—The snow added to the difficulties of shooting; the cold air added to the abundance of cool temperature, and the birds flew in the flewiest manner. Mr. D. Mohrmann won Class B with the only straight score made. Mr. G. Grieff won Class A in the shoot off with Steffens. Schumacher won C class with 4 out of 11, beating out Luhrman in the tie. Hainhorst won the club challenge medal.

N Brunie, 28	12121*2111— 9	C Thyssen, 28	2101220222— 8

Hudson Gun Club.

JERSEY CITY, Feb. 22.—At the shoot of the Hudson Gun Club the day was very cold; snow deep. Twenty-six shooters took part. The team race between the Hudsons and the Carlstadts was won by the Hudsons. This team did it: Schorty, Staples, Dudley, May, Fairmount, Duke, Pearsall. The Carlstadts: Von Lengerke, Krug, M. Rasmus, C. B. Smith, P. Rasmus, J. Vohrs and Gemp. Dudley won high average with 90 per cent. Wells and Staples tied with 81 per cent. Schorty was next with 78 per cent., and May was last to get in with 76 per cent. Scores:

HUGHES, Sec'y.

Max Condit.

POUGHKEEPSIE, N. Y., Feb. 21.—Once again has that grim harvester—death—entered our ranks and carried off one of our number. After an illness of less than two weeks Max Condit, at the age of 42 years, succumbed to-day to that dread disease, typhoid fever. Mr. Condit was one of the most enthusiastic members of the Poughkeepsie Gun Club. He was one of its charter members, and largely to his efforts, be it said, the club owes its present high standing. Up to within a few weeks of his death he had acted in capacity of captain. He was a conscientious, hard working member, always having the interest of the club at heart, and by his death is left a vacancy in the club that can never be filled. Those who were fortunate enough to be intimately acquainted with him have lost a good companion and a loyal friend. Mr. Condit was well known in shooting circles outside of Poughkeepsie. He was an expert trap shot and as such naturally had a wide circle of friends in the shooting fraternity that will be pained to learn of his demise. He was a true sportsman and a gentleman of such sterling merit that it was an honor to be known as one of those he called his friends. He leaves a widow to mourn his loss, and for whom the tenderest sympathy is felt in this, her hour of bereavement.

Gone to a land, from whence none returneth,
Together no more shall we roam.
Deep into our hearts our anguish burneth,
By effort we suppress a moan.
No more on earth shall we meet thee,
No more shall thy kind face be seen;
But, dear friend, we shall never forget thee,
Thy memory shall be ever kept green. W.

New York State Shoot.

The following circular letter has been sent to the parties directly concerned:

SCHENECTADY, N. Y., Feb. 18.—The Schenectady Gun Club has been obliged to give up the State Shoot this year on account of not being able to secure grounds for the tournament, as was arranged for. It is, therefore, necessary to call a special meeting of the New York State Association for the Protection of Fish and Game, to select another club under whose auspices the next convention can be held. You are hereby notified to send a delegate or appoint a proxy who will be present at a meeting to be held at Rochester, N. Y., on March 7 next, at Hotel Eggleston, Main street, at 3 o'clock P. M., for the above purpose. The representatives of ten clubs are necessary for a quorum. It is with deep regret that the directors of the Schenectady Gun Club are forced to take this step, and hope that some club will come forward and successfully carry on the tournament. Address all communications to Yours respectfully,

VALENTINE WALLBURG,

President Schenectady Gun Club and of New York State Association for the Protection of Fish and Game, 234 Union street, Schenectady, N. Y.

All communications intended for **FOREST AND STREAM** should always be addressed to the **Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.**

Granger Tournament.

GRANGER, Iowa, Feb. 14.—The one day tournament held by the Granger Gun Club, had 13 entries. The weather was cold, with a strong wind blowing from left to right across the traps. About 12 o'clock it began to snow, so a ttimes it was quite difficult to locate the targets after they had left the traps.

One event at 7 live birds, entrance $2.50, was shot in the afternoon. C. L. Holden won high average.

Cincinnati Gun Club.

CINCINNATI, O., Feb. 14.—The third contest for the Cincinnati Gun Club's cash prize contest resulted as follows: R. Trimble (21) 47, Kaintuck (18) 45, Ahlers (20) 42, Maynard (17) 42, Leever (16) 42, Don Minto (19) 41, Gambell (18) 40, Falk (17) 39, Roll (17) 39, Gross (20) 38, Corry (17) 38, Nye (18) 38, Herman (16) 37, Barker (18) 37, Butts (16) 37, Medico (18) 36, Faran (18) 36, E. Trimble (17) 35, McB. (16) 35, Block (18) 34, Ackley (15) 33, Boyd (16) 33, J. B. (16) 32, Miller (15) 28, Watterson (14) 22, Linn (14) 24.

PUBLISHERS' DEPARTMENT.

Tours to Los Angeles on Account of the Presbyterian General Assembly.

UNDER THE PERSONALLY-CONDUCTED SYSTEM OF THE PENNSYLVANIA RAILROAD.

For the Presbyterian General Assembly at Los Angeles, Cal., May 21 to June 1, the Pennsylvania Railroad Company has arranged three trans-continental tours at extraordinarily low rates. Special trains of high-grade Pullman equipment will be run on desirable schedules. A Tourist Agent, Chaperon, Official Stenographer, and Special Baggage Master will accompany each train to promote the comfort and pleasure of the tourists. All Sunday travel will be avoided.

The Pennsylvania Railroad is the only railroad that will run tours to Los Angeles on this occasion under its own Personally Conducted System.

NO. 1. ASSEMBLY TOUR.

Special train of baggage, Pullman dining and drawing-room sleeping cars will leave New York May 13, going via Chicago, Denver, and the Royal Gorge, stopping at Colorado Springs, Salt Lake City, and San Francisco, arriving Los Angeles May 20; leaving Los Angeles, returning, June 1, via the Santa Fe Route and Chicago; arriving New York June 5. Round-trip rate, including transportation, Pullman accommodations, and meals on special train, $134.50 from New York, $132.75 from Philadelphia, $128.75 from Baltimore and Washington, $120.00 from Pittsburg, and proportionate rates from other points.

Tickets for this tour, covering all features until arrival at Los Angeles, with transportation only returning independently on regular trains via going route, New Orleans, or Ogden and St. Louis, and good to stop off at authorized Western points, will be sold at rate of $109.50 from New York, $107.75 from Philadelphia, $104.75 from Baltimore and Washington, $98.00 from Pittsburg; returning via Portland, $11.00 more.

NO. 2. YELLOWSTONE PARK TOUR.

Special train of baggage, Pullman dining, drawing-room sleeping, and observation cars will leave New York May 12, going via Chicago, Denver, Colorado Springs, and Salt Lake City, with stops en route, arriving Los Angeles May 20; returning, leave Los Angeles June 1, via Santa Barbara, San Jose, San Francisco, Seattle, and St. Paul, with stops en route and a complete tour of Yellowstone Park; arriving New York June 23. Rate, including all necessary expenses except hotel accommodations in Los Angeles and San Francisco, $253.00 from New York, $251.25 from Philadelphia, $249.25 from Baltimore and Washington, $244.00 from Pittsburg, and proportionate rates from other points.

NO. 3. HOME MISSION TOUR.

Special train of baggage, Pullman dining and drawing-room sleeping cars will leave New York May 13, going via Chicago and Santa Fe Route, Grand Canyon of Arizona, and Riverside, arriving Los Angeles May 20, leaving Los Angeles, returning, June 1 via Santa Barbara, San Francisco, Salt Lake City, Royal Gorge and Denver, arriving New York June 11. Rate, including all necessary expenses except hotel accommodations in Los Angeles and San Francisco, $159.00 from New York, $156.75 from Philadelphia, $152.75 from Baltimore and Washington, $144.50 from Pittsburg, and proportionate rates from other points.

Tickets for this tour, covering all features until arrival at Los Angeles and transportation only returning independently via direct routes with authorized stop overs, will be sold at rate $121.00 from New York, $118.50 from Philadelphia, $116.00 from Baltimore and Washington, $110.00 from Pittsburg; returning via Portland, $11.00 more.

The tours outlined above have the indorsement of the officers of the Presbyterian General Assembly, and are designed to meet the requirements of those attending the General Assembly as well as those desiring to visit the Pacific Coast at a minimum expense.

Detailed itinerary is now in course of preparation. Apply to Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—Adv.

A Practical and Ingenious Plan to Encourage Diversified Manufacturing Along the Seaboard Air Line.

The Seaboard Air Line Railroad's Management with its wide awake General Manager, Mr. Barr, who is constantly devising new plans for the development of their territory, and the latest is certainly an ingenuous enterprise to say the least. They are having erected a large building that is to be fitted with power, and they propose to give floor space and power free of cost to skilled artisans in the Northern and New England States who will come down and start manufacturing enterprises of various kinds.

This offer is to be specially made through physicians North so that a preference may be given men who ought to come South on account of the health of a consumptive wife or child, and there are thousands of just such cases, and while the railroad is no doubt doing its work on account of the great benefit the stockholders will derive from it, yet it is worthy of the highest praise, for it will be the means of saving the lives of a great many persons who would otherwise have to stay up North and die. At a recent meeting in Boston, Mass., of the American Invalid Aid Society, composed of several hundred of the most prominent persons in that section, when the announcement of the Seaboard Air Line's plan was made, a shout of approval was given. It may not be the intention of the road to advertise its business, yet this enterprise will do more to inform the public that there is such a railroad as the Seaboard Air Line in the Southern States than any other one thing they can do, and there is no question but what it is going to bring to the line a large number of small manufacturing enterprises and at the same time call the attention of large manufacturers who may be seeking new fields in which to work.

The building is being erected at Pinebluff, N. C., and it is to be under the care of the Company's Agent, Mr. J. T. Patrick, whose headquarters are at that place.—Adv.

Florida—Thomasville—Augusta.

Atlantic Coast Line's famous trains, 8:55 A. M. daily. "New York & Florida Special," 2:10 P. M. week days. Apply at office, 1161 Broadway, New York.—Adv.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MARCH 7, 1903.

VOL. LX.—No. 10. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

There is a certain bird which is called the phœnix. This is the only one of its kind, and it lives 500 years. When the time of its dissolution draws near that it must die, it builds itself a nest of frankincense and myrrh and other spices, into which, when the time is fulfilled, it enters and dies. But as the flesh decays a certain kind of worm is produced, which, being nourished by the juices of the dead bird, brings forth feathers. Then, when it has acquired strength, it takes up the nest in which are the bones of its parent, and bearing these, it passes from the land of Arabia into Egypt, to the city called Heliopolis. And flying in open day in sight of all men, it places them on the altar of the sun, and having done this, it hastens back to its former abode. The priests then inspect the chronological registers, and find that it has returned exactly when the five hundredth year is completed.

—ST. CLEMENT.

SOME EARLY SIGNS.

THOUGH the calendar may tell us that spring has come, it sometimes strains our credulity a little to believe the statement. Too often the ground is white with snow, or if bare, rings like rock under the tread, while across streams and swamps and wet places run bars of ice which bind river and brook and marsh in an impenetrable armor.

This last first of March was different. Though the gale roared with proverbial fury, the sun shone bright and warm, and under the shelter of a lee it was pleasant to rest in the sunshine and gaze over the dull brown landscape, which a few weeks will transform to the loveliest green, dotted at first with the pale blossoms of bluets, sometimes standing so thick that it seems as though a piece of the cloudless sky had been transferred to the meadow, and for a moment one may actually imagine that he is looking at the sky's reflection in a little piece of water. Now the view shows but a monotone; sodden fields are brown, stone walls and rail fences gray, and alders and willows along the brooks that traverse the landscape are brownish gray. Yet if one can see the willows in mass, or can look over a wide extent of swamp where soft maples grow thick, the tips of the willows are seen to be turning green, while the maple twigs show a touch of red, which a few warm days will make almost brilliant.

In the depth of the swamps along the brookside, and wherever the mud is deep, the conical cap of the skunk's cabbage now shows an inch or two above the ground. Often it points directly to the sky, yet often again it is turned and twisted, its peak directed toward any point of the compass and its purple or yellow streaked glossy sheath unbroken by any hint of expanding bud. The skunk's cabbage is an humble plant, held in contempt by those who know it best, yet there have been known to come from the cities in early spring women of wealth and position—those belonging to the class to which the daily papers apply the absurd title "society people"—who, looking at the skunk cabbage, believed it to be a rare and beautiful plant, and grubbed up its roots and carried them back to cultivate in their window gardens in town.

To the sportsman the skunk cabbage is well known. He remembers how in the happy days gone by, when there were really birds, the timid woodcock was often routed out from his midday nap under its broad leaves; later in the season he has started the roaring partridge from covers where it abounded; and later still has killed Bob White, whose little crop was distended with its round berries. For some people the skunk cabbage has many associations.

On this first of March, 1903, that humble plant seemed the only sign of spring discoverable. The birds were few and only those of winter; an occasional group of half a dozen crows flew sadly across the dull brown fields and over the gray woods, with hardly spirit enough to call to one another at intervals. Along the brush-grown country lane a few scattering tree sparrows and blue snowbirds made themselves evident, flitting silently and furtively along in advance of the pedestrian. In the depths of the wood a downy woodpecker swung from tree to tree, clambering swiftly upward along each trunk stopped on, and apparently finding nothing to arrest his attention. Have he and his kind destroyed during the winter the eggs and larvæ of all the noxious insects in this bit of forest?

Could one have spent a day in the swamp with net and collecting can, no doubt an aquarium might have been stocked from the mud and water now just freed from its bondage of ice and snow. The turning over of stones would have revealed multitudes of frogs and newts and salamanders and all the marvelous brood of things—unseen by the average man—which during the long nights and cold days of winter sleep safely buried out of harm's way.

If on that day there was little of spring to be seen, at least one felt that nature was on the verge of a great change. In the protruding cap of the humble skunk cabbage could be read prophecies of the future: Warm winds, bright sun and gentle showers; green fields, opening flowers, the arrival of a horde of birds, brilliant in plumage and melodious in song. All these things the skunk cabbage foretells, and we may rejoice at its first appearance.

THE PLANK IN MASSACHUSETTS.

WE invite special attention to the extracts elsewhere printed from the report of the Massachusetts Commission, not alone because the showing there made demonstrates what was said in these columns last week respecting the condition of the fish and game interests of the Commonwealth, but because as well the discussion of the game supply affords such an instructive commentary upon the anti-sale of game system so long advocated by this journal.

When in 1894 the FOREST AND STREAM first submitted to the sportsmen of America its now famous Platform Plank—"The sale of game should be forbidden at all seasons"—Massachusetts was accounted one of the last States in which the system would receive support; for the Boston market was then, as it had long been, denominated the dumping ground of game which the laws of other States made unsalable in the close season. Boston was a depository for the game of the whole country, and in particular for the game of Massachusetts. The open sale meant, in hard, cold fact, the snaring of Massachusetts grouse for market in season and out. And so firmly were the market interests intrenched that the probability of a changed situation appeared extremely remote.

But three years ago the change came. Sportsmen and game dealers united in the indorsement of a measure which forbade absolutely, the year around, the sale of woodcock and ruffed grouse, or, as it is familiarly termed, "the old partridge." For the three seasons during which the law has been in operation, it has been well observed; and the results have been all that were expected. The partridge has been restored to sections where, under the open market regime, it had been snared practically out of existence. The general statement which the Commission's report makes of the improved grouse supply is substantiated by a mass of testimony from individuals, adducing experience and observation to show the restocking of Massachusetts' partridge covers; and the chief factor which is recognized as having contributed to this result is the enforcement of the rule that the bird shall not be made merchandise of.

The law will expire by limitation in July, but everyone is convinced of the wisdom and necessity of extending the system, and a bill is now before the Legislature to that effect. A hearing on the measure was held on Thursday of last week. It was remarkable for the large attendance from all parts of the Commonwealth, for the lively interest manifested, and for the unanimity of indorsement of the present law, and the determination that the system must be continued.

That which rendered the hearing most noteworthy and significant lay in the character of the attendance. If any need were to give the lie to the charge sometimes heard that the anti-sale law is class legislation, material to refute the assertion would have been found in abundance here. It was a remarkable hearing, writes one who was present, and distinctly emphasized the change in public sentiment that has taken place in the past three years. Not only did numbers of Representatives in the Legislature from various sections of the State speak for their constituencies in favor of the bill, but ex-Senators and ex-Representatives were numerously in evidence, as well as citizens interested as sportsmen or otherwise in the preservation of game birds. There was a slight difference of opinion as to the time the close season should cover, but this was only an incident, for the controlling desire for the main object of the bill—the prohibition of the sale of partridge and woodcock—was so strong that it was not difficult to bring all into line for the support of the bill introduced by the central committee of the sportsmen's clubs.

There was no opposition, and really not time enough to hear the indorsement of half of those who had traveled long distances in some cases to add the weight of their influence.

The gathering was notable for the large number of sportsmen present who were evidently not men of large means. This seemed to indicate that they appreciate what it means to them to have good hunting at their very doors, so that they can enjoy a day's outing with dog and gun as well as if they were millionaires.

THE ADIRONDACKS.

A ROUGH, mountainous country, unfitted for settlement, destined to be given over for all time to the wolf and the bear, and without value or benefit to mankind, save for the peltry and venison and lumber to be got out of it. This might well have been an early day estimate of the Adirondack region. That it would ever become the wealth-producing district of to-day could not then have been dreamed by the shrewdest and most prescient. The privilege of breathing fresh air was not then at a premium. The inhalation of balsam was not then something men would pay for. To kill a deer, to catch a trout, was not then a privilege for which the devotee was willing to travel hundreds of miles and pay hundreds of dollars in fares, board and boat and guide hire. The great health-seeking, sport-loving, pleasure-making army was unknown in American society. We may regret the shortsightedness which failed to foresee the new conditions; we may hardly censure our forebears and impute it to them as blameworthy that in their day and generation and according to their lights they were not more provident and conservative of the woods and the waters; and did not more intelligently serve in their turn as trustees for those who should come after.

The Adirondacks of to-day, in one phase of their commercial aspect, are admirably described in the statistical exhibit prepared by the Superintendent of Forests, Wm. F. Fox, and extracted in another column from the report of the New York Commission. There are here impressive figures. The volume of summer and autumn tourist business in the North Woods is measured in money by the millions of dollars. The hotels, with their accommodations for 27,500 guests, and the private camps and cottages represent an investment exceeding $10,000,000. The 13,000 persons employed in various capacities in caring for the 193,000 hotel guests, boarders, cottagers and campers earn more than $993,000 in wages; the sums received for railroad and steamboat transportation are put at $875,000, and the revenue for board, carriages, boats, etc., is more than $5,000,000.

LARGELY through the efforts of the Hon. John F. Lacey, of Iowa, the Committee on Public Lands of the House of Representatives recently made favorable reports on two or three bills affecting the forest reserves. The most important of these measures is that authorizing the President, in his discretion, to designate certain areas of the forest reserves, which shall thereafter be game refuges, within which the destruction of mammals, birds and fish shall be governed wholly by regulations to be established by the Secretary of the Interior. The session is so far advanced and there are so many legislative matters which for one cause and another are hanging fire, that at present there seems no prospect that this most important measure will become a law. It is bitterly opposed by at least one Congressman, who is the advocate of the sheep men, and who appears to hold the present prosperity of these people—many of whom are not even his constituents—superior to other people who are, even though the region over which the sheep feed shall become by their devastation a desert. To him the horseman, the cattleman, the rancher and the forester are all as nothing, provided only the sheep men are protected. These sheep men, by the way, are having a pretty hard time in these days in some parts of Wyoming, and it will be interesting to watch the progress of the contest that is going on between these destructive nomads and the hard working people who have established permanent homes in that State.

The Sportsman Tourist.

A Trip to Wyoming.

ON September 21, 1902, four determined sportsmen boarded the Chicago flyer of the New York Central Railroad en route for the happy hunting grounds of Wyoming. The party consisted of Mr. A. Kuttroff of New York, Mr. Carl Kuttroff of Stuttgart, Germany, Mr. Carl Buenz, and Dr. A. Caillé, both of New York.

Mr. K., alias the "Governor," carried the wampum belt, and the time-tables. He went hunting to recuperate from the exertions of managing a large business, and because he was flush, having just received his salary as director of various charitable institutions. His brother, alias "Big Germany," a retired army officer, had come here to "do" America, and we think he got his money's worth. Mr. B, alias "the Count," a noted German diplomat, who had personally conducted Prince Henry, and who was convalescent from the many dinners, went hunting for the purpose of casting off fourteen pounds of superfluous adipose tissue which had accumulated under the process. The Doctor went hunting because he doesn't know any better, having been raised in Iowa on the banks of the Mississippi, where his blood became tainted with forest and stream. Moreover, he is out of a job in the summer, as he has the knack of patching up his patients to last to Thanksgiving Day. He wasn't sufficiently steeped in crime to entitle him to a regular "alias," but on rare and festive occasions when the relations betwen him and the "Count" became delightfully strained, owing to a difference of opinion on the Monroe Doctrine, or the immortality of the soul, the Count would raise a warning finger and say in an impressive voice, "Beware, Iowa!" whereupon the Doctor invariably tendered a long-drawn peace protocol in the shape of a mild "Perfecto," and the affair ended in smoke, much to the satisfaction of the peaceful members of the party.

The Chicago flyer is a "cracker-jack," but a passenger who will stand on the rear platform of the observation car will be underground or under dust long before the train reaches the nearest suburban graveyard. Should this meet the eyes of the directors of the road we would suggest crude petroleum for the roadbed, as we want to go hunting again some day. At Chicago we were taken in tow by three of the loveliest men in creation, the Messrs. Miller and Mr. Poucher, business friends of our Governor. They gave us the freedom of the city and the courtesies of the Chicago Athletic Club and of the slaughter houses. At the Armour Company's establishment, where everything is saved but the squeal, we saw eight hundred hogs killed in one hour, and observed their progress and evolution into sausage, deviled ham and other delicacies. We think it unnecessary, however, that the hogs should be dropped alive into the scalding-vat, in which we have seen them swim about. Should this meet the eye of the jolly pig-sticker, he might oblige the pigs and do his work a little more thoroughly, even though Sarah Bernhardt, when she witnessed the slaughter, called it "grande and magnifique." The trip from Chicago to St. Paul, and from St. Paul to Livingston, Montana, over the Northern Pacific R. R., was uneventful. The train service and accommodations were very good. After crossing the Mississippi we traversed twelve hundred miles of prairie, into the region of the Bad Lands and the cowboys. Many of the railroad towns are prosperous in appearance. Others are simply a string of saloons with highfalutin names. The cowboys are either in the saddle or in the saloon. Their vault from the saloon to the saddle is less imposing than vice versa. At Livingston, Montana, we met our guide, D. B. Sheffield. It did not take us long to size him up as the right man. He has seen the ups and downs of life. He has been Indian scout and deputy sheriff and has hung seven desperadoes. He is a great hunter, and he hunts like an Indian scout day long without resting. He is passionately fond of Turkish cigarettes, which he calls "coffin-nails."

Ben had arranged to attend to the outfitting. Therefore, we had brought only our personal effects, and guns and ammunition. For the eight-day trip to our permanent camp, at Buffalo Fork, Snake River, Wyoming, we took a warm suit, an overcoat, and Arctics. We stopped over night at the local hotel in Livingston, and the next morning we took the local train for Cinnabar. Our train-ride was enlivened by the presence of the jolly delegation of Heinze politicians whose good humor was only exceeded by their capacity for fire-water and chewing tobacco. We were pleased to meet and make the acquaintance of Dr. Way, a local dentist, who left us at Jackson's Lake, and got two fine elk heads in that neighborhood all by himself. At Cinnabar we met the outfit, one spring wagon for the tenderfeet, two large transport wagons for tents, provisions, etc., eighteen horses, Jim the cook, Ed the packer, and two additional Wyoming guides, Smithy and Collins. We also took along three bear dogs. We soon came into the region of the sage bush and crossed into the Yellowstone Park.

At the Mammoth Spring Station, we were hospitably received by Major Pitcher, the reservation commandant, to whom we had cards and who introduced us also to Gen. Cobbé, of the United States Army. Our guns were sealed and we wended our way with a hearty "Good luck" from the Major. It is not the intention of the writer to describe the Yellowstone Park. Favored by the finest of weather, we traversed the hundred-mile park, getting into a higher altitude all the time until we finaly reached the great Continental divide, at an altitude of almost 9,000 feet. We crossed the divide three times, and drank water from a brook which flows in two directions, and ultimately reaches the Atlantic and the Pacific oceans. We met only one large hunting party coming out of the woods, and exchanged courtesies. This party had been very successful in getting game, and had a number of magnificent horns to show up. We afterwards learned that we had met the Rev. Dr. Rainsford, of New York, who is well known in this section as an advocate of outdoor life. We also exchanged greetings with a small party from the East who were traveling to Jackson's Lake. Two ladies in the party wore knickerbockers and rode astride, and had Nature's red roses on their cheeks from the exhilarating exercise.

We saw the spouting geysers by the hundreds, and boiling geysers and mud geysers in close proximity to hot streams and cold streams where the speckled trout wink the other eye and won't bite, else they might have been caught and boiled without taking them off the hook. We were lost in admiration of the beauties of the Yellowstone Lake region, with the green foothills, and the rocky iceclad mountain-peaks of the Teton Range in the distance. We camped wherever we found good drinking-water, and at night the horses were hobbled and allowed to shift for themselves, feeding on the succulent grass for which Wyoming is noted. On our long tramps, we sang and whistled and joked and acted for all the world like four overgrown schoolboys. The Count would frequently entertain us from his fund of personal reminiscence. He had traveled in all parts of the globe and had met Bismarck and kings and queens, and all kinds of big people. The Count is a most entertaining raconteur, and he is a great lover of the United States, its people and its institutions. Big Germany is a gentleman of quiet tastes, who had seen service in the Franco-Prussian war. He was the best shot of us all, and what he did not know about the guns and the ammunition of all nations and of all times wasn't worth knowing. But when it came to sizing up the potential energy of a beautiful hand in cards, he was "vis a vis de rien," and if we had played for money he would have been compelled to pawn his watch and wearing apparel at the ranch of Hell-roaring Jack, which was the first ranch we struck after leaving the Park. Our Governor, on the other hand, was not averse to a little game of cards, and his score was as high as the electric peak of the Rockies. He usually acted as the moderator in our party. He never lost his patience, and his authority was never disputed. But he also had his failings. He could tell in the darkest night the time of day by pressing the button of a fine repeating watch, and he would urge us to get up and wash up in icy water long before the coyotes about the camp had got through howling for breakfast.

At Jackson's Lake we settled down for a few days. It was at this camp that we first had occasion to admire and praise the culinary art of our cook, Jim. Heretofore he had regaled us with tin-can fodder and the eternal sowbelly. Now the menu ran as follows: Trout, venison, partridge, rice, prunes, French potatoes, Spanish pancakes with maple syrup, coffee, tea. Oh, such food, and oh, such appetites! We certainly loved Jim. His good-natured "All together now" will never be forgotten, and if Jim would only leave whisky alone in the winter he would be fit to walk right into the halls of Congress.

At Jackson's Lake the party had its first general cleansing bee. A small army tent was rigged up as a bathroom and barber shop, with a real live fire to make it comfortable, and each man trotted out his rubber bath-tub. Iowa had the best tub, because it was a corrugated, straight-front affair, it could stand on its own bottom, and held water without coaxing and swearing, and without slobbering all over the ranch. The other tubs had the falling sickness, and would neither sit up nor stand up. They were measly, flabby tubs, had probably been fed on the bottle, and had had no tonic management during childhood. They would lie right down and go to sleep, and slobber all over. Their owners, finally, spotted a trail to the Snake River, and performed their ablutions there, while His Excellency so far suppressed his dignity as to get on a friendly footing with a common tin washboiler. In due time we broke camp again and traveled south for two days, finally reaching the permanent camp at Buffalo Creek, Snake River. It was an admirable spot for a camp. To the right was the creek, which gave us the best of water, and beyond the creek were the green foothills of the mighty Teton Range. To our left was a mile of prairie, with other hills and the happy hunting-grounds beyond. We now got into hunting trim, warm clothes, warm gloves, lumbermen's socks, hob-nailed shoes, and we split into two parties. Ben and Smithy started out with the Count and the Doctor; Collins guided Big Germany and the Governor.

First day's hunt: Party No. 1 saw six elk and came home empty-handed. Party No. 2 missed an elk, but Big Germany shot a coyote at long range, making a record shot.

Second day: The Count missed a bull elk and started a herd of about four hundred elk, who passed us in full view, flying down the mountain, a most magnificent sight. Toward evening the Count killed a fine twelve-prong elk with a single shot at 150 yards range.

Third day: Elk were seen by both parties, but were out of range.

Fourth day: From 3 p. m. to dusk elk whistled and bellowed all around us. The woods were full of elk and elk music. We jumped bunch after bunch without getting a shot. However, at 4 p. m. the Doctor secured a fine head at 200 yards range by a regulation shot. The animal ran a hundred yards and started to go for us as we approached. He was killed by a second shot. At 6 p. m. on the way home Big Germany killed at long range a magnificent great elk with fourteen prong horns, and at the same time the Doctor got his second elk, a twelve-prong animal, by a shot through the neck and another through the chest. Both animals were standing on the brow of a hill and showed no fear nor inclination to run.

The fifth day was spent in photographing and skinning the animals, and no live animal was seen on that day.

On the sixth day our Governor had his inning, and secured a very fine twelve-prong animal. Two more days were spent in this neighborhood, but the animals were shy and wary and would not break from cover.

Elk are found in this region in the green timber, in the fallen timber, or in open places called parks. The hunting is done on horse or mule and is mostly up and down hill work. The inclines are often steep, and it requires a sure-footed animal to get over the ground. In many places we traveled over snow. To be ten and twelve miles from camp after dark, and to find your way over a number of steep ridges, and through almost impassable fallen timber, and dense underbrush, is a proposition which is trying, to say the least. But Ben knows every inch of the ground, and safely brought us back to camp every night without a mishap other than a few bruises and scratches and broken eyeglasses, which are a nuisance on a hunt. His horses and mules are wonderfully trustworthy and broken into the business.

During our stay in this camp we had a few visitors. A squaw-man with his Indian wife in a red petticoat came to our camp for meat, and two game wardens looked us up to see that we had licenses and that we obeyed the law. The deputy warden was polite and mannerly, but His Royal Nibs, the chief, a big six-footer, with guns all over him and an ingrown nail in his conscience and a streak of yellow in his nature, was not so pleasant. He remarked that Wyoming was not hankering after sportsmen from the East, but he could not explain why under those circumstances they accepted forty dollars license from each sport and his logic was seven pounds lighter than a straw hat. He soured on us from the start. In vain the Count tried to explain to him that he was only a fly-speck on the wheel of time. In vain Iowa invited him into the tent to partake of good cheer and stay till after tea. We hope that he will continue to prosper and leave us his skull when he no longer needs it, as we are anxious to secure that ingrown nail. Should this meet his eye we expect him to take us good-naturedly and have a hearty laugh over the matter, for we want to go hunting again some day and are not yet ready to be done up by mistake and meet our ancestors in heaven.

Our experience with the game warden need not deter others from coming here to hunt. In a few years at the utmost elk will be scarce or extinct unless the Government should see fit to protect them by restricting a certain territory so that the animals will have a winter range for feeding where they will not be molested. As it is, elk are slaughtered summer and winter, and thousands die from starvation every winter. Elk are killed for meat, for horns, and for their teeth. The teeth bring from two to twenty dollars a pair, according to size and color.

Bear are plentiful here, but the proper time to hunt them is in May. Our bear dogs were not in action at any time, because we found no bear tracks in the neighborhood of the carcasses of our slain animals.

We now moved our camp once more, and traveled north to spend the balance of our time fishing and hunting for ducks and geese and partridges near Jackson's Lake. This country is truly beautiful. The foothills of the grand Teton Range with its eternal ice and bold crags, dip into the clear water of the lake which abounds with fish, large and small. The writer and his friends had a glorious time trolling for fish with a No. 6 spoon hook. The trout caught weighed from one to twelve pounds, and we caught more large than small fish. The largest trout caught measured twenty-seven inches, and we also caught four land-locked salmon in this lake just at the inlet of the Snake River. Ducks are plentiful. Geese and loons are frequently seen, but are foxy and very difficult to get. There are a great many hawks throughout this neighborhood. Mountain sheep can be had here, but it takes a living skeleton to outclimb them. Antelopes are further south. The quaking asp with its variegated autumn leaves gives character to the scenery.

During our stay here we had an increase in the family in the shape of a little eleven-year-old girl who was brought to our camp from a neighboring ranch where she lived alone with her father. We were requested to take her to Chicago and leave her in care of a rich Chicagoan who had been in this neighborhood on a hunt and had offered to give the child a city education. Little Catharine is the daughter of a ranchman who was at one time the companion of a Mr. Hamilton from the East who was accidentally drowned at Jackson's Lake on a return trip from an antelope hunt. We agreed to see the little one safely to Chicago, and under the fatherly care of the Governor, who always had a piece of chocolate handy when the child appeared homesick, and the jolly friendliness of the Count, she was content and happy to remain with us. Ben rigged her up a "chambre séparé" in the tent, and in the morning the Doctor was handy in grooming her into shipshape, braiding her hair and otherwise attending to her little wants. She was dressed in overalls and rubber boots, and her frail body was not well protected in cold weather. But we were finally able to replenish her wardrobe from our own stores and make her comfortable.

We were due at Livingston on October 23, and broke camp for the eight-day home trip at the proper time. On our way home we stopped one night at the Allen Ranch, where we each had a comfortable room and a real bed which was quite a treat after our camp life. We traversed the Park again, taking a more easterly road and saw hundreds of elk, some coyotes, and many ducks, birds and geese. We visited the Cañon of the Yellowstone, which is a sight so beautiful and grand that it alone is worth the trip. In due time we arrived at Livingston without a mishap and in the best of health.

On our hunt we bagged six elk, one coyote, four mink, and any quantity of fish and small game. We saw fully six hundred elk during our trip. As regards our guns it may be of interest to know that we had one 9 mm. Mauser, one 8 mm. Mauser, one 33-caliber Winchester, and one German triplet gun (two barrels for shot and one rifle barrel combined). Big Germany and the Count had a telescope attachment for their guns, but, whisper it softly, it was no good for game shooting. We also had shot guns. We discovered a peculiarity of the black-tailed deer, inasmuch as they always wiggle their tails before they intend to run. Therefore, the best time to shoot them is before they wiggle their tails. We throw this out as a hint for the benefit of other sportsmen. We were disappointed in not getting bear, but we each ordered a silver-tipped

grizzly bear skin to be sent with our trophies, and unless this article is read by some members of our respective families, our loved ones will revel in the possession of a bear skin that "Pop shot." At Livingston we made the acquaintance of a prominent business man, Mr. Miles, and his "silent partner." This silent partner is a petrified man who was found in the mud flats of the Missouri River by a cowboy, and is supposed to be the petrified body of an ex-Governor of Montana who disappeared suddenly. There is a bullet hole in the head and the arms are tied with thongs. The entire body is of stone or concrete; and is almost absolutely true to nature. It will be exhibited at the St. Louis World's Fair, and it is well worth seeing at two "bits" a see. In discussing the anatomy of the human body, the Doctor demonstrated to his companions that three spans of the hand will reach from the chin to the pubic arch. The "silent partner" was not up to the standard in this, as well as in a few other anatomical landmarks; but as a work of art he is a howling success.

As stated before, our trip was devoid of accident, although the Doctor had elaborately prepared himself for all kinds of surgical emergencies. At Livingston, however, we struck a snag. The Count received a small cut in the face from a razor in the hands of a local barber, and the bleeding from this little wound was so profuse that the services of three local practitioners and two apothecaries were needed on the spot to cheek the hemorrhage. In this emergency, of course, Iowa was nowhere to be found, and so missed the chance of his life of getting an official decoration. The presence of our noted German was recognized whereever we went. In the woods a ranchman traveled miles to shake the hand of "Prince Hohenlohe"; and at the railroad station at Gardiner a delegation of Germans were waiting to shake hands with "Prince Henry"; and in Livingston a patriotic Austrian butcher whose elegant shop we inspected as we strolled through the town, was so delighted when our Count's cognito was revealed to him on the quiet by the foxy Ben that he presented each one of us with a fine Bologna sausage, which we devoured, all but the string, in a neighboring restaurant, where we were able to get ale and crackers. Before traveling East we visited the mining town of Butte, the noisiest place outside of New York. The miners work in three shifts of eight hours each, and the town is open all night. The political fight between the Heinze and Clark factions was at its height when we were there and good whisky is 25 cents a drink. We were shown through one of the mines and descended twelve hundred feet. Before we entered the mine we were required to sign a slip exonerating the company in case of accident. After we were shot down twelve hundred feet and had stumbled over any quantity of dynamite in our passage from one ledge to another, we were able to understand why the company had taken such interest in our welfare.

We also visited the various smelting works. Butte is a great town, not one blade of grass grows anywhere, coppery water from the mines flows all over, and little boys in the streets, instead of playing "craps" as they do in New York, hunt up old tomato cans and dip them into the copper water for pastime. After a little while the can comes out the color of an Indian. On our way East we were delayed five hours by a hold-up, the engineer was killed, and the express car blown to pieces by dynamite, and rifled. The passengers were not molested.

We stopped at Livingston long enough to gather up little Catharine and her satchel. She was now in regulation dress, and had already acquired the jaunty walk and manners of little girls. We delivered her in good shape to her protectors in Chicago, and some day perhaps this little waif will shine in the drawing-rooms of fashionable people and will be presented at court.

After taking in a theater and the Horse Show at Chicago, we boarded the Pennsylvania Limited, and got to New York over a track saturated with crude oil and lined with hundreds of coal trains heading East. Everything has its end, and so has this trip and this story. But the Livingston sausage had two ends. Here are a few parting reflections.

If you are downcast, go hunting.

Ditto if you are jolly.

If you are thin and lean, go and out-climb the mountain sheep.

If you are fat, purchase a pound of Carlsbad salt and go to Wyoming instead of to Carlsbad.

If your wife or daughter has nervous prosperity, take her along. Ben Sheffield has accommodations for man and beast, both sexes, and Wyoming is Nature's sanitarium.

A. C.

Adirondack Summer Business.

From the report of William F. Fox, Superintendent of New York State Forests.

THE business done each season by the hotels and boarding houses in the Adirondacks contributes largely to the development and prosperity of northern New York, fairly approaching in its magnitude that of the great industries which are dependent on the forest product of that region. In the management of this business employment is furnished to thousands of people, trade is stimulated by the large purchases of supplies, building operations increase the demand for skilled labor, while the railroad and steamboat lines reap the benefits accruing from the large passenger and freight traffic. Of more importance, however, far greater in its humane aspect than mere commercial advantages, are the sanitary benefits afforded by the Adirondack forests to the thousands who there find relief from disease and enjoy a new lease of life. The healthful climate is due largely to the pure air which, carried by mountain winds over great forest areas, is freed from dust, smoke and miasmatic influences, while in its course it is charged with balsamic exhalations that carry healing to the lungs of invalids.

The statistics published in the annual reports of the Adirondack Cottage Sanitarium show a remarkable percentage of cures effected in patients suffering from incipient consumption; and a large proportion of the population in some of the Adirondack villages is composed of people who enjoy comparatively good health in that climate, although they could not live long elsewhere. Of this class many find employment in various vocations, while others, whose incomes will permit, maintain a permanent residence there without engaging in any business or occupation.

Summary of Hotel Capacities in the Adirondacks.

Clinton County, 2,153; Essex County, 7,799; Franklin County, 4,626; Fulton County, 410; Hamilton County, 2,395; Herkimer County, 2,415; Lewis County, 510; Oneida County, 180; St. Lawrence County, 1,223; Warren County, 2,151; Lake George, 3,640; total, 27,502.

In August the hotels and boarding houses, with few exceptions, are filled to their utmost capacity, and the total just given—27,502—indicates closely the number of guests in the Adirondacks at that time. With these figures must be kept in mind, also, the equally large capacity of the private "camps" and cottages, each occupied during the season by some family and its guests. But the summer boarders are coming and going from June to September, staying on an average about two weeks each. In the White Mountains, an exhaustive census of the summer people and the hotel business shows that sixty-two per cent. of the arrivals remained less than one week. A careful estimate of the total number of summer visitors from the beginning to the end of the season, as reported by the Adirondack hotels and boarding houses, to which are added the occupants of private camps, shows that 193,681 people went there last season for recreation and health. This includes, also, the sportsmen who went there in May for the fishing, and in October or November for deer shooting.

That this number is not an overstatement is evident from the information kindly furnished this office by the general passenger agents of the New York Central and Delaware and Hudson railroads, from which it appears that 225,000 passengers were carried on the Adirondack divisions during the summer season. These figures do not represent the entire passenger traffic during that period, but the difference obtained by deducting from the total summer traffic an amount equal to that of the winter months, the difference evidently showing the number of summer boarders, hotel employes, and sportsmen on their way to and from the woods.

The following statistics are based on the returns made to this office by each hotel and boarding house in the Adirondack region:

Volume of Adirondack Business.

Capital invested in buildings, furniture, boats, horses, carriages, etc., not including land:	
Hotels and boarding houses	$7,037,923
Private camps and cottages	3,846,500
	$10,884,423
Number of male help employed—clerks, porters, cooks, bell boys, musicians, boatmen, stablemen, drivers, laborers, etc.	3,461
Number of female help employed—waitresses, chambermaids, cooks, laundresses, musicians, telegraph operators, typewriters, etc.	9,846
	13,307
Total wages paid	$993,530
Total number of hotel guests, boarders, fishermen, hunters, and occupants of private camps or cottages	193,681
Cash received for board, carriages, boats, etc.	$5,213,210
Cash received for railroad and steamboat fares	875,000

It is not claimed that the foregoing figures are absolutely correct, as the statements made by some of the hotel proprietors and boarding house keepers in filling out their returns were at times somewhat confused and indefinite; but they will give a fair idea of the stream of wealth that flows into northern New York each summer, and which conduces so materially to the development and prosperity of the State. It is well to note, also, that a good share of the patronage comes from people who reside in other States, and that the profit derived from their business furnishes a revenue that is especially valuable in that respect. And the continuance of this business, with all its accruing benefits, is dependent on the preservation of the Adirondack forests.

The average wages received by the employes, and the average amount paid by guests, may seem too small unless one keeps in mind the short season during which it is necessary for the Adirondack hotels to employ their help, and the short stay of a very large proportion of the summer boarders. In connection with the preparation of these statistics the following letters containing interesting and valuable information were received:

Gen. Pass. Agent J. W. Burdick, of the Delaware & Hudson Co., writes: "A careful examination of our passenger traffic statistics made with reference to ascertaining, as nearly as possible, the number of passengers carried and the revenue derived from strictly pleasure and recreation travel to the Adirondack region (in which are included Lake George and Lake Champlain) during the season of 1902, discloses that this traffic approximates closely to 175,000 passengers and $475,000 passenger revenues to the company. We estimate that about 60 per cent of this traffic originates in other States. These estimates do not include the freight and express companies' earnings.

"It is apparent to those who have kept in touch with the remarkable development of the health and pleasure resort region of northern New York during the past ten years that the State has in that country an asset of almost incalculable value to its citizen in its power to attract revenue to its farmers, its merchants and its hotel and transportation interests. As one who in connection with his avocation has made a life study of the best means of developing health and pleasure-travel resorts, I would suggest that the best investment the State could make in this direction would be the construction of a model system of highways through its Adirondack domain, affording means of easy communication between points of interest to the tourist, somewhat after the policy adopted in Switzerland, in the Austrian Tyrol, in the mountainous tourist region of Norway and through the White Mountains of New Hampshire. If this were done it would result in a great increase of travel, not only from other States, but from Europe as well, and I believe that the roads could be properly maintained by tolls without further expense to the State than their initial cost."

Gen. Pass. Agent George H. Daniels, of the New York Central, writes: "Our auditor has made an examination of our reports, and approximates the following figures covering business for three months of the summer:

	Passengers.	Railroad fares.
Adirondack section	100,000	$400,000
Thousand Island section	50,000	160,000
Niagara Falls	160,000	170,000
Catskill Mountains	85,000	155,000
	395,000	$885,000

"This information, of course, can only be given approximately; but this will afford an opportunity for the people to get some idea of the development of the Adirondacks and other resorts, and what it means to the transportation and hotel interests in the State at large. A large amount of this business comes from outside the State.

"The aggregate number of tourists carried by all lines, and the amount of money spent by them for railroad fares, hotel and boarding accommodations and incidental expenses, amounts to a large revenue to the transportation lines and residents of the State. It is worthy to be recognized as a business, and its possibilities of development should command attention."

The large amount of summer business done in the Catskill region, as indicated by the figures in Mr. Daniels's letter, is also worthy of consideration in discussing the great advantages accruing to our State from its forest districts.

Natural History.

Protective Coloring.

Editor Forest and Stream:

In your number of Jan. 31, Mr. Francis Moonan quotes Mr. Paul Fountain in a discussion of the question, "Is protective Coloring a Myth?" in which Mr. Fountain pronounces an adverse decision on the question. Mr. Moonan thinks that Mr. Fountain "has made out a very strong case" in his argument contra, but also thinks "he has not gone deep enough or far enough."

While Mr. Moonan's observations on the question at issue are interesting, and true as far as they go, it strikes this writer that neither has he "gone deep enough or far enough" in handling his subject.

The difficulty in the case of Mr. Fountain, and perhaps of Mr. Moonan also, is that the subject is contemplated from a fundamentally wrong standpoint. Mr. Fountain still adheres to a view that was once universally held, but which has now become obsolete among the generality of advanced thinkers and educated people; which is, that nature, as we find it, with all of its vast array of ramifications, interrelations and variations, was foreordained and prearranged, and has crystallized in its present forms and attitudes for all time, which forms, indeed, have been maintained from the beginning of mundane affairs; that all terrestrial existences were so arranged by the Creator with a view to perfect harmony throughout, and the inharmonies we observe in nature's domain are not so in reality, but only so in appearance, as a result of the dullness of our perceptions, etc. Moreover, the most important feature in the scheme was the homopocentric idea, that everything was so arranged with a special view to man's presence and dominion over all.

This doctrine of foreordination was preached by Col. Alexander several years ago under the symbolism of the "blue print" theory.

All of the obfuscations and perplexities in the interpretation of nature's ways disappear at once when we dismiss the Hebraic theory of sudden creation with its homopocentric implications, and fully grasp the ideas of life development that are now generally accepted by the enlightened world as axiomatic, that of the gradual evolution of all life forms, under the controlling law of "the survival of the fittest."

The keynote to a comprehension of the whole situation is to be found in the recognition of the principle that everything to be found in the animate world, is as we now find it, simply a result—a result of the action of a multitude of agencies of environment during countless generations of development.

The rattlesnake's fangs and venom were developed without reference to the destinies or fortunes of man, but purely for the snake's purposes; so were the claws of the feline families and the talons of the hawks. The pulp that surrounds the peach kernel was not evolved especially for the delectation of man's palate, nor the meat that envelops the egg germ for his nutriment, but for that of the embryonic chicken. Myriads of these things grew and perished long before historical man appeared on the scene.

Any sportsman who has looked in vain for a covey of partridges before a pointer's nose, on nearly bare ground, or has had a coiled rattlesnake pointed out to him and looked straight at it for five minutes before he could see it, must recognize the existence of protective coloring in these and many other cases,

The cases where protective coloring is conspicuously absent are no argument against its development where its existence is obvious. Such cases mean simply that protective coloring in those objects was not necessary to survival, or, that the colors were developed ages ago, under very different environment, when more essential to survival.

But there are other influences besides protection that have exerted much force in the development of colors throughout the animal kingdom, all tending to the welfare of the various species involved.

The predacious beasts of the feline family, as well as many venomous serpents, are accustomed to lie in wait for their prey or creep stealthily upon it, the ferocious outburst, "the fatal roar and rush" noted by Mr. Fountain, coming only when the victim has come within easy reach. In these cases colors assimilating to the surroundings give an obvious advantage to the pursuer. Another powerful influence in the development of colors in the field of ornamentation is the principle of "sexual selection," resulting in many cases in gorgeous colors in the male, with more or less faint reflections in the female by inheritance.

As regards the colors of eggs, as Mr. Fountain has pointed out, the fact that many of them are contained in conspicuous nests that advertise their presence, precludes the protective function of coloration, therefore protective coloring has not developed in those cases, which is manifestly true, but does not disprove it in other cases where its existence is equally manifest. The parents themselves seem to supply such measure of protection as is necessary to survival of the species. In those eggs, such as fishes', as well as many kinds of seeds, that are especially liable to destruction, nature has made lavish provision in multitude, for the survival of sufficient numbers. When we scrutinize the phenomena of nature and endeavor to assign reasons for this or that development in living forms, we can only hope to do so in a comparatively few cases of unusual plainness, or, in a general way, reasoning by analogy from the known to the implied; bearing in mind that our period of observation on nature's processes is a mere speck of time, so to speak, at the latter end of incalculable ages during which these processes have constantly progressed with the exceedingly slow movement that characterizes nature's secular operations of vast duration, many of these agencies that shaped the results we see having long ago passed out of existence, or ceased to operate on these particular objects that present to our observation apparent anomalies.

Until a few decades ago mankind looked at nature through spectacles that distorted everything most fantastically, all views and beliefs on the subject being based upon the unquestioned assumption that all the objects in our contemplation in the entire universe were suddenly created out of nothing a few thousands of years ago; that our little planet was the "universe," with the sun, moon and stars as mere adjuncts, and that man was the great central figure, with reference to whom all things were created.

Under these notions that have now happily become antiquated and are fast fading away before the light of modern knowledge, that were the concept of ages of ignorance and were perpetuated under the tyranny of dogmatic teaching, it was necessary that the entire scheme of nature should be in harmony therewith. Hence innumerable difficulties and perplexities, in reconciling palpable anomalies that arose on every hand; as the existence of a great many agencies that are inimical to man's welfare, such as venomous serpents, numerous deadly poisons, insect pests, nettles and thorns, and ferocious beasts; also the manifestation of harshness, cruelty and suffering, that are all pervading in nature's processes—the strong everywhere preying upon the weak and inflicting unnecessary pain, "vivisection" being the predominant feature throughout nature's vast machinery for perpetuating life through the means of death. Those sentimentalists who are waging clamorous war against vivisection in the interests of science and for man's great benefit, probably have not reflected that none of nature's children are permitted to die a peaceful death, but in the ordinary course of nature all must die by natural vivisection or something nearly akin to it.

The old school of cosmogonists had nothing better to offer by way of explanation of the all prevalent evils that pervade the whole of nature's domain, than that it was "all for the best if we only had eyes to see it rightly," and that everything was designed for the good of man, etc., in spite of the dictates of our reason; thus appealing, as the court of last resort, to—Ignorance.

COAHOMA.

Ducks Killed in a Storm.

CURRITUCK, N. C., Feb. 24.—*Editor Forest and Stream:* On Monday night of last week, Feb. 16, the north end of Currituck Sound and Back Bay, Virginia, was visited by a genuine western tornado, destroying some human lives and much property at Mundens Point, Virginia.

The storm did not stop at the destruction of men and houses, but killed over five hundred redhead ducks. How such a thing could be possible seems very strange to me. They were first found floating on the flat beach by Life Saving Crew No. 5, between No. 5 station and the Princess Anne Club. On the sand beach about half way from the bay to the ocean, something over five hundred were found, but there were probably many more killed, as some have been found since washed ashore from the ocean. This is a hard story to believe, but any "doubting Thomas" may be convinced by asking any man within 20 miles of that place, as they were gathered up and sold or eaten by many different people. I should like to hear through FOREST AND STREAM if any such things ever happen in the West during the severe storms that visit that country.

Ducks of all kind are still abundant at Currituck and we will no doubt have good shooting up to the last day, March 31.

Our gunning season opens next year on November 1 instead of November 10, as formerly. There is another change in our new laws which I think will help to keep our ducks with us longer. The battery shooters are not allowed to sail after or disturb the ducks after the batteries are located, but are compelled to anchor and "pick up" in rowboats. This will give the game a chance to remain in the Sound instead of being compelled to go over into the ocean as now. There are no other changes of importance.

MORE ANON.

[The destruction of the redhead ducks by the storm is interesting, and would seem to require explanation. We have never heard of anything precisely similar in the case of ducks, but a few years ago something quite like this is reported to have taken place in almost the same locality with swans. In other words, a considerable number of swans—twenty or twenty-five, if we recollect aright—were picked up apparently drowned on the outer beach, at no great distance from Currituck light house.

The destruction of these swans seemed to be explainable in this way: They had gone out to rest on the ocean, and a sudden wind raised a high and breaking sea before they attempted to take wing. It is a familiar fact that swans rise from the water against the wind and at a very acute angle, running along the surface and striking the water with their feet and the tips of the wing for a considerable distance. It is perfectly conceivable that, in a high sea, swans attempting to rise would, before getting far above the water, be met by a coaming wave and crushed down under it to the water again. This might do them no especial harm the first, second or fifth time it took place; but if continued long enough would undoubtedly drown the birds.

Something of this sort may have taken place with these ducks. A sea made up of short waves would perhaps knock them down again and again before they had risen much above the water; or, again, it is conceivable that the wind was too strong to permit them to rise at all, and that they drowned by being overwhelmed in a choppy sea. A fresh water duck which rises from the water by a sudden spring would not be exposed to such a danger. It is well known that most ducks do not like exposure to the wind and to a heavy sea, and that rough weather causes them to seek a lee if possible.

We should be glad to hear the views of correspondents on this matter.]

Ungracious Didymus.

Editor Forest and Stream:

Let me express the opinion that friend Didymus is slightly ungracious in his acceptance of that squirrel story. Now, as I very well know, that story is a direct importation from Sander's Third Reader of forty years ago. Already the story begins to show the inroads made by such doubting Thomases as Didymus. In those old days, when the migrating army came to any considerable stream, they scattered in the wood and each returned with a piece of bark which they cast into the water and jumping upon it hoisted their tails and sailed across. What a pity it is that the squirrels should have abandoned this very pretty part of the performance and in so short a time, and all because of the tendency of rude doubters. If we are to continue to oppose our own experiences and observations to written history, we shall soon have no written history left.

Didymus has admitted that squirrels migrate. If they migrate they must cross streams, and having dropped the bark part of the tales, they must swim, and all the rest follows as a matter of course. Anyone who has ever gathered a live animal or bird out of the water from a boat will wonder how so many bags and baskets could be filled in that way. How a squirrel would dodge and twist and how the boatman would grab and miss and grab and miss again. By the time he had picked up one squirrel the rest would be several miles up stream. Of course the exhaustion of the squirrels will be pleaded, but a squirrel that can't give one kick just as you reach for it is very far gone, indeed, and would soon drown, in which event they would sink in most cases. A dead squirrel does not float like a dead duck. But this only shows the fallacy of reasoning as opposed to history.

Didymus puts me in mind of the prompter of a certain clergyman who, knowing his weakness for drawing the long bow, had appointed one of the deacons to cough when he got to putting it too strong. One day he was telling the story of the foxes and stopped to remark that "in those days foxes had tails forty feet long." The deacon coughed and he promptly took off ten feet. The deacon coughed again and another ten feet was dropped; another cough and another ten feet followed, but still the deacon coughed. The clergyman looked perplexed and said: "I can't do more. It would never do to have foxes without tails." Does Didymus expect the squirrel to give up his whole beautiful tale in the short space of forty years? If he coughs again, give him a broadside of Sander's Third Reader.

This squirrel story seems more suited to the pages of the Youth's Companion than to those of stately old FOREST AND STREAM, but it enables us to "touch hands," which is the main thing.

E. P. JAQUES.

DURHAM, Kansas.

Bird Destruction in Egypt.

IN a recent number of the Journal of the Khedivial Agricultural Society, Dr. W. Innes calls attention to the continuous diminution in numbers of some of the useful birds occurring in the neighborhood of Cairo, Egypt. Certain species are being wantonly killed off in such numbers that serious injury to agriculture is likely soon to be felt. Many species of birds, and especially the birds of prey, are highly beneficial. Yet these last, particularly, are growing scarce. Another species which has been totally exterminated is the so-called cattle-egret. A few years ago this species was abundant in marshy territory, and was often seen following the plow of the husbandman in search of the insects which he turned up. Dr. Innes says "This bird was so common in the past and did so much good that many travelers confounded it with the sacred ibis of ancient times. Although its flesh is poor this bird has not escaped so-called sportsmen who kill it simply for the sake of killing." Dr. Innes urges the authorities to take immediate steps for bird protection, declaring that if something of this sort is not done, and efforts made to renew the supply of these insect eaters, other and expensive methods of destroying noxious insects must be taken.

Death on the Telegraph.

BOURNEMOUTH, England, Feb. 9.—*Editor Forest and Stream:* I am no electrician, and I write under correction with reference to your interesting notes that have lately appeared in your most attractive paper—how singular that there should be no sporting weekly on the same chatty lines in this country!—on birds being killed by joining two telegraph wires. But, seriously, would either the current be powerful enough to kill them, or, even if it were, would their bodies short-circuit so as to divert the current from its easier course along its own wire? I doubt, but I am ready to be convinced.

F. G. AFLALO.

[We are as much in the dark as our correspondent on the point about which he inquires. Birds are commonly killed by flying against telegraph wire, but we should shardly suppose they could short-circuit them.]

Cats Eat Mushrooms.

IT is not generally known, we believe, that the domestic cat will eat and is fond of mushrooms. A correspondent who observed a cat eating raw mushrooms last summer, afterward tried the experiment of offering the fungi to seven or eight cats, and tells us that all of them seemed very fond of them.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Massachusetts Game.

From the Report of the Commissioners of Fisheries and Game.

Status of Game.

THE information that comes to this commission from many sources is substantially unanimous in proclaiming that game of nearly all kinds has been more abundant this year than for a long time. With almost no exception this is the testimony given by the deputies throughout the State, who not only have the opportunity to become familiar with local conditions but some of them travel extensively, visiting all parts of the State, and by observation and conversation with sportsmen gain a comprehensive general knowledge of game conditions throughout the Commonwealth.

The increase of game birds and animals hereafter to be noticed in some detail is attributed in large part to the vigorous enforcement of law in recent years; for it goes without saying that the best laws ever enacted are of little or no efficacy unless they are enforced in a manner that will compel respect for them.

While the increase in the partridge and quail is remarkable, and really without parallel in the history of the State, it is also true that there has been a gratifying addition to the numbers of other species which are protected to a less degree than the partridge and the woodcock.

Sea and Shore Birds.

Taking the State and the season as a whole, there has been at least an average abundance of sea and shore birds. The flights hve not always been satisfactory in certain sections, and possibly this condition may have continued in exceptional instances for the season or thereabouts. On the other hand, birds have been reported unusually abundant in some localities, notably so in Quincy Bay and contiguous waters, and the chances for good shooting were said to have never been better.

Partridge, Woodcock and Quail.

Such a vast amount of material relating to the increased abundance of partridge and quail is available that much of it must be excluded from consideration here for the sake of brevity. In the multitude of testimony under this head, condensed though it may be here, there is incontrovertible evidence of the effect of the non-sale law on partridge and woodcock, even to the extent of probably causing an increase in quail, which has been one of the most remarkable incidents in the recent history of game in this State. When the non-sale low was enacted the pot-hunter's vocation was largely circumscribed if not abolished. As a consequence, the quail, or Bob White as this species is familiarly called, shared in the good fortune more specifically intended for his bigger congeners, the partridge and woodcock. For, while the quail could still be sold seven months of the year, the hunting of this species alone was scarcely sufficient to prove a paying attraction to the market-hunter, debarred by law from selling partridges. As a result the hunter for revenue only has, as a rule, found it necessary to seek other employment that keeps him out of the covers, and Bob White has undoubtedly benefited from comparative freedom from the persistent attacks of the market purveyor, who, while formerly chiefly intent on bagging partridge, was not averse to adding to his game bag every one of the smaller birds that he could gather in. Comparative immunity from the attacks of those who did not hunt for sport but for the market, and took the last bird in a covey if possible, together with the rather favorable weather conditions of the past two winters, have combined to bring such an abundance and wide distribution of quail in this State as has not been known before for many years, if ever. In enumerating the causes of this desirable condition mention should not be omitted of the public spirited work of many clubs or citizens, who have liberally contributed for the purpose of having quail imported into this State from other sections of the country. But, while freely conceding the value and importance of what has thus been done, it may justly be said that this is only a continuation of the effort along the same line that has been carried on for a number of years, without ever producing the conditions that happily have existed this year, and, to a slighter degree, in 1901. This seems to suggest that other causes have contributed chiefly to the increase noted, as well as to the fact that

Bob White's whistle has been a common note this year in the Berkshire hills and fields, where, heretofore, the quail has been rare or entirely absent. It may never become an important factor there, but its appearance in that section of the State is noteworthy.

The woodcock, though breeding here to a limited degree and reported more than usually plentiful in some sections, is not anything like generally abundant; indeed, it has been very scarce in most sections of the State. The effort to protect it here from the market-hunter is a most commendable one, and should be continued. The fact that it appears within our borders chiefly as a migrant and that it is deprived of reasonable protection in some of the States where it winters, furnishes additional reasons why all that is practicable should be done here to save from extinction this interesting and valuable species. The example of this State and other game-protecting States cannot fail to influence action where it is most needed, and we cannot be insensible to the position Massachusetts takes in this matter, in view of what her action may mean to other commonwealths.

In many towns on the coast and adjacent thereto the quail is the one species of land game bird, other than the shore, marsh or beach varieties, that is relied upon to furnish sport, for neither the partridge nor the woodcock occur in those places in sufficient numbers to be an important object for the pursuit of the hunter. So near to extermination had the partridge been brought in these localities, because of insufficient protection, that it has failed to gain satisfactorily in numbers in recent years, for the simple reason that there were few if any breeders left there to renew and increase the stock—an instructive lesson of the danger incurred in allowing this species to be again exposed to such conditions as brought this result.

Fortunately, however, the condition above referred to is limited, and many of the eastern covers afford excellent partridge shooting. Here the increase of this bird compares favorably with any part of the State, and notably demonstrates the remarkable local habits of the species.

Not for many years have game birds been so plentiful in the central section of the State. This is substantially the unanimous testimony of experienced men, both hunters and deputies, many of whom declare emphatically that they never before have seen quail so abundant and never expected to see so many partridge as were in the covers this autumn. Thus, while the conditions may not equal those in Massachusetts in 1634, when William Wood declared in his "New England Prospects" that partridges and heathcocks were so numerous that "he that is a husband, and will be stirring betime, may kill half a dozen in a morning," still, more satisfactory results have been obtained than could have possibly been anticipated three years ago.

Pheasants.

Although pheasants may not yet be classed as game birds of this State, in the sense that they can be legally hunted and killed, their prospective status as such entitles them to special notice in this report, not only because the State has taken a large interest in the propagation of the Mongolian pheasant, but also because the effort made has met with such marked success recently that this beautiful game species gives promise of occupying in the future a very prominent position among the birds of the Commonwealth that attract the hunter's skill and furnish him with an additional choice article of food.

The reports received this year show conclusively that the pheasant is doing well in all sections of the State, and the very encouraging statements sent to us last year are duplicated or excelled. There is reason to believe it is breeding successfully in those localities where it has been placed; also that it has lived through the winters as well, apparently, as our native game birds. As a rule, it rears large broods, 10 to 18 chicks, and the young birds have every appearance of strength and hardiness. There seem to be few losses in the wild state, outside of those caused by enemies, and, although some birds may be killed by foxes, hawks, owls, etc., and also by hunters who have a disposition to ignore the law, the species seems to have acquired a foothold. Therefore, aside from the fact that there is less wild land here and more hunters in a given area, there is no apparent reason why the Mongolian pheasant should not do almost as well here as in Oregon, where it is concededly the foremost game bird of the State.

Deer.

There is cumulative evidence that the deer is becoming more common in this State than was probably deemed possible only a few years ago. And it is a remarkable fact that, even now, many are disposed to believe that the wild deer reported to have been seen from time to time in various localities must be animals which have escaped from parks or reservations. In a State populated as Massachusetts is, it is not, perhaps, remarkable that the occurrence of wild deer here and there, often in close proximity to large towns, and indeed almost within sight of the gilded dome on Beacon Hill, is something difficult to either believe or understand. There is, however, indisputable evidence of this, and, although this animal is not yet deemed sufficiently numerous to justify the hunting of it, there is a strong probability that, with continued protection for a brief time longer, the hunting of it for a few days each fall may be permitted without the risk of exterminating a species which should be kept in the State's covers as long as practicable. Without protection extermination will follow with certainty and expedition.

Complaint has been made by several persons of damage done to fruit trees and growing crops, and inquiries have been received by the commission asking if the State would pay for the alleged loss.

There seems to be a division of opinion, among those presumably conversant with the habits of the deer, regarding the destruction caused by this animal in Massachusetts. However this may be, we are not aware that provision has ever been made by any State to pay for alleged damages of this nature by deer, and information has come to us that some of the public-spirited farmers of this State have emphatically declared they were opposed to anything that would permit the killing of these animals, and preferred instead to submit to any small loss that came to them. It is too much to expect that all should take a similar view under trying circumstances, but the fact that some prefer small loss to killing the animals indicates the esteem in which the deer are held by a few, at least, who may have most cause for complaint.

A mass of data is available showing the occurrence of deer in various sections of the State, from Cape Cod to the Berkshire Hills.

A deer was rescued from drowning in Barnstable Bay late in November by Capt. F. W. Dexter, of the naphtha launch Quartette, of Lynn, which at the time lay off Barnstable Point Light engaged in herring fishing. The animal was kept for nearly a week, until the vessel returned home, when Capt. Dexter reported having it on board to the commission, and Deputy Burney was instructed to take charge of its liberation. This was a most remarkable case. The deer had evidently been driven into the water by either dogs or men, and was swimming straight out to sea when seen. Capt. Dexter deserves commendation for his humane treatment of the animal, which had to be rubbed to restore its exhausted energies, after being taken on board the Quartette, and also for his courtesy in promptly reporting it after his arrival.

It is regrettable that this deer, the preservation of which reflected so much credit on Captain Dexter, should have been killed by John T. Collins, of Maplewood, on Dec. 11, only a few days after the animal was liberated by Deputy Burney, who not only brought Collins into court to answer for his violation of law, but quickly recognized the animal by a scar he had noticed when he took it from the Quartette.

The Belgian Hare.

The Belgian hare may apparently be now safely classed with the game animals of the State, although it is too early yet to speak with certainty of the results attending the efforts of the commission to stock the State covers with this large species of rabbit, alike important as a game animal or a food product. There appears to be ample evidence thus early that the Belgian hare, notwithstanding adverse predictions regarding it, may prove to be a very desirable addition to the game fauna of the State, if it succeeds in maintaining itself in spite of foxes, hounds and other species that may prey upon it.

A Morning with Old Squaws.

ORIENT POINT, Suffolk County, N. Y.—I have no great story to tell about the hundreds of canvasbacks and other aristocratic ducks which fell to our guns (like the Power brothers), but just a simple tale of what three of us enjoyed with the "old squaws" one morning in January, 1900.

On the evening previous it was arranged between Fred Terry (a cousin), Walter, my son, and myself that the next morning, everything being favorable, we would take a rowboat, battery and decoys and go to the feeding grounds of the above mentioned trash ducks, as some call them, three miles away. About four o'clock the whir-r-r-r of the alarm clock startled us from our dreams, and a half hour later we were bolting pancakes, sausages and hot coffee. The air was keen, crispy and pretty still—this latter being just what we wanted. The exercise at the oars while on our way to the grounds kept our blood warm and our cheeks glowing.

We got our decoys out just as the sun was peeping above the horizon and straggling birds began to show themselves. (I like nothing better than straggling birds if they will straggle often.) Now, it is known that the best shooting is the first hour in the morning—so that the first man in the box has the best show for a good bag. While each of us was trying to induce the other to get in first, several shots were lost, so that finally my son entered the box and Fred took the oars and rowed me to the beach (about twenty-five rods away, where I sat me down to watch the hits and misses). The birds came only occasionally, generally one at a time, and Walt. took care of them pretty well. After he had five dead ones lying around he signaled Fred to come and take his place in the box. Fred came, but as he had never been in a box he could not be induced to get into it until I had warmed the place for him. It was of no use to argue, so I hopped over into the ticklish thing and laid me down. Once in a while a duck came and sometimes I hit and sometimes I missed until I had three lying on their backs. Up to this time not a single duck except squaws had been seen. While watching and waiting I discovered, three-fourths of a mile away, two coots, and those birds came straight to their doom. The foremost duck I covered with the right barrel, and, as I thought, dropped it dead, when the other, at the report of the gun, swung off to the left and hustled; but it was of no use, for my left spoke and he fell dead. I then looked at the first duck and was surprised to see it making off in great alarm, with its head at least a foot high, looking back at me, first one side then the other. My gun is not a repeater, so I had to break it and slip in another shell in the left barrel. The duck was well away by this time, but I drew bead on it and when the gun spoke the duck's journey was done. Now my score was even with my son's, and I remembered that it was cold, too.

The boat was called in again and now our modest Fred consented to get in the warm place I had made for him. The first two or three birds which came went away much faster after he spoke to them. Then he did better and winged two, and later killed one dead. One of his cripples Walter killed. Up to this time we had just a dozen birds. Walter now got in and killed five more. Later I took his place and killed one. The sun was past its zenith now and the flying was about over, and besides we felt a kind of gnawing under our waistcoats on account of our early breakfast and other things; so we concluded to take up and strike for home, which we reached about 3 P. M.

Eighteen ducks with three guns is not great shooting, truly, but we enjoyed the shooting and also our dinner when we got it. Yes, indeed! UNCLE DAN.

The Massachusetts Sale Law.

BOSTON, March 2.—*Editor Forest and Stream:* The hearing on Thursday before the Fish and Game Committee on the anti-sale law for partridge and woodcock, was a notable one. A few less than 100 sportsmen representing every county, and at least 75 towns and cities were on hand to put in a word for the bill. The number was so great that the committee found it necessary to abandon the room in which such hearings are usually held and secure a larger one. The Central Committee held a meeting at 9:30 in the room of the commissioners, and outlined a plan of procedure for the hearing. It was agreed by all that no witness should be allowed to take more than from three to seven minutes, for the reason that all those attending would want a chance to say a few words, and many had come a distance of from 50 to 200 miles for the purpose of giving testimony. I venture to say none of your readers ever attended a hearing where there was more unanimity of sentiment or where everybody went away with more satisfaction on account of having had his chance to express his opinions.

The Central Committee had arranged that Herman S. Fay, Esq., should conduct the hearing, which he did with tact and good judgment. Chairman H. A. Estabrook, of Fitchburg, the first witness, testified to the good results of the present law and the putting out of business of certain pot-hunters, of whom he had knowledge, and one of whom had admitted that he had sent 800 birds to market the year previous to the enactment of the anti-sale law. Mr. I. O. Converse, president of the Fitchburg Rifle and Gun Club, and Prof. E. A. Kirkpatrick, an instructor in the State Normal School at Fitchburg, also testified in support of the bill. Representatives E. W. Boise, of Blandford; George Thayer, president of the Ashland Gun Club; Herbert Thayer, of Franklin; Representative Garrett, of Greenfield, and half a dozen other members of the House from different parts of the State, stated that their constituents were unanimous for the bill. Mr. A. M. Kimball spoke for the S. Acton Gun Club, Mr. A. C. Sylvester for the West Attleboro Club, ex-Senators Gray, of Walpole, and Patch, of Roxborough, spoke for their sections. Mr. Herbert E. Tuck, of the Central Committee, represented the sportsmen of Haverhill. Hon. Salem D. Charles, of Boston, spoke as a representative of the State Association, the Worcester Fur Club and the Central Committee; Representative Pingree for Georgetown and Groveland Fish and Game Associations; Capt. John Percival for the newly organized club of Sandwich.

Your readers will remember that in the hearing three years ago opposition came from Worcester in the shape of a bill to make sale illegal only during the time when shooting was prohibited—this was designated by our champion on the committee, Representative Hunt, of North Attleboro, "the bee in the honey." This bill had for its champion a man no less distinguished than ex-Congressman Walker.

Mr. A. B. F. Kinney gave testimony before the committee that this year there would be no opposition from Worcester, that all sportsmen in the heart of the commonwealth are in favor of continuing the present law. The speakers were all brief and pointed in their remarks, and several of them elicited hearty applause from the audience. This was especially true of Game Warden Jessop, of Tewksbury, whose wit "brought down the house" several times.

House Chairman Kimball, of the committee, who presided, requested Mr. Fay to endeavor to condense his final argument into ten minutes. He spoke seven minutes, and on closing the chairman declared his speech "very handsome." When the call came for remonstrants no one arose.

We confidently expect a favorable report from the committee, and hope it will be unanimous.

More than 75 towns and cities have sent in petitions for the bill, signed by selectmen, mayors, aldermen, etc., and prominent citizens generally.

On Tuesday, March 3, hearings will be given on House bill 646, to strike out the word "marsh" in the present law on "shore, marsh or beach birds," and extend the shooting season from July 15 to Aug. 15.

Also on House bill 648, which is designed to open shore shooting on the first of March instead of May 1, as at present.

On March 5 hearings are appointed on House bill 649, to open trout fishing in the western counties April 1 instead of April 15, and to close on Aug. 1 instead of July 15, as now.

On House bill 856, to make the legal limit of length in the western counties 5 inches.

On House bill 857, designed to prohibit the sale of trout, except those usually termed "domestic trout."

On March 10, House bill 642, for further extension of "right of search" by wardens without a warrant. This bill is so framed as not to apply to dwellings.

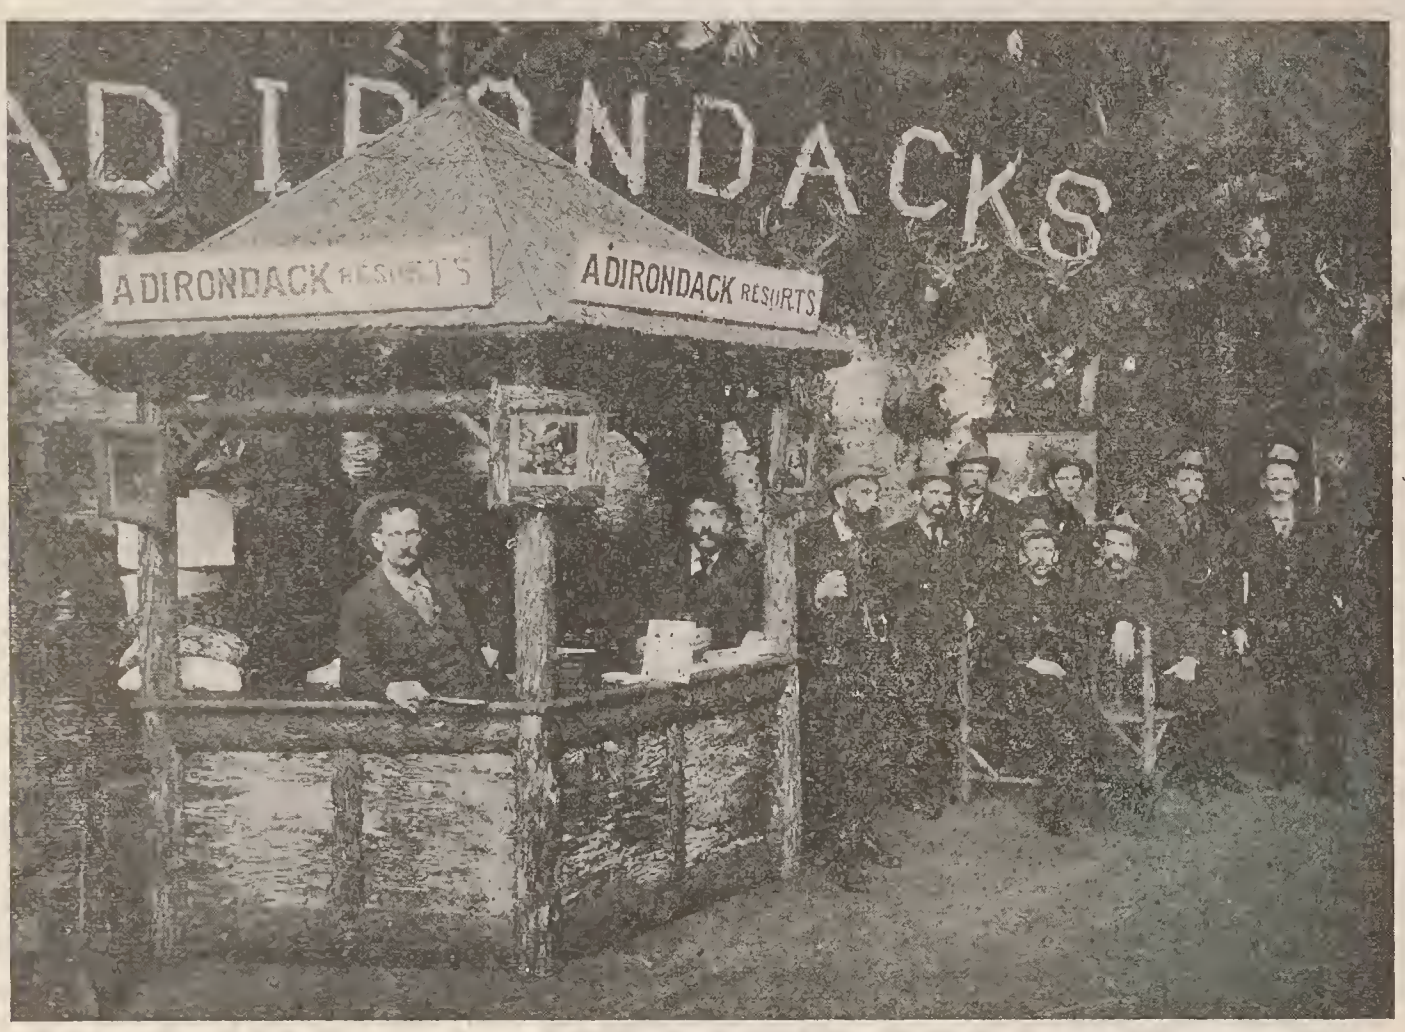
Also on House bill 644, regarding search for lobsters—to add the word public before "suspected" in the present law, so as to read "may search in suspected public places."

On March 12 will occur the hearing on the bill for the reorganization of the fish and game commission. The following concerning deer is from the Boston Herald:

"There is a bill before the committee on fisheries and game, the title of which is to provide for the better protection of deer. At the hearing given on the matter some time ago there was evidence submitted which raised a doubt in the minds of some of the committeemen whether or not it wouldn't be a good idea to pass a law for the better protection of farmers. Strange as it may seem, the protective laws in relation to deer have resulted in so increasing the species that in certain sections of the State, particularly in Worcester County, and further west, the crops have been damaged by the depredations of the animals. The law at present is regarded as being pretty severe. Under it a farmer is liable to prosecution if he chases a deer out of his cornfield, for the law expressly stipulates that whosoever hunts, drives, chases, etc., one of these animals shall be subject to a fine. The plan now is to keep the law on the statute book substan-

tially as it is, and to enact legislation which will give the farmer whose crops are destroyed by deer an opportunity to recover damages from the commonwealth."

Prof. Frank M. Chapman, in his lecture in the Walker Building yesterday, outlined a theory as to the migration of birds that may be new to some of your readers. He announced as his opinion that migration began in the south rather than in the north, as primitive birds originated in the tropical regions. A crowding near the center of food supply resulted in some of the primitive creatures seeking food at the edges of their zone of existence. As flying became more



ADIRONDACK GUIDES
At the Sportsmen's Exposition.

natural, they were able to migrate further and further with safety, so they could easily find a nesting place, to which they annually repaired, returning later to their normal zone.

Saturday evening there was held at the Copley Square Hotel a meeting of the Clearwater Club, of which one of the vice-presidents of the State Association is president.

The occasion was a reunion of those who made the trip to Clearwater Pond for salmon fishing last May.

It was on this trip that Dr. John S. Phelps caught what is believed to be the second largest fresh water salmon ever taken with light gear in this country.

Among the guests were Mayor Boothley, of Portland, and D. J. Flanders, general passenger agent Boston & Maine Railroad.

At the annual dinner of the Massachusetts Fish and Game Protective Association, to be held March 16, one of the speakers is to be Prof. R. L. Garner, known the world over as the student of the language of monkeys in the jungles of Africa.

HENRY H. KIMBALL, Secretary.

Sportsmen's Show Exhibits.

WE note the salient features of the exhibits of sportsmen's goods and appurtenances:

The Savage Arms Company, of Utica, N. Y., display a fine oak gun case containing samples of their art in rifle building and a range of quality within the reach of necessity and up to that of extreme luxury. They have added to their calibers by showing No. 1 .22, the new feature of which is the box magazine. The magazines can be loaded and carried in the pocket. Messrs. Bamberg, Savage and French are in attendance, and always ready to show and talk Savage rifles.

J. H. Lau & Co., the American agents for Ballastite powder, are showing for the first time in this country the new Reblé gun, made in Liege, Belgium. Mr. Harry Welles is in charge of this exhibit.

A. H. Funke shows a new single trigger shotgun made by the Acme Arms Company. An innovation in low grade guns. A safety is so arranged that the simultaneous discharge of both barrels is made next to impossible.

A new model of the Mannlicher rifle is shown of 9mm. .345 caliber which can be loaded as a single or repeating rifle carrying five cartridges, which dispenses with the box magazine formerly in use. Mr. A. H. Funke is in daily attendance.

Abercombie & Fitch make one of the most interesting exhibits of the show. Everything that can be used by the camper or explorer is seen here—clothing, shoes, packs, pack-saddles, cooking utensils, canvas water buckets, sleeping bags, snowshoes, hand canoes, grates for log fires, devices for every comfort asleep or awake. Their new voluminous catalogue contains cuts and prices of all these things; then, too, they have added a new and important department to their business of which they are justly proud, that of fishing tackle. Of rods they show "Tamachif," for fly-casting and in bait weights; the "Bic," another pretty piece of bamboo, in weights of from four to nine ounces, is one of their prizes; "Kosmic," for salmon fishing, 17-21 ounces, 15 feet long, are seen here, as are all the accessories for the angler. Another important feature of this exhibit is the imported compass seen here for the first time; it is so constructed that by the rays of the sun the time of day can be taken as well as correct orientation be assured. The shape and size is that of an ordinary watch.

Von Lengerke & Detmold, as eastern agents of the Racine Boat Company, occupy a space of eight hundred square feet of floor room, showing complete boats of this company's output. The full cabin auxiliary cruising-cat-boat, whose commodious quarters can only be seen by climbing a ladder, is well worth the effort. It is 26 feet 5 inches over all, 20 feet on waterline, 8 feet 6 inches beam, 30 inches draft of hull, 450 feet of canvas area, 5½ horse-power Aux gasoline motor. Natural wood finish. The new model 18 foot gasoline launch is built for pleasure purposes; it is fitted up in most elaborate style. Oak and walnut is alternately used in the deck and locker finishings; it is upholstered in red plush. Mr. Walter J. Reynolds, of Racine, and Mr. Oscar Grieff, of New York, are in charge.

Reeves & White, of Port Richmond, show a complete line of the Truscott boats. A Truscott 25-footer finished in cherry and nickel-plated trimmings is shown, geared with a six horse-power engine. Pretty plush cushions are provided for the seats. A new model 21 foot launch is shown called the "Compromised Stern." A three horse-power cylinder engine shoves it along. A canopy covers the whole deck; the furnishings are of corduroy. Rowboats are in evidence, and many of them are decidedly handsome. Motors of different degrees of strength are shown at this pretty exhibit, as are search lights and other accessories for aquatic sport.

The Toquet Launch and Motor Company exhibit a launch built for speed. It has a modified torpedo stern.

A GROUP OF MAINE GUIDES
At the Sportsmen's Exposition.

The idea embraced in the model of this launch is to do away with squatty stern and to go over rather than through the water. The keel is of oak, while the rest of the boat is mahogany. Length, 25 feet, 5 foot beam. A five horse-power, two cylinder motor sends it along with but 27-inch draft at the blade. The fittings of this launch are in perfect keeping with the rest of it. The speed is recorded at 10 miles per hour. Mr. F. E. Toquet and L. C. Duebois are in attendance.

The Lozier Company show a pretty cruising launch of the torpedo stern type, which is not a new design for this company, they having advocated this style of launch successfully for some seasons past. It is 36 feet long and the waterline is apparently the same. The deck and house are mahogany. The extensions can be converted into sleeping bunks. This boat is particularly complete in wholesome detail. Other models and sizes are shown in completion. A line of separate motors built by the Lozier Company are on exhibition.

The Marble Safety Axe Company are here with their interesting line of sportsmen's accessories. They consist of belts, holsters, game bags, cartridge belts, hunting knives, safety pocket knives, hatchets and belt axes. An automatic gaff hook is shown. They have also added to their big line the "Garrison gun cleaner." The cleaner proper is in four parts, made of a rough material that will hold a rag in position. When closed the parts come together, forming a whole not unlike a hickory nut. By a lever at the handle, the parts so spread that it can be regulated to fit breech and muzzle alike, thus easily adapting itself to the choke bore.

H. L. Rand, of Worcester, Mass., the inventor of the oval glass in taxidermy, makes one of the prettiest displays to be seen. He shows a handsome mallard duck suspended on an oak background under the cover of glass, a pair of ruffed grouse on bird's eye maple, nicely framed; the black grouse, snipe feeding, with a marine view in water colors, as a background; quail feeding in winter, woodcock boring, and many other handsome pieces for dining room decorations. Mr. Rand himself is in charge.

The Siegel-Cooper Co. have on show articles of all kinds from their sportsmen's goods department, comprising everything for outdoor life afloat or in the woods or fields. Their big catalogue is particularly interesting, inasmuch as it embraces the needs for indoor amusement as well.

The Pneumatic Cushion Company show by their vast exhibit that all their output is not embraced in their title. A brass bedstead is shown with the air mattresses and cushions. Air hassocks are here not easy to stumble over, as they are so readily moved by the foot; cushions are made by this company for the upholstery of boats and houses. One can rest on air anywhere. One of the latest things shown by them is an air cushion to be used by the duck hunter or the fisherman; a head rest in a battery or a life preserver in case of need. When it is not inflated it can be carried around the neck or packed in a quart measure.

The Chamberlain Target Company, in charge of Mr. Paul North, show, in addition to their targets, a new and simple device for throwing targets by the hand. It works on the same principle as throwing an apple from the end of a stick. It can be operated by a child.

The Stevens Arms Company and the Hollenbeck Gun Company both show samples of their output.

The Old Town Canoe Company, of Maine, show a number of canvas-covered canoes. They are made with cedar ribs and planking in natural wood finish. They are very attractive. They are from 15 to 20 feet in length.

There are a number of interesting exhibits of motors and gas and gasoline engines, made by such concerns as Chas. A. Strelenger & Co., of Detroit, the Standard Marine Engine Co., of Jersey City, the Buffalo Gasoline Motor Co., the Eagle Gas Engine Co. and the Norwalk Motor Co. The Old Hickory Chair Company show some unique and comfortable articles of furniture for outdoor life.

Legislation at Albany.

Special Correspondence FOREST AND STREAM.

ALBANY, N. Y., Feb. 24.—The present session of the Legislature differs in no essential respect from its predecessors in regard to the number of bills introduced amending the fish and game laws. Thus far twenty odd measures have made their appearance in the Senate, dealing with this subject, while in the Assembly over two score have been presented. While a few of the Senate and Assembly bills are duplicates, in most instances they are wholly dissimilar, proposing widely different changes in existing law.

Much conservatism has marked the course of the fish and game committees of the two houses in disposing of the many bills submitted for consideration. But four have been reported out by the Senate committee, while in the Asembly only seven bills have managed to get on the calendar.

Two bills have passed the Senate. One is Senator

CANADIAN GUIDES
At the Sportsmen's Exposition.

Armstrong's, adding a new section to the fish and game laws, Article II, to be known as section 27-b. It provides that grouse and woodcock killed in this State shall not be sold or offered for sale at any time or place throughout the State, and makes possession presumptive evidence that the birds were killed in this State.

The other bill passed by the Senate is one of Senator Townsend's popularity known as the black bear bill. Since its introduction it has undergone amendment several times, and in its present form is less drastic than originally. At the outset the measure was opposed by the North Woods guides, and it is not altogether certain that they are satisfied with it in its new shape. The bill adds a new section, section 11-a, and provides that wild black bears shall not be taken or possessed from June 1 to September 30, both inclusive. No person is to be permitted to take more than one bear in an open season, and no traps, snares, spring guns, pits or other devices to entrap or entice bears shall be made, set or used, nor shall black bear be taken by their aid or use. The bill goes on to provide an additional penalty of $250 for each wild moose or part of such animal taken or possessed in violation of sections 1 to 11, inclusive of Article I, of the game law. At present the penalty is $100. Another amendment contained in the Townsend bill provides that any person convicted of a misdemeanor for a violation of section 11 of Article I shall be punished by imprisonment for a term of not less than three months, nor more than one year. The penalty for violation of section 11-a is placed at $25. The bill is now in the Assembly committee, where a similar bill of Assemblyman Evans likewise reposes.

The Senate has progressed to committee of the whole Senator Baily's bill, amending section 114, so as to provide that the supervisors of the counties of Queens, Nassau and Suffolk may respectively pass laws regulating and controlling the taking of fish bait from or in the salt water of such counties, and prescribed what violations shall be punishable as misdemeanors.

Another bill amending the game law which has made partial progress through the Senate is one of Senator Elon R. Brown's, to stop spring shooting. It is regarded as one of the most important general bills affecting game proposed this season. The idea of the bill's sponsor is to protect winged game at the season just prior to breeding time, and thus, as hoped, ultimately increase their number. It is probable that arrangements will be made to have a hearing on the measure before the Senate committee on March 5, in order that all interested may have a chance to express their views before it is advanced to final passage. The bill provides as follows:

Section 20. Ducks, geese, brant and swan shall not be taken from January 1 to September 15, both inclusive, or possessed from March 1 to September 15, both inclusive.

Section 20-a. Ducks, geese, brant and swan shall not be taken in the county of Jefferson from January 1 to September 15, both inclusive.

Section 103. Ducks, geese, brant and swan shall not be taken from January 1 to September 30, both inclusive, or possessed from March 1 to September 30, both inclusive, except if lawfully taken they can be possessed in the city of New York during the open season thereof; or taken in the night before sunset and daylight.

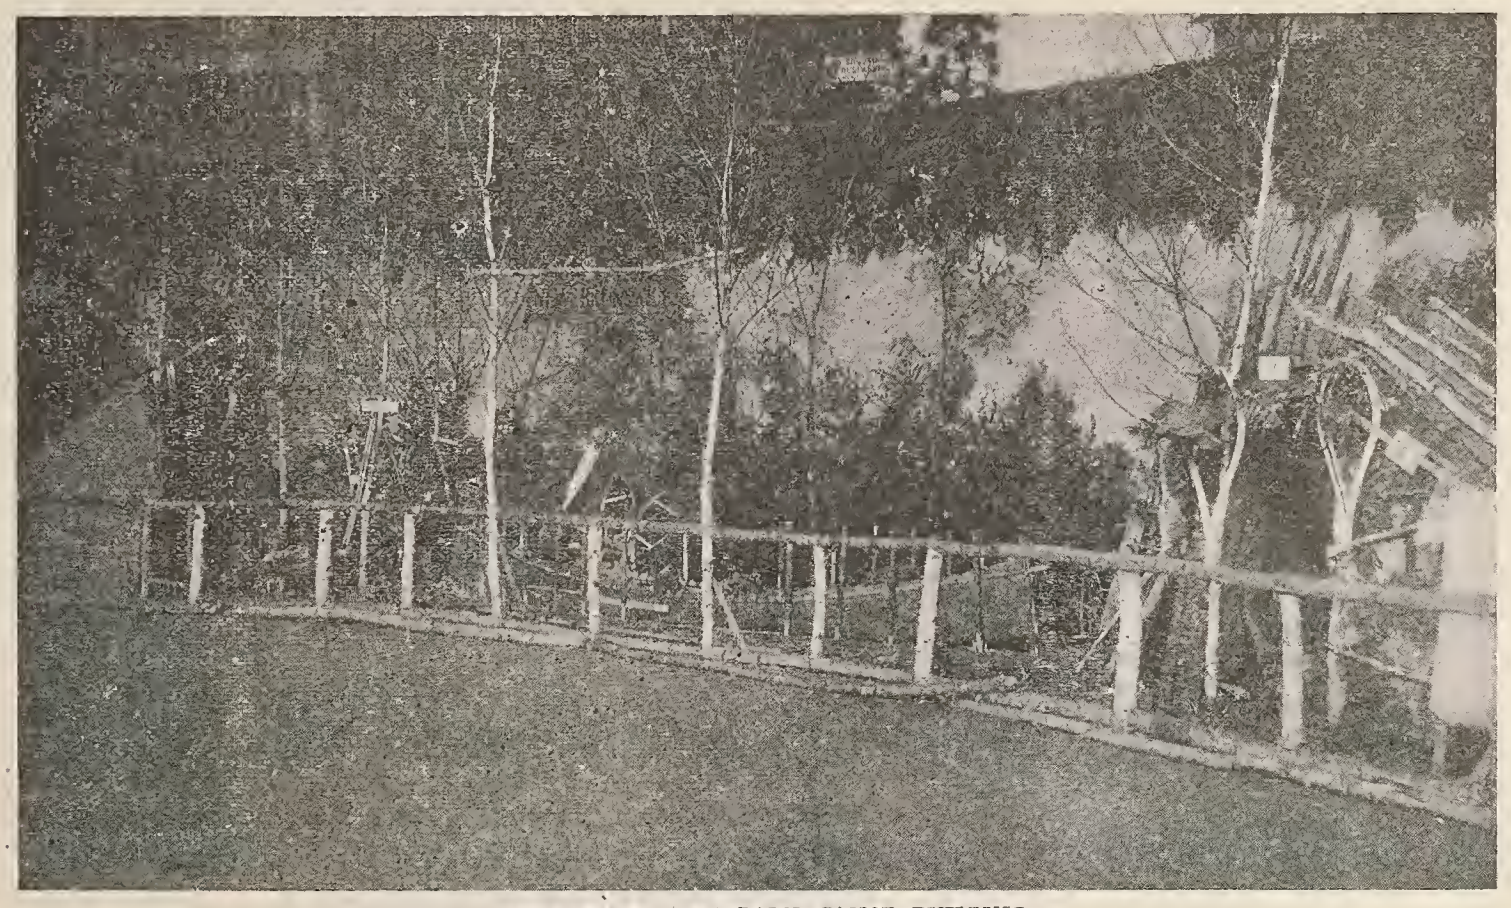
But one bill has passed the Assembly—Assemblyman Reeve's, amending section 109 so as to provide that trout shall not be taken or possessed from August 31 to the last Friday in March, both inclusive, instead of to March 28, inclusive, as at present. This bill is on the order of third reading in the Senate, and is identical with Senator Bailey's bill, which is in the Senate committee.

The following bills have been advanced to third reading in the Assembly:

Assemblyman Denison's, amending section 3 so as to provide that there shall be no open season for wild deer in the counties of Oswego and Rensselaer, and in all that portion of Oneida, Lewis and Jefferson counties lying westerly of the Utica and Black River Railroad from Utica to Ogdensburg.

Assemblyman Cowan's, amending Article II by inserting a new section, section 29-a, which provides that woodcock, grouse and quail shall not be taken in Delaware, Ulster, Schoharie, Green and Sullivan counties, in or out of season, for the purpose of selling or offering to sell the same; nor shall any person sell or offer for sale any such woodcock, grouse or quail taken at any time in such counties by him, or by any other person with his knowledge. The bill also amends Article III by inserting a new section, section 43-a, which provides that trout shall not be taken from any of the streams in Delaware, Ulster, Schoharie, Greene and Sullivan counties, in or out of season, for the purpose of selling or offering to sell the same; nor shall any person sell or offer for sale any such trout taken, at any time in such counties by him, or by any other person with his knowledge.

Assemblyman Allston's amending section 176 so as to provide that special game protectors, when regularly in the employ of boards of supervisors or incorporated associations for the protection of fish and game, shall have all the powers of a regular protector.



NEW BRUNSWICK BARK CANOE BUILDING
At the Sportsmen's Exposition.

The following bills are on the order of second reading in the Assembly:

Assemblyman Cadin's amending section 59-a by providing that tip-ups and set lines may be used in fishing through the ice in the waters of Cross Lake, in the counties of Onondaga and Cayuga.

Assemblyman Doughty's legalizing and confirming leases for the cultivation of shell-fish heretofore executed by State authorities except in Kings county.

Assemblyman Moran's amending section 80-a so as to provide that it shall be lawful to fish for and take with fyke nets, in Cayuga Lake and tributary streams from October 1 to April 30, both inclusive, bullheads, eels, suckers and dog fish, so far as affects that part of the lake north of Canoga Point and of the N. Y. C. & H. R. railroad bridge. In that part of the lake south of this point it shall be lawful from May 15 to July 15, both inclusive, to fish for and take fish, except bass, with spear or gill net, the meshes of which net shall not be less than two inch bars; provided that but one person shall spear from a boat and but one gill net shall be used by any person.

REAL INDIANS BUT PAINTED SCENERY
At the Sportsmen's Exposition.

ALBANY, March 1.—The Fish and Game Committees of the two Houses of the Legislature are reporting out a few of the many measures awaiting consideration, but are not displaying any great anxiety to favor most of the pending bills.

Two bills are on third reading in the Senate—Senator Armstrong's (Int. No. 124), providing that grouse and woodcock killed in this State shall not be sold or offered for sale in the State, and Senator Elon R. Brown's bill (Int. No. 301), to stop spring shooting of wildfowl. The latter bill was sent back to committee, however, for a hearing, retaining its place on the calendar.

Senator Townsend's bill (Int. No. 138), for the protection of bears, has passed the Senate and reposes in the Assembly committee.

The following bills are on the order of second reading in the Assembly:

Assemblyman Bedell's (Int. No. 427), fixing the close season for deer, black and gray squirrels, hares and rab-

bits, and grouse, woodcock and quail in Orange county.

Assemblyman Cadin's (Int. No. 215), permitting the use of tipups and set lines in Cross Lake, Onondaga and Cayuga counties.

Assemblyman Moran's (Int. No. 470), relative to fishing for non-game fish in Cayuga Lake and tributary streams.

Assemblyman Reynolds' (Int. No. 550), making the close season for woodcock, grouse and quail in Rensselaer county from December 1 to September 30, both inclusive.

The following bills are on the order of third reading in the Assembly:

Assemblyman Doughty's (Int. No. 613), providing that there shall be no open season for English pheasants prior to 1905.

Assemblyman Fowler's (Int. No. 116), for the protection of fish in Chautauqua Lake.

Assemblyman Fowler's (Int. No. 160), fixing the close season for skunk, muskrat and foxes in Chautauqua county.

Assemblyman McNair's (Int. No. 549), fixing the close season for black and gray squirrels from December 1 to September 15, both inclusive.

Assemblyman Bridgeman's bill (Int. No. 479), to allow the spearing of fish in the creeks of Otsego and Orleans counties, has passed the Assembly and is in the Senate committee.

Assemblyman Denison's bill (Int. No. 371), providing that there shall be no open season for deer in that portion of Oneida, Lewis and Jefferson counties west of the Utica and Black River railroad from Utica to Ogdensburg, has passed the Assembly and is in the Senate committee.

Assemblyman Reeve's bill (Int. No. 182), providing that the close season for trout on Long Island shall be from August 31 to the last Friday in March, has passed both branches of the Legislature and is now before the Governor.

CHICAGO AND THE WEST.

The Illinois Game Law.

CHICAGO, Ill., Feb. 20.—A member of the House of Representatives who is somewhat interested in the matter of protective legislation, dropped into the FOREST AND STREAM office to-day. He was asked some leading questions in regard to the Wheeler bill, which is referred to in these columns. The gentleman in question stated that the FOREST AND STREAM view of the situation was fairly correct, and that the lower part of the State would now, as in the past, no doubt be opposed to any sweeping changes in the game law. "The Wheeler measure is in some ways an ideal law," said he, "but unfortunately in politics, as in all other walks of life, we cannot always live up to ideal standards. The main thing in getting game legislation is to do what we can. The sportsmen would like to see a great many changes, but I think I may say there will always be the same opposition which has met us in the past, and which arises at the instigation of men who care nothing whatever for the wild game of the country and nothing for the unselfish side of protective measures. As to the fate of the bill I cannot say, but it will undoubtedly meet a considerable fight on the floor of the House."

The representative above quoted asked what if any would be the fight made upon this measure by the South Water street lobby. I doubt if anyone can answer this outside of Springfield. That the lobby will be there goes without saying. That clause stopping the sale of Illinois ducks will never go through without a hard fight on the part of South Water street.

On the whole, there is no special reason for self-congratulation on the part of the sportsmen of this State at the present writing. It is true that the old Illinois State Sportsmen's Association never cut much real figure in protective legislation, although it did a great deal of talking and took itself with a great deal of seriousness, no doubt honestly believing that it had very much weight in the affairs of the State councils. Yet now that this association is practically dead—killed by no more severe blow than that which cut off its live bird shooting—we have practically no body of sportsmen in this State which takes the least concerted interest in matters of State legislation. One or two sportsmen in any State usually take the practical lead in such matters. This is the case in Michigan, in Minnesota, and to some extent in Illinois. I know of one or two gentlemen in this State who do not care to have their names mentioned, who have always been agencies of strength at Springfield, and who have stood out for good game laws. I certainly hope more from the influence of these few individuals than I do from that of all the sportsmen's associations of the State of Illinois. It all comes down to the statement that as sportsmen we do not after all want to protect the game so much as we want to protect ourselves.

A Woman Warden.

It seems that Miss Emma Kellogg, a young lady of Colorado, is in search of the office of deputy game warden for the counties of Routt and Rio Blanco, two of the best game counties in Colorado, and covering a region where it may be supposed considerable opportunity for a game warden exists. Miss Kellogg will have the best wishes of the gentlemen of Colorado. She seems to be not without qualifications, it being asserted for her, perhaps by her press agent, that at one time she lassoed a young bear and took it home alive. There are elements of improbability in this story, which, however, ought not to be unduly pushed into prominence. It seems that Miss Kellogg is in the habit of hunting mountain lions, deer and elk, and that upon one occasion, when treed by an elk, she dropped lightly out of the tree upon the back of the irate animal and, grabbing him about the antlers, rode him for a considerable distance through the forest. I do not find a similar experience chronicled regarding any of the State wardens of our Western districts. Commissioner Lovejoy, of Illinois, never rode a live elk, and neither did Sam Fullerton of Minnesota, or any of the other gentlemen engaged in this line of industry. They might consider it undignified. The feat on the part of the Colorado young lady warden may be condoned upon the ground of youth and enthusiasm. If Miss Kellogg wishes to be game warden there would seem to be no reasonable doubt of her attaining her purpose.

The New Minnesota Game Measure.

It is something of a relief to turn from the confusions and bickerings of some of our Middle West States in game law matters to the clear headed methods of our sister of the Northwest, the State of Minnesota, which has so long been a model in game law matters. I hardly think it likely that there will be a multitude of game bills of diverse and conflicting natures in the Minnesota Legislature. They have a way out there of trusting these things very largely to the conservatism and wisdom of the State game and fish commission. In this way they get good laws, and they enforce them. I imagine that the advice of the State executive agent, Mr. S. F. Fullerton, has been very largely followed in the drafting of the bill just at hand. In a personal letter received to-day, Mr. Fullerton remarks that this bill will be introduced in both the House and Senate, and he believes that it will pass virtually as printed, as the sentiment of the State is very strong in favor of giving the commission everything they want. There may be some demur over the appropriation, which reaches the snug sum of $50,000. Upon the other hand the revenues from licenses, etc., of the commission are stipulated to go into the general revenue fun of the State. Even with an appropriation of $50,000, Minnesota would not have so large a fund as was probably used by the State of Wisconsin last year, it being believed that the latter State had $70,000 at its disposal, gathered from the different sources provided by law.

Mr. Fullerton says: "You will see several new features in this law which we do not have in our old law. It embodies two of my pet hobbies, making it an offense to buy game as well as to sell it; and allowing non-residents coming here and paying the license fee to take home some of the game they are fortunate enough to get. I believe that this is nothing but just to the men who come and pay a license fee of $25. They are generally a class of good citizens, and while we have run across some of the other kind, I believe they are the exception and not the rule.

"You will see we have adopted the coupon system, and also a general license law for residents, as well as non-residents. The resident license under this bill will be $1 and the non-resident $25. This, I believe, will give the little $2 Higginses and the 50 cent Smiths a chance to 'test the law' and expend their 'fund,' etc.

"We have cut fifteen days off our trout season, making it end on the 15th of August instead of on the 1st of September, as a great many of our trout spawn about that time. Then we cut fifteen days off our quail season, making it open on the 15th of October instead of on the 1st. I think, however, it will be extended fifteen days into December, making it the same length as under the old law, but running between different dates.

"We have gone over the old law entirely and strengthened it to meet the requirements of several of our judges who have passed on its constitutionality. We have tried to frame it so as to stand the test of the courts, and so that every layman can understand it.

"You will also see that we have cut off all shooting before the 1st of September. Woodcock and upland plover hunting were only used as a blind heretofore. They could be shot on and after July 4, but now no one will have that for an excuse."

Mr. Fullerton, in closing his personal letter, mentions a big haul which the wardens of Minnesota have just made from a commission man, Ertz. Mr. Ertz is charged with dabbling in illicit game for two or three months, and the wardens now think they have him where he can't get away. This incidental comment is pretty good answer to the charges of double dealing which have been made by a Chicago paper against the game commission of Minnesota.

Review of the Bill.

A careful review of the Minnesota measure above referred to shows that it embodies all the modern and accepted ideas in regard to game protection, and that it has avoided practically all the dangerous loopholes which render practically void so many of our recent and proposed game laws. The Minnesota game law is in advance of the time, but not in advance of Minnesota. It is a matter of shame that Wisconsin, Iowa, Illinois and Michigan cannot show the same sense, simplicity, straightforwardness and get-thereness which has so long been visible on the part of the State of Minnesota.

The fundamental law of this measure is specified in the statement that the fish and game belong to the State, and that no person can acquire property in it at any time, except that he may use it under certain conditions as expressly specified.

The above is the great law of the State, which says that it is greater than the individual. The law of sport is immediately thereafter recognized in the section which provides that none of these specified birds or animals may be taken in any way except by shooting them with a gun held to the shoulder of the person discharging the same.

Night shooting, sink-box shooting, and other destructive devices are prohibited. The farmer is taken care of under a section which prohibits any person from going into growing or standing grain without express permission.

Any game had in possession contrary to law is declared contraband and subject to immediate seizure upon discovery by any of the peace officers of the State.

Section 20 is a very interesting one. It changes the old law which made it legal to sell at auction confiscated game. It answer beyond peradventure the unjust charges made by the so-called sportsmen's publication above mentioned. In short, it instructs the game and fish commissioners to give any confiscated game to the charitable institutions of the State. This closes a loophole which, under a dishonest administration, might work to the detriment of the game laws. It is a loophole which has been, under early administrations in this State, the cause of a great many instances of crooked work. It is quite in keeping with the progress of Minnesota to see this clause proposed for her statute books and at the hands of these very officers who would be most benefited by the old law, were they indeed the dishonest persons which they have been accused of being.

The tag and coupon system qualifying the possession of game and making such possession legal under different conditions is a good idea. It is precisely the same idea which has been advocated for the control of the trusts, which some people think threaten the interests of this country. In short it is the remedy of publicity. The State comes out openly and says that it owns the game; that sportsmen may have it under certain conditions; that there must be no trickery about the possession of this game; that everything must be open to the public, so that there may be no mistake. In short, it is the intention of this measure to lift all the veil of secrecy, deceit, treachery and ill doing which have only too often, in different parts of the Union, rendered our game laws practically inoperative.

The establishment of the resident license brings Minnesota into line with two other Western States which have proposed the same thing. This is no doubt a sop to those who cry that the non-resident license is "unconstitutional." This resident license clause will probably defeat any game law in Illinois. It will not defeat a game law in Minesota. They all seem to have the peculiar quality of believing in game laws in that part of the world. They do a little thinking and really try to protect the game and not to protect themselves. It is just the other way here in Illinois.

The non-resident license of $25 is the same figure established by other States which have big game, as well as birds in sufficient numbers to invite sportsmen tourists.

The clause permitting a licensed hunter to take home some game with him is one which testifies to the common sense of the framers of the law. To pay a license and then not be permitted to bring out any of your game is a hardship against which the sportsmen of the country rebel more than they do against the license fee itself. The section rendering it a misdemeanor for transportation companies to handle illegal game is one which might mean nothing in another State, but is apt to mean something in the State of Minnesota.

The "stop the sale of game" idea we find, of course, in Minnesota, for Minnesota was one of the first to realize its wisdom. This is modified in one clause, section 56, which forbids the sale of any trout or bass at any time prior to January 1, 1908. This puts the evil day off for a time at least, and by that time another law may continue the motion in that regard.

Another, a more liberal, and as it seems to me, better clause of the law, is the one which extends the moose season from ten days to twenty days, the dates suggested being November 10 to November 30. A ten day moose season is practically prohibitive. The season of twenty days amends the matter very nicely, and the other phases of this law sufficiently protect moose and caribou to enable the stock of game to stand a twenty-day season. It is not likely that any more moose will be killed under this law than under the old law, but more will be killed legally.

Sweeping Six Inch Limit.

Another interesting feature of this law is that prohibiting the having in possession of any fish, except minnows for bait, which are less than six inches in length. This is broad, simple and definite. You cannot have little bass, little trout or any other little fish in possession if they measure less than six inches. This ought to stop the destruction of sunfish and little perch around the summer resorts, something which is an abomination in the eyes of all thinking observers. The leaving of these little fish in the lakes and streams around the summer resorts would offer better food to the big fishes. The latter will also be protected by section 59, which forbids the sale of any fish taken in a county which has a population of 150,000 or over. This is meant to protect Lake Minnetonka, White Bear and others of the summer resorts lakes near the big cities, which of late have been practically fished out by market fishers who supply hotels.

The foregoing is but the most casual review of the measure proposed, which is full and explicit in all regards. It will serve to show how thoroughly the State of Minnesota is in touch with modern ideas of game protection and how much she is in earnest about having a good law and enforcing it. The likelihood is that this measure will be accepted almost without change. It is a law which works no hardship to any right-thinking man. It means that the State of Minnesota will have for yet a little while her wild fowl and wild game. To be sure we outsiders will have to put up our $25 to go and enjoy this pleasure. It is better to do that than to go to a State and find nothing there to enjoy. Moreover, I think that after awhile we will come to the idea that it is pretty near right to pay the price for a seat if you want to stay in the theater. The show is open throughout the glorious fall months in Minnesota, and for one I would rather pay $25 for a continuous performance of that kind than $3 a night for anything you can get in the city. Good luck to the Minnesota law.

HARTFORD BUILDING, Chicago, Ill.

When you've got a thing to say,
Say it! Don't take half a day.
When your tale's got little in it,
Crowd the whole thing in a minute!
Life is short—a fleeting vapor—
Don't you fill the whole blamed paper
With a tale which at a pinch
Could be covered in an inch!
Boil her down until she simmers,
Polish her until she glimmers.
When you've got a thing to say,
Say it! Don't take half a day!

—Atlanta Constitution.

Broadbills at Larchmont.

NEW YORK, Feb. 27.—*Editor Forest and Stream:* One Saturday early in the month I was at the club house of the Larchmont Yacht Club and noticed from the window what appeared to be an enormous mass of sea weed extending almost across the Bay. The weather was thick and it was snowing a little. On inquiry I learned that this was a great flock of ducks, and, looking through a glass, could see what they were for myself. People told me that the feed at the bottom of the bay was good, and that the birds had come there, at first a few, but gradually in increasing numbers, until now the flock had assumed this size, and must have contained thousands of birds.

It struck me as quite unusual to find ducks in such great bodies so near New York City. H.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

A Day with the Tyee.

FEW sportsmen in the East are familiar with the greatest game fish of Puget Sound, the "tyee" or "king" salmon. This superb fish, which is known in British Columbia waters as the "spring" salmon, frequents the tide-rips of Puget Sound during the entire year, the best fishing, however, being in the months of August and September. During the winter, the "tyee" follows the schools of herring into the numerous land-locked harbors and small bays, and it is generally May 1 before he appears on his summer feeding grounds in the swift current off Point Defiance, seven miles from Tacoma, Washington.

About May 1 the herring, for some reason unknown to fishermen, suddenly leave winter quarters and appear in countless thousands in the Narrows, off Point Defiance. Here the waters of Puget Sound rush through a narrow passage about four miles long, varying in width from one to two miles. The incoming flood tide pours around Point Defiance, forming an immense eddy, or mild form of whirlpool, about 300 yards wide by 500 yards long. On the outside edge of this eddy, the water banks up two to three feet high and rushes with tremendous speed for the opposite shore, while the inside quieter waters run in the opposite direction. The herring frequent this eddy and the gamy "tyee" does his best to "decrease the surplus population." The "tyee," owing to his habit of pursuing his prey in such swift currents, is an immensely strong fish. The extreme breadth of his shoulder forms a hump just back of his head, and his undershot jaw gives him the expression of a fighting bull-dog, as indeed he is, for he never gives up while life lasts. His back is dark green with black spots, like a trout, tail comparatively thin, and forked. In weight he varies from 5 to 72 pounds; a specimen of this size having been captured off the mouth of the Fraser River, British Columbia, by an English sportsman, with rod and line. This record salmon now adorns the walls of the Museum of Natural History, Victoria, B. C.

The largest specimen I ever saw caught at Point Defiance weighed 67 pounds, and was landed with a stout hand line by a Siwash Indian and his fat squaw. They, not daring to land him in their shallow dug-out canoe, towed him around against the tide for about an hour, until he was completely exhausted, and then attempted to land him on the beach. During this operation the squaw, who was gaffing the fish, lost her balance and fell out of the canoe into three feet of ice cold water. As she fell, with the true sporting instinct of the Indian, she grabbed the salmon around the middle, and the air was filled with fish and squaw alternately, until her husband Bruce caught her by the back of her dress and pulled them both ashore. The squaw at once sat down on the fish, and as she only weighs 350 pounds, the king of the "tyees" met his Waterloo.

I shall endeavor to point out in this article the best means of capturing this fish. The Indians, who live by the proceeds of their fishing, use a thick hand line, at the end of which they attach a wire three feet long, terminating in a large salmon hook.

Before attaching this wire to their line, they run it through a herring, and fasten it on by a few skillful turns of a thread around the herring's gills. This is a most difficult knack for a white man to learn, as unless the herring moves through the water in an absolutely lifelike manner, the tyee will refuse to even look at it.

About 30 feet above the hook the Indian ties a stone as large as a croquet ball for a sinker. As this stone frequently catches against the side of the canoe during one of the salmon's terrific rushes, "halo fish" is the inevitable result. "Halo" is Siwash for "nit."

Four years ago a typical old sportsman named Howe came to the conclusion that he would invent an artificial bait to take the place of the ill-smelling herring. Acting on this idea, he made a darting spoon, shaped a little like a down-east bluefish squid. It is made of thin brass or silver, four inches long by one inch wide, very highly polished. The end nearest the line is round and spoon-shaped, with the bowl up. The end nearest the hook is pointed and turned down in the opposite direction. The hook is either soldered on this end and attached by a rivet to the middle of the bowl, or hangs free from the under side, in which case the shank is considerably shortened.

I am of the opinion that the short hanging hook is the most effective, both for its hooking qualities and the lack of a lever furnished the fish. The line is attached to a swivel hung from the upper side of the bowl of the spoon about one inch from the end. This gives the spoon a peculiar darting motion, sideways, and up and down like a wounded herring, and, as the spoon should always be kept very bright, the resemblance is startling.

I use an 8-foot split bamboo rod weighing about 12 ounces; a Vom Hofe reel carrying 600 feet of 18 thread tarpon line; a lead sinker shaped like a boat's keel, weighing 16 ounces, in the top of which are set two brass staples, and in the end a wire clip; a 4-foot piano wire leader completes the outfit. The line is passed through the staples in the top of the sinker and fastened in the clip, 30 feet from the spoon. When the salmon strikes, he disengages the line from the clip, the sinker slides down to the leader and you can handle your fish with perfect freedom.

Our camp being located just under the 300-foot bluff of Point Defiance, we are on the ground, so need lose no valuable time. At 3:30 A. M. my fishing partner Jack rouses me with the cheering assurance that "The tide is running in and the Siwashes are coming in their canoes." A cup of strong coffee and a sandwich, and we are off to the fishing grounds. I handle the oars for the first hour, and Jack seats himself with his back to me and pays out line until the 100-foot mark is reached, being designated by a red silk thread wound around the line at that point.

Jack's position in the boat is the only one to assume, as the tyee strikes like an electric shock, no nibble nor uncertain twitching, but a mad rush in the case of a large fish of 15 pounds and upwards, or a succession of short vicious rushes, in case the fish is under that weight. The experienced tyee fisherman can always tell by this initial rush whether the fish is a large one or not.

Suddenly the reel hums and Jack says, "I've got him fast, about 10 pounds I should stay, stop rowing."

First the fish sounds, the water being some 3,000 feet deep, no anxiety is felt on that account. Then comes a period of the sulks, during which there is "nothing doing," it being impossible to gain an inch of line, but gradually Jack works him to the surface and we see his black back. The tyee is slowly shaking his head from side to side like an angry dog; just here he sees the boat for the first time. Whirr! Pop! very much like the sound of a rocket, a disgusted fisherman on the stern seat looking at his dangling spoon, and the usual comforting, "You checked him too hard; don't you know he had just begun to fight," from the oarsman.

Before Jack's hour is ended he strikes another; this one he handles as if it had a tissue paper mouth, and the result is that after 17 minutes of careful work an 8-pound tyee is gaffed by me, and we change seats. My turn nets me one 13-pound fish, which fights like a fiend for 15 minutes and suddenly gives up. When landed the cause is apparent; he is surrounded by a ravenous school of dogfish, which have literally bitten his back fin off as neatly as if cut by a knife.

By this time we are getting hungry, and the tide is beginning to slack, so we go back to the tent where we eat, smoke, and sleep, until 4 P. M., when the Indians once more appear on the scene, each buck having his squaw to do most of the paddling, as well as acting as ballast. As the average squaw weighs anywhere from 195 to 500 pounds, they certainly fill the bill in this last respect. They are also the ugliest specimens of the gentler sex that could be imagined.

Now is the real time to fish for tyee, from 4 to 8:30 P. M., with a rising tide, which should flood about 9 at night. We have fair success during the afternoon, until 6:30, when the fish begin to bite as if they meant it. No sooner is one landed, or, more often, lost, than another is hooked.

Just as the last streak of the sun is visible, I strike what feels like a water-soaked log. The line runs out to the 300-foot mark on the first rush, then follow a series of short, determined runs, until 500 feet are gone. At last his strength yields to the strain, and I slowly work him to the surface. Here he sees the boat, I give him free rein, and once more 300 feet separates us. From now on the trouble really begins, and it is fully 20 minutes later before I see that swirl near the boat that indicates he is once more on the surface. Now is the critical moment, his rushes have worn the hook loose in his mouth, and Jack is shaking with excitement as he slips the gaff under his broad side. The fish is so worn out that he lies on his side almost without motion. Jack gives one vigorous twitch, and the 22-pound tyee is our meat.

During the afternoon we have caught several "silver" salmon. They differ materially from the tyee in many respects. They have a straight back, no black spots on either back or tail, and are totally different in fighting qualities. The tyee fights deep and never jumps unless foul-hooked; the "silver" is 5 feet in the air the minute he strikes, and continues to jump and twist until he is lifted into the boat perfectly helpless, owing to 4 feet of wire and 20 feet of line being wrapped around his gills. We are careful to have no reporter present to record our remarks on such an occasion, as no one would be benefitted spiritually by them.

There is another salmon, of which I have only caught one specimen. It is called the "jack" salmon, and is identical with the tyee except the tail, which is far shorter in proportion to the length of the fish. The flesh is much harder, and to say that a "jack" can fight but mildly expresses it. My 12-pound fish towed me two miles before I even saw him, I being under the impression that I was fast to a 45-pound tyee.

This reminds me of an experience of the veteran Howe, which was witnessed by Jack and me late one September afternoon. Old Howe always fishes alone, using a holder for his rod and a heavy drag on his reel to keep the line from running out. When a salmon strikes, the whirr can be heard by all the boats within half a mile, as he uses a rachet drag like a policeman's rattle.

I was fishing with Jack one evening when we heard Howe's reel talk in no uncertain tones. "He has another," said Jack, "let's watch him land it."

"How big is he, Howe?" said I; "Oh! about 10 pounds," said the old man. Here the reel began to whiz, and I could see Howe's eyes beginning to pop out.

"That's no 10-pound fish, Howe," I shouted. "I should say he weighed 50," said the old man in a strained voice; "he has 500 feet out and is going yet."

Finally he checked the fish, and sitting in the bow began to work him slowly to the surface, we then being only 50 yards distant.

Suddenly, 15 feet from the bow of Howe's boat, there appeared an enormous mastiff-like head as large as a ten-gallon keg, and an immense fox seal, sometimes called sea lion, shook the water off his whiskers and gave vent to a series of roars, which, to say the least, were not assuring.

Slowly that ancient fisherman drew forth his clasp knife and cut the line, and the seal promptly disappearing with a $1.50 silver spoon fast in his jaw. He had swallowed the original salmon in one gulp, and would have made short work of the boat if Howe had attempted to land him.

I would advise anybody coming here to fish to make arrangements to come in August or September, as the salmon are more plentiful and the weather perfect.

Such a trip as I have endeavored to describe will never be forgotten by anyone accustomed to the small fish of the average eastern waters.

P. V. CAESAR.

TACOMA, Washington.

Salmon Culture in America.

CAPE VINCENT, N. Y., Feb. 28.—*Editor Forest and Stream:* After reading the very sensible contribution of "An Old Angler" in a recent number of FOREST AND STREAM, I decided to send you a copy of a personal letter that I wrote Mr. Marston in regard to the same article to which "An Old Angler" refers. I am led to do this because, while the remarks of "An Old Angler" apply very forcibly to the propagation of Atlantic salmon, the Pacific salmon side of the question is entirely left out.

Allow me to add that I am very sure that Mr. Marston will have no objection to my sending you this copy of my letter to him. LIVINGSTON STONE.

My Dear Mr. Marston:

No very extended effort has been made in the United States to stock rivers with salmon, in which, to use the language of your letter, "it has become practically or actually extinct." This has been for the simple reason that the condition of such rivers, by reason of mills, factories and the like, has made it impossible for the salmon to breed in them, or even to ascend to their breeding grounds. Stocking such rivers would be obviously a wasted effort.

There are salmon hatcheries in the United States, both on the Atlantic coast rivers and on the Pacific coast rivers, but the salmon of the Atlantic rivers had become so diminished when the era of artificial propagation began that the hatching of Atlantic salmon has never reached very extended dimensions. Efforts have been made to stock the Merrimac, the Connecticut, the Hudson, the Delaware and the Susquehanna with these salmon, but owing to the conditions above mentioned, these efforts have not been successful and have been practically abandoned.

On the other hand, the hatching of the Pacific salmon has been conducted on a very large scale, though with the object mainly of keeping up the supply of the natural salmon rivers on which the hatcheries are located, it being impracticable to try on this coast the experiment of stocking rivers in which the salmon have become extinct, because there are no salmon rivers here in which the salmon have been exterminated. In regard to the results of this work, it can be safely said that the fishermen, the cannerymen, the fish commissioners and the enlightened public are unanimous in the belief that the accruing benefits have been enormous.

To begin with the Sacramento, the southernmost salmon river on the Pacific Coast, allow me to inclose an extract from the U. S. census on the subject, which, as you will see, credits the McCloud River Hatchery alone (Baird Station, U. S. Fish Commission), with benefitting the community to the extent of $310,000 in three years. Let me add here that when the writer started this hatchery in 1872, there were but four canneries on the Sacramento, and the salmon were rapidly diminishing in the river. A few years after the hatchery was established, there were more salmon than ever in the river, and the number of canneries was greatly increased.

Going further north to the Rogue River, Oregon, we find that Mr. George Hume, operating a large cannery near the mouth of the river, has been enabled by the help of a private hatchery to keep up the supply of salmon, notwithstanding the enormous depletion of the river made every year by his cannery.

Coming to the Columbia River, further up the coast, we find that the hatcheries have kept up the supply of salmon, notwithstanding an annual draft on that river by the canneries that in a brief time would exterminate the salmon in the finest salmon river in the world.

When the writer first went to this river in 1877 to establish the original hatchery of the Columbia (now the Clackamas Station of the U. S. Fish Commission) there were twelve hundred miles of drift nets in the lower Columbia alone, for furnishing the canneries with salmon. Since then the nets have multiplied, and there are, added to these, the destructive wheels and other murderous devices for exhausting the river of salmon. Nevertheless, the supply neither fails nor diminishes. No reasonable person could believe for a moment that this enormous draft on the salmon supply could be maintained every year unless the hatcheries turned in their millions of young fish also every year, to offset this prodigious drain on the river.

Everyone has heard of the wonderful salmon fisheries of Alaska, of which the Karluk fishery of Kadiak Island is the most famous. Here the writer saw 153,000 full-grown salmon caught in one day in July, 1888. That one day's catch filled, in round numbers, a million cans. There is a hatchery here, but it cannot be quoted yet as evidence of the benefits of artificial propagation because it has not been in operation long enough, but it is a significant fact that the cannerymen who are ranked among the shrewdest business men of the country, have expended on the hatchery a hundred thousand dollars of their private funds. Although this is by no means proof positive of the benefits of a

hatchery, it shows what sound business men think about it.

Asking your pardon for making this letter so long, I will bring it to a close by saying that there is hardly an intelligent and well informed man in the country that is not convinced that the artificial hatching of salmon is contributing immensely toward keeping up the supply of salmon in the United States.

Very truly yours,

LIVINGSTON STONE.

Reminiscences of an Octogenarian.

Part IX.

BY THE OLD ANGLER.

(*Continued from page* 172.)

WHAT is that wonderful faculty of Memory which we share with lower animals? Some of these would seem to possess it in a higher degree than many races of men, or, indeed, than some individuals of the most advanced races. This faculty of Memory, according to the most advanced Science of this Twentieth Century, is a function of the gray matter of the brain. How it acts, or what sets it in motion, science saith not; but every man, educated or ignorant, who has paid the least attention to the vagaries of his Memory, knows that it depends not on the Will, which it often defies and generally in proportion to the strength of the efforts made to coerce it. Everyone accustomed to introspection knows how many and how various are the strings to the harp of Memory, and how powerless is the will alone to make any one of them vibrate. These strings are generally more responsive to a scent or a sound than to sight, which, it might be supposed, would link us more closely to the past. But, as a matter of fact, blind men have generally better memories than those whose sight often disturbs, even while it supplies thought. A sound or a scent causes some string of this marvelous instrument to vibrate, and immediately the whole harp is in full diapason. Scenes and faces long forgotten or overlaid start up before us, as the association of ideas brings out layer after layer of that wonderful palimpsest on which is recorded the whole of our past life, and which, as a sounding board, responds to the vibrations of the various strings with which, in some mysterious way, it seems to be connected. The strangest and most wonderful thing in connection with Memory is the fact that after the grand climacteric is passed, the impressions made by recent events are soon forgotten; failing memory is one of the most annoying accompaniments of old age. The impressions made on the palimpsest of boyhood, youth and early manhood, though overlaid by those of after life, come out much more clearly and in more vivid colors when the proper harp-string is made to vibrate. For the practical purposes of life, old age requires the memory of recent years much more than that of boyhood and youth, which, whether pleasant or painful, can be of no practical assistance when we are striving to remember where we laid our glasses, or put that paper on which important results are pending.

This train of thought came unbidden; how suggested I know not. Perhaps by the taste or smell of the very inferior tobacco in my pipe, which, thanks to the "Tobacco Trust" engineered by the Multi-Millionaires, is more and more adulterating our cigars and usurping the place of the pleasant *perique* with which we solaced the cares of middle life.

But by what mysterious association of ideas this train of thought was connected with good old Doctor Benson, of Chatham, who, with his guns and dogs, brought from England the traditions of generations of Sportsmen, who can say? The "sub-conscious mind"—that psychological assumption by which *Messieurs les Savants* think they explain all the mysteries of psychomachy—must have been active and the palimpsest of Memory restores to the Conscious Mind some terms with which the good Doctor graced his stories of youthful sport in the English Shires. How careful he was to impress on his admiring listeners the great importance of using the proper terms when talking of Shooting and Hunting and Sport! Whether these terms are yet in use in England the writer cannot say; but he knows he never heard them in the United States, nor indeed in Canada, except when used by Englishmen or Irishmen who were old men when he was a youth. A nide of pheasants; a covey of partridges; a brood of grouse; a stand of plover; a whisp of snipe; a bevy of quail; a flight of pigeons; a plump of ducks; a flock of geese; a siege of herons; a drove of turkeys; a muster of peacocks; a building of rooks; a skulk of foxes; a skurry of hares; a clutch of rabbits; a bunch of deer; a gang of elks, are some of the terms Memory recalls, coupled with a mental vision of the stout old Doctor in shooting-coat and gaiters, with his pointers at his heel.

This picture of the Doctor, the first gunner the Octogenarian ever saw in field with trained dogs, recalls his mode of shooting, which was that also of Governor Sir Edmund Head, whom the writer saw years after shooting Snipe on the Gagetown Marshes. In the open, after snipe or plover, they both fired always from the hip. In covert of course the gun went to the shoulder to avoid bushes and branches; but what is called taking aim—shutting one eye and running the other along the barrels until the breech, sight and bird are in line—they ignored entirely. When old Grouse drew in, and young Ponto, her pup, was backing her staunchly, he followed the bitch's heels. With gun resting on his hip he advanced with the dog until the birds rose, when, with eyes of faith on the nearest, he fired, and turning the muzzle to the next, with the finger of hope he pulled the second trigger. Of course he often missed killing both birds, but very seldom did he miss the first. The dogs dropped and the Doctor reloaded before stirring from his tracks, when a wave of the hand was all the dogs needed to seek dead and retrieve the dying.

The writer is informed that neither in England nor in the States are Pointers or Setters now broken to retrieve; that various strains of half-bred dogs called Retrievers are considered the "proper caper" by up-to-date sportsmen. What the *raison d'être* of this may be, the Octogenarian humbly confesses he is too much behind the age to understand, and possibly he is too stupid to comprehend if it were explained. In his old-fashioned ignorance he thinks that the most essential part of the education of Pointers, Setters and Spaniels is teaching them thoroughly to seek dead, retrieve the wounded and bring both unbroken to hand. Why a third dog should be employed for this the writer has never heard explained, and he searches his past experience in vain for a sensible reason. He has seen both Pointers and Setters to whom retrieving dead or wounded birds came as natural as ranging and pointing. He has owned Spaniels that, as Retrievers, could not be beaten, not even by the best retriever he ever saw, which was a cross between a Scotch Collie bitch and an Irish water-spaniel. On land or water this dog was perfect in retrieving, but for other field-work he was only a makeshift. While the Octogenarian is a stickler for pure breeding, he has seen things about dogs that knock all orthodox theories higher'n a kite. The best partridge (grouse) dog he ever saw was a *full-blooded Mongrel*, a *thoroughbred cur* of no strain at all—or rather of all strains. He was simply a country cur, with no points either in shape or color to attract notice; but his intelligence was phenomenal. That he could reason from cause to effect and from means to the end sought, I am as firmly convinced as I am of my own reasoning power. This dog seemed to understand much of ordinary conversation, and often laid plans to evade what he overheard. If he heard anyone say, "It is time the cows were in," he would set off for the pasture adjoining a wood, in which they were often scattered; collect and bring home every cow in the herd, leaving the calves, yearlings and steers. He really seemed to understand the ways and habits of grouse better than his master who was shooting them. He rarely failed to find the tree into which the flushed birds took refuge, and he "gave tongue" until his master joined him. He would infallibly retrieve a dead bird, and a wounded one seldom escaped him; yet he had never been taught more than to bring a stick thrown into water. The rest was the result of his own reasoning—inherited instinct had nothing to do with it—for there was not a strain of sporting dog in his pedigree for generations back. *Messieurs les Savants* tell us that animals, no matter how intelligent, do not reason. The writer knows of nothing that can be more distinctive of the difference between instinct and reason than the power of adopting means to a desired end. There was, for some years, on this farm, an old mare, "Maud A," who had a record on the Canadian Turf Register of 2:28. She has been dead two years; but when living neither fence, bars nor gate could confine her to a field she wished to leave. If there were bars, she would slip them with her teeth as readily as a man. If they were tied, as they often were to outwit her, she would, after trying them, walk leisurely along the fence and select, with great judgment, the panel with the lightest rails. Taking the top rail in her teeth she would throw it to the off side as cleverly as a man could do it; the next rail she would lift up and drop at her feet; the next on the off side; when three were down she would jump the remaining ones and go where she wished; but always brought up in the best meadow. This was not an unusual thing, but a daily practice when she chose to change her pasture. I think she had a sense of humor, for she would lay back her ears, show her teeth and run at the person who sought to catch her; but she never bit nor kicked, and would always yield quietly when seized either by tail or mane. The doctrine of "innate ideas" in human psychology was exploded by Locke and Reid in the early part of the eighteenth century, and I suppose if the *genus homo* has them not, they can scarcely belong to the *genus equus* or the *genus canis*. But where the *Savants* are concerned you "can't always just exactly tell," for they are seldom consistent and never logical. If the facts do not dovetail into their theories, so much the worse for the facts! But these refuse to "down," and if the adaptation of means to an end in a new emergency is a proper test of reasoning power, sooner or later *les Savants* must revise their conclusions.

The late Col. Otty, of the Old Guard of old-fashioned Sportsmen, related to the writer the following incident illustrative of his Setter Nell's discriminating intelligence and readiness of apprehension. In stalking a plump of ducks he threw off his hat in his endeavor to steal a shot. After making a wide circuit he found the birds hopelessly out of range. Wishing to avoid the difficulties experienced in his advance, he sent Nell back for his hat, simply pointing to his bare head and waving her back. She understood perfectly and returned with the hat in which was a dying rail he had shot at sometime previously and, as he thought, missed. Now, Nell must have winded this bird on her way back, retrieved it, and failing to get both it and the hat in her mouth, must have placed the bird in the hat and thus brought both to her master. With all deference to the *Savants*, instinct will not explain this. It is as clear an act of reasoning out a new problem as is the well-authenticated feat of the Lurcher that was unable to leap a stone wall handicapped as he was with a wounded hare. After several failures to reach the top, he ran along the wall until he found a drain opening at the foot which would suit his purpose. Having found one, he thrust the hare in with his nose until it was so tightly wedged in the opening that it could not escape; the dog then jumped the wall, pulled the hare through and carried it home. Another equally well-authenticated occurrence is related in the "Notes of a Naturalist," lately published in England. Two brothers were duck shooting. A plump was feeding along the sedgy shores of a small pond. At one end of this the gunners separated, each following opposite shores. They left their hats at the parting spot, the better to stalk their game. They did not get within range until the lower end of the pond was reached, when both fired and shot several birds. Their Spaniel retrieved these and was then sent back for the hats. The brothers watched Leo attempting to get hold of both hats; in seizing the second he always dropped the first. He stood as if considering the problem; then placing one hat on the other he thrust it down with his nose and carried both hats to his master. If the reasoning faculty was not displayed in thus adapting means to the end sought, perhaps *les Savants*, who deny that animals reason, can give some rational explanation of the thousand and one well-authenticated cases in which horses and dogs, and even goats and pigs, adapt means to ends. All general readers will recall many of these which the writer does not cite lest the readers of FOREST AND STREAM should ring the chestnut bell; its columns for years past have teemed with instances of animal intelligence which instinct alone will not explain.

* * * * * *

How many readers of FOREST AND STREAM ever owned or ever saw a genuine old "Joe Manton," with its flint cock, steel-faced hammer covering the pan, and gold-bushed touch-hole? Those who have will recall its highly finished locks; its beautifully engraved plates and trigger-guard; the fine finish of its stock and damaskened barrels, and will readily admit that no better workmanship is produced to-day either in Europe or America. The Octogenarian never saw but four of these famous guns, and these were all owned by gunners on the Miramichi. Doctor Benson had two; James Matheson, a Scotchman, and Thomas Vanstone, an Englishman, each had one, which were prized as the apples of their eyes. The grandchildren and great-grandchildren of all these pioneer sportsmen of New Brunswick are living, and perhaps some of them may have these very guns preserved as curiositics. The writer remembers distinctly when the first percussion guns were imported from England; not even the advent of the breechloader created such interest among sportsmen. The conversion of a flint gun into a percussion was easily and cheaply done by the local blacksmiths, who, in those days, were gunsmiths and locksmiths as well; percussion cocks being for sale in the stores. With the percussion gun came Ely's wire cartridges, long since displaced by loaded shells containing powder, shot and cap, which the advent of the breechloader made possible, and greatly enhanced the pleasure of gunning. This has been followed by the magazine rifle and shotgun with hammerless locks; but whether these last are *improvements* the writer cannot say, never having used either. But those who have used both complain that something goes wrong with each of them at the very time when their best action is most required—the cartridges jam or the ejector won't work! Whether these latest improvements are not largely responsible for the great increase of deadly accidents with which the daily press teems, is another question on which the Octogenarian will not venture to speak *ex cathedra*—they have all come to the front since he was laid on the shelf. But having followed the evolution of the gun from the flintlock muzzleloader of his youth to the magazine revolvers, rifles and hammerless breechloaders of the present day, he has noted that a great increase in accidents has followed every improvement. It may be that these have fostered recklessness, and that most of the accidents are caused by carelessness amounting to stupidity. What can be done with that large and seemingly increasing class of sportsmen who leave loaded guns and pistols within the reach of children and fools; or with that still larger class of idiots who "didn't know it was loaded"? The Octogenarian trusts that he has not grown heartless nor cynical; but he must confess that when he reads or hears of gunning accidents caused by climbing a fence with the gun cocked; or pulling it forward by the muzzle; or using the cocks as a hook to pull down the branches of an apple tree; or pulling a loaded and cocked gun across the thwarts of a boat, he merely asks, "Did it kill him?" and he feels a suspicion of regret if it did not. Such fools are sure to kill themselves sooner or later; the sooner they do it the less chance they will have of shooting their companions. In cases of mistaking a man for a bear or a deer and shooting him, it should be made a capital offense with imprisonment for life. Society has a right to protect itself from such idiots, and the only way to do this effectually is to put them where their idiocy can do no further harm. Cases of "didn't know it was loaded" should be punished by flogging—first the idiot who left it loaded in the reach of children and grown fools of his own caliber, and second the fool who handled it without ascertaining whether or not it was loaded. This last fellow should be flogged every time a gun or pistol was seen in his hands. But even with all these precautions "the crop that never fails" will always be a large one, and some of these fools will "get in their work" in spite of all that common sense can do to eliminate them.

* * * * * *

When wild pigeons were still plentiful in Sussex, about 45 years ago, the writer and one of his angling friends drove from St. John and put up at the comfortable Inn then kept by the late Hugh McMonagle at Sussex Corner. There are many readers of FOREST AND STREAM who will remember this fine Sportsman of the Old School, and one of the Fathers of the Turf in Eastern Canada. My friend, though a good angler, was a novice with the gun. After a long tramp to the Salt Springs, in the course of which we saw some flocks and many scattering plumps, within range of which we found it impossible to get, we separated; agreeing to meet at the Springs at four o'clock and return to the Corner. The writer got but a single shot at a passing flight, bringing down only four birds. Small, scattering plumps were passing to and fro, often alighting on trees, but they had grown "gun-wise" and were too wary to allow an approach within shot. After many fruitless efforts and several hours' tramping through rough clearings on the edge of dense woods, I gave up the chase and made a bee-line for the high road, which was reached about half a mile from the springs, toward which I hastened, being late for the appointed meeting. To my surprise my friend met me, carrying four pigeons but no gun, and presenting a most sorry and woe-begone figure. He was completely wearied out, and told a most piteous tale, which elicited only roars of laughter where he looked for sympathy. The tale was too ridiculous to hear without laughing by any one with the least sense of humor. He had shot two birds, and had stalked quite a large plump resting on a withered tree; there were, he said, at least a hundred birds, beautifully disposed among the leafless branches. Under cover of a clump of alders he had got near enough for a long shot and fired. He was sure a dozen at least fell to the ground. Hastening to recover all he could, he started for the tree; to help his speed through the bushes and underwood, he laid down his gun and the two birds he had previously shot. In searching for the dead and wounded he circled the tree several times, but four birds were all he could find out of the dozen he was sure he saw fall. On returning for his gun, to which

he said he took a "bee-line," he could not find it; the more he searched the more confused he became. It seems incredible, but he assured me he spent over an hour and a half, and left no foot of ground unsearched until he was satisfied that someone had stolen his gun and game. He then gave up further search and started for the rendezvous at the springs. He made what he thought another "bee-line" for the road, through a piece of scrubby wood. Here he completely lost himself and wandered in a circle for another hour; but at last he came to an opening from which he saw the road not a hundred yards off and within a short distance from the Springs. As I was not there, he concluded I had kept the appointment, and not finding him, had gone back to the Corner, whither he was following when we met. At the end of this pitiful tale it was impossible to repress another roar of laughter, which exasperated him into a tirade of abuse that would, under other circumstances, have ended then and there the friendship of years. But the humor of the thing was too rich to leave room for offence, and after a few serious words, set us both off into paroxysms of laughter. After some questions he assured me he could take me to the foot of the tree from which he had shot the four pigeons he carried.

"In that case, we'll soon have your gun again; lead on." After tramping through pastures and stumps we entered the scrub and soon came within sight of the tree.

"Show me the clump of alders from which you fired?"

"That I cannot do. I tried in vain to find it when searching for the gun. But there's the tree I fired at."

"Well, Will, it is most unfortunate the Countryman carried that off as well as your gun. We can, however, do without its help; but not so well. How far do you think it was from the tree?"

"I should say not more than 100 yards—perhaps less."

"How far from the alders did you lay down the gun and the birds?"

"I haven't the remotest idea. I was after the dozen birds I shot."

"Well, come with me."

Starting from the foot of the tree, I told him to walk round it in a circle to the right, while I did the same to the left. As we passed in circles, widening by only a few yards, of course it was a simple question of time to find the gun if it had not been removed, which was so improbable that I dismissed the idea from the start. I had not circled the tree a dozen times before the gun and the two pigeons lay before me. Calling my friend, whose circle had taken him to the opposite side of the tree, I pointed to the gun, and asked him if he could now locate the alder from behind which he had fired. He looked round a moment, then walked straight to it. Had he used any system in his former search he could not have failed. Dear Old Will! He crossed the Divide ten years ago. May the turf lie lightly on his head! Though an indifferent gunner he was a good angler, and many times since his *res gestae* with the pigeons have we fished together on the Nepissiguit and the Southwest Miramichi, but through many years of close intimacy we never came so near a quarrel as when his sorry plight, his pitiful tale, his lost gun and his four pigeons excited my irrepressible laughter.

The tendency to travel in a circle, which all but experienced woodsmen do when lost, is explained by the right leg making a longer stride than the left; but it is astonishing how often this involuntary and unconscious difference in the stride brings an active walker back to his starting-place when lost amidst unfamiliar scenes and objects, which to him present no diversity of aspect. The writer does not know to whom belongs the credit of discovering that a watch will answer as a compass in an emergency. Point the hour hand directly at the sun, and half the distance on the face between that hand and the figure 12, counting backwards, will point nearly due south. I do not understand the *rationale* of this and will be obliged to any learned *Savant* who will enlighten me through FOREST AND STREAM, but actual trial with a watch that indicates twelve when the sun is on the meridian, shows that it always works out correctly. The old Indian signs of the moss growing thickest on the north side of trees, and the tips of the spruce trees inclining to the south, are not to be depended upon except by experienced woodmen, and more often lead an inexperienced person still further astray.

The Milicete Sachem Gabe seemed to have the same instinct which leads a dog or a horse home by the straightest route. He could not explain it, did not seem conscious of any mental effort, and he only wondered that everybody could not do the same. I have tried in vain to get him to explain how he knew the direction of our camp when miles from it—after having made many turns on the winding waters of the South West. The only explanation he could give was—"Must be there, 'cause ain't anywhere else." The *philosophy* of this may be questionable, but its *logic* cannot be assailed. V.

The Gut Crop of 1902-3.

MANCHESTER, England.—*Editor Forest and Stream:* In reporting upon the gut crop for 1902-3, I have to announce about an average production—i. e., about 18,000 pounds, Spanish weight, which, allowing about 5,000 strands to the pound weight, represent a gross total of about ninety millions.

One notable change this year is the largely diminished supply of the ordinary qualities in the shorter lengths (7 to 10 inches), but as these are mainly purchased for the American market, the English trade will be but slightly affected by that circumstance.

The supply of the heaviest salmon gut is even less than last year, which was a very limited quantity, and before the end of the season will be next to impossible to obtain.

The Italian crop of "Grecia" is again most excellent, and anglers will have less cause for complaint than usual as to the supply of the finest qualities.

With an average crop prices may be expected to rule as about last year, though the demand is steadily increasing for gut by the hospital authorities for surgical purposes.

ROBERT RAMSBOTTOM.

Fly-Casting at the Sportsmen's Show

THE fly-casting tournament that is being held every afternoon and night in connection with the Ninth Annual Sportsmen's Show in Madison Square Garden, this city, has been a very interesting affair to those who are fond of angling, while the crowds that have filled the great arena every day and evening have given the casting more attention than might have been expected. So far all of the events have been for fly-casting, except Saturday afternoon's contest, which was for distance only, open to all comers, half-ounce rubber frogs being used, but casting from the reel prohibited. The women's trout fly match was declared off for want of a sufficient number of contestants, and the beautiful trophies offered the winners in this event are still the property of the association. The events of Saturday afternoon and night were the banner ones of the tournament, so far, from the point of the number of entries, there being eight or ten, respectively.

In last week's FOREST AND STREAM the results of the first two matches were printed, and our record for this week closes with the event held Monday night, March 2. The results of subsequent events will be given in these columns next week.

Tuesday Afternoon, Feb. 24.

Class D—Trout fly-casting for distance only. Open only to those who had never cast more than 60 feet in any similar club or tournament contest. Weight of rod and length of leader unrestricted. Three prize medals—gold, silver and bronze. Judges, E. A. Sellux and A. B. Douglass; referee, E. J. Mills.

	Feet.
W. B. Cloyes	79
Will K. Park	73
W. T. Morrison	65

G. H. Gerard cast 63 feet in this event.

Tuesday Night, Feb. 24.

Class E—Light trout fly-rod contest for distance only. Rods were limited to five ounces, but those having solid reel seats were allowed three-quarters of an ounce. Open only to those who had never cast more than 60 feet in any similar contest, in either club or open tournament. Three prize medals—gold, silver and bronze. The judges were P. J. Tormey and E. J. Mills; referee, Milton H. Smith. There were eight entries, and V. R. Grimwood won. The score, in feet and inches:

	Feet.
V. R. Grimwood	76 0
R. F. Cruikshank	68 6
W. H. Hammett	66 0

J. H. Cruikshank and J. D. Foote tied with casts of 62 feet 6 inches, and Will K. Park cast 64 feet, G. H. Gerard 65 feet, and H. G. Henderson 52 feet 6 inches.

Wednesday Afternoon, Feb. 25.

The event scheduled for this afternoon was Class D, women's trout fly-casting contest for distance only, and open only to those who had never taken a first prize in any similar club or tournament event in which there had been competition. No limit to weight of rod or length of leader. The prizes were similar to those in the other contests, and three entries were necessary. As that number of contestants of the gentler sex did not put in an appearance, the event was declared off.

Wednesday Night, Feb. 25.

This event was Class G, for light trout rods of five ounces or less, with an allowance of three-quarters of an ounce for those having solid reel seats; distance only to count, and open only to those who had never cast further than 75 feet in any club or open tournament contest similar to those held at the Garden. There were three prize medals—gold, silver and bronze. J. H. Cruikshank, who took the silver medal last night, was high man in this event, with 74 feet to his credit. The judges were W. D. Cloyes and P. J. Tormey, while E. J. Mills was again the referee. The score:

	Feet.
J. H. Cruikshank	74
R. F. Cruikshank	65
W. H. Hammett	64

J. D. Foote was one foot lower on the scale than Mr. Hammett.

Thursday Afternoon, Feb. 26.

This was another switch trout fly-casting event, for distance only, open to all-comers, with no restrictions on the weight of rod or length of leader. A net was lowered fifteen feet behind the contestant's bridge. The judges were W. D. Cloyes and H. G. Henderson, while Will Park was referee. R. L. Leonard won the gold medal. The score, in feet and inches:

	Feet.
R. L. Leonard	95 6
H. W. Hawes	87 0
E. J. Mills	83 0

Thursday Night, Feb. 26.

Class I—Trout fly-casting, distance only to count, and open to all-comers. Thirty feet in front of the contestants and six feet above the water a horizontal bar was placed, under which all casts were made. No restrictions on weight of rod or length of leader. The judges were P. J. Tormey and Milton H. Smith, while W. D. Cloyes acted as referee. The gold medal went to A. B. Douglass, E. J. Mills won the silver medal and R. L. Leonard captured third. The score, in feet:

	Feet.
A. B. Douglass	64
E. J. Mills	61
R. L. Leonard	60
H. S. Henderson, Sr	52
M. C. Hazell	38

Friday Afternoon, Feb. 27.

The event scheduled for this afternoon was Class J, for very light trout fly-rods, distance only to count. There was a limit of four ounces on all rods, but those having solid reel seats were allowed three-fourths of an ounce. Only those who had never cast further than 75 feet in any similar club or open tournament contest were eligible to enter. No restrictions on the length of leader used. The judges were W. D. Cloyes and E. J. Mills, with A. B. Douglass as referee. J. H. Cruikshank won the gold medal, W. H. Hammett the silver medal and G. H. Gerard was third. The scores, in feet and inches:

	Feet.
J. H. Cruikshank	71
W. H. Hammett	65
G. H. Gerard	64

The scores of those who failed to win places: Robert Cruikshank, 62 feet 6 inches; S. Demorest, 56 feet 6 inches.

Friday Night, Feb. 27.

Class K was for black bass fly-casting, distance alone to count, with no restrictions on weight of rod or length of leader, and open to all save those who had records of 85 feet or over in any similar club or open tournament contest. Flies on No. 4 or larger hooks were permitted. The judges were G. H. Gerard and Milton H. Smith, and the referee was R. F. Cruikshank. The winner of the gold medal was E. J. Mills, silver medal A. B. Douglass and bronze medal P. J. Tormey. The score, in feet and inches:

	Feet.
E. J. Mills	80 6
A. B. Douglass	78 0
P. J. Tormey	76 0

The other contestants and their scores: W. R. Prior, 75 feet; V. R. Grimwood, 74 feet; W. H. Hammett, 67 feet 6 inches.

Saturday Afternoon, Feb. 28.

The first one of the bait-casting contests brought out seven men, despite the fact that the weather of the afternoon was extremely disagreeable. Distance alone counted, and any person could enter. Neither was there any limit placed on rod, line or reel, but casting from the reel was barred. Lines were stripped, Greenwood Lake style, with half-ounce rubber frogs, which were furnished by the committee. When the contestant signified that he was ready, he was timed; and his longest cast in the following five minutes counted as his score. He was required, however, to keep his bait within the side boundaries of the tank. The judges were G. H. Gerard and Mr. Cruikshank. D. Brandreth, of Ossining, won the gold medal, C. G. Levison, of Brooklyn, the silver medal, and the bronze medal went to J. D. Foote, of this city. The score in feet and inches:

	Feet.
D. Brandreth	77 0
C. G. Levison	72 0
P. J. Marsh	67 0
J. D. Foote	67 0
Cast-off:	
J. D. Foote	65 0
P. J. Marsh	61 6

The other contestants and their scores: L. S. Darling, 65 feet; E. J. Mills, 64 feet; Milton H. Smith, 56 feet.

Saturday Night, Feb. 28.

This contest, which was Class M, was the most interesting one that has so far been held during the Sportsmen's Show, but it was unfortunate that it could not have been held in the afternoon, as the light in the Garden was not strong enough for the judges, the referee and some of the contestants to see the fly as it fell on the dark water. The fly-casters who wear glasses—and a good many do—were handicapped not a little in this respect, for the water in the lake seemed very dark under the evergreens along the edge, and constant attention alone enabled the judges and the referee to locate the fly as it fell on or near the buoy. This event was open to all comers, with no limits on rod or line. When the contestant signified that he was ready to score, he began to cast at the buoy, and after saying "Count," or after having made five casts, the next five casts were recorded. The buoy was placed against the side of the lake, ten yards distant from the bridge and under a bush. The casts were scored as follows: The buoy was a semi-circular disk six feet in diameter, marked with circles six inches apart. A fly dropping in the central circle counted 10, in the next circle 9, next 8, and so on down, the lowest count being 5. The highest score won the gold medal. This went to D. Brandreth, while A. B. Douglass captured the silver medal, and H. J. Henderson, Sr., the bronze medal. The judges were Milton H. Smith and P. J. Tormey. H. W. VanWagenen was referee. The score:

	1st Cast.	2d Cast.	3d Cast.	4th Cast.	5th Cast.	Total.
D. Brandreth	7	4	6	8	8	33
A. B. Douglass	7	4	5	0	6	22
H. J. Henderson, Sr.	4	5	7	0	6	22
Cast-off:						
A. B. Douglass	0	6	0	7	10	23
H. J. Henderson, Sr.	0	0	9	5	6	20

The score of the contestants who did not win places follows:

	1st Cast.	2d Cast.	3d Cast.	4th Cast.	5th Cast.	Total.
R. B. Lawrence	9	0	6	0	0	15
D. T. Abercrombie	5	0	6	0	0	11
C. G. Levison	6	0	0	0	0	6
J. D. Foote	0	0	0	0	6	6
W. D. Cloyes	0	0	6	0	0	6
F. M. Spiegel	5	0	0	0	0	5
H. G. Henderson, Jr.	0	0	0	0	0	0

Monday Afternoon, March 2.

To-day's contest was Class N, trout fly-casting, for accuracy only, and open to all comers, without restrictions on weight of rod or length of leader. Five casts were required at a buoy moored 50 feet distant from the bridge, five at a second buoy 55 feet distant, and five at a third buoy 60 feet away. The method of scoring was this: If the fly fell within a foot of the buoy cast at, the cast was considered perfect, while for each foot or fraction in excess of a foot from the buoy a demerit of 1 was counted. The sum total of such demerits, divided by 15, was considered the demerit per cent. The demerit per cent. deducted from 100 represented the accuracy per cent., and the highest score won. For flies whipped off time was allowed for replacing them, and one minute for extending line to the proper buoy. The prizes were the same as in the preceding events. The scores in total follow:

	Per Cent.
P. J. Tormey	99.0
Dr. J. G. Knowlton	98.6
H. G. Henderson, Sr.	98.4

The other contestants and their scores: J. G. Foote, 98 per cent.; A. B. Douglass, 97.9 per cent.; G. H. Gerard, 97.5 per cent.

Monday Night, March 2.

Class O was open to all who had never cast further than 80 feet in any similar club or tournament contest, without restrictions on length of leader, but rods were limited to four ounces, those having solid reel seats being allowed three-fourths of an ounce. Distance only counted, and light fly rods alone were permitted. Three prize medals, gold, silver and bronze. The judges were V. R. Grimwood and W. D. Cloyes, and J. H. Cruikshank was referee. The scores of the winners, in feet and inches:

E. J. Mills.....75.6
J. D. Foote.....61.6
Dr. J. G. Knowlton.....58.6

H. J. Henderson, Sr., cast 58 feet.

Massachusetts Fish Stocking.

From the Report of the Commissioners of Fisheries and Game.

Output of Fish.

THE most important incident in the distribution of fish, considered from the standpoint of numbers as well as an innovation in the fish-cultural work of the commission, was the planting of 6,000,000 shad fry in the head waters of rivers of this State. The first lot of 3,000,000 was put into Assawompsett Pond, the source of Taunton Great River, on May 24, 1902, and four days later 3,000,000 more were planted in Furnace Pond, the head waters of North River.

These consignments were received from the United States Fish Commission, by one of its cars, and the fry were in excellent condition when planted.

The trout fry put out in the spring numbered 1,010,000. This is a record on trout fry, and exceeds the output of last year by nearly 16 per cent. In addition to these plants 4,000 yearling and 65,000 fingerling brook trout, and 1,000 brown trout fingerlings have been put into the streams, while 6,500 rainbow trout fingerlings, 1,000 landlocked salmon fingerlings, 125 adult brook trout and 2,750 white perch have been used to stock ponds, while 8,500 brook trout fingerlings have been reserved to increase the brood stock.

This brings the total output to 7,091,375, and the fact that so many of the salmonidæ species were either fingerlings or yearlings when put into State waters gives a larger importance to this work than the figures would seem to indicate.

When considering the output of fish mention may properly be made of the distribution of large quantities of landlocked smelt eggs in various ponds and lakes. Thus other thousands of fish have been added to the interior waters.

Several ponds have been stocked with landlocked smelt. The object of stocking these ponds with smelt was, primarily, to provide a natural food for landlocked salmon. It is altogether probable, however, that the smelt may prove a desirable food for other species, notably bass, perch and trout. It is also a fine food fish, and, although it is diminutive in size, it can furnish some sport, if very fine tackle is used. The method of stocking was simply to transfer eggs from the streams that empty into Lake Quinsigamond to the ponds mentioned. Nothing more is required.

Pond and Brook Fishing.

The notes extracted from the reports of deputies in various parts of the State indicate unmistakably the influence of artificial stocking with fish, and the regulations imposed by the commission under special acts. An increase of fish is noted in a large majority of cases, and since the restoration of life in our inland waters is almost wholly dependent upon fish-culture and the enforcement of protective laws, the importance of those phases of the commission's work will be apparent. If, instead of being more or less barren and unattractive, our ponds and streams can be brought to a condition which will cause them to yield large quantities of food, in addition to furnishing much healthful recreation, it is difficult to over-estimate the public benefit to be derived from the change.

Among the statements made, those relating to the pike perch are peculiarly noteworthy. In introducing this species into our ponds in 1900 and 1901 there was of necessity an element of doubt concerning it. No one could say with certainty that it would live in the ponds, with their conditions of temperature, etc., while it was impossible to be free from apprehension of the effect of predatory attacks by other species, notably the pickerel. If, then, the statements made concerning the pike perch can be fully credited (and we see no reason for doubting them), there is reason for much encouragement, so far as its introduction is concerned; for not only is it a good food and game species, that attains a considerable size, but it is prolific and can be bred in large numbers. When adult fish become reasonably abundant in our ponds it will be easy for the commission to collect all the pike perch eggs it needs, and then many millions of fry can be produced from Massachusetts fish for stocking the ponds. While this result may not be realized immediately, it is far from visionary to expect it in the not distant future.

We had a call from Capt. Pellier Johnson the winner of the Grand Prix de Monte Carlo, on Tuesday. The gallant officer had just returned from the sunny South, with all his honors thick upon him, and he was in high spirits, and looking exceedingly fit after the excitement he had recently gone through. He told us that after he had killed 19 consecutive birds, and all depended upon his last shot, he never felt so cool and confident in his life. Some extraordinary yarns have appeared in some of the papers concerning Capt. Pellier Johnson; so it may interest our readers to learn that he is a nephew of Sir John Henry Johnson, of St. Osyth's Priory, Essex. He was formerly in the 9th Lancers, and served in India, where he distinguished himself at polo, pig-sticking and flat racing. He was at one time Master of a Scottish pack of foxhounds, was one of the international team of clay bird shooters in the Anglo-American contest at Hendon, and it need scarcely be said he is a first-rate hand at driven partridges and rocketing pheasants.—Shooting Times.

Risks to Retrievers.

EVERY humane sportsman, before sending a gallant retriever to fetch a duck that has fallen on thin ice, into a cold torrent in winter, or into the sea when a hurricane is blowing off the shore, should pause to consider the danger of so doing. The wildfowler's sport is rough work. He has to put up with much hardship, much exposure to the wet; long are his stalks, elaborate his schemes to get within range, many his disappointments, and when at last he succeeds in achieving a brilliant shot, perchance killing a much coveted wild duck, his anxiety to secure the prize on which he has expended so much energy of brain and body is but natural. Rather would he never shoot a duck again than lose his dog, but it is during that moment of intense excitement, when the bird falls, that he may not realize the danger to his dog till too late, and then, unable to render any assistance, be constrained to witness a struggle that can have but one termination.

A retriever that has once become a really keen water dog will never give in till death overtakes him. In vain may his owner use both whistle and voice; but, with his bird in view, the dog only understands such sounds as notes of encouragement or direction, and cannot be blamed under the circumstances for believing that he knows better than his master, and so onward he bravely struggles and, game to the last, meets his doom. I lost the best and most faithful retriever I ever had over a wretched golden-eye—a story I never like to tell. Suffice it to say that, although a duck may fall on ice strong enough to carry a horse and cart, unless the bird drops quite dead, it may, as it flaps away from the dog, lead him to a spot that is a certain death trap. I had had a lesson, but, despite all subsequent care, both a daughter and granddaughter of my old favorite—the former twice, the latter once—had similar narrow escapes. Both inherited the reckless dash, determination, fidelity and love of water work for which the breed was famous. In her third season the daughter walked perfectly to heel in partridge shooting and under ordinary circumstances; but one winter's day I shot a cock pheasant that rose out of some scrub by the river side and fell on the ice at the far side of a pool about fifty yards wide. Before the keeper or I had time to check her, the retriever cleared the scrub at a bound, and, with a drop of about eight feet, fell clean through the ice. Return she would not, despite all our exhortations, but struggle on toward the bird, breaking the ice as she went. Sometimes the ice gave way easily enough, sometimes she hung on it a long time before it broke; but she got her bird, and then, instead of returning by the passage she had made, attempted to take a fresh and shorter route to the bank. All we could do now was to encourage her and break the ice in front of her with what stones we could find. At last she got ashore, much exhausted and without once having lost hold of her bird. All is well that ends well, but we had been very near witnessing her death.

The second time she was in danger it was under different circumstances. The river was in heavy flood, fragments of ice were coming down, and the bird was a mallard. It fell into a great swirling eddy at the bend of a pool. I was not present, and the keeper sent the retriever for the bird. The mallard was only winged, and again and again, as she was on the point of seizing it, it dived. For twenty minutes this went on and then the keeper, seeing her danger in the icy cold water, endeavored to get her out. But, as in the case of the pheasant, she refused to leave her game and nearly an hour passed before she came ashore with her bird, so exhausted that she could scarcely walk the half mile home. Rubbed thoroughly dry and placed in hot blankets before the fire, she recovered, but she had not been far from her end. These adventures had no effect on her spirits and she retained her courage and perseverance to the end of her days.

The granddaughter's peril was of a different nature. It happened one Christmas eve on the Argyllshire coast, and a hurricane blew off the shore. Squalls hurtled down the glens—mere deep fissures between precipitous mountains—with fearful force. They smashed as they met it the surface of the sea, whirling high aloft dense, spiral, alabaster-like columns of spindrift, which seemed as though they rose to greet the angry, low-flying scuds above. Such a storm as may not be seen twice in a lifetime, but it was the storm that induced me to tramp many miles to a certain part of the coast where wildfowl must, in such a gale, either seek shelter or be driven out to the broad Atlantic. In a cleft among wet seaweed at the extremity of the most projecting promontory in the vicinity the retriever and I crouched, the while my gillie paraded the coast with a gun and put the fowl on the wing. For a time the drive was most successful, and I bagged a number of birds of various kinds which fell within such easy reach that there was no risk in sending the retriever for them. But at last the danger and temptation came. With a long shot I winged a scoter, a duck of which I had for years striven to obtain a specimen. Rapidly seaward amid the foam the bird drifted and swam away; but the retriever had seen it fall, and plunged. The danger was obvious, so by firing the other barrel in an opposite direction, and raising a sham hunt ashore, I managed to slip the lead on. Had the retriever followed the bird, never should I have seen her again. Seaward would she have swam with the scoter ever before her like a will o' the wisp, till, whether she gripped her game or not, return would have been impossible.

Such has been my limited experience, but I am convinced that similar cases are not uncommon, and that, especially in hard weather, the sportsman does well who first carefully considers the safety of his dog before attempting the recovery of his game.—Arthur Crawshay, in London Field.

Canoeing.

Prizes for Canoeists.

IN order to encourage canoeists and small boat sailors, who do their knocking about on inland waters, to keep a record of their trips and experiences, the publishers of FOREST AND STREAM offer cash prizes for the best accounts of cruises taken during the season of 1903. As few restrictions as possible will be imposed, and those given are made only with the view of securing some uniformity among the competitors' stories, so that the judges will be able to make a fair award.

The prizes will be as follows:

First, $50.00.
Second, $25.00.
Third, $15.00.
Fourth and Fifth, $10.00 each.
Sixth to Eighth, $5.00 each.

I. The cruise must be actually taken between May 1 and November 1, 1903.

II. The cruise must be made on the (fresh water) inland streams and lakes of the United States or Canada.

III. The canoe or boat in which the cruise is made must not be more than 18ft. long over all.

IV. An accurate log of the trip must be kept and all incidents and information that would be of value to other canoeists covering the same route should be carefully recorded.

V. A description of the boat in which the cruise is made should preface the story, and a list of outfit and supplies.

VI. Photographs of the boat and of the country passed through, not smaller than 4x5, should, if possible, accompany each story, and they will be considered in making the awards.

VII. Stories should contain not less than five thousand words, written on one side of the paper only.

VIII. An outline chart of the trip drawn on white paper in black ink (no coloring pigment to be used) should also be sent in.

IX. Competitors should avoid the use of slang or incorrect nautical expressions in their stories, as it will count against them in awarding the prizes.

Each manuscript to which a prize is awarded shall become the property of the Forest and Stream Publishing Company. All manuscript should reach the office of the Forest and Stream Publishing Company, 346 Broadway, New York, N. Y., on or before December 1, 1903.

A. C. A. and its Finances.

Editor Forest and Stream:

The time has arrived when the members of the American Canoe Association must consider the financial condition of the organization and plan for the future. The Association has an island in the St. Lawrence River, a beautiful spot and one that should always remain a mecca for the tired brain worker and the canoeist. Some other way, however, has to be devised by which funds are to be obtained to meet the expenses than is now used. During the last five years the amount turned in to the Board of Governors in each year has been:

1898, C. V. Schuyler, Sec'y-Treas.	$110.00
1899, C. P. Forbush, Sec'y-Treas.	49.00
1900, Herb. Begg, Sec'y-Treas.	——
1901, Herb. Begg, Sec'y-Treas.	21.00
1902, F. J. Burrage, Sec'y-Treas.	——
Total	$180.90
Or an average per year of	36.18

Now the fixed charges on Sugar Island are as follows: Taxes, wages caretaker and safe deposit rent alone, $40.80, or more than the average receipts for the year.

Add to this expenditure expenses for underbrushing, register for island and the other little expenses that come up naturally and you add $15 or $20 more per year that must be met.

It does not answer the question for one or another administration to say if such and such a thing had not happened we would have made a better return. The facts stare us in the face that our expenses are greater than our receipts.

What are we to do about it? Does this mean the Association is bankrupt? It would look so. But it is not so, for the balances of the divisions last year as per 1902 Year Book aggregated $664.46. In other words, over $600 was carried over into 1903. Why should not a portion of this be available to meet the expense of preserving the real estate of the Association? Our members pay for dues every year about

$1,200. This amount is ample to meet all of the legitimate expenses of the Association. Under our present system, however, with our pursers changing each year, many men do not send in their dues because they do not know to whom to send. Some pursers forget to send bills and many men lapse and drop out. Can this condition be improved under the present system? I think not, for a purser hardly knows the routine of his office before his term is up and a new man comes in. What can be done, then? I believe the only way to meet the question and solve the problem is to have a paid secretary-treasurer and have him collect the dues of all members. He then once a month could return the 70 per cent due to each division and the endless settling, correcting and squaring of the purser's accounts and then returning them back again to be settled, corrected and squared again two or three times would be eliminated, the officers of the general association and of the divisions could tell exactly how they stood and the Association's finances would be in a businesslike shape. I should like to have an expression of opinion from the members, for "in the multitude of counselors there is wisdom."

ROBERT J. WILKIN, A. C. A. 47.

The Cruise of the Mosquito.

BY HULBERT FOOTNER.

At last early on a Sunday morning we entered the Richelieu River, and immediately passed the Canadian boundary marked by a little shanty on the shore. All day the river was full of sailboats and rowboats conveying family parties, and the first thing that impressed us about the Canadians was the greater eagerness with which they amused themselves. This was especially true of the quaint little village of St. Johns, where the whole population was abroad in crazy old rigs or on the river in canoes. Stout old men were paddling with as much zest as the youngsters. We were no longer looked upon as freaks; the Canadians took it as a matter of course that we should go cruising.

We had to enter a short canal at St. Johns to carry us around several dams in the river, and it took the mate the greater part of the afternoon in unwinding red tape to secure the necessary papers—another phase of the Canadian character!

We camped on the canal bank that night, and reached Chambly, the end of the canal, early the next morning. Montreal is only fifteen miles from this point by rail, whereas by water we had still ninety miles to cover. There are eight successive locks at Chambly, and as luck would have it a tow of some twenty barges was descending and an equal number coming up. Seeing that it would be all day before we could get through, we hired a native to carry the Mosquito around the locks on his cart, and her poor old bones were subjected to a sad shaking. As we jogged down the towpath to our eyes the most inextricable confusion of barges and ropes and horses prevailed, with men rushing to and fro bawling in mixed French and English like lunatics; but in reality the barges were being handled with both skill and dispatch. It was a most picturesque scene; the clumsy, snub-nosed barges crawling past each other and bumping in and out of the locks; the skippers leaning on the tillers and shouting all the news since they had last met to their friends bound in the opposite direction; the crews busy with lines and poles; the drivers calling to their straining teams.

Entering the river again, we found ourselves in the heart of French Canada. For the whole length of the Richelieu the character of the country never changed. A road followed either bank, dotted with bare little farmhouses set no further apart than in a village, with their fields stringing out behind, so that each farm which may be several miles deep, has a river frontage. Towering stone churches, with zinc steeples, marked the hamlets which usually faced each other on the river, and it was a matter for wonder that a country so poor could support so many and such fine churches. Each place bore a saint's name—St. Athanase, St. Ours, St. Marc, St. Polycarpe, etc.

At evening we went ashore to ask for supper at a farmhouse. Our linguistic experiences were amusing. Each person assured us he could "Spik Anglis," but it generally resulted that those two words comprised his whole vocabulary. The skipper knew a little French, and given time could arrange a passable sentence in his head, but he could not unfortunately arrange for the replies, and the flood of French that poured forth floored him completely. As for the mate, he was quite ignorant of the language, and was persuaded of the absurd idea that it would be easier for the French to understand a kind of pigeon English than the language properly spoken.

But we fell in with a most hospitable family, and sat up on a kind of second-story platform conversing with the farmer while his wife prepared "jambon et oeufs" for us below. Heads of the neighbors might be seen at the surrounding windows, and the farmer hailed one coquettish damsel in a red wrapper, whom he assured us had been to "Les Etats Unis" and could speak the language. Presently she sidled bashfully over toward us and sat within a window opening on the platform. "You spik French?" she asked the skipper. "Non. Parlez-vous Anglais?" he asked in turn. "No." "Too bad! Too bad!" we both softly sighed, and that was the end of a promising flirtation.

But this very difficulty of communication made supper the merriest of meals, and our mutual delight when we succeeded in making each other understand was simply childish. The chairs were low, with high, narrow backs, and every time the mate or the skipper leaned back to laugh he promptly fell over, amid general laughter. They brought out the best in the house for our entertainment.

Next morning we rose from our tent to find it drearily raining. We were disconsolately making breakfast over a smoky fire, when we perceived a tug coming around a bend in the river, towing the barges we had passed in the canal the day before. In fact, we had passed and repassed them several times en route, and had made friends with some of the skippers who had repeatedly invited us on board. They were approaching at a good rate, for the current was considerable, and it was a race to see if we could get ready before they passed. Abandoning the breakfast, we threw everything in the canoe, and by making a great spurt just managed to catch the last barge as it swept by. Our friends were glad to see us, and climbing on board we pulled the Mosquito up after us, and turned her over on the deck.

All day it rained steadily, culminating in a tremendous storm toward evening, and we thanked our lucky stars for the shelter. We lay on the roof of the cabin under an awning, and all the young fellows on the tow "came over the lines" and smoked and drank a kind of raspberry water, such as the French are partial to, and told stories on our deck. We heard a great store of experiences "on the boats," and boatmen's balls and wakes ashore. Young canalers are like any other sailors; they balance the enforced tedium of long voyages by riotous times in port.

Our hosts, Jean and Emile, were young French Canadians, who, in the temporary absence of their father and mother, were running two barges lashed together, which they proudly claimed were the finest on the route, and we could readily believe it. Jean was the skipper, a sturdy, square-built fellow, alert and active when the boat got in a tight place, talkative and humorous over his pipe when things were going easily. Emile was crew and cook, softer than his brother and less robust, fond of a dish of tea and the rocking chair in the cabin. He was a bit of a braggart, and subject to considerable chaffing from the others.

When we reached Sorel, the town lying at the confluence of the Richelieu and the St. Lawrence rivers, late that afternoon, the weather still showed no prospect of mending, and Jean and Emile urged us to go on up to Montreal with them. After debating a while we decided to do so, and when we had explored the muddy village a bit, another and a stronger tug took us in tow, and presently we swept out into what is in many respects the noblest of American rivers. We could not sufficiently admire the awe-inspiring sweep and volume of that vast green water, and only the cry of dinner could tempt us off the deck.

The cabin was delightfully cosy after the cold and wet above; it was not only neat and spotlessly clean, but luxurious withal, and a triumph of ingenious arrangement. One-half formed the living room and the remaining quarters were kitchen and stateroom respectively. The articles in those three tiny rooms would make an incredibly long list, and yet it was not in the least overcrowded. There were berths and shelves and cupboards in the oddest corners; there was room for both a sofa and a mantelpiece; the stateroom not being big enough for a full size bunk, there was a little hole extended under the deck for feet; even the stairs of the companionway lifted up, showing cupboards below.

Emile's dinner was uncommonly good, and we sat long over our pipes, becoming better acquainted with our hosts. Afterward, between two showers, we paced up and down the deck for an hour, watching the water swirling past, the moon striving with heavy clouds, the dark masses of the shore, the tug breathing heavily on the end of the long steel cable which hung in the water of its own weight, and the piercing lighthouse rays.

I suspect our hosts thought we were out of our wits to take so much unnecessary exercise, but we got rare enjoyment out of that tramp in the dark.

The cabin of the other boat was set aside for our use. This was the newer boat, and the cabin served ordinarily for the mother's sleeping room and the parlor. Its elegance surprised us; the floor was covered with a velvet carpet, paintings hung about the walls and a profusion of ornaments stood on the mantel. There were plush-covered chairs and a wicker rocker tied with a great bow of satin ribbon; there was actually running water and the bed was hung with lace curtains. For a finishing touch, there was suspended from the ceiling a wonderful piece of fancy-work with satin streamers; on it was embroidered "Good lok." On the whole, our stateroom that night was finer than the bridal chamber on a Sound liner.

Next morning the barge was moored at Hochelaga, and the gray walls of Montreal stretched before us grayer than ever in the rain. We still had four days remaining of our vacation, and as we could go no further up the river on account of the current, we had first to find a good camping spot in the neighborhood. We launched the Mosquito again, and bidding good-by to Jean and Emile, crossed the river to Longueuil and made our way by Herculean exertions up the current past St. Helen's Island to a tiny islet opposite the center of the city, but near the other shore. Here we pitched our tent for the last time.

Every day we paddled to the nearer shore and walked across the magnificent Victoria Jubilee Bridge, which is two miles long. This was the most direct way, for the terrible St. Mary's current, which we could not hope to cross, lay between our island and the city. It rained a good part of the time, and our costume consisted generally of ragged maskintoshes, disreputable hats and brilliant bandannas. This, with our brick-red complexions, made us striking figures in the streets of the Canadian metropolis, as we sauntered about seeing the sights. On the last night, after having seen everything, we blew in what remained of our funds for dinner at the Queen's Hotel. Our costumes excited considerable attention; however, they did not attempt to put us out.

A. C. A. Membership.

F. Valdemar Henshaw has been proposed for membership to the A. C. A.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Yachting.

The American Power Boat Ass'n.

ON Wednesday night, February 25, a meeting of the new Motor Boat Association was held at the Columbia Y. C., foot of West Eighty-sixth street, New York City. Representatives of many yacht clubs were present and the committees that had been appointed at previous meetings to frame by-laws and racing rules made their reports. Mr. Frank Bowne Jones, of the Indian Harbor Y. C., submitted the report on the constitution and by-laws and Mr. Henry J. Gielow read the report on classification and rating. This report has ben prepared by Mr. Gielow with great care and we publish it in full. A system of time allowance was also compiled by Mr. Gielow, but it is too elaborate to be published.

Racing Rules.

RULE I.

Management.

All races and all boats sailing therein shall be under the control and direction of the Race Committee of the club giving the race. All matters shall be subject to their approval and control, and all questions and disputes which may arise shall be decided by them.

Their decision shall be based upon these rules, but as no rules can be devised capable of meeting every incident and accident of sailing, the Race Committee should keep in view the ordinary customs of the sea, and discourage all attempts to win a race by other means than fair sailing and superior skill and speed. The decision of the Race Committee shall be final, unless, upon the application of the parties interested, or for other reasons, they choose to refer the questions at issue for the decision of the Executive Committee of the American Power Boat Association, whose decision shall then be final.

No member of any Race Committee shall take part in the decision of any question in which he is directly interested.

A member of a Race Committee, who is the owner of a boat sailing in a race, shall not act upon the committee in the management of such race.

RULE II.

Application.

1. The rules shall apply only to boats sailing in a race.
2. Boats shall be amenable to the rules after the preparatory signal has been given.

RULE III.

Measurement.

Boats shall be rated for classification and time allowance by a rating, which shall be determined by taking 15 times the cube root of the square root of the load water line multiplied by the horse power and divided by the area of amidship section.

$$\text{RATING} = 15 \sqrt[3]{\sqrt{\frac{\text{L.W.L} \times \text{H.P.}}{\text{MS.}}}}$$

The result is the measurement for classification and time allowance.

2. Load Waterline.—Shall be the distance in a straight line between the points farthest forward and farthest aft where the hull, exclusive of the rudder stock, is intersected by the surface of the water, when the boat is afloat in racing trim, in smooth water, with not more than two persons aboard when the measurement is being taken, stationed amidships.

If any part of the stem, stern post or other part of the boat below the load waterline projects beyond the length thus measured, such projection shall be added to the measured length; and a form resulting from the cutting away of the fair line of the stem, stern post or the ridge of the counter, for the apparent purpose of shortening the load waterline, shall be measured between fair lines.

3. Midship Section.—To be expressed in square feet, and is to be obtained as follows:

With the boat in same trim as when being measured for load waterline length, take the beam (B) of the boat at the water surface at a point 55 per cent. from the forward end of the load waterline. Divide B into five equal parts or stations, and at the first inboard station from either end measure perpendicular from the water surface down to the under side of the boat's planking (C). Then C multiplied by B will give the midship section.

If the measurement for C is taken on the inside of hull, the thickness of planking of boat must be added, allowance being made for the angle at which C intersects the bottom planking.

4. Horse-Power.—The horse-power of all motors shall be obtained as follows:

Steam.—To be calculated by standard formula for indicated horse-power.

Electricity.—To be calculated at the rate of 950 watts to equal one horse-power.

Gasolene Explosive Engines.—To be calculated by multiplying (A) the area of one piston in square inches by the number (N) of cylinders, multiplied by the stroke (S) in feet, multiplied by the number of revolutions (R) per minute, and divided by a constant (C) of 1,000 for four cycle, and 600 for two cycle engines.

$$\text{Horse Power} = \frac{\text{A.} \times \text{N.} \times \text{S} \times \text{R.}}{\text{C.}}$$

R to be taken from maker's or owner's written certificate; which shall be subject to verifications by the Assoeiation's measurer.

5. Should a boat, after having been officially measured, discharge or take on any dead weight or ballast or make any alterations in trim, she shall not be allowed to start in a race without a remeasurement, or without notifying the Race Committee, in writing, that such changes have been made, together with a request for remeasurement.

6. If through protest the measurement of a boat be called in question, the Race Committee shall direct the measurer to remeasure such boat, and the result as reported by him shall be final. The usual fee for measurement shall be collected from the owner, if the measurement be found to exceed the measurement filed, and from the person protesting, if not.

The owner of a boat so protested shall present his boat for measurement immediately after the race, when so required by the Race Committee.

7. Any boat whose official rating has not been filed with the Race Committee prior to the start of a race, shall not be eligible to compete. The official certificate of measurement shall be shown to the Race Committee upon request therefor.

RULE IV.

Classification.

All boats shall be classified by their rating, and shall be divided into classes, as follows:

First Division.

First Class (A)—All over 50ft.
50ft. Class (B)—Not over 50ft., and over 40ft.
40ft. Class (C)—Not over 40ft., and over 32ft.
32ft. Class (D)—Not over 32ft., and over 26ft.
26ft. Class (E)—Not over 26ft., and over 21ft.
21ft. Class (F)—Not over 21ft., and over 17ft.
17ft. Class (G)—Not over 17ft.

Second Division.

First Class (H)—All over 50ft.
50ft. Class (I)—Not over 50ft., and over 40ft.
40ft. Class (J)—Not over 40ft., and over 32ft.
32ft. Class (K)—Not over 32ft., and over 26ft.
26ft. Class (L)—Not over 26ft., and over 21ft.
21ft. Class (M)—Not over 21ft., and over 17ft.
17ft. Class (N)—Not over 17ft.

2. All cabin boats and boats with standing awnings shall be classed in the First Division.

3. Hunting launches and open boats shall be classed in the Second Division.

4. Any boat appearing alone in her class may enter and compete in the next larger class in her division, at the minimum limit of that class, provided that notice of her intention so to

do has been given to the Race Committee at least five minutes before the hoisting of the starting signal of the class that she enters.

RULE V.

Time Allowance.

Time allowance shall be calculated on racing measurement according to the appended table.

RULE VI.

Ownership.

1. Each boat entered for a race must be the bona-fide property of, or under charter to, the person in whose name she is entered, who must be a member of a recognized yacht club.
2. A person chartering a boat shall be considered as the owner.
3. No boat which has been chartered shall be entered for a race, unless she has been chartered in good faith for a period of not less than thirty days.
4. No two boats owned wholly or in part by the same person shall enter in the same class.

RULE VII.

Entries.

1. All entries shall be made in writing, and shall be signed by the owner or his representative, giving the name of the boat, class, rating, and racing number, and must be lodged with the Race Committee not later than forty-eight hours before the time of starting, exclusive of Sundays, unless otherwise ordered by the committee.
2. The Race Committee may refuse or accept any entry made after the time of closing.
3. The Race Committee may, if they consider it expedient, reject any entry.

RULE VIII.

Instructions.

1. The owner of each boat entered for a race shall he furnished at the time of the entry, or as soon thereafter as possible, with written or printed instructions as to the conditions of the race and the courses to be sailed.
2. The Race Committee may change the courses or amend the instructions, provided notice of such change is given to each boat before the preparatory signal is given.
3. In the absence of the owner, the delivery of instructions to any person on board a boat shall be considered sufficient.

RULE IX.

Life Buoys.

Boats in all classes shall carry two serviceable life buoys on deck.

RULE X.

Fittings, Water and Ballast.

1. Floors shall be kept down and bulkheads left standing. Doors, galley fixtures and fittings shall be kept on board, and one serviceable anchor and cable shall be carried.
2. Trimming by dead weight shall not be allowed, and neither water nor ballast shall be taken in or discharged on the day of the race.

RULE XI.

Crews.

1. The total number of persons on board a boat shall not be less than two men.
2. No person shall board or leave a boat after the starting signal has been made, except in case of accident or injury to a person on board.
3. All boats must carry as one of its crew a member of a recognized yacht club.
4. The owner of every winning boat shall, before the awarding of prizes, file with the Race Committee a certificate stating that the rules have been obeyed. Such certificate shall include the names and addresses of the members of the crew.

RULE XII.

Numbers.

All boats shall carry racing numbers, which shall be placed so they can be easily seen by the Race Committee as the boats approach the line.

RULE XIII.

Postponement.

The Race Committee may postpone a race, should unfavorable weather or other circumstances make a postponement advisable. A race postponed or resailed shall be considered a new race.

RULE XIV.

Starting and Finishing Signals.

1. The starting signals shall be as follows:
Preparatory—Blue Peter.
For Class A and B—Three red balls.
For Class C and D—Three white balls.
For Class E—Three blue balls.
For Class F—Two red balls.
For Class G—Two white balls.
For Class H and I—Two blue balls.
For Class J and K—One red ball and one white ball.
For Class L—One white ball and one blue ball.
For Class M—One blue ball and one red ball.
For Class N—One red ball.
Special starting signal—One red ball, one white ball and one blue ball.
Each starting signal shall be dropped at the expiration of the starting interval.
The intervals shall be five minutes between the setting of each two signals.
The club burgee shall be hoisted at the expiration of the starting interval of the last division.
2. The signal to denote the conclusion of the race shall be the lowering of the club burgee.
3. Attention to these signals shall be called by whistle or gun from the Race Committee's boat.

RULE XV.

Start and Finish.

1. All starts shall be flying, and shall be "one-gun" starts. Each boat in a class shall be timed from the starting signal of that class.
2. The time of finish of each boat shall be taken when the point marked by the fore flag staff crosses the finish line.
3. If any start, if the point marked by the fore flag staff has crossed the line before the signal for the start in her class is given, she must return and recross the line.
A boat so returning, or one working into position from the wrong side of the line after the first starting signal has been given, must keep clear of, and give way to all boats in the race.
A boat shall not after crossing the finishing line interfere with any boat still in the race so as to affect the time of such boat at the finish.

RULE XVI.

Marks.

1. A mark is any vessel, boat, buoy or other object used to indicate the course.
2. All marks, except Government buoys, used as marks, shall fly the club flag, or show a ball in the club colors.
3. Should any mark be absent or moved from its proper position during a race, the Race Committee shall, if possible, replace it or substitute the Committee boat with a mark ball hoisted, and call attention by gun or whistle. Failing thus to re-establish the mark, the race may be ordered resailed or not, at the option of the Race Committee.

RULE XVII.

Changing Course.

Should the Race Committee deem it desirable on account of the direction of the wind, or other cause, to order the course sailed in a reverse direction from that specified in the instructions, flag "B" hoisted five minutes before the Blue Peter (the preparatory signal), shall be the signal for so doing.

RULE XVIII.

Anchoring.

A boat may anchor, but must weigh anchor again and not slip. A boat shall not warp or kedge, or make fast to any buoy, pier, vessel or other object, except for purposes specified in the following rules:

RULE XIX.

Running Aground and Fouling.

A boat running aground or fouling a buoy, pier, vessel or other object, may use her anchors, warps, etc., to get clear, but may not receive any assistance, except from the vessel fouled. Any anchor or warp so used must be taken on board again before continuing the race.

RULE XX.

Accidents.

Every boat shall render all possible assistance to any vessel or person in peril, and if in the judgment of the Race Committee she shall thereby have impaired her chance of winning, they may order the race to be resailed between such boat or boats and the winner in the class.

RULE XXI.

Sounding.

No other means of sounding than the hand lead and line shall be employed.

RULE XXII.

Right of Way.

1. When two boats are approaching one another, so as to involve risk of collision, one of them shall keep out of the way of the other, as follows, namely:
(a) When two boats are meeting end on each shall alter her course to starboard.
(b) When two boats are crossing, the one which has the other on her own starboard side, shall keep out of the way.
(c) Where by any of these rules, one of the two boats is to keep out of the way, the other shall keep her course and speed.
(d) Every boat which is directed by these rules to keep out of the way of another boat shall, if the circumstances of the case admit, avoid crossing ahead of the other.
(e) Every boat which is directed by these rules to keep out of the way of another boat shall, on approaching her, if necessary, slacken her speed or stop or reverse.
(f) Every boat, overtaking any other, shall keep out of the way of the overtaken vessel.
(g) In obeying and construing these rules, due regard shall be had to all dangers of navigation and collision, and to any special circumstances which may render a departure from the above rules necessary in order to avoid immediate danger.
(h) A boat under way, in taking any course authorized or required by these rules, shall indicate that course by the following signals on her whistles or siren, namely:
One short blast to mean, "I am directing my course to starboard."
Two short blasts to mean, "I am directing my course to port."
Three short blasts to mean, "My engines are going at full speed astern."
2. Overtaking.—An overtaking boat shall, as long as an overlap exist, keep clear of the boat which is being overtaken.
3. Passing and Rounding Marks.—Should, however, an overlap exist between two boats when both of them are about to pass a mark on the required side, then the outside boat must give the inside boat room to pass clear of the mark.
A boat shall not, however, be justified in attempting to establish an overlap and thus force a passage between another boat and the mark, after the latter has altered her helm for the purpose of rounding.
4. Definition of Overlap.—An overlap is established when an overtaking boat has no longer a free choice of which side she will pass.
5. Altering Course.—When of two boats one is obliged to keep clear, the other shall not alter her course so as to involve risk of fouling.
6. Bearing Away.—A boat shall not bear away out of her course so as to hinder another in passing to starboard.
7. Obstruction to Sea Room.—When a boat is approaching a shore, shoal, rock, vessel, or other dangerous obstruction, and cannot go clear by altering her course without fouling another boat, then the latter shall on being hailed by the former at once give room.

RULE XXIII.

Protests.

1. Notice of intention to protest that a boat has violated these rules may be given during a race by displaying flag B of the signal code, and keeping such flag flying until answered by the Race Committee with the answering pennant.
2. Protests must be filed in writing with the Race Committee before six o'clock P. M. of the day succeeding the race, exclusive of Sundays, and must be signed by the owner or his representative.

RULE XXIV.

Disqualification.

1. Every boat must go fairly around the course, and must not touch any mark, but shall not be disqualified if wrongfully compelled to do so by another.
2. If a boat in consequence of her neglect of these rules shall foul another boat, or compel another boat to foul any boat, mark or obstruction, or to run aground, shall be disqualified and the owner shall pay all damages.
3. The Race Committee shall, with or without a protest, disqualify any boat, should it come to their knowledge before the awarding of prizes that she has committed a breach of these rules.

RULE XXV.

Awarding of Prizes.

1. Prizes shall be awarded in all classes in which one or more boats sail the course. Should a boat sail alone in her class, she shall be entitled to a "sail-over" prize of one-half the value of the regular prize.
2. If a winning boat be disqualified, the prizes shall be awarded the next boats in order of standing.

RULE XXVI.

Suspension of Rules.

The Race Committee shall have power to suspend any of these rules, by stating their suspension in the instructions for the race, or by agreement with the owners of the competing boats.

RULE XXVII.

Amendments.

Amendments to these rules may be adopted at any meeting of the Association by a two-thirds vote of those present, in person or by proxy, provided due notice has been given in the call for the meeting.

YACHT CLUB NOTES.

The annual meeting and dinner of the Point-o'-Woods Y. C., was held at the New York Athletic Club, New York City, on the evening of Feb. 14. The election of officers resulted as follows: Commodore, A. M. Ryon; Vice Commodore, J. Dempsey; Rear Commodore, H. Brewster; Secretary, John Holley Clark; Treasurer, D. H. Phelan.

The Horseshoe Harbor Y. C. has elected the following officers: Commodore, William Crossman; Vice Commodore, Lester H. Riley; Treasurer, H. C. Pryer; Secretary and Fleet Captain, Lancaster Morgan; Trustee, E. C. Griffen.

The Flushing Bay Y. C., which was recently organized, has elected the following officers: Commodore, J. G. Schmelzer; Vice Commodore, Henry Ashmore; Rear Commodore, Frank Place; Treasurer, Eugene Wright, and Secretary, Frederick R. Lacey. The club starts with some twenty chartered members, and they will probably make their headquarters at College Point, L. I.

At the annual meeting of the San Francisco Y. C., which was held at the Palace Hotel, San Francisco, on Feb. 11, over one hundred members were present, and the following officers were elected: Commodore, R. S. Bridgman; Vice Commodore, A. C. Lee; Port Captain, W. G. Morrow; Secretary, Hillyer Deuprey; Financial Secretary, A. G. A. Mueller; Treasurer, F. A. Robbins; Measurer, F. H. Muchmore.

At the beginning of last season there were 113 members, while at the present time there are 237 active members. The club's fleet consists of thirty-seven boats.

The California Y. C. has laid out a very complete series of events for the coming summer. The season will open on April 18, and on the next day the fleet will cruise in the channel. On May 3 the yachts will cruise in the channel. The 9th and 10th will be ladies' days, with a cruise to Paradise Cove. May 16, preparations for annual dinner race; May 17, annual dinner race. The 29th and 30th of May will be devoted to the first big cruise of the season, when the yachts will sail to Vallejo. On the 31st the owners' cup race will be run from Vallejo home to the club house; June 6 and 7, cruise to Sheep Island; June 14th, class flag race; June 20 and 21, cruise to Redwood City to meet the South Bay yachtsmen; July 4, Wallace trophy race; July 5 to 12, cruise up the river; July 26th, yawl race; Aug. 8, cruise to California Cove; Aug. 9, annual clambake and games at California Cove; Aug. 23, handicap anchor race; September 5, 6 and 7, cruise to Lakeville; Sept. 9, interclub regatta; Sept. 20, Vincent cup handicap race; Oct. 3 and 4, cruise outside the Heads; Oct. 17 and 18, cruise to McNear's and return; Oct. 24 and 25, closing days.

The Building Committee of the California Y. C. hope to have the new club house completed some time during the summer.

The following officers were elected at the annual meeting of the Excelsior Y. C: Commodore, Lewis Lawson; Vice Commodore, Olaf Harrison; Rear Commodore, M. N. Cormack; Treasurer, Edward De Vos; Secretary, John M. Russell; Measurer, Richard Stapleton; Trustees, Morris Kaplin, Lewis Lawson, Angus Darroch and Edward De Vos.

Mr. Charles P. Tower is to succeed Mr. John F. Lovejoy as Chairman of the Larchmont Y. C. Regatta Committee, who has resigned.

Seventy-five members were present at the annual meeting of the Hartford Y. C., which was held at the Hotel Heublein, Hartford, Conn., on Feb. 12. The following officers were elected: Commodore, Colonel Louis F. Heublein; Vice Commodore, Charles A. Goodwin; Rear Commodore, Walter S. Schutz; Secretary, Joseph Merritt; Treasurer, E. Hart Fenn; Measurer, Harry B. Snell; Fleet Surgeon, Dr. J. F. Axtelle; Trustees for three years, Thomas H. Smith and William B. Davidson; Regatta Committee, Harry B. Snell, Chairman; Charles A. Goodwin and Charles B. Wyckoff; Delegates to Yacht Racing Association, Harry B. Snell, Walter Pearce, Charles B. Wyckoff and Charles A. Goodwin.

The secretary's report showed the club had 331 members, and that there were 125 boats enrolled in the club fleet. The reports of the other committees indicated that the club was in a very prosperous condition.

The club has two houses, one in the city of Hartford and another at Fenwick, on Long Island Sound. The house at Fenwick is splendidly conducted, and visiting yachtsmen can secure meals at the clubhouse and supplies for their boats. Fenwick is one of the few accessible places with a good harbor on the north side of Long Island Sound, and cruising yachtsmen should avail themselves of the privileges so generously offered by the Hartford Y. C.

The Manchester Y. C. has announced that the trial races for the selection of a challenger for the Seawanhaka Cup will be held off the southerly end of House Island, Manchester Harbor, on Wednesday, June 10; Friday, June 12; Saturday, June 13; Monday, June 15, and Tuesday, June 16.

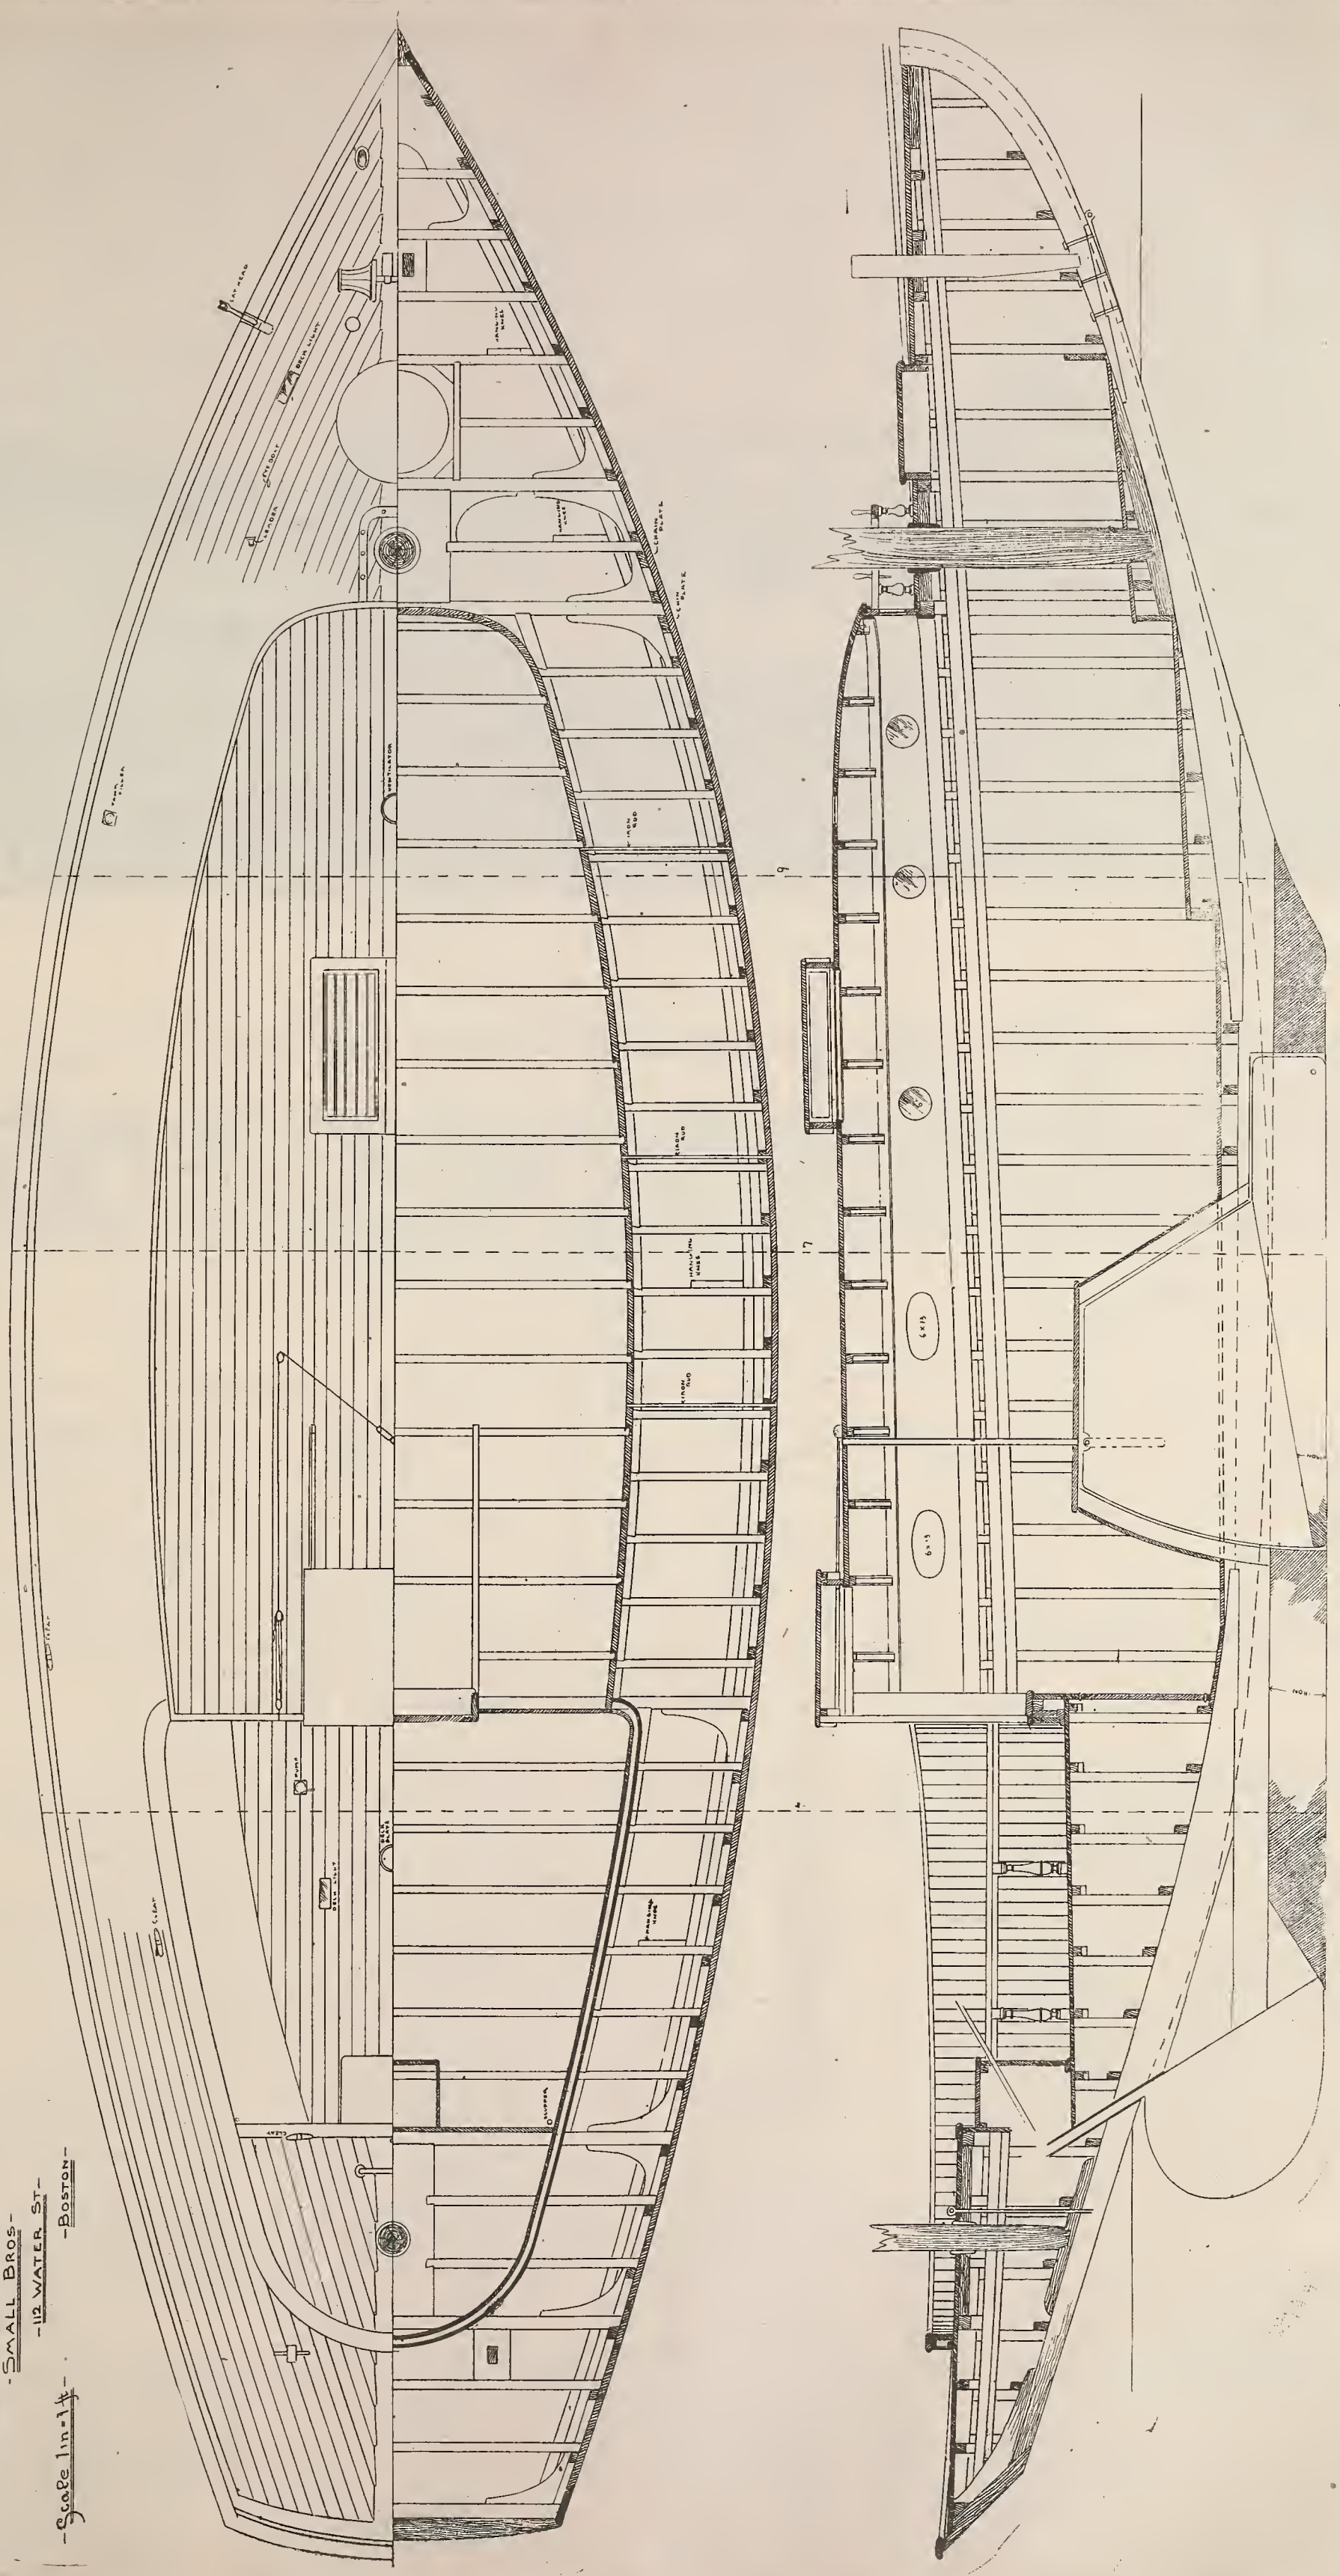
The Seawanhaka Cup Committee of the Manchester Y. C. is composed of Mr. Arthur M. Merriam, Chairman; Mr. H. B. Pearson, Secretary, No. 85 Water street, Boston, Mass.; and Mr. Edwin A. Boardman.

At a meeting of the Bergen Beach Y. C., the following committees and officers were appointed: House Committee—E. Arbour, Chairman; G. H. Hopper, H. B. Hall. Entertainment Committee—Dr. George Cooper, Chairman; W. Lachiotte, A. Miller, Louis Ashaur, George Beyers. Membership Committee—C. R. Fitzmaurice, Chairman; B. T. Morrett, C. H. Eagle, W. Patterson. Regatta Committee—J. H. Green, Chairman; C. H. Loper, T. R. Dennis. Fleet Captain, C. R. Fitzmaurice; Fleet Surgeon, Dr. George Everson. Delegates to Yacht Racing Association—C. R. Fitzmaurice, W. L. Allen.

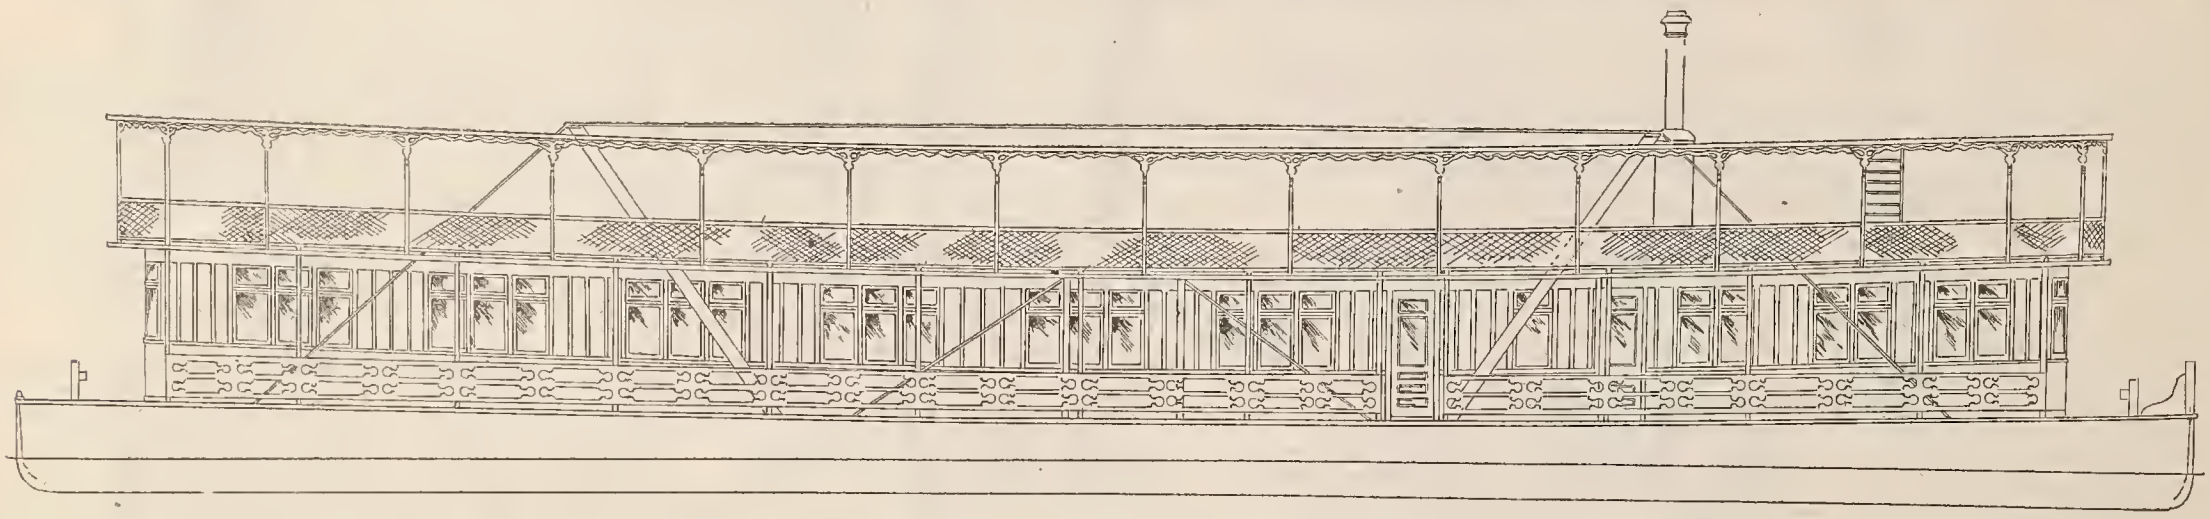
A meeting of the Seawanhaka Corinthian Y. C. was held at the club house, 12 West Forty-fourth street, New York City, on February 24. Some changes in the club's measurement rule were considered, but after a long discussion it was decided to allow the rule to stand without any change.

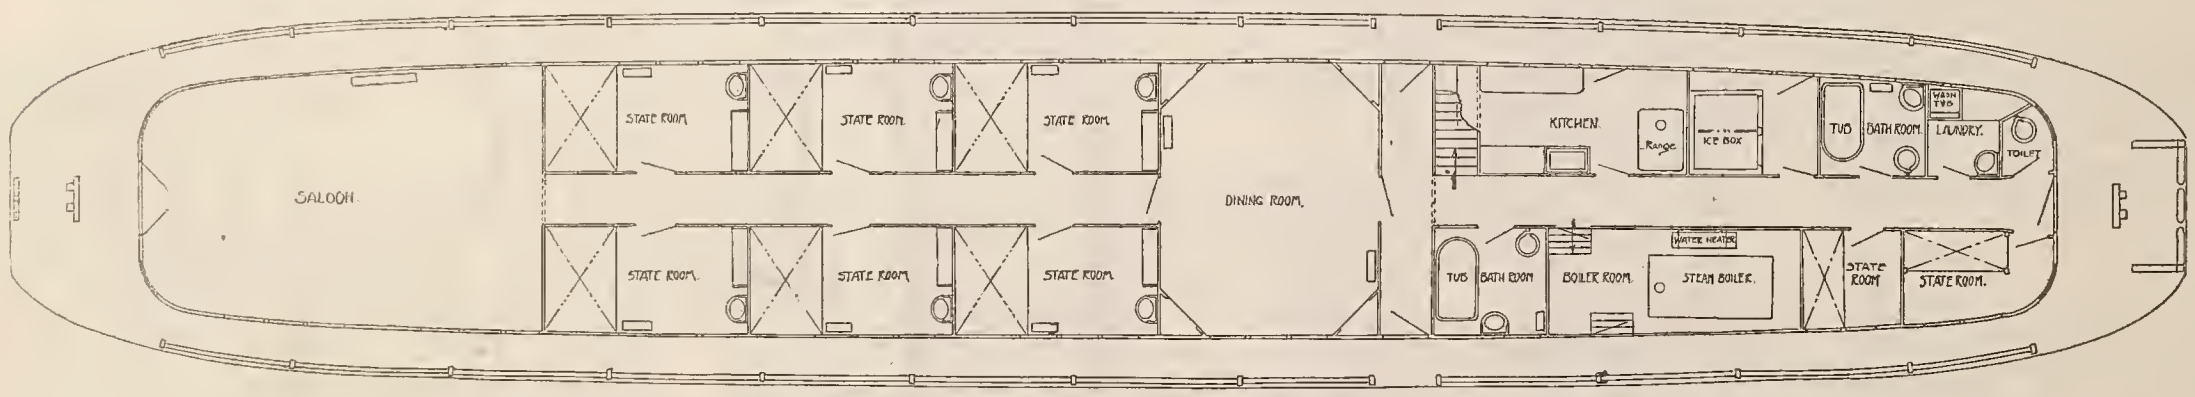
In addition to the eight boats for the Red Bank Y. C. one design class and the houseboat for Mr. Rudolph Schneider, the Metropolitan Boat & Launch Co., of Astoria, is building a 22ft. stern wheel launch for use on Great South Bay; a 24ft. clipper dory for Mr. J. W. Alker; a 22ft. clipper dory for Mr. Frank W. Towle, and five one design catboats for members of the Nonowantug Y. C. These latter boats were designed by Mr. Frank Nichols.

Mr. Charles G. Davis has prepared the plans for a 40ft. flush deck launch for Mr. G. Ashton Kay. The boat will have 6ft. headroom under the flush deck, and will be equipped with a motor of the owner's design.



28-FOOT WATERLINE CRUISING YAWL—CONSTRUCTION PLAN—DESIGNED BY SMALL BROS. FOR STANLEY H. ELDRIDGE, 1903.





HOUSEBOAT IDLER—OUTBOARD PROFILE AND CABIN PLAN—OWNED BY LAFAYETTE LAMB, ESQ.

The House-Boat Idler.

FEW of the men in the East who are interested in houseboats, realize to what extent this mode of life is enjoyed in the West. It would be difficult to find a lake or river in the West where there is not at least one houseboat and in most cases several are to be found. The boats are of all sizes and types built to meet the owners' means and requirements.

On the Mississippi River and its tributaries there are great numbers of houseboats, and we have been fortunate enough to secure the plans of one of the largest and best equipped among them. The houseboat in question is known as Idler, a most attractive name by the way, for a craft of this type. She is owned by Mr. Lafayette Lamb, of Clinton, Iowa, who, together with his family and friends, make the boat their home for several months of the year.

Idler was designed and built to meet the owner's needs, and she has proved to be a very suitable craft in every way. She is 116ft. 6in long, 20ft. 6in. breadth and draws 1ft. 9in. The boat has no propelling power of her own, and has to be towed from place to place. To look at the photograph it will be seen she has two small stacks aft, which would lead one to think she had propelling power, but the port stack is the one used for the little boiler that makes the steam for the electric light plant, and also heats the boat by steam, drives the pump that filters the water and also heats the water for bath rooms and state rooms. The stack on the starboard side is the smoke vent from the kitchen stove.

On the lower deck there is a passageway 2ft. 6in. wide, all around the cabin house, which enables one to walk entirely around the boat. There is ample deck room forward and aft for the handling of hawsers and anchors.

Forward is the main saloon or living room, 22ft. long and about 14ft. wide. In this room there are fourteen windows and a double door opening on the forward deck. Heavy rugs, Oriental hangings and wide divans make this room very comfortable and attractive. A passageway 3ft. wide leads aft to the dining-room. There are three staterooms on each side of the passage. These staterooms are 6ft. wide and 11ft. long and are all of the same size. Each room is fitted with a double bed, hanging closet and a set marble basin with running water. A steam radiator furnishes heat in case it is needed, and the three windows in each room give ample light and ventilation.

The dining-room, which is 12ft. long and 15ft. wide, is located amidships. There are three windows on either side, and in each corner are china and silver closets. Just aft of the dining-room is a transverse passageway 3ft. wide. This passage enables one to go from one side of the boat to the other without going forward or aft, and it also divides the owner's quarters from the kitchen, boiler room and servants' quarters.

Extending aft from the thwartships passage is another passageway 3ft. wide. On the port side of this is a bath room 6ft. square fitted with a porcelain tub, set marble basin and water closet, all of which have running water. Aft of the bath room is the boiler room, 6ft. wide and 14ft. long. Still further aft are two staterooms, one 5ft. by 6ft. and the other 5ft. by 8ft.

On the starboard side of the passage is the staircase to the upper deck. Just aft is the kitchen 6ft. wide and 11ft. long. Adjoining the kitchen is the larder, 6ft. by 7ft. In this room there is a large refrigerator capable of holding a good supply of ice. Further aft is another bath room 5ft. by 6ft., fitted very much the same as the other. Next comes the laundry with set tubs and wash basin, and at the extreme end of the passage is a toilet room.

The upper deck is 18ft. wide and is unobstructed for nearly 80ft. of its length. This deck is entirely roofed over, and canvas screens protect one from rain, wind or the slanting rays of the sun.

It is here that those on board spend much of their time, and the many rugs, comfortable chairs and hammocks make it an ideal loafing place.

Four boats are carried on the davits, and when not in use are swung inboard and rest on chocks on the roof over the upper deck.

In order to move Idler from one place to another, Mr. Lamb had a stern wheel steamer built, which is called Wanderer. She was built solely for the purpose of propelling Idler about. Wanderer's bow is made fast to Idler's stern, and the latter is pushed ahead. In this way the heat and smoke is avoided, although in some instances it is necessary to tow Idler instead of pushing her.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Mr. Stanley M. Seaman has made the following sales: Sloop Umbrina, owned by Mr. Charles L. Eaton, to Mr. W. H. Childs; launch Zolfo, owned by Mr. F. B. Van Doorn, to Mr. Roland S. Kolb; sloop Ashumet, owned by Mr. Roland S. Kolb, to Mr. Edgar A. Ill.

The steam launch Eagle has been sold through Manning's Yacht Agency by Mr. H. N. Brooks to Mr. J. J. Slater.

Mr. George C. Thomas is having an auxiliary yacht 110ft. long built at Baltimore. The new boat will take the place of the cruising yawl Natka.

Mr. George Crouse Cook, naval architect, has associated himself with Captain Howard Patterson, presi-

dent of the New York Nautical College. Mr. Cook will continue in the field of general ship designing, and in addition to this will have a department devoted to yacht designing and brokerage.

* * *

The English built auxiliary Sea Belle has been purchased by Mr. N. L. McCready. The yacht will come across in the early spring. Sea Belle (ex-Waverley, ex-Norseman) was designed by Mr. St. Clair Byrne and built by Laird Bros. at Birkenhead in 1875. She is built of iron and is schooner rigged. She is 124ft. long and 20ft. breadth.

* * *

Messrs. Rogers & Bro., of Bay Shore, L. I., are building for Mr. C. M. Covell, of New York City, an auxiliary sloop. She is 52ft. over all and 16ft. breadth, and will be fitted with a 12 horse-power gasolene motor.

* * *

Mr. Herman D. Wells, formerly of the firm of Herreshoff & Wells, has gone into partnership with Mr. Henry C. Winteringham. The firm will now be known as Winteringham & Wells.

A Rhyme of the Vasty Deep.

(After a Course of Kipling.)

A TWIN-SCREW brig, with an A1 rig, was the good ship Bolivar,
All spick and span, from the donkey-man to the bilge on the capstan bar;
She was pully-haul, with a ten-foot yawl, and a regular chantey crew,
And right avast at the mizzenmast, the scarlet bo'sum flew.

And, oh! dear lad, what a time I've had collecting sailor slang.
And weaving it into the strangest songs that ever a sailor sang;
Well, they mayn't be true, but they seem to do, for the checks are large and fine;
There's nothing like cheek when your fame's unique, and the pay's five dollars a line!

We had hugged the shore for a week or more, till on the seventh night,
From out of the gloom the thwartship boom of the Deutschland loomed in sight;
And inch by inch, as she dipped her winch, and her fulmar flying high,
Through the sleet and mist, with a forward list, she strove to pass us by.

"Full steam ahead!" our captain said—and we heard the pennant crack—
With a twist of the heel he put the wheel abeam on the starboard tack;
With bilge in hand, he took his stand abaft on the taffrail hatch,
And the Bolivar, like a shooting star, began to snore and ratch.

So away we went, with our fo'c's'les bent, and our hawsepipes smoking free,
While the kentledge on the kelson shone atop of the topmast tree;
On the poop abaft, where they force the draft, the coal chutes glimmered white,
And we spliced the guys to the cathead ties, and made the doldrums tight.

And never a word we spoke, but heard the bull-mouthed breakers call,
While close behind the sou'west wind went yammering down the pawl;
The garboard strake was all ashake where the spinaker-thrust comes through,
And still avast, at the mizzenmast, the scarlet bo'sun flew.

And they piled each grate with the best Welsh slate, till the gunwales almost broke—
You could hear them hum like a distant drum as the gurry-butt gave the stroke.
Then the halliard peak began to leak, and the engine room grew hot,
For the bobstays jammed, McAndrew damned, and the captain slanged the lot.

* * * * * * * * *

And inch by inch, while she dipped her winch, and her fulmar flying high,
Through the sleet and mist, with a forward list, the Deutschland passed us by.

But oh! dear lad, what a time I've had collecting sailor slang,
And weaving it into the strangest songs that ever a sailor sang;
Well, they mayn't be true, but they seem to do, for the checks are large and fine;
There's nothing like cheek when your fame's unique, and the pay's five dollars a line!

—Syren and Shipping.

"What was that noise, Katie?" shouted the lady from her boudoir. "Oh, mum, it was only the baby crawling under the piano, and he hit himself mum," replied the girl. "Dear little boy! Did he hurt himself, Katie?" "No, mum; sure it was the soft pedal he hit, mum."—Yonkers Statesman.

First Chauffeur—"Whose make is your machine?"
Second Chauffeur—"Well, about one-third the manufacturer's and two-thirds the repairer's.—Puck.

Rifle Range and Gallery.

A Nation of Marksmen.

Editor Forest and Stream:

In the days of Agincourt and Cressy those victories were the fruit of the marksmanship of the English bowmen. The archer with his long yew bow and cloth yard shaft made the English army what it was—invincible.

The French had good reason when singing their litany in church to include in same, "From the arrows of the English may the good Lord deliver us."

History is repeating itself once more, and the battles of the future upon land will be won by the men behind the rifles. Close formation and point blank volleys are things of the past. Smokeless powder and long distance rifles become of no immediate practical value in the hands of the inexperienced soldier.

The English grew into the use of the long bow as did our Minute Men and Green Mountain Boys grow into the use of the rifle, but under differing surroundings. The English boy was at an early age through the stimulus of prizes, encouraged to shoot with the bow at a mark erected on the village green. Days of merry-making always included the sport of archery upon the programme, and even was the practice at archery made compulsory by law.

Our forefathers virtually plowed with one hand and held a rifle with the other. The seal of Minnesota shows a husbandman at the plow, his rifle and powderhorn upon a nearby stump and skulking redskin in the distance. It was force of circumstances that made marksmen of our forefathers, defense against the Indians and wild beasts, and the necessity of supplying the larder from the forests. During our Civil War, soldier for soldier, we had no such marksmen in the ranks as in the Revolutionary Wark. Times had changed, men were recruited from the city and the workshop, and not as of yore, from the frontier, where stood a rifle ready for instant use behind each door.

The late Boer war was an illustration of pitting men unused to a rifle against those who understood the arm and were as familiar with it as a schoolboy with his jackknife.

Now, as a general rule, a few days' hard drilling will turn an awkward squad into some semblance to a military company in carriage and step, but it means months of incessant labor to make marksmen of those unfamiliar with the rifle.

Compulsory practice with the rifle has been successfully carried out in Switzerland, but it would not apply to the United States. The love of the rifle must be brought about in some other way.

Now, as a suggestion. Make a reward sufficiently inviting and there are those who will strive for it. Let us suppose that a yearly distribution of, say, $100,000, were made in prizes; $50,000 to the marksmen of the year; $25,000 to the second best; $15,000 to the third, and $1,000 to the next ten in rank. Whether the amount of $100,000 per year was made up out of the United States Treasury or came from other sources, makes no difference. The question is, what would the effect be upon the country after ten consecutive years of such prize offering?

I think every village in the country would have its rifle range, and few of the youths who could give the time to practice but would become applicants and contestants for the prize.

The primary contests would be shot at the home villages or cities. The winners would in turn contest among themselves within a certain district, and the successful one in each district be delegated to the final contest, to be held at some central point. Here, under conditions that could admit of no charge of partiality, would the final contest be held. Targets at fixed and unknown distances, moving objects, etc., would call into practice the very highest skill of the marksmen. The prizes would certainly be more tempting than a marksman's badge or a silver cup. In these days of $1,000,000 salaries and "melon-cutting" dividends in Wall street, perhaps a $50,000 prize might not tempt some of our gilded youth to forego the golf stick and the tennis racquet for the rifle. Yet, when you come to think of it, there are those who, with perhaps a little truck farming to help out, might worry along peacefully with a prize of $50,000 in cold cash to their credit in the bank. So the grand prize of $50,000 with the great majority of young men might be considered a tempting prize, enough so to warrant an investment in a rifle and ammunition and the giving over of a part of Saturday to the weekly practice.

There is many a "hundred thousand" that goes to make up the quota of a "billion-dollar Congress" that is spent for purposes far less meritorious than prizes for rifle proficiency among the youth of the country.

What would be the effect of a plan of this kind being carried out after say, ten or fifteen years? That's the question. We hear of Peace Congresses, International Arbitration, Total disarmament, etc., etc., but we see no diminution of the standing armies and navies of the world. Improvements in war materials go on. We no sooner improve the unpenetrability of armor than some new shell is perfected with superior penetrating powers, and so the race goes on. Guns that carried 12 miles now carry 21. Not content with fighting above the water, the sea warfare of the future seems destined to be fought out beneath the waves. Rifles of greater penetration and carrying power are being successfully put forward. All this would seem to prove that for some years to come the theory will be held that the one best equipped on a war footing in time of peace will be virtually guaranteed from neighborly interference. And if all this be so, this country must keep abreast with the times. Her ships must be second to none, and while our standing army need be kept to a minimum, yet like the Spartans, every man in the Republic should be a brick, he should become expert in the use of a rifle, and if the time ever came when his country needed him, he could step into the ranks a soldier requiring but a minimum of preliminary drilling to bring to a plane of soldierly prefection.

CHARLES CRISTADORO.

Annual Championship Matches.

THE annual indoor championship matches of the United States Revolver Association will be held this year in Boston, Chicago and New York. The conditions are as follows:

Indoor Revolver Championship.—Open to everybody; distance 20yds., 50 shots on the Standard American target, reduced, so that the 8-ring is 2¾in. in diameter; arm, any revolver not to exceed 2¾lbs. in weight; maximum length of barrel, including cylinder, 10in.; trigger pull not to be less than 2½lbs. Sights must be open in front of the hammer, and not over 10in. apart; ammunition, any suitable gallery charge approved by the executive committee. The score must be completed in one hour or less from the time of firing the first shot. Entrance fee $5. No reentries. Prizes: First, a silver cup, to be held until the next annual competition, the cup to become the property of the competitor winning it three times; second, a silver medal; third, a bronze medal. A bronze medal will also be awarded to any competitor, not a prize winner, making a score of 425 or better.

Indoor Pistol Championship.—Open to everybody; distance 20yds.; 50 shots on the Standard American target, reduced, so the 8-ring is 2¾in. in diameter; arm, any pistol; length of barrel not to exceed 10in.; trigger pull not less than 2lbs. Sights must be open in front of the hammer and not over 10in. apart. Ammunition, any suitable gallery charge approved by the executive committee. The score must be completed in one hour or less from the time of firing the first shot. Entrance fee $5. No reentries. Prizes: First, a silver cup, to be held until the next annual competition, the cup to become the property of the competitor winning it three times; second, a silver medal; third, a bronze medal. A bronze medal will also be awarded to any competitor not a prize winner making a score of 435 or better.

The ammunition in both these events must be smokeless for all calibers, except .22cal. rim-fire, in which the regular black powder cartridges may be used.

For the dates on which the competitions are to be held in Boston, and other details, address E. E. Patridge, 9 Fairmount street, Medford Hillside, Mass. Similarly, for full details in regard to the competitions in Chicago, address E. L. Harphan, 409 Ashland Block, Chicago.

The competitions in New York city will be conducted under the auspices of the Manhattan Rifle and Revolver Association, at their gallery at 2628 Broadway, near 100th street, on the evenings of March 4, 5, 6, and 7. The gallery will be open from 7:30 until 11:30 on each of the evenings named. Arrangements will be made so that competitors may have preliminary practice at a nominal cost.

For any further details in regard to the matches, address A. L. A. Himmelwright, secretary-treasurer, 121 Liberty street.

Cincinnati Rifle Association.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

The Philadelphia Record states that the Weidman Shooting Association, of Yardville, has been incorporated in the Secretary of State's office at Trenton. The object of the Association is to promote live-bird and clay target shooting events. The trustees are: William B. Weidman, George B. Gray, W. H. Mount, G. E. West and G. H. Allen, of Yardville.

We are informed that in the process of reorganization the Dupont Powder Company has entirely abolished a number of its business agencies, of which one was filled many years by Mr. W. L. Colville, whose territory as a Dupont representative included New England, New York, New Jersey and Pennsylvania.

Mr. H. B. Cannon has severed his business connection with the Remington Arms Co., with which company he has been associated about twenty years. He will engage in business in Wall street in a high and responsible capacity. He will first take a six-weeks' trip abroad, chiefly in the Mediterranean.

The contest for the E. C. cup, emblematic of the championship of New Jersey, was won by Mr. Chas. P. Cole, who defeated the holder, Mr. Neaf Apgar, by a score of 45 to 44. Each contestant shot at 50 targets. The match took place on the Interstate Fair grounds, Trenton, N. J., Feb. 23.

In the shoot of the Keystone Shooting League, Holmesburg Junction, Feb. 28, Mr. I. W. Budd killed straight in the club handicap and 13 straight in the officers' trophy event, missing his last two, the rain pouring at the time and a strong wind being unfavorable to good shooting.

Mr. John V. Linker, secretary of the Corner Rod and Gun Club, Fort Wayne, Ind., informs us that his club's tournament will be two days instead of three, as originally announced, and will be target competition exclusively. The dates are May 27 and 28, and $100 will be added.

The secretary, Mr. F. W. Olney, Concordia, Kans., under date of Feb. 23, writes us that "the State shoot of the Kansas State Sportsmen's Association will be held at this place under the auspices of the Concordia Blue Ribbon Gun Club, April 21 to 23 next."

Mr. M. H. Marlin, president of the Marlin Firearms Co., New Haven, Conn., was one of the arrivals at Pinehurst, N. C., recently, where the balmy breezes and mellow sunshine are supposed to be in pleasing contrast to the Northern weather.

There is, according to the Paterson Call, a team race arranged between Capt. A. W. Money and Mr. Aaron Doty on one side and Messrs. T. W. Morfey and Arthur Bunn on the other, to be shot at Singac, N. J., on March 6.

The contest for the February cup of the Crescent Athletic Club, at Bay Ridge, L. I., last Saturday, was won by Mr. F. T. Bedford, Jr., with a score of 45. The day was exceedingly stormy.

Owing to the absence of entries, the team race of the Jackson Park Gun Club, Paterson, N. J., did not take place. On that day, Feb. 23, the club held a successful sweepstake competition.

The Sunnyside Gun Club, of Secaucus, N. J., is a new club which is actively endeavoring to increase its membership. The next shoot of this club will be held on March 14.

In a match at a shoot of the Harrowgate Gun Club, Kensington, Pa., on Saturday of last week, 15 birds, 28yds., the scores were: Wagner 10, Munser 13, Hess 12.

The secretary, Mr. A. F. Heeb, informs us that the Dubuque, Ia., Gun Club will hold its fourth annual amateur target tournament on May 26 and 27.

The secretary, Mr. T. L. Andrews, informs us that the second annual tournament of the Titusville, Pa., Gun Club will be held on May 6 and 7.

Mr. C. W. Budd informs us that Hopkins Sears Co., of Des Moines, Ia., will hold a two days' amateur target tournament on April 2 and 3.

Mr. T. W. Morfey, and Mr. A. Doty have agreed to shoot a match at 100 live birds, $100 a side, March 6, at Singac, N. J.

BERNARD WATERS.

New Orleans Tournament.

NEW ORLEANS, La.—The Mississippi Valley Trapshooters' and Game Protective Association's tournament under the auspices of the City Park Gun Club, was held at New Orleans, Feb. 20 and 21. Mr. J. M. Hughes won the cup for the professional high average. Mr. Harold Money was second, Mr. R. O. Heikes was third. Messrs. Robert Saucier and J. A. Jackson tied for first amateur average and divided first and second.

First day, Feb. 20, the totals were as follows, the events being two at 15, six at 20, and two at 25 targets, 200 in all:

Hughes 195, Money 189, Moeser 182, Phil 181, Heikes 180, Saucier 180, J. A. Jackson 176, Faurote 175, Mermod 172, Atchison 171, Jackson No. 2, 171, Dora 169, Pinkston 169, Lawrence 168, Fletcher 167, Avery 165, McKay 164, Kaufman 162, Heard 161, Hillman 160, F. A. Weatherhead 160, Chaudet 159, Cleveland 158, Woodworth 157, Moody 156, Cocke 153, Plummer 150, Henshaw 150, Hardy 150, Sessions 146, Spicer 142, Duncan 142, Thompson 141, O'Neil 138, Strang 132, Du Bray 129, F. J. Weatherhead 115. The foregoing shot at 200. In the following the figures in parentheses show the number shot at, second the number broken:

Sens (125) 104, V. M. Jackson (165) 94, O'Connell (115) 89, McCutchen (130) 85, Shannahan (95) 76, Dinkins (105) 75, Foote (95) 75, Graber (85) 73, Hayes (75) 40, O'Trigger (55) 36.

Second day, Feb. 21, shooting at 200 targets, the scores were:

Hughes 192, Money 188, J. A. Jackson 179, Heikes 179, Picket 177, Saucier 175, Phil 173, Heard 173, Atchison 171, Moeser 171, F. A. Weatherhead 171, Kaufman 170, Mermod 170, McKay 170, Hillman 169, Mercer 169, Lawrence 165, Thompson 165, Ford 163, Pinkston 161, Cocke 160, O'Neil 160, Chaudet 159, Moody 159, Sens 159, Benedict 157, Duncan 156, Spicer 155, Jackson No. 2 154, Hardy 152, Fletcher 147, Avery 145, McCutcheon 139, Cleveland 138.

The following shot at less than 200 targets; the figures in parentheses being the number shot at, second the number broken: Foote (165) 139, Shannehan (165) 139, O'Trigger (140) 101, Sessions (115) 85, Woodworth (115) 85, Henshaw (85) 72, Proctor (85) 72, Stone (60) 48, Mitchell (40) 22, Putnam (40) 18.

Team shoot for Peters trophy, 25 targets per man, three men on a team:

Greenville Team—Henshaw 25, Shannehan 23, Foote 18; total 66.
New Orleans No. 1—Cocke 19, Saucier 18, McKay 17; total 54.
New Orleans No. 2—Chaudet 20, Benedict 19, Stone 17; total 56.
Burnside, La., Team—Israel 20, Miles 16, Boote 15; total 51.

Match race, 100 targets, $100 purse: Saucier 84, Heard 79.

General averages, 400 targets: Hughes 387, Money 377, Heikes 359, Phil 355, Saucier 355, J. A. Jackson 355, Moeser 353, Mermod 342, Atchison 342, Lawrence 336, McKay 334, Heard 334, Ford 332, Kaufman 332, F. A. Weatherhead 331, Pinkston 330, Hillman 329, Jackson No. 2, 325, Chaudet 318, Moody 315, Fletcher 314, Cocke 313, Avery 310, Thompson 306, Hardy 302, Duncan 298, O'Neil 298, Spicer 297, Cleveland 296.

Extra day; main event a team race for $50, Feb. 22:

New Orleans No. 1—Saucier 24, McKay 23, Benedict 23, Cocke 20, Chaudet 18; total 108.
St. Louis Team—Money 25, Spicer 22, O'Neil 21, Mermod 20, O'Trigger 17; total 105.
Houston, Tex., Team—Ford 23, Heard 21, Moeser 21, Sens 20, Daniels 18; total 103.
Burnside, La., Team—Bringier 21, Tucker 17, Miles 16, Boote 15, Israel 10; total 79.
Mississippi Team—Brady 23, Alexander 19, Sessions 18, Henshaw 17, Dinkins 15; total 92.
New Orleans No. 2—Kaufman 24, McMurdo 21, Hazard 14, Roberts 14, L'Hote 11; total 84.
New Iberia, La., Team—Voorheis 19, Lallande 17, Gates 16, Harry 14, Dupre 13; total 79.

ON LONG ISLAND.

New York County Gun Club.

ROCKAWAY BEACH, L. I., Feb. 16.—Rain and snow were the weather conditions. There also were strong northeast winds which added to the difficulties of making good scores.

Trap at Pinehurst.

PINEHURST, N. C., Feb. 21.—A novelty shoot, designed to furnish amusement combined with a test of skill, engaged the interest of the Frolicsome Shooters. A silver cup was the main trophy of the contest. Pajamas, summer suits, etc., added to the comic features of the contest. Mr. C. A. Lockwood, of Jamaica, L. I., won the cup with a score of 10. The conditions governing the cup event were as follows: Fifteen bird shoot—Event No. 1, 5 birds, gun below the elbow; No. 2, 5 birds, any old way; No. 3, 1 bird, "blind shooting"; each shooter to shoot sitting in a chair; No. 4, 1 bird, "flushing shot"; shooter to advance toward trap, and trap sprung without call; No. 5, 1 bird, shooter to stand on top of trap house and call for bird; No. 6, 1 bird, "mysterious"; gun to be loaded by outside party, and shooter not to know which barrel is loaded. One trigger only to be pulled. Gun to be examined after each shot; No. 7, 1 bird, "battery"; shooter to lie on back, feet toward trap, gun to be pointed toward feet; call for bird and rise to sitting position before shooting; 3 birds pulled.

Below are the scores in the above 15-target event:

Events:	1	2	3	4	5	6	7	
Targets:	5	5	1	1	1	1	1	Total.
Burroughs	2	4	0	1	0	0	0	7
Ketchum	0	3	1	0	0	0	0	4
Lockwood	3	5	1	0	0	1	0	10
Gildersleeve	3	2	0	1	0	0	0	6
Parshall	1	4	1	0	0	0	0	6
Davis	0	4	0	1	0	0	0	5
Wilson	1	4	0	0	0	0	0	5
Potts	2	4	0	0	0	1	0	7

The third shoot of the winter series, for the H. W. Priest cup, Feb. 21, had eleven contestants. The conditions were 15 singles and 10 doubles, handicap. The contestants were Messrs. A. E. Lard, St. Joseph, Mo.; M. H. Wilson, Cleveland, O.; Nelson Burroughs, Philadelphia; M. C. Parshall, Warren, Pa.; C. Gildersleeve, Warren, Pa.; C. A. Lockwood, A. C. Ketcham and Frank Presbrey, New York; F. M. Yost, Wm. Shireman and W. D. Matheson, Middletown, Pa. Messrs. Wilson and Lard tied on 27, and in the shoot-off the scores were: Lard, singles 13; doubles 15; total 28. Wilson, singles 16; doubles 14; total 30. A question was raised as to whether Wilson could score 16 out of a possible 15, and the committee decided that he could do so.

The fourth event of the series was held on Feb. 26. The conditions were 50 targets. There were thirteen contestants. The scores were: Lard 44, W. C. Cady, Cleveland, 41; A. C. Ketchum, 34, F. Presbrey 32, A. C. Lockwood 30, Wilson 29, Burroughs 27, Carl Gildersleeve, Warren, Pa., 24, P. Randolph, Philadelphia, 23; C. W. Baker, New York 20; I. C. B. Dana 19, P. Randolph, Jr., Philadelphia, 18; M. C. Parshall 16.

Mississippi Valley Association.

VICKSBURG, Miss., Feb. 25.—I inclose you herein clipping from our paper relating to coming shoots of our Association. It will be greatly appreciated by our Association if you will be so kind as to give this notice space in your next issue, and call attention to same in your locals, and also put same in your announcements of tournaments. Of course, do not put the New Orleans shoot in your announcements, as it has been held, and we are pleased to state it was a success in every way.

J. J. BRADFIELD,
Sec'y M. V. T. S. and G. P. A.

There will be some fine trapshooting by the members of the Mississippi Valley Trapshooters' and Game Protective Association during the coming year, and the future prospects are bright.

At a meeting held at the Hotel Carroll Saturday night, the following officers were elected for the year 1903: Major T. C. Pepper, of Bolton, Miss., President; Mr. J. J. Bradfield, Vicksburg, Miss., Secretary. These gentlemen are ardent sportsmen and will use every effort to make the year 1903 as successful as the retiring officers, Capt. H. T. Baker and Mr. C. W. Walton, of Natchez, Miss., have done in the past. A vote of thanks was extended to former President Baker and Secretary Walton for their efficient service to the Association.

After the election of officers the question of tournaments for 1903 came up, and it was decided to give tournaments at the following points and by the following clubs:

Vicksburg Gun Club, Vicksburg, Miss., second week in May.
Memphis Gun Club, Memphis, Tenn., second week in June.
Caddo Gun Club, Shreveport, La., second weep in July.

The Association was started two years ago, and has been very successful. There are sixteen clubs in the States of Louisiana, Mississippi and Tennessee; members of the Association with a roll of 1,000 shooters, and their shoots have been very largely attended and ably managed. No amateurs barred or handicapped at any of their tournaments. Manufacturers' agents shoot for targets only.

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., Feb. 28.—Notwithstanding the inclemency of the weather to-day the regular weekly shoot brought out eight men. The rain, falling in torrents when the shoot began, suddenly ceased, only to be followed by the wind blowing a hurricane, making shooting difficult. However, three 25-bird events were shot off, with results as follows:

Events:	1	2	3	Shot	
Targets:	25	25	25	at.	Broke.
Traver	22	17	17	75	56
Claymark	18	17	14	75	49
Winans	17	17	..	50	34
Du Bois	18	18	..	50	36
Marshall	8	8	3	75	19
Smith	18	10	12	75	40
Perkins	19	20	22	75	61
Irving	20	14	..	50	34

Feb. 25.—The regular weekly shoot of the Poughkeepsie Gun Club did not take place last Saturday on account of the death of Max Condit. Some of the boys could not wait for Saturday to roll around again, so had a little practice shoot to-day. The scores follow:

Events:	1	2	3	4	Shot	
Targets:	25	25	25	25	at.	Broke.
Traver	22	21	15	..	75	58
Winans	19	20	19	..	75	58
Irving	19	21	..	..	50	40
Du Bois	16	..	19	19	75	54

Buhler	13	..	..	..	25	13

SNANIWEH.

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., Feb. 28.—The club handicap had six contestants, Mr. I. W. Budd killing 10 straight. The second event was for the officers' trophy, 15 birds, handicap rise. Budd was also high man in this event, scoring 13, four others scoring 11. The shooting was most difficult, as the birds were aided by a very strong cross wind and heavy rain. The scores:

Club handicap:

Budd, 30.....2222222222—10
Rothaker, 29.....2222*20222— 8
Morris, 27.....2202200202— 6

New York State Shoot.

AUBURN, N. Y., Feb. 27.—*Editor Forest and Stream:* As we understand, a place is soon to be selected for the State shoot this summer. The Cayuga County Shooting Club, of Auburn, N. Y., would like to hold it in June. We would have suitable grounds and give a satisfactory shoot, throwing targets at 2 cents.

H. Knox, President; Directors, Jos. N. Knapp, H. Knox, E. A. Wadsworth.

JOS. N. KNAPP, Sec'y-Treas.

The lady was Mrs. Nuvo Reesh, and she was telling an acquaintance of a fancy dress ball to which she and her family had been. "I was Mary Queen of Squots, and Henery was in the garbage of a Monk; and Willie, who, you know, is learning for a barrister, was a Mefistofells. And every time I passed either of 'em I struck an attitude, pointed, and said, 'Exit, Omo.' And then we suppurated."—Shooting Times.

Grand American Handicap Target Tournament.

THE Interstate Association's fourth Grand American Handicap Target Tournament will be held at Blue River Shooting Park, Kansas City, Mo., April 14 to 17, inclusive. $1,000 added.

The most parts of general interest in the programme are as follows:

All entries for the Grand American Handicap at targets must be made on application blanks, a copy of which will be found in this programme. Additional application blanks can be secured by addressing Elmer E. Shaner, Secretary-Manager, 111 Fourth avenue, Pittsburg, Pa.

Conditions governing Grand American Handicap at targets are as follows:

One hundred targets, unknown angles, handicaps 14 to 25 yards, high guns—not class shooting. Two hundred dollars ($200) added to the purse by the Interstate Association. The number of moneys into which the purse will be divided will be determined by the number of entries received.

Entrance money $10, the price of targets being included. In addition to first money, the winner will receive a sterling silver trophy, presented by the Interstate Association.

Regular entries must be made on or before April 1, 1903, and must be accompanied by $5 forfeit. The remaining $5 must be paid before 5 P. M., Wednesday, April 15. Entries mailed in envelopes bearing postmarks dated April 1 will be accepted as regular entries.

Penalty entries may be made after April 1, up to 5 P. M., Wednesday, April 15, by paying $15 entrance—targets included.

Division of money in the preliminary handicap, the Grand American Handicap at targets, and the Consolation Handicap, high guns win—not class shooting:

1 to 10 entries, two moneys—60 and 40 per cent.
11 to 20 entries, four moneys—40, 30, 20 and 10 per cent.
21 to 30 entries, six moneys—30, 20, 15, 13, 12 and 10 per cent.
31 to 40 entries, eight moneys—25, 20, 15, 12, 10, 8, 5 and 5 per cent.
41 to 50 entries, ten moneys—22, 18, 14, 11, 10, 8, 5, 5, 4 and 3 per cent.
51 to 60 entries, twelve moneys—20, 16, 13, 10, 9, 7, 6, 5, 5, 4, 3 and 2 per cent.
61 to 70 entries, fourteen moneys—18, 15, 12, 10, 9, 7, 6, 5, 5, 4, 3, 2, 2 and 2 per cent.
71 to 80 entries, sixteen moneys—16, 14, 11, 9, 8, 7, 6, 5, 5, 4, 3, 3, 3, 2 2 and 2 per cent.
81 to 90 entries, eighteen moneys—15, 13, 10, 8, 8, 7, 6, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2 and 2 per cent.
91 to 100 entries, twenty moneys—14, 12, 9, 8, 7, 7, 6, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2, 2 and 2 per cent.
101 to 110 entries, twenty-two moneys—13, 11, 9, 8, 7, 6, 5, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2 and 2 per cent.
111 to 120 entries, twenty-four moneys—12, 10, 9, 8, 7, 6, 5, 4, 3, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2 and 2 per cent.
121 to 130 entries, twenty-six moneys—11, 10, 9, 8, 7, 6, 5, 4, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2 and 2 per cent.
131 to 140 entries, twenty-eight moneys—10, 9, 8, 7, 6, 5, 4, 3, 3, 3, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2 and 2 per cent.
141 to 150 entries, thirty moneys—10, 9, 8, 7, 6, 5, 4, 3, 3, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1 and 1 per cent.
151 to 160 entries, thirty-two moneys—10, 9, 8, 7, 6, 5, 4, 3, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1 and 1 per cent.
161 to 170 entries, thirty-four moneys—10, 9, 8, 7, 6, 5, 4, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1 and 1 per cent.
171 to 180 entries, thirty-six moneys—10, 9, 8, 7, 6, 5, 4, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent.
181 to 190 entries, thirty-eight moneys—10, 9, 8, 7, 6, 5, 4, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent.
191 to 200 entries, forty moneys—10, 9, 8, 7, 6, 5, 4, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent.
201 to 210 entries, forty-two moneys—10, 9, 8, 7, 6, 5, 4, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent.
211 to 220 entries, forty-four moneys—10, 9, 8, 7, 6, 5, 4, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent.
221 to 230 entries, forty-six moneys—10, 9, 8, 7, 6, 5, 4, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent.
231 to 240 entries, forty-eight moneys—10, 9, 8, 7, 6, 5, 4, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent.
241 to 250 entries and over, fifty moneys—10, 9, 8, 7, 6, 5, 4, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1

up the day with sixteen entries, and it was started at 10 birds, $5. It was cut down to 7 on account of darkness coming on. All events were divided Rose system, one money for each four entries or fraction. The handicaps to-day were 28yds., except Morfey, who stood at 31yds. Capt. Lenone tried, during the afternoon, to get some teams together outside of the Paterson teams, and have a race, but he could not succeed. Will probably try somewhere else before long. Don't be surprised when it comes along.

Shooting at St. Joseph.

The Metropolitan Gun Club, of St. Joseph, Mo., gave a delightful day's sport on Feb. 22 to a big crowd of shooters on its fine grounds on Lake Contrary. The boys are warming up earnestly to the work of practicing for the forthcoming Missouri State meet, but the principal interest in this day's work was a series of individual matches for State championship honors.

J. W. Bramhall, for some time had defeated all comers for the live-bird championship of the State, had received four challenges from his Kansas City colleagues, and it was agreed to go to St. Joe and shoot four individual matches in one day, each at 25 birds per man, the challengers taking the winner in turn. Capt. Cunningham had provided a new set of underground traps for the occasion, and the birds were a good lot—so good that no high scores were made.

Bramhall was not in his usual good form, and lost the first match to Billy Clayton. The latter successfully defended his honors against Paul Franke and Alex. Holmes, but lost in the final race to Harry Tipton.

Then followed a live-bird sweep at 10 birds. In this, Riehl, Elliott, Franke and Holmes killed straight.

In the afternoon Fred Arnhold, of St. Joe, defeated F. E. Rogers, challenger, in a match at 50 targets for the Lake trophy.

An all-day target programme of 150 birds was also shot. In this Arnholdt won first and Riehl second place, with one bird between them. Scores:

Live-bird sweep:

Riehl	1222222221—10	Clayton	1020111121— 8

WESTERN TRAP.

Chicago—Milwaukee.

CHICAGO, Ill., Feb. 16.—The race between the South Side, of Milwaukee, and Nonpareil, of Chicago, was won by Chicago yesterday in a blinding snowstorm and a keen wind by a score of 92 to 85. Only two straights were made—one by Capt. O. Von Lengerke, and one by E. Graham, both of the Chicago team. The birds were good, and the conditions hard. The race was shot as below:

Milwaukee Team.		Chicago Team.	
Thomas	2202202222— 8	Roll	2012122112— 9

Ossining Gun Club.

OSSINING, N. Y.—The Washington Birthday shoot of the Ossining Gun Club was well attended—31 shooters faced the traps. Had it not been for the sad loss of the Poughkeepsie Gun Club—the death of their captain, Max Condit—which kept them from participating, the attendance would have been a record breaker for this club. We will appoint a special day for the inter-county shoot, probably some Saturday afternoon in the near future. We had with us to-day some of our old friends and some new ones, which were alike welcomed. Sim Glover, E. Eichoff, J. Hoffman, Al Smith, E. Le Boutellier, A. Adams and C. C. Gerow came up from New York City and vicinity; P. Smith, F. Buckley and H. Marshall, of Poughkeepsie, and our old friend Bob Quimby, from Armonk, with a jolly bunch of non-shooters. The main event was a distance handicap, 14-18 yards, for a fine set of mounted antlers, presented by Mr. H. W. Bissing, and a sweepstake on the side, 25 birds. I. T. Washburn and W. H. Coleman shot way up in this event, each scoring 23 from 16-yard line. In the shoot off Washburn won with a score of 21 to Coleman's 17. M. H. Dyckman got first money with 21. High percentage was made by Glover, 86 per cent.; Blandford second, with 83 per cent. The targets were thrown full 50 yards, and were made deceptive in their flight by wind and glare of the snow. Mr. E. F. Ball has been chosen as delegate for this club to the meeting of the N. Y. A. P. G. and F. at Rochester, to be held March 7.

The yard handicaps apply in event 5 only.

The inclosed scores of the Ossining Gun Club were made at the regular Saturday shoot, Feb. 28. The first three events were shot from 16yds., when the rain started to pour down in torrents and the shooters were forced back to the 22yd. line under the porch roof. Between the rain, fog and wind there wasn't much done in the way of good scores. Events 7, 8, and 9 were shot from 16yds. Event 3 was for the handicap cup. There were only four entries, in which G. B. Hubbell came out alone with a clean score, including his handicap of misses as breaks.

Events:	1	2	3	4	5	6	7	8	9

Nos. 7, 8 and 9 were at 5 pairs each.

C. G. B.

Birch Brook Gun Club.

TWENTY-TWO shooters faced the traps at Lynnhurst, Feb. 23, in a gale of wind, and anyone who has tried smashing targets under such conditions can make allowance for the apparently poor shooting. Among the visiting shooters were Ingalls, Bell and du Pont, of the Harvard Gun Club; Miller and Lozier, of the Haverhill Gun Club; Leroy; Baker of the Brockton Gun Club; Kirkwood and Williams of the Boston Gun Club, and Keller, son of T. H. Keller.

Events 5, 6, 7 and 8 constituted the prize event, prizes, $5, $2.50 and $1, in gold. Leroy captured first with 38 out of a possible 50; Lozier 2d, with 37, and Lovering 3d, with 36.

Three hundred and fifty-five targets were thrown. Events 1, 5, and 9 were thrown from Expert traps, regular angles; events 2, 6 and 10 Expert traps, reverse angles; all the rest unknown angles from the magautrap. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

HENRY ROOD, Sec'y.

Trap at Omaha.

There was a marked revival of interest in trapshooting at Omaha. For a good portion of the past year there was not much work done at the traps in this city, but the boys are now making up for lost time. Nearly every day in the week there is some sort of a programme, and Manager McDonald says he expects a record season.

An interesting event this week was a race between W. D. Townsend and D. Burgess at fifty live birds, $50 per side. It was an intensely cold day, and the scores proved a tie on 44, which it was agreed to shoot out in another match at some later date.

On the 21st there was a live bird match, handicapped from 28 to 32 yards. This was won by F. C. Riehl, who killed straight from scratch. A target programme of 100 birds was also shot, in which Riehl made the creditable score of 98.

Billy Townsend, who is the Nebraska oracle on trapshooting matters, says that there was never such a prospect for a lively season at the trap in that State.

One of the notable evidences of this tendency to the occasional visitor is the many new faces met with on the shooting grounds.

Mr. F. S. Parmelee, one of the old and best-known trap shots in the country, has decided, much to the regret of his friends, to reside in future in Texas. Although Frank has quit the game, it will not seem well with the old-timers to find his genial face missing when they visit Omaha.

KILLMORE.

Plover Gun Club.

PLOVER, Iowa, Feb. 18.—Yesterday morning with the thermometer registering 16 below zero, 11 shooters went to the Plover Gun Club grounds to take part in the first day's programme. After shooting six events, it was decided to postpone the tournament until to-day, get an early start and finish programme, as indications were for warmer weather. This morning the thermometer showed 21 below, and the club decided to postpone the tournament until they would be assured of pleasant weather. The scores:

Events:	1	2	3	4	5	6		
Targets:	15	15	15	15	20	15	Total.	Average.

Wingohocking Gun Club.

PHILADELPHIA, Pa., Feb. 25.—Appended are the scores of the monthly shoot of the Wingohocking Gun Club, made on the club grounds to-day. There were twelve contestants. The birds were an unusually strong lot, and those who particularly drew screamers made some sensational kills. Messrs. Steese and Kister killed straight, shooting in their usual good form. Shilling was very much in hard luck, each of his lost birds being dead out of bounds. Brewer Fritsch was somewhat more fortunate, and quite surprised at himself, the major part of his kills appearing as though out of bounds from stage fright, returning into bounds to be scored as kills. The scores:

Mitchner	220000221—5	Naylor	01022 —3
Briely	020222110—6	Campbell	1*11*11* —5
Wunder	200022122—5	Fritsch	12202121 —7
Scott	102202211—7	Mallon	22001121 —6
Shilling	01222***0—4	Steese	11122112 —8
Hothersall	00221121 —6	Kister	11221212 —8

PUBLISHERS' DEPARTMENT.

Peculiarities of the Southerners' Dialect.

The Southerner has a soft, long drawn out tone of voice that has a musical sound. A well-known character in the Northern and New England States is Mr. John T. Patrick, of Pinebluff, North Carolina, who has for years represented the great Seaboard Air Line Railway, and has induced many people from the North to locate on that line of road. Mr. Patrick has many friends North who are always glad to see him, but sometimes get confused as well as interested at his expressions and pronunciation. If he wants you to meet him at his hotel and take lunch he will say. "Come around to the Parker House this evening." Evening with him and all Southerners is between twelve o'clock and sun down. In pronouncing Concord, N. H., it takes him three times as long as it does a New Englander. He says Con-c-o-r-d with a musical ring to the cord, and the same in pronouncing such words as length, strength and woman. He cannot get our Northern quick, short pronunciation, and we do not care if he can't, for his Southern way of talking has a catchy pleasantness about it that is interesting to his friends in this section.—*Adv.*

Last Florida Tour.

VIA PENNSYLVANIA RAILROAD.

The last Pennsylvania Railroad tour of the season to Jacksonville, allowing almost three months in Florida, will leave New York, Philadelphia, Baltimore, and Washington March 3.

Excursion tickets, including railway transportation, Pullman accommodations (one berth), and meals en route while going on the special train, will be sold at the following rates: New York, $50.00; Philadelphia, Harrisburg, Baltimore, and Washington, $48.00; Pitsburg, $53.00, and at proportionate rates from other points. Returning, passengers will use regular trains until May 31, 1903.

For tickets, itineraries, and other information apply to ticket agents, or to Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.

Parker Brothers, Meriden, Conn., have perfected and patented an automatic ejector that they believe will be an addition worthy to be attached to the "Old Reliable," thereby adding to its efficiency. They are, we are informed, applying the automatic ejector to their high grade guns only, $150, $200, $300 and $400 catalogue price, at $25 list extra. On account of the demand for Parker guns without ejectors they cannot possibly furnish the lower grades of guns with ejectors at present.

The firm of Messrs. J. Bernard & Son, of London, dealers in fishing tackle, have recently removed from their old quarters at 5 Church Place, where they had been established for over one hundred years—for ninety years in the old building recently pulled down, and for fifteen years before that in another building on the old site. Antiquity of residence such as this is unknown in America. Messrs. Bernard & Son send their catalogue on application.

Messrs. G. F. Heublein & Bro., manufacturers of the celebrated club cocktails, have issued a blotter with a handsome celluloid cover and also very amusing illustrated booklet of Drinking Terms, which will be sent to applicants. The story given of the origin of the American cocktail is an interesting one, whether it is true or not.

Florida—Thomasville—Augusta.

Atlantic Coast Line's famous trains, 8:55 A. M. daily. "New York & Florida Special," 2:10 P. M. week days. Apply at office, 1161 Broadway, New York.—*Adv.*

The Remington Arms Co., 313-315 Broadway, New York, have added some new guns to their production which are illustrated and described in their catalogue. They call special attention to their new No. 7 rifle, target and sporting, latest model.

The Newcastle Kennels, Brookline, Mass., call attention to the number of their Scottish terrier stud dogs, eight in all, and to the combination of famous blood in their pedigrees, every possible combination of desirable blood being included therein.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MARCH 14, 1903.

VOL. LX.—No. 11. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

SPRING SHOOTING.

ONE of the most important measures now before the game committees of the New York Legislature is Senator Brown's bill to forbid the spring shooting of wildfowl. The question at issue is whether New York shall put itself in line with other States and the Provinces in its longitudinal range and give the fowl a free course on the spring journey to the breeding grounds. The chart printed on another page shows the situation at a glance.

The ducks come to us in the late summer or early fall, and over much of the country the shooting lasts for about eight months. During this long open season it is obvious that, with the number of gunners that exist and the present easy means of transit from north to south, and from east to west, more birds are killed each season than were bred the summer before. The supply of wildfowl is constantly decreasing.

There is but one remedy for this. We cannot breed ducks and turn them loose on our waters as we breed fish to stock our lakes and streams. No method has yet been devised of rearing these birds in captivity. We must shorten the open season so that each year a less number of birds may be killed, and more may be saved to return to their northern breeding grounds, where for a few months they are measurably free from pursuit by man.

If it is worth while to keep up the supply of these birds, it is evident that some months must be cut off from this long open season, and the only question to be determined is whether these months shall be taken from the earlier or the later part of the season. As to this there can be little doubt. The autumn is the time to shoot wildfowl, and they should be protected during the late winter and early spring when they have mated and are starting, or are about to start, for their breeding grounds.

An important reason for abandoning in New York the practice of shooting wildfowl in the spring is that by doing so we shall at once induce a large number of these birds to remain with us through the summer to rear their young in all places suitable to their habits. At present the birds are shot at from the time of their arrival to that of their departure. They have no opportunity to select nesting places, and those so persistent as to strive to rear their young in the State of New York are quite certain to be killed before the young are hatched. Formerly several species of our best ducks bred in New York State, not only on and near Long Island, but about many of the beautiful lakes which are scattered over the central and northern portion of the State. To-day it is impossible for the birds to breed in such situations in any numbers owing to continued pursuit by gunners.

Many of the birds which on their migration north and south stop for rest on the Great South Bay and Long Island Sound, if undisturbed in the spring would not migrate beyond the borders of New York State, but would nest and rear their young with us.

The State of New York is fortunate in having within its borders an object lesson most instructive to sportsmen and to legislators. In Jefferson county, where for two years spring shooting on petition of the residents has been abolished, the testimony is overwhelming that there have never before been known so many birds as during these two years. Black ducks have bred there in great numbers, as well as mallards, broadbills and redheads. The shooting there in autumn has been far better than ever before; and similar conditions may be looked forward to for the whole State when the Legislature shall in its wisdom see fit to forbid spring shooting throughout New York.

The State which owns the game exercises its ownership and control for the benefit of all its citizens. It does not —or at least it should not—legislate in favor of any class or clique or special locality. It wishes its citizens to use its game and its forests, but it does not wish to have one man unduly successful at the expense of ninety-nine of his fellows. It is for this reason that nets, dynamite or poison are forbidden in the case of certain fish, swivel guns in the case of wildfowl, and traps in the case of certain large game. The State considers the greatest good of the greatest number, and cannot permit a community or a county to stand in the way of a great reform.

COLD STORAGE.

WE print elsewhere the comprehensive and well considered review of the relation of cold storage to game, in a paper read by Dr. T. S. Palmer, of the Biological Survey, before the Warehousemen's Association. The cold storage system, now so highly perfected, is one of the most serious factors we have to contend with in providing adequate protection for our game. The cold storage vault makes practicable the preservation of dead game for an indefinite period. It has multiplied many fold the market capacity. By the agency of cold storage game may be, and it is, supplied to consumers the year around. Game birds from cold storage are served in the city in hotels, restaurants, clubs and on private tables in the close season. This illicit traffic is one which we shall probably never see entirely suppressed, but it may be materially reduced.

As the special agent of the Government charged with the execution of the Lacey Act, Dr. Palmer has done admirable and efficient service, and his knowledge of the situation is such as to give the weight of authority to what he says. His suggestions to the warehousemen for the rules of business conduct in their relation to the owners of game are these:

1. That no game placed in storage would be delivered during the close season, directly or indirectly.

2. That no game would be received except in packages marked with the owner's name and a true state of contents. If inspection showed that any packages were falsely marked the storage charges on such packages would be increased 10 per cent.

3. (By insertion of clause in storage contract or otherwise) That all game would be received only at owner's risk and subject to all the restrictions of the State laws.

These rules are such as might be adopted without the slightest hesitation; indeed, to enforce such precautions as are here indicated would appear to be mere ordinary business prudence. If the Arctic Freezer Company, of this city, which loaded itself up with illicit game and is now carrying the burden of expensive suits, had adopted some such rule, the proprietors would have been in much happier state of mind to-day.

Is it not about time for cold storage concerns everywhere to take the stand, with respect to game, that they will do business on the square, and will not permit themselves to be used as fences for dishonest dealers in game out of season?

THE SPORTSMEN'S SHOW.

IN the affairs of Madison Square Garden, great events almost tread on each other's heels in the hasty swiftness of their going and coming.

After a successful two weeks, the Sportsmen's Show closed on last Saturday evening. But the sound of hammer and saw could be heard some days before its closing in preparation for the installation of the circus—"The greatest show on earth," in the grandiloquent jargon of the press agent—which follows closely in the Garden after the Sportsmen's Show. And yet the two institutions, the Sportsmen's Show and the circus show, so different in name and so different in properties, have many things in common. Both have reached a stage where, in the genius of their promoters and managers. they cater to the amusement cravings of their patrons, and seem to achieve a consequent success at the gate. Both, the circus in general and the Sportsmen's Show in particular, have features which are entirely foreign to what their titles signify. Each in turn has features which the other has not. For instance, the circus has a good zoological department, in which are specimens of big game animals and game birds; the Sportsmen's Show did not have any. The show had a theatrical dominating feature; the circus has it not.

Still, the big Garden amphitheater was not without some realism of the wilderness in the way of delicate suggestion, some few little bare trees grouped modestly in a place or two serving amply for that purpose. Apart from that, any suggestion of fields and forests was left to the imagination of the visitor. That was the general effect.

There was some fly-casting, in a subdued way. The trade exhibits were excellent, but the supplementary Sportsmen's Show features which completed the connections between trade and sport of field and stream, were meagre. The meagreness was accentuated by being trifling.

The real features of the show were the canoe tilting matches and the cantata, Hiawatha. The tilting is related in a way to outdoor sport, the singing not at all. The cantata, however, was the dominant feature of the whole show. While it proved a great drawing card from its novelty, from the prestige derived from the poem and from the excellent chorus and soloists who accompanied it, it should have been an accessory to the show instead of the dominant attraction.

In the main, the show was theatrical. The true title would more properly have been, "Hiawatha, with some accessories of sportsmanship."

Apart from the excellent trade exhibits, there was nothing of an educational character to interest the sportsman.

The circus which follows the Sportsmen's Show in the Garden events caters to the amusement and diversion of its patrons, and sails under its proper title. This is one of the properties not possessed in common.

IT would be pretty late in the day to start a crusade against the cruelty of trapping. The practice has been going on for some thousands of years, and many millions of creatures, large and small, have been trapped. Hundreds of thousands are trapped annually. Traps and killing devices vary as to the degree of cruelty involved in their operation. In large proportion the traps are deadfalls which break the neck or the back and kill speedily. Others, set for water prey, draw beneath the surface and drown. To institute a movement to change the character of the trapper's pursuit would of course amount to nothing. Trapping is done in the far wilderness; it is beyond the influence of sportsmen's sentiment or public discussion. The specific Nova Scotia snaring of moose which has prompted our correspondent's suggestion is, however, an evil against which the sportsmen of the Province are contending with much promise of success. This mode of capturing the game appears to be practiced in Nova Scotia more commonly than anywhere else. Agents of the Game and Inland Fishery Protection Society are constantly patrolling the woods, hunting out and destroying moose snares, and arresting and prosecuting the snarers. Notwithstanding the destruction by snares and the legal killing—350 were lawfully killed in 1902—the moose are reported to be holding their own.

THE millionaire—as to his nature, work and ways—is a topic prolific of discussion in the journalism of the day. The subject is a broad one, for your millionaire is, after all, a human being, and any discussion of him must then be as broad and far reaching and all embracing as human nature. If we were to give free scope to the debate on millionaires, which it would be one of the simplest things in the world to set going in the FOREST AND STREAM, there would be left no room for the contributors who want to tell us of their moose and trout, adventures and misadventures—things which are much more worth while writing about and reading about. The millionaire as a game preserve promoter is a legitimate subject of discussion; or rather, it should be, since the game preserve, by whomever owned, is one of the live topics of the day in the sportsmen's special field; and a consideration of the pros and the cons should prove not only interesting but suggestive and instructive.

THAT is a simple, cheap, practicable and readily provided fish saver which Dr. Henshall has devised and described in our fishing columns. It is so simple and ready-to-hand that it deserves, and doubtless will have, general adoption in the irrigation districts.

The Sportsman Tourist.

The Posts of the Fur Trade.

OF the old posts of the American fur trade which once dotted the banks of the Missouri, the Platte, and other of our western rivers and lakes, few traces now remain. One may turn over in a hotel at Mackinac the account books of the Astor traffic in that portion of the then Northwest, and at other points in the far West the remnant of a log stockade or tumble-down building, once part of an old trading post, may still be found. But the march of settlement, the competition of private traders, and the disappearance of game long ago relegated the distinctive posts of the fur trade to the oblivion of desuetude, as they broke the monopoly of the traffic itself.

It is only north of the forty-ninth parallel, where the fur trade is yet largely under corporate control, that its trading posts still constitute, as they did a hundred years ago, the centers of commerce and industry of great districts. Time moves slowly in that region; and though in recent years the tide of immigration has in its southern portion wrought many changes, in the north the posts still stand much as they were when the long struggle between the Northwest Fur Company and the company of adventurers from England trading into Hudson's Bay ended by coalition in 1821.

At that date the posts of the fur trade had been scattered throughout the northern quarter of the continent, and as they were then, so in greater part they are to-day. The requisitions for the trade of this year repeat those made when Samuel Hearne set forth from Fort Fond du Lac to reach the Frozen Sea, and Mackenzie wandered out from Fort Chipewyan to explore the great river that bears his name. The staples of the Indian trade are still the same. The red man brings to the post his winter catch of marten and beaver and musquash, and gets in return strouds and cotton cloth and beads and ammunition. But he knows better now the value of his furs, and is no longer willing to pay for his trade musket by piling up beaver skins beside its barrel until they are level with the muzzle.

The necessities of transportation had, of course, first consideration in the location of the posts of the fur trade. In the early days of the traffic, practically all transport was by water. Forts and factories were built on the sea coast; for the receipt of goods and the shipment of furs by sea greatly simplified the problem of transportation. It was easier to let the Indians bring their furs down the rivers to the coast than for the traders to push inland. After a time, however, supplies found their way by boat and canoe through the Great Lakes, and thence into the interior by river and stream. The English company no longer confined its operations to the shores of Hudson's Bay, but using its factories there largely as depots, forwarded its supplies thence westward and northward by lake and waterway to the Rockies and the far-away banks of the Athabasca and Great Slave Lake. The heights of land were portaged—the goods unloaded and carried by the boatmen from the head of one stream to that of another, and the boats then dragged or carried over, to be launched anew.

Inevitably the process was a slow one. Owing to the vast distances traversed, goods destined for the far western and northern posts were two and sometimes three years in transit. Reaching the shores of Hudson's Bay in August or early September, they lay in the depots there until the ice left the rivers in the ensuing spring. Then they began their inland journey, following the courses of the rivers entering the bay, to reach in the autumn the posts on Lake Winnipeg. There they remained during another winter, when they were again started westward and northward; a part finding lodgment among the posts along the route, and the remainder again stored in the larger forts further to the north for distribution during the following year to the remoter posts and outposts.

Limited thus to water transport, the posts of the fur trade were located primarily with a view to their accessibility by boat and canoe, strategic position being, of course, assured. They stand, therefore, for the most part, on the second or lower bank of lake and stream, though not infrequently they are perched on the loftier outer bank, with a view of long river reaches and wide stretches of forest and plain. Briefly, they may be described as collections of wooden buildings grouped together in square or oblong form, and surrounded by stockades of hewn logs. In the far north, however, this defense is frequently lacking; while in the southern portions of the territory it was, until comparatively recent years, stout and lofty, and so reinforced by bastions as to suggest a military stronghold rather than a peaceful trading establishment.

This difference was, of course, chiefly due to the exigencies of the trade. In the prairie region, extending from the forty-ninth parallel to the sub-Arctic forest north of the north branch of the Saskatchewan, traffic was with Indians of the plains. These were predatory, horse-riding, buffalo-hunting tribes, warring with each other and fairly supplied through free-traders from the American side of the line, with modern weapons of precision. And though the Hudson's Bay Company dwelt on fairly amicable terms with them, the Indians finding it to their interest to permit the maintenance of trading posts among them, peace could not always be relied upon. It sometimes happened that Cree, or Blackfoot, or Stony insisted upon a credit which could not be given him, or thought himself cheated in a trade, or became possessed with a wild desire to acquire the white man's goods without an equivalent in furs and robes. In this event, and especially when a small quantity of spirits was distributed after a general barter of robes, the protection of a stout stockade was essential to the maintenance of the fur trade.

In the north, however, the tribes were less warlike and dangerous. They were largely wood Indians, without horses, and practically inaccessible to other traders than those of the Hudson's Bay Company. Their supply of firearms was only that which the company chose to give, and was limited to the single-barreled trade musket of short range. They hunted the moose, bear and reindeer, fished in the rivers and lakes, and trapped the smaller fur-bearing animals.

As game was scarcer than in the plain country, and the Indians were always improvident, it often happened that the fur company had to tide them over a hard winter from its own stores, giving them gratuitously the very provisions it had purchased from them in the summer. The relations between the two were thus more friendly, and the Indians more dependent than in the plains. In consequence, the wooden palisade about the northern posts of the fur trade, and especially the smaller outposts, were sometimes omitted; and, though they generally appear, their utility is rather to isolate the little garrison and prevent pilfering than for defense.

The stockades are usually made of stout logs, placed horizontally or upright in the ground, with projecting bastions at each corner, though in a few of the larger posts in the south they are built partly or wholly of stone. The term "fort," generally applied to the posts of the fur trade, is especially applicable to these latter, which, at a distance, present much of the appearance of the old-time military fortification. The high walls are pierced with loopholes and embrasures, the heavy, two-story turrets project sufficiently to give an enfilading fire, and a wooden gallery extending about the inside of the walls, affords standing room for riflemen. Another name often used interchangeably with forts and posts and houses to denote the stations of the trade, is that of "factories," which, however, applies more strictly to the receiving posts on the coast, notably to those on the south and west shores of Hudson's Bay.

Inside the stockade, facing the gateway, and occupying the center of the inclosure, generally stands the residence of the factor or trader in charge, and of the clerks and upper class of employes. The building is usually a substantial two-story structure, roomy and comfortably furnished. In it is held the officers' mess, and whatever of social life there is in the post may be said to transpire there. Here the passing stranger is entertained, the meager budget of local and foreign news discussed, the little hoard of books and newspapers kept, and the indoor games and pastimes indulged in.

In summer, at the larger posts, it is likely to be the scene of much bustle and excitement, due to the entertainment of offiers from other posts en route in charge of boat brigades. But in winter, when the snow lies deep within the stockade, and trade is almost suspended, and the daily routine becomes largely a matter of form, the little community is driven back upon its own resources for enjoyment. It is then that books and papers and music become serious occupations, and that anything which may break the monotony of daily life and offer a new experience is eagerly sought.

Ranged about the palisade, and facing in to form a hollow square, stand the other buildings of the post—the trading-shop, the goods and fur warehouses, the houses of the men, etc. They are substantial structures, built of logs and hand-sawn lumber, with roofs generally of the pavilion shape. The trade-room, the object of deepest interest to the stranger, differs little in appearance from the general store on our western frontier. Upon its shelves are found all the staple articles of the Indian trade—blankets, clothes of all colors, capotes, bright handkerchiefs, beads, firesteels and fish hooks, steel traps, canoe awls, needles, paint, etc. From the rafters hang kettles, tin and iron ware, and other commodities likely to be required by the red man. In the posts in the prairie country guns used to be largely kept in stock; and in later years, owing to the competition of free-traders, a considerable trade was done in magazine arms. In the north, however, traffic in these weapons has always been discouraged, primarily for the better protection of game, but also to diminish the possibility of formidable attack.

In all the posts there is a large trade in tea, the consumption of which in the territory under the influence of the fur company is enormous, in one department alone exceeding one hundred and fifty thousand pounds annually. Tobacco also figures largely in the yearly requisitions, mostly in the shape of manufactured plug, which the Indians and half-breeds cut fine and mix with the bark of the gray willow in smoking. Liquors are sold in considerable quantities at the posts contiguous to white settlements; but in the remoter districts their sale is practically prohibited, and in no case are they given the Indians in exchange for furs.

Formerly, along the southern line of posts, in the prairie country, a small quantity of spirits was issued at the conclusion of a trade for robes in which a considerable body of Indians took part; though then only on condition that it should be "drunk off the premises," that is, at a distance of a mile or more from the post. Moreover, knowledge born of long experience, that the red man would inevitably demand a further supply, always led to a resolute bolting of gates against his return.

The custom was, however, regarded as a nuisance by the fur company. It was continued chiefly to retain a trade in robes which, without it, would have gone to the free-traders, always ready to supply liquors when the ordinary articles of traffic proved unattractive. What a nuisance it was will appear from an incident related by an officer in charge at Fort Pelly. It seems that his predecessor at the post had on several occasions yielded to the importunities of the Indians, and violated the rule against furnishing a second supply of spirits. When the new officer attempted to put the prohibition into force, an attack was promptly made upon the post, continued in desultory fashion for three days, during which business was entirely suspended, and the exposed portions of the houses riddled with bullets.

In the old days of the fur trade, as it still is in the more northerly and remote posts, trade was wholly a matter of barter, so many furs for so much goods.

The unit of computation was the "castor," a beaver skin, which seldom exceeded two English shillings in value. By this standard all payment for services was made, and the prices of all other furs were governed. Thus the Indian paid for his six-shilling blanket three beavers, and received for his Rocky Mountain sable, say, from twenty to thirty beavers. Visiting the trading shop, he handed over his skins to the trader, who separated them into piles, and placed the valuation upon each. If the red man had sixty beavers' worth he was given sixty little pieces of wood representing the number of castors. With these, when his debt for advances was paid, he proceeded to supply his wants, never stopping until his last wooden coin was expended.

But while this system of barter still obtains throughout the larger part of the fur company's domain, in a rapidly increasing number of posts, the dollar is becoming the recognized medium of exchange, superseding the promissory notes of the corporation. These notes, with which business was formerly transacted with the whites and half-breeds at the posts along the borders of civilization, were redeemable by bills of exchange drawn at sixty days' sight on the Hudson's Bay Company in London. They were of several denominations, from one shilling to five pounds, were about the size of a half sheet of letter paper, and were known euphoniously as "Hudson's Bay blankets." As they were readily redeemed in gold at Fort Garry, and were more easily carried than coin, they enjoyed a popularity quite equal to our own greenbacks.

It may be said to the credit of the fur company that only the best goods are sold at its posts, and that on many articles the margin of profit is so small as at times to wholly disappear. In the old days, when the company came into more direct competition with its American rivals along the line of the Missouri, the selling prices of the latter, as compared with the cost prices, were about six times greater than those fixed by the Hudson's Bay Company's tariff. That the profits of its traffic have in many years been enormous the heavy dividends paid, and the addition to capital stock under which they have been covered up, bear ample witness. But in considering the wide difference in the price paid by the Indian, say, on Great Slave Lake, for his blankets and tobacco and those received for his furs in London, it is well to remember the toil and hardship of those who took the blanket to market, and that seven years often elapse before the return to London of the skins for which it was bartered.

Moreover, in the purchase of furs and the sale of goods, every Indian receives the same treatment. In every district there is one fixed price for all commodities. No Indian ever got more for his furs or pays less for his supplies than the tariff directs. If he is an expert hunter and trapper, he may receive a present after his furs are traded, sometimes up to the value of fifty skins. Occasionally, too, presents are made to keep the Indians true to their allegiance, especially in the southern part of the territory, where the competition of the independent traders is strong. But in no case does one Indian get more for his furs than another.

It not infrequently happens, however, that the prices paid for certain furs is arbitrarily cut down far below their intrinsic value. On the theory of preserving the goose that lays the golden eggs, a close watch is kept by the officers of the various districts for indications of failure in the supply of any fur. If the number of marten or fisher or silver fox skins traded during the present year proves much smaller than that of last year, the price of these furs is promptly reduced, and the Indian trapper encouraged to hunt something else by a corresponding increase of price. The fisher and martens thus have a chance to recuperate, the company rotating its crops in this fashion, like a wise farmer. But this is by the way.

Ordinarily the trade room in a post is without special protection from attack; though in some of the forts in the plain country the approach to it was, in the earlier days, so contrived as to prevent surprise by any considerable body of Indians during a trade. Only a few Indians were admitted at a time. Loopholes in the walls and ceiling were so arranged as to permit firing upon the hostile braves from different directions; and the room was cut off by bolts and bars from the rest of the establishment. But with the progress of settlement, and the gradual civilization of the plain tribes, this danger has disappeared, and the trade rooms are now as accessible as any country store.

Next to the trading shop comes the warehouses containing the goods from England and elsewhere, intended for the fur trade. A peculiarity of these packages is their uniform weight, which ranges from eighty to one hundred pounds, the average being, perhaps, ninety pounds. The adoption of this standard weight is due to the numerous "portages" which occur on all the routes of transport, across which, frequently for considerable distances, the packages have to be carried on the shoulders of the boatmen. Each man carries two of these "inland pieces," as they are called, supporting them by a broad leather strap passing under them and about the forehead of the bearer. Necessarily, to withstand the frequent reshipments incident to the long inland journeys, the packages have to be stout, many of them being lined with zinc and bound with iron. The boats used in transport each carry seventy-five of these pieces; and the facility with which they are handled by the crews is little less than marvelous, the boats being loaded and unloaded within five minutes.

The fur warehouses follow in appearance those for the storage of goods, though they have a distinct odor of their own. From the ceilings hang beautiful warm-tinted masses of fur, of sable and fox, red, black and gray, destined to bring many a shining gold piece at the annual sales of the company in London. Fur skins lie piled in bales upon the floor, or in racks along the wall; all that is visible being the raw hide flattened, with an inner lining of fur at the extremities. For the hunter merely strips the skin from the smaller fur-bearing animals, drawing it off like a glove, and permitting it to dry hide outward.

Many of the skins bear curious marks, Indian signs or letters scratched or painted on them, the hunter's brand of ownership, or his greeting to the trader. Scattered among them are wolf skins with the grinning heads still attached; dusty hides of black and brown and grizzly bears; moose and deer skins, and myriads of martens and fisher and beaver, of mink and musquash. In the early spring, before the ice has left the rivers, the workmen at the trading posts pack the furs into bales of eighty to one hundred pounds each, carefully covering them with rawhide. Later, when the ice gives way and the boats begin to move, they are shipped to the nearest depot fort, to find their way thence to the company's house in London.

With the houses of the lower employes, the list of buildings within the stockade is complete. Outside there are likely to be a few scattered structures, stables, a shop for the repair of boats, perhaps the cabin of boatmen or half-breed retainer. A vegetable garden may lie close to the walls, and a meadow sloping away to the waterside affords pasturage for horses. Above all rises the tapering pole bearing the flag of the fur trade with its singular motto: "Pro Pelle Cutem"—skin for skin.

Isolate, lonely and remote as are these trading posts standing by lake and stream and marsh, to the traveler approaching them through long reaches of swamp and forest, or along ice-bound rivers, they seem suitable havens of rest and content. And certainly they have thus far proved the only means through which the Indian population of the far north has been commercially benefited, and the products of that vast region turned to profitable account. But how much of privation and hardship their establishment has cost is indicated by the names given some of them—Resolution, Providence, Reliance, Good Hope—names suggestive of dreary marches through the wilderness, of long winters of famine and suffering, and of a dauntless courage that never failed.

The loneliness and monotony of life at some of the remoter posts, and the privation to which the wintering agents are subjected, are, indeed, difficult to picture. Mail reaches some of them but once a year; and their nearest neighbors may be from one hundred to two hundred miles away. Life is as unvarying as it is in the rocky regions of Arabia. The landscape is always the same, the only change being from the gray-green of summer to the dead white of winter. For weeks not a strange face is seen, save, perhaps, some hungry Indian seeking food. The work of the post and its surroundings are precisely what they were in the middle of the eighteenth century. At many of the stations food is limited entirely to flesh and fish; at York Factory, for example, thousands of geese and ptarmigan and fish being dried or frozen, and stored away for winter use. At other posts flour is classed as a luxury; the few sacks annually allowed being carefully hoarded and sparingly used. Vegetables, in many localities, cannot be successfully grown, and the cost of transport prevents the use of the canned article.

At the most northerly station—on the Mackenzie River within the Arctic circle—the cold is so intense that axes have to be specially tempered lest they break when striking wood. At the posts on Hudson's Bay, the spirit thermometer often indicates sixty-five degrees below zero. Water has been known to freeze in a room heated by a red-hot stove. At old Fort Yukon the temperature was not infrequently seventy-two degrees below zero; and at Fort Chipewyan, on Lake Athabasca, a thousand miles south of the Frozen Sea, the mean winter temperature is about twenty degrees below, or some thirty degrees colder than that of the citadel at Quebec. Churchill Factory, near Hudson's Bay, is covered with snow during winter—which there lasts from mid-October to mid-June—to the depth of from six to ten feet. Before supplies of fuel were sent out from England, the wood available in the neighborhood permitted of only a single fire morning and evening. The remainder of the time the employes were forced to keep warm as best they could by exercising in the guard room in thick garments of fur. In summer, on the other hand, the mosquitoes and sand flies, in many localities, render outdoor life, save at midday, scarcely endurable.

At most of the trading posts, however, the monotony of life is considerably modified by the observance of a daily routine of duties. At certain seasons, and especially in the midwinter months, this routine often becomes a mere formality, there being very little to do. Nevertheless, every employee is expected to be on duty, and the fact that he is generally results in finding something to engage his attentions. It also contributes to exact knowledge of the requirements and details of the fur trade, on the part of the employe, and to the strict economy with which it is conducted.

This is further facilitated by the assignment of employes to specified duties for long periods; an apprentice, for example, generally being sent to pass the first years of his service in the remoter northern posts, in order to learn the practical working of the Indian trade. His first duties are those of clerk, from which he is advanced to the accountant's office, with, perhaps, further promotion to the charge of a small post as chief clerk. But in these positions he remains for fourteen years before he is admitted into the ranks of the "Fur Trade," or "Wintering Partners," which constitutes the directing class of employes in the field under the Hudson's Bay Company. Inevitably, with these years of training, he has acquired so thorough a knowledge of the details of the service, and is so identified with its tradition, as to be fully qualified for the charge of a district over which he is placed. For with posts dotted over an area one-third larger than that of the whole of Europe, it is indispensable for purposes of direction and supply that the territory should be divided into sections.

In this division there are, first, four great departments. The northern comprises the country lying between Hudson's Bay and the Rocky Mountains; the southern, that between James' Bay and Canada; the Montreal, the business of the Canadas, and the western, the country west of the Rocky Mountains. The depots to which supplies are sent to be distributed to the smaller posts are for the first department, York Factory, on Hudson's Bay; for the second, Moose Factory on the southern shores of the same bay; for the third Montreal, and for the fourth Victoria, on the west coast. In recent years, however, the routes of transport have greatly changed, the larger part of the supplies once passing through Hudson's Bay, now going through Canada and the United States; a condition which has made Winnipeg and Norway House, at the head of Lake Winnipeg, great centers of distribution for the fur trade.

The four great departments are, in turn, divided into fifty-three districts, each with its depot and directing office, and these again into one hundred and fifty-three minor establishments, factories, houses, forts, posts and outposts. Owing to the vastness of the territory under the influence of the Hudson's Bay Company, these posts are necessarily widely separated, the intervening space varying from fifty to three hundred miles. Indeed, were the scheme applied to this country, the inhabitants of each State would have about three posts at which to trade.

While the collection of fur skins throughout the company's domain is made during the autumn and winter months, summer is the busy season for the occupants of the trading posts. The transportation of goods to the various districts, the concentration of furs at the depots, and the collection of provisions for the ensuing winter there leaves the employes little occasion to complain of the loneliness and monotony of their existence.

H. M. ROBINSON.

My First Experience Over Decoys.

THE first day of March dawned bright, clear and warm. The snow on the hills under the strong rays of the sun was rapidly melting, and the ice in the river pushed out by heavy freshets was fast breaking up. In the cove a large hole had opened at the mouth of the Croton River, offering a tempting place to decoy the wily black duck and tough old sheldrake into the range of shot. In this region one must make the best of such a day, for they are few and far between. Every condition has to be perfect or the duck hunter will, as a general rule, return empty handed.

The "Veteran," whom the reader must recognize as my much respected daddy, had surmised during the winter that a good day might turn up in March, and as this was to be my first experience shooting over decoys on the ice, preparations for a trip to the Cove had been commenced some time before. Our duck boat was thoroughly overhauled, and the decoys painted and repaired, so that if the right sort of a day came, we would be all ready without any delays.

I had done some field shooting, killed a few deer in the North Woods, and also shot a good many pigeons from traps, and, by the way, I think this latter sport entails less cruelty than any other, for seldom or never does a bird escape wounded, but never as yet had I experienced the pleasures and excitements of shooting over decoys. While I do not approve of late spring shooting after the birds are mated, I see no more harm in killing a few ducks early in March than shooting them in the fall.

For sometime I had been anxious to secure a specimen of the buff-breasted merganser, which I wanted to mount and add to a collection. The Veteran told me I would be pretty sure of obtaining a shot at one that morning; he also added that these old green-headed rakes were fast flyers, coming like bullets on to the decoys, and it would take a careful and well-aimed charge of shot to bring one down.

Shortly after breakfast, guns and ammunition ready, we started off, our hopes high in expectation of the morning's shoot. A walk of three-quarters of a mile or so up the railroad track brought us to Crawbucky Point, a sandy piece of land that jutted out into the Cove. Here our two men were to meet us, and crossing over to the back we soon perceived them at the upper end with boats and decoys waiting our arrival. It took but a few minutes to don the white caps and jackets, and then the Veteran and I got in one of the duck boats and rowed out in the hole to find a good place, while the men followed with the other boat and decoys.

A light breeze ruffled the waters of the hole, which was of very wide extent, probably a quarter of a mile. Each moment it increased in size, for the heavy current pouring in from the Croton River was steadily pushing the ice southward.

Finally we succeeded in selecting a good spot on the south side of the hole, where the ice was massed and more compact, then in other places. Shoving the boat in alongside of a large cake that protruded beyond the main body of ice, we prepared for the morning's shoot. While the men were setting out the decoys, we put up the screen, and settled ourselves comfortably in the boat. The Veteran placed me in the bow, while he lay in the stern, and this meant, of course, that I was to have first crack at anything which should come along. The decoys arrayed in front of us presented a very lifelike appearance and were calculated to deceive the most wary of ducks.

The men now rowed off to some distance from our hiding place, while we crouched low in the boat and awaited events. Probably fifteen minutes had elapsed when suddenly the Veteran, who had been keeping a sharp lookout in every direction, said, "Mark left! Here come two ducks." A wave of excitement swept over me at his words, and I gripped the gun closer and peered out by the screen toward the west. There, coming swiftly and silently toward us, were two black specks in the distance. "Get ready," came the order from the Veteran, and cocking the gun I slowly pushed the muzzle up to the edge of the screen. My heart thumped furiously, and certainly if ever a person had an attack of "buck fever," I was afflicted at that moment with what might be termed "duck fever." Nearer and nearer came the two dark specks, gradually shaping themselves into a pair of sturdy black ducks. Now they were just outside the decoys, now hovering directly over them. "Shoot!" cried the Veteran. Bang, bang, went both barrels of the 12-gauge, but to my chagrin and amazement the birds, untouched, raised higher about to dart off, when two sharp reports rang out behind me, and down came both ducks, striking the water with a loud splash! I had been too hasty and made a most beautiful "Dutch double," while the Veteran scored a clean kill with right and left.

After picking up the birds, the men who had come over to where we were, moved the decoys closer to us, for the current had drifted us some distance away from them, and everything arranged once more, we began watch, hoping that we would obtain such another chance at a pair of duskies. The warm sun beating down upon us, and the water stirred by a gentle breeze lapping softly against the side of the boat, produced a drowsy and comfortable sensation.

Happening to glance over toward Crawbucky, when taking a look around, I noticed one of our men gesticulating wildly on the beach, and evidently shouting something to us, and then without warning, except for a whirr and whistle of wings, by shot a flock of seven or eight sheldrake on our right-hand side. The Veteran seized his gun and four barrels quickly followed them, but failed to bring any down, for a right-handed shot is always a hard one, and the birds coming up from behind, had taken us unawares.

Shortly after this we espied far in the distance another flock of "shellers." As they flew up toward the meadow creeks in the upper end of the Cove, they suddenly veered in their course and came directly for our decoys. As they drew closer I perceived they were led by a large drake in full plumage. Here was my chance to obtain the specimen I had so wanted to procure. On they came like bullets shot from a gun, and when within range I raised up and fired at the old leader of the flock. But, alas! I had been too slow in shooting, and instead of firing when he was coming straight into the decoys, I waited until he swung off to the right and the shot struck harmlessly several feet behind him. The second barrel proved of no avail, and away sailed the flock unscathed. This was discouraging to say the least, and much disgusted with my bad shooting, I doubted at the time whether I could have hit a barn door had it come flying by. But the sight of swift, scudding ducks sailing on to decoys seen for the first time, is liable to upset the equilibrium of one's nervous system. It did mine, at any rate! "I guess you are a little excited," said the Veteran, "but you may get one yet, so don't be discouraged."

No more ducks showing up for some time, we decided to move, and hailing the men, we picked up our decoys and crossed over to the west side of the hole, which had by this time broadened out into a small lake.

No sooner had we become fixed in our new position than a pair of young drake sheldrakes put in an appearance, lighting among the decoys. "Now is your chance," whispered the Veteran. "Give it to them in the water, and maybe you'll kill one." So taking careful aim at the nearest bird I fired, and placed five or six shot in the head of a decoy! But the second barrel worked better, and I knocked the duck down as he jumped, while the Veteran doubled the other up, and we secured the pair. At last, after many futile attempts, I managed to kill one duck. "It may be good practice to shoot at decoys," said the Veteran, "but if you give many more a dose like that we won't have any left." And those shot in that old wooden decoy's head have been a standing joke ever since.

Later a single sheldrake flew by on the outside of the flock, offering a hard cross shot, but his career was stopped short by a charge of shot from the Veteran's trusty fowling piece.

It was now rather late in the morning, and as no more ducks seemed to be moving and the inner man was crying out for the noonday meal, we decided to pick up and go home. The men came over from Crawbucky and in a few minutes the decoys were all tucked snugly away in their boat.

Rowing ashore, we counted our bag and found it consisted of one pair of black ducks and three sheldrakes. The former were, of course, worth a dozen of the latter, for a "sheller," as far as eating goes, is anything but appetizing, and requires the same method of cooking as does a loon, graphically described by an Irishman, who said, "Put your burd in the pot with a couple o' bricks settin' on him, an' bile him till the bricks is soft, an' he'll be done, oi'll bet!"

So ended my first duck shoot over decoys. Certainly our bag was far from a large one, and to those who have killed fifty and one hundred birds in a day, five ducks will probably seem a very small amount of game. But, then, the shooting does not include all the pleasures of such a trip, and our beautiful surroundings, combined with the perfect weather, doubly repaid us. The blue mountains and brown hills, here and there dotted with a patch of lingering snow; the white, glittering ice broken by the dark waters of the hole, and the clear, warm spring air, all tended to add greatly to the pleasures of the morning. Although I failed to secure the old green-headed drake, yet every minute had been filled with intense enjoyment, and we are only hoping that this spring will bring us such another day, when we can again try our luck duck shooting in the Cove.

CAMILLA.

Long Island Ducks.

BAYPORT, L. I., March 8.—*Editor Forest and Stream:* The spring duck shooting commenced here last week in good style, several bags of from 25 to 50 broadbills being reported. Guide Will Brown in one day got 71. There are more ducks in the Bay than have ever been seen at this season of the year. Geese and brant are coming in in good numbers, though I have heard of very few of them being shot. There ought to be some good shooting after the last three days' storm.

Fun!

IT was in the restaurant at the Sportsmen's Show in New York. Smoke from three post-prandial cigars curled above the small coffees. Archer, the still-life and wild game artist; Brown, who writes about angling, and Bristol, the insurance man who has fished from Idaho to Labrador, were swapping yarns.

"Slept in the snow at Jackson's Hole, Wyoming: like it better than British Columbia," drawled the artist.

"Slept in the water on a 'mesh' beside Bottom Brook in Newfoundland," added Brown.

"That's nothin'!" chirped Bristol. "Listen. When I lived at St. Paul, I went a-fishing with three members of the Minnesota Four Hundred. It was after sundown when we arrived at a railroad station sixty miles in the woods; but the smart member of our party 'knew the way' to the lake and our camp, which had already been established by a guide, who waited there. We hired the one two-seated wagon in all that region, and started. The smart fellow chose the wrong fork in the road, four miles out. We drove until eleven o'clock, flushed a log 'shack,' pounded on the door, and asked for beds.

"'Been a cleanin' up an' no beds fixed,' growled the frowsy owner of the house. 'Keep on this road an' you'll strike the county poorhouse. Only three miles!'

"We reached the poorhouse after midnight. The overseer swore at us for waking him.

"'This ain't no hotel: paupers live here, an' we're just a runnin' over! But if ye wanter stay in our ole barn, mebbe ye kin lose ther muskeeters!'

"We unharnessed and hitched the horses to a tree, and 'went to bed.' Found two bins of oats and laid down on them. The smart driver removed his shoes, and the mosquitoes held a mass meeting around his feet. Finally a foraging rat nipped him and he 'sat up.' It was pitch dark; he could hear the rats running about, and the snores of two of our party. Then he remarked:

"'And they call this *fun!*'" B.

Royal Hunting.

Brussels Correspondence New York Tribune.

HUNTING, which from time immemorial has been the favorite pastime of royalty, is to-day even more perhaps than in bygone ages the distinctive sport of kings. Nor is this surprising. When the monotonous routine of their daily life is taken into consideration—the endless chain of court functions, receptions, banquets and visits—what more natural than that crowned heads should seek relaxation in the noble sport which has been the special prerogative of their forefathers for centuries? The keenest of royal sportsmen at present are Emperor Francis Joseph, Emperor William, King Carlos of Portugal, King Victor Emmanuel of Italy, and Prince Nicholas of Montenegro.

Emperor Francis Joseph is passionately fond of chamois hunting, the dangers of which have always fascinated him from the days of his early youth. The Emperor generally indulges in his favorite sport in the neighborhood of Ischl, the heart of the Austrian Tyrol. The Hapsburg sovereign is accompanied on his expeditions by only two or three princes of the imperial family. Intent on hunting only for the pleasure it affords in itself, Francis Joseph's shooting parties take place in the simplest manner possible, and are divested of all outward show and mise-en-scène. With an alpenstock in hand and a gun over his shoulder, the Emperor leaves his shooting box at Gansgebirge, where he has spent the night, at 4 A. M., and often spends the entire day in the mountains, only returning late at night. Francis Joseph is a capital shot, and rarely misses the chamois springing from rock to rock. When the Emperor gives a shooting party in honor of a brother sovereign, it is either in the preserves of Karapanesa or in the forests neighboring to the shooting box at Korisserdo. On such occasions the Emperor and his guests each goes his own way, starting at daybreak, and hunts the whole day quite alone. As a rule, the Austrian Emperor's shooting parties last three or four days. The Emperor is never present at hunting parties given in honor of official persons and diplomats, it being the master of the hounds who presides on such occasions in the Emperor's name.

Emperor William is a perfect fanatic in the matter of sport, and is an excellent shot, notwithstanding the fact that he cannot use his left arm. He shoots, as a rule, with very light guns, which he can easily hold in one hand. The Emperor's favorite hunting grounds are in the royal forests of König's Wusterhausen, near Berlin, in the Grünwald and Springe. William II. is generally accompanied on his expeditions by his aides-de-camp, by the grand marshal of the court and by the grand master of hunts. The Emperor always wears a short shooting jacket of gray material, this being one of the few occasions when he dons civilian attire. According to official statistics, the Kaiser has shot 33,976 head of game during the last twenty-five years, the following being the itemized list of his victims: Two buffaloes, 7 elk, 3 reindeer, 3 bears, 1,022 wild animals of various kinds, 2,189 deer, 121 chamois, 16,188 hares, 674 rabbits, 9,643 pheasants, 54 heathcocks, 4 woodcocks, 95 grouse, 20 foxes, 56 wild ducks, 694 cormorants, 680 roe deer and 581 head of game not classified.

Notwithstanding his poor physique, King Victor Emmanuel, like his father, King Humbert, is an enthusiastic sportsman, and is particularly fond of hunting in the Valley of Aosta. The King's other favorite shooting haunts are at Ceresole and the southern Alpine districts, where game is very abundant. On one occasion, while chamois hunting with his father, Victor Emmanuel, then Prince of Naples, and the Duke of the Abruzzi nearly lost their lives in the Valley of Gesso; in November, 1897, they were overtaken by a snowstorm and almost frozen to death, being obliged to spend the night in a small chalet exposed to the blast of the storm. But neither this nor other dangerous experiences have lessend the King's love for sport. In winter time, whenever he finds the opportunity and leisure, he leaves Rome to shoot boar in the Abruzzi. At Castelporciano, some twelve miles from Rome, as many as two hundred boars have been shot in one day by the King and his party.

The present Czar's favorite shooting grounds are at Gatschina and at Tsarskoe Selo, near St. Petersburg. Nicholas II. also shoots in the wild districts of the Blalowiege forests, near Minsk; on such occasions the imperial sportsman and his guests make an early start, generally at 8 A. M., and take luncheon in the forest, to return only late at night. Rolling kitchens, similar to those used in the French Army, are taken on these expeditions; in this manner a sumptuous meal can be provided for the royal party at a few minutes' notice; for, unlike the German and Austrian Emperors, Nicholas II. does not like to "rough it." A table is set in the open air, the Czarina being seated next to her husband, while the guests take their seats according to the strictest rules of etiquette. Buffalo hunting is the best sport afforded in the imperial Russian preserves, but as the race is almost extinct these animals are hunted only every third year. Last year over a hundred were shot; of these, the finest weighed twelve hundred pounds, and was brought down by the Czar himself. The female buffaloes are never shot, and in winter are driven into large parks, where they breed. Next to these buffaloes the finest big game in Russia is the Blalowiege deer: the Czar and his party shot four hundred of these animals within a week last autumn.

King Carlos's achievements as a sportsman have been too recently commented upon to be repeated. While visiting President Loubet a few weeks ago at Rambouillet, the Portuguese sovereign easily proved himself the best shot among reigning royalties of to-day. The King has shot over every royal preserve in Europe, but he is particularly partial to Rambouillet, where he first made a reputation for himself as a skillful marksman in October, 1895, at a shooting party given in his honor by President Faure. The King took three thousand cartridges with him on that occasion, and during the course of the day brought down 750 head of game, among them being 13 deer and 633 pheasants.

M. Emile Loubet may be likened to his royal contemporaries in his love for sport. Although left-handed, he is a capital shot. He prefers, as a rule, to go out shooting with his favorite dog. But at times the President gives official shooting parties, either at Rambouillet or Marly; as, for instance, during the visit of the Russian grand dukes in 1900, when 748 head of game were shot at Rambouillet during a day.

President Loubet thus follows the tradition set by preceding heads of State in France. Nearly all the French kings were keen sportsmen, beginning with Charlemagne, Francis I., Henri II., Henri IV., Louis XIII., Louis XIV., Louis XV., Napoleon I., Charles X. and Napoleon III. While M. Thiers was a poor shot, Marshal MacMahon, M. Grévy, M. Carnot, M. Casimir-Périer and M. Faure worthily continued the example set by their royal predecessors.

Natural History.

Some Queer Notions.

OUR respected ancestors had some queer notions in regard to natural history. Old Sir Thomas Browne, in his "Inquiries into Vulgar and Common Errors," discusses many of these. "That a brock or badger hath the legs on one side shorter than on the other," he says, "though an opinion perhaps not very ancient, is yet very general." This belief was received not only by theorists, but by most of those who had daily opportunity to behold and hunt them; yet Sir Thomas could not accept this belief, because it seemed "no easy affront into reason, and generally repugnant unto the course of nature.' Wherever he looked he saw that the limbs of animals on the opposite sides of their bodies were of the same length and number, and that none of them had an odd leg. One would think that the question might have been put beyond cavil by simply measuring the limbs of the animal; but perhaps they never thought of that.

The worthy knight, however, could accept the basilisk, though it does not seem that he ever saw one, and did not question its power to kill by "inflicting its eye," as old Dr. Parr would have expressed it, upon its enemy. And why not? "For if plagues or pestilential atoms have been conveyed in the air from different regions, if men at a distance have infected each other, if the shadows of some trees be noxious, if torpedoes deliver their opium at a distance and stupefy beyond themselves, we cannot reasonably deny," he says, "that there may proceed from subtler seeds more agile emanations, which contemn those laws and invade at distance unexpected." But there was a limit to the credulity of Sir Thomas; and as for the generation of the basilisk, that "it proceedeth from a cock's egg hatched under a toad or a serpent," he thought it a conceit as monstrous as the brood itself.

As to the salamander, there was great difference of opinion. Sir Thomas cites a number of high authorities, among them Aristotle, Nicauder, and Pliny, who expressed their belief that the animal was able to live in flames; but these were offset by the opinion of Sextius, Dioscorides and Galen, "that it endureth the fire awhile, but in continuance is consumed therein," while Matthiolus affirmed that "he saw a salamander burned in a very short time." This belief, the good old Norwich physician remarks, had been much promoted by stories of incombustible napkins and textures which endureth fire, whose materials, he says, are called by the name of salamanders' wool. To the simple apprehension of the common people of those days, the one fact seemed no more improbable than the other; but Sir Thomas points out that this substance cannot be salamanders' wool, because this animal, "which is a kind of lizard, a quadruped corticated and depilous," was not furnished with wool, fur, or hair. A very satisfactory argument, one would think. He goes on to say that it was a mineral substance; "metaphorically so called"; and that as the heart of Germanicus and the great toe of Pyrrhus would not burn with the rest of their bodies, so "there are in the number of minerals some bodies incombustible." The material in question was no doubt asbestos. To those who were not familiar with it, it seemed something very remarkable, on a footing with the flame-enduring salamander. We recall that the young printer, Benjamin Franklin, when he went over to England, took with him a purse made of asbestos, which purifies by fire. "Sir Hans Sloane heard of it," says Franklin, in his autobiography, "came to see me and invited me to his house in Bloomsbury Square, showed me all his curiosities, and persuaded me to add that to the number, for which he paid me handsomely."

But not less remarkable was their belief in the amphisbæna, a small serpent, which had two heads, one at each extreme, and which moved equally well in either direction; that the ostrich "digesteth iron"; that "there is but on phœnix in the world which, after many hundred years, burneth itself, and from the ashes thereof ariseth up another"; that the griffin "is a mixed and dubious animal, in the forepart resembling an eagle, and behind the shape of a lion, with erected ears, four feet, and a long tail"; that a kingfisher "hanged by the bill sheweth in what quarter the wind is by an occult and secret property, converting the breast to that point of the horizon from whence the wind doth blow"; that the age of the deer exceeds the average age of man, "in some the days of Nestor, and in others surmounting the years of Artephius or Methuselah"; that a bear "brings forth her young informous and unshapen, which she fashioneth after by licking them over"; that men weigh heavier dead than alive; that lampreys have nine eyes; and that only man "hath an erect figure, and for to behold and look up toward heaven," whereas, Sir Thomas asserts that of all creatures, man is among the least able to look up, and that the contrary "is a conceit only fit for those that never saw the fish uranoscopus, which hath its eyes so placed that it looks up directly to heaven, which man doth not, except he recline, or bend his head backward."

Sir Thomas Browne died in the year 1682, but long after his time popular beliefs not less preposterous than those he discussed were common. Gilbert White, the genial old naturalist of Selborne, relates that in his village in his day were living several persons who had been healed of rupture in their infancy by being passed through an ash tree that had been cleft for that purpose. He believed that the deer is furnished with two spiracula, or breathing places, besides the nostrils. When deer, he says, are thirsty they plunge their noses, like some horses, very deep under the water while in the act of drinking, and continue them in that situation for a considerable time; but to obviate any inconveniency, they can open two vents, one at the inner corner of each eye, having a communication with the nose. Modern science has shown this to be incorrect. In White's day many people believed that swallows, instead of migrating to southern climates in the autumn, clustered in round masses and threw themselves into ponds and rivers and hibernated in the mud at the bottom; and even so great a man as Dr. Johnson accepted this notion, and told Boswell that "a number of them conglomerate together, by flying round and round, and then all in a heap throw themselves under water, and lie in the bed of a river." In those days it was believed that the hand of a dead man would reduce swellings, and that the touch of the king would cure scrofula.

All this is bad enough; but are we ever so much wiser, since it is still a wide-spread belief among us that a rabbit's foot will bring good luck; that a hazel twig will point out underground fountains of water; that a horse chestnut carried in the pocket will keep away rheumatism; and that a dog's howling in the street is a sure precursor of a speedy death? And so it ought to be, but it ought to be that of the dog.

T. J. CHAPMAN.

[Does any one seriously believe that a horse chestnut carried in the pocket will keep away rheumatism?]

The Sparrow Hawk.

(*Falco sparverius.*)

THE animal world around us has its thoughts, its cares, its sorrows and its joys, the same as we of the "higher" grade.

If we would know of these things as they relate to the humble forms we meet, we must carefully and honestly study their ways and mode of life. In doing this there is sure to be revealed to us another, a broader and more beautiful view of life, and a debt of sympathy will be evoked we had not before experienced, and in proportion as we get in tune and in harmony with these conditions, will the beautiful time spoken of be hastened, when "the lion and the lamb shall lie down together and a little child shall lead them."

An interesting instance which throws some light upon these facts and helps bear us out in the statements made, was observed by me one beautiful afternoon on the 31st of last July.

I was reclining under a magnificent old elm on the banks of the Cedar River, near Charles City, Iowa, when my attention was attracted by the peculiar but well recognized cry of a sparrow hawk (*Falco sparverius*) in the tree overhead. On glancing up I perceived a male and female of this species in the extreme top of the tree. The male had a small green snake, and the female wanted it. They both mounted into the air a little ways, both apparently uttering sharp screeching cries, and came together, the female taking the snake in her claws, and then circling around a little, dove quickly into the hollow end of a broken limb a foot in diameter and perhaps forty or fifty feet above the ground, that had been hollowed out and used by woodpeckers.

The snake was taken in to the brood of young, which together with the mother bird, kept up the same sharp, screeching cry I had first heard uttered by the parent birds.

The female went into the hollow and stayed perhaps a quarter of an hour, all the while the young keeping up their cries. During this time the male flew from his perch near the entrance to the hollow limb to another limb on the east part of the treetop.

At the end of a quarter of an hour the female flew out of a woodpecker's hole perhaps four or five feet below where she entered, with the snake in her claws apparently untouched, and with the same screeching cry flew to her mate. For a little time she kept up this crying, as if telling of the difficulties and troubles she had in trying to feed the young. Very soon the male flew to a dead twig in the top of another tall tree five or six rods to the south. The female, still uttering her cries and holding the snake in her claws, very soon followed him, and then with the snake and occasional cries, flew back to the first tree and circled around the top a moment, and then, with cries continued, flew back with the snake to the south tree, from which the male had just flown. Soon, however, he came back, and they were together there when I left off watching.

CLEMENT L. WEBSTER.

CHARLES CITY, Iowa

Gray Squirrel Migration.

THE good natured debate which for some weeks has been carried on in FOREST AND STREAM on this subject shows in a curious way the forgetfulness, or lack of knowledge, on the part of the public of facts which in past years have attracted general attention and caused much astonishment.

The enormous abundance of the gray squirrel on this continent in the early years of the last century was well known, and the fact of its migrations from time to time—like those of many other animals—was freely written about. Now that the country has been settled up, the gray squirrels—largely owing to the attacks made on them by man—have so diminished in numbers that great congregations are no longer seen.

We quote from Audubon and Bachman ("Quadrupeds of North America," Vol. I., p. 265), some remarks on this point:

"This species of squirrel has occasionally excited the wonder of the populace by its wandering habits and its singular and long migrations. Like the lemming (*Lemmus norvegicus*) of the eastern continent, it is stimulated either by scarcity of food or by some other inexplicable instinct to leave its native haunts and seek for adventures or for food in some (to it) unexplored portion of our land.

"The newspapers from the West contain many interesting details of these migrations; they appear to have been more frequent in former years than at the present time. The farmers in the western wilds regard them with sensations which may be compared to the anxious apprehensions of the eastern nations at the flight of the devouring locust. At such periods, which usually occur in autumn, the squirrels congregate in different districts of the far Northwest; and in irregular troops bend their way instinctively in an eastern direction. Mountains, cleared fields, the narrow bays of some of our lakes, or our broad rivers present no unconquerable impediments. Onward they come, devouring on their way everything that is suited to their tastes, laying waste the corn and wheat fields of the farmer, and as their numbers are thinned by the gun, the dog and the club, others fall in and fill up the ranks, till they occasion infinite mischief, and call for the more than empty threats of vengeance. It is often inquired how these little creatures, that on common occasions have such an instinctive dread of water, are enabled to cross broad and rapid rivers like the Ohio and Hudson, for instance. It has been asserted by authors, and is believed by many, that they carry to the shore a suitable piece of bark, and, seizing the opportunity of a favorable breeze, seat themselves upon this substitute for a boat, hoist their broad tails as a sail, and float safely to the opposite shore. This, together with many other traits of intelligence ascribed to this species, we suspect to be apocryphal. That they do migrate at irregular and occasionally at distant periods, is a fact sufficiently established; but in the only two instances in which we had opportunities of witnessing the migration of these squirrels it appeared to us that they were not only unskillful sailors, but clumsy swimmers. One of these occasions, as far as our recollection serves us, was in the autumn of 1808 or 1809; troops of squirrels suddenly and unexpectedly made their appearance in the neighborhood; among them were varieties not previously seen in those parts; some were broadly striped with yellow on the sides and a few had a black stripe on each side, bordered with yellow or brown, resembling the stripes on the sides of the Hudson Bay squirrel (*S. hudsonicus*). They swam the Hudson at various places between Waterford and Saratoga; those that we observed crossing the river were swimming deep and awkwardly, their bodies and tails wholly submerged; several that had been drowned were carried downward by the stream, and those which were so fortunate as to reach the opposite bank were so wet and fatigued that the boys stationed there with clubs found no difficulty in securing them alive or in killing them. Their migrations on that occasion did not, as far as we could learn, extend farther eastward than the mountains of Vermont, many remained in the county of Rensselaer, and it was remarked that for several years afterward squirrels were far more numerous there than before. It is doubtful whether any ever returned to the West, as, finding forests and food suited to their taste and habits, they take up their permanent residence in their newly explored country, where they remain and propagate their species until they are gradually thinned off by the increase of inhabitants, new clearings and the dexterity of the sportsmen around them. The other instance occurred in 1819, when we were descending the Ohio River in a flatboat or ark, chiefly with the intention of seeking for birds then unknown to us. About one hundred miles below Cincinnati, as we were floating down the stream, we observed a large number of squirrels swimming across the river, and we continued to see them at various places until we had nearly reached Smithland, a town not more than about 100 miles above the mouth of the Ohio.

"At times they were strewed, as it were, over the surface of the water, and some of them being fatigued sought a few moments' rest on our "steering oar," which hung in the water in a slanting direction over the stern of our boat. The boys along the shores and in boats were killing the squirrels with clubs in great numbers, although most of them got safe across. After they had reached the shore we saw some of them trimming their fur on the fences or on logs of drift wood."

Townsend, writing in 1834, speaks of the abundance of the gray squirrel in Missouri, and says: "On last Christmas day, at a squirrel hunt in this neighborhood, about thirty persons killed the astonishing number of *twelve hundred* between the rising and the setting of the sun!"

SPRINGFIELD, Mass., March 5.—*Editor Forest and Stream:* The squirrel migration story goes a good deal further back than Jacque's forty years. The following is from Audubon's "Ornithological Biography," published in 1831, page 247:

"The gray squirrel is too well known to require any description. It migrates in prodigious numbers, crossing large rivers by swimming with its tail extended on the water, and traverses immense tracts of country in search of the places where food is most abundant. During these migrations the squirrels are destroyed in vast quantities."

W. G.

TRENTON, Georgia, March 6, 1903.—It happened that I did not read what Col. Bobo said about the migration of squirrels, or about taking them from the water by the tail when crossing streams, but I have seen so many comments thereon that I am minded to say a word myself.

I know little about Sander's Readers—they were not in being when I left school—and I never really saw a squirrel migration—that is, in force. That they, in common with many other creatures, have so migrated, I have believed for many years. When I was a boy, say along in the forties, it was no uncommon thing to see in the newspapers casual reference made to these migrations, and I always supposed that they were undertaken in search of better feeding grounds. I have sometimes seen squirrels going rapidly through the woods in particular directions, as though they were bound for some distant point. Something more than fifty years ago I was shooting squirrels in Vermont, near the foot of Mount Ascutney. The mast was not good that year, and the game was not too abundant, yet I was assured that the squirrels had been very numerous the year before, when nuts and acorns were plenty. I have known the same thing to occur in northern Maine.

My theory is that it is no unusual thing for squirrels to move to considerable distances when food is scarce, and the like has occurred even in the case of human beings. It does not always follow that success attends their venture, but food must, if possible, be had nevertheless.

It is not strange that in earlier days, when squirrels were far more numerous than now, their movements should have appeared more as if guided by concerted action on the part of the animals; yet this is not certain. In the county where I write there are fewer squirrels than common this year, and I think it is because there are fewer nuts and acorns in this neighborhood than is usual.

As to taking these creatures from the water, I imagine that they would in their innocence rather welcome the hand that lifted them into the boat or on shore from what must have proved a watery grave to many. I know that even foxes and deer will seek human help at times.

I have myself shaken a squirrel from a tree into the water, and caught it without difficulty as it swam ashore.

As to what has been written about squirrels crossing streams on a piece of bark, I have only to say that if the bark was handy the creature would be likely to make use of it, so far as it could.

And whatever Col. Bobo may have said seriously, concerning squirrels or anything else, I should be very much inclined to take at its face value.

KELPIE.

The Water Ousel's Winter Home.

THE chosen home of the water ousel is in the rugged defiles of our further mountains. He haunts the dancing mountain streams; their sources in the little patches of dwarf willow near timber line; the lakes of gem-like beauty which they form; their winding course as they go sparkling through the mountain meadows and tumble noisily down the basins and cañons into the foothills, where they widen out and cease their brawling; as high up as he can get in summer, lower down in winter, but always in the mountains, wherever there is open water.

The sprite of the mountains he, the bearer of messages from the "Under water people" to the prospector or big-game hunter who penetrates the savage solitudes which delight the bird's little heart. He has no fear of the intruder, not he. At your very feet, up from the swirling mountain water he comes, after a submergence that seems impossible to a warm-blooded, breathing being, hops upon an ice-sheathed boulder and, flipping the water from his dark slate blue coat with movements that almost baffle the eye, so quickly are they made, he bursts into song; a sweet, soulful trill, the harmony of the mountains, a song of thanksgiving for the blessings of life which are his for the taking—that is the message.

When feeding they always seemed to me to be under the water more than half of the time. Water bugs, beetles and aquatic larvæ of all kinds constitute the grubstake of this mountain rover. Whenever he gets the chance, he will eat a few minute trout and eggs, but the old one rustles him away from her spawning place if she catches him near it—reference being had to wild trout. In the spring of 1898 the writer caught a trout in the cañon of the Medicine Lodge, a tributary of the Paint Rock, that had a water ousel or dipper in its gullet. I would not allow one of these birds to use about a pond where trout were bred, but, save for the demands of science, I would as soon think of shooting my faithful old pack-horse as this sweet singer in the rugged mountain solitudes which he affects.

I have a cherished photograph which shows the winter habitat of the American dipper. It shows the dipper at home on Paint Rock Creek, one mile below the mouth of the cañon in Big Horn county, Wyoming. One can make out the bird with the naked eye on the ice point in the thread of the stream where he is perched, in the act of singing, just as the camera was about to click, when the sun peeped out for a moment on that bleak February day. I never look at the picture but I seem to hear the sweet notes of the singer, so bold and dauntless, so typical of the West.

DR. A. J. WOODCOCK.

What Became of the Wild Pigeon.

I THINK that any one who reads this article will be, like myself, satisfied that the destruction of the pigeons was to gratify the avarice and love of gain of a few men who followed them till they were virtually exterminated.

When a boy and living in northern Ohio, I often had to go with a gun and drive the pigeons from the newly sown fields of wheat. At that time wheat was sown broadcast, and pigeons would come by the thousands and pick up the wheat before it could be covered with the drag. My father would say, "Get the gun and shoot at every pigeon you see," and often I would see them coming from the woods and lighting on the newly sowed field. They would alight till the ground was fairly blue with these beautiful birds. I would secrete myself in the fence corner, and as these birds would light on the ground they would form themselves in a long row, canvassing the field for grain, and as the rear birds raised up and flew over those in front, they reminded one of the little breakers on the ocean beach, and as they came along in this form, they resembled a winrow of hay rolling across the field. I would wait until the end of this wave was opposite my hiding place and then arise and fire into this winrow of living, animated beauty, and I have picked up as many as twenty-seven dead birds killed at a single shot with an old flintlock smooth bore. Later in the fall these birds would come in countless millions to feed on the wild mast of beechnuts and acorns, and every evening they would pass over our home, going west of our place to what was known as Lodi Swamp. Many and many a time have I seen clouds of birds that extended as far as the eye could reach, and the sound of their wings was like the roar of a tempest. And for those who are not acquainted with the habits and flight of these birds, I wish to say that once in the month of November, while these pigeons were going from their feeding grounds to this roost in the Lodi Swamp, they were met with a storm of sleet and snow. The wind blew so hard they could not breast it, and were compelled to alight in a sugar orchard near our place. This orchard consisted of twenty acres, where the timber had all been cut out, except the maples, and when they commenced lighting, the trees already partially loaded with snow and ice, and the vast flock of pigeons being attracted by those alighting, all sought the same resting place. Such vast numbers alighted that in a short time the branches of the trees were broken, and as fast as one tree gave way those birds would light on the already loaded tree adjoining, and that, too, was stripped of its long and limber branches. Suffice it to say that in a half hour's time this beautiful sugar orchard was entirely ruined by the loads of birds which had attempted to rest from the storm.

About this time did I enjoy my first pigeon hunt in a roost. Being a boy about sixteen years of age, having a brother about thirteen, and as we had seen the pigeons going by to their roost for hours and knowing that many people went there every night to shoot pigeons on the roost, my brother and I were seized with a desire to go and enjoy this exciting sport. Then arose the difficulty of a gun suitable for the occasion. As we had nothing but a small bored rifle and not owning a shotgun, we appealed to father as to what we should do for a gun. We had previously gained his consent to our going. He suggested that we take the old horse pistol; one of Revolutionary date, and had been kept in the family as a reminder of troublesome times. Let the young man of to-day, who hunts with the improved breechloader, think of two boys starting pigeon hunting, their only outfit consisting of a horse pistol, barrel twelve inches long, caliber 12 gauge, flintlock, one pound of No. 4 shot, a quarter of a pound of powder, a pocket full of old newspaper for wadding, a two-bushel bag to carry game in and a tin lantern. Thus equipped, we started for the pigeon roost, a little after dark. And although three miles from the roost when we started from home, we could hear the sullen roar of that myriad of birds, and the sound increased in volume as we approached the roost, till it became as the roar of the breakers upon the beach.

As we approached the swamp where the birds roosted, a few scattered birds were frightened from the roost along the edge of the swamp. These scattering birds we could not shoot, but kept advancing further into the swamp. As we approached this vast body of birds, which bent the alders flat to the ground, we could see every now and then ahead of us a small pyramid which looked like a haystack in the darkness, and as we approached what appeared to be this haystack, the frightened birds would fly from the bended alders, and we would find ourselves standing in the midst of a diminutive forest of small trees of alders and willows. We now found these apparent haystacks were only small elms or willows completely loaded down with live birds. My brother suggested that I shoot at the next "haystack." So we advanced along very carefully among the now upright alders till we came to where it was a perfect roar of voices and wings, and just ahead of us we saw one of these mysterious forms which so rembled a haystack. My brother suggested that I aim at the center of it and let the old horse pistol go. I instantly obeyed his suggestion, pointing as best as I could in the dim light at the center of that form, and pulled. There was a flash and a roar, and the very atmosphere seemed to be alive with flying, chattering birds. The old tin lantern was

lighted. The horse pistol was hunted for, as it had recoiled with such force I had lost hold of it. The gun being found, we then approached as nearly as we could the place where I had shot at the stack. From this discharge we picked up eighteen pigeons and saw some hobbling away into thick brush, from which we could not recover them. After an hour of this kind of hunting our bag was full of pigeons, and our tallow candle in the lantern nearly consumed. We retraced our steps out of the swamp, and about 11 o'clock at night arrived home well satisfied with the night's hunt in the pigeon roost. We had had acres of enjoyment and had brought home bushels of pigeons.

This is only to give an idea of what pigeons were in northern Ohio in the days of my boyhood. This was in the years of '44 to '46. In '54, having grown to man's estate, I moved to Michigan and settled in Cass County, where I built a log house and began clearing up a farm. After having cleared three or four fields around my house, one morning one of my girls came running in from out of doors and said: "Pa, come out and see the pigeons." I went to the door and saw scooting across my fields, as it seemed skimming the surface of the earth, flock after flock of the birds, one coming close upon the heels of another. I hastened into the house and grasped my double barreled shotgun, powder flask and shot pouch; my little girl, then a miss of twelve summers, following me. I took a stand on a slight rise in the middle of a five-acre field and commenced shooting, you might say, at wads of pigeons, so closely huddled were they as they went by. Letting the birds get opposite me and firing across the flock, I was enabled to kill from three to fifteen pigeons at a shot. And my girl was perfectly wild picking up the dead birds and catching the winged ones and bringing them to me. You never saw two mortals more busy than we were for a half hour. At this time my wife called for breakfast, as we were near the house, and I found my stock of ammunition nearly exhausted. We went into the house for our breakfast and when we came out the birds were flying as thickly as ever. She says, let us count the pigeons and see how many we have. We found we had killed and picked up in this short time twenty-three dozen. My wife said I had better take them to Three Rivers, which was our nearest town, and sell them. And as my ammunition was about exhausted, I hitched up my team, took twenty dozen of the birds and drove ten miles to the station, sold my birds for sixty-five cents a dozen and returned home well satisfied with my day's work, and having on hand a good supply of ammunition for the next morning's flight.

Now I wish to pass along, the lapse of time being about sixteen years. During this time I had removed from Cass County to Van Buren County, where I had located in the beautiful village of Hartford. In the year 1869 or '70, the pigeoners, a class of men who lived in Hartford, made a business of netting pigeons, and they are living here yet, and not one of them feels any pride in the part he took in the destruction of these beautiful birds. In March, 1869, word was received that a large flight of pigeons were coming north through the State of Indiana. These men, who had followed the pigeons for years, said, "As we have snow on the ground they will be sure to nest near here, and as we have had a big crop of beechnuts and acorns last fall they will be sure to stop to get the benefit of this mast." A queer thing about the pigeon was that he always built his nest on the borders of the snow, that is, where the ground underneath was covered with snow.

Sure enough, as predicted, in two days after receiving notice of the flight of the birds from Indiana, myriads of pigeons were passing north along the east shore of Lake Michigan, and soon scattering flocks were seen going south toward the bare ground. In a few days word was received that pigeons had gone to nesting in what was then called Deerfield Township, a vast body of hardwood and hemlock timber. Then it was that the pigeon killers, with their nets, stoolbirds and flyers commenced making preparations for the slaughter of the beautiful birds when they commenced laying their eggs. This takes place only three or four days after they commence nesting, as a pigeon's nest is the simplest nest ever seen in a tree built by a bird. It consists of a few little twigs laid crosswise without moss or lining of any kind, and the lay of eggs is but one. As soon as one egg is laid, they commence sitting, and the male pigeon is quite a gentleman in his way, taking his turn and sitting one-half of the time.

In about twelve or fourteen days—some claim twenty—the young pigeon is hatched. As soon as hatched the male and female birds commence feeding on what is known as marsh feed, that is, on low, springy ground. And from this feed is supplied to both the male and female bird what is known as pigeon's milk, forming inside of the crop a sort of curd, on which the young pigeon is fed by both father and mother, who supply alike this food. The young bird is gorged with this food, and in a few days becomes as heavy as the parent bird. Another singular thing about the wild pigeon is that as the snow melts and the ground is left bare where the nesting is, the old birds never eat the nuts in the nesting, but leave them for the benefit of the young ones, and so when he comes off the nest he always finds an abundance of food at his very door, as it were. As soon as the young birds are able to leave the nest and commence feeding on the ground in the nesting, the old birds immediately forsake them, move again on to the borders of the snow, and start another nesting. In five or ten days the young birds will follow in the direction of the old birds.

When the young birds first come off the nest and commence feeding on the ground, they are fat as balls of butter, but in ten days from this time, when they start on their northern flight to follow their mother bird, they are poor as snakes, and almost unfit to eat, while, when they first leave the nest, they are the most palatable morsel man ever tasted. However, in about forty days from the time they began nesting to the time they took their northern flight, there was shipped from Hartford and vicinity, three carloads a day of these beautiful meteors of the sky. Each car contained 150 barrels with 35 dozen in a barrel, making the daily shipment 24,750 dozen.

Young men, who are now hunting for something to shoot and wondering what has become of our game, as you realize these figures, and hear men inquire: "What has become of the pigeons?" point to western Michigan and say: "In three years' time there were caught and shipped to New York and other Eastern cities 990,000 dozen in one year, and in the two succeeding years from Shelby it was estimated by the same men who caught the pigeons at Hartford, there were one-third more shipped from there than from Hartford; and from Petoskey, Emmet County, two years later, it is now claimed by C. H. Engle, a resident of this town, who was a participant in this ungodly slaughter, that there was shipped five carloads a day for thirty days at an average of 8,250 dozen to the carload. Now, when anyone asks you what has become of the wild pigeons, refer them to C. H. Engle, Stephen Stowe, Chas. Sherburne and Hiram Corwin, and a man by the name of Miles from Wisconsin, Mr. Miles having caught 500 dozen in a single day. And I say, when you are asked what has become of the wild pigeons, point them to Hartford, to Shelby, to Petoskey; figure up the shipping bills, and that will show them what has become of this the grandest game bird that ever cleft the air of any continent.

My young friends, I want to humbly ask your forgiveness for having taken a small part in the destruction of this the most exciting of sport. And there is not one of us but is ashamed of the slaughter brought about by our efforts and of robbing you of enjoyment. If we had been restrained by laws of humanity, you, too, could have enjoyed this sport for years to come. This, in our estimation, explains what has become of the passenger pigeon.

SULLIVAN COOK.

HARTFORD, Mich.

Our Wood Inhabiters in Winter.—III.

The Woodpeckers and Nuthatches.

As we pass through the stretch of young growth and penetrate still further into the forest, we find that the birds have become more scarce, the notes of the chickadees alone breaking the stillness of these grand old woods. Bird life in winter seems to abound most in the outskirts of the forest, perhaps because the slanting rays of the sun temper the chilliness of the air in such places or they are sheltered from the breezes which often are severely cold, or possibly a supply of food is more easily gleaned there than in the heavier growth.

Amid the larger trees, however, we may almost always expect to find an occasional downy woodpecker and with it, chiefly for company's sake, and traveling with it, but not in what might be called a close comradeship, now and then will be seen that industrious little bird, the white-bellied nuthatch.

Up and down the trunk and along the larger limbs they keep up their incessant search for the larvæ and eggs of insects, the woodpecker occasionally uttering its shrill little note as its bill plays a rolling rat-a-tat-tat upon a dead limb, and the nuthatch replying to it with its peculiar cha-cha-cha-châ, as it climbs about the tree, tapping the bark now and then in imitation of the woodpecker.

Brave, hardy little feathered pigmics are they to linger among our snow-clad woods in such inclement weather as they have to bear, when by following the example set by their summer neighbors they could, in a very few hours, reach a more genial clime and a more congenial environment.

The white-bellied nuthatch is a common species in New England, residing there the entire year, and in the Middle States as far south as the lower mountainous districts of Pennsylvania, it is more or less abundant; in fact, it seems to be pretty generally distributed throughout the eastern United States and the British Provinces.

It is a bird of very great activity, seemingly reluctant to lose a moment of its time during the day. Around the tree it winds its way, sometimes hanging suspended beneath a horizontal limb where, perhaps, a grub is hidden among the bark and lichens. It seems almost always to prefer the solitude of the forests to the vicinity of human habitations, and if, by chance, it is occasionally seen in an orchard, it is only by accident that it has found its way there, and this even in the most rigorous winters.

Like the chickadee, the nuthatch seems devoted to its mate the whole year through, and when isolated individuals are seen, they are either unmated or they have by some accident lost their chosen partners.

All who have paid attention to the habits of our birds have probably noticed that the chickadee almost always travel by pairs, although there may be a dozen members in their scattered little flock. The nuthatch imitates them in this particular very closely.

Its name, like that of its European congeners, is derived from its habit of storing acorns and other nuts in crevices in trees and between the bark and the woody layer, and sometimes these are so securely wedged in, a constant and prolonged hammering by the bird is required to break the shell and obtain the meat within, which, although the bird is chiefly insectivorous in its habits, proves, together with various dried fruits and seeds, not unwelcome additions to its menu. The nest of this species, which is composed of soft grasses, hairs, fine rootlets and a few feathers, is arranged compactly in the bottom of a hole which has been excavated by the birds in a dead stump of a tree, the hole being carried down to a depth of eight or nine inches. The eggs are of a beautiful roseate white color, and are covered more or less thickly with fine spots and dashes of reddish and light brown. In the Canadian forests, where it is fairly abundant, it seems to fraternize with the red-bellied nuthatch in the summer, just as it does with the titmice and creepers in our latitude in winter; the call notes of both these species are among the sounds first heard by the traveler or sportsman in the early morning. I have sometimes heard the notes in the middle of the night as I lay in my tent or was, perchance, traveling across a forest lake, and frequently they seemed to be high up in the air, as if the birds were moving from one point to another. The sounds of the night in a northern forest are often made melodious by the love songs of various birds, the white-throated sparrow, hermit thrush and various warblers often ascending into the air and pouring out an entrancing serenade to their prospective or already acquired partners.

As for the little downy woodpecker, the smallest of all our Picidæ, I doubt if the nuthatch, even, displays a greater diligence throughout the hours of the day in which it performs its labor. We see it as it mounts upon the insect-infected limb of a tree and patiently hammers and probes the bark and wood, sometimes for a half hour at a stretch, before the destructive hordes are dislodged and destroyed. As Alexander Wilson, the ornithologist, truly says: "When the bird is thus engaged you may walk up pretty close to the tree, and even stand immediately below it, within five or six feet of the bird, without in the least embarrassing it. The strokes of his bill are distinctly heard several yards off, and I have known him to be at work for two hours together on the same tree. Buffon calls this 'incessant toil and slavery;' their attitude 'a painful posture,' and their life 'a dull and insipid existence,' expressions improper because untrue, and absurd because contradictory. The posture is that for which the whole organization is particularly adapted; and though to a wren or a humming bird the labor would be both toil and slavery, yet to him it is, I am convinced, as pleasant and as amusing as the sports of the chase to the hunter or the sucking of flowers to the hummingbird."

The Butcher Bird.

Both the downy woodpecker and the nuthatch, as well as the chickadee and the junco or blue snow bird, often fall victims to the rapacity of the butcher bird or great northern shrike, which we are likely to meet at any moment in our winter day's ramble.

Perched on a telegraph pole or the limb of a tree, we see the gray and black and white plumaged marauder waiting patiently for the appearance of some of the smaller birds; and when they do approach within a safe striking distance he launches himself down upon them, after the manner of the small sparrow hawk, and rarely does he miss his aim.

Baynes, in an interesting sketch of the habits of this shrike, states that he is said to be very fond of English sparrows, and these birds are certainly much disconcerted whenever he puts in an appearance. "In flying he may be recognized by a characteristic habit. He does not fly straight to the point on which he intends to alight, but in a horizontal line considerably below it. At the last moment, however, he makes a sudden upward turn and reaches his point of destination."

While the butcher bird is not abundant anywhere, it is much more plentiful than it is generally supposed to be. It is a resident species in the Canadian fauna, and a winter visitor in New England and the Middle States.

It is quite probable that it breeds in the higher mountain ranges of Pennsylvania—increase of altitude having the same influence on bird life as increase of latitude—in fact, Dr. Coues quotes Mr. Trumbull's statement that "many of these birds nestle on the mountain ridges of the Alleghanies," and Gentry mentions it as arriving in Philadelphia during the latter part of October and remaining there until the last of March. If he is not in error in this statement, the bird must have descended from its mountain home rather than have come from the north, for the reason that it does not appear in middle New England before the cold weather fairly sets in.

That the shrike imitates the notes of other birds as a means of decoying them within his reach seems to be the opinion of several writers on ornithology, but I am inclined to believe that if it possesses the power of mimicry it exercises it very sparingly. I have had fairly good opportunities for studying its habits both in the wild state and in captivity, and never have heard it give utterance to what might be termed a song. When disturbed in his watch for feathered victims, he utters a harsh, querulous shriek, and flies away, sometimes to a considerable distance before he alights again on a tree top or other point of observation.

Nuttall ascribes to it the gift of song; he states that he heard it as late as November 10 uttering a low, soft warble which resembled at first that of the song sparrow, and which was changed to the notes of the catbird or gray mockingbird.

The general character of the bird is not one to impress us with the idea that it is a songster, for its traits are those of a destroyer of lives simply for the purpose of killing, and its mission seems to be well set forth by its actions. Possibly in its nuptial days it gives utterance to some kind of melody, but while it is with us the exuberance which calls forth such song is entirely subdued. Gentry, in treating of this, says: "The season of cold being considerably advanced on its arrival, and everything bearing the impress of winter, and its retirement in spring being unusually early, it is obvious that its surroundings are of such a character as not to awaken joyous impressions. Besides, the males and females lead solitary lives during their stay, and depart as they come, alone; and there is wanting besides that ardor of feeling between the sexes which exhibits itself in the power of song."

With most species song is assumed about the mating period by the males, in order to attract the females on their arrival, or to captivate them by the power of its charms. Darwin, in speculating upon this subject, views it in this light. Although song is mainly designed upon the part of the male "to influence the female in the matter of choice, it is plain that it is often indulged in as a thing of enjoyment." Primitively, however, it is awakened by amatory influences.

That the butcher bird often visits the parks of cities in winter is a well established fact, a number of instances having been recorded of its preying upon the European sparrows which are so abundant in those localities.

"One winter," says Merriam, "it was no uncommon thing to see a shrike flying across the street in New Haven, Conn., with a sparrow in its talons. The poor sparrows, unused to danger of any sort, were utterly helpless, and at one time it seemed as if we were actually going to be rid of the little pests."

I have seen individuals of this species perched on the elms of Boston Common, where they had come undoubtedly in pursuit of the sparrows; in Central Park in New York they have also been observed, and in Fairmount Park, Philadelphia, they have been seen to capture the sparrows, which are exceedingly numerous there. In its raids upon the small birds the shrike singles out an in-

dividual and follows it to its death, just as a hawk selects a pigeon in a flock and pursues it with unswerving pertinacity, no matter how it turns and doubles and tries to lose itself among its comrades. The blue snow bird and chickadees, who are well acquainted with its bloodthirsty rapacity, sound the note of alarm at its coming, and dart into a thicket or some other cover in their efforts to escape from it; but the occasion is rare, indeed, when it is completely balked of capturing a victim.

The first living shrike that I ever saw puzzled me considerably; at first glance I thought, on aeccount of the color of its plumage, that it was a mockingbird that had either escaped from confinement or was very strangely out of its proper latitude; this was in December, near Boston, when there were very few small birds to be seen.

I watched the shrike and followed it as it moved from one tree to another, it being evidently unwilling to permit my near approach, but not seeming to fear me or to regard me with much distrust. Its mode of flight, which resembled very much that of one of the small hawks, together with its peculiarly colored head and hooked bill, enabled me to identify it very quickly, and in a few moments I had an opportunity of observing the manner in which it follows and kills its prey; a small flock of snow birds appearing on the scene and one of them being pounced upon and killed in a most expeditious way. Fortunately I had a gun with me, and I knocked the shrike over as it was on the point of tearing its prey and devouring it.

On several occasions I have seen a shrike capture small birds and in every instance the victim was seized by the sharp-pointed, hooked and toothed beak of the marauder, and not in its talons, as described by Merriam, although these are very sharp and cruel. On one occasion I saw a shrike dart into a flock of tree sparrows and kill three of them before they could escape; and it seems characteristic of this bird to secure more than enough food for its present wants. Its habit of suspending small birds, mice, and insects on thorns and small, sharp-pointed twigs is well known. This is done, I am inclined to think, not because, as some writers assert, that it will not eat its food when freshly killed, but rather to have this food stored for future need. We see many other birds with this same habit of providing for coming wants; particularly the blue jay, nuthatches and some of the woodpeckers. In captivity the butcher bird is surly and unapproachable. It resents every attempt that is made to become friendly with it, and shows a thoroughly fierce and implacable spirit to the end. I know of hardly any other bird or animal that is so completely untamable. Even the most savage hawks and carnivorous animals at times unbend and show less of their savage nature to those who constantly attend them.

I have had rather exceptional opportunities for observing them as caged specimens and have found nothing in their nature that is interesting or attractive.

A number of years ago I wing-tipped a fine male bird, and after removing the wounded member I placed it in a large wire cage and hung it to a hook in the upper casing of a window, the top of which was opened slightly to provide the bird with an abundance of fresh cold air which seemed necessary to its existence. There I allowed it to remain, feeding it occasionally with bits of meat, small birds and mice. I affixed to the bars of the cage a number of wire hooks arranged somewhat similarly to the barbs on a wire fence. Singularly enough the shrike absolutely refused to touch one of the dead birds, and only when hunger absolutely compelled it would it eat any of the mice. I hardly believed that it was starving itself out of sheer ugliness, and continued to feed it with as great a variety of food as I could procure. I hung one or two of the mice and birds on the sharp barbs in imitation of its methods in a state of nature, but they were untouched. At length the idea occurred to me that perhaps the shrike preferred to eat only prey of its own killing, and acting on this thought I stretched some fine wire netting around the bottom of the cage bars to the height of four or five inches and then turned several mice that I had trapped into the cage.

The moment they began to run about the shrike seemed to awake from its surly mood and become restless and excitable; but he refused to touch one of the living mice while I was watching it. Finally I turned away from the cage and buried myself in the most distant part of the room, at which, however, hung a large mirror, in which I could watch the bird as perfectly as if I was near it. For a few minutes he remained motionless, evidently expecting I would return to him, but as I did not stir, the bird, now all excitement, dropped upon one of the mice, burying his talons in its back as he caught the animal.

The mouse uttered a faint squeak and struggled weakly but in vain, for the shrike, seizing it in his powerful mandibles, with a sharp bite or two quickly killed it. As soon as the little rodent ceased to struggle the bird mounted to his perch, where, holding the mouse with one foot against the wooden bar that served as a roost, he commenced to tear it with his sharp beak.

At this point his attention was diverted to another of the mice that was running about the floor of the cage, when, hanging his first victim upon one of the wire hooks that I had prepared, he dropped upon the second mouse and killed it just as he had killed the other. Again he ascended to his perch and prepared to feast upon his quarry, when his attention was again attracted to the movements of the third and last mouse.

For a moment he held his victim in his beak and then, forcing it into an angle formed by the crossing of two wires, just as a jay forces an acorn into a crack of a tree or in the crotch of two limbs, he then dropped upon the remaining mouse and despatched it without any loss of time.

And now happened the curious part of this incident; the third mouse was almost wholly eaten at one meal, the remainder of the body being hung on one of the wire barbs, where it remained until the cravings of the bird's hunger later in the day led him to finish it; but the other two mice were permitted to hang untouched for two days; in fact, they were not eaten at all, for as an experiment I put two live mice into the cage on the second day, both of which he killed and ate.

I inferred from this occurrence that the shrike hangs or impales its prey on thorns, etc., in a state of nature, not so much for the purpose of saving them for future food, or until they have become somewhat "high," as has been surmised by some writers, but simply as a method of putting them in safe keeping, as it were, while other victims are being disposed of, and the carnival of killing is ended, and this seems to account for the fact that most of the birds or small animals that it destroys and hangs up remain untouched until they fall to the ground or are eaten by wandering crows or jays.

For a week or more I had kept the shrike a solitary prisoner, when by accident I caught another one that had followed a junco into a carriage house in attempting to capture it. On seeing the birds enter the house, I rushed to the door and closed it, and after a short chase I caught the marauder with the snow bird firmly clutched in his talons. The fierce bird gave me a sharp bite or two, uttering a harsh, savage scream the while, before I succeeded in getting it into the cage in which the other shrike was confined. Of course the entrance of the newcomer was the signal for a spell of wild fluttering on the part of both birds, each of whom evidently regarded the other as an enemy.

At last both quieted down and occupied the long perch, but each kept at the end of it as far from the other as possible. I doubt if two birds of equally bad dispositions were ever confined in one cage before. They were not only entirely unsociable, but they were positively hateful to each other. If either moved the other bristled up its feathers, opened its beak in a fiercely threatening manner, and prepared to attack its companion at a moment's notice. They absolutely refused to be reconciled to each other, and to the end continued the attitude of vindictive belligerency.

One morning I found my first captive dead, his scattered feathers and badly cut head and neck showing unmistakable signs that a fierce battle had been fought, and a day or two subsequently the second bird, which had persistently refused to eat, dropped from his perch, evidently from the weakness of starvation, and though I made every possible effort to induce him to swallow some morsels of meat, which efforts he savagely, but weakly, resented, he crawled into a corner of the cage and, with his feathers ruffled and his beak opened threateningly at me, he died.

EDWARD A. SAMUELS.

Connecticut Valley Migrants.

From the Springfield Republican.

FROM the migratory birds' point of observation, which is supposed to be usually at an altitude of from one to three miles, the Connecticut River, running in a general southerly direction from its source to its mouth, together with the parallel range of mountains on the east and west portions of the valley, must serve as conspicuous marks to guide these travelers in their spring and autumn journey.

From remote times, the migration of birds has been considered a great mystery, but recent investigations have thrown considerable light upon the subject. Within the last few years, it has been ascertained that by focusing a powerful telescope upon the moon during clear nights, when the so-called bird rushes are at their height, an observer may see many migrants pass across the face of the moon, and even recognize the species to which some of them belong. We know that many kinds prefer the Connecticut River route, from the fact that they are often found stopping in this valley during the time of their migration, while elsewhere in central and southern New England they are comparatively rarely seen at this time. Probably many of some species fly up and down the valley and, like express trains, do not stop at way stations, so we rarely see any of them here. Some years numerous individuals of certain kinds of birds may rest and pay us a short visit, and at the next time of migration most of them will go over in one long flight and hardly any alight in the valley. The bay-breasted warbler, about once in eight or ten years, during the month of May, will appear in abundance, and except during such seasons is not commonly met with here. The white-winged scoter, a species of sea duck, is said to pass up this valley on its way north the last of spring, but it hardly ever stops, and then only during severe storms or dense fogs, when the view of all landmarks is cut off from its vision. One year, in the month of May, during a quiet night, when the valley was filled with fog, I heard a large flock of ducks pass over Springfield, and so near that I could hear the whistle of their wings and the guttural note they uttered. Probably they were of the sea duck family. Another year, in the same month, when the meteorological conditions were similar, I heard constantly one evening for fifteen or twenty minutes the call note of sandpipers as they passed overhead, and for that time there must have been a continuous flock going north over Springfield, and so incessantly were their voices to be heard that a blind bird would have had no difficulty in keeping company with the flock. It is seldom that any species of sandpiper stops here in any great numbers, except the spotted and solitary, and this immense flock did not belong to either of these kinds.

Some of the birds that usually spend the summer and raise their young further south, penetrate some distance up the Connecticut valley to breed, while elsewhere in New England they are only rarely found. Among these are the mockingbird, yellow-breasted chat, and several kinds of warblers, including the hooded and worm-eating.

The experience that a wild bird goes through during migration, together with its constant effort to obtain food and to avoid its enemies, must tend to increase its intelligence. Take, for instance, the wild mallard, ever alert and quick to escape from danger, and with the sagacity to fly to food and fair weather when necessary, and compare it with its descendant, the common tame puddle duck, that has for generations depended upon man for food and shelter, so stupid that it will sit close to the ground and let a trolley car run over it rather than move.

But few people realize how far south some of our summer residents go in winter, and how short a distance do others. The bluebird that nests in the orchard of an Agawam farmer may pass the colder months in southern Connecticut, within sight of Mt. Tom, while the bobolink that breeds in his meadow extends its migration to the equator and beyond. The former can fly to us in a few hours at the first breath of spring, while the latter is on its way a long time. To migrate down the Connecticut valley on a fair night cannot be a very difficult task for an old bird that has followed this route for a number of years, neither would it be for a man in the night, under favorable conditions, to steer a perfected air ship down the lower Connecticut valley, with simply the portions of the sky that reflect the electric lights of the cities and towns, to serve as illuminated guides. Starting a mile high, over Northampton, the light of Holyoke would be an easy mark to steer by, and guided by the lights of Springfield, Windsor Locks, Hartford, Middletown and other places, an experienced air navigator would not be easily lost at night in going to Long Island Sound.

While, under favorable circumstances, the flight of a bird a few hundred miles may not seem a very marvelous performance, the mechanical force required to go through the great annual migration of some species must be very great. Take the bobolink, for instance. It does seem wonderful that its little heart, an organ about the size of a pea, will pump the blood that nourishes the muscles that propel this little body down and over the entire length of the United States, passing along the Central American coast and then over Venezuela and Colombia, across the equator and the headwaters of the Amazon, to its winter quarters in southern Brazil, and will furnish the power that will bring it back again in the spring, and with a so well timed journey that you may hear its first song of the season on a West Springfield meadow within forty-eight hours of the 8th of May in each year.

The power of vision in birds is far more keen and clear than in human beings. Some kinds are said to be able to distinguish a small object twenty times as far as can man. A hawk has been seen to descend from a great height in a perpendicular line and seize a little insignificant mouse which he had singled out for his quarry. Birds have the power to instantly adjust their eyes for bright or obscure light, and to quickly focus them upon either near or far objects. With their telescopic eyes, what changes in the landscape of this valley must have appeared to the night-flying migrants in their spring and autumn journey during the last 300 years.

The Indian name for the Connecticut River was sometimes interpreted to mean the river of pines. The valley must then have been almost an unbroken forest. The few clearings made by the handful of Indians that dwelt along the larger streams was but an insignificant portion of the whole. Dark and gloomy was the view that then met the eyes of the night-flying migrants as they looked down from their point of observation in the upper air; but following the appearance of the Puritans here, in the less than three centuries a great change occurred in the face of the country, first by the clearing away of the original forest, by the apeparance of cultivated fields lined off by the stone walls and Virginia fences and by the building of villages and towns; and during the last sixty years new and strange objects have constantly appeared to the vision of the night-traveling birds.

The engines of the steam railroads, with smoke issuing from them, and occasional flashes of light toward the sky, seeming to the migrants like lightning from the earth, the lamp and gas-lighted towns, dim in comparison with those of our day, and later the modern cities with their blaze of lights, the suburban trolley cars, looking from a mile above like moving stars, all these changes of the aspect of the country have come by degrees, and many things are as they have always been since migration up and down this region began. The mountains and side valleys are still here, serving as landmarks to the passing birds, just as they did ages ago.

ROBERT O. MORRIS.

SPRINGFIELD, Mass.

Some More Early Signs.

MIDDLETOWN, N. Y., March 8.—*Editor Forest and Stream:* The "Farmers' Almanac" says spring is here, and so does FOREST AND STREAM, and it must be so.

Sunday, March 1, I awoke to find the first clear Sunday we had had in about nine weeks, and also to find that the month was being ushered in in due and ancient form—she was roaring.

I started out for a walk to look for "signs of spring," and shortly was greeted by the voice of the bluebird singing in the spruce trees. I stopped to listen and this is what he said: "Curious, curious, curious, it's cold and chilly."

Out of another tree robin redbreast was advising brother bluebird to "Cheer up, cheer up, 'twill soon be warmer."

Monday evening, the second, about seven o'clock, a flock of wild geese passed over the city going northward; the honk, honk of the leader was sounded frequently, and the chattering of the flock could be distinctly heard. They were flying low, no doubt attracted or bewildered by the electric lights. Several flocks of black ducks have passed over during the week on their way north.

The crows have been moving north in a continuous procession for ten days from about five o'clock in the morning until evening.

March seventh the crow-blackbirds arrived and are resting among the spruce trees on the lawns within the city limits. This is about the only time they come to town, save occasionally in some dago's pocket.

By the way, the dago may be a very useful "cuss" in building railroads, waterworks and sewers, but he is at the same time. and all the time, a destructive "cuss." He hunts in season and out, Sundays included; it's his best day; he kills everything that runs or flies, and when "pulled up" he no understands. The dago should be suppressed.

With the advent of spring I notice the usual crop of amendments to the fish and game laws. It seems to be the legislator's only remedy for spring fever. I would like to say something on the subject myself, but "what's the use." I've bored the Assemblyman and Game Protector Kidd, of Newburgh, with suggestions until they cross the street when they see me coming. I may cut loose some time, but not now.

JOHN WILKIN.

Editor Forest and Stream:

Noted the first appearance of robins and bluebirds this morning, March 6. This is the earliest date of their

coming in this locality within my recollection. From some of my old notebooks I glean the following dates of former early arrivals:

Bluebird—1884, March 16; 1885, March 19; 1886, March 21; 1888, March 20.

Robin—1884, March 10; 1885, March 22; 1886, March 17; 1888, March 10. THEODORE M. SCHLICK.

DANSVILLE, N. Y., March 6.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

N. Y. Spring Duck Shooting Bill.

THE hearing held last Thursday in the Senate Chamber at Albany before the joint Fish and Game Committees of the Senate and the Assembly, on Senator Brown's bill to prohibit spring duck shooting in New York, brought together a considerable number of persons interested.

The joint committee was made up as follows: In the Senate: Messrs. E. R. Brown, Armstrong, Allds, Lefevre, W. L. Brown, Townsend and Keenan. In the House: Messrs. Allston, of Herkimer; Reeve, of Suffolk; Doughty, of Queens-Nassau; Moran, of Seneca; C. W. Smith, of Fulton-Hamilton; McNair, of Wyoming; Coutant, of Ulster; Simpson, of Sullivan; Knapp, of Clinton; Wolf of Kings; Duer, of Queens; Shanahan, of Kings; Mortimer, of Oneida.

A large delegation of Long Islanders, chiefly from Suffolk county, was on hand, and their forces were marshaled by Senator Bailey, who is, of course, opposed to the bill. Among these were Capt. Wm. H. Kreamer, of Bellport, L. I.; Capt. Downs, Mr. J. Wood, of Sayville, who appeared as counsel for the supervisors; Mr. W. H. Post, Mr. Hart, and Mr. F. Lawrence, of Mastic.

The meeting was called to order by Senator Brown at 2:30 P. M., and the proceedings opened by an address from Senator Bailey, who then called as witnesses Capt. Kreamer and Capt. Downs. Both these gentlemen testified that this year birds in the Great South Bay appeared to be more numerous than ever. They said that their autumn shooting was usually confined to the month of November, since the bay usually closed early in December, after which there was no shooting until it opened again in March. The point was made that few or no brant were killed except on their way north in the spring, and that the number of brant—and indeed of ducks—killed was very inconsiderable in comparison with the number of birds found. Questions put by Mr. Reeve, of Suffolk, brought out from these gentlemen the opinion that the birds found in the Great South Bay did not proceed north to New York State, or indeed across the country, but followed the coast and bred in the far north, somewhat vaguely described as Labrador.

Mr. Grinnell, of New York, was asked to open for the side advocating the bill. He went over many of the familiar arguments in favor of the abolition of spring shooting, called attention to the fact that in Jefferson county New York already had within its boundaries an object lesson which proved the case for the advocates of the bill, for—spring shooting having been abolished there for three years—wildfowl were more numerous than ever before, black ducks having bred by thousands, mallards and teal in some numbers, broadbills and redheads a few, and perhaps one brood of geese.

Mr. Chas. H. Mowry, representing the New York Fish and Game and Forest League, followed. He spoke of the general feeling in the State against spring shooting, enumerated the States and Provinces which have done away with it, and pointed out that in all these cases the results of such abolition have been very satisfactory. His address was listened to with attention.

Mr. Wm. Dutcher, speaking for the Bird Protective Committee of the American Ornithologists' Union, explained the work of that committee, stating that it had begun by endeavoring to protect non-game birds, but had now extended its work to game birds. He said that for thirty years he had been making a special study of the birds of Long Island, and that his knowledge of these birds and their habits was equal to that of any bay man or gunner of Long Island. He pointed out that the abolition of spring shooting would result in a greatly increased supply of birds on Long Island, and that, as sportsmen from a distance desired to have just about so much shooting every season, men who now visit Long Island both in the spring and fall will, if Senator Brown's bill became a law, merely concentrate their visits, going to Long Island twice as often in the autumn as they do now in spring and fall, so that the gunners there will lose nothing.

Mr. Joseph Wood, of Sayville, as counsel for the supervisors of Suffolk county, made a somewhat extended address covering many of the points already gone over on his side. He insisted especially on the great number of birds in Long Island Sound, and in the discussion which followed between himself and the chairman, Senator Brown suggested that the Great South Bay was a natural gathering place—a sort of game refuge—the last along the seacoast north of the Chesapeake Bay, and that the birds were always found there in great numbers.

Mr. W. H. Tallett, of Watertown, the man to whom more than to anyone else Jefferson county owes the abolition of spring duck shooting, gave a historical review of that matter, and later, in answer to questions, told of the enormous improvement of the autumn shooting there, of the great number of birds which had bred, of the general satisfaction of the gunners with the existing law, but of their rebellion against the injustice of having no spring shooting within their borders while other counties of the State could kill birds in the spring.

Mr. C. H. Wilson, of Glens Falls, vice-president of the North American Fish and Game Protective Association, appeared in behalf of that Association and made a ringing speech. He pointed out that of all the United States and Canadian Provinces east of Michigan which border on the Great Lakes, only New York and Pennsylvania still permit spring duck shooting. He quoted at length from the reports and proceedings of the North American Game Protective Association, and his address was very impressive.

Mr. Dutcher, in response to questions by the chairman, gave additional testimony as to wildfowl and other birds on Long Island. He exhibited a diagram of the States which forbid spring duck shooting, and explained the great numbers of ducks on Long Island on the ground that Long Island was reaping the benefit of the abolition of spring shooting in Canada and northern New England. The diagram is given on page 212.

Mr. W. A. Post spoke interestingly and effectively on the side of Suffolk county. He contradicted a statement made by an earlier speaker that ducks were mated in the early spring or late winter and gave it as his belief that they did not mate until April. The matter of course is one of opinion only, since positive evidence is lacking on the point. Other speakers were Mr. Hart and Mr. Lawrence, the latter of whom felt very strongly on the subject, and really seemed to be too full for the utterance of his sentiments.

The hearing was adjourned by the chairman at 4:30.

Game Preserves.

Editor Forest and Stream:

I MUST congratulate Mr. Charles Day on his excellent article under the head of "Game Parks and Other Things." At the same time it strikes me that Didymus must be simply having a little fun at the expense of some of your able correspondents.

The American millionaire has been a blessing to his country. With his superb pluck and untiring energy he has sunk his all into the building of thousands of miles of railroads and opened up millions of acres to civilization. He has put farms, villages and cities in the wilderness, and has made it possible for the poorest of us to visit hunting grounds which we would never be able to see had it not been for him. Our millionaires endow colleges, making it possible even for those who revile them to gain a superior education to their own. Then there are libraries, hospitals and other noble works of charity provided, in many instances exclusively by our American millionaires. And when they acquire land worthless for anything but game preserves and perpetuate the propagation of wild animals which would otherwise become extinct, they are performing another public service.

The millionaire who buys up a whole section of country and turns it into a game preserve is a public benefactor. As the game increases it is bound to escape in more or less numbers, and keep the surrounding country permanently stocked. This accounts for the appearance of deer in many sections lately where they have been extinct for years. From this cause and game protection deer are rapidly increasing in Connecticut.

Long may the millionaire flourish to pay good prices to those who need the money for land worthless for other purposes than game preserves. And long may the surplus of their game and fish of their stocked streams overflow into the surrounding country to be gathered in by my children and your children, should they never be millionaires themselves. WILLIAM H. AVIS.

HIGHWOOD, Conn., March 6, 1903.

Editor Forest and Stream:

The right of individuals to exclude the public from lands and waters to which they have acquired a "sacred title" is worthy of serious attention, and the limits of that right, if there are any, defined so that those interested in the subject may know just what ought to be done—and do it!

On Feb. 21, in your paper, Mr. Chas. Day talks about "American liberty and the sacred rights of titles," holding that one American liberty is the right to buy wild lands and exclude therefrom all whom the purchaser desires. Doubtless, in common, man-made law, it is proper for a man to fence in mountains and lakes for which so much cash per acre has been paid. Yet it cannot be forgotten that when "game preserves" in France had reached a certain stage of exclusiveness, the "threat of murder," long muttered, was put into execution. The "good laws" governing such cases, became a universal law of compensation. The holders of "sacred rights of title" were killed—the French Revolution resulted from an effort to preach the doctrine of "divine rights" of exclusiveness. There is not likely to be any revolution in the United States of that sort over game parks, because the matter will be rightly settled by the exercise of American sense.

Mr. Day, so far as I can make out, says this notion is and always has been selfish. He is evidently a little weak in spots on history, but it is true, nevertheless, that the pursuit of money has developed men who have lost sight of what money is for. Our "sires and grandsires" came to America to "better their condition"; they despised the "lordly landed aristocracy," and only the weaklings and degenerates ever mimicked this "aristocracy." They came here for the right to do their own work, in their own way, for their own good, with the privilege of rest when their work was done temporarily, or permanently. The nation was founded by workers, and its most serious difficulty was when its millionaire class "gave employment to thousands of men" without compensation.

The subject of private game parks is not a question of work, but one of rest. Have the few who own game preserves the right, according to the American idea, to hold for their own pleasure the lands of resting to the exclusion of all other workers? That is, does a five-foot-eight millionaire really need 50,000 acres of land, while a six-foot-two employe needs more?

It is granted freely that millionaires are a product of America, the more the better. But to talk about unlimited resources in relation to our areas of rest, is, these days, blind folly.

Mr. Day calls the matter of the North Hempstead Lake a mere matter of business. Didymus speaks of it in that light, "a good investment." Let us so consider it. The children of North Hempstead now have the pleasure of playing in the vicinity of that water, under the trees in its neighborhood. Men and women, in quieter fashion, play there, too. As a result: so many good, healthy children, able to do so many goods days' work by and by worth so much to the nation; so many men, commuters, mostly, I presume, refreshed, invigorated, recreated, able and willing to do so much better work, so much more of it on the following day at so much per for the advancement of the nation. Just suppose, to take the most conspicuous example, just suppose Roosevelt had been shut into roads and towns all during his boyhood, with no country to hunt over, "the sacred rights of title" acquired by millionaires having been exercised to keep him from free, healthy roaming with rifle from Maine to the Bad Lands. There is a man developed by unrestricted, unfenced American wilderness, one not to be reared in any 15-strand inclosure devisable. I can't see how he permitted himself to hunt in the Corbin game park.

That little lake at North Hempstead is a good investment. It brings countless dollars to that town, more than the millionaire would. Mr. Day, after a little figuring, can see that. What Didymus sees, is that, instead of being a dallying place for a mere man of wealth, it is a resting place for scores of people, each quite as, if not more, important to the community, being a doer, than a "wealthy man of leisure." No one will object to Mr. Vanderbilt's using the lake in common with his neighbors. It would give great pleasure even in other communities to have him and others of his class if they would recognize the "we Americans" expression, rather than that of "we millionaires."

So it is getting something for nothing when one fishes, hunts or boats on land or water to which the sportsman does not have a sacred paper title. If a man hunted, or fished, or sported all the time it would be so. Living on game or fish is doing that. The market hunter lives on the property of the community. But not so the worker, who has done something—built bridges, or transported wheat or raised cattle, or manufactured shoes or clocks. The nation owes him a rest in addition to the money he has received for adding to the comfort of the people. It owes him just as many varieties of resting as it is possible for the nation to devise and make or purchase—good roads to ride on, beautiful trees to sit under, unpainted mountains to climb, diamond-pure streams to fish in or boat upon, the liveliest trout possible, the wariest deer in the biggest forests, lands and waters free to all, barring none, with every liberty commensurate with the rights of the others. Hence, the law forbidding more than two deer, or one moose, or 25 birds to a gun, is right and just. It is American. But a title which permits an individual to take to himself one minute more of pleasure than is rightfully his, or permits him to deprive others of pleasures of which he may be incapable of appreciating, is not "sacred" nor "divine." It cannot last, though it may be long before the fallacy is uprooted.

"The rugged, barren wilderness, utterly worthless and unprotected," if Chas. Day means that, and believes it, Didymus can pity him. Day is an object of commiseration. He recognizes only one value in this world, that the meanest, least worthy which it is possible to imagine, the cash value. The hunger of a dog for meat places a truer value than the price of a hog in dollars. How much vaster, worthier, more accurate, then, is the value which Didymus places on anything than any which Mr. Day can conceive? "Rugged wilderness," because it is not possible to plant it to turnips and cabbages at so much per head or bushel. "Barren wilderness," because tinted mosses and gnarled trees compose it, not spruce pulp or pine timber.

Day would applaud a Cold Spring Harbor, Long Island, millionaire as most generous. A public highway ran along the beach between his land and the harbor. He said to the townspeople, give me this sand strip and I'll let you in to look at my magnificent grounds—grounds highly cultivated, the lands smooth as tables, grass even and soft as velvet, trees trimmed to the shape of inverted carrots and wash basins, hothouse flowers speaking no lesson of fading beauty, an owner glowing with the pride of possession and complaisant generosity—a town full of people deprived of its view of the wide salt waters and the right to walk along a clean, natural, sacred beach. The offer was refused, as in the North Hempstead case.

As to the threats of murder in the case of a park owner, I don't know of a single case in the Adirondacks where the club or individual did not try to seize more than the "sacred title" called for. Public streams have been closed, public highways fenced, even State reservoirs claimed as private ponds, utterly without regard to the rights of the public. I don't believe there is a single geographical community in the whole Adirondack region where the public rights have not been violated by the class of men whom Mr. Day has rushed forward to defend. If there is a private game park in the mountains in which the law has not been ignored in some instance or other, I would be glad to know of it.

I desire to state here that the unfenced game "preserves" have proved a distinct advantage to the Adirondack region. They have been, literally, lands of refuge for the hunted deer. The overflow of deer from these preserves has kept up the supply of game in wonderful fashion. It is too bad that the clubs and individuals have not set an example to the woods people for common justice, let alone manly generosity.

A matter which the financial intellect will not comprehend has been brought forcibly to the minds of central New Yorkers by the typhoid epidemic at Ithaca, due to the bad water served to the town. The water did not cost so much money as good water would have done, yet there are many people who think that good money put into good water is worth while, and a profitable investment. The time is almost in sight when the Adirondacks will have to be used to furnish water to the growing cities. New York itself may look that way some day. The spruce and hemlock trees shading the moist hills are worth money, so are the hardwoods. But there are indications that by the time the woods are gone, people will recognize

the need of keeping such a reservoir intact, regardless of the price of timber and pulp. In every town around the mountains one hears that "there must be some way of getting the hard wood to market." With the trees all gone, it will be seen, even by the man who measures things by dollars, that the forest standing on the mountains is in a better market than any conceivable as sawed timber, simply as health and cleanliness to the lodwland cities.

And then, some day, the time will arrive when even the descendants of Chas. Day will see that the spiritual health of mankind and easy access to the preservations and cares thereof is as much more needful than the bodily health, as the Didymus idea of values is superior to that of Chas. Day.

And by all means, keep religion out of this matter. Business is business, and game parks have nothing to do with doing unto others. Raymond S. Spears.

Newfoundland and the Caribou.

Several articles have recently appeared in our magazines on the Newfoundland caribou (*Rangifer terranovæ*), and the necessary information connected with its capture by the sportsman. These have been written by men who, having been there, are in a position to know; and their unanimous opinion seems to be that at present the island is one vast game preserve. In fact, from the reports and undoubted success of all who have been there during the open season, the idea has become pretty well established these last three or four years that in Newfoundland a man with limited time would be surer of securing his legal number of good heads than in any other section of eastern North America, Labrador being the only possible exception. At present, however, the facilities for hunting and traveling are so poorly developed in the latter region, it is so difficult of access, so vast in extent that often considerable time might be spent in locating a "good game country," and the sportsman with limited time will hardly make the venture.

The present conditions in Newfoundland, and the adequacy and efficiency of its game preservation, should then become objects of peculiar interest to American sportsmen; and especially to those of us who, handicapped by scanty time or means, never have and never will reach the great game regions of the West and Northwest, but who are compelled to take what is offered by the East or nothing.

Reports from Newfoundland have not been exaggerated. I have recently returned from the island and found it, as it has been named, "A vast deer park." In a short time we saw about eighty deer, as they are called by the guides, and a friend who was there for three weeks at the same time counted over sixty stags alone, to say nothing of does and fawns. A year ago last fall, Dr. Henry Van Dyke, who was on the island early in September, informs me that the caribou were plentiful; while Professor Thompson and Mr. Scudder, of Princeton, N. J., had no difficulty in securing first rate heads. This was not during the period of the great migration, but in late August and early September, when the deer were for the most part living singly or in small companies around the ponds and heavily wooded river bottoms, and before they had collected in herds on the open barrens. It is no unusual occurrence, later in September and during October, when their southward migration is intercepted, to see forty or fifty deer in the course of a single day.

At present the caribou are abundant: There is no doubt about it. How long this will continue is, however, a different question, for if present conditions mean anything their numbers cannot fail to become very rapidly diminished.

The very nature and habits of the animals will tend to hasten and facilitate their destruction, for of all our big game they are the easiest to locate, to stalk, and to successfully bring to bag even by the most inexperienced tyro. As compared with the Virginia or red deer in its ability to elude the sportsman, the caribou, at least that of Newfoundland, is helplessness itself, and if the two species coexisting in a given area were subjected to an equal amount of hunting, the former would in all probability thrive long after the latter had been exterminated.

This is, of course, merely an hypothetical instance, as the red deer is not found on the island, but it illustrates without exaggeration the relative acuteness of the two animals in regard to their respective powers of self-preservation.

Early in the fall, Mr. P. T. McGrath gave to the readers of Outing some startling facts in his description of the annual midwinter slaughter by the Newfoundland fishermen; and from what I learned and saw while in that country, I am convinced that unless the Government takes immediate and stringent measures against this merciless pursuit during the winter months the caribou are doomed to a swift and speedy destruction. The mere fact that the animals are still very abundant is no argument whatever in favor of laxity or delay. Less than fifty years ago the American bison, now lost to us forever, roamed our western prairies in countless millions. As a sufficient thickness of snow and ice is necessary to enable the dog teams and sledges to make the journey from the coast, this slaughter does not usually take place until well into the winter, long after the stags have dropped their antlers, and when the does are far advanced in pregnancy. Both sexes are killed indiscriminately, although the stags at that time are usually poor and thin, not a sufficient period having elapsed since the rutting season to warrant the best of meat. It frequently happens that the fishermen in their efforts to get only the best and fattest, kill more animals than are really necessary or than it is possible for them to "pack out;" the choicest carcasses are accordingly taken, the others are left to rot where they fall. The great majority of these fishermen are hunters neither by nature nor instinct. They know no more about the interior of the island nor the habits of the deer than a New York cab driver does about game in the Adirondacks. They are usually piloted over the barrens by some guide who knows the country and the most favorable localities for taking the deer en masse. In this way the whole fishing community of the coast obtains its entire winter supply of meat, worth from three to five cents per pound.

The Newfoundland Government seems to be sincere in its endeavor to protect the game, and some of its more recent legislation, notably the laws prohibiting shooting in the water and from the railroad track, is wisely conceived and has long been needed. In their general policy, however, the laws have the common failing with those of so many of our big-game regions, and do not operate as an efficient protective agency, because they do not strike at the root of the evil. Last year great latitude was allowed the alien sportsman, but at present an exorbitant license fee keeps him from the island; while in either case no adequate remedy has been offered to curb this winter slaughter by the native Newfoundlanders.

In 1901 the $40 non-resident license allowing the holder to take three deer seemed to many a wise and reasonable arrangement. The mischief was done, however, by allowing another license of $80 for seven caribou, which, of course, was much too large a number for any one man to be allowed. Last year a party of four camping together legally killed twenty-five deer. This season, however, the Government, in its effort to protect the game from alien sportsmen, has gone to the other extreme, and seems to have done its utmost in prohibiting him from the island by imposing a non-resident license fee of $100. Of course the Game and Fish Commission must have a sufficient revenue to enforce its laws, but why should the caribou hunter be called upon to pay it all? Hundreds of salmon and trout and ouananiche are taken every season from the rivers of the west coast, yet no license, not even $5 per rod, is required.

The results of this most short-sighted policy can, of course, be easily anticipated, and will prove more disastrous to the half-destitute Newfoundland guides than to the sportsmen, who will undoubtedly seek elsewhere for their big game. The great forests of Quebec, Ontario and New Brunswick are well stocked, easy of access, and the latter Province offers deer, moose and caribou for a $25 license.

In September last I found quite a number of men at Alexander Bay who had previously obtained employment for $2 a day as guides, very glad to earn $1 a day as "packers," or human beasts of burden. "De hunters is'ent a'commin to de country dis year on account of de high license," was a frequent answer to my inquiries concerning the prospects for a successful autumn season. The people living along the line of the railroad were for the most part in a wretched condition, glad to get work at almost any price.

American sportsmen should be encouraged by all means; and intelligent legislation, adequate protective laws on the part of Newfoundland will give to her people an ever-increasing means of livelihood, and to the sportsman a wonderful country for the future.

Nine-tenths of the people who go to Newfoundland for caribou are successful; the other tenth usually miss. For the large majority, however, real success only exists as far as the procuring of heads is concerned. Of course, if the ambition and desire of the sportsman is merely to get antlers the easiest possible way, the present method of taking the game will strongly appeal to him—a method involving much killing but very little hunting. There are many men who go regularly every fall to Grand Lake or the vicinity of Howley, and return laden with trophies, well pleased with the trip and satisfied that they are real big-game hunters. The genuine sportsman, however, the one who puts the hunting before the killing, who enjoys the stalking more than the shooting, whose success is appreciated only after a day or week of hard tramping over a rough country, will not care for the hunting in Newfoundland as it is carried on at present. In fact, a number of gentlemen, old Adirondack and Maine sportsmen, who recently returned from the island reporting good luck, reluctantly confessed to me that after all it was rather unsatisfactory. "Too easy, too much like shooting cows in a pasture." It would seem absurd to condemn a region merely because game is too plentiful and very easily obtained, but too great an abundance (how rarely it occurs) may, under certain conditions, become just as demoralizing as too great a scarcity. And I do not criticise Newfoundland as a game country, but merely the usual method of hunting as compared with another possible one.

If the reader will glance at a map of the island he will see on the western coast a long narrow peninsula stretching one hundred and fifty miles northward to the southern extremity of Labrador. In this great tract thousands of deer spend the summer months, and when the fall migration commences all are compelled to cross the railroad track at the narrow base of this peninsula on their southward journey. During September and October a continuous stream of the animals traverses the comparatively small area around Sandy Pond and Howley; and it is to such places as these that the great majority of sportsmen repair. A camp is put up along the line of the railroad or on the shore of some suitable pond nearby where the deer are known to cross in numbers. The hunters merely sit still on the summit of a neighboring knoll or hill and wait for the caribou to come along, scanning the barrens with field glasses and picking out the heads they wish. In the height of the season forty or fifty deer are often in sight at once. The stags are thoroughly examined, the size of the antlers noted, and the one possessing the finest is accordingly singled out and shot. No particular skill is required to get within one hundred or even fifty yards of his game, provided the hunter strictly observes that most important rule, "Keep well to leeward." Should the animal be approaching along a "lead" or runway, the sportsman's fire is reserved until he is absolutely sure of hitting the mark. Even concealment is often unnecessary, for a caribou cannot, or at any rate does not, discriminate between a bush and a man at one hundred yards, provided the latter remains motionless. But even should he be detected, a good standing shot may always be obtained while the animal stares stupidly at the intruder. During the rutting season many an old stag has met his death by means of a very simple deception employed by the guide. The latter merely walks in a stooping posture, through bushes high enough to conceal his legs, with a pair of antlers held aloft. A dry branch of the proper shape is easier to procure and will answer the purpose just as well. A frequent plan is for the sportsman to remain in camp all day, but with a guide posted as lookout on a neighboring hill, who gives the signal when game is observed. One gentleman usually posts his guide in a tree top, and when a stag is sighted an electric button is pressed; the animal is according stalked and killed with little more excitement and often far less trouble than is required to stick a pig in a barnyard.

This method of having the game walk up almost within sight of the tent, of course, does neither appeal to nor satisfy the man who wants real hunting, and by whom the killing is only appreciated when it comes at the end rather than at the beginning of the hunt. To such a man the writer can heartily recommend a trip similar to one taken by him in company with Frank and Nevin Sayre, of South Bethlehem, Pa., early last September.

Hitherto the prevalent notion among sportsmen has been that all the caribou migrate southward every fall, returning the following spring; and this is true to a certain extent. The deer do move toward the south in the autumn, but by no means do they all go northward at the close of the winter. The whole central and southern interior, comprising one-half the area of the island, contains the year around vast numbers of non-migratory animals, or those that have lost the instinct to migrate. This great wilderness, almost unknown to sportsmen, is the permanent home of thousands of caribou that, never having seen the railroad, have consequently escaped the murderous fusillade at Howley and Grand Lake. And it is in the interior that the very finest heads are to be obtained at the present time. The reason for this is obvious. The herds which are accustomed to regularly cross the railroad track have been examined with the glasses and sorted over so often during the last ten years that a great many of the real old stags have long since fallen. Small deer are still very abundant, but there is no doubt about it that the grand old patriarchs, the forty and fifty pointers, are not nearly as frequent as some years ago. One has merely to examine the quality of the heads shipped from Port au Basques to see that a thirty-five pointer is considerably above the average, while many of the antlers are but little larger than those of a good sized red deer.

It is then to this vast central region, in size twice that of the State of New Jersey, four times the area of the Adirondacks, a country of unknown streams and lakes, of broad open barrens and wooded hills, that the sportsman is recommended to direct his attention.

Last fall the writer was one of a party of three who, with Bob Stroud, of Alexander Bay, as head guide (and a better man is not to be found), made a successful trip into the interior. Our destination was one of the many unfrequented lakes up at the headwaters of the Terra Nova River, to be reached partly by water, partly by "packing in" over the barrens. The season was a dry one, and consequently the river, lower than usual, finally became too shallow to float our canoes, which were of the heavy or Newfoundland type. In addition to this the frequent and serious mistake was made of taking in too large an outfit. Plenty of "truck" is all right where water is not at a premium, but in a country where portages are frequent and difficult, and where the last fifteen or twenty miles must be "packed in" over a rough country, all superfluous provisions and clothing are worse than useless. Aside from these little inconveniences, however, the trip was made at a time and under conditions suitable for a very successful one. We started early in September, just as the stags had commenced to rub off the velvet, but before the setting in of the chill fall nights and biting winds which later make the heaviest blankets and sleeping bags a necessity. A great majority of the small deer had already commenced to collect on the high lands, while the stags, tardy as usual, were still living around ponds and in the heavily wooded river bottoms. The signs around all the water courses indicated that early in September at least that particular region was unmistakably a "stag country." Taking advantage of this fact we devoted our time and attention more particularly to the small marshes and stream beds of the lowlands, and consequently saw a goodly proportion of large deer. Along one sluggish stream, "Butts Brook" by name, six stags, all well antlered, were jumped at intervals during one afternoon. One of these, a grand old fellow with a snow-white neck, stopped just a moment too long in his mad flight to gaze at us. He had probably never seen a man before, and stood wondering and astonished, truly the noblest creature of the northern wilderness. A few days later we were plodding wearily along a runway which led over endless wet boggy barrens to Island Pond. It had been a demoralizing morning, hot and humid. Nothing had been seen since early sunrise but the vindictive black fly; and caribou fat is a wretched substitute for "fly dope." We had just about arrived at that disheartened wish-I-hadn't-come stage, and felt very much like quietly subsiding into the bog. But in hunting, as in fishing, it is at some such inopportune and apparently impossible moment that something always happens; and something did happen; and the effect was magical on the spirits of the party. On rounding a clump of bushes, Stroud, who was in the lead, suddenly stopped short and grasped my arm, pointing at the same time to something sticking up over the grass some distance ahead. At first sight it looked like a couple of dry branches, but an instant later two magnificent stags leaped to their feet, wheeled about and stood staring and astonished. At the first report one, struck in the head, collapsed right in his tracks; the other, after waiting a moment as if for his dead companion to rise, broke into that peculiar swinging lope and struck out over the barren toward the uplands. Five minutes later, on the crest of a high ridge, we could see his dark form and great branching antlers silhouetted against the sky as he rushed with headlong strides far away into the wilderness.

Yes, Newfoundland possesses many hidden secrets for those of us who will seek them out. Secrets for the angler as well as the sportsman. Her lakes, which have never yet wet a line, can be counted by the hundred; and in her inland waters the ouananiche attains a size and perfection rarely exceeded on the continent. But to those of us who would find real success, let it be sought in the vast central interior, the home of the caribou; where the beaver still builds his dam in peace and the wild geese breed free and unmolested as an hundred years ago.

William Arthur Babson.

The Cold Storage of Game.*

BY T. S. PALMER, ASSISTANT BIOLOGICAL SURVEY, DEPARTMENT OF AGRICULTURE.

REFRIGERATION AND GAME PROTECTION.—The application of refrigeration to storage has revolutionized the trade in certain perishable goods, but in few directions has it produced more marked results than in the trade in game. By making it possible to keep game for an indefinite period, it has enabled the dealer to obtain birds in large quantities in favorable localities and seasons, and after transporting them thousands of miles to place them on the market under such conditions that they will command prices sufficient to net a handsome profit.

In the fruit industry and in the meat industry the opening of distant markets with the opportunity for securing higher prices has increased the demand for certain goods which in turn has encouraged an increased production. More orchards have been planted, and more cattle, sheep and hogs have been raised for market in order that the supply may keep pace with the demand.

In the case of game the results have been very different. Cold storage has built up if, indeed, it has not created the trade in game, but this trade has been developed almost entirely on one side, for it has created an enormous demand without developing a corresponding supply. In other words, it has stimulated increased destruction rather than increased production, and in fact in some regions has reduced the supply almost to the point of extinction. The reason is obvious. Game consists almost entirely of animals and birds existing in a state of nature. It is not supplied to any extent by species under domestication, and no method is as yet known by which it can be propagated in sufficient quantities to meet the demands of the markets of the larger cities. This demand can produce but one result. As soon as it exceeds the normal rate of reproduction it must, unless restricted, invariably reduce the available stock at a rapid rate. Restrictions have been applied in the form of game laws, and these restrictions are constantly growing more stringent and more complicated. Without entering into a discussion of this phase of the subject it will suffice merely to touch upon a few of the salient points, such as the legal status of game, the trend of legislation and litigation, and the methods thus far suggested or put in practice to meet existing conditions.

Legal Status of Game.—Fish and game, but more especially game, differ in a marked degree from other goods offered for storage in that they belong to the State, and the individual can never acquire more than a qualified property right in them. An individual may purchase flour, fruit, furniture, or goods of almost any kind, and may sell them, store them, or use them at any time or in any way he sees fit, for he has acquired an absolute property right in them. But in the case of game he never acquires this right; whether he comes into possession of his game by capture or purchase he merely holds it by sufferance subject to conditions which may be fixed by law. The State may prescribe the time, manner and purposes of capturing game, may prohibit shipment in or out of the State, may prohibit sale, and may even prohibit possession during certain seasons or throughout the year. If the individual transgresses any of these regulations he forfeits his right to the game, and the State may reclaim and take possession of it. For the protection of this peculiar property special officers, known as game wardens, are appointed, and they are sometimes given extraordinary powers to enable them to perform their duties. In some States they may enter and search without warrant, places where they suppose game to be held contrary to law, may seize game, may break open and examine suspected packages without incurring liabilities for damage to goods, and objection on the part of the owner only renders the latter liable to additional penalties.

Statutes of this kind may seem harsh and unreasonable, and they would undoubtedly cause much hardship if they should all be suddenly and strictly enforced. But to the common objection that such laws are unconstitutional, the reply may be made that the police powers of the State under which they are enacted are very broad, and that in the majority of cases carried to the higher courts the constitutionality of game laws has been upheld. The principle of the State ownership of game has been maintained by the highest courts of several of the States and has been upheld by the Supreme Court of the United States (Geer vs. Com., 161 U. S., 549). It is incorporated in many game laws. In the statutes of Minnesota, for example, it appears in the following terms: "No person shall at any time or in any manner acquire any property in or subject to his dominion or control, any of the birds, animals, or fish within this State of the kinds herein mentioned. * * * and whenever any person kills, catches, takes, ships, or has in his possession or under control any of the birds, animals, or fish mentioned in this act at a time or in a manner prohibited by this act, such person shall thereby forfeit and lose all his right to the possession of such bird, animal, or fish, and the State shall be entitled to the sole possession thereof." Gen. Laws, 1897, chap. 221, sec. 9). The full meaning of this principle is not generally appreciated. In discussing this point the Supreme Court of Illinois, in a decision rendered Oct. 25, 1902, said: "Section 11 of the Act (of April 24, 1899) declares the ownership and title to the animals designated to be protected to be in the State of Illinois. Prior to the enactment the State had general ownership of animals *feræ naturæ*—not, however, as a proprietor, but in its sovereign capacity as the representative of the people * * * Section 11 places the title and ownership in the State as a proprietor, and the individual may no longer acquire ownership by capturing, killing, or reclaiming such animals except so far as permitted so to do by other provisions of this Act." (Meul vs. People, 64 N. E. Rep., 1,108).

I have dwelt upon this point because it lies at the foundation of game protection and game storage. It vitally affects the question of possession during close season, and of contracts for storing game from one open season to another. It is unnecessary to enter into a full discussion of the question, but a few examples will illustrate its practical application. Reference has been made to the fact that mere possession is often made an offense under State laws, and this may be so even when the owner has lawfully come into possession of his game and done nothing more than hold it beyond the expiration of the open season. Game lawfully acquired in December may become contraband in January, and if a State sees fit to enforce its right and confiscate birds held during the close season, in the words of the Supreme Court of Indiana, which has passed upon this very point, the owner "has lost nothing that belonged to him, and there has been no taking of property without due process of law or without just compensation." (Smith vs. State, 58 N. E. Rep., 1,045). Even if possession during the close season is only prima facie evidence of unlawful capture, it has been held (by the Supreme Court of Kentucky) that a dealer who offers game for sale in the close season cannot escape punishment by showing that the game was taken in the open season. (Comm. vs. Chase Davidson Co., 58 S. W., 609.)

The fact that the game may have been imported from another State does not alter the question or prevent the operation of the local law. No principle in game protection has been more vigorously contested than this, and few have been more generally passed upon by the higher courts. It has been upheld in California, the District of Columbia, Illinois, Maryland, Massachusetts, Michigan, Missouri, New York, Ohio and Oregon. The majority of the decisions maintain the right of the State to control possession of game irrespective of its place or origin, and the Act of Congress of May 25, 1900, expressly provides that game brought into a State at once becomes subject to the local law, to the same extent and in the same manner as though produced in that State.

Important Storage Cases.—As early as 1873 the New York Society for the Protection of Game secured the conviction of Joseph H. Racey, a game dealer in New York City, who was fined $2,500 for the possession of 100 quail out of season. The case was carried to the Court of Appeals. The defendant alleged that the birds held in cold storage in the New York close season had been imported from the West, where they were lawfully killed; that they were, therefore, articles of interstate commerce, and that the New York law forbidding the possession of such imported game was unconstitutional. The court, however, passed over as immaterial the plea of the defendant that he had invented a process of keeping game from one lawful period to another, which was not provided for in the act, held the law constitutional and affirmed the judgment of the lower court, thus giving game protection one of its strongest and most valuable decisions. It declared that "The Legislature may pass many laws, the effect of which may be to impair or even to destroy the right of property. Private interest must yield to the public advantage. * * * The protection and preservation of game has been secured by law in all civilized countries. * * * The measures best adapted to this end are for the Legislature to determine, and courts cannot review its discretion." (Phelps vs. Racey, 60 N. Y., 10.)

In 1879 the Court of Appeals of Missouri upheld a similar prohibition in the Missouri law against possession of game in the close season without reference to when or where the game was killed. The case was based on quail and prairie chickens placed in refrigerator in St. Louis in December and kept until the following February. (State vs. Judy, 7 Mo. Appeals, 524.)

In 1884 the New York Society for the Preservation of Game again brought suit, this time against a commission merchant in New York for 10 barrels of quail in cold storage. Judgment was asked for $63,500, at the rate of $25 a bird, but the complaint was afterwards amended to include only one barrel, on which judgment was asked and obtained for $5,000. (FOREST AND STREAM, XXIII, p. 506, Jan. 22, 1885.)

In 1899 Minnesota successfully maintained its right to reclaim game which had been captured in a manner or at a time prohibited by statute. (Thomas vs. Northern Pacific Express Co., 73 Minn., 185.)

Finally it has been held that under a statute prohibiting possession a contract for storage of game during the close season is null and void. Such a decision was rendered by the Supreme Court of Missouri in 1898 in the case of Haggerty vs. St. Louis Ice Manufacturing & Storage Co. (143 Mo., 238), and relieved the Storage Company of the payment of $7,000 damages for the loss of certain game which had spoiled in storage.

In the light of these decisions the seizure of a large quantity of contraband game in the cold storage rooms of the Arctic Freezing Company, of New York City, in May, 1901, assumes unusual interest. This game comprised some 50,000 pieces, including 6,000 grouse, 5,000 quail, 7,000 English snipe, 9,000 golden plover, 1,000 ducks, 10,000 snow buntings (not properly game) and miscellaneous game. (FOREST AND STREAM, LVI., p. 441; LVII., pp. 201-203, 1901.) The full penalties under the Act, if it were literally applied, would amount to more than one million dollars. The Supreme Court, however, held that two of the sections of the law covering this game were void, thereby reducing the total penalties very considerably, but the amount to which the company is liable is still very large. This case is now on the docket of the Court of Appeals, and the decision will be awaited with much interest, in the expectation that it will throw some light on the question as to how far warehousemen are responsible for goods in packages which they accept without examination, merely on the statement of the owner.

It must not be supposed that all legislation has been favorable to game protection. Commission merchants and warehousemen, ever alert to their interests, have sought, and in some cases obtained, exemptions from game laws which they have considered too stringent. Mindful of the damage which might be done by unrestrained examination of goods in their care, they have opposed bills intended to give wardens the right of search and seizure without warrant. In Massachusetts they have secured the enactment of a proviso that any person, firm, or corporation dealing in game or engaged in the cold storage business, may have quail, pinnated grouse, shore birds, and ducks in possession in cold storage at any season if such birds were not taken or killed in the Commonwealth contrary to the provisions of the Act (Act of 1900, Chap. 379). In Missouri they have secured practically the same exemption in another form, namely, that the restriction on sale "shall not apply to game shipped into this State from any other State or Territory." (Laws of 1901, p. 131.) In New York, some years ago, they secured the repeal of the prohibition against possession of game out of season, but owing to the pressure of public sentiment the statute was re-enacted in 1895. Exceptions like these can be regarded only as temporary and unsatisfactory makeshifts.

It can hardly be expected that States will long permit any one class of persons to enjoy immunity from laws when such exemption tends to defeat an object which the State desires to secure. Moreover, the rapid increase in non-export laws and the part the Federal authorities are now required to take in enforcing the interstate commerce provisions relating to shipment of game, have greatly altered conditions which existed a few years ago. A dealer who obtains exemption from the laws of his own State and bids for shipments from other States in the face of non-export laws encourages his correspondents to violate their local laws, if he does not actually render himself liable to the penalties of the Federal law. Instead of seeking to preserve the game which makes a continuance of his trade possible, the dealer has too often considered only his personal interests and the opportunity for immediate gain. The warehouseman, too, perhaps unintentionally endorsed the methods of the game trade and aided dealers in their efforts to evade the law.

It does not appear that any serious effort has been made to solve the real problem of cold storage of game—to trace the game from the field to the table, investigate the methods by which it is captured, killed, packed, shipped, stored and sold, to ascertain the best temperature, the best form of package, the amount of ventilation, or the period of time during which game may be kept to advantage. Methods which would never be tolerated in handling poultry are accepted without question in the case of game. Some birds are netted, their necks are wrung, and they are packed for storage without being bled or properly cooled. Ducks are caught in nets set under water so arranged that the birds are entangled and drowned. They are then thrown into barrels and shipped to market without special care to packing. Many of those shipped in spring are unfit for food, and are often condemned when they reach the market stall. Is it strange, then, that under these conditions cold storage game is often claimed to be detrimental to health and that cases of ptomaine poisoning are sometimes charged against it?

Acceptance of current market methods may, however, prove a source of loss to the warehouseman if he does not take the precaution to protect himself by ascertaining the real contents of packages offered for storage as he may unwittingly have game in possession in violation of law. Several States now make it a serious offense to offer game for shipment in packages improperly marked, and the same should hold good in the case of goods offered for storage. Unscrupulous dealers resort to many devices of packing and marking to evade the game laws. Two of the most common devices are packing game in egg cases or butter boxes and tubs. The Department of Agriculture has recently received a copy of a circular widely distributed in the Northwest during the fall of 1902, in which a certain commission merchant gives the following directions for packing prairie chickens: "The best way to ship is to pack in egg cases. Line the cases with brown paper so that the feathers will not show through the cracks. See that the birds are thoroughly cooled before packing. You can put ten to twelve birds in each end of the case, put two or three very thick pasteboards on top of the birds, then put in a filler of three dozen eggs on each side. If not enough birds fill up the case with eggs. See that the case is well nailed on top, bottom and sides. Ship by express. Put some name other than your own on the card and write me when you ship."

Note.—Under the Act of May 25, 1900, the shipper is required to mark his name and address and a statement of the contents on the outside of every package of game shipped by interstate commerce. Compliance with these directions would, therefore, render him liable to the loss of his game as well as the heavy penalties for evasion of the law.

It happens that certain food products in storage are liable to damage from odors, and this is particularly true of both eggs and butter, which are usually stored by themselves and carefully separated from citrus fruits and from such vegetables as cabbages and onions. The temperatures at which butter and eggs are stored are also different from those maintained for meats, and are higher than those required for fish and game. If a quantity of prairie chickens were shipped under the above directions by a person who, through carelessness neglected the precaution of properly cooling the game or notifying the warehouseman of their true character, in consequence of which the birds were tainted on arrival at destination and in that condition were stored in rooms with a large quantity of eggs, it might be possible for such birds, perhaps remaining for several months at a higher temperature than is necessary for game, to seriously damage the stock of eggs and thereby render the storage company liable to damage for the loss thus incurred.

Bonding Game.—What has been done to improve existing conditions? In his annual message of 1902 Governor B. B. Odell, of New York, referring to the

*From Proceedings Twelfth Annual Meeting American Warehousemen's Association, 1903. Read before annual meeting at Washington, D. C., Dec. 5, 1902.

game found in the possession of the Arctic Freezing Co., said: "The seizure of a large amount of game in cold storage during the past summer and the possible conflict of our laws with those governing commerce between the States, brings up the question whether, while aiming to preserve our game, we should not also protect the innocent purchaser thereof. * * * It seems that if a system of bonding for such game as may remain in possession of a dealer at the close of the open season were provided for that we should do more for its protcetion than by any attempt to ferret out and destroy it under conditions that are at least questionable." (Message, Jan. 1, 1902, pp. 20-21.)

This recommendation resulted in the enactment of a special law at the last session of the Legislature of New York, under which dealers may have their game bonded by the Forest, Fish and Game Commission and be permitted to hold it during the close season. It is too soon as yet to determine precisely how this law will operate, but it is doubtful if such a law is sufficiently broad to fully cover the case. The State has no means of knowing whether all the game in the hands of dealers has been bonded, nor has it absolute control over goods stored in a number of warehouses with other goods.

It has been suggested by A. J. Lovejoy, game commissioner of Illinois (and it may be added that this suggestion seems to be the most practical of any yet advanced), that the State, as owner of the game, should assume responsibility for its care during the close season: in other words, should reclaim its property during the close season and actually store it.

If game always remains the property of the State and the individual can never acquire absolute right in it, and if the State sees fit to prohibit its possession during the greater part of the year and to entrust the care of this property to officers with extraordinary powers, it seems fitting that the State itself should assume the responsibility and care of its game during the season when possession is denied the individual. This does not mean that the State shall erect and maintain expensive storage plants, nor that all the game in a State must be stored in one or two specified places, thereby entailing much expense and inconvenience to dealers. It simply means that the State shall by contract or otherwise have under its control in convenient places certain storage rooms to which game may be removed, and where it will be not only safe but completely under the control of State authorities. In return for safe keeping of the game the State may require a small fee in addition to the regular storage charges, and thereby, without working any undue hardship on the individual, make the storage service self-supporting and even a source of revenue. This is merely an enlargement of the New York method. which seems not only feasible but practicable, and worthy of trial. The details remain to be worked out, but doubtless many of the objections which appear at first sight can be easily overcome, and will prove to be merely questions of method rather than principle.

In conclusion, it may be stated that while it is probably true that game storage is decreasing, and that in many cases, particularly where the sale of game is prohibited, it has already decreased to such a degree as to be an insignificant feature in the cold storage business, yet in other places it is still an important item and is likely to continue so for some time to come. It is very desirable, therefore, that steps be taken to place the matter on a more satisfactory basis, but it must be admitted that the problem is a difficult one, and probably will not be solved immediately.

It may be suggested that from the standpoint of game protection the main evils to be corrected are (a) handling game in falsely marked packages, and (b) the practice of allowing game to be withdrawn from storage during the close season for use or sale. Two methods of bringing about the desired result readily suggest themselves: One by voluntary action on the part of warehousemen, the other by securing further legislation.

It is the practice of some companies just before the expiration of the open season, to send out notices calling attention to certain provisions in the game laws, and announcing that game will not be received during the close season. The practice should be universal. Much more could be accomplished if warehousemen instead of merely refusing to accept game during the close season, would give notice to their patrons:

(1) That no game placed in storage would be delivered during the close season directly or indirectly.

(2) That no game would be received except in packages marked with the owner's name and a true statement of contents. If inspection showed that any packages were falsely marked the storage charges on such packages would be increased 10 per cent.

(3) (By insertion of clause in storage contract or otherwise) That all game would be received only at owner's risk and subject to all the restrictions of the State laws.

Much could also be accomplished in the way of legislation if, instead of seeking special exemptions from the game laws warehousemen would throw all their influence on the side of the State and seek to obtain (1) statutes similar to the shipping laws now in force, making it a misdemeanor punishable by heavy fine to offer or deliver falsely marked packages of game for storage; (2) statutes defining clearly the status and disposition of game held during the close season, and drawn in such a way as to be at once equitable to the warehouseman and the owner, and comformable to the policy of the State.

IN looking over one issue of an exchange we find that the editor hopes, is glad, is pained, is pleased, is delighted, has regret, and has heartfelt sorrow. No one could stand such a combination but the country editor, who generally has an elastic conscience and an India rubber stomach.—Centralia Journal.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

CHICAGO AND THE WEST.

The Rifle Scabbard.

CHICAGO, Ill., March 3.—Mr. George Florence, of St. Joseph, Mo., writes as below regarding rifle scabbards and how to carry them:

"I have got into a dispute here over the proper manner of making and carrying rifle scabbards, and would like to have you settle it. In the first place, is the scabbard worn on the right or left side? Is it worn under the rider's leg and under the saddle flap, or does it hang loosely at the side? Should the trigger or the hammer of the gun be upward when the gun is in the scabbard, and in making the scabbard should the seam be on the upper or lower edge?

"By answering these inquiries you will greatly oblige me, and will settle the dispute on the subject. In conclusion, will say I find the catalogues of the various manufacturers and sporting goods houses are about equally divided—some show the scabbards to hang on the left side and the others to hang on the right side, but it seems to me the left side, with the trigger up and seam down, is correct. I know you have been among the cowboys and cattle punchers who have used these goods, and will be very much interested in your reply."

In the old times, when I used to live in the cowboy country of the West, it was customary to wear the rifle scabbard on the left side, under the saddle flap. We commonly used in those days either the Winchester carbine or the short Winchester .44, of the 1873 model. Our scabbards in that part of the country, the southwestern range, were customarily worn with the seam upward. The rifle was thrust into the scabbard with the trigger guard up. This brought the hammer and the sights down. The weight of the rifle thus rested partly on the foresight. The Winchester rifles were nearly all made with strong metal sights, so that I presume the shooting of the rifle was rarely injured by this practice. In the case of a thin foresight, like the Lyman ivory bead on the .30-40 or .30-30 rifle, this practice of carrying the rifle with the top down does not always make for safety to the sights or accuracy in the shooting. Realizing this, the last time I was out in the Blackfoot country with Jack Monroe I used to carry my rifle with the sights upward in the scabbard. Jack Monroe reproved me for this In-Western method. Hence I should suppose that the custom generally in the West was to carry the rifle with the sights downward, the seam of the scabbard being customarily and for reasons of durability, carried upward. The sling straps of the scabbard wear better on the rounded leather than on the seam.

Shipment of Wildfowl for Texas.

Attention was recently called in these columns to the efforts of the sportsmen of Texas to get through a game law which should stop the shipment of all sorts of game from that State. It was predicted that there would be an attempt made to nullify this law by exempting a number of counties from its action. Precisely this same thing in sweeping form has come up, and seeing that their efforts to stop the sale of game were rendered of no avail by the efforts of those opposed to the prohibition of the sale of Texas game, the sportsmen in some of the larger cities of the State have rallied and are getting up a petition to the Legislature, which is already largely signed. This petition asks that the last two lines of the game laws of May 27, 1897, Articles 520 B and 520 G Penal Code, shall be struck out. They read: "Provided that nothing herein contained shall be construed to prohibit the sale or shipment of wild ducks or wild geese." This elision would cut out the clause which permits the shipment of wildfowl under the law of 1897, and would leave the old law a fairly good one in lieu of a new one which should embody these principles through more sweeping changes. It is much to be hoped that these sportsmen of Texas will succeed in their attempts to stop the outgo of Texas game. We used to think that when we could go nowhere else we could always go to Texas and get good shooting. Let not any northern shooter believe this to be the case to-day, for it is not. The game of Texas is going, and it will disappear if Texas herself does not wake up and adopt the proper measures in time.

The petition above offered points out the very interesting fact that this sale of Texas game operates to the disadvantage of citizens of the State. It states that, "During the past few years the slaughter and shipment of wild game have increased to such proportions that the absolute extinction of wildfowl seems near at hand. Many thousands of wild ducks, principally canvasbacks and redheads, are slaugtered annually as a business, and are exported to northern States. They are rarely offered for sale in Texas. We believe it unfair to all true sportsmen and contrary to public policy to permit the extermination of this species of game." These are wise words and true ones. Did you ever try to buy a canvasback duck to eat in San Antonio, in Corpus Christi, in Houston, in Galveston, in Austin, Dallas or Fort Worth?

Some Moose Stories.

CHICAGO, Ill., Feb. 27.—Mr. Frederic W. Jenkins, of Binghamton, N. Y., paid the FOREST AND STREAM office a very pleasant visit during the week, and I had much pleasure in talking over matters and things with him. Mr. Jenkins is a lawyer and a hard working man, but an enthusiast over big-game shooting. I have earlier mentioned one or two of his trips into Canada and the Rocky Mountains. Last fall he did not go out West but made a trip up into Nova Scotia, his object being moose, and he got all that he went for. Mr. Jenkins seemed quite satisfied with the results of his hunt, his party of three getting four moose and several caribou, and he killed a magnificent bull moose, the best he has ever yet had in any of his moose hunts. This moose he told me he killed with one shot from a .30-40 Winchester. He has now killed four moose and it has taken him just four shots with the .30-40 to do it. He simply pooh-poohs at anyone who says the .30-40 is not as good a moose gun as any man wants.

I do not recall the measurements of the head which Mr. Jenkins got, but think it was 60 inches. He says that the Nova Scotia moose antlers do not spread quite so wide as the New Brunswick heads, but turn up and back more. The blades of this head were tremendous and the whole antlers very massive and heavy. Mr. Jenkins says it is the best head he has ever yet killed. He has been to Nova Scotia two or three times before and speaks with great enthusiasm over the trout fishing, caribou shooting, etc., as well as of the men who guided him.

A Lucky Hunter.

With Mr. Jenkins on this hunt was his friend, Mr. Clarence Hotchkiss, of Binghamton. Mr. Hotchkiss is one of those lucky fellows who never do any hard work on a hunt and who always get what they want without the least trouble and much as a matter of fact. Mr. Hotchkiss has never been known to kill a head of game more than half a mile from camp. He never bothers himself in the least, takes it easy, and when finally the spirit moves him, calmly announces that he is going out to kill a moose, or whatever he is after, and then, quite as a matter of fact, does so.

On this particular hunt, Mr. Jenkins and his friend, Mr. Phelps, also of Binghomton, the latter a beginner in the big-game hunting, were having their usual run of hardships. At length Mr. Hotchkiss said: "Well, boys, I see it's about time for me to go out and get a moose." Whereupon he knocked the ashes out of his pipe, called to his guide, picked up his rifle and strolled down the woods road. He had gone but a little way when, feeling the perspiration beginning to start to some extent on his somewhat massive form, he suggested to the guide that it would be a good thing to stop and "boil the kettle." The guide was horrified, for they had, as luck chanced, but a few minutes before struck the trail of a tremendous bull, which was fresh, and the guide was hoping to get a shot within a few minutes. His horrified protest, however, produced no effect upon Mr. Hotchkiss, who calmly sat down on a log and began to kick together kindling for the fire. His guide dutifully obeyed, built the fire, boiled the kettle, and they had lunch then and there, Mr. Hotchkiss not in the least forgetting his peaceful pipe of good strong tobacco, which well nigh completed the poor guide's mental collapse. He had never seen a moose hunt conducted on the Clarence Hotchkiss line before.

"Well," said Mr. Hotchkiss, at length, rising and knocking the ashes out of his pipe again, "now we'll go kill him." So they took up their moose trail and followed on across the country for a little way. In less than ten minutes from the lunching place the guide stopped and pointed. Mr. Hotchkiss looked and could see the edge of a big horn. Finally he made out the moose, lying down and taking his ease. He fired one shot which, as usual, did its work. Then he walked up to the fallen quarry, kicked it with his toe, grunted and said: "I guess I'll go back to camp." This, by means of a convenient woods road, he did without any trouble. He set his gun down by the side of the door, walked in and lit another pipe.

"Did you get him?" asked one of his friends, derisively.

Mr. Hotchkiss opened his eyes in wonder. "Get him," said he. "Why, of *course* I got him." And presently the guide came in to bear ample confirmation.

The Other Sort.

This was not quite the end of the Hotchkiss moose, however. This was on Monday, and on the following Friday Mr. Jenkins and his guide were hunting in the country below camp when they struck what seemed to be a tremendous moose trail. They followed on and on for several hours, until finally they became exhausted. "It may be 24 hours old," said the guide, "maybe more; but I don't think it has gone out of the country." Thus encouraged, Mr. Jenkins pushed on, looking all the time for fresher horn sign. At last the long walk wearied both hunter and guide, so that they concluded to stop for a "boiling." Just as they were finishing up their noonday repast, Mr. Jenkins looked about and saw the ashes of a little fire. A sudden light came to him. "Billy," said he, "do you suppose it's a possible thing that we have been following the trail of that moose which Mr. Hotchkiss killed?" Billy's face fell about a foot. He got up, went a little way along the trail, came back and looked at the fire. "Mr. Jenkins," said he, "don't tell anybody here in this country about this. It would be all my reputation would be worth!" It was a fact, however, that they had been on the trail of the Hotchkiss moose. It must be pretty hard to work nearly a whole day and then come up on the closing scenes of a moose hunt made by a man who had never been more than a half mile from camp.

It may be seen that most of this moose hunting in Nova Scotia is done by still-hunting. Mr. Jenkins is no believer at all in the calling of moose. He says that there is nothing in it, and will not waste time in night calling. He says that he and his party have always gotten all the moose they wanted in still-hunting, and he considers this the greatest form of sport obtainable under any circumstances. The Nova Scotia guides, he says, are splendid hunters and perfect woodsmen. Caribou he spoke of as being fairly abundant, but I did not discover much enthusiasm on his part over the caribou game. Mr. Jenkins has often hunted caribou in Newfoundland, but he says that the killing of that animal in the big Newfoundland herds is not to be called genuine sport. He did not care so much for the Newfoundland guides he secured, as he said they were so ignorant as to scarcely know how to take the skin off an animal. They look on the caribou there more as a beef animal than anything else.

Mr. Jenkins killed his own big moose the next to the last day of his hunt, having held the party for two extra days over the time they had set for departure. He seems to be much like myself in his hunting, never gets anything until the last minute and after doing more work than anyone else would have to. His moose he and his guide Billy trailed for a long time. The guide caught sight of the bull standing on a little eminence among the trees about 120 yards distant. It was a peculiar shot, as the moose stood with his head entirely hid back of a little clump of trees. Mr. Jenkins says that he could see two big dark bands of hair between the three trees. He could not tell which way the moose was pointing, but reasoned that naturally his head would be up wind. Hence he picked the left band of hair and fired as close to the left on it as he dared. At the shot the big moose started out into the open, and stood with his head thrown up looking

directly at them. Presently he dropped down behind and then gradually sank forward, never running at all from the spot where he was struck. The shot was through the body, close to the shoulders. Mr. Jenkins says that he has never known a .30-40 bullet to go entirely through a moose. This does not coincide with my own limited experience, as the first shot which I fired into my moose passed entirely through the body, as nearly as we could determine.

Mr. Jenkins says that Nova Scotia in physical appearance is much like New Brunswick, much overgrown and of a monotonous regularity, there being few opportunities left for a look out over the country. He likes the Rocky Mountains, but gives his countrymen the worst of it in the guiding proposition, as he says these men of the northeastern country were as skillful and as cheerful hunters as he ever saw. I doubt not that he and his newly made hunter friend, Mr. Phelps, and his plegmatic associate, Mr. Hotchkiss, will be headed somewhere toward the west for the next big-game season, however, as Mr. Jenkins says he has now killed four moose and thinks he has had his share. He wants now to kill a grizzly bear, and if any gentleman has one staked out anywhere, he migh do well to communiteate as to terms, etc.

Duck Shooting in the Southwest.

The duck shooting on the Gulf coast in southwestern Texas seems to be languishing of late and the north-bound flight is now setting in, depriving the Coast shooters of something of their accustomed sport. I hear that Mr. W. W. Peabody, of New York, and Mr. Alex. Settle, of Cincinnati, who went down to Rockport last week, met rather good weather and rather poor shooting. They did not damage anything very much and put in most of the time loafing. Pretty soon we will hear of some of these Texas ducks up in this part of the country. The birds do not get much rest either in Texas or in the North. I wonder how Texas would feel about a law closing the shooting on wild fowl January 1? This would give the Texas shooters as long a fall season as we have up here, and would indeed cover the best of the winter shooting, the cream of it in Texas coming along in November and December.

Two Men and their Books.

New York, Feb. 26.—*Editor Forest and Stream:* I am one of the old time readers of Forest and Stream who is saddened by the losses from its old list of contributors which seem to follow one another so rapidly. At different times I have thought that some men could never be replaced; yet I am bound to acknowledge that to-day the paper seems to me better than it has ever been.

There is one thing that we can none of us be sufficiently grateful for, and that is that some of these old contributors, who were so highly valued by your readers, have left behind them in their books memorials which will give pleasure and instruction to generations who have never seen their writings in Forest and Stream.

One of the first of these writers is Mr. R. E. Robinson, whose charming pictures of New England life seem to me unequalled by anything that I have ever read. With the charm and the simplicity of a Burroughs or a Thoreau, Mr. Robinson combined a broader view; and seeing all that there is of beautiful and sweet and tender in nature, he sees also all that there is of beautiful and sweet and tender and strong in woman and in man. The world is better and happier because Mr. Robinson lived and wrote.

Fred Mather's writings always had for me a very great charm. He was one of the men who, having eyes, saw—something that a number of people can do, though the number is not large—but besides seeing, he could make others see, and his clear, concise and often humorous descriptions when once read were not forgotten. He was another very human man who saw the humanity all about him and could describe it. His "Men I Have Fished With," and its sequel, "My Angling Friends," are books that should be in the library not only of every angler, but of every sportsman and of every lover of his kind.

If we regret that these two men have left us, let us at least be thankful for what they have left behind them.

Sage.

Albany Legislation.

Albany, March 7.—Governor Odell has signed Assemblyman Reeve's bill, Int. No. 183, making the trout season on Long Island open on the last Saturday in March.

Fish and game bills that have been reported from committee made the following progress the past week:

Senator Armstrong's, Int. No. 124, relative to the sale of grouse and woodcock, third reading.

Senator Bailey's, Int. No. 344, powers of Queens, Nassau and Suffolk supervisors relative to game, third reading.

Senator E. R. Brown's, Int. No. 301, to stop spring shooting, third reading.

Senator Townsend's, Int. No. 138, for the protection of wild black bear, Assembly committee.

Assemblyman Denison's, Int. No. 371, close season for wild deer, Senate committee.

Assemblyman Reeve's, Int. No. 828, taking wildfowl, Peconic Bay, second reading.

Assemblyman Whitney's, Int. No. 376, for the protection of game, third reading.

Assemblyman Bedell's, Int. No. 428, close season for trout, Orange county, third reading.

Assemblyman Doughty's, Int. No. 613, relative to taking pheasants, Senate committee.

Assemblyman J. T. Smith's, Int. No. 418, relative to taking fish from Whaley's Pond, Dutchess county, Senate committee.

Assemblyman Bedell's, Int. No. 427, close season for certain game, Orange county, third reading.

Assemblyman Reynolds', Int. No. 550, close season for grouse, woodcock and quail, Rensselaer county, third reading.

The Cruelty of Trapping.

Editor Forest and Stream:

In a recent publication, Mr. Earnest Russell describes a barbarous manner of snaring moose in Nova Scotia by which the animals are partially suspended and are sometimes left so for several days by the shiftless class of men that set the snares, to be visited only at long intervals.

It is cause for some wonder that humanitarians, societies for the prevention of cruelty to animals, and sportsmen also, have not arrayed themselves strongly against such methods of snaring and trapping as cause protracted torture to the victims, with steel trapping uppermost in mind.

The steel trap closes with such force that it frequently crushes the leg bone of the captive, and usually lacerates the skin and flesh until the cold steel clamps only upon the naked bone. In this horrible state of torture the animal must await the convenience of the trapper, who may, by some happy chance, make his rounds the next forenoon, and kill the creature as an end to its sufferings; but too frequently he has made a journey to distant parts, leaving his traps set. In the course of two or three days, perhaps a week, he will return to terminate the suffering he has prolonged by his indifference.

Let the readers of Forest and Stream rise up en masse against the using of such a machine for torture upon our dumb neighbors of the woods. If the campaign is vigorous and widespread through the local press and the legislatures in every State, the end may be accomplished.

Sea and River Fishing.

Long Island Trout Season.

A law signed by Governor Odell on March 3 amends the Long Island trout season section to read:

Sec. 109. Trout shall not be taken or possessed from August 31 to the last Friday in March, both inclusive. Trout taken lawfully may be sold or possessed in the City of New York in the open season established by this section.

Notes on Fish and Fishing.—I.

With the month of June, good sport on most of our Eastern trout streams may be said to end. The hot days of early July usually send the fish to their summer retreats, and no matter how numerous they have been, few can now be found, except a school here and there at the mouths of cold brooks, or where springs pour their freshening waters into the main stream.

On the whole, the season of 1902 may be said to have been a fairly satisfactory one, in spite of heavy floods and ice jams during the winter. Trout were quite abundant in all the old nearby brooks and rivers, and took the fly well until late in May, when symptoms of hook shyness began to appear, with great discrimination in the color of the artificial fly. One pattern would be taken and the other left. On our last fishing excursion we found the fish quite hard to please, and great perseverance and many changes of fly were necessary before a fair basket could be made.

Anglers are too apt to pin their faith to two or three favorite flies, and to imagine that if the trout will not rise at these, that they will not take at all. In many of the New York and Pennsylvania waters this is a great mistake, particularly on those streams that produce a great variety of natural flies. Some one particular color is apt to be the favorite for a time, and I honestly believe that even when the trout are taking almost anything, larger fish and a better average will reward the man who takes the trouble of looking out for the natural fly, and, if possible, imitating it in color and size.

This question has been pretty well thrashed out, and men whose experience has been chiefly confined to wild waters in Maine and Canada or the regions of the great lakes, will be apt to scout such ideas, as well as many other good anglers of experience. However, the proof of the pudding is the eating of it and chewing the string. I have been fixed in my faith by many experiences, but I grant you that entomology is only necessary, or particularly successful, in some localities in others, it is a waste of time to study the natural fly, though to me it is always interesting. One thing is clear, if you grant that a fair copy of the living fly is the best that can be put up in a certain stream with which you are familiar, you at once have something to go by; you are no longer fishing at random, but have a definite end in view. At the risk of being tedious, I will give a few of the many experiences which have led me to study entomology, as far as my opportunities have permitted.

Many years ago I was fishing a fine large limestone stream ner Bellefont, Pa., in company with a native of that town, who was a most expert angler and who cast in a particularly graceful manner. The scene of our afternoon's sport was a rather shallow mill dam constructed only a few years before; this dam was full of brook trout of about a quarter of a pound each, and they were rising steadily all over the water. We cast and cast, and compared the flies in our respective books. Finally, in an old envelope in the pocket of his book, my friend found a small straw-colored fly closely approximating the fly at which the trout were rising. He put it on, and in half an hour or a little over caught 42 trout. He had only one fly of the kind, so I was forced to play audience; nothing that I could offer being tempting to the fish.

During the same week I had much the same experience with a very dark, almost black fly, which I think belonged to the crane fly genus. I was fishing with three flies on my leader, and the middle fly happened to be nearest the natural. It had a very thin body of silk, and fishing quite a short line over a deep channel under sheltering willows, I could see the trout rise and take this fly between the two others. After some hours the fly was literally chewed up, and I substituted another, which I thought very nearly the same. The body was a little lighter and was made of mohair instead of silk. It proved to be entirely useless, and I was forced to put on the mangled remains of the old fly, when I again began to kill fish.

Again, on a hot morning, after a five-mile tramp, we were refreshed by a charming cool breeze springing up from the southeast. My companion on this occasion was a veteran angler of large experience and a most agreeable man to fish with. The month was July, and as we reached the stream we noticed many of the little blue duns with long tails rising from the surface of the pools and floating easily up stream before the breeze. I had a dozen flies on No. 12 hooks, which, as far as body was concerned, were the right color, and my friend had two of the same which he had copied from mine the day before. I put up two flies of the same kind, and he one of them as a tail fly. We soon began to take fish, but my companion was so unfortunate as to lose his tail fly in a trout. For some reason he wished to keep his remaining fly as a sample, and being a little ahead of me put on a small coachman until I should come up. When I did so he borrowed a couple of the bluish-bodied flies. Meanwhile, however, the small trout had been taking his coachman freely, and being partial to the use of this fly, he did not care to change it, but persisted in its use. We kept quite close together as the stream was large, and again and again he said, "Was not that a pretty big fish you caught." Several times he saw the fish when landed and said, "Well, I have seen no fish like that to-day." We ate our lunch sitting on a log far up the stream.

Returning, he fished first, I giving him fifteen minutes' start. I caught up with him at a large pool just as he was wading out, it seemed useless to fish at once after him, but I waded in and made a cast, when at once two large fish rose at the flies. I hooked one, and after a good fight my friend netted him for me. "Well!" he said, "What fly are you using? I have seen no such fish to-day, but time is up; we must start for home." "Wait a minute," I said, "There is another fish here. I waded in again, and at the first cast hooked the trout, which, after a good struggle managed to free itself from the hook and escaped. On the way home we stopped at a cold brook to rest and turned out our fish to wash them. We found that my friend had 36 trout and I had 34, but that mine weighed double, owing to the larger size of the fish. This case was peculiarly clear, as we fished together nearly all the day, and my chum was in several respects the more skillful fisherman; his casting was fine, and he had a very neat and expeditous way of netting his fish after playing them up to him.

The weather has everything to do with the time at which natural flies appear, there may be a difference of from one to three weeks in different seasons. A few varieties do not appear annually in numbers. I have one fly in mind that was very abundant in August, 1890, but only a few specimens have been seen since then. I could find a few at almost any hour on a cool day, and a great many in the morning or after four o'clock P. M. The body was peculiar, a yellow with a tinge of olive or green. After several failures a lady gave me a quantity of scraps of crewel, and picking one of these to pieces, I spun it on light yellow silk. This gave the exact color, and adding pale dun wings and a ginger hackle, I had a good imitation of the natural fly, which proved very killing for about three weeks. It did not matter where this fly was placed on the leader, all the best fish were taken with it, and on several occasions I was successful when other anglers had poor sport. This fly has not been of much service, except for a short time in 1898.

There is a little orange-bodied dun, that hatches out on cold days in July, which is a great favorite with the trout. It seems to come up when a strong wind is blowing and clouds obscure the sun. A very small drk cowdung is well taken while this fly is on the water, the hook must not be larger than No. 12. A small blue dun is an excellent fly at times all through the season, but it is difficult to get hackles of the right color for legs. Hens can be found at long intervals which give the right color, but their hackles are very soft. If you cannot do better use the lightest brown or ginger hackle you can get. We have a beautiful large fly, which may resemble the English May fly, but it is a very light yellow. If you make the body of silk it is apt to be too dark when wet. I prefer

wool or crewel, though the former soaks up much water.

If you can get the old-fashioned crewel, made, I have been told, from the fine hair of some kind of goat, it will be found very useful. It is the same color, wet or dry, and has been dyed a fast color. Chenille, if made of silk, is good for making large flies and for Uncle Rube's favorite fly, the Ruben Wood. The muskrat, mink, weasel, field mouse, rabbit and many other animals afford an excellent fur. No one but a fly-maker can realize the difficulty in getting hackles fit for trout flies. Not one cock in twenty is worth examining. Many years ago this was not so much the case; more game fowls were bred and the birds found in a farmyard were smaller, rounder and more like game birds in appearance. The introduction of large coarse fowls has not only injured the fly tier, but has given us a poor bird for the table, coarse fleshed and stringy, with a prominent breast bone, very unlike the partridge-like form of the old-time chicken.

In this State (New York), we have now had an experience of about ten years with the European trout (*Salmo fario*), and I am inclined to believe that there is less prejudice against the fish than there was a few years ago. That it displaces the native trout (*fontinalis*), seems to be true, but it can endure a higher temperature, grows much faster and is a free riser to the fly, at least up to the weight of about three pounds. Fifteen years ago, in many of our best trout streams, a pound specimen was a big fish. In all my experiences of waters easily accessible from New York, I took but one fish of sixteen inches. Since the introduction of the brown trout, all this is changed. The average size of trout taken has much increased, and many fish of two pounds are caught every season with fly. Not only is this the case, but not a year passes that a number of immense fish are not (at least) hooked by fly-fishermen. I mean fish weighing from four to six pounds. These usually escape, owing to the light tackle used, but they afford a man a sensation that he is in no danger of forgetting to the last day of his life. THEODORE GORDON.

The Sportsmen's Show Casting Tournament.

THIS tournament, which opened the night of Saturday, Feb. 21, and came to an end the night of Saturday, March 7, in Madison Square Garden, this city, and was part of the Ninth Annual Sportsmen's Show, was a success, both in number of entries, and as an attraction to visitors who take more or less interest in contests of this sort, who fish whenever they have the opportunity; who like to see what the expert anglers and fly-casters use, in the way of tackle, and who look to these tournaments for instruction in casting. The entries in tournaments of this kind would be far larger if it were not for the fact that anglers who possess only a moderate degree of skill are too modest to display what they consider their awkwardness in a public competition, and to whom such names as Leonard, Hawes and Levison are a sort of bugaboo. But these persons—men and women—took a deep interest in the game, and lined up alongside the big tank, crowding as near its edge as possible, and watched all the features of each event with enthusiastic attention. The casting was from a bridge over one arm of the pool, and the flies and baits fell within a few feet of the spectators, so that they could see every stage of the contests and admire the skillful work of the men. But there was one thing that had an important bearing on the scores that the average visitor did not understand, and that was why the contests for distance in the latter part of the tournament were won on such low scores. The contestants were all on the island, and had to keep their disappointments to themselves during a match, so that it was only the friends of contestants, who talked with the men afterward, who learned of the sticky water and its effect on tackle.

There was more or less dissatisfaction among the contestants because of the glue-like substance that floated on the surface of the water, and at times men would not enter certain events because of the poor showing they were making; but the fact remained that while the water was far from clear and pure, the conditions were as fair for one as for another. The reason for this state of things was this: The great tank was lined inside with heavy duck, and this duck was water-proofed with a preparation containing some sticky substance. The paddling and the tilting contests served to stir up the water every afternoon and evening, and the oily substance came to the surface and remained there. Lines and flies became coated with it and carried it to the guides and reels. After a contest the rod-tips were covered with a coating which gave them the appearance of having been carelessly daubed with heavy varnish, then used before the coating had had time to dry. The effects of the stuff were to a certain extent counteracted by the liberal use of vaseline on lines and guides, and the fly-casters did all they could under the circumstances, and made their best efforts in a sportsmanlike manner. Some of them thought the pool should have been drained to rid it of the objectionable coating on the water, but while this could have been done, of course, those who claimed to know about such things argued that the oil would not go out with the water, but would remain in the bottom of the tank, and rise to the surface of any fresh water that might be turned in. To drain and refill the great tank would have taken no little time, and would have shouldered the management with an additional expense of no small proportions. Summing up all the arguments, then, it seems there was no practical help for the existing condition of the water.

The highest score made in any of the bait-casting contests was that of R. C. Leonard, who landed a half-ounce rubber frog 128 feet 7½ inches from the casting platform on the last day of the tournament. His friend, H. W. Hawes, made the longest cast of any person in a single-handed trout fly-casting event, when he scored 97 feet on the afternoon the tournament closed.

A veteran angler and enthusiastic fly-caster, who did not attend this tournament, and whose presence was missed by the large circle of friends, is William Mills, who has been quite ill recently, but is now convalescing. Mr. Mills barely escaped typhoid fever.

The scores made in events held previous to March 3 have already been printed in these columns. The results of the events held that day and afterward are given in detail below:

Tuesday Afternoon, March 3.

The event held this afternoon was Class P, dry fly-casting for accuracy, with flies furnished by the committee, and open to all, the only restriction being that loose line in hand or on the platform was not permitted. Five casts were made at a buoy moored 35 feet from the bridge, and five at a second buoy at 45 feet, thirty seconds being allowed to extend line, after which time every cast was scored save in the event of a fly being whipped off, when time was allowed to replace it, and thirty seconds to extend line again. The method of scoring was as follows: If a fly fell within a foot of the buoy cast at, the accuracy was considered perfect, while for each foot or fraction of a foot in excess of one foot from the buoy, a demerit of one was counted, and the sum total of such demerits divided by ten was scored the demerit per cent.; the demerit per cent. deducted from 100 was the accuracy per cent.; to the accuracy per cent. was added the average number of seconds the fly floated at each cast, and the total was the score. D. Brandreth, of Ossining, N. Y., won the gold medal; Dr. J. G. Knowlton, of this city, took the silver medal; third place was tied for by R. C. Leonard, of Central Valley, N. Y., and H. G. Henderson, Sr., of this city, and in the cast-off Mr. Leonard won. The score:

Casts:	1 2 3 4 5	1 2 3 4 5	Total.	Av.
D Brandreth	0 3 1 1 2—7	2 0 1 1 0—4	11	99.4
Dr. J. G. Knowlton	2 1 1 2 2—8	0 3 1 2 1—7	15	99.0
R. C. Leonard	2 0 1 0 3—6	4 3 1 2 1—11	17	....
H. G. Henderson, Sr.	3 1 2 2 0—8	1 2 2 3 1—9	17	....
Cast-off:				
Leonard		1 0 0 0 0—1		
Henderson		0 1 0 2 0—3		
Scores of the non-winners:				
C. G. Levison	3 1 0 1 2—7	2 3 2 4 3—14	21	98.5
D. T. Abercrombie	4 0 4 4 4—16	3 3 3 3 3—15	31	98.0
J. D. Foote	1 4 2 4 0—11	3 3 4 3 1—14	25	98.0

Tuesday Night, March 3.

Another open-to-all event was Class Q, for four-ounce trout rods, with the usual allowance for rods with solid reel seats, and no restrictions on length of leaders. There were four entries, but the low man withdrew because of the condition of the water. The prizes were the same as in other events, and the judges were L. Taylor and W. D. Cloyes, while J. H. Cruikshank was referee. The scores are in feet, as this event was for distance only:

R. C. Leonard....94
H. W. Hawes....87
E. J. Mills....76

Wednesday Afternoon, March 4.

The feature of to-day's casting was the high score made by R. C. Leonard, of Central Valley, N. Y., who stretched his line to the 96-foot mark and carried away the gold medal, while his fellow townsman, H. W. Hawes, took the silver medal, and W. D. Cloyes was third. The contest was open to all-comers, distance alone to count, and fly-rods limited to five ounces, except those having solid reel seats, which were allowed three-fourths of an ounce. The score, in feet:

R. C. Leonard....96
H. W. Hawes....86
W. D. Cloyes....81

E. J. Mills cast 76 feet, J. D. Foote 66 and Dr. J. G. Knowlton 63 feet.

Wednesday Night, March 4

There was no dearth of fly-casters in the Garden to-night, but few cared to enter the contest, as the glue-like coating on the water rendered good work very difficult, and men with high records disliked to attempt to do satisfactory casting with gummy lines and clogged line-guides. The event was for single-handed bait-casting for distance and accuracy, open to all, half-ounce rubber frogs being used, and no restrictions were placed on rods or lines, but free running reels were required. For distance, five casts were made at a buoy 60 feet distant, and five at a buoy at 80 feet; a demerit of one being counted for each foot or fraction the frog fell from the buoy cast at, and the sum total of these demerits, divided by 10, was counted as the demerit per cent.; the demerit per cent. deducted from 100, was the accuracy per cent. Five casts were made for distance, and the average, added to the percentage of accuracy, constituted the score, high man to win. Two practice casts for distance and one at each buoy for accuracy, were permitted. The judges were H. L. Leonard and F. T. Pratt. W. F. Kimber was referee. D. T. Abercrombie won the gold medal and W. D. Cloyes the silver medal, while the third man withdrew and did not cast. The score:

D. T. Abercrombie.

	1	2	3	4	5	Average.	Total.
Distance	58	73	70	61	58	64	
	1	2	3	4	5		
Accuracy	3	19	8	6	22	5 4-5	94 1-5
	6	7	8	9	10	Average.	Total.
Accuracy	15.5	5.5	4	7	6	3 4-5	96 1-5

W. D. Cloyes.

	1	2	3	4	5	Average.	Total.
Distance	58	20	45	59	82	48.6	
	1	2	3	4	5		
Accuracy	17	60	46	12	2	13 8-10	86 3-10
	6	7	8	9	10	Average.	Total.
Accuracy	9	10	1	4	30	5 2-5	94 3-5

M. Calhane, withdrew.

Thursday Afternoon, March 5.

Although the conditions of this contest were similar to those of several that had gone before, interest in it reached a high pitch when the high men tied again and again, and finally decided to let the matter go over until the evening contest for a final decision as to who should claim the gold medal offered for the afternoon event. The conditions called for trout fly-rods of any sort, any length of leader, distance only to count, and open to all who had never cast further than 90 feet in any similar club or tournament contest. The prize medals were similar to those given in other events. The judges were H. G. Henderson and E. J. Mills, with J. H. Cruikshank as referee. The score, in feet and inches, as decided in the final cast-off:

W. D. Cloyes....80 6
V. R. Grimwood....80 6
W. R. Pryor....80 0

Scores of the non-winners:

D. Brandreth....78 0
C. G. Levison....72 0
J. D. Foote....72 0

Cast-off for first and second prizes:

V. R. Grimwood....80 6
W. D. Cloyes....80 6

Second tie cast-off:

V. R. Grimwood....79 0
W. D. Cloyes....79 0

Thursday Night, March 5.

To-night's contest was single-handed trout fly-casting, for distance only. There were no restrictions on weight of rod or length of leader, and any person could enter who had never cast more than 100 feet in a similar contest. The prizes were similar to those previously mentioned. R. C. Leonard and Milton H. Smith were the judges, while L. S. Darling refereed. W. D. Cloyes won by six inches over V. R. Grimwood, and as this event was also to decide who should win the final tie in the afternoon's contest, Mr. Cloyes was declared the winner of both. A large number of fly-casters and angling visitors witnessed this match between the two gentlemen who showed such equal skill, despite the unfavorable condition of the water, which grew steadily worse as the days passed. The score:

W. D. Cloyes....80 6
V. R. Grimwood....80 0
Nathaniel S. Smith....68 0

Friday Afternoon, March 6.

The feature of to-day's casting was the score of R. C. Leonard, who cast a quarter-ounce rubber frog from a free running reel a distance of 113 feet, and captured first place and the gold medal. C. G. Levison won the silver medal with 96 feet 6 inches, and H. W. Hawes had to be satisfied with third place. This was a single-hand bait-casting affair, the best effort in five to count, distance only. It was open to all comers, and the only restrictions were that quarter-ounce rubber frogs and free-running reels should be used, and that the casting should be overhead. Three trial casts were allowed before scoring. The results, in feet and inches:

R. C. Leonard....113 0
Chauncey G. Levison....96 6
H. W. Hawes....87 6

The other contestants were E. J. Mills, who scored 69 feet, and D. T. Abercrombie, who landed at the 52-foot mark.

Friday Night, March 6.

Class W was open to all-comers, distance alone to count. It was for black bass flies, which could be used on hooks No. 4 or larger, and any weight rod or length of leader could be used. Three prize medals, gold, silver and bronze. The score, in feet and inches:

H. W. Hawes....94 4
Dr. J. G. Knowlton....62 0
D. T. Abercrombie....59 0

Saturday Afternoon, March 7.

Class X was a single-hand bait-casting contest, for distance only, and open to all-comers. Each contestant was allowed three trial casts with half-ounce rubber frog, after which the longest cast in five counted as the score. There were no restrictions on rods or leaders, but the use of free running reels was required. R. C. Leonard won the gold medal with a cast of 128 feet 7½ inches, and broke last year's record of 125 feet, made by C. G. Levison; Mr. Levison was second with 97 feet, and H. W. Hawes took the bronze medal. The score, in feet and inches:

R. C. Leonard....128 7½
C. G. Levison....97 0
H. W. Hawes....87 0

The Closing Event, Saturday Night, March 7.

Six men entered Class Y, single-hand trout fly-casting for distance only, and open to all comers, without restrictions on rods or leaders; prizes similar to those heretofore mentioned. H. W. Hawes won the gold medal. The score, in feet:

H. W. Hawes....97
W. R. Pryor....80
V. R. Grimwood....77

The other contestants were N. S. Smith and R. B. Lawrence, who tied with 74 feet each, and Dr. Knowlton, who scored 70 feet.

The Summary of Winnings.

Below is given a summary of the standing of the contestants who won places during the entire tournament. Thirty-one contestants entered during the tournament, and out of this number twenty-one won places. R. C. Leonard won the greatest number of first prizes, while H. W. Hawes was second and W. D. Cloyes was third. Mr. Cloyes was tied for number of first prizes with J. H. Cruikshank, each capturing three, but Mr. Cloyes had two second prizes, whereas Mr. Cruikshank had no seconds. The summary follows:

	Times entered.	No. of 1st prizes won.	No. of 2d prizes won.	No. of 3d prizes won.
R. C. Leonard	7	5	0	2
H. W. Hawes	7	3	3	2
W. D. Cloyes	7	3	2	1
J. H. Cruikshank	4	3	0	0
E. J. Mills	9	2	2	2
V. R. Grimwood	6	1	2	2
A. B. Douglass	4	1	2	0
C. G. Levison	7	1	3	0
H. G. Henderson	7	1	0	3
D. T. Abercrombie	7	1	0	3
P. J. Tormey	3	1	0	1
Dr. J. G. Knowlton	7	0	4	3
W. H. Hammett	4	0	1	2
R. F. Cruikshank	4	0	3	0
D. Brandreth	4	1	0	0
W. R. Pryor	3	0	1	1
J. D. Foote	9	0	1	1
Will. K. Park	3	0	1	0
W. T. Morrison	1	0	0	1
W. H. Cruikshank	1	0	0	1
G. H. Gerard	4	0	0	3

Salmo Mykiss in Europe.

BY SIEGFRIED JAFFE.

THE following interesting article is abstracted from the Bulletin de la Société Centrale d'Agriculture et de Pêche for January, 1903:

Several years ago my attention was called by Dr. Schillinger to the interest which would attend the introduction into Europe of the black spotted trout (*Salmo mykiss* vel *clarkii*), which he had observed during a trip in the Rocky Mountains.

I determined, therefore, to attempt the acclimatation of this species, known also as cutthroat trout, but the United States Fish Commission at Washington, instead of encouraging me in my project, endeavored to turn me from it, because it was thought to be very difficult if not impossible to bring the living eggs of the cutthroat trout to Europe. This is because of the great rapidity with which these eggs hatch; for scarcely sixteen days elapse from the time of fertilization to the time of hatching. Also, the eggs must be carried three or four days on muleback from the heights, where they are taken, to the nearest fish hatchery, at Leadville, where they are put to hatching. Then if they prove to have been fertilized, they must be safely packed for their long journey, and when this has been done there only remain about seven days before the time of hatching for them to journey over the immense distance which separates Leadville from the European port, and which, by the most rapid means of travel, can hardly be covered in less than thirteen days.

To overcome the difficulty, I had made a special box on a special model in which the eggs could be packed immediately after being taken and fertilized, and in which their hatching might go on during the journey. The eggs of *Salmo mykiss*, however, being very delicate, it was necessary to take special precautions to keep them from contact with the water of the melting ice, which would have destroyed them.

This method of packing consisted of two boxes, one within the other. The eggs were separated in little trays, each holding about 1,000.

Such an apparatus having been prepared, a shipment of eggs of the cutthroat trout was made me in 1899. These eggs were put in the apparatus as soon as possible after fecundation, left Leadville May 1, New York May 4 and reached Bremerhaven the 14th. During the journey across the Atlantic on the steamer of Lloyd's Steamship Co., a little ice was introduced into the apparatus every two days and kept it cool. This was renewed the last time on the arrival of the eggs at Bremerhaven, and on the 15th of May the 10,000 eggs reached me at Sandford, having suffered only about a ten per cent. loss during the journey.

Hatching followed almost immediately, and was over by the 25th of May; and with the purpose of increasing the chances of acclimatation, I sent about half the fry obtained to the fishculture establishment of Munich.

The fish did well. They have now become adult, and have given us this year the first yield of eggs. According to a report sent me the first of last June by the president of the Société Bavaroise de Pisciculture, the stripping made at the fishculture station at Neufhaven, was 4,000 eggs. Some specimens of the fry from these eggs were sent to the Exposition at Vienna last September, and there obtained the first prize.

The United States Fish Commissioner was good enough to send this year a second shipment of eggs, which, having left Mera, Col., the 10th of last July, reached me the 25th of the same month in perfect condition. Of 20,000, only 148 died en route. The apparatus employed for the journey was the same model as that used during the first shipment, except that the space reserved for putting in the ice was a little smaller.

The hatching of these eggs succeeded well, and at the beginning of October the fry obtained already measured from 6 to 10 centimeters in length.

Actually, therefore, we now possess here more than 5,000 adult specimens from the first shipment of eggs, and there exist besides about 6,000 in the fishcultural establishment of Bavaria.

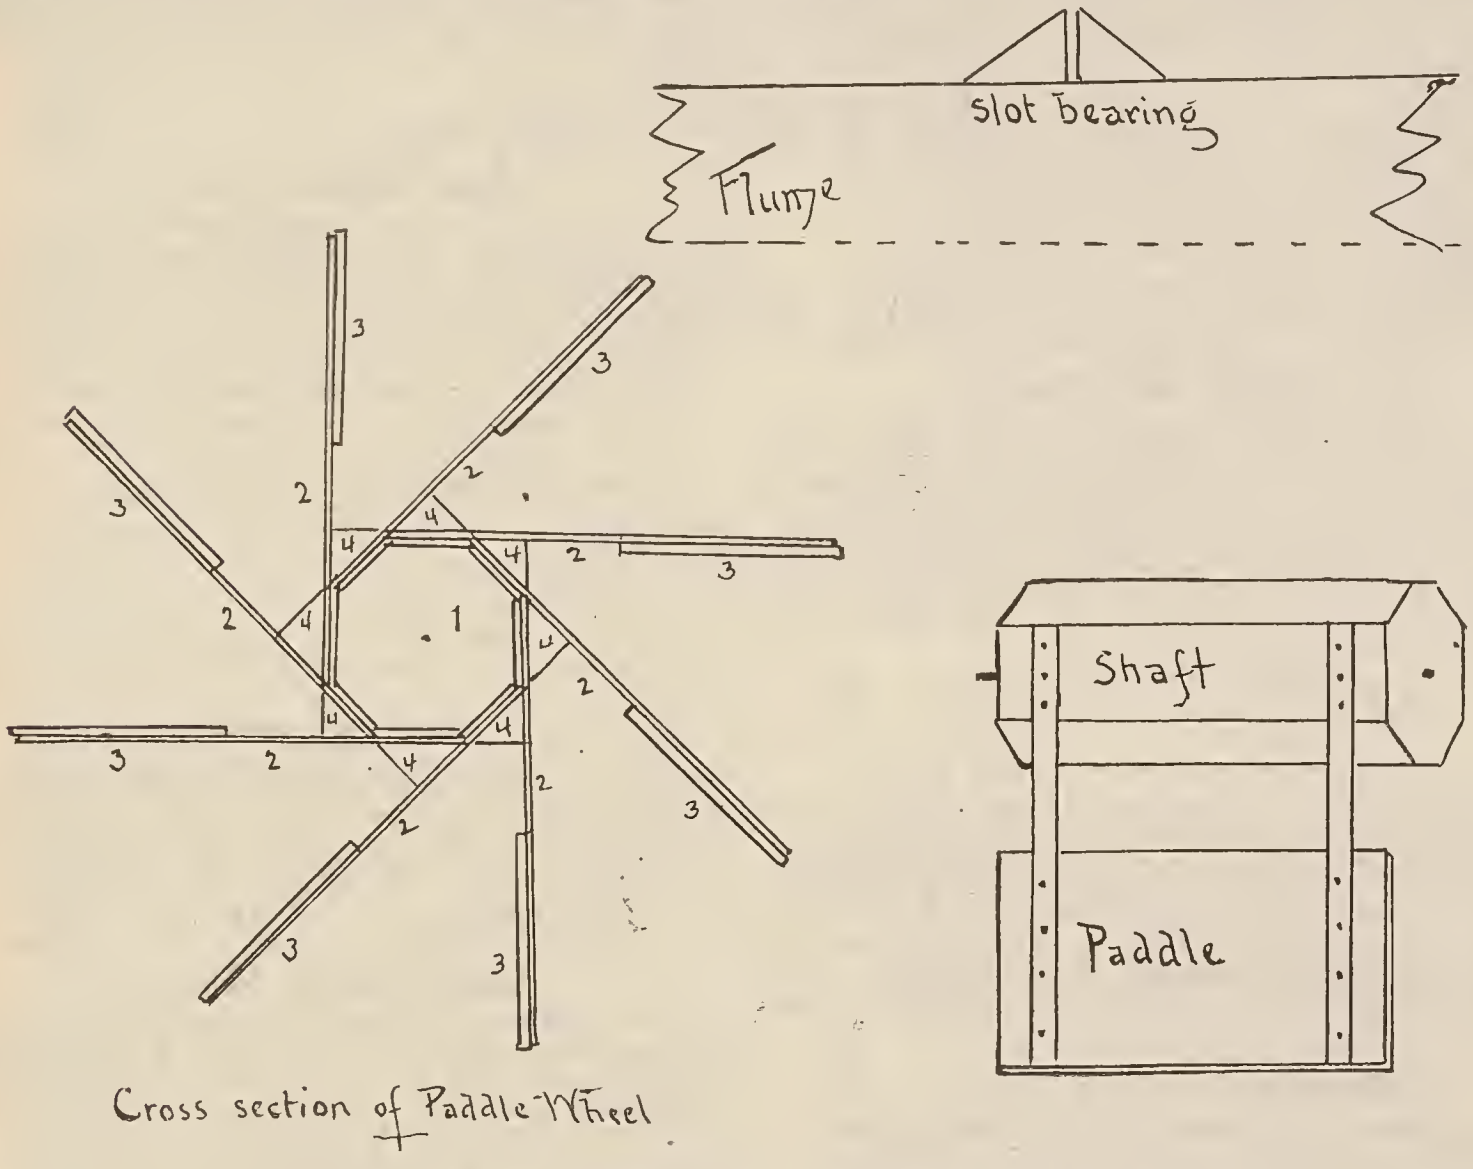
I therefore confidently anticipate a good yield of eggs in 1903, and am very hopeful that I shall have the pleasure of sending a lot to Nid-de-Verdier, so that the rearing of this species may be attempted in France.

Paddle Wheels for Ditches.

To Prevent Destruction of Fish by Irrigating Ditches.

Editor Forest and Stream:

IN FOREST AND STREAM of February 14, is an article with the caption "Montana Game and Fish Interests," giving extracts from the semi-annual report of the State Warden, Mr. W. F. Scott. I wish to call attention to certain portions of said report. He says: "It is a matter of serious regret that no practical method has been adopted to prevent the great loss of trout which escape through the irrigating canals and ditches out on to the land, and perish, during the irrigating season, other than the common wire mesh screen which clogs up and retards the flow of water in the spring and autumn when drift matter and leaves are brought down by the current of the stream."



Cross section of Paddle Wheel

1, eight-sided shaft. 2, arms, nailed or screwed on. 3, paddles. 4, braces between the arms.

It is both disheartening and discouraging to the western fishculturist to know that millions of fish, both large and small, annually perish through being stranded on the meadows and grain fields as the result of unscreened ditches. He sees a large percentage of the work of the United States and State Fish Commissions go for naught from this cause.

The hardship entailed by the use of the common wire mesh screen exists more in imagination than in reality, for during the season of irrigation in the summer the streams are clear of leaves and trash. "In the spring and autumn when drift matter and leaves are brought down by the current of the stream," the head gates of the ditches could be closed, for at those seasons rain or snow usually furnishes all the water needed for the crops.

But in order to provide a contrivance "which will not injure or work a hardship on the farmer, and at the same time put an end to this widespread destruction," I have devised an arrangement to be put in at the intake of ditches that is as effective as a screen, but which is not open to its objections, as it permits the passage of such matter as would clog a screen, and at the same time it prevents fish from entering the ditch. I understand that some such device is successfully used in Colorado, but I have not been able to obtain the particulars of its construction.

My device is very simple, consisting merely of a short flume at the head of the ditch, with sufficient fall to operate an eigh-bladed paddle wheel, fitting the flume closely. The width and depth of the flume, and the size of the paddle wheel would be governed by the width and depth of the ditch. If very wide a double flume and two wheels could be used. In large ditches two old wagon wheels could be utilized by affixing paddles to the spokes. The bearings of the shaft should work in vertical slots, so that any hard substance could pass under the paddles by raising the wheel. The continual splashing of the paddles would be effectual in frightening fish or fry and prevent their passage. But to make assurance doubly sure, a barrel-shaped frame covered with woven wire of very small mesh, and fitting the flume closely, could be operated as a revolving screen, by utilizing the paddle wheel as a motor. The pulleys to each should be placed on the shafts just outside of the flume, with the belt crossed so as to cause the wheel and screen to revolve in opposite directions, the revolving screen, of course, being at the entrance of the ditch. This forms a self-cleaning screen, all leaves and trash being carried over, while the smallest fish fry are prevented from passing it. I think, however, that the paddle wheel alone would answer the purpose very effectually.

The annexed rough drawings may make the device and its construction more easily understood. For very shallow ditches the paddles might be nailed directly to the octagon shaft. Farmers who are skilled in the use of tools might make a round shaft, with mortises for the arms of the wheel, but it would be no better or stronger than the simple one mentioned.

JAMES A. HENSHALL,
U. S. Fish Commission.

BOZEMAN, Montana.

Debsconeag Club Dinner.

Suppose success don't come at first,
What be you goin' to dew?
Throw up the sponge an' kick yourself,
An' go to feelin' blew?
No, course yer hain't, yeur goin' ter fish,
An' bait, an' bait again;
Bimeby success will bite yeur hook,
An' you will pull 'im in.

This bit of philosophy, good for fisherman and layman, for fishing and for life, for recreation and for toil, was printed on one of the pages of the menu cards of the first annual dinner of the Debsconeag Fish and Game Club at the New York Yacht Club, where eighteen of the Debsconeags were guests of Mr. Edward A. Sumner. There was other inspiration on the menu—pictures of the Debsconeag familiar spots—Ambijejus, Rainbow, Millinocket, and others of like pleasant memory. There were present, Edward A. Sumner, Fred J. Hutchinson, of Boston; M. Elton Brown, of Hollis, N. Y.; Ambrose G. Todd, New York; William H. Roberts and Walter P. Stokes, of Philadelphia; Theodore Vietor, Gordon Merritt and William Cheel, of Ridgewood, N. J.; H. B. Plumb, of Brooklyn; Charles T. Hungerford, of New York; Clarence B. Moss, of Passaic, N. J.; William R. Noone, of Boston; Rufus B. Goffe, of Providence, R. I.; M. R. Bingham, of Rome, N. Y.; Merritt B. Miller and John B. Sumner, of New York, and Walter Place, of Oakville, Conn.

Letters of regret were read from President Roosevelt, Senator Redfield Proctor and George M. Bowers, United States Fish Commissioner. The toasts were: America, "Hail to you, from us, your sons;" the President of the United States, "Hail to you from your clubmates," for President Roosevelt is an honorary member of the club; Debsconeagers and our guests, "Hail all! Good health! Long Life! Happiness! Nerve be to your rifle and skill to your rod;" The Flag, "Hail, stars of the night, bars of the light and white of God's own purity."

There was some fisherman's luck in calling for responses. The name of each speaker upon a card was thrown into a bowl of punch, from which it was drawn by means of a rod, hook and line, the cast being made from the opposite end of the table.

Canine Elegies and Epitaphs.

XXXIV.—Tex.

CORNISH, Me., Feb. 21.—Tex was a little red spanied of untraced pedigree that the writer and his brother bought as a pup of a street vagrant, for the fabulous sum of 15 cents. We gave him a rigid training as an all-round hunter, and as such he was unexcelled. His strongest point was hunting the ruffed grouse in the old manner of putting to tree, which method, I contend, gives a chance for the display of as much intelligence and skill on the part of the dog, as the more modern way requires of the setter or pointer. He was also a fine retriever for ducks. We hunted with him ten successive seasons, when he succumbed to some unknown malady. We fully recognized his worth only after he was gone. JOHN L. WOODBURY.

TEX.

No more my little dog will come,
When forth with gun I go,
To frisk and gambol on before,
His wild delight to show.

No more his bark the woods will wake,
As stanch beneath the tree,
Within whose top the shy grouse hid,
He signaled sharp to me.

The solemn woodcock has no fear,
The hare and squirrel rove at will,
The wounded duck my bag should win,
In hiding foils me still.

I miss the swift step through the brush,
That once so well I knew,
The lashing tail, the eager bound,
As on the game he drew.

And never more the noonday lunch
Shall soothe with quiet rest,
The absent face and figure trim,
In a coat of brown curls drest.

Ah! many a day, my litle dog,
We roamed the forests wide,
The thicket's maze you freely braved,
The rugged mountainside.

But now my gun stands idly by,
The charm has fled from vale and mound;
The babbling brook, the wind-swept boughs,
Now greet my ear as mourning sound.

For underneath the sod you lie,
Hard by the scenes you loved the best;
The wild flowers fling in summer's sun
A halo o'er your place of rest.

Nor whistle sharp, nor whir of wing,
Nor pattering step the brushwood through,
Has power again thy heart to thrill—
Sweet be your sleep, my doggie true.

Canoeing.

Prizes for Canoeists.

IN order to encourage canoeists and small boat sailors, who do their knocking about on inland waters, to keep a record of their trips and experiences, the publishers of FOREST AND STREAM offer cash prizes for the best accounts of cruises taken during the season of 1903. As few restrictions as possible will be imposed, and those given are made only with the view of securing some uniformity among the competitors' stories, so that the judges will be able to make a fair award.

The prizes will be as follows:

First, $50.00.

Second, $25.00.

Third, $15.00.

Fourth and Fifth, $10.00 each.

Sixth to Eighth, $5.00 each.

I. The cruise must be actually taken between May 1 and November 1, 1903.

II. The cruise must be made on the (fresh water) inland streams and lakes of the United States or Canada.

III. The canoe or boat in which the cruise is made must not be more than 18ft. long over all.

IV. An accurate log of the trip must be kept and all incidents and information that would be of value to other canoeists covering the same route should be carefully recorded.

V. A description of the boat in which the cruise is made should preface the story, and a list of outfit and supplies.

VI. Photographs of the boat and of the country passed through, not smaller than 4x5, should, if possible, accompany each story, and they will be considered in making the awards.

VII. Stories should contain not less than five thousand words, written on one side of the paper only.

VIII. An outline chart of the trip drawn on white paper in black ink (no coloring pigment to be used) should also be sent in.

IX. Competitors should avoid the use of slang or incorrect nautical expressions in their stories, as it will count against them in awarding the prizes.

Each manuscript to which a prize is awarded shall become the property of the Forest and Stream Publishing Company. All manuscript should reach the office of the Forest and Stream Publishing Company, 346 Broadway, New York, N. Y., on or before December 1, 1903.

A. C. A. Membership.

The following have been proposed for membership to the A. C. A.: Active, Theo. S. Jube and Jerome H. Pennock; associate, Martha R. F. Genet.

Canoe Tilting at the Sportsmen's Show.

NEW YORK, March 9.—*Editor Forest and Stream:* You very kindly gave considerable prominence to the fact that I had arranged for a series of tilting contests to be held at the Sportsmen's Show. Will you kindly give equal publicity to the fact that since the night of March 2 my connection with the contests ceased.

The two communications which I inclose you herewith, one from Capt. Dressel and the other from the contestants, will explain why. E. T. KEYSER.

[*Copy.*]

National Sportsmen's Association, J. A. H. Dressel, Secretary-Treasurer. Sportsmen's Show, New York City, March 2, 1903.—Mr. E. T. Keyser, Madison Garden, N. Y.

DEAR SIR—Following conversation had with you last evening, and decisions arrived at, I thought the matter had been definitely settled, particularly in the matter of Mr. West. I understand now that you have excluded Mr. West from contesting this evening., You have therefore broken faith with me, and I shall ask you to retire from the management of the Tilting Contests, to take effect at once.

Yours truly,
(Signed) J. A. H. DRESSEL,
General Manager.

[*Copy.*]

NEW YORK, March 7.—We, the undersigned contestants in the Amateur Tilting Contest at the Ninth Annual Show of the National Sportsmen's Association, desire to express our appreciation of the attitude of Mr. E. T. Keyser in refusing to allow the entries of suspected professionals into the event. That the stand taken by Mr. Keyser, in refusing to attempt to force us to meet a suspected professional, led to his deposition from the management of this contest by the management of the Sportsmen's Association on March 2, was to his credit.

As far as positive knowledge goes, West may not be a professional, but we suspect that he has, at some time, served in a professional capacity in athletic sports.

(*Signed*) J. B. Dunn, Jr.; J. A. Robinson, Eugene M. Scheffler, G. H. King, F. R. White, E. E. Vreeland, Geo. P. Vreeland, Wm. E. Tufts.

Knickerbocker Smoker.

On Saturday evening, March 28, the Knickerbocker Canoe Club held a subscription smoker at their boat house, Hudson River and One Hundred and Fifty-second street, which was a grand success in bringing out a full quota of the boys and their friends, there being fifty present.

The entertainment was preceded by lantern slides of canoeing scenes and a cruise up the Hudson, illustrated with remarks by our fellow canoesist, A. W. Scott, who kindly operated the stereopticon. After the slides, refreshments and lunch was served by a caterer, which was greatly enjoyed.

The souvenirs of the evening were highly appreciated, consisting of brier pipes, individually decorated by pyrography, for each member and guest, being reproductions from photographs of camp scenes, sailing and paddling events, etc., besides the club totem, a sea horse, finished in red, painted on each.

The balance of the evening was pleasantly passed with the help of our musical members, Messrs. Roberts and Boyle, assisted by professional talent.

The smoker was pronounced one of the most successful ever held by the Knickerbocker Canoe Club, and the Entertainment Committee deserve to be congratulated by the showing made.

The committee consisted of M. Ohlmeyer, Jr.; W. G. Harrison, E. Howe Stockwell.

A. C. A. and its Finances.

Editor Forest and Stream:

I have read with interest Mr. Robert J. Wilkin's letter published on March 7, and heartily concur in the suggestion that there should be a permanent paid secretary-treasurer to collect the dues of all members. No doubt many members will raise objection on the question of the expediency of expense. However, I am of the opinion there would be a saving of the funds to the Association in the department of the secretary-treasurer and pursers. And if each division should be called upon to give a further ten per cent. of its dues to the central body for this purpose it would be more than made up by the members annually saved to the Association and therefore would not decrease the present incomes of the divisions.

Moreover, we have now a life membership permanent fund. And we hope to see many of the past and present canoeists take up their life membership within the next few months. This fund carefully invested will in time provide the income required to keep up the Association's permanent home, and I trust provide for the salary of the paid secretary-treasurer. It behooves every member to make some sacrifices, even to the extent of less elaborate camps, etc., so that the balances of the divisions and the affairs of the A. C. A. shall be retained on a safe and satisfactory basis.

H. LYNDHURST POLLARD, A. C. A. 4207.

New Chairman Regatta Com. of A. C. A.

To the Members of the A. C. A.:

I am pleased to notify you that Mr. James K. Hand, of the Atlantic Division, has accepted the chairmanship of the Regatta Committee. A better man could not fill this position. Mr. Hand is now busy with preliminary arrangements for the success of sailing and racing at Sugar Island meet in 1903.

NATHANIEL S. HYATT,
Commodore A. C. A.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Yachting.

Conditions Governing the Seawanhaka Challenge Cup.

THE Royal St. Lawrence Y. C., of Montreal, Canada, having accepted the challenge of the Manchester Y. C. of Manchester, Mass., for the Seawanhaka International Challenge Cup for small yachts, and the conditions governing the match having been arranged, the Manchester Y. C. take pleasure in announcing both these conditions and those that will govern the trial races for the selection of its representative yacht.

The contest being an international one, the Manchester Y. C. hopes to interest other American yacht clubs in its effort to regain the cup. To this end, it proposes to hold open trial races for the selection of the challenger in order that the fastest possible American boat may be sent to Canada next year.

A cordial invitation is extended to all American yacht clubs to enter yachts in the trial races, which will be held off the Manchester Y. C. on June 10, 12, 13, 15 and 16, 1903.

For the information of any who may be interested in the subjects, and especially for the guidance of those who may contemplate making entries in the trial races, the Seawanhaka Cup Committee of the Manchester Y. C. beg to announce the following general conditions, governing the cup, which are extracts from the Deed of Trust executed by the Seawanhaka Y. C., and the following general regulations for the control of the match which have been agreed upon with the Royal St. Lawrence Y. C.

EXPLANATION OF TERMS.

Article I. The following expressions have the meanings assigned to them in this section unless the context requires otherwise:

(a) "The match" means the races to be sailed for the cup.

(b) "The trust" means the Declaration of Trust.

(c) "The challenged yacht," "the challenging yacht," "the yachts," "the competitors," "a competitor," means the yachts representing the Royal St. Lawrence Y. C. and the Manchester Y. C. respectively.

(d) "Centerboard" includes plates and sliding keels, as mentioned in Article VI. of the Trust, and permits of the use of more than one on either yacht.

(e) "The crew" includes the helmsman.

(f) "The mark" means a mark used to indicate the course as provided for in Article XXV.

THE MATCH.

Article II. The match shall be awarded to the yacht winning three of five races.

Each race shall be of a total length of twelve nautical miles, as measured by the log.

NOMINATION OF YACHTS.

Article III. Each club shall name its representative yacht at least five days before the first race. Any protest as to the eligibility of either competitor must be made at least three days before the first race.

THE JUDGES.

Article IV. The challenging and challenged clubs shall each nominate a person and secure his consent to act as a judge.

Notice of such nomination and consent shall be given by each club to the other on or before the first day of June, 1903. This notice shall be forthwith communicated by such other club to its nominee.

Article V. The two judges so appointed shall elect a third judge on or before the first day of July, 1903.

Article VI. The third judge shall act as convener and chairman of the judges, and shall forthwith notify the two clubs of his own appointment.

Article VII. In the event of the judges so nominated by the clubs, or either of them, subsequently refusing, or being for any cause unable to act, the nominating club shall immediately make a new nomination and give notice thereof.

For like reason and in like manner a new selection of a third judge shall be made and notified to the clubs.

Article VIII. Subject to the provisions of the Trust of this Agreement, the judges shall

(a) Verify and decide whether the competitors come in all respects within the prescribed conditions.

(b) Lay out the courses.

(c) Order in what direction the course for the day shall be sailed.

(d) Postpone a start in the event of fog or calm; or of a competitor being injured or disabled, as provided in Articles XXVI. and XXVII.

(e) Generally manage the races and decide all questions in disputes in relation thereto.

(f) Act as time-keepers and declare the results.

(g) The decision of the judges shall be final.

Note.—If either yacht is found by the judges not to be within the conditions, the competitor whose yacht is excluded, may nominate another.

RACING LENGTH MEASUREMENT.

Article IX. Competitors must not exceed 500ft. sail area, and must not exceed 25ft. limit of racing length under the following rules:

Load waterline plus square root of sail area, divided by two, equals racing length.

Article X. The factor of load waterline used in determining racing length shall be ascertained with 450lbs. dead weight placed substantially amidships (center of buoyancy) in lieu of crew, when the yachts are in racing trim.

The factor of sail area used in determining racing length shall be ascertained by adding to the actual area of the mainsail the area of the fore triangle.

The hoist and outer points of the mainsail, when measured, shall be marked respectively on the mast, boom and gaff, or other spars used to set the sail.

The factor of fore triangle, used in determining sail area, shall be ascertained from the perpendicular distance between the deck and the point on the forestay, where the line of the after leach of the jib intersects the forestay, and the base distance between the forward side of the mast and the point of intersection of the forestay, or line of the jib luff, with the bowsprit or hull.

The said point of intersection of the forestay or jib luff shall be marked thereon.

DRAFT.

Article XI. Draft shall be determined when the competitors are in trim for measurement.

Article XII. A competitor's draft of hull or fixed keel shall not exceed 5ft., and with the centerboards down shall not exceed 6ft.

Article XIII. Yachts shall be constructed in accordance with the following restrictions:

(a) On a cross section taken at any point no part of the hull shall be appreciably below the center part of the hull, exclusive of the false keel or skeg.

(b) The area of the cockpit shall not exceed 30 per cent. of the total area of the deck.

(c) The planking of hull shall not be less than ½in. thick at any point.

(d) The frames or ribs shall be of oak, elm or other hardwood, and shall not be less than 1¼sq. in. per lineal foot of length; they may, however, be spaced as desired.

Example frames may be 1¼ × 1in., spaced 12in. c. to c., or ⅝ × 1in., spaced 6in., c. to c., or ⅝ × ⅜in., spaced 2¼in. c. to c. Internal bracing, floors, knees or other stiffening members shall not be included in the area of the frames or deck beams.

(e) The deck planks shall not be less than ½in. thick, if without covering; but where covered with canvas may be ⅜in. thick. The deck beams shall not be less than 1½sq. in. per lineal foot

of length. Example deck beams may be 1½ × 1in., spaced 12in. c. to c., or 1½ × ½in., spaced 6in. c. to c.

Article XIV. Centerboards shall be so constructed that they can be wholly housed without leaving any projection below the keel or hull.

They shall not be loaded except to overcome flotation, but metal plates may be used under the following restrictions:

If of steel or iron plate, they shall be of practically uniform thickness, and shall not weigh, either singly or collectively, over 450lbs.

If of bronze, brass or any metal other than steel or iron, they shall be of practically uniform thickness, and not weigh, either singly or collectively, over 300lbs.

(For draft of centerboards see Article XII.)

No hollow boards shall be allowed.

SAILS.

Article XV. Sails shall be limited to mainsails, jibs and spinnakers.

All jibs and spinnakers must be triangular sails, but each may have a small club on the head not exceeding 5 per cent. of the base of the fore triangle.

The total area of the mainsail and fore triangle shall not exceed 500 sq. ft.

The total area of the spinnaker, measured as a triangle, whose base is the length of the spinnaker boom measured from its out end, when set to the center of the mast, and whose perpendicular is the distance from the deck at the foreside of the mast to the spinnaker halliard block, shall not exceed twice the area of the fore triangle.

Article XVI. The mainsail when set must not be set beyond the hoist and outer points marked on the mast, boom, gaff or other spars, as directed by Article X:

Any jib, when set, shall not extend beyond the upper and forward points defined in Article X.

The spinnaker boom, when used in carrying sail, shall not be lashed to prevent its lifting.

BALLAST.

Article XVII. Shifting ballast shall not be allowed.

Centerboards shall be considered as fixed ballast.

Article XVIII. No outrigger or other mechanical device for carrying live ballast outboard shall be allowed.

Article XIX. Yachts must sail throughout the match with the same amount of fixed ballast and with centerboards of practically the same weight as carried in the first race.

LIFE PRESERVERS AND ANCHORS.

Article XX. Life preservers, anchors, chains, etc., may or may not be carried, at the option of the contestants. The option must be declared before measurement and for the purposes hereof, and shall be adhered to throughout the races.

CREW.

Article XXI. The crew shall be amateurs and members of the respective clubs.

Article XXII. The provision of the Trust, Article X., requiring helmsmen to be nominated in writing twenty-four hours before the day appointed for the first race is waived. In lieu thereof the challenging and challenged clubs shall furnish each to the other, or to their respective representatives, a certificate in a form of the following tenor:

"It is hereby certified that.....who are nominated to sail on the....., representative yacht of this club, are amateurs in the spirit of the word, and are members of this club."

Article XXIII. The total weight of the crew, including all clothes, personal apparel and belongings worn by them or carried on board during the race, shall not exceed 650lbs.

COURSES.

Article XXIV. The courses shall consist of a triangular course and a course to windward and return.

Each leg of the triangular course shall be one and one-third nautical miles in length. The course shall be sailed over three times.

Each leg of the course to windward and return shall, if possible, be two nautical miles, and in any event not less than one nautical mile.

The course shall be sailed over a sufficient number of times to make a total of twelve nautical miles.

Article XXV. The marks to indicate the courses shall consist of staffs, bearing red and white flags for the triangular course, and black and white for the windward and return course, and they shall be capped with bright tin cones.

Article XXVI. A race may be suspended or postponed for such time as the judges deem reasonable, to permit of repairs to a competitor disabled or injured before the second or preparatory signal.

Article XXVII. A start may be suspended or postponed to a later hour of the same day or to the next following day (excluding Sunday) in the event of a fog or a calm.

ORDER OF COURSES.

Article XXVIII. The races shall be sailed alternately over the triangular and the windward and return courses.

The first race to be triangular or windward and return, as the winner of the toss may elect.

START AND FINISH.

Article XXIX. The start and finish shall be respectively across a line between and designated by a mark and a stakeboat flying the burgee of the Royal St. Lawrence Y. C.

Article XXX. (a) Windward and return course. For the start and during the race the stakeboat shall be anchored at right angles to the course, so that the competitors shall leave the starting buoy to starboard.

(b) Triangular course. For the start and during the race the stakeboat shall be moored outside and at right angles to the first leg.

Article XXXI. For the finish the stakeboat shall be moored in a similar position on the other side of the buoy at right angles to the last leg.

Article XXXII. To determine the start and finish, the judges' steamer shall be anchored beyond the stakeboat, with its signal staff, as nearly as practicable, in range with the mast of the stakeboat and the mark, but the true line shall be held to be the prolongation of the range of the signal staff of the judges' steamer and of the flag mast on the stakeboat.

Article XXXIII. Unless otherwise ordered, marks shall be left to starboard.

Article XXXIV. If the judges, in their discretion order the triangular course to be sailed in the reverse direction, leaving marks to port, the reverse positions of the stakeboat and judges' steamer shall be a notice of such reversal.

THE RACES.

Article XXXV. The start be made as nearly as practicable at a quarter past one in the afternoon.

The race shall be deemed to have begun when the second signal has been given, except for the calculation of the time limit, under Article XXXIX.

Article XXXVI. The start shall be a flying start, and the signals therefor shall be as follows:

(a) First Signal—Preliminary.—The blue peter shall be hoisted on the signal staff of the judges' steamer, accompanied by a whistle 15 seconds' long.

There shall be an interval of 5 minutes between the first and second signals.

(b) Second Signal—Preparatory.—The blue peter on the judges' steamer shall be lowered and a red ball hoisted, accompanied by a whistle 15 seconds long.

There shall be an interval of 5 minutes between the second and third signals.

(c) Third Signal—Start.—The red ball shall be lowered, accompanied by the firing of a gun, and a whistle 15 seconds long.

Article XXXVII. The races shall be sailed without time allowance.

Article XXXVIII. In case it should be necessary to recall either or both of the competitors, the following signals shall be used.

(a) For the recall of the challenging yacht a United States ensign shall be hoisted on the signal staff of the judges' steamer, accompanied by two sharp whistles.

(b) For the recall of the challenged yacht a British ensign shall be so hoisted, accompanied by three sharp whistles.

(c) For the recall of both competitors the burgee of both clubs shall be hoisted, accompanied by four sharp whistles.

Article XXXIX. The competitors shall be called off:

(a) If any triangular race is not concluded within three and one-quarter hours after the third or start signal has been given.

(b) If any windward and return race is not concluded within three and one-half hours after the third or start signal has been given.

Article XL. For calling off a race the red ball shall be half-masted on the signal staff of the judges' steamer, accompanied by the firing of a gun and a whistle 15 seconds long.

Article XLI. The match shall be sailed under the rules of the Royal St. Lawrence Y. C., except as modified by this instrument.

Article XLII. The provisions of the Trust, insofar as the same are inconsistent with the foregoing articles, are hereby waived.

TRIAL RACES.

Note.—The rules and regulations governing the Seawanhaka International races will be followed in the trial races as far as possible.

The trial races will be held off the southerly end of House Island, Manchester Harbor on Wednesday, June 10; Friday, June 12; Saturday, June 13; Monday, June 15, and Tuesday, June 16, 1903.

COURSES.

The courses will be alternately triangular and to windward or leeward and return. Full instructions will be furnished from the judges' steamer on each race day, one hour before the preliminary signal.

START AND SIGNALS.

The start shall be made as nearly as practicable at 2 o'clock in the afternoon of each day. The race shall be deemed to have begun when the second signal has been given, except for the calculation of the time limit. (See Article XXXIX. of the Seawanhaka International Rules.)

The start shall be a flying one, and the signals therefor shall be as follows:

First Signal—Preliminary.—The blue peter shall be hoisted on the signal staff of the judges' steamer, accompanied by a whistle 15 seconds long.

There shall be an interval of 5 minutes between the first and second signals.

Second Signal—Preparatory.—The blue peter on the judges' steamer shall be lowered and a red ball hoisted, accompanied by a whistle 15 seconds long.

There shall be an interval of 5 minutes between the second and third signals.

Third Signal—Start.—The red ball shall be lowered, accompanied by the firing of a gun and a whistle 15 seconds long.

NO TIME ALLOWANCE.

The races shall be sailed without time allowance.

RECALLS.

Should the judges decide to recall the yachts after the race is started, a gun will be fired or a whistle blown from the judges' steamer after all the competitors have crossed the starting line.

SPECIAL CONDITIONS FOR TRIAL RACES.

(1) Written entries must be filed with the secretary of the Seawanhaka cup committee of the Manchester Y. C. on or before June 1, 1903.

(2) The owner of each yacht entering for the trial races must, on or before June 8, 1903, furnish to the secretary of the committee the racing measurement of his yacht, certified by the measurer of the Manchester Y. C.

(3) Each yacht must carry the racing number fastened securely on both sides of the mainsail. Numbers to be furnished by the Manchester Y. C.

(4) In the event of any race being postponed or ordered resailed, it will be sailed at as early a date as may be practicable.

(5) The yacht or yachts, selected to represent the club, shall be the ones which, in the judgment of the special committee (appointed by the Manchester Y. C.) shall be the best adapted therefor, and not necessarily the winners of a majority of the trial races. Additional races may be ordered by the committee between such contestants as they may select.

(6) It is understood and agreed that the Manchester Y. C. is to pay the transportation charges on any yachts that may be sent to Canada by the Manchester Y. C. to compete in the Seawanhaka international races of 1903.

Note.—In reference to Article XXII. of the Agreement between the Royal St. Lawrence Y. C. and the Manchester Y. C., and for the purpose of carrying out this said agreement, the following vote has been promulgated by the executive committee of the Manchester Y. C.:

Voted: That a committee of three from the club be appointed by the executive committee of the Manchester Y. C. to select any number of yachts which they may see fit to represent the Manchester Y. C. in the races on Lake St. Louis next July, 1903, and that said special committee be also empowered to select from the members of the Manchester Y. C. a crew of four men to handle said yachts in the Seawanhaka races, and that the crew thus chosen be allowed to name from members of the Manchester Y. C. any substitutes which they may see fit to select. And also that the crew selected shall have the power to designate which of the selected yachts shall compete against the representative of the Royal St. Lawrence Y. C.

All communications with reference to the Seawanhaka cup races should be addressed to Mr. H. B. Pearson, 85 Water Street, Boston, Mass.

Arthur M. Merriam, Chairman.
H. P. Pearson, Secy.
Edwin A. Boardman,
} Seawanhaka Cup Committee Manchester Y. C.

Boston Letter.

Boston, March 9.—Mr. J. Hopkins Smith, Jr., has ordered another yacht to compete in the Kiel regattas. Mr. B. B. Crowninshield, who designed Uncle Sam for Mr. Smith last year, will turn out the lines of the new boat, and she will be built by Fenton, of Manchester, who built Uncle Sam. Uncle Sam was a 21-footer, and this time Mr. Smith will go up a class. The new boat will be 48ft. 1in. over all, 30ft. 6in. waterline, 9ft. 6in. beam and 6ft. 9in. draft. Her displacement will be 15,420 pounds, and she will carry 7,507 pounds of lead outside.

Mr. Linus A. Chase, formerly in the New York office of Mr. Frank N. Tandy, is now associated with Mr. Crowninshield. Mr. Crowninshield has sold the 55-footer Sea Lark, owned by Mr. Asa Schofield, to Mr. H. W. Peabody, and the Bar Harbor 25-footer, Rip, owned by Mr. A. J. Cassatt, of Philadelphia, to Mr. James Lawrence, of Groton, Mass. She will be used on the Maine Coast. Lines are being turned out for a light draft 55ft. waterline schooner for Mr. Lawrence Jones, of Louisville, Ky., who now has the schooner Attaquin under charter. She will be 81ft. over all, 20ft. beam and 2ft. 9in. draft. Her displacement will be about 42 tons, and she will carry about 2,500 square feet of sail. Provisions will be made for auxiliary power, although it is not expected that the engine will be installed at once. The centerboard will be hung on one side of the keel, so that the shaft may be placed in the center of the vessel, the engine being designed to fit in between the centerboard box and the foremast. The yacht will be used in Florida and southern waters. Crowninshield has also received an order for a one-rater for Mr. I. Bergmanon, of St. Petersburg, Russia, to conform to the Russian rating rule. Oxner and Story are building a 61ft. waterline fisherman for a syndicate headed by Mr. Crowninshield. The 18-footer of his design for Mr. B. S. Permar has been laid down by Graves, of Marblehead, and the 25-footer for Mr. L. C. Wade has been set up at the Marblehead Yacht Yard. The 27-foot yawl for Mr. J. C. Ayers, will be built at Jacob's yard, City Island.

The spring meeting of the Yacht Racing Association of Massachusetts will be held Thursday evening, March 19, at which officers will be elected and dates will be assigned to the clubs for open races during the season. There are several amendments to be proposed which will make the meeting the most important held for years. It is understood that a vote will be proposed to the effect that at the fall meeting rules will be proposed for all of the Association classes. This is practically a notice that at the end of this season the present classes will pass out of existence, unless it should be the will of the delegates, at the fall meeting, to adopt the present restrictions again. It is not believed, however, that anything of this kind will be done. Throughout the season the Executive Committee will watch the result of rules in this and other sections of the coast, so that the best points in each may be absorbed. A proposition will be made to adopt the 22ft. class, and, considering the number of boats that have been built for the class, there seems to be great confidence on the part of the promoters that it will be adopted. There are now eight boats ordered. The last two are for Mr. Samuel W. Lewis and Mr. F. B. Talbot, designed by Messrs. Burgess and Packard, and for Mr. Charles D. Lanning, designed by Messrs. Small Bros. Another new rule to be proposed in the Association meeting will be in regard to protests that are appealed from the judges of races to the Executive Committee of the Association. It will be proposed that the sum of $5 accompany each notice of appeal, this sum to be returned to the person making the appeal if he should be in the right, and to be turned over to the Association's treasury if he should be wrong. It is expected that the resquest will be made that the Boston Y. C. be allowed more delegates, because of its size and the number of yachts entering from it.

The Regatta Committee of the Corinthian Y. C., of Marblehead, has arranged the following fixtures:

June 20, Saturday—First championship.
July 4, Saturday—Second championship.
July 18, Saturday—Third championship.
July 29, 30, and 31, and August 1, Wednesday, Thursday, Friday and Saturday—Midsummer series of invitation races.
August 8, Saturday—Fourth championship.
August 15, Saturday—Fifth championship.
August 22, Saturday—Sixth championship.

Other races will be announced later. The arrangements for the annual cruise will be goverened by the orders of Commodore John O. Shaw, Jr.

Mr. Hollis Burgess has sold to Mr. W. Starling Burgess the cutter Winnifred, owned by Mr. E. H. Howe, of Lynn. Mr. Burgess will have about the same alterations made in her interior that were made in the cutter Edith, recently purchased by him. She will also be given auxiliary power. Winnifred was originally called Butterfly and was afterward called White Wing. She was designed by Mr. J. Beavor Webb for Mr. Burgess' father, the late Edward Burgess. Mr. Burgess will call her by her original name, Butterfly. Burgess and Packard have received an order for a 30ft. launch for Mr. Henry F. Hurlburt. She will be built by Murray and Tregurtha. Prof. Packard went to Pennsylvania last week to look over the new coaching launch, Ben Franklin II., designed by Messrs. Burgess and Packard for the University of Pennsylvania.

Mr. Joseph J. Moebs and Mr. H. J. Connor have formed a partnership and will conduct the business of yacht designing and brokerage at 7 Water street, Boston. Mr. Moebs is a graduate of "Tech," and is well known among the racing men of Massachusetts Bay.

At Lawley's the 40-rater designed by Messrs. Burgess and Packard for Col. R. H. Morgan, is in frame. Major L. H. Bent's 50ft. schooner, designed by Mr. Arthur Binney, is being finished up inside and will soon be ready for launching. The 25-footer designed by Mr. F. D. Lawley for Mr. John Swift, is being finished up inside. The cruising 21-footer designed by Mr. F. D. Lawley for Mr. L. H. Spalding, will probably be hauled out of the shop this week. Mr. Trenor L. Park's 43-rater, designed by Mr. B. B. Crowninshield, is partly planked. Charles Fletcher's new steam yacht, designed by Cheseborough, is nearing completion and the steam yacht for Mr. C. G. Emery, by the same designer, is nearly all plated. The launch designed by Mr. F. D. Lawley for Mr. W. F. Greer is planked and the launch for the Boston Y. C. is finished. The wooden keel is being turned out for Mr. John M. Richmond's schooner.

Mr. E. A. Boardman has an order for an 18-footer for Mr. Reginald Boardman and a 14ft. double planked cedar tender for Mr. J. C. Philips, to be used on Wenham Lake. This boat will weigh between 70 and 80 pounds. White, of Manchester, has the Malcolmson 18-footer planked and has started the Watson 21-footer. He has finished the 18-footer for Mr. E. A. Boardman, which will be tried out Patriots' Day.

Mr. F. T. Wood, of Wollaston, has designed a 21-footer for his brother, Mr. W. S. Wood, of Fall River. She will be a heavily built cruising boat, with 4ft. 8in. headroom, and will carry 675 square feet of sail. She will be built by Mr. A. LeBonté, of Fall River. Mr. LeBonté is also building from Mr. Wood's design a 32ft. speed launch, to be equipped with two 7 horse-power engines placed tandem.

Mr. W. B. Stearns and Mr. George T. McKay have formed a partnership under the name of Stearns & McKay. The business of designing, building, outfitting and repairing will be carried on at the Marblehead Yacht Yard, as heretofore. A specialty will be made of auxiliary yachts and power launches.

Mr. Isaac B. Mills has designed a 35ft. cabin launch for Mr. G. H. Street, which is building by Meek, of North Weymouth. He has also designed two 30ft. hunting launches, one of which is for Mr. C. T. Estabrook, and a 15ft. power tender for Mr. C. M. Bruce.

Mr. Samuel MacConnell has resigned from the firm of MacConnell Bros., and with William H. Stimpson has established a yacht designing and brokerage business at 114 State street. Ex-Commodore J. R. Hodder, of the Winthrop Y. C., has been admitted to the firm of MacConnell Bros., who have removed their headquarters to 519 Exchange Building. John B. Killeen.

Mr. Samuel MacConnell has resigned from the firm of MacConnell Bros. and with William H. Stimpson has established a yacht brokerage business as MacConnell & Co., at 114 State Street, Boston, Mass. In addition to the regular business, they intend to add a department for designing yachts and superintending their construction.

Columbia Y. C.

This very enterprising Chicago club is making great preparations for Sir Thomas J. Lipton Competitive Cup races, to be held next August. These races should be the best of the season, as there are more clubs competing for this magnificent trophy.

Dr. Pinckard, owner of Sprite, last year's Chicago Y. C. representative, is having her thoroughly overhauled and her fin deepened to increase her power.

George R. Peare's La Rita, winner of the cup last year for the Columbia Y. C., is to have a new hollow mast and a new suit of Wilson & Silsby sails. Her sail plan is to be enlarged and changed in shape. Mr. Peare having discovered that he can increase area of jib and mainsail about 120 sq. ft., and the best share of this increase can be put in mainsail, as it was nowhere near the 80 per cent. limit. With these changes Mr. Peare is very confident that he can win the Lipton Cup again this season.

Outlaw, the Jackson Park Y. C.'s representative, is to have a new suit of sails, size to be increased to the limit, in the hope that she will improve sufficient in speed to win. Mr. Porter, her owner, is to be commended for his enthusiasm.

The Milwaukee Y. C. is red hot after the cup. Mr. Brown, of the club, having purchased Pilot, of Boston, one of last year's speedy 21-footers, of the Yacht Racing Association of Massachusetts Bay, and they building a new yacht, as yet unnamed.

The Lakes Erie and Ontario clubs are keeping very quiet as to their movements. However, it has been learned that there are two boats under way in Canada that are to be sent to Chicago, with the hope that they will capture this, the finest yachting trophy in the world.

The Columbia yachtsmen, not to be outdone, have secured plans from Small Bros., of Boston, and will have a yacht built and launched East, and thoroughly tuned up there before shipping her West. By trying her out with such cracks as Little Haste and Chloris, it will be much easier to tell what she can do. The name selected for this syndicate yacht is "Little Shamrock," same being considered very appropriate, in view of the fact that it is built to defend a cup offered for competition by the distinguished yachtsman, Sir Thomas J. Lipton.

Then there is Rear-Com. Oscar Daniel's Privateer—a Hanley centerboarder that will probably start, although hardly considered a probable winner—unless her last season's form is greatly improved upon.

The date of the Columbia Y. C.'s Annual Michigan City Race has been changed from June 6 to June 20, in the hope that there will be warmer weather at the latter date.

The 25-footers have taken a boom—the old ones being Nymph, Widsith, Columbia and Gloria. To this fleet five new ones will be added—owned respectively by Com. J. F. McGuire, Ole Amundson, Dr. E. H. Hayes, Mr. Oliver and Chas. E. Soule, Jr.

It looks now as though most of the racing would be confined to these two classes.

The Columbia Y. C. has decided to hold all races on July 4, in the morning, and to devote the afternoon to water sports directly in front of the club house, same to consist of swimming races, diving contests, dinghey races, canoe battles, etc., and in the evening the entire fleet is to be decorated with Chinese lanterns, and a yachtsmen's ball will be held at the club house in the evening.

American Power Boat Association.

Editor Forest and Stream:

In regard to the racing rules of the American Power Boat Association, published in your issue of March 7, I beg to state that the final rules for adoption will not be ready until after the next meeting, as the rules published by you will, no doubt, have many alterations and corrections. I would thank you to make note of the fact that according to the constitution of the Association, that any recognized yacht club in America having a membership of over fifty is eligible for representation and is entitled to one representative for each 100 members or fraction thereof, and the probable dues for the representation in the Association will be $3 for each representative to which the club is entitled. The next meeting of the Association will take place on Wednesday, March 18, at the Columbia Y. C., foot of Eighty-sixth Street, New York, at which time the officers of the Association will be elected, the reports finally adopted and the Association finally formed. It is earnestly requested that any yacht club desiring to join the Association shall signify their intention of doing so at once and name their representatives.

W. H. Ketcham,
Chairman A. P. B. A.

New York City, March 5.

Cruising Competition.

The photographs and manuscript submitted by the competitors in the cruising competition have been returned to us by Mr. T. C. Zerega, and it is our intention to begin to use the stories in Forest and Stream in the next issue. Seven of the cruises sent in will be published—the four prize winners and three others.

We have heard from all the prize winners, either by personal call or by letter. They all express their satisfaction at being among the successful competitors. We publish two of the letters; the first is from the winner of the third prize and the second one is from the winner of the special prize offered by Mr. Zerega:

Editor Forest and Stream:

Inclosed please find receipt for your check for twenty dollars. I want to say that I appreciate very much my being awarded this prize, and consider myself highly honored. Here's wishing you continued prosperity and an ever increasing circulation.

William Lambert Barnard.

Editor Forest and Stream:

I am in receipt of your esteemed favor of the 26th ult., inclosing check for ten dollars, fourth prize money in yachting competition, for which please accept my thanks. When I got my copy of the Forest and Stream of the preceding week, I saw that "something was coming to me." You will be pleased to know that I am more than satisfied, as I felt all the time that my story scarcely came within the conditions of the competition. The special mention that Mr. Zerega gave the cruise in making the awards was very pleasant both to the owner of the yacht and myself. Please convey to Mr. Zerega our personal thanks for his courtesy and generosity in the matter. If I dare trespass on his kindness further, I should be very grateful to have him send me, at his leisure, a criticism of my article, by which I might profit in any future attempt of this kind.

H. P. Vicborn.

Wyandotte, Mich., March 2.

YACHT CLUB NOTES.

At the annual meeting of the Greenville Y. C., of Jersey City, whose club house and anchorage are at the foot of Linden Avenue, upper New York Bay, the following officers were elected for the ensuing year: Com., Oscar Grieff; Vice-Com., H. D. Salkeld; Rear-Com., W. Guilfoyle; Sec., Chas. J. Leach; Treas., C. P. Boos; Fin. Sec., Harry Seimer; Meas., Charles Johnson; Sergeant-at-Arms, Louis Morling; Board of Trustees, Oscar Grieff, Chas. J. Leach, C. P. Boos, F. J. McMullen, A. G. Roemer, Harry Queen, S. A. Cooper, John Ryder and W. Bruns. The finances of the club were reported in a satisfactory condition, and the old Guatier mansion, which the club has occupied for over ten years, is to receive some improvements.

The Gloucester (N. J.) Y. C. held its annual meeting on March 1 and elected the following officers: Com., Benjamin Wilson; Vice-Com., John Minahan; Rear-Com., Robert Murray, Jr.; Rec. Sec., Walter Fleming; Fin. Sec., Americus Brinton; Treas., John Casnet; Trustees, Harry Quinn, James F. Leming, Thomas Platts; Steward, Harry Quinn; Meas., Harry Tolan, William Lowrey, Stewart Cattell.

The Columbia Y. C. held its annual meeting at the club house, foot of West Eighty-sixth Street, New York City, on Tuesday evening, March 3. There were two tickets in the field, and the following were elected: Com., Walther Luttgen; Vice-Com., Alfred Carr; Rear-Com., W. Colborn; Sec., George R. Bronson; Treas., James Stewart; Fleet Surgeon, Dr. H. Griswold; Trustees, Nelson M. Patterson, William K. Olcott and William C. Trageser.

Com. Frederick G. Bourne, New York Y. C., has appointed former Rear-Com. C. L. F. Robinson Fleet Captain.

Com. Henry R. M. Cook presided at the special meeting of the Brooklyn Y. C., that was held at the Clarendon Hotel, Brooklyn, on Feb. 25. At this meeting it was voted to raise the annual dues from $20 to $30. It was also decided to abolish the monthly meetings and hold an annual one instead. The club now has 240 members. The present club house, at the foot of Twenty-third avenue, Bensonhurst, has been leased for five years, and the buildings will be refitted and extended.

The "Fitting Out" dinner of the Manhasset Bay Y. C. will be held at the Hotel Manhattan, New York City on Wednesday evening, March 18, at 7:30 o'clock.

The Shelter Island Y. C. recently elected the following officers: Com., James Weir, Jr.; Vice-Com., F. M. Smith; Rear-Com., James B. Edson; Sec., William B. Hill; Treas., William H. Bedford; Meas., Pliny Brigham; Fleet Surgeon, J. Lester Keep, M. D.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Messrs. W. B. Stearns and G. T. McKay announce that they have formed a partnership under the name of Stearns & McKay. The business of designing, building and fitting out of yachts will be carried on at the Marblehead Yacht Yard as heretofore. A specialty will be made of the design and construction of auxiliary yachts and motor launches.

The schedule for the Interlake Yachting Association's regatta at Put-In Bay, has been arranged as follows: July 20, smoker; July 21, triangular race, all classes; July 22, windward and leeward races and power race; July 23, squadron sail, auxiliary race and ball; July 24, free-for-all, distribution of prizes.

Carmena is the name selected for the steam yacht building at Lawley's yard, South Boston, for Mr. Chas. Fletcher, from designs by Mr. A. S. Cheseborough.

Catania, the steam yacht owned by the Duke of Sutherland, has been chartered through Messrs. Tams, Lemoine & Crane to Mr. S. Barton French. Com. A. Van Rensselaer has chartered his steam yacht Mary to Mr. C. Ledyard Blair through the same agency.

The steam yacht building at Jacob's yard, City Island for Mr. Spencer Kellogg, will be named Elgrudor. Mr. Jacob will build a centerboard yawl for Dr. J. C. Ayer from designs by Mr. B. B. Crowninshield. She will be 57ft. over all, 35ft. waterline, 11ft. breadth and 7ft. 6in. draft.

Messrs. C. T. Reynolds and Harry Growtage are having racing catboats 26ft. long built from the same design at Gil Smith's yard, Patchogue, L. I. Mr. Smith is building for Mr. Thomas Cousins a sloop 25ft. on the waterline and 36ft. over all. At the same yard there is building a 26ft. catboat for Mr. Thomas R. Ball, and a 20ft. catboat for Mr. H. Y. Bedell.

S. C. Wicks & Co., of Patchogue, L. I., are building for Mr. John Thornton a ten horse-power cruising launch. She is 31ft. over all, 10ft. breadth and 28in. draft. At this yard there is building a cruising sloop for Mr. Walter Cook, Jr. She is 37ft. over all, 25ft. waterline, 11ft. breadth and 30in. draft.

Messrs. Overton & Smith, of Bellport, are building two boats that will be raced in the 30ft. class.

A 48ft. schooner, a 30ft. sloop and a 20ft. catboat are building at Mr. M. Smith's yard at Bellport.

The Imperial Y. C., at its annual meeting just held, appropriated $10,000 for entertainments and special expenses during the regattas of next June. Emperor William was re-elected President. Admiral von Koellner, Capt. Pock and Lieut. Luedecke were elected members of the board. Prince Henry of Prussia was among those present.

During the course of the discussion of the prospects of the June yachting racing, it was mentioned that Allison Armour, of Chicago, was the only American yacht owner who had notified the board that he would attend the regattas. Few other Americans are expected, because American interests will be centered in the races for the America's Cup off Sandy Hook.

The books of the Imperial Y. C. show that 36 steam yachts and 162 sailing yachts are owned by the members, an increase of 9 vessels, and that the total membership of the club is 1,785, an increase of 213 over last year.—New York Times.

Rifle Range and Gallery.

For General Instruction.

The following interesting information is taken from the New York Sun:

The executive committee of the National Rifle Association of America met at 99 Cedar street yesterday, the following being present: Gen. B. W. Spencer, New Jersey; Gen. George W. Wingate, New York; Gen. George H. Harries, District of Columbia; Gen. John S. Saunders, Maryland; Col. Leslie C. Bruce, New York; H. A. Haskell, New York, and Lieut. A. S. Jones, New Jersey. The following resolution, proposed by Lieut. Jones and adopted, tells of the object of the meeting:

Resolved, That the National Rifle Association of America, recognizing the importance of training the young men of the country in rifle shooting, adopt a code for a course of rifle instruction, which code shall be the same as that proposed by the War Department for the State militia, and that official score sheets be supplied to all ranges and to rifle clubs throughout the United States for the purpose of enabling citizens not connected with any military establishment an opportunity to qualify and become enrolled in the National Marksmen's Reserve, and that a suitable decoration be given to each person qualifying; and that a classified report be made to the War Department each year of those who have qualified under the code.

"As the plan of the Administration for a national volunteer reserve was defeated in the last session of Congress," said one of the executive committee yesterday, "the National Rifle Associaiton now proposes to secure and offer to the Government such a reserve, through adopting a code for qualification and rifle practice which will conform to that drawn up by the War Department for the militia.

"It is proposed to supply official score sheets to all the rifle clubs throughout the country, and all qualifying will be done under proper supervision. Those qualifying will receive a private's decoration with the words 'National Marksman' inscribed thereon; for subsequent years a small pendant with the year on will be given. Report will be made to the War Department of those qualifying during the year, and be published by the National Rifle Association.

"Another undertaking which the National Association is promoting is introducing rifle shooting in the schools and colleges of the country. When a course of instruction in rifle firing has become established, it is the purpose of the Association to institute a series of competitions among the schools to keep the interest alive."

Major Bell, Inspector-General of Rifle Practice of the District of Columbia, has started this movement by the following resolution, which has met the approval of the executive committee, and will be put into immediate operation.

Resolved, That the National Rifle Association of America deems it expedient to take immediate steps to secure the affiliation with it of colleges, universities and other educational institutions of the United States for the purpose of stimulating and encouraging rifle practice among the American youth.

Another matter of interest taken up by the executive committee had to do with sending a team of American military riflemen to Bisley next summer to compete for the Palma trophy. It was resolved to send a team, provided the necessary funds could be raised. It has been estimated that about $8,000 will be required. So far about $600 has been subscribed by regiments of this city and New Jersey.

Washington Defeats Montreal.

Washington, D. C., March 8.—It has been a long time since I have sent you any notes or scores of shooting, but this is of such an interesting character I am pleased to write you. This is the first of a series best two out of three matches, and we hope to land the next one safely. The conditions will probably be changed for the next match, to make things a trifle more even.

Revolver shooting is on the boom in Washington, as the late match with the Montreal A. A. A. Revolver Club will evidence. Each club agreed to shoot on their home ranges and exchange telegrams and targets. Teams consisted of ten men, 20 shots each at the Standard target, 20yds. distance. The Washington Revolver team used .38cal. military revolvers, and service ammunition; the Canadian team used any revolver, maximum caliber .38, and any ammunition. This is considered by revolver experts to be an advantage, and the M. A. A. A. R. C. generously allowed the Washington team a handicap of 5 points for each ten shots. A time limit of 5 minutes for ten shots was also decided on. The Washington team were winners without the handicap, and it is not reckoned in the following scores:

Maj G B Young	64 63—127	Capt A Summers	77 76—153
Maj J E Bell	42 61—103	A M Woltz	64 57—121
Lieut F W Holt	61 74—135	Geo E Cook	81 78—159
J C Bunn	76 67—143	Lieut W. M. Farrow	83 71—154
E A Byrnes	65 62—127		
J W McCormack	50 67—117		1339

Montreal Amateur Athletic Association Revolver Club, 1280.

Capt. Corman was referee in Montreal. Lieut. Britton was referee in Washington. Lieut Farrow was captain of the Washington team.

W. M. F.

Cincinnati Rifle Association.

Cincinnati, O.—At the regular meeting of this Association on March 1 the following scores were shot. A very tricky wind ranged from 4 to 8 o'clock. Conditions, 200yds., offhand, Standard target.

Hasenzahl	88 87 82 82 81	Bruns	81 80 79 74 66
Strickmeier	85 83 81 80 79	Lux	79 79 78 72 72
Gindele	84 84 83 78 73	Trounstine	79 78 78 74 73
Nestler	83 83 83 83 80	Jonscher	76 74 70 70 70
Hoffman	83 79 75 74 73	H Uckotter	76 63 57 .. ..
Odell	83 77 75 75 73	Freitag	74 73 72 72 69
Payne	82 81 80 79 78	R Uckotter	66 65 63 61 60
Hofer	82 79 79 77 77		

Honor target: Hasenzahl 24, Gindele 21, Nestler 25, Hoffman 25, Odell 21, Payne 25, Hofer 24, Lux 19, Trounstine 22, Jonscher 25, Freitag 22.

Championship Gallery Match.

The championship gallery match for 1903, under the auspices of the Zettler Rifle Club, New York, Feb. 28 to March 7, March 1 excepted, was closely contested. The conditions were open to all, 100 shots, offhand, $5 entrance, 20 scores of 5 shots to be fired at

any time during the tournament; the regular 25 ring (¼in.) target to be used. There were seven merchandise prizes, and twenty cash prizes, ranging from $15 down to $2. The winner was Louis B. Ittel, of Allegheny City, Pa., with a score of 2,457 out of a possible 2,500. Dr. W. G. Hudson was second with 2,455. H. M. Pope was third with 2,442. Other prize winners were: P. Muth 2,439, T. P. Geisel 2,439, F. C. Ross 2,437, L. P. Hansen 2,436, T. C. Buss 2,435, M. Dorrler 2,432, Dr. T. C. T. Mehlig 2,430.

The ring target, open to all; targets of 3 shots, 35 cents; reentries unlimited; the best 3 targets to count for the first 5 prizes; the best 2 targets to count for the next 5 prizes; one target for the rest. The 25-ring target with ⅛in. rings was used.

The ring target match was also won by L. P. Ittel. His 3 targets showed 75 each, which is a perfect score. H. M. Pope was second with two 75s and a 74. Scores:

L P Ittel, Pittsburg	75	75	75—225
H M Pope, Springfield	75	75	74—224
George Schlicht, Union Hill	75	74	73—222
T R Geisel, Springfield	74	74	74—222
L P Hansen, Jersey City	74	74	74—222

Bullseye target: H. Fenworth, New York, 3½ degrees; W. Koch, 6 degrees; L. Buzzine, New York, 7½ degrees; T. H. Keller, New York, 8 degrees; J. Metz, New York, 9½ degrees; H. F. Barning, Springfield, 9½ degrees; H. M. Pope, Springfield, 10 degrees.

Greatest number of bullseyes: S. N. Murphy, Catskill, 180; P. Muth, Brooklyn, 123; T. H. Keller, New York, 120.

Revolver Championship.

THE first match of the series of the annual indoor championship matches of the United States Revolver Association, March 4 to 7 inclusive, was held under the auspices of the Manhattan Rifle and Revolver Association, 2628 Broadway. There were two championship events; one for revolver shooting, distance 20yds., the other for pistol, distance 20yds., there being three prizes in each, a silver cup, a silver medal and a bronze medal.

Dr. W. H. Luckett finished with the highest score in the revolver match, making 437 out of a possible 500. He also made the best score on any one target, 49 out of a possible 50.

In the pistol match the still better score of 456 was made by J. A. Dietz, Jr.

Revolver championship, distance 20yds., 50 shots on the Standard American target, reduced: Dr. W. H. Luckett 437, J. A. Dietz, Jr., 435, Dr. Reginald H. Sayre 416, A. P. Proctor 415, Sergt. W. E. Petty 408, A. L. A. Himmelwright 383.

Pistol Championship, distance 20yds., 50 shots on the Standard American target, reduced: J. A. Dietz, Jr., 456, Dr. Reginald H. Sayre 446, A. L. A. Himmelwright 438.

Trapshooting.

Fixtures.

If you want your shoot to be announced here send a notice like the following:

March 19.—Carlstadt, N. J.—John S. Wright's all-day shoot.

March 16-21.—Houston, Tex., Gun Club's all week shoot; $500 added money. S. J. Smith, Sec'y.

April 1-3.—Grand Island, Neb.—Consolidated tournament of the Buffalo Bill Gun Club, of North Platte, and the Grand Island Gun Club; two days targets, one day live birds. Managers, Geo. L. Carter, North Platte, and Gus Sievers, Grand Island.

April 2-3.—Des Moines, Ia.—Hopkins-Sears Company's tournament.

April 7-10.—St. Joseph, Mo.—Tournament of the Missouri State Game and Fish Protective Association. F. B. Cunningham, Secretary-Manager.

*April 8.—Allegheny, Pa.—North Side Gun Club. L. B. Fleming, Sec'y.

April 14-17.—Kansas City, Mo.—The Interstate Association's fourth Grand American Handicap at targets, at Blue River Shooting Park. One thousand dollars added to the purses. Elmer E. Shaner, Secretary-Manager, 111 Fourth avenue, Pittsburg, Pa.

April 20.—Springfield, Mass.—Spring tournament of the Springfield Gun Club. C. L. Kites, Sec'y.

April 21-22.—Olean, N. Y., Gun Club's fourth annual tournament. B. D. Nobles, Sec'y.

April 21-23.—Concordia, Kans.—Kansas State Sportsman's Association's State shoot, under auspices of Concordia Blue Ribbon Gun Club; $300 added. F. W. Olney, Sec'y.

*April 22-23.—Pittsburg, Pa.—Herron Hill Gun Club. Harry Vandergrift, Sec'y.

April 28-May 1.—Lincoln, Neb.—Nebraska State Sportsmen's Association's twenty-seventh annual tournament, under the auspices of the Lincoln Gun Club. F. E. Mockett, Sec'y.

*May 5-6.—Irwin, Pa., Gun Club's tournament. John Withers, Sec'y.

May 6-7.—Union City, Ind.—Parent Gun Club's tournament.

May 6-7.—Lafayette, Ind.—Lafayette Gun Club's tournament.

May 6-7.—Titusville, Pa., Gun Club's annual tournament. T. L. Andrews, Sec'y.

**May, second week.—Vicksburg, Miss., Gun Club's tournament.

May 7-8.—Wilmington, Del.—Wawasett Gun Club's target tournament.

May 9-10.—Chicago, Ill.—Spring tournament of the Grand Crescent Gun Club.

May 12-15.—Interstate Park, L. I.—The Interstate Association's fifth Grand American Handicap at targets; $1,000 added to the purses. Elmer E. Shaner, Secretary-Manager, 111 Fourth avenue, Pittsburg, Pa.

May 19-22.—Wissinoming, Philadelphia.—Thirteenth annual tournament of the Pennsylvania State Sportsmen's Association, under auspices of the Florists' Gun Club of Philadelphia. V. V. Dorp, Sec'y.

May 21-22.—Kenton, O.—Shoot of the Kenton Gun Club. A. G. Merriman, Sec'y-Treas.

May 26-27.—Dubuque, Ia., Gun Club's fourth annual amateur target tournament. A. F. Heeb, Sec'y.

*May 26-27.—Brownsville, Pa.—Brownsville Gun Club tournament. W. T. Doherty, Sec'y.

May 27-28.—Williamsport, Pa.—The Interstate Association's tournament, under the auspices of the West Branch Rod and Gun Club. H. A. Dimick, Sec'y.

May 27-29.—Fort Wayne, Ind.—Two-day bluerock tournament of the Corner Rod and Gun Club; $100 added. John V. Linker, Sec'y.

May 29-30.—Union City, Ind.—Spring tournament of the Parent Grove Gun Club.

May 30.—Tournament of the East Harrisburg, Pa., Shooting Association.

May 30—Newport, R. I., second annual tournament of the Aquidneck Gun Club. J. S. Coggeshall, Sec'y.

May 30.—Detroit, Mich.—Winchester Gun Club's Decoration Day third annual tournament; all day. Rose system and average prizes. Sliding handicap, 16, 18 and 20yds., D. A. Hitchcock, Sec'y-Treas.

June 2-5.—Baltimore, Md.—Third annual Baltimore County shoot; three days targets; one day live birds; $500 in purses and prizes. Hawkins and Malone, Managers.

June 3-4.—Boston, Mass.—The Interstate Association's tournament, under the auspices of the Boston Shooting Association. O. R. Dickey, Sec'y.

June 3-5.—Parkersburg, W. Va.—Sixth annual tournament of the West Virginia Sportsmen's Association, under auspices of Ohio Valley Shooting Association.

June 4-5.—Greenville, O.—Spring tournament of the Greenville Gun Club.

**June, second week.—Memphis, Tenn., Gun Club's tournament.

June 7-8.—Ligonier, Pa., Gun Club's tournament.

June 9-11.—Sioux City, Ia.—Ninth annual amateur tournament of the Soo Gun Club. B. F. Duncan, Sec'y.

June 9-11.—Cincinnati, O.—Seventeenth annual target tournament of the Ohio Trapshooters' League. Chas. T. Dreihs, Sec'y.

*June 10-11.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.

June 16-19.—Warm Springs, Ga.—The Interstate Association's tournament, under the auspices of the Meriwether Gun Club. Chas. L. Davis, Sec'y.

June 16-18.—New London, Ia.—Seventh annual midsummer target tournament of the New London Gun Club.

*June 24-25.—New Castle, Pa., Gun Club's tournament. James Atkinson, Sec'y.

*July 7-8.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.

July 8-9.—Huntsville, Ala.—The Interstate Association's tournament, under the auspices of the Huntsville Gun Club. E. R. Matthews, Sec'y.

**July, second week.—Shreveport, La.—Cadds Gun Club's tournament.

*July 21-22.—Beaver Falls, Pa., Gun Club's tournament. W. R. Keefer, Sec'y.

July 30-Aug. 1.—Viroqua, Wis.—The Interstate Association's tournament, under the auspices of the Viroqua Rod and Gun Club. Dr. R. W. Baldwin, Sec'y.

Aug. 19-20.—Ottawa, Ill.—The Interstate Association's tournament, under the auspices of the Rainmakers' Gun Club. Paul A. Selember, Sec'y.

*Aug. 19-20.—Millvale, Pa., Gun Club's tournament. Wm. Bussler, Sec'y.

*Sept. 1-2.—Irwin Pa., Gun Club's tournament. John Withero, Sec'y.

Sept. 2-3.—Akron, O.—The Interstate Association's tournament, under the auspices of the Akron Gun Club. G. E. Wagoner, Sec'y.

*Sept. 23-24.—Ruffsdale, Pa., Gun Club's tournament. R. S. Deniker, Sec'y.

Sept, 23-24.—Ruffsdale, Pa., Gun Club's tournament.

*Oct. 6-7.—Allegheny, Pa.—North Side Gun Club's tournament. L. B. Fleming, Sec'y.

*Oct. 20-21.—Ligonier, Pa., Gun Club's tournament. J. O'H. Denny, Sec'y.

*Member of Western Pennsylvania Trapshooters' League. Chas. G. Grubb, Sec'y, 507 Wood street, Pittsburg.

**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J. Bradfield, Sec'y, Vicksburg, Miss.

DRIVERS AND TWISTERS.

The annual meeting of the Aquidneck Gun Club, of Newport, R. I., was held on March 3. The list of officers elected for the ensuing year are as follows: President, Wm. A. Dring; Vice-President, E. P. Gosling; Secretary-Treasurer, J. S. Coggeshall; Executive Committee: Wm. A. Dring, P. H. Powell and H. A. Peckham. Conditions were fixed for the final shoot for the Powell cup on April 1, which will be 100-target race at unknown angles. A liberal appropriation was also made for average prizes for the second annual tournament.

The Herald states that Mr. C. A. Sykes, who is to be the captain of the Crescent team in their match with the Boston Athletic Association, which begins on March 21, announced on March 7 that the conditions of the match will be 100 targets to a man, eight men to a team, at known traps and unknown angles. The aggregate score at both grounds is to decide the ownership of the challenge cup, which will be open to challenge every year. The first half of the match will be shot on the Crescent grounds, and the latter half at Boston on April 4.

In a match at Palm Beach, Fla., between Mr. John W. Gates and his son, Mr. Charles G. Gates, 100 birds a side, the press dispatches recount that "the shooting was remarkably fine, being the best that has occurred at Palm Beach. They had picked fast birds from St. Louis. They stood at 30yds. Charles G. Gates killed 93 and his father 88. During the contest Charles Gates made 30 straight kills, which is a record for the club." No mention is made of how many million scudos were in the purse.

Capt. J. A. H. Dressel, with the regular tribal rites was adopted into the tribe of Ojibway Indians on Friday evening of last week, and was given the name of Wasinini, which in English signifies, The Man in the Desert. They deliberated whether to baptize him Chief Hurry-up, a rather good name in itself. Capt. Dressel entertained his new relatives with delicatessen and ambrosia.

A press dispatch states that "the Princeton, N. J., University Gun Club will erect a club house this spring near the traps, back of Brown Hall, on the south campus. Plans are now being drawn for the building, and work on it will be started in a few days. The candidates for the gun team will be called out within the next two weeks. Nearly all the members of last year's team are still in the University."

Mr. G. R. Schneider, secretary, pro tem, writes us that "at a meeting of the Fulton Gun Club, of Brooklyn, L. I., the following officers were elected for the year 1903: Geo. R. Schneider, President; Eugene Fuchs, Vice-President; Geo. R. Schneider, Secretary pro tem; Anthony Woods, Treasurer, and W. G. Hearne, Shooting Captain."

On March 6, at Singac, N. J., Mr. T. W. Morfey defeated Mr. Aaron Doty in a 100 live-bird match, $100 a side, by the score of 92 to 85. Morfey lost four dead out. Doty lost a large number dead out. The rise was 30yds., 50yds. boundary. Mr. T. Chris. Wright acted as referee.

Mr. Chris Gottlieb, of Kansas City, Mo., has sent us the cover of the souvenir score book for the fourth Grand American Handicap at targets. It is a beautiful work of art. Mr. Gottlieb informs us that the book will be printed on heavy book paper, and will be a work of beauty as well as of utility.

At Palm Beach, Fla., Mr. J. S. S. Remsen, of Brooklyn, won the loving cup at the Florida Gun Club's shoot, on Friday of last week. The cup was presented by Mr. Charles Goodwin Emory, of New York. Mr. Thomas McKee Cook won second.

June 2, 3, 4 and 5 have been fixed upon as dates for the third annual Maryland County shoot at Baltimore. Three days will be devoted to targets, one day to live birds; $500 in purses and prizes given. Messrs. Hawkins and Malone are managers.

The contest between teams of the Port Washington Gun Club and the Freeport Gun Club, at Freeport, L. I., March 4, was won by the latter club. The scores were 285 and 256. There were seven men to each team, and each man shot at 25 targets.

Mr. L. J. Squier, under date of March 6 writes us as follows: "The Wawasett Gun Club, of Wilmington, Del., will give a two-days' target tournament on May 7 and 8. It will be a distance handicap shoot, with added money, and open to all."

Press dispatches state that the Golden Gate Gun Club, of San Francisco, is deliberating over whether or not to abandon live-bird shooting entirely, devoting the competition to bluerock shooting only.

A large bluerock tournament to be held in June next is under consideration of the San Francisco Trapshooting Association. One of the inducements contemplated is cash prizes to the amount of $1,500.

Mr. G. G. Stephenson, Jr., scored the first win on the March cup of the Crescent Athletic Club at Bay Ridge, L. I., on Saturday of last week. He scored 48 out of 50.

It is rumored that the next shoot between the Baltimore Shooting Association and the Keystone Shooting League of Philadelphia will be held at Baltimore, March 16.

A special meeting of the stockholders of the Interstate Association will be held on March 13, at 2 o'clock P. M., at 79 Cedar street, New York.

Mr. Harvey McMurchy, the prince of good fellows, is reported to have arrived in San Francisco, last week, from a long Eastern trip.

On June 8 to 12 the New York State shoot will be held under the auspices of the Ossining, N. Y., Gun Club.

In a match at 100 live birds per man, $200 a side, Mr. Fred Muller defeated Mr. A. J. Miller, at Philadelphia, on Wednesday of last week by a score of 83 to 77.

Mr. Fred Gilbert, of Spirit Lake, Ia., won high average at the three-days' tournament of the Forester Gun Club, Davenport, Ia., which ended on March 6.

The fourth annual tournament of the Olean, N. Y., Gun Club will be held on April 21 and 22, so we are informed by the secretary, Mr. B. D. Nobles.

BERNARD WATERS.

Ticonderoga Gun Club.

THE Ticonderoga Gun Club enjoyed the reunion and dinner of its members, held at the New York Yale Club on the evening of March 6. About twenty-five men who habitually visit Eagle Lake, Ticonderoga or that part of the Adirondacks for their fishing and hunting trips were present.

A number of interesting reminiscences about life on the lake were related by the president, Ingle Carpenter, in a graceful manner. The secretary, Peter Flint, spoke earnestly in favor of the work of the organization in keeping alive the principle of eternal vigilance in the use of firearms which has kept Essex county free from hunting disasters in deer hunting for the last year, and alluded to the efforts that several public-minded men in this State and northern New York are putting forth in the direction of preserving the ruins of old Ticonderoga, restoring the grim old fortress by the lake, and making a public military park for reviews and garrison drill of its matchless surrounding fields and groves. He then referred to the interest that President Roosevelt is reported to have taken in the matter, and expressed it as his desire that the club should do all in its power to forward this subject and aid the Ticonderoga Historical Society in its most patriotic efforts in this direction. He was followed by Brant Sero, a great-great grandson of the famous Indian Chief Joseph Brant, the friend and supporter of the Crown and the Johnsons in central New York during the Revolutionary War. Mr. Brant Sero has reeently returned from England and South Africa, where he served during the Boer War for England, and is now engaged in giving lectures and entertainments for the uplifting of his race and the Mohawk tribe in general. He was listened to with deep attention, and the scene of a big chief in evening clothes talking in the most friendly way concerning the philosophy, religion and laws of his people to the descendants of men with whom his ancestors had engaged in the bloody battle of Oriskany, was one that has not before been seen, in the Yale Club at least. He instructed the club in the Mohawk style of singing, and led a chorus used by his tribe when a male child is presented by the medieine man with his first name. He said that Ticonderoga might possibly mean "Under the Fish Tail," which may mean the situation of the fort grounds, under the falls, up which the salmon leaped in the old days before pulp and saw mills were heard of, on their way to the colder waters of the upper stream, and which was consequently under his tail. It may have meant the fish tail rapids of the creek, or possibly the name was given to the form of the promontory upon which the fortress was erected, beneath which the silent canoe of the Indian might have passed nightly by stealth. He spoke of the hill country of Ticonderoga and Eagle Lake, which he had heard his people speak of in tradition, and suggested the Indian name Ahgweks, Eagle, as a neat title for the beautiful water. He spoke feelingly of the kindness of men like Dr. Grinnell and President Roosevelt, and of their desire that the Indian should be thoroughly assimilated into the civilization of America, where his race found its early home.

Mr. Edward M. Bliven followed with some earnest remarks about the future of the club, and gave the party the result of his recent experiences in Ticonderoga among the large number of local members, who with Alexander Weed, our coming president, will have the work of actively building and maintaining the house at Eagle Lake during the winter and spring, when the city members are tied to their places of business in the city. He also related some amusing personal anecdotes about the hunting and fishing of Ticonderoga.

Mr. W. Bradford Smith followed with a brief speech about his own amateur canoe building and success with the big pike on the lake.

At the suggestion of Mr. De Motte, the health of President Roosevelt was drunk by the members standing.

Paris S. Russell gave some amusing dialect imitations, and gave, as treasurer, some comforting details of the club's condition.

Among those present were Herbert Smith, Daniel Dugan, A. G. Oakley, M. R. Baldwin, C. D. Newell, J. E. Taylor and Wm. W. Rutter, of Orange, N. J.; G. F. Bentley, Leslie Palmer, Mr. Emory and Mr. Jacobs.

PETER FLINT, Sec'y.

Ossining Gun Club.

OSSINING, N. Y.—The inclosed scores of the Ossining Gun Club were made at the regular weekly shoot, March 7. Though the attendance was not large, two of the cups, which are to be won three times to own, were shot for.

Event No. 2 was the handicap cup, misses as breaks, and event No. 3 was for the scratch cup. P. B. was high man in event No. 2, and G. Hubbell won a shoot-off from the tie with I. Washburn, made on 22d ult. This puts Hubbell and Rohr ahead with two wins each. Coleman got his first win to-day for the scratch cup with 22. Blandford made 23, but was just shooting along. Figures following the names are the allowances in event No. 2:

Events:	1	2	3	4	5	6	7
Targets:	10	25	25	10	10	5p	5p.
I Washburn, 3	7	19	w	7	8	5	..
R Kromer, Jr., 3	7	20	17	7	9	..	..
W Coleman, 3	9	..	22	..	..	..	..

P B, 5	..	24	18	8	7	7	6
Hans, 3	..	21	18	7	6	7	7
C G Blandford, 0	..	..	23	..	7	8	7

C. G. B.

Poughkeepsie Gun Club.

POUGHKEEPSIE, March 7.—The weekly shoot of this club to-day was attended by but seven members. Several of our "regulars" are in the South, which, with lack of interest in some of our heretofore enthusiastic members, accounts for light attendance of our shoots for some time past. Some of the boys, too, have gone stale, and are keeping away from the traps for the purpose of resting out, while some others "in the same boat" are sticking at it in hopes of "getting on" again as suddenly as they got off. Following are the day's scores, all 25-target events:

Events:	1	2	3	4	Shot at.	Broke.
*Smith	11	11	14	11	95	47
Traver	19	21	21	8	90	69
Hoetor	15	13	12	8	95	48
Irving	15	..	..	..	25	15
Marsh	3	5	9	12	100	29
Perkins	18	17	14	..	75	49
Hew	10	17	14	..	75	41

In last event Smith and Hoctor shot at 20, and Traver shot at but 15 targets.

SNANIWEH.

Colored Championship Trophy.

PLEASANT HILL, Mo.—Being the holder of the colored championship trophy, I hereby make known to all colored shooters—especially the ones from St. Louis and Kansas City, who have been doing much talking—that, if before the 1st of April, I receive a challenge for said trophy, I will not require the challenger to put up one cent against trophy, but will put same up free of charge, and each put up $25 a side, losing man to pay for birds. I will designate St. Louis or Kansas City as place of match, whichever is handiest to challengerr, whoever he may be.

And now, here is something new regarding this trophy. This trophy may be redeemed from holder thereof for $25 cash, by any gun club which will put the same up in open handicap contest. Now, this should cause all aspirants to covet this trophy more than ever, for the holder of same at time of the seventh annual colored merchandise and sweepstake shoot, to be held under the auspices of the Colored Gun Club of Kansas City, Mo., this year, it will be worth $25 to him, for they will redeem same for this annual shoot, whereas, if I am holder of same this year I have agreed to surrender same to them without any redemption.

Now, boys, is your time to talk and be heard from.

T. H. COHRON.

IN NEW JERSEY.

North River Gun Club.

Edgewater, N. J., March 4.—There were fourteen contestants in the 100-target event of the North River Gun Club to-day. A light fog toned up the background evenly, there was a good light, and a calm atmosphere; still, the shooting was difficult, as shown by the scores. Hardly any one held up to his average, excepting Wash, who shot in good time, and centered his targets with excellent precision. He made a total of 95 out of the 100, and his nearest competitor was Schortemeier, with a score of 89. Beside the main event, there were eight sweepstake events at 10 and 15 targets. A number of the crackerjacks were presnt. All the events were shot for the price of targets. The scores follow:

Events:	1	2	3	4	5	6	7	8
Targets:	10	10	15	15	15	15	15	15
Welles	7	7	12	9	9	..	..	..

Morfey vs. Doty.

Singac, N. J., March 6.—The weather was clear, calm and pleasant. There was a good attendance. The birds were first class. The retrieving was done excellently well by a setter dog. The conditions were 100 birds, $100 a side, 30yds. rise, 50 yds. boundary. The scores were Morfey 92, Doty 85. The scores:

Doty	12112201212222222222022022—22

ON LONG ISLAND.

Freeport—Port Washington.

Freeport, L. I., March 4.—The team contest between the Port Washington Gun Club and the Freeport Gun Club took place on the grounds of the latter to-day. There were seven men to a team and 25 targets per man. The results follow:

Port Washington Team—Smull 46, Glover 42, W. Hyde 32, Bradley 31, Cornell 41, C. Hyde 29, Carey 35; total 256.

Freeport Team—Bell 43, Willis 42, Rider 36, Apgar 44, Sprague 39, Dr. Carman 39, Lott 42; total 285.

New York County Gun Club.

Rockaway Park, L. I., March 2.—There was a strong northwest wind, with squalls, which made exceedingly irregular target flights. A delicious stew and coffee was furnished gratis to the shooters. There will be a shoot of the club on March 15, at which lunch as above mentioned will be served gratis. The scores:

Events:	1	2	3	4	5	6	7
Targets:	20	20	20	25	20	20	25
Duke	11	14	13	16	15	12	18

Trophy, 15 targets: Marshall (3) 8, Money (1) 14, McConville (2) 15, Palmer (1) 13, Lott (2) 14, Hopkins (2) 11, Fish (1) 11, Hagedorn (2) 14, O'Brien (3) 9, Werleman (4) 9, Rasmus (2) 13, Stake (2) 13, Sykes (2) 12, Bennett (3) 13, Wigham (2) 14.

WESTERN TRAP.

Pigeon Bill in Illinois.

CHICAGO, Ill., March 6.—It is generally understood that pigeon shooting is a thing of the past in and around Chicago. The fact is, that live-bird shooting is prohibited in this city under municipal ordinance, and there is no State law barring it. It has, however, long been understood that during the present session such a measure would be introduced. Hence comparatively little surprise is expressed over the fact that yesterday Representative Clarence A. Darrow, of Chicago, introduced a bill providing that "any person who shall keep or use any live pigeons, fowl or other bird for the purpose of a target, or to be shot at either for amusement or a test of skill in marksmanship, and any person who shall shoot at any bird aforesaid, shall be punished by a fine of not less than $3 nor more than $300 for each offense." The bill provides that nothing in the act shall apply to the shooting of wild game in a wild state.

There is much likelihood that this bill will become a law. It is generally understood that the S. P. C. A. is behind this bill in Illinois, and a number of similar measures which have been already presented or presently will be in other Western States.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Davenport Tournament.

DAVENPORT, Ia., March 6.—The midwinter tournament of the Forester Gun Club closed to-day. The attendance was fair. Twenty-two shooters took part in the first day's target shooting; twenty-four the second and twenty-nine the third day.

The shooting was done from one magautrap. The weather was cloudy and damp.

The programme at targets was a long one, and had ten events on both the first and second days, and five events at targets and two at live birds on the third day. The main event in the programme was to have been at 25 live birds, entrance $20; but owing to the scarcity of birds it was cut down to 15, $10 entrance. The birds were an uneven lot.

But one man made a clean score. Mr. Arthur, of De Witt, was the lucky one, and he drew about $75 for doing the trick.

The trade was represented by Samuel D. Woodhane, Leslie Standish, C. W. Budd, Fred Gilbert and Fred C. Whitney.

Fred Gilbert won high average for the three days, and was about $80 to the good.

The Forester Gun Club will hold a fall tournament and will add good money to the purses.

March 4, First Day.

Loudenburg, Stauber, Stone and Henshaw divided. Birds ran out.

HAWKEYE.

Trap Around Reading.

READING, Pa., March 3.—A team match at targets took place at the Spring Valley grounds, each man being allowed 25 targets. The result:

Howard Homan 20, F. Albright 18, J. Albright 17; total 55.

J. Rothenberger 20, B. Ritz 17, A. Witka 16; total 53.

Mahanoy City, Pa., Feb. 23.—In a shooting match at the park this afternoon William Fox, of Morea, outshot William McMutrie, of Pottsville, in an 11-bird race. Fox killed 9 and McMutrie 5. The match was for $100 a side and gate receipts, which amounted to $75. R. J. Green, of Girardville, was referee.

Bloomsburg, Pa., Feb. 24.—The Mainville Gun Club held a live-bird shoot on their grounds this morning. Ten birds were shot at by each contestant, with the following result; J. Fetterolf 10, Adams 10, Yetter 7, Smith 3, H. Fetterolf 8, Quinn 5.

Birdsboro, Pa., March 3.—The Birdsboro Rod and Gun Club elected the following: President, John W. Slipp; Vice-President, Edwin F. Mohr; Recording Secretary, Theo. R. Lacey; Financial Secretary, Charles Henry; Treasurer, George K. Lutz; Trustees, William G. Shingle, L. H. Focht, David S. Lutz; Captain, Harvey Brinley; Assistant Captain, Charles Maxton.

The annual live-bird and target tournament being arranged for by the Birdsboro Rod and Gun Club will be held on March 27 and 28 instead of the dates first announced, the postponement being made so as not to have the event interfere with the shoot at Loraine on March 21. On March 14 the Birdsboro organization will go to Sinking Spring to shoot a return contest with the Independent Gun Club, of Reading. In the contest held here between these clubs the Independent won.

Shamokin, Pa., Feb. 23.—The Shamokin Gun Club held its annual tournament and supper shoot at Bunker Hill to-day. The supper shoot was won by Capt. Longshore's men. Each man shot at 25 birds. The scores:

Longshore's Team—Longshore 15, North 21, Tovey 17, Malick 18, Peiffer 20, Goss 17, Mineral 4, McClow 17, Boughner 10, Sowers 9, Kohlbreaker 10, Smith 17, Herrold 12, Shipman 18; total 205.

Seiler's Team—Seiler 14, Riboon 21, Sober 15, Richie 21, Lippiatt 10, Trometter 15, Wray 18, Kaseman 11, Erdman 14, Keiser 13, Hoover 17, Erdman 6, Wilcox 9, Jones 15; total 199.

Reading, Pa., March 5.—A pigeon shoot on the Robesonia grounds yesterday for a prize of $20 resulted as follows: D. T. Link 4, Charles German 5, Newman Bricker 7, Henry Koch 3, Reilly Koch 4, Fred Miller 8.

DUSTER.

Winchester Gun Club.

DETROIT, Mich.—The weather was short on blizzards at the regular shoot, March 7, but worked off a little rain instead. The usual pleasant time was had, however, and some good scores made.

Mr. Howard Bates, well known and well liked, and whom we are proud to claim as a member, made his bow and cleaned up Class A. Ford had a run to win in Class B, and McAdam was high in Class C.

Following are the scores, the seventh event being the trophy handicap, and the eighth the club event:

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	10	15	10	25	25	25

D. A. H.

New York State Shoot.

OSSINING, N. Y., March 9.—At the special meeting of the N. Y. S. P. F. and G. C., held at Hotel Eggleston, Main street, Rochester, on 7th inst., the Ossining Gun Club representative, Mr. E. F. Ball, armed with proxies of the Hell Gate, Emerald, Jeannette, N. Y. County, Oceanic, Rockaway Point, and the Brooklyn gun clubs, succeeded in annexing the State shoot for 1903. This club herewith announces that the shoot will be held in the second week of June, 8, 9, 10, 11 and 12. The first day will be devoted to the meeting of the Association, practice, sweeps and getting acquainted. The next four days will be given up to the solid enjoyment of a well regulated shoot. This club will follow on the lines of previous State shoots, and prizes will be liberally distributed.

We ask that the Eastern clubs that have kindly given us their votes—also the Western clubs—will co-operate with us and help us make this one of the best State shoots ever held. We have a fine club house, ample grounds, plenty of enthusiasm, we are only ten minutes' ride by trolley from Ossining station on the N. Y. C. & H. R. R. R., and thirty-one miles from New York city.

Programme will be announced later.

C. G. BLANDFORD, Capt. Ossining G. C.

Handicap Application Blank.

THE following is the form of the application blank furnished by the Interstate Association:

To the Interstate Association.

I, ...

a white citizen of.....

hereby make application, under the rules of the Interstate Association, to enter its Fourth Grand American Handicap at Targets, to be shot at Blue River Shooting Park, Kansas City, Mo., on April 16, 1903, and I post herewith five dollars ($5) deposit upon said entry, agreeing in the case of the granting of my application to pay the additional sum of five dollars ($5) before 5 P. M., Wednesday, April 15, 1903. The five dollars ($5) deposited with this application otherwise to be forfeited, except that should my entry not be accepted the money is to be refunded.

Name .....

Address .....

"Shooting names" will not be used at this tournament.

Muller vs. Miller.

PHILADELPHIA, Pa., March 4.—At Point Breeze to-day, in a match, $200 a side, 100 birds per man, Muller defeated Miller by 7 birds, killing 83 to 77. The scores, at 30yds.:

F Muller	22222*2222222222222222222—23	
	2222*2220*2202*222**22222—18

Arkansas Championship.

STUTTGART, Ark., Feb. 26.—No more adverse conditions could be imagined than those under which the championship contest was decided here to-day. It rained throughout the whole day, and as there was no shelter at the score, the principals were exposed to the elements during the entire competition. In the face of such conditions it is really remarkable that such good scores were made in the target contest, and Arnold's fine score of 49 out of 50 is even better than it looks. In addition to a bad light a gusty wind made the targets skip and duck, so that the principals were kept guessing all the time, and many a cypher in the score must be attributed to this. This worried all the contestants, except Arnold, and that he had the problem nicely solved is evidenced by his score, as only a single target succeeded in eluding his aim. This is Mr. Arnold's first win, but only once before has his score of to-day been equalled in an open contest, and that was when Mr. J. B. Speers won the trophy at the State shoot at Pine Bluff in July, 1901. In August of the same year Mr. G. W. Clements successfully defended the trophy against De Long in an individual contest, by a perfect score; but these scores were all made under favorable conditions, and therefore Mr. Arnold's score will always rank among the best.

The contest for the possession of the Peters Cartridge Co. trophy, emblematic of the live-bird championship, was a spirited and long-drawn-out affair, and finally resolved itself into a 50-bird race between Mr. W. B. Powell, of English, Ark., and Mr. R. W. Larkan, of De Valls Bluff.

The scores show that there were but twelve entries in this event, but owing to scarcity of birds at least that many more were debarred from participating, and only those who had qualified by sending their forfeit were permited to start, and even then after two misses were compelled to withdraw. Thus only Powell Larkan, Thibault, Balle and Arnold went the route, and all of these tied on 24. The conditions provide that ties must be shot off at 5 birds, and Arnold was the first one to come to grief, losing his first bird dead out of bounds, and with it his chances of making it a double win. Balle lost his fifth bird, and as Powell, Larkan and Thibault killed, he was forced to join Arnold on the mourners' bench. The next string of five saw Thibault's finish, as he lost his fifth, a big blue fellow, that died out of bounds. Powell's second bird in the next string got away entirely, and it began to look very much as though Larkan would prove the winner. He managed to kill his first three, but the fourth, a big blue bird, carried both loads out of bounds, and as Powell killed the remainer in this string, the race was once more a tie. Thus it remained until the twentieth round, when Powell again missed, and it only remained for Larkan to kill and win; but he was not equal to the occasion, for his next bird was a fairly good one that he could not negotiate.

The supply of birds was almost exhausted, and it began to look as though the race would end in a tie, as only 12 birds remained. But the strain of the race was telling on Larkan, who is practically a new man at the traps, and he lost his last bird, which if he had killed would have made the race a draw, as only one bird remained.

Owing to the weather conditions, the birds were only an ordinary lot, as the elements were decidedly against them. In the shoot-off they improved, and in the latter part of the race some very good ones were trapped. If there was anything in the luck of the birds, Larkan probably got a little the worst of it, as all of his losses occurred on good birds, and two of the four were dead out of bounds, and not a single one got away untouched. His first loss in the shoot-off was the hardest of luck, as it was hard hit with both barrels, and fell just a little way out of bounds. The scores:

Powell	22222112222022222222222222—24
Larkan	211112*21112222212222222222—24
Thibault	21211202221222222212121 2—24
Balle	22211222222202222222211122—24
Arnold	22221221201222222222211222—24
Coles	0222221211212220
Conrey	02222220222
Vick	12102111110
Wright	21221022120
Litzke	22222*2202
Scvier	220120220
Lloyd	210210

Shoot-off:

Powell	22222222222022222222022222—23
Larkan	22222222222222*22222022220—22
Thibault	222222222*
Balle	22220
Arnold	*

Immediately after the race was decided Gibson Thibault, of Little Rock, challenged the winner, and Powell at once accepted; but as soon as it became known there were several others who wished to have another try for the trophy, the Pine Bluff Gun Club decided to redeem the trophy and hold an open contest for it on Wednesday, March 11.

J. A. Coles was right after Arnold to shoot him for the target championship, and the latter was as eager as Coles, but there were just as many aspirants for this honor, so the Pine Bluff Gun Club also proposed to redeem this from Arnold and hold an open contest therefor, if he would sanction this, there being no clause in the conditions that would force him to do so. In order to make these shoots as attractive as possible, this club will also put up for open competition the two-man team championship, which is now held by I. J. Vick and E. C. Arnold, members of this club. Thus the club is enabled to offer attractions which heretofore have only occurred at the annual tournament. This is largely due to the fact that all the trophies are held by members of this organization.

Target championship, 50 targets, unknown angles: Arnold 49, Coles 45, Powell 43, Thibault 42, Conrey 41, Vick 41, Cook 41, Balle 39, Wright 38, Ambrose 34, Sevier 31, Robinson 30.

PAUL R. LITZKE.

Boston Gun Club.

BOSTON, Mass., March 4.—The regular Wednesday shoot of the Boston Gun Club was held at Wellington to-day, and for once the club secured the kind of weather suitable for this sport, and eighteen shooters were on hand to take advantage of it. The afternoon's shooting furnished some new records, Griffith's 41 overtopping Kneil's 22 of a few weeks ago in the consecutive match, and Woodruff's 30 straight in the prize match, the first straight score in this match that has been made. Other scores seemed small in comparison with these, but Gleason, Spencer and Linfield all got in the 80 class, and Leroy and Barry all but in it, the former having to leave the shoot early, something Leroy does not do very often. He is always among the first to get there, and invariably the last to leave, but at present not being in the best of health, it was good judgment to take a much needed rest. We are hoping it won't be long before he again takes the accustomed place with us, which means added enjoyment for all. Other scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Feb. 25.—The usual weekly shoot of the Boston Gun Club was held on their grounds at Wellington to-day, and though a nice day, very few shooters were present. Gleason was high with 23 in the match, closely followed by Frank with 22. Woodruff was the only one to secure a straight, his first score counting 10. Other scores follow:

Events:	1	2	3	4	5	6	7	8	9	10

Busy at Kansas City.

THE Foresters, one of the many wideawake shooting clubs of Kansas City, met at Blue River Park on Feb. 27, for their regular monthly matince. Owing to rough weather and absence of members from town, only seven participated, but it was a spirited contest nevertheless, with a free wind and a lot of good birds. Groves won the honors with the high score of 17. Riehl, who killed straight, shot by courtesy as a visitor with the club. Scores, all stood at 30yds.:

Jones	11121*02220122*01111—15
Scarrett	222021102002*1222212—15
Hadley	21002212212021202101—15
Russell	21101220221220212102—16
Groves	11011112121 2*1122021—17
Rogers	22212220221220222002—15
Gaines	01201202211220222112—16
Riehl	21221222122211122222—20

On Saturday afternoon three trade representatives, Harold Money, Dave Elliott and F. C. Riehl, went out to the park and indulged in a little practice work. Incidentally a friendly match was shot at 100 targets. The wind was blowing a gale, and to make the game good the traps were set to the highest tension, and contestants stood at 18yds. The result was all that could be desired in the way of a difficult proposition. Money, fresh from his victory at Detroit, was in best form, and distanced his competitors. Score: Money 79, Riehl 68, Elliott 64.

The usual weekly matinee was held at the park on the 1st, with a good attendance. Manager Elliott first pulled off two miss-and-out events, and then a short target programme. The birds were corkers, and in the handicap sweep nobody killed straight, although it was only 10 birds. Elliott and Bramhall divided in the first miss-and-out, and Hickman, Money and Riehl in the second. Of those shooting in all target events, Riehl was high. The scores:

KILLMORE.

McCoy vs. Budd.

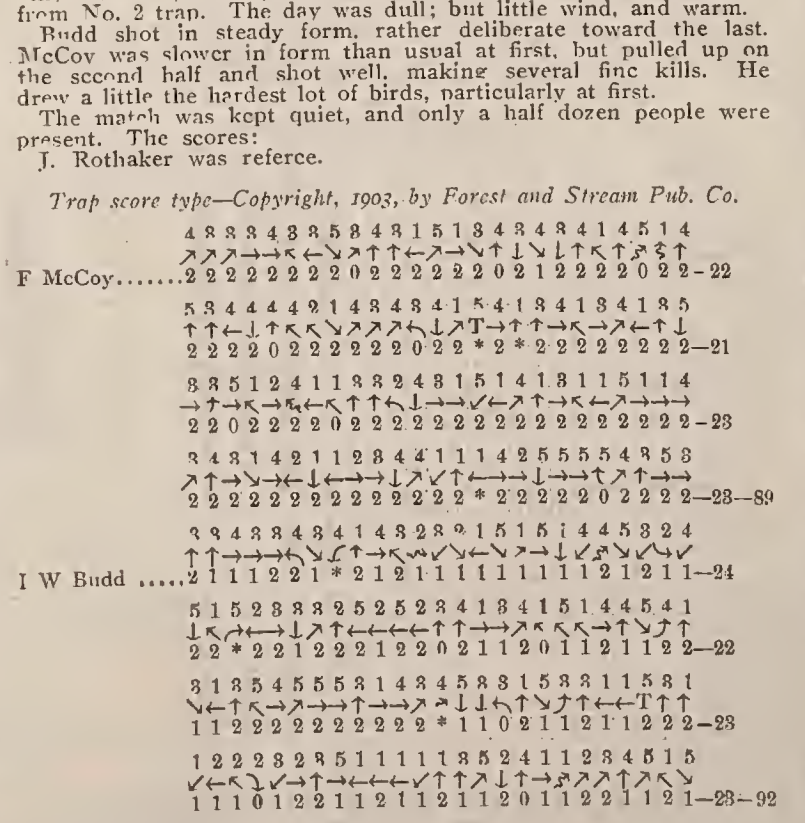
PHILADELPHIA, March 5.—At the Keystone Shooting League's shoot to-day a fine lot of birds was offered. Many were drivers of the fastest kind. Only two "no birds." No. 2 trap broke and only opened part way. A shooter could refuse or accept birds from No. 2 trap. The day was dull; but little wind, and warm.

Budd shot in steady form, rather deliberate toward the last. McCoy was slower in form than usual at first, but pulled up on the second half and shot well, making several fine kills. He drew a little the hardest lot of birds, particularly at first.

The match was kept quiet, and only a half dozen people were present. The scores:

J. Rothaker was referee.

Trap score type—Copyright, 1903, by Forest and Stream Pub. Co.



All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., March 7.—The day was rainy and uncomfortable, consequently the weekly shoot of the Keystone Shooting League was under unfavorable weather conditions. Nevertheless, three straight scores were made. The wind was very strong, and helped the birds a great deal.

In the club handicap, 10 birds, Mr. I. Budd killed 10 straight. The scores in this event follow:

Budd, 30	2112112222—10	Leedom, 28	2222101012— 8
Rothacker, 29	2002*21222— 7	Fitzgerald, 28	2102122112— 9
Geikler, 28	2022222222— 9	Harrison, 28	1000110*21— 5
Davis, 28	2222020222— 8	Darby, 28	2202222202— 8
Sanford, 28	2222110122— 9	Van Loon, 28	0222222022— 8

A very fast left-quarterer caused Budd to lose in the sixth round in the officers' trophy event, at 15 birds. The scores:

Budd, 30	112210122222212—14	Fitzgerald, 28	121221001122010—11
Rothacker, 29	2222222222222222—15	Harrison, 28	122111111210110—13

Davis, 28	102201112000100— 8	Van Loon, 28	0111022112222210—12
Sanford, 28	1112212222212212—15		

Nonpareil Gun Club.

BURNSIDE CROSSING, Ill., March 7.—At Watson's Park to-day the Nonpareil Gun Club held a shoot, of which the main event, at 50 targets, was the regular club contest, with results as follows: R. Kuss 45, S. Young 36, J. B. Barto 27.

Two 15-target sweeps were shot, with the following results: Kuss 14, Young 11, Barto 11, Graham 14. Second event at 15: Kuss 15, Young 11, Barto 8, Graham 13.

PUBLISHERS' DEPARTMENT.

From a New England Lady Down South to Her Father in New Hampshire.

PINEBLUFF, N. C.

Dear Papa: I suppose you think me mean; but I have written twice to the folks, and suppose of course they have given you all the news. I hope your health is good this winter. I wish I had you where I could send you some of my fresh eggs and a chicken. You wish me to give you a detailed account of my surroundings. Well, Pa, I will try. In the first place, I am in the heart of the North Carolina long-leaf pines. This is an ideal health resort. We have, beside the health-giving ozone of the pines, the best water on the face of the globe, not barring the Poland Lake mineral springs of Maine. The water is from living springs right out of the side hills over the whitest sand you ever saw, and the climate is something grand, warm days and cold nights in winter, and the same in summer, with always a beautiful breeze. I have spent the most delightful time of my life here this winter. I have got rid of my cough, and that is a great deal to me. If you know any one with any kind of trouble with their lungs or bronchial tubes, do not fail to tell them what the long-leaf pines have done for me. These are the trees they make turpentine of; also the tar used on ropes, and in calking vessels and a thousand other uses. I saw the other day a tar kiln in operation. There are very beautiful wild flowers here in the woods in summer. The wild Orchid, palm grass, Trailing Arbutus, or Mayflowers, violets and wild Honeysuckles, which grow profusely, also Jack-in-the-Pulpit, and many others I know nothing about. Now, about animals. The hog, or razorback, as you call them, do best. There are lots of them running wild on the range; marked and turned loose; also there are lots of goats, which get their living on the hills here. There are possum, rabbits, quail and wild turkeys, and foxes, vegetables and all kinds of fruit do well here, such as grapes, pears, plums, peaches, fig apricots, nut trees of all kinds, peanuts, sweet and white potatoes, etc. Well, Pa, now I will tell you of our own place. We have 14 acres. Our house is 1½ stories, two rooms below and one up stairs—not very high posted, but it does very well to commence with; one kitchen and one sitting room downstairs. The chimneys here are mostly built of tile or drain pipe, but we thought a brick chimney would be better, so Albert built it himself, and never having built one before, it is rather crude, but it answers the purpose very well. In fact there are several around where we live would like one like it. We also have a very good shed, and carpenter shop combined, also a hen house, and I have 18 hens, from which I am receiving quite a number of eggs at present, and I find ready market for all I can spare. We have about one dozen grape cuttings planted, a few peach, some prune and one fig tree; that is all as yet, and quite a little clearing done on the land. We expect to make our place a poultry and fruit farm. Give our love to all, and tell them they owe me a letter. With best love to you from your loving children, Annie and Bert, Mrs. A. L. Allen.—*Adv.*

Old Point Comfort, Richmond, and Washington.

SIX-DAY TOUR VIA PENNSYLVANIA RAILROAD.

THE first personally-conducted tour to Old Point Comfort, Richmond and Washington via the Pennsylvania Railroad for the present season will leave New York and Philadelphia on Saturday, March 14.

Tickets, including transportation, meals en route in both directions, transfers of passengers and baggage, hotel accommodations at Old Point Comfort, Richmond and Washington, and carriage ride about Richmond; in fact, every necessary expense for a period of six days, will be sold at rate of $36 from New York, Brooklyn and Newark; $34.50 from Trenton; $33 from Philadelphia, and proportionate rates from other stations.

OLD POINT COMFORT ONLY.

Tickets to Old Point Comfort only, including luncheon on going trip, one and three-fourths days' board at Chamberlin Hotel, and good to return direct by regular trains within six days, will be sold in connection with this tour at rate of $17 from New York; $15.50 from Trenton; $14.50 from Philadelphia, and proportionate rates from other points.

For itineraries and full information apply to ticket agents; Tourist Agent, 263 Fifth avenue, New York; 4 Court street, Brooklyn; 789 Broad street, Newark, N. J., or Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—*Adv.*

Florida—Thomasville—Augusta.

Atlantic Coast Line's famous trains, 8:55 A. M. daily. "New York & Florida Special," 2:10 P. M. week days. Apply at office, 1161 Broadway, New York.—*Adv.*

At the Mardi Gras tournament, New Orleans, La., J. M. Hughes, of Palmyra, Wis., won first average with 96.7 per cent. He made straight runs of 84, 94, and two of 93. On two occasions he broke 99 out of 100. On the first day he did not lose a target while shooting over the magautrap. L. Moeser, of Houston, Tex., won third average in the amateur class with 88.7 per cent. C. R. Pinkston, of Vicksburg, Miss., won the Association individual championship cup. All used Peters Ideal factory loaded shells.

No class of men are keener after new things than sportsmen. Each is an experimenter, constantly searching for some implement or some method which will make his days afield more successful. To such men the Burtis Single Hook Trolling Bait should especially appeal, and no doubt many of them will try it. The Burtis split bamboo rods and Burtis flies are well known. The manufacturers offer an illustrated booklet on his product.

The time has long gone by since the manufacture of ships, yachts and their fittings was confined to the seaboard. The Great Lakes now have enormous works devoted to such manufacture. The plant of the Clark Marine and Stationary Gasoline Engine is located at Fond du Lac, Wisconsin. These engines are said to be simple, strong, durable and inexpensive.

In all the long list of manufacturers of fishing tackle there is hardly a name better known than that of Malcolm A. Shipley, of Philadelphia. Mr. Shipley has long made a specialty of Bethabara wood rods, which have an established reputation. The booklet, which he sends out to those who apply to him, tells all about these rods, and gives a full list of fishing tackle which he has for sale.

Hotel Wachapreague, headquarters for sportsmen and their families. See inducements, page x.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MARCH 21, 1903.

VOL. LX.—No. 12. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

THE EAGLE, THE FROG AND THE EEL.

As a public educator the daily press arrogates much praise to itself. It claims originality of thought and purity of truthful teaching. In the main, it does all it claims. In exceptional instances it fosters the false and the absurd. Of the falsities none are more numerous than those which pertain to frogs, toads, snakes, lizards, eels and the human stomach. Of the daily papers which vie in this connection by publishing vulgar myths in a sensational way as facts, none is equal to the Brooklyn Eagle in its habitual consistency. The stately dignity and scholastic soundness of its editorial columns are as a consequence in violent contrast with the silliness of its news columns.

Some weeks ago, with much minuteness of detail, the Brooklyn Eagle recounted the case of a Mrs. Charles Burtis, of Hopewell Junction, N. Y., who was discharged from St. Catherine's Hospital, Brooklyn, N. Y., as cured. The Eagle incidentally commented on the case as "said to be the most remarkable in the history of that institution." It then proceeded gravely to a recountal of particulars. Briefly they were as follows: A live frog, four inches in length, was removed from Mrs. Burtis's stomach; she believed it had been in her stomach at least five years; it was supposed that she swallowed it in "egg form, or as a pollywog while drinking water at a public spring;" she complained "constantly of feeling something tearing at her stomach;" the X rays disclosed a dark object in her stomach; the surgical operation resulted in the removal of the live frog and the cause of the ailment. The Eagle naïvely concludes its minute account with the following: "At the hospital a young physician, who requested that his name be withheld, said the frog was of medium size and that it had lived about an hour after it was taken from the patient's stomach. It was very fat."

One would imagine that after such an impudent play upon the credulity of its readers, the Eagle would refrain from a repetition of it, or that it would buy its frog editor a primary work on natural history for his better information, if it was resigned to retain his peculiar talents for the public benefit. The same story, however, dished up in a new form, was served to the public as a matter of fact one day last week. In this case, however, an eel took the place of the frog, and the history of the case, as set forth by the Eagle, was substantially as follows:

Neils Andersen, a 17-year-old Swede, landed in America from the Campania; he was ill on the voyage, suffering from violent coughing spells and severe stomach pains. The surgeon was nonplussed, and his treatment proved futile. When he landed and was under inspection by the surgeons of the Marine Corps, he was seized with a fit of coughing, which doubled him up, and he had the appearance of choking to death; "a violent cough, and the eel popped out of his mouth; it was very much alive and wriggled around on the deck." The Eagle concludes the history of the case with the remark: "It is believed that Andersen swallowed the eel when it was a little thing while drinking water from a pool, and that it grew to its present size of six inches in length in the boy's stomach."

It will be noted that in the main the stories are alike in their conclusions. In both cases the specifications of names and places give them an apparent ring of truth.

But one would imagine that they had some origin in fact. One would hardly assume that, with names of persons and places, the frog and eel stories, published in a great and dignified daily, the Brooklyn Eagle, were fictions pure and simple. As a matter of fact, they had no origin other than in the imagination of the Brooklyn Eagle's bright snake and eel editor. There was neither frog nor eel in material form. It was pure fiction served as news fit for the entertainment of the paper's readers.

It is hardly necessary to add that frogs, snakes, lizards and eels are organic beings, to which air, food and water are as essential as they are to man, and that for any of them to live in the human stomach is in the realm of the impossible.

GOOD LAW AND GOOD ENGLISH.

AN entirely new version of "English as She is Wrote" might be compiled from the successive annual blunderings of the New York Legislature in its framing of Sec. 33 of the game law, being the section which has to do with the protection of birds other than game and vermin. As it stands now, no game birds may be killed in the open season except under the authority of a certificate issued by a natural history society. A bill to correct the error has been introduced by Senator Allds, reading as follows:

> Wild birds other than the English sparrow, crow, hawk, crow blackbird, snow owl and great horned owl shall not be taken or possessed at any time dead or alive except as expressly permitted by this act. No part of the plumage, skin or body of any bird protected by this section shall be sold or had in possession for sale.

The act is nowhere permissive, it is prohibitive throughout. To adopt this amendment then would not remedy the existing defect of the statute; it would simply make it worse, for the law, as Mr. Allds would have it, would permit the taking of game birds not at all, neither with a certificate nor without one.

Secretary William Dutcher, of the A. O. U. Committee on Bird Protection, is endeavoring to secure the adoption by New York of the law for the protection of birds other than game and harmful species, which has already been incorporated in the laws of numerous States. If the Legislature will substitute Mr. Dutcher's bill for the old Section 33, and in place of any new blundering text of Section 33, like this of Senator Allds, New York will have taken its place with the States which have in their bird protective statutes at once good laws and good English.

BIG GAME IN NEW HAMPSHIRE.

IT is interesting to observe the slow advance that is being made in these latter days toward restocking certain portions of our country with game great and small. We take little note of the individual steps as they happen, yet each such event is full of significance.

After a century or two of riotous and wasteful slaughter of game there has come to many thoughtful people a realization that the wild things of our land have a value and are worth preserving, and while this value is in part sentimental, it is also in part economic; it may be measured in those dollars and cents which appeal so strongly to the American mind.

The vast majority of Americans as yet know or care little about these things. Yet there is a small and more or less forceful minority which feels very deeply about them, and which by sheer force of persistence has impressed its belief on others, so that this minority is continually increasing, and is now not without its weight in legislative and governmental circles.

A few years ago the preaching of those persons who were interested in forestry seemed to have no more effect on the public mind than the winds that blow over the prairies or sigh among the boughs of the mountain pine. Yet within a dozen years a mighty change has come over the views of the American people with regard to forestry, and the results of this change are seen all over the western country in the monuments established by Presidents Cleveland, Harrison, McKinley and Roosevelt—the forest reserves.

A few years ago anyone who had suggested an appropriation by Congress for the purchase of buffalo to start a domesticated herd in the Yellowstone Park would have been laughed at as an impractical enthusiast; yet to-day we have in the Park under fence a herd of twenty domesticated animals, which pretty nearly doubles the number of buffalo found in that reservation.

Within a year or two, through the generosity of owners of game preserves in the Adirondacks, a number of specimens of our larger *Cervidæ* have been set free in the Adirondacks, and although a few have been killed by that lawless element which exists in city and country alike, yet it is reported that on the whole these animals are doing well and are likely to increase.

A like service has recently been performed for the State of New Hampshire by the Blue Mountain Forest Park Asscoiation, which was founded by the late Austin Corbin, and was fully described in FOREST AND STREAM not many weeks ago.

The game laws of New Hampshire prohibit the killing in the State of elk, moose and caribou, and in view of this law, which promises protection to the animals set free, the Blue Mountain Forest Association on March 13 turned out a herd of twelve elk, ten cows and two bulls, on Ragged Mountain, at Andover, N. H. The animals have been formally presented to the State, and are thus beyond any question its property, so that it should not be difficult to protect them.

The elk turned loose by the late Mr. Corbin in Blue Mountain Forest Reserve have done exceedingly well, and have increased much faster than might have been expected by those not familiar with the habits of the animals. There seems to be no reason why those now turned loose, provided they are reasonably well looked after, should not so increase as to become very numerous.

PROTECTION OF SIMIANS.

IT is a far cry from the simian inhabited jungles of Africa to the United States, yet it is not too far for a message to be brought to America, which may well be heeded and acted upon. Professor Garner told the Massachusetts Association the other night that under existing conditions the apes, chimpanzees and gorillas of West Africa are surely approaching extinction because of the relentless and unflagging pursuit of them for export. The native hunters are stimulated by the traders chiefly by rewards of rum, and of the creatures taken a large proportion perishes before leaving Africa. If the traffic shall be continued as it is now conducted, early extermination of the species will follow. It is within the province of the French Government to regulate the trade in apes, and citizens of other countries might at least give expression of their reluctance to see an interesting form of animal life obliterated, and by doing so might prompt France to take action in the matter. Under existing conditions it is clear that in his efforts to acquire the speech of the simian, Professor Garner is studying what must soon be put in the category of the dead languages.

ANTI-SALE LAWS.

A NOTABLE feature of the banquet of the Massachusetts Fish and Game Protective Association the other evening was the enthusiastic approval expressed by the speakers of the anti-sale law. President Reed characterized it as the most important measure ever enacted for the protection of Massachusetts game; and Rev. Mr. Jaynes declared that its repeal would arouse a storm of protest from the Berkshires to Cape Cod. Public opinion is all for the law. It is recognized as a measure which saves Massachusetts game for Massachusetts sportsmen.

This experience in the Bay State demonstrates in the strongest and most convincing manner the precise truth of all that has ever been claimed for a non-sale of game system. To stop the sale of game means to stock the game covers; to cut off the market means that the grouse-snarer has lost his job. It has been said here, and may be said again, that what has proved so advantageous and profitable for Massachusetts would prove equally effective for New York. The bill now in the Legislature at Albany to prohibit the sale of quail, ruffed grouse and woodcock killed in the State, is not all that could be desired—it should prohibit absolutely the sale of these species wherever taken—but it is a thousand times better than the present law, which permits their sale in the open season, and it ought to have the indorsement and earnest, active support of every citizen who wants to see repeated in New York the game restoration which has been wrought in Massachusetts.

The advocates of the bill to reorganize the Massachusetts Fish and Game Commission were given a hearing on Thursday of this week. If popular sentiment shall control, this measure is one which will never emerge from the committee rooms.

The Sportsman Tourist.

In the Yellowstone Park.

YELLOWSTONE NATIONAL PARK, March 7.—*Editor Forest and Stream:* There is nothing much new here except snow. News we get from the outside (it's the same old thing, only more so). As to game, antelope are now being fed in several places. Major John Pitcher is feeding mountain sheep and deer in Gardiner Cañon, close to the wagon road. A start was made to feed antelope, sheep and deer higher up on MacMinn Bench, but the elk drove every other animal away and devoured the hay. Major Pitcher established the present feeding place close to the wagon road with the object in view for only mountain sheep, and to keep any possible elk away a scare crow, or, rather a "scare elk," was put up. This is an old suit of clothes stuffed with hay, with extended arms, a red bandana handkerchief at one hand and a white rag at the other. There is an old white hat on the end of this stuffed object. Close by there is a portable engine, a rock crusher, conveyor, platform and shoots. The engine and boiler are covered with flapping canvas. The mountain sheep have found the hay, also two domestic goats that have run wild ever since they were kids a few weeks old.

All the animals feed together and show no fear at all of men or teams. Major Pitcher drove down there last Friday for some photographs. In the wagon were several people. He found about 30 mule deer, 23 sheep and the two goats. Only a few of the animals were eating, most of them were lying around. Now and then some would get up and eat a while, "mosying around." The deer were keeping the best lookout. The sheep looked very sleepy and paid no attention at all to the party. The goats were the most timid of all the animals, still they did not care for the people; they were more afraid of the other animals. Some of the deer and sheep were close to the "scare crow." It is stuffed with hay, care being used to prevent the animals getting at it. Were there any holes they would eat the stuffing out of it. When I first saw this scare crow I could not make out the object of its being placed there, for it was evident that none of the animals were afraid of it, even when the wind blows its rags and flags in rather a wild and threatening manner. The deer and sheep will pass close enough to be brushed by the scare crow. Sheep get up on the platform and crusher and lie there, using it as a desirable outlook. The Major's team drove close to the cutbank, and within less than 15 feet of the nearer animals. Here the team was stopped and several exposures were made. Conversation was carried on and remarks were made in an ordinary tone of voice. The sheep hardly looked at the outfit. The team would be moved up for a different view; still the animals did not pay any especial attention, attending to their business as unconcerned as though they were hundreds of miles from the sight or sound of men. Freight teams are often passing, mail coaches, buckboards, buggies, horsemen and men afoot.

I have lived more or less with wild creatures about me for the past thirty years, yet I am filled with wonder and surprise at the remarkable changes in the habits of the wild (?) game around here. True, the change has been going on for a number of years, but the result at the present time is a constant surprise to me.

Major Pitcher learned when he first came here that all the deer kind, sheep and antelope, preferred alfalfa hay to any other kind; and they are now getting that only. The feeding place in front of the houses at Ft. Yellowstone is growing in popularity every day. On March 5, at 6:15 P. M., I counted 59 deer. I thought that was all. At 6:23 I saw 3 more bucks "coming a-running." Later others came, until it got dark. Saturday evening at 6:30, 77 deer were feeding here, and how many more came later I can't say. There are often a few all the afternoon, going and coming, but about an hour before sundown they "come a-running" from all directions. Those that spend the day in the timber back of the post, take the shortest cuts between the buildings, where they have regular trails. Others come across the flats, while many follow the wagon roads. Strangers are not always welcomed. There is more or less scrapping among them, but the strangers are persistent, and in a few days belong to the band, and are as ready as the oldest to stare at any newcomers. The animals at all the feeding places are constantly increasing in number, as new ones find out there is food for them.

It is a fine lesson in natural history to watch them. They are so fearless of man that their actions are as natural as possible. When one wishes to drive another from a bunch of hay it approaches with its ears laid flat back, like an angry cat or horse. If the other does not move off it lays its ears back and there is a bit of a scrap. They make a few passes at each other, striking straight out in front. If one does not give the ground up they both go on their hind legs and strike at each other. This lasts only a few seconds before one quits and walks away. There is no real fighting, only little scraps and short quarrels. Many of the bucks have shed their horns; some have full heads. Now and then one is seen with only one horn. They commence to drop their horns about the 10th of February.

If the weather holds cold we expect to see many, over 100 at one time, feeding in front of the quarters.

Buffalo (C. J.) Jones and his brother, N. C. Jones, have trapped three mountain lions each. This, with the one shot by Scout Holt, makes seven to date. Still there are a large number left. Mr. C. J. Jones is after a very large one. He hopes to capture him Sunday, the 8th. He only is able so far to capture them on a Sunday, that being his "medicine day." The big fellow which he is after has killed 15 elk, all young (yearling) bulls, 12 of them in a space of less than half an acre. Mr. Jones says the lion lies in a quaking asp grove and kills the elk as they come down to lie in the shelter of the grove.

Mr. Jones has seen between 35 and 40 elk carcasses killed by mountain lions, and all were young bulls, except one of a cow and one of an old bull. Buffalo Jones last Sunday (March 1) found a small lion in one of his traps, caught by one front foot. This was up on the east fork of Gardiner River. He hog-tied the lion, then with the aid of the trap chain, some wire and a lever held its head down until he fastened a wire around its jaws so that it could not bite, and held the wire in place with strings passing back and around its neck. When everything was secure he brought it into the post in front of him on his horse, sometimes carrying it in his arms. He has him chained up in a loft of a small barn. Both the Jones brothers are hard workers and enterprising in the effort to kill off some of the lions around here.

The lions were never so bad before, they having increased for several years. So far all the lions killed have been on and along the skirts of Mt. Everts, where the mountain sheep and so much other game find their winter range. Major Pitcher is particularly anxious to keep the lions killed off so that the sheep will find a safe refuge in Gardiner Cañon. With this end in view he has secured a pack of hounds trained solely for the purpose of hunting lions. These dogs will never be turned loose except when hunting that animal. The lion pack is expected to arrive here in a few days.

Private Fitch came in from the Lake Station Friday and reports having seen 19 of the wild herd of buffalo in the Pelican Creek country and a great many elk. In two bands he saw there were over 700. He reports all the animals as being in fine condition.

Sergeant Davenport, from the Snake River Station, reports the snow very deep around the station—6 to 7 feet—and deep snow all the way down into Jackson's Hole. The elk are very numerous. Bands are seen of 300 and 400. He says that they are smashing into the ranchers' hay corrals and fenced fields in search of food.

Complaint comes to Major Pitcher from some of the ranchmen along the northern boundary of the Park that elk from the Park are breaking down their fences and into their corrals, doing considerable damage. The State of Montana should permit the domestication of these elk so that the ranchmen could get some compensation for their losses, as the elk are the property of the State when they cross the line.

At the Grader's Camp, less than half a mile from the town of Gardiner, three mule deer have taken up their quarters. They hang around the camp all the time, eating potato peelings, bread and other stuff thrown out by the cook; they have been there for a long time. The kitchen door is their favorite part of the camp. The camp is down on Gardiner River, close to the old Turkey Pen Road, and is in charge of Mitchell Askey.

The Death of Club Foot.

ON a slight rise of ground, somewhat higher than the business portion of Juneau, stands the little cottage of Richard Williby. "Old Dick Williby," as he is called, is known all over Alaska. He came to the territory in 1862, five years before it was purchased by the United States, and was probably the first American to make a permanent home there. At that time the site now occupied by the town of Juneau, was a complete wilderness, and the old man has watched that wilderness grow into a thriving village of 1,864 inhabitants. During this period he had been "below," to the States, but once, and then only for a few weeks. He speaks the Indian language as fluently as the natives themselves.

When I made Dick's acquaintance, in August, 1901, he was feeble from old age, and had frequent attacks of asthma. I spent many interesting hours looking out of his front window over the bay, while he related experiences of his early life. One of his most thrilling tales was the killing of a huge Alaskan brown bear that for many years had practically ruled the region it inhabited.

"During the summer of 1884," the old-timer began, "in company with my partner Jim, I prospected for gold on Admiralty Island, a large wooded and mountainous island some fifteen miles west of Juneau. From the time we landed the Indians told wonderful stories of a giant bear, which, owing to one of its feet being larger than the others, they had named 'Club Foot.' Club Foot was a terror to the natives—he had not only whipped all the animals of his species out of the neighborhood, but he had also wounded and killed several Indians. With their crude arms, the people had been unable to kill him, which led to the superstitious belief that he had a charmed life; so they had ceased to contest his supremacy. They warned us to beware of Club Foot, for he was sure death to whomever he met.

"The reward of $50 which I offered for his skin was no inducement to them whatever, and I soon saw that if I was to secure his hide I must kill him myself. While I knew from the stories that Club Foot must be an enormous fellow, I did not fully realize the truth of their statements until one evening while trailing deer I came across his track. It was a huge track indeed, measuring 14 inches in length. It led into a large opening, surrounded by timber. There was a stream running through the open, and luxuriant weeds and grass 5 feet high grew upon its banks. I had no more than reached the center of the park, when Club Foot arose upon his haunches from among the weeds. As we glared at each other my heart sank from fright, for he towered fully three feet above my head, and looked every bit as large and dangerous as the Indians had depicted him. If I had had a modern rifle I would have attacked him without hesitation, but with the unreliable weapons used in those days it would not have been safe. I rammed another ball into my old muzzleloading rifle, and looked about for a tree to climb, but there was none nearer than a hundred yards. After eyeing me for a few seconds, every one of which seemed an hour, the bear for some unaccountable reason dropped to his feet and slowly sauntered into the timber, and I had not the nerve to fire.

"Not long after this incident several hunters from Juneau heard of Club Foot, and came over to carry back his skin, but when I showed them his tracks they came to the conclusion that they had not lost any bear, and returned satisfied, as they had seen enough of him.

"While prospecting late that fall I again ran across the tracks of the old fellow and followed them up the side of a steep mountain, then into a cave in the rocks. I knew at once that this was his den, so hastened back to notify Jim. A band of Indians was camped about a day's journey from us, and we concluded that it was best to get some of them with their dogs before attacking the bear. So I set out the next morning to hunt them up. I found the camp, and told them in their own language that I had located the den of Club Foot. The Chief, whom we called Bob, walked up and down in front of his tent for some time deliberating. 'Club Foot has killed and injured several of my people,' he finally said; 'he must die; my men are brave; my dogs are brave, and I want the honor of killing Club Foot. I am the chief of my tribe, and I want to be chief of the party.' I told him that all I wished for was the skin of the bear, and if he would persuade his braves to accompany me with their dogs I would give them the meat of Club Foot and allow him to be chief of the expedition. He agreed to this, and ordered three of his best braves and their squaws to be ready to return with me in the morning. I was awakened several times by the monotonous tum-tum of their drums as they made 'good medicine' for those that were to take part in the hunt. They decorated themselves with their gayest paint and feathers, and early the following morning we left for my camp. In the meantime a heavy snow had fallen, and we were compelled to use snowshoes.

"The next day we made our way to Club Foot's den. There were Jim and myself and Chief Bob and three of his braves and five of their best bear dogs. As we neared the cliff where the old bear lived I told the Indians that they knew better than I what a dangerous animal the bear was, and that we must keep together and shoot true and rapid or some of us would be killed. Chief Bob led the dogs to the entrance of the cave. They growled, and the hair on their backs bristled, but they refused to enter. The chief had boasted that they were the best dogs on the island, and not afraid of anything.

He now became greatly enraged and hammered them over the back with his rifle, whereupon they set up a loud howling. At this juncture Club Foot rushed out and made for Bob, but when he was almost upon him four of the dogs attacked the bear, and he turned to defend himself. In the scuffle the chief was knocked down; my snowshoe caught in a bush and I plunged head-foremost into a drift, and slid under a mass of fallen timber. I heard the bear and dogs fighting furiously for some time. After the battle appeared to be over I crawled out. Not a human being was in sight, three of the dogs were dead and another lay wounded upon the snow. I shouted, and in answer Jim slid down from a tree. Suddenly a mound of snow arose in front of me, and Chief Bob shook himself out from a drift, where he had crawled while the bear and dogs were fighting. Club Foot had made good his escape, but we knew that he would return, as the snow was so deep he could not travel far. We hunted up our guns, killed the disabled dog, and went to camp.

"The squaws made all manner of fun of us, and said if we would lend them the guns and the remaining dog they would return and kill the bear. The chief was greatly chagrined at this, and came to me for advice. I told him that I proposed to make a cartridge from our blasting powder, creep close to the cave, light it and throw it in and blow up bear, den and all. He hesitated a few seconds, then asked, 'Who will throw the bomb?'

"'Who will throw the bomb? That's a great question,' I replied. 'If I had asked to be chief, I wouldn't put such a question as that.'

"'I'll blow him up; I'll blow him up,' he answered.

"We wrapped several sticks of giant powder tightly in strips of gunny sacking, bound them with heavy cord and soaked the bomb in water, which had no damaging effect on the powder, but strengthened the force of the explosion.

"This time we left the dog behind and stealthily approached the cave. The braves were halted about 50 yards away, and Chief Bob, Jim and myself went ahead. I climbed a tree commanding a good view into the den. While Bob held the bomb, Jim lit the fuse and put down the mountain side. The braves saw him coming, and they too ran. I saw the fuse smoking and sputtering, and called to Bob to throw it, but he seemed not to hear me. The fire had burned to within two inches of the powder, and still the Indian stood looking into the cave as though petrified. 'Throw it, Chief! throw it!' I again shouted. Bob raised the bomb above his head, and was in the act of following my command, when Club Foot, roaring with rage, rushed out from the darkness. The chief hurled the bomb with all his strength and ran for his life. It was a good cast. The cartridge landed almost in the face of the bear. The infuriated beast grabbed the sputtering, smoking bundle between his teeth. There was a loud report and the air was filled with smoke, dust and flying pieces of rock. I was nearly thrown from my perch, and the chief was hurled several feet into the snow. The echoes vibrated and revibrated, then everything was still.

"The Indians and Jim now returned, and after the atmosphere had cleared we went into the den. Blood and pieces of flesh were spattered upon the rocks, and the remains of Club Foot were almost buried in debris. We hauled him out and found that the explosion had blown away half his body. Enough remained to prove that he was a huge animal. He must have weighed at least 1,400 pounds. On skinning his hips, we found nine buckshot and a navy ball was embedded in his club foot.

"Chief Bob now became very boastful, and made long harangues to his followers. They sledded the remains of the bear, together with the four dead dogs, to camp, and for three days did nothing but eat, dance and be merry.

"The following summer I visited the cave again, and found a gun, and the skeleton of an Indian near by, while the rusty remains of a hatchet were embedded in a tree."

J. Alden Loring.

A Maine Woods Walk in Sixty-One—I.

BY MANLY HARDY.

Late in March in the spring of '61, wishing a vacation, I thought I would take a trip up north and visit some of my hunting acquaintances. As I wished to start from the head of Chesuncook, something over one hundred miles from Bangor, and as the stage went only to Katahdin Iron Works, about half way, I hired a team at Bangor to take me to the head of Chesuncook.

It had been raining for two days and the snow was very deep, so I got only about thirty miles the first day. That night it froze and the next noon we reached Katahdin Iron Works. Beyond the iron works there was only the regular tote road traveled solely by double teams. Any single sleigh had to have the thills "set over" so that the horse could walk on one sled track. As the sleigh of my driver was not set over his horse plunged so in the snow, which was over four feet deep, that we went only a short distance before he refused to go any further and urged me to return with him. However, leaving my overcoat with him and taking my rifle, snowshoes and a bundle containing a hunting frock, a pair of Indian moccasins and a few pairs of stockings, I started to walk fifty miles of the distance he was hired to carry me.

Walking in a tote road, one has to keep exactly in the narrow sledshoe track, and this is much more difficult than walking in the main road. That night I reached B Stream Shanty, and as there was no other stopping place within ten miles, I stopped there for the night.

This shanty was a long structure of logs, roofed with cedar splits, divided into three parts, the first like a regular lumber camp, having bough berths and a fire in the center, the second was the dining room, and the third was reserved for the family who kept the shanty.

By dusk twenty or thirty men had come in, parts of various crews who were going out of the woods. All were happy at the prospect of going out of the woods into "the States," and were full of joke and fun. Two or three of them posed as head lumbermen settling up with their crews. Calling up one of the others they would proceed to read from an old newspaper an imaginary account of his work and what he had had from the firm. The settlement would be about as follows: "You went in November 1 at $20 a month; that makes one hundred dollars of wages due. You were sick so many days, board at a dollar a day. Add such a number of pounds of tobacco at a dollar a pound, and——" then would follow an itemized bill of clothing at wangan prices, which are about three times the cost out in the States—and the employe would be informed that he was in debt five or ten dollars on his winter's work. Then would follow a consultation on the profits of the season: they had had a great deal of shoveling which was expensive, but had kept the crew mostly on beans and other cheap food, so that they were in hopes to come out with a profit. Some of the hits on the operators were keen ones, very much relished by the crowd. One man, on being asked what he intended to saw his lumber into, replied that "two by tapering was the most salable dimension, and he should put all his cut into that." An old tote teamster who had broken his whiffle-tree and was trying to fit the irons to a new one had become the butt of the crowd. Everyone was giving him advice. "Uncle, you are getting that too small," one would say. Then he would have to pull the hot iron out of the fire and try it. Another would advise him another way. At last, thoroughly exasperated, he turned on them with: "Who the devil is making this whiffle-tree, you or I?"

This night all was life about the shanty. It was a pleasant sight going out in the hovel to see through the air, thick with steam, twenty or thirty horses contentedly munching their feed.

The next morning after breakfast I started again. Before reaching the Roach River Shanty, ten miles beyond, a cold rain began and I was quite wet before getting there. It cleared about the middle of the afternoon, and I again started out, this time for the Grant Farm, fifteen miles distant.

I had heard that on the way I should pass near the camp of my old friend, Henry Clapp, of Brownville. Finding the path to it, I visited it, but it was deserted. It was not a great protection against a Maine winter, being simply a double lean-to of brush with a fire in the middle. On the way I learned that he and his partner had killed ten moose during the winter.

I reached the Grant Farm about dark without having met a person on the way. At that time the Grant Farm was a large clearing in the middle of the forest. It was built of lumber whip-sawed on the spot. There was also a very large barn, all the boards of which had been whip-sawed. It was covered with long shingles of rifted cedar. It had been burned in 1857, and I was there when they were rebuilding it.

As the next morning was Sunday, and I never traveled Sundays, I planned to stay where I was. After breakfast, as the proprietor, old Foster Wood, was sweeping up the floors, he asked me if I was going to start out soon. On my replying that I intended to stop there for the day, he informed me that I should probably see some things I would not like, and perhaps should enjoy myself better traveling. On my asking what I should see that I should object to, he told me that there would be a great many men coming in from the neighboring camps, and before night a good many of them would be drunk. On my asking him if he sold rum, he replied: "Yes, I have to; I tried to get along without it at first; Mr. Coe did not want me to; but I can make more off from two barrels of rum than off the whole of the rest of the shanty-keeping for the year. And besides if I didn't keep it people would go straight by to Joe Morris's" (which is ten miles beyond).

It turned out about as he predicted. By noon from twenty-five to thirty men had come in from various camps within a radius of five or six miles. They took this opportunity to come to a common center to exchange news and incidentally to get something to drink. Among others who came in was my old friend Roderick R. Park, one of the most noted shots and still-hunters in Maine. He informed me that he had lately shot ten moose in the vicinity.

Although there was some drinking, there was no quarreling, in spite of some pretty sharp joking. Foster Wood, the proprietor, who had been drinking some, was very partial to the head men of crews who had come in. He had been talking some time with one named Jase Hamilton, a man who stood six feet four and had to lean over in order to get on a level with Wood. Some one across the shanty called him to come over to that side. He hiccoughed: "I—should be—glad to—but I've got so drunk—taking old Foster's breath—that I can't walk." In point of fact he was perfectly sober, not having drunk a drop.

Later in the afternoon the crowd began to disperse. Just at sunset, when there were but seven besides myself, one of our best known lumbermen drove up in a jumper, and, seeing me at the door, on the strength of my having given him a dinner in the woods four years before, came in and ordered a bottle of rum and a tumbler of molasses, for which he paid a dollar. As I never drink, I declined. The others were invited one after another, and to my surprise not a man of them touched the liquor. Mr. Wood pocketed his dollar bill and kept his wet goods.

Just at dark two young men named Butler came in, bringing two bear cubs. Their dog had found the old bear that afternoon in a den under the roots of a tree, where her breath had frozen the snow around so that after killing her they had a good deal of chopping to get her out. The cubs were a little larger than full-grown cats. On putting them on the floor they at once commenced to walk around the room close to the wall, crying Wagh! wagh! as cubs always do when they are hungry. On my saying that they were hungry and needed to be fed, there arose the difficulty of finding anything which they could eat, as no cow was kept on the place. I suggested molasses. This seemed to agree with the cubs' ideas and they ate eagerly all that was given to them. That night we slept upstairs, all in one berth, hunters, lumbermen, tote teamsters and others, covered with one long spread. The bed smelled strongly of spirits of turpentine, which had been sprinkled over the boughs to keep off smaller bedfellows. I remember one of the men saying "It seemed as if old Foster had spilled some of his rum into the berth."

Among others in the loft was the farm blacksmith, Alec Maxfield. He had an old-fashioned flat brandy bottle with an eagle on one side which he placed on a barrel at the foot of the berth with a candle behind it and said he had got him drunk down to the bill and he was going to drink him down to the tail. Occasionally he would get up and take a drink and pass the bottle back and forth to those who were similarly inclined. After one of his visits to the bottle, he suddenly remembered the bears, and thought that they ought to have a better sleeping chance. Going down stairs he soon appeared with the two cubs, which he slung into the berth. One of them made his way to me, and as I treated him kindly he first tried to nurse my nose, but afterwards found the lower part of my ear more to his liking, and we both went to sleep, he nursing my ear.

I had taken the precaution to pay my bill the night before, so when I judged that it was getting toward daylight, I left the bears and the other occupants and started in the dark on the ten mile walk to Joe Morris's.

Although it was bright star-light overhead, as soon as I had got under the shadow of the woods it was very hard work keeping the sled track. After going two or three miles I came to where a tote road branched to the right, and hearing a loud crackling and seeing the woods lighted as by a fire, I went in to investigate. I found a large set of camps nearly burned to the ground. I could see within the remains of the baker's and other cooking tools now red with the heat. I had heard before that a man named Frank Black had committed suicide at this camp and that the crew, being superstitious, all had left. Some one of those visiting one of the shanties had probably set it afire. It gave one a weird sensation, standing alone there in the forest in the darkness before dawn lighted only by the burning camp.

Returning to the main tote road I had walked several miles further and it was getting just light enough to discern objects, when I saw a tall lumberman coming at a dog-trot down a slight elevation. He was clothed in white overalls and a red shirt. Some time before getting to me he reached into the breast of his shirt and drew out a round bottle of the sort commonly known as Cherry Bitters bottles. As he was passing me in the opposite sled track, without stopping his trot he reached the bottle across to me, saying: "My friend, do you ever smile?" On my answering in the negative, he said: "I do myself sometimes," and pursued his way without another word or stopping his trot. This was the only sign of life in ten miles.

I reached Joe Morris's before breakfast. The Morris Shanty consisted of a log house and a medium sized barn situated in a small clearing about one mile from Caribou Lake. In the barn I saw the mother of the two bear cubs and four moose, the latter having been killed by a man named Horatio Powers.

After breakfast I started for the head of Chesuncook, eleven miles distant. I arrived there a little before eleven in the morning, not having seen a living thing on the way. They often speak of "Maine miles" as being good measure, but these last were the longest miles I ever saw, excepting those on the Tobique River.

The stopping place at the head of Chesuncook was the same so minutely described by Thoreau in his "Maine Woods." At that time the building was a very long log structure like four or five camps joined together, and was kept by Ansel Smith. In 1859 I happened to be there when they fastened on oxen and tore out the middle section, replacing it by a frame section, so that now the center was frame and the wings were the original log structure. The place was now kept by Pete Walker, who was noted as being a man who never wore a hat, no matter how inclement the weather.

Here I was met by A. B. Farrar, who had heard from someone passing up on Sunday that I was coming, and had come down seven miles to meet me. Farrar was a rather slender man with black hair, fine and silky as a woman's, which came down around his shoulders. He also had a very long jet black beard and mustache. A large double-edged knife hung from his belt at the left side and a twelve-inch two-shooter in an elaborately carved leather case hung by a strap from his shoulders. He had with him his two moose dogs, small, dark colored dogs, just alike, having round yellow spots over each eye, making them look as if they had two pairs of eyes. He had come to meet me to see if I would not pilot him over into the Allegash country to see two hunters, Philbrook and Billings, with whom I was acquainted, but who were strangers to him. He wished to engage one of them to go hunting bears that spring with him. There was here at Chesuncook a hunter named Joe McClaren, who reported that he had been hunting with a St. Francis Indian named Frank Capino, near Harrington Lake, and that they had killed about forty moose.

After dinner I started with Farrar on a seven mile snowshoe trip to the camp where he had been stopping. I had left my boots at Joe Morris's and replaced them with a pair of moccasins. On reaching the camp where Farrar was staying, I found that it was one of Strickland's camps on Rocky Rips. The crew consisted of about thirty men of six nationalities, the boss being a Tobique Indian. As they were to break camp the next morning, the crew were having an unusual amount of fun that evening.

Next morning was bright and pleasant, but we were obliged to wait until nearly seven o'clock for Farrar to settle some business. While we were there the crew broke camp, after hiding their chains under the camp floor, as they expected to occupy it the next season. The camp equipment they took out with them on their sleds.

At this camp every time the camp door opened it would scare up a flock of nearly two hundred crossbills which had been feeding about the door where the cook's slops and tea grounds had been thrown out. These sang very sweetly, the first time I had ever heard of crossbills singing.

Farrar and I started at about seven o'clock without an ounce of anything to eat, as the crew were to take dinner at Northeast Carry and nothing cooked could be furnished us.

Farrar had with him a beautiful two and a half pound ax made by the same Alec Maxwell whom I had seen drinking at the Grant Farm. This later I bought of him when he went to war, and afterward lost on the south end of Long Island in Bluehill Bay while porpoise and seal hunting with Louis Ketchum.

We had no plan, and Farrar was unacquainted with the

country, except for a few miles. I had been by water up the Caucomgomoc and also up the Caucomgomocsis, or, as we call it, the "Sis." Philbrook and Billings had written me that if I wished to find them if I would come to Daggett Pond I would find a bush in a bog on the north side which would point to a spotted line running across to Allegash, and that their camps were at the inlet of Allegash Lake. My objective point therefore was Daggett Pond, which is on the Sis, between Round Pond and Shallow Lake. It was about fifteen miles across country, and I had to depend almost entirely upon guesswork.

About the middle of the forenoon I shot a partridge with the rifle, and we expected this to furnish our dinner. A little before noon we very unexpectedly came upon a lumber camp in the fork between two logging roads. We had not heard an ax nor seen a sign of lumbering up to this time, and by a curious chance we came out directly in front of the camp. There was here five feet by measure of solid settled snow: the roads were shovelled and cut squarely down like so many canals. A man on snowshoes above could hear the teamsters but could see nothing of the horses. If anyone on snowshoes got into one of these roads it was very difficult to get out again, and it could be done only by the help of some tree on the side.

On entering the camp the cook at once called me by name. He was just fitting out a boy with a hand-sled, loaded with provisions and a large coffee pot, which was to be the dinner of the men working in the woods too far off to come in to the camp at noon. As usual, we were pressed to eat dinner, which we were not reluctant to do; dinner consisting of the customary baked beans, gingerbread and strong tea. He told us we were on Little Scott Brook at one of Thissell's camps. I gave him the partridge and we started once again without an ounce of anything to eat to finish our journey of some fifteen miles.

On reaching a high ridge I got Farrar to climb and report the country to me. Caucomgomoc Lake was hidden, so he could not see it, but he reported a large body of open water to the northwest. I figured on this and finally concluded that it must be the bog on Great Scott Brook. I asked him if he could see three sharp pinnacles a little east of north. He reported that he could, and then I got him to throw a limb toward them, so that I could know the exact direction. Laying my course by this we soon crossed the Caucomgomoc and struck out at about the center of Daggett Pond.

We found that the thaw had extended up here and the pond was glare ice. Crossing the pond I found the bush, but as the thaw had obliterated all snowshoe tracks, and as there was a wide bog back margined by cedar swamp, it was pretty hard work to pick up the trail. However, we at last found it and had no difficulty in following it.

When at least a mile from any water, looking between the trees, I saw something crooked lying upon the crust and said to Farrar that it looked like a dead sable. He replied that it was nothing but a dead limb. After passing it I got another glimpse and as it still looked like a sable, I turned aside to investigate and found a mink with his skull broken and his brains gone, probably the work of an owl. I offered Farrar half its value ($1.75), but he said that if he was such a fool that he couldn't tell a mink when it was pointed out to him he wouldn't touch a share of it.

Just beyond here the trail passed by the carcass of a large bull moose which Billings had still-hunted on a light snow and killed with a ten-inch pistol.

Coming to Ellis Brook Bog, when about half way across our dogs left us and soon announced that they had a moose, but as we had no time to waste we kept on our way. A little further on we came to Upper Ellis Pond, at the outlet of which I found a bear trap setting for otter. I afterwards found that they had caught five otter in that trap this winter. A short distance further brought us to the shore of Allegash Lake. Here our troubles began. I had never seen Allegash Lake before, and only knew that Philbrook and Billings' camp was on the inlet, which I judged must be in a northwest course. The lake was about six miles long and was glare ice, so that no track could be followed. After going about two miles we came around a point and from there I could see something out on the ice which looked like a man. Coming up we found it to be a one runnered toboggan which I recognized as one that I had seen at Loon Lake in 1859 when I was hunting with Philbrook. It had been stuck up endwise and was frozen into the ice.

From here I could see the valley in which the inlet must be. It was almost sunset when we reached the inlet. We could hear the water running under the ice, but all tracks were obliterated. Going up the inlet quite a distance we found a canoe on the north bank where it had been left in the fall and covered with boughs. Where the snow had melted away a small portion of the canoe was exposed. Going directly back from the canoe we soon found the camp.

On entering I saw by the wavering yellow light something shine on the shelf on the opposite side of the camp. I found it was a gilt-edged Testament which I had given Philbrook two years before.

There was no sign of anyone having been in the camp for a number of days, but there was a handsled, and, improving the fast fading light, with the aid of Farrar's ax, we soon had a supply of wood. In the meantime I had been digging into the snow bank outside, hoping to find where meat had been hidden to keep it from the Canada jays. I was successful in this to the extent of finding a piece of moose ribs weighing three or four pounds.

When we had lighted the fire and investigated further we found a tent and a blanket or two for bedding, a very few beans and some dried apples. There were cooking tools, so we soon had our meat roasting and a bean stew on the fire.

The camp was a duplicate of one which Philbrook and I built two years before. It was ten by fourteen feet inside and had a half-pitch roof; of course it was without windows, as there was no glass to be had in that wilderness.

While walking behind the fire in the evening, I felt the ground spring under my feet, and on digging away a few inches of earth I found a cavity which contained moose tongues and noses covered with small sticks.

My Indian moccasins had been like pieces of tripe most of the previous day after the snow had begun to thaw, and I was very much in need of something for foot-wear. Farrar had on moose shanks, so while my feet were soaking wet his had been perfectly dry. There were two pairs of skates in the camp, so I proposed to Farrar to go back to Ellis Brook Bog and kill that moose the dogs had been barking at in order to get some shanks.

It was a lovely morning when we started down the lake. We had put pieces of old mitten over the heel brads of the skates so as not to injure our foot-wear. When we were on skates I learned to my surprise that Farrar had never learned to skate well, and it was only by steadying himself with his snowshoes and ax that he could get along at all. Our dogs seemed to enjoy the morning fully as much as we did, and kept skirting the shores and barking to express their high spirits, sometimes being so far away from us that we could hardly discern them.

At the point where we came upon the lake the night before, I saw the name of Abiel P. Willard, Brownville, upon a tree close by the shore. He was the man whom Dirty Donald murdered a few years after, sinking the body in Eagle Lake Thoroughfare.

Getting to Ellis Brook Bog our dogs soon found the moose, which proved to be an immense bull. As an experiment, I shot him near the kidneys, when he rose straight up upon his hind legs and fell back perfectly dead. We skinned him out and then skinned off the shanks, which is a rather difficult undertaking for a novice. In order to skin a pair of moose shanks the hide is cut around about eighteen inches above the hock joint and below as much as the length of the foot requires. Then a knife has to be worked around the inside from both above and below until the whole skin has been freed from the flesh, after which the hoof has to be disjointed and the skin slipped off.

We took the shanks, nose, tongue and perhaps twenty pounds of the steak. The hide we prepared for hauling in the usual manner, which is by folding it lengthwise till it is about two feet wide, tying it in several places to prevent its unfolding and then cutting a narrow strip from the upper edge of each of the forelegs nearly to the ears and tying the two ends together, so as to pass over the shoulders of the one hauling it. A hide prepared in this way sleds along as easily as a toboggan. We hauled the hide out to Philbrook and Billings's spotted line and left it there for them.

On getting to Allegash Lake, where we took off our snowshoes, Farrar said he could not see how the stuff was to be carried, as it was all he could do to get along on skates without carrying anything. I told him I thought I could take all the rest myself. So I laid down the snowshoes one upon another, and by passing a string through one of the foot-holes on each side I tied them tightly together. Then I placed the meat and shanks on top and also laid on a beautiful cock Canada grouse, the top of whose head I had knocked off with a bullet. These I tied fast with another snowshoe string while the fourth I tied into the toes of the snowshoes and took in my hand as a sled rope. In this way I drew the whole load along without any trouble.

After reaching camp and getting dinner the next thing was to prepare my shanks for wearing. This is done by turning the shank flesh side out, inserting a piece of split cut to fit and shaving off all the loose flesh and muscle. Then they are covered with salt, which is rubbed in with the back of a sheath knife. The distance the foot requires is next measured off and the toe is trimmed in semi-circular shape, the cutting being done from the flesh side so as not to clip the hair and make an ugly looking seam. After sewing the toe with strong thread, the seam is filled with moose tallow. More salt is put on and they are left over night, and again rubbed thoroughly in the morning. Shanks prepared in this way are perfectly water-tight and will need no further attention till worn out, except to rub in more salt occasionally. When worn, small holes are cut around the top about two inches apart through which a string is passed; they are pulled on like a stocking, drawn up tightly around the calf of the leg and the string is passed around the back of the leg and tied again in front.

[TO BE CONTINUED.]

Watch, Compass, Memory.

Editor Forest and Stream:

I have read with both interest and profit the entertainig contributions of your able contributor, "The Old Angler." In his last he alludes to the use of a watch to serve the place of a compass, and asks for an explanation of the rationale of the operation. He says, "Point the hour hand directly at the sun, and half the distance on the face between that hand and the figure 12, counting backward, will point nearly due south."

I believe I can explain it in a way that may be understood: The sun generally does not rise exactly in the east nor set exactly in the west, nor is it exactly on the meridian at noon, except twice a year, at the equinoxes. But for the purposes of a woodsman, to find his way, it will give a sufficiently close approximation when treated as so indicating the points of the compass.

Now, suppose that the sun rises in the east at 6 o'clock; lay the watch on a table at 6 o'clock in the morning, the sun then rising, with the hour hand pointing to the sun, and to the figure 6. It is evident that the east and west line will pass through the figures 6 and 12, while the south and north line will pass through the figures 9 and 3, the figure 9 being at the south end. Leave the watch lying in the same position until 10 A. M. The distance on the rim of the dial from figures 6 to 9 is the quadrant of a circle, or 90 degrees. The sun travels in its apparent orbit 15 degrees an hour, so that at 10 o'clock it will have traveled 60 degrees from sunrise, and will stand opposite the figure 8 on the dial, or two-thirds of the quadrant. Now, if the watch is moved around so that 10 takes the place of 8, the south and north lines will pass through 11 and 5 instead of 9 and 3, the figure 5 being half way between 10 and 12, counted the longest way, and marking the north, not the south point. But suppose the watch had remained undisturbed until 4 P. M., that is, ten hours from sunrise. The sun would have traveled ten times 15 degrees, and the circumferential distance between the figures on the dial being 30 degrees, it would have moved around to the figure 11, or five spaces from 6. Now, move the watch around until 4 takes the place of 11, and we have 2 and 8 on the south and north line, 8 being half way between 12 and 4 counted backward, and marking the north point of the compass. Of course, the half-way point between 12 and 4 counted the other way, marks the south point.

This explanation can readily be understood by drawing a circle on paper and dividing into 12 spaces marked as the dial of a watch.

The Old Angler also dropped some interesting reflections on the subject of memory, noting the fact that some of the lower animals have this faculty highly developed, of course along limited lines; that impressions on the memory of human kind derived from the senses of smell and hearing have more strength and persistency than from sight, and that the blind generally have better memories than those who see.

I have myself noted that illiterate people have much better memories concerning the things that they think about, than do educated people who do a great deal more reading and thinking; and particularly that many negroes exhibit astonishing memories along special lines. For example, negroes in the cotton fields, who were entirely without education, have been known to remember and correctly report at the end of the week the weights of cotton picked each day by a large number of cotton pickers. Also, the fact is familiar doubtless to many of your readers, that negroes stationed at dining-room doors of hotels to take charge of the hats, umbrellas and canes of the guests, never make a mistake in returning to each his own property. My own explanation is that those who do the least thinking have the best memories; or, in other words, the "palimpsest" that is overlaid with the fewest impressions can most readily call into use those that it has received.

This brings the suggestion that the nose and ears may have separate "palimpsests" from that used by the eyes, the latter being covered by a vastly greater number of impressions than the former, with a resultant greater difficulty in recalling them when wanted.

As regards the recurrence of childhood's memories in old age, it may be suggested that the impressions made on the mind of the child are deeper than on the adult; that during the active period of adult life the mind is wholly engaged with the passing events of current life, and that in old age, when the mind has ceased to busy itself with the thoughts and events incident to the period of active effort, these are dropped out of the mind and the more lasting impressions of childhood are brought to the surface again.

COAHOMA.

Natural History.

Some Pets.

I HAVE seldom seen an animal of any kind that could be made a pet of without trying to get one of them to experiment on. I tried for about two years to get a young coyote alive. I knew that if I could catch one that was still young enough I would have no more trouble in raising it than in raising a puppy. I finally got one by roping it; but I must have hurt it when I pulled it down, for it died in my hands in a day or two. Several years after this I had a greyhound that would catch them for me, and not hurt them; but I had a bear on my hands then and did not have room for a menagerie. However, I did get an old one that the dog pulled down for me; but after I had kept him several days without being able to get him to eat anything, I let him go again.

The prairie dog was another animal that I wanted, and at last got. I at first tried to drown them out of their burrows in the spring, when I thought there would be young ones among them; but pouring water in one of these holes is much like pouring it into a rat hole. Their burrows would sometimes get flooded in a heavy rain, then I could catch them and get my hands bitten all over. They have teeth as sharp as needles, and know how to use them. I caught an old one, a male, and putting a cord around his neck brought him home and staked him out on the grass. In a short time he began to dig a hole; he meant to stay. I let him keep at work on it a while, then took the cord off his neck. He put down a slanting hole about three feet long, with a small chamber at the botton; then made his bed in the chamber, using dead grass for a bed. I got him hay and excelsior, and he used these to make his bed. Every week or two I would leave a fresh lot of it near his hole; then he would rake out the old bed and make a new one. I fed him cabbage leaves, the tops of vegetables out of the garden, sugar, and when I could get it an apple once in a while. Apples were what he wanted, but I could not often get them, and they cost me 5 cents each when they could be got, so he did not often get any. He would sit up on his hind legs and take sugar out of my hand, but would never let me touch him.

It is generally thought that these dogs live without water; it is true that their towns are often found miles from any surface water; but I have always thought that one burrow at least in each town was sunk far enough to reach the water. They certainly use it—mine did. I kept a tin can sunk in the ground near his hole with water in it; he would drink the water, then sit at the can dipping his paws in it; but I never saw him wash as some animals do.

He was kept for eighteen months; then we were ordered away, and he was so tame now that if I left him behind he would be killed sooner or later when I was not there to prevent it, so I got him into a basket, then carried him back to the town I had taken him out of, and turned him loose in it.

The next wild animal that I tried to raise was a black bear. I got him when he was only a few weeks old. I was hunting one morning in May down in the Concho River, a few miles below where the North and South Concho unite to form the main Concho. Fort Concho stood up in the forks of the river then; San Angelo, a large town, occupies its site now.

While going along close to the bank of the river, I came across bear tracks that led off through the tim-

ber, and followed them. They had been made lately by an old bear and its cub. I wanted the cub.

I had gone nearly a mile when I came in sight of the bears. The old one lay on her back playing with the cub. This was the first female bear I had ever met, and I had heard so much about the fight they would put up when a cub was following them that I expeceted to have a fight right here now. I had met the male bear often enough to know that he would not fight anything if he got a chance to run; but I thought that the tales of the female fighting were all gospel. This one did no fighting though.

I was over 100 yards away when I first saw the bears, and keeping hid I stood watching them and waiting for a chance to fire and not hit the cub. At last the old one got on her feet, and as she did so I let drive at her head and missed her clean, and in two seconds after she was going off as fast as her legs could carry her, never stopping to do any fighting or see if her cub was following her or not.

I got one more shot at her; it was another miss, I suppose; in fact, I might stand here shooting all day and miss. It was not the gun's fault, though. I had a Marlin; they don't miss if they are held right; this only happened to be my day for missing.

I ran down to get the cub before he would follow his mother, and found him with his hindquarters shoved in under a fallen tree. Taking him by the neck, I dragged him out, while he kept making a little whining noise, and when I took him in my arms he shoved his head inside of my shirt bosom, but did not offer to bite or scratch me; he was too young yet; just the kind of a cub I wanted. I could not follow his mother and carry him, and did not want to leave him; so I waited for the next two hours thinking that she would come back looking for her cub; but she did not; I must have scared her clear out of the country, for I hunted the country all over half a dozen times after this, but never saw her tracks again.

I carried my bear up home, then put a small leather collar on him and tied him out on a horse lariat, giving him an empty flour barrel and an old blanket to sleep on. We had no fresh milk in that country then; the cows were there, plenty of them, but they were Texas cows; no one would try to milk them; so I got a can of condensed milk, and taking half of it, mixed it with warm water, then put it in a pan and proceeded to teach the bear to eat, just as I used to teach my young dogs when I would get one only two weeks old. I dipped a pocket handkerchief in the milk, then put it in the cub's mouth; he tried to eat it. Next, shoving his nose in the pan, I held it there while he got the pan emptied in short order; then he licked it clean; then he upset it to see where the milk came from.

I gave him bread and milk for his next meal, then cut the milk out of his bill of fare, giving him bread soaked in beef soup. This seemed to suit him just as well; in fact, I found out in a short time that the bear would eat anything a hog would eat. I had been afraid that I would not be able to raise him. I need not have worried about that; he could raise himself. After he had got to be of some size all I gave him was a loaf of bread, 20 ounces, twice a day. He would eat the whole loaf seated on his tail with the bread held in his forepaws. He ate all the sugar he could get; and a pound of mixed candy would last him about five minutes. I fed him but little meat, and tried to keep fresh beef away from him; but I could not keep others from giving it to him. I was afraid if he got much of it that when he grew up I might not be able to manage him. He never got beyond my control, though.

He had not been tied on the rope long before he began to eat it, and I had to get a chain. I had no chain light enough, so I got about a dozen old side-line chains and made him a chain out of these twenty feet long.

The barrel he lived in furnished him his principal amusement; he would spend hours on top of it rolling it until it happened to roll out of reach of his chain, then he would sit and whine until his barrel was brought back to him. We could handle him even after he had got to be a year old; he got so much handling that he never became dangerous. The only one I ever knew him to hurt was a little trumpeter, and I did not whip the bear when he did it, either. This boy I warned to keep out of the bear's reach. I knew that he would play some trick on the bear, then get hurt for it. I heard a yell from him one afternoon, and on going out found that the bear had him laid out; he had spit tobacco in the bear's face, and before he could get out of the bear's reach the bear let him have it. The hospital steward patched up the boy's face where the bear's paws had laid it open, and ever after that I never had to tell the boy to keep away from the bear—one dose was a cure.

I left the post before the bear was quite two years old, and soon after this they had to kill him. He soon missed me and the club I whipped him with, then went on the warpath, they told me. CABIA BLANCO.

A Kadiak Bear.

THERE was shown at the New York office of the Winchester Repeating Arms Company, last week, a bear skin which was contemplated with awe by a large number of interested and deeply impressed visitors. It was of a Kadiak bear, killed by Mr. Chas. A. McLennan, of Nome, in northwestern Alaska. The figures given were: Length, 11 feet 7 inches; breadth, 11 feet 3 inches; circumference, 48 feet 6 inches. Commodore Sanford found it necessary to rearrange his office furniture to make room for the outspread rug into which the skin has been converted.

The story that goes with the skin is that Mr. McLennan was passing along the trail toting a pack and a Winchester rifle, when the apparition of this bear as big as a meeting house uprose before him with a *woof*. A single ball from the '95 model Winchester, .30-40, passing in on one side, through the heart, and out on the other side, was the only ammunition used in reducing the monster to possession. The bear was a male. The weight was given as 2,275 pounds, but it could not be learned whether this was claimed to be actual weight or estimated weight. Two cubs were with the old one and were killed; the mother could not be found.

How the Captives Sleep.

THE writer, who received permission to visit the Central Park Zoo late at night in order to note the different positions in which animals and birds rest, observed some curious things. To any one fond of natural history such a visit is most interesting.

In the lion house the lioness was lying on her left side at full length, while the lion, couchant, rested his head on his crossed forepaws, his hindlegs being half drawn under him, and the tail curled in toward the body.

The pumas, tigers and leopards were all resting on their sides, in nearly every case lying on the right side. The hyenas—pariahs and scavengers of the forest—rested with their hindlegs drawn under them, the forelegs stretched out, with heads slightly bent to the right. Nearby the two-horned rhinoceros was lying at full length on his left side, gently snoring. The hippopotami showed only their heads and backs above the water.

No longer looking for peanuts, the elephants lay stretched out on the floor, their huge legs lying out at full length and the trunk curved under the body. They were all resting on their right side. Close by, in the deer house, the different deer had all crouched low for their rest, with forelegs bent under them and the hind ones drawn up, while the head was turned to the right and rested on the side of the body.

The oryx, with its long horns, was resting with its head away from the body, the horns making an arch over the shoulders. The alpaca simply looked like a large ball of black wool. The camels lay on their stomachs, with their fore and hindlegs bent under them, while their heads and necks were stretched straight out.

The monkeys were squatting about their cages, their heads bowed down over their chests, the arms resting on the thighs of the hind ones. A baby monkey was sleeping cuddled up in the arms of its mother, its little eyes peering out inquisitively at the midnight visitors. In the smaller animal house, given up almost entirely to civet cats, 'possums and such like, every animal had curled itself up into the smallest possible space, burying the nose under the stomach, with all the paws drawn up close to the body. The bears were resting in various positions, some lying out at full length, others curled up. The two polar bears were huddled up in a heap, with their noses buried deep in their white fur, and forepaws crossed over the eyes.

The llamas, zebus and American buffalo were resting as cows rest, with their forelegs drawn under them and their hind ones drawn in. The porcupine was lying on its stomach, its head bent to the left, with the quills standing out in every direction. The emu was resting with the first joints of its legs on the ground, the body a short distance above and its head buried in the plumes.

Most of the birds were resting on their perches, their legs bent under them and their heads tucked under a wing—in every case the right one. The parrots had only drawn their necks in, while the pelicans slept squatting on the ground, their heads drawn well back and their ponderous bills resting on their breasts.

Sleepy Grass and its Effect on Horses

IN a recent number of Science appears the following description of this plant and its effect on horses:

In the Pecos Valley of New Mexico a year ago, a ranchman told me of a strange kind of grass found in the Sacramento Mountains west of there which, from its peculiar effect on horses is called "sleepy grass." He described it as differing from the locoes in merely putting horses into a deep sleep without other symptoms of poison.

The story had a far-away sound and made little impression at the time, but last September, as I was traveling along the crest of the Sacramento Mountains, it came back to me with a new interest.

We had made camp one evening in a beautiful park, bordered with spruces and firs, and covered with tall grass that, with its green base leaves and ripe heads loaded with heavy rye-like grain, offered a tempting feast to our hungry animals. The moment saddles and harness were off, the horses were eagerly feeding. A few minutes later a passing ranchman stopped his team and called over to us: "Look out there! Your horses are getting sleepy grass," and added, "If they get a good feed of that grass you will not get out of here for a week." We were not prepared to spend a week in that locality, but I was anxious to test the grass, so let the horses feed for a half hour, then brought them up for their oats and picketed them in some short grass on a side hill well out of reach of the sleepy grass.

The following morning, just after sunrise, the cook called my attention to the attitude of one of the team horses, saying there was "sure something the matter with old Joe." The horse was standing on the side hill, asleep, his feet braced wide apart, head high in air, both ears and under lip dropped, a most ridiculous picture of profound slumber. The other horses apparently had not eaten as much of the grass as old Joe, for they were merely dozing in the morning sun and showed signs of life in an occasional shake of the head or switch of the tail. At breakfast time the others woke up to a keen interest in their oats, but old Joe, after being dragged to camp much against his will, preferred to sleep rather than eat, and after pulling back on the rope all the way down to the spring, refused to drink or even lower his head to water. My little saddle mare showed the least signs of the general stupor, so dropping behind with her, I woke the others up pretty thoroughly and brought them into camp on a lope. Later, when in the harness, the team traveled along steadily with some urging, but when we reached Cloudcroft and left the horses in front of the store while getting supplies, their heads drooped and for an hour they slept soundly. Even my nervy little mare did not move from her tracks, but stood with drooping ears, paying no attention to the unusual surroundings and stir of a town. On starting again the saddle horses responded to the spurs with worried switches of the tail quite different from their usual manner, while the team paid no greater attention to the whip. For the rest of the day our progress was slow, notwithstanding which the driver called my attention to the fact that the team, and especially old Joe, were sweating profusely. Our saddle horses would sigh with relief when allowed to stop for a moment, and we had many a good laugh at the flapping ears of my companion's horse—a large-eared, raw-boned cayuse, which seemed to have lost all control of her usually erect ears.

That night we camped in another park-like valley where sleepy grass was abundant, but took care to picket the horses out of reach of it. They were hungry and all began to feed eagerly, but old Joe soon stopped, braced his feet and relaxed into forgetful slumber. The next morning when we went to bring them in for their grain, all were fast asleep.

The stupor lasted about three days, and was too evident to be attributed to weariness or natural indisposition. We were making easy trips and the horses were in good condition. After it wore off they showed their usual spirit and energy, as well as appetite. The only after-effect was a gaunt appearance, apparently resulting from lack of energy to get their usual amount of grass. Old Joe had even refused his grain for about half the time.

It should be remembered that our horses had but a small amount of the grass. The ranchman told us that other travelers coming into the country had been obliged to camp for a week while their horses slept off the effect of a good feed of it, and while its effects usually lasted for a week or ten days, it did no more serious damage than to leave the animals thin from fasting. Stories were told of horses being lost in the mountains and found several days later in the bushes near camp fast asleep.

I have offered no real proof that this particular species of grass is what affected our horses. They undoubtedly ate a dozen other species of grass, as well as some other plants, every day while we were in the mountains. But after our experience I am inclined to give credit to the uniform statements of the ranchmen in regard to it. All agree on the species, on its effects, and to the fact that after one good dose of sleepy grass horses will never touch it again. This latter statement has ample proof. Horses and cattle are ranging in many of the valleys where it grows in abundance, untouched and full of ripe seed, while the other grasses are cropped close all around it. I did not see horses or cattle touch it except in the case of our own animals and the team of another traveler from the valley, all of which ate it eagerly. They ate both the base leaves and the heads that were full of ripe seeds. I shelled out and ate a handful of the seeds, but without noticeable effect. The ranchmen generally agree that it is the leaves which produce the sleepiness.

I did not hear that cattle were affected by it, but they certainly avoid it, as many were grazing near where it stood untouched.

While this experience was new to me, I find that sleepy grass has long been known to botanists as such, or technically as *Stipa vaseyi*. Something has been known of its effects on horses, but apparently its chemical properties have not yet been determined. VERNON BAILEY.

That Western Tornado.

WYMORE, Neb., March 7.—*Editor Forest and Stream:* I have just read the account, from the pen of "More Anon," of the ducks killed by a storm in Currituck Sound, and am amazed as well as interested. I am inclined to doubt the reliability of your correspondent. In the first place, he says "The Sound was visited by a genuine western tornado." How could a "western" tornado visit Currituck Sound? And if so, would it still be a western tornado? Now notice this statement in the same article: "Ducks of all kinds are still abundant at Currituck." Now, if that was a genuine western tornado, why did it not kill all the ducks in the Sound? Would a genuine western tornado go around picking out a few redheads? Verily not. Your correspondent has never been west; he is writing about things he never saw and knows nothing about. Again, he says: "There is another change in our new laws which I think will help to keep our ducks with us longer." Why don't he be more specific, and tell whether the new laws prohibit "western tornadoes" instead of incumbering the record with statements like the following: "This is a hard story to believe." Of course it is a hard story to believe, and it is not necessary for him to tell the readers of FOREST AND STREAM that it is hard to believe. The witness questions his own veracity. Again you will notice that the witness does not claim to have seen or gathered up and eaten any of these dead ducks himself, but refers to a lot of people living within twenty miles of the Sound. Now, I want the names of every one of them, with their addresses; I don't propose to have our western tornadoes slandered without making a vigorous kick. If we can't have any of the ducks brought into court, let's have some of the feathers.

Now, Mr. Editor, you have also excited my curiosity. In your notes to "More Anon's" letter in regard to the instance you cite of swans being drowned in a storm "in the same locality." Was this a western tornado, too? Such things never happen in the West; our ducks can swim. A. D. MCCANDLESS.

A Four-Legged Sapsucker.

LAST week, while driving from Freedom to Liberty in Waldo county, Maine, I observed a red squirrel acting rather strangely. He was clinging to a small sugar maple tree beside the road some distance ahead. As I approached, I stopped my horse to watch him. I soon learned that he had a "sweet tooth" and was tapping trees for the sap. He had gnawed through the bark and clinging to a limb was sucking the sap as it started to run freely from the gash he had made. So eager was he not to lose a drop that as I drove past him, near enough that I might have hit him with my whip, his thirst for the sweet was so great that though he eyed me cautiously he clung to his post and allowed me to pass by very near to him.

I had observed the chickadees tap the sugar maples for the sap, but this was new to me.

The red squirrel has been very numerous in the State this winter. Hardly a pleasant day goes by all winter long but one or more may be seen beside the roads, especially in the small cypress groves, eating the buds or picking the cones in pieces, letting them fall on the snow below. J. MERTON SWAIN.

AUGUSTA, Me., March 10.

[Red squirrels are known to tap sugar maples for sap as stated.]

A Snow White Partridge.

"DOWN in Virginia, near Brandy Station, the scene of many big battles during the Civil War and the home of Representative Rixey, the other day Mr. G. C. Wood, a farmer, killed the only white partridge ever known in that section of the country," said J. K. Jackson, of Culpeper, Va., to a Star man at the Metropolitan this morning. "It was pure white from tip to tail. The bird was sent to a taxidermist here in Washington to be mounted, and it will probably be sent to the National Museum. The plumage of the bird is soft and silken, but in form and other points it is identically like the other partridges killed in the neighborhood."—Washington Star.

Wildfowl and Lighthouses.

WASHINGTON, D. C.—*Editor Forest and Stream:* I note the report of the ducks supposed to have been killed by the recent storm in Currituck Sound. A number of years ago I had the pleasure of visiting the Boston lighthouse, and the subject of ducks having been brought up, the keeper told me that in very stormy weather in the mornings they had often picked up quantities of ducks of every description which had become bewildered and had flown into the light. Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

A Moose Hunt in Maine.

FOR the past two years I had been trying to find time to go on a moose hunt in Maine, but owing to my college work I was unable to leave. This fall, however, I found myself sufficiently "up" in my studies to take a short vacation.

Leaving Boston at 7:40 P. M. October 16, I arrived at Greenville on the following day at eleven o'clock, and found my guide, Joe Morsec, waiting for me at the station. After dinner Joe and I sallied out to buy "grub." During the evening Joe packed our stuff, and early the next morning we left Greenville for Northeast Carry, at the head of Moosehead Lake. We arrived there just in time for dinner. By the middle of the afternoon Joe had our canoe packed and ready for the twenty mile trip down the West Branch.

We had paddled nearly a mile down the river when we jumped a doe deer on the left hand bank. This was not the only proof we had that the country was teeming with game. That evening Joe showed me that he could do one thing at any rate which would tend to make our trip a happy one: he could cook corn cakes and flapjacks to perfection.

The happiest time of the whole day, I think, is in the evening around the camp-fire, when the pipes are lighted and the laugh and story go the rounds. The "rounds" in this case, however, included only Joe and me, but nevertheless we were happy.

We were up bright and early the next morning, and by sunrise Joe had our breakfast cooked. It didn't take us long to eat it and pack up for the start. This day will remain long in my memory, as it was on that forenoon I saw a moose for the first time. We had been paddling slowly and silently down stream for an hour or more, when Joe called my attention to a moose feeding on the opposite bank, near the mouth of Moosehorn stream. Carefully we drew nearer. I had my rifle all ready to shoot, when I saw, to my disappointment, that although the moose was a big bull, he carried only spike horns. Replacing my rifle in the bow of the canoe, I took the paddle and we got within three feet of him before he started.

By noon we had passed the Half Way House kept by Joe Smith, and entered into that long succession of rapids and falls which extended nearly to Chesuncook Lake. In the afternoon we crossed Suncook and had dragged the canoe a mile up the Cuxabexis stream.

It was at Chesuncook that I first obtained a view of Mount Katahdin, rising like a giant out of a comparatively flat, swampy country. In fact, nearly all of the land lying on the eastern side of Chesuncook Lake is swampy and level. This view of Katahdin was the only one that I got, as from that time on the mountain was shrouded in mist. It is worth noting that at about sunset of this day we had a severe thunder storm, followed by cold, damp weather.

While Joe was busy cooking our breakfast the following morning, I took my rifle and walked cautiously down stream. I had barely gotten out of sight of our tent when "crash" off to my left a deer started. All I saw of him was his flag vanishing through a thick fir clump.

By the middle of the afternoon we reached Cuxabexis Lake. Crossing this beautiful sheet of water, we continued up the dead water of the Cuxabexis, and located a place for our permanent camp. During the night we had slight flurries of snow intermingled with rain, so instead of hunting in the morning, Joe and I cut wood, got the tent fly up and fixed things generally. Early in the afternoon we started out to see the country, and if possible to shoot a deer for food. Referring to my diary, I find that we jumped six deer on this day, but owing to the scrubby fir growth, I did not get a shot. We found moose signs in plenty, but for the most part they were old.

The next two days we hunted for moose untiringly, but without success. At the end of this time Joe proposed we take a five days' trip to the second dead water, which lay about two miles above the lumbermen's old dam, and possibly six miles from us. The next day was spent in cooking, but early the following morning we started.

We traveled mostly by old lumber roads, which, thanks to the late heavy rains, were ankle deep with water and mud. That night we put up at a tumbled down long deserted lumber camp. The greater part of the roof had fallen in, but up in one corner enough remained to afford us a partial shelter from the weather. That evening I found an old moose horn, and although it had been partly eaten by mice and squirrels, the blade measured sixteen inches across.

Next morning I was fortunate enough to get a shot at a doe. She ran about ten yards and dropped. When we got to her she was dead.

That evening two deer were around our camp. Once during the night I lighted a match to look at my watch. At the unexpected glare both deer jumped and blew, but even this did not scare them for long.

Moose signs were fresher and more plentiful up there at the headwaters of the Cuxabexis than at the home camp, but when the moose made these tracks is more than I know. We would come to bog holes in which the mud, disturbed by a passing moose, had not yet settled, but to see the moose we could not.

The next night Joe decided to try calling. At three o'clock he awoke me and together we walked to an open bog two miles from the camp. The moon, which was on the wane, was nearly setting when we arrived at the bog. Selecting a good position, Joe called. I will not attempt to describe a moose call. To me it seemed one of the very wildest, loneliest, most plaintive sounds that I had ever heard. We called three times that morning, but got no response.

During the next two days we had rainy, cold weather. We hunted, nevertheless, but with the same ill luck attending us.

On the last day of our stay at the old camp, luck swerved a little in our favor. We had been walking carefully along the middle branch of the brook when suddenly a deer snorted. By climbing on to a fallen tree I could see his body and shoulder, but not his head. Taking as careful aim as I could, I pulled the trigger. The deer started and ran. Cautiously we worked ourselves forward to where the deer had been standing, and there, a short distance off at the foot of a pine stub, he lay. He had a magnificent head—eight points and very regular.

Shortly after shooting the deer we came upon beaver signs. Alders and small birch had been cut clean off at about five inches from the ground. Following down the brook, we at last came to the dam. This dam was possibly forty feet long and eighteen inches high. It was composed of alders placed with their branches pointing up stream. Smaller branches, sticks and grass had been floated down and lodging against the bed formed a nearly water-tight dam. Mud and debris had been placed on the stems of the alders, thus holding them down. The water had been raised a foot and backed up for two hundred yards.

On the following day the weather became very cold. I decided that we had better get back as soon as possible to the home camp. There we found everything in good condition, except that the moose birds had eaten some of our provisions.

The next day, having packed everything, we embarked once more in our canoe and started on our way back to Greenville. Nothing of any importance happened until we reached Chesuncook Lake. The wind had been steadily rising all day, and by the time we reached the lake a big sea was running. I myself wished to camp on the shore until the sea had somewhat subsided, but Joe persuaded me that we could get across in safety. I never want to have an experience like that again. In the middle of the lake, where the waves were strongest, the sea fairly dashed over us, and if it had not been for the rubber blanket over the "camp truck" in the center of the canoe we should have been swamped. I bailed incessantly while Joe guided and paddled the canoe. We arrived safely, however, at the other shore, and that night we stopped at the Chesuncook House.

Two days later I found myself at Northeast Carry, my moose hunt over.

Looking back over my trip, although I did not get a moose, I do not regret having taken it.

I came back much better in health and spirits, and I advise every man, whether in good health or bad, to take a canoe trip in Maine. WALTER T. HOOVER.

Days with Quail in Southern Indiana

JEFFERSONVILLE, Ind.—The quail season of 1902 opened very unsatisfactorily, the weather, until the middle of December, being very warm and dry, to the great discomfort of both man and dog. The extremely cold, sleety January of the previous winter had worked havoc among the old birds and the rainy spring had drowned many of the young ones, so that in this section of the country quail were very scarce.

I had, nevertheless, spent all my spare time during the summer cleaning and re-oiling my gun (a 6 pound 28-inch No. 12) and yard breaking my two pointer puppies—Duke of Belmont and Jingorette—sired by that superb young pointer Gorham's Jing, and both very promising young dogs 12 months old, at the opening of the season.

My friend Cook and myself spent the first week of the season at a point 35 miles up the Ohio River from the famous Falls, where Gen. George Rodgers Clark, Daniel Boone and John Floyd spent the most eventful years of their lives. This first hunt was a splendid outing, the weather being warm and dry, the valley along the north bank of the Ohio being a most beautiful spot, interspersed with the long white trunks of the sycamore along the river bank, while back a little way from the river were thickets of sweet gum, sumach and water maple, showing a most ingenious color scheme, ranging from the deep purple of the sweet gum to the bright crimson of the sumach, the water maple furnishing all the intermediate shades. But the birds were very scarce, the first day we were not able to put up a single covey, and to add to our discomfort my dog Jingorette developed a sure enough case of gun shyness at the first shot, leaving the field without permission and going to stay. Duke, however, took to both birds and gun like a "duck to water," from the first covey being staunch, backing and retrieving like a veteran. Coupling Jing to Duke the next day did no good, as she would leave the field the moment she was uncoupled; so she was allowed to go.

We returned home at the end of the week with one dozen birds each (which I think should be the limit for any sportsman to kill on any one hunt, or, at least, to bring in with him), with a determination to remain in until next season, as birds were too scarce to make hunting interesting.

I waited two whole weeks for Cook to propose another trip, but he failed to propose, when I began to "feel of him" and found he was only waiting for a show.

It was arranged that we spend the last day of the season of 1902—December 31—along the foot of the Knobs, eighteen miles northwest from home. As I had but one available dog, Duke, and Cook none, it was decided to invite our friend Gilbert to make one of the party, as he is one of the fraternity and has a good dog. Of course Gilbert accepted with thanks, remarking he had promised his wife he would not go quail hunting this season again, but would beg off this one time. All arrangements were made accordingly, a trap ordered for five o'clock A. M., the morning of Dec. 31—the last day of the season of 1902.

On Dec. 29 snow fell about 4 inches deep, and the thermometer went to zero, but we had agreed to go, and it was the last day of the season.

Five o'clock on the appointed day found us in the trap, ready to start on that 18-mile drive, the thermometer 8 degrees above, Cook on the rear seat with the two dogs, Gilbert in front, astride a carriage heater, myself beside him driving. It was a fine winter morning, the roads were well packed and were hard and smooth, the air crisp, the rising sun on the snowdrifts showing a rare assortment of sparklers. The route lay through one of the most picturesquely beautiful parts of southern Indiana, the long high peaks of the Knobs lying to our left, so that the sun shone on the snowcapped peaks, making a picture to delight the eye.

We reached our destination at eight o'clock, had the team groomed and stabled for the day, and set out without delay, to locate our first covey. The cover was superb, and was familiar to each of us, the dogs were in prime condition and working as if they enjoyed it; but after a hunt until nearly noon, in the open fields, not raising a single bird, we ate lunch from our pockets, which contained nothing with a feather on it, after which we decided to "take to the woods."

As soon as we had finished lunch we started across a small stubble into a large beech woods, noting plenty of beech mast, and had gone but a short distance when I was delighted to discover tracks, where the brown beauties had been feeding the evening before. Duke came up and crossed the trail; but did not take the scent, forged ahead about 100 yards and pointed in a large pile of brush. Cook and Gilbert were not in sight and did not answer my whistle, so I decided to flush the birds and mark them down well and find my friends and have some shooting. To my great disappointment not a bird would flush, although I beat every bush over well. Then going about two yards in front of Duke, I discovered where the covey had passed the night under the side of a log and had run out in the woods to feed in the morning, instead of rising to wing, as is their custom (if a quail ever has a custom). So I knew how it was with Duke. He had scented where they had roosted, the tracks up to that point not being live, and refused to go ahead until I convinced him his point was false. The birds were running in the direction we were going, so I decided to work them down with Duke, and in the meantime try to locate Cook and Gilbert. I had gone but a few paces when I heard that peculiar and pleasing "whirr" so well-known to the follower of the gamest of all birds—Bob White—and was just in time to see a beautiful covey of about twenty-five birds go sailing down over the hill further into the woods, and began to wonder who could have flushed them, when a long-eared, lank 'coon hound came into sight, and a moment later a boy of about 16, with a long single barrel muzzleloader.

If you have ever followed the dog after quail you know how I felt at that time, if you have not, it would be useless for me to try to explain.

I followed in the direction the birds had flown, coming on Cook and Gilbert a short distance to my left, only to find the birds had gone into a large thicket so tangled and overgrown with greenbrier and tangled shrubbery that it was impossible to get through it, and in passing around the thicket some five or six scattered birds were flushed, Cook getting two, Gilbert and I one each. After circling the thicket we gave up in disgust, returning to where we had stabled the team, with a firm resolve to pack up and return home, hungry, tired, out of humor with ourselves and all mankind in general, and long-eared, lean 'coon hounds in particular.

While we were packing up around the sheet iron drum stove our host remarked that he had been over to visit a neighbor about a mile south (we had been north) that day and had "skeered up" a bunch of birds along the creek bank about half a mile from the house, near a sorghum patch. It was then 2 o'clock and we had four birds in the bag. Cook and I both at once got our guns back and strapped leggings on again, ready to locate that covey. Gilbert (who, by the way, is 60 years old) remarked that all the birds in Clark County could not tempt him to leave that sheet iron drum, but kindly gave his consent for us to go and allowed us to take his dog. We soon reached the sorghum and the bend in the creek and spent nearly half an hour going carefully over every inch of the ground, but failed to locate a single bird, and were just about deciding to return to the house and pack up for good when, on coming around a clump of small trees of about four acres, we found Duke down, and as I came up behind him to flush I heard a shout, "Don't shoot! That is a winged bird of mine,' and Gilbert hove in sight, trying in one breath to explain, that after we left he lost his nerve and followed, that he took a short cut to where we were, to catch us, that he ran into the covey

and winged one on the rise, and that they were all scattered along the bushes on the banks of the creek. All of his sins were at once forgiven and he assumed the proportions of a "Prince Bountiful."

Gilbert chose the left bank of the creek, Cook the right, so I was left to be the "ham in the sandwich," taking the middle of the creek on the ice, which was good walking, being covered with snow.

Within 20 yards Gyp pointed on Gilbert's side, while at the same time Duke went down in front of me, along the edge of the ice. Gyp had about ten birds which Gilbert flushed, getting a double, Cook and I no shot. I then flushed for Duke, raising a single, which I stopped; Cook no shot. About 50 yards further Gyp went down again, Duke backing, the birds, about six or seven, coming up through a thick clump of bushes, Cook and Gilbert each getting a single; myself a double. The birds were then well scattered along the creek bank, which we followed up, getting some five or six more, making about fifteen in all, the last shot of the day being one of the finest I had ever seen. Passing from the clump of small trees which lined the bank of the creek, on our way back to the team, Duke came to a point at the edge of the sorghum patch, which at that point was about 60 yards from the bank of the creek, about half the distance being clear (stubble), the remainder of the distance was covered thickly with small saplings. Cook and I decided to give Gilbert the shot, I went behind Duke to flush, while Cook dropped a little to the left, Gilbert announcing he was ready. The bird, upon rising, went straight for the creek bank, Gilbert missing both barrels, before the bird reached the timber. I was busy complimenting Duke on the grand manner in which he had closed the season, and looked up just in time to see Cook take a snap shot almost through the timber and fully 60 yards distant (he shoots a 12 bore, 30-inch barrel), and to my surprise saw the game go heels over head, Cook and Gilbert both maintaining it was another miss. I sent Duke for the bird and saw him pick it up on the ice about the middle of the stream, the momentum having carried the bird fully 15 yards before reaching the ground. It was found to have three or four shot through his head.

Within 20 minutes we were in the trap facing that 18-mile drive home, each one declaring it was at least 10 degrees warmer than it had been an hour before. That little spurt of shooting had changed the entire mood of each of us, and we would then have been willing to have divided our last farthing with any one who might have asked, while not more than an hour before either would have been inclined to have shot any living being asking for a kindness, and all because we had been able to pit our skill against the "Little Brown Beauty" and win.

That hunt has become a landmark in the lives of each of us, and up to the present time whenever two of that party meet, the afternoon of the last day of the season of 1902 is sure to be gone over again.

In conclusion I wish to say for the benefit of some one who may read this and is interested in the pursuit of that most uncertain of all birds, that we have in this part of the State some very fine cover, very hard hunting, but we protect the birds from the bad weather and wholesale slaughter of the pothunter, and that we have sufficient birds left over to insure good shooting next year, unless we have another very wet spring during the hatching season.

In the shaping of our future game laws, an earnest effort should be made to gag the hog hunter and the small boy on the farm with the figure 4 trap.

W. E. OGDEN.

Legislation at Albany.

ALBANY, March 14.—Game legislation has made considerable progress in Senate and Assembly during the week just ended. The most important development of the week's session was the action of the Senate committee in reporting out Senator E. R. Brown's bill to forbid spring shooting and its subsequent defeat by the Senate by a tie vote of 23-23, when it came up for final passage on Thursday. It is understood that an effort will be made later to resurrect the measure and pass it, although Senator Bailey, of Long Island, its chief opponent in the Legislature, is sanguine that not enough votes can be obtained to save the bill.

Progress of fish and game bills during the week may be noted as follows:

The Assembly passed Assemblyman Whitney's bill, Int. No. 376, P. N. 947, relative to special close season for trout.

The Assembly passed Bedell's bill, Int. No. 427, P. No. 1,065, relative to close season for certain quadrupeds and birds in Orange county.

The Senate committee reported favorably the following bills:

Assemblyman McNair's, Int. No. 549, P. No. 620, relative to the close season for squirrels. It was later advanced to committee of the whole.

Assemblyman Doughty's Int. No. 266, P. No. 782, legalizing certain shell-fish leases.

Assemblyman Denison's, Int. No. 371, P. No. 728, relative to close season for wild deer.

Assemblyman Bridgman's, Int. No. 479, P. No. 526, relative to spearing fish in Otsego and Orleans counties' creeks.

Assemblyman Doughty's, Int. No. 613, P. No. 693, relative to the taking of pheasants; advanced to committee of the whole.

Assemblyman Fowler's, Int. No. 116, P. No. 545, for the protection of fish in Chautauqua Lake; advanced to committee of the whole.

Senator Armstrong's, Int. No. 305, P. No. 346, relative to close season for grouse in counties of Ulster, Sullivan and Greene.

Senator Allds', Int. No. 507, P. No. 633, relative to wild birds.

Senator Brackett's, Int. No. 487, P. No. 604, relative to fishing in Saratoga Lake and Lake Lonely; advanced to committee of the whole.

Senator Bailey's, Int. No. 498, P. No. 615, relative to possession of trout on Long Island.

Senator Townsend's, Int. No. 379, P. No. 450, relative to deer.

Senator Goodsell's, Int. No. 261, P. No. 282, relative to fishing through the ice with tip-ups in Orange and Rockland counties.

Senator Armstrong's, Int. No. 310, P. No. 351, relative to spearing fish in Seneca Lake; advanced to committee of the whole.

Senator Armstrong's, Int. No. 305, P. No. 346, relative to close season for grouse in the counties of Ulster, Sullivan and Greene.

Senator Armstrong's, Int. No. 307, P. No. 348, relative to the sale of venison.

Senator Armstrong's, Int. No. 309, P. No. 350, defining the powers of game protectors in various counties; advanced to committee of the whole.

Senator Armstrong's, Int. No. 186, P. No. 190, relative to the destruction of illegal devices.

The Senate has advanced to third reading Senator Armstrong's bill, Int. No. 303, P. No. 344, relative to close season for quail.

The Assembly has passed the following bills:

Assemblyman Bedell's, Int. No. 462, P. No. 505, relative to fishing through the ice with tip-ups in Orange and Rockland counties.

Assemblyman Bedell's, Int. No. 428, P. No. 453, relative to close season for trout in Orange county.

Assemblyman Nichols' Int. No. 693, P. No. 812, relative to close season for grouse in counties of Ulster, Sullivan and Greene.

Assemblyman C. W. Smith's, Int. No. 886, P. No. 1104, relating to wild birds.

Assemblyman Moran's, Int. No. 470, P. No. 517, relative to fishing for non-game fish in Cayuga Lake and tributary streams.

A Wet Day's Ducking.

Editor Forest and Stream:

Day dawned dull and gray, with rain falling in sheets, flooding the asphalt pavements until the gutters ran curb-full. Long before break of day I had been awakened by the drone of the downpour on the roof of the next block, several stories beneath the window of my room, perched like an aerie in the top of a tall building. It was a blowing rain, driving with a good southeaster that promised more to come, and so I mentally shelved the duck shoot that I had planned for that day, and over a leisurely breakfast and the morning papers looked forward to a lazy Sabbath in loafing about the club. As often as the howling wind would tempt me to change my resolution, so often would the sight of the pelting rain hold me back.

However, about noon the wind shifted to the southwest, and though it continued to blow a gale, the clouds began to break, the rain to cease and bits of blue sky appear. Then thoughts of the flying fowl, and mental pictures of a certain stretch of water, with banks of ducks riding off the windward shore, made me glance repeatedly at my watch. The next train for the marsh left at 1:40. An hour later would see me in a duck boat.

In vain I tried to induce some one of my club friends to accompany me, in vain I argued as to the certainty of a good shoot. They simply pointed to the square bit of blue bunting, straining at the staff over the weather office across the street, snapping flat as a shingle in the teeth of the stiffening breeze—that meant continued rain they said, and—well, there were occasions when a crackling fire and spicy applejack were better than ducks and a probable wetting.

But I pinned my faith on the bit of blue that flecked the gray heavens here and there, and was soon speeding coastward.

No keeper was at the station to meet me, he little dreaming that any of the fellows would be down, so a half mile tramp to the cabin, across the rain-sodden fields followed, but the sight of wedges of ducks trading back and forth lent energy to my steps.

I found the keeper and some farmer folk sitting about the great open fireplace, in which logs of eucalypti blazed and crackled, and the former was loud in his protestations of the uselessness of going out upon the lake in the wind, which by this time had increased to a small hurricane, sweeping over the mesa and marshes with a force that made the willows hum and the tall tules lie flat over the water.

"Why, Bob, you'll get nary a duck from the blinds. The birds is all in thet willer swamp. They's millyuns uv 'em, but they can't be druv out with a cannon in this storm," said the keeper, a hearty old Maine exguide, with an equal disregard of His Majesty's English and my high-flown hopes. Nevertheless, I donned canvas togs and boots, and then enveloping myself in a green "slicker" and an old "sou'wester," and generously dabbing the metal parts of a Parker twelve with gunoleum, I launched a light Mullins duck boat and started on a half mile row to the nearest blind.

There was a good sea running, for the wind had the sweep of the length of the lake, but as in going out I had the wind astern I got along famously, the little craft bobbing up serenely on the top of each miniature billow, and not shipping a cupful of water. It was not easy to set the decoys, but I managed to drop overboard a couple of dozen or so in fair shape, where they bobbed about and tugged at their anchors in such an alarming way that I fear they did more harm than good.

Unfortunately, the blind that I had selected was in a bunch of tules on the lee shore, and what birds came in circled over the other side and banked in the smoother water. I could see a great raft of them in the lee of a tule island, and after firing some half dozen shots I finally put several bands in motion, a few scattered birds from which offered me long, hard shots.

After I had killed two successive teal, only to see them blown twenty yards to drop into dense tules back of me, never to be retrieved, I concluded to take only shots in front of me, where the birds would fall in open water.

The clouds were gathering again, and from across the lake I could hear the incessant chattering whistle of the widgeon. Finally a pair of these birds swung by me at a good fifty-five yards. I did not allow sufficiently for the drift of the shot in the wind, and missed cleanly with the first barrel, but stopped a bald-headed, white-winged old drake with the second. I could only see him as a wave would lift him on its crest, and as the bird was fast drifting away I put out to get him. It was the toss of a coin whether I'd get the duck or a ducking, but I landed him finally, plump and heavy, and in the rather sporty garb of full plumage.

I concluded that I would have better chances in a makeshift blind on the windward shore, and after a hard pull at the oars I reached it, but the birds simply drifted further on down the shore, and I got practically no shooting.

To the windward it was growing blacker than ink, and in a few moments the storm broke over me—rain, hail and rain, great bucketsful, while I sat there in a clump of cockleburrs with the water pouring from the brim of my sou'wester. The wind was blowing so that I could see the spray dashing high in air across on the lee shore. Finally the heavy clouds passed on, and the sky overhead was blue once more. But to the leeward the inky blackness rolled. Then suddenly, as if painted by the mighty sweep of some celestial brush, sprang into vivid contrast with the dun background of drifting clouds the perfect arc of a most perfect rainbow. The colors of the chromatic scale stood forth in a double band, so clearly and with such enagaging vividness that it seemed a tangible thing, rather than a phantom built of rain mist and sunlight, and I imagined that there might be a pot of gold where that blazing arc touched the earth—for its either end sank into the rugged Sierras, where lodes of white quartz, full-veined with red gold, lie hidden, did we but know where to look for them.

But I digress. The thought of the row back to the cabin, with the wind dead ahead, made me decide to beach the boat in the shelter of some grass and tramp back along the shore of the lake. Presently up sprang a pair of teal, and with a quick right and left I had the pleasure of bagging them both—a male and female cinnamon, the azure wing coverts of the male glinting like a bit of the rain-washed sky, against the ruddy chestnut of his plump little breast. After all, what a pity to kill them. Perhaps this pair, with a premonition of approaching spring, were already beginning their tender courtship; perhaps—but anyway, they died together.

Before reaching the cabin I crossed a bit of marsh, and from the center of a little green islet a jacksnipe sprang with his inimitable quavering cry; the wind caught his little corkscrewing body and whirled him like a dried leaf, but the second charge of sixes that I sent after him sent him falling to earth like a plummet. It was an old cock bird, as the exceeding richness of the tan and chocolate markings on his penciled back proclaimed. As he lay on his breast on a bit of a tuft of emerald grass, in which the new-fallen rain still glistened, with his head thrown back, his wings extended and his barred tail spread in a last quivering convulsion of approaching Nirvana, he was a picture of one of the most beautiful and gamy of all our game birds.

As I picked him up and stroked his feathers, preparatory to putting him in my pocket, a meadow lark sprang from a hedge of rushes, and turning his bright yellow breast, barred with jet, to the stinging wind, he shrilly caroled his song. I had almost a guilty feeling as I stowed scolopax in my pocket. Had the meadow lark seen, and was he singing Jackie's requiem? After all, scolopax had been just as free of wing, though not as silver-toned in point of voice, as the lark, and that only a short moment ago. And now—but he was good, and so was the strip of bacon!

ROBERT ERSKINE ROSS.

LOS ANGELES, Cal., February.

Of Nebraska Game Fields.

OMAHA, March 8.—The decidedly spring-like weather we have been having out here for the past two or three days has brought the ducks and geese up from the south in large numbers, and it looks as if the flight was going to be a great one. Many hunting parties are already on the grounds, especially up the Missouri and out the Platte, for it is to the rivers the birds first resort out here in the early spring, as the lakes and sloughs and marshes in the sandhills country are yet locked tight in their icy fetters. The fact is, the whole prairie country from the river to the Wyoming foothills is covered with from one to two and a half feet of snow, and all the conditions are yet decidedly wintry. There are many open holes, however, along both the Platte and the Missouri and they are all swarming with birds, principally canvasbacks, redheads and pintails. Geese are also unusually plentiful this spring, and several big kills have been made near Richmond's camp at Clark's and at Berryman's near Central City. Last evening the flight of canvasbacks and redheads up the Missouri valley was one of the most interesting spectacles seen here for many years, and hundreds of people were attracted to the bluffs to watch the streaming birds. From half past three until nearly dusk the sky was a veritable network of dotted lines, and there must have been millions of birds passed up the river. It was the biggest flight I have ever witnessed here at this season of the year, and I think I keep about as close tab on the birds as any man in this western country.

The trap shooters of Nebraska are much wrought up just now over the non-shooting pigeon bill that has been introduced in the Legislature, and the fight between them and the contingent urging the passage of the bill has been a vigorous one. It looked at first as if it would go through with a rush, but it has been stood up until now the shooters are openly declaring that they have got it killed. There is also a fight on over another bill that was presented early during the session, a bill amending and changing our already excellent game laws. This bill has both its good and bad features and I regret to say that it is very likely to become a law. It fixes the open date for deer and antelope having horns from August 15—fully two months too early—to November 15. Both animals should be protected perennially. There probably is not

more than a score of wild deer—whitetails—in the State, and but precious few antelopes, and these only in October, when wandering bands stray in from the mountains. Wolves, coyotes, foxes, skunks, prairie dogs and rabbits are lawful prey the year round. It makes the open season for pinnated grouse—our prairie chicken—and all other species of the grouse family from September 1 to November 30, instead of from October 1 to November 30. It limits the number of chickens to ten per day during September. and to 25 in November. This is the most objectionable feature of the whole proposed new law, and the hope is that it will be expunged before put to passage. It will simply give the gunners residing in or adjacent to the chicken grounds the privilege of exterminating the birds. It will deny sportsmen from the cities the rights enjoyed by those of the rural districts. But few men can afford to travel hundreds of miles for the sport, if it can be called sport, of killing ten half-grown, flabby chickens a day, and it is the man from the city who will be held strictly within the law. Conscienceless rural shooters can kill ten or ten dozen birds every day in the week with little, precious little, fear of detection or molestation. The fact that the bill is receiving the hearty support of all residents of the chicken country should be sufficient to condemn it in the eyes of all honest men who are really in earnest in their desire to preserve the birds. The supporters of the bill argue that the birds are too strong of wing and too hard to approach in October and November, and hence they are denied a sport that has been theirs since time immemorial. This, of course, is all tommy rot. The fact that the birds have a chance to match their strength and speed of wing against the cunning of man should only enhance the enjoyment of their pursuit. There is no enjoyment for the true sportsman in knocking over "cheepers" with hardly strength enough to rise out of the long grass. But when they thunder from beneath his feet and go away like the wind—well, that is an entirely different matter. It thrills him to the marrow and puts him on his mettle, and when he kills a bird, he's got a bird worth having, and it affords him satisfaction to know that it had an honest chance.

To again legalize the killing of prairie chickens in this State in September means the undoing of all the good that our present excellent laws have accomplished. October, aye, November, is plenty early enough to kill any bird so sure of extermination as our prairie chicken is, and September—that is simply preposterous. It is simply to return to the old days of no law at all. So far as the average Nebraska sportsman is concerned, he is well satisfied with the game law as it now stands, and sees no call for enlarging the open season on any of our game birds or animals. If chicken killing is allowed next September, the destruction of the birds will be incalculable, and if the Legislature is really in earnest about preserving this royal bird, it will vote this proposed change down. The man who wants an open season in September also undoubtedly would like to have a gun for October and November that would be as effective at a quarter of a mile as his September gun is at fifteen or twenty yards.

This bill also provides for the restoration of a short open season on quail, and this meets with the heartiest approval on all hands. It sets aside November as the quail month, and while it would be pleasing to some to have it extended through December, the one month is ample. There are great dangers from heavy snowfalls in December, and on such occasions the birds are absolutely defenseless. The wildfowl seasons remain as before, and there is no complaint on this score. It begins September 1 and closes April 15, and in this clause jacksnipe and yelllowlegs—heretofore unprotected—are included. It also makes upland plover and dove shooting allowable between July 15 and November 30. The open season for game fishes from April 1 to October 31, and shooters are limited to ten wild geese and twenty-five other game birds, and twenty-five fish per day.

Speaking of the probable open season on quail, reminds me that the statistics I have gathered from all parts of the State during the past month show that fully 35 per cent. of the birds were winter killed. In fact, the past winter has been almost as severe on the quail as was the memorable winter of 1888, when they were all but totally destroyed. There were more quail in Nebraska last year than was ever known in the history of the State, and while the three years' prohibition of their shooting was largely instrumental in this happy increase, the mild winters had much to do with it. There is yet a good crop left over, and the sport next November should prove fairly good in all sections. As to the chickens, they have not been so plentiful in Nebraska for fifteen years, thanks to our splendid laws on this subject.

SANDY GRISWOLD.

Elk Starving in the Mountains.

The following is an excerpt from a letter from Bill Liddiard, "Rattlesnake Pete," of Pine Ridge Indian Reservation fame, now county judge at Ishawooa, Wyoming, and will explain itself:

ISHAWOOA, Wyo., March 14.—*My Dear Sandy*—There have been worlds of snow here this winter and the mountains are yet full of it, and old hunters say that fully half of the elk will starve to death. Their feeding grounds are under about five feet of the beautiful, and it has become so crusted that the animals can get to neither food or drink, and must necessarily perish. We are organizing here, and within the next week will haul out to accessible points to the elk all the hay we can procure. It may seem strange, but what deer I have seen lately seem to be in pretty good order. This elk question, however, is one for the immediate attention of the Government authorities.

W. H. LIDDIARD.

BIG HORN COUNTY, Wyo.

The main issue of the wildfowl from the south seems to have started up this way, and hunting parties are radiating daily to all points of the compass. The flight is an unusually large one. SANDY GRISWOLD.

An English lady who visited America many years ago used to tell the following story: On the voyage she was one day shocked by seeing a ship's officer knock down one of the crew who was inclined to mutiny. So much did the sight affect her that she retired to her cabin, and did not again appear on deck until land was sighted. Then she perceived at the wheel the man who had received the blow. Approaching him, she asked, with deep sympathy: "How is your head now?" "Wes'-and-by-nor', ma'am," was the answer.—Shooting Times.

"Honest John" Plumbley.

OSSINING, N. Y.—*Editor Forest and Stream:* I am sending you a photo which would probably be of interest to some of your readers. This was taken four years ago at the camps situated at the head of Brandreth Lake, Hamilton county, in the Raquette Lake district of the Adirondacks. This is the last photograph taken of "Honest John" Plumbley, who was so termed by "Adirondack Murray" in his book of the wilderness. Standing with his hand resting on the wolf (which, by the way, is supposed to be the last wolf killed in the Adirondacks), is James T. Blandford, who, with John Plumbley as his guide, penetrated the woods to Brandreth Lake over fifty

"HONEST JOHN" PLUMBLEY.

years ago and purchased the lake and a large tract of land adjacent, acting as agent for Dr. Benj. Brandreth, founder of the great patent medicine concern now known as The Allcock Manufacturing Company. The land called Brandreth Park is now owned by Messrs. Franklin Brandreth, Frederick Potter and Gen. E. A. McAlpine, the two latter being sons-in-law of Dr. Brandreth. "Uncle John" died about three years ago. He was then, and had been for some years, employed by the owners of Brandreth Park. C. G. BLANDFORD.

Nova Scotia Game.

SECRETARY GEORGE PIERS, of the Nova Scotia Game and Inland Fishery Protection Society, sends us his annual report for 1902, from which we take these paragraphs respecting game conditions in the Province:

Regarding moose, I can say that they are holding their own fairly well, a condition of things which is largely due to legislation passed at the instance of your Society.

Forty years ago dogging was much practiced by the country people, many of them keeping from one to three so-called moose dogs, a cross between the smooth-haired Newfoundland and the bull dog, for this purpose. Happily this style of hunting our noble game is almost, if not quite, a thing of the past.

Snaring has been more in vogue of late years, and is still carried on in out-of-the-way districts; but by perseverance on the part of our agents in continually destroying the snares, and always, when possible, bringing the law-breakers to justice, this evil also will, I trust, be stamped out ere long.

Judging roughly from the agents' reports, I should say that about three hundred and fifty moose have been legally killed during the year.

I regret to have to differ from my venerable friend, Commissioner Crooker, and others who think the license fee for non-residents too high. I do not think there is an American sportsman worthy of the name who would object to the forty dollar fee for an all game license, nor do I believe that lowering the fee would increase the number of visiting sportsmen one per cent.

Agent Kelley is to be congratulated on his success in convicting the gang of snarers at Oak Park, Barrington. These men have been carrying on a wholesale destruction of moose quite unhindered, as the men of this vicinity, appointed by the Society to suppress this practice, were afraid to act.

Caribou have left our peninsula, with the exception of a few small herds. These should have a close season of some years. In the Island of Cape Breton, the caribou have greatly benefitted by the close time enjoyed by them some few years ago, and in some districts are quite numerous.

The manner in which the red deer have multiplied during the few years since their introduction is most gratifying. They are now to be found in nearly all the counties of the peninsula. In Yarmouth and Queens counties, where last year only a few of their tracks were seen, there is now quite a good showing of them, some quite near the farms. Our Yarmouth agent reported a herd of eleven, while Queens reported as many as seven having been seen at one time. Not one has been killed during the year, as far as can be ascertained.

The Society must not forget that the close time for red deer will expire in 1904. Therefore it should ask the Legislature to further protect them.

The country is well stocked with hares, excepting some places where disease has diminished their numbers. I think that the open season should begin on the fifteenth of October, as the hare is only then clear of ticks and fit for human food.

You will see, by referring to the agents' reports, that there are still a few beavers left in Nova Scotia; but if they do not receive immediate and prolonged protection, there will not be one of them remaining after a year or two.

Wildcats have become unusually plentiful and make great havoc among the smaller game. Other fur-bearing animals are about the same as reported last year.

Ruffed grouse were very scarce in most of the counties in spite of their recent rest of three years. Undoubtedly the principal cause of this scarcity is the unusually cold and wet weather experienced by them for the last three or four years during hatching period.

The woodcock, from a sportsman's point of view, is the most gamy bird we have, and I regret to say that year by year they are becoming scarcer in our Province. This is largely due to their wholesale destruction in the Southern States, where they have no protection whatever, excepting in South Carolina and Alabama. As is well known, the woodcock comes north about the end of March and during April; so it is plain to be seen that we suffer for their want of protection while they sojourn in the South. Beside all this, our telephone and telegraph wires are fruitful causes of their destruction, being about the height of a woodcock's flight.

There was the usual number of snipe during the breeding season and latter part of the summer, but as soon as the rainy weather set in they left for more suitable feeding grounds, and therefore the snipe shooting was poor.

Pheasants are doing well near Windsor. A few are also occasionally seen at Hammond's Plains.

I regret to say that I have nothing encouraging to report concerning pin-tailed grouse. They seem to have disappeared almost entirely from the place they were originally put out.

Blue-winged ducks continue to increase, excepting in Cumberland county, where, greatly to the regret of all true sportsmen, the wanton destruction of spring shooting is still carried on. GEORGE PIERS,

Secretary.

In this connection we print the following report recently received from Mr. George Seaman, who writes from Queens county:

There have been over two hundred moose shot in this district (No. 1), which includes the counties of Queens, Shelburne, Yarmouth, Digby and Annapolis, this last season, mostly by our local sportsmen. Some Americans who have been down here have had very poor luck, and from all I can find out it is by having very incompetent guides, taking up with almost any man that would say he was a guide. Even some of the Indians, whom one would suppose to be good guides, are no better than a common clerk out of a store. I will give you one little instance of a gentleman's trip here. He came from New York and thought sure an Indian was the right kind of guide to have, so secured one. They were out over fifty days before they got any game, and finally got a good bull moose by creeping on him.

I do not wish to convey the impression that all Indians are poor guides.

Moose have been and are now very plentiful in the forests here. The next season should prove a very profitable one to sportsmen visiting this section. Bears have been very scarce this season. Caribou none to speak of. Red deer are beginning to prosper, but the close season is on them until 1904. Wildcats quite plentiful. Red foxes quite numerous. Partridges and rabbits very plenty. Of fish we have salmon and trout plenty in their season.

GEORGE SEAMAN.

New Game Fields Near Boston.

THE general impression seems to be that one must take long trips to get good shooting, but I want to tell of a day's shooting within twenty miles of Boston.

C., with his dog Wiz, Mr. P. and his Pont, and I with my English setter Ned, got an early train one Saturday morning, reached the grounds about 7:30, and started right in hunting.

A small covert near the station gave up three partridges, but we didn't seem to connect. Following them we started to beat up the woods where they had flown, and Ned began almost immediately to make game. The bird flushed before he got into a point, but gave me a nice side shot, which I took advantage of. Going up a hillside Ned and Pont began to road. We didn't know which had the right trail, but Ned found them, and I was lucky enough to drop two of them. Ned found three singles, two of which I missed beautifully. But Mr. P. made up for it by making a beautiful double. His dog then started down the hill, going like the wind, but scenting another bird he nearly tore himself in two stopping. Mr. P. walked up and killed the bird, which Ned brought to me. We then beat up an alder run, as C. had joined us with a partridge. Ned came to a point, then backed out and came to me, then went on and pointed again. But he seemed undecided and I couldn't imagine what the matter was until I walked in and put up a woodcock. When I killed it I never saw a dog so pleased. It was his first woodcock. C. and Mr. P. each picked up another partridge, and I distinguished myself by missing one that Ned had passed by. Ned made up for this by running down into a swamp and finding a big bunch of quail. Mr. P. and I each got one out of the covey.

After lunch, as we were going across a wheat field, we found another covey, but they wouldn't wait, as the covey was thin. Wiz pointed them in a growth of scrub oak from about thirty feet off. The others each got one, but mine didn't stop, and I thought I had missed him. But as I started on calling my dog, he came around a pine tree carrying the bird, which was flapping lustily. The singles lay very close, but we managed to find and kill one or two apiece. One of mine fell in a posted field, so I sent Ned in after it. He pointed, but wouldn't fetch it, so I left my gun and walked down to him, when a big partridge got up

within a foot of the dead quail. I certainly used a lot of forbidden language. In the meanwhile the others had found a big covey and I could hear them popping all over the lot. I started toward a farm house to get a drink, but had to stop to kill a single quail that Ned found under a bush. I waited for the others for a while and we started home together, picking up two quail and a partridge on the way to the station. Not a bad day's sport for this locality!

Though I intend to sell my dog to make room for a brilliant pointer pup, it will be a good while before I get such a reliable old dog again. I never want to see three better working dogs in the field. Wiz I consider the best dog I have ever seen. C. is a lucky man. L.

The Maine License.

WORCESTER, Mass., Feb. 21.—*Editor Forest and Stream:* Within the last few days I have learned the provisions of the proposed new game law of Maine, whereby they propose to tax non-resident sportsmen $25 for the privilege of hunting moose, $10 for hunting deer and birds, and $5 if they hunt birds only.

Although non-resident sportsmen have spent millions of dollars in Maine and more than paid for all game secured, the sportsmen generally would not object to a nominal tax, say $10 at maximum, for the privilege of hunting big game.

We have forwarded a strong protest to the Maine Legislature, and I thought that you could aid us materially by calling attention to the matter, and asking the sportsmen of the various localities to send in their protests at once, inasmuch as the bill has been filed in the Legislature, but has not been acted upon as yet.

Can you not ask sportsmen, either individually or as communities, to send in their protests to the Legislature or to Hon. Chas. E. Oak, the only member of the Commission who had the courage to oppose the bill? I send you clippings from our Worcester Telegram stating our case plainly. I also send you a slip I had printed and sent to every guide whose address I could get:

To the Legislature of the State of Maine:

We, the undersigned, sportsmen residing in the vicinity of Worcester, Mass., who have, in the past, been accustomed to spend our outings in the Maine woods, hunting, respectfully present to the honorable, the Legislature of Maine, this, our remonstrance against the passage of a bill taxing non-resident sportsmen to the extent called for in said bill.

We state that we have annually, heretofore, passed our vacations in Maine, and the cost of transportation, subsistence, supplies and guide fees, which we have paid, amounts to large sums. But if a tax of over $10 is to be levied we shall feel obliged to cancel our engagements, already made for the coming hunting season in Maine, and hereafter seek other hunting grounds, where game is more plentiful, where the moose are larger, and where caribou may be shot without extra cost.

We believe that the passage of the bill, as framed, will not be for the best interests of the State of Maine. We favor a moderate fee being charged of, say $10, and believe that would suffice to yield a sufficient sum to insure the protection of the game, and would, in fact, yield to the State fully as much income as the more excessive fee called for in the bill, from the fact that the sportsmen would not object to paying the more moderate fee.

CHICAGO AND THE WEST.

CHICAGO, Ill., March 9.—Heavy rains for a couple of days in this vicinity and storms which have been general all over the Mississippi Valley have sent the streams out of bounds, lifted or covered the ice and brought up the wildfowl in considerable numbers all over this portion of the country. Even at Fox Lake, which is slow to open in the spring, report came down to-day that the sudden rise of the river had lifted and broken the ice and bade fair to run it out before long. Birds are reported in along Fox Lake in considerable numbers.

At Swan Lake the waters are high, as indeed is the case all down the Illinois and Kankakee Valleys. Telegrams from Swan Lake reported the birds in and requested the members to hold themselves in readiness to go down.

At English Lake Club, on the Kankakee, in Indiana, birds were in two days ago in considerable numbers. The Hoyt brothers of this city ran down to English Lake and killed some twenty odd ducks, six of which were canvasbacks. The latter are the first canvasbacks reported in the bag of any Chicago shooter this spring.

No great numbers of birds have appeared in Lake Michigan as yet, though Tolleston Club reports a small transient flight, and members of that club are preparing to drop down there during the week. There may be heavy shooting at any of the better points now at any day this week. The bayous along the Kankakee River were at last writing still frozen over, although at several points, for instance, at Goose Lake Club, considerable numbers of ducks were reported flying about and looking over the country for resting and feeding grounds.

Everywhere the daily press reports tremendous floods and the highest waters known for a long time. This will mean good shooting and good fishing, although the price paid for that will be very high when the settlement for the flood shall have been made.

Tame Buffalo Hunt.

A dispatch from Salt Lake City, Utah, reports the killing of three bulls of a private herd which has been kept on Antelope Island, some fifty miles from Salt Lake City. It is stated that these animals had become very vicious, hence it was resolved to kill them. It must have been a very exciting sort of buffalo hunt; indeed, the press dispatch frankly speaks of it as such. It is stated that "several of the men had narrow escapes. Several times the animals, maddened by bullets, turned upon their pursuers and the latter escaped only by urging their mounts to the utmost speed. The buffaloes were finally killed." It must have been a very bold, adventuresome and sportsmanlike kind of a hunt. I don't think it would have lasted quite so long had some old skin hunter engaged in it with a .45 Sharps.

Better Game Laws in Montana.

The State of Montana is coming forward in the matter of protective legislation. The records of the present session of the Legislature show that the principle of salaried officials paid out of a fish and game fund created by fines and licenses, etc., is at present indorsed by the Montana sentiment. The salary of the State game and fish warden is set at $1,800 per annum, deputies to be paid $1,200 per annum, the latter not to have any expense fund allowed them.

Several changes have been made in the game seasons and in the specifications in regard to game animals. Three important bills have become fish or game laws at the present session. Senate Bill No. 29 a week ago only awaited concurrence of the Senate in one or two amendments, and will pass. This bill prohibits the shooting of turtle doves at any season. It allows the killing of two bull elk per season and one mountain sheep each season. In regard either to elk or mountain goat the season will be from September 1 to December 1, cutting off one month, that of December. The killing of one mountain sheep, three deer and one goat per season is permitted. The old law allowed the killing of six deer and six goats, but prohibited the killing of mountain sheep.

The grouse season on prairie chickens, sage hens, partridges, etc., opens August 15 and closes December 1. An excellent feature of the bill is that abolishing spring shooting altogether. The open season on wildfowl is September 1 to January 1. In this respect Montana is far ahead of the State of Illinois.

In another respect Montana shows herself close in line with the most advanced game laws of the period. She prohibits the selling of trout, grayling or black bass at any time of the year. She has not quite yet got to the point of making a sweeping prohibition of the sale of game. Perhaps that will come a little later.

Senate bill No. 30 has been passed by both houses and signed by the Governor of Montana. It obliges non-resident hunters to take out a license at $25 for hunting big game and $15 for hunting small game. This law, however, does not apply to taxpayers in the State. No game can be shipped from the State except under permit from the State warden, and any non-resident before shipping any game must present his license to the transportation company. Common carriers are held responsible for violations of the provisions of this law. All shipments of game must be marked in plain letters.

Thus it may be seen one by one the Western States are accommodating themselves to the principle of charging for the killing of their game. With this attitude seems to come a growth of the sentiment against the marketing of like game.

Books on the Early West.

Mr. Selden R. Probasco, of Burlington, N. J., wishes to learn about a book or so on the early West. He writes: "Some three or four years ago in one of your letters you mentioned two books written by George F. Ruxton, 'Mexico and the Rocky Mountains' and the 'Far West,' the latter dealing with the early mountain men. My father has 'Mexico and the Rocky Mountains' (Harpers, 1848), and did have the 'Far West,' but it was loaned to someone who forgot to return it. I think you mentioned this book was published by a firm in London and could be gotten from them at the time your letter was published. I am very anxious to get a copy of it if possible, and any information you can give will be appreciated."

Ruxton's "Life in the Far West" was published in 1849 by Wm. Blackwood & Sons, Edinburgh and London. I presume almost any extensive bookseller could secure a copy for Mr. Probasco. My copy came to me through Mr. Horace Kephart, Librarian of the Mercantile Library of St. Louis. Should Mr. Probasco fail through his bookdealers, I think perhaps Mr. Kephart could advise him where to purchase a copy.

Waters Opening.

CHICAGO, March 14.—The waters are rapidly opening up even to the north of this point, and the ducks are reported in yesterday and to-day. Pistakee Bay is open, Nippersink Lake is open, and the channel between these waters and Fox Lake is open, although the latter and bigger water is still under the ice, and only showing spots of open water. A few Chicago shooters will run up to the Fox Lake country to-night or to-morrow.

Tolleston Club has a few men down at the grounds waiting for a flight. There were not many birds there yesterday.

The main flight seems to be along the Kankakee thus far, but returning shooters say the water is so high they can not do much with the birds. The flight is still very unsettled and is hunting for feeding grounds.

The Illinois Game Law.

The bill earlier referred to in these columns as the Wheeler bill, slightly amended and introduced in the House by Representative Montgomery, is to-day reported by Representative J. B. Castle, of Sandwich, as very apt to pass. There will be an amendment exempting the sons of farmers from paying license for shooting on their own lands, but other residents will pay a shooting license. The quail dates are amended to read November 15 to December 15. Mr. Castle thought the clause stopping the sale of ducks would pass. Let us hope the latter may be the case. Personally I have some doubts as to the passage of any Illinois bill which carries a resident gun license and a stop-the-sale-of-game clause.

A Greater Minnesota Park.

The movement for the Minnesota National Park was not altogether so great a success as its friends hoped for, yet it may be called a success. Even 1,700 acres of virgin forest is better than a continuous wilderness of slashings, and even a cut tract, if cut under United States forestry regulations, is far better than one ruined by the careless and wasteful lumbering operations. At least the park, as it is secured, may have its success measured by the ire of the lumbermen who fought it. They do say that the Hon. Tom Shevlin, of Minneapolis, is a very wrathful man because he finds himself not left free to cut a pine tree whenever and wherever found, on Indian lands or anywhere else.

But this is not quite the end of the hopes of the friends of the Minnesota park. In the next Congress there will be introduced a bill providing for the acceptance, for park purposes, and subject to the Unied States forestry regulations, of all tracts of pine lands which may be surrendered in trust by their present owners to the United States Government. The Weyerhauser and other big interests express themselves as perfectly willing and eager to enter upon such arrangements. They would have the timber as it grew again cut as the United States forester would instruct. The lands, now cut over and worthless, according to the ancient doctrine of the American lumberman, might thus eventually in time come to produce a certain income. The old doctrine has been—after me, the deluge. The new doctrine is—after us, posterity. It is a wide step for even the most intelligent of the lumber operators to be willing to admit that there is going to be any posterity. That they should do this and that they should realize that there is something in the principles of scientific forestry, is directly due to the agitation created over the establishment of the Minnesota National Park. With this the case, no one ought to call that park a failure.

It is a singular thing how the forces originally opposed to this park movement in Minnesota have been scattered. Page Morris, of Duluth, an enemy of the park in Congress and elsewhere, has now retired from Congress and is again a judge in Minnesota. Judge Morris insists that personally he was not opposed to the park. I imagine that the friends of the park are not concerned how Judge Morris felt personally, since his works spoke for themselves. He is now where his activity will scarcely be so much against the interests of the park. J. Adam Bede, who goes to Congress for that same district, is and always has been an outspoken friend of the park personally and politically, or rather so much personally that he did not care for the political side of it. Mr. Eddy, late member for the other Congressional district most affected by the establishment of the park, is out, and in his stead is a man who used to be in the State Legislature and who has always been a friend of this park movement. Commissioner Binger Herman, of the land office, although not openly opposed to the movement, was never any too actively friendly to it. His successor will be more so. In short, everything is framing up for a general Minnesota ratification of the park scheme, and for the very possible enlargement of the park lines. It is now Col. Cooper's dream to see all that corner of Minnesota bounded on the south by a line running westward from Duluth, and bounded on the west by a line running up north from Cass Lake and through Red Lake, devoted, after its original lumbering off, to the purpose of a national playground, subject to the United States forestry regulations and patrolled regularly by a body of fire wardens chosen from among the Indians native to that country. It should be remembered that a logged-off country is not wholly unattractive if fire can be kept out of it. The Indians themselves were never guilty of great forest fires. They would make good wardens. Perhaps, after all, Col. Cooper's dream is not so visionary as to be impossible. Whether it shall expand into further success is not yet to be said, but he is very much mistaken who calls the Minnesota National Park a failure, even under its present restricted lines.

Unfound.

This week Mr. H. W. Osborn, labor agent of the Great Northern railway, dropped into this office and I asked him whether anything had ever been heard of the Great Northern official, Mr. Egan, who was lost in the Rocky Mountains near Belden, Mont., early last winter. Mr. Osborn said that the most diligent search has thus far failed to reveal any trace of the missing man, and that Mr. Egan was given up for lost by all of his friends. Search will be resumed this spring as soon as the melting of the snow renders it possible. Mr. Egan was with a friend and they started to meet two other friends at the extremity of a lake, one party being upon each side of the lake. A snow came up and in the journey toward the meeting place Mr. Egan wandered aside and did not join his friends. The falling snow at once obliterated all traces, and there all knowledge ended. His fate will probably forever be one of the secrets of the mountains.

Called.

Mr. Irby Bennett, general agent of the Winchester R. A. Co., was in town yesterday, looking well and reporting everything running at full steam and a nigger on the safety valve. Mr. Bennett was just from Kansas City, where he left Harold Money critically ill with typhoid fever. Capt. A. W. Money, of the E. C. Powder Co., had hurried to his son's bedside. The word from him was that unless a telegram was sent yesterday the news was to be supposed good. Mr. Harold Money should have passed the crisis of the disease some time yesterday, and it is much hoped that he is now upon the mend.

Gone to Texas.

Mr. Frank Parmelee, of Omaha, long famous in the shooting world, is reported to have given up his domicile at Omaha and to have removed with his family to Texas. At last accounts he was threatening to establish his residence at Rockport, Texas. Mr. Parmelee is something of a jester. Should he really have determined to drive his stake at Rockport, the chances are that he may live there at least thirty days. After that it might grow a little monotonous for one of his enterprising habits.

All About 'Coons.

A friend of mine who lives in York State writes me as below in regard to the *chasse au 'coon* as viewed from his standpoint:

"Last December you wrote a most entertaining little story about the Illinois 'coon hunt, that has been on my mind ever since, and I cannot keep still any longer, but must say just a word or two, showing how opinions can differ. Who told you that the 'coon is most apt to begin his wanderings at some hour after midnight? Not Mr. Powel, who hunts with a good pair of hounds. You have probably been imbibing 'coon lore from some such source as I took it from some years ago, when that statement was made by many to whom I looked up as persons who ought to know. Like many other ancient tales it is not founded on fact. Now, here are a few of the happenings last fall, 1902: September 19, track at 8 P. M.; treed and

captured at 8:30. October 22, treed at 7 P. M., after short run. November 1, track at 6 P. M., treed and captured at 6:50; another track found inside of half an hour, treed at 8:30. November 13, treed first one at 7:45; struck another track at 9:05, treed and captured before 11. In all we caught twelve 'coons in thirteen hunts last fall, and eighteen in eighteen hunts in the season before, 1901. As almost all of these were caught before midnight, and many of them early in the night, we have revised the rule to read, get your dogs started as soon after dark as possible, and we think we have good reason for the faith that is in us.

"All this hunting was done with the two hounds whose pictures you have. They may not be the best in the world, but are the best I know of, and are the result of 'coon dog hunting since 1896. It seems there are two ways of getting 'coon dogs. One is to keep advertising, answering advertisements, buying and trying until you find a good one and then pay what the man asks; the other to have some good friend in Byhalia or elsewhere present you with a pair. The latter plan I have never tried. Fortunate is he who has such a friend.

"The long eared black and tan, Massachusetts born and New York bred and trained, has a voice that alone is worth a trip to the woods and a night out to hear. The smaller hound was sent me by 'Old Dominion,' of White Post, Va., and is mountain bred and trained, I believe. The big dog had a record of forty-four or five in the season of 1900, but his then owner is a man who drops farming and all trivial pursuits when the 'coon season comes.

"Possibly we are not true 'coon hunters, for most of our hunts have ended before midnight, the controlling fact being that we had jobs to do the next morning. How nice it would be if there were no next morning to think about. You may have thought of this yourself.

"Why don't more people take up 'coon hunting? The game is good for the best there is in the best hounds you can get. In 1899 one old fellow kept three Virginia hounds busy for two hours and a half before he treed. Last fall one kept this pair going for three hours, and then got away."

It is always a logical fallacy for one to reason from particular to general, or from general to particular. The sportsman who observes the habits of a given game animal in one section of the country is too apt to generalize and think that those habits are the same everywhere else. Of course the writer of the above is entirely correct, as any woods wanderer can certify. I have very often engaged in 'coon hunts where we killed game long before midnight. I have sometimes tracked raccoons in the daytime upon the snow, and once shot a lazy old fellow out of the fork of a tree to which I had thus tracked him. He had been out in midday. Once in Mississippi I incurred the wrath of Col. Bobo by killing a 'coon out of a tree where it had been chased by some of his dogs in broad daylight. I think even my friends of lower Illinois, with whom I hunted last fall, would not call it a universal habit of the ring-tailed gentleman to venture forth only after midnight's holy hour had struck. Upon the other hand, it was really Mr. Powel who advised me that our chances for getting a 'coon were better after midnight than before. This statement should be regarded as accurate, for Mr. Powel is a good hunter in whatever branch of sport he undertakes. At the same time it may be capable of qualification by the statement that we were in a very much hunted country. A neighbor by the name of Litzke had some 'coon dogs and was in the habit of making a hunt nearly every night. As he no doubt got into the habit of going home along about midnight, the 'coons perhaps also got into the habit of coming out about the time he went home. Your 'coon is something of a philosopher, and not without adaptability. Perhaps herein lies the fact that later hours of the night are considered, in that part of the country, most apt to be productive of results. It requires a little enthusiasm to get up at two or three o'clock in the morning to go 'coon hunting. I am not sure whether I am so brim full of that sort of enthusiasm as I once was. I remain very well satisfied, however, that both my friends are right in their views of 'coon hunting, each from his own standpoint of environment.

Furs.

The Western office of FOREST AND STREAM still maintains its proud boast that it can get anything or do anything which anybody in any corner of the world may happen to want. Now there was our friend W. J. Dixon, formerly of Cimarron, but now of Dodge, Kans., who had been some industrious in the skunk line and had accumulated a right smart chance of fur. He wanted a market, wrote to me, got his market, sold his furs at a good price, and now writes a letter of thanks for this service. A good many of these ready-made information bureaus charge money, but the Western office of FOREST AND STREAM charges nothing but thanks.

Mr. Dixon, by the way, says he has been studying that interesting animal, the skunk, and intends before long to write a story on skunks for the FOREST AND STREAM. "I will make it a strong story," says he.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The Sportsmen's Show.

FREEPORT, N. Y., March 12.—*Editor Forest and Stream:* I read with great satisfaction your very discriminating and, in my judgment, entirely just editorial note on what was called "The Sportsmen's Show," recently closed in New York.

If Indian blankets and motor boats combine to make a show that is properly named a Sportsmen's Show, the last exhibition was a success. But there are a few who do not think that this is a proper name for such an exhibit. Personally I was greatly disappointed in the show this year and regard it as being far below any that have been held in the Garden under the above named title.

Probably a score of persons from this community who did not visit it would have done so could the exhibit have been honestly commended. I know nothing of the commercial aspect of the affair neither this year nor in any previous year, but am of opinion that two or three more like the last will exhaust the patience and interest of many who would like to attend and support a genuine Sportsmen's Show.

D. A. JORDAN.

New Jersey Game.

ASBURY PARK, N. J., Sunday, March 1.—This afternoon when strolling near a brook a mile or so west of here, I found many well grown spathes of the skunk cabbage—the first blossom of spring. Also saw several bluebirds.

MILHURST, N. J., March 2.—This morning I saw both crow-blackbirds and redwings, bluebirds, robins and song sparrows. In the afternoon I found skunk cabbage spathes along the brooks in several places; also found them well grown in a swamp near here.

The prospects for game in this section of central Jersey were never better. I have seen several coveys of quail within a short time, in one of which there were at least twenty birds. Reports from farmers and from local sportsmen all point to like conditions. Too late now for snows to be of much detriment to them.

Owing to our game laws forbidding tracking and shooting when snow covers the ground, lots of rabbits wintered over about here, as I have seen during the past month the snow in many places fairly pathed with their tracks. Have also in my woods rambles during the past winter seen a great many gray squirrels. So prospects all point to a first class gunning season here next fall.

A. L. L.

West Virginia.

MORGANTOWN, W. Va.—*Editor Forest and Stream:* Sporstmen all over this State are busily engaged in securing signatures to a petition urging that the bill now pending in the Legislature, and known as the Greynolds bill, shall not pass.

The bill seeks to remove all restrictions against shipping game out of the State and to abolish the office of game warden.

It is also understood that there will be an effort made to do away with the present non-resident law, which requires the payment of a license fee of $25 from non-residents for the privilege of hunting in the State. If all these restrictions are removed, it will leave a wide open road for the complete extermination of the game, since the law, as it now is, allows anyone to kill all the deer they can.

EMERSON CARNEY.

A Remarkable Shot.

LAST fall Mr. F. R. Dickerman, cashier of the First National Bank, Bristol, Vt., had a singular experience which hunting small game with a 12-gauge hammerless, While stalking a gray squirrel he heard a partridge in the bushes. Soon he knocked the squirrel out of a tall tree, but on striking the ground the squirrel gathered himself and ran a short distance, stopping on a tree trunk a few feet from the ground. The second barrel laid him low. On advancing to pick him up, Mr. Dickerman heard a flutter beyond, and going a little way picked up the partridge, which had been killed by the second shot. He had not seen the partridge at all before the shooting. He recently went rabbit hunting, and the result was a game dinner for the writer and his friends.

JUVENAL.

BROOKLYN, N. Y.

Winter-Killed Quail.

POUGHKEEPSIE, N. Y., March 9.—A gentleman coming in from the country to-day reports having found a bunch of quail, fourteen in number, that had been winter-killed. Owing to the unusually heavy snows and wind storms in this section the past winter, local sportsmen have feared that these birds would suffer. This is the first case, however, that has been reported of these gamest of all birds having actually perished, although many coveys have, through hunger, been driven to neighboring barnyards, where, in most instances, the farmer has generously sprinkled a quantity of wheat for their sustenance.

SNANIWEH.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Rainbow Trout vs. Black Bass.

COUNCIL BLUFFS, Ia., March 8.—*Editor Forest and Stream:* Having for many years fished in the best bass waters of Canada, Wisconsin and Minnesota, and having had occasional experiences with mountain and lake trout, until lately, I have agreed cordially with Dr. Henshall in his statement concerning the black bass, viz., that it is, "inch for inch, and pound for pound, the gamest fish that swims;" but last summer, in British Columbia, when fishing in an almost virgin trout river some two hundred miles from the railroad, I became acquainted with the rainbow trout, so now have to change my opinion.

The fish in the swift, cold water of this stream were plentiful, large and gamy—more gamy, in fact, than any fresh-water fish that I have ever seen. They struck fiercely, ran swiftly, jumped high and far, and fought till they were either in the landing net or on the beach; in fact, sometimes afterward, for I lost several after I thought they had been secured. It was not uncommon for them to jump six or eight times; and I don't know how many times more they would have jumped had I given them a chance, because invariably I took them in with the least possible delay.

The largest that I caught weighed 3¾ pounds; and the average weight for a day's catch was about 1 pound. In all, I had only four and a half days' fishing in this stream, three days with a companion, near a small settlement, and a day and a half alone, some twenty-five miles further up and about fifteen miles beyond the last ranche.

In one day, fishing alone, I caught fifty that weighed an even 50 pounds; and on another day my companion and I took eighty-four that weighed over 60 pounds.

A few of our fish weighed 3 pounds or more; quite a number 2 and 3 pounds, many between 1 and 2 pounds, and about half of them between half a pound and a pound. Of course, as in all waters, there were a few that weighed less than half a pound. These served to keep down the average weight, and to supply our table (or, rather, frying pan, as usually we had no table). The larger ones we either gave to the people in the little settlement or rubbed over with brown sugar and salt and took to our friends in Victoria, who pronounced them excellent when preserved in this way.

There were larger fish in this stream than any that we landed—I know because I had several of them on my line and lost them, generally by my own fault. As in the past, I had always used three flies when trout fishing, I continued to do so here. They worked well enough near the settlement, where the big fish were not so plentiful, but on a number of occasions I landed doubles and two or three times three at a time; but when I reached the virgin waters the three flies brought disaster more than once. Sometimes a big fellow would take my leader and slash the other two flies around to such an extent as to induce one or two more trout to take hold, the result being either the escape of the big one or the breaking of the leader and consequent loss of all three fish.

At the highest point of the stream which I reached, in a pool at the junction of another stream, I saw leap the largest trout that I have ever seen alive—it must have weighed nearly six pounds. With some difficulty I succeeded in placing my fly where it jumped, and in raising it, setting the hook in good shape. After playing the fish about a minute, another took hold, and I fought them both for a short space of time; then the large fellow broke loose, and I soon landed the smaller one, which weighed 2½ pounds.

The next time that I fish in those waters (which I hope will be next August), I shall put on one, or at most two, flies, and thus try to land fewer but larger fish.

In their tastes these trout appeared to be rather plebeian, for, although they did not refuse the Jock-Scotts and silver-doctors at 50 and 75 cents apiece, which I occasionally offered them, they seemed to prefer as a steady diet common every-day flies at 50 cents per dozen. One black hackle with a red body and two red streamers for a tail was specially enticing. A couple of expensive Montreal flies, presented to me on the train by a sportsman whom I met there, did not seem to find much favor. The various hackles and several varieties of coachmen gave most satisfaction; but, truth to tell, these trout were uneducated, so took readily nearly everything that I offered them. My only way to discover their special likings was to try them with three different kinds of fly in one cast, and even then the position of the fly had something to do with their choice. In still water the leader was often taken, but in swift water the said leader was generally in the air, so the tail fly was then more liable to be the one chosen.

On one occasion a small trout jumped several times clear out of the water, nearly a foot high after my leader, and finally succeeded in hooking itself. I was standing right above it on a high log, and fishing among some driftwood with a very short line, only the tail fly being in the water. The leader, which was a red hackle, must have had some special attraction for the little fellow because it could have taken the middle fly with a lower jump.

On this trip I took with me my 5 or 6 ounce Leonard fly-rod, a heavier lancewood fly-rod of English manufacture, purchased in Victoria before starting, as a reserve; a 6-foot split-bamboo bait-casting rod that I bought from that expert bait-caster Mr. J. M. Clark, of Smeltzer & Sons, Kansas City, and two Bristol steel rods. Nearly all my fishing in this stream was done with the Leonard rod, than which, in my opinion, there is no better fly-rod in the world; but I caught a few as an experiment on the bait-casting outfit, employing a very small spoon and a hanging sinker to prevent twisting the line. The fish took the spoon fairly well, and the average weight of those caught thus ran high; but the sport of fly-fishing was so much superior to that of spoon casting that I did but little of the latter. The Bristol steel rods I reserved for trolling on the lakes, of which more anon.

Although through carelessness in handling of small fish in a little brook I had partially crippled the middle joint of the Leonard rod before reaching the good fishing waters, nevertheless I preferred using it in its injured condition, after reinforcing, rather than to handle all day the heavier English fly-rod.

Before I made the up-river trip, my companion and I put in two and a half days trolling on a couple of lakes, and had fairly good luck, although none of our rainbow trout caught there weighed much more than 2½ pounds, and the number caught daily per rod was less than our average for the river fishing. On the other hand, though, the average weight of the fish was greater.

By putting on a heavy sinker and trolling at a depth of fully 100 feet, my friend one morning took two lake trout of 6 and 7 pounds weight; but, although I tried this style of fishing for a couple of hours, I was unsuccessful. These lake trout are marked something like pickerel or great northern pike, and are very heavy for their length, being apparently over-fed.

The standard formula for weight when applied to these fish was a pound shy in each case, while it fitted a number of large rainbow trout almost exactly. The reason for its failure in the case of the lake trout was probably because they had their bellies full, their girth making a sudden decrease toward the tail, near mid length, while the rainbow trout varied in circumference uniformly throughout.

My friend informed me that at first the lake trout pulled like logs, but that after they reached the surface they afforded fairly good sport.

As soon as the weather begins to get cold, which in that latitude (52 degrees) it does early in September, these fish frequent the shallow water and take a spoon readily.

Generally, trolling for trout requires such a heavy sinker that the fish cannot jump well when hooked, so the sport is spoiled thereby for a true fisherman.

Throughout the Province of British Columbia are countless lakes of all sizes, many of them teeming with trout, and in some of them no white man has ever wet a line. Some of the latter lakes were pointed out to me by my guide, a Dane, who had lived in that country for many years, and who spends a large portion of his time in hunting and fishing. There are also a great many lakes which have no trout, and which are capable of supporting them. These the Provincial Government ought to stock at once, as an inducement for American sportsmen to spend their summers in that country and leave there some of their surplus wealth.

No one who is not pretty comfortably fixed financially should go there for sport, as the stage traveling is very expensive; but after one reaches the fishing ground the usual amount of $5 per day per sportsman will cover the entire expense. Each sportsman should have a canvas boat and a complete camp outfit, beside a large supply of tackle, everything being at least in duplicate, as nothing except provisions can be purchased in the far North. Boatmen are scarce, and may have to be transported a long distance. They ask from $2 to $3 per day and all expenses.

The scenery in that country is picturesque beyond description; the air in summer is comfortably cool and very inviting; the insects, as a rule, are not troublesome; the water is pure, clear and cold; there is very little rain; and, in short, all the conditions are simply ideal for a fishing trip.

Grouse of half a dozen varieties are abundant, but the shooting season does not open till Sept. 1; and soon after that, it is said, the ducks and geese come down from the north in great numbers. Bear, deer and caribou are numerous; but it requires a special and rather expensive license for an American to shoot them; beside, the best time to get them is during the winter months.

In preparing this paper I started out with the intention of discussing the comparative game qualities of rainbow trout and black bass; and now I find myself giving a lot of information about British Columbia as a sporting country, so *"revenous à nos moutons," comme disent les Français.*

I therefore would state that, as far as my experience goes—and it is by no means a narrow one—no black bass that swims, be it large-mouth or small-mouth, can put up such a brave fight for its life as does the rainbow trout in the rivers of the far North.

J. A. L. WADDELL.

Salmon Culture in America.

Editor Forest and Stream:

I AM glad to see from your issue of 7th inst. that my old friend, Mr. Livingston Stone, is still in the land of the living, and as zealous as ever in his hobby of Fish-Culture. But I regret to see that, in his letter to Mr. Marston, of the London Fishing Gazette, he is not as ingenuous as I thought him when last we met on the banks of the Southwest Miramichi, when I assisted him to get the first Salmon ova he ever hatched.

He seems to think my statement of facts and figures, taken from the Public Records of Canada, does not tell the whole story because I omitted any mention of the hatcheries on the Pacific Coast, and he assures Mr. Marston that there Salmon hatching has been a prodigious success. His disingenuousness is painfully evident in his reticence as to the condition of the Salmon rivers of the Pacific Coast. All writers who have recorded what they saw on these rivers agree as to the incredible numbers of Salmon that crowd their waters. The account given by Lieut. Fred. Schwatka of what he saw in 1887 almost staggers belief. That indefatigable investigator, tireless traveler and fine Angler of the Old Guard, Mr. Charles Hallock, who, more than any other man whose writings are before the public, has made the Pacific Salmon a special study for over thirty years, writing in 1890 says, at page 12 of his instructive "Salmon Fisher:" "Upwards of 30,000,000 pounds of Salmon have been taken yearly in the Columbia River, and the canned commodity is known all over the world. Immense numbers ascend the large rivers of the Pacific Coast, moving up sometimes a thousand miles until they are ready to spawn, after which most of those that reach the upper waters perish from exhaustion. * * * During the midsummer run they swim in schools ten feet deep or more, with ranks closed up solid, so that it is impossible to thrust a spear or boat-hook into the mass without striking a salmon. In some of the estuaries on the Alaska Coast I have seen them jammed together so closely that they could not move at all; so that it is very easy to comprehend how it would be possible for a person to cross the stream dryshod if a plank were laid across their protruding backs." Again at page 48 he writes: "In the Columbia and like rivers, which extend for hundreds of miles, they die by millions, worn out and exhausted by their incredible journey; such as reach the upper beds arrive in sorry plight, mutilated, crushed and almost shapeless. Fortunate are those which have vitality enough to be able to return to the sea. Indeed, so great is the mortality that it is generally believed they never return at all."

I have now before me a letter written this year describing the Salmon-run in Fraser River, which says: "The Salmon enter this river in such enormous numbers as to stop boats. It would seem to me that the force of their own weight in rugged places would kill thousands—forcing them against the shores and rocks by pressure from behind. The weaker must succumb to the tremendous force of struggling millions, and be literally jammed to death." There would seem to be little need of hatching houses here, and yet, strange to say, there are two and others asked for. The manager of the hatching house on this river, the late Thomas Mowat, who graduated as a fish-culturist in the hatchery at Dee Side on the Restigouche, was an exceptionally clever observer, for which his experience on that great Salmon river peculiarly fitted him, states in his Reports that, in his opinion, three-fourths of the fish that reach the upper grounds perished after spawning.

I have also before me as I write the Report of a Commission appointed in 1891 to investigate the condition of this and the Skeena River, consisting of 433 pages. The Commissioners were Hon. D. W. Higgins and Sheriff Armstrong, of British Columbia, and the late Samuel Wilmot, who acted as chairman. There were 112 witnesses examined under oath, representing the canneries, the merchants, farmers, fishermen and settlers along the river. Some of these witnesses had been residing in British Columbia more than thirty years, and were of English, Scotch, Irish, United States and Canadian parentage. There was a general consensus of testimony that, though there were then twenty-two canneries in active operation, the fish were just as numerous as ever, and the death rate about the same. In that year, 1901, the canneries put up 400,000 cases of 48 pounds each, making a total of 19,200,000 pounds. The Inspector of Fisheries testified that, had the canners desired, 600,000 cases could have been packed.

Mr. Stone says in his letter: "When I first went to the Columbia, in 1877, to establish the original hatchery, there were 1,200 miles of drift nets in the lower Columbia alone, for furnishing the canneries with Salmon. Since then the nets have multiplied and there are, added to these, the destructive wheels and other murderous devices for exhausting the river. Nevertheless the supply neither fails nor diminishes. No reasonable person could believe for a moment that this enormous draft on the Salmon supply could be maintained every year unless the hatcheries turned in their millions of young fish to offset this prodigious drain on the river." But the Report of the Commission above mentioned shows that 112 of the most reasonable men in Victoria and Vancouver believed and testified on oath that for thirty years the supply had been kept up in Fraser River, and was then as great as they had ever known it to be. Mr. Stone further says that he "saw at the Karluk fishery of Kadiak Island 153,000 full-grown Salmon caught in one day in July, 1888, and that this one day's catch filled, in round numbers, a million cans. There is a hatchery here, but it cannot be quoted yet as evidence of the benefits of artificial propagation, because it has not been in operation long enough; *but it is a significant fact that the cannery men, who are ranked among the shrewdest business men of the country*, have expended on the hatchery $100,000 of their private funds."

Mr. Marston cannot fail to see that Mr. Stone has furnished no data whatever to enable him to judge for himself how successful or otherwise the hatcheries have been. Their success rests entirely on the mere *opinion* of the "enlightened public," including fishermen, cannerymen and the Fish Commissioner, "that the benefits have been enormous." I think Mr. Marston and your readers will have strong doubts about the "shrewdness" of these business men who spend $100,000 on a hatchery without informing themselves of the result of similar experiments in the United States, in Canada, in Great Britain and in Europe; especially when the end sought could be more cheaply and effectually gained by refraining from catching 153,000 fish in one day, and allowing a sufficient number to ascend to their spawning beds and reproduce their kind in the way Nature has established, and which has been so successful that their progeny are so numerous that they kill themselves in vast numbers from overcrowding. I can see no "shrewdness"—but rather the want of it—in trying to increase the number of Salmon already too great for the river and for their own health. This want of "shrewdness," however, cannot be charged on the Columbia River canners; for as long as the Fish Commission will produce young Salmon at the public expense for their benefit, they will continue to use their 1,200 miles of drift nets and their murderous wheels. They will, if Nature will let them, repeat the old story which Mr. Stone has heard and seen in the Eastern and Northern States—the old story of the St. Croix, the Penobscot, the Merrimac, the Connecticut, the Hudson, the Delaware and the Susquehanna, which past greed has depopulated, and which Mr. Stone confesses cannot be restocked by artificial culture.

No one knows better than Mr. Stone how complete has been the failure of Salmon culture to increase the catch in England, Scotland and Ireland; no one knows better than he that a similar failure has resulted from all the experiments made in France, Germany, Sweden and Norway; no one knows better how utterly it has failed in the Atlantic States and in Canada, and I am at a loss to know what possible motive he can have in telling Mr. Marston that its success in the Pacific States has been great and its benefits enormous, when he cannot produce a particle of evidence that a county court judge would admit that anything more has been done than collect ova, hatch fry and dump them into the rivers, as is still being done in no fewer than fourteen hatcheries in Canada, with the result shown in my reply to Mr. Marston which was printed in your issue of February 21. If my old friend will calmly study the question in the light of what has resulted from Salmon culture in Great Britain, on the continent of Europe, in the Atlantic States and in Canada, I think he will revise his present belief in its usefulness.

THE OLD ANGLER.

When is a Sea Trout a Brook Trout?

Not even the scalpels and microscopes of the scientists, the expert ichthyologists, will show them any distinguishing differences between the sea trout and the brook trout in any of those particulars on which they rely to distinguish different species.—Wm. H. Venning, Feb. 25, 1903.

This is exact truth. For one I have always admitted that there was no anatomical or structural difference between the two. But—listen, mark, and inwardly digest the points wherein I make irreconcilable distinctions. Take, for argument's sake, litters of dogs, cats, foxes, squirrels, et al., or even human twins, triplets or quartettes, if you please, which are certainly of the same family: When we observe a startling difference in their colors, dispositions, habits, choice of food, occupation, tastes, tendencies and selection of environment, do we not label and designate them differently, for sake of convenience in specification, as well as out of respect to the facts, and to help such persons as do not know them to tell them apart on these recognized lines of dissimilarity?

The twin brothers Jacob and Esau were founders of two notably distinct races of men, although of the same parents. If we admit the facts as to men, why not as to fishes?

CHARLES HALLOCK.

MARCH 6, 1903.

Salmon Propagation in Pacific Waters a Success.

Editor Forest and Stream:

It was not my good fortune to see a copy of your issue of Feb. 28, and but for the kindness of a friend I should not have read Old Angler's communication in re "Artificial Salmon Culture in America," or have known that Mr. R. B. Marston, editor of the Fishing Gazette, of London, had in your issue of Feb. 7 asked for authentic information as to the results of artificial cultivation of salmon in America.

The Old Angler says "That not having the reports of the United States Fish Commissioner to quote from, the writer can only state that, as far as he has been able to learn, not a single adult Pacific salmon has been taken from any waters in which millions have been planted since 1872, when Mr. Livingston Stone sent his first shipment of eyed ova from the McCloud River to the United States Fish Commission."

In answer to the desire of Mr. R. B. Marrston and to the above statement, let me briefly submit the following from the Pacific side of America: For ten years the writer was the executive officer of the Fish Commission of the State of California, and for the past thirteen years has devoted almost his entire time to the study of the life and the propagation of Pacific salmon. In writing, in 1901, upon the results of the propagation of salmon (*O. tschanytscha*) in California, the writer stated briefly that:

"In reviewing the history of the salmon and its propagation in the Sacramento River, we find that under natural conditions, before the natural spawning grounds had been destroyed, the catch in 1873 was a little over five million pounds. Hatcheries were established in 1874, and 2,000,000 fry were annually planted up to 1884, when the hatcheries were closed for four years. In 1878 the catch was 6,500,000 pounds. The annual catch reached its greatest in 1880, when 10,837,000 pounds were taken, and the catch in each of the ensuing years was over 9,000,000 pounds. Beginning with the fourth year following the close of the hatcheries, the catch annually decreased until 1892, when the lowest figures were reached, only 3,484,000 pounds being taken, when the effect of the resumption of the hatchery work was again made manifest. The catch has annually increased. The census for 1899, issued by the United States Commission of Fish and Fisheries, gives the catch for that year as 7,232,645 pounds, and the catch for 1901 is placed by authorities at about 9,000,000 pounds.

In this connection it should be remembered that the establishment of manufactories, the diversion of waters for irrigation, extensive mining and agricultural methods during the last ten years have almost entirely destroyed the natural spawning grounds of the salmon in the Sacramento River. The propagation of salmon in California alone maintains the run of these fish in her streams. This statement cannot be, and is not, questioned by any authority on the subject."

The Reports of the United States Fish Commission and those of the California Fish Commission have given full attention to the work in California and contain ample evidence of the success met with there since Mr. Livingston Stone began his great work.

The reports of the fish commissions of Oregon and Washington contain evidence of the success of salmon propagation in their waters. Not only are the catches of salmon in the Columbia River shown to be increasing—after years of steady decline—but young salmon liberated from the United States Fish Commission station at Clackamas, in Oregon, after being marked, have been recaptured upon their return to the Columbia River as adults.

The evidence from California is more complete than from any other Pacific State for the reasons that greater attention has been given it; the figures of the catch have been preserved; propagation has been carried on for a longer period, and that from the limited nature of her salmon waters results can be more readily shown. The California Fish Commission has not confined its efforts to the propagation of Pacific salmon.

The *Salmo salar sebago* was introduced into some of the lake waters in California as early as 1878, and scattering plants have been made up to 1898. The eyed-ova was shipped from Maine. The records show that a total of 96,550 of these fry have been liberated there and that the fry of the early shipments were weak and gave little promise of survival. Adult specimens of these landlocked salmon have been taken from Lake Tahoe and some of the smaller lakes of the Sierra Nevada Mountains. They are not numerous, but they are there.

The Eastern brook trout (*S. fontinalis*) were introduced into California in 1872, and the State has propagated them nearly every year since. For the past fifteen years the eggs have been obtained from local waters. These fish have thrived in all suitable waters and are now found in abundance in many of the lakes and streams in the Yosemite Valley region and in many other less known sections.

Similar results have been obtained with the *Salmo fario.*

In addition to the above it is interesting and to the point to note that in 1879 and 1882 a total of only 450 fingerling striped bass (*Roccus lineatus*) were successfully transported from the Atlantic Coast and liberated in the waters of the Sacramento River in California. These fish were unknown to any Pacific waters, and no others than the before-mentioned 450 were ever liberated there. Yet these fish began to be taken in 1888, and as early as 1892 the catch is shown to have been 56,209 pounds. Their increase has been marvelous. In 1900 over 1,500,000 pounds were taken from California waters. Similar results followed the introduction of the shad.

In commenting upon these results, Dr. Hugh M. Smith, of the United States Fish Commission, says:

"Of scarcely less consequence than the actual results of shad and striped bass introduction on the west coast is the important bearing which the success

of the experiment must have in determining the outcome of artificial propagation in regions in which it is not possible to distinguish, with satisfactory accuracy, the natural from the artificial conditions. If these far-reaching results attend the planting on a few occasions of small numbers of fry in waters to which the fish are not indigenous, is it not permissible to assume that more striking consequences must follow the planting of enormous quantities of fry year after year in native waters. There is no reasonable doubt that the perpetuation of the extensive shad fisheries in most of the rivers of the Atlantic coast has been accomplished entirely by artificial propagation. On no other supposition can the maintenance and increase of the supply be accounted for."

It appears to the writer that these facts from California are a sufficient answer to Old Angler and the "certain scientific gentlemen in England who deny that salmon culture, by means of hatching houses, has been a success anywhere, so far as stocking rivers with fish or increasing the catch is concerned." and will enable Mr. R. B. Marston, of the London Fishing Gazette, to combat the statements of "these gentlemen who have looked for fish and found only oodles of ova and figures of fry." If they do not, then let them read the reports of the United States and the California Commission, or consult Dr. Hugh M. Smith, Mr. Livingston Stone, Mr. A. W. Wilcox, Mr. A. B. Alexander, or Mr. Cloud Rutter, all of the United States Fish Commission; Mr. A. T. Vogelsang, late of the California Commission, or Mr. A. C. Little, ex-fish commissioner of the State of Washington. The above-mentioned gentlemen are well-known experts, who have made themselves familiar with the results of salmon culture on the Pacific coast.

As to the results of salmon propagation on the Atlantic coast, the writer is not qualified to write. Let the Eastern experts answer for that part of America.

Successful propagation does not consist in filling the hatcheries with "oodles of eggs" and the planting of "figures of fry" at the alevin stage. The eggs must be carefully handled, and the fry liberated must be strong healthy fish of sufficient age and strength to give promise of success. Where this has been done in the hatcheries on the Pacific coast, with the ova of any of our Pacific salmon, success has been attained.

JOHN PEASE BABCOCK,
Fisheries Commissioner.

VICTORIA, B. C., March 4.

The Massachusetts Association Dinner.

IT was a goodly company which gathered on Monday night of this week in the banquet hall of the New Algonquin Club, Boston, for the twenty-ninth annual dinner of the Massachusetts Fish and Game Protective Association. President James Russell Reed presided, and the members present were: Messrs. Wm. Almy, Butler Ames, L. G. Blair, T. G. Brewer, A. W. Burke, C. R. Byram, Jr., W. O. Blake, Dr. Heber Bishop, Paul Butler, E. H. Clement, Dr. Wm. M. Conant, Gilmer Clapp, Mr. Cory, George Clark, Harry Dutton, W. L. Davis, W. W. Davis, S. W. Davis, H. S. Dodd, H. W. Dodd, O. R. Dickey, C. W. Dimick, Robert F. Ford, Chas. F. Ford, J. Fulton, C. K. Fox, Dana J. Flanders, L. N. Godfrey, R. S. Gray, M. D. W. Green, T. N. Genoud, I. L. Halman, T. H. Hall, C. W. Hutchings, Mr. Hastings, John Hopewell, W. S. Hinmann, Bernard Hyneman, C. D. Holmes, H. H. Hartung, M.D.; Col. Haseltine, T. H. Johnson, Secreary H. H. Kimball, C. D. Lewis, T. F. Mullen, Her. Merriam, E. L. Osgood, Mr. Rich, C. W. Parker, H. M. Pinkham, W. Pitcher, M. H. Richardson, Com. Roberts, B. W. Rockwood, George J. Raymond, W. G. Rose, Mr. Robbins, G. O. Sears, S. W. Smith, A. C. Sylvester, W. H. Sweatt, S. Sterne, A. D. Thayer, H. W. Tufts, J. H. White, A. R. Whittier, Mr. Whiton, Mr. Whidden, J. H. Young, J. C. Young, C. York.

The guests were Prof. Richard Richard L. Garner, the famous investigator of simian speech; Prof. Hugo Munsterberg, of the Harvard University psychological laboratory; Rev. Julian C. Jaynes, of Newton; Hon. Wm. H. Phinney, of Lynn, secretary of the Legislative Committee on Fish and Game and chairman of the Central Committee of the associated Massachusetts fish and game protective clubs; Commissioners Collins and Delano, and C. B. Reynolds.

It was a social occasion, yet one pervaded through and through with enthusiasm for the special work to which the Association is committed. President Reed congratulated the members upon the very substantial achievements of the year and the bright promise for the future. The Association, he said, is accomplishing its purpose; it is a live force in the community, and in its undertakings it enjoys the hearty cooperation and valued support of three agencies—the press, which is heartily with it, the Commissioners of Fisheries and Game, who are energetic, active, capable and efficient; and the associated clubs representing different localities throughout Massachusetts, which have united their influence and activities to achieve the common end. The law prohibiting the sale of woodcock and grouse, he declared, was the best law ever adopted for the protection of Massachusetts game.

Responding for the legislative committee, Hon. Wm. H. Phinney expressed his confidence that the important measures now before the Legislature would be disposed of, each in a way to promote fish and game interests. There is every reason to believe that the amendment making permanent the anti-sale law, which otherwise would expire by limitation in July, will be adopted, for the sentiment throughout the Commonwealth is overwhelmingly in its support. The law to reduce the penalty for killing a deer from $100 to $25, and the measure providing for a reorganization of the fish commission, will, it is believed, not receive the sanction of the Legislature.

Rev. Mr. Jaynes gave an eloquent appreciation of the outdoor recreations of rod and gun as upbuilding work." said he, "when cares and troubles come in work," said he, "When cares and troubles come in and sleep is banished from my eyelids, I have no use for sedative drugs, but recalling some woodland stream known of old, I wander once again along its banks, casting my flies upon its waiting pools, here entering the shade of the dense forest and again emerging into sunlit openings, where pleasing landscapes lie spread out before the eye, and so in retrospect conjured up from the days of the past, with the sound of the placid waters in my ears, and the odor of balsam greeting my nostrils, I fall into pleasant dreams.

"I felicitate you elders, that by your experiences in the woods and on the streams you have provided for yourselves such rich stores of memory, and you younger ones that, by your excursions afield, you are preparing for yourselves solace for the years that are to come."

Mr. Jaynes received much sympathy in his confession of a long standing wrong he had committed against one of the members of the Association. "Some years ago," said he, "as we were grouped about the camp fire in the north, and the stories went round, as they do go around camp fires, I related in a modest and diffident way certain of my own achievements in fishing, when one of the company approached me and with a sob in his voice, gave into my hands a small leather case. 'Take it,' said he, 'I have carried it long, but it is yours.' I opened the case and looked in. It contained a gold medal inscribed ANANIAS II. You may remember that at the Association dinner four years ago I related this incident and exhibited to you the medal. I have now to confess that in having retained this badge of distinction during all these years, I have committed a grievous wrong to a member of your Association; for at the dinner to which I have referred this member said to me, commenting upon my ownership of the token of superiority, 'I never have to stretch the truth when I am telling about what I have done in the field, for my game bag is always heavy when I come home and my creel is always full. The simple statement of the actual fact, backed by such substantial testimony is enough for me.' When he said that, I recognized on the instant that the medal should be his; but I was proud of that medal, and I retained it, and took it home and put it up where my eye might often fall upon it and I might gain inspiration from it. But all through these years I have had the accusing consciousness that it belonged not to me, but to him. Here, then, to-night, publicly, in your presence, I make restitution by giving it over to the one to whom it rightfully belongs and who alone should wear it—President Reed. Now my conscience is clear." And while the company applauded Mr. Reed accepted the gift with a countenance upon which modesty and a grateful consciousness of deserved recognition of merit contended for the mastery.

The presence of Professor Garner had special appropriateness, because, as he related, it was due to the financial support of some of the members of the Association that he had been enabled to prosecute his studies in Africa. It is rarely that a company of sportsmen have the privilege of listening to such an intensely interesting account of hunting and nature study as that which he gave, as he reviewed in outline his recent experiences in studying simian speech and intelligence. "As a hunter rather than a sportsman," said he, "I have traversed the game regions of three continents. In my last experience in Africa, where I was duly installed as the white king of a village of natives, it was a part of my kingly duties to provide my subjects with meat; and this I did by hunting the buffalo. The African buffalo is a creature very different from the American bison. It is exceedingly savage, charging its pursuer with great fury and ferocity, and demanding efficient arms and a steady nerve in the encounter. The hunting grounds are a combination of jungle so dense in parts that nothing but a snake or a rodent can penetrate it, and there are vast expanses of plain consisting of grass as high as one's head, interspersed with numerous sloughs, in which the water reaches from the waist to the shoulders, and progress through which sets free noxious and deadly gases. The hunting grounds are infested with pythons, which prey upon the buffalo, and after one of my hunting men had been swallowed by a python it gave me a creepy feeling to go over the ground alone, as I was often obliged to do."

Professor Garner's work on this expedition consisted in part of experiments to determine whether apes possess a comprehension of dimension, shape and color. Among the tests made were some with a series of boards, in which were cut holes square, round and triangular, with blocks to fit into the holes. With a number of the chimpanzees experimented upon, it was found that after a little practice, being encouraged by rewards of tid-bits to eat, they would fit the square block into the square hole, the round block into the round hole, and with greater difficulty could distinguish between the square and the triangular blocks. Further test was made by painting upon the square block a round black disk, and upon the circular block a square black disk. This produced at first considerable confusion and difficulty, but in the end some of the chimpanzees became expert in fitting each block into its right hole, irrespective of the shape of the disks painted upon it. Other experiments consisted in providing holes of different dimensions with corresponding blocks, and in the placing of these the subjects displayed a certain degree of proficiency.

The subject of animal psychology was further pursued by Professor Munsterberg, who described some of the experiments in this field which are being conducted in the Cambridge Laboratory of Animal Psychology. Many of the movements of the lower forms of animal life, which are popularly credited to consciousness on the part of the subject, laboratory study appears to demonstrate may be explained as due only to reflex action with no more consciousness involved than is present in a beheaded frog, which, when an irritant is applied to its skin, will respond with movements to free itself from the irritation.

The professor exhibited a box tortoise, which had been made to seek its food by passing through a labyrinth; and, whereas, when first put to the task, it required an hour and a half to find its way, it could now pass through the labyrinth in a few minutes.

The progress of the dinner and the speaking was punctuated and enlivened with song, an excellent quartette being in attendance; and Mr. T. H. Hall, familiarly known to the members as "dear old Tom Hall," rendered several songs with great effect, among them these:

In the Good Old Summer Time.

(A la Clearwater Club.)

In the good old summer time,
In the good old summer time,
We journeyed to the State of Maine
With our rod and line,
To catch the salmon and frisky trout
In a manner that was quite sublime;
But our blessed breath was all we caught,
In the good old summer time.

A Chorus.

Chorus:
Good-by, trolley, we must leave you,
Soon our joyous cry will be;
"Subs and L" will not be needed
In the woods or by the sea.

First time:
Soon will nature have her opening,
'Read her "ads" 'neath azure sky;
Then you'll learn of priceless bargains
Money cannot buy.

Second time:
Winter's back will soon be broken,
Spring gates will be ajar;
Forth we'll go with voices ringing,
Good-by, trolley car.

Another.

Chorus:
Just one bite, only just one bite,
All day fishing and only have just one bite;
But, alas! 'tis as sure as fate,
Fish won't rise to a man who has brought no bait.

The Care of Fishing Rods.

AFTER having used a fishing rod enough so that it becomes a favorite it is apt to increase in value much beyond its original cost to the owner. Below are a few suggestions which, if followed, will add years to the life of a rod.

In jointing put the tip in middle joint first, then push it from you, unite the middle joint with butt. In threading line through rings be careful and not rest the butt of rod where it is liable to be stepped upon by a companion. If during a day's fishing your rod should take a set give the line a pull in opposite direction, enough to take set out. When you stop fishing for the noonday lunch, or for any other reason, do not rest your rod where the sun strikes it, particularly if it be a split bamboo, as the heat is liable to start the glue. When the day's fishing is over, after removing hook or cast, be sure that you do not leave a knot in line, as it sometimes happens in reeling up a knot will catch in top and cause the breaking of a tip. After unjointing, dry rod with a soft cloth. Before putting in case glance over each piece and remove set by bending in opposite direction. If ferrules stick apply a little oil or tallow (tallow is the best) to the male ferrule, which will make ferrules work smoothly together and prevent sticking.

At the end of the season look your rods over carefully and have necessary repairs made on same. Rods that receive considerable use should have a coat of good varnish each season. The tips of bait-casting rods receive very hard use, and if from the wetting they receive by reeling line through guides it is found they need it, apply a coat of varnish during season. Put your rods away for the winter in a cool place, otherwise you will find in the spring the artificial heat has caused wood to shrink more or less and ferrules and reel seat will have to be reset. If you do not use a wood form for your rod, be careful and not tie rod bag so tight that joints will be kept bent. If your rod be a steel one be sure that it is well dried before putting away, particularly around ferrules. Steel rods are made to stand lots of hard use, but a little rust around ferrules may play havoc with them.

The above suggestions may seem quite unnecessary to old anglers, but will possibly be some assistance to young ones.

CHAS. C. ELLIOTT.

ELGIN, Ill., Jan 25.

Fly-Casting at New York.

IN the report of the fly-casting at the Sportsmen's Show in our last issue, reference was intended to be made to the absence of Mr. T. B. Mills, but the name of William Mills was inadvertently given.

In the single-hand bait-casting contest of March 7, Mr. C. J. Tormey, of San Francisco, won with 110 feet. Mr. Levison did not cast. He was a judge of the event.

CORTLAND, N. Y., March 12.—*Editor Forest and Stream:* I beg to call your attention to error in your report of Anglers' Tournament in your March 14 issue, as to Class V., Thursday evening, March 5. My record was eighty-six feet six inches. R. C. Leonard and L. S. Darling, officials, the latter with Abercrombie & Fitch, 314 Broadway, New York City, will substantiate this assertion. I only used about two minutes of my allotted five.

I had reported the correct score, and have been subjected to adverse criticism and some humiliation owing to your report, which is considered official by the general public.

We had good sport among ourselves, and personally I was not out for records of any kind, only used my regular fishing equipments.

W. D. CLOYES.

Editor Forest and Stream:

I have been informed that there were some errors in the scores of the fly-casting contests at the Sportsmen's Show which I reported for you. I regret this very much, as I

prepared my reports carefully. Whenever it was possible I obtained the figures from the judges or the referee. At other times the official scorer was asked for correct figures. Sometimes he gave them to me, but at others he declined, referring me to the press room, where they were posted. The press reports were not always correct, as shown by the scores of the last afternoon, when the press report stated that the contest for bass flies was "won by H. W. Hawes, with a cast of 94 feet 4 inches." As a matter of fact, R. C. Leonard won the event the last afternoon, which was for single-handed bait-casting, with a score of 128 feet 7½ inches. Had I taken the press room figures, which I did not do, I would have fallen into the same error that the daily press did next morning, when it ignored Mr. Leonard's high record and printed as Saturday afternoon's score the score made Friday night.

PERRY D. FRAZER.

Yachting.

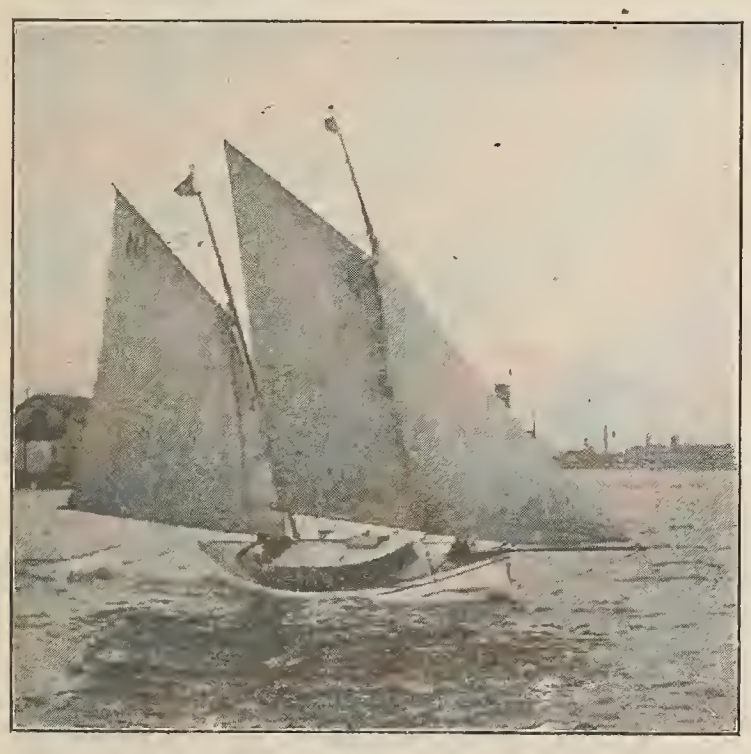
The Cruise of Tainui.

BY L. E. MARSH, TORONTO.

Winner of First Prize in "Forest and Stream" Cruising Competition.

THIS is the plain tale of a seventeen days' cruise on Lake Ontario, a trip as chockful of excitement as a mule is of kick. We got everything on that voyage, from the tail end of a cloudburst, black squalls, and good old sou'easters to gentle zephyrs and Paddy's hurricanes—plenty of the latter particular brand. Even the Skipper with all his years of experience could not predict what we would get an hour hence. In fact he gave up after the first week out and settled down to make the best out of what Providence willed in the way of wind and weather. The entire summer on the Canadian shore of Lake Ontario had been peculiar. The weather man up in the Toronto observatory surrounded by all his delicate instruments and the grizzled old fisherman on the beach were equally as wild in their weather prognostications. If either predicted a storm, a half a hurricane from the nor'west, it blew a dead clam. If either foretold a warm spell you wore your light coats. It was indeed a peculiar summer, the first in Ontario in which cyclones of however small proportions could be recorded.

But to get back to the trip. The journey was made in the yacht Tainui of the National Yacht and Skiff Club of Toronto. We started the cruise on July 26, and it was Aug. 12 before Tainui was again fraternizing with her home mooring.



TAINUI UNDER SAIL.

Though Tainui is of the general build and is generally referred to as a Mackinac she is in reality a schooner. She is 24 feet 6 inches over all, her water-line is 23 feet 6 inches, and her beam 8 feet. She is a chunky, full-bodied boat, sharp fore and aft, with flat floors amidships, and is very staunchly built. She is planked clinker fashion. Tainui draws 18 inches with her board up and 5 feet with the plate down. The centerboard is of half inch steel and weighs about 300 pounds. An iron shoe split for the centerboard extends from stem to stern outside the keel. This weighs 400 pounds. She carries but little inside ballast for a craft of her class, some 600 pounds. Tainui's foremast, which is 30 feet long, is right up into the eyes of her, while the mainmast, 28 feet long, is stepped just aft of her cabin trunk. Her jib was carried out upon a nine-foot horn. Upon her foremast Tainui spread 198 square feet of canvas, while her mainsail contained 12 square feet more. The jib accounted for 106 square feet of her total spread of 514 square feet. Both spars were well braced. The foremast had a pair of quarter-inch shrouds and a forestay of similar thickness, while the mainmast boasted of a double set of shrouds of the same diameter. All the shrouds were set up with deadeyes and lanyards. To steady her spars, when we were pounding into a heavy sea, or driving before a stiff breeze, we had what we called "jumper stays." These were of half inch manila. One was spliced to the foremast just over the shroud eyes, the other to the mainmast in the same position. When called into use the fore jumper stay was carried aft to the mainmast, just below the goose-neck band, and hauled taut, while the main jumper stay was carried forward and made fast under the goose-neck band on the foremast. This braced her masts up wonderfully and to their use we credit the fact that we returned from the trip with the same pair of sticks in her as we departed with from the harbor.

So much for the craft; now for the crew. There were four of us. The Skipper was Rear Commodore Commeford, of the National Club. He is the owner of Tainui, and though only 25 years of age, has been sailing in craft of his own for ten years. The man dignified with the title of Mate, is the historian of this cruise, L. E. Marsh. I learned the game under the skipper's tuition and have been sailing for four years. Charles Culham, the only other member of the crew who knew a peak halyard from the bobstay plate eye, is 19 years of age, and has been blistering his hands, rousing in sheets, for a matter of three years. He was the only man on the cruise who could not swim like an otter, but it did not matter how wildly she was plunging about, Culham sprinted around the deck as lively as the best of us. The last, but not

TAINUI IN WINTER QUARTERS.

least, physically speaking at any rate, was the "lobster" of the crew, Fred. Clark, of Orangeville, aged 22 years. Clark knew more about a lacrosse stick and the mysteries of the Canadian national game than he did about the foresail reefing gear, but he was an apt pupil, and being naturally handy with his hands and feet soon became a fair to middling sailor. He got his sea legs the first day out, and after that was as much at home on her when she was rolling about as were those who had been sailing on the little schooner all season.

Now for the trip!

To be brief we went around Lake Ontario, cutting off a bit at both ends. In all we covered 514 miles and called at 31 ports.

We left Toronto at 2.30 P. M., Saturday, July 26. The club had a cruising race to Port Credit, 12 miles west, and, though we were bound for the Thousand Islands at the eastern end of the lake, we decided to take in the race. It blew half a gale from the east when the starting gun was fired. Tainui jumped away in fifth place in a fleet of eight skiffs, half raters and mackinacs. Running free, with their boards hauled up, the flat-bottomed, scow-like skiffs skated along at a lively gait. With our sails wing and wing we held on. Half way the wind shifted off shore and we closed down and headed up. We were sixth when the wind shifted, but before the other boats took advantage of the shift, we were a quarter mile to weather and in an excellent position. Then rain squalls came. Down we went to the rail and away we plunged with the wind abeam. We were going well and had pulled up with the leaders when the wind shifted back astern and we "wung" out our canvas again. Then another squall struck us. Out of a race, prudence would have caused us to round up and dowse our foresail, but a race is a race. We carried on every stitch. Two miles from the piers there was a crash from aloft and we were left like a gull winged by a hunter. Our foregaff had carried away at the jaws and only the lower half of the foresail was working.

"Take her in," roared the Skipper, but everything fouled in that abominable gaff and we did not get that tangle straightened out for ten minutes.

"Bind a dinghy oar across the break and do it quick," cried the man at the helm. We fell all over ourselves in the hurry, but managed to make the repair in respectable time. We chased the foresail aloft again and squared away for the harbor, now a scant half mile away. The squalls still dropped thick and fast, but, though we carried on through them all, the best we could do was fourth, only two hundred yards astern of the first boat. Just as the six-foot seas hurled us into the narrow channel we found another craft blockading our entrance. We rounded up as best we could in the 40-foot gap and dropped our canvas, but found we were drifting down upon the leeward pier, a collection of broken and rotted spiles.

"Get the dinghy," shouted Commeford. We dumped the dinghy off the cabin top, where we had carried it during the race, but discovered that she was useless, one oar still being lashed to the broken gaff.

"The hooks," roared the man in command. Down went the anchor, but before the flukes settled home we were upon the piles. I went at the gaff lashings with a knife, while the other three tried to hold her off. Just as it seemed as if nothing would save her from staving a hole in herself I got the oar free and sprang into the dinghy. A sea threw me prostrate, but I stuck to the oar, and in a moment was towing for dear life. For an instant I failed to move her; then she forged ahead an inch. I tugged on the blades with renewed energy. Inch by inch, foot by foot she came and we reached the shelter of the weather pier. Then the work was easy. As soon as we anchored we stripped the gaff and hustled off with it to the shipyard. Fortunately we had a surplus on the gaff and to make repairs all we had to do was to move the jaws back a foot.

The rain came down in torrents just after we made the harbor, but cleared away in an hour, and the wind, true to the old saying anent wind before rain, dropped dead.

About nine o'clock a bit of a breeze sprang up off shore and we hove the anchor aboard and put out. Half an hour later we were sorry. The breeze was fickle and we doddled along with the booms slatting dismally across the decks from the dead roll from the east. About midnight we all turned in except the Skipper.

"Lou! Lou! get up quick, we're going to get a bad one," was the cry which awoke me at two o'clock. It also awakened Clark and Culham. I tumbled up in double quick time and so did the rest of the crew. Half awakened, we all reached the cabin door at once and each not seeing the other dove at the opening. The result was a jam and bumped heads. We untangled and struggled out into the cold. It did look dirty, but we concluded to carry our muslin and try and make Long Branch pier before it broke. The threatened storm did not break before we reached the pier, but we got another scare before we reached our point. The storm of the afternoon had amounted almost to a cloudburst in the neighborhood of Toby Creek and had torn down trees, washed away boat houses and wrecked skiffs. In the darkness we ran into a floating tree and the Skipper for an instant thought we were ashore. When we reached Long Branch we tied up with one anchor on the pier and the other out over the stern. It rained hard before we succeeded in making snug for the night, but it was bright and clear when we awoke at daybreak. A plunge overboard chased away the cobwebs, and soon all was activity. We split up into two watches. One watch cleaned ship, while the other wrestled with the breakfast problem. After breakfast we whistled for wind, for a couple of hours, and finally, at nine o'clock, set sail in a zephyr from the southeast. Half an hour later the crew to a man was in swimming while the wind chased the mast hoops up and down the spars. An hour later we got some more of it from the southeast and starting the little schooner's sheets a trifle, headed on a compass course for Port Dalhousie across the lake. It was a shifty bit of wind. Now we could lay Charlotte and the next thing we were heading for Hamilton, still on the same tack. Every time we came about to take the wind over the other quarter the breeze shifted back to its original quarter. The zephyr tantalized us all morning, but gained strength in the early afternoon, and we raised the southern shore about two o'clock. We were just between Port Dalhousie and the mouth of the Niagara. The day was brilliant and we were skylarking to and fro, but the Skipper was fidgetty. When he wasn't shifting his seat he was shifting his sheets.

"I don't like this," he exclaimed suddenly. Something in his tone checked the skylarkers.

"What's wrong," chorused his trio of fellow voyagers.

"I don't know," he replied. "But I feel as if we were going to get it this afternoon."

"Let her come; anything's better than drifting," exclaimed Culham as he hunted up a biscuit. It did look a little threatening in the west.

Half an hour later we got all that was coming to us, and also what was coming to a few score other fellows, as the Skipper remarked, after the fun was over. The wind shifted around to the westward like a flash and then dropped dead. But we were not without wind for five minutes. It came moderate for a while and we were happy, for the Tainui was bowling along at a five-knot clip. Suddenly on the horizon appeared a long line of white.

"Here she comes! Get that foresail in. Quickly," shouted Commeford.

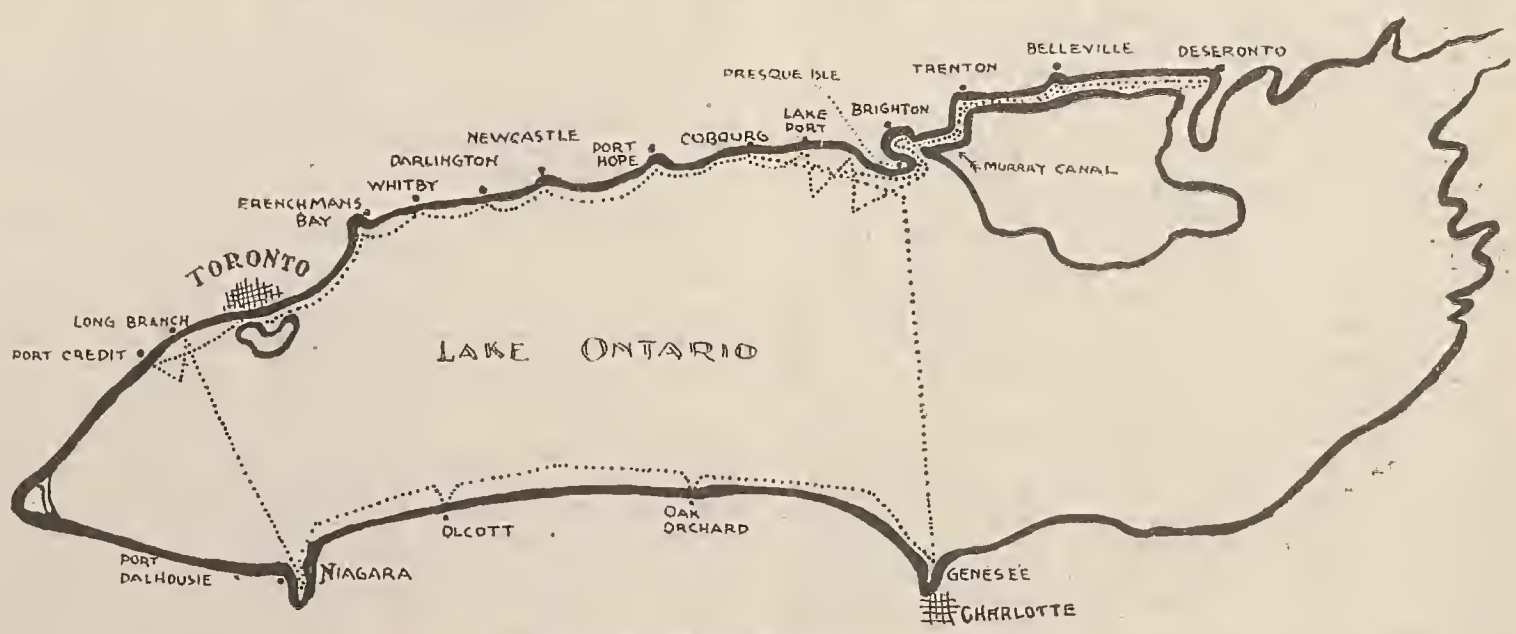


CHART OF COURSE TAKEN BY TAINUI.

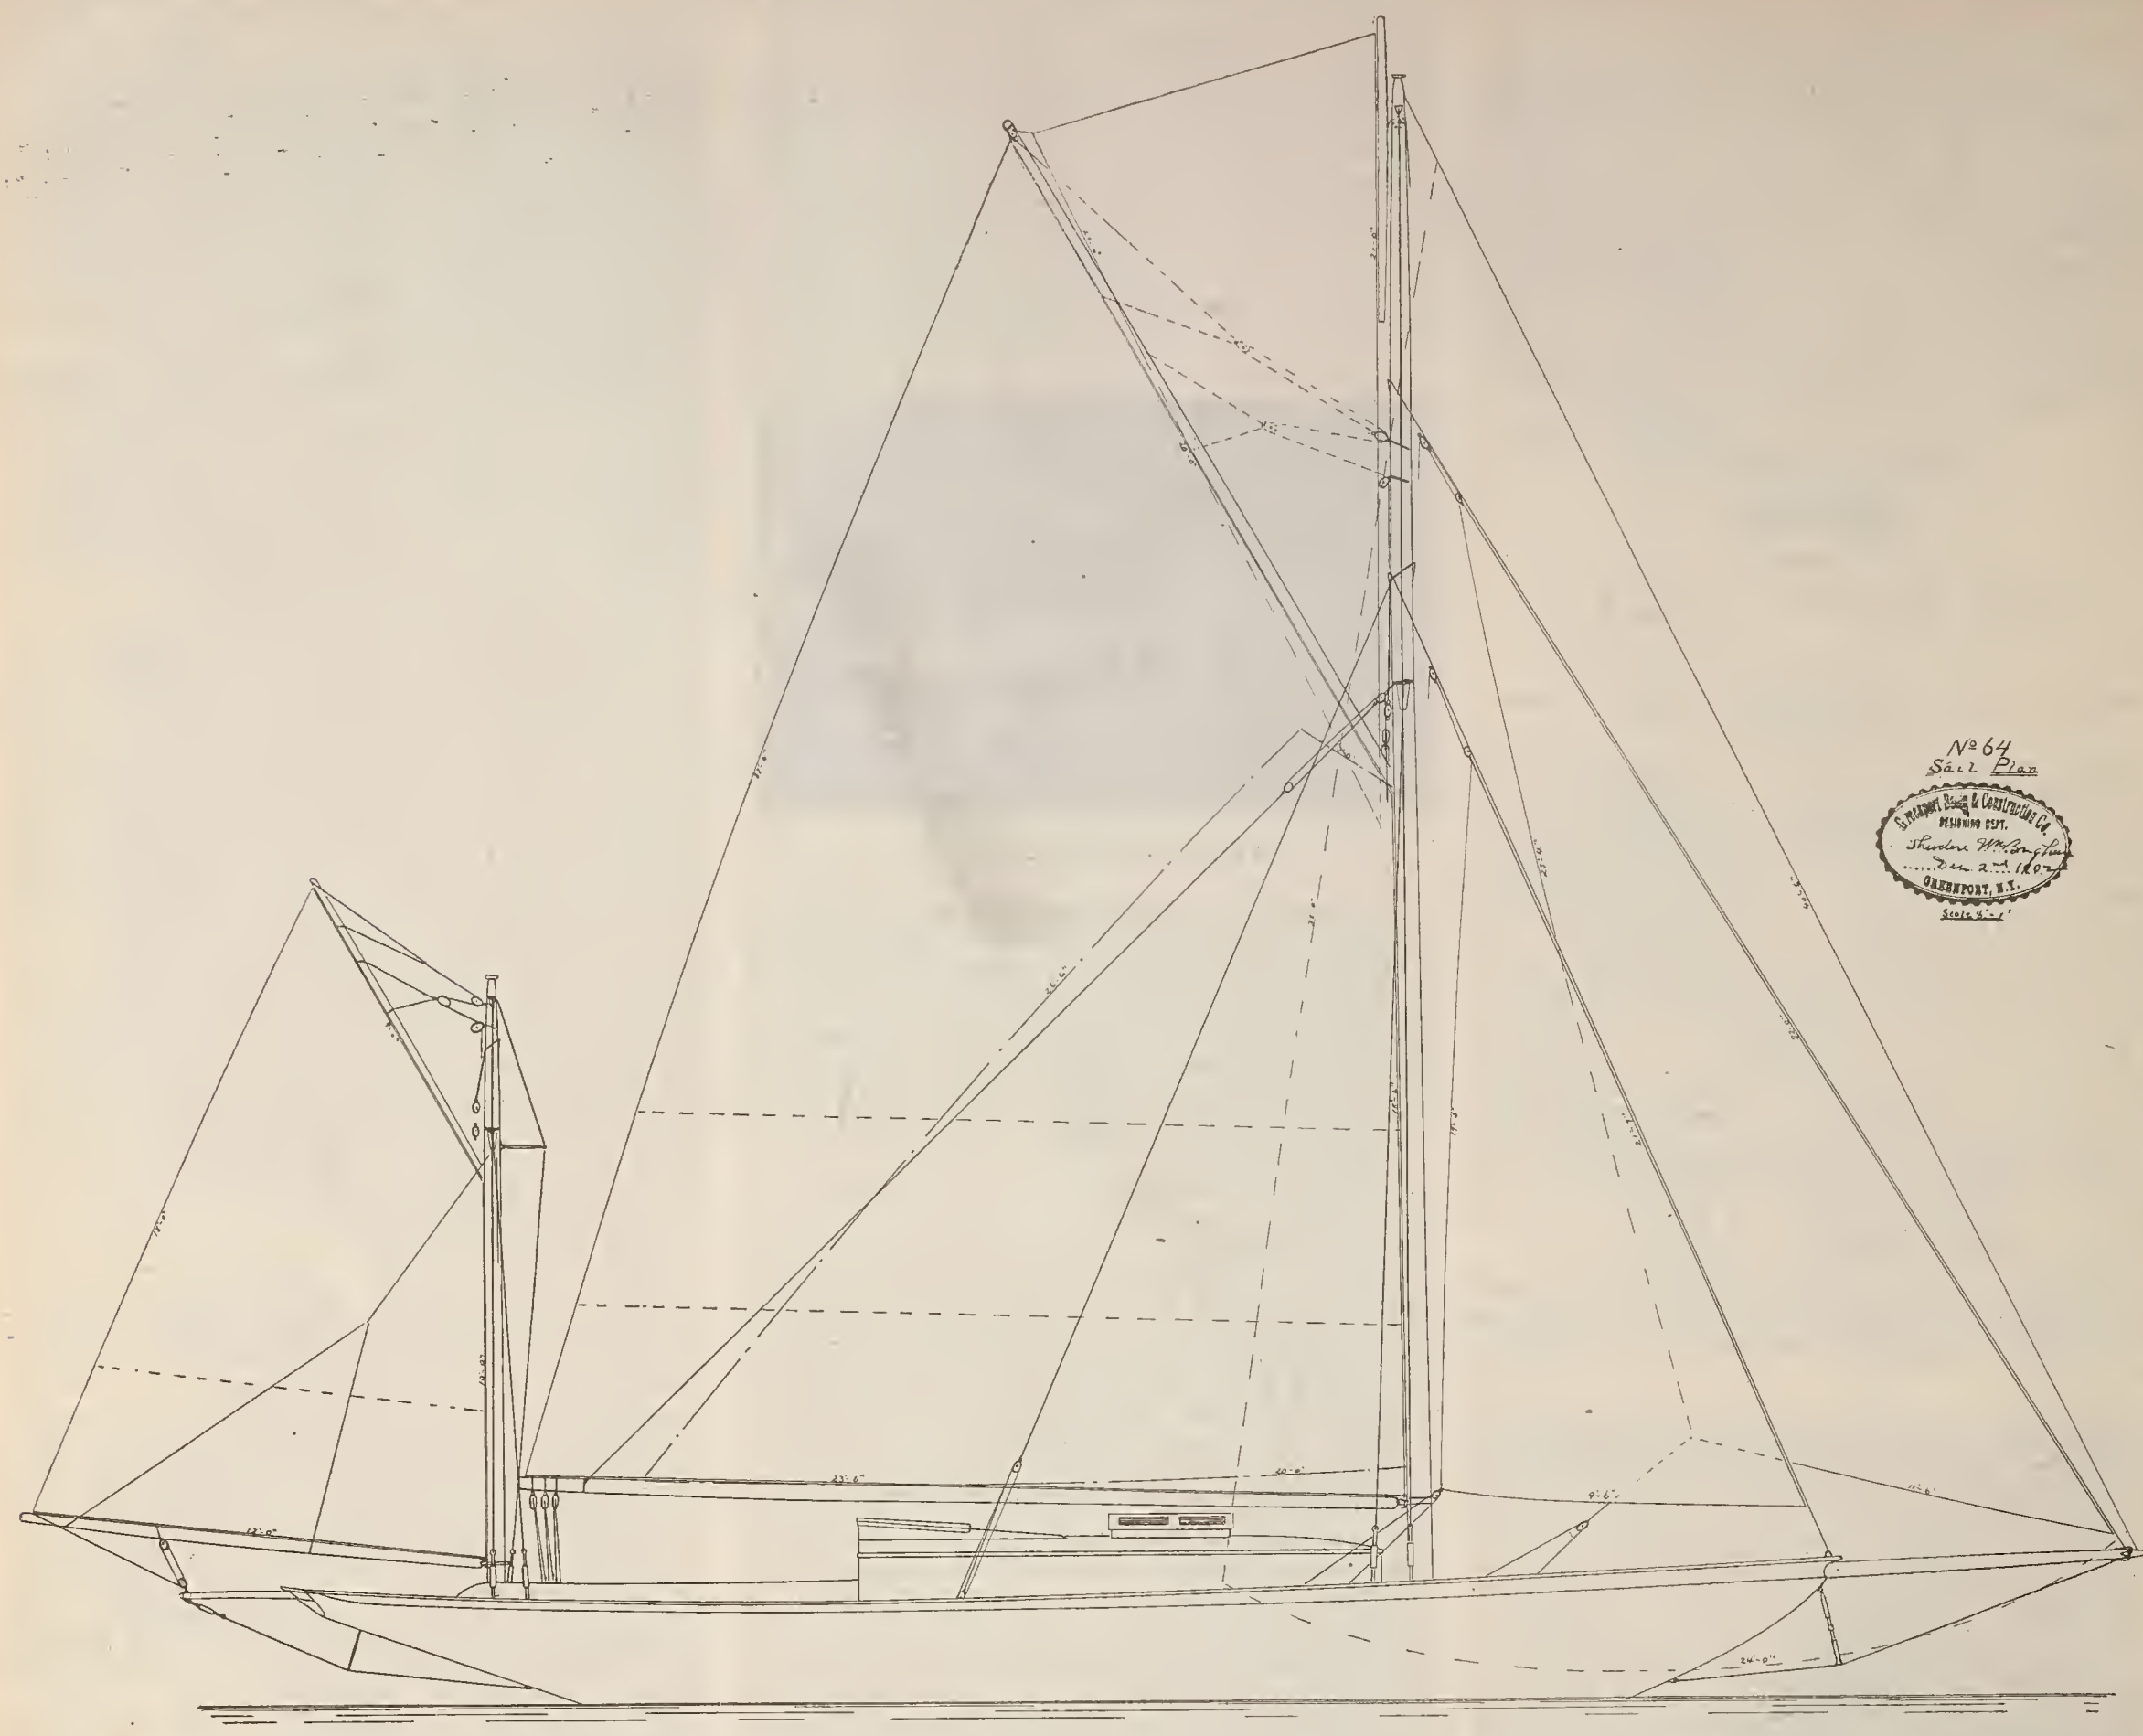
Clark and I ran forward. Before we got the topping lifts up the squall was upon us. The sail came down with a run and while the Skipper kept her sailing we furled it.

The first squall was a hot one, but we weathered it safely. We had just settled down to sail her again, and were debating the advisability of hoisting away the foresail, when the sky suddenly darkened, and a black squall, of the genuine old brew, struck us. Culham started the jib sheet, and I raced forward to dowse it. I went out upon the horn to unsnap the canvas from the forestay,



CRUISING YAWL—SAIL PLAN—DESIGNED BY THEODORE W. BRIGHAM FOR B. H. WELLS, 1903.

Before I got out upon the horn the schooner was down on her beams-end, and even the flapping jib was dragging her into it broadside. She went down until the water threatened to pour into her, but the Skipper stuck to the mainsheet, and she gradually rounded up into it. Had he started the main sheet in the excitement that squall would have surely turned her over. With both legs wrapped around the horn guys, I strove to get in that headsail. Several times I had to let go, and hang on, but finally I succeeded in getting the jib aboard, and Culham and the Skipper gathered in the mainsail, and we let her drift. The squall brought up a six-foot sea and soon we were bobbing about like a cork awaiting a subsidence of the wind.

Finally, for occupation's sake, we reefed the jib and mainsail and during a lull hoisted them away. Away we went at a nice clip for about two minutes and then the wind dropped light and we commenced to roll.

"Hoist the foresail."

We cast off the gaskets, and had just seized the halyards when another squall, which seemed to embody all the spent fury of the preceding two, dropped upon us. When I went out to gather in the jib this time, the schooner, rising on a heavy sea, jabbed me clean through the next roller. I clung on, I knew not how, and resumed my labor. I got a second ducking before I got that jib inboard. As soon as I came aboard the Skipper's voice roared out to me, above the shrill harping of the wind through the wire rigging and the clatter of the halyards against the spars, "Lend a hand, or the rudder's gone;" I hurried aft. A sea had swamped our dinghy, and the schooner had backed down upon the waterlogged little craft, and now she was threatening our rudder, which hung outboard upon gudgeons and pintles. Clark's broad back was bowed, as he swung around a precarious footing on the counter, and pulled mightily upon the side of the dinghy. Canny Culham, with his feet jammed under a seat in the cockpit, leaned over the side and heaved upon the little craft, but she stirred not. There was half a ton of water in her. The Skipper passed her painter forward and we dragged her alongside. There was nothing to cling to between the stays, and to fall overboard meant an undertaker's bill, for no swimmer could live in such a turmoil of water, but all four let go and took a chance. We needed that dinghy. As Tainui raised upon a big sea we bent to our task, overturned the dinghy, and hoisted her across the cabin top. The next plunge sent Clark headlong into the cockpit, while the Skipper and I seized the sidestays and gripped tightly. Culham took a flying leap across the deck and wound up with his arms around the furled foresail. The dinghy slid across the cabin top.

"She's gone," shouted the Skipper disconsolately, but she stopped on the deck's edge and Culham from his point of safety gaily waved the dinghy's painter end. In the plunge he had seized the painter and had passed it around the foreboom. It was a quick bit of work and saved us our dinghy, for, had she gone adrift, we would not have dared to spread canvas to follow her. We had no time to congratulate Charlie, for we were threshing about in a manner decidedly hard upon the nerves.

"Get a sea anchor out," shouted the Skipper. I looked around. I didn't see any sea anchor and had but a hazy idea of what such a contrivance looked like. Culham passed up a pail. "Send that out," he called. I did, and the pail sank like a stone, and did us no good. Tainui was broadside on and plunging like a broncho fresh haltered in the seas, which were now about ten feet high—they seemed forty—and as far as eye could reach the lake was covered with cotton-topped waves. The livid threatening green of the lake water, the black lined sky, the whitecaps of the waves and the yellowish gold of the western sky, formed a symphony of color of surpassing magnificence, but we did not stop to admire. All we considered at that moment were the teeth of the menacing waves.

"Send out the jib for a sea anchor," called the Skipper, as he shied a coil of stout bolt rope at me.

I wound my legs about the foreshrouds, tied a rope's end to each corner of the reefed jib, and set adrift, with about twenty feet of line. Before I dropped the jib overboard, I cast off the reef points, leaving the reefing gear at leach and luff, still fastened, and equalized the three lines attached to the corners of the sail. The jib filled with water, bellied out and partly hauled her head to the wind. Still she plunged and rolled, the wind blew harder than ever, and the seas pounded us broadside on. The clouds blotted out the shoreline and left us in solitude to fight it out with the elements. The wind blew so hard we could not keep our caps on our heads and still from the westward poured the whitecapped myrmidons of the storm king—a thousand thousand—each bent it seemed to us, upon our destruction. Any one, had it boarded us, would have filled the craft to the combings and left us, waterlogged, at the mercy of the seas.

"Let go both anchors; they'll help keep her head to the seas," said the man at the stick. Of course our supply of chain would not reach within a hundred feet of the bottom, but the weight dragged her head around a trifle, but still she rolled almost broadside on. The wind had shifted around into the southwest, and the pressure kept her lying broadside to the seas, which still rolled in from the west. A big fellow would bear down upon us looking large enough to simply swallow us, but when she rolled into us, that chubby, little white craft would simply walk up the wall of green water, and nestle a second or two in the foam on the crest. Then she would slide down the farther side, like a toboggan down a shoot the chutes, and would ride up the side of the next one like a feather. It was hard enough to hold on without doing anything, but there was work to do. In the plunges Tainui carried away the ropes of the improvised sea anchor. To renew those ropes was a ticklish job. It took three of us to do it. I did the work while Clark and Culham kept me from falling overboard. Culham slipped a halyard end around my waist and took a turn around the foremast, while Clark fastened his fingers in my belt behind and wound his legs around the shrouds. When we got the jib alongside everything was in a tangle. There was no time to waste untying knots, so we went at the tangle with a knife and soon released the jib, and sent it out anew. We still rolled deck under at every plunge, and the spars whipped about like switches.

"Get the jumper stays down, or we won't have a stick in her in another hour," the Skipper called, as soon as he noticed the masts swaying. Down we came with the auxiliary stays. The masts certainly were jumping about in a dangerous manner, as we discovered when we attempted to set the jumper stays. After another ten minutes' rolling, Commeford produced another sea anchor, in the shape of a big ulster. Culham, the lightest man on the crew, was sent out upon the horn to fasten the line attached to the ulster to the end of the horn; Culham had his troubles out there too. Half a dozen seas submerged him before he got the line fast, but they could not shake him off his perch. With the ulster out, we rode much easier, but the wind kept shifting until half an hour later we were again in the trough. It was fully another hour before the wind from the southwest broke up the roll from the westerly, though it came from that direction good and hard. About five o'clock our nerve came back and we decided that it was up to us to get some muslin on her if we were to make the southern shore before dark. We reefed the wet jib and setting it behind the foremast headed by the wind for the shore about Niagara. Even this scrap of canvas lifted us along at a good gait, but our nerve came back in large sized chunks, and we were only satisfied with our progress under the reefed jib about 15 minutes. We suddenly discovered that we were hungry, and that at the gait we were going it would be midnight at least before we reached Niagara, 12 miles away, and the chef had a chance to get busy with his pots and pans. Up rattled the reefed mainsail, and the reefed jib was shifted out upon the horn. Ten minutes later the reefs were cast adrift, but still we were not satisfied, though we were rail down.

"Reef the foresail and we'll set that too," came the order, but before we had finished the job the wind had

so lighted that she could carry her full canvas and the tucks were dispensed with.

The wind shifted off shore at dusk, but as we had been pinching up and were close in, we started our sheets,and with a good wholesail breeze over the quarter, laid off for the Niagara. About eight o'clock we took a pull at the sheets and headed into the mouth of the river. The river current and the lake seas were having a little argument a full quarter mile from shore when we arrived, and took a hand in the fun ourselves. We were having a gay time in the broken water when a squall from over the river banks laid her down on her beams-end before we could start a sheet. We were in a hurry to get in, so we lugged all the canvas we had through a couple of more little squalls, off the river banks, and at 8.30 tied up behind the wharf on the Canadian shore and started in to hunt for supper.

My, what appetites!

Two young women took compassion upon us and volunteered to prepare the meal for us while we got into some dry togs. They started in to cook eggs for us, but the eggs disappeared so fast that they abandoned the frying pan in despair.

Just after we had dowsed the glim and turned in, the Skipper's voice broke the silence. "Did I hear something about a storm?" There was a crash, a grunt from the Skipper, and in the dawn of the morrow Clark's shoes were found near Commeford's pillow.

In the morning—July 28—we cast adrift from the dock with a following wind. The way we hustled down the river to the lake led us to believe that we were due for a nice day's run, but outside at the river's mouth the wind hauled off shore and a little ahead of the beam.

Even at this Tainui sped along at a three-knot clip, for she was good in light airs, if she had a bit of a started sheet. The day was beautiful. The rataplan of the volley firing of the Fort Porter regulars at their morning's firing exercises sounded as clear as if the rifles were spitting fire only a hundred yards astern. After an hour's sailing, the wind dropped completely and we were stuck for something to do. Clark and the Skipper dozed away, but Charlie located a peach orchard ashore and started off in the dinghy. I decided to swim ashore. Twenty minutes later, while Charlie and I were pottering along the shore, a trifle of breeze sprang up and the Tainui started to move along at a merry gait in the smooth water. We tugged at the dinghy oars until our arms ached, but still the schooner tantelizingly led us in the race, and the jeers of Clark and the Skipper added to our exasperation. Finally, they left the sheets fly and we caught up. Almost as soon as we boarded the craft, the wind dropped. We drifted, and then drifted some more, until finally Olcott piers, 16 miles from Niagara, hove into view. We had enough of the doddling along in light airs and so entered the port. A big picnic from Buffalo in the Beach Park helped the crew to enjoy the afternoon and evening.

At midnight we hoisted away canvas, and with a light night breeze, soon left Olcott light behind. The first watch—Clark and the Skipper—kept her moving until 3.30 when the wind dropped away to a zephyr and I was called. Half awake, I tumbled up, shivered awhile in the chilly morning air, and set to work to keep her moving in what there was of breeze. The wind was very light, and it was a close pinch up the shore. I "tickled" the stick for an hour, lost my temper at her miserable progress, and then lashing the helm, turned in for a snooze, leaving the hooker to sail or drift. At 5.30 the Skipper walked all over me as he climbed up on deck. The boat was heeled gently, and the water gurgled entrancingly along her planks, as she chased along. Even this alluring lullaby could not keep the crew between decks, and they crawled out and blinked in the brilliant sunrise.

[TO BE CONTINUED.]

Design for a Cruising Yawl.

IN this issue we publish the plans of a cruising yawl that was designed by Mr. Theodore W. Brigham and built by the Greenport Basin & Construction Co., Greenport, L. I., for Dr. B. Hughes Wells, of New York City.

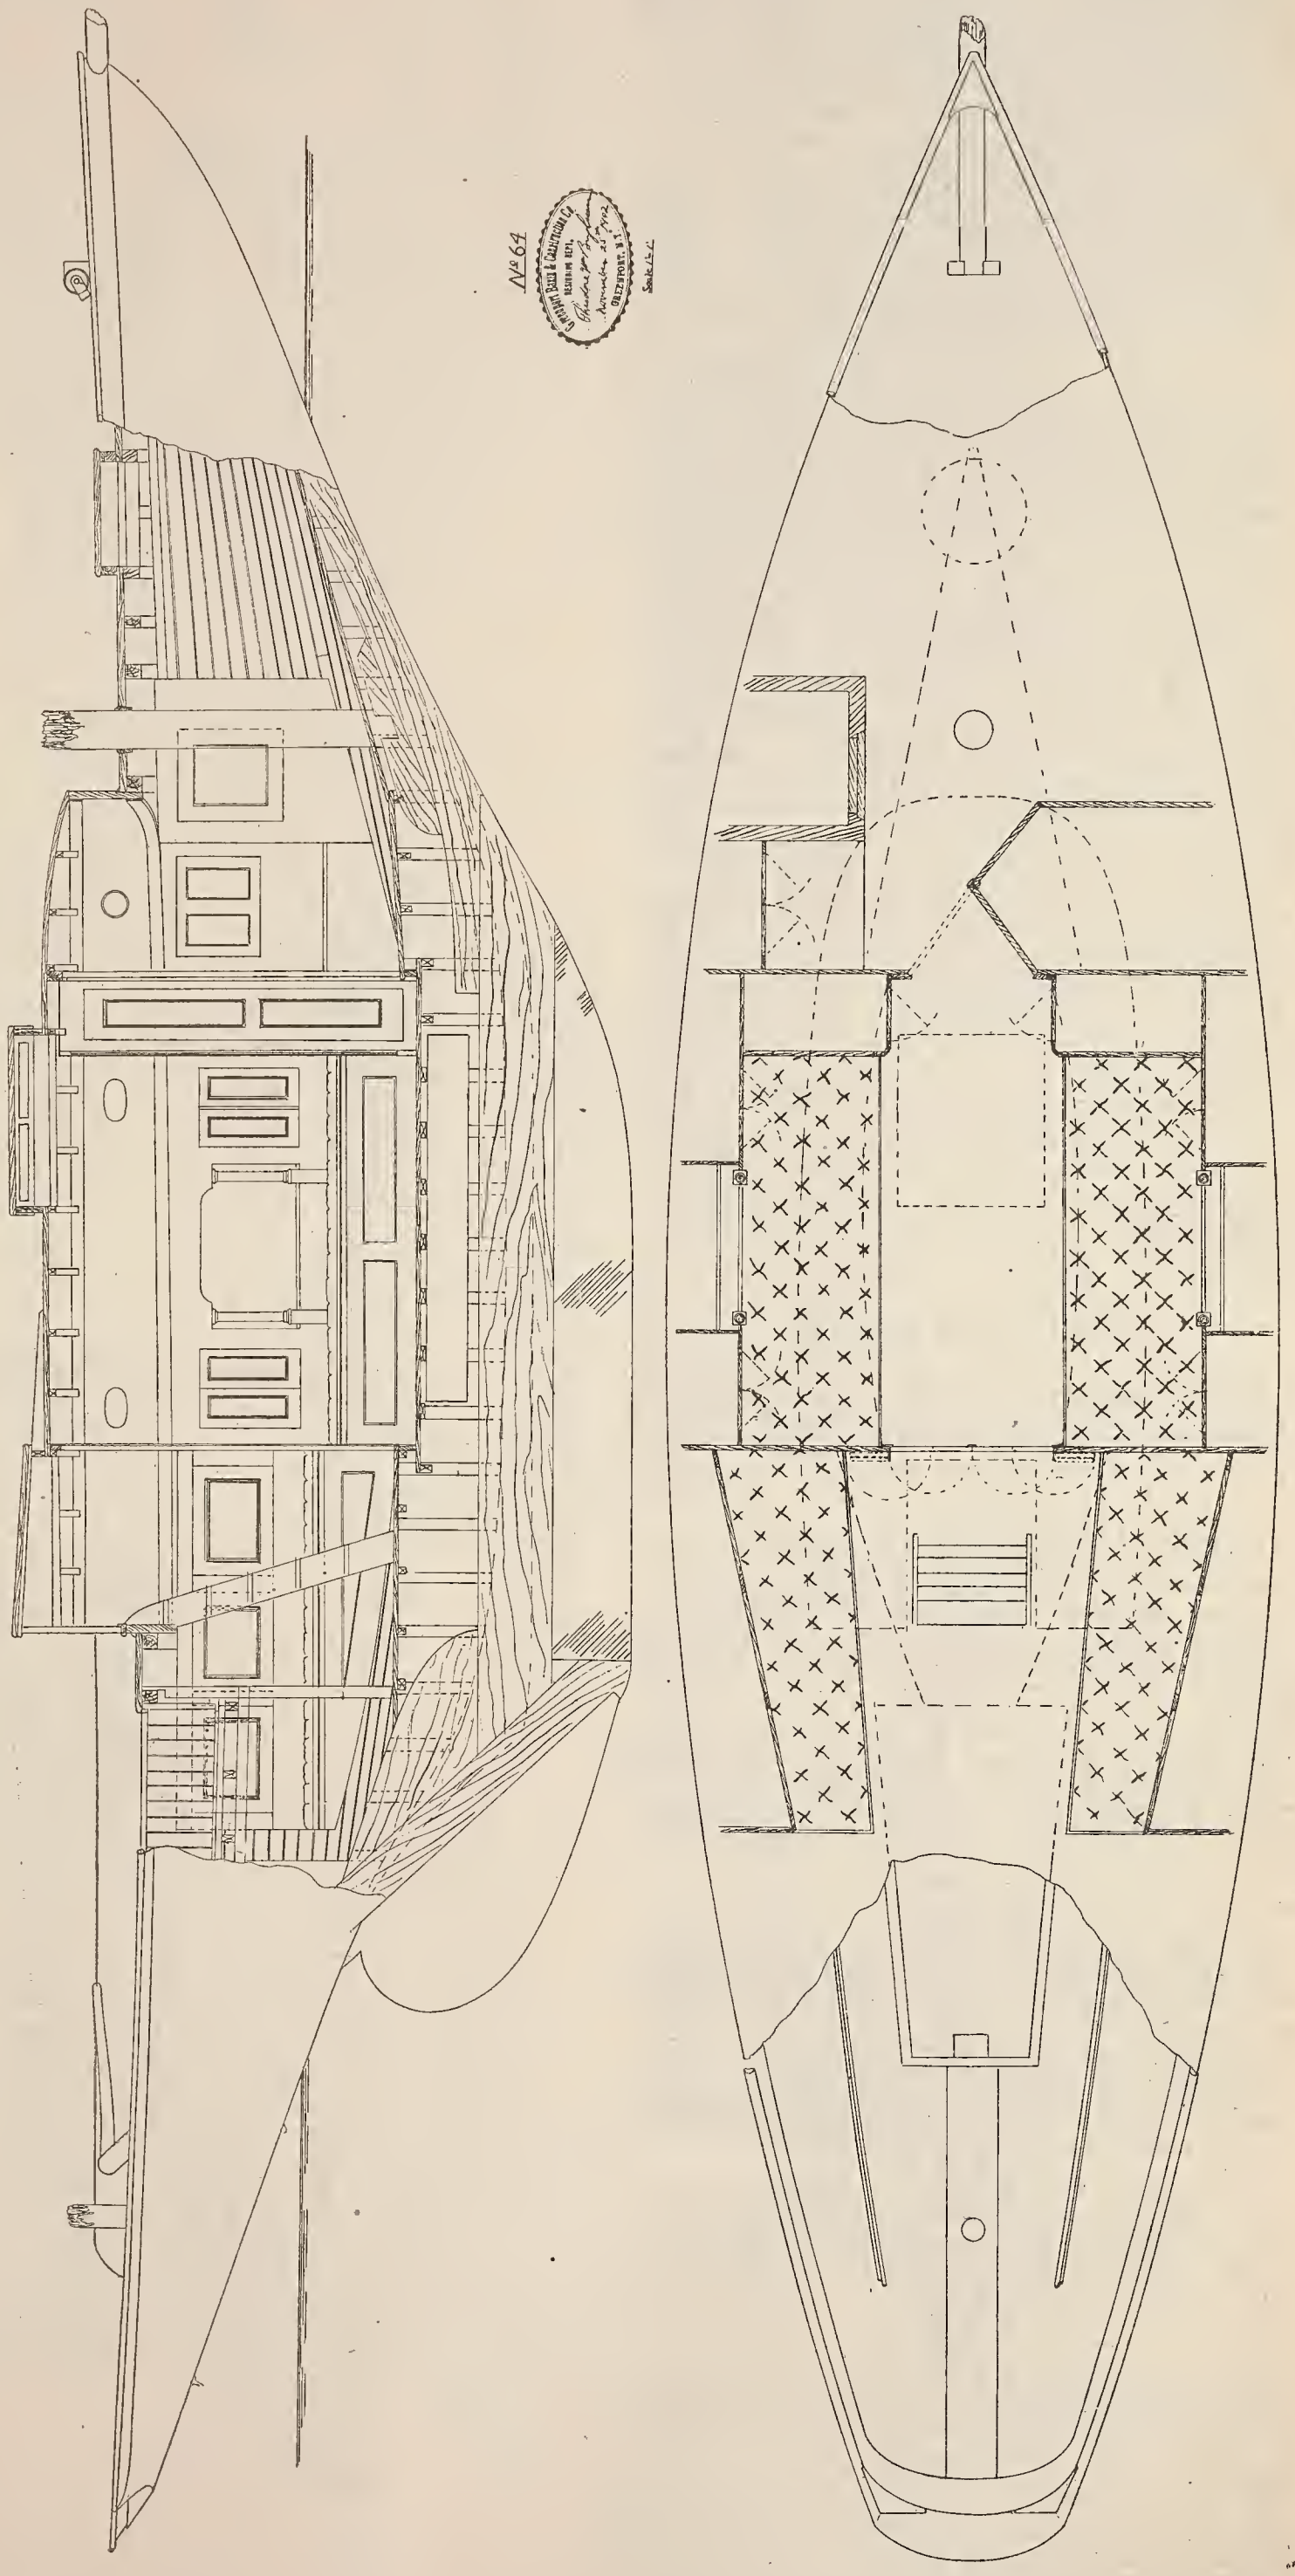
The new boat will take the place of Altair, a smaller yawl that was designed by Mr. Henry C. Wintering-ham for Dr. Wells a couple of years ago. Dr. Wells is an old boat sailer and is one of the best amateur yachtsmen in the East. He does a good deal of offshore cruising, and a boat to fill his requirements must be unusually well built and seaworthy and capable of being handled easily under all conditions. In ordering the new boat the designer was instructed to keep the above mentioned requirements in mind, and the plans show a nice little boat that should answer the owner's wants in every way.

Her dimensions follow:

Length—			
Over all	41ft.	3	in.
L. W. L.	27ft.	6	in.
Overhang—			
Forward	5ft.	11	in.
Aft	7ft.	10	in.
Breadth—			
Extreme	10ft.		
L. W. L.	9ft.	6	in.
Draft—			
Extreme	5ft.	6	in.
Freeboard—			
Forward	3ft.	8½	in.
Aft	3ft.		
Least	2ft.	8	in.

The boat is substantially put together, being framed with white oak and planked with cedar. The ballast is all outside of the keel.

The cockpit is 8ft. long and is watertight. Two deck beams extend across the after end of the cabin house, and give the boat extra transverse strength. There is 6ft. headroom under the cabin house, which is 14ft. long. The companionway leads to a steerage, which is entirely shut off from the main cabin; on either side are berths 6ft. long. The main cabin is



CRUISING YAWL—CABIN PLAN—DESIGNED BY THEODORE W. BRIGHAM FOR B. H. WELLS, 1903.

nearly 8ft. long and is fitted with the usual transoms, lockers and sideboards. Forward on the starboard side is the toilet room with patent closet and folding lavatory, and opposite on the port side is the galley. In the forecastle there is ample room for a man should the owner wish to carry one.

Model Yachting in California.

California, with its beautiful climate, bays, lakes and rivers, affords the boat loving population great sport. San Francisco Bay and the artificial lakes of San Francisco are a central attraction for many yacht clubs.

One unique club, called the San Francisco Model Y. C., gives great pleasure not only to its members but to hundreds of interested spectators. This club has been in existence only six months, but in this short time the city has donated $22,000 for the construction of a new lake for the use of this club. On Sundays and holidays the banks of Stow Lake, a lake in Golden Gate Park, are crowded with people eager to see the racing of the models. The club has 148 members, 50 of whom have models; some of the models are very valuable, considering the work put upon them; they value from $10 up to $350.

The yachts are in two classes; yachts with a 28in. to a 38in. waterline are in the small class, while yachts from a 38in. to a 54in. waterline are in the large class. Among the boats of the large class are the Imp, Flirt, Austril, Kingfisher, Annie, Hobo, etc. The Imp, owned and built by Commodore London, is very fast, having taken many races and having done great credit to its owner. The Flirt and Hobo, designed, built and owned by the Collier Bros., are excellent pieces of workmanship, especially the Flirt. Her dimensions are 62in. over all, 18in. beam, 40in. waterline, 2½in. draft. She is built of one-sixteenth inch planks of sugar pine, with a double skin. Over 2,000 brass screws were used in building her; she weighs only 9 pounds and carries a 14 pound bulb on an aluminum fin; there are 3,000 square inches in her mainsail and jib. She is the model of the Challenger, designed by Mr. B. B. Crowninshield, a very fast boat belonging to the California Y. C.

The Annie, Hobo and Lark are built on the scow plan, and also prove to be very fast.

Rockners Annie, a beautiful little craft, carried off the blue pennant, while the Hobo came in second.

Rudders are not used. The sails are made so that they balance each other, in the respect that the jib keeps the mainsail from bringing the boat into the wind, consequently the boats attain high speed.

In racing, the yachts are started 15 seconds apart; they tack up a narrow neck of the lake, a man on each side turns the boat with a pole as she nears the land and starts her on the next tack.

Most of the yachts are sloop rig, but some of them carry a club topsail and a flying jib.

The lake is very rocky along the banks, and it is hard work towing the boats back with poles. Commander Gerung has, however, solved the problem by simply attaching a spinnaker and turns his boat loose, and she simply scoots.

Chester Chapman.

San Francisco, Cal., March 4.

YACHT CLUB NOTES.

The Newark Y. C. held its annual meeting on Thursday evening, March 5, and the following officers were elected: Com., Jean R. Tack; Vice-Com., Thomas J. Roche; Sec., William Berger; Fin. Sec., Edward Hinderlang; Treas., John F. Sherman.

* * *

At the annual meeting of the New Haven Y. C., the following officers were elected: Com., Edward F. Cole; Vice-Com., Ennis N. Searles; Rear Com., James B. Smith; Sec. and Treas., Frank W. Guion; Meas., Clifford W. Rawson; Trustees, Joseph D. Sargent and Charles S. Hamilton; Regatta Committee, Henry F. Parmelee, Phelps Montgomery and Hayes Q. Trowbridge.

* * *

The following officers were elected at a recent meeting of the Passaic River Y. C: Com., George L. Staats; Vice-Com., A. W. Krinich; Fleet Captain, Charles E. Hall; Sec., E. Keppler; Fin. Sec., W. K. Wilkins; Treas., F. Weslow; Trustees, T. Chamberlain, W. H. Byrne, C. C. Capern and Jacob Ruff.

* * *

On April 15 the Yale-Corinthian Y. C. will go formally into commission. The following Saturday the first series of races will begin. The Graduate Cup series will be held April 18 and 25, May 2 and 9, and the Officers' Cup series on May 23 and 30, June 6 and 13. Every Wednesday there will be a special race. All races start at 3 P. M., except on Decoration Day, when the start will be made at 10 A. M. The fleet will cruise to the Thimble Islands on May 16.

* * *

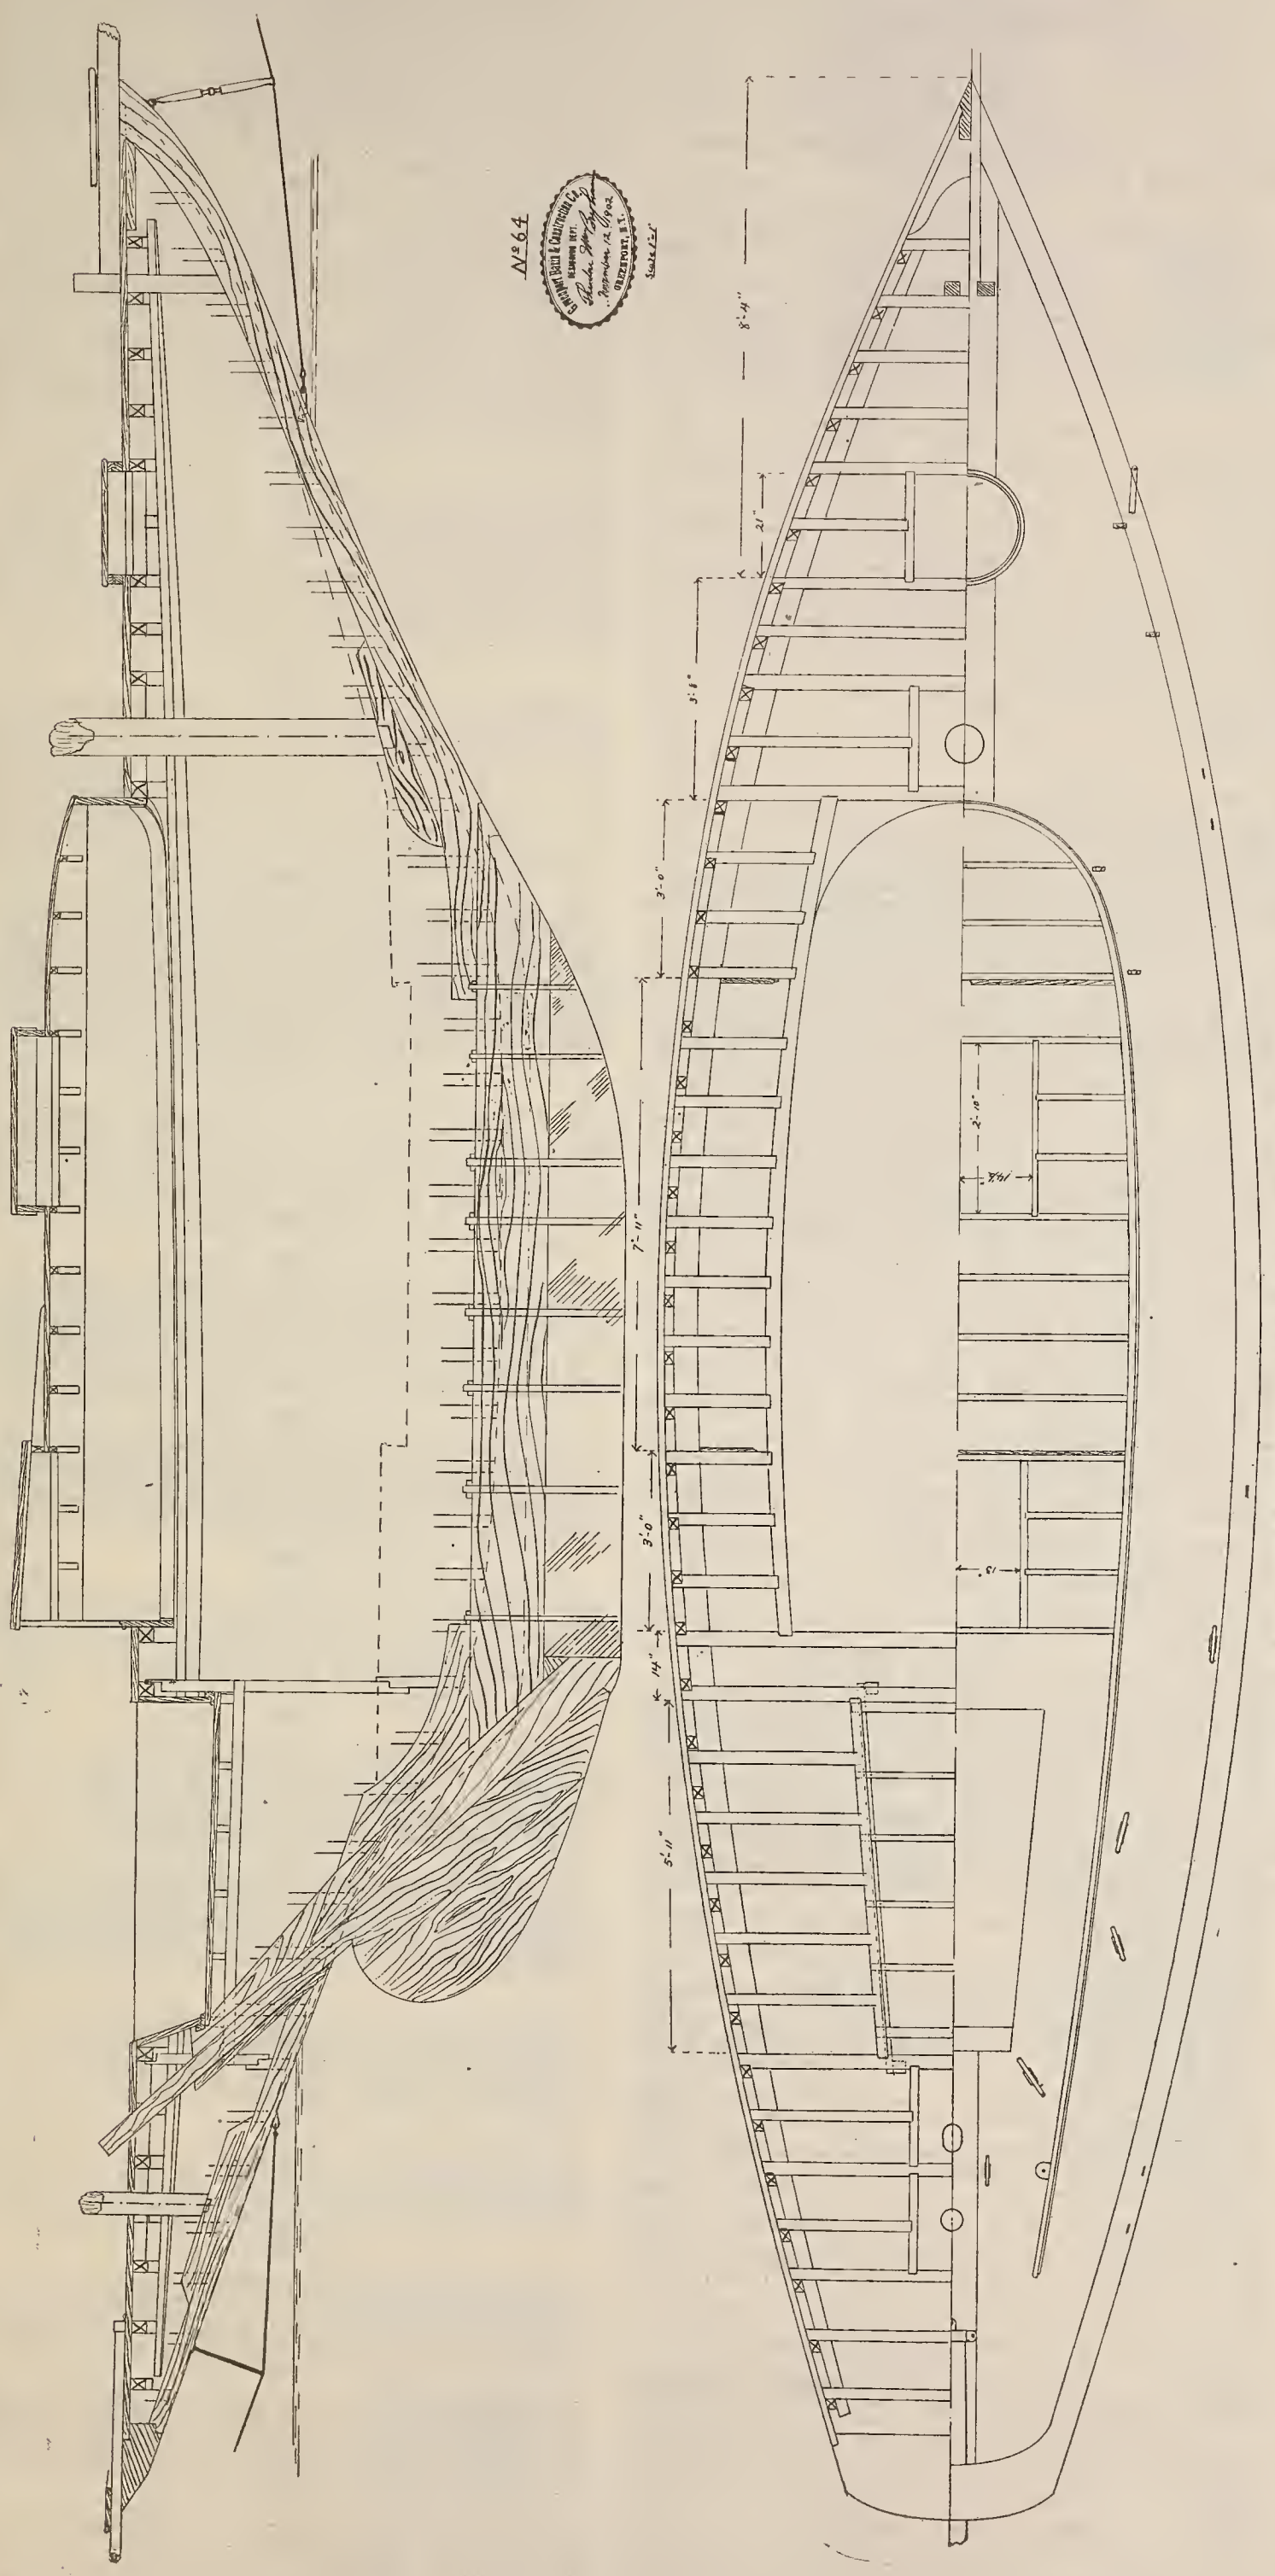
At a meeting of the Harvard Y. C. the following were elected officers: Com., L. Davis; Vice-Com., F. G. Macomber, Jr.; Rear Com., R. H. Gardiner, Jr.; Sec. and Treas., R. Winsor, Jr.

* * *

Com. R. S. Bridgman, of the San Francisco Y. C., has appointed G. T. S. White, Dr. T. L. Hill and John J. Marshall, Jr., delegates to the Pacific Interclub Yacht Association for the coming year. W. L. Spencer, George E. Smith and G. B. Lavensaler have been appointed members of the Regatta Committee.

Two steam yachts were launched at Morris Heights last week. On Wednesday, March 11, Corinthia, the boat built for Mr. J. Adolph Mollenhauer, was put overboard. Corinthia is 90ft. over all, 77ft. waterline, 16ft. breadth and 4ft. 3in. draft. She is schooner rigged, and has twin screws. Mr. S. H. Vandergrift's new steamer Cherokee, was launched on Saturday, March 14. Cherokee is somewhat larger than Corinthia, being 115ft. over all, 95ft. waterline, 15ft. breadth and 5ft. 5in. draft.

CRUISING YAWL—CONSTRUCTION PLAN—DESIGNED BY THEODORE W. BRIGHAM FOR B. H. WELLS, 1903.



CRUISING YAWL—DESIGNED BY THEODORE W. BRIGHAM FOR B. H. WELLS, 1903.

UNLESS the unexpected happens, Shamrock III., Sir Thomas Lipton's new challenger for the America's Cup, will be launched from the yard of Denny Brothers, Dumbarton, Scotland, on Tuesday, March 17. This date was selected, owing to the fact that it is St. Patrick's Day. The stories that have been sent to this side ever since the boat's keel was cast have been wild and conflicting, and while there is no question that the new boat will be more extreme in every way than the previous boats, little is really known about her design. She is more lightly built than the second Shamrock, and she is plated with nickel steel instead of bronze, the material used in the old boat.

The sails and steel spars are all ready, and the boat can be rigged soon after she is launched. In all probability she will have had a trial under sail before the month is over.

Constitution was launched from the yard of the Thames Towboat Company, at New London, on March 2, and was towed to Bristol the day following. On her arrival there the work of overhauling her was begun. The hull is in splendid condition, and she will have a new suit of sails that were made by the Herreshoffs. Captain Urias Rhodes is in charge, and a few of the men who will serve under him are now at work on the boat.

Columbia is at Hawkins' yard, City Island, and Captain Leon Miller and some of the crew will begin the work of fitting her out on March 23. She will be put overboard early in April and will then be taken to Bristol, where some minor work will be done and her new sails bent. Mr. E. D. Morgan will again be in charge of the boat.

The work of plating the new boat being built by the Herreshoffs for the defense of the America's Cup, is practically completed, and the interior bracing is now being put in place. The aluminum deck plating is being laid, and in a few days this work will be finished. The steel spars are about ready, and there will be no delay in so far as spars and rigging are concerned. The mast can be stepped and the boat rigged as soon as she is put overboard. No date has been set for the launching, but it is thought that the work will be all done by the middle of April at the latest, and that the boat will be launched about that time.

As yet no name has been decided upon, although Republic, Defiance and Hope have been considered.

The new boat will be more of a scow than either Columbia or Constitution, and will sail on an inclined waterline at least 10ft. longer than did Constitution. Her ends are much longer and the draft slightly less than Constitution's. The sail area will be in the vicinity of 15,000 sq. ft. With Captain Charlie Barr in charge, there is hardly a doubt that she will demonstrate her superiority on all points of sailing over the two older boats.

Challenge for the Manhasset Bay Cup.

THE Indian Harbor Y. C. challenged on March 10 for the Manhasset Bay Challenge Cup on behalf of Mr. Henry L. Maxwell. Mr. Maxwell has just bought back the 30-footer, Virginia II., ex-Oiseau, and this boat will be named by the club as the challenger. The races will probably be sailed between June 29 and July 3, and will be the best two out of three matches. The courses will be to windward and return and over an equilateral triangle, sailed on alternate days. This is the first challenge that the Manhasset Bay Y. C. has received for the cup.

FRANK BOWNE JONES,
Chairman Regatta Committee, I. H. Y. C.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

Tarantula, the turbine yacht that was built for the late Col. Henry McCalmont, has been sold to Mr. William K. Vanderbilt through the agency of Messrs. Tams, Lemoine & Crane. Tarantula was designed by Messrs. Cox & King, and built by Messrs. Yarrow & Co., in 1902. She is 152ft. 6in. long, 15ft. 4in. breadth and 8ft. 4in. depth.

At the Crosby shops, Osterville, Mass., there is building a cruising yawl from designs by Mr. H. Manly Crosby. The boat is for Mr. J. D. McKee, and will be known as Cruiser III. She is 60ft. over all, 40ft. waterline, 14ft. 6in. breadth and 5ft. 6in. draft.

Mr. F. M. Smith has sold his steam yacht Hanoli to Mr. John N. Robins. The yacht's name will be changed to Seminole.

Sir Thomas Lipton has ordered from the Whitestone Hollow Spar and Boat Co. a 35ft. launch. The boat will be fitted with a 30 horse-power kerosene motor and will have a speed of sixteen miles. This firm is also making spars for the club topsail to be used on Sir Thomas Lipton's new cup challenger Shamrock III.

Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, is having a 21ft. raceabout built from his own designs at Wood's yard, City Island.

Mr. F. C. Haven's launch that is being built by the Electric Launch Co., Bayonne, N. J., will be named La Mascotte.

Mr. Isaac Stern has sold Virginia II., through the agency of Messrs. Gardner & Cox, to Mr. Henry L. Maxwell.

The Lozier Motor Co., Plattsburg, N. Y., is building for Mr. J. N. Johnston a 25ft. launch for use in

Virginia waters. She will be fitted with a 5 horse-power engine. This firm is also building a 30ft. launch for Mr. A. G. Paine, Jr.

Mr. Malcom MacNaught, who has been in the employ of the Herreshoff Mfg. Co. for ten years past, has gone into business for himself and has started a boat building plant at Bristol, R. I. Mr. MacNaught is now building eight one-design boats from designs by Messrs. Burgess & Packard, a knockabout for Dr. Edward C. Briggs, of Boston, and a number of gasolene launches.

At the Newport shipyard there are building three 15-footers from designs by Mr. William H. Hand, Jr. The boats will be 25ft. over all, 15ft. waterline, 6ft. 7in. breadth and 3ft. 9in. draft. There will be 850 pounds of lead outside, and they will carry 316 sq. ft. of sail.

Canoeing.

Prizes for Canoeists.

IN order to encourage canoeists and small boat sailors, who do their knocking about on inland waters, to keep a record of their trips and experiences, the publishers of FOREST AND STREAM offer cash prizes for the best accounts of cruises taken during the season of 1903. As few restrictions as possible will be imposed, and those given are made only with the view of securing some uniformity among the competitors' stories, so that the judges will be able to make a fair award.

The prizes will be as follows:

First, $50.00.

Second, $25.00.

Third, $15.00.

Fourth and Fifth, $10.00 each.

Sixth to Eighth, $5.00 each.

I. The cruise must be actually taken between May 1 and November 1, 1903.

II. The cruise must be made on the (fresh water) inland streams and lakes of the United States or Canada.

III. The canoe or boat in which the cruise is made must not be more than 18ft. long over all.

IV. An accurate log of the trip must be kept and all incidents and information that would be of value to other canoeists covering the same route should be carefully recorded.

V. A description of the boat in which the cruise is made should preface the story, and a list of outfit and supplies.

VI. Photographs of the boat and of the country passed through, not smaller than 4x5, should, if possible, accompany each story, and they will be considered in making the awards.

VII. Stories should contain not less than five thousand words, written on one side of the paper only.

VIII. An outline chart of the trip drawn on white paper in black ink (no coloring pigment to be used) should also be sent in.

IX. Competitors should avoid the use of slang or incorrect nautical expressions in their stories, as it will count against them in awarding the prizes.

Each manuscript to which a prize is awarded shall become the property of the Forest and Stream Publishing Company. All manuscript should reach the office of the Forest and Stream Publishing Company, 346 Broadway, New York, N. Y., on or before December 1, 1903.

Of Interest to A. C. A. Members.

Editor Forest and Stream:

We are very anxious to get some good photographs of canoeing scenes, of last year's general meet, or of the division meets, for publication in the 1903 year book. If you will kindly ask, through your paper, that any member having good views will kindly send same to me I will be greatly obliged.

I would also like to have any member who has noticed errors in 1902 book in their names, number, address, canoe, or club, to notify me direct, and I will see that it is corrected this year.

H. LANSING QUICK,
Acting Secretary-Treasurer.

YONKERS, N. Y., March 14

Rifle Range and Gallery.

Indoor Championships.

NEW YORK, March 16.—Inclosed herewith are the scores made in the indoor championship matches of the U. S. R A. The matches were conducted in New York, Chicago, Boston and Springfield:

Revolver:

W H Luckett, New York	44	49	45	41	46	42	42	42	41	45	—437

**Members of Mississippi Valley Trapshooters' and Game Protective Association. J. J. Bradfield, Sec'y, Vicksburg, Miss.

DRIVERS AND TWISTERS.

The programme of the consolidated tournament of the two clubs, the Buffalo Bill, of North Platte, and the Grand Island Club, is now ready for distribution. April 1 and 2, the ten regular events are alike each day, namely alternately 15 and 20 targets, $1.50 and $2 entrance, $5 and $7.50 added. An extra event the first day is for the Dickey Bird trophy, held by Geo. W. Waddington, Beatrice. The extra event for the second day is the team race, all Nebraska against Omaha. Manufacturers' agents are barred from the division of the moneys. In 15-target events, four moneys; 20 target events, five moneys. Shooters who score 91 to 92 per cent. will be charged $1 per day extra; 92 to 93 per cent., $2; 93 or more per cent., $3; these moneys to be divided between those who score less than 89 per cent. and who shoot through the programme. The managers are Messrs. Geo. L. Carter and G. Sievers.

The latest advices concerning the condition of Mr. Harold Money were very favorable, he having safely passed the crisis of his pneumonia attack on the 12th inst. He was removed to St. Joseph's Hospital, Kansas City, Mo., on March 7, from the Hotel Baltimore, and also was well looked after specially by his many Kansas City friends. His father and mother, Captain and Mrs. A. W. Money, arrived in Kansas City early last week to care for him, and Mr. Irby Bennett made a like trip from Memphis. The warm friendship felt for him was strongly in evidence at 318 Broadway by the anxious inquiries and heartfelt good wishes for his recovery, expressed by the numerous friends who have called there every day since his illness became known to them. May good health return to him speedily.

Mr. W. W. Marshall and Dr. H. O'Brien tied on a full score of 50 for the Crescent Athletic Club March cup, in the second contest for it, at Bay Ridge, L. I., last Saturday. Saturday of this week will be a day of special interest in Crescent Athletic Club shooting circles, for on it the long expected match between a home team and a team of the Boston Athletic Association Gun Club is fixed to take place. A committee of the Crescents will meet the visiting team at the Manhattan end of the Bridge, journey thence by parlor car to the country house, lunch, shoot, then hie to the city house for dinner.

The secretary, Mr. S. G. Miller, writes us as follows: "The Haverhill, Mass., Gun Club will open the shooting season of 1903 with their seventh annual Patriots' Day tournament, Monday, April 20. To all our old friends we would say, come and see us, and we will do our best to please you; and to all lovers of the scatter gun, come and see what we can do to make it pleasant for you. We will have a target in the air all the time, and a good part of the time several more. In the prize event shooters will be handicapped on results of the first 100 targets shot at. Distance 16 to 22yds."

The Hillside Gun Club and the S. S. White Gun Club had a team contest at Gorgas Station, Pa., on Saturday of last week, twelve men on a side, 25 targets per man, with the following results: S. S. White Team—Wilkins 23, Harber 22, Robinson 22, Dr. Cotting 19, Gee 19, Denham 18, Hinkson 18, C. C. Byer 17, Kendall 17, Stahl 17, Witherden 16, Lodge 6; total 214. Hillside Team—Larson 20, Gillin 21, R. Bisbing 18, C. W. Haywood 18, Meehan 17, Hammell 16, Laurent 16, C. C. Byer 16, J. B. Haywood 14, M. Bisbing 14, Cail 10, Thurman 6; total 186.

The Patriots' Day shoot of the Haverhill, Mass., Gun Club has fourteen events, at 10, 15 and 20 targets, entrance $1.15, $1.25 and $1.30; a total of 190 targets, with a total entrance of $17. Events 9, 10 and 11, 20, 20 and 15 targets respectively, constitute a prize handicap at 55 targets, the prizes of which to high guns are: First, $5; second, $3; third, $2. Targets included at 1½ cents. Sweepstakes optional. Lunch served free. Loaded shells may be obtained on the grounds.

The secretary-manager, Mr. Elmer E. Shaner, writes us that "changes have taken place at Interstate Park which render it impossible for the Interstate Association to hold the fifth Grand American Handicap at targets there. As other grounds in the East are not available, the stockholders of the Association, at a special meeting held on the 13th inst., decided to cancel this tournament, which was scheduled for May 12 to 15."

Mr. C. C. Nauman, the manager, under date of March 7, writes us as follows: "Kindly announce in your sporting columns that the San Francisco, Cal., Trapshooting Association will hold a three days' bluerock handicap tournament at their grounds, at Ingleside, San Francisco, Cal., on May 24, 25 and 26; $1,500 in cash will be added to events. Open to all."

On April 18, at Glen Rock, Pa., an open shoot for the live-bird championship trophy of York County, Pa., is fixed to take place. The conditions are 20 live birds, $5 entrance, optional sweep, $5; handicaps 25 to 30yds. Entries close on April 10; $2 forfeit. Other live bird and target events will be on the all-day programme. Shooting for the trophy commences at 9:30 A. M. Mr. Allen M. Seitz is the secretary.

Mr. Charles Billings, at one time president of the Emerald Gun Club, of New York, had completed arrangements to leave New York last week for his winter home in Florida, where he will remain till permanently pleasant spring weather has come in the North. He has taken up yachting as a sport, than which nothing is both more wholesome and enjoyable.

In a match at Point Breeze, Pa., on Wednesday of last week, between Messrs. H. McIntire, of Oxford, Pa., and W. Cloverdale, of Chestnut Hill, Philadelphia, at 25 birds, McIntire won by a score of 22 to 19. A second event, $50 a side, 50 birds, was shot between Messrs. Cowan and F. Muller. Cowan won with a score of 46 to 42.

Mr. Arthur Gambell, the energetic superintendent of the Cincinnati, O., Gun Club, after readjusting his bones, has struck a true crackerjack gait at the traps. March 11, in a contest at 100 targets with D. Gross, he scored 95 to 93. On March 12, in a three-cornered 100 target match, he defeated Messrs. Gross and Ahlers.

The Baltimore Shooting Association's team defeated the Keystone League's team at Baltimore, Md., on Monday of this week by a score of 193 to 176. There were nine men on a side, and each man shot at 25 live birds. This decides the series of contests between Baltimore and Philadelphia in favor of the former.

Col. A. G. Courtney, of Syracuse, N. Y., is on the list of invalids these days, being confined within doors during a slow convalescence. We heartily wish him a speedy recovery. With the pleasant spring weather which is now due, or should be due in the near future, good health should come then at the latest.

The series of matches between teams of the Mineola Gun Club and the Freeport Gun Club was definitely decided on March 14, Mineola winning two out of three, the last by a score of 84 to 79. There were five men on a side, 25 targets per man. The final contest took place on the grounds of the Mineola club.

The Colt Gun Club's first medal shoot of the season was held on March 14, on the club grounds, Hartford, Conn. Messrs. Herman and Hubbell tied on 22, and in a toss for it, Herman won. The club holds its shoots every other week, with a tournament on holidays.

At Long Branch, N. J., March 13, a return match between teams of the Highland and Long Branch Gun Clubs was shot; ten men on a side, 10 targets per man. Highland won by a score of 79 to 72. The Long Branch club won the first contest.

The Dominion Trapshooting and Game Protective Association, through its secretary-treasurer, Mr. A. W. Throop, has fixed upon Aug. 12 to 15 for the Association's annual tournament, which will be held at Toronto.

The first live-bird contest of two between W. Widman and J. R. Farlee took place at Trenton, N. J., on Wednesday of last week. Widman won by a score of 46 to 44. Each shot at 50 birds. The second race was fixed to take place at Yardville, N. J., on Wednesday of this week.

The Intercounty cup shoot will take place at Ossining on Saturday of this week. Rockland, Orange, Dutchess and Westchester counties are the limitations of club eligibility as to domicile. The teams will be seven-man.

The Boston Gun Club's annual team shoot will be held at Wellington, Mass., April 29. Any information in relation to this shoot will be cheerfully given by Mr. H. C. Kirkwood, 23 Elm street, Boston, Mass.

At Palm Beach, Fla., March 9, on the grounds of the Florida Gun Club, Mr. John W. Gates and Mr. E. A. Mulliken, of Boston, tied for the Greenleaf and Crosbey cup on a score of 19 out of 20.

In a match at 100 bluerocks per man, $25, at Dexter Park, Brooklyn, March 14, Mr. George Lebohner, of Brooklyn defeated Mr. Chas. R. Nelson, of Union Course, by a score of 91 to 90.

The energetic secretary-manager of the Interstate Association, Mr. Elmer E. Shaner, returned to Pittsburg on Friday night of last week, after a three-days' stay in New York.

Messrs. Fred Miller and James Cowan shot a match at 100 live birds at Point Breeze race track, Pennsylvania, on Monday of this week. Miller won by a score of 79 to 73.

The secretary, Mr. G. G. Zeth, informs us that the Altoona, Pa., Rod and Gun Club will hold a shoot on May 30.

The next shoot of the Jackson Park Gun Club, of Paterson, N. J., is fixed to take place on March 28.

BERNARD WATERS.

Randall Tournament.

RANDALL, Ia., March 11.—The one-day tournament of the Randall Gun Club had eighteen entries. The programme had fourteen events, and called for 200 targets, beside a special event at 50 targets for the Hamilton and Story county championship medal and a purse of $10. Dr. R. N. De La, of Jewell, won the medal, defeating John Peterson by a score of 40 to 34.

The weather was cloudy and cold. John Frees was high for the day, and C. B. Adams a close second.

HAWKEYE.

Ossining Gun Club.

OSSINING, N. Y., March 14.—There was considerable fun at the regular Saturday afternoon shoot of the Ossining Gun Club to-day after the shoot for the handicap and scratch cups, in which Washburn got a win for the first, and Blandford for the second. Several matches were shot, Washburn coming out ahead.

In these last events all were using inferior loads, which fact brings out Washburn's score as a fine exhibition. Washburn, Clark and Fisher tied for the handicap cup and Washburn won on the third shoot-off.

Event No. 4 is the scratch cup event; misses as breaks denoted by figures after the names, which apply in events Nos. 5, 6 and 7.

The Intercounty cup shoot will take place next Saturday at Ossining; seven-man teams, teams from any club in Rockland, Orange, Dutchess and Westchester counties are invited to compete. All shooters are invited to shoot along.

Events:	1	2	3	4	5	6	7	8	9	10

B. A. A. Gun Club.

BOSTON, Mass., March 14.—A handicap at 50 targets, which was subdivided into five 10-target events, was the programme of the Boston A. A. Gun Club to-day at its shoot at Riverside. The weather was pleasant, with favorable conditions for good scores. Dennison, a scratch man, led the field with a total of 44. Ellis was second with 42. Mr. T. E. Batten, business manager of FOREST AND STREAM, was the guest of the club.

The team which Capt. Daggett will take to Brooklyn March 21 to compete with the Crescent Athletic Club consists of Daggett, captain; Clark, Ellis, Hill, Edwards, Dennison, Howell and Baxter. The scores:

Events:	1	2	3	4	5	Broke.
Clark	10	7	8	6	10	41
Ellis	7	9	10	9	7	42
Hill	6	5	6	5	5	27

Trap at St. Louis.

A MATCH at 20 live birds was shot at Dupont Park, St. Louis, on March 8, the objective being a Francotte Knockabout gun. Eight men contributed $10 each, and agreed that the high gun should take the prize. The birds proved good ones, and 18 was the high score, with a tie between Henry Stroh (Jonah) and Joe O'Neil:

Spencer	21122120220200222212—16

Jonah and O'Neil agreed to divide profits. KILLMORE.

Keystone Shooting League.

HOLMESBURG JUNCTION, March 14.—Capt. John Rothaker was the star performer of the Keystone Shooting League's Saturday contests. He killed 25 straight in the events of the afternoon. There was a light attendance. The weather was pleasant. The scores:

Club handicap, 10 birds: Geikler, 28yds., 10; Rothaker, 29yds., 10; Budd, 30yds., 8; Morris, 27yds., 10; Hall, 28yds., 7; Johnson, 28yds., 9; Fitzgerald, 28yds., 10.

Officers' trophy, handicap rise, 15 birds: Geikler, 28yds., 14; Rothaker, 29yds., 15; Budd, 30yds., 13; Morris, 27yds., 12; Hall, 28yds., 12; Johnson, 28yds., 7; Fitzgerald, 28yds., 12.

IN NEW JERSEY.

Erie Gun Club.

Carlstadt, N. J., March 11.—The Erie Gun Club, of Brooklyn, held a shoot on Outwater's grounds to-day. The club shoot had 14 birds per man. Detlefson was high with 13. The scores follow:

S Hitchcock	00111211022012—10	C Luhrman	00211010000011— 9

Italian Shooting Club.

Carlstadt, N. J., March 10.—The shoot of the Italian Shooting Club, held on Outwater's grounds to-day, had eighteen contestants. Three tied on 9. Mr. Wm. Clark, Jr., was the official scorer:

Pagani	0010200000— 2	Malnati	0000021000— 2
Arrignoni	0100011110— 5	Louis	1120222100— 7

Jackson Park Gun Club.

Paterson, N. J., March 14.—The Jackson Park Gun Club, of Paterson, N. J., held a very successful and pleasant shooting affair this afternoon among some of its own members and a few visitors. It proved very interesting while it lasted. The shoot itself was started about 2 o'clock and we were back in the city before 5:30 P. M., having disposed of 250 first-class birds.

There were only three incomers in the lot. About eight or ten had to be flushed, and were corkers when they started. The whole proved to be about the best we have had at our grounds. Only one bird had to be called for refusing to fly. The birds were retrieved by G. A. Hopper's dog. He does his work very rapidly, and is what I would call very humane. He gently brings the bird back and lays it down on the platform, and if the bird shows any sign of life he gently places his foot on it till the trapper gets to it, and then he goes to his place, ready for the next.

The shoot to-day opened with a 5-bird event, $2.50, handicap. Christy, in great shape and shooting in excellent time, is the only one to kill straight.

Lenone had a good chance to tie, but would not use his second barrel on his third bird, and it got away. He finished second all alone. He promised to-day to gather his birds with single barrel kills. He used his second only three times during the afternoon, all missed, and had excellent birds to shoot at.

The second event was at 10 birds, $5, for a splendid seven-year-old moose head. The second man was to get his entrance back. Christy again proved to be the best in form, doing his work quick and clean, and scored his 10 birds. Morgan, Powers and Hopper each lost his fifth bird. Each was a corker. Lenone continued to use his single barrel, losing his third through waiting till the bird was nearly over the boundary before using the second. He dropped his eighth and tenth the same way as Hopper lost his eighth and tenth—both excellent birds. Morgan's tenth was an incomer, hit hard, and came straight for him, almost at his feet; could have got it himself had he laid his gun down and put his hand out; it fell dead just back of him. Powers came right after. With less experience at the game, but the making of a good one with another season's practice, showed the lack of experience on a slow bird, and it got away unhurt. He shot too quick both times. Ratcliff is a new man at the traps; he will make a good one before long. Bunn was in poor shape.

In the third event, 7 birds, $3, Morgan, Powers and Ratcliff did the best work. Christy and Roberts, another new man, making a great promise, with little practice, were close up with 6.

In the fourth event, a $1 miss-and-out, Morgan, shooting in good form, lost a corking driver on his fifth round, and had to retire.

Ratcliff, in hard luck, lost his fifth just back of him, about 3yds. Roberts and Klotz divided, as there was only 1 bird left in the traps, and one of Paterson's finest police officers, Dave Gibson, did the act with the last one and scored it dead.

The weather to-day was of the most beautiful kind for outdoor sport, and would like many more of the same kind.

The next shoot at live birds will take place on March 28. The principal event will be for a fine head of the black-tail deer. Everybody welcome. Shooting to commence at 1 P. M. The scores:

Lenone, 28	11011—4	1101111010— 7	0001111—4	0

Concerning the Grand American Handicap at targets, April 14 to 17, the powder, shell and gun companies have decided to obtain a party railroad rate from Cincinnati, which includes sleeper from Cincinnati to Kansas City and return. No conditions are imposed in the way of shooting gun or ammunition. Address Mr. F. J. Waddell, Cincinnati, O.

Boston Gun Club.

BOSTON, Mass., March 11.—The usual weekly shoot of the Boston Gun Club was held on their grounds at Wellington to-day, and twelve shooters were present, all bent on the same purpose, that of smashing bluerocks. That the majority of them did it seems to be the case, straight scores coming quite easy and apparently without much effort.

The consecutive match, which has been causing considerable interest of late, was as usual entered by all, and after the smoke had cleared away, the record was again broken, Rule having just 45 to his credit, and going Griffith to the good 4 targets. Dr. Gleason also was distinctly in it, breaking a 27 straight and a 25 straight, also securing 93 out of his 100 targets, the highest score of this kind on the grounds this season, and also making 28 in the match, closely followed by Woodruff with 27, who seems now to have struck his old clip. Other scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	
Targets:	10	*	15	10	15	15	10	*	15	15	15	20	Av.

Interstate Association Meeting.

A SPECIAL meeting of the stockholders of the Interstate Association was held in the offices of the Laflin & Rand Powder Co., 99 Cedar street, New York city, on Friday, March 13, at 2:15 P. M. In the absence of both President Bennett and Vice-President Bruff, Mr. Eugene Dupont occupied the chair.

The roll call showed the following members present, represented either in person or by proxy: Tatham & Brothers, Chas. Tatham; Le Roy Shot and Lead Works, O. D. Delano; Laflin & Rand Powder Co., A. W. Higgins; American E. C. and Schultze Gunpowder Co., Ltd., Edward Banks; Union Metallic Cartridge Co., Theo. Moore; E. I. Dupont de Nemours & Co., Eugene Dupont; Peters Cartridge Co., by proxy, A. W. Higgins; Hazard Powder Co., by proxy, Eugene Dupont; Remington Arms Co., by proxy, Theo. Moore.

W. R. Hobart, of the American Field, and M. R. Herrington, of Shooting and Fishing, honorary members of the Association, were also present, as was Elmer E. Shaner, secretary-manager of the Association.

The secretary read the call for the meeting, signed by the president, which stated that the call was issued for the purpose of considering matters in connection with the holding of the fifth Grand American Handicap at targets at Interstate Park.

In view of the numerous changes which have taken place at Interstate Park, both in the grounds and in the management, it was a question as to whether the Association would be able to hold the event there. Manager Shaner stated that he had inspected the grounds very carefully, and in his opinion the G. A. H. could not be held there in the same up-to-date manner as heretofore. The matter was discussed at considerable length, and on motion made and duly seconded it was decided to cancel the tournament.

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., March 14.—The regular weekly shoot of the Poughkeepsie Gun Club to-day was attended by eight regulars, one of whom, Mr. Marshall, holds the record for rapid progress in trapshooting. Two weeks ago this gentleman made his first attempt to smash bluerocks, when, after the shoot was over, he found it easier to count the breaks than the misses. To-day, however, it was easier to count the misses, which in his last string amounted to but four. Twenty-one is a nice score to make, for one having had as little experience as Mr. Marshall.

The warm spring sunshine, and total absence of wind made the day an ideal one for shooting, and but for the crankiness of the trap, which persisted in breaking at least half a dozen targets before delivering a good one, good scores would have been the order of the day. Notwithstanding, however, some good scores were made. On Saturday, the 21st, this club will send a seven-man team to Ossining to shoot in the Intercounty cup match. To-day's scores follow:

Events:	1	2	3	4	Shot	
Targets:	25	25	25	25	at.	Broke.
Marshall	11	13	17	21	100	62
Traver	11	23	20	..	75	54
Perkins	21	20	21	..	75	62

Baltimore—Keystone.

BALTIMORE, Md., March 16.—The deciding shoot of the series between the Baltimore Shooting Association and Keystone Shooting League teams, as to the superiority of Baltimore over Philadelphia at the traps, was settled to-day in favor of Baltimore by a score of 193 to 176. Each man, nine on a side, shot at 25 live birds. The competition was in pairs, one man of each team shooting a man to man race. Only two of Philadelphia's men came out victors. Mr. I. Budd was the only contestant who killed straight. Baltimore had 17 to the good at the close of the race, thus the net winning of the local team was raised to 10 birds for the four shoots, which decided the championship. The scores:

Baltimore—McAlistoer 22, Storr 20, Coe 24, Burroughs 21, Malone 22, Dupont 22, Gifford 16, Gorman 23, Waters 23; total 193.

Keystone—Rothaker 18, Van Loon 17, E. Johnson 22, Coffin 18, P. Johnson 19, Hobbs 18, Dr. Darby 22, Hallowell 17, Budd 25; total 176.

Omaha Trap.

OMAHA, Neb., March 16.—For years Omaha has been one of the shooting centers of the United States, and ten years ago it was noted for the frequency of its big trap events. Then there was a season of several years' inactivity; but after this rest the pastime broke out with more vigor than ever, and to-day there is probably no city or State in the country that compares with Omaha and Nebraska for the number and importance of its trap tournaments. There are now no less than six or eight regularly organized clubs in the city, and over half a hundred in the State; and bigger crowds assemble at the weekly shoots and more targets are atomized and more pigeons killed than there used to be in a month. For this condition of things much credit is due to the Omaha Gun Club, one of the oldest shooting organizations in the country, and to the State Sportsman's Association. The Omaha club was organized nearly forty years ago, and originally it was styled the Omaha Sportsman's Club. That was in the good old days when Yank Hathaway, Gen. George Crook, John Petty, G. H. Collins, George A. Hoagland, Byron Reed, Judges B. E. B. Kennedy and George B. Lake, Dr. Peabody, John Withnell, Howard Kennedy, Dick Withnell, Henry Homan, Al. Patrick, Major Sackett, W. H. S. Hughes, Goodley Brucker, William Preston and John J. Hardin and scores of others, now difficult to recall, were the active members. The club had a large general membership, composed of the most prominent professional and business men—as it is to-day—and as they were all practical and enthusiastic followers of the field, it took but precious little inducement even at that early date to interest them in friendly competitions at the trap. In those days trap tournaments were new, and the regular weekly shoot was attended by the full membership, while the spectators who assembled to witness the sport ran up into the hundreds, while to-day the lookers-on are chiefly composed of the shooters themselves. In the old days the rivalry between the contestants was always at fever heat, and the average scors made then, with black powder, soft shot and hammer guns, incredible as it may seem, were up to those of the present day. Along in the '70s, I have seen Frank Parmelee—who, by the way, has just moved to Rockport, Tex., where he will engage in the poultry business, and who since his boyhood has occupied a premier position among the crackerjack trap shots of the world—and John Petty, Hal Penrose, J. J. Hardin, Billy Townsend, Billy Brewer, H. B. Kennedy, Charlie Williams, Johnny Thompson, Goodley Brucker, Taylor Sprigg, Dick Metz, D. T. Stubbs, Clark Ellis and a dozen others run their scores up well into the 90s in every 100 live-bird or artificial target shoot in which they took part. In the 25-target shoots, which were the regular weekly club shoots, Parmelee, Petty, Hardin, Penrose, Williams and one or two others more often emerged from the fray with straights than they did with broken records.

It is extremely pleasing to note that to-day there seems to be more than a full restoration of the activity of the days of he old lang syne. The preservation of the old Omaha club in the perfect vigor of its youth, the splendid organization of the Dickey Bird Gun Club; the Taylor & Williams Yellowstone Gun Club; the Prairie Gun Club; the South Omaha and Council Bluffs gun clubs, and the Rifle Club, are all robust organizations, and very much alive, and putting forth extra efforts this spring to make Omaha a shooting center second to none in the country. Their initial shoots this spring, despite the generally inauspicious weather, indicate that this much-desired end is to be surely attained, and that this health-promoting and life-prolonging divertisement is to take rank with the most popular pastimes of the day.

The Omaha club at present has a roster of seventy members, with J. P. Smead, President; W. P. McFarlane, Vice-President; W. D. Townsend, Secretary, and Goodley Brucker, Treasurer. They shoot every Saturday afternoon. The Dickey Bird Gun Club is a younger and large body, with George Nicholson, President; Walter F. Kinnear, Vice-President, and George Toozer, Secretary and Treasurer. The Yellowstone Gun Club has a limit of thirty members, and Fred Hoye is President. The South Omaha Gun Club at its last census had sixty members, and the Council Bluffs Gun Club about the same number. The Omaha Rifle Club, with fifty members, was recently organized, with Dr. J. C. Whinnery, President; Joe Barton, Vice-President, and Fred Carter, Secretary and Treasurer. The Omaha Mallard and Merganser clubs are principally duck shooting organizations, although they pay considerable attention to the trap.

Omaha also has a game and fish protective association, with H. S. McDonald, President, and Council Bluffs has just organized a similar body, with E. C. Brown President, and a membership of over three hundred. Their one aim is to break up the illegal fishing that has been practiced on most all Iowa waters from time immemorial, and they are preparing for the building of a modern club house at Lake Manawa, formerly famous for its black bass.

On the Trans-Mississippi trapshooting tournaments' spring card there are many good things, beginning with the joint shoot of the North Platte, Buffalo Bill and Grand Island gun clubs, which will be held at Grand Island April 1, 2 and 3, the first two days to be devoted to targets, ten events each day, and the last to the third shoot between the All-Nebraska and Omaha, South Omaha and Council Bluffs ten-man teams, 100 live-bird race. The two teams have already met twice, the rural shots skinning their metropolitan rivals both times; the first in October last by a margin of 5 birds, and the second last month by a margin of 4. Both shoots were held on the Omaha Gun Club grounds. The teams are: Omaha, South Omaha and Council Bluffs—W. D. Townsend, captain; Tom Grant, Dick Kimball, Fred Montmorency, G. W. Loomis, Charlie Lewis, Billy Brewer, Dorsey Burgess, Fred Goodrich and Ed Hafer; All-State—George L. Carter, captain; Dan Bray, Syracuse; C. D. Linderman; Weeping Water—G. A. Schroeder, Columbus; State Game Warden George B. Simpkins, Lincoln; Gus Seivers; Grand Island—Frank Baird, Herman; W. H. Illian, Albion; Fanner Burke, Elgin, and Martin Diefenderfer, Wood River. Then follows the Geneva, Neb., Gun Club's meet, March 25 and 26; the St. Joe, Mo., Gun Club shoot, April 7 to 10; the Grand American Handicap, Kansas City, April 14, 15, 16 and 17; the Nebraska State Sportsman's annual, Lincoln, April 29, 30, 31 and May 1; the Kansas State shoot, Concordia, Kans., May 1, 2 and 3; the Iowa State shoot, Osceola, May 19, 20 and 21; the Sioux City Gun Club shoot, June 9, 10 and 11.

SANDY GRISWOLD.

ON LONG ISLAND.

Crescent Athletic Club.

Bay Ridge, L. I., March 14.—There were nineteen contestants in the second contest for the March cup, and of these Mr. W. W. Marshall and Dr. H. O'Brien tied on a full score. Saturday of this week is the day fixed upon for the team contest between the Crescents and the Boston Athletic Association Gun Club, for a trophy purchased jointly by the two organizations. The members of the visiting team are considered to be Messrs. C. M. Howell, W. L. Hill, George E. Clark, R. W. Dennison, D. W. Edwards, Dr. S. A. Ellis, T. F. Baxter, Daniel Hallett and J. H. Daggett.

The weather was pleasant and a large programme was shot, in which there were numerous ties. The scores follow:

Cup shoot, 50 targets:

Mineola—Freeport.

Mineola, L. I., March 14.—The third and last contest of teams from the Mineola A. C. and the Freeport Gun Club took place on the grounds of the former to-day. Victory rewarded the skill of Mineola, the scores being: Mineola 84, Freeport 79. There were five men to a team, 25 targets per man. With this win Mineola won two out of the three contests. The scores:

Mincola Team.

F Gildersleeve	1111111110101111101011101—20
W Simonson	1010101000111010111111011—16

Ten targets: Greiff 5, W. Simonson 7, T. Ryder 9, T. Sprague 8, P. Murphy 4, F. C. Willis 9, G. Houghton 2, E. Schmidt 7, M. Scally 8, F. Gildersleeve 10, W. Seaman 8.

Ten targets: Simonson 5, Ryder 9, Sprague 8, Murphy 3, Willis 9, Houghton 5, Schmidt 7, Scalley 6, Gildersleeve 7, Seaman 6.

Emerald Gun Club.

NEW YORK, March 10.—Herewith please find the record for the past year, March, 1902, to March, 1903, of the Emerald Gun Club. The annual meeting was held on Thursday at 8 P. M. at the house of Dr. C. V. Hudson. The club was organized twenty-two years ago this month, and is now entering the twenty-third year of its existence. It has been an active organization at all times during this period, shooting from eight to twelve times a year. Nothing but live birds have been used, and many prizes have been contested for. Its team has won the team championship at targets and the last Dean Richmond trophy contest, shot for at live birds in the State of New York, at the meeting of the N. Y. S. A. P. F. and G. The club donates from its treasury more cash for prizes each year than any other club in this vicinity, and the handicapping is on the point and rise basis, thus allowing a B or class man to win the highest point average. This is the fourth year Schortemeier has won the average prize, and his coming year's handicap is 33yds. The club will shoot at Smith Brothers' grounds, Newark, which are being enlarged the coming year.

The following officers were elected: Patrick J. May, President; L. H. Schortemeier, First Vice-President; Henry C. Koegel, Second Vice-President; Thomas Short, Recording and Financial Secretary, and the old reliable John H. Moore as Treasurer, a position he has held for many years.

The balance in the treasury is satisfactory, and the usual amount of cash was voted for prizes the coming year. The value of cash prizes and merchandise the past few years averaged some $200. The cash prizes are given on condition that the member purchases a memento or souvenir or something pertaining to the sport. The shooting day is the third Tuesday of the month, excepting the months of July and December; and any shooter in the vicinity is welcome to participate, but of course is not eligible to prizes.

The first shoot of the year took place appropriately on March 17.

Record of Emerald Gun Club of New York at live birds, season March 1, 1902 to March 1, 1903; average to count in eight or more shoots, winners can select only one prize, point average:

	—Handicap— Yards.	Points.	Shot at.	Killed.	Points.	Avge.
J Fischer	28	6	100	78	18	.780
W Corbett	25	5	100	64	14	.640
L Schortemeier	32	7	90	78	15	.867
F Hausman	25	6	100	69	12	.690
Dr Hudson	28	7	100	79	11	.790
J H Moore	28	6½	100	74	11	.740
A Schoverling	30	7	80	64	10	.800
F J Kall	25	6	100	65	10	.650
T Short	25	7	100	73	9	.730
P May	28	6	80	54	8	.675
H C Koegel	30	7	100	74	7	.740
W Hassenger	30	7	60	49	7	....
W Catton	28	7	100	68	6	.680

Al Scheubel	28	6½	20	17	4	....
H Dressell	28	6	10	7	1	....
N V Gunther	28	5½	10	6	½	....

Average prizes: First, Schortemeier, $20; second, Schoverling, $10; third, Koegel, $5.

Point prizes: First, Fischer; second, Corbett; third. Hausman.

MANHATTA.

The Florist's Gun Club.

PHILADELPHIA, March 12.—The thirteenth annual tournament of the Pennsylvania State Sportsmen's Association will be given under the auspices of the Florists' Gun Club, of Philadelphia, on their grounds at Wissinoming, Pa., May 18, 19, 20 and 21, at flying targets; and Keystone Shooting League grounds, at Holmesburg Junction, Pa., May 22 and 23, at live birds.

We offer State shooters guaranteed purses; daily average, high and low guns; general average, high and low guns; added money to purses for 66 to 80 per cent. men; 70 per cent. is sure to win some money; a tax purse for those who shoot through the three days' open amateur events, 100 shots a day, and fail to win back their entrance; absolute trophy in each team match; individual prizes to team winners; individual trophy to winner of State average; added money in all State events; two grand merchandise handicaps; open amateur sweeps; manufacturers' agents shoot for targets only and rebate average purse; shooting at bluerock targets from four magautraps run by electric motor; shad dinners; most beautiful shooting grounds in the State. Anything else? Yes. Come and see the greatest shoot ever given in this State.

V. V. DORP, Sec'y.

2728 NORTH TWELFTH STREET, Philadelphia, Pa.

Cincinnati Gun Club.

CINCINNATI, O., March 7.—The seventeenth contest for the Troisdorf medals resulted as follows: Rike (20) 45, Randall (16) 45, Lindsley (16) 42, Corry (15) 42, Leever (17) 42, Hawk (16) 42, Ackley (16) 41, Ahlers (21) 41, Van Ness (16) 41, Maynard (19) 41, Barker (18) 40, Block (18) 39, E. Trimble (17) 39, Medico (16) 39, Nye (16) 39, R. Trimble (21) 38, Linn (15) 38, McB. (16) 38, Capt. (16) 38, Coleman (19) 38, Falk (18) 37, Brown (16) 37, Gambell (20) 30, Williams (16) 23.

Randall, Van Ness and Medico's handicaps were 20, 19 and 18yds., respectively, but they preferred shooting at the 16yd. mark, their scores in the medal not counting.

Ed Rike paid us a visit and made high score from 20yds., breaking his first 30 straight.

The day was a miserable one to shoot, rain stopping the shoot time and again. However, it did not keep the crowd from coming out.

Van Ness and Gambell have started a series of 100-target races, one to take place each week and the total in 500 to count. Result of first race: Van Ness 89, Gambell 87.

March 11.—Gambell and Dell Gross decided to test their skill at the traps last week, so after kidding the former at Schuler's one night recently a match was made and shot at the club grounds.

The weather was ideal, and good scores were made by both contestants; in fact, Gambell shot "like he used to years ago," and put up the good score of 95 to 93 for Gross.

The following day a three-cornered match was shot between Gambell, Gross and Ahlers, the first-named winning by 2 targets. Scores:

No. 1, match at 100 targets, 18yds.: Gambell 95, Gross 93.

No. 2, same: Gambell 89, Ahlers 87, Gross 87.

March 14.—The fourth contest for cash prize had scores as appended. Medico shot at 16yds.; regular handicap, 18yds.:

Medico (16) 44, Barker (17) 43, Maynard (18) 43, Block (17) 42, Gambell (18) 42, Jack (15) 42, Ackley (15) 41, E. Trimble (17) 41, Corry (17) 41, Rike (18) 39, Ahlers (20) 39, Steinman (18) 39, R. Trimble (22) 38, Van Ness (18) 38, McB (15) 37, Faran (18) 37, Linn (15) 37, Capt. (16) 36, Falk (17) 35, Coleman (17) 35, J. B. (16) 35, Roanoke (15) 28.

Colt Gun Club.

HARTFORD, Conn., March 14.—The Colt Gun Club held their first medal shoot of the season to-day. The weather conditions were most favorable for the sport. Mr. Holister, who has successfully held the medal since last fall against all competitors, was forced to relinquish his grip on it to-day in favor of Messrs. Hubbell and Hermann, who tied for first at 22 each. In the toss up Hermann won, and the prospects are that he will hold it for another season. The scores in full were:

Events:	1	2	3	Events:	1	2	3
Targets:	25	25	25	Targets:	25	25	25
Hermann	22	13	12	Warner	18	15	..
Hubbell	22	..	..	Edgerton	19	15	..
Holister	21	14	..	Stone	15	9	..
Alger	20	14	..	Scifert	17	10	..
McFetridge	21	..	..	Wander	14	11	..
Cook	20	..	..				

No. 1 was the medal contest.

R. McF.

Answers to Correspondents.

No notice taken of anonymous communications.

G. H. A., Boston, Mass.—1. When leaving the ground or tree, is the flight of the ruffed grouse always accompanied by the roar of wings, or is it sometimes noiseless? 2. What constitutes a noiseless flight—that is, is it by scaling, or is it a noiseless beat of the wings? 3. Under what conditions does a ruffed grouse "whistle"? Ans.—1. The flight is sometimes noiseless. 2. When it sails with outspread wings. 3. Generally when it is disturbed, though the noise could not properly be termed a whistle.

PUBLISHERS' DEPARTMENT.

Tours to the Pacific Coast.

VIA PENNSYLVANIA RAILROAD, ACCOUNT PRESBYTERIAN GENERAL ASSEMBLY.

FOR the General Assembly of the Presbyterian Church, at Los Angeles, Cal., May 21 to June 2, the Pennsylvania Railroad Company will run three personally-conducted tours to Los Angeles and the Pacific Coast. These tours will leave New York and Philadelphia, May 12 and 13. Tour No. 1, covering twenty-four days, $134.50 from New York; $132.75 from Philadelphia. Tour No. 2, covering forty-three days, including Yellowstone Park, $253 from New York, and $251.25 from Philadelphia. Tour No. 3, covering thirty days, including Grand Canyon of Arizona, $159 from New York, and $156.75 from Philadelphia. Proportionate rates from other points. Arrangements may be made to return independently on Tours No. 1 and No. 3.

Special Pullman trains will be used, and the services of a tourist agent, chaperon, baggage master and official stenographer will be provided on each train.

For itinerary giving rates and full information apply to Tourist Agent, 263 Fifth avenue, New York city, or Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia, Pa.—*Adv.*

Mr. T. H. Keller writes us that in "the annual competition for the indoor rifle championship, New York city, Feb. 28 to March 7, the conditions called for 100 shots at 75 feet, position off-hand, on the German ring target. The championship was won this year for the second consecutive time by L. P. Ittel, of Pittsburg, Pa. Not one of Mr. Ittel's 100 shots was placed outside the bullseye, and his score of 2,457 points was a remarkable piece of marksmanship. Mr. Ittel used in this contest Peters .22 caliber short cartridges. This ammunition has now won the championship for six consecutive years, 1898, 1899, 1900, 1901, 1902, and 1903. In addition to this victory, the ammunition won first in every other contest of the tournament, and a large number of perfect scores were made with it."

The Savage Arms Co., Utica, N. Y., have issued a beautifully illustrated catalogue, with text abounding in information. In it is set forth a full description of the 1903 Savage repeater, which is furnished to use the various .22 caliber cartridges. To meet the demands of sportsmen the Savage Arms Co. have adopted the .30-30 1899 Savage model to take .25-35, .32-40 and .38-55 cartridges. Apply to the Savage Arms Co. for the catalogue.

Many American anglers are familiar with the name of W. J. Cummins, North of England Rod Works, Bishop Auckland, England, who offers to send free to any address his illustrated catalogue of high-grade rods and tackle. A manufacturer of fishing tackle whose goods have pleased men like the late A. N. Cheney, Mr. Frank Hampton, of South Carolina, and Mr. W. B. Mershon, of Saginaw, Mich., is likely to please other anglers.

These are busy days for Spratts Patent (America) Limited, of Newark, N. J. They fed and fitted up the recent Pittsburg show, and have done or are doing the same for Coshocton, Chicago, Buffalo, Atlantic City and Rochester.

Florida—Thomasville—Augusta.

Atlantic Coast Line's famous trains, 8:55 A. M. daily. "New York & Florida Special," 2:10 P. M. week days. Apply at office, 1161 Broadway, New York.—*Adv.*

Hotel Wachapreague, for yachting, sailing, fishing, bathing, driving, recreation of every description. See inducements, page x.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1903, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MARCH 28, 1903.

VOL. LX.—No. 13. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

THE DOOM OF THE ELK.

IN western Wyoming, in the country immediately about the Yellowstone Park, but chiefly south of it, are the only considerable herds of elk that exist in America to-day. Once these animals extended over almost the whole country, from the Atlantic to the Pacific, but like so many other species of great game, they have been exterminated over almost the whole continent. Later than the year 1870 there were a few in Michigan, Minnesota and Iowa, and they were then very abundant over the plains of Nebraska. On the Upper Missouri and in the northern Rocky Mountains they lasted much longer. Only within a few years were they exterminated in Arizona. In California there is still a little herd rigorously protected by the owners of land they range on. A few are found in the Olympic Mountains, and a few on Vancouver Island. But nowhere are they abundant save in Wyoming and southernmost Montana.

Most States now have fairly good game laws, which are generally fairly well enforced. There is no great danger that sportsmen, hide hunter or tooth hunter will exterminate the elk; and yet in Wyoming, outside of the Yellowstone Park, this extermination is destined shortly to come. It will take place, too, by wholesale. In a small way it will be like the destruction of the last herds of the plains buffalo, though from another cause. Thousands will perish in a week and their unskinned, dried up carcasses will greet the cow-puncher as he rides over the hill, or the sportsman who visits the region to look—in vain—for game.

The summer range of these elk is in the high timber-clad mountains of the main range. They feed there in the lovely grassy parks among the timber, or on the high mountain meadows, such as the mountain sheep often visit. But in winter the early snows drive them down from these heights, and as these snows become deeper they work their way to lower altitudes and toward the southern and more open country, where the snow fall is less deep and the fierce winds sweep the bald hills bare, leaving exposed the grass on which the herds can feed.

Up to within the past few years each autumn saw a long procession of many thousand elk stringing down from the Yellowstone Park, and the country immediately south of it toward the Red Desert of Wyoming, which was their winter pasturing ground. But in recent years the settlements have crept further and further north; ranchmen have taken up and fenced places along the streams, and have blocked up and cut off the ancient roads, so long traveled by these great deer. Now, for many of them, it is impossible to follow these ancestral pathways, and they must remain in the snow country, striving as best they may, by pawing through the white drifts, to get at the vegetation buried beneath it. If the snow is too deep they cannot reach the food, or if it crusts over they are equally helpless. Then their only resort is to break into the ranchman's hay corral and feed on the crop that he has put up for the use of his own stock, and when this is gone or if they are driven away, starvation must ensue.

This, we are told, is the situation of thousands of elk in Wyoming to the south of the Park to-day, and of a less number—though still some thousands—to the east of the Park.

It is possible that during a winter or two of a mild character the elk may survive here, but it will surely happen that a winter will come when—unless some outlet is found by which these elk can reach their winter range—all of them will starve, and there will then remain in northern Wyoming only the few animals found in the Yellowstone Park. When this shall happen there will be a destruction of the elk which will parallel that of the buffalo on the Laramie plains of what is now western Wyoming which took place nearly sixty-five years ago. The story of this extermination, told us many years ago by an old trapper, Uncle Jack Robinson, who was young and brave and hardy in the old days when Bonneville and Ashley and Soublette and Wyeth were great personages on the then unknown western plains, was this:

In the winter of 1840 there was a great still storm, and snow fell deep over all the country. It was so deep that nothing could move about; and as there was no wind, no portion of the ground was bare. A day or two of mild weather followed and the snow melted and settled a little, and then came a period of hard cold which formed a thick crust. Even the buffalo, powerful as they were, could not break through this, and over a vast stretch of country every animal perished of hunger. The next summer, as Uncle Jack said, the plains were strewn with buffalo as thick as ever they lay after a big killing; and many years after the event, old weather-beaten skulls, crumbling to pieces and dotted with the yellow lichen which grow at that high altitude, could be seen, reminders of the devastation of that terrible winter's storm.

Such a destruction, if it has not already taken place this winter, may be looked for among the elk of western Wyoming, unless the authorities shall find some way of opening and keeping open a road for them between their winter and their summer range.

CHARLES E. WHITEHEAD.

CHARLES E. WHITEHEAD, of this city, died at Aiken, S. C., on Saturday of last week, March 21, at the age of 76 years. By his death New York loses one of its best known and most beloved sportsmen. The younger generation, in particular, owe him a lasting debt for the services he rendered the cause of game protection when its principles were not so familiar to the public as they are in our day, nor so strongly supported by popular sentiment. Mr. Whitehead was one of the founders of the New York Association for the Protection of Game, and from the beginning had large share in shaping the policies, directing the activities and winning the victories of that organization, which has behind it an honorable record of half a century of achievement in its chosen field. To Mr. Whitehead's part in the work of the Association, Mr. Roosevelt bears testimony in his tribute on another page. The work was of the most substantial character; its results have been far reaching and permanent. The game protection of to-day is established in very large measure upon the sure foundation laid by the New York Association at the period when Mr. Whitehead was one of the guiding spirits in its councils.

As a writer Mr. Whitehead was best known by the series of sketches originally contributed to the old *Spirit of the Times* descriptive of hunting and camping adventures in Florida in the '50's, and afterward collected in the volume entitled "The Camp Fires of the Everglades, or Wild Sports in the South." The chapters were pervaded with a freshness and wholesomeness of spirit, a vivacity and depth of sentiment, a keen insight into nature and wild life, and a grace of style and expression which gave the volume a secure place among the classics of American outdoor literature. Who that has read it can ever forget that first paragraph of the opening chapter:

> A goodly sight is a tree! Its trunk supporting a thousand branches that interweave the blue air with their tracery; lithe to the wind, stubborn to the storm, the pillars bend, but do not break, in the leafy aisles of Pan's cathedral. Its roots, far-reaching, with tiny fibers probe the earth for moisture, and send the life-blood through the arteries to the fragrant blossoms and the topmost leaves that "clap their little hands in glee with one continuous sound." To its shadows not only the beasts of the field come for shelter, but millions of insects seek a home under the fold of its bark, or weave their cradles in its rocking boughs. On its branches the birds build their nests, and in its hollows the squirrel and the hooting owl conceal their young, and the wild bee stores its sweets, while both day and night the buds breathe their perfume, and the wind, the leaves, and its feathered guests chant an anthem of praise.

Copies of the earlier editions have long been among the prized possessions of collectors. In 1891 Mr. Whitehead brought out the work in a veritable *édition de luxe* from the press of David Douglas, of Edinburgh, and found for it a new generation of delighted readers.

Mr. Whitehead possessed a most charming personality. A man of much erudition, of keen wit, of abundant vocabulary and of most genial manner, he was a very entertaining companion. For his favorite pursuits he had the enthusiasm of a boy. Long and delightful evenings spent in his sole companionship discussing matters of shooting and fishing are well yet sadly remembered.

On Long Island he owned a charming place which he called a fishing box, and in which he rejoiced. Nothing gave him greater pleasure than to have a sympathetic friend with him at this home, where a little fishing with a vast deal of angling talk furnished delightful entertainment to guest and host alike.

He was one of the most admirable of sportsmen and truest of men. The good that he did was not limited to matters of forest and stream. He was prominent in charitable work, while in matters which on any side touched his favorite subjects he was an ardent worker. He took an active part in the formation of the New York Zoological Society, became one of its Board of Managers, and was for years its Vice-President and a member of its Executive Committee.

His loss will be keenly felt by a large circle of loving friends, but his death will effect also a far larger circle who knew him not, but who were touched, more or less directly, by his activities in behalf of the citizens of New York.

SPORT AND EXPORT.

A SYSTEM which requires a non-resident sportsman to pay a license fee for the privilege of shooting and fishing and which at the same time denies him the privilege of taking home any of the game or the fish he has taken, is essentially unjust. It is unjust because it denies to the sportsman one feature of his outing which is to him a very important and valued part of it, the bringing home of the fruits of his expedition for the gratification of his family and friends, and for his own gratification in showing and bestowing his fish and game.

If there were any sound and sufficient reason for the restriction, if it could be shown that the game and fish of a State would not be conserved without imposing such deprivation upon visiting sportsmen, the hardship might be endured. But no good reason exists. There are in successful operation export regulations which, as experience has abundantly demonstrated, control and safeguard the transportation of game and fish when accompanied by the owner, without the least deleterious effect upon the supply. If such system is in operation in one State, it might be in operation in another. For a State to incorporate in its game laws—as does New Jersey and as does Pennsylvania—a provision that the non-resident who is made to pay a license fee may not take any game home with him, is to confess that it is incompetent to administer the more liberal systems which prevail in its sister States. Even a Canadian Province is more fair and equitable in its dealings with the non-resident sportsman than is New Jersey or Pennsylvania; for the Canadians permit their visitors to bring out their trophies, while New Jersey not only refuses so much as this, but actually seizes game in transit from another State to another State.

It is a gratification to record that a measure has been introduced into the Pennsylvania Legislature to permit the export of big game under certain stringent conditions from game preserves; and the export of birds killed by licensed non-resident shooters. The privilege is limited, and it is right that it should be; the numbers of each species being of ruffed grouse, six; English pheasants, ten; woodcock, six; quail, fifteen; squirrels, ten; rabbits, twenty; and ducks and geese combined, twenty. The measure has the indorsement of the game commissioners, and will probably become a law.

THE ill-considered movement to reorganize the Massachusetts Fish and Game Commission has ended in the summary rejection of the measure by legislative committee. The hearing last Thursday, as our report in another column indicates, was almost entirely one-sided, the advocates of the change being conspicuous by their absence, and the hearing was made the occasion of warm commendation of the present board, both as to its constitution and personnel. Appreciation of the high character of the service performed by the Commission is general throughout Massachusetts; and the vote of confidence—for this was what the hearing amounted to—was well deserved, and we believe truly reflects public sentiment.

Mr. Howard P. Frothingham, who was for several years president of the New Jersey Fish and Game Commission, sent his resignation to the Governor on Monday of this week.

CHARLES E. WHITEHEAD.

MR. CHARLES E. WHITEHEAD, whose death took place on the 21st of this month, was one of the most devoted of sportsmen. Not only was he a good fly-fisher—expert in casting the fly for trout and salmon—and an excellent shot on birds and large game, but he was most devoted to the protection of game. No one has done more or more intelligently for this cause than he. During the most active days of the New York Association for the Protection of Game he was its attorney and counsel. During all those years before the State assumed the responsibility and left the work to a public board and to paid official protectors, during the dark hours when everyone's hand was against us, when we had to educate the ladies and gentlemen in society as well as the dealers in game, when we had to teach our best people that to serve game out of season was not only wrong in itself and unworthy of gentlemen, but utterly destructive of its existence, he was untiring. He brought the great suits, some of them going to the Supreme Court at Washington, which determined the power of the Legislature and established the modern method of protection. He employed detectives, he arranged the marshalling of proof so that it was as difficult to evade it by falsehood as by cunning. And yet he was always liberal and never vindictive. A poor ignorant market dealer unacquainted with the law was never oppressed; all he had to do was to promise not to offend again and he went free. Even the wealthy hardened transgressors he thought it better policy to persuade and encourage than to drive too hard. I have no time to go into details and must leave that task for others, but I wish to record my tribute of admiration and respect for my old and valued friend, my honored associate, my consistent helper in the good work of game protection, and my delightful companion in many a fishing bout—that noble specimen of bodily and mental manhood, Charles E. Whitehead. He was physically strong, active and handsome; he stood over six feet high, vigorous as a young pine tree, fearless in the right and untiring in its service. The cause and the country have lost a valuable citizen when he was called away.

ROBERT B. ROOSEVELT.

The Sportsman Tourist.

"The Law West of the Pecos."

Editor Forest and Stream:

Mr. Hough's reference not long since to Ben Thompson and King Fisher, reminds me of my promise some time ago to try and set down a few of the tales connected with Judge Roy Bean, of Langtry, Texas, and his administration of justice in that distant and sparsely settled territory. For the benefit of those who did not see the contribution in which this promise was made, or, having seen it, have forgotten the circumstances, I will explain that, away out beyond the Pecos River, where the Southern Pacific Railway touches the Rio Grande, there is a station called Langtry. Before the railroad was built this place was called Eagle's Nest, which was doubtless appropriate enough, as the sandy bluffs of the river in this vicinity are high and inaccessible, and afford numerous convenient shelves or benches where the eagles could make their nests. In fact, when I was stationed there, although the eagles themselves were gone, one could still see what was said to be the remains of their eyries on these high shelves. The Southern Pacific came through there, I infer, at about the time of the "Jersey Lily's" greatest fame, and for some inexplicable reason this forlorn, miserable little railroad town, consisting of not more than a dozen structures, and located in the most barren portion of Texas, was given her name.

The population of this little place, though small, contained, however, more interesting, or, to be accurate, more curious and eccentric characters than many places of perhaps a thousand times its numbers; in fact, every resident had something worth relating connected with his history. I will confine my reminiscences in this article to its principal inhabitant, Roy Bean. It is probable that Roy is known to some of the readers who may chance to glance over these lines. I feel sure that our always entertaining writer, Cabia Blanco, must have become acquainted with him during his Texas service, and can perhaps vouch for the truth of some of the many tales extant regarding Roy, either in his honor or at his expense, as the case may be.

At the time of which I write Roy was pretty well along in years, probably sixty or more. He told me that he had been a wagonmaster in the Mexican War, and related many incidents of the various expeditions he had made. These were believed by but few; probably they were wholly fictitious. There is no question, however, but that he had been on the Mexican frontier for a long time, even if he didn't date back quite to the days of Kearney and Domphan. He kept a kind of store and drinking saloon, the only one in existence for miles in any direction, and held the position of justice of the peace, and consequently was called "Judge" by his acquaintances. For a long time the saying went, "There's no law but Judge Bean west of the Pecos;" and it was nearly true, the error being in the exception. The following anecdotes illustrate his character and his administration of justice. Some of them have been published in many papers, usually so embellished and touched up by the correspondent's fancy as to bear but little relation to actual occurrences. I cannot vouch for the truth of what I write; but they were all either told me by the Judge himself or by some of his neighbors, who claimed to be present at the time of the occurrence; I give them as I heard them, to the best of my recollection.

Toward the completion of the Southern Pacific Railway, the eastern and western ends approached each other somewhere in the vicinity of Roy's saloon and Hall of Justice. The gangs of laborers on the eastern end were mostly Irishmen; those on the western branch mainly Chinese. As many will still recall, the latter were very unpopular at that time, and when these discordant elements had gotten quite near each other, I have no doubt the simple minded Celestial had taken it from the more boisterous eastern gangs. Finally matters were carried to such extremes that in some fray or other a Chinaman was killed by one of the opposing party. Out and out murder seems to have reached the limit of even Pecos County forebearance, and so, in course of time, the offender was haled before Judge Bean, charged with the murder of this Chinaman. The Judge established his court and tried the man with such decorum as circumstances would admit. The prisoner in due time was found guilty, and it then devolved upon the Judge to take some action in the case. Being only a justice of the peace, of course he had no jurisdiction in such cases, but, claiming to be the only law west of the Pecos, he had assumed the right to try the case, and as the man was found guilty, he had now to dispose of it. He accordingly had the prisoner stand up, and made a brief review of the case, concluding something as follows: "You have been found guilty of killing this Chinaman and merit the punishment of death. In order, however, to proceed strictly within the law, I have carefully examined the statutes and find that there is no penalty denounced therein for killing a Chinaman; in fact, the word 'Chinaman' doesn't appear in the statutes. The court consequently decides that killing a Chinaman is not an offense against the State of Texas, and dismisses the case."

Of course this must appear to the reader like utter burlesque, but Roy went on to explain to me why he rendered such an unexpected decision. He said: "Had I sentenced this man to death, or even sent him to the neighboring county for trial by a court having jurisdiction in such cases, it would have caused such an uprising among the lawless men in the eastern gang as would have resulted in the death of half the Chinese camp. By thus letting the offender off on such a surprising technicality, I avoided this probable massacre." Of course there was some ground for this view, but what actuated Roy in this now famous decision was doubtless the safety of his own skull rather than that of the Chinese camp.

Some years later there was stationed at Langtry an officer who not unfrequently departed from the conventional idea of conduct becoming an officer and a gentleman. He has long since left the army, but I will withhold his name, as he has relatives in high places who might fail to see the humor in these anecdotes were names given in full. This lieutenant and a railroad employe having fallen out over some trifle, they measured off thirty paces of ground and took shots at each other with the six-shooters of that day, and the lieutenant was hit and painfully wounded in one hand. Roy, having heard about it, immediately had them both brought before him for justice, and having heard the case through, fined the lieutenant two dozen of beer. The beer was promptly purchased at Roy's bar, and in it, with the help of the usual coterie of idlers, I believe all hard feelings engendered in the quarrel were either drowned or dissolved.

Roy's commercial methods might properly be said to keep pace with his legal decisions. He once assured me with some glee and a rather pardonable pride at his own originality, that when anyone paid him anything on account he debited them with the item just as though they had received that amount from him. He said they were liable to be drinking at the time and to remember but little about it afterward; if they questioned the charge at a subsequent settlement, he always removed it, but if they paid it he was just so much ahead. I told him in reply that though I had appeared to acquiesce in times past in some pretty doubtful tales, I should have to have some evidence to pass this one. He accordingly brought out an illegible account book and showed me items which he said corroborated his story. I have never been able to make up my mind whether he was telling the truth or trying to make game of me; his idea was certainly original, and I doubt very much if he would have been deterred from its execution by any qualms of conscience.

I come now to the anecdote called up by Mr. Hough's article. This one was not told me by Roy himself, but by his neighbors. One morning when the train from the east stopped for breakfast at the railway eating house, a fine looking, well dressed gentleman stepped out of the sleeper and walked into Roy's store. By his neat and fashionable attire Roy hastily took him to be some "tenderfoot" from the East, and observing that he wore two large revolvers strapped about his waist, determined to collect a fine from him. He accordingly blusteringly accosted the stranger, asking him how he dared to go about wearing pistols in violation of the law of the State. The stranger replied in a quiet and undisturbed manner that he wasn't aware that he was violating the law of the State. The Judge told him quite brusquely that he was violating it, and that he was going to bring him immediately to trial for so doing. The stranger, still calm and polite, asked if there was a magistrate before whom the trial could be had. Roy told him quite forcibly that he was already before such a magistrate. The stranger thereupon asked him if the court was ready to proceed with the trial. Roy was about to reply in the affirmative, when, like a flash, the stranger drew both revolvers and fired them apparently at Roy's judicial head, the balls barely missing either ear and causing sad havoc among the bottles and glasses on the shelves behind him. Roy dropped behind the counter in a jiffy, and the loafers and frontier idlers sitting around on boxes and barrels enjoying the scene, hastily took refuge behind the most convenient screen; and almost in a twinkling everyone but the stranger was out of sight, and not a sound could be heard; all realized that they "were up against the real thing." As Uncle Remus says, "'Twas jes like blowin' out a candle." The stranger looked calmly around and said: "The court seems to have taken a recess; gentlemen of the jury, come out from your hiding places and help yourselves to drinks." It is probable that all taste for liquor was temporarily destroyed in his panic-stricken hearers, but none dared refuse, and each one helped himself to a drink of Roy's liquor, while Roy himself kept ignominiously out of sight behind his bar. After this ceremony was concluded, the stranger laid his card and a dollar bill on the bar, and stepped aboard the sleeper just as the train pulled out for the West. As soon as Roy dared, he crawled out from his retreat and on the card read the following legend:

KING FISHER,
Deputy Sheriff.

I do not now recall the number of men Fisher was alleged to have killed, but his very name was enough to make the average Texan's blood run cold, and I fancy Roy passed some anxious hours lest he might receive a call from Fisher on his return from the West. He was spared that annoyance, but for a long time 'twas not considered good taste to ask the Judge if he had collected that fine yet from King Fisher for wearing pistols.

Well, time flies. Nearly twenty years have slipped away since my sojourn at Langtry. I doubt not justice is now as accurately administered in Pecos county as in any county. King Fisher has long since gone. Doubtless by this time Roy, too, has gone. Maybe old Julius and his hounds are gone; and possibly even the mountain lions they used to hunt and the deer and beaver once so numerous there. Truly the poet says:

"Life's but a walking shadow: A poor player,
That struts and frets his hour upon the stage,
And then is heard no more."

WILLIAM F. FLYNN.

JEFFERSON BARRACKS, MO.

On the very day Capt. Flynn's sketch was received in the FOREST AND STREAM office, the following press dispatch was published in the New York Evening Post:

"The Law West of the Pecos" Dead.

EL PASO, Texas, March 17.—Roy Bean, known as "The Law West of the Pecos," is dead at his home in Langtry, Texas. "Squire" Bean was one of the most noted characters in the United States, and for years had been the subject of innumerable anecdotes and newspaper sketches.

A Maine Woods Walk in Sixty-One

BY MANLY HARDY.

In Three Parts—Part II.

As we could not wait for Philbrook and Billings to come to us, we started early the next morning to try and find them. All snowshoe tracks were nearly obliterated, and we had a hard time finding a spotted line which led to their next camp. After traveling several miles we came to a small pond surrounded by cedars. It was the lower one of the upper Allegash ponds. Crossing this in a short time we came to a second.

As we were going down a long swell of open hardwood land, while still a long distance off, we saw a man approaching us. It proved to be T. W. Billings, of Brownville, better known as Waldo Billings, the guide whom your contributor, Mr. C. H. Ames, has written of. He said that his partner Philbrook and he had separated a week before to be gone two weeks, that Philbrook was somewhere on the headwaters of the Upper St. John, and that if we would return with him to the home camp he would go with us to find Philbrook.

Billings was carrying the old three-barreled two-shooter which Hiram L. Leonard, the noted fly-rod maker, had made in 1857. As there probably was never another like it, I will describe it. It was a three-barreled gun, which revolved so that but one hammer was needed. Two barrels were rifled to carry a half ounce round ball; the other was of the same caliber, but made smooth to fire shot. Each barrel was two-shootered, as it was called, which also was an invention of Mr. Leonard's—that is, each barrel had a second tube far enough beyond the first to admit of a full charge below it. When the gun was loaded, two charges were loaded, one on top of the other. In firing the first the hammer came down upon a piece of metal which fired the first charge; then by touching a spring, this flew up out of the way and the second charge was fired as if from an ordinary gun.

Proceeding in company with Billings, we crossed lengthwise of the lower of the two upper Allegash ponds, and going through a short thoroughfare came to the upper one where his camp was situated, about half way up the pond on the north side. This pond, by the way, is only about two miles from Chimquassabamtook, the highest water in the State, and is itself but little lower.

On approaching the camp, I was surprised to see what looked like an immense washing hung out to dry. It proved to be twenty-five or thirty shaved moose hides all in a row, stretched on poles.

In stretching moose hides our hunters were accustomed to hang the hide neck up from a slanting pole and shave all the hair off clean with a sharp knife. It took an expert from a quarter to half an hour to shave a moose hide, and when done, the hide was as clean as a man's face after a shave. In stretching a hide two poles some ten feet long and about the size of a man's arm, each having a fork at the upper end, were driven solidly into the ground about the distance apart that a moose hide would reach. The hide then had slits five or six inches long cut all along the edge from the neck to the end of the hide. Through these loops a pole was run, each end of which was put in one of the crotches. When a pole had been run along the lower edge of the hide in a corresponding manner, the hunter would put his knee upon one end, and drawing it down as tightly as possible, lash it to the upright with bark. After securing the other end of the pole in like manner he would cut small separate holes in each end of the hide, and passing a piece of bark through, secure the ends to the uprights. Then all adhering meat and fat was carefully removed. In warm weather in the fall the thick hide on the back of the neck and on the hips was slashed crosswise a number of times just deep enough to cut the grain in order to facilitate drying. When the hides were nearly dry, but before they became too stiff, they were taken out of the frames and folded, first lengthwise and then crosswise, so as to make a snug pack about three feet long by eighteen inches wide. The shaved hides of a full-grown moose

would weigh from ten to twenty pounds, according to the size and season when taken, fall hides being much the heaviest. The bark used in stretching was usually cedar, though that of elm and basswood was sometimes used. Philbrook and Billings had taken advantage of the smooth surface of the ice, through which they had cut holes, sticking their poles down into the mud below, and slanting them so as to receive the full benefit of the sun.

After dinner we retraced our steps to the lower pond. About half way down this on the west side we took a town line running west which they had re-spotted as a sable line. This line we followed some six miles, the whole length of the township, on the way taking two sables and a rabbit out of their log traps. Here let me say that a rabbit will eat meat or fish of any kind nearly as quickly as a cat would. It is certainly not done for the sake of the salt contained, as they take perfectly fresh meat. Red squirrels also, as every hunter knows, will eat any kind of fresh meat or fish. They will also eat each other out of traps, as I have seen done dozens of times.

Incidentally I may say that on the way across I shot another moose, purposely hitting him in the kidneys to note the effect of the shot. After striking a few clips at the dogs, he reared straight up on his hindlegs and fell back dead.

After reaching the end of the town line we turned short to the south, and after about half a mile came to one of Philbrook's camps on a small pond on St. John's waters. Here a fire out of doors was still burning, and near to it were the freshly skinned bodies of two each of beaver, lynx and sable. A snowshoe track only two or three hours old led south.

This was as far as Billings had ever been, but as he had heard Philbrook speak of having another camp, we concluded to follow the track, taking with us half of one of the beavers for fear of his not having meat enough for so many visitors.

After about two miles the track led to a stream with high banks, where was a beaver house above a very short dam. We found where Philbrook had just set two traps for him. The beaver was living on newly cut wood, and I saw where he had felled a large white birch lengthwise of the stream instead of, as is their usual custom, toward the water. This had evidently been done intentionally, so that, as he cut them off, he could roll the pieces, they being too heavy for him to drag in if they had been lying lengthwise.

After walking a mile or two further, we came to another small pond, on the further side of which we could see the smoke of Philbrook's camp. Approaching, we told Billings to go in first, and I remember Philbrook's asking what in the world sent him over there so quick. Afterward Farrar and myself slid down into the camp and received a hearty welcome, as Philbrook had been my partner in the fall of '59 on Caucomgomoc.

His camp, which had been built before the snow came, was about 7 by 10 feet, and intended for only one man. One had to slide down in order to get into the door, as the snow was four or five feet deep. It was a single camp, the back being made of split fir, and protected from fire by rocks and earth piled against it.

Our whole outfit of cooking tools consisted of one pint dipper and a very shallow plate. In the corner next the door Philbrook had his cooking establishment. Here he had a birch bark dish in which he mixed his flour, his water being in another dish of birch bark. He rolled out his bread on a sheet of birch bark with a rolling-pin made from a stick of peeled maple. His food consisted entirely of meat, bread and tea. He baked the bread in the tin plate and fried his meat in the same plate, using a split stick for a handle.

The place was not large enough to get in ourselves, and our snowshoes, and at night we had to leave our snowshoes out of doors. We had to lie edgewise and pass in the dogs over us, using them for pillows. When Philbrook got supper we ate up the moose meat he fried in his tin plate so fast that it was a good while before he got his turn.

The pond where Philbrook was camped was in what is now called Desolation, and is the pond where Pete La Fontaine was shot by a warden. I have noticed that within a few years several sportsmen have written of discovering some of these ponds, and having been the first to traverse this wilderness. I will say that fifty years ago all this country had been accurately mapped, and the man who within that time has discovered any place in Maine not visited before, has about as much right to claim the discovery as I should to discover Boston Common. There is not a square mile in the State that has not been hunted over a great many times.

In the morning I found that my right ankle was very badly swollen. I was not aware of having sprained it, and judge it came from the pull down of the green moose shanks I had been wearing. Nevertheless, I started with Philbrook to look his traps.

He showed me where the beaver were when he first found them, and the dam which they had built. It was the most singular one I ever saw. There were but two beavers, and they had built a house just where the brook entered the pond. As there was no chance to get any flowage on the stream, they had inclosed a portion of the pond about 50 feet long by one-half as wide with a semi-circular dam about 2 feet above the level of the pond. Instead of making the dam in the usual manner, they had put down sticks endwise, which still projected above the ice, and had filled in with brush and mud. The dam had a waste-way in the center, and had raised the water about 18 inches above the level of the pond. On coming back a most singular thing occurred. As I walked across the pond, and was just stepping over the dam close to the waste-way, the beaver suddenly plumped over the dam into the pond, throwing mud and water upon my snowshoe. We had probably disturbed him in looking traps two miles above, and both of us had arrived at the dam at nearly the same moment. I did not see the beaver fairly, but saw the water bulge up and a large dark-colored mass plunge into the pond below the dam.

In the afternoon the others concluded to go on a moose hunt, saying that as my ankle was so bad they would leave me to keep camp. I kept camp about five minutes and crawled out to the camp door just in time to see them disappearing in the woods across the pond. It was no use, ankle or no ankle, I was not going to be left behind, so getting on my snowshoes, I started after them. It was very painful work at first, but in less than a mile I overtook them.

Shortly after we found moose tracks, and as the dogs had not barked, we separated, Farrar and Billings circling to the left, while Philbrook and I kept on directly ahead. The deep snow filled up the space between the ground and the lower branches of the trees, so that one could not see well without crouching close to the snow. Being ahead, I was doing this, when I saw four pairs of legs—the bodies were entirely hidden. Motioning to Philbrook, we both sat watching, when suddenly we heard the crack of two pistols, and the next instant a large cow moose, followed by a calf, came directly for us. It was very evident that she meant us. I held the rifle on her head, but she kept swinging it so that it was useless to fire. Not over eight or ten feet ahead of me was a tree which she must turn out for before getting to me. This would give me a chance at her shoulder. So I held the rifle ready and fired at her shoulder when she was not more than eight feet from the muzzle of the rifle. I jumped sideways as I fired. The next moment Philbrook's pistol cracked, and looking around I saw the moose lying between Philbrook and myself. We were not fifteen feet apart. The calf stubbed his toes on his mother when she fell and nearly turned somersaults.

As we had muzzleloaders, we stopped to reload, and soon heard a great barking of dogs and shouting in the direction the calf had taken. On getting there we found that Farrar had mounted the calf with his snowshoes still on and was trying to cut the calf's throat with his knife. The moose, although but a calf, was nearly as tall as a horse, and an animal not to be trifled with. Just as we came up, Billings put his pistol to the moose's ear and fired, killed the moose instantly. In falling he rolled on Farrar, pinning him down, and we had quite a time to get him out. The cow moose measured, after being skinned, six and a half feet from the flat of the foot to the top of the shoulder, and charged on us fully as viciously as I have ever seen a bull do.

After skinning the moose and setting a log trap for fisher and one for sable, we started homeward. It may seem singular to the uninitiated to set a trap baited with a small piece of the same meat beside the carcass from which it was taken, but such is the nature of both fisher and sable that they will go into a trap, even though they have the whole carcass to feed upon.

[TO BE CONCLUDED.]

In Wild Pigeon Days.

SOME of your correspondents have of late been writing of the passager pigeon, and I shall perhaps never have a better opportunity to tell your readers the little that I have known about them in days long past. I remember that I wrote to the Green Bay Advocate some account of a visit I once made to a pigeon roost; but as this was before FOREST AND STREAM was born, any repetition of what I may have said in print at that time is of little importance.

Fifty or sixty years ago these birds were not uncommon in the State of Massachusetts, and were even netted to some profit by those who, for the most part, remembered or cherished the traditions of far larger flocks which, in former days, had visited that land. I recall the casual statement made by a man who, were he living, would be nearly ninety years old, that his father used, when the narrator was a small boy, to trap pigeons in large numbers, and as the boy had not the strength of hand requisite to pinch the heads of the birds as they protruded through the net, the old man made him a small hammer, with which to inflict the death blow.

In my time it was not usual to see many pigeons together, and when this occurred it was usually where "beds" had been prepared and grain sown to attract them. There was, I believe, even special legislation favoring the pigeon netters, and I remember my disgust at hearing of some law forbidding the discharge of firearms within a specified distance of a pigeon bed.

I thought at the time that if a man wanted to secure the shooting in a good woodcock cover, he had only to dig up a pigeon bed or so in the vicinity thereof.

I have myself been warned not to shoot pigeons on the trees near a "stand," though, before the warning was given, I had not known of its existence. We rarely had shots at pigeons then, and I recall what seemed to me the singular fact that having on one occasion shot one of these birds, my dog, a setter who was a good retriever, sniffed at the pigeon, but refused to pick it up.

In 1855 I saw many small flights of pigeons near Paw Paw, Van Buren County, Michigan, and was told that there was a roost a few miles distant. This I did not see. Later, in central Illinois, being out on an unsuccessful deer hunt, we shot with the rifle a few of these birds from the limbs of the trees in the Burr Oak Grove. They furnished the meat for our supper.

The first large (or what seemed large) flocks of pigeons which I saw, came to Oconto County, Wisconsin, when I was living in the woods, about twenty miles from the mouth of the Oconto River. This was, I think, in May and June, 1871, and they passed northward in the morning and southward in the afternoon. Mr. Stratton (Antler) has since told me that the males had the morning flight and the females that of the afternoon. He well remembered the enormous numbers of pigeons which formerly passed over New York State.

My place, Riverwood, was on the banks of the Oconto River, and although I saw many pigeons, I was otherwise occupied and gave them little attention. There was a family named Volk, living at Oconto Falls, then a little hamlet, where was a postoffice, about two and a half miles from my home, and on occasion I used to go there for the mail. One morning I was a little unwell, and one of these young men came to my house to borrow a gun. He was going after pigeons. So I lent him the gun, and taking another, walked up on a cleared hill toward the falls and sat down, while the young man aforesaid went to look for pigeons in the trees, which were not far away.

Soon small flights began to pass, going north, and directly across the river. When I shot one, it would pitch over the bank and into the bushes, so that I took up a position further south and in a sort of hollow. I was not in good shooting form, my gun was heavy and I found that I could not make a double shot at the small flights which passed, yet my shots were generally successful, and when the birds fell they would strike the ground near the north end of the hollow. After a while young Volk came back.

"How many you got?" he asked.

I counted the birds and replied, "Thirty-five; how many have you?"

"Only three."

The next time I went to the postoffice Mr. Henry Volk said to me:

"I wish you'd tell me how you manage to shoot pigeons?"

I replied, in substance, that I generally pointed the gun about where I thought the charge would be most effective and cut loose. "But," I said, "I can tell you one reason why you do not get more, for I recently saw you and your boys loading and firing in the sumachs. The size of shot you are using is far too large—about No. 1 or No. 2. Now I am shooting No. 8."

"Well," said he, "I bought a new double gun, when the pigeons came, and we thought that with this and our other guns we'd get all we wanted, though we don't often hunt anything but deer; but yesterday morning Fred 'n I went down to the edge of the rocks that overlook a spring flat down by the river. The ground below was fairly blue with pigeons, and when we raised they all came up in a cloud, and we fired into 'em. We thought we'd ought to a got a wagon load, but we didn't get not the derned one."

I could not say much in the way of consolation, but intimated that one of the first things I had learned when shooting into flocks of birds, was that it is well to hold for some particular one and take your chances on the rest; otherwise the results are often unsatisfactory.

Those men were good shots with the rifle at large game, but so far as I can remember, the only way that they ever managed to shoot any flying pigeons was by concealing themselves on the line of flight and firing at incoming birds.

The roost frequented by these pigeons was distant from my place some four or five miles. It was back in the wilderness, and one day a party of us went through the woods until we found it. This party was seven in number, of which six carried guns. There was one very long man, one short man, one stout, one thin and three more of assorted sizes. The gun borne by the long man was nearly equal in linear measurement to the distance across a quarter-section of land. The stout man carried an ax. He was "going for" the squabs. These two constituted the guides and interpreters to the expedition. After traveling some miles through the woods, we halted in order to poke a hole through the swarms of black flies and mosquitoes with a gun barrel to see the sun and ascertain if the compass was correct.

We were standing on the bank of a little brook with our guns resting on the ground, when a single pigeon went by like a bullet. I pitched forward my gun and fired as I would at a woodcock in a summer brake, and the stout man said, "Why, you shot three feet behind that bird." He judged by the smoke, but the pigeon fell, much to his surprise. I mention this in order to give some idea of the speed attained by these birds.

About this time we struck a smell. It was peculiar—much like an old hen roost, and we were encouraged to proceed. Then we heard a noise. At first we could not tell what to make of it. As we proceeded it grew louder, and at last, as somebody expressed it, it was as the sound of a Woman's Rights Convention in full blast, pending a motion for the discussion of the "previous question."

It was not long before we were in the tract of woodland which was occupied by the pigeons as a roost, or nesting place. I doubt if they had been disturbed before our advent. This roost bore no comparison with those of which I had read, yet it was a very remarkable sight. The trees were in many cases large pines and hemlocks, with some maples and beeches, and I doubt if there was a suitable tree on several acres which did not bear many nests of the pigeons. The branches, however, were not broken down by the weight of the birds, as in some cases of which I had read. The nests were of the simplest, and contained but one squab each. In fact, these squabs were so fat and large that it occurred to me that had there unluckily been two of them in a nest, the mother bird would have had to ship outriggers of some sort in order to enable her to hover the brood properly.

The pigeons were flying about in the tops of the trees, or were on the nests, and but few were shot in this place. The ax man leveled some trees, and secured what squabs we required.

Toward evening we had reached the shore of a small pond, where the pigeons came, I suppose, to drink. The tops of the low trees were full of them, and for a while there was a constant fusilade. When we started for home we had, I think, 280 pigeons to carry. About eighty of these were squabs—we might easily have had many more. None of these birds, as far as I know, were sold or wasted.

Somewhere about this time I shot twelve pigeons as they passed my house, and these, I believe, were all that I killed that season.

In the summer (I think) of 1880 there were a good many pigeons in the woods of Antrim County, Michigan. They nested, as I think, in the woods to the north of Intermediate Lakes. One day, when I was dining on a boarding-scow, near the head of Six Mile Lake, they were continually fluttering about in the trees near by, and could probably have been shot in considerable numbers. I one day went out and shot seven, and those, I believe, were the last passenger pigeons at which I have pointed my gun.

That same winter an effort was made in the Michigan Legislature to give some protection to these beautiful birds, but it was blocked by some old ignoramus

who wanted to make a few more dollars with his pigeon nets. His efforts might well have been spared, for so far as I know the pigeons have never since revisited the Michigan forests.

Where are they now? Who knows! No explanation that has ever been given of their disappearance has been satisfactory to me. I believe that George Kennedy has come as near to the truth as any one who has written in your columns. Like Hans Breitmann's "barty," they have "gone afay mit de lager bier. Afay in de ewigkeit." KELPIE.

TRENTON, Georgia, March 16.

Natural History.

The New Babies at the Bronx.

Spring Stirs the Beasts and Birds in the Dens and Groves.

WILD baby animals are rarely secured by hunters in their native haunts, and their life has always been somewhat of a mystery, even to men of science; but young animals in captivity afford an excellent study of characteristics that are interesting—even fascinating. One of the greatest ambitions of managers of zoological gardens and park menageries has always been to rear young wild animals in captivity, and then exhibit them to the public.

When the first baby elephant was born in this country, it proved such a curiosity that the circus which owned it made thousands of dollars in exhibiting it to the people, and when the Central Park baby hippopotamus first saw the light of day it was an event of profound satisfaction to the keepers there.

Since those first baby animals of the forest appeared conditions have changed greatly, and now it is no uncommon thing to find a half dozen or more cubs in our parks and zoological gardens. This, at least, is the case with the Central Park menagerie, and still more so with the New York Zoological Park up in the Bronx. While a baby animal in captivity may not now excite so much attention as formerly, a collection of them never fails to interest those who are at all in sympathy with the animals of the woods and fields. Young cubs are always different from their parents, and when only a few months old they exhibit all the pleasant characteristics of all babies. The first feeling of the spectator is to pet and fondle the little baby creatures, although some are not so lovable in looks as others.

Animals, like the feathered creatures, vary greatly when first born. Some are ugly and some good looking, but as they grow older these conditions are oftentimes just reversed. There is no prettier sight than a young chicken or waddling duckling when it first emerges from the shell; but a robin, bobolink or oriole is about the homeliest thing imaginable, with hardly a pin feather on its naked body. Yet within a few weeks the small birds are clothed with the finest garments, while the ducks and chickens grow uglier and more awkward as the days go by.

The nursery question may be said to be the greatest problem of the New York Zoological Park. How to bring up the tender little ones which would thrive so hardily if they were roaming wild over the desert, the prairie or the hills, whose mothers could and would care for them if they had been born in their native condition, puzzles the wisest heads. Perhaps those neglectful mothers are purposely neglectful. Perhaps they think that the long life of captivity is not worth the living; perhaps they see with a prescience which seems beyond their intelligence what is ahead of these babies—the easy, aimless, tamed existence of the cage or corral, and think it kinder to let their offspring die. But the keepers are often better mothers to the motherless little ones than one would expect them to be. They grow to understand the natures of their charges.

Just now it may be truly said that any conscientious mother in New York would find it worth her while to take a peep into the nursery of the Bronx Zoo. There are things there which she could learn. High up on her wooden bar sits Madame Susie, the baboon mother, with her arms clasped about her baby and the mother light shining in her eyes. If you stand before her cage long enough you are impressed with the belief that any man who denies that his forefathers were monkeys would find it difficult to make the same denial regarding his foremothers. Susie's face is an open book. In it is written every emotion from pride to tenderness, which a young mother feels, or ought to feel. Before she became a mother Susie was never considered a particularly clever baboon. She swung all day from her perch, and flirted with Rubber, the long-armed baboon who is the happy father of Kaiser Wilhelm, her baby. But Susie is, so Mr. Hornaday declares, the best mother the Zoo has ever known. Her care of her baby has delighted the scientists. Like those stupid girls who do not shine in public places, she has turned out to be a perfect goddess of the domestic hearth. She neither pampers Kaiser Wilhelm, nor does she neglect him for a moment. When I saw her she was sitting on her high perch looking like a Madonna, with Kaiser Wilhelm enfolded in her two enormously long arms and tugging at her breast. When he got a bit obstreperous, she gave him a dainty little box on the ears, and then smoothed his head anxiously to make sure she hadn't hurt it. The baby squeaked, but he was good after that.

"It is not often," said Mr. Hornaday, "that we find a really good mother like Susie among the animals. The average mother either neglects her little ones entirely or kills them with over-attention. That is our greatest trouble. Science will do a great deal toward raising the young, but a pound of science will not take the place of an ounce of mother instinct. We had a red fox here last year who gave birth to a fine healthy little brood. She was the most over-anxious mother we have ever had. She never left her babies for an instant, and there were times when she would get into a nervous frenzy and would pick up one of the tiny cubs and walk about the cage for hours with it hanging from her mouth. At length they died one by one. It was impossible to raise them, with so much overdone kindness."

There is another type of mother at the Zoo, too, the mother who, like some women in society, thinks she has quite done her duty when she has brought her babies into the world. One of the most striking examples of this class is a huge Siberian bear, whose baby died only a few weeks ago from the effects of his mother's heartless neglect. Bears are seldom born in captivity, and even when they are the mother generally neglects them. For two days this little fellow, scarcely larger than a guinea pig, although the mother weighs nearly 300 pounds, appeared to be receiving the proper care and nourishment. It was cautiously visited by Keeper Mulvehill at frequent intervals. Late in the afternoon of the second day Keeper Mulvehill discovered that the mother had wilfully changed her sleeping quarters, and the tiny new-comer had become thoroughly chilled. It was brought to the reptile house, warmed and placed in cotton, while several keepers were sent scurrying about for a foster mother. They returned with a hound, and the little bear was immediately placed in her charge. The foster mother did all in her power, but exposure had weakened the cub, which died early the next morning.

The five little lion cubs at the Zoo, born on Dec. 1, are doing finely. They are about the size of three-months-old Newfoundland puppies, and they look more like mongrel meat hounds than like the crown princes of beasts. They lie huddled in a corner, their furry yellow backs touching and their baby eyes twinkling at their mother, as she sits proudly on guard, apparently sneering at the young women who stand in front of her cage and dub her noble offspring "cute" and "darling." The mother of the Gracchi could not be sterner or more dignified than she. She is a good mother, too, and all her babies look strong and healthy. They are as playful as kittens, and the average woman who watches them feels like stepping into the cage and catching one of the little ones up in her arms. They have a cage all to themselves now, and they frolic around it to the great amusement of spectators and their mother. The latter has an adjoining cage, which has a private opening into that of her nursery, and she is permitted at times to visit them. Their mother is so indulgent that she will allow them to pull the choicest bits of meat from her, and when fresh water is pushed into the cage they deliberately crowd her away. Not once has the mother been seen to nip or strike her cubs; but occasionally when they get too boisterous she will walk away and push them to one side and hold them there.

One of the strangest youngsters in the park is a Canada porcupine, which received much the same treatment from its mother as did the bear. Keeper Greebe is raising this odd baby with a bottle, and although affectionate in disposition, it must be handled with care. Apparently it is covered with long gray hair, but a cactus plant is pleasant to the touch compared with the little creature. With a gait that might be called decidedly bow-legged, Greebe's queer pet follows him about like a dog, emitting a series of plaintive squeals if unnoticed.

There are several young baby alligators at the Zoo. They seem uninteresting, for they are sleeping most of the time, and are as slothful as the snakes when gorged with food. But there are times when they wake up and move about to get into mischief. When they were first hatched out in an incubator in the reptile house, they were so small that they looked like little lizards, and not much more formidable, but far less active and agile. Their little bodies were covered with a hard armor even then; but it has been growing thicker and harder ever since. When they first crawled out of their eggs they tried to find some dark place to hide in, and two of them managed to crawl away and hide for several days. In vain the keepers searched for them, but after a long hunt they were found snugly buried in the ground. The hole must have been there beforehand, the little alligators crawled in, and the earth falling around them concealed them from view. Their hides are nearly the color of dirt, and this helped to render the deception more complete.

A lively little lamb is the young moufflon, and he keeps things humming on the moufflon range; also he keeps his mother in a state of excitement and alarm because she realizes that such a harum-scarum youth is likely to get into all manner of difficulties. He is only a few weeks old, but he has been a constant care since he was a few days old. The mother's solicitude is most inspiring, but she is sensible about it, whereas the father is not. He is a most rambunctious moufflon and a dangerous sheep. The baby doesn't fear anything or anybody. He will come to the fence and plainly show his delight when he is petted. The mother will stand by and throw out her chest in maternal pride. But Papa Moufflon comes charging down with head lowered, prepared to butt the intruders clear out of the park. Of course, the wire fence restrains him; also it makes him madder than he was before. He drives his family away in high dudgeon.

Next to the moufflons is the house of the aoudad, another species of mountain sheep, and so shy that they blush—sheep-fashion, of course—when any one looks at them. The baby aoudad is a month old, amazingly large for his age, and most retiring. He shuns all human kind. When people are about he stays in the little cave cut in the rocks. When the coast is clear he gambols gracefully about. That is usually in the evenings after visitors have departed and quiet has settled down on the park. The father aoudad watches them closely. He is a vicious animal, a real fighting man, and not a keeper in the Zoo dares come near the baby, or even enter the inclosure when he is at large.

Distinguished among the babies at the Zoo just now are the twelve little fer-de-lance snakes, which are all that are left of the twenty-six born to the huge single specimen of that beautiful spotted snake brought to the park from Martinique, where thousands of her kind were killed in the volcanic eruption. These babies are the first of their kind born in captivity. So deadly are these snakes that few dare to capture them. The baby fer-de-lance is remarkably attractive in appearance, having a bright golden tail, which it waves in the air in order to attract its victims. He is born in full possession of his fangs, and when twenty-four hours old can almost instantly kill a good-sized mouse with one touch of his poison fangs. Just now these babies are kept in small glass cases in a miniature fairy land of snowy gravel and ferns. The baby snakes are not over four inches long and so slender that a child's finger ring would easily encircle them.

Way down in a hay-filled barn is a different kind of baby, a soft, sweet-eyed baby who will nose up to you for a petting. This is the wonderful little horse-tailed deer, whose mother and father came from Malay. The keeper will let you go inside the corral if you like. Then the baby will look up at its mother and the mother will lift her brown eyes anxiously to yours. If you look trustworthy, she will lean over her baby and whisper something, and then he will crawl out on his graceful hoofs and bring you a wisp of hay. He is a hardy baby, and is already being weaned. He is not going through the intermediary stages of prepared food, but is simply taking a little hay with his dinner. As soon as he was born his father, a fine old buck, went on a spree of joy and came back in a bad humor. He beat his wife so severely that he had to have his horns sawed off, and to be put in a separate corral. But already he is repentant, and rubs his nose through the opening in the fence in order to give his baby a gentle kiss now and then.

It appears that chastisement is an important part of animal bringing up, as seen at the Zoo. All the animals have different ways of chastisement for their young, but all the children get it, and some of them get it hard. Curator Ditmars tells an incident of the wolf dens.

One day mother wolf was asleep with her head between her paws. Three little gray babies were tumbling over each other in a corner of the cage, as happy and playful as kittens. Suddenly an acorn fell from the top of the great oak above the cage and struck the tip of mamma wolf's nose, waking her with a start of sharp pain. Without a minute's hesitation she ran over to the puppies in the corner, cuffed each one of them smartly and then went back to her nap, feeling that the guilty ones had been punished.

As the wolves grow older and really get their milk white teeth to showing, they are more and more robust in their play, biting each other quite savagely, but all in fun of course. Sometimes they try this strenuous sort of amusement on mamma, and if she doesn't feel just right, or has not finished the housework, and thinks she has not time to play, she will sometimes turn on them and bite each one till the blood flows over their soft skins. According to some of the books, it is a lucky thing for the guilty one—if the family is in a wild state—if papa has had a meal that day, for the sight of blood and his hunger might prompt him to make a meal of the offender.

The most genuine spanking of course is done in the monkey house. They originated it probably, and our ancestors brought it along with them when they came up. The monkey house is the only place where a male habitually spanks not only his babies, but his wife. According to Mr. Ditmars, there was a tremendous sensation among the primates the other afternoon when old Greenface, who had been chasing his wife for two days, caught her and proceeded to lay her screaming across his knee. She is not as big as he is, and he could do it easily. He held her tail in his teeth while he spanked her vigorously. Suddenly he let go and began to scream himself. She had bitten him on the calf of his leg, taking out a piece of flesh as large as a bean. This thoroughly scared the husband and he ran bellowing to the top of the cage.

The most economical method of chastisement is employed by the alligators, who never have to punish their little ones but once. They never offend again. The thing is done by the mother or father opening a pair of jaws and swallowing the baby whole. There is never another offense. For this reason the Zoo authorities keep the young ones in a cage by themselves.

With the coming of spring, the India black ducks, of all the birds in the park, were the first to take up their domestic duties. They have laid about a dozen eggs, which the keepers are trying to hatch out in an incubator. Indeed most of the birds are making changes of some sort in their personal appearance. An interesting collection of moulted fur and feathers could be picked up on the ground at the bottoms of the cages. The age of the feathers and not the outside temperature determines when they are to be shed, so the inhabitants of the artificially heated house of aquatic birds are moulting at exactly the same time as those kept out of doors for the winter.

The nesting attempts of the egrets, snakebirds, ducks and burrowing owls, and the highly differentiated and often intricate notes of many birds are interesting, but the moulting and plumage development of some of the birds are even more so.

A pair of those martyrs of millinery, snowy egrets, will in a few weeks be in the prime of their breeding plumage, and their immaculate while feathers and long graceful plumes contrast sharply with their black legs and yellow feet. They are living refutations of the absurdly false statement that their plumes drop off naturally while in their perfect condition. As a matter of fact, they must be cruelly slaughtered before these "aigrettes" deface a hat. Their larger cousins, the American white egrets, are not so far advanced, but in a month they will vie with their smaller relations in beauty and length of plumes.

During the winter the color of the little blue herons has caused many people to mistrust the scientific knowledge used in labeling the birds; but the pure white, immature plumage of these herons is being replaced rapidly by the slate-blue coloration so characteristic of the adult bird, several stages in the transition being visible at present. A pair of scarlet ibises are exhibiting two different phases of plumage. One is fast completing the spring moult, and is a glowing mass of scarlet, especially in the wings. The other is in a half way condition, presenting a curious pied appearance, alternating scarlet and light rose.

The shedding of a deer's antlers always seems to cause comment, for the reason perhaps that many

people cannot be convinced that such a thing really takes place every year. The axis deer buck sheds his in January, and the new horns in the velvet are already nearly six inches long. The mule deer come next, and the two big elk lost theirs only a short time ago. The horn is absorbed at the base, and finally drops or is knocked off, exactly like a small boy's "loose teeth." It is amusing to see the care with which, after losing one horn, a buck lies down, always with the remaining antler underneath, as if afraid that the weight would twist his neck if he did not.

All things considered, the biggest baby among all the wild animals at the Zoo is an infant that is not an mammal at all, but a reptile, one of the herd of testudo, or giant tortoises, natives of the Galapagos Islands. With his three companions, he forms one of the few relics we have left to us of the life of the Pliocene age; these tortoises are the sole survivors of the prehistoric reptiles. The young testudo is the smallest in the herd; he weighs only 66 pounds. His age is not positively known, but it is variously estimated that he must have seen from eighty to one hundred years. That seems rather old for a baby, but he is a child in arms compared with one of his relatives, a *Testudo vicina*, who carries on her broad back (it is 4 feet 3 inches by 4 feet 7 inches) the weight of something over four centuries, and who tips the scale at 325 pounds.

There will be more babies in the park presently, but of course that is always a delicate subject to talk about until they actually arrive.

Squirrel Migrations.

Ovid, N. Y., March 18.—*Editor Forest and Stream:* In regard to the discussion recently running anent squirrels, my father, whose statements about matters of this sort may not be questioned, assures me that he saw a squirrel migration nearly seventy years ago in Ohio. He wishes me to correct the statement made by at least one disputant that squirrels in swimming keep their tails under water. In the migration referred to vast numbers of gray and black squirrels were crossing the Cuyahoga River, which at that place was about one hundred yards wide. The animals were thick in the tree tops along the bank, often clinging to the branches overhanging the stream, as if contemplating the trip. When the men and boys, undoubtedly with sacks, approached the trees, no more hesitation was shown, but with mighty leap and outstretched limbs the squirrel would sail far out, striking flat, and then, *with tail upraised,* would strike bravely out for the farther shore.

Thus is the Sander's Reader of boyhood days vindicated. It is not to be doubted that the squirrels would mount a piece of bark and, as the tail of this animal is usually hoisted, sail easily over. Away with the doubters of those splendid stories in old Sander's! We never get in life such thrills and keen hair-raising enjoyment as imagination gave on the initial-carved seat in the back row.

Nor do we doubt that, in swimming wider rivers than the Cuyahoga, the tail is under water. The squirrel generally knows what he ought to do. That flaunting undulatory, propeller, rail-fence motion of the tail well known to hunters, would easily assist the crossing. Therefore Col. Bobo, Didymus and Sander's are all correct. *Q. E. D.* B. E. Birge.

Alexander Wilson relates in his American Ornithology, in the chapter on the white-headed or bald eagle: "In one of those partial migrations of tree squirrels that sometimes take place in our western forests, many thousands of them were drowned in attempting to cross the Ohio; and at a certain place, not far from Wheeling, a prodigious number of their dead bodies were floated to the shore by an eddy. Here the vultures assembled in great force, and had regaled themselves for some time, when a bald eagle made his appearance, and took sole possession of the premises, keeping the whole flock of vultures at their proper distance for several days. . . In hard times, when food happens to be scarce, should he accidentally meet with one of these who has its craw crammed with carrion, he attacks it fiercely in the air; the cowardly vulture instantly disgorges, and the delicious contents are snatched up by the eagle before they reach the ground."

Pythons and Buffalo.

Editor Forest and Stream:

The present might be termed the "age of fiction" in popular natural history as well as in general literature, citing as evidence thereof more than one recent publication, offering to readers uncritical in zoology life histories and fantasies in animal psychology, absolutely without existence except in the sense of the late Prof. Clifford's "ejects." These have been fully dealt with by Mr. John Burroughs, in the March Atlantic, and need no further attention at present.

But the case is different when preposterous nonsense gravely stated in a pseudo-scientific manner as facts of observation, is given the cachet of publication in standard journals. These should be spoken of without delay in good round terms.

Forest and Stream of this week, page 232, contains a quotation from remarks recently made before a number of intelligent gentlemen, at a dinner in Boston, by R. L. Garner, learned in Simian phonetics, to the effect that in certain portions of Africa, unspecified, but visited by him, the pythons prey upon buffalo.

Now, let it be said at once, that as far as is known—unless it be to Mr. Garner—Africa contains but three species of python, two of which are of small size and perhaps never exceed six or seven feet in length. The other, *P. sebæ*, is one of the larger species, but is not known to the unemotional tape line of a length greater than about twenty-five feet as a very unusual extreme.

A large Belgian hare, or a chicken of such a breed as the Dorking, about meets the ordinary capacity of a twenty-foot python at one swallow, and the addition of four or five feet to the snake's length might increase its gape enough to take in an animal of twice that size, though I doubt it. So even if Mr. Garner's buffaloes be limited to the newly born calf, even of the relatively small species of the West Coast, the absurdity of the statement appears to be clear enough without further discussion.

It would be interesting, however, to know if Mr. Garner got this tale from some loquacious gorilla.

But a more tragic occurrence, seemingly, of human authority is with dramatic skill reserved to the last: "* * * after one of my hunting men had been swallowed by a python it gave me a creepy feeling. * * *" Quite true; so it should! But Mr. Garner owes it to ethnology to mention just where in the dark continent this tragedy occurred, for there, at least, there be dwarfs beside whom the little men of the Semliki forest are as giants. Arthur Erwin Brown.

Zoological Gardens, Philadelphia, March 19.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in Forest and Stream.

Some Sportsmen I Have Known.

Editor Forest and Stream:

I have been greatly interested in the reminiscences of that good sportsman, R. B. Roosevelt, recently published in Forest and Stream, and wish that I might add something to them.

I did not migrate from the rock ribbed hills of dear old Madison county—the home of the bushy tails, or the clover meadows beneath where congregated the whistling woodchuck—until the toesin of disagreement with our southern sportsmen came to our ears. Not until 1861 did I become a resident of New York City. A few years later I drifted to Jersey City, and perhaps a few reminiscences of those times and mention of some of the old sportsmen of those days—i. e., the latter part of the 60's and early 70's—might be interesting to your readers. I always want to add my quota to your great paper.

On becoming domiciled on Jersey City Heights, I early made the acquaintance of a Mr. Lattimer, of, I think, 78 Murray street, New York City, a near neighbor who had a good dog—though not as good as mine, he often said. Two or three times a week the rising sun would find us together on the Hackensack meadows.

We invariably found a couple of woodcock at a pond hole forenenst where now is the old watch factory. Further down toward the meadows was another hole, and we would scoop in a couple more. There, on the border of the meadow near the railroad track, we were almost sure to find another couple. In a couple of hours we have bagged from eight to a dozen of these nice game birds and been home on the heights before or shortly after 8 A. M. Sometimes we made a day or half a day of it, and good bags were the result, for there were birds there then on the Hackensack meadows.

In our peregrinations we often came across other sportsmen—some celebrated in the annals of shooting lore. There was Uncle Billy Hughes, "Old Reliable No. 1." Big, rollicking Sam Castle, of Newark; Richard Dyne—our Dick—three of the most reliable and successful brush shots in the three States of New York, Pennsylvania and New Jersey. We will except none, for we have tramped up the mountain side and shot with them, and Canadensis and the Pocono Mountains will bear testimony to their accuracy and reliability in securing that wariest of the game birds of the world—the ruffed grouse. Then there was Bill Siegler, "Old Reliable No. 2," of Montclair; Al Heritage, "Old South Paw," by which name he is known wherever sportsmen congregate from Maine to California. He shoots left-handed and straddles wide when he shoots. Then comes old Oscar Sanford, a veteran of the fifties, I was going to say. A good shot, but more celebrated as a dog trainer for more wealthy sportsmen. He had a half way house and kennels on the Newark turnpike—"Old Mosquito Tavern," it was called, and sometimes he had as high as from forty to sixty dogs in training, many of exceeding fine strain and pedigree. But old Oscar essayed to cross the railroad once too often and was killed, I think in the early seventies, nearly opposite the watch factory. Another dog trainer and sportsman was Miles Johnson, lower down the State. He must be still alive, but I opine he has laid aside his breechloader; but he can give the youngster good points yet. Jack and Bill Taylor knew the Hackensack meadows well. Not a foot of them that they have not trod, and with good results. Gen. Heber Breintnall, of Newark, every inch a soldier and equally a gentleman sportsman, is now very deservedly a high cockalorum in the militia of the State. C. M. Hedden, and Doctor Pindell lived in Newark, but if they wanted snipe they had to come to the Hackensack meadows for them in those days, and they generally got their share. In later days came John Henry Outwater, a good trap and field shot and good fellow, and the Von Lengerkes, Justus, Herman and Oswald or Oscar, great snipers all of them. Dr. P. W. Levering, of Jersey City Heights, the noblest Roman of them all. Ah! the many sunny hours and some dark days, for that matter, we have trod the brakes or climbed the rugged hillside with the genial Doctor. He is one of those mortals that is good to all and don't know how to think, less say a word to or of anybody. We are indebted to him for many happy hours in the field and elsewhere.

Of the well known shots of these days, Uncle Billy Hughes, one of the most reliable shots, a genial, square man in all walks of life, and beloved by all that know him; Oscar Sanford, Jack Taylor, the pigeon shot, Dr. Pindel and Thomas Harrison, ex-Mayor of old Hudson City, not such a brilliant shot, but a thoroughly good all around sportsman, have all gone to the great meadows beyond.

In the latter part of the sixties we used to get some good woodcock shooting down Jamaica way. It was there that one October day Lattimer and I got nineteen fine fall birds, and we were feeling pretty well over our bag when, about 4 P. M., we stopped at a farm house for a drink of water. The farmer now accosted us: "Heerd you firing down in my swamps. What ye shoot?" With some complacency I pulled out one of our birds. "Huh!" said he, "blind snipe, eh? Why, my man killed hull lot o' them 'ere last night. Here they be, back of the well curb; has 'em laid out; going to take 'em to railroad conductors—gets 20 cents apiece for 'em!"

And as sure as you live, there, laid out smoothly on their backs, were twenty-four plump birds. How did he get them? "There comes John," as a colored man came up the lane driving the cows. I hailed him: "John, did you kill these?" "Yas, sir." "What with?" He stepped to the barn door and, reaching around, brought out a gun. An old musket of about 20 or not to exeeed 24-inch barrel and inch nozzle. "How did you shoot them with this instrument?" "Stood up in the middle ob de road, sah, and shot 'em as they flewed over one side or t'other."

There was a full moon, and this darkey would drop these birds in the middle of the road with his scatter gun. It struck us, as woodcock were worth from $1 to $2 or $2.50 a pair in the market, that the conductor was having a good thing of it.

It was early in the seventies when Major Beckwith, a gallant ex-soldier and a boyhood companion, and I, in pursuit of pastures new, stumbled on Recorder Hackett's great game corner that he had kept so carefully from all save a chosen few—Canoe place and Ponquogue on Shinneecock Bay. Here we found what we wanted—geese, redheads and blackheads. The natives called them broadbill. With that chief of baymen, Bill Lane, we got seven black brant the first day. I had killed the white brant, or Mexican goose, out West, but not half as good a bird, either to shoot or for the table. We fastened on Lane, and many trips we made over that Long Island road.

One day we shot out of a battery, and Lane and his son Charlie gathered in 87 broadbill shot by Jacobstaff after 2 P. M. Many days of good goose shooting we had. Lane had a flock of 35 trained wild geese, and a gander. "Old Pomp," who knew as much or more than a dog, would see birds flying long before we could and set up his honking and seemed to take ecstatic delight in drawing down his fellow bipeds to destruction.

With Captain Ruben Johnson, a Mr. Munday, and two others whose names I do not recall, we bagged in three days' shooting 41 geese.

Those were great days on Tiana Bay and vicinity; but have they not been told and retold in the chronicles of Forest and Stream? I have not been down there in years, but I am told that there is some broadbill shooting in the season yet and that bay snipe at the right time is almost as good as ever. Lane has long ago retired and is living (as last I heard) resting on the laurels he has won as the best shot, the most honest and reliable of all baymen on the coast.

That was a capital article of R. B. Roosevelt's, and you won't get any to beat or even equal it. He must have had lots of good, solid, genuine fun, and how well he tells it. I would like to meet him. I saw him once across the table when he presided over a meeting of sportsmen many years ago, but I have read his works with great interest, "The Game Birds of the North," etc. He knows what he is talking about, and says it well. But I am getting garrulous. Jacobstaff.

Spring Duck Shooting.

Editor Forest and Stream:

I will esteem it a great favor if you will allow me the space to make a few comments on the subject of the Brown bill, to prohibit the spring shooting of wildfowl in this State. The bill seems to have been hurriedly drawn, and while it may be just what is needed to benefit the duck shooting in the upper part of the State, it does not fit the conditions prevailing in Long Island waters.

The Great South Bay, of Long Island, covers more than one-half the duck shooting waters of the State; broadbills, a smaller proportion of redheads, with some sea ducks, being the fowl represented. The ducks arrive every fall between Oct. 1 and 15. The law of several years ago, and before, allowed the shooting of wildfowl from batteries on and after Oct. 1; but it was found that this date was too early, as the ducks were never in the bay in large enough numbers to warrant the use of a battery, and the few that did arrive were broken up and driven off the flats by gunning parties from New York and elsewhere. These parties, frequently having made their arrangements with their battery men the previous season, and anxious to get the first chance at the ducks, insisted on going out, and would not take the advice of their gunners and defer their visit until later in the season.

The battery men, recognizing the fact that something should be done to preserve the shooting, succeeded, through Mr. Regis H. Post, our representative for Suffolk county, in getting the opening of the season for battery shooting fixed at Oct. 20. The result has been the finest duck shooting we have had in years. Now the Brown bill proposes to make the opening of the season Sept. 15, which is three weeks before the arrival of the ducks, which would practically put us back on our old basis, and of course with the same unsatisfactory results.

Broadbills have, if anything, increased in numbers in the bay. Redheads are scarcer, the result, as you know, of excessive shooting in Southern waters, as they have never been killed in any large numbers in the South Bay.

Another thing I wish to call attention to is the fact that a portion of the South Bay, eighteen miles long by its full width, is owned and controlled, one-half by the town of Brookhaven, one-half by the Smith heirs. Most of the best gunning ground is embraced within this section of the bay. A license to shoot in Brookhaven waters costs $20; a license to shoot in waters controlled by the Smith heirs, $15. Total cost to battery gunners, $35. Every year the bay is frozen over by Christmas. This winter it closed about Dec. 17, and was not clear of ice again until the last of February. This year, up to Jan. 1, we had about twenty-six days on which a battery could be used. Some seasons there might be a few more days, but very seldom. Now, I doubt if that number of days' shooting would make it pay any battery gunner to take out even one license. I refer to the battery gunners who make a business of taking parties out. If they give up, a splendid piece of duck shooting country will be closed

to a great many sportsmen who enjoy their outings on the South Bay, and the grounds will fall into the hands of clubs formed from residents of this locality.

I recognize the fact that ducks as a whole are getting scarcer each year, but broadbills are increasing, if anything, and as this is the duck which furnishes the shooting in the Great South Bay, the gunners of that section do not see why they should suffer with another part of the State, whose marsh duck shooting is on the decline.

Why not leave Long Island waters out, and pass the bill for the rest of the State, where the need of it is felt. C. R. PURDY.

BAYPORT, L. I.

CHICAGO AND THE WEST.

High Water.

CHICAGO, Ill., March 20.—The floods which have prevailed for more than two weeks all over the Middle West and the South have turned the Father of Waters into a tremendous stretch of open sea running almost across this country from north to south. This means that in all likelihood the north-bound Mississippi flight this spring will be unusually heavy, although that does not necessarily imply that the duck shooting will be especially good, for the prevalence of the high water has left a good deal of roosting and feeding grounds for the wildfowl in a great many different places.

At Tolleston Club at the latter part of last week and first of this week some very good bags were made. Mr. Charles S. Dennis got 18 birds one afternoon without any difficulty, Mr. Hempstead Washburne 9, and other members of Tolleston Club had fair success.

Mr. W. L. Wells and Mr. Hollis Field, both of the Chicago Tribune, who went up last week into the Fox Lake country, met very wet, foggy and unpleasant weather and not so many birds as they had hoped. It is not an uncommon thing for visitors to Fox Lake to come back with explanations why they did not do much shooting. The hotel keepers of that neck of the woods are prolific in explanations. Now the flight has passed, or again it is not yet up, and again the conditions are not yet right, etc.

Along the Kankakee River better sport has been had. A good many pintails and mallards have been killed. We should hear much more of this were it not for the Indiana license, which it seems is still a stumbling block for our Chicago shooters. It is hardly to be expected that a gentleman who borrows the license of a friend or goes into Indiana without a license will make public the doings of his shooting trip. There is no doubt, however, that at Water Valley and at other points above and below, the shooting has been noteworthy within the last six days.

Mr. Thomas W. Blodgett, of advertising circles here, asks for news regarding New Boston, which is one of his favorite shooting places. I have no returns yet from that point, but it is well known that the water is well up all over the pin oak flats of the Mississippi Valley bottoms near there. If the mallards are not working too extensively on the corn fields, they should be in on the oak flats, and in that case the shooter ought to have some sport there during the next week.

The President in the West.

To-day Billy Hofer, of the Yellowstone Park, Seattle, Alaska, and elsewhere, dawned in Chicago without any previous warning. Billy is on his way with a couple of mountain lions, some deer, etc., for the Cleveland Sportsmen's Show, where he expects to remain for a week or so. Early in April he will start back for his quarters at Gardiner, Montana, where he will have business of an interesting nature. It is known that President Roosevelt is to visit the Yellowstone Park early in his coming Western trip, and it goes almost without saying that Billy Hofer will be his guide and companion during his stay at the Park, which will begin about April 8. The likelihood is that at that time the snow will have left the flats and valleys at the level of the Mammoth Hot Springs, but in the upper mountains there will probably be six or ten feet of it, so that travel, except on snowshoes, would in all likelihood be difficult.

Forestry in Indiana.

The State of Indiana is awaking to the necessity of applying the principles of forestry for the preservation of her rapidly disappearing timber. Under the supervision of W. H. Freeman, State Forester, there will be planted during the coming year nearly a half million trees. The State Legislature of Indiana has made an appropriation for the purchase of a State reservation of 2,000 acres, which will be planted with hardwood timber. An act of the Legislature provides that not to exceed one-eighth of the total area of the land owned shall be appraised for taxation at $1 an acre if it is set aside as a permanent forest reservation. Indiana's modest beginning with the principles of forestry is at least a step in the right direction, and a step in which all the Western States will eventually have to follow her.

Marked Advance in Illinois Game Legislation.

To-day I had opportunity for full and very interesting conversation with Representative J. B. Castle, of De Kalb county, who has been prominent in the present Legislature in many matters, including those of fish and game laws. From Mr. Castle's advice it seems very clear that matters were never in better shape at Springfield than they are to-day in regard to the protection of our fish and game. The old fight between the lower and upper portions of the State was never closer to compromise than it is to-day. The general opinion of the legislators in regard to the supply of fish and game is greater to-day than it ever was before. What is very much to the point, Mr. Castle is of the firm belief that we are going to have this spring the best and most practical game law ever put upon the statutes of the State of Illinois.

Reference has already been made to this bill, which is more generally known as the Montgomery bill. It is House bill 604. This bill has been fought through the committee and sub-committee, and has now reached its third reading in the House. Between fifteen and twenty distinct and different amendments were offered to the bill, but only two or three of these were adopted, so that the measure now stands practically as it was conceived by the men who first introduced it. It is beyond the stage where it can be amended in the House, and has reached its first reading in the Senate, where in all likelihood it will pass without further amendment. In the opinion of Mr. Castle, who, with Dr. Wheeler, of Sangamon county, made the fight for this bill on the floor of the House, the passage of the measure is practically safe. Therefore it may be considered in the way of advance information if we take up some of the features of the bill.

The more salient features of the bill as it now stands amended will be the adoption of the FOREST AND STREAM plank of "Stop the Sale of Game." Heretofore we have always permitted the sale of ducks in this State, and it was generally agreed that we would always have to permit this sale. If this bill shall pass, as in all likelihood it will, we shall stand before the world as a State not permitting the sale of any of our game.

Mr. Castle told me personally that there was considerable feeling expressed in the committee meetings over the recent tremendous slaughters and sale of game along the Illinois River. The butchery of the Powers boys and their friends who shot on their private marshes on the Illinois River was brought up, and great indignation was expressed over the fact that these so-called gentlemen sportsmen should shoot for the market (to the extent of 837 ducks killed and sold in one day). The indignation against this outrage appeared so general that it was resolved to stop altogether the selling of ducks in this State. Another consideration moving thereto was the evidence introduced of the sale of 26,000 ducks by one firm of game dealers from Beardstown, Ill., last fall. Perhaps we should not crow before we get out of the woods, and South Water Street is not yet heard from, but it is believed that we have whipped out this sort of thing in the State of Illinois, let us hope for once and for all.

Another prominent thing in this new bill is the establishment of a four years' close season on prairie chickens. This close season of several years once before proved the salvation of our Illinois grouse, and the general opinion is that the time has come for its application the second time. It will unquestionably in large measure restore the prairie chicken crop of this State.

Yet another interesting feature, and one in which Mr. Castle takes especial pride, is the limiting of the bag of ducks in any one day to 50. This is rebuke sufficient to club shooters and others who have been in the habit of making unlimited and unsportsmanlike bags of ducks on those occasions when the flight happened to be just right. Mr. Castle himself told me that he thought that if the limit could be put down to 25 birds a day, it would in some measupre offset the loss of the "no sale" clause, should the latter eventually be defeated, which is unlikely. He also said that for very many years he has himself made it a practice to limit his own bag to 25 ducks and to 12 prairie chickens. The latter number of birds is the limit which he and his friends have always established to take home with them at the end of a prairie chicken shoot. He has felt always the same way in regard to smaller game birds, such as quail. It seemed to him that the sportsmen ought not always to seek to reach the limit even of the legal specifications. It is much to be regretted that there are not more such sportsmen in this country.

An interesting feature of this bill is the fact that no part of a wild bird, excepting a game bird, may be had in possession (with the exception of the English sparrow, crow, crow blackbird or chicken hawk). This will stop the use of native Illinois song birds for millinery purposes.

One amendment offered to the bill is the same as suggested in these columns last week. The resident gun license is to be collected of all, "Provided, however, that the owner or owners of farm lands, their children or tenants, shall have the right to hunt and kill game on the farm lands of which he or they shall be bona fide owner or tenants during the season when it is lawful to kill game, without procuring such resident license." This gets over the difficulty of the farmer's boy.

This latter clause is, in a way, widened to almost a loophole quality, being an amendment to Section 32, which extends the free hunting privileges to a person hunting on the lands of any person "by invitation of such land owner."

Under this new measure Illinois will stand committed to the principles of paid wardens and deputies. The non-resident license will be raised to $15, and it is thought that between $6,000 and $10,000 will be raised in this way, this sum to be largely swelled by the resident license. State Warden Lovejoy believes there are 25,000 shooters in this State who will take out licenses. I hardly share in this optimistic belief, although the number of shooters may be something like that total. There will be, however, without doubt, a great deal of money paid into the treasury of the State by resident shooters should this bill become a law. The fund raised in this manner will be a considerable one. The old system of paying wardens by giving them half of the fines will be done away with and the fines will go direct to the school fund in the township in which the offense is committed. The license system has spread very rapidly in the West, and is apt to spread quite rapidly pretty much all over the country, it seeming to be chosen as the popular panacea at this time. There is no doubt that practically it raises a large fund. The State of Wisconsin during the past year is thought to have used the snug sum of $70,000, what with its license collections and the State appropriation. That much money intelligently applied and free from politics could do a great deal toward bettering the supply of fish and game in any State.

There are, therefore, some pronounced changes in our legislative ideas in this part of the world as compared to the ideas of ten or twelve years back. In very many ways it will be seen that the State of Illinois, so long reprehensibly backward in the matters of game protection, is at last slowly coming to the front. If we shall be able to keep in the Legislature such sportsmen as Mr. Castle, Dr. Wheeler and others of those who stood by the guns in this fight, we may hope for still better results in the future.

It is most gratifying to believe that the representatives from the lower agricultural part of this State have felt so willing to meet the upper part of the State more than half way. In reality there ought to be two game districts in this State, for the interests of the sportsmen of lower Illinois cannot be considered identical with those of the upper part of the State. A glance at the map will show the truth of this.

Representative Montgomery, of Madison county, was chairman of the committee to which this bill was referred, and there worked with him some twenty other representatives on the committee, these being chosen from all over the State, so that each section had its fair showing.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Wildfowl Breeding in New York.

WATERTOWN, N. Y., March 8.—*Editor Forest and Stream:* For two years we have had no spring shooting of wildfowl in Jefferson county, N. Y. This county is thickly populated, has very little waste land, and during the summer thousands of visitors from other States and countries seek rest and pleasure within our borders. The St. Lawrence River, with its thousand islands, Alexandria Bay, Clayton, Cape Vincent, Sacketts Harbor, Henderson, Chaumont, Redwood, Theresa and the islands in Lake Ontario are famous throughout the world as the anglers' paradise for black bass and muscallonge. On the shores and islands are thousands of summer homes; the waters are thickly dotted each day with boats of all descriptions. That wildfowl will stay and nest amid such surroundings may seem incredible to the sportsman who has only seen the birds during the hunting season, when no law restrains the murderous instinct of man. It is surprising how quickly they lose all fear of human beings when unmolested, becoming almost as tame as domesticated fowl.

The large number which have nested here have enabled us to learn some things about their habits which I believe are not generally known. One is that they often nest some distance from the shore, nests of the black duck having been found two and one-half miles from the nearest body of water. Some people believe that the duck covers the eggs during the day and the drake at night; but direct evidence is wanting as to this, and it is opposed to the belief of the naturalists.

In 1901 large numbers of fowl were seen in our open waters during the day, and as none were seen flying over the land, many thought that they were not nesting. Last year they began nesting early in April, as young wood duck were seen the first week in May. Reports show that a much larger number nested in 1902 than in 1901.

Capt. Henry S. Johnston, of Clayton, reports that large numbers of mallard, black duck and teal nested along the river. Joseph Northrup (State protector), Alexandria Bay, reports the same as to his vicinity; Dr. Glen Coe, of Theresa, reports that large numbers of these birds bred on the lakes and creeks near Redwood and Theresa. Dan Arnold, of Perch Lake, Frank Jerome, of Lafargeville, George E. Bull, of Ellisburg, report the same. Linn Stratton, of Point Peninsular, in addition to these species, reports broadbills, redheads, whistlers and sheldrake. George Lloyd, of Pillar Point, also reports broadbills nesting. George Maitland, of same place, broadbills and whistlers. I have also received large numbers of verbal reports from responsible parties which show that other species as well as those mentioned have nested here. A large number of ducks have stayed here all winter, as there has been much open water.

We have very little trouble to enforce the law, as all are now anxious to have the birds nest in their vicinity. A trip into this county any time in the next five months would surprise some of those people who still think that wildfowl fly up the coast to Canada. The ducks are coming in from the south to-day, and unless we have severe cold to drive them back, will be safe until next fall, at least.

Why the sportsmen of the other counties still permit the market-shooters and hoodlums to kill and drive these mated birds from their waters is a mystery to me. Some time these same people will be kicking themselves for being such blamed fools. Drive them along boys! Send them up to Jefferson! Next fall we'll have ducks while you are waiting. If you should see a drake or a flock of them next month out in open water, don't let them stay there, for it's a sure sign that the duck is on a nest somewhere. It's hard work to break an egg-sucker or teach an old dog new tricks, but the time is coming when they will get wise. W. H. TALLETT.

P. S.—At the hearing at Albany, March 5, one of the Long Islanders testified that the birds killed in the spring were mostly drakes. If these birds were killed in April, I believe that the ducks were already nesting, as the drakes are always in the open water during the daytime and the ducks on the nest. W. H. T.

Information Wanted of the Dismal Swamp.

Editor Forest and Stream:

May I ask through the columns of your paper for information concerning the Dismal Swamp of Virginia, and the opportunities it offers for a vacation outing. Various articles I have read heretofore have given me a general idea of the canal and Lake Drummond, but they have been indefinite as to what one could do in them. Are there good camping grounds? Are there many waterways to be explored with boat or canoe, or is it mostly impenetrable swamp? What game is there and what fish? Is it a good place for a man who would rather get a variety of game in limited amount rather than a whole lot of one kind; a good place for a lover of canoe, light shotgun and small bore rifle, for a "woods loafer." I have always wanted to go there, and still want to if it is possible, but don't want to throw away a season; there are too few left for that. If someone who knows will kindly tell, it will be considered a favor. STEWART.

Long Island Ducks and Geese.

EAST QUOGUE, Long Island, N. Y., March 23.—Dr. L. Hosford Abel and friends shot 22 wild geese Saturday, March 21. A large flight of wild geese, coming from southern waters, passed over Long Island last week. Captain E. A. Jackson and rig with New York sportsmen shot thirty-four last week; also a number of black ducks. Quite a number of broadbills are in the Shinnecock Bay, but are very wild. E. A. JACKSON.

Spring in Quebec.

MONTREAL, Quebec, March 19.—*Editor Forest and Stream:* Robins and blackbirds were reported to have been seen here yesterday the 18th. STANSTEAD.

Game and Fish Bills at Albany.

Special Correspondence of FOREST AND STREAM.

ALBANY, March 21.—Fish and game bills continue to be progressed rapidly through both houses of the Legislature. The Senate and Assembly committees at present are reporting out a very considerable proportion of the measures intrusted to their care. But few public hearings on pending bills have been held, however.

No great surprise was caused by the action of the Senate in reconsidering its adverse action on Senator Elon R. Brown's spring shooting bill, and passing it without amendment. Some powerful influences are back of it, and despite the strong opposition directed against the measure from various quarters, its sponsors expect to get it through the Assembly with votes to spare.

The status of fish and game bills before the Legislature, other than those still reposing in committee, is as follows:

The Senate has passed the following bills:

Senator Armstrong's, P. No. 344, relating to the close season for quail.

Senator Armstrong's, P. No. 351, relative to spearing fish in Seneca Lake.

Senator Brackett's, P. No. 604, relative to catching perch in Saratoga Lake and Lake Lonely.

Assemblyman Bridgeman's, P. No. 526, relative to spearing fish in creeks in Otsego and Orleans counties.

Assemblyman Doughty's, P. No. 693, relative to the taking of pheasants.

Assemblyman Fowler's, P. No. 545, for the protection of fish in Chautauqua Lake.

Assemblyman McNair's, P. No. 620, in relation to the close season for squirrels.

Assemblyman Denison's, P. No. 728, relative to the close season for wild deer.

Senator Armstrong's, P. No. 692, relative to the destruction of illegal devices.

Senator Goodsell's, P. No. 693, relative to fishing through the ice with tip-ups in Orange and Rockland counties.

The Senate has recommitted Senator Allds' bill, P. No. 633, relative to wild birds.

The Senate reconsidered its vote defeating Senator Brown's spring shooting bill, P. No. 648, and passed it, 28—14.

The Senate advanced the following bills to third reading this week:

Senator Armstrong's, P. No. 432, in relation to grouse and woodcock.

Senator Armstrong's, P. No. 350, relative to the powers of game protectors.

Senator Armstrong's, P. No. 699, relative to the close season for grouse in the counties of Ulster, Sullivan and Greene.

Senator Armstrong's, P. No. 697, relative to the sale of venison.

Senator Townsend's bill, P. No. 698, relative to deer, was amended in general orders in the Senate, upon his motion, so as to provide that no person shall take more than one deer in an open season.

The Assembly this week transacted the following business:

Assemblyman Whitney's bill, P. No. 1243, relative to taking perch in Saratoga Lake and Lake Lonely, passed the Assembly.

The Assembly advanced these bills to third reading:

Assemblyman Hubbs', P. No. 1304, relative to the transportation of fish.

Assemblyman Nichols', P. No. 813, relative to taking woodcock.

Senator W. L. Brown's, P. No. 438, in relation to fires to clear lands.

The Assembly committees on fisheries and game reported favorably the following bills:

Assemblyman Robinson's, P. No. 1370, relative to fishing in Hemlock Lake.

Assemblyman Moran's, P. No. 1324, relative to fishing for non-game fish in Cayuga Lake.

Assemblyman Stevens', P. No. 1326, relative to laying out private parks.

Assemblyman Cowan's, P. No. 1299, relative to the close season for mink, skunk, muskrat and foxes in Delaware county.

Senator Townsend's, P. No. 392, relative to the protection of black bears.

Senator Bailey's, P. No. 621, relating to the powers of supervisors in Queens, Nassau and Suffolk counties.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Jottings of a Fly-Fisher.—II.

THE season of 1900 was a particularly good one, and the average size of the fish taken was really remarkable. However, the long drouth of that year, lasting from June until late in the fall, was very disastrous, many of the tributary brooks dried up entirely, and great numbers of small fish were destroyed. In the large streams the big fish had a hard time of it. The extreme low water laid bare their retreats and they were poached in every conceivable manner, shot, snared, speared, etc.

The year 1901 began well; we had much rain and the spring was a late one. The fishing was not as good as the previous season, but better than was expected. The hot week early in July put a stop to fishing, but for a short time great numbers of fish collected at the mouths of cold brooks. In several cases I heard that advantage of this was taken to destroy the large fish by dynamiting or otherwise. I know of one or two convictions, but the penalty imposed was not in proportion to the offense committed. For instance, the fine was $50 in one instance, when hundreds of fish were killed and served to summer boarders.

I am an admirer of the rainbow trout (*irideus*), and believe this fish to be nearer the true salmon in its qualities than any other trout we have. I cannot understand the low opinion of this fine trout I have heard expressed by many persons. It rises freely at the fly, leaps from the water again and again, and rushes desperately down stream. This last peculiarity makes it in large waters one of the most difficult fish to land I know of. Rainbows like to lie in streamy water several feet in depth, and if there are heavy rapids below you are pretty sure to have to follow one of any size to the end of them. I am sure that this fish would be a great success in the lower waters of our large trout streams, such as the Beaverkill, Neversink, etc., as it can thrive in much warmer water than any other trout. It is a great favorite in Germany, and has been successfully introduced into some of the rivers in New Zealand. In the former country it is considered commercially, but in the latter is spoken of as exhibiting all the sport-giving qualities I have mentioned, rising at the fly, leaping from the water, etc. Six pounds is a weight often reached, while in Germany specimens of over thirteen pounds are recorded.

In this country I have read of one being taken in a lake (I think in British Columbia) weighing twenty-three and a half pounds. A gentleman in Denver, Col., holds the record there, with a rainbow of twelve and one-quarter pounds, taken with artificial fly. The fishing in rivers in that State has been greatly injured by the newer methods of refining ore, the refuse from the cyanide process killing the fish. With modern fishculture there is no reason why we should not have good sport in all our old well known streams, frequent restocking with fry, or if possible yearlings, making up for any drain upon them, at least by fair fishing. If a stream is heavily fished a fair proportion of the trout will soon become sufficiently educated to save them from the wiles of most anglers, enough to leave many breeding fish after the season for angling is past. I fear, however, that in a few years very little water will be free to the public.

More farms are "posted" every year, and miles of the best waters are leased from the owners, or a strip of land on both banks is purchased by clubs or individuals, sometimes for a trifling sum in cash. It is claimed that waters stocked by the State cannot be closed, but this probably has no more foundation than the statement made years ago that the public could not be excluded from any flowing water that had been used for logging. I for one would feel like a poacher if fishing posted water without a permit. Personally I care little for fishing strictly preserved water, or for fishing anywhere where trout are so numerous and easily taken that they are undervalued.

In 1885 Tim Pond, in Maine, was so crowded with small trout of one-fourth to three-fourths of a pound that anyone could take them, and my anticipated pleasure was almost annihilated on arriving by finding that the camp keeper had been obliged to bury 75 pounds that morning. To take large fish when they are shy is the acme of sport. A day now and then on preserved waters crowded with fish eager for your flies is a pleasant novelty, but for real sport give us free water where the trout are critical, hard to please, and highly valued when caught. Fish are not necessarily scarce in such a stream, they may be numerous and even large, but have learned through much temptation to take good care of their precious skins.

I know of one preserve that is managed on very generous principles. Bait-fishing is strictly prohibited, but any fly-fisherman asking permission for a day on the water is never refused. The fishing has greatly improved since this club controlled the water, though few fish have been turned in. The stoppage of bait-fishing in the space of a year or two increased the number and raised the average size of the fish. Small trout will take a worm all day long, and nearly every day, and few recover after having a good sized bait hook in their throats. Bait-fishing for trout may be made a scientific and enjoyable amusement, but we have only a few fish that will rise to the artificial fly, while there are many good game fish for which bait-fishing is the only practical and satisfactory method. I know of several most expert bait-fishers who have made this sacrifice for the benefit of the brotherhood of anglers at large. One of these gentlemen is really a marvel. He can cast a long line with wonderful accuracy, never breaking his worm, and dropping it like a feather almost in the exact spot he wishes. The sacrifice in his case is really very great, but has been persevered in for several years.

The enormous increase in the number of anglers in recent years has made it necessary that all true sportsmen should consider the interests of others as well as their own. On a good sized stream one may fish after several fly-fishers without much diminution of sport. I have waited half an hour after nine had passed and then had a very fair day. One or two worm fishers can spoil the sport of many, and this is so generally recognized that in fishing with bait-fishing friends they have invariably asked me to precede them, saying that they lost nothing by following me, but that I would fishing after them.

I wish that attention could be attracted to the introduction of the European grayling into some of our streams. They are said to drop down into the lower portion of trout streams, and as rainbow trout do the same, we might have fine fishing from, say, the first of August until very cold weather, where now there is nothing except wind fish and suckers. Grayling and rainbows are both spring spawners, and are in highest condition in the fall of the year. My impression is that only the large rainbow trout spawn, as I have never seen any signs of it in the month of May except in fish over a pound in weight. Fish of fifteen inches and over were often thin, and the vent was conspicuous, while those of smaller size were in first rate condition, plump and hard, and as silvery as possible. The mouth of the rainbow would seem to indicate that it is not a cannibal, but a large female in the New York Aquarium was very savage. She injured her companion, and when I saw her had been placed in the tank with the salmon. She was of a restless, shrewish disposition, evidently.

It has always annoyed me to hear our beautiful native brook trout spoken of as a char. In olden times this fish was known to scientists as *"Salmo fontinalis"*—"The salmon of the fountain;" a most appropriate name it would seem for a fish inhabiting only the coldest and purest streams in the country. It was then put in a sub-genus and given a new name—*Salvelinus*—because, I am told, it has the same teeth on the vomer as the European char. The habits of the latter fish are utterly and entirely different; they live only in very deep lakes and are rarely taken except in nets when they seek shallow water to deposit their spawn. A few are sometimes taken by sinking a bright fly and moving it very slowly. I know nothing of the fish except from brief mention in books read years ago, but I believe I state the case correctly when I assert that the European char have few habits in common with our speckled trout, and that it is slandering that sportive game fish to call him a char. Even in Lake Superior and the Maine lakes our brook trout only seek the depths when the surface water is overheated in the months of July and August.

Of late I have been giving more attention to the feathers of our game birds, as I do not believe that American fly tyers have made the most of their resources in furs and feathers. Men who have the habit of observation have frequently called my attention to the similarity in the coloring of certain birds and insects. It has been called mimicry in nature, and it may be of great service in imitating some of the flies which form the favorite food of the trout. An insect diet has proved to be the most nourishing, and quickly brings the fish into condition. I have read somewhere that the experiment was tried of feeding the trout in three small pools at a fish hatchery with flies, larvæ, maggots, etc., and with worms and minnows. Thomas Tod Stoddard was the authority for this experiment, I believe. The trout fed on the first developed much more rapidly than the other two. Minnows came next and worms last. It is said that worms scour the trout, having a laxative effect, but I know nothing about fishculture except through a few visits to hatcheries years ago when methods were comparatively primitive.

Flies without wings are often very killing, and some that I have tried with a soft feather twisted in front of the cock's hackle have done good work. I got the idea first from a fly that was sent to me from England. The stems of these soft feathers are often very stiff and hard to manage, but the long fibres are not particularly objectionable, as in practice the flies hook just as well as those dressed with small cock's hackles. They are not pretty, but give an impression of life in the water. If anglers generally would take a little more interest in the construction of their flies they could assist the fly tyer materially by making practical suggestions that would lead to decided improvements in many of the flies in use.

The common practice of naming flies after persons has become something like a nuisance. The fly lists are growing, growing, and much unnecessary duplication of colors is the result. A list of lake and sea trout flies came to me recently in which the names indicate the materials of which the flies are made and the colors in the body. "Mallard and yellow," "Mallard and green," "Mallard and gold," etc. This may answer pretty well for fancy flies, and if we ever have a good natural history of the flies born of the water, the difficulty might be obviated. Imitations of the flies described would probably have to be tied in more than one shade of color—say light and dark yellow duns, and so on—and the fancy flies could be named after the materials composing them. These are only tentative suggestions, and are probably without practical value. Lists will continue to expand, as few anglers are indifferent to the compliment of having a killing fly named for them.

Anglers are patient, hopeful people. All the fatigues and misfortunes of the pursuit are forgotten, or form subjects for jokes or amusing reminiscences. We remember our first trout and nearly all of our big fish until the last day of our lives. The man who caught his first trout with a fly may be congratulated. I took mine with a worm scented with asafœtida. The old man who introduced me to Bonny Brook was a real old-time fish hawk, such as may be found in many fishing neighborhoods. He believed devoutly that the ill smelling stuff referred to had a powerful attraction for all fish, and kept his worms stored in an old stocking with a big lump of this drug, or whatever it is, in the middle. The foot of a sock held the worms for a day's fishing, with a smaller quantity of asafœtida in that. Poor old Docky: he passed to the land of ever-flowing waters many years ago.

When a friend goes fishing I always send after him a wish not that he may fill his basket, but that he may take a really big fish, and this, thanks to the liberality of the State of New York, is not a very improbable event. Trout have been taken with the artificial fly within a short distance of New York City weighing five pounds or more, and we know that in many of our large streams, and even in some that are quite small, larger fish are known to dwell. Two years ago, in August, when the river was very low, I saw a male trout in the Beaverkill that I am confident was 28 to 30 inches in length. As I got within ten feet of this fish on two occasions there is no reason to doubt that I judged correctly. This fish inhabited a hole in what was usually a large pool, and had his home under a flat rock only just large enough to conceal him. He went under diagonally and had some difficulty in getting his latter end tucked away out of sight. His coloring was very bright for a big fish, the head very large, with great powerful jaws, and to see him open them a little, as he did once or twice, made thrills run down my back. That fish is right there now, as such fish haunt the same pool for many years, and I will describe the place to any good fly-fisher.

Another large fish was in plain sight from the public road on almost any day you looked for him. Some people put the weight of this trout at seven pounds, but I believe this estimate to be excessive. It was truly a brown trout—in fact, almost black—and a large company of other trout—natives, browns and a few rainbows—was collected in the same pool to enjoy the water flowing in from an ice-cold brook. When the water fell very low these fish would be literally plastered against the stones, as most of the cool water flowed under the rocks and gravel into the main stream. THEODORE GORDON.

The Latest in Fishing Tackle.

From Van Bugg's Latest Tackle Catalogue.

No. 132. Kippered herring fly rod; three-piece, with extra tip. Scales attached. Price, $29.

Smoked halibut bait rod; nickel trimmed, cork tips. Cheap. Price, $16.

Planked shad rod; oak handle, straw or cork tips. Excellent rod for club house purposes. Price, $42.50.

Combination steamed finnan haddie and sardine fly rod. Another great club house rod. Price, $16.32.

Baked bluefish rod; cane wound handle, spiral handle, Sumatra wrapper. Price, $27.35.—Chicago Tribune.

Fly-Casting at New York.

MR. MILTON H. SMITH sends us the following as the official score of the single-handed bait-casting Saturday afternoon, March 7, Class X:

R. C. Leonard	128 7-12
P. J. Tormey, San Francisco, Cal.	110 5-12
Milton H. Smith, New York	91 6-12

The Massachusetts Commission.

BOSTON, March 19.—*Editor Forest and Stream:* The long expected hearing on the bill for the reorganization of the Fish and Game Commission of this State occurred to-day. Beyond question many who are interested in matters relating to fish and game in the old Bay State expected this hearing would be the occasion for a pretty stiff fight between the advocates of the changes contemplated by the bill and those who are satisfied with the Commission as it is, who commend its work and are heartily opposed to any change in its status. But those who went to the State House this morning anticipating an attack on the Commission, or a telling effort in the attempt to secure a change in its personnel, by an increase of the membership of the board, must have been disappointed. Indeed, the sentiment of those present was so unanimously in favor of the Commission that the spokesman for the bill was not an exception, and his only plea for consideration was that he thought the appointment of additional commissioners would strengthen the hands of the board.

Naturally different opinions concerning the hearing were expressed. Those who were possibly looking for something sensational, pronounced the affair "a regular farce," so far as any support of the bill was concerned. One said the hearing had resolved itself into "a love feast for the Commission," while another, with a probable relish for trouble, remarked that "There aint fight enough in this thing to make it interesting; it's all one way."

It is undoubtedly true that it was a veritable field day for the three commissioners, who were quietly observant on one side of the committee room, and who had nothing to do but listen to the praises of their work that came from all. They certainly must have felt repaid for their arduous efforts when one after another commended their work, and, most remarkable of all, some of those who spoke the most earnestly and appreciatively of the board's work were strangers. It was likewise remarkable that men were there from the extreme eastern and western sections of the State, as well as intermediate points, and the bench, bar, church, science and commercial fisheries, as well as the sportsman, were represented among those who spoke in opposition to any change in the status of the Commission. Many who would gladly have joined in the chorus of approval of the Commission, and in opposition to any change in it, could not get a chance to speak, due to the one-sidedness of the hearing, which the chairman felt might as well be brought to a close an hour or more sooner than usual.

Ex-Representative Stevenson, of Pittsfield, was the principal advocate of the bill. It would not be far out of the way to say that he was the only speaker who favored it.

At the beginning he disclaimed any purpose of attacking the Commission. Continuing, he said, among other things:

"On the contrary, what I have to say in regard to it is with the idea of strengthening the Commission and its work in the State. I believe that the people of this State at heart are very much interested in the work that this Commission has under its charge. I think their interest has grown. * * * I have nothing but the best of consideration for them [the commissioners] for what they have done toward me and toward the section where I live. * * *

"The main object aimed at in this bill was to aid in shaping public opinion by having representatives in different parts of the State. * * * And that is one object why I claim we should have a representative in different parts of the State; they would get more in touch with the people, they would get better facilities and aid the Commission in enforcing the laws and increasing the interest and getting the support which they aim for.

"Now I would say what I would like to see is men like the present chairman of the Commission appointed to support and help him carry on this work. I think it is a very fortunate thing for the State when the Governor selected him. I am very glad to say that I was pleased with his appointment; that he has done splendid work, and what we want is more men like him.

"This bill was drawn, I think, hastily, and was on the lines of one that was introduced a number of years ago, and as it does not carry out the object really which the voters want; a new bill has been drawn which we would like to ask you to substitute in place of that bill. It simply makes the provision of adding two members to the Commission and fixing no compensation but their expenses."

Mr. Stevenson thought that men could be found who would serve on the board without compensation, but stated that he did not care to do it; that he was too busy. He said that the main object he had had was to improve and better the conditions under which the Commission was now working, if it were possible to do so.

Mr. Stevenson was followed by Representative Bearse, of Springfield, who explained very briefly that he had introduced the bill at the request of some of his constituents who felt the hands of the commissioners would be strengthened by additions to the board from the western section of the State. It was plainly evident he was not extremely enthusiastic over the matter, for he probably did not occupy more than a single minute in speaking, and did not go beyond explaining his relation to the bill. It was plain that Mr. Stevenson was the only one of those who favored the increase of the personnel of the Commission who had the courage of his convictions, and although, like Casabianca, he stood firm on the deck "whence all but him had fled," he deserves credit for his sincerity, even from those who disagree with the policy he advocated.

Curiously enough the star witnesses in opposition to any change in the Commission were from Berkshire county, where the bill originated. The first of these, and the one who spoke at greatest length, was Judge Sanborn G. Fenney, of Williamstown. He spoke in part as follows:

"I have come from the western jumping-off place in Massachusetts, and therefore think that I may properly speak upon the sentiment of the people in that section. I have been particularly interested in the question of fish and game from my earliest recollection; I have talked very fully with the people of that section, and find that there is practically an unanimous opinion in favor of the retention of the board as at present organized. So far as I can see, the case of the petitioners, as here represented, is simply that they want an earthquake in order to put in a commissioner from Springfield or Pittsfield. * * *

"I am somewhat familiar with the enforcement of law in my section, and I think that the deputies, as controlled by the present board, have done efficient work.

"It appears to me that the proposed change in personnel would be an additional expense to the Commission without compensating value to the State. Such an upheaval at a time when the Commission is on such an excellent footing would be very poor compensation for the untiring labors the board has given to the State. I think it would be very unfortunate if a precedent were established that, after such efficient labors, the work of such a board failed of recognition.

"I can speak not only for the community in which I live, but for that whole section, and I speak not only for the people of my town, but also, in an unauthorized way, for Williams College. I took occasion to consult the men of the biological department before coming here. They knew of the work of Mr. Collins. One of them was associated with him in the U. S. Fish Commission, and he said that Massachusetts was very fortunate to have a man who could perform the efficient, intelligent and scientific work that Mr. Collins is able to accomplish.

"Now, of course, it is said that this is not directed against Mr. Collins or against the present board, but it seems to me that it is directed against an efficient administration of the Commission, as now organized.

"I have been familiar with the brooks of western Massachusetts from the time I was able to fish, at a very early age, and there was a period three or four years ago when things looked pretty blue for our brooks; but under the present Commission's work those conditions have materially improved, and there are now streams that have been stocked by this Commission which are furnishing fine sport. The same is true of the hunting.

"Now, that could not have been accomplished, Mr. Chairman and Gentlemen of the Committee, without untiring effort, and if, as I say, at the jumping-off place of Massachusetts, the covers are stocked and protected, the streams are stocked and the Commission have their fingers upon the men who represent this Commission so that the laws are enforced, I think it speaks admirably of the administration of the board. I can see no advantage in increasing the number of commissioners. It will be cumbersome, and while it might be urged, as I have said before, that this is not directed against this board, it seems to me that from the arguments, so-called, that have been brought forth here, it is directed against the administration of the present board. No attack is made, they say, on this Commission. Why, gentlemen, we have one of the most efficient Commissions! I don't know how they accomplish the work they do with the appropriation they have in hand, and I will put myself on record in saying that everybody that I have spoken with is perfectly satisfied, and more than satisfied, and full of praise for the work of the present Commission. I think the substance of the so-called arguments that have been adduced here simply show the flimsy structure upon which this bill was introduced, and I wish to put in my little plea against any change."

Representative Charles Giddings, of Great Barrington, spoke as follows:

"You have just listened to the very concise and clear statement of my good friend, Judge Tenney, of Williamstown, who says that he represents the jumping-off place. He is in the northwestern corner of the State, and the district which I represent is in the southwestern corner. * * * Those whom I represent, including the best sportsmen of that section, most emphatically protest against any change in the present Commission. They believe that the present Commissioners have done not only well, but admirably in their administration; * * * and instead of increasing the efficiency of this board by making a change as is contemplated by either of these bills, they believe that the Commission would be hampered and would be rendered less effective.

"I had a long letter this morning from a gentleman who has studied these matters much longer than I have, and his idea is where you put the responsibility upon a good many men you are taking a long step against efficiency. Confine your responsibility to a few good men and you will get more effective work." * * *

Representative William F. Barrington, of North Adams, heartily concurred in what had been said by Judge Tenney and Mr. Giddings. Ex-Representative Harry D. Hunt, of North Attleboro, whose name is familiar to readers of FOREST AND STREAM, spoke for the eastern section of the State, saying that the sportsmen were a unit in opposition to any change in the status of the Commission. He represented a club of 400 members, he said, and he voiced their opposition to change. He fully agreed with all that had been said by speakers from the western part of the State.

Representative Louis H. Warner, of Northampton, told the committee that the sportsmen he represented, including the Northampton Club of 300 members, were well satisfied with the Commission as it is, and deprecated a change.

Mr. E. Bumstead, who represented the Civic League, spoke lucidly of the law-enforcing work of the Commission. He was followed by Dr. N. D. Kneeland, Secretary of the New England Sunday Protective League, who commended the board for conscientious work. Prof. E. L. Mark, of Harvard University, told of the good work the Commission was doing in aiding scientific research. All these opposed any change in the board, as also did Mr. C. D. Botsford. Ex-Representative R. E. Conwell, of Provincetown, spoke for the commercial fishing interests of the State, "From the tip end of Cape Cod to Cape Ann." He protested against any change, and declared the best thing the committee could do was to let the Commission remain just as it is. "It is doing good work and we don't want it to be disturbed," he said. He was formerly a member of the committee on fisheries and game, and is highly respected by his former colleagues on the committee.

Many others were present who would have spoken in the same way, but there was such an overwhelming opposition to any change that the committee called for a rising vote. Two stood for the bill and forty or more in opposition, some of the latter who had not spoken being members or Senators, ex-Senators, presidents of clubs and others prominent in affairs and sporting circles. Prominent among these was Hon. Wm. A. Butler, of Georgetown, recently a Senator, who is also a sportsman of note.

I will only add that the committee promptly voted "leave to withdraw" on the bill, and it will be regrettable if this attempt to enlarge the Commission is repeated.

BAY STATE.

BOSTON, March 23.—*Editor Forest and Stream:* The hearing on House bill 988, providing for a reorganization of the Fish and Game Commission, originally announced for March 12, took place on Thursday last. Mr. J. M. Stevenson said in favoring the bill he was in no way hostile to the present board. He said with more members distributed over the State more interest in the work of the Commission would be aroused and that laws were of little account unless supported by public sentiment. He instanced the plan of organization in several other departments of the State government on similar lines and the good results. He was followed by Representative Bearse, of Pittsfield, who stated that the members of the Sportsmen's Club of his city were favorable to the bill. No others appearing in support of the measure, Chairman Kimball called for remonstrants. Judge Tenney, of Williamstown, led off with a forcible speech commending the work of the present board, and declared that while three or four years ago "it looked blue" for those fishing for trout in his section, conditions now are greatly improved; also that the hunting laws were much better enforced. He said there was abundant evidence that the Commission was doing its work on an intelligent, scientific basis. Of late he had heard only words of commendation of the work of the board, and the people of his section were opposed to any change.

Representative Giddings, of Great Barrington, entered a protest for the people of his district.

H. D. Hunt, ex-Representative of North Attleboro, said his club, numbering 400 members, was unanimously opposed to the bill.

He was followed by Representative Barrington, of North Adams. Other remonstrants were Prof. E. L. Mark, of Harvard College, and Eben Bumstead, of the Civic Committee. H. A. Estabrook, chairman of the Central Committee, and I. O. Converse, President of the Fitchburg Rifle and Gun Club, and representatives of several other club were present and rose in their places when the chairman requested all those opposed to the bill to rise.

It was evident to all that the vigorous work of the board since Captain Collins became its chairman is winning the support of sportsmen generally through the State, and probably nothing had contributed more to this gratifying condition than the determined and vigorous manner with which the anti-sale law and those making the close seasons for shooting have been enforced.

After the hearing was concluded the committee went into executive session and voted that the petitioners have leave to withdraw.

CENTRAL.

Salmon Culture in America.

CHARLESTOWN, N. H., March 13.—*Editor Forest and Stream:* Permit me to indorse the conclusions of my old friend, Livingston Stone, on the subject of "Salmon Stocking," as expressed in his letter to Mr. Marston, reprinted in last week's FOREST AND STREAM. Half a dozen years of labor and failure on the Merrimac River enables me to speak with some degree of confidence on the subject.

To begin with, the New Hampshire Fish Commission was organized at the instance of the late Judge Bellows and others, for the express purpose of restoring salmon to the Merrimac and Connecticut rivers, and such was, by law, our main duty when I entered the Commission in 1876.

The first fishways built on the river, at Lawrence, Lowell and Manchester, were ineffective, and we remodeled them the first thing we did. The mouth of the one at Lawrence was turned back to the foot of the dam, where the fish could find it, after being stopped by the dam, the one at Lowell given up, and a new passage provided by taking off a "flash board" at the west end of the dam, where the stone-work was only 2 feet high, and a new one built at Manchester, opening at the foot of the dam and leading up into the canal from which the fish passed upward without obstruction. That the fishways were sufficient, was proved by the fact that a few fish found them and passed up them to the hatchery at Plymouth, N. H., over 100 miles of the river. One year seventy were taken at Plymouth, one of them weighing 30 pounds; but this was a small return for the hundreds of thousands of eggs which were hatched and planted.

We first tried California eggs, but the fish never returned, though the young fry were planted in good condition. Then we got eggs from Maine, and after the fishways were in working order, we got and hached the spawn from the few fish which did find their way to the hatchery. After my term of service on the Commission expired I followed up the work of my successors for some years more, until I became perfectly convinced, with them, that the attempt to restock the river was useless. Hundreds of thousands of fry, as I have said, were annually liberated in the river, and the straggling return of a few dozens was sadly discouraging. Now I attribute the failure to the pollution of the water by the factories on the river. A salmon starting up the river would first meet the sewage from the shoe factories at Haverhill, Mass., then the drainage from the woolen and flax mills at North Andover. Then the acids, alkalies and other drugs from the great Pacific and Washington mills at Lawrence, beside various smaller establishments; at Lowell he would come to the refuse from the Merrimac and Hamilton Print Works, the Middlesex woolen mills and many smaller concerns, while opposite Lowell, at Beaver Brook, and just above it, at North Chelmsford, would come more mill refuse, and at Manchester the Manchester Print Works and the dye houses of the Amoskeag mills turn in another flood of deleterious matter, that I do not wonder that the fish refused to encounted it! I do not know how it is in other rivers, but what fish did come up the Merrimac always

came in the night when the mills were not running, and we found them at Manchester in the morning resting in a shallow pool at the foot of the dam during the day, from which they disappeared the next night, except a few, which some over-zealous wiseacres, who thought the fish did not understand their own business, netted and lifted over the dam, to save them the trouble of finding the fishway!

My successors on the Commission, as well as myself, became fully convinced that we had wasted time and money enough in attempting to carry out the original purpose for which it was created, and that we had better turn our attention to the stocking of the inland waters, with the "landlocked" variety, or the "wannanish," and to replenishing the brooks with the native trout, and in these ways we made the Commission a success and an advantage to the State.

I am very glad to see that your able Canadian correspondent, Mr. Chambers, agrees in the opinion which I have previously expressed in FOREST AND STREAM that the fresh-water salmon, or wannanish, as I spell it, though he prefers the French alphabet and spells it as the Montagnais Indians do, is the original progenitor of the *Salmo salar,* or salt-water salmon, which were probably "froze out" by the ice of the glacial period," or some other visitation of cold, and took to the salt water for the winter, finding the food so abundant and the temperature so agreeable that they have since resided there, only returning at the promptings of instinct to their original home in fresh water to spawn, and I apply the same origin to the sea trout, which Mr. Venning and Mr. Hallock have been recently discussing in your columns, and although I have never seen one of these fish alive, I am convinced that they, too, winter in salt water, and go up the rivers to feed and spawn with the salmon. The weight of evidence is against Mr. Venning, whose "Reminiscences of an Octogenarian" I have enjoyed hugely, the more so, as a few months, if I live, will place me in the same category as to age. I, too, recall the old flint lock musket with its powder horn and with the shot carried in a bottle, or canvas bag, in one pocket, while the other was filled with old paper, or tow for wadding, and the charges of powder and shot were measured (?) by pouring them into the palm of my left hand; or later, when I got a japanned tin powder flask, in the thimble-shaped cover!

From these I progressed by stages to the lever-gate, powder flask and double shoulder belt, for coarse and fine shot, which I have had for fifty years, and which now hang in my closet by the old 12-gauge, double-barrel muzzleloader, which, like its owner, has outlived its usefulness in the field.

Mr. Venning seems to be in doubt as to the cause of the entire disappearance of the wild pigeon, and just as I was going to explain my opinions on the question, along comes this week's number of FOREST AND STREAM with Sullivan Cook's letter, which anticipates nearly all I had to say. I have shot pigeons here in New Hampshire when a boy, and one of my farmer friends used always to bring my father in a dozen or two every year, which he had netted.

So late as 1841, when I went to Lowell, I saw in the neighborhood of that city the brush blinds and long sloping poles for "roosts," where they were baited and "raked" down when they lit on the pole. I well remember reading in "Audubon," and in the works of other writers, seventy years ago, the accounts of the awful slaughter made of them in their "roosts," when the hogs were depended on to pick up the young squabs which fell to the ground.

Mr. Cook tells the whole story so plainly from his own memories that I will not waste time and space discussing the question further, but merely to say that it is not a mystery to me why the wild pigeon disappeared.

Spring seems to be really coming at last, though I have not yet seen the bluebirds and robins which put in a premature appearance three weeks since and then vanished again; but my daughter says her tulips are coming up, and last Saturday she dug some nice parsnips from under a snowdrift, and reports no frost in the ground!

I hope to get a few trout this year, though the grippe knocked me out of all sport last season.

VON W.

CAPE VINCENT, N. Y., March 23.—*Editor Forest and Stream:* I think I have the laugh on my friend, "The Old Angler," in his claim that my letter to Mr. Marston was a disingenuous reply to his excellent contribution to FOREST AND STREAM of February 21, entitled, "Artificial Salmon Culture in America." I think the laugh is on him because my letter, which he calls a disingenuous reply to his article, was written two days before his article appeared. His contribution was published February 21. My letter to Mr. Marston was written and *mailed* to London February 19. To put it plainly, "The Old Angler" claims that I replied to his article two days before it appeared, which was also two days or more before I saw his article or heard of it. So I think the laugh is on my friend "The Old Angler."

Let me add that my letter to Mr. Marston was simply a friendly and private letter, not intended to be controversial nor intended for publication, and I consequently did not feel called upon to furnish proofs and statistics, but if "The Old Angler" wants proofs and statistics, he can find some in the timely contribution of Mr. Babcock in FOREST AND STREAM of March 21.

LIVINGSTON STONE.

Perverse Beast.

Cobwigger—"How was it that dog of yours wouldn't do any of his tricks to-day?"

Brown—"I gues it was because I was showing him to a man who wanted to buy a dog."—Harlem Life.

"THIS, I suppose," said the visitor, "is the gun your great-grandfather carried through the Revolution?"

"Most assuredly not," haughtily replied Cadleigh Rich. "That was his gun, but his man carried it for him, of course."—Philadelphia Press.

Delaware River Angling.

With a lunge and a plunge, and a sweep and a leap,
Goes the bass that I've hooked through the lip!
A scoot and a shoot—and he's off through the deep!
And my rod has a broken tip!

"He's off!"

My boat chum glares in blank dismay at circling ripples from the last big splash in the water, and at the broken tip and wrenched second joint of his rod, and resumes the low seat in our dory, from which he had risen so hastily as his reel began to scream.

"What are you grinning at? Yes, the name of my little tableau is *Despair!* I never did like this river!"

He fumbles at the reel. "That bass did not weigh an ounce over three pounds, and I've landed them up to five pounds on this very six-ounce bamboo. How did he do it? Took all my line, too! It was tested to a nine-pound pull. Didn't leave me enough string to tie up these pieces!"

I soothe him with philosophy. "Better ones yet in the river! You were 'rattled' by his suddenness. The tilt was worth all your trouble and money. He proved why you respect a black bass, and call him a fighting 'brute'

WHERE IT HAPPENED.

and 'pirate.' It was the prettiest struggle you have had this trip, and the bass won. These fellows who live in the rapids and swirls of the upper Delaware are twice as lively as their brothers in the still water of lakes! Rig up that ten-ounce lancewood, quick! for they are biting and f——"

"B-r-r-r-r-r!" goes my own reel; and I, also, am "in trouble!"

I draw a veil over that scene. But in a Brooklyn fishing-tackle "den" are two smashed rods, tied with blue ribbons, and labeled:

"A tribute to the prowess of two small-mouth black bass in the upper Delaware River. Ketched 'em; didn't land 'em!"

L. F. BROWN.

The Habits and Culture of the Black Bass.*

BY DWIGHT LYDELL.

THIS paper sets forth the experiences of nine seasons beginning with 1894, during which I have had charge of the black bass work of the Michigan Fish Commission. The work was begun at Cascade, Mich., and after four seasons was transferred to Mill Creek, where it is now carried on. The methods of pond culture finally adopted are based on a knowledge of the breeding habits of the fish under natural conditions. The account has reference to the small-smouthed bass, unless the large-mouthed is specified.

In studying the habits of the bass, it is necessary to distinguish the males from the females; ordinarily this is not possible except by dissection, but at spawning time the female is distinguishable, even at a distance of ten or twenty feet, on account of her distension with eggs, and this makes it possible to determine the part taken by each sex in nest-building and the rearing of young.

The nests of the black bass are built by the male fish working alone. The small-mouthed bass prefers a bottom of mixed sand and gravel, in which the stone ranges from about the size of a pea to that of one's fist. As the spawning season approaches the males are seen moving about in water of two or three feet depth seeking a suitable resting place. Each male tests the bottom in several places by rooting into it with his snout and fanning away the overlying mud or sand with his tail. If he does not find gravel after going down three or four inches, he seeks another place. Having found a suitable place, he cleans the sand and mud from the gravel by sweeping it with his tail. He then turns over the stones with his snout and continues sweeping until the gravel over a circular spot some two feet in diameter is clean. The sand is swept toward the edge of the nest and there forms a few inches high, leaving the center of the nest concave, like a saucer. The nest is usually located near a log or large rock so as to be shielded from one side. If the bank is sheer and the water deep enough, the nest may be built directly against the bank. If possible, it is placed so that the fish can reach deep water quickly at any time.

During nest-building no females are in sight, but when the nest is done—and this takes from four to forty-eight hours—the male goes out into deep water and soon returns with a female. Then for a time—it may be for several hours—the male exerts himself to get the female into the nest and to bring her into that state of excitement in which she will lay her eggs. If she lies quiet, he turns on his side and passes beneath her in such a way as to stroke her belly in passing. If she delays too long, he urges her ahead by biting her on the head or near the vent. If she attempts to escape, he heads her off and turns her back toward the nest. If, after all, she will not stay in the nest, he drives her roughly away and brings another female.

Some fifteen to thirty minutes before the female is ready to enter the nest and spawn, her excitement is made evident by a change of color. Ordinarily she appears to be of a uniform dark olive or brown above, changing to a light green below. The only markings readily seen are four stripes on each cheek; but in reality the sides of the fish are mottled with still darker spots on the dark olive background. The spots are arranged so as to form irregular, vertical bands, like those on the perch, but these are not usually visible. Now, as the excitement of the female increases, the background becomes paler and finally changes to a light green or yellowish hue, so that the spots and bands stand out in strong relief. The whole surface of the fish becomes thus strongly mottled. This is a visible sign that the female will soon spawn. The male undergoes a similar but less pronounced change of color.

Soon after this the female enters the nest and the male continues to circle about her, glide beneath her, and to bite her gently on the head and sides. At times he seizes her vent in his mouth and shakes it. When this has continued for a time, spawning takes place. The two fish turn so as to lie partly on their sides with their vents together and undergo a convulsive fluttering movement lasting three to five seconds. During this time the eggs and milt are extruded. The circling movements are then resumed, to be interrupted after a few seconds by spawning. This alternate circling and spawning continue for about ten minutes. The male then drives the female away, biting her and showing great ferocity. She does not return.

The male, and the male only, now continues to guard the nest, fanning sediment from the eggs and repelling enemies. At 66 degrees F. the eggs hatch in five days and the young fish swarm up from the bottom in twelve to thirteen days from the time of hatching.

Henshall, in his "More About the Black Bass," published in 1898, quotes, with approval, Arnold's observations to the effect that the nests are built and then guarded by the female. The "Manual of Fish Culture," published in 1897 by the United States Fish Commission, speaks of the nests as being built by the mated fish, sometimes working together, sometimes separately. These seem to be the latest published observations, and are not at all in accord with my observations in Michigan.

Shortly after the young small-mouthed bass rise from the nest they scatter out over a space four or five rods across—not in a definite school with all the fish moving together, but as a loose swarm, moving independently or in small groups. This makes it impossible to seine the young fry, as upon the approach of the seine, instead of keeping together, they at once scatter and escape the seine. The fry may be at the surface or on the bottom in weeds or clear water, and are attended by the male until they are 1¼ inches long. The swarm then gradually disperses and the young fry, which were previously black, take on the color of the old fish.

The breeding habits of the large-mouthed black bass are similar to those of the small-mouthed, but differ in some respects, which are of importance in pond culture.

1. The nests of the large-mouthed are not made on gravel, but by preference on the roots of water plants. These are cleaned of mud over a circular area, and on them the eggs are laid. As the eggs of the large-mouthed bass are smaller and more adhesive than those of the small-mouthed, they are apt, when laid on gravel, to become lodged between the stones and to stick together in masses, and are then likely to be smothered. When laid on fibrous roots of water plants this does not occur.
